

B.Tech. ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SYLLABI 2023-2024

(CHOICE BASED CREDIT SYSTEM)

Department of Computer Science and Engineering

FACULTY OF ENGINEERING

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)

(Established Under Section 3 of UGC Act 1956)

(Accredited with A+ Grade by NAAC in Second Cycle)

Pollachi Main Road, Eachanari Post

Coimbatore - 641021.

FACULTY OF ENGINEERING

DEGREE OF BACHELOR OF ENGINEERING / TECHNOLOGY

REGULAR PROGRAMME

REGULATIONS 2023

CHOICE BASED CREDIT SYSTEM

These regulations are effective from the academic year 2023 – 2024 and applicable to the candidates admitted to B. E. / B. Tech. during 2023 - 2024 and onwards.

1. ADMISSION

1.1 Candidates seeking admission to the first semester of the eight semesters B. E./B.Tech Degree Programme:

Should have passed the Higher Secondary Examination (10+2) prescribed by the State Government / Central Government with Mathematics/ Physics/ Chemistry/ Computer Science/ Electronics/ Information Technology/ Biology/ Informatics Practices/ Biotechnology/ Technical Vocational subject/ Agriculture/ Engineering Graphics/ Business Studies/ Entrepreneurship. (Any of the above three subjects) or any similar Examination of any other institution/ University or authority accepted by the Karpagam Academy of Higher Education as equivalent thereto).

Should obtained at least 45% marks (40% marks in case of candidates belonging to reserved category) in the above subjects taken together.

(OR)

Passed min. 3 years Diploma examination with at least 45% marks (40% marks in case of candidates belonging to reserved category) subject to vacancies in the First Year, in case the vacancies at lateral entry are exhausted. (The Universities will offer suitable bridge courses such as Mathematics, Physics, Engineering drawing, etc., for the students coming from diverse backgrounds to achieve desired learning outcomes of the programme)

1.2 Lateral Entry Admission

Candidates who possess Diploma in Engineering / Technology (10+3 or 10+2+2) awarded by the Directorate of Technical Education with passed minimum THREE years / TWO years (Lateral Entry) Diploma examination with at least 45% marks (40% marks in case of candidates belonging to reserved category) in ANY branch of Engineering and Technology are eligible to apply for admission to the third semester of B. E./B. Tech.. Such candidates shall undergo two additional engineering subjects in the 3rd and 4th semester as prescribed by the University.

OR

Passed B.Sc. Degree from a recognized University as defined by UGC, with at least 45% marks (40% marks in case of candidates belonging to reserved category) and passed 10+2 examination with Mathematics as a subject.

OR

Passed D.Voc. Stream in the same or allied sector.

(The Universities will offer suitable bridge courses such as Mathematics, Physics, Engineering

drawing, etc., for the students coming from diverse backgrounds to achieve desired learning outcomes of the programme)

Eligibility criteria for admission in the third semester is given in the table below.

S. No.	Programme	Eligibility criteria
1.	B.E Bio Medical Engineering	<p>Passed Minimum THREE years / TWO years (Lateral Entry) Diploma examination with at least 45% marks (40% marks in case of candidates belonging to reserved category) in ANY branch of Engineering and Technology.</p> <p>OR</p> <p>Passed B.Sc. Degree from a recognized University as defined by UGC, with at least 45% marks (40% marks in case of candidates belonging to reserved category) and passed 10+2 examination with Mathematics as a subject.</p> <p>OR</p> <p>Passed D.Voc. Stream in the same or allied sector. (The Universities will offer suitable bridge courses such as Mathematics, Physics, Engineering drawing, etc., for the students coming from diverse backgrounds to achieve desired learning outcomes of the programme)</p>
2	B. E. Civil Engineering	
3.	B. E. Computer Science and Engineering	
4.	B. E. Computer Science and Engineering (Cyber security)	
5.	B. E. Electrical and Electronics Engineering	
6.	B. E. Electronics and Communications Engineering	
7.	B. E. Mechanical Engineering	
8.	B. Tech. Artificial Intelligence and Data Science	
9.	B. Tech Bio - Technology	
10.	B. Tech Food Technology	

1.3 Migration from other University

Candidates who have completed their first to sixth semesters of B. E./B. Tech. study in any University are eligible to apply for admission to their next semester of B. E./B. Tech. in the branch corresponding to their branch of study. The student will be exempted from appearing for Examination of the equivalent courses passed in the earlier programme and will have to appear for courses which he/she has not done during the period of his/her earlier programme. Along with the request letter and mark sheets, he/she has to submit a copy of syllabus of the programme duly attested by the Registrar, Competent authority, he/she has undergone. Equivalence Certificate shall be provided by the “Students’ Affairs Committee” of Karpagam Academy of Higher Education. Students’ Affairs Committee comprises all the Heads of the Departments and Dean of the Faculty of Engineering and a nominee of the Registrar.

2. PROGRAMMES OFFERED

A candidate may undergo a programme in any one of the branches of study approved by the University as given below.

List of B. E. and B. Tech. Degree Programmes

1. B.E Bio Medical Engineering
2. B. E. Civil Engineering
3. B. E. Computer Science and Engineering
4. B. E. Computer Science and Engineering (Cyber Security)
5. B. E. Electrical and Electronics Engineering
6. B. E. Electronics and Communications Engineering
7. B. E. Mechanical Engineering
8. B.Tech. Artificial Intelligence and Data Science
9. B. Tech. Bio-Technology
10. B. Tech Food Technology

3. MODE OF STUDY

3.1 Full-Time:

In this mode of study, the candidates are required to attend classes regularly on the specified working days of the University.

3.2 Conversion from full time mode of study to part time is not permitted.

3.3 Change from one programme to another is not permitted.

4. STRUCTURE OF PROGRAMMES

4.1 Every programme will have a curriculum with syllabus consisting of theory and practical courses such as:

- (i) General core courses comprising Mathematics, Basic Sciences, Engineering Sciences and Humanities.
- (ii) Core courses of Engineering/Technology.
- (iii) Elective courses for specialization in related fields.
- (iv) Workshop practice, computer practice, engineering graphics, laboratory work, in-plant training, seminar presentation, project work, industrial visits, camps, etc.

Every student is encouraged to participate in at least any one of the following programmes

- NSS / Sports/Physical exercise/NCC/YRC/Red Ribbon club/Environment club and Energy club
- Other Co-Curricular and Extra Curricular activities

(V) Choice Based Credit System

CBCS is introduced for students admitted in the academic year 2017-18. As per AICTE guidelines, CBCS is an approach in which students opt for courses of their choice. CBCS provides greater flexibility with multiple courses and enable students to undergo additional courses. CBCS is applicable to Full Time Undergraduate & Post Graduate Programmes of study. It provides a choice for students to select from the prescribed courses (Professional soft core, Professional Hard core, Professional Electives, Open Electives, Value added courses, Humanity Sciences, Basic sciences & Engineering sciences). A course designated as hard core for a particular programme of study must invariably be completed by the student to receive the degree in the programme. The Hardcore courses cannot be substituted by another courses. Students can exercise their choice among a set of Soft core courses from the list of Soft core courses specified for each Programme of study. The student should meet the criteria for prerequisites to become eligible to register for that course. The student should request for the course for every semester within the first week of semester. Maximum no of students to be registered in each course shall depend on availability of physical facilities, classroom availability and lab capacity. Registration of already requested courses by students in previous semester is not allowed.

4.2 Each course is normally assigned certain number of credits.

No. of credits per lecture period per week	1
No. of credits per tutorial period per week	1
No. of credits for 3 periods of laboratory course per week	2
No. of credits for 3 periods of project work per week	2
No. of credits for 2 weeks of field project/internship training during semester vacations	1

4.3 In every semester, the curriculum shall normally have a blend of theory courses not exceeding 6 and practical courses not exceeding 4. However, the total number of courses per semester shall not exceed 9.

4.4 The prescribed credits required for the award of the degree shall be within the limits specified below.

PROGRAMME	PRESCRIBED CREDIT RANGE
B. E./B. Tech.	160– 165

4.5 The medium of instruction for all Courses, Examinations, Seminar presentations and Project/Thesis reports is English.

4.6 Value Added Course

Besides core courses and elective courses, value added course is introduced. The blend of different courses is so designed that the student would be trained not only in his / her relevant professional field but also as a socially conscious human being.

4.7 Evaluation in the courses comprises two parts, one is the Continuous Internal Assessment (CIA) and the other one is the End Semester Examination (ESE). Evaluation in few courses may be by Internal Assessment only.

5. DURATION OF THE PROGRAMME

5.1 The prescribed duration of the programme shall be

Programme	Min. No. of semesters	Max. No. of semesters
B. E./B. Tech. (HSC Candidates)	8	14
B. E./B. Tech. (Lateral Entry Candidates)	6	12

5.2 Each semester shall normally consist of 90 working days or 540 hours.

5.3 Additional classes for improvement, conduct of model test, etc., over and above the specified periods shall be arranged, if required. But for the purpose of calculation of attendance requirement for eligibility to appear for the end semester Examinations (as per Clause 11) by the students, 540 hours conducted within the specified academic schedule alone shall be taken into account and the overall percentage of attendance shall be calculated accordingly.

6. REQUIREMENTS FOR COMPLETION OF THE SEMESTER

6.1 Ideally every student is expected to attend all classes and secure 100% attendance. However, in order to allow for certain unavoidable circumstances, the student is expected to attend at least 75% of the classes and the conduct of the candidate has been satisfactory during the course.

6.2 A candidate who has secured attendance between 65% and 74% (both included), due to medical reasons (Hospitalization / Accident / Specific Illness) or due to participation in University / District / State / National / International level sports or due to participation in Seminar / Conference / Workshop / Training Programme / Voluntary Service / Extension activities or similar programmes with prior permission from the Registrar shall be given exemption from prescribed attendance requirements and shall be permitted to appear for the Examination on the recommendation of the Head of the Department concerned and Dean to condone the lack of attendance. The Head of the Department has to verify and certify the genuineness of the case before recommending to the Dean. However, the candidate has to pay prescribed condonation fees.

6.3 Candidates who are not recommended for condonation and those who have less than 65% attendance will not be permitted to proceed to the next semester and have to redo the course. However, they are permitted to write the arrear Examinations, if any.

7. CLASS ADVISOR

To help the students in planning their courses of study and for general advice on the academic programme, the Head of the Department will attach a certain number of students to a teacher of the Department who shall function as Class Advisor for those students throughout their period of study. Such Class Advisors shall advise the students and monitor the courses undergone by the students, check the attendance and progress of the students and counsel them periodically. If necessary, the Class Advisor may display the cumulative attendance particulars in the Department notice board and also discuss with or inform the Parents/Guardian about the progress of the students. Each student shall be provided with course plan for each course at the beginning of each semester.

8. CLASS COMMITTEE

8.1. Every class shall have a class committee consisting of teachers of the class concerned, Maximum of six student representatives [boys and girls] and the concerned Head of the Department. It is like the 'Quality Circle' with the overall goal of improving the teaching-learning process. The functions of the class committee include

- Clarifying the regulations of the degree programme and the details of rules therein particularly Clause 4 and 5 which should be displayed on Department Notice-Board.
- Informing the student representatives, the details of Regulations regarding weight age used for each assessment. In the case of practical courses (laboratory / drawing / project work / seminar, etc.) the breakup of marks for each experiment / exercise /module of work, should be clearly discussed in the class committee meeting and informed to the students.
- Solving problems experienced by students in the class room and in the laboratories.
- Informing the student representatives, the academic schedule, including the dates of assessments and the syllabus coverage for each assessment.
- Analyzing the performance of the students of the class after each test and finding the ways and means of solving problems, if any.
- Identifying the weak students, if any and requesting the teachers concerned to provide some additional academic support.

8.2 The class committee for a class under a particular branch is normally constituted by the Head of the Department. However, if the students of different branches are mixed in a class (like the first semester which is generally common to all branches), the class committee is to be constituted by the Dean.

8.3 The class committee shall be constituted within the first week of each semester.

8.4 The Chairperson of the Class Committee may convene the meeting of the class committee.

8.5 The Dean may participate in any Class Committee of the Faculty.

8.6 The Chairperson is required to prepare the minutes of every meeting, submit the same to Dean through the HOD within two days of the meeting and arrange to circulate it among the students and teachers concerned. If there are some points in the minutes requiring action by the

Management, the same shall be brought to the notice of the Registrar by the HOD through Dean.

- 8.7** The first meeting of the Class Committee shall be held within one week from the date of commencement of the semester, in order to inform the students about the nature and weightage of assessments within the framework of the regulations. Two subsequent meetings may be held in a semester at suitable intervals. During these meetings the student members representing the entire class, shall meaningfully interact and express their opinions and suggestions of the other students of the class in order to improve the effectiveness of the teaching-learning process.

9. COURSE COMMITTEE FOR COMMON COURSES

Each common theory course offered to more than one discipline or group, shall have a “Course Committee” comprising all the teachers handling the common course with one of the nominated as Course Coordinator. The nomination of the Course Coordinator shall be made by the Dean depending upon whether all the teachers teaching the common course belong to a single department or to several departments. The ‘Course Committee’ shall meet to arrive at a common scheme of evaluation for the test and shall ensure a uniform evaluation of the tests. Where ever feasible, the Course Committee may also prepare a common question paper for the Internal Assessment test(s).

10. PROCEDURE FOR AWARDING MARKS FOR INTERNAL ASSESSMENT

10.1 Every teacher is required to maintain an 'ATTENDANCE AND ASSESSMENT RECORD'(Log book) which consists of attendance marked in each theory or practical or project work class, the test marks and the record of class work (topic covered), separately for each course.

10.2 Continuous Internal Assessment (CIA): The performance of students in each subject will be continuously assessed by the respective teachers as per the guidelines given below:

THEORY COURSES:

S. No.	CATEGORY	MAXIMUM MARKS
1.	Assignment	5
2.	Seminar *	5
3.	Attendance	5
4.	Test – I	8
5.	Test – II	8
6.	Test – III	9
Continuous Internal Assessment: TOTAL		40

*Evaluation shall be made by a committee.

PATTERN OF TEST QUESTION PAPER (Test I & II)

INSTRUCTION	REMARKS
Maximum Marks	60
Duration	2 Hours
Part- A	1 to 9 Two Mark Questions, uniformly covering the two units of the syllabus. All the 9 Questions are to be answered. (9 x 2 =18Marks).
Part- B	Question 10 to 12 will be of either or type, covering two units of the syllabus. Each Question may have subdivision. (3 x 14 =42 Marks).

PATTERN OF TEST QUESTION PAPER (Test III)

INSTRUCTION	REMARKS
Maximum Marks	100
Duration	3 Hours
Part - A	Part A will be online Examination. 20 Objective type Questions, Covering all the 5 units. (20 x 1= 20 Marks) (Online Examination).
Part- B	21 to 25 Two Mark Questions, uniformly covering the Five units of the syllabus. All the 5 Questions are to be answered. (5 x 2= 10Marks).
Part- C	Question 26 to 30 will be of either or type, covering Five units of the syllabus. Each Question may have subdivision. (5 x 14=70 Marks).

PRACTICAL COURSES:

S. No	CATEGORY	MAXIMUM MARKS
1.	Attendance	5
2.	Observation work	5
3.	Record work	5
4.	Model Examination	15
5.	Viva – Voce [Comprehensive]	10
Continuous Internal Assessment: TOTAL		40

Every practical exercise / experiment shall be evaluated based on the conduct of exercise/ experiment and records maintained.

INTEGRATED THEORY AND PRACTICAL COURSES:

The Continuous Internal Assessment for Integrated Theory and Practical Course is awarded for 40 Marks with mark split up similar to regular theory course. But Assignment and Seminar components are replaced by Observation and Record marks.

S.No.	CATEGORY	MAXIMUM MARKS
1.	Observation	5
2.	Record	5
3.	Attendance	5
4.	Test –I	8
5.	Test –II	8
6.	Test–III	9
Continuous Internal Assessment :TOTAL		40

The external evaluation of integrated practical component from End semester Examination by internal mode is awarded for 50 Marks and later scaled down to 15 Marks and similarly the external evaluation for integrated theory from End semester Examination is awarded for 100 Marks and later scaled down to 45 Marks. Hence the external assessment for integrated theory and practical components contribute to 60 Marks.

10.3 ATTENDANCE

Attendance carries a maximum of 5 marks and the distribution is as under:

S. No.	Attendance %	Marks
1	91 and above	5.0
2	81-90	4.0
3	76-80	3.0

10.4 PROJECT WORK/ INTERNSHIPS:

Final year project work will be always in-house. However, as a special case, if a student is able to get a project from a government organization or private or public sector company, the student may be permitted to do his/her project work in reputed institution/research organization/industry. Hence final year students may have commencement of eighth semester classes for 30 days in fast track mode and complete their final semester and are made eligible for undergoing Internships in Industry and also interested students are permitted for doing projects in Industries.

10.5 CERTIFICATION COURSES:

Students have to undergo a minimum of one value added course beyond curriculum as a certified course per semester for duration not less than 30 hours.

11. REQUIREMENTS FOR APPEARING FOR END SEMESTER EXAMINATION (ESE)

A candidate shall normally be permitted to appear for the ESE of any semester commencing from I semester if he/she has satisfied the semester completion requirements (Subject to Clause 5) and has registered for Examination in all courses of the semester. Registration is mandatory for Semester Examinations as well as arrear Examinations failing which the candidate will not be permitted to attend the next semester. A candidate already appeared for a subject in a semester and passed the Examination is not entitled to reappear in the same subject of the semester for improvement of grade.

12. END SEMESTER EXAMINATION

ESE will be held at the end of each semester for each subject, for 100 marks, later scaled down to 60 marks.

PATTERN OF ESE QUESTION PAPER:

INSTRUCTION	REMARKS
Maximum Marks	100
Duration	3 Hours
Part - A	Part A will be online Examination. 20 Objective type Questions. Covering all the 5 units. 20*1= 20 Marks (Online Examination)
Part- B	21 to 25 Two Mark Questions, uniformly covering the Five units of the syllabus. All the 5 Questions are to be answered. (5 *2= 10Marks).
Part- C	Question 26 to 30 will be of either or type, covering Five units of the syllabus. Each Question may have subdivision. (5*14=70 Marks)

13. PASSING REQUIREMENTS

13.1 Passing minimum: The passing minimum for CIA is 20 (i.e. out of 40 marks). The passing minimum for ESE is 30 (i.e. out of 60 marks). The overall passing minimum for theory/laboratory course is 50 (Sum of his/her score in CIA and ESE) out of 100 marks.

13.1.1 The passing minimum for value added course is 50 marks out of 100marks. There will be two tests, the first covering 50% of syllabus for 50 marks and the other for 50 marks.

13.2 If the candidate fails to secure a pass in a particular course ESE, it is mandatory that candidate shall register and reappear for the Examination in that course during the subsequent semester when Examination is conducted in that course. Further the candidate should continue to register and reappear for the Examination till a pass is secured in such supplementary Examination within the stipulated maximum duration of the programme (Clause 5.1).

The CIA marks obtained by the candidate in his/her first or subsequent appearance where

he/she secures a pass shall be retained by the office of the Controller of Examinations and considered valid for all remaining attempts till the candidate secures a pass in his/her ESE.

13.3 If the candidate fails to secure a pass in a particular course in CIA, it is mandatory that candidate shall register and reappear for the CIA in that course during the subsequent semester when CIA is conducted in that course by the faculty member assigned for that particular course during that semester by the concerned HOD. Further, the candidate should continue to register and reappear for the CIA till a pass is secured in such subsequent Examination within the stipulated maximum duration of the programme (Clause 5.1).

13.3.1 If a candidate fails to secure a pass in value added course, he/she has to appear for the tests when course is conducted subsequently.

13.4 ONLINE COURSE(MOOC) COORDINATOR

To help students in planning their online courses and for general advice on online courses, the HOD shall nominate a MOOC coordinator for the online courses. The Online course MOOC coordinator shall identify the courses which students can select for their programme from the available online courses offered by the different agencies periodically and inform the same to the students. Further, the coordinator shall advice the students regarding the online courses and monitor their course.

13.4.1 Student Shall study atleast one online course from Sawayam/NPTEL in anyone of the first seven semesters for which examination shall be conducted at the end of the course by the respective organization body. The student can register to the course which are approved by the department. The student shall produce a pass certificate from the respective body before the end of the seventh semester.

14. AWARD OF LETTER GRADES

14.1 All assessments of a course will be done on absolute mark basis. However, for the purpose of reporting the performance of a candidate letter grades, each carrying certain number of points will be awarded as per the range of total marks (out of 100) obtained by the candidate in each subject as detailed below:

Letter grade	Marks Range	Grade Point	Description
O	91 - 100	10	OUTSTANDING
A+	81- 90	9	EXCELLENT
A	71-80	8	VERY GOOD
B+	66- 70	7	GOOD
B	61 – 65	6	ABOVE AVERAGE
C	55 - 60	5	AVERAGE
D	50 - 54	4	PASS
RA	<50	-	REAPPEARANCE

AB		0	ABSENT
----	--	---	--------

14.2 GRADE SHEET

After results are declared, Grade sheet will be issued to each student which will contain the following details:

- The list of courses enrolled during the semester and the grade scored,
- The Grade Point Average (**GPA**) for the semester and
- The Cumulative Grade Point Average (**CGPA**) of all courses enrolled from first semester onwards.

GPA is the ratio of the sum of the products of the number of Credits (**C**) of courses enrolled and the Grade Points (**GP**) corresponding to the grades scored in those courses, taken for all the courses to the sum of the number of credits of all the courses in the semester.

$$\text{GPA} = \frac{\text{Sum of [C*GP]}}{\text{sum of c}}$$

CGPA will be calculated in a similar manner, considering all the courses enrolled from First semester. **RA** grade and value added course will be excluded for calculating **GPA** and **CGPA**.

14.3 REVALUATION

Revaluation and Re-totaling are allowed on representation. A candidate can apply for revaluation of his/her semester Examination answer paper in a theory course, within 2 weeks from the declaration of results, on payment of a prescribed fee through proper application to the Controller of Examinations through the Head of the Department and Dean. A candidate can apply for revaluation of answer scripts for not exceeding 5 subjects at a time. The Controller of Examinations will arrange for the revaluation and the results will be intimated to the candidate through the Head of the Department and Dean. Revaluation is not permitted for Supplementary Examinations, Practical Examinations, Technical Seminars, In-plant Training and Project Work.

14.4 TRANSPARENCY AND GRIEVANCE COMMITTEE

A student may get the Photostat copy of the answer script on payment of prescribed fee, if he/she wishes. The students can represent the grievance, if any, to the Grievance Committee, which consists of Dean of the Faculty, (if Dean is HOD, the Dean of another Faculty nominated by the University), HOD of the Department concerned, the faculty of the course and Dean from other discipline nominated by the University and the COE. If the Committee feels that the grievance is genuine, the script may be sent for external valuation; the marks awarded by the External Examiner will be final. The student has to pay prescribed fee for the same.

15. ELIGIBILITY FOR AWARD OF DEGREE

A student shall be declared to be eligible for award of Degree if he/she has

- Successfully gained the required number of total credits as specified in the curriculum

corresponding to his/her programme within the stipulated time.

- No disciplinary action is pending against him/her.

The award of the degree must be approved by the Board of Management of Karpagam Academy of Higher Education.

16. CLASSIFICATION OF THE DEGREE AWARDED

16.1 A candidate who qualifies for the award of the Degree (vide Clause 15) having passed the Examination in all the courses in his/her first appearance within the specified minimum number of semesters (vide Clause 5.1) securing a CGPA of not less than **8** shall be declared to have passed the Examination in First Class with Distinction.

16.2 A regular candidate or a lateral entrant is eligible to register for BE(Honors), B.Tech.(Honors). If, he / she has passed all the courses in the first appearance and holds / maintains a CGPA of 7.5 at VI Semester. He / she has to take an additional 20 credits by studying online courses through Swayam/NPTEL . Such a candidate is eligible for the award of BE (Honor), B.Tech.(Honor). However, is he / she fails in securing 20 additional credits but maintains CGPA of 7.5 and above is not eligible for Honors degree but eligible for First class with Distinction.

16.3 A candidate who qualifies for the award of the Degree (vide Clause 15) having passed the Examination in all the courses within the specified minimum number of semesters (vide Clause 5.1) plus one year (two semesters), securing CGPA of not less than **6.5** shall be declared to have passed the Examination in First Class.

16.3 All other candidates (not covered in Clauses 17.1 and 17.2) who qualify for the award of the degree (vide Clause 15) shall be declared to have passed the Examination in Second Class.

17. PROVISION FOR WITHDRAWAL FROM END-SEMESTER EXAMINATION

17.1 A candidate may for valid reasons and on prior application, be granted permission to Withdraw from appearing for the examination of any one course or consecutive examinations of more than one course in a semester examination.

17.2 Such withdrawal shall be permitted only once during the entire duration of the degree programme. Withdrawal application shall be valid only if the candidate is otherwise eligible to write the Examination

17.3 Withdrawal application is valid only if it is made within 10 days prior to the commencement of the Examination in that course or courses and recommended by the Head of the Department, Dean and approved by the Registrar.

17.3.1 Notwithstanding the requirement of mandatory TEN days notice, applications for withdrawal for special cases under extraordinary conditions may be considered on the merit of the case.

17.4 Withdrawal shall not be construed as an appearance for the eligibility of a candidate for First Class with Distinction. This provision is not applicable to those who seek withdrawal during III semester.

17.5 Withdrawal from the ESE is NOT applicable to arrear Examinations.

17.6 The candidate shall reappear for the withdrawn courses during the Examination conducted in the subsequent semester.

18. PROVISION FOR AUTHORISED BREAK OF STUDY

18.1 Break of Study shall be granted only once for valid reasons for a maximum of one year during the entire period of study of the degree programme. However, in extraordinary situation the candidate may apply for additional break of study not exceeding another one year by paying prescribed fee for break of study. If a candidate intends to temporarily discontinue the programme in the middle of the semester for valid reasons and to rejoin the programme in a subsequent year, permission may be granted based on the merits of the case provided he/she applies to the Registrar, through the Head of the Department and Dean stating reasons thereof and the probable date of rejoining the programme.

18.2 The total number of semesters for completion of the programme from the commencement of the first semester to which the candidate was admitted shall not exceed the maximum no. of semesters specified in Clause 5.1 irrespective of the period of break of study (vide Clause 18) in order that he/she may be eligible for the award of the degree (vide Clause 15). The candidate thus permitted to rejoin the programme at the commencement of the semester after the break shall be governed by the curriculum and regulations in force at the time of rejoining. Such candidates may have to do additional courses as per the curriculum and regulations in force at that period of time.

18.3 The authorized break of study (for a maximum of one year) will not be counted for the duration specified for passing all the courses for the purpose of classification (vide Clause 17). However, additional break of study granted will be counted for the purpose of classification.

18.4 The total period for completion of the programme reckoned from, the commencement of the first semester to which the candidate was admitted shall not exceed the maximum period specified in Clause 5.1 irrespective of the period of break of study (vide Clause 18.3) in order that he/she may be eligible for the award of the degree.

18.5 If any student is detained for want of requisite attendance, progress and good conduct, the period spent in that semester shall not be considered as permitted 'Withdrawal' or 'Break of Study' (Clause 18 and 18 respectively).

19. SUPPLEMENTARY ESE: After the publication of VIII semester results, if a student has **ONE** arrear in any theory course of the entire programme, he/she will be permitted to apply within 15 days of the publication of results, and appear for supplementary Examination.

20. INDUSTRIAL VISIT

Every student is required to undergo one industrial visit for every semester, starting from the third semester of the programme.

21. DISCIPLINE

Every student is required to observe discipline and decorous behavior both inside and outside the University and not to indulge in any activity which will tend to bring down the prestige of the University. The erring student will be referred to the Disciplinary Committee constituted by

the University, to enquire into acts of indiscipline and recommend to the University about the disciplinary action to be taken.

If a student indulges in malpractice in any of the ESE/CIA he/she shall be liable for punitive action as prescribed by the University from time to time.

22. REVISION OF REGULATION AND CURRICULUM

The University may from time to time revise, amend or change the Regulations, Scheme of Examinations and syllabi, if found necessary on the recommendations of Board of Studies, Academic Council and Board of Management of Karpagam Academy of Higher Education.

23.KARPAGAM INNOVATION AND INCUBATION COUNCIL (KIIC)

(A Section 8 Company)

Based on the 2019 National Innovation and Startup Policy and the 2019–2023 Tamil Nadu Startup Policy, KIIC has recommended to the KAHE students who are affiliated with the KIIC that it be incorporated in the university Program Regulations 2023-24 and implement from this academic year.

23.1 Norms to Student Start-Ups

- a) Any (UG/PG / (Ph.D.) Research scholars, student, right from the first year of their programme is allowed to set a startup (or) work part time/ full time in a startup or work as intern in a startup
- b) Any (UG/PG / (Ph.D.) Research scholars) student right from the first year of their programme is allowed to earn credit for working on Innovative prototypes/business Models/ Pre incubation (case to case basis). Start Up activities will be evaluated based on the guidelines being given by the expert committee of the KIIC
- c) Student Entrepreneurs may use the address of incubation center (KIIC) to register their venture while studying in KAHE.
- d) Students engaged in startups affiliated with the KIIC or those who work for them may be exempted from KAHE's attendance requirements for academic courses under current regulations, up to a maximum of 30% attendance per semester, including claims for ODs and medical emergencies Potential Students who have been incubated at KIIC may be permitted to take their University semester exams even if their attendance is below the minimum acceptable percentage, with the proper authorization from the head of the institution.
(On case-to-case basis depends upon the applicability strength, societal benefits and quality of the Innovation and Subsequent engagement of the students with the/ her business)
- e) Any Students Innovators/entrepreneurs are allowed to opt their startup in place mini project /major project, /seminar and summer training etc. (In plant training, Internship, value added Course.). The area in which the student wishes to launch a Startup may be interdisciplinary or multidisciplinary.
- f) Student's startups are to be evaluated by Expert committee, formed by KIIC and KAHE.

23.2 Guide lines to award Credits/ Marks to a Student startup

Student's startup stages are divided into five phases and these startup phases can be considered equally in place of the course title as mentioned below with the same credits allotted to the course title in a university curriculum.

Sl. No.	Description/Startup phases	In place of the Subject / Course title	Grades/Credits /Marks
1	Idea stage/Problem Identification	Seminar	Same Marks/Credits can be awarded that are listed in the course title's curriculum for the respective startup phases.
2	Proof of Concept (POC) /Solution development	In-plant training /Internship	
3	Product Development (Lab scale) /Prototype Model/ Company Registered	Mini Project/ Value added Course	
4	Validation/Testing	Main Project phase I	
5	Business Model/Ready for Commercialization/Implementation	Main Project phase II	

KARPAGAM ACADEMY OF HIGHER EDUCATION
(Deemed to be University)
(Established Under Section 3 of UGC Act 1956)
Accredited with A+ Grade by NAAC in the Second cycle
FACULTY OF ENGINEERING
DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING
ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

List of PEOs, POs and PSOs

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- I. To perform well in their professional career by acquiring enough knowledge in the domain of Artificial Intelligence and Data Science.
- II. To improve communication skills, follow professional ethics and involve in team work in their profession.
- III. To update with evolving technology and use it for career advancement.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

- a) **Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b) **Problem Analysis:** Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c) **Design/ Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d) **Conduct Investigations of Complex Problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e) **Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- f) **The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- g) **Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- h) **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

- i) **Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- j) **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- k) **Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- l) **Life-long Learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs):

1. The ability to apply, analyse, design and develop the application software that meet the automation needs of society and industry.
2. The ability to understand the evolutionary changes in computing, apply standard practices and strategies in software project development using open-ended programming environments to deliver a quality product for business success, real world problems and meet the challenges of the future.

COURSE OBJECTIVES

The goal of this course is for students to

- Extend the communicative competence of learners.
- Develop use language effectively in academic /work contexts
- Make use of Language skills in Reading and Writing
- Utilize language efficiently in expressing their opinions via various forms.
- Extend inter-personal communication skills.

COURSE OUTCOMES

Upon completion of this course students will be able to

- Identify new words by employing vocabulary building techniques.
- Build correct sentence structures and grammatical patterns in oral and written communication
- Construct business letters, proposals and E-Mail communication.
- Adopt the skills of planning, structuring, and delivery techniques in group discussions and presentations.
- Follow leadership, work ethics and management principles.

UNIT I VOCABULARY BUILDING**9**

Word formation process - One word Substitutes – Homophones – Homonyms – British and American vocabulary – Punctuation marks and capitalization

UNIT II FUNDAMENTALS OF ENGLISH GRAMMAR**9**

Subject –verb agreement (Concord) – If-conditionals - Modal verbs - Question types (Wh, Yes or No & Question tag), Prepositions- Articles

UNIT III LANGUAGE SKILLS (READING AND WRITING)**9**

Reading (Skimming& Scanning) - Reading Methods (SQR3) – Writing -Business Letters (Job Application Letter & Resume Preparation, sales letter, Quotation letter) – E- Mail communication & etiquettes – Business Proposals (Structure & Types)

UNIT IV PROFESSIONAL SKILLS**9**

Interview skills – Dos and Don'ts of an Interview, Group Discussion – Dos and Don'ts of GD, Presentation skills – Planning, structuring and Delivering Techniques

UNIT V INTERPERSONAL SKILLS**9**

Personality development –Conflict management, Team work, Leadership Principles, Negotiation skills

Note: Students shall have hands on training in improving Speaking skill in the language laboratory @ 2 periods per each unit.

Average	-	-	-	-	-	-	-	2	2	3	-	2.4	-	1

COURSE OBJECTIVES

The goal of this course is for students is to

- Develop the use of matrix algebra techniques that is needed by engineers for practical applications.
- Familiarize the student with the differential calculus of multivariable functions. This is needed in many branches of engineering.
- Acquaint the student with mathematical tools needed in evaluating multiple integrals.
- Make the students acquire sound knowledge in techniques of solving linear ordinary differential equations.
- Provide knowledge about the concepts of partial differential equation with constant coefficients.

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Make use of orthogonal transformation to reduce the quadratic form to canonical form.
- Utilize differential calculus of multivariable to optimization problems.
- Apply multiple integrals for finding area and volume.
- Solve the nth order Ordinary Differential Equations(ODE) and Homogeneous equation of Euler's type.
- Solve the nth order Partial Differential Equations.

UNIT I MATRICES

12

Eigenvalues and Eigenvectors of a real matrix– Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices by orthogonal transformation – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.

UNIT II DIFFERENTIAL CALCULUS OF MULTIVARIABLE FUNCTIONS

12

Partial differentiation – Homogeneous functions and Euler’s theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions –Applications: Maxima and minima of functions of two variables – Lagrange’s method of undetermined multipliers.

UNIT III MULTIPLE INTEGRALS

12

Proper and Improper integrals - Bernoulli’s extension formula – Double integrals – Change of order of integration – Double integrals in polar coordinates – Area using double integrals – Evaluation of Triple Integrals

UNIT IV ORDINARY DIFFERENTIAL EQUATIONS

12

Linear differential equation of second and higher order with constant coefficients – Euler-Cauchy linear differential equation – Method of Variation of parameters.

UNIT V PARTIAL DIFFERENTIAL EQUATIONS

12

Homogeneous linear partial differential equations of second and higher order with constant coefficients – Classification of partial differential equations.

(i) THEORY**COURSE OBJECTIVES**

The goal of this course is for students is to

- Learn the basics of Periodic properties, Intermolecular forces
- Infer the terminologies of electrochemistry and to analyze about energy storage devices
- Build the concept of corrosion and its prevention
- Summarize the basic water technology and its purification.
- Develop an understanding of the range and uses of analytical methods in chemistry

COURSE OUTCOMES:

Upon completion of this course, the student will be able to

- Analyse periodic properties of elements.
- Apply the concepts of electrochemistry in storage devices.
- Illustrate the types of corrosion and its prevention.
- Identify the quality of water and treatment methodologies.
- Explain the principles and working of spectroscopic techniques.

UNIT I PERIODIC PROPERTIES, INTERMOLECULAR FORCES**9**

Introduction to Periodic Properties- atomic and ionic sizes, ionization energies, electron affinity and electronegativity, effective nuclear charge. Penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations. Polarizability, oxidation states, coordination numbers. Ionic, dipolar and van Der Waals interactions.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICE**9**

Thermodynamic functions. Free energy and emf. Cell potentials, the Nernst equation and applications. Types of electrodes Standard Hydrogen Electrode (SHE) & Calomel. Energy storage devices Primary and secondary cells- Leclanche cell, Lead Acid Battery, Nickel Cadmium Battery, Lithium Battery Charging and discharging reactions.

UNIT III CORROSION AND ITS CONTROL

9

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion- Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings - Organic coatings-Paints - Constituents and functions Inorganic coatings- Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating - Hot dipping

UNIT IV WATER TECHNOLOGY

9

Sources-Characteristics - Specification for drinking water, BIS &WHO-Alkalinity- Types of alkalinity and determination - Hardness - Types and estimation by EDTA method - Domestic water treatment - Disinfection methods (Chlorination, Ozonation, UV treatment) - Boiler feed water - Requirements - Disadvantages of using hard water in boilers - Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) - External conditioning - Demineralization process - Desalination - Reverse osmosis.

UNIT V - SPECTROSCOPIC TECHNIQUES AND APPLICATIONS

9

Spectroscopy (Principles and Instrumentation only). Electronic spectroscopy. Vibrational and rotational spectroscopy. Applications. Surface characterization techniques Scanning electron microscope (SEM) and Transmission electron microscopy (TEM). Fluorescence and its applications in medicine

Total : 45

(ii) LABORATORY

Choice of 10 experiments from the following:

1. Determination of surface tension and viscosity
2. Determination of Sodium Carbonate and Sodium Hydrogen Carbonate in a mixture using volumetric titration
3. Determination of Ca / Mg using complexometric titration
4. Thin layer chromatography
5. Determination of chloride content of water
6. Determination of the rate constant of a reaction
7. Conductometry - Determination of cell constant and conductance of solutions
8. pH Metry - Determination of Acid / Base
9. Potentiometry - determination of redox potentials and emfs
10. Saponification/acid value of an oil
11. Determination of the partition coefficient of a substance between two immiscible

liquids

12. Adsorption of acetic acid by charcoal
13. Use of the capillary viscosimeters to demonstrate the isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg

Total : 30

Average	2.6	1.8	1.3	1	-	1	1	1	1	1	-	1	-	-

(i) THEORY**COURSE OBJECTIVES**

The goal of this course is for students to

- Impart the basic knowledge about the Electric circuits.
- Understand the concept of Electrical Machines and Transformers.
- Understand the working of Semiconductor devices and Digital Circuits.
- Impart the basic knowledge of Measuring Instruments and Electrical Installation.
- Know the fundamentals of Electrical Engineering and Practical.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

- Build the electric circuits DC and AC excitation by applying various circuit laws.
- Illustrate the basic principles, construction and working of AC, DC Motors.
- Identify the characteristics of semiconductor devices and real time application of digital circuits.
- Identify the characteristics of semiconductor devices and real time application
- Compare the types of Batteries and its application in Electric Vehicle.

UNIT I - DC CIRCUITS**9**

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff's current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin's and Norton Theorems.

UNIT II - AC CIRCUITS**9**

Representation of sinusoidal waveforms, peak and rms values, Phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three phase balanced circuits,

voltage and current relations in star and delta connections.

UNIT III - ELECTRICAL MACHINES AND TRANSFORMER

9

Construction and working of a three-phase and Single-phase induction motor. Construction, working and speed control of DC motor. Magnetic materials, BH characteristics, Construction and working principle of ideal and practical transformer.

UNIT IV- SEMICONDUCTOR DEVICES AND DIGITAL ELECTRONICS

9

Bipolar Junction Transistor – Characteristics. Introduction to operational Amplifier –Model– Applications. Number systems – binary codes - logic gates - Boolean algebra, laws & theorems

UNIT V- MEASURING INSTRUMENTS AND ELECTRICAL INSTALLATION

9

Principle, construction, and operation of moving coil and moving iron meters-Measurement of Power. Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, RCCB, MCCB. Earthing. Types of Batteries and its application in Electric Vehicle, Important Characteristics for Batteries. Elementary calculations for energy consumption and battery back up.

Total : 45

(ii)LABORATORY

COURSE OBJECTIVES

- Impart the basic knowledge about the Electric circuits.
- Observe the speed control experiments in DC motor.
- Acquire the knowledge of energy consumption measurements in single phase system.
- Observe and analyze the electrical parameters in R load
- Experiment the basic laws and logic gates.

COURSE OUTCOMES

At the end of this course, students will be able

- Getting basic practical knowledge about the Electric circuits using law.
- To observe the speed control experiments in DC motor.
- Gathered knowledge of commercial system energy calculations.
- To analysis various parameters in R load circuits.
- To verify the logic gates.

LIST OF EXPERIMENTS

1. Experimental verification of electrical circuit problems using Ohms law
2. Experimental verification of electrical circuit problems using Kirchhoff's Voltage law.
3. Experimental verification of electrical circuit problems using Kirchhoff's Current law.
4. Measurement of electrical quantities – voltage, current, power & power factor in R load.
5. Measurement of energy using single phase energy meter.
6. Speed control of DC Shunt Motor.
7. Verification of truth table of Logic Gates.

(i) THEORY**COURSE OBJECTIVES**

The goal of this course is for the students is to

- Interpret problem solving using C.
- Apply the concept of arrays and strings.
- Identify the functions of C Language.
- Apply the concept of pointers .
- Develop C Programs using user defined function and file handling.

COURSE OUTCOMES:

Upon completion of this course the students will be able to

- Apply problem solving techniques for a given problem
- Solve problems using arrays and strings.
- Build modular applications in C using functions.
- Categorize dynamic memory management operators with pointers.
- Examine sequential and random access file processing.

UNIT I INTRODUCTION**9**

An overview of computers and programming - Understanding computer systems - Programming logic - Steps in program development – Algorithm - Using pseudocode and flowchart – types of programming languages – Compiler – Interpreter – Linker - Introduction to C – Structure of C program - Identifiers and Keywords - Data types - Constants and variables - Type conversion – Operators - Expressions. Formatted and Unformatted Input/Output functions - Control structures.

UNIT II ARRAYS AND STRINGS**9**

Arrays in C - Declaring and initializing arrays in C - Defining and processing 1D and 2D arrays - Inserting and deleting elements of an array - Strings - Defining and initializing strings - Processing of string - Character arithmetic - String manipulation functions and library functions of string.

