							28	**280**	**420**	**700**
				SEMESTER IV						
16ASP491	Project	**2.3**	**2,11**	**0**	**0**	**0**	**15**	**80**	**120**	**200**

The following are the Elective papers

List of Elective Papers		
S.No	Course Code	Subjects
1.	16ASP105(A)	எண்கணிதம் (Numerology)
2.	16ASP105(B)	ஆடிப்படை வாஸ்த்து – I (Fundamentals of Vasthu – I)
3.	16ASP105(C)	அங்கலட்சனம் மற்றும் மச்சங்கள் (Samuthrika Lakshanam)
4.	16ASP205(A)	நவரத்தினங்கள் (Gemology)
5.	16ASP205(B)	நவீன வாஸ்த்து – II (Modern Vasthu – II)
6.	16ASP205(C)	கைரேகை சாஸ்திரம் (Palmistry)
7.	16ASP306(A)	தாஜிகம் (Thajigam)
8.	16ASP306(B)	அஷ்டவர்க்கம் (Astavargam)
9.	16ASP306(C)	16 வர்க்க சக்கரங்களும் பலன்களும் (Predictions through 16 Varga Chakras)

Programme outcomes

1) சோதிட முதுகலை மாணவர்கள் வானவியல் பற்றிய, சோதிடவியல் பற்றிய வரலாற்றை அறிவதால் இத்துறையின் பழமையையும் பெருமையையும் புரிந்து கொள்வார்கள்
2) சோதிடவியலின் அடிப்படைத்தன்மைகள் இராசி காரகத்துவங்கள், கோள்களின் காரகத்துவங்கள், பாவக காரகத்துவங்கள் ஆகியவற்றை பற்றிய ஆழ்ந்த அறிவு சாதக பலன்கள் நிர்ணயிப்பத்தில் முக்கிய பங்கு வகிக்கும்.
3) சோதிடவியலுக்கு பெரும் புகழ் சேர்த்த சோதிட அறிஞர்களின் பலன் கூறும் முறைகளை தெரிந்து கொள்வதினால் இத்துறையில் பல சாதனைகள் பல செய்ய ஆர்வம் ஏற்படும்
4) எண்கணிதம், வாஸ்து, கைரேகை, நவரத்தினங்கள், அங்கலட்சணங்கள் ஆகிய துணைப்பாடங்களுக்கு சோதிடவியலே ஆதாரம் என்பது புலப்படும்.
5) சாதகம் இல்லாதவர்களுக்கு பலன்கள் சொல்லும் வகையில் பிரசன்ன முறைகள் மூலம் பலன்கள் அறிந்து கொள்ளலாம்.
6) நாடி முறை, ஜெயமினி முறை, கிருஷ்ணமூர்த்தி பத்ததி முறை, மேலைநாட்டு முறை ஆகிய முறைகளில் பலன்கள் சொல்லப்படுவது சோதிட துறையின் வளர்ச்சிக்கு ஆதாரங்கள் ஆகும்.

7) நல்ல முகூர்த்தங்களில் ஆரம்பிக்கும் செயல்கள் நல்ல பலன்களைத் தரும், தீய முகூர்த்தங்களில் ஆரம்பிக்கப்படும் செயல்கள் துன்பத்தை விளைவிக்கும் என்பதை உணரமுடியும்.
8) மருத்துவ சோதிடத்தின் மூலம் நோய் ஏற்படும் உடல் பாவகம், நோயின் தன்மை, நோய் ஏற்படும் காலம், நோய் தீர்க்கும் முறைகள் ஆகியவற்றை தெளிவாக அறிய முடியும்.
9) சோதிட கணித முறைகளை அறிந்து கொள்வதின் மூலம் இக்கால விஞ்ஞானம், கணினி முதலியன அழிந்தாலும் சோதிட கணித முறைகள் அழியாமல் பாதுகாக்க முடியும்.
10) அஷ்டவர்க்கங்கள், தாஜிகம், பதினாறு வர்க்க சக்கரங்கள் பற்றிய அறிவு, சாதக பலன்களை சொல்லுவதில் துல்லியத்தை நிர்ணயிக்க உதவும்.
11) கல்வி, திருமணம், தொழில், புத்திரபேறு முதலியவை பற்றிய கேள்விகளுக்கு தெளிவான பலன்களை சொல்ல முடியும்.

Programme Specific outcomes

12) தனிமனிதனின் பிரச்சனைகளுக்கு சோதிட ரீதியில் சரியான தீர்வை கொடுக்க முடியும்.
13) எதிர்காலத்தில் நடக்கக்கூடிய நன்மை, தீமைகளை முன் கூட்டியே அறிந்து, அதற்காக முன் எச்சரிக்கை நடவடிக்கைகளை எடுத்துக் கொள்ள முடியும்.
14) சோதிட சாஸ்திரம் தனிமனிதனின் வளர்ச்சிக்கும், நாட்டின் வளர்ச்சிக்கும் ஒரு வழிகாட்டியாக அமையும்.

Programme Educational Objectives (PEOs)

PEO 1 : சோதிடவியல் முதுகலைப்பட்ட தாரிகளுக்கு வானவியல் அறிவு, சோதிடவியலின் வரலாறு, சோதிடவியலின் அடிப்படைத் தன்மைகள், கோள்கள், இராசிகள், பாவகங்கள் பற்றிய அறிவு உள்ளதால் கால தேச வர்த்தமானங்களுக்கு ஏற்ற வகையில் பலன்கள் கூறுவதற்கான திறமைகள் வளரும்.

PEO 2 : சாதக பலன்கள் சொல்லுவதற்கு சோதிட சாஸ்திரத்தில் பல முறைகள் உண்டு. அனைத்து முறைகளிலும் நன்கு பயிற்சி அளித்து, இத்துறையில் வலிமை உள்ளவர்களாக மாற்ற முடியும். இவர்கள் இத்துறையில் புதிய கண்டுபிடிப்புகளை கண்டுபிடிக்க முடியும். சோதிடத்தின் துணை சாஸ்த்திரங்களான கைரேகை, வாஸ்து, எண்கணிதம் முதலியவற்றிலும் அறிவு வளரும்.

PEO 3 : இது ஒரு தெய்வீக கலை என்பதால் சோதிட முதுகலை பட்டதாரிகள் ஒழுக்கத்தில் சிறந்தவர்களாகவும், சோதிட அறிவில் தன்னிகரற்றவர்களாகவும் மாற்றம் ஏற்படும். தற்காலத்தில் சமுதாயத்தில் ஏற்படும் அனைத்து தனி மனித பிரச்சனைகளுக்கும் தீர்வு காணமுடியும்.

KARPAGAM ACADEMY OF HIGHER EDUCATION

DEPARTMENT OF ASTROLOGY

Marks Allocation

Continuous Internal Assessment (CIA):

The performance of students in each will be continuously assessed by the repective faculty as per the guidelines given below:

Theory Courses

S.No	Category	Maximum Marks
1.	Attendance	5
2.	Test-I#	10
3.	Test-II#	10
4.	Journal Paper Analysis & Presentation	15
Continuous Internal Assessment : Total		40

- The Mark obtained in the seminar should be entered in automation software on or before 60th working day of the semester.
- # Test answer scripts in should be evaluated and marks awarded should be entered in automation software on or before 4th working day after the last date

Practical Courses (Astrology):

S.No	Category	Maximum Marks
1.	Attendance	5
2.	Observation Work	5
3	Record Work	5
4.	Model Examination (Related with astrology)	15
5.	Viva –Voce [Comprehensive]	10
Continuous Internal Assessment : Total		40

- Includes Viva-voce Conducted during every regular practical class and the model exam practical.
  Every practical exercise/experiment and records should be maintained.

UNIVERSITY EXAMINATIONS

End Semester Examination(ESE): ESE will be held at the end of each semester for each course.The question paper is for a maximum of 60 marks.

Pattern of ESE Question Paper:

Instruction	Remarks
Maximum Marks	60 marks for all Semester Examination
Duration	3 Hours
Part –A	10 out of 15 two mark Questions (10x2=20 Marks) (Not exceeding 3 questions from each unit)
Part-B	5 Eight mark Questions(5x8=40 Marks) • One Question from any one of the units is compulsory. It shall be oriented to analysis/design/application/case studies. • 4 Questions are in ‘either –or’ choice. • (One Question each from the remaining 4 units)

Admission eligibility: Any degree passed in a recognized university

----

16ASP101	Fundamentals of Astrology – 1	Semester – I 4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0	Marks Internal : 40, External : 60 Total : 100 End Semester Exam : 3 hrs

நோக்கங்கள் :

1) ஜோதிடத்தின் தோற்றம் எந்த நாட்டில் ஏற்பட்டது என்பதில் தெளிவு உண்டாகும்.

2) வானசாஸ்த்திர வளர்ச்சியை வரலாற்று ரீதியாகக் கற்றுக் கொள்வதால் ஆய்வு மனபான்மை உண்டாகும்.

3) இந்திய ஜோதிடத்தை அறிந்து கொள்வதால் இந்தியர்களின் ஜோதிடத்திறமை எவ்வாறு இருந்துள்ளது என்று உணரலாம்.

4) வேதாங்க ஜோதிடம், அதர்வன ஜோதிடம் ஆகியவற்றில் சொல்லப்பட்டுள்ள கருத்துக்களை தெரிந்துக் கொள்ளலாம்.

5) அயல் நாட்டு ஜோதிடவியலின் வரலாற்றை தெரிந்துக் கொள்வது.

6) நாஸ்ட்ரடாமஸ் போன்ற தீர்க்க தரிசிகளை பற்றி தெரிந்துக் கொள்வது.

பயன்கள்

1) இந்திய ஜோதிடத்தின் வரலாற்றை அறிந்து கொள்வதால் நமது கலாச்சாரத்தின் தொன்மையை அறியலாம்.

2) இந்தியர்களின் வானசாஸ்த்திர புலமை, ஜோதிடவியல் புலமை ஆகியவற்றை அறிந்துக் கொள்வதால் ஆய்வு மேற்படிப்புகளில் பயனுள்ள முடிவுகளை எடுக்க முடியும்.

3) ஜாதகத்தை கணிப்பதற்கு பஞ்சாங்க நூல் வேண்டும், பஞ்சாங்க நூல்கள் வானசாஸ்த்திரத்தின் அடிப்படையில் உருவாக்கப்பட்டவைகளாகும்: எனவே பஞ்சாங்க நூல்கள் யாரால் எப்படி உருவாக்கப்பட்டவை என்ற அறிவு அவசியமாகிறது.

4) பராசரர் போன்ற ரிஷிகளின் பெருமைகள் நமக்கு புரியும்.

5) வேதங்கள், புராணங்கள், இதிகாசங்களின் பெருமை புரியும்.

6) இந்திய ஜோதிட வரலாற்றை அயல் நாட்டு ஜோதிட வரலாற்றோடு ஒப்பு நோக்க முடியும்.

UNITS:

1. வானியலும் ஜோதிடமும்

வானசாஸ்திரம் - கோள்களின் அமைப்புக்கள்
சூரிய குடும்பம் - பூ கோளமும் வான் கோளமும்

2. ஜோதிடத்துடன் தொடர்புகள்

பூமியின் இயக்கமும் ஜோதிடமும். இராசி சக்கரம் என்னும் மகா அற்புதம். இராசி மண்டலமும், நட்சத்திரப் பிரிவுகளும்.

3. ஜோதிட வரலாறு - பாபிலோனியா - எகிப்து – கிரேக்கம்

ஈரல் ஜோதிடம் - ஜோதிடவியலின் தோற்றம் - வானவியல் ஜோதிடம் - பூவுலகில் கோள்களின் தாக்கம் தனிமனித ஜாதகம் - சகுனங்கள்.

4. **மேலை நாடுகளின் சோதிட வரலாறு**

சுமேரியர் - மெசபதோமியர் - பாபிலோனியா – சால்தியா. எகிப்து – கிரேக்கம் - வானசாஸ்திர மறுமலர்ச்சி – நிக்கோலஸ் கோபர் நிகஸ் - கலிலியே கலில் - ஜொகன்னஸ் கெப்ளர் - ஐசக் நியூட்டன்.

5. **ஜோதிட வரலாறு - இந்தியா**

வேதாங்க ஜோதிடம் - வேதகால மாதங்கள் - வேதகால திதிகள் - முகூர்த்தங்கள் - பதினெட்டு சித்தாந்தங்கள் - இந்திய வானசாஸ்த்திர அறிஞர்கள். வராகமிகிரார்.

குறிப்புதவி நூல்கள்

1.	Hindu Astrology and the West	B.V.Raman.
2.	கிருக்ஷ்ணமூர்த்தி பத்ததி முறை	K.S. கிருஷ்ணமூர்த்தி
3.	வானசாஸ்திரம்	M.L. ராஜா
4.	வானியலும் ஜோதிடமும்	M.K. தாமோதரன்
5.	Ancient Hindu Astrology for the Modern Western Astrologer (1986)	James T.Braha

16ASP102 Planets in Astrology – 1 Semester – I
4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்

1) கோள்களின் வடிவங்கள், நிறங்கள், குணங்கள், தன்மைகள் இவைகளை தெரிந்துக் கொள்வது அவசியமாகும்.
2) கோள்கள் குறிப்பிடும் உடல் உறுப்புக்கள் மற்றும் நோய்கள் பலன்கள் கூறுவதில் முக்கிய பங்குவகிக்கின்றன.
3) கோள்கள் குறிப்பிடும் தொழிகள் எவை என்பதை தெரிந்துக் கொண்டு, ஜாதகர்களை சரியான வழியில் வழிகாட்ட முடியும்.
4) நாம் கூறும் பலன்கள் எக்காலகட்டத்தில் நடைபெறும் என்பதை அறிய தசா, புத்தி, கோசாரம் பற்றிய அறிவு நமக்கு தேவைப்படுகிறது.
5) கோள்களின் இணைவு மூலம் ஜாதகரின் வாழ்க்கையில் ஏற்படும் பலன்களை அறிவது.
6) கோள்களின் காரகத்துவங்கள் பார்வைகள் மூலம் ஜாதக பலன்களை மிக துல்லியமாக கணிக்க முடியும்.

பயன்கள்

1) ஜாதக பலன்கள் நிர்ணயிப்பதில் கோள்களின் காரகத்துவங்களுக்கு முக்கிய பங்குண்டு.
2) கோள்களின் தன்மைகள், குணங்களின் அடிப்படையில் ஜாதகங்களின் தன்மையும், குணங்களும் இருக்கும் என்பதில் சந்தேகம் இல்லாமல் பலன்கள் கூறமுடியும்.
3) கோள்கள் குறிப்பிடும் உடல் உறுப்புகளில் மிக துல்லியமாக நோய்களை கணித்து கூறமுடியும்.
4) கோள்களின் சேர்க்கையை கொண்டு விதவிதமான தொழில்களை ஜாதகர்களுக்கு சுட்டி காட்ட முடியும். தசா, புத்தி, கோசத்தை கொண்டு நிகழ்ச்சிகள் நடக்கும் காலத்தை நிர்ணயிக்கலாம்.
5) கோள்களின் பலத்தைக் கொண்டு ஜாதக பலன்களை முடிவு செய்ய முடியும்.
6) 2,10க்கு அதிபதியான கோள்களை கொண்டு ஜாதகர் எந்த தொழில் மூலம் பணம் சம்பாதிப்பார் என்பதை அறிய முடியும்.

UNITS

1. கோள்களின் குணங்கள்

கோள்கள் - வடிவங்கள் - நிறங்கள் - இருப்பிடம் - கோள்களின் உருவம் - பாலினம் - சமித்து – திக்கு, மலர் - ரத்தினம் - தானியம் - உலோகம் - சுவை நீச்ச ராசி - மூலத்திரிகோண ராசிகளட – உச்ச ராசிகள் - கோள்களின் நட்சத்திரங்கள்.

2. கோள்களின் காரகங்கள்

குணங்கள் - தன்மைகள் - கோள்கள் குறிக்கும் இடங்கள் - வீட்டு உபயோக பொருட்கள் - உறவுகள் - விலங்கினங்கள் - மரங்கள் - மனிதர்களின் குணாதிசயங்கள் - பஞ்சபூத தன்மை – நவரத்தினங்கள்.

3. கோள்கள் குறிப்பிடும் உடல் உறுப்புக்கள் மற்றும் நோய்கள்.
காலபுருஷ ராசியும் -உடல் உறுப்புக்களும - கோள்கள் சுட்டும் உடல் பாகங்கள்-நோய்கள் - முக அவயங்கள் - உடலின் உட்புற உறுப்புகள்.

4. கோள்கள் குறிப்பிடும் தொழில்கள்
பத்தாம் பாவமும் தொழில்களும் - பத்தாம் பாவத்தில் நின்ற கோள்கள் - சுட்டும் தொழில்கள் - பத்தாம் பாவக - நவாம்ச அதிபதி -குறிப்பிடும் தொழில்கள்-உதாரண ஜாதகங்களுடன் விளக்கம் - வேலைகள்

5. கோள்கள் குறிப்பிடும் திசாக்கள் - திசாக்களின் வகைகள் - திசா, புத்தி, அந்தரம் - **சூட்சமாகணிதம்** - தசாபுத்தி பலன்கள் . குறிப்பாக சனிதசா – சனி புத்தி தரும் பலன்கள் - ஏழரைநாட்டுசனி

குறிப்பதவி நூல்கள்

1.	உத்திரகாலாமிருதம்	S.A.குமாரஸ்வாமி ஆச்சாரியார்.
2.	Prasana Marga	B.V.Raman
3.	Pointer to Profession	T.P.Trivedi & R.Asthana
4.	Brihat Parasara Hora Sastra	G.C.Sharma
5.	ப்ருஹத் ஜாதகம்	C.G.ராஜன்
6.	குடும்பஜோதிடம்	ஸ்ரீராமய்யங்கார்-ஸ்ரீஸ்ரீனிவாஸாசாரியார்
7.	Mundane Astrology	B.V.Raman
8.	ஜோதிடமும் நவகிரகங்களும்	முருகு இராசேந்திரன்

16ASP103 | Horary Astrological Methods – 1 | Semester – I
4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 | Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்

1) ஜாதகம் இல்லாதவர்களுக்கு ஜாதக பலன்கள் சொல்வதற்காகவும், பிறப்பு ஜாதகத்தில் பிறந்த நேரம் சரியாக இல்லாத போது பலன்கள் மாறுவதை, பிரஸன்னம் தடுக்கும்.

2) பிரசன்ன ஜோதிடமுறையில் கேள்வியாளரின் நிலை, ஆடை தொடும் உறுப்பு முதலியவை கொண்டு பலன் அறியலாம்.

3) பலவகையான ஆருட லக்னங்கள் கண்டுபிடித்தல், சகுனம், நிமித்தங்கள், அஷ்டமங்கல பிரஸன்னம் ஆகியவற்றின் மூலம் ஜோதிடத்தின் ஆழத்தை புரிந்துக் கொள்ள முடியும்.

4) சகுனம், நிமித்தங்களின் மூலம் ஜாதகரின் கேள்விகளும் பதில் கூற முடியும்.

5) வெற்றிலை ஜோதிடம் மூலம் ஜாதகரின் கடந்த காலம், நிகழ்கால பலன்களை தெளிவாக கூற முடியும்.

6) அஷ்ட மங்கல பிரசன்னம் மூலம் ஜாதகரின் குறிப்பிட்ட கேள்விகளுக்கு பதில்கள் கூற முடியும்.

பயன்கள்

1) பலன்கள் கூறுவதில் மிக துல்லியத்தை கொடுப்பது பிரசன்ன ஜோதிடமாகும்.

2) பிறப்பு ஜாதகம் இல்லாமலும், கேட்கப்பட்ட கேள்விகளுக்கு பதில் சொல்ல முடியும்.

3) பிரஸன்னத்தின் மூலம் நம் முன்னோர்களின் நிலையையும், நம்முடைய பூர்வ கர்மங்களின் நன்மை, தீமைகளை பற்றிய தன்மையையும் தெளிவாக புரிந்துக் கொள்ளலாம்.

4) இப்பிறப்பில் செய்யப்பட்ட நல்வினை, தீவினை ஆகியவை பற்றியும் பிரஸன்னத்தின் மூலம் அறியலாம்.

5) அஷ்ட மங்கல பிரசன்னம் மூலம் கேள்வியாளர் பிரச்சினைகளை எளிதாக கண்டு பிடிக்க முடியும்.

