*Electives are Transborder / cross disciplinary / Discipline centric elective nature.

Blue – Employability Green – Entrepreneurship Red- Skill Development

PROGRAMME OUTCOMES (POs)

- a) Graduates will be able to have knowledge on the basic and applied theories.
- b) Providing a broad educational and analytical knowledge necessary to make the students for appearing in competitive examinations
- c) Ability to design and conduct experiments as well as to interpret the results.
- d) An expert to work on Biotechnological concepts and allied fields (immuno, medical, microbial, Food, agricultural, environmental, plant and animal) with modern tools and techniques towards product and process development for academic, industrial and research application.
- e) Generating the graduates with an ability to identify, formulate and solve to deliver process/product with professional, societal and ethical responsibilities.
- f) Graduates will be able to visualize and work on multidisciplinary laboratory problems.
- g) Graduates will be able to update the current knowledge of interdisciplinary subjects related to biotechnology

PROGRAMME SPECIFIC OUTCOMES (PSOs)

To enable the student to emerge as:

- h) Biotechnologist to recognize the societal need and lifelong learning.
- i) Proficient to demonstrate entrepreneurial and leadership skills with life-long learning.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO I: The post-graduates of Biotechnology will be able to acquire in-depth knowledge of the basic and applied subjects of Biotechnology and allied fields.

PEO II: The post-graduates of Biotechnology are equipped to design, analyze, conduct and interpret the experiments and data for the development of process/product within the realistic constraints.

PEO III: The post-graduates of Biotechnology will be able to acquire the knowledge and ability to use the concept of theories, practical skills and recent technological tools in solving any technological and professional issues independently in a global and societal context.

PEO IV: The graduates of Biotechnology will continue learning to update and to become an entrepreneur in a competitive world of technology and also contribute to all forms of life.

19BTP101

FUNDAMENTALS OF BIOCHEMISTRY AND MICROBIOLOGY**Semester – I
4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The main objectives of the course are

- To understand the key concepts of biomolecules and its organization
- To attain strong theoretical knowledge on three-dimensional construction of biological macromolecules and the principles of molecular recognition
- To understand the functions and importance of various biomolecules
- To know the classification of microorganisms
- To obtain strong knowledge on industrial application of microorganisms
- To obtain necessary knowledge on diseases and causative agents

Course Outcomes

On completion of the course, students are able to

1. Draw or describe the structure of amino acids, proteins, enzymes, chemical messengers, carbohydrates, lipids, and nucleic acid
2. Understand fundamental properties of elements, their role in formation of biomolecules and in chemical reactions within living organisms
3. Write the chemical reactions involved in biochemical pathways that produce ATP such as citric acid cycle and electron transport
4. Be familiar with the enzymes (biocatalysts), and their salient attributes including unique conformation and amazing catalytic properties
5. Describe the metabolic pathways in microorganisms
6. Designate the infectious organisms and treatment measures

UNIT –I Biomolecules:

Chemical basis of life; Bonding; Theories; Composition of living matter; Water – properties, pH, ionization and hydrophobicity; Emergent properties of biomolecules in water; Biomolecular hierarchy; Biomolecules – Structure, classifications and properties of carbohydrates, amino acids, proteins, lipids, Ribonucleic acids and deoxy- ribonucleic acids, nucleoprotein complexes.

UNIT –II Metabolisms:

Carbohydrates, lipids (fatty acid oxidation and biosynthesis), amino acids biosynthesis, nucleotides (de novo synthesis and salvage pathways) synthesis. Disorders of lipid, carbohydrate, nucleic acid, amino acid metabolism. Inborn errors of metabolism. Metabolomics.

UNIT – III Bioenergetics:

Energetics - TCA Cycle, glycolysis, gluconeogenesis, Pentose phosphate shunt, Embden-Meyerhof pathway, urea cycle, interconnection of pathways, Metabolic regulation, Bioenergetics: Respiratory chain, ATP cycle, energy-rich compounds.

UNIT- IV Microbial Classification, Diversity and techniques:

Diversity- Bacteria, fungi, algae - distribution, reproduction, characteristics, nutrition. Techniques - staining, Microscopy - Principle, types, applications. Microbial growth - nutrients, media, isolation, maintenance, preservation, curve, measurements, factors, regulation.

UNIT –V Applications, Diseases and control measures:

Microbes - Biomass production (Single Cell Protein), Industrially application (Antibiotics). Microbial Diseases - Causative agent, pathology, diagnosis, control and treatment of Bacterial - TB, Cholera and Typhoid. Protozoan – Amoebiasis and Malaria. Viral - AIDS. Control of microorganisms – drugs, chemotherapy, antimicrobial agents.

19BTP102

CELL BIOLOGY AND MOLECULAR GENETICS**Semester – I**
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Understand the structures and functions of basic components of eukaryotic cells, especially macromolecules, membranes, and organelles
- Understand how the cellular components are used to generate and utilize energy in cells
- Understand the cellular components underlying cell division
- To impart knowledge in genetics and genome organizations in organisms
- To understand the principles of extensions to Mendelian inheritance, including multiple allelism, lethal alleles, and gene interactions
- To obtain knowledge on normal chromosome number, structure, and behaviors in human cells, and understand the cause and effect of alterations in chromosome number and structure

Course Outcomes

On successful completion of the course, students will be able to

1. Describe the structures and basic components of eukaryotic cells
2. Illustrate how the cellular components are used for various cellular activities
3. Demonstrate the pathways involved in various cellular events including cell cycle
4. Understand the inheritance of genes among plants and animals and the genetic makeover as well as the physical appearance of organisms
5. Describe Mendelian inheritance and the inheritance of gene in human beings
6. Illustrate the effect of chromosomal abnormalities in human diseases

UNIT-I Cell Organization and regulation:

Structure of prokaryotic and eukaryotic cells, Structural organization and function of intracellular organelles (Nucleus, Endoplasmic Reticulum, Golgi complex, Mitochondria, Chloroplast, Lysosomes, Peroxisomes and vacuoles, Cytoskeletons. Chromatin organization and packaging. Nucleic Acid - Replication, Types, Transcription, Post Transcriptional Modification, Translation and Post Translational modification, regulation of gene expression.

UNIT – II

Structure of model membrane, lipid bilayer and membrane protein diffusion, osmosis, ion channels, active transport, and ion pumps. Intracellular protein sorting- Mechanism and regulation of intracellular transport in mitochondria, chloroplast, endoplasmic reticulum and nucleus. Electrical properties of membranes. Cell cycle and its regulation, Molecular events Check points, Cyclins and protein kinases.

UNIT -III Genetics:

Mendelian and Non-Mendelian principles. Concept of gene: Allele, multiple alleles, pseudoallele, complementation tests. Genetic recombination, Genetic mapping, linkage and crossing over. Mutations- Types of Mutation, Genetic analysis of Mutations, DNA repair Mechanisms.

UNIT – IV Methods of genetic transfers:

Transformation, conjugation, transduction. mapping genes by interrupted mating, Linkage maps, tetrad analysis, mapping with molecular markers, mapping by using somatic cell hybrids. Introduction to Transposable elements – Discovery and types, Nomenclature - Insertion sequences - Mechanism – Transposons of *E. coli*, Bacteriophage and Yeast.

UNIT –V Microbial and Human genetics:

Gene transfer in Bacteria, Bacteriophages - properties, Structure, Role of phages as vectors. Human genetics - Pedigree analysis, linkage testing, karyotypes, genetic disorders, Eugenics. Epigenetics & Genome Imprinting. Structural and numerical alterations of chromosomes, ploidy and their genetic implications, Quantitative genetics - Polygenetic inheritance, heritability and its measurements, QTL Mapping.

19BTP103

ECOLOGY, EVOLUTIONARY AND DEVELOPMENTAL BIOLOGY**Semester – I
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

The objectives of the course are to make the students to

- Comprehend the principles of evolution
- Know the concepts of community ecology
- Realize the origin of biotic community
- Escalate the basic concepts of population genetics
- Recognize the significance of morphogenesis and organogenesis in plants
- Understand the significance of developmental aspects of living organism

Course Outcomes

On successful completion of the course, students should be able to

1. Learn the fundamental principles and concepts of evolutionary theory and ecology
2. Use this knowledge to explore the evolution
3. Learn the basic ecological theory
4. Understand the principles and proposing solutions to the major environmental problems facing the biosphere
5. Describe evolutionary and ecological patterns and processes related to the survival
6. Describe relationships, distribution, abundance and interactions of organisms, their populations and environments

UNIT-I Ecological principles:

The Environment: Physical, biotic environment; interactions. Habitat and Niche: Concepts, types. Population Ecology: Characteristics, growth curves; regulation; life history strategies (r and K selection); concept of metapopulations. Species Interactions: Types. Community Ecology, Ecological Succession: Types; mechanisms; changes, concept of climax.