UNIT III FUNCTIONS

9

Functions - Types of Functions - Function prototypes - Function definition - Function call including passing arguments by value and passing arguments by reference - Passing arrays to functions - Math library functions - Recursive functions - Scope rules (local and global scope) - Storage classes in C.

UNIT IV POINTERS

9

Pointers - Pointer declaration and initialization - Types of pointers - Pointer expressions and arithmetic - Operations on pointers - Passing pointer to a function - Pointer and one-dimensional array - Pointers and strings – Command line arguments - Dynamic memory management functions.

UNIT V USER DEFINED TYPES AND FILE HANDLING

9

User defined types - Enumerator – Typedef - Structures - Declaration of a structure - Accessing structures - Array of Structures - Structures and pointers - Nested structures – Bit fields – Unions - Declaration of a union – Accessing unions – Union vs Structure - File Input/Output – Preprocessor directives.

Total :45

(ii) LABORATORY

LIST OF EXPERIMENTS

1. Develop a C Program to find the roots of quadratic equation for non-zero co-efficient using if-else ladder construct.
2. Develop Programs using simple control statements such as if else, while, do while. Example Extracting the digits of an integer, reversing digits, finding sum of digits
3. Develop a C Program to implement a simple calculator to perform addition, subtraction, multiplication and division operations using switch construct. Display appropriate messages for invalid operator and divide by zero error.
4. Develop C Program to generate Fibonacci sequence, calculation of factorials, printing various patterns and generate the Prime numbers between the ranges m & n using for loop.
5. Develop a C program to read n elements into an integer array, Insert and Delete element from the array. Print the input array and the resultant array with suitable messages.
6. Develop a C program to read two matrices A (m x n) and B (p x q) and compute the product of the two matrices. Print both the input matrices and resultant matrix with suitable headings and output should be in matrix format only. Program must check the compatibility of orders of the matrices for multiplication. Report appropriate message in case of incompatibility.
7. Develop a C function Program to sort the given names in Asecnding Order.

8. Develop a C program to count the vowels & consonants in a given string.
9. Develop a C Program to find the GCD of two integers using Euclid's algorithm
10. Develop a recursive C function to find the factorial of a number, $n!$, defined by $\text{fact}(n)=1$, if $n=0$. Otherwise $\text{fact}(n)=n*\text{fact}(n-1)$. Using this function, develop a C program to compute the Binomial coefficient nCr . Perform input validation as well.
11. Develop a C program to find the smallest and largest elements in an array using pointers and then swap these elements and display the resultant array.
12. Develop a C program to find the sum of all the elements of an integer array using pointers.
13. Insert, update, delete and append telephone details of an individual or a company into a telephone directory using structures and pointers

CO-PO MAPPING

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2	1	-	-	-	-	-	2	2	-	2	3	-
CO2	3	2	1	-	-	-	-	-	2	2	-	2	3	-
CO3	3	2	1	-	-	-	-	-	2	2	-	2	3	-
CO4	3	3	2	1	-	-	-	-	2	2	-	2	3	-
CO5	3	3	2	1	-	-	-	-	2	2	-	2	3	-
Average	3	2.4	1.4	1	-	-	-	-	2	2	-	2	3	-

COURSE OBJECTIVES

The goal of this course for the students is to

- Provide the basic concepts of graphs.
- Impart the knowledge of trees and its properties via various algorithms.
- Afford the adequate knowledge on matrix representation of graphs.
- Inculcate the concept of coloring and dominating sets.
- Understand the concepts and significance of lattices which are widely used in engineering fields.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Infer the basic terminologies of directed and undirected graphs.
- Illustrate the properties of trees, connectivity, fundamentals of circuits, cutset through algorithms.
- Apply matrix representation of graphs to explore spectra and energy of graphs.
- Interpret the coloring and domination of a given graph.
- Explain Lattice theory and its operations on discrete structural areas of computing.

UNIT I-GRAPHS**12**

Graphs: Directed and undirected graphs – Konigsberg bridge problem – Handshaking Theorem– Walk, Trail, Path, Circuit, Cycle, sub graphs, induced and spanning subgraphs, connected graphs, complement of a graph – Euler, Hamiltonian graphs - Isomorphism of graphs.

UNIT II TREES**12**

Trees: Properties of trees – Distance and centers in tree – Rooted and binary tree Spanning trees – Connectivity and separability – Fundamental Circuits and Cut sets – Algorithm on spanning trees: Kruskal's and Prim's Algorithm – Dijkstra's shortest path algorithm.

UNIT III MATRIX REPRESENTATION OF GRAPHS**12**

Matrix Representation of Graphs: Adjacency matrix, Incidence matrix, Circuit matrix, Fundamental

circuit matrix, Laplacian matrix, rank of these matrices and its properties – Spectra and Energy of Graphs.

UNIT IV COLORING, COVERING AND PARTITIONING

12

Coloring, Covering and Partitioning: Chromatic number – Chromatic Partitioning: Dominating set – Minimal Dominating set – Domination number- Chromatic Polynomial– Matching – Four color theorem (Statement only).

UNIT V LATTICE THEORY

12

Lattice theory: Partial ordering – Posets – Lattices as posets – Properties of lattices – Lattices as algebraic systems – Sub lattices – Direct product and homomorphism – Some special lattices.

Average	2.2	1.2	1	-	-	-	-	-	-	-	-	1	-	2

COURSE OBJECTIVES

The goal of this course for students is to

- Provide the knowledge of Vector differentiation and Integration.
- Inculcate the concepts of theories on Numbers.
- Introduce the concepts of Graphs.
- Introduce diversified methods of trees namely the algorithm on spanning trees.
- Afford the adequate knowledge of Linear Programming Problems.

COURSE OUTCOMES

Upon completion of this course, the student will be able to

- Make use of vector calculus for finding the area and volume.
- Interpret the concepts of divisibility, prime number, congruence and number theorems.
- Explain the terminology of basic graphs and its Matrix representation.
- Illustrate the properties of trees, connectivity, fundamentals of circuits, cut set through algorithms.
- Solve linear programming models by Graphical method, Simplex method and Dual simplex method.

UNIT I VECTOR CALCULUS

12

Vector differential operator – Gradient, divergence and curl – Identities (Statement only) – Directional derivatives – Irrotational and solenoidal vector fields –Conservative vector fields – Vector integration – Green’s theorem in a plane, Gauss divergence theorem and Stoke’s theorem (excluding proofs) – Simple applications involving square, rectangle, cubes and rectangular parallelepipeds.

UNIT II NUMBER THEORY

12

Divisibility – Fundamental Properties – Euclidean algorithm – Euclid’s lemma – Fundamental theorem of arithmetic – Congruence – Fermat’s Little theorem – The Fermat-Euler theorem.

UNIT III GRAPH THEORY

12

Incidence and degree – Finite and Infinite graphs – Sub graphs – Isomorphism of graphs – Walks, Paths and Circuits – Eulerian and Hamiltonian graphs – Planar graph – Matrix representation of graphs – Incidence and Adjacency matrices

UNIT IV TREES

12

Trees: Properties of trees – Distance and centers in tree – Rooted and binary tree – Spanning trees– Properties of trees – Algorithm on spanning trees – Kruskal’s algorithm.

UNIT V LINEAR PROGRAMMING PROBLEM

12

Formulation of Linear Programming Problem– Advantages and disadvantages of LPP – Algebraic solution of a LPP - Graphical method - The Simplex method - Principle of duality - Dual and primal problems - Dual Simplex method.

Average	2.4	1.4	1	-	-	-	-	-	-	-	-	1	-	1

COURSE OBJECTIVES

The goal of this course for students is to

- Make the students to understand the concept of periodic function and represent them in Fourier series.
- Make the students to understand the applications of partial differential equations.
- Acquaint the students with the concepts of Fourier transform techniques.
- Impart knowledge in Laplace transform techniques and its applications.
- Provide knowledge about solving ordinary differential equations using the Inverse Laplace transform.

COURSE OUTCOMES

Upon completion of this course, the student will be able to

- Illustrate Fourier series representation of periodic functions.
- Apply Fourier series in one dimensional heat flow and wave equation.
- Make use of Fourier transform for converting elementary functions in to frequency domain.
- Utilize Laplace Transform to convert time-domain systems into frequency-domain systems.
- Apply Inverse Laplace Transform in linear differential equations.

UNIT I FOURIER SERIES

12

Dirichlet's conditions – General Fourier series in the interval $(0,2l)$ & $(-l,l)$ – Half range sine series – Half range cosine series – Harmonic analysis.

UNIT II: APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS

12

Fourier series solution for one dimensional wave equation – Fourier series solution for one dimensional heat equation with zero end conditions.

UNIT III FOURIER TRANSFORMS

12

Fourier transform pair – Complex form of Fourier transform- Fourier sine and cosine transforms – Convolution theorem – Parseval's identity of Fourier transform.

UNIT IV LAPLACE TRANSFORM

12

Transforms of standard functions – Properties of Laplace transform – Transforms of derivatives and integrals –Initial and final value theorem – Transforms of periodic functions.

UNIT V INVERSE LAPLACE TRANSFORM

12

Inverse Laplace transforms of standard functions – Inverse Laplace transform using second shifting theorem – Method of partial fractions– Solution of ordinary differential equations with constant coefficients using Laplace transforms

Average	2.8	1.8	1	-	-	-	-	-	-	-	-	1	-	1

COURSE OBJECTIVES

The goal of this course for students is to

- Create the awareness about environmental problems among people.
- Develop an attitude of concern for the environment.
- Motivate public to participate in environment protection and improvement.
- Gain a variety of experiences and acquire a basic understanding of environment and it's associated problems.
- Relate critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Outline the ecological processes supporting the life system.
- Infer the importance of environment and impact of human activities on natural resources.
- Explain the levels and values of biodiversity and its conservation.
- Summarize the problems of environmental pollution and its control measures.
- Interpret the remediation methods for social issues and degraded environment.

UNIT I INTRODUCTION - ENVIRONMENTAL STUDIES& ECOSYSTEMS**9**

Environment Definition, Scope and importance; Ecosystem, Structure and functions of ecosystem. Energy flow, Food chains and food webs, Ecological succession. Classification of ecosystem. Forest ecosystem, Grass and Ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

UNIT II - NATURAL RESOURCES - RENEWABLE AND NON RENEWABLE RESOURCES**9**

Natural resources - Renewable and Non - Renewable resources. Land resources and land use change, Land degradation, soil erosion and desertification. Forest resources- Deforestation: Causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal populations. Water resources- Use and over-exploitation of surface and ground water, floods, droughts, conflicts over water. Use of alternate energy sources, growing energy needs, case studies. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

UNIT III - BIODIVERSITY AND ITS CONSERVATION

9

Levels of biological diversity - genetic, species and ecosystem diversity. Ecosystem and biodiversity services: Ecological, economic, social, ethical, aesthetic and Informational value. Bio-geographical classification of India. Biodiversity patterns (global, National and local levels). Hot-spots of biodiversity. India as a mega-diversity nation. Endangered and endemic species of India. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV -ENVIRONMENTAL POLLUTION

9

Definition, causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Noise pollution. Nuclear hazards and human health risks. Solid waste management and control measures of urban, industrial and e-wastes. Role of an individual in prevention of pollution. Case studies.

UNIT V - SOCIAL ISSUES AND THE ENVIRONMENT

9

Concept of sustainability and sustainable development. Water conservation -Rain water harvesting, watershed management. Climate change, global warming, ozone layer depletion, acid rain and its impacts on human communities and agriculture. Environment Laws (Environment Protection Act, Air Act, Water Act, Wildlife Protection Act, Forest Conservation Act). International agreements (Montreal and Kyoto protocols). Resettlement and rehabilitation of project affected persons. Disaster management (floods, earthquake, cyclones and landslides). Environmental Movements (Chipko, Silent valley, Bishnois of Rajasthan). Environmental ethics: Role of Indian and other religions and cultures in environmental conservation. Environmental communication and public awareness, case studies(e.g., CNG vehicles in Delhi). Human population growth: Impacts on environment, human health and welfare.

(i) THEORY**COURSE OBJECTIVES**

The goal of this course for students is to

- Understand the fundamentals of electrons flow and band structure.
- Inculcate the characteristics of electronic materials through basics.
- Divulge knowledge on the basics of semiconducting materials for diode applications.
- Understand the basics of laser and optical fiber with appropriate applications.
- Impart the basic knowledge of new semiconducting material for engineering applications.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Apply the basics of free electron theory for classification of materials.
- Identify the types of semiconductors and its carrier concentration using Hall effect.
- Utilize magnetic properties for finding B - H Curve.
- Examine the performance of light, laser and optical fibres.
- Illustrate the properties of low dimensional materials and its fabrication methods.

UNIT I ELECTRONIC THEORY OF SOLIDS**9**

Classical free electron theory, Expression for electrical conductivity – Thermal conductivity, expression - Quantum free electron theory - Fermi- Dirac distribution function - Density of states in metals and energy band diagrams, Energy bands in solids, Direct and indirect band gaps, types of electronic materials: metals, semiconductors, and insulators, Occupation probability, Fermi level, Effect of temperature on Fermi level.

UNIT II SEMICONDUCTORS**9**

Properties of semiconductor, Types: Intrinsic and extrinsic semiconductors – Intrinsic carrier concentration, Dependence of Fermi level on carrier-concentration and temperature (equilibrium carrier statistics), Carrier transport: diffusion and drift - Hall Effect – Determination of Hall coefficient - Applications

UNIT III MAGNETIC AND DIELECTRIC MATERIALS

9

Magnetic moment, magnetic dipoles - magnetic permeability and susceptibility, types of magnetic materials - Ferromagnetism, Domain Theory, Hysteresis on the basis of domains, Energy product, hysteresis loss, soft and Hard magnetic materials - Dielectric materials: Polarization, Types - dielectric loss, internal field, Clausius - Mosotti relation, dielectric breakdown.

UNIT IV LASER AND FIBER OPTICS

9

LASER: Introduction - characteristics - Einstein's co-efficients derivation Principle of laser action- population inversion- pumping methods -Types of laser - Nd: YAG, CO₂ - Applications of LASER in industry and medicine.

Fiber optics - principle- modes of propagation of light in optical fibers – numerical aperture and acceptance angle – types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram).

UNIT V NANOMATERIALS

9

Density of states in 2D, 1D and 0D (qualitatively), Practical examples of low-dimensional systems such as quantum wells, wires, and dots – Nanostructures: Fabrication technique (Chemical vapour deposition, Physical laser deposition), Properties and its applications – Carbon nanotubes: Properties and applications.

(ii) LABORATORY

COURSE OBJECTIVES

The goal of this course for students is to

- Develop basic laboratory skills and demonstrating the application of physical principles.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Ability to use modern semiconductor devices and tools, including laboratory instrumentation.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Apply the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Model the lab experiment and perform individually a wide spectrum of experiments.
- Illustrate the experimental data in various appropriate forms like tabulation, and plots.
- Examine the experimental results using the tabulated values and plotted graphs.
- Demonstrate the various experimental principles, instruments/setup, and procedure.

LIST OF EXPERIMENTS – PHYSICS (Any 7 Experiments)

1. Determination of Band gap of a semiconductor.
2. Characteristics of Photo diode.
3. Determination of Hall Coefficient and carrier type for semi-conducting Materials.
4. Carey Foster Bridge - Determination of specific resistance of a given coil of wire
5. Determination of magnetic materials using B-H Curve.
6. Determination of resistivity of four probe method.
7. Laser- Determination of the wave length of the laser using grating,

8. Optical Fiber – Determination of Numerical Apearture and Acceptance angle of the optical fiber
9. Viscosity of liquids-Determination of co-efficient of viscosity of a liquid by Poiseuille's flow.
10. Air wedge – Determination of thickness of a thin sheet/wire.

(i) THEORY**COURSE OBJECTIVES**

The goal of this course for the students is to

- Understand the principles of web design.
- Gain knowledge of HTML and its elements.
- Infer the concepts of CSS and various layouts for styling a web page.
- Develop designing interactive web pages using JavaScript.
- Learn about responsive web design using Bootstrap.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Develop interactive front-end web user interfaces using responsive web design principles.
- Experiment with HTML tags and its elements for designing static pages.
- Apply the concepts of CSS and layouts for styling web pages.
- Categorize dynamic web pages using JavaScript.
- Analyze responsive web pages using Bootstrap.

UNIT I THE ESSENTIALS OF WEB DESIGN**9**

Introduction to web design – the internet versus the web – web browsers – the design process - defining good design - web page anatomy - grid theory – balance – unity – emphasis – layouts – web trends - responsive design - screen resolutions - responsive web design principles - responsive frameworks – accessibility – site performance - modern web development tools.

UNIT II INTRODUCTION TO HTML**9**

Introduction to HTML - document structure – paragraphs – headings – lists – div – span – improving accessibility with aria – hyperlinks – adding images – table markup – forms – embedded media.

UNIT III CASCADING STYLE SHEETS

9

Introduction to CSS – units of measurement – formatting text with css3 – colours and backgrounds – padding – borders – margins – floating and positioning – CSS layout with Flexbox and Grid.

UNIT IV DYNAMIC WEB PAGES USING JAVASCRIPT

9

Introduction to JavaScript – adding JavaScript to a page – anatomy of a script – the browser object – events – DOM – polyfills – JavaScript libraries.

UNIT V RESPONSIVE WEB DESIGN USING BOOTSTRAP

9

Introduction to Bootstrap – setting up bootstrap – structuring web page using bootstrap – grid system – typography – tables – forms – images – effects – icons - components.

CO2	3	2	1	-	1	-	-	-	2	2	-	2	-	3
CO3	3	2	1	-	1	-	-	-	2	2	-	2	-	3
CO4	3	3	2	1	1	-	-	-	2	2	-	2	-	3
CO5	3	3	2	1	1	-	-	-	2	2	-	2	-	3
Average	3	2.4	1.4	1	1	-	-	-	2	2	-	2	-	3

(i) THEORY**COURSE OBJECTIVES**

The goal of this course is for the students is to

- Understand the concepts of ADTs.
- Learn linear data structures – lists, stacks, and queues.
- Interpret non-linear data structures – trees and graphs.
- Implement sorting, searching and hashing algorithms.
- Apply Tree and Graph structures to real world scenario.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Build abstract data types for linked list data structure.
- Apply the concepts of stack, queue and its applications.
- Experiment with operations on binary trees.
- Identify the traversal techniques of graphs and its applications.
- Inspect sorting, searching and hashing techniques.

UNIT I LISTS**9**

Abstract Data Types (ADTs) – Elementary Data types–List ADT – Array-based implementation – Linked list implementation – Singly linked lists – Doubly-linked lists – Circularly linked lists – Applications of lists – Polynomial ADT –Multilists–Sparse Matrices.

UNIT II STACKS AND QUEUES**9**

Stack ADT – Operations – Applications – Balancing Symbols – Evaluating arithmetic expressions- Infix to Postfix conversion – Function Calls – Queue ADT – Operations – Circular Queue – Deque – Applications of Queues.

UNIT III TREES

9

Tree ADT – Tree Traversals - Binary Tree ADT – Expression trees – Binary Search Tree ADT – AVL Trees – Red-Black Trees – Priority Queue (Heaps) – Binary Heap.

UNIT IV MULTIWAY SEARCH TREES AND GRAPHS

9

B-Tree – B+ Tree – Tries – Graph Definition – Representation of Graphs – Types of Graphs - Breadth-first traversal – Depth-first traversal — Bi-connectivity – Euler circuits – Topological Sort – Dijkstra's algorithm – Minimum Spanning Tree – Prim's algorithm – Kruskal's algorithm

UNIT V SEARCHING, SORTING AND HASHING TECHNIQUES

9

Searching – Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertion sort – Shell sort — Quick Sort – Merge Sort – Heap Sort – Radix Sort – Hashing – Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.

Total: 45

(ii) LABORATORY

LIST OF EXPERIMENTS

1. Array implementation of Stack, Queue and Circular Queue ADTs
2. Implementation of Singly Linked List
3. Linked list implementation of Stack and Linear Queue ADTs
4. Implementation of Evaluating Postfix Expressions, Infix to Postfix conversion
5. Implementation of Binary Search Trees and AVL Trees
6. Implementation of Heaps using Priority Queues
7. Implementation of Dijkstra's Algorithm
8. Implementation of Prim's Algorithm
9. Implementation of Linear Search and Binary Search
10. Implementation of Insertion Sort and Selection Sort
11. Implementation of Merge Sort and Quick Sort
12. Implementation of Open Addressing (Linear Probing and Quadratic Probing)

Average	3	2.2	1.2	1	-	-	-	-	2	2	-	2	3	-

(i) THEORY**COURSE OBJECTIVES**

The goal of this course is for the students is to

- Learn basic python language syntax, semantics and control structures.
- Apply list, tuple, set and dictionary to handle data.
- Solve the problems using functions and modules.
- Infer the object-oriented programming concepts in python.
- Interpret inheritance and exception handling in python.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Apply python control flow statements to solve problems.
- Model data structures for string, tuple, list, set, and dictionary.
- Identify Python built-in functions to write user defined functions.
- Apply object-oriented programming concepts in python.
- Analyze the concepts of exception handling to a real world scenario.

UNIT I - PYTHON FUNDAMENTALS**9**

Introduction to Python – language classification - python language syntax - keywords - identifiers - indentation - comments - input - output - escape characters – variables – operators - Control Statements.

UNIT II - DATA STRUCTURES IN PYTHON**9**

String - Mutable vs immutable types – indexing and slicing – String functions - Tuple - Tuple operations– List - List operations – List as array – List comprehension - Set - Set operations – Dictionary – Dictionary operations.

UNIT III - FUNCTIONS AND MODULES

9

Python built in functions - User defined functions - Creating function – Invoking functions – Types of function arguments – Recursion and lambda or anonymous functions - Defining, Creating and Accessing a Package, importing packages and user defined modules.

UNIT IV - CLASSES AND OBJECTS

9

Object Oriented terminologies (class, object, method, inheritance, abstraction, encapsulation, polymorphism) – UML Class diagram - access specifiers – Creating classes – Creating object – Accessing members - __init__() method - instance, static and class methods - Importance of self – Implementing encapsulation.

UNIT V - INHERITANCE, POLYMORPHISM AND EXCEPTION HANDLING

9

Implementing inheritance – Types of inheritance – Implementing Polymorphism - Method overloading – Method overriding – Operator overloading - Abstract Classes - Association and Aggregation - Errors vs exceptions – Handling exceptions – Raising exception – Creating user defined exception.

Total: 45

(ii) LABORATORY

LIST OF EXPERIMENTS

1. Programs using operators and control structures.
2. Programs using string functions.
3. Programs using tuple.
4. Programs using list.
5. Programs using set.
6. Programs using dictionary.
7. Programs using built-in functions.
8. Implementing user defined functions with various parameter options
9. Implementation of class & objects.
10. Implementation of inheritance and association.
11. Implementation of overloading and overriding.
12. Implementation of exception handling.

Total: 30

Average	3	2.2	1.2	1	-	-	-	-	2	2	-	2	-	3

COURSE OBJECTIVES

The goal of this course for the students is to

- Inculcate the concepts of theories on Numbers.
- Extend student's logical and mathematical maturity and ability to deal with abstraction.
- Synthesize methods of solving problems in summation of series and recurrence relations.
- Introduce the concept of Theoretical Distributions.
- Make the students to interpret the importance of correlation function and spectral studies.

COURSE OUTCOMES

Upon Completion of this course the students will be able to

- Interpret the concepts of divisibility, prime number, congruence and number theorem.
- Solve a given problem using propositional logic.
- Explain the concept of Mathematical induction and the fundamentals of Probability
- Infer standard distributions of random variables.
- Explain the perceptions of correlation and spectral densities.

UNIT I NUMBER THEORY**12**

Divisibility – Fundamental Properties – Euclidean algorithm – Euclid's lemma – Fundamental theorem of arithmetic – Congruence – Fermat's Little theorem (statement only) and the Chinese remainder theorem (statement only).

UNIT II PROPOSITIONAL CALCULUS**12**

Propositional Calculus: Propositions – Logical connectives - compound propositions – conditional and biconditional propositions - Truth tables - Tautologies and contradictions – contrapositive – Logical equivalences and implications – Demorgan's Laws – Normal forms – Principal conjunctive and disjunctive normal forms.

UNIT III COMBINATORICS

12

Mathematical Induction – Permutations and combinations - Recurrence Relation – Formation of Recurrence relation – Solution of recurrence relation by Generating Functions – Concept of Probability – Conditional– Theorem of Total Probability – Baye’s theorem.

UNIT IV THEORETICAL DISTRIBUTIONS

12

One dimensional Random Variables – Discrete and Continuous Random variables – Probability distribution function – Probability density function - Mathematical Expectations – Moments –. Mean and Variance – Moment generating function of Binomial, Poisson and Normal distributions

UNIT V STOCHASTIC PROCESS

12

Classification of Random Process – Discrete and Continuous cases — Auto Correlation Functions – Properties – Stationary Random processes – WSS and SSS processes – Power spectral density – properties of power spectral density – Cross-power spectral density and properties – Auto-correlation function and power spectral density of a WSS random sequence.

23BTAD301B**NUMERICAL METHODS****4H-4C****Instruction Hours/week: L:3 T:1 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for students is to

- Inculcate the basic concepts of solving algebraic and transcendental equations.
- Understand the numerical techniques of interpolation in various intervals
- Provide the knowledge of numerical differentiation and integration
- Provide the knowledge of solving ordinary differential equations numerically
- Inculcate various techniques of solving partial differential equations numerically.

COURSE OUTCOMES

Upon completion of this course, the student will be able to

- Solve the systems of linear and nonlinear equations by iterative methods.
- Make use of interpolation methods for finding the missing terms.
- Apply numerical methods for finding differentiation and integration of a given function.
- Solve ordinary differential equations using Euler's, Taylor's, Runge Kutta and Milne Thomson's method.
- Utilize implicit and explicit methods in heat and wave equations.

UNIT I SOLUTION OF EQUATIONS**12**

Regula Falsi Method - Newton Raphson method for solving algebraic and transcendental equations
Solution of system of linear equations - Gauss elimination method - Gauss Jordan method -Gauss Seidel method

UNIT II INTERPOLATION**12**

Interpolations with unequal intervals-Lagrange's interpolation -Newton's divided interpolation -
Interpolation with equal intervals-Newton's forward and backward interpolation

UNIT III NUMERICAL DIFFERENTIATION AND INTEGRATION**12**

Approximation of derivatives using Newton's forward and backward interpolation - Numerical
integration using Trapezoidal, Simpson's 1/3 and 3/8 rule

UNIT IV NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS 12

Single step method- Euler's method-Taylor's series method-Fourth order Runge – Kutta method –Multi step method-Milne's predictor corrector method

UNIT V NUMERICAL SOLUTIONS OF PARTIAL DIFFERENTIAL EQUATIONS 12

Solutions of one dimensional heat equation by Bender-Schmidt and Crank Nicholson methods – Numerical solutions of one dimensional wave equation by explicit method

Average	2.8	1.8	0.8	-	-	-	-	-	-	-	-	1	-	1

COURSE OBJECTIVES

The goal of this course for students is to

- Import the knowledge of solving system of algebraic equations.
- Provide the concept of Algebraic Structures such as Groups, Ring, Field and Vector spaces.
- Inculcate various spaces namely Null space, Row space, Column space and Range space and its matrix representations.
- Apply the concept of inner product spaces in orthogonalization.
- To afford the adequate knowledge of least square approximation, Singular Value Decomposition and Principal Component Analysis.

COURSE OUTCOMES

Upon completion of this course, the student will be able to

- Solve algebraic equations using direct and indirect methods.
- Infer the basics of vector spaces, subspaces and its properties.
- Explain the properties and matrix representation of a linear transformation.
- Interpret the inner product spaces in Gram Schmidt orthogonalization process and orthogonal projection.
- Apply Least Square Approximation, Singular Value Decomposition and Principal Component Analysis in vector spaces.

UNIT- I NUMERICAL SOLUTION OF SYSTEM OF ALGEBRAIC EQUATION**12**

Solving system of equations – Direct methods: Gauss Elimination and Gauss Jordan Methods – Inverses of Matrix by Gauss Jordan method – LU Factorizations – Iterative method: Gauss Seidel method – Power method for finding Eigen values.

UNIT - II VECTOR SPACES**12**

Algebraic Structures – Binary Operation – Semi Group, Monoid and Group – Subgroups – Rings and Fields (Concept only) – Vector Spaces – Subspaces – Linear Span – Linear Independence and dependence of vectors - Basis and Dimension.

UNIT – III LINEAR TRANSFORMATION

12

Linear Transformation – Properties of Linear Transformation — Null Space and Nullity of a matrix – Rank-Nullity theorem – Range Space – Dimension Theorem – Matrix Representation of Linear Transformation

UNIT - IV INNER PRODUCT SPACE

12

Inner Products and Norms – Inner Product Spaces – Cauchy-Schwartz inequality – Orthogonal Projection –Projection Theorem -Orthogonal Vectors – Gram- Schmidt Orthogonalization Process – Orthogonal Complement

UNIT - V POSITIVE DEFINITE MATRICES

12

Least Square Approximations – Tests for positive definite, semi definite and indefinite matrices – Positive Definite Matrices – Singular value Decomposition (SVD) – Principal Component Analysis (PCA).

COURSE OBJECTIVES

The Goal of this course for the students is to

- Understand the basic principles and organization of computer architecture.
- Impart knowledge of Instruction Level Architecture and Instruction Execution.
- Illustrate how I/O devices are accessed.
- Provide the knowledge on Instruction Level Parallelism.
- Analyze the knowledge on micro programming and advanced pipelining techniques.

COURSE OUTCOMES

Upon completion of this course the student will be able to

- Apply the functionalities of a CPU's instruction set.
- Build the hardwired and micro programmed design approach.
- Analyze the peripheral devices for 8085 microprocessor architecture.
- Infer the working of pipelining functionalities.
- Examine the control logic design for processor unit.

UNIT I INTRODUCTION

9

Functional blocks of a computer: CPU, memory, input-output subsystems, control unit. Instruction set architecture of a CPU – registers, instruction execution cycle, RTL interpretation of instructions, addressing modes, instruction set. Case study – instruction sets of some common CPUs.

Data representation: signed number representation, fixed and floating point representations, character representation. Computer arithmetic – integer addition and subtraction, ripple carry adder, carry look-ahead adder, etc. multiplication – shift-and-add, Booth multiplier, carry save multiplier, etc. Division restoring and non-restoring techniques, floating point arithmetic.

UNIT II INTRODUCTION TO X86 ARCHITECTURE

9

CPU control unit design: hardwired and micro-programmed design approaches, Case study – design of a simple hypothetical CPU. Memory system design: semiconductor memory technologies, memory organization.

UNIT III PERIPHERAL DEVICES AND THEIR CHARACTERISTICS

9

Peripheral devices, Interfaces, Modes of I/O Data Transfer, Accessing I/O Devices, Computer Architecture: I/O Processor- Interrupts – Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Controlling Device Requests, Direct Memory Access.

UNIT IV PIPELINING

9

Basic concepts of pipelining, throughput and speedup, pipeline hazards. Parallel Processors: Introduction to parallel processors, Concurrent access to memory and cache coherency. Memory organization: Memory interleaving, concept of hierarchical memory organization, cache memory, cache size vs. block size, mapping functions, replacement algorithms, write policies.

UNIT V CONTROL LOGIC DESIGN

9

Control organization – design of hardwired control –control of processor unit –PLA control. Micro-programmed control: Microinstructions –horizontal and vertical micro instructions – micro-program sequencer –micro programmed CPU organization.

(i) THEORY**COURSE OBJECTIVES**

The Goal of this course for the students is to

- Understand the basic concepts of Database Management Systems.
- Learn about the Structured Query Language (SQL) and familiar with subqueries.
- Illustrate the knowledge in control transactions.
- Enhance knowledge in normalization and system privileges.
- Adopt indexing techniques in physical DB design

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Choose databases using Entity Relationship model.
- Implement single row and group functions.
- Apply Structured Query Language (SQL) to a given application.
- Analyze control transactions for maintaining the consistency of the database.
- Inspect database repository using normalization techniques.

UNIT I INTRODUCTION TO DBMS, KEYS AND ER DIAGRAM**9**

Introduction of DBMS orientation - Data - Information - Knowledge - Need for DBMS - Database Vs File system - Keys and its importance. Data models - ER Diagram - Cardinality of Relationships - Limit the rows that are retrieved by a query - Sorting rows - Substitution variables - Use the SQL row limiting - Pattern matching.

UNIT II - FUNCTIONS AND JOINS**9**

Single row functions - Character - Number - Date - Conversion - General. Group functions - HAVING clause. Joins - Equijoins and non-equi joins - self-join - Outer joins - Generate a Cartesian product.

UNIT III - SUBQUERIES AND SET OPERATORS

9

Subqueries - Single-row and multiple-row subqueries - Subqueries in SELECT, FROM and WHERE clauses. Set operators - UNION, UNION ALL, INTERSECT AND MINUS.

UNIT IV - SCHEMA OBJECT CREATION

9

DML DDL-TCL - Control transactions - Data types - Constraints - Schema objects-Create View, Index -Sequences - Synonyms - Data dictionary views-Grant-Revoke privileges.

UNIT V - DATABASE CONCEPTS AND NORMALIZATION

9

ACID Properties - Transaction Processing - Recovery Technique - Serializability-Concurrency Control -Lock-Normalization- Functional Dependency- 1NF, 2 NF, 3 NF. BOYCE CODD and 4NF. PLSQL -Cursor and Trigger.

Total :45

(ii) LABORATORY

LIST OF EXPERIMENTS

1. Design an ER diagram for a sample database and implement it in SQL.
2. Use SQL statements to retrieve, restrict and sort data.
3. Practice using various single-row functions in SQL.
4. Perform different types of joins (equijoin, non-equijoin, self-join, outer join) on sample tables.
5. Experiment with group functions and HAVING clauses.
6. Create and use single-row and multiple-row subqueries in SQL.
7. Use set operators (UNION, UNION ALL, INTERSECT, MINUS) in SQL.
8. Practice creating and modifying schema objects in SQL, including views, indices, sequences, and synonyms.
9. Application Development-I.
10. Application Development-II.

(i) THEORY**COURSE OBJECTIVES:**

The goal of this course is for the students is to

- To understand the concepts of ADTs.
- To learn linear data structures – lists, stacks, and queues.
- To interpret non-linear data structures – trees and graphs.
- To implement sorting, searching and hashing algorithms.
- To apply Tree and Graph structures to real world scenario.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Build abstract data types for linked list data structure.
- Apply the concepts of stack, queue and its applications.
- Experiment with operations on binary trees.
- Identify the traversal techniques of graphs and its applications.
- Inspect sorting, searching and hashing techniques.

UNIT I LISTS**9**

Abstract Data Types (ADTs) – Elementary Data types–List ADT – Array-based implementation – Linked list implementation – Singly linked lists – Doubly-linked lists – Circularly linked lists – Applications of lists – Polynomial ADT –Multilists–Sparse Matrices.

UNIT II STACKS AND QUEUES**9**

Stack ADT – Operations – Applications – Balancing Symbols – Evaluating arithmetic expressions- Infix to Postfix conversion – Function Calls – Queue ADT – Operations – Circular Queue – Deque – Applications of Queues.

UNIT III TREES**9**

Tree ADT – Tree Traversals - Binary Tree ADT – Expression trees – Binary Search Tree ADT – AVL Trees –Red-Black Trees – Priority Queue (Heaps) – Binary Heap.

UNIT IV MULTIWAY SEARCH TREES AND GRAPHS

9

B-Tree – B+ Tree – Tries – Graph Definition – Representation of Graphs – Types of Graphs – Breadth-first traversal – Depth-first traversal – Bi-connectivity – Euler circuits – Topological Sort – Dijkstra's algorithm – Minimum Spanning Tree – Prim's algorithm – Kruskal's algorithm

UNIT V SEARCHING, SORTING AND HASHING TECHNIQUES

9

Searching – Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertion sort – Shell sort – Quick Sort – Merge Sort – Heap Sort – Radix Sort – Hashing – Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.

Total: 45

(ii) LABORATORY

LIST OF EXPERIMENTS

1. Array implementation of Stack, Queue and Circular Queue ADTs
2. Implementation of Singly Linked List
3. Linked list implementation of Stack and Linear Queue ADTs
4. Implementation of Evaluating Postfix Expressions, Infix to Postfix conversion
5. Implementation of Binary Search Trees and AVL Trees
6. Implementation of Heaps using Priority Queues
7. Implementation of Dijkstra's Algorithm
8. Implementation of Prim's Algorithm
9. Implementation of Linear Search and Binary Search
10. Implementation of Insertion Sort and Selection Sort
11. Implementation of Merge Sort and Quick Sort
12. Implementation of Open Addressing (Linear Probing and Quadratic Probing)

(i) THEORY**COURSE OBJECTIVES**

The goal of this course for the students is to

- Understand and apply the algorithm analysis techniques on searching and sorting algorithms.
- Illustrate different algorithm design techniques.
- Critically analyze the efficiency of graph algorithms.
- Solve programming problems using state space tree.
- Examine NP Completeness, Approximation algorithms and randomized algorithms

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Solve the basic problems with asymptotic notations.
- Apply graph traversal algorithms for a given applications.
- Experiment with dynamic programming and greedy techniques.
- Examine backtracking strategy for solving real time problems.
- Analyze the algorithmic techniques for tractable and intractable problems

UNIT I INTRODUCTION**9**

Algorithm analysis: Time and space complexity - Asymptotic Notations and its properties – Best case, Worst case and average case analysis – Recurrence relation: substitution method - Lower bounds – searching: linear search, binary search and Interpolation Search, Pattern search: The naïve string-matching algorithm - Rabin-Karp algorithm - Knuth-Morris-Pratt algorithm. Sorting: Insertion sort – heap sort

UNIT II GRAPH ALGORITHMS**9**

Graph algorithms: Representations of graphs - Graph traversal: DFS – BFS - applications - Connectivity, strong connectivity, bi-connectivity - Minimum spanning tree: Kruskal's and Prim's

algorithm- Shortest path: Bellman-Ford algorithm - Dijkstra's algorithm - Floyd-Warshall algorithm
Network flow: Flow networks - Ford-Fulkerson method – Matching: Maximum bipartite matching

UNIT III ALGORITHM DESIGN TECHNIQUES

9

Divide and Conquer methodology: Finding maximum and minimum - Merge sort - Quick sort
Dynamic programming: Elements of dynamic programming — Matrix-chain multiplication - Multi stage graph — Optimal Binary Search Trees. Greedy Technique: Elements of the greedy strategy - Activity-selection problem — Optimal Merge pattern — Huffman Trees.

UNIT IV STATE SPACE SEARCH ALGORITHMS

9

Backtracking: n-Queens problem - Hamiltonian Circuit Problem - Subset Sum Problem – Graph colouring problem Branch and Bound: Solving 15-Puzzle problem - Assignment problem - Knapsack Problem - Travelling Salesman Problem

UNIT V NP-COMPLETE AND APPROXIMATION ALGORITHM

9

Tractable and intractable problems: Polynomial time algorithms – Venn diagram representation – NP algorithms - NP-hardness and NP-completeness – Bin Packing problem - Problem reduction: TSP – 3-CNF problem. Approximation Algorithms: TSP - Randomized Algorithms: concept and application - primality testing - randomized quick sort - Finding kth smallest number

Total :45

(ii) LABORATORY

LIST OF EXPERIMENTS

1. Implement Linear Search and Binary Search. Determine the time required to search for an element. Repeat the experiment for different values of n, the number of elements in the list to be searched and plot a graph of the time taken versus n.
2. Given a text txt [0...n-1] and a pattern pat [0...m-1], write a function search (char pat [], char txt []) that prints all occurrences of pat [] in txt []. You may assume that n > m.
3. Sort a given set of elements using the Insertion sort and Heap sort methods and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n.
4. Develop a program to implement graph traversal using Breadth First Search and Depth First Search
5. From a given vertex in a weighted connected graph, develop a program to find the shortest paths to other vertices using Dijkstra's algorithm.
6. Find the minimum cost spanning tree of a given undirected graph using Prim's algorithm.
7. Implement Floyd's algorithm for the All-Pairs- Shortest-Paths problem.
8. Compute the transitive closure of a given directed graph using Warshall's algorithm.

9. Develop a program to find out the maximum and minimum numbers in a given list of n numbers using the divide and conquer technique.
10. Implement Merge sort and Quick sort methods to sort an array of elements and determine the time required to sort. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n.
11. Implement N Queens problem using Backtracking. Approximation Algorithms Randomized Algorithms
12. Implement any scheme to find the optimal solution for the Traveling Salesperson problem and then solve the same problem instance using any approximation algorithm and determine the error in the approximation.

PRE-REQUISITES: Object Oriented Programming with Python, Data Structures and Algorithms

(i)THEORY

COURSE OBJECTIVES

The goal of this course is for the students is to

- Learn the fundamental concepts of Java programming.
- Gain knowledge of inheritance in Java.
- Understand the concepts of abstraction, exception and packages in Java.
- Infer Java Collection API and Multithreading plugins.
- Implement JDBC and Lambda expression in Java.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Solve a given problem using basic object-oriented programming concepts.
- Develop Java programs using inheritance.
- Build Java programs using interface and package for complex problem.
- Analyze the collection API for given problem statement.
- Inspect an application using JDBC connections for Java programming.

UNIT I- INTRODUCTION TO JAVA

9

History of Java - Features of Java - Java Architecture - Comments - Data Types - Variables – Operators
Type Conversion and Casting - Flow Control Statements - Reading Input from keyboard, Command Line
Arguments, Using Scanner Class, Arrays - Classes and Objects - UML Class diagram - Methods -
Constructors - static variables and Methods - this Keyword - Encapsulation -Concept of Access Control.

UNIT II-- INHERITANCE

9

Inheritance, Types of Inheritance - Super and Sub Classes - super keyword - final class and methods -
Object class - Understanding Polymorphism, Types of polymorphism, Method Overloading, Constructor

Overloading, Method Overriding, Dynamic Method Dispatching - garbage collection - String class - StringBuffer class - StringBuilder class

UNIT III- DATA ABSTRACTION

9

Packages, Introduction to Packages, User-Defined Packages, Accessing Packages - Abstract classes and Methods - Interfaces - Defining an interface - implementing interfaces - extending interfaces - Multiple Inheritance Using Interfaces - Exception Handling -Errors vs Exceptions - Exception hierarchy - usage of try, catch, throw, throws and finally - built in exceptions - user defined exceptions.