6) விவாஹ பிரசன்னம், நஷ்ட பிரசன்னம், ஆயுள் பிரசன்னம், ரோக பிரசன்னம் மூலம் கேள்வியாளரின் கேள்விகளுக்கு பதில்கள் கூற முடியும்.

UNITS

1. **பிரசன்னத்தில் ஜோதிடர் கேள்வியாளர் பங்கு.**
ஜோதிடருக்கான கோட்பாடுகள் - கேள்வியாளர் கொண்டுவரும் பொருட்கள் - கேள்வி கேட்பவர் நிற்கும் திசைகள் - தொடும் அங்கங்கள் - அதற்கான பலன்கள் - ஜோதிடரின் சுவாசம்.

2. **கேள்வியாளரின் நிலை- ஆடை மற்றும் லட்சணங்கள்.**
கால்களை எடுத்து வைத்தல் - கால்களை ஆட்டுதல் - தயக்கம் - மூன்றாம் நபர் கடந்து செல்லுதல் - கைகளை பிசைதல் - தன்னை அடித்துக் கொள்ளுதல் - மரண தொடர்பு கர்மங்கள்- நிற்கும் போது, உட்காரும் போது உள்ள நிலைகள்.

3. **பிரசன்னத்தில் லக்னம் நிர்ணயித்தல்**

ஆறு வித ஆருட லக்னங்கள் ஸ்வா்ணாருடம் - உதயாரூடம் - உதய வா்ன அம்ஸ ஆருடம் - சாத்திர ஆருடம் - அங்கஸ் பரஷ்ட ஆருடம் - சந்திர ராசி.

4. **பிரசன்ன வகைகள் - அக்ஷ்டமங்கலம்**
தெய்வானுக்கிரகம் - குலதெய்வானுக்கிரகம் - பிதுா் சாபம் - மாதா் சாபம் - சா்ப்ப தோஷம் - வாக்தோஷம் - திருஷ்ட தோஷம் - சத்ரு தோஷம்- பிராமண தோஷம் - குரு, குருபத்னி சாபம் - விஷபோஜனம் - வாஸ்து தோஷம்.

5. **சோழிப்பிரசன்னம்-** தேங்காய்- ஆரூடம்- பலகரைசோதிடம் - பஞ்ச பட்சி முறை நட்சத்திரங்களுக்குரிய பட்சிகள் - பஞ்ச பட்சிகளின் தொழில் முறை, படுபட்சிபலன் கூறும் முறைகள் ஆறு விதிகள்

குறிப்புதவி நூல்கள்

1. Prasana marga(1999) B.V.Raman
2. பிரசன்ன ஜோதிடம் (2006) K.S. கிருஷ்ணமூா்த்தி
3. அஷ்டமங்கல தேவபிரசன்னம் (2011) அ.அமிா்தலிங்கம்
4. சோழிப்பிரச்ன ஆருடம் எம். நடராஜன்
5. Prasanna Tantra (2001) B.V.Raman
6. பிரசன்ன ஆரூடம் சுப. சுப்ரமணியன்
7. ஷட் பஞ்சாசிகா (2002) எஸ்.ஏ.குமாரசாமி ஆச்சாரி

16ASP104	Rasi – Bhava – Star Constellations- 1	Semester – I 4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்

1) பன்னிரு ராசிகளின் காரகத்துவங்களை தெரிந்துக் கொள்வதால் பலன்களை தெளிவாக முடிவு செய்ய முடியும்.
2) ராசிகளின் தன்மை, வடிவம், இருப்பிடம், மரங்கள், மிருகங்கள் என்பவை பலன் சொல்வதில் முக்கிய பங்கு வகிக்கின்றன.
3) பன்னிரு பாவகங்களின் காரகத்துவங்களும் தெளிவாக புரிந்துக் கொண்டால் மட்டுமே ஜாதகப் பலன்களை வரையறுத்து கூற முடியும்.
4) 27 நட்சத்திரங்களின் தன்மை, குணம், வடிவம் இவைகளும் பலன் கூறுவதில் முக்கிய பங்கு வகிக்கின்றன.
5) ராசியில் நிற்கும் கிரகம் பாவகத்தில் மாறி நின்றால் பலன்கள் மாறுவதை அறிய முடியும்.
6) பாவாதிபதிகள் மாறி நிற்பதால் ஏற்படும் ஜாதக பலன் மாற்றங்களை அறிவது.

பயன்கள்

1) சூர்யாதி, சந்திராதி, பஞ்ச மஹா புருஷ யோகங்கள் பற்றி தெரிந்துக் கொள்வதால் ஜாதகருக்கு எப்படிபட்ட யோகத்தின் அடிப்படையில் பலன்கள் நடைபெறும் என்பதை கூறமுடியும்.
2) கேள்வியாளர்களின் கேள்விக்கு ஏற்ற பதிலை சொல்வதற்கு மேஷம் முதல் மீனம் வரையுள்ள இராசிகளின் தன்மை மற்றும் காரகத்துவங்களும், 12 பாவகங்கள் எதை குறிப்பிடுகின்றன என்பனவற்றை பற்றிய அறிவு வேண்டும்.
3) கோள்கள் நிற்கின்ற நட்சத்திரங்களின் அடிப்படையில் பலன்கள் மாறுவதை காணமுடியும்.
4) ஒரு கோள் எந்த ராசியில், எந்த பாவகத்தில் எந்த நட்சத்திரத்தில் அமர்கின்றது என்பதை பொருத்து பலன்கள் சொல்ல முடியும்.
5) லக்னம், லக்னாதிபதி எந்த நட்சத்திரத்தில் நிற்கின்றதோ அதை பொருத்து ஜாதகரின் பலன்கள் நிர்ணயிக்க முடியும்.
6) கோள்களின் நிலை தெரியாமலேயே லக்னத்தை கொண்டு பலன்களை வரையறுக்க முடியும்.

UNITS

1. பன்னிரு ராசிகள் காரகத்துவம்

மேக்ஷம் முதல் மீனம் வரை பன்னிரு ராசிகளின் இருப்பிடம் -வடிவம் - சிறப்பு அம்சங்கள். பன்னிரு ராசிகளுக்கும் ஆதிபத்ய முறையில் பலன்கள். ஒவ்வொரு ராசியில் உள்ள நட்சத்திர அடிப்படையில் பயன்கள். ஒவ்வொரு ராசியிலும் ஆட்சி, உச்சம், நீச்சம் அடையும் கிரகங்களை கொண்டு பலன்கள்.

2. பாவகங்களின் காரகத்துவம்

பன்னிரு பாவகங்கள் குறிப்பிடும் நிலைகள். பன்னிரு பாவகங்கள் குறிக்கும் - உயிர்காரத்துவங்கள். உடல் உறுப்புகள் - நன்மை, தீமைகள். ஒவ்வொரு பாவகமும்

குறிப்பாக உணர்த்தும் காரத்துவங்கள். மறைவு ஸ்தனங்கள்- தனஸ்தானம் - லாபஸ்தானம் - களத்திர ஸ்தானம்.

3. **பல வகையான யோகங்கள் சூர்யாதி, சந்திராதி, பஞ்ச மஹா புருச யோகங்கள்**

பத்ரயோகம் - மாளவியா யோகம் - சச யோகம் - ஹம்சயோகம் - ருஷயோகம்.

4. இருபத்தியேழு நட்சத்திரங்களின் அமைப்பு

அசுவனி முதல் ரேவதி வரை இருபத்தியேழு நட்சத்திரங்களின் வடிவம்-நட்சத்திரங்கள் ராசியின் தன்மை, ராசி அதிபதியின் தன்மைக்கு ஏற்ற வகையில் பலன்கள் தரும் முறைகள்.

5. **இருபத்தியேழு நட்சத்திரங்களின் குணம் மற்றும் தன்மைகள்**

பாவாதிபதிகள் நட்சத்திரங்களில் நிற்பதால் ஏற்படும் பலன்கள். கோள்கள் நட்சத்திரங்களில் உச்ச நீச்சம் அடைவதால் ஏற்படும் பலன்கள்.

5.	இருபத்தியேழு நட்சத்திரகோவில்கள்	K.P. வித்யாதரன்

16ASP105 (A)	Numerology - 1	Semester – I 4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்:

1) எண் கணிதம் பற்றிய அடிப்படையான கருத்துக்களை தெரிந்துக் கொள்ள வேண்டும்.
2) 1 முதல் 9 வரையுள்ள எண்கள் எந்தெந்த கிரகங்களை குறிக்கின்றது என்ற அறிவை பெற வேண்டும்.
3) 1 முதல் 30 தேதிகளில் பிறந்தவர்கள் எப்படிபட்ட குணாதிசயங்களுடன் வாழ்கிறார்கள் என்பதை இந்த எண்கணித சாஸ்திரம் நமக்கு தெளிவாக விளக்கும்.
4) பிறவி எண், விதி எண், பெயர் எண்களின் கூட்டு தொகை இவைகளை கொண்டு பலன் கூறும் முறையை தெரிந்துக் கொள்ளலாம்.
5) எண் கணிதம், ஜோதிட சாஸ்திரம் ஆகிய இரண்டிற்கும் உள்ள தொடர்பை அறிதல்.
6) ஒருவரின் பெயரை கொண்டு வாழ்நாள் முழுவதும் பலன்களை அறிதல்.

பயன்கள்:

1) எண் கணித சாஸ்திரத்திற்கு ஜோதிட சாஸ்திரமே அடிப்படை என்ற கருத்தை தெளிவாக புரிந்துக் கொள்ளுதல்.
2) பெயர்களின் சப்தங்களுக்கு எவ்வளவு வலிமை உண்டு என்பதை உதாரணங்களின் மூலம் தெரிந்துக் கொள்ளலாம்.
3) விதி எண் நாம் அனுபவித்துக் கொண்டிருக்கின்ற இன்ப துன்பங்களை படம் பிடித்து காட்ட கூடியது.
4) எண் கணிதம் மூலம் பெயர் மாற்றம் செய்து ஜாதகர்களின் வாழ்க்கை துன்பங்களை நீங்குவது.
5) பெயரில் திருத்தங்கள் செய்வதன் மூலம் பல அறிய பலன்களை அடைய முடியும்.
6) ஜாதகர் பிறந்த தேதியையும், கூட்டு எண்ணையும் கொண்டு வாழ்நாள் பலன்கள் சொல்ல முடியும்.

UNITS

1. எண்கணிதம் பற்றிய முக்கிய குறிப்பு, எண்களின் பொருள்

எண்கள் குறிக்கும் கோள்கள் - ஆங்கில எழுத்துக்கள் எண்களின் குணதிசயங்கள். பெயர் வைக்கும் முறை பெயர்களின் எண்களி சுட்டு எண்.

2. எண்களில் விளக்கங்கள் (எண்களின் ஆற்றல்)

பெயர்களின் கூட்டு எண்களின் பலன்கள் - வாழ்வில் ஏற்றம் தரும் எண்கள், கஷ்டத்தை தரும் எண்கள் - உயர்வை தரும் எண்கள்.

3. எண்களின் செயல்பாடு – எண் நிறம், தன்மை, அதிபதி

1,2,3 ஆகிய எண்களை பிறவி எண்களாக கொண்டவர்களின் பலன்கள். பிறப்பு ஜாதகத்தை கொண்டு பெயர் அறியும் முறை.

4. பிறவி எண், விதி எண் பெயர் என அறியும் முறை

பிறவி எண், விதி எண் இரண்டையும் சேர்த்து பலன்கள் நிர்ணயம் முறைகள். ஒரு எண்ணுக்கு நன்மையும், தீமையும் ஏற்படுத்தும் எண்கள்.

5. 9 கோள்களின் வக்கர எண்கள் பலவீன எண்கள்

எண்கணித ஜோதிட˙ பரிகாரங்கள். நோய்கள் மற்றும் பல பிரச்சினைகளை தீர்க்கும் முறை. வாழ்வின் ஏற்ற தாழ்வுகளை மாற்றும் பெயர் மாற்றம்.

குறிப்புதவி நூல்கள்

1. அதிஷ்டவிஞ்ஞானம் பண்டிட் ஸேதுராமன்
2. Lucky Numerology Veejay Raj
3. எண்கணித ஜோதிடம் ஸ்வாமி
4. எண் ஜோதிடம் சிவராசா

16ASP105 (B) Fundamental Vasthu – 1 Semester – I
4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள் :

1) வீடு கட்டுவதற்கும், கட்டிடம் கட்டுவதற்கும் நிலம் தேர்வு செய்தல் அவசியமாகும். இப்பாடப் பகுதியில் தெளிவாக தெரிந்துக் கொள்ளலாம்.
2) நிலத்தின் வடிவம், கோணங்கள், சல்லியம் கண்டு பிடித்தல் முதலியவை இடத்தை தேர்வு செய்வதில் முக்கிய பங்கு வகிக்கின்றது.
3) வீடு அல்லது கட்டிடம் கட்டுவதற்கு ஒவ்வொரு அளவுகளும் எவ்வளவு அளவு இருக்க வேண்டும் என்பதை பற்றிய அறிவும் இதன் மூலம் கிடைக்கும்.
4) ஜோதிட சாஸ்திரமே வாஸ்து சாஸ்திர அடிப்படையாகும்.
5) வீட்டில் ஒவ்வொரு அறையும் அமையக் கூடிய இடங்களை முடிவு செய்ய முடியும்.
6) அறைகள் அமைப்பு, ஜன்னல் அமைப்பு மூலம் பலன்கள் அறிய முடியும்.

பயன்கள் :

1) வீடுகள், கட்டிடங்கள் எந்த திசையை பார்த்த வண்ணம் இருக்க வேண்டும், தலைவாசல், பின்வாசல் ஆகியவற்றின் திசைகள் வீட்டில் தங்கியுள்ளவர்களுக்கு எவ்வித பலனை தரும் என்பதை இப்பாட பகுதியில் தெரிந்துக் கொள்ளலாம்.
2) வீட்டிற்குள் நடப்பதையும், நடக்க போவதையும் அக்கட்டிடத்தின் வாஸ்துவின் மூலம் தெரிந்துக் கொள்ள முடியம்.
3) வாஸ்து சாஸ்திரம் நமது தலை எழுத்தை மாற்றும் சக்தி படைத்தது.
4) ஆரோக்கியமான வாழ்விற்கு துணைபுரியும்
5) செல்வம் நிறைந்த வாழ்விற்கு துணைபுரியும்
6) கல்வி, ஒழுக்கம் நிறைந்த வாழ்விற்கு துணை புரியும்.

UNITS

1. நிலம் தேர்வு செய்தல்

வாஸ்து என்பதன் பொருள் - நிலத்தின் தன்மை – நிறம் - மணம் - சுவை – அமைப்பு - வசிக்கதக்க விலக்கத்தக்க நிலம் சல்லியம். வாஸ்து புருஷனின் புராணகால வரலாறு. வீடுகட்ட சிறந்த மனைகள் - வீடுகட்ட விலக்கத்தக்க மனைகள்.

2. நிலத்தின் வடிவம்

நிலத்தின் வடிவம் - சதுரம் - செவ்வகம் - வட்டம் - முக்கோணம் - நீள் சதுரம் - சக்கரம் - கிண்ணம் பானை – பலவித கோணங்கள் - தன்மைகள் - மனைகளின் அமைப்பு – மனைகளின் வடிவங்களால் ஏற்படும் பலன்கள் - மனைகளின் வடிவத்தை சீர்திருத்தம் செய்தல்.

3. நிலத்தடி சோதனை

சல்லியம் கண்டுபிடித்தல் - பிரச்னம் - சகுனம் - நிமித்தம் - நட்சத்திரம் - வாயிலாகச் சல்லியம் கண்டுபிடித்தல் - நீக்குதல் - கஜ பிருஷ்டம் - கூர்ம பிருஷ்டம் - தைத்ய பிருஷ்டம் - நாக பிருஷ்டம்.

4. நிலத்தை அளத்தல் ஆயம் கணித்தல்

அங்குல அளவு - கை அளவு - பொதுவான அளவு முறைகள் - ஆயம் கணித்தல் - பலன் - பார்வை – கதவு நிலம் அதிபதி – கால்நடைகள் - ஒன்பது வர்க்கம் கணக்கிடுதல் - திசைகளை நிர்ணயித்தல் - வீடு கட்டத் தகுதியான பாகங்கள்

5. கட்டுமானம்

வீடு – உயரம் - தலைவாசல் - ஒற்றை அறை - இரட்டை அறை – பதினாறு வகையான கட்டுமானம் - நிலத்தின் தோஷம் - திசை – மரம் - அஸ்திவாரம் - கதவு - சன்னல் - மனையடி சாஸ்திரம்.

குறிப்புதவி நூல்கள்

16ASP105 (C) Samutrika Lakshanam Semester – I
4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்

1) பொதுவான முகத்தின் லட்சணத்தை கொண்டு ஜாதகரின் குணாதிசயங்களை சொல்ல முடியும்.
2) ஜோதிடத்திற்கும் அங்கலட்சணத்திற்கும் நெருங்கிய தொடர்பு உள்ளது. ஒரு மனிதனை பார்த்து அவனுடைய ஜாதக கட்டங்களை எழுதுகின்ற அளவிற்கு அறிவை வளர்க்க முடியம்.
3) உடலின் வலிமை, நிறம், உயரம், மச்சங்களின் பலன்கள் அந்த ஜாதகரின் வாழ்கையில் நடக்கும் நிகழ்ச்சிகளை தெரிவிக்கும்.
4) ஒருவரை பார்த்த மாத்திரத்தில் அவருடைய குணங்களை சொல்வது நோக்கமாகும்.
5) சமுதாயத்தில் எச்சரிக்கை உணர்வோடு வாழ்வது.
6) நம்மை பற்றிய, மற்றவர்கள் பற்றிய எதிர்கால பலன்களை தெரிந்துக் கொள்வது.

பயன்கள்:

1) ஒரு மனிதனை பார்த்த மாத்திரத்தில் அவனுடைய குணம், இறந்த கால வாழ்க்கை, நிகழ்கால வாழ்க்கை எதிர்கால வாழ்க்கை பற்றி தெரிந்துக் கொள்ளலாம்.
2) மனித உடலின் அங்கங்களின் வடிவம், அமைப்பு, நிறம், அளவு, தன்மை முதலியவற்றை தெளிவாக புரிந்துக் கொண்டால் அம்மனிதனை பற்றிய அனைத்து மறைக்கப்பட்ட உண்மைகளையும் நம்மால் சொல்ல முடியும்.
3) மனிதர்கள் மட்டும் இன்றி வளர்ப்பு பிராணிகளுக்கு அங்கலட்சனம் பார்க்கப்பட்டன. அவைகள் எஜமானனுக்கு எவ்வகையில் உதவும் என்பதும் சொல்ல முடியும்.
4) ஒரு மனிதனின் ஆயுள் ஆரோக்யத்தை சொல்ல முடியும்.
5) திருமண வாழ்க்கையை புரிந்துக் கொள்ளலாம்.
6) வேலை, தொழில் அமைப்பு, புத்ர பாக்யங்களை தெரிந்துக் கொள்ளலாம்.

UNITS

1. பொதுவான முக லட்சணம்
மூக்கின் லட்சணங்கள் - வாயின் லட்சணங்கள் - உதடுகளின் லட்சணம் - பற்களின் லட்சணங்கள் - காதுகளின் அமைப்பு.

2. அங்கத்துடிப்புகள்
நாக்கின் லட்சணங்கள் - காதுகளின் அமைப்பு. கன்னங்கள் - சிரிப்பும் அழுகையும் - முகவாய்க்கட்டு – கழுத்தின் லட்சணங்கள்.

3. தலை முடியின் லட்சணம்
தாடி மீசைகளின் லட்சணங்கள் - முதுகின் லட்சணங்கள் - தோள்களின் லட்சணங்கள் கைகளின் லட்சணங்கள் - மணிக் கட்டுகள் உள்ளங்கைகள் - புறங்கைகள்.

4. நெற்றியின் லட்சணம், கண்களின் லட்சணங்கள்

கைரேகை லட்சணங்கள் - விரல்கள் லட்சணங்கள் - நகங்களின் லட்சணங்கள் - இடும்பும் வயிறும் - தொடைகளின் லட்சணங்கள் - ஆண்குறியும் விதைகளும் - கால்களின் லட்சணங்கள் - கணுக்கால்கள்.

5. உடல் மச்சங்களும் பலன்களும் , மச்சங்களின் வடிவ லட்சணங்களும் பலன்களும்

சாமுதிரிகா லட்சணமும் ஜோதிடவியல் சம்பந்தமும் - மச்சங்களின் வகைகள் - ராசி சக்கரத்தை கொண்டு மச்சகளின் இருப்பிடத்தை நிர்ணயித்தல்.