UNIT – II Ecosystem, Applied and conservation Ecology:

Ecosystem structure; function; energy flow and mineral cycling (C, N, P), structure and function of some Indian ecosystems: terrestrial (forest, grassland) and aquatic (fresh water, marine, eustarine). Biogeography: Major terrestrial biomes; theory; biogeographical zones of India. Applied Ecology: pollution; global change; biodiversity: status, monitoring and documentation; major drivers, management approaches. Conservation Biology: Principles, approaches, Indian case studies on conservation/management strategy (Project Tiger, Biosphere reserves).

UNIT -III Evolutionary Biology:

Emergence, Lamarck; Darwin–concepts, Mendelism; Origin of cells and unicellular evolution: Concept of Oparin and Haldane; The first cell; Evolution of prokaryotes, eukaryotic, unicellular eukaryotes. Origins of unicellular and multi cellular organisms; plants and animals; Molecular Evolution: Concepts, tools.

UNIT – IV Population genetics:

Populations, Hardy-Weinberg Law, Speciation; Convergent evolution. Brain, Behavior and Evolution: Approaches, methods. Biological clocks; Development of behavior; Social communication; Habitat, Domestication and behavioral changes.

Developmental Biology:

Concepts, determination and differentiation; morphogenetic gradients; genomic equivalence and the cytoplasmic determinants; imprinting; mutants and transgenics in analysis of development.

UNIT –V Gametogenesis, fertilization and early development:

Production, development in animals, plants; formation, germination or establishment in plants, animals. Morphogenesis and organogenesis in animals: Cell aggregation and differentiation Dictyostelium, Drosophila, amphibia and chick; organogenesis (*Caenorhabditis elegans*, vertebrates), development- environmental regulation of normal development; sex determination. Morphogenesis and organogenesis in plants: Organization, development and transition - shoot, root, leaf, floral in Arabidopsis and Antirrhinum.

19BTP104

BIOINSTRUMENTATION AND BIOSTATISTICS**Semester – I
4H-4C**

Instruction Hours / week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Understand fundamental principles of bioinstrumentation commonly used in biomedical engineering research labs and hospitals
- Comprehend the colorimetric principles
- Recognize the concepts on centrifugation and chromatography
- Obtain key knowledge on electrophoresis
- Understand key concepts on biostatistics and its various parameters
- Attain strong knowledge on the applications of biostatistics and its relevant softwares

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate the bioinstrumentation principles with respect to device design and applications
2. Identify, explain and judge safety issues related to biomedical instrumentation
3. Apply the principles of chromatography for the separation of bioactive compounds
4. Recognize the definition of statistics and its relation with the other sciences
5. Collect data relating to variable/variables which will be examined and calculate descriptive statistics from these data
6. Apply the statistical knowledge in analyzing biological problems

UNIT – I Colorimetry and Spectroscopy:

Color and absorption spectra, Beer's and Lambert's law. Principle of photoelectric colorimeter, Spectroscopy – Properties of electromagnetic radiations, Instrumentation and applications of – UV Visible light spectroscopy, Spectrofluorimeter, FTIR, atomic spectroscopy, NMR spectroscopy and MALDI – TOF, Mass spectroscopy, GC – MS, LC- MS.

UNIT – II Centrifugation:

Principle, types of centrifuges, Principles, g and RPM value, Applications of analytical- and preparative centrifuge, density gradient and ultra centrifuge. **Chromatography:** Principles, Type – Paper, thin layer, ion-exchange, affinity, gel filtration, HPLC and HPTLC

UNIT – III Electrophoresis:

Principle, instrumentation and applications of agarose gel electrophoresis, sodium dodecyl sulphate – polyacrylamide gel (SDS-PAGE), native PAGE, isoelectric focusing, immuno, pulse field, gel, capillary, 2D electrophoresis, gel documentation and image analysis.

UNIT- IV Biostatistics:

Data collection, classification and presentation of tabulation. Measures of central tendency – mean, median and mode. Measures of dispersion – mean deviation, standard deviation, standard error and analysis of variance. Probability and probability distribution – theorems, binomial, poisson and normal distribution. Correlation and regression – simple correlation, correlation co-efficient, simple and linear regression analysis.

UNIT- V Applications of biostatistics:

Randomized block design, ANOVA, Test of significance -F, t, DMRT and chi-square test. Statistical and graphical software – SPSS and other softwares. Case studies.

19BTP105A

BIODIVERSITY, BIOSAFETY AND IPR

Semester – I
4H-4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Introduce basic concepts of biosafety that is essential for different disciplines of science
- Know the procedures involved in protection of intellectual property and related rights
- Discuss about various aspects of biosafety regulations and IPR concerns arising from the commercialization of biotech products
- Understand balanced integration of scientific and social knowledge in sustainable development
- Attain knowledge on the benefits of GM technology and its related issues
- Identify the patent related cases

Course Outcomes

On successful completion of the course, students will be able to

1. Interpret basics of biosafety and its impact on all the biological sciences and the quality of human life
2. Recognize importance of biosafety practices and guidelines in research
3. Apply intellectual property law principles including copyright, patents, designs and trademarks to real problems and analyze the social impact of intellectual property law and policy
4. Comprehend the importance of protection of new knowledge and innovations and its role in business
5. Gain more insights into the regulatory affairs
6. Describe various agreements and treaties related to the protection of intellectual property

UNIT –I Biodiversity:

Introduction, types, Concepts. Values, uses, Measures of biodiversity. Vegetation types of India. Hotspot biodiversity areas in India, Red Listed plants and RED Data Book, Threatened plants and animals of India. Role of biotechnology; Conservation biodiversity - In situ and ex situ methods. Molecular markers and their application in plant conservation. [National Biodiversity Authority](#).

UNIT –II Bioethics:

Introduction. Animal Rights. General issues related to environmental release of transgenic plants, animals and microorganisms. Ethical issues related to research in embryonic stem cell cloning. Ethical, Legal and Social Implications (ELSI) of Human Genome Project.

UNIT – III Biosafety:

Introduction; Background; Biological Safety Cabinets; Primary Containment for Biohazards; Biosafety Levels; Biosafety Levels; Recommended Biosafety Levels, Cartagena protocol on biosafety.

Biological risk assessment: Biosafety guidelines for Genetically Modified Micro organisms (GMM) and Plants (GMP)-Risk assessment, guidelines for research activities, Guidelines for environmental release of GMM, GMP and GLP. GATT and World Trade Organizations. Establishment and functions of GATT, WTO and WIPO. WTO Guidelines and Summits. Roles of IBSC, RCGM and GEAC.

UNIT –IV Intellectual Property Rights:

Types of IP: Patents, Trademarks, Copyright and Related Rights. Physical and Intellectual Property. Tangible and Intangible property. **Agreements and Treaties:** History of GATT and TRIPS Agreement; Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty; PCT; Indian Patent Act 1970 and recent amendments, International Patent guidelines.

UNIT – V Patent application:

Rules governing patents. Patent related cases. Licensing - Flavr Savr™ tomato as a model case. Biopiracy and case studies on patents (Basmati rice, Turmeric, and Neem). Biotechnological examples of patent, trademark, trade secret, copy right. Traditional Knowledge.