UNIT IV- COLLECTION API AND MULTITHREADING

9

Introduction to wrapper classes, Predefined wrapper classes, Conversion of types , Concept of Auto boxing and unboxing - Java Collections API - Introduction to Collection - Generics - List implementations - Set implementations - Map implementations - Multithreading: Introduction to Multithreading - Process Vs Thread, Thread life cycle - Thread class, Runnable Interface - Thread creation, Thread control and priorities - Thread synchronization

UNIT V- JDBC AND LAMBDA

9

JDBC - Introduction to JDBC - Establishing connection - Executing query - Processing results - Prepared Statement - Callable Statement - Transactions - Meta-Data objects. Functional Interfaces - Predicates - Functions - Suppliers - Consumers - Lambda Expressions - Accessing local variables- Accessing class variables - Function argument in lambda expression - Sorting - Predicates and Lambda Expressions

Total :45

(THEORY & LAB)****SEMESTER-III****5H-4C****Instruction Hours/week: L:3T:0 P:2****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****PRE-REQUISITES:** Fundamental of Computers**(i) THEORY****COURSE OBJECTIVES**

The goal of this course is for the students is to

- Familiar with programming paradigms.
- Understand classes and objects.
- Understand realization of constructor and destructor.
- Know about inheritance and polymorphism concepts.
- Provide knowledge about pointers and exception handling.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Illustrate the object oriented concepts and control structures.
- Build C++ program using classes and objects.
- Develop program using inheritance and interfaces.
- Analyze multithreading and exception handling for real time applications.
- Categorize C++ program to handle input and output streams.

UNIT I INTRODUCTION**9**

Introduction: Programming paradigms – Procedural programming – Modular programming – Object oriented programming – Basic concepts of OOPS – Procedure versus object oriented programming – Applications of C++

UNIT II BASIC I/O OPERATIONS**9**

Tokens – Keywords – Identifiers – Variables – Constants – Data types – Operators – Control structures – Basic I/O operations. Classes and Objects: Classes – Access specifiers – Objects – Scope resolution operator – Data and member functions – Objects and instances – Static class members – Default arguments – Constant objects – Array of objects – Constant member functions

UNIT III CONSTRUCTORS AND DESTRUCTORS**9**

Constructors and Destructors: Constructors – Types of constructors – Overloaded Constructors – Destructors – Overloading: Functions – Call by value – Call by reference – Call by address – Inline

functions – Friend functions – Friend classes – Overloading – Function overloading – Operator overloading – Operator overriding.

UNIT IV INHERITANCE

9

Inheritance: Introduction – Base and Derived classes – Accessibility modes and inheritances –Types of inheritance – Single – Multiple – Multilevel – Hybrid – Hierarchical inheritances – Threading – Constructors in Base and Derived classes – Abstract class – Wrapper classes. Pointers and Exception handling: Pointers –

UNIT V DYNAMIC MEMORY ALLOCATION

9

Dynamic memory allocation – Array of pointer to base class objects – Polymorphism – Compile time and runtime – Static and dynamic binding – Virtual functions – Need for Virtual functions – Exception handling – Try-catch – Throw – Multiple catch statements – Uncaught exceptions – Templates – File concepts – Threading.

Total:45

Average	2.8	2.2	1.5	1	-	-	-	-	2	2	-	2	-	3

COURSE OBJECTIVES

The goal of this course For students is to

- Understand the concept of statistical tools and apply in engineering.
- Understand various statistical techniques from both applied and theoretical points of view.
- Provide the concept of linear programming problem and its various solution procedures.
- Impart the knowledge of transportation and assignment models.
- Afford the adequate knowledge on networking models and game theory.

COURSE OUTCOMES

Upon completion of this course, the student will be able to

- Explain the concept of measures of central tendency and measures of dispersion.
- Apply small and large sample tests in testing of hypothesis.
- Make use of Graphical method, Simplex method and Dual simplex method in linear programming models.
- Interpret solutions for transportation and assignment problems
- Solve network models, $2 \times n$ and $m \times 2$ games with and without saddle point.

UNIT I DESCRIPTIVE STATISTICS

12

Measures of central tendency – Mean, median, mode, geometric mean and harmonic mean – Dispersions – Range, mean deviation, variance, standard deviation, coefficient of variation – Relative measures – Coefficient of correlation – Pearson's correlation coefficient – Lines of regression.

UNIT II SAMPLING THEORY

12

Test of hypothesis – Large sample tests based on normal distribution – Test for single mean – Difference between means – Proportion – Difference between proportion – Small sample test – Student-t test – Test for single mean – Difference between means – Snedecor's F test – Chi-square test for goodness of fit, independence of attributes.

UNIT III LINEAR PROGRAMMING PROBLEM

12

Advantages and disadvantages of LP - Formulation of LP - Algebraic solution of a LP - Graphical method - The simplex method - Principle of duality - Dual and primal problems - Dual simplex method.

UNIT IV TRANSPORTATION AND ASSIGNMENT MODELS

12

Initial basic feasible solution - North west corner rule, row-minima, column minima, matrix minima and Vogel's approximation methods - MODI method for finding optimum solution - Unbalanced transportation problems – Assignment Model - Initial basic feasible solution - Hungarian algorithm - Unbalanced Assignment Problem - Maximization in assignment problems.

UNIT V NETWORK MODELS AND GAME THEORY

12

CPM & PERT techniques - Critical path method - PERT approach - Expected length of a project - Probability of project completion by due date - Game theory – Pay-off matrix - Pure strategies: Games with saddle point - The rules of dominance - mixed strategies: Games without saddle point - Solution of $2 \times n$ and $m \times 2$ games.

COURSE OBJECTIVES

The goal of this course for the students is to

- Provide the required fundamental concepts of probability theory and Random variables.
- Introduce the concept of Theoretical Distributions.
- Impart the knowledge of Measures of Central tendencies, Dispersions
- Impart the knowledge of Correlation and Regression
- Inculcate the knowledge of testing of hypothesis using small and large sampling tests.

COURSE OUTCOMES

Upon Completion of this course the students will be able to

- Infer the fundamentals of probability and random variables.
- Explain standard distributions of random variables.
- Make use of statistical data for finding the measures of central tendency and measures of dispersion.
- Interpret the data using correlation and regression.
- Apply small and large sample tests in testing of hypothesis.

UNIT I PROBABILITY AND RANDOM VARIABLES**12**

Concept of Probability – Addition and multiplication laws – Conditional probability – Total Probability – Baye's theorem and its applications – One dimensional Random Variables (Discrete and Continuous) – Mathematical Expectation.

UNIT II THEORETICAL DISTRIBUTIONS**12**

Discrete distributions – Binomial, Poisson, Geometric Distributions – Continuous distributions – Uniform, Exponential and Normal Distributions.

UNIT III DESCRIPTIVE STATISTICS**12**

Measures of Central Tendency – Mean, Median, Mode – Measures of Dispersion – Mean deviation – Standard deviation – Coefficient of variation.

UNIT IV CORRELATION AND REGRESSION

12

Correlation – Pearson’s Correlation coefficient – Spearman’s Rank correlation coefficient – Regression –Regression lines- Linear, Multiple Regression- Logistic Regression - Polynomial Regression.

UNIT V TESTING OF HYPOTHESIS

12

Large sample tests based on normal distribution – Test for single mean – Difference between means – Proportion – Difference between proportions – Small sample test – Student-t test – Test for single mean – Difference between means – Snedecor’s F test – Chi-square test for goodness of fit, independence of attributes.

COURSE OBJECTIVES:

The goal of this course is for the students :

- Understand the various characteristics of Intelligent agents
- Learn the different search strategies in AI
- Represent knowledge in solving AI problems
- Analyse the different ways of designing software agents
- Know about the various applications of AI

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Outline problem solving approaches for AI based problems
- Classify problem solving methods based on local search algorithms and optimization problems
- Apply first order and predicate logic for a given problem.
- Analyze the performance of Intelligent Agents.
- Categorize applications for NLP in Artificial Intelligence.

UNIT I INTRODUCTION**9**

Introduction–Definition - Future of Artificial Intelligence – Characteristics of Intelligent Agents– Typical Intelligent Agents – Problem Solving Approach to Typical AI problems.

UNIT II PROBLEM-SOLVING METHODS**9**

Problem solving Methods - Search Strategies- Uninformed - Informed - Heuristics - Local Search Algorithms and Optimization Problems - Searching with Partial Observations - Constraint Satisfaction Problems – Constraint Propagation - Backtracking Search - Game Playing - Optimal Decisions in Games – Alpha - Beta Pruning - Stochastic Games.

UNIT III KNOWLEDGE REPRESENTATION**9**

First Order Predicate Logic – Prolog Programming – Unification – Forward Chaining-Backward Chaining – Resolution – Knowledge Representation - Ontological Engineering-Categories and

Objects – Events - Mental Events and Mental Objects - Reasoning Systems for Categories - Reasoning with Default Information.

UNIT IV SOFTWARE AGENTS

9

Architecture for Intelligent Agents – Agent communication – Negotiation and Bargaining – Argumentation among Agents – Trust and Reputation in Multi-agent systems.

UNIT V APPLICATIONS

9

AI applications – Language Models – Information Retrieval- Information Extraction – Natural Language Processing - Machine Translation – Speech Recognition – Robot – Hardware – Perception – Planning – Moving.

(THEORY & LAB)****SEMESTER-IV****5H-4C****Instruction Hours/week: L: 3 T:0 P:2****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****(i) THEORY****COURSE OBJECTIVES**

The goal of this course for the students is to

- Learn the basic concepts of operating systems.
- Understand the concepts of scheduling techniques.
- Infer different memory management techniques.
- Familiarize with the important mechanisms in file systems.
- Appreciate the emerging trends in memory management and networking.

COURSE OUTCOMES

Upon Completion of this course the students will be able to

- Outline the basic services and functionalities of operating systems.
- Experiment with pre-emptive and non-preemptive scheduling algorithms.
- Identify memory management techniques in operating system
- Analyze the functionality of file systems.
- Compare Linux and Windows operating systems.

UNIT I OPERATING SYSTEM OVERVIEW**9**

Operating system structure – Operations – Process – Memory – Storage management – Protection and security – Distributed systems – Computing Environments – Open source operating systems – OS services – User operating system interface – System calls – Types – System programs – OS structure – OS generation – System boot – Process concept – Scheduling – Operations on processes – Cooperating processes – Inter process communication – Examples – Multithreading models – Thread libraries – Threading issues – OS examples.

UNIT II SCHEDULING AND DEADLOCK**9**

Basic concepts – Scheduling criteria – Scheduling algorithms – Thread scheduling – Multiple processor scheduling – Operating system examples – Algorithm evaluation – The critical section problem – Peterson's solution – Synchronization hardware – Semaphores – Classic problems of synchronization – Critical regions – Monitors – Synchronization examples – Deadlocks – System model – Deadlock characterization – Methods for handling deadlocks – Deadlock Prevention – Deadlock avoidance – Deadlock detection – Recovery from deadlock

UNIT III MEMORY MANAGEMENT

9

Memory management – Swapping – Contiguous memory allocation – Paging – Segmentation – Example: The Intel Pentium – Virtual memory: Background – Demand paging – Copy on write – Page replacement – Allocation of frames – Thrashing.

UNIT IV FILE SYSTEMS

9

File concept – Access methods – Directory structure – File system mounting – Protection – Directory implementation – Allocation methods – Free space management – Disk scheduling – Disk management – Swap space management – Protection.

UNIT V THE LINUX AND WINDOWS SYSTEM

9

The Linux system – History – Design principles – Kernel modules – Process management – Scheduling – Memory management – File systems – Input and output – Inter process communication – Network structure – Security – Windows 7 – History – Design principles – System components – Terminal services and fast user – File system – Networking.

Total:45

(ii) LABORATORY

LIST OF EXPERIMENTS

1. Basic UNIX commands.
2. Shell Programming.
3. File system related system calls. (Learn to create, open, read, write, seek into, close files; open, read, write, search, close directories).
4. Process management – Fork, Exec (Learn to create a new process and to overlay an executable binary image on an existing process).
5. Inter-process communication between related processes using pipes.
6. Inter-process communication among unrelated processes using message queues.
7. CPU scheduling algorithms.
8. Contiguous memory allocation strategies – best fit, first fit and worst fit strategies.
9. Page replacement algorithms.

Pre requisites: Java Programming

i)THEORY

COURSE OBJECTIVES

The goal of this course is for the students is to

- Understand the concepts of Servlet API.
- Gain knowledge of JSP and its tags.
- Illustrate the concepts of Hibernate for interacting with database.
- Understand Spring container, Modules, Dependency Injection and aspect-oriented programming.
- Understand how to design and develop application using Spring Boot

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Apply web based applications using Servlet.
- Build user interface for web applications using JSP and JDBC.
- Make use of object relation mapping with hibernate query language to interact with relational databases.
- Analyze web based applications using Spring MVC.
- Examine web based applications using Spring Boot.

UNIT I - SERVLET API

9

Introduction to MVC - Features of MVC - Components of MVC. Servlet Introduction, Servlet Life Cycle, Types of Servlet, Servlet Configuration with Deployment Descriptor, Working with ServletContext and ServletConfig Object, Attributes in Servlet, Response and Redirection using Request Dispatcher, sendRedirect Method, Session Tracking: using Cookies, HttpSession Performing CRUD (Create,Read,Update,Delete) operation using Servlet with JDBC

UNIT II - JSP API

9

Introduction to JSP, Comparison with Servlet, JSP Architecture, JSP: Life Cycle, Scripting Elements, Directives, Action Tags, Implicit Objects, Java Beans in JSP, Expression Language (EL),

JSP Standard Tag Libraries (JSTL) Core Tags, Session Management, Exception Handling, CRUD Application.

UNIT III - HIBERNATE API

9

Introduction to Hibernate, Exploring Architecture of Hibernate, Object Relation Mapping (ORM) with Hibernate, Hibernate Annotation, Querying in Hibernate - Hibernate Query Language (HQL) - Criteria Queries - Create queries with Native SQL, Basic O/R Mapping - Collection Mapping - Association Mappings - CRUD Operation using Hibernate API

UNIT IV SPRING MVC

9

Spring: Introduction, Architecture, Spring MVC Module, Life Cycle of Bean Factory, Constructor Injection, Dependency Injection, Inner Beans, Aliases in Bean, Bean Scopes, Spring Annotations, Spring AOP Module, Spring DAO, Database Transaction Management, CRUD Operation using DAO and Spring API. Build Tools – Maven and Gradle, pom.xml and build.gradle, building application using Maven and Gradle

UNIT V - SPRING BOOT

9

Introduction to Spring Boot - Spring Vs. Spring Boot - Internals of Spring Boot - Spring Boot Application Creation - Spring Boot Auto Configuration - Spring Boot Annotations - Spring Data JPA Introduction - Crud Repository and JPA Repository Methods in JPA - Custom Queries in JPA - Spring Boot Profiles - Spring Web MVC - Thymeleaf – Spring boot application with CRUD operation.

Total : 45

(ii) LABORATORY

LIST OF EXPERIMENTS:

1. Developing web application using Servlets
2. Design an application using Servlet and JDBC
3. Developing application using JSP.
4. Design an application using JSP and JDBC
5. Developing application using Hibernate Annotations
6. Developing application using Hibernate Collection Mapping
7. Developing application using Association Mapping in Hibernate.
8. Developing application using spring MVC.
9. Developing application using Spring MVC with database
10. Building application using Maven and Gradle
11. Developing application using Spring Boot
12. Developing application using Spring Boot application with JPA Repositories

i) THEORY**COURSE OBJECTIVES**

The goal of this course is for the students is to

- Identify the key components of no-code development and explain their applications.
- Demonstrate the ability to use various no-code platforms and tools to create and publish applications.
- Analyze data using machine learning tools and present results in a meaningful way.
- Create voice applications and bots that integrate with external services to enhance functionality.
- Develop basic UI/UX design skills to create and design effective and aesthetically pleasing applications.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Illustrate low-code tools in web scraping
- Build low-code platforms applications with Zapier, voice flow and Figma.
- Experiment with the machine learning algorithm.
- Categorize voice based applications using voice API
- Analyze UI/UX design for Figma application.

UNIT I – WEB SCRAPING AND API PARABOLA WITH NO CODE**9**

No-Code Stacks_No-Code Fundamentals. Web Scraping : Scrape Data From Websites_ Initial Scraper Setup_ Defining our data_ Using our Scraped Data. Work With APIs : Filtering Data_ Numerical Formatting_ Exporting Data _ Publishing

UNIT II - BUILD AUTOMATIONS AND CREATE BOTS WITH NO CODE**9**

Automations using Zapier : Introduction _ Connecting Google sheets _ Connecting twitter_ Publishing Zapier Automation . Bots : Configuring Slack _ Creating First bot using slack _

Including conditional and helper functions _ Connecting Giphy _Connecting slack to bot _ Publishing our bot.

UNIT III - DATA SCIENCE

9

Introduction to Data science: Data flow_ Machine learning . Obviously AI : Introduction_ Sourcing our data_ Uploading our data_ Analyze our data _ Publish using Obviously AI.

UNIT IV - VOICE APP

9

Voice App: Introduction_Voice Flow_Initialsetup_Create the launch sequence for voice application_ Querying the user_ Calling API for data_ Returning Data to the user_ Testing the application_ Publish the voice app.

UNIT V – UI / UX DESIGN FOR APPLICATION

9

UI/UX: Introduction_ Business Use case_ Tools.Figma :Introduction_ Filessetup_ Placing Images_ Add logo to the Frame_ Body copy_ Building Forms_ Profile Image_ Proportions_ Project.

Total : 45

(i) LABORATORY

LIST OF EXPERIMENTS

1. Installation of Knime framework in windows operating system.
2. Implement a Knime workflow or architecture to clean a dataset to preprocess the data.
3. Implement a Knime workflow to narrate instances of confusion matrix, accuracy, precision, sensitivity, specificity
4. Implement a Knime workflow or architecture to execute KNN framework on any medical realtime dataset.
5. Implement a Knime workflow or architecture to execute Decision Tree framework on any online shopping dataset.
6. Implement a Knime workflow or architecture to execute Random Forest framework on any realtime dataset.
7. Implement a Knime workflow or architecture to execute SVM framework on any realtime dataset Simulation of patient flows in hospitals to optimize resource allocation and reduce waiting times.
8. Simulation capabilities to model and spread of information or influence within the network.

9. Eliminate Stop words that do not carry significant meaning in a given language (e.g., "the," "is," "and").
10. Sentiment analysis techniques to analyze player sentiment and feedback.
11. Train regression model and evaluate its performance using various metrics for traffic flow and transportation systems.
12. Simulate virtual experiments for designing and evaluating smart city technologies and initiatives.

PRE-REQUISITES: Data Structures and Design Analysis of Algorithms

(i) THEORY

COURSE OBJECTIVES:

The goal of this course for the students is to

- learn programming and mathematical backgrounds for design and analysis of algorithm.
- Study the concept of designing an algorithm.
- Have a complete understanding of the various advanced data structures.
- Implement advanced algorithms using appropriate design techniques.
- Inculcate advanced graph algorithms and applications.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Explain data structures and mathematical background in programming.
- Solve problems using hungarian algorithm.
- Compare backtracking techniques with branch and bound techniques.
- Examine Eulerian and Hamiltonian paths in graphs
- Analyze searching and pattern matching algorithms.

UNIT I PROGRAMMING LANGUAGE BACKGROUNDS

9

Programming language backgrounds: STL in C++ – Data structures support in python. Mathematical backgrounds: Logarithmic exponentiation – Efficient prime factorization – Combinatorics – Sieve of Eratosthenes–Geometry–Co-ordinate compression–Binomial coefficients–Euclid's extended algorithm – Line intersections

UNIT II ADVANCED AGORITHMS

9

Probability – Modular multiplicative inverse – Matrix exponentiation –Millerrabin primality test– Heavy light decomposition–Convex hull –Hungarian algorithm –Sweep line algorithm – Gaussian algorithm – Pollard rho factorization – Euler's totient function –Burnside lemma.

UNIT III DYNAMIC PROGRAMMING

9

Recursion – Dynamic programming – Backtracking – Branch and bound – Suffix automata – Game theory – Meet in the middle – Arbitrary precision integer – Square root decomposition. Knapsack problem – Stable marriage problem – N-queen problems – Tug of wars – Sudoku problem. Advanced Trees: Binary indexed tree – Segment tree – Lowest common ancestors – Counting inversions – Suffix tree – Interval tree – Sparse table – K-Dtree – Treap – Link/cut tree

UNIT IV GRAPH ALGORITHMS

9

Advanced Graph Algorithms: Union find/disjoint set – Cycle detection – Bellman ford – Maxflow – Ford-fulkerson – Edmonds karp algorithm – Min cut – min cost flow – Dinic's algorithm – Maximum bipartite matching – Topological sorting – Eulerian and Hamiltonian paths – Graph coloring – Blossom's algorithm – Jarvis algorithm – Graham Scan – Johnson's algorithm.

UNIT V SEARCHING AND PATTERN MATCHING

9

Searching and pattern matching: Rabin-karp algorithm – Z-algorithm – Aho-corasick string matching algorithm – Manacher's algorithm – Kasai's algorithm – Levenshtein distance. Sorting: Quick select.

Total : 45

(ii) LABORATORY

LIST OF EXPERIMENTS:

1. Programs to solve problems using STL.
2. Programs to solve geometric problems.
3. Programs on Convex-Hull optimization.
4. Programs on dynamic programming.
5. Programs involves backtracking methods.
6. Programs involve segment tree.
7. Implementation of k-d Tree.
8. Implementation of finding lowest common ancestors.
9. Program on detecting cycle in a graph.
10. Programs involve topological sorting.
11. Implementation of graph coloring.
12. Implementation of pattern matching algorithms.

PRE-REQUISITES: Data Structures and Algorithms

(iii) THEORY

COURSE OBJECTIVES

The goal of this course for the students is to

- To understand and apply the algorithm analysis techniques on searching and sorting algorithms.
- To illustrate different algorithm design techniques.
- To critically analyze the efficiency of graph algorithms.
- To solve programming problems using state space tree.
- To examine NP Completeness, Approximation algorithms and randomized algorithms.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Solve the basic problems with asymptotic notations.
- Apply graph traversal algorithms for a given applications.
- Experiment with dynamic programming and greedy techniques.
- Examine backtracking strategy for solving real time problems.
- Analyze the algorithmic techniques for tractable and intractable problems

UNIT I INTRODUCTION

9

Algorithm analysis: Time and space complexity - Asymptotic Notations and its properties – Best case, Worst case and average case analysis – Recurrence relation: substitution method - Lower bounds – searching: linear search, binary search and Interpolation Search, Pattern search: The naïve string-matching algorithm - Rabin-Karp algorithm - Knuth-Morris-Pratt algorithm. Sorting: Insertion sort – heap sort

UNIT II GRAPH ALGORITHMS

9

Graph algorithms: Representations of graphs - Graph traversal: DFS – BFS - applications - Connectivity, strong connectivity, bi-connectivity - Minimum spanning tree: Kruskal's and Prim's algorithm- Shortest path: Bellman-Ford algorithm - Dijkstra's algorithm - Floyd-Warshall algorithm Network flow: Flow networks - Ford-Fulkerson method – Matching: Maximum bipartite matching

UNIT III ALGORITHM DESIGN TECHNIQUES

9

Divide and Conquer methodology: Finding maximum and minimum - Merge sort - Quick sort
Dynamic programming: Elements of dynamic programming — Matrix-chain multiplication - Multi stage graph — Optimal Binary Search Trees. Greedy Technique: Elements of the greedy strategy - Activity-selection problem — Optimal Merge pattern — Huffman Trees.

UNIT IV STATE SPACE SEARCH ALGORITHMS

9

Backtracking: n-Queens problem - Hamiltonian Circuit Problem - Subset Sum Problem – Graph colouring problem Branch and Bound: Solving 15-Puzzle problem - Assignment problem - Knapsack Problem - Travelling Salesman Problem

UNIT V NP-COMPLETE AND APPROXIMATION ALGORITHM

9

Tractable and intractable problems: Polynomial time algorithms – Venn diagram representation – NP algorithms - NP-hardness and NP-completeness – Bin Packing problem - Problem reduction: TSP – 3-CNF problem. Approximation Algorithms: TSP - Randomized Algorithms: concept and application - primality testing - randomized quick sort - Finding kth smallest number

(iv) LABORATORY

LIST OF EXPERIMENTS:

1. Implement Linear Search and Binary Search. Determine the time required to search for an element. Repeat the experiment for different values of n, the number of elements in the list to be searched and plot a graph of the time taken versus n.
2. Given a text txt [0...n-1] and a pattern pat [0...m-1], write a function search (char pat [], char txt []) that prints all occurrences of pat [] in txt []. You may assume that $n > m$.
3. Sort a given set of elements using the Insertion sort and Heap sort methods and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n.
4. Develop a program to implement graph traversal using Breadth First Search and Depth First Search
5. From a given vertex in a weighted connected graph, develop a program to find the shortest paths to other vertices using Dijkstra's algorithm.
6. Find the minimum cost spanning tree of a given undirected graph using Prim's algorithm.
7. Implement Floyd's algorithm for the All-Pairs- Shortest-Paths problem.
8. Compute the transitive closure of a given directed graph using Warshall's algorithm.
9. Develop a program to find out the maximum and minimum numbers in a given list of n numbers using the divide and conquer technique.
10. Implement Merge sort and Quick sort methods to sort an array of elements and determine the time required to sort. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n.
11. Implement N Queens problem using Backtracking. Approximation Algorithms Randomized Algorithms
12. Implement any scheme to find the optimal solution for the Traveling Salesperson problem and then solve the same problem instance using any approximation algorithm and determine the error in the approximation.

COURSE OBJECTIVES

The goal of this course is for the students is

- To develop a formal notation for strings, languages and machines.
- To understand finite automata concepts and to design finite automata to accept a set of strings of a language.
- To Understand and apply context free grammars to generate strings.
- To identify the hierarchy of formal languages, grammars and machines.
- To analyze Turing machines and their capability
- To Distinguish between computability and non-computability and Decidability and Undesirability.

COURSE OUTCOMES

Upon completion of the course the student will be able to

- Build a finite automaton for a deterministic and non-deterministic finite automata
- Apply concepts of context free grammars to resolve the real-time problems.
- Analyze closure properties, and its role in the theory of computation.
- Analyze the computational capabilities of Turing machines.
- Compare decidability and undecidability for a given language.

UNIT I INTRODUCTION TO FINITE AUTOMATA**9**

Introduction to Finite Automata:Structural Representations, Automata and Complexity, the Central Concepts of Automata Theory – Alphabets, Strings, Languages, Problems. Nondeterministic Finite Automata:Formal Definition, an application, Text Search, Finite Automata with Epsilon-Transitions.Deterministic Finite Automata:Definition of DFA, How A DFA Process Strings, The language of DFA, Conversion of NFA with ϵ -transitions to NFA without ϵ -transitions. Conversion of NFA to DFA, Moore and Melay machines

UNIT II REGULAR EXPRESSIONS**9**

Regular Expressions:Finite Automata and Regular Expressions, Applications of Regular Expressions, Algebraic Laws for Regular Expressions, Conversion of Finite Automata to Regular expressions. Pumping Lemma for Regular Languages,Statement of the pumping lemma, Applications of the Pumping Lemma. Closure Properties of Regular Languages:Closure properties

of Regular languages, Decision Properties of Regular Languages, Equivalence and Minimization of Automata.

UNIT III CONTEXT-FREE GRAMMARS

9

Context-Free Grammars: Definition of Context-Free Grammars, Derivations Using a Grammar, Leftmost and Rightmost Derivations, the Language of a Grammar, Sentential Forms, Parse Tree, Applications of Context-Free Grammars, Ambiguity in Grammars and Languages. Push Down Automata: Definition of the Pushdown Automaton, the Languages of a PDA, Equivalence of PDA's and CFG's, Acceptance by final state, Acceptance by empty stack, Deterministic Pushdown Automata. From CFG to PDA, From PDA to CFG.

UNIT IV NORMAL FORMS FOR CONTEXT- FREE GRAMMARS

9

Normal Forms for Context- Free Grammars: Eliminating useless symbols, Eliminating ϵ -Productions. Chomsky Normal form, Greibach Normal form. Pumping Lemma for Context-Free Languages: Statement of pumping lemma, Applications. Closure Properties of Context-Free languages: Closure properties of CFL's, Decision Properties of CFL's

UNIT V TURING MACHINE

9

Turing Machines: Introduction to Turing Machine, Formal Description, Instantaneous description, The language of a Turing machine. Types of Turing machine: Turing machines and halting. Undecidability: Undecidability, A Language that is Not Recursively Enumerable, An Undecidable Problem That is RE, Undecidable Problems about Turing Machines, Recursive languages, Properties of recursive languages, Post's Correspondence Problem, Modified Post Correspondence problem, Other Undecidable Problems, Counter machines..

Total : 45

TEXT BOOKS

1. Introduction to Automata Theory, Languages, and Computation, 3rd Edition, John E. Hopcroft, Rajeev Motwani, Jeffrey D. Ullman, Pearson Education, 2008.
2. Theory of Computer Science – Automata languages and computation, Mishra and Chandrashekar, 2nd edition, PHI, 2008.

REFERENCE BOOKS

1. Introduction to Languages and The Theory of Computation, John C Martin, TMH, 2006.
2. Introduction to Computer Theory, Daniel I.A. Cohen, John Wiley.
3. A Text book on Automata Theory, P. K. Srimani, Nasir S. F. B, Cambridge University Press, 2011
4. Introduction to the Theory of Computation, Michael Sipser, 3rd edition, Cengage Learning, 2013

5. Introduction to Formal languages Automata Theory and Computation, Kamala Krithivasan, Rama R, Pearson,2009.

CO5	3	3	2	1	-	-	-	-	1	1	-	1	2	-
Average	3	2.6	1.6	1	-	-	-	-	1	1	-	1	2	-

(i) THEORY**COURSE OBJECTIVES**

The goal of this course is for the students is to

- Outline the fundamental concepts, technologies, and protocols used in computer networks
- Gain knowledge in network design, implementation, and management
- Identify the problems related to network performance and security
- Understand about the principles of data transmission, routing, and switching
- Implement network architecture, including local area networks (LANs), wide area networks (WANs), and internet protocols (IP)

COURSE OUTCOMES

Upon completion of the course, the students will be able to

- Infer the layered architecture of computer networks functionalities.
- Apply error detection techniques in the data link layer.
- Examine the process of transition mechanisms from IPv4 to IPv6.
- Analyze networking protocols in real-world problems.
- Inspect security architectures for protecting common network attacks.

UNIT I – INTRODUCTION**9**

Introduction – history and development of computer networks – Networks topologies – Layering and protocols. Physical Layer: Different types of transmission media – errors in transmission – attenuation – noise. Repeaters – Encoding – NRZ, NRZI, Manchester, 4B/5B MAC Layer: Aloha, CSMA, CSMA/CD, CSMA/CA protocols. Examples: Ethernet, including Gigabit Ethernet and WiFi (802.11). Time permitting, a quick exposure to Token Ring and to Bluetooth, WiMax may also be included.

UNIT II - DATA LINK LAYER**9**

Data Link Layer: Error detection (Parity, CRC), Sliding Window, Stop and Wait protocols. LAN: Design, specifications of popular technologies, switching. A student should be able to design the LAN of a campus or a building.

UNIT III - NETWORK LAYER AND TRANSPORT LAYER

9

Network layer: Internet Protocol, IPv6, ARP, DHCP, ICMP, Routing algorithms: Distance vector, Link state, Metrics, Inter-domain routing. Subnetting, Classless addressing, Network Address Translation. Transport layer: UDP, TCP. Connection establishment and termination, sliding window revisited, flow and congestion control, timers, retransmission, TCP extensions. Design issues in protocols at different layers.

UNIT IV - NETWORK PROGRAMMING

9

Network Programming: Socket Programming. Session, Presentation, and Application Layers. Examples: DNS, SMTP, IMAP, HTTP, etc.

UNIT V – NETWORK SECURITY

9

Network Security: Concepts of symmetric and asymmetric key cryptography. Sharing of symmetric keys - Diffie Hellman. Public Key Infrastructure. Public Key Authentication Protocols. Symmetric Key Authentication Protocols. Pretty Good Privacy (PGP), IPSec, Firewalls.

Total : 45

(ii) LABORATORY

LIST OF EXPERIMENTS

1. Study of different network devices in detail.
2. Study of different types of network cables and practically implement the cross-wired cable and straight through cable using clamping tool.
3. Study of basic network command and Network configuration commands
4. Implement different LAN topologies using Network Simulator
5. Implement the concept of VLAN using Network Simulator
6. Implement the concept of static routing
7. Implement the concept of dynamic routing (RIP, OSPF, BGP).
8. Packet capture and header analysis by wire-shark (TCP,UDP,IP)

PRE-REQUISITES: Web Application Development

i) THEORY

COURSE OBJECTIVES

The goal of this course for the students is to

- Learn the fundamental concepts of Git and JavaScript.
- Gain knowledge of Node.js.
- Understand the concepts of working with MongoDB.
- Gain knowledge of ReactJS.
- Create Restful web Services.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Utilize the syntax, semantics of JavaScript for a web application.
- Apply Node.js concepts in web applications.
- Develop JavaScript's Shell using MongoDB.
- Apply the ReactJS to web based applications.
- Analyze the backend connection in ReactJS web applications.

UNIT I – INTRODUCTION TO GIT AND JAVASCRIPT

9

Introduction to Full Stack Development - Intro to Git - Git Commands using CLI - Git vs. GitHub - Git Work Flow - Pull Requests. JavaScript: Variables – Datatypes - Operators - Expressions – Data structures – Control statements – Functions – this keyword – AJAX – Callbacks – Promises – Classes – Modules – Debugging.

UNIT II - NODE JS BASICS

9

Introduction to Node.js – Modules: Common JS – ESM – Custom Modules. Package Manager: npm. Error Handling: Types of Errors – Handling Async Errors – Stack Trace – Asynchronous Programming – Command Line Apps – Working with APIs – Templating Engines.

UNIT III - WORKING WITH MONGODB

9

Introduction to MongoDB – MongoDB through the JavaScript's Shell – Creating and Querying through Indexes – Collections and Documents – MongoDB Query Language – Connecting node.js with MongoDB.

UNIT IV - FRONTEND DEVELOPMENT WITH REACT JS

9

Introduction to ReactJS – CLI tools – Components: Component Basics – Functional Components. Rendering – Hooks: Basic Hooks – Common Hooks – Custom Hooks – Routing using React Router – State Management with Context – Styling using Material UI and Tailwind.

UNIT V - REST API AND TESTING

9

API calls: Axios – react-query – SWR – Testing: React Testing Library – Jest – Playwright – Forms with React Hook Form – Connecting react application to the backend.

Total: 30

ii) LABORATORY

LIST OF EXPERIMENTS

1. Demonstrate the Git Commands for Version Controlling
2. Programs using flow control statements, arrays and arrow functions.
3. Develop simple application using NodeJS.
4. Develop Rest API with NodeJS.
5. Develop simple application using MongoDB.
6. Develop Rest API with NodeJS and MongoDB.
7. Develop simple application using ReactJS.
8. Develop simple application using ReactJS Components.
9. Develop simple application using React Context with styles.
10. Develop Rest API with Axios.
11. Develop Rest API with react-query and SWR.
12. Developing full stack application using ReactJS and MongoDB.

Total: 30

COURSE OBJECTIVES

The goal of this course for students is to

- Understand the fundamentals of business data processing and its significance in modern organizations.
- Gain knowledge of database management systems, including database design principles, relational database concepts, and SQL fundamentals.
- Develop skills in data analysis and visualization techniques for business decision-making and reporting.
- Learn data analysis and visualization techniques.
- Summarize the applications of robotic process automation.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Apply business data processing in modern organizations.
- Build a relational database table using SQL query for normalization technique
- Utilize data analysis and data visualization techniques to support business decision-making.
- Identify Robotic Process Automation (RPA) in business data processing.
- Analyze secure data transmission and storage practices to protect user data.

UNIT I INTRODUCTION TO BUSINESS DATA PROCESSING**9**

Introduction - Overview of business data processing - significance in modern organizations - structured - unstructured - and semi-structured data - Data processing lifecycle - data collection - data entry - data storage - data processing - data output - information systems - Ethical and legal considerations.

UNIT II DATABASE MANAGEMENT SYSTEMS**9**

Introduction to database management systems - Database design principles - Relational database concepts - tables - relationships - keys - normalization - SQL fundamentals - DDL - DML - Data integrity - Data Security - Privacy

UNIT III DATA ANALYSIS AND VISUALIZATION

9

Introduction - importance in business decision-making - techniques - descriptive - diagnostic - predictive - prescriptive analysis - data visualization tools - techniques - Exploratory data analysis - visualization for business reporting and performance tracking

UNIT IV BUSINESS PROCESS AUTOMATION

9

Introduction to business process automation - Workflow management systems - process modeling - Business process reengineering - process optimization - Robotic Process Automation (RPA) - its applications in business data processing

UNIT V DATA SECURITY AND PRIVACY IN BUSINESS

9

Overview of data security and privacy concerns - Data protection regulations - compliance - Secure data transmission and storage practices - Access control - user authentication - Data backup - disaster recovery.

Total:45

(ii) LABORATORY

LIST OF EXPERIMENTS:

1. Exploring Data Types and Significance in Business
2. Designing a Relational Database Schema
3. SQL Querying and Data Manipulation
4. Visualizing Data for Business Insights
5. Process Modeling for Business Automation
6. Normalizing Tables for Data Integrity
7. Analyzing Descriptive Statistics in Business Data
8. Predictive Analytics for Forecasting Trends
9. Implementing Robotic Process Automation (RPA)
10. Securing Data and Ensuring Compliance

Total:30

i) THEORY**COURSE OBJECTIVES:**

The goal of this course is for the students :

- Understand the concepts of machine learning.
- Appreciate supervised learning and their applications.
- Interpret the concepts and algorithms of unsupervised learning.
- Understand the theoretical and practical aspects of probabilistic graphical models.
- Excel algorithms for advanced learning.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Apply probabilities and statistical methods for Machine Learning.
- Develop classification of a given dataset in supervised learning.
- Analyze unsupervised learning for reduction techniques and component analysis.
- Choose graphical models for a given dataset for decision making.
- Analyze sampling process algorithm to reinforcement learning.

UNIT I MACHINE LEARNING ALGORITHMS**9**

Machine Learning – Types of Machine Learning – Machine Learning process – preliminaries, testing Machine Learning algorithms, turning data into Probabilities, and Statistics for Machine Learning- Probability theory – Probability Distributions – Decision Theory.

UNIT II SUPERVISED LEARNING**9**

Supervised Learning: Linear Models for Regression – Linear Models for Classification – Discriminant Functions – Decision Tree Learning – Bayesian Learning, Naïve Bayes – Ensemble Methods, Bagging, Boosting, Neural Networks, Multi-layer Perceptron, Feed-Forward Network.

UNIT III UNSUPERVISED LEARNING

9

Error Back propagation – Support Vector Machines. Unsupervised Learning: Clustering– K-means – EM Algorithm – Mixtures of Gaussians – Dimensionality Reduction, Linear Discriminant Analysis, Factor Analysis, Principal Components Analysis, Independent Components Analysis.

UNIT IV GRAPHICAL MODELS

9

Machine Learning :A Graphical Models – Undirected Graphical Models – Markov Random Fields – Directed Graphical Models – Bayesian Networks – Conditional Independence properties – Markov Random Fields- Hidden Markov Models – Conditional Random Fields (CRFs).

UNIT V SAMPLING METHODS

9

Sampling-Basic Sampling methods, Monte Carlo, Gibbs Sampling – Reinforcement learning – Markov Decision processes, Deterministic and Non-deterministic Rewards and Actions, Temporal Difference Learning Exploration.

PRE-REQUISITE: Basics of Programming

COURSE OBJECTIVES:

The goal of this course is for the students :

To understand basic digital forensics and techniques.

- Provide knowledge about computer vision algorithms.
- Understand the basic concepts of camera calibration, stereoscopic imaging and higher-level image processing operations.
- Familiarize the student with the image processing facilities in octave and its equivalent open-source tools like OpenCV.
- Appreciate the use of computer vision in Industrial applications and to understand the role of computer vision.
- Understand and implement object detection and object tracking algorithms.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Illustrate basic computer vision algorithms for computer.
- Apply object detection methods for image processing.
- Make use of features reduction methods for images.
- Examine the model based vision methods .
- Analyze real time object detection and face detection.

UNIT I IMAGE FORMATION

9

Image Formation and Representation–Intensity and Range Images – Camera models – Camera parameters – Light and colour – Image Noise – Image Filtering (spatial domain) – Mask based filtering– Image Smoothing –Sharpening.

UNIT II POINT AND LINE DETECTION

9

Point and Line Detection – Hough Transform and Shape detection – Edge Detection – Corner Detection – Harris Detector- Stereopsis – Correspondence Problem –RANSAC and Alignment – Epipolar Geometry. Image Features – Textures.

UNIT III MOTION ANALYSIS

9

Deformable Contours – Features Reduction – Principal Component analysis – Feature Descriptors – SIFT and SURF– Motion field of rigid objects – Notation of Optical flow – Estimation Motion Field – Horn and Schunck Algorithm – Lucas and Kanade Algorithm.

UNIT IV MODEL BASED VISION

9

Shape from Shading and shape from Texture Model based Vision – Smooth Surfaces and their Outlines–Aspect Graphs and Range Data – Localization – Classification and Evaluation.

UNIT V OBJECT DETECTION

9

AdaBoost – Random Decision Forests – Pedestrian Detection. Emotion Recognition – Real Time Object Detection– Gesture Recognition – Face Detection.

i)THEORY**COURSE OBJECTIVES:**

The goal of this course is for the students :

- Understand the representation and processing of Morphology and Part-of Speech Taggers.
- Appreciate various techniques used for speech synthesis and recognition.
- Understand different aspects of natural language syntax and the various methods used for processing syntax and disambiguating word senses.
- Appreciate the various representations of semantics and discourse.
- Know about various applications of natural language processing.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Make use of text normalization and sentiment classification for speech synthesis.
- Apply machine learning techniques used in natural language processing.
- Model encoder and decoder for semantic parsing.
- Analyze information extraction resolution to sentiment analysis.
- Examine automatic speech recognition to convert text to speech.