16ASP111 Predictive methods in Astrology - 1 Semester – I
4H – 4C

Instruction Hours / Week: L : 0 T : 0 P : 4 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள் :

1) பல்வேறு சிறப்பு லக்னங்களை கொண்டு பலன் சொல்லும் முறைகள் இங்கே செய்முறை பயிற்சியின் மூலம் தெளிவாகிறது.
2) நாம் சொல்லும் பலன்கள் எக்கால கட்டங்களில் நடக்கும் என்பதை தசாபுத்தி கோட்சார அடிப்படையில் கால நிர்ணயம் செய்வதை இப்பாடப்பகுதி தூண்டும்.
3) பல்வேறு முறைகளில் பலன் சொல்வது நோக்கமாகும்.
4) ஜாதகம் இல்லாதவர்களுக்கு பலன்கள் சொல்வது.
5) இன்றைய ஜோதிட வளர்ச்சியை, புதிய கண்டுபிடிப்புகளை ஏற்றுக் கொள்வது.
6) ஜெய்மினி முறையில் பலன்கள் கண்டுபிடிப்பது.

பலன்கள் :

1) பலன்கள் கூறுவதற்கு பல முறைகள் உண்டு என்பதை தெரிந்துக் கொண்டு அவைகளை பயன்படுத்தி பார்ப்பது இங்கே அனுபவத்தை அதிகரிக்கும்.
2) அஷ்ட வர்க்க முறையிலும், ஷட்பல முறையிலும், எண்கணித முறையிலும் பலன்களை சொல்லுவதற்கு நம்மால் முடியும்.
3) ஏதேனும் ஒரு முறையில் நாம் சொல்லும் பலன்களை வேறுமுறையில் சோதித்து அறியலாம்.
4) நமக்கு தெரிந்த முறையில் பலன் கூறி பழகலாம்.
5) எந்த முறையில் பலன் கூறினாலும் பலன் ஒன்றாக தான் இருக்கும் என்பதை நிருப்பிக்கலாம்.
6) எளிமையான முறையில் பலன்கள் நிர்ணயம் செய்யலாம்.

UNITS

1. லக்ன பலன் கூறுதல்
பல்வேறு சிறப்பு லக்னங்களைக் கொண்டு பலன் சொல்லுதல் - கேந்திர திரிகோண அதிபதிகளின் தொடர்புகளைக் கொண்டு பலன் சொல்லுதல்.

2. தசாபுத்தி - கோட்சார முறைகளைப் பயன்படுத்தி பலன் கூறல்.
தசாக்கோள் - புத்திகோள் நிலைகள் - நின்ற நட்சத்திரம் - கோட்சார சனி – குரு நிலைகளைக் கொண்டு பலன் கூறுதல்

3. எண்கணித முறையில் பலன் கூறுதல் - பிறப்பு எண் - விதி எண் அடிப்படையில் பலன்கள் கூறுதல்.

4. அஷ்டவர்க்க முறையில் பலன் கூறுதல் - நவகிரக அஷ்டவர்க பலன்கள் - நவகிரக கச்சயா பலன்கள்.

5. ஷட்பலம் முறையில் பலன் கூறுதல் - நவகிரகங்களின் பலம் பலஹீனத்தை கொண்டு பலன் கூறுதல்.

16ASP201 Fundamentals of Astrology – 1I Semester – II
4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள் :

1) தமிழ் இலக்கியங்களில் உள்ள ஜோதிட குறிப்புக்கள் ஜாதக அலங்காரம், குமாரசுவாமியும், புலிப்பாணி 300, நாடி ஜோதிட நூல்கள் முதலிய நூல்களை பற்றி தெரிந்துக் கொள்வதால் தமிழகத்தில் ஜோதிடவியலின் ஆழத்தை பிரிந்துக் கொள்ள முடியும்.
2) பராசரர், ஜெயமினி, பிருகு முதலிய ரிஷிகளின் ஜோதிட கொள்கைகளை பற்றி அறிந்துக் கொள்வது மாணவர்களின் அறிவை வளர்ச்சியடைய செய்யும்.
3) கிருஷ்ணமூர்த்தி பத்ததி அவர்களின் புதிய ஜோதிட முறையின் மூலம் துல்லியமான பலன்களை கூறலாம்.
4) கல்யாணவர்மா, ஸ்ரீபதி, வராகமிஹிரர் போன்ற வடமொழியில் ஜோதிட நூற்கள் எழுதியவர்களின் ஜோதிட புலமைகளை அறிவது.
5) சி.ஜி. ராஜன் போன்ற தமிழக ஜோதிடர்களின் புலமைகளை அறிவது.
6) பி.வி.ராமன் போன்றவர்களின் அனுபவ ஜோதிட அறிவை புரிந்துக் கொள்வது.

பலன்கள்:

1) கல்யாணவர்மா, ஸ்ரீபதி, வராகமிஹிரர் ஆகிய ஜோதிட மேதைகளின் ஜோதிட நூற்களை படிப்பதன் மூலம் ஜோதிடத்தில் ஆழ்ந்த அறிவு உண்டாகும்.
2) ஜெயமினி, பராசரர் முதலிய ரிஷிகளின் ஜோதிடவியல் பங்களிப்புகள் ஜோதிடவியலின் தெய்வீக தன்மையையும், நம்பக தன்மையையும் அதிகப்படுத்துகின்றன.
3) நாஸ்டர்டாம், அகஸ்தியர் முதலிய ஜோதிட மேதைகளின் பலன் கூறும் முறைகள் இன்றளவிலும் ஒரு ஆச்சர்யமாகவே பார்க்கப்படுகின்றன.
4) கர்கர், பிருகு போன்ற ரிஷிகளின ஜோதிட அறிவை அவர்களின் நூற்களின் மூலம் அறிந்துக் கொள்ள முடியும்.
5) சாதக சந்திரிகை போன்ற பழம் பெரும் நூற்களின் பெருமைகள் புரியும்.
6) ஜோதிட வல்லுனர்களின் ஜோதிட புலமை என்பது மாணவர்களுக்கு ஒரு வரபிரசாதமாக அமையும்.

16ASP202	Planets in Astrology – 1I	Semester – II 4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள் :

1) பன்னிரு ராசிகளில் கோள்கள் அடையும் ஆட்சி, உச்சம், நீச்சம், பகை, மூலத்திரிகோணம் ஆகிய பலன்கள் கோள்களின் பலத்தை அறிவதில் முக்கிய பங்கு வகிக்கின்றன.
2) பாவகத்தில் கோள்கள் நின்ற பலன்களும் ஜாதகத்திற்கு பலன் சொல்வதற்கு துணையாக இருக்கும்.
3) கோள்களின் இணைவு பலன்கள் ஜாதகபலன் நிர்ணயத்திற்கு பெரும் பங்காற்றுகின்றது.
4) திசா புத்தி கோட்சார பலன்கள் நிகழ்ச்சிகள் நடக்கும் காலகட்டத்தை துல்லியமாக எடுத்துரைப்பதாகும்.

பயன்கள் :

1) கோள்களின் பார்வைகள், சிறப்பு பார்வைகள் ஜாதகரின் வாழ்க்கையில் எப்படிப் பட்ட தாக்கத்தை ஏற்படுத்துகின்றன என்பதை தெரிந்துக் கொள்ள முடியும்.
2) கோள்களின் வலிமையை கொண்டு அக்கோள் ஜாதகருக்கு எவ்வளவு பலனை தரும் என்பதை கணிக்கலாம்.
3) பாவகங்களில் நிற்கும் கோள்களின் தன்மைகளுக்கு ஏற்ற வகையில் ஜாதகனின் வாழ்க்கை அமைகிறது.
4) தர்ம, அர்த்த, காம, மோட்ச திரிகோணங்களில் நிற்கும் கிரகங்களை கொண்டு ஜாதகனின் பிறவியின் நோக்கம் தெரிந்துக் கொள்ளலாம்

UNITS

1. கோள்களின் பலன்கள்

ஆட்சி, உச்சம், நீசம், திரிகோணம், கேந்திரம் வர்க்கப்பலன்கள் - பன்னிரு ராசிகளில் கோள்கள் அடையும் ஆட்சி – உச்ச- நீச- பகை- மூலத்திரிகோண பலன்கள்

2. பாவகத்தில் கோள்களின் பலன்கள்

தர்ம - அர்த்த - காம்ய - மோட்ச - கேந்திர - கோண பலன்கள் - நட்சத்திரங்களின் கோள்கள் நின்ற பலன்கள்.

3. கோள்களின் பார்வை பலன்கள் மற்றும் கோட்சார பலன்கள்

கோள்களின் பொதுப் பார்வைகள் - சிறப்பு பார்வைகள் குரு – சனி – செவ்வாய் - ராகு - கேதுக்களின் பார்வைகள் - கோள்களின் கோட்சாரப் பலன்கள்.

4. கோள்கள் இணைவு பலன்கள்

இரண்டு அல்லது அதற்கு மேற்பட்ட கோள்கள் இணைதல் மற்றும் பலன்கள்- யோகி கோள் - அவயோகி கோள்.

5. கோள்களின் திசா புத்தி பலன்கள்

போதகர் - காரகன் - பாசகன் - வேதகன்.

4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 | Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்

1) கேள்வியாளர்களின் தூரப் பயணங்களை பற்றியும், தனது தொழிலில் ஏற்படும் ஏற்ற தாழ்வுகள் பற்றியும் பிரஸன்ன முறையில் பலன்கள் கூறப்படும்.
2) புத்திர பேறு அறிதல் பற்றிய கேள்விகளுக்கு பிரஸன்ன முறையில் பதில்கள் சொல்வதற்கு பயிற்ச்சியளித்தல்.
3) விவாஹ பிரஸன்ன முறையில் திருமணத்தை பற்றிய அனைத்து கேள்விகளுக்கும் பதில் கூற முடியும்.
4) ரோக பிரஸன்ன முறையில் ஜாதகருக்கு ஏற்பட்ட நோயை அறிந்து அதற்கு பரிகாரமும் சொல்ல முடியும்.
5) சகுனம், நிமித்தங்களின் மூலம் ஜாதகரின் கேள்விகளும் பதில் கூற முடியும்.
6) வெற்றிலை ஜோதிடம் மூலம் ஜாதகரின் கடந்த காலம், நிகழ்கால பலன்களை தெளிவாக கூற முடியும்.

பயன்கள் :

1) ஜாதகம் இல்லாதவர்களும் ஜோதிடத்தின் மூலம் பலன்களும் பரிகாரங்களும் தெரிந்துக் கொள்ளலாம்.
2) நிகழ் காலத்தில் ஏற்படுகின்ற தொழில் தடை, திருமண தடை முதலியவைகளை முன்கூட்டியே அறிந்து அவைகளுக்கு தீர்வும் அளிக்கலாம்.
3) குழந்தை ஆணா? பெண்ணா? எக்கால கட்டத்தில் பிறக்கும், அக்குழந்தையால் பெற்றோர்களில் வாழ்க்கையில் ஏற்படும் மாற்றங்கள் ஆகியவை தெரிவுப்படுத்தப்படும்.
4) நோய் வருவதற்கு காரணம், அதை தீர்க்கும் முறையும் சொல்லப்படும்.
5) அஷ்ட மங்கல பிரசன்னம் மூலம் கேள்வியாளர் பிரச்சினைகளை எளிதாக கண்டு பிடிக்க முடியும்.
6) விவாஹ பிரசன்னம், நஷ்ட பிரசன்னம், ஆயுள் பிரசன்னம், ரோக பிரசன்னம் மூலம் கேள்வியாளரின் கேள்விகளுக்கு பதில்கள் கூற முடியும்.

UNITS

1. **பிரசன்ன முறையில் நீண்ட தூரப் பயணங்களை அறிதல்**
   பிராணத்திற்கு ஏற்ற காலம் - பிரயாணத்தில் ஏற்படும் தடைகள் - கஷ்டங்கள் - கண்டங்கள்- நோய்கள்.

2. **பிரசன்ன முறையில் தொழில் அறிதல்**
   வேலை கிடைக்குமா? கிடைக்காதா? வேலை கிடைக்கும் காலம் - எத்துறை சார்ந்த வேலை அமையும்.

3. பிரசன்ன முறையில் திருமண விவரம் அறிதல்

ஏழாம் பாவகத்தைக் கொண்டு மனைவியை அறிதல் - சுக்கிரனின் பங்கு திருமண காலம் -மனைவியின் குணங்களை அறிதல்- பல்வேறு பொருத்த நிலைகள்-

4. பிரசன்ன முறையில் புத்திர பேறு அறிதல்

குழந்தைப்பேறு அறிதல் - சந்தானவிருத்தி அறிதல்.
நிசேகம் லக்னம் குறித்தல் - குழந்தைப் பேறு அறிதல் - சந்தான விருத்தி

5. பிரசன்ன முறையில் நோய் மற்றும் வழக்கு அறிதல்

பிரசன்னத்தில் நோய்கள் அறிதல் - பல்வேறு வகையான நோய்களுக்கு- கோள்களின் நிலைகள் - கர்ம விபாக முறையில் பரிகாரங்கள் - நோய் வருங்காலம் - தீர்தல்

குறிப்புதவி நூல்கள்.

1. Prasana Marga (1999) — B.V.Raman
2. பிரசன்ன ஜோதிடம் (2006) — K.S. கிருஷ்ணமூர்த்தி

16ASP204 Rasi – Bhava – Star Constellations- II Semester – II
4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்:

1) கோள்கள் பன்னிரு ராசிகளில் ஏற்படுத்தும் பலன்கள் ஜாதகனை எவ்வகையில் பாதிக்கிறது.
2) கோள்கள் பன்னிரு பாவகங்களில் நிற்பதால் ஏற்படும் பலன்கள் ஜாதகனை எப்படி செயல்பட வைக்கின்றன.
3) லக்னம் முதல் பன்னிரு பாவாதிபதிகள் பாவகங்களில் மாறி நிற்பதால் ஏற்படும் பலாபலன்கள் ஜாதகனுக்கு எப்படிப்பட்ட தாக்கத்தை உண்டு செய்கின்றது.
4) நட்சத்திரங்களில் கோள்கள் நிற்பதால் ஏற்படும் பலன்கள், ஜாதக பலன்களில் ஒரு முக்கிய திருப்பு முனையாகும்.
5) ராசியில் நிற்கும் கிரகம் பாவகத்தில் மாறி நின்றால் பலன்கள் மாறுவதை அறிய முடியும்.
6) பாவாதிபதிகள் மாறி நிற்பதால் ஏற்படும் ஜாதக பலன் மாற்றங்களை அறிவது.

பயன்கள்:

1) பன்னிரு பாவகங்களில் பாவாதிபதிகள் மாறி நிற்பதால் ஏற்படும் பலன்கள், ஜாதகனை அடையும் முறைகள் தெளிவாக எடுத்து சொல்ல முடியும்.
2) பாவாதிபதிகள் தான் நிற்கும் நட்சத்திரங்களை பொருத்து பலன்களை மாற்றியமைக்கும் தன்மை பெற்றவை. இவைகளை தெளிவாக பார்க்க முடியும்.
3) கோள்களின் இலக்ன ஆதிபத்திய பலன்கள், எதிர்பாராத மாற்றங்களை ஏற்படுத்துவதை உணர முடியும்.
4) ஒரு கோள் எந்த ராசியில், எந்த பாவகத்தில் எந்த நட்சத்திரத்தில் அமர்கின்றது என்பதை பொருத்து பலன்கள் சொல்ல முடியும்.
5) லக்னம், லக்னாதிபதி எந்த நட்சத்திரத்தில் நிற்கின்றதோ அதை பொருத்து ஜாதகரின் பலன்கள் நிர்ணயிக்க முடியும்.
6) கோள்களின் நிலை தெரியாமலேயே லக்னத்தை கொண்டு பலன்களை வரையறுக்க முடியும்.

UNITS

1. **பன்னிரு ராசிகளில் கோள்கள் நிற்கும் பலன்கள்.**
பன்னிரு ராசிகளில் சூரியன் முதல் ஒன்பது கோள்கள் நிற்பதால் ஏற்படும் பலன்கள்- கோள்களின் சேர்கையால் ஏற்படும் பலன்கள்.

2. **பன்னிரு பாவகங்களில் ஒன்பது கோள்கள் நிற்பதால் ஏற்படும் பலன்களை வரையறுத்தல் - விளக்கம் கூறுதல்.**
சூரியன் - சந்திரன் - செவ்வாய்- புதன் - குரு- சுக்கிரன் - சனி –ராகு – கேது - தனித்தனியே மற்றும் சேர்க்கை பெற்று ஏற்படுத்தும் பலன்கள்.

3. **பன்னிரு பாவகங்களில் பாவாதிபாதிகள் மாறி நிற்பதால் ஏற்படும் பலன்களை வரையறுத்தல்**
பன்னிரு பாவகங்கள் பாவகங்களின் ஆதிபத்தியம் -லக்னம் முதல் பன்னிரு பாவகங்களில் பாவாதிபதிகள் நிற்பதால் ஏற்படும் பலன்கள் .

4. **நட்சத்திரங்களில் கோள்கள் இருப்பதால் ஏற்படும் பலன்கள்.**

இருபத்தியேழு நட்சத்திரங்களும் உரிய கோள்களும் -
இருபத்தியேழு நட்சத்திரங்களில் கோள்கள் நிற்பதால் ஏற்படும் பலன்கள்..

5. **நட்சத்திரங்களில் நின்ற கோள்களின் இலக்ன ஆதிபத்தியப் பலன்கள்**
ஓவ்வொரு லக்னத்திலும் பிறந்தவர்களின் பலன்களை ஆதிபத்ய முறையில் வரையறை செய்தல்.

4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள் :

1) நவ இரத்தினங்கள் பற்றி பல நூல்களில் கூறியுள்ள செய்திகளை தெரிந்துக் கொள்வதால், இவைகளை பற்றிய முக்கியத்துவமும், அத்தியாவசியமும் நமக்கு விளங்கும்.
2) இரத்தின கற்களிலிருந்து ஏற்படும் பல விதமான கதிர் வீச்சுக்கள் எவ்வகை தாக்கத்தை மனிதர்களிடத்தில் ஏற்படுத்துகின்றன.
3) ஓவ்வொருவருடைய ஜாதக பலனை கொண்டு யோககாரகனின் இரத்தினத்தை அணிவதால் ஏற்படும் மாற்றங்கள் பற்றி அறியலாம்.
4) நவகிரகங்களுக்கும் நவ ரத்தினங்களுக்கும் உள்ள தொடர்பை அறியலாம்.
5) நவமணியின் வகைகளை, வைரங்களின் வகைகளை அறிவது.
6) நவரத்தின வியாபரத்தின் மூலம் பொருளீட்டுவது.

பயன்கள் :

1) மாணிக்கம், முத்து, பவளம், மரகதம் ஆகிய கற்களின் குணாதிசயங்களை தெரிந்துக் கொள்வது.
2) இவைகளை எந்த ஜாதகர் அணிந்துக் கொண்டால் எப்படிபட்ட பலன்களை அவர் பெறுவார்.
3) வைரம், நீலம், கோமேதகம், வைடூரியம் ஆகிய கற்களின் குணதியசங்களை புரிந்துக் கெர்வது.
4) இவைகளை பயன்படுத்தும் முறைகளை சோதித்து பார்த்து ஜாதகர்களுக்கு அறிவுரை வழங்குவது.
5) எந்த லக்னத்தில் பிறந்தவர் எந்த ரத்தினத்தை அணியலாம் என்பதை கண்டுபிடிப்பது.
6) பிறப்பு ஜாதகத்தில் உள்ள தோ'ங்களை நீக்க பயன்படும்.