NANO BIOTECHNOLOGY

4H-4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Obtain fundamental concepts of nanobiotechnology
- Offer a strong knowledge in the interface between chemistry, physics and biology on the nanostructural level with a focus on biotechnological usage
- Provide advanced training in the area of nanobiotechnology
- Understand the interaction of nanomaterials with biological molecules and cells
- Learn nanomaterials and their use with biocomponents to synthesize and address larger systems.
- Produce highly skilled individuals suited for the fast-changing requirements of today's advanced workforce

Course Outcomes

On successful completion of the course, students will be able to

1. Recognize the role of bio nanotechnology as an interdisciplinary tool and to understand how to use these new tools in solving biological problems
2. Demonstrate the interactions and relationship between molecular dynamics, nanoscale physics and macroscopic system behaviour
3. Explain biophysical mechanisms in the context of nanobiotechnology application areas
4. Analyze and discuss the engineering requirements of multidisciplinary technology based on biology
5. Explain the challenges of commercializing new technologies
6. Demonstrate technical and cognitive skills associated with nanobiotechnology

UNIT – I Nanotechnology:

Definition, The fundamental Science behind nanotechnology- electrons, atoms and ions, molecules, metals, biosystems. Nanobiotechnology – concepts, definitions, prospects; nanoparticles – size, shape, properties. Types - nanoparticles, quantum dots, nanotubes and nanowires.

UNIT – II: Synthesis and Characterization:

Methods – Physical, Chemical and Biological synthesis – Principle, Applications; Nanoanalysis –Optical (UV-Vis/Fluorescence); X-ray diffraction; Imaging and size (Electron microscopy, light scattering, Zetapotential); Surface and composition (ECSA, EDAX, AFM/STM etc); Vibrational (FT-IR and RAMAN), Magnetic, Electrical and Electrochemical analysis.

UNIT – III Nano biotechnology and Biomedical:

Nanoparticles in biomedical and clinical applications. Cyto-toxicity, Geno-toxicity In vivo tests/assays. Biosensors. Biomedical applications: drugs, drug delivery, molecular motors. Neuro electronic interfaces, Nanoluminescent tags, imaging and mapping. Microfluidics and Lab-on-a-chip - Materials of Microfluidic Components - Silicon, Glass, polymers, fluid structure, fabrication methods. Surface modifications, Spotting, Detection mechanics.

UNIT – IV Nano biotechnology and Agriculture:

Nanoparticles – Phytotoxicity tests/assays; Nano-materials to improve crop productivity, Seed pretreatment, Growth promotion, Nano- fertilizers, Nano- pesticides, Nano-nutrient.

UNIT – V Nanotechnology and Environment:

Nanoparticles in bio- degradation, nano-material-based adsorbents for water treatment, possible mutagenic properties of nanoparticles, nanoparticle bioaccumulation.

19BTP105C

BIO-ENERGY TECHNOLOGY**Semester – I
4H-4C**

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Provide an overview of the basic process of bioenergy
- Understand different strategies to convert biomass to biofuels
- Obtain knowledge on the available technologies and how these could meet the growing demand for energy in the future
- Understand biomass biodegradability and bioconversion rate in relation to energy yields
- Describe biochemical processes of biomass conversion to bioenergy production with focus on fermentation and anaerobic digestion
- Understand technological potentials of biogas, bioethanol, biofuel and biohydrogen

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate bioenergy production processes adequate to diverse biomass characteristics
2. Discuss state-of-the-art technologies of generating biofuels from sustainable bioresources
3. Discuss and propose feasible biofuel technologies and biofuel products from selected biomasses
4. To illustrate a bio-energy thermo-chemical conversion process
5. Design biogas reactor capacity and propose optimal and economically viable technical operational condition
6. Demonstrate sequential bioethanol and biogas production and compare the scenarios with respect to energy recovery

UNIT – I Biofuel:

Introduction, features, undesirable features, Energy crops – wood, sugar and starch crops, hydrocarbon producing crops. Modes of utilization of biomass.

UNIT – II Biogas:

Substrate, digester, microorganisms, process of biogas production, factors affecting biogas yield, precautions, advantages and disadvantages.

UNIT – III Bioethanol:

Introduction, bioethanol vs. petrol, production of bioethanol – yeast, sugar and starch crops, ethanol recovery.

UNIT – IV Biodiesel:

Introduction, lipids as a source of biodiesel – algae, sunflower, rapeseed, linseed, soybean, jatropha, peanut, biodiesel from hydrocarbons. Biobutanol – *Clostridium*, molasses.

UNIT – V Biohydrogen:

Hydrogen as fuel – production - methods - electrolysis of water, gasification, biological agents.
Biohydrogen production – anaerobic fermentation, photolyses and photosynthetic methods.

**19BTP111 FUNDAMENTALS OF BIOCHEMISTRY AND MICROBIOLOGY
– PRACTICAL I****Semester – I
4H - 2C****Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

The objectives of the course are to make the students to

- Offer knowledge to execute the biochemistry and microbiology experiments flawlessly
- Gain practical knowledge on fundamentals of biochemistry and microbiology
- Learn the quantification of sugars, aminoacids and lipids
- Understand cell permeability in eukaryotic cells
- Understand how to perform pure culture techniques
- Learn how to draw bacterial growth curve

Course Outcomes

On successful completion of the course, students will be able to

1. Describe the quantification of sugars, aminoacids and lipids
2. Interpret the outcome of experiments that involve the use of biochemistry
3. Perform separation of bioactive compounds using thin layer chromatography
4. Demonstrate the effect of pH, temperature and substrate concentration in enzyme assays
5. Carry out various microbiological staining techniques
6. Join as a technician in biochemical and microbiological labs

List of Practicals**Biochemistry**

1. Quantification of proteins – Lowry *et al*/ Bradford method
2. Quantification of sugars – Anthrone method
3. Total free amino acids
4. Quantification of lipids
5. Quantification of Ascorbic acid
6. Thin Layer Chromatography (Amino acids / fatty acids/ sugar/ nucleic acids)
7. Effect of pH, temperature, substrate concentration (any one enzyme - Catalase / SOD / amylase by OD method)

Microbiology

1. Pure culture technique –pour spread, loop out technique and streaking, preservation,
2. Staining technique –grams and fungal.
3. Motility –Flagellar staining, hanging drop and soft agar analysis.
4. Growth curve (Bacteria and Fungi) - turbidity cell counting with reference to dilution and Biomass estimation

CELL BIOLOGY AND MOLECULAR GENETICS - PRACTICAL II**Semester – I
4H-2C**

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Gain knowledge on Cell Biology and Molecular Genetics and its application
- Understand various cell types and its components
- Understand how to perform fractionation of cellular components
- Get practiced with the tools and techniques for analyzing conjugation and transduction
- Know the nuclear staining techniques
- Comprehend lipid solubility of membranes

Course Outcomes

On successful completion of the course, students will be able to

1. Interpret the outcome of experiments that involve the use of cell biology and molecular genetics techniques
2. Discuss the various macromolecular components of cells and their functions
3. Describe cell permeability in plants and animal cells
4. Explain the basic steps involved in *Drosophila* giant chromosome preparation and nuclear staining
5. Perform conjugation and transduction experiments
6. Do cell cycle analysis experiments

List of Practicals**Cell Biology**

1. Identification of cell types- Microbe/plant /Human
2. Fractionation of cellular component – Nuclear Components, Mitochondria, Chloroplast.
3. Sucrose Fractionation of Castor Bean
4. Lipid Solubility of Membranes
5. Cell permeability – Plasmolysis - RBC/plant cells
6. Cell division (Mitosis/Meiosis)

Molecular Genetics

1. *Drosophila* Giant Chromosome preparation.
2. Nuclear staining (Giemsa / acridine orange /feulgen)
3. Metaphase preparation and karyotyping (Human leucocytes/ onion root tip)
4. Conjugation
5. Transduction

JOURNAL PAPER ANALYSIS AND PRESENTATION

Semester – I
2H-0C

19BTP201

RECOMBINANT DNA TECHNOLOGY**Semester – II
4H-4C**

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Be familiarize with emerging field of biotechnology: Recombinant DNA Technology
- Understand the basic concepts of recombinant DNA Technology and genetic engineering
- Acquaint versatile tools and techniques employed in recombinant DNA technology
- Obtain the principles of versatile DNA modifying enzymes, cloning strategies, and vector types for selection and screening of recombinant clones
- Understand the concepts of nucleic acid labeling techniques
- Illustrate creative use of modern tools and techniques for manipulation and analysis of genomic sequences and to use recombinant DNA technology in biotechnological research

Course Outcomes

On successful completion of the course, students will be able to

1. Outline the fundamental steps in recombinant DNA technology
2. Demonstrate the mechanism of action and the use of restriction enzymes in biotechnology research and recombinant protein production
3. Explain the value of plasmid preparations and how the concentration and purity of plasmid samples can be determined
4. Confer cloning strategies and techniques used in DNA probing for specific genes of interest
5. Conceptualize PCR technique in clinical research
6. Recapitulate various applications of recombinant DNA technology in human health care and safety regulations

UNIT – I Tools in Genetic Engineering:

Nucleic acid manipulating enzymes- restriction- nucleases, ligases, polymerases, modification enzymes - kinases, phosphatases, adapters and linkers. Polynucleotide tailing.