UNIT I FUNDAMENTALS OF NLP ALGORITHMS**9**

Introduction–Regular Expressions, Text Normalization, Edit Distance–N-gram Language Models–Naive Bayes and Sentiment Classification–Logistic Regression.

UNIT II NEURAL LANGUAGE MODELS**9**

Vector Semantics and Embeddings – Neural Networks and Neural Language Models – Sequence Labeling for Parts of Speech and Named Entities – Deep Learning Architectures for Sequence Processing – Contextual Embeddings.

UNIT III ENCODER,DECODER MODELS

9

Machine Translation and Encoder – Decoder Models –Constituency Grammars – Constituency Parsing – Dependency Parsing – Logical Representations of Sentence Meaning – Computational Semantics and Semantic Parsing.

UNIT IV EXTRACTION FOR NLP ALGORITHM

9

Information Extraction – Word Senses and WordNet – Semantic Role Labeling – Lexicons for Sentiment, Affect, and Connotation – Coreference Resolution.

UNIT V AUTOMATIC SPEECH RECOGNITION

9

Discourse Coherence – Question Answering – Chatbots& Dialogue Systems – Phonetics – Automatic Speech Recognition and Text-to-Speech.

PRE-REQUISTES:Basics of programming

i)THEORY

COURSE OBJECTIVES:

The goal of this course is for the students :

- Provide basic knowledge about the fundamentals of pattern recognition and its application.
- Understand about unsupervised algorithms suitable for pattern classification.
- Familiarize with the feature selection algorithms and method of implementing them in applications.
- Infer the basis of algorithm used for training and testing the dataset.
- Apply basic fuzzy system and neural network architectures, for applications in pattern Recognition, image processing, and computer vision.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Apply the pattern recognition to Bayesian belief network
- Apply the concept of clustering and procedures for classification.
- Identify the feature selection process for minimization algorithm.
- Examine the approaches used in Hidden Markov models.
- Analyze neural network for fuzzy set classification.

UNIT I PATTERN RECOGNITION

9

Overview of Pattern Recognition – Discriminant Functions – Supervised Learning – Parametric Estimation – Maximum Likelihood Estimation – Bayes Theorem – Bayesian Belief Network–Naive Bayesian Classifier.

UNIT II CLUSTERING

9

Clustering Concept – Hierarchical Clustering Procedures – Partitional Clustering – Clustering of Large Data Sets – EM Algorithm – Grid Based Clustering– Density Based Clustering

UNIT III SELECTION ALGORITHM

9

Entropy Minimization – Karhunenloeve Transformation – Feature Selection through Functions Approximation – Binary Feature Selection – K-NN.

UNIT IV HIDDEN MARKOV MODELS

9

State Machines – Hidden Markov Models: Maximum Likelihood for the HMM, Forward - Backward Algorithm, Sum and Product Algorithm for the HMM, Scaling Factors, Viterbi Algorithm, Extensions of the Hidden Markov Model – Support Vector Machines.

UNIT V NEURAL NETWORKS

9

Maximum Margin Classifiers, Relevance Vector Machines. Fuzzy Classification: Fuzzy Set Theory, Fuzzy and Crisp Classification, Fuzzy Clustering, Fuzzy Pattern Recognition– Introduction to Neural Networks: Elementary Neural Network for Pattern Recognition, Hebbnet, Perceptron, ADALINE, and Back Propagation.

Total: 45

(ii)LABORATORY

LIST OF EXPERIMENTS:

1. Implementation of Image classification using Hebbnet method.
2. Implementation of Image classification using Perceptron method.
3. Implementation of Fuzzy pattern recognition.
4. Implementation of Feature extraction using KL transform.
5. Implementation of Clustering using partition based clustering.
6. Implementation of Clustering using density-based clustering.
7. Implementation of Classification using SVM.
8. Implementation of Classification using HMM.
9. Implementation of Classification using Bayes Methods.
10. Implementation of Neural Network methods.

Total: 30

COURSE OBJECTIVES

The goal of this course for the students is to

- Enable the students to study the evolution of Management
- Learn the functions and principles of management.
- Learn the application of the principles in an organization.
- Infer the effective and barriers communication in the organization
- Study the system and process of effective controlling in the organization.

COURSE OUTCOMES

Upon completion of the course, students will be able to

- Explain the international aspects of management.
- Infer the planning process in the organization.
- Illustrate the managerial role in organizational behavior.
- Outline the factors contributing to leadership.
- Apply the ethical responsibilities of the engineers

UNIT I MANAGEMENT FUNCTIONS AND STRUCTURE**9**

Management – Definition – Basic Functions – Contributions of Taylor and Fayol. Types of structure – Line, Staff, Line and Staff, Functional, Committee, Project and Matrix Structures. Departmentalization – Centralization – Decentralization – Span of Control – Management by Objectives – Management by Exception.

UNIT II MANAGEMENT OF ORGANISATION**9**

Forms of Business – Industrial Ownership, Sole Trade, Partnership, Company. Performance Appraisal – Basic principles – Pitfalls – Methods to overcome. Industrial Safety – Causes of accidents – How to minimize accidents. Plant Layout and Maintenance – Need, Types and Managerial Aspects

UNIT III ORGANISATIONAL BEHAVIOUR

9

OB-Definition-Nature & Scope- Contributing Disciplines-Importance of OB to Managers. Personality-Definition-Theories-Factors Influencing Personality. Motivation-Definition-Theories. Theory X & Y-Transactional Analysis. Morale & Job Satisfaction-Factors Influencing Job Satisfaction

UNIT IV GROUP DYNAMICS

9

Group-Definition-Types-Determinants of group cohesiveness. Communication-Process- Barriers-Effective Communication. Leadership Theories-Factors Contributing to effective Leadership. Role of Trade Union in Organizations-Functions of trade Union-Why Trade Unionis Required? - Types of Trade Union

UNIT V PROFESSIONAL ETHICS

9

Ethics in Workplace - Formulation of Ethics - Managerial Ethics - Managing Ethical Behavior - Codes of Ethics - Encouraging Ethical Behavior - Ethical Leadership - Ethical Decision making. Corporate Social Responsibility (CSR) - Intellectual Property Rights (IPR)- Meaning-Laws relating to Intellectual Property Rights (IPRs)

COURSE OBJECTIVES:

The goal of this course is for the students :

- Introduce the functional elements of Robotics.
- Impart knowledge on the forward and inverse kinematics.
- Introduce the manipulator differential motion and control.
- Educate on various path planning techniques.
- Introduce about hydraulics system.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Interpret basic concept of robotics fundamental principles, components, and applications of robotic systems.
- Identify the dynamics of robotic systems and implications for planning and control.
- Utilize the principles of state estimation and steps involved in the Kalman filtering process.
- Identify the components, working principles, applications of Pneumatic and Hydraulic system.
- Utilize the principles of fluidic devices and fluidic logic circuits. automation.

UNIT I KINEMATICS CONCEPTS**9**

Introduction – Actuators – Sensors – Rigid body – coordinate systems – Kinematics – Forward Kinematics & Inverse Kinematics – Velocity Kinematics – Angular velocity – Linear velocity – Singularity – Force and torque.

UNIT II MOBILE ROBOTS**9**

Dynamics – Mobile Robots – Planning and Control – Path & Trajectory planning – Probabilistic Roadmaps – Localization.

UNIT III KALMAN MODELS**9**

Basics of probability – Kalman Filtering – Extended Kalman – Particle filter – Localization – Computer Vision – Vision Based Controls.

UNIT IV PNEUMATIC AND HYDRAULIC SYSTEM

9

Automation – Basic Laws and Principles – Basic Pneumatic and Hydraulic system – Pumps and compressors – Fluid accessories.

UNIT V ELECTRICAL AND ELECTRONIC CONTROLS

9

Cylinders and Motors – Control valves – Circuits – Pneumatic logic circuits – Fluidics – Electrical and electronic controls – Transfer devices and Feeders.

COURSE OBJECTIVES

The goal of this course for the students is to

- Introduce DevOps terminology, definition & concepts
- Understand the different Version control tools like Git, Mercurial
- Identify the concepts of Continuous Integration/ Continuous Testing/ Continuous Deployment
- Understand Configuration management using Ansible
- Illustrate the benefits and drive the adoption of cloud-based Devops tools to solve real world problems.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Apply Model View Controller framework to a devops application.
- Build a system using maven and cradle.
- Categorize the Continuous Integration using Jekins.
- Analyze Ansible operations in configuration management.
- Examine Cloud-based DevOps tools using Azure DevOps.

UNIT I INTRODUCTION TO DEVOPS**9**

Devops Essentials - DevOps lifecycle–DevOps tools and technologies- Model–View–Controller–Developing MVC applications- Introduction To AWS, GCP, Azure - Version control systems: Git and Github.

UNIT II COMPILE AND BUILD USING MAVEN & GRADLE**9**

Introduction, Installation of Maven, POM files, Maven Build lifecycle, Build phases(compile build, test, package) Maven Profiles, Maven repositories(local, central, global),Maven plugins, Maven create and build Artificats, Dependency management, Installation of Gradle, Understand buildusing Gradle

UNIT III CONTINUOUS INTEGRATION USING JENKINS

9

Install & Configure Jenkins, Jenkins Architecture Overview, Creating a Jenkins Job, Configuring a Jenkins job, Introduction to Plugins, Adding Plugins to Jenkins, Commonly used plugins (GitPlugin, Parameter Plugin, HTML Publisher, Copy Artifact and Extended choice parameters).Configuring Jenkins to work with java, Git and Maven, Creating a Jenkins Build and Jenkinsworkspace.

UNIT IV CONFIGURATION MANAGEMENT USING ANSIBLE

9

Ansible Introduction, Installation, Ansible master/slave configuration, YAML basics, Ansible modules, Ansible Inventory files, Ansible playbooks, Ansible Roles, adhoc commands in ansible

UNIT V BUILDING DEVOPS PIPELINES USING AZURE

9

Create Github Account, Create Repository, Create Azure Organization, Create a new pipeline, Build a sample code, Modify azure-pipelines.yaml file.

B.Tech ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

PROFESSIONAL ELECTIVES

PRE-REQUISITES: Data Structures**COURSE OBJECTIVES**

The goal of this course for the students is to:

- Infer the basics of algorithm analysis and notations.
- Understand the concept of tree data structure along with its elementary operations.
- Learn about the advanced tree data structures like threaded trees, tournament trees, B-trees, splay trees, red black trees and tries.
- Analyze the basic concept of the graph data structures and many algorithms associated with it.
- Know the basics of advanced randomized algorithms, parallel algorithms and string pattern matching algorithms.

COURSE OUTCOMES

Upon completion of this course, the students will be able to:

- Interpret the problem solving techniques using asymptotic notations.
- Apply the concepts of trees in a real time application.
- Utilize multi way tree structures for problem solving.
- Examine the single source shortest path for a given graph.
- Analyze pattern matching algorithms.

UNIT I INTRODUCTION TO ALGORITHM DESIGN TECHNIQUES**9**

Introduction to algorithm design techniques: Fundamentals of algorithmic problem solving – Important problem types – Problem solving techniques – Greedy algorithms – Divide and conquer – Dynamic programming – Backtracking – Branch and bound – Randomized algorithms. Introduction to algorithm analysis: Asymptotic notations– Recurrences – Iterative and recursive algorithms.

UNIT II TREES**9**

Trees: Introduction – Terminologies – Array and linked representation – Binary search tree Vs Threaded binary tree – Tournament trees. Balanced trees: Applications. Heaps: Array based heaps – Min, max heap – Binary heap – Operations – Binomial heap.

UNIT III MULTI WAY TREES

9

Multi way trees: 2–3 trees – 2–4 trees – Operations. B–tree: Definition – B–Tree of order m – Operations – Insertion, Searching– B+ trees. Red Black Tree – Splay Tree – Elementary operations – Introduction to tries and compressed tries – Dictionaries – Suffix trees – Suffix arrays.

UNIT IV GRAPHS

9

Graphs: Introduction – Traversals. Applications of graphs: Articulation Point – Connectivity – Biconnected graph – Eulerian path and circuit – Strongly connected components. Spanning trees: Minimum spanning tree algorithms – Prim's algorithm – Kruskal's algorithm – Applications. Single source shortest path algorithms: Dijkstra's – Bellman ford. Floyd warshalls all pair shortest path.

UNIT V ADVANCED ALGORITHMS

9

Advanced algorithms: Network flow problem – Ford fulkerson algorithm. Introduction to parallel algorithms – Parallel sorting algorithms. Randomized algorithms – Randomness to hide worst cases – Optimization problems with a random structure. Pattern matching algorithms: Brute force string matching – KMP string matching algorithm – Boyer moore string matching.

COURSE OBJECTIVES

The goal of this course for the students is to:

- Learn the foundations of Human Computer Interaction.
- Become familiar with the design technologies for individuals and persons with disabilities.
- Illustrate the components mobile HCI.
- Learn the guidelines for user interface.
- Understand about Designing Web Interfaces.

COURSE OUTCOMES

Upon completion of the course, the students will be able to:

- Make use of input and output channels to interact humans with computers.
- Identify the role of human-computer interaction in software development life cycle.
- Apply communication and collaboration models for effective GUI design.
- Apply experimental design and statistical analysis of HCI
- Utilize interaction techniques in Virtual Reality

UNIT I FOUNDATIONS OF HCI**9**

The Human: I/O channels – Memory – Reasoning and problem solving; The Computer: Devices – Memory – processing and networks; Interaction: Models – frameworks – Ergonomics – styles – elements – interactivity- Paradigms. - Case Studies

UNIT II DESIGN & SOFTWARE PROCESS**9**

Interactive Design: Basics – process – scenarios – navigation – screen design – Iteration and prototyping. HCI in software process: Software life cycle – usability engineering – Prototyping in practice – design rationale. Design rules: principles, standards, guidelines, rules. Evaluation Techniques – Universal Design

UNIT III MODELS AND THEORIES**9**

HCI Models: Cognitive models: Socio-Organizational issues and stakeholder requirements – Communication and collaboration models-Hypertext, Multimedia and WWW.

UNIT IV MOBILE HCI**9**

Mobile Ecosystem: Platforms, Application frameworks- Types of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements of Mobile

UNIT V WEB INTERFACE DESIGN

9

Designing Web Interfaces – Drag & Drop, Direct Selection, Contextual Tools, Overlays, Inlays and Virtual Pages, Process Flow - Case Studies

PRE-REQUISITE: Network

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Understand the fundamentals of cloud computing and its services.
- Know cloud collaborating communities.
- Impart knowledge on various collaboration in cloud management.
- Familiarize different services of cloud in web mail and social networks.
- Explore the concepts of cloud storage.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Identify the basic concepts of cloud computing.
- Apply the concept of cloud in the social networks.
- Make use of the collaboration of cloud computing and cloud management.
- Examine the strategies of cloud storages for online groupwares.
- Distinguish cloud file storage and sharing services.

UNIT I INTRODUCTION

9

Cloud computing introduction – From collaboration to cloud – Working of cloud computing – The pros and cons of cloud computing – Beneficiary – Developing cloud computing services – Types of cloud service development–Discovering cloud services.

UNIT II CLOUD TASK MANAGEMENT

9

Centralizing email communications – Cloud computing for community – Collaborating on schedules –Collaborating on group projects and events – Cloud computing for corporation – Managing schedules managing projects–Presenting on road–Collaborating on calendars, schedules and task management.

UNIT III PLANNING AND PROJECT MANAGEMENT

9

Exploring online scheduling – Exploring online planning and task management – Collaborating on event management – Collaborating on contact management – Collaborating on project management –Collaborating on word processing–Spread sheets and databases.

UNIT IV CLOUD WEBMAIL SERVICES

9

Evaluating web mail services – Evaluating instant messaging services – Evaluating web conference tools – Creating groups on social networks– Evaluating online groupware – Collaborating via blogs and wikis. Understanding cloud storage.

UNIT V FILE STORAGE**9**

Evaluating online file storage and sharing services–Exploring online bookmarking services– Exploring online photo editing applications– Exploring photo sharing communities–Controlling it with web based desktops.

Average	2.8	2.2	1.5	1	-	-	-	-	1	1	-	1	-	2

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Study the basic concepts of Visualization, Data Analysis with visualization and important of visualization role in solving complex data solutions.
- Explore the importance of Visual Analytics and explore the various charts features and techniques used for Visualization.
- Gain visualization concepts of creating simple as well as complex visualizations in various tools.
- Establish connection with data and perform various data.
- Explore Data Analysis with charts and Dashboards.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Identify the data visualization and analytics tools to visualize data.
- Make use of visualization tool to combine and append data.
- Build the data using charts about KPI visuals.
- Analyze report Interface and scripting tool bar.
- Inspect different functions available in Qlikview.

UNIT I INTRODUCTION**9**

Introduction to Data Visualization and Visual Analytics Data Visualization - Establishing Connection - Joins - Union- Data Blending - Managing Extracts - Managing Metadata - Visual Analytics - Data Granularity using Marks Card - Visual Analytics in Depth I - Visual Analytics in Depth II – Sorting – Filtering – Grouping - Graphical Visualization – Sets – Forecasting – Clustering - Trend Lines - Reference Lines – Parameters - Mappings - Dashboard Layout - Designing Dashboard for Devices - Dashboard Interaction - Using Action,- Introduction to Story Point, Introduction to Maps – Editing Unrecognized Locations -Web Mapping Services. Background Images.

UNIT II TOOLS IN VISUALIZATION**9**

Data Sources BI Desktop -Query Editor -Combining Data – Merging and Appending-Modeling Data-Cross Filter Direction-Matrixes and tables Slicers.

UNIT III CHARTS AND MAP VISUALS**9**

Map Visualizations-Gauges and Single Number Cards-Modifying colors in charts and visuals - Shapes, text boxes, and images-Page layout and formatting-KPI Visuals-Z-Order-Dashboard vs. Reports-R Integration in BI.

UNIT IV DATA LOADING TECHNIQUES**9**

Data Ingestion - Report Interface – QVS, QVW and .log files - Sheet Objects - Dimensions and Expressions - Presentation/ Layout / Sort tabs - Scripting - Script Toolbar - Script Menu Commands - Variables (Set,Let) and Fields - Adding Sheet Objects - Inline table

UNIT V DATA FILTERS AND MANIPULATION**9**

Function (Sum, Avg, Count, Date, etc) - Slider Text Box, Calendar Box, Current Selections Box - Bar chart, line, combo, radar, scatter, grid, pie, funnel, block, gauge, mekko - Management console: Server, Publisher.

Average	2.8	2	1.5	1	-	-	-	-	1	1	-	1	-	2

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Study the basic concepts of Data Science and data life cycle
- Understand the theoretical and mathematical aspects of Data Science models
- Learn common random variables and their uses, and with the use of empirical distributions
- Infer the knowledge in data management tools
- Explore the major techniques for data science

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Interpret the key concepts in data science and data processing.
- Infer sampling and probabilistic models
- Make use of data normalization and data management tools.
- Distinguish between supervised and unsupervised machine learning techniques.
- Classify analytics used in business intelligence.

UNIT I INTRODUCTION**9**

The Big Picture: What is Data Science? –The data life cycle: pre-processing, analysis, post-processing – Pre-processing: Data gathering, cleansing, visualization, and understanding (Mean, Variance, Standard Deviation. Percentiles.)–Data Storage (Relational databases, e.g.MySQL)

UNIT II PROBABILISTIC MODELS**9**

Sampling – Probability Models for Statistical Methods: Discrete and continuous probability distributions, density functions. Random variables, expected values, variance, correlation.

UNIT III NORMALIZATION**9**

Data Normalization (z-values, transforms) –Random processes –Data Management: Tools for Data Analysis, Case Study: Data analysis using Python-Arrays, Visualization.

UNIT IV DATA MINING**9**

Major Techniques in Data Science: Data mining, Data warehousing, Data mining vs Data warehouse – Machine Learning- Supervised Learning, Unsupervised Learning.

UNIT V BUSINESS INTELLIGENCE AND ANALYTICS

9

Business Intelligence –Descriptive Analytics, Diagnostic Analytics, Predictive Analytics, Prescriptive Analytics– Cloud computing-definition, Cloud services, types of clouds, some of commercial and non commercial cloud service providers.

Average	2.6	2	1.7	1	-	-	-	-	1	1	-	1	-	2

COURSE OBJECTIVES

The goal of this course is for the students to:

- Understand the various characteristics of Intelligent agents
- Learn the different search strategies in AI
- Represent knowledge in solving AI problems.
- Illustrate the different ways of designing software agents
- Know the various applications of AI.

COURSE OUTCOME

Upon completion of the course, the students will be able to:

- Apply search algorithms in real world scenarios.
- Identify different methods of knowledge representation.
- Examine description logic and conceptional dependencies.
- Inspect strategies for optimal decision-making in the context of game-playing scenarios.
- Categorize the properties of Markov process and the concept of transition probabilities.

UNIT I INTRODUCTION

9

Introduction: Objective, scope and outcome of the course Meaning and definition of artificial intelligence, Physical Symbol System Hypothesis, production systems, Characteristics of production systems; Breadth first search and depth first search techniques. Heuristic search Techniques: Hill Climbing, Iterative deepening DFS, bidirectional search. Analysis of search methods. A* algorithm, and their analysis. Introduction to Genetic Algorithms.

UNIT II KNOWLEDGE REPRESENTATION

9

Knowledge Representation, Problems in representing knowledge, knowledge representation using propositional and predicate logic, logical consequences, syntax and semantics of an expression, semantic Tableau. Forward and backward reasoning. Proof methods, substitution and unification, conversion to clausal form, normal forms, resolution, refutation, deduction, theorem proving, inferencing, monotonic and non monotonic reasoning. Introduction to prolog.

UNIT III NETWORK-BASED REPRESENTATION

9

Network-based representation and reasoning, Semantic networks, Conceptual Graphs, frames. Description logic (DL), concept language, reasoning using DL. Conceptual dependencies (CD), scripts, reasoning using CD. Introduction to natural language processing.

UNIT IV GAME THEORY**9**

Adversarial search and Game theory, classification of games, game playing strategies, prisoner's Dilemma. Game playing techniques, minimax procedure, alpha-beta cut-offs. Complexity of alpha-beta search. Automated planning, classical planning problem, forward planning, partial order planning, planning with proposal logic, hierarchical task planning, multiagent planning.

UNIT V FUZZY LOGIC**9**

Reasoning in uncertain environments, Fuzzy logic, fuzzy composition relation, operations on fuzzy sets. Probabilistic reasoning, Bayes theorem, construction of Bayesian networks, belief propagation. Markov processes and Hidden Markov models.

CO5	3	3	2	1	-	-	-	-	1	1	-	1	-	2
Average	3	2.6	1.6	1	-	-	-	-	1	1	-	1	-	2

PRE-REQUISITES: Software Engineering**COURSE OBJECTIVES:**

The goal of this course is for the students to:

- Understand agile methods and roles.
- Interpret the XP lifecycle processing for extreme programming
- Learn different types of planning and development methodology.
- Familiarized with development environment.
- Gain knowledge on delivery and cyclicity.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Identify the basic concepts of the agile software development and XP concepts.
- Make use of Extreme Programming(XP) in projects.
- Analyze globalization, reflection, change and leadership phases.
- Examine agile approach in global software development.
- Inspect the agile software development change process.

UNIT I INTRODUCTION TO AGILE METHODOLOGY**9**

Agile development – Agile classification methods – Principles – Project Management – Modeling Story–Evidence –Scrum: Lifecycle, Work products, roles and practices.

UNIT II EXTREME PROGRAMMING**9**

Understanding the XP – Life cycle – XP Team – XP concepts – Adopting XP – Theory of constraints XP pre requisite and recommendation – The challenge of change – Applying XP to a brand new project, existing project, phase–Base organization–Planning–Vision–Release planning–Pair programming–Collaborating–Releasing: Nobugs.

UNIT III RISK ANALYSIS AND MANAGEMENT**9**

Version control–Ten minute build, Collective code ownership, Documentation–Planning: Vision, Release Planning–Risk management–Estimating, Developing: Incremental requirements–Customer tests–Refactoring–Incremental design and architecture.

UNIT IV AGILE APPROACHES**9**

Values and principles – Improve the process – Rely on people – Eliminate waste – Deliver value Technical excellence–Globalization: Agile approach in global software development–Communication

in distributed agile teams. Reflection: Reflection on learning.

UNIT V AGILE SOFTWARE DEVELOPMENT

9

Agile software development- Change: Transition to an Agile software development environment – Organizational changes. Leadership: Styles – The Agile change leader. Delivery and cyclicity: Reflective session between releases.

Average	2.8	2.2	1.5	1	-	-	-	-	1	1	-	1	-	2

PRE-REQUISITES: Basics of Database Management Systems and Operating Systems**COURSE OBJECTIVES:**

The goal of this course is for the students:

- To introduce technological, social and pragmatic aspects of developing open-source software.
- To understand information about free and open-source software projects from software releases.
- To analyze version control system and to interface with version control systems used by development communities.
- To provide an exposure to open-source Django.
- To Interpret the concepts of Apache web server.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Infer the basics of open sources, kernels, and its process.
- Illustrate the open-source database and connectivity process using MySQL.
- Apply the concepts of PHP classes and objects.
- Develop an application using Django.
- Examine the features of the web servers and uml families.

UNIT I INTRODUCTION**9**

Introduction to open sources – Need to open sources – Advantages of open sources – Application of open sources. LINUX: Introduction – General overview – Kernel mode and user mode – Process – Advanced concepts – Scheduling – Scheduling multiprocessor systems – Personalities – Cloning – Signals – Development with Linux.

UNIT II DATABASE AND MYSQL**9**

Introduction to open source database: Introduction to MySQL – Setting up account – Starting, stopping the MySQL server – Data and time – Sorting query – Database metadata – Creating and using database– Creating and selecting database.

UNIT III PHP INTRODUCTION

9

PHP: Introduction – Variables – Constants – Data types – Operators – Statements – Functions – Arrays – Object Oriented Concepts – PHP classes and objects – String Manipulation and regular expression – File handling and data storage – Error handling – Secure e-mail– PHP and SQL database – PHP and LDAP – Connectivity. Sending and receiving e-mails –Debugging and Security – Templates.

UNIT IV PROCESSING BOARDS

9

Django: Introduction to Django – Templates – Models – Forms – Deploying django – Caching – Integrating with legacy databases and applications – Security. Open Source Hardware: Raspberry pi –Arduino – Building embedded applications with raspberry pi and arduino – Open source 3-D printing.

UNIT V WEB SERVER AND UML

9

Web server: Apache web server – Working with web server configuring and using MDA – Introduction to MDA – Meta object facility – UML and UML Profiles – MDA applications – Apache web services.

CO5	3	3	2	1	-	-	-	-	1	1	-	1	-	2
Average	2.6	2.2	1.5	1	-	-	-	-	1	1	-	1	-	2

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Understand how to accurately represent voluminous complex data set in web and from other data sources.
- Interpret the methodologies used to visualize large data sets.
- Infer the various processes involved in data visualization.
- Working with interactive data visualization and tools.
- Analyze the different security aspects involved in data visualization.

COURSE OUTCOMES:

Upon Completion of this course the students will be able to:

- Choose data visualization tools for representing complex data.
- Apply interactive data visualization for a given application.
- Classify charts, maps and space filling methods in data visualization.
- Compare methodologies to visualize data in plotted form.
- Analyze the process involved and security issues in data visualization

UNIT I INTRODUCTION**9**

Context of data visualization – Definition, Methodology, Visualization design objectives. Key Factors – Purpose, visualization function and tone, visualization design options – Data representation, Data Presentation, Seven stages of data visualization, widgets, data visualization tools.

UNIT II MAPS AND CHARTS**9**

Mapping – Time series – Connections and correlations – Indicator – Area chart – Pivot table – Scatter charts, Scatter maps – Tree maps, Space filling and non-space filling methods.

UNIT III MATRIX REPRESENTATION**9**

Hierarchies and Recursion – Networks and Graphs – Displaying Arbitrary Graphs – Node link graph – Matrix representation for graphs – Info graphics.

UNIT IV DATA VISUALIZATION LAYOUT AND FRAMEWORK

9

Drawing with data – Scales – Axes – Updates, Transition and Motion – Interactivity – Layouts – Geomapping – Exporting, Framework – d3.js, tableau. Port scan visualization - Vulnerability assessment and exploitation

UNIT V FIREWALL

9

Firewall log visualization – Intrusion detection log visualization – Attacking and defending visualization systems – Creating security visualization system.

Average	2.6	2.4	1.5	1	-	-	-	-	1	1	-	2	-	3

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Introduce soft computing concepts and techniques and foster their abilities in designing appropriate technique for a given scenario.
- Implement soft computing-based solutions for real-world problems.
- Understand the concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic
- Infer the fundamentals of nature inspired optimization algorithms
- Reveal different applications of soft computing techniques to solve engineering and other problems.

COURSE OUTCOMES:

Upon Completion of this course the students will be able to:

- Interpret the main components of soft computing and fuzzy logic.
- Apply optimization algorithm to solve different engineering problems.
- Build various nature inspired optimization algorithms.
- Analyze the performance of the swarm and foraging algorithms used in soft computing.
- Examine uncertainty in fuzzy logic and reasoning problems

UNIT I INTRODUCTION**9**

Introduction to soft computing – Importance of Soft Computing – Main Components of Soft Computing – Fuzzy Logic – Artificial Neural Networks – Support Vector machine – Evolutionary Algorithms – Introduction to Genetic Algorithms (GA) – Binary and real-coded GA.

UNIT II ALGORITHMS**9**

Swarm Intelligence: Ant Colony Optimization Algorithm – Application of ACO to combinatorial problems – Particle Swarm Optimization Algorithm Working Principles – Introduction to Differential Evolution Algorithm.

UNIT III FORAGING AND SEARCHING

9

Bacterial Foraging Algorithms – Cuckoo Search Algorithm – Firefly Algorithm and Artificial Bee Colony Algorithm – Applications of nature inspired optimization algorithms in Data Science.

UNIT IV FUZZY LOGIC

9

Fuzzy Logic Systems: Introduction to Fuzzy logic – Classical sets vs fuzzy sets – Membership functions and its features – Properties and operations on Fuzzy sets – Classical relations vs Fuzzy relation – Operations of Fuzzy relation.

UNIT V RULE BASE AND APPLICATIONS

9

Defuzzification – Fuzzy rule base and approximate reasoning – Fuzzy Inference Systems – Design of fuzzy logic system: Mamdani & Sugeno Architecture – Applications of Fuzzy logic in Data Science

Average	2.6	1.8	1.5	1	-	-	-	-	1	1	-	1	-	2

PRE-REQUISITE: Database Management Systems

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Learn NoSQL, its characteristics and history, and the primary benefits for using NoSQL data.
- Infer the major types of NoSQL databases including a primary use case and advantages/disadvantages of each type
- Understand wide-column, document, key-value, graph and object-oriented databases, add content, and run queries.
- Describe the NoSQL data architecture patterns.
- Perform basic database administration tasks.

COURSE OUTCOMES:

Upon Completion of this course the students will be able to:

- Interpret the basic operations of NoSQL Database.
- Apply NoSQL data management methods through the CRUD operations
- Make use of querying mechanisms in real time problems.
- Identify the features of NoSQL database development tools.
- Analyze a given database using object oriented concepts.

UNIT I INTRODUCTION

9

NoSQL Overview–NoSQL Database Environment–NoSQL Options–Benefits to using NoSQL DB– Drawbacks to Using NoSQL DB–NoSQL vs. SQL3–Introduction to NoSQL Development -Schemaless Development–Data Models–Distribution Models–Consistency–Categories of NoSQL– Key–Value Stores–Wide-Column Family Stores–Document Databases–Graph Databases–Object- Oriented Databases–NoSQL Scalability

UNIT II MONGO DB QUERY API

9

Attributes–Metadata–Formats–XML–JSON and BSON–MongoDB–Introduction to MongoDB key features–Core Server tools–MongoDB through the JavaScript’s Shell–Creating and Querying through Indexes–Document-Oriented, principles of schema design.

UNIT III KEY VALUE DATABASES

9

Constructing queries on Databases– collections and Documents– MongoDB Query Language–Key- Value Databases – NoSQL: Major Keys–Minor Keys–Values–Examples–Redis.

UNIT IV CASSANDRA QUERY LANGUAGE

9

Column Family–Key and Keyspace – Categories of NoSQL – Examples – Cassandra – Introduction to Cassandra – Cassandra Query Language (CQL) – Cassandra Data Modeling – Cassandra Architecture.

UNIT V OBJECT-ORIENTED CONCEPT

9

Graph Databases – NoSQL: Edges – Nodes – Relationships – Examples – Neo4J – InfoGrid – GraphBase Object-Oriented Databases – NoSQL: Object-Oriented Concepts – Object Stores – Examples – ZODB–ObjectDB.

Total: 45

PRE-REQUISITES: Computer Networks**COURSE OBJECTIVES:**

The goal of this course is for the students to:

- Understand about computer forensics and investigations.
- Know about digital evidence and crime.
- Analyze and validate forensics data.
- Know about e-mail investigation.
- Identify the Procedure for Mobile device forensics.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Interpret investigation procedures of computer forensics.
- Apply the knowledge of digital evidences.
- Make use of forensics tools to conduct investigations.
- Analyze the performance of virtual machines in e-mail verification.
- Examine the importance of investigation reports.

UNIT I INTRODUCTION TO COMPUTER FORENSICS**9**

Computer forensics and investigations as a profession – Preparing for computer investigations –Taking a systematic approach–Procedure for corporate high-tech investigations–Data recovery work stations and software– Conducting an investigation.

UNIT II CRIME DATA REVIEW**9**

Data acquisition – Storage formats for digital evidence – Validating data acquisitions – Processing crime and incident scenes–Identifying digital evidence–Collecting evidence in private-sector incident scenes – Preparing for search-seizing digital evidence at the scene-storing digital evidence –Reviewing a case.

UNIT III COMPUTER FORENSICS TOOLS**9**

Current computer forensics tools–Software tools–Hardware tools–The macintosh file structure and boot process – Computer forensics analysis and validation – Addressing data –Hiding techniques.

UNIT IV VIRTUAL MACHINES**9**

Virtual machines – Network forensics – Developing standard procedures – Live acquisitions – e-mail investigations – Investigating e-mail crimes and violations – Understanding e-mail servers – Cell phone and mobile device forensics

UNIT V PROCEDURES FOR INVESTIGATION REPORTS**9**

Understanding mobile device forensics – Acquisition procedures – Report writing for high-tech investigations – Importance of reports – Guidelines for writing reports – Expert testimony in high-tech investigations.

Average	2.8	2.2	1.75	1	-	-	-	-	1	1	-	1	-	2

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Understand the different issues involved in the design and implementation of a Edge, FoG and M2M
- Apply the fundamentals of Core IOT Module in edge
- Understand concepts of Raspberry Pi and integration tools
- Apply the real time data for RaspberryPi and Cloud edge protocols
- Design and build a simple Commercial IoT and Edge technology using Raspberry Pi .

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Explain the basic concept of IoT and Edge Computing.
- Make use of design principles for IoT Architecture and Core IoT Modules.
- Apply the basics of RaspberryPi Board and optimization techniques.
- Analyze state transition of MQTT for given problems.
- Categorize commercial and industrial applications of Edge computing.

UNIT I INTRODUCTION TO EDGE COMPUTING**9**

IoT and Edge Computing Definition and Use Cases Introduction to Edge Computing Scenario's and Use cases - Edge computing purpose and definition, Edge computing use cases, Edge computing hardware architectures, Edge platforms, Edge vs Fog Computing, Communication Models - Edge, Fog and M2M.

UNIT II IoT ARCHITECTURE AND MODULES**9**

IoT Architecture and Core IoT Modules-A connected ecosystem, IoT versus machine-to-machine versus, SCADA, The value of a network and Metcalfe's and Beckstrom's laws, IoT and edge architecture, Role of an architect, Understanding Implementations with examples-Example use case and deployment, Case study – Telemedicine palliative care, Requirements, Implementation, Use case retrospective.

UNIT III INTRODUCTION TO RASPBERRY-PI**9**

RaspberryPi: Introduction to RaspberryPi, About the RaspberryPi Board: Hardware Layout and Pinouts, Operating Systems on RaspberryPi, Configuring RaspberryPi, Programming RaspberryPi, Connecting Raspberry Pi via SSH, Remote access tools, Interfacing DHT Sensor with Pi, Pi as Webserver, Pi Camera, Image & Video Processing using Pi.

UNIT IV – MQTT ARCHITECTURE

9

Implementation of Microcomputer RaspberryPi and device Interfacing, Edge to Cloud Protocols-Protocols, MQTT, MQTT publish-subscribe, MQTT architecture details, MQTT state transitions, MQTT packet structure, MQTT data types, MQTT communication formats, MQTT 3.1.1 working example.

UNIT V – INDUSTRIAL AND COMMERCIAL SOLUTIONS

9

Edge computing with RaspberryPi, Industrial and Commercial IoT and Edge, Edge computing and solutions.

Average	2.8	2.2	1.5	1	-	-	-	-	1	1	-	1	-	2

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Understand various data mining functionalities.
- Inculcate knowledge on data mining query languages.
- Know in detail about data mining algorithms.
- Be familiar with the concepts of data warehouse and data mining.
- Be acquainted with the tools and techniques used for Knowledge Discovery in Databases

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Make use of multidimensional data model and schemas in association mining.
- Model the architectural view for data warehouse repository.
- Build data mining technique for preprocessing of data.
- Apply appropriate classification and clustering techniques for data analysis.
- Analyze spatial databases and spatial data mining techniques.

UNIT I INTRODUCTION TO DATA WAREHOUSING**9**

Evolution of Decision Support Systems- Data warehousing Components –Building a Data warehouse, Data Warehouse and DBMS, Data marts, Metadata, Multidimensional data model, OLAP vs OLTP, OLAP operations, Data cubes, Schemas for Multidimensional Database: Stars, Snowflakes and Fact constellations.

UNIT II DATA WAREHOUSE PROCESS AND ARCHITECTURE**9**

Types of OLAP servers, 3–Tier data warehouse architecture, distributed and virtual data warehouses. Data warehouse implementation, tuning and testing of data warehouse. Data Staging (ETL) Design and Development, data warehouse visualization, Data Warehouse Deployment, Maintenance, Growth, Business Intelligence Overview- Data Warehousing and Business Intelligence Trends - Business Applications- tools-SAS

UNIT III INTRODUCTION TO DATA MINING

9

Data mining-KDD versus data mining, Stages of the Data Mining Process-task primitives, Data Mining Techniques -Data mining knowledge representation – Data mining query languages, Integration of a Data Mining System with a Data Warehouse – Issues, Data preprocessing – 90 Data cleaning, Data transformation, Feature selection, Dimensionality reduction, Discretization and generating concept hierarchies-Mining frequent patterns- association-correlation

UNIT IV CLASSIFICATION AND CLUSTERING

9

Decision Tree Induction - Bayesian Classification – Rule Based Classification –Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods - Clustering techniques – , Partitioning methods- k-means Hierarchical Methods - distance-based agglomerative and divisible clustering, Density-Based Methods – expectation maximization -Grid Based Methods – Model-Based Clustering Methods – Constraint – Based Cluster Analysis – Outlier Analysis

UNIT V ADVANCED TOPICS IN DATA MINING

9

Mining complex data objects, Spatial databases, temporal databases, Multimedia databases, Time series and Sequence data; Text Mining –Graph mining-web mining-Application and trends in data mining.

Total: 45

Average	3	2.2	1.2	1	-	-	-	-	1	1	-	1	-	2

PRE-REQUISITES: Network Security

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Decompose a blockchain system's fundamental components, how they fit together and examine a decentralization using block chain.
- Illustrate how Crypto currency works, from when a transaction is created to when it is considered part of the blockchain.
- Analyze the components of Ethereum, programming languages for Ethereum and study the basics Hyperledger and Web3.
- Categorize the nature of threats and cyber security management goals and technology
- Inspect the landscape of hacking and perimeter defense mechanisms

COURSE OUTCOMES:

Upon completion of the course the student will be able to:

- Identify the components of Block chain and its working principles.
- Build Ethereum model with architectural components.
- Make use of the components of a Hyperledger in development framework.
- Inspect the nature of threats in cyber security management.
- Analyze the malicious software attack and wireless network attack.

UNIT I INTRODUCTION OF BLOCKCHAIN TECHNOLOGY

9

History of Blockchain – Types of Blockchain – Consensus – Decentralization using Blockchain – Blockchain and Full Ecosystem Decentralization – Platforms for Decentralization. Bitcoin – Digital Keys and Addresses – Transactions – Mining – Bitcoin Networks and Payments – Wallets – Alternative Coins – Theoretical Limitations – Bitcoin Limitations – Name Coin – Prime Coin – Zcash. – Smart Contracts – Ricardian Contracts.

UNIT II ETHEREUM NETWORK

9

The Ethereum Network – Components of Ethereum Ecosystem – Ethereum Programming Languages: Runtime Byte Code, Blocks and Blockchain, Fee Schedule – Supporting Protocols – Solidity Language.

UNIT III FRAMEWORK FOR HYPERLEDGER FABRIC

9

Introduction to Web3 – Contract Deployment – POST Requests – Development frameworks – Hyperledger as a protocol – The Reference Architecture – Hyperledger Fabric – Distributed Ledger – Corda – Alternative Blockchains.

UNIT IV CYBER SECURITY

9

Introduction – Cyberspace – Cyber Crime – Nature of Threat – Cyber security – Policy, Mission and Vision of Cyber security Program. Cyber security management system – goals, technology categories – perimeter defense and encryption.

UNIT V WEB APPLICATION ATTACKS

9

Malicious Attacks, Threats, and Vulnerabilities- Malware – malicious software attack – social engineering attack – wireless network attack – web application attack – Countermeasures. Creating Mechanisms for IT Security.

Average	3	2.4	1.4	1	-	-	-	1	1	1	-	2	-	2

PRE-REQUISITES: Database Management Systems and Data Structures

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Familiar with big data batch and real time processing.
- Understand the basic object oriented and functional programming concepts in scala using interactive shell.
- Aware of operations and functions of transformation and actions used in Resilient Distributed Dataset (RDDs).
- Explore and analyze the spark streaming data.
- Enhance knowledge in MLLibrary and GraphX library in spark.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Infer the limitation of Map Reduce in hadoop.
- Build scala object oriented and functional programming.
- Apply the transformation and action functions on RDD to develop a SBT.
- Make use of the procedure to extract real time stream data using Spark SQL.
- Examine streaming data using advanced analytics libraries and visualize the data.