UNITS

1. இரத்தினம் பற்றி பல நூல்கள் கூறியவை – நாகமணியின் வகைகள்,
இரத்தினக்கற்கள் மற்றும் வைரங்கள் வகைள்

2. சோதிடமும் இரத்தினக் கற்களும்
யோகக்காரர்களும், இரத்தின கற்களும், விபரீத ரத்தினம், இரத்தினக் கற்களும் தசா காலங்களும், இலக்னாதிபதியும் இலக்ன கற்களும்

3. கிரகங்களின் இயற்கையான நட்பு, பகை, சமம் போன்ற விவரங்கள் பரஸ்பர பகை கிரகங்களுக்கான இரத்திரங்கள், விரல்களும் இரத்தினக் கற்களும், ஆருட லக்னமும் கற்களும்

4. இரத்தினக் கற்கள் பற்றிய விவரங்கள்
மாணிக்கம், முத்து, பவளம், மரகதம்

5. கனகபுஷ்பராகம்

வைரம், நீலம், கோமேதகம், வைடுரியம்

6. வாஸ்து சாஸ்திர வாஸ்தவங்கள், கௌரு திருப்பதி ரெட்டி, பிரஜகித்தா பப்ளிசர்ஸ், ஹைதராபாத்
7. பல வகையான சோதிட இணைய தளங்கள்

16ASP205 (C)	Palmistry	Semester – II 4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்:

1) கைரேகை சாஸ்திரம் பற்றிய வரலாறு, பழங்கால நூல்களில் உள்ள குறிப்புகளை தெரிந்து கொள்வது.
2) கைரேகைகளின் வகைகள், கைகளின் வகைகள், கையில் உள்ள ரேகைகளுக்கும் கோள்களுக்கும் உள்ள சம்பந்தத்தை அறிதல்.
3) ஆயுள் ரேகை, புத்தி ரேகை, புதன் ரேகை ஆகியவற்றின் பலன்கள். இந்த ரேகைகளின் அமைப்புகள் ஏற்படுத்தும் தாக்கங்கள்.
4) குருமேடு, சூரிய மேடு, சுக்கிர மேடு, சனிமேடு, புதன் மேடு ஆகிய மேடுகளின் அமைப்பும் பலன்களும்.
5) கைரேகையை கொண்டு வாழ்நாள் பலன்களை சொல்வது.
6) கைகளில் உள்ள குறிகளை கொண்டு பல வியக்க தக்க பலன்களை சொல்வது.

பயன்கள் :

1) ஜோதிட சாஸ்திரத்திற்கும் கைரேகை சாஸ்திரத்திற்கும் உள்ள தொடர்பை புரிந்துக் கொள்ளுதல்.
2) பிறப்பு ஜாதகம் இல்லாதவர்களுக்கு கைரேகை மூலம் பலன்களை சொல்லுதல்.
3) தோஷ பரிகாரங்கள் செய்த பிறகு கைரேகையில் ஏற்படும் மாற்றங்களை கவனித்தல். கையில் உள்ள ஒவ்வொரு குறிகளுக்கும் பலன்களை எடுத்துரைத்தல்.
4) கையில் உள்ள ரேகைகளை கோள்களுடன் இணைத்து பலன் சொல்ல முடியும்.
5) கைகளில் உள்ள மேடுகளை கோள்களுடன் இணைத்து பலன்கள் கூற முடியும்.
6) ரேகைகளின் இணைவு, குறிகளின் இடம் இவைகளின் மூலம் பலன்கள் துல்லியமாக கூற முடியும்.

UNITS

1. கைரேகை சாஸ்திரம் பற்றிய குறிப்புகள் , ரேகைகளின் வகைகள்
கைரேகை சாஸ்திரம் பற்றிய வரலாறு

2. கைகளின் பிரிவுகளும், குணங்களும்
கைகளில் காணப்படும் சில முக்கிய கோடுகளும் குறிகளும்

3. விரல்கள், விரல் நுனிகள், விரலின் கணுக்கள் பற்றிய விவரங்கள்
கையில் உள்ள ரேகைகளுக்கும் கோள்களுக்கும் உள்ள சம்பந்தத்தை அறிதல்.

4. கைகளின் மேடுகளும், பலன்களும்
சூரியமேடு, குரு மேடு, சுக்கிர மேடு, சனி மேடு, புதன் மேடு

5. ரேகைகளும், பலன்களும்

ஆயுள் ரேகை, புத்தி ரேகை, புதன் ரேகை போன்றவைகள்

குறிப்புதவி நூல்கள்:

2. Palmistry Renita cheiro
3. All the secrets of palmistry prof. Dayanand

16ASP211 Predictive Methods in Astrology - II Semester – II
4H – 4C

Instruction Hours / Week: L : 0 T : 0 P : 4 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்:

1) பல்வேறு லக்னங்களை கொண்டு மாணவர்கள் பலன் சொல்லும் முறையை தெரிந்துக் கொள்ள வேண்டும். ராசியைக் கொண்டு பலன் கூறும் முறை.
2) பன்னிரு பாவாதிபதிகளின் நிலைகள் கொண்டு பலன் கூறுதல், கோள்களின் சேர்க்கை, பார்வை பலன்களின் தாக்கம் ஆகியவற்றை புரிந்துக் கொள்ளுதல்.
3) நாடி முறை, ஜெய்முனி முறை, கிருஷ்ணமூர்த்தி பத்ததி முறை ஆகிய பல முறைகளில் பலன்கள் காணும் விதத்தை தெரிந்துக் கொள்ளுதல்.
4) பல்வேறு முறைகளில் பலன் சொல்வது நோக்கமாகும்.
5) ஜாதகம் இல்லாதவர்களுக்கு பலன்கள் சொல்வது.
6) இன்றைய ஜோதிட வளர்ச்சியை, புதிய கண்டுபிடிப்புகளை ஏற்றுக் கொள்வது.

பயன்கள்:

1) எந்தமுறையில் பலன்கள் சொன்னாலும், ஒரே மாதிரியான பலன்கள் ஜாதகருக்கு சொல்ல முடியும். பலன்களில் மாற்றங்கள் ஏற்படாது என்பதை புரிந்துக் கொள்வது.
2) பலன்காணுவதற்கு நாமும் புதிய முறைகளை கண்டு பிடிக்கலாம் என்ற எண்ணம் வளரும்.
3) ஒரு முறையில் கண்டுபிடித்த பலன்களை மறுமுறையில் உறுதி செய்வது.
4) நமக்கு தெரிந்த முறையில் பலன் கூறி பழகலாம்.
5) எந்த முறையில் பலன் கூறினாலும் பலன் ஒன்றாக தான் இருக்கும் என்பதை நிருப்பிக்கலாம்.
6) எளிமையான முறையில் பலன்கள் நிர்ணயம் செய்யலாம்.

UNITS

1. **பராசரர் முறையில் பலன் கூறுதல்**
பல்வேறு லக்னங்களைக் கொண்டு பலன் கூறுதல் - ராசியைக் (சந்திரன்) கொண்டு பலன் கூறுதல் பன்னிரு பாவாதிபதிகளின் நிலைகளைக் கொண்டு பலன் அறிதல் - கோள்களின் பார்வையைக் கொண்டு பலன் கூறுதல்

2. நாடி முறை
நாடி விதிகள்- நாடி பார்வை முறைகளை கொண்டு பலன் கூறுதல்

3. ஜெய்முனி முறை
ஜெய்முனி பார்வை - சிறப்பு லக்னங்கள்

4. உத்திரகாலமிர்த முறையில் பலன் கூறுதல்

5. **கிருஷ்ணமூர்த்தி பத்ததி முறையில் பலன் கூறுதல்.**
உப நட்சத்திரங்கள் - குறிகாட்டிகள்

16ASP212 Pratical –II Semester – II
4H – 4C

Instruction Hours / Week: L : 0 T : 0 P : 4 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்:

1) ஜாதகரின் தொழில் நிர்ணயம் செய்வதில் நாடி ஜோதிட விதிகளின் எளிமையை புரிந்துக் கொள்வது.
2) தொழில் முனைவோர் ஜாதகங்களை கொண்டு, அவர்கள் அத்தொழில் செய்வதற்கான காரண காரியங்களை அலசுதல்.
3) பொறியாளர், மருத்துவர் ஜாதகங்களை ஆய்வு செய்து, தொழில்களுக்கான விதிகளை புரிந்து கொள்ளுதல்.
4) ஜாதகர்களில் கைரேகையின் வலிமையைக் கொண்டு தொழிலின் வலிமையை கண்டறிதல்.
5) கோள்களின் பலத்தை அறிந்துக் கொள்ள திக்பலம் பயன்படும்.
6) பல்வேறு முறைகளில் பலன் சொல்வது நோக்கமாகும்.

பயன்கள் :

1) இளம் வயதினர் ஜோதிடர்களை அணுகும் போது, பிற்காலத்தில் அவர்கள் செய்ய போகும் தொழிலை முன்கூட்டியே வரையறுப்பதற்கு உதவும்.
2) ஒரு ஜாதகர் தான் செய்ய போகும் ஒன்றுக்கும் மேற்பட்ட தொழில்களை வரையறுத்துக் கூறலாம்.
3) தொழிலில் ஏற்படும் ஏற்ற தாழ்வுகள், தொழில் தன்மை, மாற்றங்கள், சொந்த தொழிலா? அடிமை தொழிலா? தொழிலால் ஏற்படும் பெயரும், புகழும் போன்ற பல கருத்துக்களை சொல்ல முடியும்.
4) மனிதர்களுக்கு மிக இன்றியமையாதது கல்வியும், திருமண வாழ்க்கையும், தொழிலும் ஆகும். இவைகளை இந்த செய்முறை பாட பகுதியின் மூலம் நன்கு அறிந்தும் கொள்ளலாம்.
5) எந்த முறையில் பலன் கூறினாலும் பலன் ஒன்றாக தான் இருக்கும் என்பதை நிருப்பிக்கலாம்.
6) எளிமையான முறையில் பலன்கள் நிர்ணயம் செய்யலாம்.

UNITS

1. நாடி ஜோதிட அடிப்படையில் தொழில் குறித்து பலனைக் கூறுதல்
2. தொழில்முனைவோர் ஜாதகங்களை வரையறுத்தல்
3. பொறியாளர் ஜாதகங்களை வரையறுத்தல்
4. கைரேகை மூலம் பலன் உரைத்தல்
5. மருத்துவர் ஜாதகங்களை வரையறுத்தல்

16ASP301	Modern Astrological Methods	Semester – III 4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0   Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள் :

1) நம் நாட்டு ஜோதிட பலன் கூறும் முறைகள் அல்லாமல் மேல்நாட்டு பலன் கூறும் முறைகளையும் மாணவர்கள் தெரிந்துக் கொள்ளுதல்.
2) மழை அறிதல், இயற்கை பேரிடர் ஆகிய இகலோக ஜோதிடத்தின் அடிப்படை தன்மைகளையும் மாணவர்கள் அறிந்துக் கொள்ள வேண்டும்.
3) பலன் அறியும் முறைகளில் கிருஷ்ணமூர்த்தி பத்ததியின் புதிய கண்டுபிடிப்புகளை படிக்கும் நோக்கிலும், ஆய்வுமனபான்மையை வளர்க்கும் நோக்கிலும் இப்பாட திட்டம் அமைக்கப்பட்டுள்ளது.
4) பாவக ஆரம்ப முனைகள் நிற்கும், குறிகாட்டும் பாவகங்களின் மூலம் பலன்கள் முடிவு செய்வது.
5) புதிய கண்டுபிடிப்புகளை ஊக்குவிக்க முடியும்.
6) புதிய கண்டுபிடிப்புகளின் மூலம் ஜாதக பலன்கள் துல்லியமாக கூறுவது.

பயன்கள்:

1) மாணவர்கள் புதிய ஜோதிட பலன் கூறும் முறைகளை படிப்பதினால், புதிய ஜோதிட சார்ந்த கண்டு பிடிப்புகளுக்கு வழிவகுக்கும்.
2) மாணவர்கள் காலதேச வர்த்தமாணங்களுக்கு ஏற்ற வகையில் பலன் கூறமுடியும்.
3) மற்ற துறைகளில் புதிய கண்டு பிடிப்புகளுக்கு ஏற்ற கோள்களின் காரகத்துவ பலன்களை நிர்ணயிக்க உதவும்.
4) நாட்டுக்கு பலன்கள் கூற முடியும்.
5) நாட்டில் ஆட்சி மாற்றங்கள், இயற்கை பேரிடர்கள் இவைகளை முன் கூட்டியே சொல்ல முடியும்.
6) மேல்நாட்டு ஜோதிட முறைகளை நம் நாட்டு ஜோதிடமுறைகளோடு ஒப்பிட முடியும்.

UNITS

1. மேல்நாட்டு ஜோதிட முறைகள்
அடிப்படை - பார்வை பலன்கள் - உலகியல் ஜோதிடமுறைகள் - ராசிகளுக்குரிய நாடுகள் - மற்றும் ஊர்கள் - பன்னிரு ராசிகளின் செயல்கள்- மழை அறிதல் - இயற்கை பேரிடர்.

2. கிருஷ்ணமூர்த்திபத்ததி முறை விளக்கம்
249 உப நட்சத்திர விளக்கம் -அயனாம்சம்- பாவக கணித முறைகள் - கோள்கள்-

3. கிருஷ்ணமூர்த்திபத்ததி கணித முறைகள்
கணித முறைகள் - தசாபுத்தி கணித முறைகள் -கே.பி முறையில் பாவக சக்கரம் வரைதல் - குறிகாட்டிகள்.

4. பாவக ஆரம்ப முனை விளக்கம்

பன்னிரு பாவகங்களில் பாவக ஆரம்பமுனை நிற்றல் குறித்து விளக்கம்- ஆளும் கோள்கள் குறித்து விளக்கம் - பார்வை முறைகள் - பன்னிரு பாவகங்கள் குறிப்பிடுவது - கோள்கள் குறித்து விளக்கம்.

5. ஒன்று முதல் பன்னிரெண்டு பாவகங்கள் வரை பலன்கள் விளக்கம்.
ஒன்று முதல் பன்னிரெண்டு பாவகங்கள் வரை- உதாரண ஜாதகங்கள் மூலம் விளக்கம்.

16ASP305 (A) Thajigam Semester – III
4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள்:

1) பலன் கூறுவதற்கு பலமுறைகள் இருந்தாலும், மாணவர்கள் பழங்கால முறையான தாஜிக முறையில் பலன் கூறுவதற்கு உதவியாக இருக்கும்.
2) தாஜிக முறையில் யோகங்களுக்கு பலன்கள் கூறுவது ஒரு வித்யாசமான முறை என்றே புரிந்துக் கொள்ளலாம்.
3) ஒவ்வொரு வருடத்திற்கும் ஒரு ஜாதகம் கணித்து பலன் சொல்லும் முறையை மாணவர்கள் அறியும் நோக்கில் இப்பாட பகுதி அமைந்துள்ளது.
4) ஜாதகர்களின் வருங்கால ஜோதிட பலன்களை கூறுவது.
5) கோள்களின் நிலைகளை மிக துல்லியமாக கணித்தல்
6) பலன்கள் நடைபெறும் காலங்களை முன்கூட்டியே எடுத்துரைத்தல்.

பயன்கள்:

1) பழமையான முறைகளில் ஒன்றான இத்தாஜிக முறை. ஒரு வித்யாசமான கோணத்தில் பலன்களை கூற வைக்கும்.
2) ஒரு வருடத்தில் ஏற்படும் நன்மை, தீமைகளை வரையறுத்து கூறுவதில் வல்லமைவுடையது தாஜிக முறையாகும்.
3) வாழ்நாள் முழுவதும் ஜாதகரின் வாழ்க்கையில் ஏற்படும் இன்பதுன்பங்களை சொல்ல முடியும்.
4) கோள்களின் பலம், பலஹீனம் ஆகியவற்றை தெளிவாக அறிய முடியும்.
5) ஒவ்வொரு வருடத்திலும் ஏற்படும் பலன்களை கோட்சார கிரகங்களை கொண்டு முடிவு செய்ய முடியும்.
6) பாவகங்களில் நிற்கும் கோள்களால் ஏற்படும் பலன்களை துல்லியமாக கணிக்க முடியும்.

UNITS

1. வருட சாதகம் கணித்தல்

வருட பிறந்த நாள் - வருட அதிபதி- இலக்கினம் - கோள்களின் நிலை, திதி – முந்த்தா – முந்த்தா இராசி அதிபதி – மந்த்தா இராசியல் நிற்கும் கோள்கள் - வருட அதிபதியைக் காணுதல்

2. சகமங்கள்

தாஜிக முறைப்படி சகம ஸ்புடங்கள் கணித்தல் - பலன் அறியும் விதம்

3. யோகங்கள்

தாஜிக முறையில் கூறப்படும் யோகங்களும் அதன் பலன்களும்

4. வருட தசை கணித்தல்

தாஜிகா முறைப்படி – வருட தசை கணித்தல், தசையில் புத்தியைக் கணித்தல் - பொது தசா பலன்கள்

5. சாதக பலன் நிர்ணயித்தல்

வருட சாதகத்தில் - பாவங்களின் நிற்கும் கோள்களால் ஏற்படும் பலன்கள் - அந்த வருடத்தில் ஏற்படக்கூடிய தீயபலன்கள் - தீய பலன்கள் நீக்கும் விதம்.

குறிப்பு நூல்கள்

நோக்கங்கள்:

1) அஷ்டவர்க்க முறையில் பலன்கள் சொல்ல தேவையான அடிப்படை செய்திகளை இப்பாட பகுதி மூலம் தெரிந்துக் கொள்ளலாம்.
2) கோள்கள் அஷ்ட வர்க்கத்தில் கொடுக்கும் பரல்களுக்கு ஏற்ற வகையில் பலன்களில் ஏற்படும் தாரதம்யத்தை மாணவர்கள புரிந்துக் கொள்ளலாம்.
3) கோச்சார கிரகங்கள் அஷ்டவர்க்கங்களில் ஏற்படுத்தும் பலன்களை நிர்ணயம் செய்யலாம்.
4) சூரிய, சந்திர அ்டக வர்க்கங்களில் கோசார சூரியனை கொண்டு சுப முகூர்த்தங்கள் முடிவு செய்யலாம்.
5) செவ்வாய் பின் பின்னா்டக வர்க்கத்தில் கோசார செவ்வாய் வரும் காலத்தை கொண்டு சகோதர, சகோதரிகளை பற்றி அறியலாம்.
6) அஷ்டக வர்க்க கணிதம் மூலம் ஆயுள் கணிதம் துல்லியமாக கணிக்கலாம்.

பயன்கள் :

1) அஷ்ட வர்க்கங்களை கொண்டு முகூர்த்த நிர்ணயம் செய்யலாம், தொழில் நிர்ணயம் செய்யலாம்.
2) ஜாதகர்களுக்கு ஏற்படும் நோய், திருமண வாழ்க்கை, புத்ர பாக்யம் போன்ற அனைத்து விதமான பலன்களையும் மிக துல்லியமாக வரையறுத்து கூற முடியும்.
3) பலன் கூறுவதில் ரிஷிகளின் அறிவு கூர்மையை புரிந்துக் கொள்ள முடியும்.
4) அஷ்டக வர்க்க கணிதம் மூலம் திருமணப் பொருத்தம் நிர்ணயம் செய்ய முடியும்.
5) மகிழ்ச்சிகரமான திருமண வாழ்க்கைக்கு சுக்கிர பின்னாஷ்ட வர்க்கத்தின் மூலம் அறியலாம்.
6) புனித யாத்திரை, புதிய முயற்சிகள், தொழில் தொடங்குதல் ஆகியவற்றை சூரிய சஞ்சாரத்தின் மூலம் முடிவு செய்யலாம்.