UNIT –II Cloning Vectors:

Plasmid - conjugative and non conjugative plasmid, Types of Plasmid- Natural plasmids, Artificial plasmid- pBR322 and PUC series. Phage vectors. Plant Vector – Ti plasmid. Animal viral vectors - Retroviral viral vectors, Shuttle vectors, cosmid, phagemid, fosmid. Artificial chromosomes –BACs, YACs.

UNIT-III Gene transfer methods:

Physical, chemical and biological methods of gene transfer- prokaryotes - eukaryotes. Screening and analysis of recombinants, DNA and RNA probes – construction. Analysis of cloned foreign genes. Hybridization techniques – Southern Blotting, Northern Blotting and Western Blotting.

UNIT –IV Analytical Techniques:

PCR, RAPD, RFLP, AFLP, SSCP, protein engineering- site directed mutagenesis, PCR mediated. Alteration of restriction sites, Molecular diagnosis and therapy of cancer, DNA based detection of microbial infection/ contamination, sequence analysis, SNP, NGS, gene editing tool CRISPR.

UNIT –V Application:

Antisense technology, RNAi technology, terminator gene technology, gene therapy- *in vivo* and *ex vivo*. Gene delivery systems - viral and non viral; DNA marker technology in plants, DNA fingerprinting, genetically engineered biotherapeutics and vaccines.

19BTP202

FERMENTATION AND BIOPROCESS TECHNOLOGY**Semester – II
4H-4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

The objectives of the course are to make the students to

- Be familiarize with knowledge about biological and biochemical technology, with a focus on biological products, the design and operation of industrial practices
- Describe power requirements in bioreactors, modeling of bioprocesses, and traditional and new concepts in bioprocess monitoring, and the biological basis for industrial fermentations
- Understand biological and engineering principles for cultivating microorganisms in fermentors
- Obtain knowledge on assessing biological and engineering principles for cultivating microorganisms in fermentors
- Understand the importance of monitoring foam control, nutrient dosing, sterile sampling and filter sterilization
- Attain key concepts in calibration and maintenance of process critical for fermentation such as aeration, agitation and pH

Course Outcomes

On successful completion of the course, students will be able to

1. Evaluate factors that contribute in enhancement of cell and product formation during fermentation process
2. Analyze kinetics of cell and product formation in batch, continuous and fed-batch cultures
3. Differentiate the rheological changes during fermentation process
4. Develop protocol for scale-up and harvesting from shake flask to bench top fermentor
5. Analyze the bioprocess paradigms including scale-down, bioprocess simulation and economics in biological manufacturing
6. Examine considerations in bioprocess simulation and economics, sterilization in bioproduct manufacturing

UNIT –I Introduction:

Isolation and screening of industrially important strains- primary and secondary screening. Strain improvement, mutation, selection of mutants, recombination – bacteria, fungi and actinomycetes, assay and fermented products. Fermentations- submerged, solid state

UNIT – II Media:

Media formulation – sterilization – batch and continuous sterilization, sterilization of air, fibrous filters. Microbial kinetics: batch, fed-batch and continuous cultures, phases of batch growth. kinetics of cell growth, product formation, substrate utilization, product inhibition kinetics, yield concept and productivity.

UNIT – III Design of fermenter:

Types – CSTR, Tower, jet loop, air lift fermenter, bubble column, packed bed. Fundamentals of process control and monitoring – on line and off line analysis, feedback control, PID controller, computer aided control

UNIT – IV Kinetics:

Transport phenomena – Rheological properties, determination of O₂ mass transfer, heat transfer, role of aeration and agitation, factors affecting O₂ transfer, RSM; Production of chemicals – alcohol, antibiotics – Penicillin and Streptomycin, Single cell proteins.

UNIT –V Downstream processing:

Cell distribution methods for intracellular products; foam separation, precipitation. Filtration – micro and ultra-filtration; Solvent extraction-, chromatographic separation- FPLC, HPLC, dialysis, centrifugation, distillation, drying, crystallization, turbidity analysis and cell yield determination. Fermentation products-available in market.

19BTP203

ENZYME TECHNOLOGY

Semester – II
4H-4C

Instruction Hours / week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Understand about the enzyme system
- Obtain key concepts on enzyme- nomenclature and classification of enzymes
- Comprehend the principles of enzyme with thermal stability and catalytic efficiency of enzyme
- Understand strong fundamental knowledge in enzymology
- Attain the principles involved in enzyme technology including methods for large scale production of enzymes
- Recognize the application of enzymes used in different industries

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate various enzyme process including delivery system for protein pharmaceuticals, structure function relationship in enzymes
2. Describe the isolation and purification of industrially important enzymes
3. Recognize how enzymatic pathways and regulatory networks function
4. Appreciate the underlying mechanisms of Immobilized and soluble enzyme in health and industry
5. Illustrate the role of artificial enzymes
6. Apply the acquired knowledge of this course in enzymology research

UNIT – I Definition:

Nomenclature and classification of enzymes, Isozymes, characteristics of enzymes, Enzyme cofactors, Catalytic power, Catalytic strategies, Substrate specificity, Lock and key model, Induced fit hypothesis, Active site- structure, substrate binding, role of catalytic amino acid residues, Catalytic mechanisms of enzymes with representative examples, Types of enzyme inhibition, regulation, kinetics of enzyme-catalyzed reactions, effect of pH and temperature, Thermodynamics, Enzyme pathways and regulatory networks.

UNIT – II Properties of Enzymes:

Thermal stability and catalytic efficiency of enzyme, site directed mutagenesis and enzyme engineering–selected examples, Delivery system for protein pharmaceuticals, structure function relationship in enzymes, structural motifs and enzyme evolution. Methods for analysis of secondary and tertiary structures of enzymes. Protein folding *in vitro* & *in vivo*.

UNIT – III Improvement of enzymes:

Strategies for the discovery of improved and novel enzymes for industrial applications (homology and structure-based approaches, screening methods, use of mutants). Optimization of industrial enzymes by mutagenesis; Protein engineering strategies to improve enzyme stability, specificity and activity; Enzyme immobilization - types, advantages, drawbacks and applications; Artificial enzymes; Isolation and purification of industrially important enzymes.

UNIT – IV Enzyme Technology:

Methods for large scale production of enzymes. Immobilized enzyme and their comparison with soluble enzymes, Methods for immobilization of enzymes. Immobilized enzyme reactors. Application of Immobilized

and soluble enzyme in health and industry. Application to fundamental studies of biochemistry. Enzyme electrodes.

UNIT – V Applications of enzymes:

Enzymes used in different industries, Enzyme catalysis in organic solvents, enzyme replacement therapy – definition, modes of administration, enzyme deficiency disorders and enzyme therapy; Application of enzymes: Cosmetic benefits, Enzyme-based biosensors; Enzymes in clinical diagnosis: primary and secondary serum enzymes, Intracellular distribution of diagnostic enzymes, Enzyme markers of Xenobiotic toxicity - Pharmacogenomics related to polymorphism of drug metabolizing enzymes, , KEGG (Kyoto Encyclopedia of Genes and Genomes) pathway.

19BTP204

IMMUNOTECHNOLOGY

Semester –II
4H-4C

Instruction Hours / week: L:4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Understand the human immune system and the immune response of cells and organs
- Obtain key concepts on gene-re-arrangement of immunoglobulin and T-cell receptor genes, antigen processing and presentation
- Comprehend the principles of immunological techniques like hybridoma technology and catalytic antibodies synthesis
- Understand strong fundamental knowledge in tumor immunology
- Attain the principles involved in vaccine technology including recombinant vaccines
- Recognize the basic concepts in transplantation of bone marrow and other organs

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate various immunological process including innate and adaptive immunity, cells and organs of immune system, antigen and antibody interaction, immunogenicity and antigenicity, epitopes and antibody structure
2. Describe the organization of Ig genes, class switching in constant regions of genes and expression and regulation of Ig genes
3. Recognize how antigens are processed, presented and immune activation occurs via B- and T-cells activation
4. Appreciate the underlying mechanisms of auto-immune diseases and allergic reactions
5. Illustrate the role of cancer immunotherapy
6. Apply the knowledge of this course in research and pharmacological industries

UNIT –I Introduction:

History and scope, Immunity – types, Antigen and Antibody - biology, structure and functions, super antigens, antigen- antibody interactions, primary and secondary immune response. Humoral and cell mediated immunity.