UNIT I INTRODUCTION

9

Introduction to big data and apache spark: Understanding big data – Batch processing – Real time processing – Hadoop architecture – Data processing hadoop – Spark architecture – Spark in hadoop ecosystems – Spark web UI.

UNIT II FUNCTIONS AND VARIABLES

9

Introduction: Scala for spark – Scala in other frameworks – Scala REPL – Variable types – Type inference – Lazy values – Control structures – Loop – Functions – Procedures. Collections: Array – Array buffer – Maps – Tuples – Lists. OOps and functional programming in scala: Classes in scala – Getters and setters – Constructor – Singletons – Companion objects – Inheritance in Scala – Traits – Layered traits – Functional style programming in scala.

UNIT III OPERATIONS IN SPARK

9

Spark common operations: Invoke spark shell, PySpark and SparkR – Basic spark operation – Analyze spark context and spark properties – Build spark projects – Spark modes – Persistence in spark. Playing with RDD: RDD operation – Load and save data from RDD – RDD function – Transformation – Action – Analyze RDD functions – Advanced RDD operations - Integrating spark with hadoop.

UNIT IV STREAMING AND FAULT TOLERANCE

9

Spark steaming and MLLib: Spark streaming architecture – Run a spark steaming program – Transformation in spark steaming – Window operation in spark streaming – Check pointing for fault tolerance – Machine Learning algorithms in spark.

UNIT V SQL AND DATA FRAMEWORK

9

Concepts in ML – Steps in ML pipeline. SQL context and hive context in spark SQL – Data frame in spark SQL – Data visualization in spark – Accumulators and broadcast variables – GraphX library in spark – Graph algorithms.

Total: 45

CO5	3	3	2	1	-	-	-	-	1	1	-	1	-	2
Average	2.8	2	1.2	1	-	-	-	-	1	1	-	1	-	2

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Introduce the basic mathematical foundations of reinforcement learning
- Understand the fundamental concepts of current reinforcement learning.
- Understand and work with tabular methods to solve classical control problems
- Work with approximate solutions
- Learn the policy gradient methods from vanilla to more complex cases

COURSE OUTCOMES:

Upon completion of the course, the student should be able to:

- Interpret the basic concepts of reinforcement learning techniques.
- Utilize dynamic programming and temporal difference learning in reinforcement learning.
- Apply the Temporal Difference (TD) and lambda function for prediction in reinforcement learning.
- Utilize Linear and ANN based function approximation techniques in reinforcement learning.
- Analyze gradient methods in reinforcement learning.

UNIT I INTRODUCTION TO REINFORCEMENT LEARNING**9**

The Reinforcement Learning problem: evaluative feedback – Non-associative learning – Rewards and returns – Markov Decision Processes – Value functions – Optimality and approximation.

UNIT II DYNAMIC PROGRAMMING**9**

Dynamic programming: value iteration – Policy iteration – Asynchronous DP – Generalized policy iteration. Monte-Carlo methods: policy evaluation – Roll outs – On policy and off policy learning – Importance sampling. Temporal Difference learning: TD prediction – Optimality of TD (0) – SARSA-Q-learning – R-learning – Games and after states.

UNIT III TRACES AND PREDICTIONS**9**

Eligibility traces: n-step TD prediction – TD (lambda) – Forward and backward views, Q (lambda), SARSA (lambda), replacing traces and accumulating traces.

UNIT IV – FUNCTION APPROXIMATION**9**

Function Approximation: Value prediction – Gradient descent methods – Linear function approximation – ANN based function approximation – Lazy learning – Instability issues Policy.

UNIT V – GRADIENT ALGORITHMS**9**

Gradient methods: non-associative learning –REINFORCE algorithm – Exact gradient methods –Estimating gradients – Approximate policy gradient algorithms – Actor-critic methods.

Average	2.8	2	1.5	1	1	-	-	-	1	1	-	2	-	2

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Understand the basics of Internet of Things.
- Get an idea of application Internet of Things
- Infer the middleware used for Internet of Things
- Know about Arduino board and its uses.
- Understand the IOT protocols and its applications.

COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

- Infer the basic concepts of IoT architecture.
- Identify the communication criteria in IoT network layer.
- Build the basic blocks of an IoT device.
- Examine data analytics tools for decision-making in operational environment.
- Analyze real time architecture of IoT systems for communication networks.

UNIT I ARCHITECTURES AND MODELS**9**

Introduction to IoT – IoT Architectures – Core IoT Functional Stack, Sensors and Actuators Layer, Communications Network Layer, Applications and Analytics Layer – IoT Data Management and Compute Stack, Fog Computing, Edge Computing, Cloud Computing – Sensors, Actuators, Smart Objects, Sensor networks. Middleware for IoT: Overview – Communication middleware for IoT – IoT Information Security, WSN and Sensing Model.

UNIT II CONNECTIVITY**9**

Communications Criteria – Access Technologies – IP as IoT Network Layer – Business case – Optimization – Profiles and compliances – Application Protocols – Transport Layer – Application Transport Methods.

UNIT III SYSTEM DEVELOPMENT**9**

Design Methodology – Case study – Basic blocks of IoT device – Raspberry Pi – Board, Interfaces, Linux, Setting up, Programming – Arduino – Other IoT Devices.

UNIT IV DATA ANALYTICS FOR IOT**9**

Data Analytics for IoT – Big Data Analytics Tools and Technology – Edge Streaming Analytics –Network Analytics Applications. Security history, challenges, variations – Risk Analysis Structures – Application in Operational Environment.

UNIT V IOT IN INDUSTRY**9**

Manufacturing, Architecture, Security Protocols – Utilities, Grid Blocks - Smart Cities, Architecture, Use cases – Transportation, Architecture, Use cases.

Average	2.8	2.2	1.5	1	-	-	-	-	1	1	-	1	-	3

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Learn about the basic mechanics and control strategies.
- Realize how careful component selection and design affect the vehicles' performance.
- Understand the preliminary concepts of Geometry and Mechanics
- Explore the planning and control in drone technology
- Be familiar in latest topics in UAV.

COURSE OUTCOMES:

Upon completion of the course, the student should be able to:

- Interpret the history of robots and drones.
- Apply the working principle of drone.
- Identify the geometrical mechanisms for performing transformations and rotations.
- Make use of 2-D quadrotor and 3-D quadrotor control models for planning and control.
- Analyze the functionalities of sensors for given environment.

UNIT I – HISTORY OF DRONES**9**

A History of Drones-Introduction to Aerial Robotics: Unmanned Aerial Vehicles–Quadrotors–Key Components of Autonomous Flight–State Estimation–Applications–Basic Mechanics–Dynamics and 1-D Linear Control–Design Considerations–Agility and Maneuverability–Component Selection–Effects of Size

UNIT II – GEOMETRY AND MECHANICS**9**

Geometry and Mechanics: Transformations–Rotations–Euler Angles–Axis/Angle Representations for Rotations–Angular Velocity.

UNIT III – NEWTON-EULER EQUATIONS**9**

Newton-Euler Equations–Principal Axes and Principal Moments of Inertia–Quadrotor Equations of Motion.

UNIT IV – QUADROTOR MODELS**9**

Planning and Control: 2-D Quadrotor Control–3-D Quadrotor Control–Time, Motion, and Trajectories–Motion Planning for Quadrotors.

UNIT V – SENSORS**9**

Advanced Topics: Sensing and Estimation–Nonlinear Control–Control of Multiple Robots.

PRE-REQUISITES: Network Security/ Information Security

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Understand the fundamental approaches for biometric systems.
- Gain knowledge about biometric face recognition.
- Analyze the process of iris recognition.
- Learn about various biometric security systems.
- Illustrate various attacks on biometric systems.

COURSE OUTCOME:

Upon completion of the course, the students will be able to:

- Illustrate the basic functionality of biometric systems and security.
- Apply the biometric methods in face recognition system.
- Make use of the biometric methods in iris recognition system.
- Analyze multi biometrics systems in acquisition process.
- Classify security attacks of the biometric process.

UNIT I INTRODUCTION TO BIOMETRICS

9

Biometric functionalities – Biometric system errors – The design cycle of biometric systems – Applications of biometric systems – Security and privacy issues – Fingerprint recognition – Fingerprint acquisition – Feature extraction – Fingerprint indexing – Palmprint.

UNIT II FACE RECOGNITION

9

Introduction to face recognition – Image acquisition – Face detection – Feature extraction and matching.

UNIT III IRIS RECOGNITION

9

Introduction to iris recognition – Design of an iris recognition system – Iris segmentation – Iris normalization - Iris encoding and matching – Iris quality – Biometric traits – Hand geometry – Soft biometrics.

UNIT IV MULTI-BIOMETRICS**9**

Multi-biometrics – Sources of multiple evidence – Acquisition and processing architecture – Fusion levels.

UNIT V SECURITY OF BIOMETRIC SYSTEMS**9**

Adversary attack – Attacks at the user interface – Attacks on the biometric processing – Attacks on the template database.

Average	2.8	2.2	1.2	1	2	-	-	1	1	1	-	2	-	2

PRE-REQUISITES: Machine Learning Techniques

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Interpret the basic ideas and principles of Neural Networks
- Understand the basic concepts of Big Data and Statistical Data Analysis
- Familiarize the student with The Image Processing facilities like Tensor flow and Keras
- Appreciate the use of Deep Learning Applications
- Implement Deep Learning Architectures

COURSE OUTCOMES:

Upon Completion of this course the students will be able to:

- Interpret the basic concepts of neural network.
- Apply feed forward neural networks and back propagation algorithm.
- Make use of transfer learning in image classification.
- Develop real time applications using RNN and LSTM algorithms.
- Analyze RNN ,CNN and LSTM algorithms in Computer vision.

UNIT I – INTRODUCTION TO NEURAL NETWORKS

9

Basic concept of Neurons – Perceptron Algorithm – Feed Forward and Back Propagation Networks.

UNIT II – BACK PROPAGATION ALGORITHMS

9

Feed Forward Neural Networks – Gradient Descent – Back Propagation Algorithm – Vanishing Gradient problem – Mitigation – ReLU Heuristics for Avoiding Bad Local Minima – Heuristics for Faster Training.

UNIT III – CNN ARCHITECTURE

9

Nesters Accelerated Gradient Descent – Regularization – Dropout. CNN Architectures – Convolution – Pooling Layers – Transfer Learning – Image Classification using Transfer Learning

UNIT IV – ENCODER AND DECODER ARCHITECTURE

9

RNN, LSTM, GRU, Encoder/Decoder Architectures – Autoencoders – Standard- Sparse – Denoising – Contractive- Variational Autoencoders – Adversarial Generative Networks – Autoencoder and

DBM- Image Segmentation – Object Detection – Automatic Image Captioning – Image generation with Generative Adversarial Networks – Video to Text with LSTM Models.

UNIT V - COMPUTER VISION

9

Attention Models for Computer Vision – Case Study: Named Entity Recognition – Opinion Mining using Recurrent Neural Networks – Parsing and Sentiment Analysis using Recursive Neural Networks – Sentence Classification using Convolutional Neural Networks – Dialogue Generation with LSTMs.

Average	2.8	2	1.2	1	2	-	-	1	1	1	-	2	-	2

PRE-REQUISITES: Basics of Programming

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Learn about the basic concepts of digital image processing and various image transforms.
- Familiarize with the image enhancement techniques.
- Expose to a broad range of image processing techniques and their applications.
- Appreciate the use of current technologies those are specific to image processing systems.
- Explore real-world applications of image processing

COURSE OUTCOMES:

Upon Completion of this course the students will be able to:

- Illustrate the basic image processing approaches.
- Apply image transformation techniques for image enhancements.
- Utilize multi-resolution analysis to extract features from images.
- Identify image segmentation and feature extraction using SIFT and SURF
- Analyze Image classifiers using supervised learning and unsupervised learning algorithms.

UNIT I – INTRODUCTION TO IMAGE PROCESSING

9

Introduction–Applications of Image Processing – Steps in Image Processing Applications – Digital Imaging System – Sampling and Quantization – Pixel Connectivity – Distance Measures – Colour Fundamentals and Models – File Formats, Image Operations

UNIT II – IMAGE TRANSFORMATIONS

9

Image Transforms: Fast Fourier Transform and Discrete Fourier Transform – Image Enhancement in Spatial and Frequency Domain – Grey level Transformations–Histogram Processing – Spatial Filtering – Smoothing and Sharpening – Filtering in Frequency Domain.

UNIT III – MULTI-RESOLUTION ANALYSIS

9

Multi-Resolution Analysis: Image Pyramids – Multi Resolution Expansion – Wavelet Transforms–Image Restoration–Image Degradation Model–Noise Modelling- Blur – Order Statistic Filters–Image restoration Algorithms.

UNIT IV – FEATURE EXTRACTION**9**

Image Segmentation – Detection of Discontinuities – Edge Operators – Edge Linking and Boundary Detection – Thresholding – Region based Segmentation –Image Features and Extraction–Image Features– Types of Features–Feature Extraction–SIFT, SURF and Texture–Feature Reduction Algorithms.

UNIT V – SUPERVISED AND UNSUPERVISED LEARNING TECHNIQUES**9**

Image Classifiers – Supervised Learning – Support Vector Machines, Image Clustering – Unsupervised Learning – Hierarchical and Partition Based Clustering Algorithms – EM Algorithm – Case Studies

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Recognize classes of optimization problems in machine learning and related disciplines.
- Understand the mathematical underpinnings of optimization methods via examples drawn from machine learning, computer vision, engineering, and data analysis.
- Understand foundational optimization ideas including gradient descent, stochastic gradient methods, higher-order methods, and more advanced optimization algorithms.
- Classify optimization problems by their tractability, difficulty, and compatibility with existing software.
- Illustrate the advanced models and optimizations algorithms.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Apply fundamental knowledge of optimization methods for machine learning.
- Make use of optimization techniques and numerical methods for optimization.
- Apply optimization techniques to real time problems arising from machine learning.
- Apply optimization methods with existing software.
- Distinguish parallel and distributed optimization algorithms for a given applications

UNIT I FUNDAMENTALS OF CONVEX ANALYSIS**9**

Introduction: Optimization and Machine Learning–Convex Optimization with Sparsity-Inducing Norms–Interior-Point Methods for Large-Scale Cone Programming–Incremental Gradient, Sub-gradient, and Proximal Methods for Convex Optimization

UNIT II FIRST-ORDER METHODS**9**

Stochastic and Online Variants of mentioned methods–Coordinate Descent–Frank-Wolfe–Accelerated Methods– Cutting-Plane Methods in Machine Learning–Introduction to Dual Decomposition for Inference.

UNIT III HIGHER ORDER METHODS

9

Augmented Lagrangian Methods for Learning, Selecting, and Combining Features–The Convex Optimization Approach to Regret Minimization–Projected Newton-type Methods in Machine Learning

UNIT IV OPTIMIZATION TECHNIQUES IN MACHINE LEARNING

9

Robust Optimization in Machine Learning–Improving First and Second-Order Methods by Modeling Uncertainty – Optimization Methods for Sparse Inverse Covariance Selection.

UNIT V DISTRIBUTED OPTIMIZATION ALGORITHM

9

A Pathwise Algorithm for Covariance Selection–Advanced models: GANs, adversarial optimization, robust optimization, cycle consistency–Parallel and Distributed Optimization Algorithms

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Recall the concept of software quality and the different components of Software Quality Assurance.
- Provide the knowledge of software development methodologies.
- Understand the software testing strategies and implementation.
- Understand the concept of software configuration management.
- Know various quality management standards.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Identify the basics of software quality assurance techniques and testing components.
- Make use of software development methodologies for a given model.
- Apply testing strategies for given test cases..
- Utilize the software configuration management for phases in software development life cycle.
- Classify the testing and quality management standards for a software development product.

UNIT I SOFTWARE QUALITY ASSURANCE COMPONENTS**9**

Introduction – Software quality challenges – Software quality – Software quality factors – Components of SQA–Contract review – Development and quality plans.

UNIT II SOFTWARE DEVELOPMENT METHODOLOGIES**9**

Classic and other software development methodologies–Factors affecting intensity of quality assurance activities in the development process – Verification, validation and qualification – A model for SQA defect removal effectiveness and cost – Review objectives – Formal design reviews – Peer reviews – A comparison of the team review methods – Expert opinions.

UNIT III SOFTWARE TESTING STRATEG**9**

Software testing-strategies: Definition and objectives – Software testing strategies – Software test classifications – White box testing – Black box testing. Software testing-implementation: The testing process – Test case design –Automated testing –Alpha and beta site testing programs.

UNIT IV – SOFTWARE CONFIGURATION MANAGEMENT

9

Software configuration management – Documentation control – Project progress control – Software quality metrics – Costs of software quality – Quality management standards: Scope– ISO 9001 and ISO 9000-3 – Capability Maturity Modes – The bootstrap methodology.

UNIT V – QUALITY MANAGEMENT STANDARD

9

The SPICE project and the ISO/IEC 15504 software process assessment standard. SQA project process standards – IEEE software engineering standards – Management and its role in software quality assurance – The SQA unit and other actors in the SQA system.

PRE-REQUISITES: Fundamentals of Computer

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Understand the concepts of Game design and development.
- Familiarize the processes, mechanics and issues in Game Design.
- Acquire knowledge of Core architectures of Game Programming.
- Introduce Game programming platforms, frame works and engines.
- Apply computer graphics concepts to develop games.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Identify the concepts of game design and development.
- Apply game loop to facilitate simulation in real time gaming world.
- Make use of software development tools and methods for game development
- Utilize the python programming libraries to generate interactive 2D and 3D games.
- Apply basic artificial intelligence in computer games.

UNIT I ANIMATION

9

3D Transformations, Quaternions, 3D Modeling and Rendering, Ray Tracing, Shader Models, Lighting, Color, Texturing, Camera and Projections, Culling and Clipping, Character Animation, Physics-based Simulation, Scene Graphs.

UNIT II GAME LOGIC

9

Game engine architecture, Engine support systems, Resources and File systems, Game loop and real-time simulation, Human Interface devices, Collision and rigid body dynamics, Game profiling.

UNIT III EVENT MANAGEMENT

9

Application layer, Game logic, Game views, managing memory, controlling the main loop, loading and caching game data, User Interface management, Game event management

UNIT IV GAME STUDIO

9

2D and 3D Game development using Flash, DirectX, Java, Python – Introduction to python-pygame libraries- Mobile Gaming for the Android, iOS, Game engines - Adventure Game Studio, DXStudio, UnityDX Studio.

UNIT V GAME DESIGN

9

Developing 2D and 3D interactive games using DirectX or Python – Isometric and Tile Based Games, Puzzle games, Single Player games, Multiplayer games. Game project management, Game design documentation, Rapid prototyping and game testing.

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Recall the basic concepts of data storage systems.
- Examine emerging technologies including IP-SAN.
- Describe the different backup and recovery topologies and their role in providing disaster recovery and business continuity capabilities.
- Familiarize the knowledge in secured data storage infrastructure
- Identify components of managing and monitoring the data center.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Apply the information storage and retrieval concepts in a storage system.
- Utilize storage networking technologies for deploying virtualization.
- Model the SAN, NAS and CAS storage subsystems architectures.
- Identify the security components for the implementation of NAS.
- Analyze CAS architecture archives and forms of virtualization.

UNIT I – STORAGE SYSTEMS**9**

Introduction to Storage Systems: Storage System – Introduction to Information Storage and Management – Storage System Environment – Data Protection Raid – Intelligent Storage System.

UNIT II – STORAGE AREA NETWORKING**9**

Storage Area Networking: Storage Networking Technologies and Virtualization – Storage Networks Network Attached Storage – IP SAN – Content Addressed Storage – Storage Virtualization.

UNIT III – BACKUP AND RECOVERY MECHANISHMS**9**

Backup and Recovery Mechanisms: Introduction to Business Continuity – Backup and Recovery – LocalReplication – Remote Replication.

UNIT IV– STORAGE SECURITY**9**

Storage Security: Securing the storage Infrastructure – Storage Security Framework – Risk Triad – Storage Security Domains – Security Implementation in Storage Networking.

UNIT V- STORAGE INFRASTRUCTURE MANAGEMENT

9

Storage Infrastructure Management: Managing the Storage Infrastructure – Monitoring the Storage Infrastructure – Storage Management Activities – Developing an Ideal Solution – Concepts in Practice – Disaster recovery –Cloud storage-Github.

3D PRINTING AND DESIGN**3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES:**

The goal of this course is for the students to:

- Create awareness on rapidly evolving and widely used fabrication technology.
- Make aware of the technology for conceptual modelling, prototyping and rapid manufacturing.
- Impart detailed knowledge of wide applications of Additive Manufacturing (AM) in industry and society; and in particular, key applications of AM such as rapid tooling, medical AM and rapid manufacturing.
- Understand 3D printers and its applications.
- Know about liquid based 3D printing.

COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

- Explain the principle of fused deposition modeling using 3D Printing
- Apply AutoCAD software for designing and drafting.
- Model additive manufacturing techniques for a given product.
- Examine the design technology for Stereo lithography.
- Inspect 3D parts using advanced CAD software and 3D printing.

UNIT I INTRODUCTION**9**

Introduction to Design, Prototyping fundamentals. Introduction to 3D printing, its historical development, advantages. Commonly used terms, process chain, 3D modelling, Data Conversion, and transmission, Checking and preparing, Building, Post processing, RP data formats, Classification of 3D printing process, Applications to various fields.

UNIT II FDM AND FFF PRINTING**9**

Principle of FDM/FFF printing, Basic steps to perform FDM printing, Significant process parameters of FDM printing, layer height, raster angle, raster width, build temperature, Nozzle temperature, orientation, printing speed etc

UNIT III FDM MATERIALS**9**

Types of FDM printer Cartesian, Polar, delta, Robotic (SCARA), continuous FDM Materials PLA,

ABS, PETG, Nylon, PVA, PC, TPU, Carbon reinforced nylon, ceramics, metals, Dual and multi material etc

UNIT IV LIQUID BASED 3D PRINTING

9

Stereo lithography apparatus (SLA): Models and specifications, process, working principle, photopolymers, photo polymerization, layering technology, laser and laser scanning, applications, advantages and disadvantages, case studies. Solid ground curing (SGC): Models and specifications, process, working, principle, applications, advantages and disadvantages, case studies

UNIT V SOLID BASED 3D PRINTING

9

Laminated object manufacturing(LOM): Models and specifications, Process, Working principle, Applications, Advantages and disadvantages, Case studies. Fused Deposition Modeling (FDM): Models and specifications, Process, Working principle, Applications, Advantages and disadvantages, Case studies, practical demonstration

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Understand the fundamentals of data science and big data.
- Gain in-depth knowledge on descriptive data analytical techniques.
- Develop simple to complex analytical algorithms in big data frameworks.
- Use big data processing methods in data science.
- Demonstrate data visualization, web scraping and machine learning using various Data Science tools.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Apply the fundamentals of big data analytics to a dataset.
- Utilize Hadoop file system and its components for unstructured dataset.
- Compare RDBMS and MongoDB Database Model.
- Categorize data science packages for solving problems.
- Examine interactive visualization techniques using Matplotlib in Python.

UNIT I – FUNDAMENTAL AND COMPONENTS OF DATA SCIENCE**9**

Data Science – Fundamentals and Components – Data Scientist – Terminologies Used in Big Data Environments – Types of Digital Data – Classification of Digital Data – Introduction to Big Data – Characteristics of Data – Evolution of Big Data – Big Data Analytics – Classification of Analytics – Top Challenges Facing Big Data – Importance of Big Data Analytics – Data Analytics Tools. Linear Regression – Polynomial Regression – Multivariate Regression

UNIT II – INTRODUCTION ABOUT HADOOP FILE SYSTEM**9**

Introducing Hadoop –Hadoop Overview – RDBMS versus Hadoop – HDFS (Hadoop Distributed File System): Components and Block Replication – Processing Data with Hadoop – Introduction to MapReduce – Features of MapReduce

UNIT III – INTRODUCTION TO NO SQL**9**

Introduction to NoSQL: CAP theorem – MongoDB: RDBMS Vs MongoDB – Mongo DB Database Model – Data Types and Sharding – Introduction to Hive – Hive Architecture – Hive Query Language (HQL).

UNIT IV – DATA SCIENCE PACKAGES**9**

Introduction to Essential Data Science Packages: Numpy, Scipy, Jupyter, Statsmodels and Pandas Package – Data Munging: Introduction to Data Munging, Data Pipeline and Machine Learning in Python

UNIT V – INTRODUCTION TO DATA VISUALIZATION**9**

Data Visualization Using Matplotlib – Interactive Visualization with Advanced Data Learning Representation in Python.

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Understand the concept of IoT in the modern industry and new economy.
- Summarize the business models, protocols and sensors used in Industrial area.
- Bring the IoT perspective in designing and building solutions.
- Introduce the tools and techniques that enable IoT solution and Security aspects.
- Solve various case studies and problems.

COURSE OUTCOMES:

Upon completion of the course, the student should be able to:

- Apply the concept of Internet of Things and Industrial Internet of Things.
- Identify the concept of industrial sensors and network layer protocols
- Model the importance of Data Analytics in IoT.
- Categorize applications for Industrial IoT.
- Analyze the opportunities, challenges by Industry 4.0.

UNIT I - PLATFORM AND PRODUCT LIFECYCLE MANAGEMENT**9**

Cyber Physical Systems and Next Generation Sensors, Collaborative Platform and Product Lifecycle Management, Augmented Reality and Virtual Reality, Artificial Intelligence, Big Data and Advanced Analysis.

UNIT II – INDUSTRIAL INTERNET OF THINGS**9**

IIoT-Introduction, Industrial IoT: Business Model and Reference Architecture: IIoT-Business Models, Industrial IoT-Protocol Layers: IIoT Sensing, IIoT Processing, IIoT Communication, IIoT Networking.

UNIT III – BIG DATA ANALYTICS**9**

Big Data Analytics and Software Defined Networks, Machine Learning and Data Science, Julia Programming, Data Management with Hadoop.

UNIT IV – APPLICATIONS OF INDUSTRIAL IOT**9**

Industrial IoT: Security and Fog Computing - Cloud Computing in IIoT, Fog Computing in IIoT, Security in IIoT - Industrial IoT (Robotics)- Application Domains: Oil, chemical and pharmaceutical industry, Applications of UAVs in Industries)

UNIT V - INDUSTRY 4.0 AND THE IIOT IN THE MILK PRODUCTION PROCESS**9**

Real case studies : Milk Processing and Packaging Industries, Manufacturing Industries.

Average	2.8	2.2	1.5	1	1	-	-	-	-	1	-	2	-	2

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Impart the knowledge of basics of digital manufacturing and its importance.
- Provide a strong orientation on the new advancements in manufacturing
- Introduce the basics of industrial internet systems, networks and protocols
- Inculcate the basics of Industry 4.0 concepts
- Understand engineering processes, practices, technology and applications of Smart Manufacturing.

COURSE OUTCOMES:

Upon completion of the course, the student should be able to:

- Apply the basics of Industrial Internet and its use cases
- Apply intelligent approaches to develop smart applications.
- Identify the Industrial internet systems, networks and middleware protocols
- Analyze Middleware basic concepts.
- Categorize predictive modeling for smart applications using IoT.

UNIT I – INTRODUCTION TO INDUSTRIAL IOT**9**

Introduction to the Industrial Internet–Industrial Internet Use-Cases–The Technical and Business Innovators of the Industrial Internet–IIoT Reference Architecture.

UNIT II - EXAMINING THE ACCESS NETWORK TECHNOLOGY**9**

Designing Industrial Internet Systems–Examining the Access Network Technology and Protocols.

UNIT III - MIDDLEWARE TRANSPORT PROTOCOLS**9**

Examining the Middleware Transport Protocols–Middleware Software Patterns–Software Design Concepts.

UNIT IV - MIDDLEWARE INDUSTRIAL INTERNET OF THINGS**9**

Middleware Industrial Internet of Things Platforms–IIoT WAN Technologies and Protocols–Securing the Industrial Internet.

UNIT V – INTRODUCTION TO INDUSTRY 4.0**9**

Introducing Industry 4.0–Smart Factories–Smart Applications: Online Predictive Modeling, Monitoring and Intelligent Control of Machining/Manufacturing and Logistics/Supply Chain Processes.

COURSE OBJECTIVES:

The goal of this course is for the students to :

- Provide a sound knowledge in UI & UX
- Understand the need for UI and UX
- Understand the various Research Methods used in Design
- Explore the various Tools used in UI & UX
- Creating a wireframe and prototype

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Build user interface for user applications
- Develop user experience design for an product or web application
- Model user experience skills in product development phases.
- Apply sketching principles to wireframing, prototyping and testing
- Build wireframe techniques for a given web based application.

UNIT I FOUNDATIONS OF DESIGN**9**

UI vs. UX Design - Core Stages of Design Thinking - Divergent and Convergent Thinking - Brainstorming and Game storming - Observational Empathy

UNIT II FOUNDATIONS OF UI DESIGN**9**

Visual and UI Principles - UI Elements and Patterns - Interaction Behaviors and Principles – Branding - Style Guides

UNIT III FOUNDATIONS OF UX DESIGN**9**

Introduction to User Experience - Why You Should Care about User Experience - Understanding User Experience - Defining the UX Design Process and its Methodology - Research in User Experience Design - Tools and Method used for Research - User Needs and its Goals - Know about Business Goals

UNIT IV WIREFRAMING, PROTOTYPING AND TESTING

9

Sketching Principles - Sketching Red Routes - Responsive Design – Wireframing - Creating Wireflows - Building a Prototype - Building High-Fidelity Mockups - Designing Efficiently with Tools - Interaction Patterns - Conducting Usability Tests - Other Evaluative User Research Methods - Synthesizing Test Findings - Prototype Iteration

UNIT V RESEARCH, DESIGNING, IDEATING, & INFORMATION ARCHITECTURE

9

Identifying and Writing Problem Statements - Identifying Appropriate Research Methods - Creating Personas - Solution Ideation - Creating User Stories - Creating Scenarios - Flow Diagrams - Flow Mapping - Information Architecture

Average	3	2	1	-	-	-	-	-	1	1	-	1	-	2

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Introduce the relevance of this course to the existing technology through demonstrations, case studies and applications with a futuristic vision along with socio-economic impact and issues
- Understand virtual reality, augmented reality and using them to build Engineering applications
- Know the intricacies of these platform to develop PDA applications with better optimality.
- Learn concepts of developing web and mobile application on VR.
- Understand the concepts of engineering applications in VR.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Build a system with realistic engineering constraints.
- Apply the geometric modeling in computer graphics for simulations of materials.
- Apply the technical resources virtual reality system.
- Make use of JS VR for web and mobile application development.
- Examine the role of VR in gaming applications

UNIT I – VR TECHNOLOGY COMPONENTS**9**

The three I's of virtual reality-commercial VR technology and the five classic components of a VR system - Input Devices: (Trackers, Navigation, and Gesture Interfaces): Three-dimensional position trackers, navigation and manipulation-interfaces and gesture interfaces-Output Devices: Graphics displays-sound displays & haptic feedback.

UNIT II - MODELING AND MANAGEMENT**9**

Geometric modeling - kinematics modeling- physical modeling - behaviour modeling - model Management.

UNITIII – IMPORTANCE OF VIRTUAL REALITY SYSTEMS**9**

Methodology and terminology-user performance studies-VR health and safety issues-Usability of virtual reality system- cyber sickness -side effects of exposures to virtual reality environment.

UNIT IV AR-VR BUILDING BLOCKS**9**

JS-pros and cons-building blocks (WebVR, WebGL, Three.js, device orientation events)-frameworks (A-frame, React VR)-Google VR for Android-Scripts, mobile device configuration,

building to android-cameras and interaction-teleporting-spatial audio-Assessing human parameters-
device development and drivers-Design Haptics.

UNIT V – APPLICATIONS OF AR-VR

9

Medical applications-military applications-robotics applications- Advanced Real time Tracking-
other applications- games, movies, simulations, therapy.

Average	3	2.2	1.2	1	2	-	-	-	-	1	-	1	-	3

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Recall the overview of data center infrastructure elements and their requirements.
- Evaluate storage architectures, including storage subsystems, DAS, SAN, NAS, CAS.
- Emphasis the storage virtualization and cloud emerging technologies.
- Define backup, recovery, disaster recovery, business continuity, and replication.
- Examine emerging technologies including IP-SAN.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Illustrate intelligence storage system in a memory structure.
- Identify storage technologies for cost-effective IT solutions.
- Classify data backup and recovery for memory storage.
- Analyze the service models in cloud environment.
- Inference security solutions for storage environment.

UNIT I – INTRODUCTION TO STORAGE AREA NETWORK**9**

The value of information and data creation to a business – Overview of Data Center infrastructure elements and their requirements – Physical and logical components of host, connectivity and storages –Disk drive architecture and performance – RAID – Different RAID levels (RAID 0, 1, 3, 4, 5, 0+1/1+0 and 6)–Overview of Intelligent Storage System (ISS)–Components of ISS–Implementation of ISS as storage arrays.

UNIT II – INTRODUCTION TO IP SAN AND ITS COMPONENTS**9**

DAS Implementation–Overview of SCSI–Architecture, Components. Topologies: FC-SAN,IP-SAN, FCoE–NAS, Overview of Object based storage system–CAS.

UNIT III – CLOUD STORAGE AND SERVICES**9**

Application: Long term archiving solution – Unified storage – Block level and File level storage virtualization technologies–processes. Overview of emerging technologies: Cloud service models – Cloud deployment models –Cloud challenge.

UNIT IV – BACKUP AND RECOVERY TERMINOLOGIES

9

Information Availability – Measurement – Downtime: causes – consequences – RTO – RPO – Storage infrastructure: Single point of failure and solution–Backup/Recovery: purpose, Architecture, Topologies–Local and remote replication: Technologies, Operation.

UNIT V – INFORMATION SYSTEM SECURITY

9

Emerging Technologies: Duplication, Offsite Backup – Introduction to information security – Critical security attributes for information system – Elements of a shared storage model and security extensions – Storage security domains–Common threats in each domain.

**OPEN ELECTIVES
OFFERED
FROM
ARTIFICIAL INTELLIGENCE
AND DATA SCIENCE**

COURSE OBJECTIVES

The goal of this course is for the students to:

- Study the basic concepts of Data Science and data life cycle
- Understand the theoretical and mathematical aspects of Data Science models
- Learn common random variables and their uses, and with the use of empirical distributions
- Obtain the knowledge in data management tools
- Explore the major techniques for data science

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Identify the key concepts in data science and data processing.
- Apply sampling and probabilistic models to a real time application.
- Make use of data normalization and data management tools.
- Distinguish between supervised and unsupervised machine learning techniques.
- Inspect different analytics used in business intelligence.

UNIT I INTRODUCTION

9

The Big Picture: What is Data Science? –The data life cycle: pre-processing, analysis, post-processing – Pre-processing: Data gathering, cleansing, visualization, and understanding (Mean, Variance, Standard Deviation. Percentiles.)–Data Storage (Relational databases, e.g. MySQL)

UNIT II PROBABILISTIC MODELS

9

Sampling – Probability Models for Statistical Methods: Discrete and continuous probability distributions, density functions. Random variables, expected values, variance, correlation.

UNIT III NORMALIZATION

9

Data Normalization (z-values, transforms) –Random processes –Data Management: Tools for Data Analysis, Case Study: Data analysis using Python-Arrays, Visualization.

UNIT IV DATA MINING

9

Major Techniques in Data Science: Data mining, Data warehousing, Data mining vs Data warehouse–Machine Learning- Supervised Learning, Unsupervised Learning.

UNIT V BUSINESS INTELLIGENCE AND ANALYTICS

9

Business Intelligence –Descriptive Analytics, Diagnostic Analytics, Predictive Analytics, Prescriptive Analytics– Cloud computing-definition, Cloud services, types of clouds, some of commercial and non commercial cloud service providers.

1

COURSE OBJECTIVES

The goal of this course is for the students to:

- Understand the various characteristics of Intelligent agents
- Learn the different search strategies in AI
- Represent knowledge in solving AI problems.
- Illustrate the different ways of designing software agents
- Know the various applications of AI.

COURSE OUTCOME

Upon completion of the course, the students will be able to:

- Apply search algorithms in real world scenarios.
- Identify methods of knowledge representation.
- Examine description logic and conceptional dependencies.
- Inspect strategies for optimal decision-making in the context of game-playing scenarios.
- Categorize the properties of Markov process and the concept of transition probabilities.

UNIT I INTRODUCTION

9

Introduction: Objective, scope and outcome of the course Meaning and definition of artificial intelligence, Physical Symbol System Hypothesis, production systems, Characteristics of production systems; Breadth first search and depth first search techniques. Heuristic search Techniques: Hill Climbing, Iterative deepening DFS, bidirectional search. Analysis of search methods. A* algorithm, and their analysis. Introduction to Genetic Algorithms.

UNIT II KNOWLEDGE REPRESENTATION

9

Knowledge Representation, Problems in representing knowledge, knowledge representation using propositional and predicate logic, logical consequences, syntax and semantics of an expression, semantic Tableau. Forward and backward reasoning. Proof methods, substitution and unification, conversion to clausal form, normal forms, resolution, refutation, deduction, theorem proving, inferencing, monotonic and non monotonic reasoning. Introduction to prolog.

UNIT III NETWORK-BASED REPRESENTATION

9

Network-based representation and reasoning, Semantic networks, Conceptual Graphs, frames. Description logic (DL), concept language, reasoning using DL. Conceptual dependencies (CD), scripts, reasoning using CD. Introduction to natural language processing.

UNIT IV GAME THEORY

9

Adversarial search and Game theory, classification of games, game playing strategies, prisoner's Dilemma. Game playing techniques, minimax procedure, alpha-beta cut-offs. Complexity of alpha-beta search. Automated planning, classical planning problem, forward planning, partial order planning, planning with proposal logic, hierarchical task planning, multiagent planning.

UNIT V FUZZY LOGIC

9

Reasoning in uncertain environments, Fuzzy logic, fuzzy composition relation, operations on fuzzy sets. Probabilistic reasoning, Bayes theorem, construction of Bayesian networks, belief propagation. Markov processes and Hidden Markov models.

23BTADOE03**INTERNET PROGRAMMING****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal: 40 External:60 Total:100****End Semester Exam:3Hours****COURSE OBJECTIVES**

The goal of this course is for the students to:

- Recall fundamental tags used in HTML5 and CSS to create simple web application.
- Rephrase the concept to create static and dynamic webpage with validation controls and event handling methods.
- Make use of servlets and JSP tag to develop server-side scripting.
- Summarize the tags in PHP and XML to create simple php web application.
- Interview the basic concept and tags are used in web service application using ajax.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Develop a basic website using HTML and Cascading Style Sheets.
- Build dynamic web page with validation using Java Script objects and event handling mechanisms.
- Examine server-side programs using Servlets and JSP.
- Model a web pages in PHP and represent data in XML format.
- Develop web service application using Ajax.

UNIT I – WEBSITE BASICS, HTML 5, CSS 3, WEB 2.0**9**

Web Essentials: Clients, Servers and Communication – The Internet – Basic Internet protocols – World wide web – HTTP Request Message – HTTP Response Message – Web Clients – Web Servers – HTML5 – Tables – Lists – Image – HTML5 control elements – Semantic elements – Drag and Drop – Audio – Video controls – CSS3 – Inline, embedded and external style sheets – Rule cascading – Inheritance – Backgrounds – Border Images – Colors – Shadows – Text – Transformations – Transitions – Animations.

UNIT II - CLIENT-SIDE PROGRAMMING**9**

Java Script: An introduction to JavaScript–JavaScript DOM Model-Date and Objects, -Regular Expressions- Exception Handling-Validation-Built-in objects-Event Handling- DHTML with JavaScript- JSON introduction – Syntax – Function Files – Http Request – SQL.

UNIT III – SERVER-SIDE PROGRAMMING

9

Servlets: Java Servlet Architecture- Servlet Life Cycle- Form GET and POST actions- Session Handling- Understanding Cookies- Installing and Configuring Apache Tomcat Web Server
DATABASE CONNECTIVITY: JDBC perspectives, JDBC program example – JSP: Understanding Java Server Pages-JSP Standard Tag Library (JSTL)-Creating HTML forms by embedding JSP code

UNIT IV – PHP AND XML

9

An introduction to PHP: PHP- Using PHP- Variables- Program control- Built-in functions- Form Validation- Regular Expressions – File handling – Cookies – Connecting to Database. XML: Basic XML- Document Type Definition- XML Schema DOM and Presenting XML, XML Parsers and Validation, XSL and XSLT Transformation, News Feed (RSS and ATOM).

UNIT V – INTRODUCTION TO AJAX AND WEB SERVICES

9

AJAX: Ajax Client Server Architecture-XML Http Request Object-Call Back Methods; Web Services: Introduction- Java web services Basics – Creating, Publishing, Testing and Describing a Web services (WSDL)-Consuming a web service, Database Driven web service from an application –SOAP.

Average	3	2	1	-	-	-	-	-	1	1	-	1	-	2

COURSE OBJECTIVES:

The goal of this course is for the students to:

- Introduce the functional elements of Robotics.
- Impart knowledge on the forward and inverse kinematics.
- Interpret the manipulator differential motion and control.
- Educate on various path planning techniques.
- Understand about hydraulics system.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Interpret basic concept of robotics fundamental principles, components, and applications of robotic systems.
- Identify the dynamics of robotic systems and implications for planning and control.
- Utilize the principles of state estimation and steps involved in the Kalman filtering process.
- Identify the components, working principles, applications of Pneumatic and Hydraulic system.
- Utilize the principles of fluidic devices and fluidic logic circuits automation.

UNIT I KINEMATICS CONCEPTS**9**

Introduction – Actuators – Sensors – Rigid body – coordinate systems – Kinematics – Forward Kinematics & Inverse Kinematics – Velocity Kinematics – Angular velocity – Linear velocity – Singularity – Force and torque.

UNIT II MOBILE ROBOTS**9**

Dynamics – Mobile Robots – Planning and Control – Path & Trajectory planning – Probabilistic Roadmaps – Localization.