UNITS

அஷ்டவர்க்கம்

1. **அஷ்டவர்க்கம் கணித்தல்**
அஷ்டவர்க்கம் அறிமுகம் - முக்கியத்துவம் - கோள்கள் பரல் தரம் ஸ்தானங்கள் - சமுதாய – பிரஸ்தார அஷ்டவர்க்கம்

2. **அஷ்டவர்க்க சோதனைகள் மற்றும் சுத்த பிண்டம் கணித்தல் - திரிகோண சோதனை –**
ஏகாதிபத்திய சோதனை – கிரக குணாகரம், இராசி குணாகரம் - சுத்த பிண்டம்

3. **அஷ்டவர்க்க பொது பலன்கள்**

பன்னிரண்டு பாவங்களில் உள்ள பரல்களின் பலன் - கோள்கள் தரும் பரல்களின் பலன் - பாவகம் மற்றும் கோள்களின் பொதுப் பலன்கள்

4. அஷ்டவர்க்க சிறப்புப் பலன்கள்

சுத்த பிணடம் கணித அடிப்படையிலும் - கோள்கள் ஒரு பாவத்தில் கொடுத்துள்ள பரல்களின் அடிப்படையிலும் - பலன் நிர்ணயித்தல் - ஆயுள் கணித்தல் - பாவக பலன் நடைபெறும் காலம் கணித்தல்

5. அஷ்டவர்க்க கோசார பலன்கள்

கோள்களின் தற்கால நிலை – பரல்களுக்கு ஏற்றவாறு தரும் பலன்கள் - கச்சயா கணக்கிடுதல் - கோள்கள் கச்சயாவை கடக்கும் கால அளவு - பலன்கள்

குறிப்பு நூல்கள்

1. பராசரர் - உரை, கிரிஸ் சந்த் சர்மா, பிருகத் பராசரா ஹோரா சாஸ்திரம், சாகர் பப்ளிகேசன்ஸ்,
   புது தில்லி
2. சி.எஸ் படேல் மற்றும் சி.ஏ. சுப்பிரமணிய சாஸ்திரிகள். அஷ்டவர்க்கம், சாகர் பப்ளிகேசன்ஸ்,
   புது தில்லி
3. பி.எஸ். சாஸ்திரி, சீக்ரேட்ஸ் ஆ.்.ப் அஷ்டவர்கா, ரஞ்சன் பப்ளிகேசன்ஸ், புது தில்லி
4. பீ.வி ராமன், அஷ்டவர்கா சிஸ்டம் ஆ.்.ப் பிரடிக்கசன், பு.பி எஸ்.பி.டி. பப்ளிகேசன்ஸ். புது தில்லி
5. பல வகையான சோதிட இணை தளங்கள்

16ASP305 (C) 16 Varga Chakras and Prediction Semester – III
4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0 Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs

நோக்கங்கள் :

1) ஒவ்வொரு கேள்விக்கும் ஒவ்வொரு வர்க்க சக்கரங்களை ஏற்படுத்தி அதன் மூலம் பலன்கள் துல்லியமாக சொல்ல முடியும்.
2) கோள்களின் உண்மையான வலிமை வர்க்க சக்கரங்களில் மட்டுமே வெளிப்படும்.
3) இராசி சக்கரத்தை கொண்டு மேலோட்டமான பொது பலன்களை மட்டுமே சொல்ல முடியும் ஆனால் வர்க்கங்கள் கொண்டு துல்லியமான, ஆழமான, விளக்கமான பலன்களை சொல்ல முடியும்.
4) நவாம்சத்தை கொண்டு ஜாதகரின் திருமண வாழ்க்கையின் சாராம்சத்தை புரிந்துக் கொள்ள முடியும்.
5) சதுர்விம்சாம்சத்தை கொண்டு ஜாதகரின் கல்வியின் தரத்தை நிர்ணயம் செய்ய முடியும்.
6) சப்தாம்சத்தை கொண்டு, புத்ர பாக்யத்தை அறிய முடியும்.

பயன்கள்:

1) வர்க்க சக்கர முறையில் பலன் சொல்வது என்பது ஒரு உயர்தர முறையில் பலன்கள் சொல்வதாகும்.
2) ஜாதகனின் வாழ்க்கையில் மறைந்து கிடக்கின்ற பலபல உண்மைகளை வெளி உலகத்திற்கு காட்டும் ஒரு பல பலன் சொல்லும் முறை என்றால் அது மிகையல்ல.
3) நமது வாழ்வில் நடக்கும் அனைத்து நிகழ்ச்சிகளுக்கும் காரண காரியங்களோடு, கோள்கள் சம்பந்தம் உள்ளது என்பதை புரிந்துக் கொள்ள முடியும்.
4) சதுர்த்தாம்சத்தை கொண்டு அசையா சொத்துகளின் நிலையை அறிய முடியும்.
5) தசாம்சத்தை கொண்டு ஜாதகரின் வேலையின் நிலையை முடிவு செய்யலாம்.
6) ஏகாதாம்சத்தை கொண்டு ஒருவரின் சொந்த தொழில் நலனை அறியலாம்.

UNITS

16 வர்க்கச் சக்கரங்களும் பலன்களும்

1. ஸ்தான பலம் மற்றும் திக்பலம்
ஸ்தான பலம் - உச்ச – சப்த வர்கிய – ஓஜ உக்ம – கேந்திர திரிகோண பலம் - திக்பலம் - திசைகள் - கோள்களின் பலம் - பலவீனம் - பலன் D2, D3 கட்டமைப்புகள், பலன்கள்

2. காலபலம் மற்றும் சேஷ்டாபலம்
கோள்களின் தற்காலிக பலம் - பகல் - இரவு - திரிபாகம் - வருடம் - மாதம் - நாள் - நேர அதிபதி –
கோள்களின் கோசார பலம் - உள்வட்டம் - வெளிவட்டம் - விரைவாக – மெதுவாகச் செல்லும் -
கோள்களின் பலம் - பலவீனம் - பலன் D4, D16, D24 கட்டமைப்புகள், பலன்கள்

3. **நைசர்க்கிய பலம் மற்றும் திருக் பலம்**

கோள்களின் இயற்கை பலம் - கோள்களின் பார்வை பலம் - பலவீனம் - பலன் D5,D6,D7 கட்டமைப்புகள், பலன்கள்

4. **பாவக பலம்**

பாவக பலம் - பால காரகம் - பகல் - இரவு - பிறப்பு பலம் - இஷ்ட பலம் - கஷ்ட பலம் நிகர பலம் D8, D9, D10, D11, D12, D20, D30 கட்டமைப்புகள், பலன்கள்

5. **சாதக பலன் நிர்ணயித்தல்**

பல அடிப்படையில் கோள்கள் - பாவகம் - தசா புக்தி கோசார – பலன் நிர்ணயித்தல்

குறிப்புதவி நூல்கள்

1. பராசரர், உரையாசிரியர் - கிரிஸ் சந்த் சர்மா, பிருகத் பராசரா ஹோரா சாஸ்திரம், சாகர் பப்ளிகேசன்ஸ், புது தில்லி
2. மந்திரேஸ்வரர், உரையாசிரியர், சு.எ. குமார சுவாமி ஆச்சாரியார், பல தீபிகை, ஆனந்த நிலையம் சென்னை
3. கல்யாணவர்மர், உரையாசிரியர் சு.ஏ. குமாரசுவாமி ஆச்சாரியார். சாராவளி. ஆனந்த நிலையம் சென்னை
4. கிருஷ்ண குமார், சட்பல ரகசியம், ஆல்ஃபா பப்ளிகேசன்ஸ், புது தில்லி
5. எஸ்.எம். சதாசிவம், சட்பலம், இந்து பப்ளிகேசன்ஸ், சென்னை
6. பல வகையான சோதிட இணைய தளங்கள்
7. Sanjay Rath, varga chakra, Saagar publication.
8. P.V.R. Narasimha Rao, Vedic Astrology an intergrated Approach. Sagar publication.
9. Crux of vedic Astrology- timing of events by Sanjay Rath, Sagar publication.
10. V.P.Goel, Comprehensive prediction by Division charts, Sagar publication.

16ASP312 Practical – III Semester – III

4H – 4C

Instruction Hours / Week: L : 0 T : 0 P : 4 Marks Internal : 40, External : 60 Total : 100

End Semester Exam : 3 hrs

நோக்கங்கள்

1) பராசரா் முறையில் பன்னிரு இலக்ன சாதகங்களுக்கு ஆதிபத்திய முறையில் பலன் கூறுதல் மாணவா்களின் சோதிட அறிவை பரைசாற்றுவதாக அமையும்
2) மேலும் பன்னிரு இலக்ன சாதகங்களுக்கு நட்சத்திர சார ஆதிபத்திய முறையில் பலன்கள் கூறுதல் மாணவா்களின் நுட்பமான சோதிட அறிவு இந்த செய்முறைத் தோ்வின் மூலம் வெளிப்படும்
3) பலன்களாக சொல்லப்படும் நிகழ்வுகள் எக்காலகட்டத்தில் ஏற்படும் என்பதை விம்சோத்திரி தசா புத்தியின் மூலம் கூறுவது இந்த செய்முறைத் தோ்வின் நோக்கமாகும்.
4) அஷ்டவா்க்க பலன்கள் மூலம் கோட்சார பலன்களை சொல்வதும்,
5) மேலை நாட்டுமுறையில் பலன்கள் கூறுவதும் மாணவா்களை பல முறைகளில் பலன் கூறவைப்பதற்கான முயற்சியாகும்.
6) கோள்களின் நிலைகள் இல்லாமலேயே ஜாதகப் பலன்களை லக்னம், ராசியை கொண்டு அறிதல்.

பயன்கள்

1) இந்த செய்முறை பயிற்சியின் மூலம் மாணவா்கள் உயா்தரமான சோதிட அறிவை பெறுவாா்கள்
2) தங்களிடம் வருகின்ற சாதகா்களின் வாழ்வில் வழிகாட்டியாகவும் நன்மை செய்பவா்களாகவும் இருப்பாா்கள்
3) மற்றவா்களுக்கு சோதிட சாஸ்திரதின் மூலம் வழிபாட்டுவதால் தெய்வீக நிலையை அடைய வழி ஏற்படும்.
4) மேலை நாட்டு முறையில் பலன்களை கண்டறிதல் மாணவா்களுக்கு புதிய உத்வேகத்தை தரும்.
5) விம்சோத்திரி தசா மூலம் ஜாதக பலன்கள் நடக்க போகும் காலக்கட்டத்தை அறிய உதவும்.
6) அஷ்டக வா்க்கத்தின் மூலம் மிகவும் துல்லியமான பலன்களை சொல்ல முடியும்.

செய்முறைத்தோ்வு (Practical) :III

UNITS

1. பன்னிரு லக்ன சாதகங்களுக்கு ஆதிபத்திய முறையில் பலன் கூறுதல்.
2. பன்னிரு லக்ன சாதகங்களுக்கு நட்சத்திர சார ஆதிபத்திய முறையில்பலன் கூறுதல்.
3. விம்சோத்திரி தசா புத்தி கணித்துப் பலன் கூறுதல்.
4. அஷ்டவா்க்க ஜனன பரல்கள் மூலம் கோச்சார பலன்களைக் கூறுதல்.
5. மேலை நாட்டு முறையில் பலன் கூறுதல்.

Instruction Hours / Week: L : 0 T : 0 P : 0		Marks Internal : 80, External : 120 Total : 200

DEPARTMENT OF BIOCHEMISTRY
FACULTY OF ARTS, SCIENCE AND HUMANITIES
KARPAGAM ACADEMY OF HIGHER EDUCATION
(*Deemed to be University, Established Under Section 3 of UGC Act 1956*)
Eachanari PO, Coimbatore – 641 021, India.

B.Sc., BIOCHEMISTRY

PREAMBLE

- Biochemistry is the study of chemistry and relating to, biological organisms.
- Biochemistry is sometimes viewed as a hybrid branch of organic chemistry, which specializes in the chemical processes and chemical transformations that take place inside of living organisms.
- All life forms alive today are generally believed to have descend from a single proto-biotic ancestor, which could explain why all known living things naturally have similar biochemistries.
- Biochemistry essentially remains the study of the structure and functions of cellular components (such as enzymes and cellular organelles) and the processes carry out both on and by organic macromolecules - especially proteins, but also carbohydrates, lipids, nucleic acids and other biomolecules.
- Biochemistry is the chemistry of life.

OBJECTIVE

- To inspire and educate students, today and for the future, in the concepts and skills of biochemistry; to prepare them to think about, to work with, and to enjoy the concepts of biochemistry and apply them at appropriate situation in practical life.

CORE COURSE

CC-1: Molecules of Life
CC-2: Cell Biology
CC-3: Membrane Biology and Bioenergetics
CC-4: Proteins
CC-5: Enzymes
CC-6: Human Physiology
CC-7: Metabolism of Carbohydrates and Lipids
CC-8: Metabolism of Amino Acids and Nucleotides
CC-9: Hormone: Biochemistry and Function
CC-10: Gene Organization, Replication and Repair
CC-11: Gene Expression and Regulation
CC-12: Immunology

SKILL ENHANCEMENT COURSE

SEC-1: Tools and Techniques in Biochemistry
SEC-2: Protein Purification Techniques
SEC-3: Clinical Biochemistry

SEC-4: Bioinformatics
SEC-5: Recombinant DNA Technology
SEC-6: Concepts in Genetics
SEC-7: Genetic Engineering and Biotechnology
SEC-8: Biochemical Correlations and Diseases

DISCIPLINE SPECIFIC ELECTIVE

DSE-1: Nutritional Biochemistry
DSE-2: Basic Microbiology
DSE-3: Molecular basis of non-infectious human diseases
DSE-4: Molecular basis of infectious diseases
DSE-5: Research Project
DSE-6: Advanced cell biology
DSE-7: Plant Biochemistry
DSE-8: Research Methodology
DSE-9 : Biostatistics
DSE-10: Fundamentals of nanotechnology
DSE-11: Food Preservation Technology
DSE-12: Drug Biochemistry

ABILITY ENHANCEMENT COMPULSORY COURSE

AECC-1: English communication

AECC-2: Environmental Studies

PROGRAMME OUTCOME (POs).

The Biochemistry graduate will be able to acquire

a. **Critical Thinking and Language Training:** The ability to analyze information objectively and make a reasonable judgment and conclusion by evaluating data, facts, observable phenomenon, and research findings from a set of information and distinguish among priorities to solve a problem To train them to communicate science by improving their English vocabulary. Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.

b. **Ethics:** Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

c. **Social Interaction:** Elicit views of others, mediate disagreements and help reach conclusions in group settings. Demonstrate empathetic social concern and equity centered national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.

d. **Understanding cellular function:** To equip them with basic and advanced knowledge in cell biology in order to get entry/placed in cell based research and development institution/laboratories.

e. **Protein based skills:** To make them understand protein, enzymes and human physiology to lay solid foundation and to get through competitive examinations. To equip them to get placed in recombinant protein production industries/laboratory.

f. **Understanding of endocrine system and metabolism:** To train them on the regulatory role of hormone on the metabolism of carbohydrates, lipids, amino acids and nucleic acid.

g. **Molecular and Genetic understanding:** To train them on the genetic regulation of immune system and to use computational tools.

h. **Environment and Sustainability:** Understand the issues of environmental contexts and sustainable development.

i. **Self-directed and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes.

j. **Skill development:** To gain hands on experience on various biochemical experiments and to equip them to interpret the data.

PROGRAMME SPECIFIC OUTCOME (PSOs)

k. Be able to demonstrate foundation knowledge in the areas of Biochemistry like Cell biology, Biomolecules, Protein Biochemistry, Molecular Biology, Pharmaceutical Chemistry and Hormonal Biochemistry.

l. Be able to integrate knowledge learned in discipline specific courses like Microbiology, Plant Biochemistry, Nutritional Biochemistry, Biostatistics, Drug Biochemistry and Biotechnology.

m. To use standard laboratory protocols in biochemistry, modern instrumentations, proper laboratory safety protocols and classical techniques to carry out experiments and also use computers in data acquisition and processing and use available software as a tool in data analysis.

n. To understand the applications of biological sciences in Genetics, Biochemical Correlations of Diseases, Microbiology, Genetic Engineering and Biotechnology.

PROGRAMME EDUCATIONAL OBJECTIVES (PEO)

I. To give students a basic knowledge in biochemistry and to teach on ethics.

II. To develop analytical and critical-thinking skills that allows independent exploration of biological phenomena through the scientific methods.

III. To acquaint knowledge on modern methods of biochemical experimentation to implement for future studies.

IV. To motivate students for social responsibilities and to educate them on ethical values in addition to inculcating environmental awareness.

V. To enable them to execute a research objective through experimentation.

Mapping of PEOs and POs

Semester I

16LSU101 **TAMIL-1** **4H-4C**

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

பாடத்திட்டப்பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கைமேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப்பயன்விளைவு

1. இந்தியகுடியுரிமைப்பணிமுதலானபோட்டித்தேர்வுகளில், விருப்பப்பாடமாகஇந்தியகுடியுரிமைப்பணிமுதலானபோட்டித்தேர்வுகளில், விருப்பப்பாடமாகஇடம்பெறுகின்ற, ‘தமிழ்இலக்கியவரலாறு’ குறித்தமுழுமையானஅறிமுகம்பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல்மற்றும்தொல்லியல்சார்ந்தஆவணத்தேடலுக்குரியஆய்வு மனப்பான்மையுடன், இலக்கியங்களைஅணுகுதல்.
3. தமிழின்வளர்ச்சித்துறையாகிய, ‘அறிவியல்தமிழ்’ ; ‘இணையதமிழ்’ குறித்தபன்நோக்குஅணுகுமுறையிலானஆய்வுச்சிந்தனைமேம்பாடு.
4. வேலைவாய்ப்புக்குரியசுயதிறன்மேம்பாட்டுடன், படைப்பாக்கத்திறன்மேம்பாடும்பெற்றிருத்தல் .
5. சமுதாயமற்றும்வாழ்வியல்மதிப்புகளைப்பேணுவதற்குக்கருவியாகஇலக்கியங்களைநாடுகின்றமனப்பான்மைவளர்ச்சி.
6. மொழிபெயப்புத்துறைசார்ந்தவேலைவாய்புத்திறன்பெற்றிருத்தல்

- அரசுத்தேர்வுகளுக்குமாணவர்களைஆயத்தமாக்குதல்.

அலகு – I :இக்காலஇலக்கியம்: (10 மணிநேரம்)

கல்வி: மகாகவிபாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.
இன்றைய நிலை : கவிமணிதேசிகவிநாயகம்பிள்ளை– ஒற்றுமையேஉயிர்நிலை.
மனிதநேயம் :கவிஞர்சிற்பிபாலசுப்பிரமணியன் –மலையாளக்காற்று.
சூழலியல் :கவிஞர்.வைதீஸ்வரன் - விரல்மீட்டியமழை.
பெண்ணியம் :கவிஞர்.சுகந்திசுப்பிரமணியம் – புதையுண்டவாழ்க்கை.

அலகு – II :அறஇலக்கியம்: (10 மணிநேரம்)

கொன்றைவேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்பம் – 20 குறள்கள்

பழமொழிநானூறு: 5 பாடல்கள்

அலகு - III :சிற்றிலக்கியம்: (10 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர்முருகன்பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப்பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV :கட்டுரை: (10 மணிநேரம்)

1. **உயர்தனிச்செம்மொழி-பரிதிமாற்கலைஞர்**
2. **கட்டிடக்கலை-** அ. இராசமாணிக்கனார்
3. **வாழ்க்கை** - இளவழகனார்
4. ஆளுமைத்திறன்அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V :மொழிப்பயிற்சி: (8 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை,கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு

Semester I

16ENU101 ENGLISH -I 4H- 4C

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcomes (CO's):

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed
6. Betterment of language competence

Unit 1

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

Unit 2

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman **–** Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

Unit 3

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

Unit 4

Poetry: No Sentence – Anjum Hassan
One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams

Grammar: Preposition, Voice- Active and Passive

Unit 5

Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitution
Grammar: Question, Pronunciation

Prescribed Text:

Semester I

16BCU101 **MOLECULES OF LIFE** **4H-4C**

Instruction hours/week: L: 3 T: 1 P: 0 Marks: Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To understand the properties and importance of water in biological system
- To know the biological significance of aminoacids and proteins in living systems
- To know the biological significance of lipids and fats in living systems
- To know the biological significance of carbohydrate metabolites in living systems
- To understand the functional role of nucleic acid in living systems
- To introduce the importance of vitamins in human body

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Recognize water as a universal solvent and elixir of life by knowing its importance
2. Identify the properties and classification of carbohydrates
3. Recall the role of various lipids in biomembrane including signal transduction
4. Categorize the amino acids and know their properties
5. Differentiate the structure, properties and functions of DNA and RNA
6. List the functions and deficiency disease of fat and water soluble vitamins

Unit 1

The foundations of biochemistry and water: Cellular and chemical foundations of life. Unique properties, weak interactions in aqueous systems, ionization of water, buffers, water as a reactant and fitness of the aqueous environment.

Unit 2

Carbohydrates and glycobiology: Monosaccharides - structure of aldoses and ketoses, ring structure of sugars, conformations of sugars, mutarotation, anomers, epimers and enantiomers, structure of biologically important sugar derivatives, oxidation of sugars. Formation of disaccharides, reducing and non-reducing disaccharides. Polysaccharides – homo- and heteropolysaccharides, structural and storage polysaccharides. Structure and role of proteoglycans, glycoproteins and glycolipids (gangliosides and lipopolysaccharides). Carbohydrates as informational molecules, working with carbohydrates

Unit 3

Lipids : Building blocks of lipids - fatty acids, glycerol, ceramide. Storage lipids - triacyl glycerol and waxes. Structural lipids in membranes – glycerophospholipids, galactolipids and sulpholipids, sphingolipids and sterols, structure, distribution and role of membrane lipids. Plant steroids. Lipids as signals, cofactors and pigments

Unit 4

Amino acids and Nucleic acids : Structure and classification, physical, chemical and optical properties of amino acids. Nucleotides - structure and properties. Nucleic acid structure – Watson-Crick model of DNA. Structure of major species of RNA - mRNA, tRNA and rRNA. Nucleic acid chemistry - UV absorption, effect of acid and alkali on DNA. Other functions of nucleotides - source of energy, component of coenzymes, second messengers.