UNIT –II Immune system:

Hematopoiesis and differentiation, Lymphocytes, Lymphoid organs: Primary and secondary lymphoid organs. Antigen recognition and presentation, activation of B and T lymphocytes, cytokines and their role in immune regulation. **Complement system** - Classical and alternate pathway. MHC I and II complex.

UNIT-III Transplantation:

MLR, MHC and HLA typing, bone marrow transplantation, organ transplants, immunosuppressive therapy. Hybridoma technology and monoclonal antibodies, immuno-diagnosis and application of monoclonal antibodies in biomedical research, human monoclonal antibodies and catalytic antibodies, Xeno transplantation from various species.

UNIT –IV Hyper-sensitivity reactions, auto-immune disorders. Tumor immunology:

Tumor antigens, immune response to tumours, cancer immunotherapy. Immunodeficiencies – primary and secondary.

UNIT –V Vaccines:

Vaccine technology including DNA vaccines, identification of B and T epitopes for vaccine development. Immunodiagnosis of infectious diseases, immuno screening of recombinant library.

19BTP205 A

PHARMACEUTICAL BIOTECHNOLOGY

Semester – II
4H-4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total:100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Obtain basic skills necessary for employing biotechnology principles in together with various pharmaceutical parameters
- Understand novel formulation approaches for better delivery of biotechnology derived drugs, such as reverse micelles, liposomes, microemulsions and microencapsulation
- Attain knowledge on the delivery of peptides and proteins by the parenteral, oral, transdermal and nasal routes of administration
- Recognize novel biotechnology products and their use in therapeutics and diagnostics
- Comprehend the physical and chemical properties of the solution/colloidal/dispersion that influence physical stability of the bioactive macromolecule with emphasis on aggregation behavior, its identification and its impact on bioactivity
- Learn about special storage, handling, reconstitution and administration conditions and techniques for drug delivery systems containing bioactive macromolecules

Course Outcomes

On successful completion of the course, students will be able to

1. Evaluate different pharmaceutical parameters of current biotechnology products
2. Determine parameters related to stability and formulation of biotechnology products
3. Discuss quality control procedures related to biotechnology products
4. Demonstrate novel formulation methods for better delivery of biotechnology derived drugs
5. Evaluate different techniques related to separation and purification of cell types; conduct techniques for measuring cell turnover and growth, conduct cytotoxicity assays
6. Join pharmaceutical biotechnology lab and industries as a research assistant

UNIT –I Introduction:

Classification of Pharmaceuticals - Solutions, suspensions, tablets, capsules. Drugs and its sources, Routes of Drug Administration, Absorption and Bioavailability, Distribution, Drug metabolism, Drug theories, Drug Receptor interactions, Pro-drug concept.

UNIT –II Biotechnology and health:

Drug design; drug development; random screen up, target identification and validation, drug discovery, drug delivery. Drug abuse, self-poisoning. pharmacogenomics, pharmacokinetics, biochip.

UNIT –III Biotechnology and Pharmacy:

Genetically engineered protein and peptide agents, novel drug delivery systems – non convectional routes of administration, Anti-AIDS drug development, oncogenes as targets for drugs, Multi-drug resistance, vaccine development and role of genetic engineering in controlling infectious diseases, stem cell therapy.

UNIT –IV Enzyme Technology:

Sources of enzymes, extraction and purification: Applications pharmaceutical, therapeutic and clinical. Production of amyloglucosidase, glucose isomerase, amylase and trypsin, Techniques of immobilization of enzymes and their applications in the industry. Reactors for immobilized systems and perspective of enzyme engineering.

UNIT –V Novel Drug Delivery Systems:

Introduction to the drug carrier, liposome as a drug carrier, biodegradable polymers as a drug-carrier. Modified Drug Release: The sustained release, first order release approximation, multiple dosing.

19BTP205B

AGRICULTURAL BIOTECHNOLOGY**Semester – II**
4H-4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Provide various techniques and aspects regarding Agri biotechnology
- Equip with theoretical knowledge regarding the techniques and applications of Agri Biotechnology
- Attain comprehensive training in the agri biotechnology and its application for increasing agricultural production, environment improvement
- Learn about genome organization in plants and basic techniques in tissue culture
- Discuss the applications of genetic transformation in plants, metabolic engineering, production of pharmaceuticals and industrial products and plant molecular farming
- Get a career in Industry/R&D

Course Outcomes

On successful completion of the course, students will be able to

1. Describe the genome organizations in plants
2. Elaborate the plant cell and tissue culture systems
3. Explain the genetic transformation techniques in plants
4. Demonstrate genetic transformation in plants
5. Explain the application of genetic transformation in plants
6. Evaluate the importance of metabolic engineering and agricultural farming in plants

UNIT –I Plant tissue culture and its application:

Recombinant DNA technology, methods of gene transfer in plants, Development of transgenics for abiotic & biotic stress tolerance Tools and techniques used in agriculture biotechnology.

UNIT –II Genetic and Molecular basis:

Heterosis and Apomixis and their significance, Mutations and polyploidy in crop improvement, Molecular markers, Marker assisted breeding, QTL mapping, Origin, evolution and cultivation practices of the major crop plants

UNIT –III Improvement of crop plants:

Increase in iron, protein and amino acids, golden rice colours – anthocyanins, betalaines, crocin and crocetin. Flavours–capsaicin, vanillin, stevioside, thaumatin. Developing vaccine and plantibodies, terminator technology and male sterility;

UNIT – IV Biotic and abiotic resistance:

Virus -coat protein mediated, nucleocapsid gene, antisense and RNAi, Fungal diseases: chitinase, 1-3 beta glucanase, RIP, antifungal proteins, thionins, PR proteins, Insect pests resistance: Bt genes, Non-Bt like protease inhibitors, alpha amylase inhibitor, nematodes resistance and herbicide resistance: phosphinothricin, glyphosate, sulfonyl urea, atrazine. Drought, salinity, thermal stress, flooding and submergence tolerance

UNIT – V Genetic engineering for increasing crop productivity:

Enhancing photosynthetic, nutrient use and nitrogen fixing efficiencies of plants, Genetic Engineering for quality improvement: Seed storage proteins; essential amino acids, Vitamins and minerals, heterologous protein production in transgenic plants, Plants as biofactories, Biosafety and risk assessment of GM crops.

INDUSTRIAL TOXICOLOGY

Semester – II
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Acquire knowledge and learn the terminology of the field of Industrial toxicology
- Describe the relationship of dose - response, and the principle of determining the theoretical expertise on the mutagenic, teratogenic and carcinogenic effects of toxic substances
- Obtain knowledge of current legislation on health protection while working with chemical agents, carcinogenic and mutagenic factors, and biological factors
- Learn about toxic effects of elements and their compounds
- Understand the classification of substances under the new legislation
- Gather and critically interpret toxicological information from diverse resources for human health hazard and risk assessment

Course Outcomes

On successful completion of the course, students will be able to

1. Describe toxicology as a discipline in the overall health sciences framework
2. Explain the basic concepts of chemical hazard and exposure as determinants of chemical toxicity
3. Describe key pathways and mechanisms of chemical absorption, distribution, metabolism, storage and excretion in the human body
4. Explain dose-response relationships as the basis of toxicity
5. Outline the derivation of reference dose and other related measures of occupational exposure
6. Describe the scientific basis of occupational exposure assessments and methods for their determination

UNIT – I Introduction:

Scope, Divisions of Toxicology, General principles of toxicology, - Classification of Toxic Agents. Mechanism of action of toxicants, Routes of exposure-absorption and translocation.

UNIT – II Toxicokinetics:

Absorption, Distribution, Metabolism and Excretion, Factors influencing Toxicity, Dose-effect and Dose response relationship- LD50, LC50.

UNIT – III Ecotoxicology:

Influence of ecological factors on the effects of toxicity; Pollution of the Ecosphere by industries; degradable and non-degradable toxic substances; food chain. Eco-system influence on the fate and transport of toxicants.