UNIT III KALMAN MODELS**9**

Basics of probability – Kalman Filtering – Extended Kalman – Particle filter – Localization – Computer Vision – Vision Based Controls.

UNIT IV PNEUMATIC AND HYDRAULIC SYSTEM

9

Automation – Basic Laws and Principles – Basic Pneumatic and Hydraulic system – Pumps and compressors – Fluid accessories.

UNIT V ELECTRICAL AND ELECTRONIC CONTROLS

9

Cylinders and Motors – Control valves – Circuits – Pneumatic logic circuits – Fluidics – Electrical and electronic controls – Transfer devices and Feeders.

COMPUTER SCIENCE AND ENGINEERING

23BEC SOE01**INTERNET OF THINGS****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students to:

- Understand the basics of Internet of Things.
- Identify an idea of some of the application areas where Internet of Things can be applied.
- Infer the middleware for Internet of Things.
- Express the concepts of Web of Things .
- Examine the concepts of Cloud of Things with emphasis on Mobile cloud computing.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Infer the basic concepts of IoT architecture.
- Identify the communication criteria in IoT network layer.
- Build the basic blocks of an IoT device.
- Examine data analytics tools for decision-making in operational environment.
- Analyze real time architecture of IoT systems for communication networks.

UNIT I INTRODUCTION TO IOT**9**

Introduction to IoT – IoT Architectures – Core IoT Functional Stack, Sensors and Actuators Layer, Communications Network Layer, Applications and Analytics Layer – IoT Data Management and Compute Stack, Fog Computing, Edge Computing, Cloud Computing – Sensors, Actuators, Smart Objects, Sensor networks. Middleware for IoT: Overview – Communication middleware for IoT – IoT Information Security, WSN and Sensing Model.

UNIT II IOT COMMUNICATION**9**

Communications Criteria – Access Technologies – IP as IoT Network Layer – Business case – Optimization – Profiles and compliances – Application Protocols – Transport Layer – Application Transport Methods.

UNIT III DESIGN METHODOLOGY

9

Design Methodology – Case study – Basic blocks of IoT device – Raspberry Pi – Board, Interfaces, Linux, Setting up, Programming – Arduino – Other IoT Devices.

UNIT IV DATA ANALYTICS FOR IOT

9

Data Analytics for IoT – Big Data Analytics Tools and Technology – Edge Streaming Analytics – Network Analytics Applications. Security history, challenges, variations – Risk Analysis Structures – Application in Operational Environment.

UNIT V IOT IN INDUSTRY

9

Manufacturing, Architecture, Security Protocols – Utilities, Grid Blocks - Smart Cities, Architecture, Use cases – Transportation, Architecture, Use cases.

Total: 45

23BEC SOE02**MACHINE LEARNING****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students to:

- Introduce the basic concepts and techniques of Machine Learning.
- Understand Supervised and Unsupervised learning techniques.
- Study the various probability based learning techniques.
- Learn Dimensionality Reduction Techniques.
- Infer Evolutionary Models and Graphical models of machine learning algorithms.

COURSE OUTCOMES

Upon completion of this course, the students will be able to:

- Infer the basics of machine learning techniques and its types.
- Apply machine learning algorithms for a given problem.
- Build mathematical relationships using machine learning algorithms.
- Examine the art of machine learning to predictive data analytics.
- Analyze machine learning algorithms to enhance classification efficiency.

UNIT I: MACHINE LEARNING BASICS**9**

Introduction to Machine Learning (ML) - Essential concepts of ML – Types of learning – Machine learning methods based on Time – Dimensionality – Linearity and Non linearity – Early trends in Machine learning – Data Understanding Representation and visualization.

UNIT II: MACHINE LEARNING METHODS**9**

Linear methods – Regression -Classification –Perceptron and Neural networks – Decision trees – Support vector machines – Probabilistic models —Unsupervised learning – Featurization

UNIT III: MACHINE LEARNING IN PRACTICE**9**

Ranking – Recommendation System - Designing and Tuning model pipelines- Performance measurement – Azure Machine Learning – Open-source Machine Learning libraries – Amazon's Machine Learning Tool Kit: Sagemaker

UNIT IV: MACHINE LEARNING AND DATA ANALYTICS**9**

Machine Learning for Predictive Data Analytics – Data to Insights to Decisions – Data Exploration – Information based Learning – Similarity based learning – Probability based learning – Error based learning – Evaluation – The art of Machine learning to Predictive Data Analytics.

UNIT V: APPLICATIONS OF MACHINE LEARNING**9**

Image Recognition – Speech Recognition – Email spam and Malware Filtering – Online fraud detection – Medical Diagnosis.

23BEC SOE03**BLOCKCHAIN TECHNOLOGIES****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students to:

- Comprehend the importance of the Blockchain framework and its practical uses.
- Scrutinize the verification of Bitcoin transactions through the utilization of the Blockchain.
- Recognize the constituent elements of smart contracts required for achieving consensus in a Permissioned Blockchain.
- Furnish the essential infrastructure and boost the effectiveness, efficacy, and transactions of diverse business procedures by utilizing Hyperledger.
- Examine the scope of utilization of Blockchain in diverse governmental and non-governmental entities.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Interpret block elements in a blockchain cryptographic methods.
- Apply consensus algorithm in securing the networks.
- Build permissioned blockchain for asset transfer.
- Identify the transaction flow in Hyperledger fabric and validation process.
- Apply blockchain adoption in Non-Governmental and Governmental organization.

UNIT I: INTRODUCTION**9**

Introduction – Block Structure – Architecture – Block Header – Genesis Block – Merkle Trees – Hashing - Signature & Encryption Schemes – Business Applications

UNIT II: BITCOIN BASICS**9**

Bitcoin Basics – Wallet - Decentralized Consensus – Aggregate transactions - Proof of Work – Miners – Consensus Algorithms – Double Spending - Verifying Transactions – Fork – Reward

UNIT III: PERMISSIONED BLOCKCHAIN**9**

Permissioned Block Chain – Smart Contracts - Consensus – Raft – Byzantine – Paxos – Degree of Decentralization – Asset Transfer - Enterprise Application.

UNIT IV: FABRIC ARCHITECTURE**9**

Fabric Architecture – Transaction Flow – Channel – Ordering Service –Membership & Identity Management – Network Setup – Hyperledger Composer – Roles – Network Administration

UNIT V: BLOCKCHAIN USE CASES & SECURITY**9**

Financial Services – Supply Chain – Government – Digital Identities – Land Record Registry – Security Overview – Membership & Access Control – Privacy

23BEC SOE04**CLOUD COMPUTING****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students to:

- Learn the basic concepts of cloud computing.
- Learn types of cloud services and its applications.
- Understand the key components of Amazon Web Services.
- Collaborate with real time cloud services.
- Understand the security risk and application of cloud computing.

COURSE OUTCOMES

Upon completion of this course, the students will be able to:

- Infer the basic concepts of cloud computing and its usage.
- Outline the types of cloud computing services.
- Illustrate the functions collaborating with cloud application.
- Identify the importance of virtualization along with their technologies.
- Categorize cloud management and administration tools for application development.

UNIT I CLOUD INTRODUCTION**9**

Cloud Computing Fundamentals: Cloud Computing definition, Types of cloud, Cloud services: Benefits and challenges of cloud computing, Evolution of Cloud Computing , usage scenarios and Applications, Business models around Cloud – Major Players in Cloud Computing - Issues in Cloud - Eucalyptus - Nimbus – Open Nebula, CloudSim.

UNIT II CLOUD SERVICES AND FILE SYSTEM**9**

Types of Cloud services : Software as a Service - Platform as a Service – Infrastructure as a Service - Database as a Service - Monitoring as a Service – Communication as services. Service providers - Google App Engine, Amazon EC2, Microsoft Azure, Sales force. Introduction to MapReduce, GFS, HDFS, Hadoop Framework.

UNIT III COLLABORATING WITH CLOUD**9**

Collaborating on Calendars, Schedules and Task Management – Collaborating on Event Management, Contact Management, Project Management – Collaborating on Word Processing ,Databases – Storing and Sharing Files- Collaborating via Web-Based Communication Tools –

Evaluating Web Mail Services – Collaborating via Social Networks – Collaborating via Blogs and Wikis.

UNIT IV ABSTRACTION AND VIRTUALIZATION

9

Introduction to Virtualization Technologies, Load Balancing and Virtualization, Understanding Hyper visors, Understanding Machine Imaging, Porting Applications, Virtual Machines Provisioning and Manageability Virtual Machine Migration Services, Virtual Machine Provisioning and Migration in Action, Provisioning in the Cloud Context.

UNIT V MANAGING AND SECURING CLOUD

9

Managing & Securing the Cloud: Administrating the Clouds, Cloud Management Products, Emerging Cloud Management Standards, Securing the Cloud, Securing Data, Establishing Identity and Presence. Case-Studies: Using Google Web Services, Using Amazon Web Services, Using Microsoft Cloud Services

OPEN ELECTIVES
OFFERED
FROM
COMPUTER SCIENCE AND
ENGINEERING (CYBER SECURITY)

COURSE OBJECTIVES

The goal of this course for the students is to

- Understand the fundamental concepts of cybercrime.
- Explore knowledge on cybercrimes in wireless devices.
- Infer tools used in the cyber security.
- Familiar with various Indian IT Act in cybercrime and cyber security.
- Enhance the knowledge in handheld devices and digital forensics.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Identify the basics of cyber-crime and information security in safeguarding digital assets.
- Apply the fundamentals concepts for identifying cyber-attacks.
- Make use of tools and methods used in cyber security.
- Analyze theoretical and cross-disciplinary approaches in Indian IT Act and in digital devices.
- Examine the effect of cybercrime on digital devices on the public sector, private sector, individual, and societal levels

UNIT I INTRODUCTION

9

Introduction to Cyber Crime: Cyber Crime and Information Security – Classifications of Cyber Criminals – Cyber Crime Legal Perspective and Indian Perspective – Cyber Crime and Indian ITA – A Global perspective on Cybercrimes – Categories of Cybercrimes – Criminal plans for attack – Social Engineering – Cyber talking – Cyber cafe and cyber criminals – Botnet – Attack vector – Cloud Computing.

UNIT II CYBER CRIME MOBILE AND WIRELESS DEVICES

9

Cyber Crime Mobile and Wireless Devices: Proliferation – Trends in Mobility – Credit card frauds – Security challenges – Registry setting – Authentication service – Attacks – Security Implication for Organization – Organizational measures – Organizational Security Policies – Physical security counter measures.

UNIT III TOOLS AND METHODS USED IN CYBER SECURITY 9

Tools and methods used in cyber security: Proxy servers and anonymizers – Phishing – Password cracking – Keyloggers and spywares – Virus and worms – Trojan horse – Steganography – DoS and DDoS attack – SQL Injection – Buffer overflow – Attacks on wireless networks – Phishing and Identity theft.

UNIT IV CYBER CRIME AND LEGAL LANDSCAPE 9

Cyber Crime and Legal landscape – Indian IT Act – Digital Signature and Indian IT Act – Amendments to the Indian IT Act – Cybercrime and punishment. Understanding Computer Forensics: Need for computer forensics – Cyber forensics and digital evidence – Digital forensics life cycle – Network forensics – Computer forensics and steganography - Computer forensics from compliance perspective – Challenges

UNIT V SPECIAL TOOLS AND TECHNIQUES 9

Special tools and techniques –Hand held devices and digital forensics. Cyber security organizational implications: Cost of cybercrimes and IPR – Web threads for organizations – Security and privacy implications – Social media marketing – Incident handling – Forensics best practices for organization.

CO3	3	2	1	-	-	-	-	-	1	1	-	1	-	2
CO4	3	3	2	1	-	-	-	-	1	1	-	1	-	2
CO5	3	3	2	1	-	-	-	-	1	1	-	1	-	2
Average	3	2.4	1.4	1	-	-	-	-	1	1	-	1	-	2

COURSE OBJECTIVES

The goal of this course is for the students to

- Make aware of fundamentals on cyber forensics and usage of cyber forensics tools.
- Be familiar with the file systems and challenges in the Linux and mac operating system.
- Explore knowledge on the network and different operating systems on mobile devices.
- Learn various services like FaaS and MaaS.
- Enhance the knowledge on database, email and threats in crypto currency.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

- Interpret the basic of Forensics investigation process.
- Utilize popular Linux distributions and artifacts associated with Linux systems.
- Make use of iOS forensics and relevant data extraction procedure from iOS devices
- Identify the challenges in cloud forensics.
- Examine Bitcoin forensics and Blockchain artifacts.

UNIT INTRODUCTION

9

Introduction to Cyber forensics: Forensics investigation process – Forensics protocol – Digital forensics standards –Digital evidence – Types of cyber crime – Notable data breaches – Case study - Challenges in Cyber security – Cyber forensics tools. Windows forensics: Digital Evidence – File systems – Time analysis – Challenges- Case Study.

UNIT II LINUX FORENSICS AND MAC OS FORENSICS

9

Linux forensics: Popular linux – File systems – Process – Artifacts – Linux distribution used for forensics analysis – Challenges – Case study. Mac OS forensics: File systems – Process – Artifacts – Information to collect Mac book forensics investigation – Case study. Anti-forensics: Data wiping and shredding – Trial obfuscation – Encryption – Data hiding – Anti-forensics

detection technique

UNIT III NETWORK FORENSICS AND MOBILE FORENSICS

9

Network forensics: OSI Model – Artifacts – ICPM Attack – Analysis tools. Mobile forensics: Android operating system – Mutual Extraction – Physical acquisition – Chip-off – Micro-read – Challenges – iOS operating system.

UNIT IV CLOUD FORENSICS AND WEB ATTACK FORENSICS

9

Cloud forensics: Cloud computing model – Server-side forensics – Client-side forensics – Challenges – Artifacts – use – Forensics as a Service. Malware forensics: Types – Analysis – Tools – Challenges – Malware as a Service. Web attack forensics: Web attack test – Intrusion forensics – Database forensics – Log forensics – Content analysis – File metadata forensics

UNIT V EMAILS AND EMAIL CRIMINALS

9

Emails and email criminals: Protocols – Email criminals – Email forensics. Solid State device forensics: Components – Data wiping – Analysis. Bit coin forensics: Crypto currency – Block chain – Artifacts – Challenges.

23BECYOE03 CYBER LAWS AND INTELLECTUAL PROPERTY RIGHTS 3H-3C**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students to

- Understand the need for cyber laws and intellectual property rights.
- Acquire knowledge about the protective measures of Intellectual property such as copyright, patent, Trademark.
- Examine the criminal remedies and defensive measures.
- Provide an insight about the role of certifying authority and cryptography.
- Be aware of Indian IT Act 2000 and 2008 cyber laws.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

- Interpret the fundamental concepts of cyber laws and intellectual property rights for criminal activities.
- Utilize the concept of work of employment and its implications in copyright infringement cases.
- Choose civil remedies available for design infringement and their application.
- Identify the scope and significance of cyber laws that arises from the use of technology.
- Make use of information technology act and its subsequent amendments in cyberspace.

UNIT I INTRODUCTION**9**

Intellectual Property: Introduction – Protection of Intellectual Property – Copyright related rights – Patents – Industrial designs – Trademark – Unfair competition – Information technology related intellectual property rights – Computer software and intellectual property – Copyright protection – Reproducing – Defences – Patent protection.

UNIT II INFRINGEMENT**9**

Ownership and enforcement of intellectual property – Defences in case of infringement copyright – Work of employment infringement – Defences for infringement – Trademarks – Rights – Protection of good will – Infringement – Passing off defences

UNIT III IP IINTELLECTUAL PROPERTY RIGHTS AND ENFORCEMENT 9

Designs – Defences of design infringement. Enforcement of intellectual property rights – Civil remedies – Criminal remedies – Border – Security measures. Practical aspects of licensing – Benefits – Determinative factors – Important clauses – Licensing clauses.

UNIT IV CYBER LAW 9

Cyber law: Basic concepts of technology and law – Understanding the technology of internet – Scope of cyber laws. Cyber jurisprudence law of digital contracts: The essence of digital contracts – The system of digital signatures – The role and function of certifying authorities

UNIT V INTELLECTUAL PROPERTY ISSUES 9

The science of cryptography – IT Act 2000 and 2008 – Amendments in IT Act – IPC and Privacy threats in cyber law. Intellectual Property issues in cyber space: Domain names and related issues – Copyright in the digital media – Patents in the cyber world. rights of netizens and e-Governance.

23BECYOE04**BLOCKCHAIN AND CYBER SECURITY****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****PRE-REQUISITES:** Network Security**COURSE OBJECTIVES**

The goal of this course is for the students

- Decompose a block chain system's fundamental components, how they fit together and examine a decentralization using block chain.
- Illustrate how Crypto currency works, from when a transaction is created to when it is considered part of the blockchain.
- Explain the components of Ethereum, programming languages for Ethereum and study the basics Hyperledger and Web3.
- Understand the nature of threats and cyber security management goals and technology
- Infer the landscape of hacking and perimeter defense mechanisms

COURSE OUTCOMES

Upon completion of the course the student will be able to

- Outline the technology components of Block chain and its working principles.
- Utilize Ethereum model and its architectural components.
- Make use of Hyperledger components along with its development framework.
- Identify the nature of threats and cyber security management goals.
- Analyze malicious software attack and wireless network attack.

UNIT I INTRODUCTION OF BLOCKCHAIN TECHNOLOGY**9**

History of Blockchain – Types of Blockchain – Consensus – Decentralization using Blockchain – Blockchain and Full Ecosystem Decentralization – Platforms for Decentralization. Bitcoin – Digital Keys and Addresses – Transactions – Mining – Bitcoin Networks and Payments – Wallets – Alternative Coins – Theoretical Limitations – Bitcoin Limitations – Name Coin – Prime Coin – Zcash. – Smart Contracts – Ricardian Contracts.

UNIT II ETHEREUM NETWORK**9**

The Ethereum Network – Components of Ethereum Ecosystem – Ethereum Programming Languages: Runtime Byte Code, Blocks and Blockchain, Fee Schedule – Supporting Protocols – Solidity Language.

UNIT III FRAMEWORK FOR HYPERLEDGER FABRIC

9

Introduction to Web3 – Contract Deployment – POST Requests – Development frameworks – Hyperledger as a protocol – The Reference Architecture – Hyperledger Fabric – Distributed Ledger – Corda – Alternative Blockchains.

UNIT IV CYBER SECURITY

9

Introduction – Cyberspace – Cyber Crime – Nature of Threat – Cyber security – Policy, Mission and Vision of Cyber security Program. Cyber security management system – goals, technology categories – perimeter defense and encryption.

UNIT V WEB APPLICATION ATTACKS

9

Malicious Attacks, Threats, and Vulnerabilities- Malware – malicious software attack – social engineering attack – wireless network attack – web application attack – Countermeasures. Creating Mechanisms for IT Security.

LIST OF OPEN ELECTIVES
SCIENCE AND HUMANITIES

COURSE OBJECTIVES

The goal of this course is for the students to

- Outline the basic concepts of communication and its types.
- Extend the knowledge with process of mass communication and their relevance.
- Explain the functions of mass communication with real time experience.
- Utilize the mass communication theories in media communication.
- Plan research proposals using international concepts in mass communication.

COURSE OUTCOMES

On completion of the course, student will be able to

- Identify the process and types of human communication.
- Recognize the function and characteristics of mass communication.
- Describe correlation and culture of mass communication.
- Replicate the concepts of mass communication theories in real life situation.
- Explain the impact of media theory in international communication.

UNIT I BASIC CONCEPTS OF COMMUNICATION**9**

Communication: Nature and process of human communication, functions of communication, verbal and non- verbal communication, intra-personal, inter-personal, small group, public and mass communication.

UNIT II MASS COMMUNICATION**9**

Nature and process of mass communication, media of mass communication, characteristics and typology of audiences. Social Functions of Mass Communication, Scope of Mass Communication.

UNIT III FUNCTIONS OF MASS COMMUNICATION**9**

Functions of Mass Communications – Surveillance, Correlation, Cultural transport, Marketing Mass Culture- Evaluate the impact of issues of media monopoly.

UNIT IV MEDIA THEORY**9**

Communication Theories: Authoritarian; Libertarian; Socialistic; social-responsibility; Normative theories; Development media theory; Democratic participation media theory.

UNIT V FOLK MEDIA AND INTERNATIONAL COMMUNICATION THEORY 9

Folk Media and Electronic Media; International Communication Theories: World Systems, Dependency and Structural Media Monopoly – Cross Media Ownership.

Total:45**TEXT BOOKS**

23BESHOE02/23BTSHOE02

FUZZY MATHEMATICS

3H-3C

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

COURSE OBJECTIVES

The goal of this course for students is to

- Understand basic knowledge of fuzzy sets and fuzzy logic
- Apply basic knowledge of fuzzy operations.
- Know the basic definitions of fuzzy relations
- Apply basic fuzzy inference and approximate reasoning
- Know the applications of fuzzy Technology.
- Provide a firm basis for further reading and study in the subject.

COURSE OUTCOMES

Upon completion of this course, the student will be able to

- Infer the concepts of Fuzzy sets and functions.
- Utilize the method of operations in fuzzy sets.
- Interpret the idea of Fuzzy relations and relational equations.
- Make use of the Possibility theory and probability measures in Fuzzy sets.
- Apply the logic of Fuzzy decision making.

UNIT I FUZZY SETS 9

Fuzzy Sets: Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS 9

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, tco norms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS 9

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES 9

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE

9

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

Average	2.6	1.6	1.0	-	-	-	-	-	-	-	-	2	-	-

COURSE OBJECTIVES

The goal of this course for the students is to

- Inculcate the fundamental principles and concepts of magnetic materials for different engineering applications.
- Impart basic knowledge of superconductivity and associated applications.
- To serve the fundamental concepts of dielectric materials for diverse applications in energy engineering.
- Divulge the basics of crystals, their structures and different crystal growth techniques.
- Make the students familiar in the fundamentals of ceramics, composites and nonmaterial's.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Illustrate the theory of magnetism and magnetic properties of the materials
- Explain the theory of superconductivity and its application in SQUID
- Infer the types of polarization and dielectric breakdown
- Outline the basics of crystals, structures and its defects
- Summarize the types of ceramics, metallic glasses and alloys

UNIT I MAGNETIC MATERIALS**9**

Origin of magnetic moment; Bohr magneton; comparison of Dia, Para and Ferro magnetism; Langevin theory of diamagnetism and paramagnetism; Quantum theory of paramagnetism; Curie-Weiss law; Temperature dependence of saturation magnetization; Domain theory; Hysteresis; soft and hard magnetic materials; antiferromagnetic materials; Ferrites and its applications.

UNIT II SUPERCONDUCTING MATERIALS**9**

Superconductivity, properties; Meissner effect; Type I and Type II superconductors; London equation; BCS theory of superconductivity (Qualitative), Flux quantization; High T_c superconductors; Josephson superconductor tunnelling, DC and AC Josephson effect; Applications of superconductors, SQUID, cryotron, magnetic levitation.

UNIT III DIELECTRIC MATERIALS

9

Electrical susceptibility, dielectric constant; electronic, ionic, orientational and space charge polarization; frequency and temperature dependence of polarisation; internal field; Clausius - Mossotti relation (derivation); dielectric loss; dielectric breakdown, uses of dielectric materials (capacitor and transformer); ferroelectricity and applications.

UNIT IV CRYSTAL PHYSICS

9

Lattice, Unit cell, Bravais lattice; Lattice planes; Miller indices; d spacing in cubic lattice; Calculation of number of atoms per unit cell, Atomic radius, Coordination number, Packing factor for SC, BCC, FCC and HCP structures; Crystal imperfections; Crystal growth techniques; solution, melt (Bridgman and Czochralski) and vapour growth techniques (qualitative).

UNIT V NEW MATERIALS

9

Ceramics; types and applications; composites: classification, role of matrix and reinforcement, processing of fiber reinforced plastics; metallic glasses: types, glass forming ability of alloys, melt spinning process, applications; shape memory alloys: phases, shape memory effect, applications; nanomaterials: preparation (bottom up and top down approaches), properties and applications.

COURSE OBJECTIVES

The goal of this course for students is to

- Make the students conversant about the green chemistry
- Make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- Acquaint the student with concepts of green technology.
- Develop an understanding of the basic concepts of renewable energy resources.
- Acquaint the students with the basics information on catalysis.
- Apply the concepts of green catalysts in the synthesis.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Outline the basic principles of green chemistry.
- Explain the chemical synthesis in terms of atom efficiency.
- Relate the concepts of green chemistry in biotechnology.
- Illustrate the importance of renewable feedstocks.
- Extend the phenomena of catalysis in green synthesis.

UNIT I-INTRODUCTION TO GREEN CHEMICAL PRINCIPLES**9**

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluoruous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II - ATOM EFFICIENT PROCESSES**9**

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNITIII-BIOTECHNOLOGY AND GREEN CHEMISTRY**9**

Bio technology and its applications in environmental protection - Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV-RENEWABLE RESOURCES

9

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V-CATALYSIS IN GREEN CHEMISTRY

9

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

LIST OF OPEN ELECTIVES
ELECTRICAL
AND
ELECTRONICS ENGINEERING

COURSE OBJECTIVES

The goal of this course is for the students is to

- Gain the knowledge about environmental aspects of energy utilization.
- Understand the basic principles of solar cells, photovoltaic conversion.
- Understand the basic principles of wind energy conversion.
- Gain the knowledge about hydro and ocean energy.
- Understand the basic principles of Biomass, fuel cell, Geo thermal power plants and MHD.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Outline the environmental issues associated with fossil fuels and other energy resources.
- Make use of Solar PV systems for practical applications.
- Choose the Wind Turbine systems for application based on their working.
- Explain the operation of Hydro electric Plant and Ocean Energy
- Compare the working of Biomass Power Generation ,Fuel Cell, Geo thermal plants and MHD.

UNIT I INTRODUCTION

9

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization-Energy Conservation and Energy Efficiency-Need sand Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY

9

Introduction to solar energy: solar radiation, availability, measurement and estimation–Solar thermal conversion devices and storage – solar cells and photovoltaic conversion –PV systems – MPPT Applications of PV Systems– solar energy collector sand storage.

UNIT III WINDENERGY

9

Introduction– Basic principles of wind energy conversion-components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes

for electric generation – generator control, load control, energy storage – applications of wind energy –Interconnected systems.

UNIT IV HYDROENERGY

9

Hydropower, classification of hydropower, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES

9

Bio energy and types – Fuel cell, Geo-thermal power plants ; Magneto-hydro-dynamic (MHD) energy conversion.

23BEEEOE02**HYBRID ELECTRIC VEHICLES****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for the students is to

- Understand the basics of electric and hybrid electric vehicles, their architecture, technologies and fundamentals.
- Familiarize the plug – in hybrid electric drive- Train Topologies.
- Analyze electric drives suitable for hybrid electric vehicles.
- Discuss different energy storage technologies used for hybrid electric vehicles and their control.
- Demonstrate energy management strategies in hybrid electric vehicles.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Explain the basics of electric and hybrid electric vehicles, their architecture, technologies and fundamentals
- Analyze the use of train topologies in hybrid electric drive.
- Interpret electric drives suitable for hybrid electric vehicles.
- Explain the use of energy storage devices used for hybrid electric vehicles.
- Analysis the performance of Energy Management strategies in HEVs.

UNIT I INTRODUCTION**9**

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS**9**

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT**9**

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE

9

Introduction Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES

9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

ELECTRONICS AND COMMUNICATION

ENGINEERING

23BEECOE01**REAL TIME EMBEDDED SYSTEMS****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for students is to :

- Introduce students to the embedded systems, its hardware and software.
- Introduce devices and buses used for embedded networking.
- Study about task management.
- Learn about semaphore management and message passing.
- Study about memory management.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Explain the Embedded system's hardware and software.
- Outline the operating system for embedded applications.
- Analyse the tasks performed by Embedded system.
- Examine the activities of multiple processes in an embedded system.
- Interpret the memory management system.

UNIT I INTRODUCTION TO EMBEDDED SYSTEM**9**

Introduction- Embedded systems description, definition, design considerations & requirements- Overview of Embedded System Architecture (CISC and RISC)-Categories of Embedded Systems- embedded processor selection & tradeoffs- Embedded design life cycle -Product specifications- hardware / software partitioning- iterations and implementation- hardware software integration – product testing techniques–ARM7.

UNIT-II OPERATING SYSTEM OVERVIEW**9**

Introduction–Advantage and Disadvantage of Using RTOS–Multitasking–Tasks - RealTime Kernels – Scheduler- Non-Preemptive Kernels – Preemptive Kernels – Reentrancy- ReentrantFunctions– Round Robin Scheduling- Task Priorities- Static Priorities– Mutual Exclusion–Deadlock– Inter task Communication–Message Mailboxes–Message Queues- Interrupts- TaskManagement–Memory Management-Time Management–Clock Ticks.

UNIT-III TASK MANAGEMENT**9**

Introduction-μ C/OS-II Features-Goals ofμ C/OS-II-Hardware and Software Architecture–Kernel Structures: Tasks–Task States–Task Scheduling–Idle Task–Statistics Task–Interrupts Underμ

C/OS-II–Clock Tick- μ C/OS- II Initialization. Task Management: Creating Tasks–Task Stacks–Stack Checking – Task’s Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task–Resuming a Delayed Task–System Time. Event Control Blocks-Placing a Task in the ECB Wait List–Removing a Task from an ECB wait List.

UNIT IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

9

Semaphore Management: Semaphore Management Overview– Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox –Deleting Mailbox–Waiting for a Message box–Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue– Deleting a Message Queue–Waiting for a Message Queue–Sending Message to a Queue– Flushing a Queue.

UNIT-VMEMORY MANAGEMENT

9

Memory Management: Memory Control Blocks–Creating Partition-Obtaining a Memory Block–Returning a Memory Block. Getting Started with μ C/OS-II–Installing μ C/OS-II–Porting μ C/OS-II:Development Tools–Directories and Files– Testing a Port -IAR Workbench with μ C/OS-II- μ C/OS- II Porting on a 8051CPU– Implementation of Multitasking- Implementation of Scheduling and Rescheduling –Analyze the Multichannel ADC with help of μ C/OS-II.

COURSE OBJECTIVES

The goal of this course for students is to:

- Study about various speakers and microphone.
- Learn the fundamental of television systems and standards.
- Learn the process of audio recording and reproduction.
- Study various telephone networks.
- Discuss about the working of home appliances.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Explain working of loud speakers and Microphones
- Interpret the fundamentals of Television systems.
- Record the Audio Signal and reproduce it.
- Classify telecommunication networks.
- Examine the working of home appliances.

UNIT I LOUDSPEAKERS AND MICROPHONES**9**

Introduction Loudspeaker, types of loud speakers, Loudspeaker characteristics, Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters – Introduction Microphone, Types of Microphone, Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT II TELEVISION STANDARDS AND SYSTEMS**9**

Introduction to TV system - Components of a TV system–Scanning – types of scanning–interlacing–Colour TV Fundamentals - Additive Mixing- Subtractive Mixing- Need for Synchronization-Aspect Ratio-Video Bandwidth -Positive and Negative Transmission-Advantages of Negative Transmission-composite video signal - Colour TV system– Luminance and Chrominance signal- Monochrome and Colour Picture Tubes- Color TV systems– NTSC, PAL, SECAM.

UNIT III AUDIO RECORDING AND REPRODUCTION

9

Introduction to Audio disc - Audio Disc– Processing of the Audio signal–Readout from the Disc –Reconstruction of the audio signal–Introduction to Video Disc recording –video disc mastering and replication - Video disc formats- Recording Systems–Playback Systems.

UNIT IV TELECOMMUNICATION SYSTEMS

9

Introduction to telecommunication Systems – Modes of telecommunication system-line system characteristics – Radio system characteristics –Signaling- Station Interconnection - Telephone services-telephone networks–switching system principles–PAPX or PBX switching–Data Services - Circuit, Packet and Message Switching, Telephone Networks - LAN, MAN and WAN, Integrated Services Digital Network. Introduction to Mobile radio systems- Wireless Local Loop – the role of WLL – types of WLL - VHF/UHF radio systems- Limited range Cordless Phones – Introduction to cellular communication - cellular modems.

UNIT V HOME APPLIANCES

9

Introduction to home appliances – types of home appliances- Microwaves - Basic principle and block diagram of microwave oven -Washing Machine- electronic controller for washing machines - washing machine hardware and software –Introduction to air conditioners and refrigerators - Components of air conditioning systems – types of air conditioning systems- Refrigeration –Refrigeration systems – types of Refrigeration systems.

LIST OF OPEN ELECTIVES

FOOD TECHNOLOGY

COURSE OBJECTIVES

The goal of this course for students is to

- Explain the milling, extraction and manufacture of tremendous products from cereals, pulses and oilseeds.
- Summarize the production and processing methods of fruits and vegetables.
- Discuss the chemical composition, processing, production, spoilage and quality of milk and milk products.
- Outline the overall processes involved in the production of meat, poultry and fish products.
- Review the production and processing methods of plantation and spice products.

COURSE OUTCOMES

Upon completion of this course, students will be able to,

- Discuss the basics of food processing.
- Demonstrate the various processing technologies involved in fruits and vegetables, dairy, cereals, meat, fish, egg and plantation products.
- Infer the basics on microbiology of food products.
- Describe the process of manufacture of various food products.
- Outline the various methods of food preservation.

UNIT I CEREAL, PULSES AND OILSEEDS TECHNOLOGY**9**

Rice milling, Pulse milling, Wheat milling – Recent trends in milling process- Oil extraction – different methods in oil extraction - Methods of manufacture of Bread - different processes of manufacture- types of breads-buns, biscuits, cakes and cookies- Pasta products- Tortilla-Method of manufacture.

UNIT II FRUITS AND VEGETABLE PROCESSING**9**

Production of Fruits and vegetables in India, Maturity standards, Cause for heavy losses, preservation treatments- Basics of Canning, Minimal processing and Hurdle technology as applied to Vegetable and Fruit processing, Processing of fruit juices, Dehydration, Aseptic processing- Indian Food Regulation and Quality assurance Fruit Juice / pulp/Nectar/Drinks, concentrates.

UNIT III DAIRY PROCESSING

9

Basic dairy terminology, composition, General tests at reception, Dairy Processing -Method of manufacture of Standardized, toned and double toned milk, milk powder -Equipments - Pasteurizers, homogenizers and pumps - Method of manufacture of dairy products - Ice-cream, Cheese, Paneer, Yoghurt - Pasteurization and microorganismsinvolvedinspoilageofmilk– Majorpathogens,Plantconstruction, Sanitationmanagement, Cleaning equipment.

UNIT IV-MEAT, POULTRYAND FISH PROCESSING

9

Meat composition from different sources, Definitions and measurements, Carcass Processing, Meat Products, Processing of Poultry Products, Common path ogens, Sanitation management, Sanitizers for meat & poultry plants, Fish and other Marine Products Processing, Sources of sea food contamination.

UNIT V-PLANTATIONPRODUCT TECHNOLOGY

9

Processing of Tea, Coffee and Cocoa – Outline of the methods of manufacture of-greentea, black tea, instant tea, Instant coffee, Cocoa and Chocolate. Outline of the methods of processing of Pepper, cardamom, ginger, vanilla and turmeric. By products from plantation crops and spices.

COURSE OBJECTIVES

The goal of this course for students is to

- Explain the basic concepts of food and nutrition.
- Define the overall classification, function, and source of carbohydrates, lipids and proteins.
- Summarize the availability, source, deficiency and physiological role of fat and water-soluble vitamins.
- Outline the role of health and nutritional importance of micro and macrominerals.
- Discuss the recent trends and developments in nutrition.

COURSE OUTCOMES

Upon completion of this course, students will be able to

- Explain the basics in the area of nutritional assessment in health and disease.
- Outline the biological functions of various macro molecules in terms of food and health.
- Discuss the balanced diet for healthy life to avoid or prevent the deficiency disorders.
- Infer an appropriate diet, products that prevent vitamin deficiency disorders.
- Identify the proper foods rich in minerals to live a healthy life.

UNIT I HUMAN NUTRITION

9

Six classes of nutrients - Historical perspective of nutrient requirements – Assessment of nutritional status - recommended dietary allowances of macronutrients for all age groups - Assessment of protein quality - Malnutrition and related disorders –Balanced Diet. Factors influencing dietary intake: Food habits, food fads and fallacies, their influence on health and wellbeing.

UNIT II BIOMOLECULES

9

Carbohydrates-Definition, classification, Functions, Sources of Carbohydrates, Deficiency. Lipids – Definition, classification, function, sources, Properties of fats and oils, Refined & Hydrogenated fats process. Proteins - Definitions, Classification, Function, Amino Acids, Sources of Proteins, Texturized proteins.

UNIT III VITAMINS

9

Physiological role, bio-availability, requirements, sources and deficiency of FatSolubleVitamins:VitaminA,VitaminD,E&K.fWatersolublevitamins:VitaminC,Thiamine,Riboflavin, Niacin, Pantothenic acid, Biotin, Folic acid, Vitamin B12, VitaminB6.Stabilityunderdifferent food processing conditions.

UNIT IV MINERALS AND WATER

9

Physiological role, bio-availability, requirements, sources and deficiency of Macrominerals : Calcium, Phosphorus Magnesium, Sodium, Potassium chloride. Microminerals: Iron, Zinc, copper, selenium, chromium, iodine, manganese, Molybdenum and fluoride - Chemistry and physical properties of free, bounded and entrapped water, water activity, quality parameters of drinking and mineral water.

UNIT V RECENT TRENDS IN NUTRITION

9

Principles of dietary management out, rheumatism, AIDS/HIV – Cancer – risk factors, symptoms, dietary management, and role of food in prevention of Cancer. Role of functional foods Health foods and novel foods, organically grown foods, personalized nutrition, recent concepts in human nutrition like nutrigenomics, nutraceuticalsetc.

23BTFTOE03**READY TO EAT FOOD****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for students is to

- Outline the current status of snack food Industry.
- Describe the production, processing and marketing trends of potato and tortilla chips.
- Outline the overall processing of popcorn.
- Explain the production and processing of fruits involved in snack food preparation.
- Summarize the sensory analysis methods and packaging techniques of snack foods

COURSE OUTCOMES

Upon completion of this course, students will be able to

- Outline the various manufacturing process in snack food industries.
- Summarize the current production and marketing status of Snack foods.
- Explain the advantages of Sensory Evaluation.
- Describe packaging technologies in Snack Food Industries.
- Demonstrate the equipments involved in the snack production processes.

UNIT I INTRODUCTION TO SNACK FOODS**9**

Introduction- Types – processing methods - Nutrition- Quality and standards for snack foods - GHP and GMP for snack food industries - Outline of snack food industry –Domestic Snack Food Market-Global Market.

UNIT II POTATO AND TORTILLA CHIPS PROCESSING**9**

Potato Production- selection and grading of potato - Potato snack Ingredients- Potato Analysis and Composition-Potato chip manufacturing process-Unit Operations-Other value added products from Potato. Tortilla chips - Raw Materials- Processing steps -Equipment involved-Reconstitution of Dry Maize Flour-Unit operations – Nutritional properties of potato and tortilla chips.

UNIT III POPCORN PROCESSING**9**

Introduction – Raw popcorn selection and preparation – Popping Methods – Home preparation of Popcorn – Equipments - Industrial manufacturing process - Flavorings and Applicators-Popcorn Packaging-Relative Nutrition-Marketing.

UNIT IV FRUITBASED SNACKS

9

Introduction-production and processing of fruit crops – fruit purees – fruit powders –canned fruit snacks – alcoholic preservation of fruit snacks – fruit candies – fruit bars –exotic fruits – Nutritious and health benefits of fruit snacks.

UNIT V SENSORY EVALUATION AND PACKAGING

9

Introduction- importance of sensory evaluation–Analytical methods-Sensory methods - Sensory Aspect of Processing- Limitations of sensory evaluation- Quality properties of Snack Foods and Packaging Materials-Automated Bag- Pouch Packaging- Cartoning Case Packing- Labelling requirements –Current Issues in Snack Foods Packaging.

COURSE OBJECTIVES

The goal of this course for students is to

- Categorize the types of agricultural wastes
- Outline the production and utilization of biomass
- Explain the various parameters considered to be important in the designing of biogas units
- Discuss the methods employed in the production of alcohol from agricultural wastes/ byproducts
- Summarize the overall aspects involved in the production of paperboards and particleboards from agricultural wastes

COURSE OUTCOMES

Upon successful completion of this, students will be able to

- List and classify the types of agricultural wastes
- Collect and generate number of value added products from agricultural wastes
- Recall the techniques involved in the production and utilization of biomass
- Assess the various parameters considered to be important in the designing of biogas units
- Illustrate the various methods employed in the production of alcohol from the by products of agricultural wastes
- Choose the appropriate materials to produce paperboards and particleboards from agricultural wastes

UNIT I TYPES OF AGRICULTURAL WASTES**9**

Introduction and Background Agricultural Waste, Crop Waste, Agricultural Residues (annual crops), Technical terms, properties of agricultural waste- storage and handling - rice by-products utilization-rice bran and germ, rice bran oil, economic products from agriculture waste/by-products.

UNIT II BIOMASS PRODUCTION AND UTILIZATION**9**

Biomass – types – production and utilization Technology used for the utilization of agricultural wastes: Biomass Gasifier, Nimbkar Agricultural Research Institute (NARI) Gasifier, Rice-Husk Based Gasifier, Heat and Steam from Sugarcane Leaf and Bagasse.

UNIT III BIOGAS DESIGN AND PRODUCTION

9

Biogas: Definition, composition, history of biogas, Production of biogas – factors affecting the efficiency; types of biogasplant (floating drum type and fixed dome type) and their components (inlet, outlet, stirrer, slanting pipe, digester, gas holder and gas outer pipe), Selection and Design of biogasplant.

UNIT IV PRODUCTION OF ALCOHOL FROM WASTE MATERIALS

9

Production of Alcohol from waste materials: Introduction, Production methods, Cellulolysis (biological approach): Pretreatment, Cellulolytic processes (Chemical and Enzymatic hydrolysis), Microbial fermentation, Gasification process (thermochemical approach).

UNIT V PRODUCTION OF PAPER BOARD AND PARTICLE BOARDS FROM AGRICULTURAL WASTE

9

Production and testing of Paperboards and Particleboards from Agricultural Waste: Introduction, History, Terminology and classification, Raw materials, Production steps- Pulping, Classifications of pulp, Bleaching, Plies, Coating, Grades.