Unit 5

Vitamins: Structure and active forms of water soluble and fat soluble vitamins, deficiency diseases and symptoms, hypervitaminosis

Stryer, L., (2009). Biochemistry, W.H. Freeman and Company, New York.

Murray, R.K., Bender, D.A., Botham, K.M., and Kennelly, P.J., (2012). Harper's illustrated Biochemistry, 29th Edition. McGraw-Hill Medical. London.

Semester I

16BCU102 **CELL BIOLOGY** **4H-4C**

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To understand the structural organization of prokaryotic cells
- To understand the structural organization of eukaryotic cells
- To understand the technical basis of membrane biology
- On the structure and functions of various sub-cellular organelle
- To understand the cytoskeletal network and extracellular matrix
- To understand the cell cycle, cell division and cell death process

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Differentiate the prokaryotic and eukaryotic cell
2. Understand the principle behind studying the cell morphology using various microscope
3. Identify the structure and functions of each organelle in cell
4. Recognise the mechanism behind the protein sorting and transport to their destinations like lysosome, mitochondria and chloroplast
5. Maintenance of cytoskeleton structure and function of micro, macro and intermediary filaments
6. Enumerate the phases of cell cycle, events in cell division and mechanism of cell death

Unit 1

Introduction to cell biology: Prokaryotic (*archaea and eubacteria*) and eukaryotic cell (animal and plant cells), cells as experimental models.

Plasma membrane: Composition, Fluid mosaic model

Tools of cell biology: Light microscopy, phase contrast microscopy, fluorescence microscopy, confocal microscopy, electron microscopy, FACS. Centrifugation for sub-cellular fractionation.

Unit 2

Structure of different cell organelles

Structure of nuclear envelope, nuclear pore complex. Selective transport of proteins to and from the nucleus. Regulation of nuclear protein import and export.

ER structure. Targeting proteins to ER, smooth ER and lipid synthesis. Export of proteins and lipids from ER and into ER.

Structure and functions of mitochondria, chloroplasts and peroxisomes. Zellweger syndrome.

Unit 3

Protein trafficking

Organization of Golgi. Lipid and polysaccharide metabolism in Golgi. Protein sorting and export from Golgi. Mechanism of vesicular transport, cargo selection, coat proteins

and vesicle budding, vesicle fusion.
Lysosome. – Acid hydrolases, phagocytosis and autophagy**.**
import and mitochondrial assembly, protein export from mitochondrial matrix. Import and sorting of chloroplast proteins.

Unit 4

Cytoskeletal proteins : Structure and organization of actin filaments. Treadmilling and role of ATP in microfilament polymerization, organization of actin filaments. Non-muscle myosin. Intermediate filament proteins, assembly and intracellular organization. Assembly, organization and movement of cilia and flagella.

Unit 5

Cell wall and extracellular matrix :Prokaryotic and eukaryotic cell wall, cell matrix proteins. Cell-matrix interactions and cell-cell interactions. Adherence junctions, tight junctions, gap junctions, desmosomes, hemidesmosomes, focal adhesions and plasmodesmata.

Cell cycle, cell death and cell renewal : Eukaryotic cell cycle, restriction point, and checkpoints. Cell division. Apoptosis and necrosis - brief outline. Salient features of a transformed cell.

Semester I

16BCU103 MEMBRANE BIOLOGY AND BIOENEGETICS 4H-4C

Instruction hours/week: L:3 T:1 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- The basis of membrane proteins (intrinsic and extrinsic)
- The basis of membrane lipids (phospholipids and glycolipids)
- The basis of membrane carbohydrates
- The basis of membrane model system for drug delivery
- On the transport of biomolecules across membranes
- To understand the role of membrane components on energy production

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the basis of membrane proteins (intrinsic and extrinsic)
2. Understand the basis of membrane lipids (phospholipids and glycolipids)
3. Understand the basis of membrane carbohydrates
4. Understand the basis of membrane model system for drug delivery
5. Understand the transport of biomolecules across membranes
6. Understand the role of membrane components on energy production.

Unit 1

Biomembranes, membrane structures and membrane dynamics: Composition of biomembranes- prokaryotic, eukaryotic, neuronal and sub-cellular membranes. Study of membrane proteins. Fluid mosaic model with experimental proof. Monolayer, planer bilayer and liposomes as model membrane systems. Polymorphic structures of amphiphilic molecules in aqueous solutions- micelles and bilayers. CMC, critical packing parameter. Membrane asymmetry. Macro and micro domains in membranes. Membrane skeleton, lipid rafts, caveolae and tight junctions. RBC membrane architecture. Lateral, transverse and rotational motion of lipids and proteins. Techniques used to study membrane dynamics - FRAP, TNBS labeling etc. Transition studies of lipid bilayer, transition temperature. Membrane fluidity, factors affecting membrane fluidity.

Unit 2

Membrane transports: Thermodynamics of transport. Simple diffusion and facilitated diffusion. Passive transport- glucose transporter, anion transporter and porins**.** Primary active transporters- P type ATPases, V type ATPases, F type ATPases. Secondary active transporters- lactose permease, Na^+-glucose symporter. ABC family of transporters- MDR, CFTR. Group translocation. Ion channels- voltage-gated ion channels (Na^+/K^+ voltage-gated channel), ligand-gated ion channels (acetyl choline receptor), aquaporins, bacteriorhodopsin. Ionophores - valinomycin, gramicidin.

Unit 3

Vesicular transport, membrane fusion and bioenergetics: Types of vesicle transport and their function- clathrin, COP I and COP II coated vesicles. Molecular mechanism of vesicular transport. Membrane fusion. Receptor mediated endocytosis of transferrin. Laws of thermodynamics, state functions, equilibrium constant, coupled reactions, energy charge, ATP cycle, phosphorylation potential, phosphoryl group transfers. Chemical basis of high standard energy of hydrolysis of ATP, other phosphorylated compounds and thioesters. Redox reactions, standard redox potentials and Nernst equation. Universal electron carriers.

Unit 4

Oxidative phosphorylation: Mitochondria. Electron transport chain- its organization and function. Inhibitors of ETC and uncouplers. Peter Mitchell's chemiosmotic hypothesis. Proton motive force. Fo F1ATP synthase, structure and mechanism of ATP synthesis. Metabolite transporters in mitochondria. Regulation of oxidative phosphorylation. ROS production and antioxidant mechanisms. Thermogenesis. Alternative respiratory pathways in plants.

Unit 5

Photophosphorylation : General features of photophosphorylation, historical background, Hills reaction, photosynthetic pigments, light harvesting systems of plants and microbes and resonance energy transfer. Bacterial photophosphorylation in purple bacteria, Green sulfur bacteria and *Halobacterium salinarum*. Photophosphorylation in plants - structure of chloroplast, molecular architecture of Photosystem I and Photosystem II, Z-scheme of photosynthetic electron flow, oxygen evolving complex and action of herbicides. Cyclic photophosphorylation and its significance. Photo inhibition. Evolution of oxygenic photosynthesis.

Semester I

16BCU111 **MOLECULES OF LIFE PRACTICAL -1** **3H-2C**

Instruction hours/week: L:0 T:0 P:3 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course Objectives

To impart hands-on training:

- To know the safety measures to be followed in laboratory
- To prepare molar, normal and ppm solutions
- On buffer preparation
- To separate the biomolecules using chromatography techniques
- To identify the biomolecules qualitatively
- To quantify the biomolecules using colorimetry

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Gain knowledge on lab safety
2. Prepare reagents and solutions
3. Understand the basis of buffer preparation
4. Understand the principle and working procedure behind chromatographic separations
5. Understand the principle and working procedure behind staining techniques
6. Understand the principle and working procedure behind colorimetrictechniques

Experiments

1. Safety measures in laboratories.
2. Preparation of normal and molar solutions.
3. Preparation of buffers.
4. Determination of pKa of acetic acid and glycine.
5. Qualitative tests for carbohydrates, lipids, amino acids, proteins and nucleic acids.
6. Separation of amino acids/ sugars/ bases by thin layer chromatography.
7. Estimation of vitamin C.
8. Estimation of vitamin E.

Semester I

16BCU112 **CELL BIOLOGY PRACTICAL -2** **3H-2C**

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

To impart hands-on training:

- On different parts of light microscopy
- On how to visualize the cells
- On phase contrast microscopy
- On how to identify different stages of mitosis and meiosis
- On staining techniques to identify the cell types
- On how to count the cells using hemocytometer

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Identify the spotters of light microscopy
2. Be able to visualize the cells
3. Use the phase contrast microscopy at appropriate magnifications
4. Identify the cells using staining techniques
5. Interpret various stages of cell division
6. Count the cells manually using hemocytometer

Experiments

1. Preparation of onion root squash and observation of cell
2. Visualization of animal and plant cell by methylene blue.
3. Identification of different stages of mitosis in onion root tip.
4. Identification of different stages of meiosis in grasshopper testis.
5. Cell size determination using ocular stage micrometer
6. Micrographs of different cell components (dry lab).
7. Sub-cellular fractionation.
8. Visualization of nuclear fraction by acetocarmine stain.
9. Staining and visualization of mitochondria by Janus green stain.

Instruction hours/week: L:0 T:0 P:4 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

To impart hands-on training:

- To analyze the composition of lipids in animal cell (RBC)
- To analyze the composition of lipids in plant cell
- On CMC determination and its significance
- To separate the photosynthetic pigments using TLC
- On techniques related to isolation of membrane bound enzymes
- On techniques related to quantification of membrane bound enzymes

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Analyze the composition of lipids in animal cell (RBC)
2. Analyze the composition of lipids in plant cell
3. Determine CMC for the given sample
4. Separate the photosynthetic pigments using TLC
5. Isolate membrane bound enzymes
6. Perform quantification of membrane bound enzymes

Experiments

1. Effect of lipid composition on the permeability of a lipid monolayer.
2. Determination of CMC of detergents.
3. RBC ghost cell preparation and to study the effect of detergents on membranes.
4. Separation of photosynthetic pigments by TLC.
5. Isolation of mitochondria from liver and assay of marker enzyme SDH.
6. Study photosynthetic O2 evolution in hydrilla plant.
7. Isolation of chloroplast from spinach leaves, Estimation of chlorophyll.

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின்சிறப்பு

முருகன்இருப்பிடங்கள் – 'சிறுதினைமலரொடு' என்பதிலிருந்துதொடங்கி, 'அறிந்தவாறே' என்பதுவரையிலானதொடர்கள்: 218-249.

முருகன்அருள்புரிதல் – 'தெய்வம்சான்ற' என்பதிலிருந்துதொடங்கி, 'நல்குமதி' என்பதுவரையிலானதொடர்கள்: 286-295.

அலகு - III :காப்பியம் (6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கலவாழ்த்துப்பாடல்: (21-29) – கண்ணகியின்சிறப்பு:

'நாகநீள்நகரொடு' என்பதிலிருந்துதொடங்கி,

'கண்ணகிஎன்பாண்மன்னோ' என்பதுவரையிலானதொடர்கள்.

நடுகற்காதை: (207-234)- சேரன்செங்குட்டுவன்கண்ணகிக்குக்கோயில்எடுத்தல்:

'அருந்திறலரசர்' என்பதிலிருந்துதொடங்கி, 'மன்னவரேறென்' என்பதுவரையிலானதொடர்கள்.

Semester II

16BCU201 **PROTEINS** **4H-4C**

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To build their understanding on proteins
- On different molecular techniques used for separation of proteins
- On different molecular techniques used for characterization of proteins
- To study the three dimensional structure of proteins using computational tools
- To enrich the biological significance of proteins
- To identify appropriate technique to use during their project work

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Build on their understanding of proteins
2. Use different molecular techniques used for separation of proteins
3. Use different molecular techniques used for characterization of proteins
4. Understand the three dimensional structure of proteins using computational tools
5. Identify the biological significance of proteins
6. Use appropriate technique during their project work

Unit 1

Introduction, Extraction and Separation of Proteins: Introduction - Amino acids and their properties - hydrophobic, polar and charged amino acids. Biologically important peptides - hormones, antibiotics and growth factors. Multimeric proteins, conjugated proteins and metallo proteins. Diversity of function. Extraction of proteins for downstream processing - Solubilization of proteins from their cellular and extracellular locations. Use of simple grinding methods, homogenization, ultrasonication, French press and centrifugation. Separation techniques - Ammonium sulphate fractionation, solvent fractionation, dialysis and lyophilization.

Unit 2

Purification and Characterization of proteins: Chromatographic Techniques - Ion-exchange chromatography, molecular sieve chromatography, hydrophobic interaction/reverse phase chromatography, affinity chromatography, HPLC (Normal and Reverse phase) and FPLC. Characterization of proteins - Determination of purity, molecular weight, extinction coefficient and sedimentation coefficient, IEF, SDS-PAGE and 2-D electrophoresis.

Unit 3

Structural Organization and Analysis of proteins : Organization of protein structure into primary, secondary, tertiary and quaternary structures. N-terminal and C-terminal amino acid analysis. Sequencing techniques - Edman degradation. Generation of overlap peptides using different enzymes and chemical reagents. Disulfide bonds and their location. Mass spectrometric analysis, tandem MS. Solid phase peptide synthesis

Unit 4

Three dimensional structures of protein and Protein Structure Database : Nature of stabilizing bonds - covalent and non covalent. Importance of primary structure in folding. The peptide bond - bond lengths and configuration. Dihedral angles psi and phi. Helices, sheets and turns. Ramachandran map. Techniques used in studying 3-D structures - X-ray diffraction and NMR. Motifs and domains. Tertiary and quaternary structures. Structures of myoglobin and haemoglobin. Denaturation and renaturation of Ribonuclease A. Introduction to thermodynamics of folding and molten globule. Assisted folding by molecular chaperones, chaperonins and PDI. Defects in protein folding. Diseases –Alzheimer's and Prion based. Protein sequence and structure databases (PDB). Use of sequence and domain information. Viewing protein structures using *in silico* tools.

Unit 5

Specialized Proteins and its Applications : Myoglobin and haemoglobin - Oxygen binding curves, influence of 2,3-BPG, CO2 and Cl^- Hill plot. Cooperativity between subunits and models to explain the phenomena –concerted and sequential models. Haemoglobin disorders. Antibodies - Antibody structure and binding to antigens. Actin-myosin motors - ATP activated actin - myosin contractions. Membrane Proteins - Integral and membrane associated proteins. Hydropathy plots to predict transmembrane domains. Significance of membrane proteins - bacteriorhodopsin.

Semester II

16BCU202 **ENZYMES** **4H-4C**

Instruction hours/ week: L:4 T:1 P:0 **Marks:** Internal: **40** External: **60 Total**: **100**
End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To understand the basic concepts of enzymes
- To study the kinetics of enzyme catalysed reactions
- To learn the mechanism of action of enzymes and enzyme inhibition concepts
- To understand various modes of enzyme regulation
- To learn the application of enzymes in health
- To learn the application of enzymes in diseases

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the basic concepts on enzymes
2. Relate the initial velocity and substrate concentration of enzymes and be able to understand the kinetics of inhibition reactions
3. Understand the basis of enzyme inhibitor drugs
4. Be able to understand the regulation pattern of various enzymes
5. Relate the regulation pattern of enzymes for its application in health and diseases
6. Understand the application of enzymes as marker in various disease conditions

Unit 1

Introduction to enzymes and enzyme catalysis

Introduction - Nature of enzymes - protein and non-protein (ribozyme). Cofactor and prosthetic group, apoenzyme, holoenzyme. IUBMB classification of enzymes. Features of enzyme catalysis- Factors affecting the rate of chemical reactions, collision theory, activation energy and transition state theory, catalysis, reaction rates and thermodynamics of reaction. Catalytic power and specificity of enzymes (concept of active site), Fischer's lock and key hypothesis, Koshland's induced fit hypothesis.

Unit 2

Enzyme kinetics

Relationship between initial velocity and substrate concentration, steady state kinetics, equilibrium constant - monosubstrate reactions. Michaelis-Menten equation, Lineweaver-Burk plot, Eadie-Hofstee and Hanes plot. Km and Vmax, Kcat and turnover number. Effect of pH, temperature and metal ions on the activity of enzyme. Bisubstrate reactions - Types of bi bi reactions (sequential – ordered and random, ping pong reactions). Differentiating bi substrate mechanisms (diagnostic plots, isotope exchange).

Unit 3

Mechanism of action of enzymes and Enzyme inhibition

Mechanism of action of enzymes - General features - proximity and orientation, strain and distortion, acid base and covalent catalysis (chymotrypsin, lysozyme). Metal activated enzymes and metalloenzymes, transition state analogues. Enzyme Inhibition - Reversible inhibition (competitive, uncompetitive, non-competitive, mixed and substrate). Mechanism based inhibitors - antibiotics as inhibitors.

Unit 4

Regulation of enzyme activity

Control of activities of single enzymes (end product inhibition) and metabolic pathways, feedback inhibition (aspartate transcarbomoylase), reversible covalent modification phosphorylation (glycogen phosphorylase). Proteolytic cleavage-zymogen. Multienzyme complex as regulatory enzymes. Occurrence and isolation, phylogenetic distribution and properties (pyruvate dehydrogenase, fatty acyl synthase) Isoenzymes - properties and physiological significance (lactate dehydrogenase).

Unit 5

Coenzymes in enzyme catalysed reactions and Applications of enzymes. Structure and Functions of TPP, FAD, NAD, pyridoxal phosphate, biotin, coenzyme A, tetrahydrofolate, lipoic acid. Applications of enzymes - Application of enzymes in diagnostics (SGPT, SGOT, creatine kinase, alkaline and acid phosphatases), enzyme immunoassay (HRPO), enzyme therapy (Streptokinase). Immobilized enzymes – Preparation techniques and its applications.

Semester II

16BCU203 **HUMAN PHYSIOLOGY** **4H-4C**

Instruction hours/week: L:3 T:1 P:0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- On the concept of homeostasis
- On the physiological functioning of cardiovascular system
- On the physiological functioning of renal system
- On the physiological functioning of gastro-intestinal and hepatic system
- On the physiological functioning of muscular skeletal system
- On the physiological functioning of reproductive system

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the concept of homeostasis
2. Understand the physiological functioning of cardiovascular system
3. Understand the physiological functioning of renal system
4. Understand the physiological functioning of gastro-intestinal and hepatic system
5. Understand the physiological functioning of muscular skeletal system
6. Understand the physiological functioning of reproductive system

Unit 1

Homeostasis and the organization of body fluid compartments :
Intracellular, extracellular and interstitial fluid. Homeostasis, control system and their components. Plasma as an extracellular fluid, RBC, molecular mechanism of blood coagulation, role of vitamin K in coagulation, anticoagulant and fibrinolytic systems. Anemias, polycythemia, haemophilia and thrombosis.

Respiration : Organization of the pulmonary system. Mechanism of respiration, pulmonary ventilation and related volumes, pulmonary circulation. Principles of gas exchange and transport. Regulation of respiration. Pulmonary oedema and regulation of pleural fluid. Hypoxia, hypercapnea, pulmonary distress, emphesema, ARDS.

Unit 2

Cardiovascular physiology: Pressure, flow and resistance. Anatomy of heart. Physiology of the cardiac muscle, automacity of the cardiac muscle contraction, excitation contraction coupling, relationship between cardiac cycle, heart sound, ventricular volumes and the ECG, control of cardiac function and output. The arterial system, venous system, the microcirculation and mechanics of capillary fluid exchange. Control of blood flow to the tissues. Portal circulations. Arterial pressure and its regulation. Hypertension, congestive heart disease, atherosclerosis and myocardial infarction.

Unit 3

Renal physiology: Anatomy of the kidney and the nephron. Regulation of renal blood flow. Cell biology of the Bowmans' capsule. Physiology of glomerular filtration and GFR. Tubular processing of the glomerular filtrate. Micturition reflex and voluntary control of micturition. Regulation of ECF electrolyte and water content, blood volume and long term blood pressure. Blood buffer systems, renal and pulmonary control of blood pH, renal clearance. Assessment of kidney function. Acidosis and alkalosis. Glomerular nephritis, renal failure, dialysis and diuretics.