UNIT –IV Human Toxicology:

Pollution induced biochemical, hematological and pathological changes, Immunotoxicity, genotoxicity and carcinogenic effects

UNIT – V Regulatory issues and testing:

Bacterial mutation assays, Mammalian cell mutation assays, *in vitro* chromosome aberration assays, *In vivo* carcinogenicity assays and Comet assay.

19BTP211

**RECOMBINANT DNA, FERMENTATION AND
BIOPROCESS TECHNOLOGY - PRACTICAL III****Semester – II
4H-2C****Instruction Hours / week: L:0 T: 0 P:4****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

The objectives of the course are to make the students to

- Be familiarize with practical knowledge in the emerging field of biotechnology: Recombinant DNA technology
- Perform basic molecular biology techniques including DNA and RNA isolation from microbes, plants and animals
- Acquaint versatile tools and techniques employed in recombinant DNA technology such as restriction and digestion, ligation, transformation and PCR
- Gain adequate knowledge on screening of industrially important microorganisms
- Comprehend the enzyme immobilization technique
- Get knowledge on production of wine

Course Outcomes

On successful completion of the course, students will be able to

1. Carry out DNA and RNA isolation from microbes, plants and animals
2. Perform recombinant DNA techniques including restriction and digestion, ligation, transformation and PCR
3. Explain the methods of wine production and alcohol determination
4. Extract amylase enzyme from microbial sources
5. Perform the enzyme immobilization assay
6. Join in research and clinical labs as a project/ research assistant

List of Practicals**Recombinant DNA Technology**

1. Isolation and analysis of total DNA from Microbes (*E. coli*), plant
2. Isolation and analysis of plasmid DNA
3. Isolation and analysis of total RNA
4. Restriction digestion of DNA, Ligation of DNA
5. Transformation of plasmid DNA using calcium chloride
6. Amplification by PCR
7. Southern blotting (Demonstration)
8. Northern blotting (Demonstration)
9. Western blotting (Demonstration)

Fermentation Technology

1. Isolation and secondary screening of industrially important microorganisms
2. Production of amylase or protease, Enzyme immobilization
3. Wine Production and alcohol determination by chromic acid method
4. Down stream processing by Solvent extraction

19BTP212

IMMUNO AND ENZYME TECHNOLOGY – PRACTICAL IV**Semester – II
4H-2C**

Instruction Hours / week: L: 0 T:02 P: 4

Marks: Internal: 40 External: 60 Total:100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Be familiarize with practical knowledge in the emerging field of biotechnology: immuno technology
- Perform and understand basic immuno techniques
- Acquaint versatile tools and techniques employed in immuno technology such as methods of immunoelectrophoresis
- Gain hands on experience in immunological tools used in diagnosis, such as immunoelectrophoresis, ELISA and WIDAL test
- Purify enzymes from natural resources
- Calculate K_m , V_{max} , K_{cat} and other kinetic parameters

Course Outcomes

On successful completion of the course, students will be able to

1. Carry out the immuno laboratory techniques
2. Explain the preparation of sample for analysis
3. Describe the basic knowledge about antigen and antibody interaction using Rocket immune electrophoresis
4. Perform various techniques like Immunoelectrophoresis, and ELISA etc.
5. Perform the enzyme isolation and kinetics parameter calculations
6. Join in research and clinical labs as a project/ research assistant

List of Practicals**Immuno-technology**

1. ABO blood grouping, Preparation of serum from blood
2. Methods of immunization, Methods of bleeding, Hemolysis
3. Single and Double radial immunodiffusion
4. Immunoelectrophoresis
5. Rocket Immunoelectrophoresis
6. Counter Current Immunoelectrophoresis
7. WIDAL test
8. DOT-ELISA

Enzyme technology

1. Purification of an enzyme from any natural resource
2. Quantitative estimation of proteins by Bradford/Lowry's method.
3. Perform assay for the purified enzyme.
4. Calculation of kinetic parameters such as K_m , V_{max} , K_{cat}

JOURNAL PAPER ANALYSIS AND PRESENTATION

**Semester – II
2H-0C**

19BTP301

PLANT AND ANIMAL BIOTECHNOLOGY

Semester – III
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Introduce biotechnological methods for production of transgenic plants
- Give knowledge about various methods of gene transfer in plants
- Cognize and get the knowledge on animal culture
- Explain the basics of the physiological and molecular processes that occur during plant growth and development and during environmental adaptations
- Use basic biotechnological techniques to explore molecular biology of plants and animals
- Understand the processes involved in the planning, conduct and execution of plant and animal biotechnology experiments

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the growth conditions required to culture the plants and animal in *in vitro* conditions
2. Inculcate the deep understanding of Gene expression system of plants
3. Acquire knowledge on producing transgenic plants
4. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of plant biotechnology experiments
5. Learn the structure and organization of plant and animal genome
6. Learn the basic techniques for hybridization in producing transgenic plants and animals

UNIT - I

Micropropagation: Tissue culture media – composition and preparation, Callus and suspension culture, somaclonal variation, micropropagation, organogenesis, somatic embryogenesis, Embryo culture and embryo rescue. Haploidy; protoplast fusion and somatic hybridization; cybrids; anther, pollen and ovary culture for production of haploid plants and homozygous lines. Plant hardening transfer to soil, green house technology.

UNIT - II

Plant genetic engineering: Methodology; Plant transformation with Ti plasmid of *Agrobacterium tumifaciens*; Ti plasmid derived vector systems, Ri plasmids; Physical methods of transferring genes to plants - Microprojectile bombardment, Electroporation; Manipulation of gene expression in plants; Production of marker free transgenic plants.

UNIT -III

Animal Cell culture: Types, disaggregation of tissue, primary culture, established culture; suspension culture, organ culture, embryo culture, three-dimensional culture and tissue engineering, feeder layers; cell synchronization; cryopreservation. Biology and characterization of cultured cells, tissue typing; cell – cell interaction; measuring parameters of growth; measurement of cell death – apoptosis and its determination.

UNIT-IV

Animal genetic engineering: Molecular cell techniques: cell transformation- physical, chemical and biological methods; manipulation of genes; cell and organism cloning; green fluorescent protein and its application. Gene therapy. *In vitro* fertilization and stem cell research.

UNIT - V

Applications of plant and animal genetic transformation:

In Plants: Productivity and performance: herbicide resistance, insect resistance, virus resistance, fungal resistance, nematode resistance, Induction of abiotic stress and cold stress. Delay in fruit ripening, LEA protein, plantibodies, edible vaccines - primary and secondary metabolite modification, biopolymers, plant-based enzyme engineering.

In Animal: Transgenic animals; transgenic animals as models for human diseases; transgenic animals in live- stock improvement; Ethical issues in animal biotechnology.

19BTP302

GENOMICS, PROTEOMICS AND BIOINFORMATICS**Semester – III**
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Import the basic and recent developments in the field of genome sequencing, genome mapping, proteomic data analysis
- Develop the knowledge on gene sequencing methods
- Know the structure and interactions of proteins
- Describe advanced genomics and proteomics technologies and the ways in which their data are stored
- Use bioinformatics techniques to construct phylogenetic tree
- Describe the different types of genome variation and their relationship to human diseases

Course Outcomes

On successful completion of the course, students will be able to

1. Have a clear understanding on the application of genetic markers in genome mapping
2. Application of 2D technique to analyze the structure of protein
3. Analyze the genomic and proteomic data
4. Acquire knowledge and understanding of fundamentals of genomics and proteomics, transcriptomics and metabolomics and their applications in various applied areas of biology
5. Discuss how biological systems information relating to genes, proteins and cellular structures can be used to model living cells, and even to create new synthetic cells
6. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study

UNIT I

Genomics: Genome – Human Genome project (HGP)-Merits and limitations of Chemical sequencing method – Dideoxy method – mRNA sequencing – cDNA library – Shotgun method – Automated sequencing – Next generation sequencing – Pyrosequencing –Genome mappings – Restriction mappings – Fluorescence *in situ* hybridization (FISH) – Genetic markers – SNP, VNTR, RFLP, Minisatellite and Microsatellite – Applications of genome mappings.