23BTFTOE05 DESIGN OF FOOD PROCESS EQUIPMENT**3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for students is to

- Illustrate the types of materials used in the food processing equipments.
- Discuss the materials and designing of different types of vessels.
- Explain the importance of reaction vessel and their designing techniques.
- Explain the materials and designing of heat exchanger and evaporators.
- Discuss the importance of dryers in food processing industries.

COURSE OUTCOMES

Upon successful completion of this, students will be able to

- Outline the materials suitable for the construction of equipment's.
- Summarize the vessels used for food storage in the industries.
- Classify types of reaction vessel used for different purposes.
- Discuss the importance of heat exchanger in the designing of food processing equipment's.
- Infer the significance of dryers in food processing.

UNIT I MATERIALS**9**

Metals and non-metals, design of pressure vessels – cylindrical shell –internal and external pressure - under continued loadings. Materials for fabrication, mechanical properties, ductility, hardness, corrosion, protective coatings, corrosion prevention linings equipment, choice of materials, material codes Numerical problem and design of pressure vessel.

UNIT II STORAGE VESSELS**9**

Design of storage vessels – Rectangular Tank without stiffeners –with stiffeners – shell design – Numerical problem and design. Design of agitators and baffles. Design considerations: Stresses created due to static and dynamic loads, combined stresses, design stresses and theories of failure, safety factor, temperature effects, radiation effects, effects of fabrication method, economic considerations;

UNIT III REACTION VESSELS**9**

Design of Reaction vessels – materials -classification – jackets-Design of vessel shell with half

coil – Design of vessel shell with jacket – Numerical problem and design. Hazards in process industries, analysis of hazards, safety measures, safety measures in equipment design, pressure relief devices.

UNIT IV HEAT EXCHANGERS

9

Design of Heat exchangers – types – materials – Design pressure and temperature- shell design – tubes - Numerical problem. -Design of Equipment. Evaporator: Materials of concentration – types –design- consideration – Design of agitators – power requirements – Design based on Torque – criticalspeed.

UNIT V DRYERS

9

Types - General considerations – Design of Tray dryer, Rotary Dryer, fluidized bed dryer, spray dryer, vacuum dryer, microwave dryer – Material Balance, Thermal energy Requirements , electrical energy Requirements, Performance Indices

LIST OF OPEN ELECTIVES

MECHANICAL ENGINEERING

23BEMEOE01**BATTERY MANAGEMENT SYSTEM****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for students is to

- Demonstrate familiarity with alternative energy sources and their role in sustainability.
- Analyze energy requirements for different hybrid and electric vehicles.
- Examine the principles and components of lithium-ion batteries.
- Explore advancements in battery technologies.
- Apply knowledge of battery management systems and ensure safety in high-voltage batteries.

COURSE OUTCOMES

Upon successful completion of this, students will be able to

- Apply the alternative energy and sustainability to electric transportation.
- Analyze energy needs for hybrid and electric vehicles.
- Choose the appropriate operations for manufacturing lithium-ion batteries.
- Outline the advancements in battery technology.
- Utilize battery management system and prioritize safety in high-voltage batteries.

UNIT I ENERGY STORAGE SYSTEMS**9**

General background on alternative energy sources and sustainability, Introduction to electric-based transportation, Overview of on-road vehicle electrification, EVs configuration, Energy and power requirements for various HEVs and EVs Vehicle performance and driving cycles.

UNIT II LITHIUM BATTERIES**9**

Li-ion batteries - Principle of operation, Battery components and design Electrode, cell and battery fabrications, Building block cells, battery modules and packs and applications. All solid-state batteries and future developments, Li-Sulphur battery, Li-Air battery, Sodium-battery, Magnesium battery, Aluminium battery, Silicon battery.

UNIT III HIGH TEMPERATURE BATTERIES FOR BACK-UP APPLICATIONS**9**

Advance Ni-MH batteries for transportation, Future prospects of Ni-MH batteries vs. lithium ion batteries, Zebra cell, Li-iron sulphide cells, Vanadium and iron-based batteries, Semi-fluid flow batteries for large scale grid application, Ni-H₂cells for space applications.

UNIT IV FUEL CELLS AND BATTERY RECYCLING TECHNOLOGY

9

Introduction to fuel cells, Proton-exchange membrane and alkaline fuel cells for transportation, Solid oxide fuel cells, Technology and economic aspects of battery recycling, Environmental effect and controlling of poisonous chemicals contamination.

UNIT V BATTERY MANAGEMENT

9

Fundamentals of battery management systems and controls, Battery Thermal Management - Passive cooling, Active cooling-Liquids and air systems. Regulations and Safety Aspects of High Voltage Batteries, Code and Standards, Safe handling of Lithium Batteries, Safety of high voltage battery.

23BEMEOE02**INDUSTRIAL SAFETY AND ENVIRONMENT****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for students is to

- Provide in-depth knowledge on various techniques of non-destructive testing.
- Acquaint the student with the need and awareness of the safety concepts.
- Understand the importance of various safety techniques involved in industrial sector.
- Introduce the concepts of accident zone and prepare reports related to it.
- Develop an understanding of safety monitoring.

COURSE OUTCOMES

Upon successful completion of this, students will be able to

- Explain the need of safety.
- Outline the safety techniques involved in industrial sector.
- Develop the report for the accident zones.
- Inspect the safety strategies in industrial sector.
- Illustrate training sessions based on safety.

UNIT I CONCEPTS OF SAFETY ENGINEERING**9**

Evolution of modern safety concept- Safety policy - Safety Organization - line and staff functions for safety-Safety Committee-budgeting for safety.

UNIT II TECHNIQUES OF SAFETY ENGINEERING**9**

Incident Recall Technique (IRT), disaster control, Job Safety Analysis (JSA), safety survey, safety inspection, safety sampling, Safety Audit.

UNIT III ACCIDENT INVESTIGATION AND REPORTING**9**

Concept of an accident, reportable and non-reportable accidents, unsafe act and condition – principles of accident prevention, Supervisory role- Role of safety committee – Accident causation models - Cost of accident. Overall accident investigation process –Response to accidents, India reporting requirement, Planning document, Planning matrix, Investigators Kit, functions of investigator, four types of evidences, Records of accidents, accident reports.

UNIT IV SAFETY PERFORMANCE MONITORING

9

Reactive and proactive monitoring techniques - Permanent total disabilities, permanent partial disabilities, temporary total disabilities - Calculation of accident indices, frequency rate, severity rate, frequency severity incidence, incident rate, accident rate, safety “t” score, safety activity rate– problems.

UNIT V SAFETY EDUCATION AND TRAINING

9

Importance of training-identification of training needs-training methods – programme, seminars, conferences, competitions – method of promoting safe practice – motivation – communication – role of government agencies and private consulting agencies in safety training – creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign – Domestic Safety and Training. Modern safety equipment and technics – Case study.

23BEMEOE03**NON DESTRUCTIVE TESTING****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for students is to

- The main objectives of this course are to introduce the concept of non-destructive testing among the students and make them understand various types of non-traditional practices available for manufacturing industry.
- Provide in-depth knowledge on various techniques of non-destructive testing.
- Provide an overview of destructive and non-destructive tests and state their applications.
- Study the features of NDT techniques for various products and to understand the established NDE techniques and basic familiarity of emerging NDE techniques.
- Expose students to skills needed for selection of appropriate NDT technique(s) for new inspection jobs.

COURSE OUTCOMES

Upon successful completion of this, students will be able to,

- Summarize the codes, standards and specifications related to NDT.
- Classify the destructive and non-destructive tests and their applications.
- Develop NDT techniques for mechanical components.
- Compare the eddy current and visual testing methods.
- Explain the NDE techniques and its applications.

UNIT I INTRODUCTION**9**

Properties of Engineering Materials – Types of Defects – Surface and Sub-Surface of a component – Characteristics of Ferrous, Non-ferrous and Alloys. Classification of Destructive testing and Non-Destructive testing – Uses and applications. Codes, Standards and Specifications of NDT (ASME, ASTM, AWS etc.). Importance and Scope of NDT, Non-destructive testing methods

UNIT II PENETRANT TESTING AND MAGNETIC PARTICLE INSPECTION**9**

Introduction to Penetrant Testing – Liquid Penetrants and Dye Penetrants - Apparatus required for LPT - An Illustration of Penetrant Testing, Application, Advantages and Disadvantages of Penetrants Testing. Introduction to Magnetic Particle Inspection – MPT equipments and devices - An Illustration of Magnetic Particle Inspection, Application, Advantages and Disadvantages of Magnetic Particle Crack Detection.

UNIT III ULTRASONIC FLAW DETECTION AND RADIOGRAPHY INSPECTION 9

Introduction to Ultrasonic Flaw Detection, UT equipments and devices, An Illustration of Ultrasonic Flaw Detection, Application, Advantages and Disadvantages of Ultrasonic Flaw Detection. Principle of Radiography Inspection, RT equipments and devices Radiation sources, uses of x-rays and gamma rays Attenuation in the specimen, Radiographic imaging, Inspection Techniques, Application and limitations, Safety from Radiation.

UNIT IV EDDY CURRENT TESTING AND VISUAL TESTING METHODS 9

Introduction to Eddy Current Testing. ECT equipments and devices, An Illustration of Eddy Current Testing Equipment, Application, Advantages and Disadvantages of Eddy Current Testing. Introduction to visual testing method, Equipments required for VT - An Illustration of visual testing method, Application, Advantages and Disadvantages of visual testing method.

UNIT V NON-DESTRUCTIVE INSPECTION(NDI) AND ITS APPLICATIONS 9

Inspection of Raw Products, Inspection for In-Service Damage, Power Plant Inspection, Storage Tank Inspection, Automobile component Inspection, Jet Engine Inspection, Pressure Vessel Inspection, Bridge Inspection, Pipeline Inspection.

COURSE OBJECTIVES

The goal of this course for the students is to

- Provide students the knowledge of optimization techniques and approaches.
- Enable the students, apply mathematical, computational and communication skills needed for the practical utility of Operations Research.
- Understand the Engineering and Managerial situations in Transportation.
- Make the student acquire sound knowledge on sequences to perform operation among various alternatives.
- Teach students about networking, inventory, queuing, decision and replacement models.

COURSE OUTCOMES

Upon successful completion of this, students will be able to

- Solve Linear programming technique in industrial optimization problems.
- Examine transportation problems using OR techniques.
- Explain various OR models for optimization.
- Make use of OR tools in a wide range of applications in industries.
- Identify the advanced techniques for group replacement.

UNIT I INTRODUCTION TO OPERATIONS RESEARCH**9**

Operations research and decision-making – types of mathematical models and constructing the model – Role of computers in operations research –Linear Programming Techniques: Formulation of linear programming problem, applications and limitations, graphical method, simplex method – The Big –M method – the two-phase method.

UNIT II TRANSPORTATION PROBLEMS**9**

Least cost method, North west corner rule, Vogel's approximation method, modified distribution method,unbalanceanddegeneracyintransportationmodel,shortestrouteargorithm–dijkestra algorithm.

UNIT III ASSIGNMENT MODELS AND SCHEDULING**9**

Assignment models - Hungarian algorithm, unbalanced assignment problems - maximization case in assignment problems, traveling salesman problem. Scheduling – processing n jobs through two machines, processing n jobs through three machines, processing two jobs through ‘m’ machines, processing n jobs through m machines.

UNITIV INVENTORY CONTROL AND QUEUING THEORY**9**

Variables in inventory problems, inventory models with penalty, shortage and quantity discount, safety stock, multi-item deterministic model. Queuing Models: Queues–Notation of queues, performance measures, The M/M/1queue, The M/M/mqueue, batch arrival queuing system, queues with breakdowns.

UNITV PROJECT MANAGEMENT AND REPLACEMENT MODELS**9**

Basic terminologies, constructing a project network, network computations in CPM and PERT, cost crashing, Replacement Models: Replacement of Items due to deterioration with and without time value of Money, Group replacement policy, Staff replacement

CIVIL ENGINEERING

23BECEO01**HOUSING PLAN AND MANAGEMENT****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for the students is to

- Examine the role and tasks of basic housing policies and building bye laws
- Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
- Analyze the Innovative construction methods and Materials
- Analyze city management strategies and strengthen the urban governance through a problem solving approach
- Know the Importance of basic housing policies and building bye laws
- Use Housing Programmes and Schemes

COURSE OUTCOMES

Upon completion of the course, the students will be able to

- Know the Importance of basic housing policies and building bye laws
- Use Housing Programmes and Schemes
- Plan and Design of Housing projects
- Examine Innovative construction methods and Materials
- Know Housing finance and loan approval procedures
- Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING**9**

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES**9**

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighborhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organizations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS**9**

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units

(Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation.

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL 9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

COURSE OBJECTIVES

The goal of this course for the students is to

- Defining and identifying of engineering services systems in buildings.
- Know the role of engineering services systems in providing comfort and facilitating life of users of the building.
- Understand the basic principles of asset management in a building & facilities maintenance environment
- Learn the Importance of Fire safety and its installation techniques.
- Understand Electrical system and its selection criteria
- Use the Principles of illumination & design

COURSE OUTCOMES

Upon completion the course, the students will be able to

- Machineries involved in building construction
- Understand Electrical system and its selection criteria
- Use the Principles of illumination & design
- Know the principle of Refrigeration and application
- Importance of Fire safety and its installation techniques
- Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES**9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS**9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN

9

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilization factor – Depreciation factor – MSCP – MHCP – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS

9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Sub cooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION

9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

COURSE OBJECTIVES

The goal of this course for the students is to,

- Learn various distress and damages to concrete and masonry structures
- Know the influence of corrosion in durability of structures
- Understand the importance of maintenance of structures
- Study the various types and properties of repair materials
- Learn various techniques involved in demolition of structures
- Assess damage of structures and various repair techniques

COURSE OUTCOMES

After completing the course, the students will be able to

- Various distress and damages to concrete and masonry structures
- Durability of structures and corrosion mechanism
- The importance of maintenance of structures, types and properties of repair materials etc
- Assessing damage of structures and various repair techniques
- the various types and properties of repair materials
- Modern technique and equipment being adopted for the demolition of structures

UNIT I INTRODUCTION**9**

Quality assurance for concrete construction as built concrete properties strength, permeability, thermal properties and cracking. Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors.

UNIT II DURABILITY OF STRUCTURES**9**

Corrosion mechanism – diagnosis- causes and effects - cover thickness and cracking, measurements for corrosion - methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings, cathodic protection.

UNIT III MAINTENANCE AND REPAIR STRATEGIES**9**

Definitions: Maintenance, repair and rehabilitation, Facets of Maintenance importance of Maintenance Preventive measures on various aspects Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration - testing techniques.

UNIT IV MATERIALS FOR REPAIR

9

Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fibre reinforced concrete. eliminators and polymers coating for rebars during repair foamed concrete, mortar and dry pack, vacuum concrete.

UNIT V TECHNIQUES FOR REPAIR AND REPAIR OF STRUCTURES

9

Non-destructive Testing Techniques, Corrosion protection techniques, Guniting and Shotcrete Epoxy injection, Mortar repair for cracks, shoring and underpinning. Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering wear, fire, leakage, marine exposure Engineered demolition techniques for dilapidated structures - case studies.

23BECEO04 COMPUTER AIDED CIVIL ENGINEERING DRAWING**3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for the students is to

- Develop Parametric design and the conventions of formal engineering drawing
- Produce and interpret 2D & 3D drawings
- Communicate a design idea/concept graphically/ visually
- Examine a design critically and with understanding of CAD - The student learn to interpret drawings, and to produce designs using a combination of 2D and 3D software.
- Get a Detailed study of an engineering artifact.
- To Communicate a design idea/concept graphically/ visually

COURSE OUTCOMES

After completing the course, the students will be able to

- Develop Parametric design and the conventions of formal engineering drawing
- Produce and interpret 2D & 3D drawings
- Communicate a design idea/concept graphically/ visually
- Examine a design critically and with understanding of CAD – The student learn to interpret drawings, and to produce designs using a combination of 2D and 3D software.
- Get a Detailed study of an engineering artifact
- Planning and designing of structures

UNIT I INTRODUCTION**9**

Introduction to concept of drawings, Interpretation of typical drawings, Planning drawings to show information concisely and comprehensively; optimal layout of drawings and Scales; Introduction to computer aided drawing, co- ordinate systems, reference planes. Commands: Initial settings, Drawing aids, Drawing basic entities, Modify commands, Layers, Text and Dimensioning, Blocks. Drawing presentation norms and standards.

UNIT II SYMBOLS AND SIGN CONVENTIONS**9**

Materials, Architectural, Structural, Electrical and Plumbing symbols. Rebar drawings and structural steel fabrication and connections drawing symbols, welding symbols; dimensioning standards.

UNIT III MASONRY BONDS

9

English Bond and Flemish Bond – Corner wall and Cross walls - One brick wall and one and half brick wall

UNIT IV BUILDING DRAWING

9

Terms, Elements of planning building drawing, Methods of making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing of small residential buildings. Foundation plan. Roof drainage plans. Depicting joinery, standard fittings & fixtures, finishes. Use of Notes to improve clarity.

UNIT V: PICTORIAL VIEW

9

Principles of isometrics and perspective drawing. Perspective view of building, Software's

23BECEO05**CONTRACTS MANAGEMENT****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for the students is to

- Have developed a more detailed appreciation for construction planning and scheduling
- Apply their learned knowledge as it pertains to upper level construction management skills and procedures.
- Evaluate the best practices associated with the development of contract parameters.
- Understand the legal aspects of acts governing the contracts
- Discuss techniques for appropriate risks and changes, monitoring and measuring the contract closure
- Understand the basics of the bid process, important points in a tender document, and unbalanced contracts.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Apply project Procurement management concepts in a project environment.
- Describe techniques used to procure resources within a project's scope and techniques to reduce procurement risks.
- Evaluate the best practices associated with the development of contract parameters.
- Understand the legal aspects of acts governing the contracts
- Discuss techniques for appropriate risks and changes, monitoring and measuring the contract closure
- Understand the basics of the bid process, important points in a tender document, and unbalanced contracts.

UNIT I CONTRACT MANAGEMENT**9**

Introduction, Importance of Contracts, Overview of Contract Management, Overview of Activities in Contract Management; Planning and People- Resource Management; Types of Contracts, Parties to a Contract; Contract Formation, Formulation of Contract, Contract Start-Up, Managing Relationships; Common contract clauses (Notice to proceed, rights and duties of various parties, notices to be given, Contract Duration and Price.

UNIT II CONTRACT PARAMETERS**9**

Performance parameters; Delays, penalties and liquidated damages; Force Majeure, Suspension and Termination. Changes & variations, Notices under contracts; Conventional and Alternative

Dispute Resolution methods.

UNIT III VARIOUS ACTS GOVERNING CONTRACTS

9

Contract Administration and Payments- Contract Administration, Payments; Contract Management in Various Situations- Contract Management in NCB Works, Contract Management in ICB Works Contracts, Contract of Supply of Goods- Design, Supply and Installation Contracts, Contract Management in Consultancy,

UNIT IV BID PROCESS AND BID EVALUATION

9

Bid process, important points in a tender document, and unbalanced contracts. Material covered includes: Request For Proposal and problems Different types of proposals Design Conditions and Standard Component List-Tender document - Unbalanced proposals. Exercises: Evaluating Unit Prices Premium Portion Of The Overtime Rate Handling Bid Questions.

UNIT V MANAGING RISKS AND CHANGE

9

Managing Risks, Managing Change; Contract Closure and Review- Ending a Contract, Post-Implementation Review; Legal Aspects in Contract Management- Contract Management Legal View, Dispute Resolution, Integrity in Contract Management; Managing Performance-Introduction, Monitoring and Measurement.

23BECEO06**AIR AND NOISE POLLUTION AND CONTROL****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES:**

The goal of this course for the students is to

- To impart knowledge on the principles and design of control of indoor/ particulate / gaseous air pollutant and its emerging trends
- To induce operational considerations under the processing and control monitoring.
- To apply sampling techniques of gaseous contaminants.
- To control noise pollution by specific measurements, standard and preventive measures.
- To enable to evaluate the behavior of air pollutants.
- To have knowledge about appropriate control measures of air pollution

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Have knowledge about appropriate control measures of air pollution.
- To apply sampling techniques and suggest suitable air pollution prevention equipment's and techniques for various gaseous and particulate pollutants.
- Have knowledge about the air pollution monitoring and modeling.
- Understand causes of air pollution and Analyze different types of air pollutants.
- Evaluate air pollutant behavior in the atmosphere.
- Enable to evaluate the behavior of air pollutants.

UNIT I: INTRODUCTION**9**

Structure and composition of Atmosphere – Sources and classification of air pollutants -Effects of air pollutants on human health, vegetation & animals, Materials & Structures – Effects of air Pollutants on the atmosphere, Soil & Water bodies – Long- term effects on the planet – Global Climate Change, Ozone Holes – Ambient Air Quality and Emission Standards – Air Pollution Indices Emission Inventories.

UNIT II: AIR POLLUTION MONITORING AND MODELLIN**9**

Ambient and Stack Sampling and Analysis of Particulate and Gaseous Pollutants -Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Transport & Dispersion of Air Pollutants – Modeling Techniques – Air PollutionClimatology.

UNIT III: CONTROL OF PARTICULATE CONTAMINANTS**9**

Factors affecting Selection of Control Equipment – Gas Particle Interaction, – Working principle,

Design and performance equations of Gravity Separators, cyclones, Fabric filters, Particulate Scrubbers, Electrostatic Precipitators – Operational Considerations - Process Control and Monitoring –Costing of APC equipment – Case studies for stationary and mobile sources.

UNIT IV: CONTROL OF GASEOUS CONTAMINANTS

9

Factors affecting Selection of Control Equipment – Working principle, Design and performance equations of absorption, Adsorption, condensation, Incineration, Bio scrubbers, Bio filters – Process control and Monitoring - Operational Considerations - Costing of APC Equipment – Case studies for stationary and mobile sources.

UNIT V: AUTOMOBILE AND NOISE POLLUTION

9

Vehicular Pollution: Automobile emission- Types of emissions- Exhaust emissions, evaporative emissions, crank-case emissions- Prevention and control of vehicular pollution. Noise Pollution: Sources and Effects of Noise Pollution – Measurement – Standards –Control and Preventive measures. Sources types and control of indoor air pollutants, sick building syndrome types – Radon Pollution and its control.

COURSE OBJECTIVES

The goal of this course is for students

- Discuss all the organelles of an animal cell and their function.
- Perceive structure and functions of the various types of systems of human body.
- Outline about eye, ear and Endocrine glands of human
- Learn organs and structures involving in system formation and functions.
- Infer basic understanding of the inter connection of various organ systems in human body

COURSE OUTCOMES

Upon completion of this course, students will be able to

- Explain the basic structure and functions of cells and organelles .
- Outline the anatomy and physiology of cardiac and nervous system).
- Illustrate the working mechanism of human respiratory and musculoskeletal system .
- Infer the functions of digestive, excretory and lymphatic system .
- Model the sensory and endocrine systems of human body .

UNIT I CELL**9**

Structure of Cell– Organelles and description–Function of each component of the cell– Membranepotential–Action Potential–Generation and Conduction –Electrical Stimulation. Blood Cell–Composition –Origin of RBC–Blood Groups–Estimation of RBC, WBC and Platelet–Tissues and its functions-.Homeostasis - Tissue: Types – Specialized tissues– functions.

UNIT II CARDIAC AND NERVOUS SYSTEM**9**

Heart, Major blood vessels– Cardiac Cycle – ECG-Conducting system of heart--importance of blood groups – identification of blood groups- Nervous Control of Heart-Cardiac output– Coronary and Peripheral Circulation–Structure and function of Nervous tissue–Neuron-Synapse- Reflexes-Receptors-Brain-Brainstem-Spinalcord–Reflexaction.

UNIT III RESPIRATORY SYSTEM AND MUSCULOSKELETAL SYSTEM**9**

Physiological aspects of respiration–Trachea and lungs -Exchange of gases–Regulation of Respiration -Disturbance of respiration function -Pulmonary function test-Types of respiration - Oxygen and carbon dioxide transport and acid base regulation-Muscles-tissue-types-structure of skeletal muscle-types of muscle and joints.

UNIT IV DIGESTIVE, EXCRETORY AND LYMPHATIC SYSTEM**9**

Organisation of GI System, Digestion and absorption –Movements of GI tract–Intestine–Liver–Pancreas– Structure of Nephron–Mechanism of Urine formation–Urine Reflex–Skin and Sweat Gland–Temperature regulation, Lymphatic: Parts and Functions of Lymphatic systems–Types of Lymphatic organs and vessels.

UNIT V EYE, EAR & ENDOCRINE GLANDS**9**

Optics of Eye–Retina–Photochemistry of Vision–Accommodation–Neurophysiology of vision–EOG, Physiology of internal ear–Mechanism of Hearing–Auditory Pathway, Hearing Tests–Endocrine–Pituitary and thyroid glands.

Average	2.2	1.2	1	-	-	1	-	1	1	1	-	1	-	-

COURSE OBJECTIVES

The goal of this course for students is to

- Have an overview of artificial organs & transplants
- Describe the principles of implant design with a case study
- Explain the implant design parameters and solution
- Study about various blood interfacing implant
- Study about soft tissue replacement and hard tissue replacement

COURSE OUTCOMES

Upon completion of this course, students will be able to

- Outline the concepts of organ replacements.
- Infer the principles of implant design.
- Interpret the implant design parameters.
- Summarize the functions of neural and cardiovascular implants.
- Illustrate the artificial organ implants in gastrointestinal and cosmetic applications.

UNIT I ARTIFICIAL ORGANS & TRANSPLANTS**9**

ARTIFICIAL ORGANS:-Introduction, Outlook for organ replacements, Design consideration – Evaluation process.

TRANSPLANTS:-Overview, Immunological considerations, Blood transfusions, Individual organs –kidney, liver, heart and lung, bone marrow, cornea.

UNIT II PRINCIPLES OF IMPLANT DESIGN**9**

Principles of implant design - body response to implants, Clinical problems requiring implants for solution, The missing organ and its replacement, Tissue engineering, scaffolds, Biomaterials, Regenerative medicine & Stem cells.

UNIT III IMPLANT DESIGN PARAMETERS AND ITS SOLUTION**9**

Biocompatibility, Local and systemic effects of implants, Design specifications for tissue bonding and modulus matching, Degradation of devices, natural and synthetic polymers, corrosion, wear and tear, Implants for Bone, Devices for nerve regeneration. Limb prosthesis, Externally Powered limb Prosthesis.

UNIT IV BLOOD INTERFACING IMPLANTS**9**

Neural and neuromuscular implants, Heart valve implants, heart and lung assist devices, artificial heart, cardiac pacemakers, Prosthetic cardiac valves, Artificial kidney-dialysis membrane and artificial blood.

UNIT V IMPLANTABLE MEDICAL DEVICES AND ORGANS

9

Gastrointestinal system, Dentistry, Soft tissue replacement & Hard tissue replacement –sutures, surgical tapes, adhesive, percutaneous implants, internal fracture fixation devices, joint replacements. Maxillofacial and craniofacial replacement, Recent advancement and future directions.

LIST OF OPEN ELECTIVES

BIOTECHNOLOGY

23BTBTOE01**BASIC BIOINFORMATICS****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****END SEMESTER EXAM:3 HOURS****COURSE OBJECTIVES**

The goal of this course is for students to

- Elaborate the available tools and databases for performing research in bioinformatics.
- Expose students to sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Discuss the 3D structure of protein and classification.
- Acquire basic knowledge in protein secondary structure prediction.

COURSE OUTCOMES

Upon completion this course, the students will be able to

- Summarize the basic concepts of bioinformatics.
- Outline the sequence retrieval and analysis tools using bioinformatics.
- Infer the methods used to construct phylogenetic tree for evolution analysis.
- Apply the protein structure knowledge for modeling
- Make use of bio-informatics principles towards biological applications

UNIT I OVERVIEW OF BIOINFORMATICS**9**

Aims and tasks of Bioinformatics-applications of Bioinformatics-challenges and opportunities. The scope of bioinformatics; bioinformatics & the internet; useful bioinformaticssites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene& protein expression data; protein interaction data. Databases– contents, structure & annotation: fileformats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA**9**

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system).Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III PHYLOGENETICS

9

Introduction to Phylogenetics, Molecular Evolution and Molecular Phylogenetics, Phylogenetic tree, Forms of Tree Representation, Rooted and un-rooted trees, Phylogenetic Tree Construction Methods: Distance based methods- NJ, UPGMA PGMA , cladistics & ontology; building phylogenetic trees; evolution of macro molecular sequences. Sequence annotation: principles of genome annotation annotation tools & resources.

UNIT IV STRUCTURAL BIOINFORMATICS

9

Protein sequence data-bases-Swiss Prot/TrEMBL,PIR, Sequence motif databases-Pfam, PROSITE, Protein structure databases, Protein Data Bank-SCOP, CATH, KEGG, ChEMBL, Sequence, structure and function relationship. Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure; introduction to protein structure prediction; Protein structure prediction, modeling.

UNIT V: MICROARRAY DATA ANALYSIS

9

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharmainformatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

Average	2.4	1.0	2.0	1.0	1.0	1.0	-	-	-	-	-	1.6	-	-

COURSE OBJECTIVES

The goal of this course is for students to

- Impart the skills in the field of nanotechnology and its applications.
- Acquire knowledge in nano particle synthesis and its characterization.
- Gain the basic knowledge on the application of bionanomaterials in biotechnology
- Provide the knowledge in the field of medical nanotechnology.
- Analysis the ethical issues involve in nnanotechnology

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Summarize the basics of nanotechnology and its applications.
- Outline the techniques involves in nanoparticles synthesis and characterization.
- Apply the principles of biomolecules for the fabrication of nanoparticles
- Develop nanoscale devices for the medical applications.
- Analyze the socio-economic and ethical issues in Nano biotechnology.

UNIT I INTRODUCTION**9**

Introduction to Nanotechnology: Properties at nanoscale, Scope and Overview, Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution; Silicon based Technology, Nanotechnology in Different, Application of Nanotechnology

UNIT II NANOPARTICLES**9**

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles- MEMS/NEMS, Atomic Force Microscopy, Self-assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes. X-ray diffraction technique; Scanning Electron Microscopy with EDX; Transmission Electron Microscopy including high-resolution imaging.

UNIT III BIONANOMATERIALS**9**

Bionanomaterials- Introduction, biomolecule for designing nanostructures, properties of

DNA and motor proteins, fabrication and applications of DNA nanowires, nanoprinting of DNA, RNA and proteins; DNA nanostructures, DNA robot, DNA microarrays, Bio-MEMS, Biological and medical applications of bionanomaterials

UNIT IV MEDICAL NANOTECHNOLOGY

9

Nanomedicine, Nanobiosensor and Nanofluidics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodesigns and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine. Case study on drug delivery of gold nanoparticles against breast cancer

UNIT V ETHICAL ISSUES IN NANOTECHNOLOGY

9

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

LIST OF OPEN ELECTIVES
FACULTY OF PHARMACY

23BP804ET**PHARMACEUTICAL REGULATORY SCIENCE****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for students to

- Learn in detail on the regulatory requirements, documentation requirements, and registration procedures for marketing the drug products.
- To know the process of drug discovery, development and generic product development
- To understand the regulatory approval process and registration procedures for API and drug products in various countries
- To learn the basic understanding of regulations of India with other global regulated markets
- It gives basic understanding of developing clinical trial protocols

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Explain the process of drug discovery, development and generic product development
- Describe the regulatory approval process and registration procedures for API and drug products in various countries.
- Understand the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals in India and other global regulated markets.
- Explain basic understanding of developing clinical trial protocols
- Understand the concept of pharmaceutical vigilance and its significance.
- Understand the guidance and laws in regulations in regulatory market.

UNIT I NEW DRUG DISCOVERY AND DEVELOPMENT**9**

Stages of drug discovery, Drug development process, pre-clinical studies, non-clinical activities, clinical studies, Innovator and generics, Concept of generics, Generic drug product development.

UNIT II REGULATORY APPROVAL PROCESS**9**

Approval processes and timelines involved in Investigational New Drug (IND), New Drug Application (NDA), Abbreviated New Drug Application (ANDA). Changes to an approved NDA / ANDA.

Regulatory authorities and agencies: Overview of regulatory authorities of India, United States,

European Union,Australia, Japan, Canada (Organization structure and types of applications)

UNIT III REGISTRATION OF INDIAN DRUG PRODUCT IN OVERSEAS MARKET 9

Registration of Indian drug product in overseas market: Procedure for export of pharmaceutical products, Technical documentation, Drug Master Files (DMF), Common Technical Document (CTD),electronic Common Technical Document (eCTD), ASEAN Common Technical Document (ACTD) research.

UNIT IV CLINICAL TRIALS 9

Clinical trials: Developing clinical trial protocols, Institutional Review Board / Independent Ethics committee - formation and working procedures, Informed consent process and procedures, GCP obligations of Investigators, sponsors & Monitors, Managing and Monitoring clinical trials, Pharmacovigilance - safety monitoring in clinical trials.

UNIT V REGULATORY CONCEPTS 9

Regulatory Concepts: Basic terminology, guidance, guidelines, regulations, Laws and Acts, Orange book, Federal Register, Code of Federal Regulatory, Purple book.

23BP809ET**COSMETIC SCIENCE THEORY****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for students to

- Know the cosmetics in day to day life.
- Understand the formulation characteristics of cosmetic preparations
- Understand the role of herbs in cosmetic science
- Demonstrate the evaluation procedures in the formulation of cosmetics
- Identify the problems encountered during the usage of cosmetics
- Illustrate the role of nutraceuticals in day to day life

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Discover the cosmetics in day-to-day life.
- Formulation's Development and characteristics of various cosmetic products.
- Understand about principles and building blocks of skin and hair care products.
- Understand the role of herbs in cosmetic science
- Understand the principles of cosmetic evaluation including various parameters
- Illustrate the important role of nutraceuticals in day -to -day life.

UNIT I INTRODUCTION**9**

Classification of cosmetic and cosmeceutical products definition of cosmetics as per Indian and EU regulations, Evolution of cosmeceuticals from cosmetics, cosmetics as quasi and OTC drugs

Cosmetic excipients: Surfactants, rheology modifiers, humectants, emollients, preservatives.

Classification and application.

Skin: Basic structure and function of skin.

Hair: Basic structure of hair. Hair growth cycle.

Oral Cavity: Common problem associated with teeth and gums.

UNIT II BUILDING BLOCKS OF SKIN CARE PRODUCTS**9**

Principles of formulation and building blocks of skin care products: Face wash, Moisturizing cream, Cold Cream, Vanishing cream and their advantages and disadvantages. Application of these products in formulation of cosmeceuticals. **Antiperspirants & deodorants-** Actives & mechanism of action.

Principles of formulation and building blocks of Hair care products: Conditioning shampoo, Hair conditioner, anti-dandruff shampoo. Hair oils. Chemistry and formulation of Para-phenylene diamine based hair dye. Principles of formulation and building blocks of oral care products: Toothpaste for bleeding gums, sensitive teeth. Teeth whitening, Mouthwash.

UNIT III ROLE OF HERBS IN COSMETICS

9

Sun protection, Classification of Sunscreens and SPF.

Role of herbs in cosmetics: Skin Care: Aloe and turmeric Hair care: Henna and amla. Oral care: Neem and clove

Analytical cosmetics: BIS specification and analytical methods for shampoo, skin-cream and toothpaste.

UNIT IV PRINCIPLES OF COSMETIC EVALUATION

9

Principles of Cosmetic Evaluation: Principles of sebumeter, corneometer. Measurement of TEWL, Skin Color, Hair tensile strength, Hair combing properties Soaps, and syndet bars. Evolution and skin benefits.

UNIT V COSMETIC PROBLEMS

9

Oily and dry skin, causes leading to dry skin, skin moisturisation. Basic understanding of the terms comedogenic, dermatitis. Cosmetic problems associated with Hair and scalp: Dandruff, Hair fall causes Cosmetic problems associated with skin: blemishes, wrinkles, acne, prickly heat and body odor. Antiperspirants and Deodorants- Actives and mechanism of action

LIST OF OPEN ELECTIVES

**FACULTY OF ARTS, SCIENCE,
COMMERCE AND MANAGEMENT**

23MBAPOE301**ORGANISATIONAL BEHAVIOUR****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students to

- Understand the basic concepts of organizational behaviour.
- Analyze the individual behaviour traits required for performing as an individual or group.
- Obtain the perceiving skills to judge the situation and communicate the thoughts and ideas.
- Understand how to perform in group and team and how to manage the power, politics and conflict.
- Recognize the importance of organizational culture and organizational change.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Analyse organizational behaviour issues in the context of the organizational behaviour theories and concepts.
- Assess the behaviour of the individuals and groups in organization and manage the stress.
- Manage team, power, politics and conflict arising between the members.
- Explain how organizational change and culture affect the working relationship within organizations.
- Understand and exhibit the communication skills to convey the thoughts and ideas of case analysis to the individuals and group.

UNIT I - ORGANIZATION BEHAVIOUR: INTRODUCTION**9**

Organization Behavior: Meaning and definition - Fundamental concepts of OB - Contributing disciplines to the OB field – OB Model - Significance of OB in the organization success - Challenges and Opportunities for OB.

UNIT II- BEHAVIOUR AND PERSONALITY**9**

Attitudes – Sources - Types - Functions of Attitudes. Values – Importance - Types of Values. Personality – Determinants of personality- Theories of Personality - psycho-analytical, social learning, job-fit, and trait theories.

UNIT III- PERCEPTION**9**

Perception – factors influencing perception - Person Perception – Attribution Theory – Frequently Used Shortcuts in Judging Others- Perceptual Process- Perceptual Selectivity - Organization Errors of perception – Linkage between perception and Decision making.

UNIT IV- GROUP AND STRESS MANAGEMENT**9**

Foundation of Group Behavior - Types of Groups - Stages of Group Development - Group Norms - Group Cohesiveness – Stress – Causes of stress – Effects of Occupational Stress- Coping Strategies for Stress.

UNIT V- ORGANIZATION CULTURE AND CHANGE**9**

Organizational culture- Characteristics of Culture- Types of Culture – Creating and Maintaining an Organizational Culture. Organizational change – Meaning - Forces for Change - Factors in Organizational Change - Resistance to change- Overcoming resistance to change.

23PHPOE301**MATERIAL CHARACTERIZATION****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students:

- Study materials is always important, for any application, including fabrication of satellites.
- Introduce various methods available for characterizing the materials. The characterization of materials specifically addresses that portfolio with which researchers and educators must have working familiarity.
- Provide an introduction to materials characterization and its importance
- Discuss different types of characterization techniques and their uses.
- Introduce the students to the principles of optical and electron microscopy, X-ray diffraction and various spectroscopic techniques

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Handle with X-ray, thermal, microscopic, and electrical methods of characterization.
- Understand and describe the fundamental principles behind the methods of characterization which are included in the curriculum
- Analyze, interpret and present observations from the different methods.
- Evaluate the uncertainty of observations and results from the different methods.
- Understand the history of materials science with basic understanding of metals, binary alloys, magnetic materials, dielectric materials and polymers

UNIT I- X-RAY TECHNIQUE**9**

X-ray techniques for materials characterization X-ray diffraction: Principle, measuring system and applications for characterization of powdered materials. X-ray diffraction profile and analysis: FWHM and line broadening, Crystallite size effect and Scherrer formula, Effect of strain (tensile vs compressive, uniform vs. non-uniform) Introduction to Extended X-ray absorption fine structure (EXAFS), Surface extended X-ray absorption (SEXAFS).

UNIT II- MICROSCOPIC TECHNIQUES**9**

Microscopic techniques Principles, instrumentations and applications of Optical microscope, Scanning Electron Microscope (SEM), Transmission Electron Microscope (TEM) for

characterization of different samples. Energy dispersive X-ray microanalysis (EDS) - Basic aspects of Atomic force microscopy (AFM).

UNIT III- SPECTROSCOPIC METHODS

9

Spectroscopic methods Principle, instrumentation and applications of UV-Visible Diffuse Reflectance (UV-Vis DRS) spectroscopy, Ft-Ir, Raman and Fluorescence spectroscopy. Hand of experience on operation of UV-Vis-DRS, FT-IR, Raman and data analysis..

UNIT IV- THERMOANALYTICAL METHODS

9

Thermoanalytical Methods Principle, instrumentation and applications of Thermogravimetric Analysis (TGA), Differential Temperature Analysis (DTA) and Differential Scanning Calorimetry (DSC). Factors affecting the TGA/DTA/DSC results and their interpretations. Hand on experience of operation of TG/DSC and data analysis.

UNIT V- ELECTROANALYTICAL TECHNIQUES

9

Electroanalytical Techniques Voltammetric principles, hydrodynamic voltammetry, stripping voltammetry, cyclic voltammetry, criteria of reversibility of electrochemical reactions, quasi-reversible and irreversible processes, qualitative and quantitative analysis current-potential relation applicable for Linear Sweep Voltammetry (LSV) and Cyclic Voltammetry (CV), interpretation of cyclic voltammograms and parameters obtainable from voltammograms. Hand on experience on operation of CV and data analysis.

23PHPOE302**NUMERICAL METHODS AND PROGRAMMING****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students

- Computational physics may be broadly defined as 'the science of using computers to assist in the solution of physical problems, and to further physics research.
- Equip the students of M.Sc. Physics with knowledge of programming in C, roots of equation, interpolation, curve fitting, numerical differentiation, numerical integration, solution of ordinary differential equations
- Introduce students to computational methods for simulating physical systems and solving problems arising in physics and astronomy, as well as in other related fields
- Computers now play a role in almost every branch of physics like large scale quantum mechanical calculations in nuclear, atomic, molecular and condensed matter physics, large scale calculations in such fields as hydrodynamics, astrophysics, plasma physics, meteorology and geophysics etc.
- The huge increase in the power of computers in recent years has made an impact on the role of computational physics.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Programme numerical methods and their implementation like applying to problem in physics, including modeling of classical physics to quantum system as well as data analysis (Linear and non linear).
- Analysis techniques for propagating error, representing data graphically. Create, solve and interpret basic mathematical tool.
- Program independently computers using leading-edge tools,
- Formulate and computationally solve a selection of problems in physics,

UNIT I INTRODUCTION**9**

Errors, different type of errors. Representation of numbers in computer, computer arithmetic, zero in floating point number.