Unit 4

Gastrointestinal and hepatic physiology: Histology of the gastrointestinal tract. Propulsion and motility of food and digested material. Enteric reflexes, secretory functions of the gastrointestinal tract, digestion and absorption of macro and micronutrients. Peptic ulcer, Sprue, celiac disease, IBD, regurgitation, diarrhoea and constipation. Anatomy of the hepatic lobule and blood flow into the liver. Formation and secretion of bile. enterohepatic cycle, reticuloendothelial system, metabolic importance of liver. Liver function tests. Jaundice, liver cirrhosis and fatty liver.

Musculosketetal system :Bone structure and formation. Physiology of muscle contraction in striated and non-striated muscle.

Unit 5

Reproductive physiology : Sex determination and differentiation. Development of female and male genital tracts. Spermatogenesis, capacitation and transport of sperm, blood testis barrier. Ovarian function and its control. Uterine changes, fertilization and implantation. Placenta as a feto- maternal unit, gestation and parturition.

Neurochemistry and neurophysiology: Central Nervous system. Peripheral Nervous system. Blood brain barrier and CSF. Membrane potentials. Synaptic transmission. Neurotransmitters. Sensory receptors and neural pathways. Somatic sensation, EEG, sleep, coma, learning and memory**.**

Semester II

16BCU211 **PROTEINS PRACTICAL - 4** **3H-2C**

Instruction hours/week: L:0 T:0 P:3 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course Objectives:
To impart hands-on training:

- Qualitative analysis of proteins
- Quantitative analysis of proteins
- Determination of isoelectric point of proteins
- Separation of proteins using chemical methods
- Electrophoretic separation of proteins using SDS-PAGE
- Immune based separation of proteins

Course Outcomes (CO's):
After successful completion of the course, the student will:

1. Perform qualitative analysis of proteins
2. Quantify the amount of protein in the given sample
3. Determine isolectric point of given protein
4. Separate the protein using ammonium sulphate method
5. Perform SDS-PAGE for separation of proteins
6. Perform affinity chromatography

Experiments

1. Estimation of proteins using UV absorbance and Biuret method.
2. Microassay of proteins using Lowry/Bradford method.
3. Isoelectric pH of casein.
4. Ammonium sulphate fractionation of serum proteins.
5. Separation of albumin from serum using anion-exchange chromatography.
6. SDS-PAGE analysis of proteins.

Semester II

16BCU212 **ENZYMES PRACTICAL - 5** **3H-2C**

Instruction hours/ week: L:0 T:1 P:3 **Marks:** Internal: **40** External: **60** **Total**: **100**

End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To understand the basic concepts of enzymes
- To study the kinetics of enzyme catalysed reactions
- To learn the mechanism of action of enzymes and enzyme inhibition concepts
- To understand various modes of enzyme regulation
- To learn the application of enzymes in health
- To learn the application of enzymes in diseases

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the basic concepts on enzymes
2. Relate the initial velocity and substrate concentration of enzymes and be able to understand the kinetics of inhibition reactions
3. Understand the basis of enzyme inhibitor drugs
4. Be able to understand the regulation pattern of various enzymes
5. Relate the regulation pattern of enzymes for its application in health and diseases
6. Understand the application of enzymes as marker in various disease conditions

Experiments

1. Partial purification of acid phosphatase from germinating mung bean.
2. Assay of enzyme activity and specific activity, e.g. acid phosphatase.
3. Effect of pH on enzyme activity
4. Determination of Km and Vmax using Lineweaver-Burk graph.
5. Enzyme inhibition - calculation of Ki for competitive inhibition.
6. Continuous assay of lactate dehydrogenase.
7. Assay of glucose-6-phosphate dehydrogenase.

Semester II

16BCU213 **HUMAN PHYSIOLOGY PRACTICAL-6** **4H-2C**

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course Objectives

To impart hands-on training on:

- Counting of different cell types using microscopy
- Estimation of haemoglobin in the given blood sample
- Determination of the group of the given blood sample
- Separation of isoenzymes by electrophoresis
- Measurement of blood pressure using sphygmomanometer
- Fixing and staining of microtome sections of tissues for histopathology observations

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Count of different cell types (RBC, WBC) using microscopy
2. Perform the estimation of haemoglobin in the given blood sample
3. Perform and identify the grouping (ABO and Rh) of the given blood sample
4. Separate isoenzymes by electrophoresis
5. Perform blood pressure measurement using sphygmomanometer
6. Perform fixing and staining of microtome sections of tissues for histopathology observations

Experiments

1. Hematology.
   a. RBC and WBC counting
   b. Differential leucocyte count.
   c. Clotting time.
   d. Bleeding time
2. Estimation of haemoglobin.
3. Determination of blood groups
4. Separation of plasma proteins.
5. Determination of total iron binding capacity.
6. Pulmonary function tests, spirometry and measurement of blood pressure.
7. Separation of isoenzymes by electrophoresis.
8. Histology of connective tissue, liver and/ brain permanent slides.
9. Case studies (Renal clearance, GFR, ECG).

Semester II

16AEC201 **ENVIRONMENTAL STUDIES** **4H/4C**

Instruction hours/week: L: 3 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To understand the concepts and components of ecosystem
- To understand the significance of eco components and measures to maintain ecosystem
- To teach the ethical and legal perspectives on ecosystem management
- To understand the undesired effects of environmental pollution
- To device a strategy to avoid environmental pollution
- To understand the concept of conservation

Course Outcomes (COs)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Understand the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT-1

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit 2

Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. effects of fireworks.

Unit 3

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit 4

Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution , Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit 5

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Semester III

16BCU301 METABOLISM OF CARBOHYDRATES AND LIPIDS 4H-4C

Instruction hours/week: L: 4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objective

Equip the students:

- An overview on various metabolic pathways in human
- An overview on various metabolic pathways in plants
- To understand the pathways related with energy production through catabolism of carbohydrates and lipids
- To understand the pathways related with energy production through anabolism of carbohydrates and lipids
- To recognize the metabolic pathways that involve with the synthesis of macromolecule
- To know the biomolecules homeostasis mechanism

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Students are able to understand the breakdown of macromolecules like carbohydrate and lipids
2. Recognise the energy production pathways like glycolysis, glycogeneolysis and TCA cycle
3. Interpret the central role of TCA cycle in energy metabolism
4. Relate the calvin cycle with the synthesis of starch and sucrose and integration of carbohydrate metabolism in plant
5. Understand the energy requirement and energy balance through glucose homeostasis
6. Relate the interdependence of metabolic pathways

Unit 1

Basic design of metabolism: Autotrophs, heterotrophs, metabolic pathways, catabolism, anabolism, ATP as energy currency, reducing power of the cell.

Glycolysis: Glycolysis - a universal pathway, reactions of glycolysis, fermentation, fates of pyruvate, feeder pathways for glycolysis, galactosemia.

Gluconeogenesis and pentose phosphate pathway: Synthesis of glucose from non-carbohydrate sources, reciprocal regulation of glycolysis and gluconeogenesis, pentose phosphate pathway and its importance.

Unit 2

Glycogen metabolism: Glycogenesis and glycogenolysis, regulation of glycogen metabolism, glycogen storage diseases.

Citric acid cycle: Production of acetyl CoA, reactions of citric acid cycle, anaplerotic reactions, amphibolic role, regulation of citric acid cycle, glyoxalate pathway, coordinated regulation of glyoxalate and citric acid pathways.

Unit 3

Synthesis of carbohydrates : Calvin cycle, regulation of calvin cycle, regulated synthesis of starch and sucrose, photorespiration, C4 and CAM pathways, synthesis of cell wall polysaccharides, integration of carbohydrate metabolism in plant cell.

Unit 4

Fatty acid oxidation: Digestion, mobilisation and transport of cholesterol and triacyl glycerols, fatty acid transport to mitochondria, β oxidation of saturated, unsaturated, odd and even numbered and branched chain fatty acids, regulation of fatty acid oxidation, peroxisomal oxidation, ω oxidation, ketone bodies metabolism, ketoacidosis.

Fatty acid synthesis: Fatty acid synthase complex. Synthesis of saturated, unsaturated, odd and even chain fatty acids and regulation.

Unit 5

Biosynthesis of eicosanoids, cholesterol, steroids and isoprenoids: Synthesis of prostagladins, leukotrienes and thromboxanes. Synthesis of cholesterol, regulation of cholesterol synthesis. Synthesis of steroids and isoprenoids.

Biosynthesis of membrane lipids:

Synthesis of membrane phospholipids in prokaryotes and eukaryotes, respiratory distress syndrome, biosynthesis of triacylglycerol, biosynthesis of plasmalogens, sphingolipids and glycolipids, lipid storage diseases.

Starve-feed cycle

Well-fed state, early fasting state, fasting state, early re-fed state, energy requirements, reserves and caloric homeostasis, five phases of glucose homeostasis.

Semester III

16BCU302 METABOLISM OF AMINOACID AND NUCLEIC ACIDS 4H-4C

Instruction hours/week: L: 4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To understand the structure and functions of amino acids
- To understand the structure and functions of nucleic acids
- To understand the basis of diseases associated with amino acid catabolism
- To understand the basis of diseases associated with nucleic acid catabolism
- To understand the interconnection between amino acids and nucleic acids and central dogma concept
- To understand the biosynthesis of amino acids and nucleic acids

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Identify basic structures, names, and properties of nucleic acids
2. Demonstrate overview of amino acid metabolism and catabolism of amino acids
3. Understand the chemical logic of metabolic pathways
4. Recognize and understand basic mechanisms of pathway regulation
5. Understand the central dogma concept
6. Understand the basis of amino acid and nucleic acid disorders

Unit 1

Overview of amino acid metabolism : Nitrogen cycle, incorporation of ammonia into biomolecules. Metabolic fates of amino groups. Digestion and absorption of dietary proteins. Protein calorie malnutrition - Kwashiorkar and Marasmus. Nitrogen balance, transamination, role of pyridoxal phosphate, glucose-alanine cycle, Kreb's bicycle, urea cycle and inherited defects of urea cycle.

Catabolism of amino acids : Catabolic pathways of individual amino acids. Glucogenic and ketogenic amino acids. Metabolism of one carbon units.

Unit 2

Catabolism of amino acids

Disorders of amino acids metabolism, phenylketonuria, alkaptonuria, maple syrup urine disease, methylmalonic acidemia (MMA), homocystinuria and Hartnup's disease.

Biosynthesis of amino acids

Overview of amino acid synthesis. Biosynthesis of non-essential amino acids and its regulation.

Unit 3

Precursor functions of amino acids

Biosynthesis of creatine and creatinine, polyamines (putresine, spermine, spermidine), catecholamines (dopamine, epinephrine, norepinephrine) and neurotransmitters (serotonin, GABA). Porphyrin biosynthesis, catabolism and disorders of porphyrin metabolism.

Unit 4

Biosynthesis of purine and pyrimidine nucleotides

De novo synthesis of purine and pyrimidine nucleotides, regulation and salvage pathways.

Deoxyribonucleotides and synthesis of nucleotide triphosphate

Biosynthesis of deoxyribonucleotides and its regulation, conversion to triphosphates, biosynthesis of coenzyme nucleotides.

Unit 5

Degradation of purine and pyrimidine nucleotides

Digestion of nucleic acids, degradation of purine and pyrimidine nucleotides. Inhibitors of nucleotide metabolism. Disorders of purine and pyrimidine metabolism – Lesch-Nyhan syndrome, Gout, SCID, adenosine deaminase deficiency.

Integration of metabolism

Integration of metabolic pathways (carbohydrate, lipid and amino acid metabolic pathways), tissue specific metabolism (brain, muscle, and liver).

Semester III

16BCU303 HORMONES: BIOCHEMISTRY AND FUNCTION 4H-4C

Instruction hours/week: L:3 T:1 P:0 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students on:

- The fundamentals of hormones and receptors
- Different mechanisms of hormonal actions
- Understanding of physiological and biochemical actions of hypothalamic, thyroid and pituitary hormones
- The role and applications of gastrointestinal hormones
- Understanding the clinical significance of adrenal and gonadal hormones
- Understanding of various endocrine disorders

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Gain knowledge on functions, classification and transport of hormones
2. Understand the role of secondary messengers, effector systems and protein kinases, tyrosine kinases in hormonal action
3. Have knowledge on the biochemical action and regulation of various endocrine hormones
4. Understand the role and applications of gastrointestinal hormones
5. Have knowledge on the role and functions of adrenal and gonadal hormones
6. To be able to identify an endocrine disorder if symptoms are available

Unit 1

Introduction to hormones and receptors

Functions of hormones and their regulation. Chemical signaling - endocrine, paracrine, autocrine, intracrine and neuroendocrine mechanisms. Chemical classification of hormones, transport of hormones in the circulation and their half-lives. Hormone therapy. General introduction to Endocrine methodology. Hormone receptors - extracellular and intracellular. Receptor - hormone binding, Scatchard analysis. G protein coupled receptors, G proteins

Unit 2

Mechanisms of hormonal actions

Second messengers - cAMP, cGMP, IP3, DAG, Ca^{2+}, NO. Effector systems - adenylate cyclase, guanylate cyclase, PDE, PLC. Protein kinases (PKA, PKB, PKC, PKG). Growth factor signaling, PDGF, EGF, IGF-II, and erythropoietin. Receptor tyrosine kinases - EGF, insulin, erythropoietin receptor; ras - MAP kinase cascade, JAK - STAT pathway. Steroid hormone/ thyroid hormone receptor mediated gene regulation. Receptor regulation and cross talk.

Unit 3

Hypothalamic, pituitary and thyroid hormones

Hypothalamic - pituitary axis. Study the physiological and biochemical actions of hypothalamic hormones, pituitary hormones - GH, prolactin, TSH, LH, FSH, POMC peptide family, oxytocin and vasopressin, feedback regulation cycle. Endocrine disorders - gigantism, acromegaly, dwarfs, pigmies and diabetes insipidus. Thyroid gland.

Biosynthesis of thyroid hormone and its regulation; its physiological and biochemical action. Pathophysiology - Goiter, Graves disease, cretinism, myxedema, Hashimato's disease.

Unit 4

PTH, calcitonin and gastrointestinal hormones

PTH, Vitamin D and calcitonin. Mechanism of Ca^{2+} regulation and pathways involving bone, skin, liver, gut and kidneys. Pathophysiology - rickets, osteomalacia, osteoporosis. Regulation of release of insulin, glucagon, gastrin, secretin, CCK, GIP, adipolectin, leptin and ghrelin. Summary of hormone metabolite control of GI function. Physiological and biochemical action. Pathophysiology - diabetes type I and type II.

Unit 5

Adrenal and gonadal hormones

Aldosterone, renin angiotensin system, cortisol, epinephrine and norepinephrine. Fight or flight response, stress response. Pathophysiology – Addison's disease, Conn's syndrome, Cushing syndrome.Male and female sex hormones. Interplay of hormones during reproductive cycle, pregnancy, parturition and lactation. Hormone based contraception.

16BCU311 METABOLISM OF CARBOHYDRATES AND LIPIDS Semester III
PRACTICAL- 7 4H-2C

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training:

- On different qualitative methods to estimate glucose
- On different quantitative methods to estimate glucose
- On fermentation techniques
- On isolation methods for lipids
- To understand the quantitative analysis of enzymes involved in carbohydrate metabolism
- To understand the quantitative analysis of enzymes involved in lipid metabolism

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Use different qualitative methods to estimate glucose
2. Use different quantitative methods to estimate glucose
3. Perform fermentation techniques
4. Understand the quantitative analysis of enzymes involved in carbohydrate metabolism
5. Isolate lipid from the given sample
6. Estimate enzymes involved in lipid metabolism

Experiments

1. Estimation of blood glucose.
2. Sugar fermentation of microorganisms.
3. Assay of salivary amylase.
4. Isolation of lecithin, identification by TLC, and its estimation.
5. Isolation of cholesterol from egg yolk and its estimation.

16BCU312 METABOLISM OF AMINOACID AND NUCLEIC ACIDS Semester III
PRACTICAL-8 4H-2C

Instruction hours/week: L:0 T:0 P:4 Marks: Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training:

- To assay clinically relevant transaminases
- To assess the levels of urea, uric acid and creatinine in urine sample using qualitative methods
- To assess the levels of urea, uric acid and creatinine in urine sample using quantitative methods
- To interpret the results on amino acids and nucleic acids in clinical cases
- To introduce case studies related to amino acid disorders
- To introduce case studies related to nucleic acid disorders

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Assay clinically relevant transaminases
2. Assess the levels of urea, uric acid and creatinine in urine sample using qualitative methods
3. Assess the levels of urea, uric acid and creatinine in urine sample using quantitative methods
4. Interpret the results on amino acids and nucleic acids in clinical cases
5. Understand case studies related to amino acid disorders
6. Understand case studies related to nucleic acid disorders

Experiments

1. Assay of serum transaminases – SGOT and SGPT.
2. Estimation of serum urea.
3. Estimation of serum uric acid.
4. Estimation of serum creatinine.

16BCU313 HORMONES: BIOCHEMISTRY AND FUNCTION PRACTICAL-9 Semester III 4H-2C

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training on

- Qualitative and quantitative measurement of glucose
- Calcium assessment methods (inorganic)
- Assay of insulin using enzyme linked immunosorbent assay
- Basis of pregnancy detection kit
- Assessments of electrolytes to understand hormonal functioning
- Case studies related to hormonal imbalance

Course outcomes (CO's)

After successful completion, the students will understand

1. The different Qualitative and quantitative methods of glucose estimation
2. Titrimetric and colorimetric methods for Calcium assessment
3. Enzyme linked immunosorbent assay
4. The principle behind the making of hCG kit and working procedure
5. Assessments of electrolytes to understand hormonal functioning
6. The fundamental defects due to hormonal imbalance

Experiments

1. Glucose tolerance test.
2. Estimation of serum Ca^{2+}.
3. Estimation of serum T4.
4. HCG based pregnancy test.
5. Estimation of serum electrolytes.
6. Case studies.

16BCU304-A **TOOLS AND TECHNIQUES IN BIOCHEMISTRY** **Semester III**
3H-3C

Instruction hours/week: L: 3 T:0 P:0 Marks: Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objective

Equip the students:

- On maintenance of safety documents.
- On the preparation of SOPs
- On the detection of radioisotopes
- Interpretation of virtual lab experiment
- Different methods of centrifugation (differential/density gradient)
- Determination of pKa for biological buffers using Henderson-Hasselbach equation

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Maintain safety documents.
2. Prepare SOPs
3. Detect radioisotopes
4. Interpret virtual lab experiments
5. Use different methods of centrifugation (differential/density gradient)
6. DeterminepKa for biological buffers using Henderson-Hasselbach equationin a given situation

Unit 1

Biochemical reagents and solutions

Good laboratory practices. Preparation and storage of solutions. Concepts of solution concentration and storing solutions.

- Preparation of a molar solutions
- Preparation of normal solutions
- Preparation of percentage and ppm solutions.

Unit 2

Serial dilution

Quantitative transfer of liquids.

- Preparation of dilute acids from concentrated acids
- Preparation of various dilute solutions

Unit 3

Buffers

Concept of a buffer, Henderson-Hasselbach equation, working of a pH meter.

- Preparation of a buffer of given pH and molarity.

Unit 4

Spectrophotometric techniques

Principle , instrumentation and applications of UV-visible and fluorescence spectroscopy.

- Determination of the absorption maxima and molar extinction coefficient (of a relevant organic molecule).
- Measurement of fluorescence spectrum.
- Determination of concentration of a protein solution by Lowry/BCA method.
- Determination of nucleic acid concentration and purity

Unit 5

Introduction and importance of virtual labs in Biochemistry

Semester III

16BCU304-B **CONCEPTS IN GENETICS** **3H-3C**

Instruction hours/week: L: 3 T:0 P:0 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students:

- On understanding of the principles and concepts of genetics
- On the concepts of genetic disorders
- On the concepts of different types of mutations (inversions, deletions, duplications and translocations)
- On understanding the structure-function relationship of a specific gene
- On different model systems to study hereditary concepts
- On pedigree analysis

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the principles and concepts of genetics
2. Understand the basis of genetic disorders
3. Comprehend different types of mutations (inversions, deletions, duplications and translocations)
4. Understand the structure-function relationship of a specific gene
5. Use appropriate model systems to study hereditary concepts
6. Perform pedigree analysis

Unit 1

Model organisms, Mendelism and chromosomal basis of heredity

Model organisms: *Escherichia coli*, *Saccharomyces cerevisiae*, *Drosophila melanogaster*, *Caenorhabditis elegans*, *Danio rerio* and *Arabidopsis thaliana*, Basic principles of heredity. Laws of probability & binomial expansion, formulating and testing genetic hypothesis, chromosomal basis of Mendelism -Sutton and Boveri hypothesis with experimental evidences.