UNIT II

Proteomics: Proteome –SDS-PAGE – IEF – 2D Gel electrophoresis –Sample preparations – Merits and limitations - Mass spectrometry – ESI-MS – Molecular weight estimations – Studying Protein-protein interactions – Structural analysis – Protein folding pathways analysis – Tandem Mass spectrometry - Protein sequencing – MALDI-MS.

UNIT III

Omics Databases: Genome databases – ENSEMBL - VISTA – FlyBase – OMIM – Protein databases – NCBI – UniProt – Secondary databases – PROSITE - 2D PAGE Database - Structural databases – PDB – SCOP – CATH.

UNIT IV

Sequence and Structural Alignments: Sequence similarity searching tools – Protein BLAST – Nucleotide BLAST – tBLASTn – BLASTx – Pairwise alignments – Multiple sequence alignments – Clustal Omega - Protein structure alignment – DALI - Phylogenetic tree construction and analysis.

UNIT V

Structure prediction tools: Secondary structure predictions – Empirical and knowledge-based methods –Predicting three-dimensional structures of proteins – strategies, tools, merits and limitations of comparative modeling – threading/fold recognition and *Ab initio* methods – Stereochemical and structural analysis – Molecular visualization tools.

19BTP303

FOOD BIOTECHNOLOGY

Semester – III
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Understand the concepts of food biotechnology along with principles of genetics in food industry
- Attain strong knowledge on primary sources of microorganisms in food
- Explore the methods for development and preservation of fermented foods
- Recognize the nutritive values of fermented foods
- Understand the concepts of food adulteration and food safety
- Obtain strong knowledge on food spoilage

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the beneficial role of microorganisms in fermented foods and in food processing and the microbiology of different types of fermented food products
2. Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
3. Know the spoilage mechanisms in foods and thus identify methods to control deterioration and spoilage
4. Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods
5. Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
6. Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation

Unit – I

Introduction: History and Scope of Food Biotechnology, Nutritive value of food, Role of microbes in food biotechnology – bacteria, fungi and yeast. Fermented foods – Types, Changes during Fermentation, Nutritive value of fermented foods.

Unit - II

Food Microbiology: Primary Sources of Microorganisms in food. Food-borne Bacteria, Molds and Yeasts. Intrinsic- and Extrinsic Parameters of food affecting microbial count. Detection of Microorganisms in food - SPC, Membrane filters, Dry films. Bacterial Toxins - Botulism and Staphylococcal toxin. Fungal Toxins - Aflatoxins.

Unit - III

Fermented Foods: Origin, scope and development and preservation- Cheese, Yoghurt, Butter, miso, tempeh, kefir, koumiss, acidophilus milk, sourkraut, pickles and vinegar. Fresh juice production –Mango, orange, and pineapple. Technological aspects of industrial production of beer, wine and baker's yeast.

Unit - IV

Food Spoilage and Preservation: Causes of Food Spoilage, Spoilage of Fruits, Vegetables, Meat, Soft Drinks, Eggs, Dairy products. Food Preservation through chemicals - Acids, Salts, Sugars,

Antibiotics, Ethylene oxide, Antioxidants. Other Methods of Food Preservation -Radiations, Low and High temperature, Drying. Food packaging materials and their properties.

Unit - V

Food Adulteration and Food Safety: Adulteration, Responsibility for food safety, Food Additives - Definition, Types and Functional characteristics. Natural Colors -Types, Applications, Advantages of natural colors. Sweeteners - Types and Applications. Adulteration Detection systems and sensors. Food safety - HACCP System to food protection, FSSAI guidelines.

19BTP304

ENVIRONMENTAL BIOTECHNOLOGY**Semester – III
4H – 4C**

Instruction Hours / week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Understand the various components of the environmental biotechnology including ecosystems, biodiversity, threats and policy
- Obtain knowledge on the sources for environmental pollution and its remedial measures
- Understand toxic chemicals and their impact on environment and human health
- Attain key concepts on the role of microbes in remediation of environmental pollutants
- Learn various technologies, tools and techniques in the field of environmental biotechnology
- Understand the importance of biological techniques in controlling air pollution

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate various types of ecosystems, biodiversity components, environmental threats and policy
2. Discuss the impact of environmental pollution and its remediation measures
3. Recognize various global and regional environmental concerns due to natural causes and/or human activities
4. Illustrate the role of Toxic chemicals in the environment and their associated health issues in humans
5. Investigate some examples of different types of environmental pollution and their impacts
6. Appreciate the scientific, ethical and/or social issues associated with certain applications of biotechnology for alleviating the environmental concerns

UNIT - I

Ecosystem – Concept and management of ecosystems. Energy budget. Energy Transfer and energy pyramids. Environmental pollution and its problems- Air, water, soil. Biogeochemical cycle (Carbon, nitrogen and phosphorous cycle). Response of plant, animal and microbes to external factors.

UNIT - II

Genetically Engineered Microorganisms (GEMs) in environment: Role of environmental biotechnology in management of environmental problems, Bioremediation, advantages and disadvantages; In situ and ex-situ bioremediation; slurry bioremediation; Bioremediation of contaminated ground water and phytoremediation of soil metals; microbiology of degradation of xenobiotics. Bioleaching.

UNIT - III

Sewage, waste water treatment and solid waste management: chemical measure of water pollution, conventional biological treatment, role of microphyte and macrophytes in water treatment; Recent approaches to biological waste water treatment, composting process and techniques, use of composted materials.

UNIT – IV

Biological decomposition: Organic carbon, Nitrogen and Phosphate removal. Biological removal, biotransformation, and biosorption of metal ions. Aerobic- and Anaerobic degradation of Xenobiotics. Bioaugmentation for degradation of Xenobiotics. Industrial sources of waste water. Treatment strategies.

UNIT - V

Biofuels and biological control of air pollution: plant derived fuels, biogas, landfill gas, bioethanol, biohydrogen; Biodiesel, Microbial Fuel Cell. Use of biological techniques in controlling air pollution; Removal of chlorinated hydrocarbons from air. Sustainability, Maintenance and Swatch Bharat aspects in environmental biotechnology.

19BTP305A

APPLIED BIOTECHNOLOGY

Semester – III
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Introduce biotechnological methods for production of transgenic plants
- Cognize and get the knowledge on animal culture
- Apply the knowledge in the unresolved issues in agricultural biotechnology
- Understand the application of biotechnology in food industries
- Attain knowledge on bioremediation and biosensors
- Understand the concepts of bioethics and biosafety

Course Outcomes

On successful completion of the course, students will be able to:

1. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of plant biotechnology experiments
2. Appreciate the applications of animal cell culture in clinical and biotechnology industries
3. Apply the knowledge of stem cell therapy to cure dreadful diseases
4. Demonstrate the beneficial role of microorganisms in fermented foods and in food processing and the microbiology of different types of fermented food products
5. Appreciate the scientific, ethical and/or social issues associated with certain applications of biotechnology for alleviating the environmental concerns
6. Join biotechnology labs and industries as a research assistant

UNIT - I

Plant Biotechnology: Genetic engineering of plants: Insect resistance, Virus resistance, Stress tolerant plants, Flower pigmentation, Modification of plant nutritional content, Delayed fruit ripening, Artificial seeds. Biofertilizers: Definition and advantages, Strain selection – Inoculum development – Mass production – Packaging – Quality control of different Biofertilizers.

UNIT – II

Animal Biotechnology: Transgenic cattle, super ovulation, Embryo transfer, production of recombination products- Growth hormones, Human Interferon, Vaccines, Monoclonal antibody, Gene knockout and mice model for Human genetic disorder, stem cell therapy.

UNIT - III

Industrial Biotechnology: Fermentors – Types, Production of enzymes- Amylases, proteases and Lipases. Antibiotics – Penicillin. Aminoacids –Glutamic acid. Production of alcohol, Xanthan gum and SCP. **Alcoholic:** Fermented and distilled their preparation and sources. **Production of dairy products:** Cheese. Yoghurt, buttermilk, kefir, koumiss, acidophilus milk. Pickles – Dill pickles, slippery pickles, soft and black pickles. Fermented Vegetables – Sauerkraut.

UNIT – IV

Environmental Biotechnology: Biosensors – Types, xenobiotics degradation, Bioleaching, sewage treatment, Biogas production, Role of superbug in biodegradation, Bioremediation – *In situ* and *Ex situ*.