UNIT II OPERATORS

9

Operators –finite differences, average, differential, etc., their inter-relations. Difference of polynomials. Difference equation. Interpolation. Lagrange’s methods, error terms. Uniqueness of interpolating polynomial.

UNIT III INTERPOLATION

9

Newton’s fundamental interpolation. Forward, backward and central difference interpolations. Interpolation by iteration. Spline interpolation, comparison with Newton’s interpolation. Hermite’s interpolation. Bivariate interpolation, Lagrange and Newton’s methods. Inverse interpolation.

UNIT IV APPROXIMATION

9

Approximation of function. Least square method. Use of orthogonal polynomials. Approximation by Chebyshev polynomials, Max-min principle. Economization of power series.

UNIT V PYTHON PROGRAMMING

9

Python Programming –Loops- Conditional statements- Functions- Object-oriented programming- Array computing- 2 and 3d visualizations

23CAPOE301**ROBOTICS PROCESS AUTOMATION****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students

- Learn the concepts of RPA, its benefits, types and models
- Gain the knowledge in application of RPA in Business Scenarios
- Identify measures and skills required for RPA
- Adopt to the implementations of Automation
- Able to process information and draw inference

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Demonstrate the benefits and ethics of RPA
- Understand the Automation cycle and its techniques
- Draw inferences and information processing of RPA
- Understand the Automation concepts
- Implement & Apply RPA in Business Scenarios

UNIT I –INTRODUCTION**9**

Introduction to RPA - Overview of RPA - Benefits of RPA in a business environment - Industries & domains fit for RPA - Identification of process for automation - Types of Robots - Ethics of RPA & Best Practices - Automation and RPA Concepts - Different business models for implementing RPA - Centre of Excellence – Types and their applications - Building an RPA team - Approach for implementing RPA initiatives.

UNIT II - AUTOMATION**9**

Role of a Business Manager in Automation initiatives - Skills required by a Business Manager for successful automation - The importance of a Business Manager in automation - Analyzing different business processes - Process Mapping frameworks - Role of a Business Manager in successful implementation – Part 1 - Understanding the Automation cycle – First 3 automation stages and activities performed by different people

UNIT III - AUTOMATION IMPLEMENTATION

9

Evaluating the Automation Implementation Detailed description of last 3 stages and activities performed by different people - Role of a Business Manager in successful completion – Part 2 - Activities to be performed post-implementation - Guidelines for tracking the implementation success - Metrics/Parameters to be considered for gauging success - Choosing the right licensing option - Sending emails - Publishing and Running Workflows

UNIT IV - ROBOT

9

Ability to process information through scopes/systems - Understand the skill of information processing and its use in business - Leveraging automation - Creating a Robot - New Processes. Establish causality by variable behavior - Understand the skill of drawing inference or establishing causality by tracking the behavior of a variable as it varies across time/referenced variable - Leveraging automation for this skill - Robot & new process creation.

UNIT V –ROBOT SKIL

9

Inference from snapshots of curated terms – Omni-source data curation - Multisource trend tracking - Understand the skill of drawing inference from the behavior of curated terms by taking snapshots across systems in reference to time/variable(s) - Leveraging automation for this skill – Robot creation and new process creation for this skill.

Average	3	3	3	2	-	-	-	-	2	-	-	-	-	-

COURSE OBJECTIVES

The goal of this course is for the students

- To understand the Fundamentals of food, nutrients, and their relationship to health
- To identify deriving maximum benefit from available food resources
- To understanding of the consequences of vitamin and mineral deficiency/ excess vitamin
- To describe the nutrition deficiency diseases and their consequences
- To explain Food adulteration and prevention of food adulteration.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Understand the fundamentals of nutrition and their relationship to health
- Identify the maximum benefits from available food resources
- Outline the consequences of vitamin and mineral deficiency/excess vitamin
- Illustrate nutrition deficiency diseases and their consequences
- Explain the sources of food adulteration and measures to prevent it

UNIT I BASIC CONCEPTS**9**

Basic concepts in food and nutrition- Understanding relationship between food, nutrition and health, Functions of food- Physiological, psychological and social. Dietary guidelines for Indians food pyramid. Junk foods and its causes.

UNIT II NUTRIENTS**9**

Nutrients - Functions, dietary sources and clinical manifestations of deficiency/ excess of the following nutrients: Carbohydrates, lipids and proteins, Fat soluble vitamins-A, D, E and K, Water soluble vitamins – thiamin, riboflavin, niacin, pyridoxine, folate, vitamin B12 and vitamin C, Minerals – calcium, iron and iodine

UNIT III PHYSIOLOGICAL CHANGES**9**

Physiological changes, RDA, nutritional guidelines, nutritional concerns and healthy food choices -Adult, Pregnant woman, Lactating mother, Elderly. Nutrition during childhood -Growth and development, nutritional guidelines, nutritional concerns and healthy food choices -Infants, Preschool children, School children, Adolescents. Nutritional needs of nursing mothers and

infants, determinants of birth weight and consequences of low birth weight, Breastfeeding biology, Breastfeeding support and Counselling, Infant and young child feeding and care - Current feeding practices and nutritional concerns, guidelines for infant and young child feeding, Breast feeding, weaning and complementary feeding. Assessment and management of moderate and severe malnutrition among children, Micronutrient malnutrition among preschool children. Child health and morbidity, neonatal, infant and child mortality.

UNIT IV NUTRITIONAL DEFICIENCY DISEASES

9

Introduction to Nutritional deficiency diseases -Causes, symptoms, treatment, prevention of the following: Protein Energy Malnutrition (PEM), Vitamin A Deficiency (VAD), Iron Deficiency Anaemia (IDA), Iodine Deficiency Disorders (IDD), Zinc Deficiency, Fluorosis Nutritional needs during pregnancy, common disorders of pregnancy (Anaemia, HIV infection, Pregnancy induced hypertension), relationship between maternal diet and birth. Maternal health and nutritional status, maternal mortality and issues relating to maternal health.

UNIT V DIETETICS

9

Dietetics : Diet for diabetes mellitus-Nutrition recommendations for patient with diabetes, Meal planning, Exchange list of different food groups, Glycemic index based formulation of diet for diabetic individual, Diabetic diets menu wise. Diet for Cardiovascular Diseases -Dietary management and general guidelines for coronary heart disease, Dietary recommendations of WHO. Diet for Acute cardiac diseases. Influence of diet on carcinogenesis, Dietary risk factors and cancers at various sites in the human body, diet therapy, diet for cancer patients, managing eating problems during treatment. Hormonal imbalance-Poly cystic ovarian syndrome, hypogonadism, cushing syndrome. Causes of hormonal imbalance. Treatment- Dietary and stress management protocols to be followed.

23BECSPOE301**CYBER FORENSIS****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students

- Understand about computer forensics and investigations.
- Know about digital evidence and crime.
- Analyse and validate forensics data.
- Know about e-mail investigation.
- Understand about mobile device forensics.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Define, understand and explain various investigation procedures and summarize duplication of digital evidence.
- Apply the knowledge of digital evidences.
- Design and develop various forensics tools and analyse the network forensics.
- Demonstrate the systematic study of high-tech forensics
- Understand the importance of reports.

UNIT I INTRODUCTION**9**

Computer forensics and investigations as a profession – Preparing for computer investigations – Taking a systematic approach–Procedures for corporate high-tech investigations–Data recovery work stations and software– Conducting an investigation.

UNIT II DATA ACQUISITION**9**

Data acquisition – Storage formats for digital evidence – Validating data acquisitions – Processing crime and incident scenes–Identifying digital evidence–Collecting evidence in private sector incident scenes – Preparing for search-seizing digital evidence at the scene-storing digital evidence –Reviewing a case.

UNIT III FORENSICS TOOLS**9**

Current computer forensics tools–Software tools–Hardware tools–The Macintosh file structure and boot process – Computer forensics analysis and validation – Addressing data –Hiding techniques.

UNIT IV VIRTUAL MACHINES

9

Virtual machines – Network forensics – Developing standard procedures – Live acquisitions – email investigations – Investigating e-mail crimes and violations – Understanding e-mail servers – Cell phone and mobile device forensics.

UNIT V MOBILE DEVICE FORENSICS

9

Understanding mobile device forensics – Acquisition procedures –Report writing for high-tech investigations – Importance of reports – Guidelines for writing reports –Expert testimony in high-tech investigations.

The goal of this course is for the students

- Familiarize with regard to the concept of Investment Planning and its methods
- Examine the scope and ways of Personal Tax Planning;
- Analyze Insurance Planning and its relevance
- Develop an insight in to retirement planning and its relevance.
- Construct an optimal portfolio in real life situations

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Familiarize with regard to the concept of Investment Planning and its methods
- Examine the scope and ways of Personal Tax Planning;
- Analyze Insurance Planning and its relevance
- Develop an insight in to retirement planning and its relevance.
- Construct an optimal portfolio in real life situations

UNIT I - INTRODUCTION TO FINANCIAL PLANNING**9**

Introduction to Financial Planning - Financial goals, Time value of money, steps in financial planning, personal finance/loans, education loan, car loan & home loan schemes. Introduction to savings, benefits of savings, management of spending & financial discipline, Net banking and UPI, digital wallets, security and precautions against Ponzi schemes and online frauds such as phishing, credit card cloning, skimming.

UNIT II - INVESTMENT PLANNING**9**

Investment Planning - Process and objectives of investment, Concept and measurement of return & risk for various assets class, Measurement of portfolio risk and return, Diversification & Portfolio formation. Gold Bond; Real estate; Investment in Greenfield and brownfield Projects; Investment in fixed income instruments- financial derivatives & Commodity market in India. Mutual fund schemes including SIP; International investment avenues.

UNIT III -PERSONAL TAX PLANNING

9

Tax Structure in India for personal taxation, Scope of Personal tax planning, Exemptions and deductions available to individuals under different heads of income and gross total income, Special provision u/s 115BAC vis-à-vis General provisions of the Income-tax Act, 1961. Tax avoidance versus tax evasion.

UNIT IV - INSURANCE PLANNING

9

Insurance Planning Need for Protection planning. Risk of mortality, health, disability and property. Importance of Insurance: life and non-life insurance schemes. Deductions available under the Income-tax Act for premium paid for different policies.

UNIT V - RETIREMENT BENEFITS PLANNING

9

Retirement Benefits Planning - Retirement Planning Goals, Process of retirement planning, Pension plans available in India, Reverse mortgage, New Pension Scheme. Exemption available under the Income-tax Act, 1961 for retirement benefits.

23CHPOE301**CHEMISTRY IN EVERYDAY LIFE****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students

- Gain knowledge in the importance of chemistry in food industry.
- Understand the chemistry of medicines and cosmetics.
- Evaluate the solar energy utilization and its storage.
- Knowledge about the production of electricity by a nuclear reactor.
- Know about the chemistry of soaps, detergents and textiles.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Know the importance of chemistry in food industry.
- Understood the chemistry of medicines and cosmetics.
- Evaluate the solar energy utilization and its storage.
- Understood the production process of electricity by a nuclear reactor.
- Know about the chemistry of soaps, detergents and textiles.

UNIT I - IMPORTANCE OF CHEMISTRY IN FOOD**9**

Chemicals in food, colouring agents, artificial preservatives, flow stabilizers, binding substance, flavours and sweeteners, antioxidants, minerals, vitamins. Chemistry at the breakfast table, raising agents- gluten, the taste maker- glutamic acid, stimulants-Caffeine, chemistry of onion, garlic and curcumin.

UNIT II - CHEMISTRY IN MEDICINES AND COSMETICS**9**

Elements in the human body, drugs and their classification, drug-target interaction, action of different classes of drugs, antiseptics and disinfectants.

Cosmetics: Chemistry behind the lotions, fragrances, talcum powder, sunblock and sunscreen, toothpaste, lipsticks, nail polishes.

UNIT III - CHEMISTRY IN ENERGY

9

Solar energy - fuel from sun light - splitting of water - hydrogen from sunlight - hydrogen economy - fuel cells - batteries - photovoltaics - stealing the sun - nuclear energy - nuclear fission and fusion - production of electricity by a nuclear reactor - radioactivity and the hazards of radioactivity - living with nuclear power.

UNIT IV - IMPORTANCE OF CHEMISTRY IN SOAPS, DETERGENTS AND TEXTILES

9

Detergents and soaps, types of soaps and detergents, saponification, cleansing action of soaps and detergents, perfumes used in soaps.

Textiles: Chemistry behind wool, silk, jute, cotton, glass fibre, polyester, acrylic, nylon, and other raw materials.

UNIT V - CHEMISTRY OF POLYMERS, FUEL AND AGRICULTURE

9

Polymers, types, polyethylene, plastics, disposal of plastics, degradation of polymers and plastics using nano materials. Petrochemistry, petrol, diesel, LPG, CNG, kerosene, oils, and other fuels. Agriculture: fertilizers, herbicides, insecticides, and fungicides.

23MBPOE301**FERMENTATION TECHNOLOGY****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours**

COURSE OBJECTIVES

The goal of this course is for the students

- Encompass the use of microorganisms in the manufacture of food or industrial products on the basis of employment.
- Get equipped with a theoretical and practical understanding of industrial microbiology
- Appreciate how microbiology is applied in the manufacture of industrial products
- Know how to source microorganisms of industrial importance from the environment
- Know about the design of bioreactors, factors affecting growth and production, heat transfer, oxygen transfer

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Provides knowledge in the large scale production of industrial product, and teaches the modern employment trends to cater the needs of industry.
- Students will differentiate the types of fermentation processes.
- Understand the biochemistry of various fermentations.
- Identify techniques applicable for Improvement of microorganisms based on known biochemical pathways and regulatory mechanisms.
- Comprehend the techniques and the underlying principles in downstream processing.

UNIT I - BASICS OF FERMENTATION PROCESSES

9

Definition, scope, history, and chronological development of the fermentation industry. Component parts of the fermentation process. y. Component parts of fermentation process. Microbial growth kinetics, batch and continuous, direct, dual or multiple fermentations; scaleup of fermentation, comparison of batch and continuous culture as investigative tools, examples of the use of fed batch culture.

UNIT II ISOLATION AND PRESERVATION

9

Isolation, preservation, and strain improvement of industrially important microorganisms. Use of recombination system (Parasexual cycle, protoplast fusion techniques), application of recombinant strains, and the development of new fermentation products.

UNIT III –SCREENING AND INOCULUM DEVELOPMENT

9

Screening (primary and secondary screening); detection and assay of fermentation products (Physico-chemical assay, biological assays). Inoculum development, criteria for transfer of inoculum, development of inoculum: Bacteria, Fungi and Yeast.

UNIT IV–MICROBIAL PRODUCTION

9

Fermentation type reactions (Alcoholic, bacterial, mixed acid, propionic acid, butanediol and acetone-butanol). Microbial production of enzymes (amylases, Proteases, cellulases, pectinases and lipases) primary screening for producers, large scale production. Immobilization methods.

UNIT V – ALCOHOLS AND BEVERAGES

9

Fermentative production of industrial alcohol, production of beverages. Production of organic acids: citric acid, aminoacids: glutamic acid, production of vitamins. fungal enzymes and Single cell protein.

23BTPOE301**SERICULTURE****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students

- Apply knowledge and skills of seribiotechnology for development new mulberry variety and silkworm breeds suitable for varied agro-climatic zones.
- Apply tools and techniques of biostatistics for critical analysis and interpretation of data accrued.
- Use bioinformatics tools and techniques for the analysis and interpretation of bimolecular data for better understating mulberry and silkworm.
- Demonstrate communication skills, scientific writing, data collection and interpretation abilities in all the fields of seribiotechnology.
- Thorough knowledge and application of good laboratory and good manufacturing practices in sericulture and biotech industries.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Know the different components and chain link of sericulture industry.
- Understand concepts of sericulture industry and demonstrate interdisciplinary skills
- Acquired in mulberry plant cultivation and silkworm rearing.
- Demonstrating the Laboratory and field skills in mulberry cultivation and silkworm
- rearing with an emphasis on technological aspects.

UNIT I INTRODUCTION**9**

Introduction to Sericulture - History of Sericulture – Sericulture organization in India, By products of silk industry. Mulberry and Non – mulberry silkworm types–Morphology and Life cycle of Bombyxmori

UNIT II MULBERRY CULTIVATION**9**

Mulberry Cultivation: Mulberry Varieties – Methods of Irrigation –Nutrient Management and Weed control. Pruning and Harvesting – Crop improvement – Mechanism in Morigulture – Pest and Disease, deficiencies and symptoms in Mulberry.

UNIT III REARING OF SILKWORM

9

Rearing of silkworm – Rearing Appliances – rearing operation. Harvesting and marketing of cocoons. Cocoon processing and reeling - Appliances used for reeling. Pre reeling process – Cocoon boiling. Reeling technology – re-reeling technology.

UNIT IV SCOPE OF NON-MULBERRY SERICULTURE

9

Non – Mulberry Sericulture Scope of Non-mulberry Sericulture - Non-mulberry silk varieties and fauna, tasar, muga, eri – Silk Production and Marketing – Tropical tasar / muga – Morphology, anatomy grainage

UNIT V DISEASES OF SILKWORM

9

Diseases of silkworm –Pebrine Protozoan, Flacherie bacterial, Nuclear Polyhedrosisviral and Muscardine fungal diseases. Pests of Silkworm.

Total: 45

LIST OF MANDATORY COURSES

COURSE OBJECTIVES

The goal of this course is for the students to

- Illustrate design thinking concepts and principles
- Utilize design thinking methods in every stage of the problem
- Identify the different phases of design thinking
- Plan for various product and service communication in design thinking
- Interpret the use of tools for the design process

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Explain the design thinking process, tools and theories.
- Identify the types of users and the requirements of customers.
- Explore the concepts of Prototyping and its testing.
- Analyze design thinking strategies in product and service design.
- Customize existing products by utilizing design thinking strategies.

UNIT I INTRODUCTION**6**

Understanding Design thinking and tools - Human-Centric Design Process - Design Thinking Process - DT Activity with case studies.

UNIT II EMPATHISE WITH USERS**6**

Five Whys - Needs of user - Types of user research -Customer Journey Mapping - Observational Research

UNIT III PROTOTYPING**6**

Ideas to presentable concepts - Scenario-based Prototyping – Testing prototypes - Usability and ergonomic testing - Rapid prototyping.

UNIT IV PRODUCT AND SERVICE DESIGN

6

Product Design - Interaction Design - Service Design - Communication Design - Transportation Design.

UNIT V DESIGN AND INNOVATION

6

DT For strategic innovations - Extreme Competition - Experience design - Standardization - Humanization - Creative Culture.

COURSE OBJECTIVES

The goal of this course is for the students to:

- Have knowledge of Physical fitness and exercise management to lead better quality life
- Enable to officiate, supervise various sports events and organize sports events
- Acquire the knowledge of Physical Education, Sports and Yoga and understand the purpose and its development
- Gain knowledge to plan, organize and execute sports events

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Practice physical activities and yoga for strength, flexibility and relaxation.
- Use techniques for increasing concentration and decreasing anxiety for stronger academic performance.
- Perform yoga exercises in various combination and forms.
- Improve personal fitness through participation in sports and yoga activities.
- Follow sound nutritional practices for maintaining good health and physical performance.

UNIT I INTRODUCTION TO PHYSICAL FITNESS

Explain importance of physical education - Describe importance of Physical Fitness & Wellness - Explain the components of physical fitness - Demonstrate healthy life style - Prevent health threats by changing life style

UNIT II FUNDAMENTALS OF ANATOMY & PHYSIOLOGY IN SPORTS & YOGA

Explain importance of anatomy and physiology - Describe effects of exercise in various body systems - Describe concept of correct posture - Explain corrective measures for posture deformities.

UNIT III YOGA & PRANAYAMA

Explain importance of yoga - Perform various pranayama for increasing concentration - Use meditation and other relaxation techniques for improving concentration.

பாடத்திட்ட பயன்விளைவு

- வரலாற்றிற்கு முற்பட்ட தமிழகத்தை மாணவர்களுக்கு அறிமுகப்படுத்துதல்
- பழந்தமிழர் பண்பாடு சார்ந்த வாழ்க்கை முறையை மாணவர்கள் அறியுமாக்குவித்தல்
- தமிழ் மொழியின் பழைமையும், திராவிட மொழிகளில் தமிழ் மொழியின் தனிச்சிறப்பையும் மாணவர்களுக்கு அறிமுகப்படுத்துதல்.
- தமிழர்களின் வாழ்வியல், தமிழர்கலைகள், ஆற்றங்கரைப் பண்பாடுகள் குறித்து மாணவர்கள் அறியச்செய்தல்.
- இந்தியக்குடியரிமைப் பணி முதலான போட்டித் தேர்வுகளில் விருப்பப்பாடமாக இடம்பெறுகின்ற தமிழ் நாகரிகமும் பண்பாடும் குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்

பாடத்திட்டப் பொதுநோக்கம்

- இந்தியக் குடியரிமைப் பணிமுதலான போட்டித்தேர்வுகளில், விருப்பப்பாடமாக இடம்பெறுகின்ற, 'தமிழ்இலக்கியவரலாறு' குறித்த முழுமையான அறிமுகம்பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத்தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித்துறையாகிய, 'அறிவியல் தமிழ்'; 'இணையதமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச்சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத் திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாயமற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி. மொழிபெயர்ப்புத்துறை சார்ந்த வேலைவாய்ப்புத்திறன் பெற்றிருத்தல்.

அலகு:1 தமிழர்மரபு

மரபு-விளக்கம்-சங்ககாலதமிழர்மரபு - திணைப்பகுப்பும்தமிழர்மரபும்-உலகப்பொதுமை - அகத்திணைமரபு - புறத்திணைமரபு- இடைக்காலத்தமிழர்மரபு - பிற்காலமரபும்மாற்றமும் - தற்காலதமிழர்மரபு - வளர்ச்சி.

அலகு: 2 தமிழர்பண்பாடு

பண்பாடு - விளக்கம் - பழந்தமிழர்பண்பாடு - இயற்கைசார்ந்தவாழ்வியல் - தமிழர்சமயம் - அரசியல்நிலை-சமூகப்பழக்கவழக்கங்கள் - நம்பிக்கைகள் - வாழ்வியல்அறங்கள் - வணிகம்போன்றவை.

அலகு:3 தமிழர்கலைகள்

தமிழகத்தில்கலைகளின்வளர்ச்சி - சிற்பக்கலைவளர்ச்சி -கோயில்கலை - கற்கோவில்கள் - ஓவியக்கலை - அழகுக்கலைகள் - கூத்துக்கலை - மருத்துவக்கலை - நாடகக்கலை- இசைக்கலைபோன்றவை.

2. தமிழர்நாகரிகமும்பண்பாடும், அ. தட்சிணாமூர்த்தி, ஐந்திணைப்பதிப்பகம், சென்னை, திருத்தியபதிப்பு - 2022.
3. தமிழர்வரலாறும்பண்பாடும், நா. வானமாமலை, நியூசெஞ்சரிபுக்ஹவுஸ், சென்னை, ஆறாம்பதிப்பு - 2007 .
4. தமிழகவரலாறுமக்களும்பண்பாடும், கே.கே. பிள்ளை, உலகத்தமிழராய்ச்சிநிறுவனம், சென்னை.

23BT MC251**SOFT SKILLS****SEMESTER-II****1H - 0C****Instruction Hours/week: L:1 T:0 P:0****Marks: Internal:100 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course is for the students to

- Encourage all round development of the students by focusing on soft skills.
- Make the students aware of critical thinking and problem-solving skills.
- Develop leadership skills and organizational skills through group activities.
- Function effectively with heterogeneous teams.
- Develop social and work-life skills as well as personal and emotional well-being.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Memorize various elements of effective communicative skills.
- Interpret people at the emotional level through emotional intelligence.
- Apply critical thinking skills in problem solving.
- Analyze the needs of an organization for team building.
- Judge the situation and take necessary decisions as a leader.

UNIT 1 COMMUNICATION SKILLS

Introduction, meaning, significance of soft skills –definition, significance, types of communication skills -Intrapersonal & Inter-personal skills

UNIT 2 CRITICAL THINKING

Active Listening –Observation –Curiosity –Introspection –Analytical Thinking –Open-mindedness –Creative Thinking- Public Speaking

UNIT 3 PROBLEM SOLVING & DECISION MAKING

Meaning & features of Problem Solving –Managing Conflict –Conflict resolution –Methods of decision making –Effective decision making in teams –Methods & Styles - Time Management

1. Personality Development and Soft Skills (English, Paperback, Mitra Barun K.) Publisher: Oxford University Press; Pap/Cdr edition (July 22, 2012)
2. Personality Development and Soft Skills: Preparing for Tomorrow, Dr Shikha Kapoor Publisher : I K International Publishing House; 0 edition (February 28, 2018)
3. Soft skills: personality development for life success by Prashant Sharma, BPB publications,2018

COURSE OBJECTIVES

The goal of this course is for the students to

- Highlight the social construction of gender in Indian society and the role of social institutions in the socialization process.
- Make aware about the practical issues concerning gender and politics.
- Classify the students in engendering national policies and programmes.
- Observe the liability of women and women's work in the context of globalization.
- Acquaint knowledge about the political participation of women and the gendered structures of governance and polity.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Infer into the basic concepts related to sex, gender, femininity etc.
- Demonstrate the rationale for women's studies
- Compare Gender Equality Issues and Movements in Women's Studies
- Summarize the Social construction of Gender, Gender Roles and Genderstereotyping.
- Illustrate Social Structures, Changing Status of Women in India.

UNIT I FUNDAMENTAL CONCEPTS OF WOMEN'S STUDIES

Definition- Objectives of Women's Studies; Importance of Women's Studies; Women's Studies as an Academic Discipline; Role of UGC Centre for Women's Studies

UNIT II SOCIAL EMPOWERMENT

Women in Higher Education; Gender issues in Health, Environment, Family welfare Measures, Indecent representation of Women in media; Women in Difficult circumstances;Constitutional.

UNIT III POLITICAL EMPOWERMENT

Women leaders in politics-Women in Local Governance- Barriers- Reservation policies- Women's Political Rights, Property Rights - Violence against Women -Women's work

Family: recreating knowledge, sage, and new delhi.
3. Jasbir jain (ed). (2005). “women in patriarchy: cross cultural”. Rawat publication jaipur.

COURSE OBJECTIVES

The goal of this course for the students is to

- Categorize, apply, and use thought processes to distinguish between concepts of Quantitative methods.
- Prepare and explain the fundamentals related to various possibilities and probabilities related to quantitative aptitude.
- Critically evaluate numerous possibilities related to puzzles.
- Understand and solve puzzle-related questions from specific and other competitive tests.
- Solve questions related to Time and distance and time and work etc.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Explain the basics of quantitative ability.
- Solve questions related to Logarithm, Permutation and Combinations, Probability, Basic Accountancy, Time, Speed, distance, work, Ratio and area etc.
- Utilize satisfactory competency in Verbal Reasoning Questions.
- Solve campus placements aptitude papers covering Quantitative Ability and verbal skills.
- Apply Quantitative and Verbal reasoning in puzzle-related questions.

UNIT -I 1. QUANTITATIVE ABILITY (BASIC MATHEMATICS)

- 1.1. Number Systems
- 1.2. LCM and HCF
- 1.3. Decimal Fractions
- 1.4. Simplification
- 1.5. Square Roots and Cube Roots
- 1.6. Problems on Ages
- 1.7. Surds & Indices
- 1.8. Percentages

UNIT II 2. QUANTITATIVE ABILITY (APPLIED & ENGINEERING MATHEMATICS)

- 2.1. Logarithm
- 2.2. Permutation and Combinations
- 2.3 Probability

- 2.4 Profit and Loss
- 2.5 Simple and Compound Interest
- 2.6. Time, Speed and Distance
- 2.7. Time & Work
- 2.8. Ratio and Proportion
- 2.9. Area
- 2.10 Mixtures and Allegation

UNIT III 3. VERBAL - APTITUDE

- 1.1 Words
- 1.2 Idioms
- 1.3 Phrases in Context
- 1.4 Reading comprehension techniques
- 1.5 Narrative sequencing
- 1.6 Data interpretation

COURSE OBJECTIVE:

The goal of this course is for the students to,

- Discuss topics utilizing basic vocabulary from a variety of themes/topics including:
- use correct verb forms (conjugation)
- Identify the correct gender and plural forms of nouns and use appropriate pronouns
- distinguish between the nominative and accusative cases (definite and indefinite articles)
- Identify numbers for use in counting, dates, and telling time

COURSE OUTCOMES:

Upon completion of this course the students will be able to,

- Learn the proper pronunciation of words
- Use two tenses of verbs(present tense and present perfect),in the active voice;
- Conduct simple conversations in German by using learned patterns;
- Translate short passages of German to English;
- Use German language in e-communication

UNIT I :Herzlichwillkommen! -WieistdeinName ? -IchtrinkegernKaffee.-Wirkonjugieren die Verben.

UNIT II: A bit of history and ZAHLEN - Verben, W-Fragen, Ja-Nein Fragen, Imperativ-das Alphabet, die Woche, das Jahr -Was sinddeineHobbys ? Formular ausfüllen

COURSE OBJECTIVE

The goal of this course is for the students to

- To facilitate students to develop proficiency in communication in French Language and to be globally competent
- To develop creative and innovative abilities using French Language, to meet the challenges of the constantly evolving industry and to identify entrepreneurial opportunities
- To enable students to be leaders and develop inter personal skills to perform effectively in diverse teams of MNC using French Language.
- To appraise the students of the different customs, traditions, sociohistorical aspects and trends in French society and literature.
- To assess and interpret authentic documents in French Language

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Explain linguistic requirements of French Language grammar and vocabulary
- Demonstrate basic written communicative skills with emphasis on creative writing in French Language.
- construct syntactically correct answers in basic French Language comprehension
- Develop basic oral skills in French Language for possible situations.
- Use of French Language in e-communication
-

UNIT I :Recognize the French letters, Identify the letter-combinations that are characteristic of the French language, Identify the remaining letter-combinations that are characteristic of the French language,

UNIT II :Use the imperative in the affirmative form, Say the time in French, Talk about the weather in French, .Talk about actions that just happened, Speak about actions that are yet to happen

UNIT III :Learn a few basic and commonly used 2nd group verbs, Understand the concept of French ‘modal verb, Learn a few basic and commonly used 3rd group verbs, Learn what reflexive verbs, Distinguish between moods and tenses

UNIT IV :Place an order in a restaurant, Learn a third past tense, .Identify a direct object, Identify an indirect object, Use direct and indirect objects pronouns in a single sentence

UNIT V:Learn the various positions of the object pronouns - Use object pronouns in the negative imperative - Use object pronouns in the affirmative imperative - Learn the word order specific to the indirect object pronouns associated with the 3rd person singular and plural

COURSE OBJECTIVES

The goal of this course for the students is to

- Equip and develop the learners entrepreneurial skills and qualities essential to undertake— business.
- Impart the learners entrepreneurial competencies needed for managing business efficiently and— effectively.
- Understand basic concepts in the area of entrepreneurship
- Develop personal creativity and entrepreneurial initiative
- Adopt the key steps in the elaboration of business idea

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Gain entrepreneurial competence to run the business efficiently.
- Undertake businesses in the entrepreneurial environment
- Prepare business plans and undertake feasible projects.
- Be efficient in launching and develop their business ventures successfully
- Monitor the business effectively towards growth and development

UNIT I ENTREPRENEURIAL COMPETENCE

Entrepreneurship concept – Entrepreneurship as a Career – Entrepreneurial Personality- Characteristics of Successful Entrepreneurs – Knowledge and Skills of an Entrepreneur.

UNIT II ENTREPRENEURIAL ENVIRONMENT

Business Environment - Role of Family and Society - Entrepreneurship Development

UNIT III BUSINESS PLAN PREPARATION

Sources of Product for Business - Prefeasibility Study - Criteria for Selection of Product - Ownership

UNIT IV LAUNCHING OF SMALL BUSINESS

Finance and Human Resource Mobilization - Operations Planning - Market and Channel Selection - Growth Strategies

UNIT V MANAGEMENT OF SMALL BUSINESS

Monitoring and Evaluation of Business - Effective Management of small Business - Case Studies.

23BT MC452 ESSENCE OF TRADITIONAL INDIAN KNOWLEDGE AND HERITAGE**1H-0C****Instruction Hours/week: L:1 T:0 P:0****Marks: Internal:100 External:0 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES**

The goal of this course for the students is to

- Impart a holistic understanding about Indian Culture and Thoughts from a Historical perspective.
- Encourage critical appreciation of the Indian thoughts and cultural manifestations.
- Introduce the students to important concepts from the diverse intellectual traditions of India.
- Make use of Indian cultural heritage and various epistemological inquiries.
- Gain knowledge of Indian heritage.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Understand the cultural diversity
- Infer the need of cultural unity
- Know the Dravidian culture
- Realize the power of Indian educational system called gurukul
- Come to know the concepts of vedic thought

UNIT I INTRODUCTION TO INDIAN THOUGHT AND CULTURE

Plurality of Indian culture - Cultural Diversity and Cultural Unity -Different manifestations of Indian Culture: Indus valley culture -Vedic culture and Dravidian culture.-The Medieval Bhakti Culture

UNIT II TRADITIONAL KNOWLEDGE SYSTEMS OF INDIA

Introduction to the Traditional Indian Education system of Gurukul - Parampara -Understanding Indian Philosophy: Vedic thought and the nine schools of philosophy - Indigenous Knowledge and Women in India

TEXT BOOKS

1. Chatterjee, Satishchandra and DhirendramohanDatta. (2007) Introduction to Indian Philosophy.Rupa Publications, New Delhi.
2. Husain,S. Abid. (2003). The National Culture of India. National Book Trust, New Delhi.

PRE-REQUISITES: Java Programming

COURSE OBJECTIVES

The goal of this course for the students is to

- Develop knowledge about mobile application development.
- Understand the building blocks of mobile apps.
- Gain knowledge about graphics and animations in mobile apps.
- Know about testing of mobile apps.
- Learn the advantages and limitations of development frameworks.
- Understand more about how to distribute apps on mobile market place.

COURSE OUTCOMES

Upon completion of this course the students will be able to

- Define, understand and explain the overview of android with its states and lifecycle.
- Apply the mobile applications for e-marketing in Android and iPhone.
- analyze mobile databases and various types of testing.
- Develop the simple android applications.
- Evaluate alternative mobile frameworks, and contrast different programming platforms.
- Implement the android applications in different field with modern tools.

UNIT I

Mobility landscape – Mobile platforms – Mobile apps development – Overview of android platform – Setting up the mobile app development environment along with an emulator – A case study on mobile app development.

UNIT II

App user interface designing – Mobile UI resources (Layout, UI elements, Drawable, Menu) – Activity – States and life cycle – Interaction amongst activities – App functionality beyond user interface – Threads, async task, services – States and lifecycle, Notifications, Broadcast receivers.

UNIT III

Telephony and SMS APIs – Native data handling – On-device file I/O – Shared preferences – Mobile databases such as SQLite, and enterprise data access (via Internet/Intranet). Graphics and animation – Custom views – Canvas – Animation APIs – Multimedia – Audio/video

playback and record – Location awareness and native hardware access (sensors such as accelerometer and gyroscope).

UNIT IV

Debugging mobile apps – White box testing – Black box testing and test automation of mobile apps – JUnit for android, robotium and monkey talk. Versioning – Signing and packaging mobile apps – Distributing apps on mobile market place. Introduction to objective C – iOS features

UNIT V

UI implementation – Touch frameworks – Location aware applications using core location and map kit – Integrating calendar and address book with social media application – Using WIFI – iPhone market place – Drawbacks on iOS over Android – Various stores available in online market – Configuration of mobile app – Online ecommerce transaction – E-booking transaction.

Total :15

TEXT BOOK

1. Anubhav Pradhan and Anil V Deshpande, Composing Mobile Apps Wiley, First Edition 2014

REFERENCE BOOK

1. Barry Burd, Android Application Development All-in-one for Dummies, John Wiley, First Edition 2012

WEBSITES

1. www.impetus.com/mobility
2. www.cise.ufl.edu/~helal/classes/fl10/notes/intro_to_mobile.ppt
3. www.diva-portal.org/smash/get/diva2:626531/FULLTEXT01.pdf
4. www.law.fsu.edu/library/databases/ppt/Androidapps.ppt
5. www.infosys.com/flypp/resources/Documents/mobile-application-testing.pdf

COURSE OBJECTIVES:

The goal of this course is for students to:

- See the need for developing a holistic perspective of life
- Facilitate the development of a Holistic perspective among students towards life and profession
- Highlight plausible implications of such a Holistic understanding in terms of ethical human conduct
- Sensitise the student about the scope of life – individual, family (inter-personal relationship), society and nature
- Develop more confidence and commitment to understand, learn and act accordingly

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Build comfortable relationship with each other
- Recall technical education without study of human values can generate more problems than solutions
- Infer that lack of understanding of human values is the root cause of most of the present day problems
- Demonstrate that the natural acceptance (intention) is always for living in harmony
- Differentiate between the characteristics and activities of different orders

UNIT I- ASPIRATIONS AND CONCERNS

Individual academic – career - Expectations of family – peers - society - nation - Fixing one's goals

UNIT II- SELF MANAGEMENT

Self confidence- peer pressure- time management- anger- stress- Personality development- self improvement

UNIT III- HARMONY OF THE SELF AND BODY

Understanding Human being as the Co-existence of the Self and the Body - Distinguishing between the Needs of the Self and the Body-Mental and physical health -Health issues- healthy diet- healthy lifestyle -Hostel life

UNIT IV- HARMONY IN RELATIONSHIP

Harmony in the Family – the Basic Unit of Human Interaction - Values in Human-to-Human Relationship- gratitude towards parents, teachers and others - Ragging and interaction- Competition and cooperation -Peer pressure.

UNIT V- HARMONY IN THE SOCIETY

Understanding Harmony in the Society- Participation in society- Participation in nature/ existence.

LIST OF PROJECT WORK

Instruction Hours/week: L:0 T:0 P:2**Marks: Internal: 100 External:0 Total:100****End Semester Exam:3 Hours****PRE- REQUISITES:** None**COURSE OBJECTIVES**

The goal of this course for the students is to

- Be self motivated and diligent professional
- Involve new learning, expanded growth or improvement on the job
- Enable the students to develop their engineering skills

COURSE OUTCOMES

Upon completion, the students will be able to

- Develop written and oral communication skills in both technical and non-technical Environment and use ICT for effective presentation of the study/internship
- Function effectively as an individual to identify the mathematical concepts, science concepts, Engineering concepts and modern engineering tools necessary to communicate the identified Study /internship
- Engage in independent study to research literature and understand engineering trends in the Identified study
- Apply and analyze the knowledge of engineering concepts to effectively communicate the Results from various publications
- Emphasize the need and abide by professional ethics
- Emphasize the role of engineering concepts on environmental, cultural and social concepts

Average	3	3	3	3	3	2	2	2	2	2	2	3	3	2

PRE- REQUISITES: None**COURSE OBJECTIVES**

The goal of this course for the students is to

- Provide an opportunity to transform theoretical knowledge acquired into practice.
- Sufficient confidence to carry out final year projects.
- An opportunity to conceptualize an idea into a system or product based on the theoretical knowledge gained in the specific domain.
- Knowledge and practice in writing project report and its presentation to the expert committee.

COURSE OUTCOMES

Upon completion, the students will be able to

- Apply and analyze the engineering concepts to solve the identified research work through literature survey
- Arrive at an exhaustive list of available engineering tools, and select the tool for implementing the identified research work
- Design systems using hardware components/software tools considering health, safety and societal need and validate the results of the identified work leading to publications
- Abide by the norms of professional ethics and meet societal and environmental needs
- Perform in the team, contribute to the team and mentor/lead the team
- Communicate effectively through presentation and demonstration of the project and preparation of the report and video
- Apply the principles of project management and finance during the implementation of the project
- Function effectively as an individual to engage in independent learning.

Guidelines

- Maximum of 4 students per group will do the project.
- Each batch will select and carry out their project under the guidance of a teaching faculty.

- The project will be evaluated by the guide and coordinator nominated by the HOD as per the following details:

Category	Marks	Evaluated by
Project Selection and Design	20	Guide
Implementation and Validation	40	Guide and Coordinator
Project Report	20	
Viva-Voce	20

Instruction Hours/week: L:0 T:0 P:8**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****PRE- REQUISITES:** None**COURSE OBJECTIVES**

- Identification of a real life problem in thrust areas
- Proposing different solutions for the problems based on literature survey
- Developing a mathematical model for solving the above problem
- Finalization of system requirements and specification
- Future trends in providing alternate solutions
- Consolidated report preparation of the above

COURSE OUTCOMES

Upon completion , the students will be able to

- Apply and analyze the engineering concepts to solve the identified research work through literature survey
- Arrive at an exhaustive list of available engineering tools, and select the tool for implementing the identified research work
- Design systems using hardware components/software tools considering health, safety and Societal need and validate the results of the identified work leading to publications
- Abide by the norms of professional ethics and meet societal and environmental needs
- Perform in the team, contribute to the team and mentor/lead the team
- Communicate effectively through presentation and demonstration of the project and Preparation of the report and video
- Apply the principles of project management and finance during the implementation of the project
- Function effectively as an individual to engage in independent learning

Average	3	3	3	3	3	2	2	2	2	2	2	3	3	2

COURSE OBJECTIVES

- The objective of the project work is to enable the students in convenient groups of not more than members on a project involving theoretical and experimental studies related to the branch of study. Every project work shall have a guide who is the member of the faculty of the institution. Twenty periods per week shall be allotted in the time table and this time shall be utilized by the students to receive the directions from the guide, on library reading, laboratory work, computer analysis or field work as assigned by the guide and also to present in periodical seminars on the progress made in the project.
- Each student shall finally produce a comprehensive report covering background information, literature survey, problem statement, project work details and conclusion. This final report shall be typewritten form as specified in the guidelines.

COURSE OUTCOMES

Upon completion , the students will be able to

- Apply and analyze the engineering concepts to solve the identified research work through Literature survey
- Arrive at an exhaustive list of available engineering tools, and select the tool for implementing the identified research work
- Design systems using hardware components/software tools considering health, safety and Societal need and validate the results of the identified work leading to publications
- Abide by the norms of professional ethics and meet societal and environmental needs
- Perform in the team, contribute to the team and mentor/lead the team
- Communicate effectively through presentation and demonstration of the project and Preparation of the report and video
- Apply the principles of project management and finance during the implementation of the Project
- Function effectively as an individual to engage in independent.