UNIT - V

Bioethics and Biosafety: Intellectual property rights. General ethics & ethical issues, Animal rights, Environmental safety of GMOs. Regulation of GMOs, Bioethics for future.

19BTP305B

SYSTEM BIOLOGY

Semester – III
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Understand the new concept of system biology applied to the area of biotechnology
- Build the knowledge in computational methods in biotechnology
- Acquire requisite skills for the design and development of high throughput screening and to retrieve and submit the data, genome database and other databases and analysis
- Learn the computational tools for applying biotechnology in research
- Study the techniques involved in structural and functional proteomics
- Utilize the bioinformatics tools to design and development of novel drugs

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the basic concepts of System Biology
2. Differentiate various Metabolic Networks and Models in System Biology
3. Understand the various databases available for data collection and interpretation
4. Understand the scope and applications of tools
5. Utilize the computational tools for applying biotechnology in research
6. Study and deduce the molecular characterization of human genome

UNIT - I

Introduction to Systems Biology: Introduction to Systems Biology. Need for System Analysis in Biology. Basic Concepts in System Biology: Component vs System, Links and Functional States, Links to Networks, Hierarchical Organization in Biology.

systems, scales, static/dynamic, approaches, limitations, reductionism; central dogma; mathematical models; computational analysis; statistics of prokaryotes and eukaryotes.

UNIT - II

Metabolic Networks and Models in System Biology: Basic Features of Metabolic Networks. Reconstruction Methods of Metabolic Networks. Models as Dynamical Systems. SYN1, SYN3 and molecular simulation, Parameter Problem. Meanings of Robustness.

UNIT - III

Systems Biology Databases KEGG (Kyoto Encyclopedia of Genes and Genomes). BRENDA (BRAunschweig ENzyme DAtabase). BioSilico. EMP (Embden-Meyerhof-Parnas). MetaCyc and AraCyc. SABIO-RK (System for the Analysis of Biochemical Pathways - Reaction Kinetics). BioModels.

UNIT - IV

Tools for System Biology: Cell Designer. Ali Baba. Cell Profiler. JDesigner. Bio-SPICE (Biological Simulation Program for Intra and Inter Cellular Evaluation). SBML (Systems Biology Markup Language). SBGN (Systems Biology Graphical Notation). SBML-SAT (SBML based Sensitivity Analysis Tool).

UNIT - V

Premises & Promises of Systems Biology: Premise of Systems Biology. Promise of Systems Biology. Challenges of Systems Biology. Applications of Systems Biology.

TISSUE ENGINEERING AND REGENERATIVE MEDICINE

Semester – III
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives****The objectives of the course are to make the students to**

- Understand tissue growth and development as well as the tools and theoretical information necessary to design tissues and organs
- Recognize the need of controlling all factors related to biomaterials architecture such as cell biology, biochemistry pathways, and surface characterization and modification
- Comprehend various physical and chemical stimuli that control the structure of biomaterials
- Get knowledge in which cell types are available to be used in tissue engineering applications
- Understand the relevance of the extracellular matrix and its interaction with materials
- Obtain knowledge on bioreactors used in tissue engineering

Course Outcomes**On successful completion of the course, students will be able to**

1. Describe and use the fundamental tools and techniques used in tissue engineering
2. Compare and contrast various strategies for repairing tissues
3. Show mastery of fundamental topics in tissue engineering including stem cells, plasticity, transdifferentiation and cloning
4. Describe and the developments of biomaterials for regenerative therapies and tissue engineering
5. Discuss and give an example of how biomaterials are used to fabricate devices for clinical use
6. Illustrate the basic concepts of cell culture and critical components of bioreactor/tissue design

UNIT - I**Introduction to Tissue engineering and Regenerative medicine.** Tissue engineering and cells as therapeutic agents. Tissue structure and organization, extra cellular matrix, and tissue dynamics.**UNIT - II****Cellular fate processes.** Cell division and cell death. Coordination of cellular fate processes and malfunctions in soluble signaling. Cell-extra cellular matrix interactions and cell-cell communications.**UNIT - III****Cell and Tissue Culture.** Separation, Culture environment and maintenance of cells *in vitro*. Microscopic characterization of tissues. Basic tools to detect cell fate and cell functions.**UNIT - IV****Stem cells and growth factor delivery, and Bioreactors.** Stem cell properties, types, resources and application in tissue engineering and regenerative medicine. Gene transfer. Bioreactors in tissue engineering.

UNIT - V

Biomaterials and scaffold fabrication. Introduction and microscopic characterization of biomaterials. Degradable materials, porosity, mechanical strength, 3-D architecture and cell incorporation. Bioengineered scaffolds for bone, cartilage, tendons, ligaments, skin, liver, pancreas and blood vessels. Case study and regulatory issues.

19BTP311

PLANT AND ANIMAL BIOTECHNOLOGY - PRACTICAL V**Semester – III
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

The objectives of the course are to make the students to

- Understand the new concept of system biology applied to the area of biotechnology
- Gain hands-on experience and to learn the principles behind plant and animal biotechnology
- Know the process involved in isolation, separation, manipulation of plant and animal tissues
- Apply the technology in research and development and pharmaceutical industries
- Execute the recent technology involved in plant and animal cell culture
- Describe the principles of gene manipulation

Course Outcomes

On successful completion of the course, students will be able to

1. Acquaint with principles, technical requirement, scientific and commercial applications in plant and animal biotechnology
2. Support methodologies in plant and animal tissue/cell culture
3. Explain basic principles and techniques in genetic manipulation and genetic engineering
4. Describe gene transfer technologies in plants and animals
5. Designate problems associated with plant and animal cloning
6. Join as lab manager and key scientist in plant and animal biotechnological research institutes and industries

List of Practicals**Plant Tissue Culture Techniques**

1. *In vitro* Germination of Seeds
2. Micropropagation
3. Callus induction, differentiation and regeneration
4. Suspension culture
5. Embryo Culture
6. Synthetic seed production.
7. Protoplast Isolation
8. *Agrobacterium*-mediated gene transformation

Animal Biotechnology

9. Preparation and Filter-sterilization of Animal Tissue Culture Medium
10. Chicken embryo fibroblast Culture
11. Quantification of cells by haemocytometer
12. Quantification of viable and non-viable cells by trypan blue dye exclusion method
13. Identification of leukocyte subsets and total count.
14. Blood leukocyte culture
15. Soft agar assay
16. Cryopreservation and revival of cell lines.

19BTP312 GENOMICS, PROTEOMICS AND BIOINFORMATICS PRACTICAL VI**Semester – III
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

The objectives of the course are to make the students to

- Give knowledge on bioinformatics and its application
- Offer knowledge to assess biological databases
- Understand and to analyze protein/nucleotide sequences and to predict its 3D structure
- Understand the various online databases for submitting and retrieving data
- Understand how the phylogeny plays a vital role in finding ambiguities
- Get practiced with the tools and techniques for analyzing the data

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the relationship between sequence - structure - function of genes
2. Familiarize with the algorithms required to compare sequences and require to know the phylogenetic relationship between the gene sequences
3. Inculcate knowledge on building 3D structures of genes
4. Locate and use the main databases at the NCBI and EBI resources
5. Know the difference between databases, tools, repositories and be able to use each one to extract specific information
6. Use selected tools at RasMol, JMol and PyMol to run simple analyses on genomic sequences

List of Practicals

1. Exploring of primary databases (Proteins and Nucleic acids) and sequence retrieval
2. Physicochemical and structural analyses of primary sequences (Proteins and Nucleic acids)
3. Sequence similarity searches and pairwise alignments
4. Multiple sequence alignments and phylogenetic analysis
5. Comparative modeling using online and standalone tools
6. Molecular visualization tools: RasMol, JMol and PyMol
7. Structural analysis and verification tools
8. Molecular dockings of biological macromolecules

JOURNAL PAPER ANALYSIS AND PRESENTATION

**Semester – III
2H-0C**

19BTP491

PROJECT – VIVA VOCE

Semester – IV
15C

Instruction Hours / week: L: 0 T: 0 P: 0

Marks: Internal: 80 External: 120 Total: 200

Course Objectives

The main objectives of the course is

- The hands-on training through one full semester project with thesis gives special expertise within one of the research areas represented at The Department of Biotechnology.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. This dissertation programme provides the candidate with knowledge, general competence, and analytical skills on an advanced level, needed in industry, consultancy, education and research