Unit 2

Extensions of Mendelism, genetics of a gene, bacteria and viruses

Allelic variation and gene function- dominance relationships, multiple alleles, lethal alleles and null alleles. Pleiotropy gene interaction- epistatic and non-epistatic, interaction between gene(s) and environment. Penetrance and expressivity, norm of reaction and phenocopy. Complementation test, limitations of *cis-trans* test, intragenic complementation, rII locus of phage T4 and concept of cistron. Mechanism of genetic exchange - conjugation, transformation and transduction. Gene mapping in bacteria.

Unit 3

Genetics of eukaryotes and Human pedigree analysis

Linkage and crossing over, genetic mapping in eukaryotes, centromere mapping with ordered tetrads, cytogenetic mapping with deletions and duplications in *Drosophila*, detection of linked loci by pedigree analysis in humans and somatic cell hybridization for positioning genes on chromosomes. Pedigree conventions, characteristics of dominant and recessive inheritance. Applications of pedigree analysis.

Unit 4

Developmental genetics, epigenetics and chromosomal aberrations

Model organism for genetic analysis, *Drosophila* development, maternal effect genes, morphogens and zygotic gene activity in development, sex chromosomes and sex determination, dosage compensation of X-linked genes. Extra nuclear inheritance, tests for organelle heredity and maternal effect, epigenetic mechanisms of transcriptional regulation & genomic imprinting. Variations in chromosome number- monosomy and trisomy of sex and autosomes. Variations in chromosome structure- inversions, deletions, duplications and translocations.

Unit 5

Complex traits inheritance, population & evolutionary genetics

Inheritance of complex trait, analysis of quantitative traits, narrow and broad sense heritability, quantitative trait loci (QTL) and their identification. Hardy- Weinberg law, predicting allele and genotype frequencies and exceptions to Hardy-Weinberg principle. Molecular evolution - analysis of nucleotide and amino acid sequences, molecular phylogenies, homologous sequences, phenotypic evolution and speciation.

16BCU314-A TOOLS AND TECHNIQUES IN BIOCHEMISTRY PRACTICAL-A Semester III 3H-1C

Instruction hours/week: L:0 T:0 P:3 Marks: Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training:

- On the strength of concentrated acids
- On serial dilution of concentrated solutions
- How to determine the molar extension coefficient?
- How to obtain UV spectrum for a given compound?
- How to quantify nucleic acids using spectrophotometer?
- How to estimate the purity of nucleic acids

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Know the strength of laboratory acids and bases
2. Prepare serial dilution of concentrated solutions
3. Determine the molar extension coefficient
4. Obtain UV spectrum for a given compound
5. Quantify nucleic acids using spectrophotometer
6. Assess the purity of nucleic acids

Experiments

1. Preparation of a molar solutions
2. Preparation of normal solutions
3. Preparation of percentage and ppm solutions.
4. Preparation of dilute acids from concentrated acids
5. Preparation of various dilute solutions
6. Preparation of a buffer of given pH and molarity.
7. Determination of the absorption maxima and molar extinction coefficient (of a relevant organic molecule).
8. Measurement of UV spectrum of compounds .
9. Determination of concentration of a protein solution by Lowry/BCA method.
10. Determination of nucleic acid concentration and purity

16BCU314-B **CONCEPTS IN GENETICS PRACTICAL-B** **Semester III**
3H-1C

Instruction hours/week: L:0 T:0 P:3 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training:

- Sex determination
- On the method of induction of polyploidy
- On utility of buccal epithelial cells for genetic assessments
- On verification of Monohybrid crosses.
- On calculation of allele and genotype frequencies
- On plasmid conjugation in bacteria (transformation)

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Execute sex determination
2. Understand induction methods of polyploidy
3. Use buccal epithelial cellsfor genetic assessments
4. Understand monohybrid crosses.
5. Calculate allele and genotype frequencies
6. Understand bacterial transformation

Experiments

1. Squash preparation of salivary glands of Dipteran larva to observe polytene chromosomes.
2. Induction of polyploidy in onion roots.
3. Smear technique to demonstrate sex chromatin in buccal epithelial cells.
4. Monohybrid crosses in *Drosophila* for studying autosomal and sex-linked inheritance.
5. PTC testing in a population and calculation of allele and genotype frequencies.
6. Study of abnormal human karyotype and pedigrees (dry lab).
7. Conjugation in bacteria.

16BCU401 GENE ORGANISATION, REPLICATION AND REPAIR Semester IV
4H-4C

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

Equip the students:

- On the genome organization
- To study the mechanism of replication DNA in prokaryotes
- To study the mechanism of replication DNA in eukaryotes
- To study the mechanism of transcription in bothprokaryotes and eukaryotes
- To understand the mechanism of recombination and transposition of DNA
- To understand DNA damage, mutation and DNA repair process

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the genome organization
2. Understand the mechanism of replication DNA in prokaryotes
3. Understand the mechanism of replication DNA in eukaryotes
4. Understand the mechanism of transcription in both prokaryotes and eukaryotes
5. Understand the basis of recombination and transposition of DNA
6. Understand DNA damage, mutation and DNA repair process

Unit 1

Structure, Genes and genomic organization of DNA

DNA structure, features of the double helix, various forms of DNA, denaturation and reassociation of DNA. **Genes and genomic organization** - Genome sequence and chromosome diversity, definition of a gene, organization of genes in viruses, bacteria, animals and plants. Nucleosome structure and packaging of DNA into higher order structures.

Unit 2

Replication of DNA in Prokaryotes

The chemistry of DNA synthesis, DNA polymerase, the replication fork, origin of replication, enzymes and proteins in DNA replication, various modes of replication, stages of replication of *E. coli* chromosome, relationship between replication and cell division,

Unit3

Replication of DNA in Eukaryotes

Replication in eukaryotes. Comparison of replication in prokaryotes and eukaryotes. Inhibitors of DNA replication and applications in medicine. Supercoiling of DNA and its importance, topoisomerases, critical role of topoisomerases in cell, topoisomerase inhibitors and their application in medicine.

Unit 4

Recombination and transposition of DNA

Homologous recombination, proteins and enzymes in recombination, site-specific recombination, serine and tyrosine recombinases, biological roles of site-specific recombination, transposition, three classes of transposable elements, importance of transposable elements in horizontal transfer of genes and evolution.

Unit 5

Molecular basis of mutations and DNA repair

Importance of mutations in evolution of species. Types of mutations - transition, transversions, frame shift mutations, mutations induced by chemicals, radiation, transposable elements, Ames test. Various modes of DNA repair - Replication errors and mismatch repair system, repair of DNA damage, direct repair, base excision repair, nucleotide excision repair, recombination repair, translesion DNA synthesis.

Semester IV

16BCU402 GENE EXPRESSION AND REGULATION 4H-4C

Instruction hours/week: L:4 T:0 P:0Marks: Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students:

- To utilize stages of transcription for drug development
- To understand the stages of RNA biosynthesis
- To understand the antibiotics mechanism of action and applications in medicine
- To understand the specialized system for protein degradation
- To gain knowledge on RNA interference in the treatment of HIV and Cancer
- To gain knowledge on DNA repair mechanisms

.

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the mechanism of action of drugs
2. Understand the stages of RNA biosynthesis
3. Understand the mechanism of action of broad spectrum and specific antibiotics
4. Utilize the specialized system for protein degradation
5. Gain knowledge on RNA interference in the treatment of HIV and Cancer
6. Gain knowledge on DNA repair mechanisms.

Unit 1

Biosynthesis of RNA in prokaryotes

RNA polymerases, transcription cycle in bacteria, sigma factor, bacterial promoters, identification of DNA binding sites by DNA footprinting, the three stages of RNA synthesis, initiation, elongation and termination, rho-dependent and rho-independent termination. Inhibitors of transcription and applications as anti-microbial drugs.

Unit 2

Biosynthesis of RNA in eukaryotes

Comparison between prokaryotic and eukaryotic transcription. Transcription by RNA polymerase II, RNA polymerase II core promoters, general transcription factors, various types of RNA processing, transcription by RNA polymerase I and III. Inhibitors of eukaryotic transcription and their applications. Comparison of fidelity of transcription and replication.**RNA splicing-** Chemistry of RNA splicing, the spliceosome machinery, splicing pathways, group I and group II introns, alternative splicing, exon shuffling, RNA editing.

Unit 3

Biosynthesis of proteins

The genetic code-Degeneracy of the genetic code, wobble in the anticodon, features of the genetic code, nearly universal code. **Biosynthesis of proteins-** Messenger RNA, transfer RNA, attachment of amino acids to tRNA, the ribosome - initiation, elongation and termination of translation, regulation of translation. Comparison of prokaryotic and eukaryotic protein synthesis. Use of antibiotics in understanding protein synthesis and applications in medicine.**Protein targeting and degradation -** Post translational modifications, glycosylation, signal sequences for nuclear transport, bacterial signal sequences, import of proteins by receptor mediated endocytosis, specialized systems for protein degradation.

Unit 4

Regulation of gene expression in prokaryotes

Principles of gene regulation, negative and positive regulation, concept of operons, regulatory proteins, activators, repressors, DNA binding domains, regulation of lac operon and trp operon, induction of SOS response, synthesis of ribosomal proteins, regulation by genetic recombination, transcriptional regulation in λ bacteriophage.

Unit 5

Regulation of gene expression in eukaryotes

Heterochromatin, euchromatin, chromatin remodeling, regulation of galactose metabolism in yeast, regulation by phosphorylation of nuclear transcription factors, regulatory RNAs, riboswitches, RNA interference, synthesis and function of miRNA molecules, phosphorylation of nuclear transcription factors.

Semester IV

16BCU403 IMMUNOLOGY 4H-4C

Instruction hours/week: L:3 T:1 P:0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Organs involved in immunity
- Acquired and innate arms of immune system
- The significance of humoral and cell mediated immunity during infection
- Various immunodeficiency diseases and hypersensitive reactions
- Structure and function of various immune cells and their role to combat infection
- Principles of vaccination

Course outcomes (CO's)

After successful completion, the students will understand

1. Organs involved in immunity
2. Acquired and innate arms of immune system
3. The significance of humoral and cell mediated immunity during infection
4. Various immunodeficiency diseases and hypersensitive reactions
5. Structure and function of various immune cells and their role to combat infection
6. Principles of vaccination

Unit 1

Cells and organs of the immune system and immunity

Hematopoiesis, cells of the immune system, primary and secondary lymphoid organs and tissues (MALT). Anatomical barriers, cell types of innate immunity, soluble molecules and membrane associated receptors (PRR), connections between innate and adaptive immunity, cell adhesion molecules, chemokines, leukocyte extravasation, localized and systemic response.

Unit 2

Antigens, Antibodies and receptor diversity

Antigens and haptens, factors that dictate immunogenicity, B and T cell epitopes. Structure and distribution of classes and subclasses of immunoglobulins (Ig), Ig fold, effector functions of antibody, antigenic determinants on Ig and Ig super family**.** Dreyer-Bennett hypothesis, multigene organization of Ig locus, mechanism of V region DNA rearrangement, ways of antibody diversification.

Unit 3

Biology of the B and T lymphocyte and complement system

Antigen independent phase of B cell maturation and selection, humoral response – T-dependent and T-independent response, anatomical distribution of B cell populations. Structure and role of T cell receptor, and co-receptor, T cell development, generation of receptor diversity, selection and differentiation. Complement activation by classical, alternate and MB lectin pathway, biological consequences of complement activation, regulation and complement deficiencies.

Unit 4

Cell mediated cytotoxic responses and hypersensitivity

General properties of effector T cells, cytotoxic T cells (Tc), natural killer cells; NKT cells and antibody dependent cellular cytotoxicity (ADCC). Organ specific and systemic autoimmune diseases, possible mechanisms of induction of autoimmunity, Gell and Coombs classification, IgE mediated (Type I) hypersensitivity antibody mediated cytotoxic (Type II) hypersensitivity, immune complex mediated (type III) hypersensitivity and cell mediated (Type IV) hypersensitivity.

Unit 5

Antigen presentation, MHC complex and transplantation

General organization and inheritance of MHC, structure, distribution and role of MHC class I and class II proteins, linkage disequilibrium, pathways of antigen processing and presentation. Immunological basis of graft rejection, clinical manifestations, immunosuppressive therapy and privileged sites. Vaccines - active and passive immunization, types of vaccines.

Semester IV

16BCU411 GENE ORGANISATION, REPLICATION AND REPAIR 4H-2C

PRACTICAL -10

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

To impart hands-on training on:

- The isolation of prokaryotic chromosomal DNA
- The isolation of eukaryotic chromosomal DNA
- Determination of melting temperature for the given nucleotide sequence
- Concepts of hyper and hypo chromicity
- Determination of viscosity
- Verification of Chargaffs rule (purine=pyrimidine)

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Isolate prokaryotic chromosomal DNA
2. Isolate eukaryotic chromosomal DNA
3. Determine the melting temperature for the given nucleotide sequence
4. Know the concepts of hyper and hypo chromicity
5. Determine the viscosity of DNA
6. Verify Chargaffs rule (purine=pyrimidine)

Experiments

1. Verification of Chargaff's rule by paper chromatography.
2. Ultraviolet absorption spectrum of DNA and RNA.
3. Determination of DNA and RNA concentration by A260nm.
4. Determination of the melting temperature and GC content of DNA.
5. A study on the viscosity of DNA solutions.
6. Isolation of chromosomal DNA from *E. coli* cells.

Semester IV

16BCU412 **GENE EXPRESSION AND REGULATION** **4H-2C**
PRACTICAL - 11

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40**External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training:

- To analyze total nucleic acids from planttissue
- To analyze total nucleic acids from animal tissue
- To isolate mRNA using affinity chromatography
- On the synthesis of cDNA
- On the gene expression using RT-PCR
- To study Lac Operon

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Estimate total nucleic acids from plant tissue
2. Estimate total nucleic acids from animal tissue
3. Isolate mRNA using affinity chromatography
4. Synthesize cDNA
5. Perform RT-PCR
6. Test Lac Operon in E. coli cells

Experiments

1. Extraction of total nucleic acids from plant tissue.
2. Isolation of mRNA from yeast by affinity chromatography.
3. cDNA synthesis
4. Assessment of gene expression using RT-PCR.
5. Induction of Lac Operon.

16BCU413 **IMMUNOLOGY PRACTICAL - 12** **Semester IV** **4H-2C**

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

To impart hands-on training on:

- Isolation of lymphocytes
- Purification of immunoglobulins using protein A
- Immunodiffusion techniques (Single and Double)
- Agglutination techniques
- Blood grouping
- ELISA

Course outcomes (CO's)

1. Will perform isolation of lymphocytes
2. Purify of immunoglobulins using protein A
3. Perfom Immunodiffusion techniques (Single and Double)
4. Agglutination techniques
5. Blood grouping
6. ELISA

Experiments

1. Isolation of lymphocytes from blood and macrophages from peritoneal cavity or spleen.
2. Purification of immunoglobulins.
3. Assays based on precipitation reactions - Ouchterlony double diffusion (ODD) and Mancini radial immunodiffusion.
4. Assays based on agglutination reactions - Blood typing (active) & passive agglutination.
5. Enzyme linked immune-sorbent assay (ELISA).

Semester IV

16BCU404-A **BIOINFORMATICS** **3H-3C**

Instruction hours/week: L:3 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To understand basis and importance of bioinformatics and computer aided drug design
- To get exposed to different types of biological databases
- To look at a biological problem from a computational point of view
- To find out the methods for analyzing the expression, structure and function of proteins, and understanding the relationships between species
- To get knowledge on different methods for construction of a phylogenetic tree
- About the basics and importance of Proteomics and Genomics

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the basics of computer aided drug design
2. Perform experiment pair wise and multiple sequence alignment and will analyze the secondary and tertiary structures of protein sequences
3. Understand the data structure (databases) used in bioinformatics and interpret the information
4. Perform search on protein and metabolic pathway databases
5. Perform BLAST to identify the sequence of amino acids
6. Construct a phylogenetic tree using bioinformatics

Unit 1

Introduction to bioinformatics

Computer fundamentals - programming languages in bioinformatics, role of supercomputers in biology. Historical background. Scope of bioinformatics - genomics, proteomics, computer aided drug design (structure based and ligand based approaches) and Systems Biology. Applications of bioinformatics.

Unit 2

Biological databases and data retrieval

Introduction to biological databases - primary, secondary and composite databases, NCBI, nucleic acid databases (GenBank, EMBL, DDBJ, NDB), protein databases (PIR, Swiss-Prot, TrEMBL, PDB), metabolic pathway database (KEGG, EcoCyc, and MetaCyc), small molecule databases (PubChem, Drug Bank, ZINC, CSD). Structure viewers (RasMol, J mol), file formats.

Unit 3

Sequence alignment

Similarity, identity and homology. Alignment – local and global alignment, pairwise and multiple sequence alignments, alignment algorithms, amino acid substitution matrices (PAM and BLOSUM), BLAST and CLUSTALW.

Unit 4

Phylogenetic analysis

Construction of phylogenetic tree, dendrograms, methods of construction of phylogenetic trees - maximum parsimony, maximum likelihood and distance methods.

Unit 5

Protein structure prediction analysis and gene prediction

Levels of protein structure. Protein tertiary structure prediction methods –homology modeling, fold recognition and *ab-initio* methods. Significance of Ramachandran map. Introduction to genomics, comparative and functional genomics, gene structure in prokaryotes and eukaryotes, gene prediction methods and tools.

Semester IV

16BCU404-B PROTEIN PURIFICATION TECHNIQUES 3H-3C

Instruction hours/week: L:3 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students on:

- The basic principles involved in protein purification
- The basic chemical methods used for protein separation
- The principle, working and applications of different chromatographic techniques for protein characterization
- The principle, working and applications of different electrophoretic techniques for protein purification.
- The principle and applications of dialysis
- Advanced protein purification techniques

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the basic principles pertaining to protein purification
2. Perform gel exclusion, affinity and ion exchange chromatography for protein purification
3. Perform SDS PAGE and identify the molecular weight of the protein
4. Understand the principle, instrumentation and applications of HPLC
5. Perform dialysis technique
6. Identify and apply appropriate techniques for purification of the given protein sample

Unit 1

Salting in and salting out- Principle, Debye-Huckel theory, Hofmeister series,Ionic strength, Ammonium sulfate precipitation, applications

Unit 2

Gel exclusion Chromatography- Principle, instrumentation and applications of gel exclusion chromatography, data analysis Advantages and disadvantages.

Unit 3

Polyacrylamide gel electrophoresis- Principle, instrumentation and applications of PAGE. Gel polymerization- APS, TEMED. Separation and determination of molecular weight of proteins SDS, running gel, stacking gel, electrophoresis buffer,

Unit 4

HPLC -Principle, instrumentation and applications of HPLC. Preparation of column, adsorbent materials, void volume, efficiency factor. Van Deemter equation Applications- Manufacturing, legal, research, medical

Unit 5

Dialysis- Principle and types- Hemodialysis, pediatric, intestinal and peritoneal dialysis. Dialyzable substances. Medical applications.

16BCU414-A **BIOINFORMATICS PRACTICAL-A** **Semester IV 3H-1C**

Instruction hours/week: L:0 T:0 P:3 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training on:

- Sequence retrieval from NCBI database
- Searching Protein and DNA structure from PDB
- Different molecular file formats for saving a protein/DNA sequence
- Different sequence alignment databases.
- Applying the statistical approaches and models for phylogenetic analysis and tree reconstruction.
- Different protein structure prediction databases

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Be able to retrieve a sequence from NCBI database
2. Be able to search a protein from PDB
3. Understand the different molecular file formats for saving a protein/DNA sequence
4. Apply different sequence alignment databases such as BLAST and CLUSTALW.
5. Apply the statistical approaches and models for phylogenetic analysis and tree reconstruction.
6. Analyze and predict the protein structure using structure prediction databases

Experiments

1. Biological databases and data retrieval

Sequence retrieval (protein and gene) from NCBI.
Structure download (protein and DNA) from PDB.
Molecular file formats - FASTA, GenBank, Genpept, GCG, CLUSTAL, Swiss-Prot, FIR. Molecular viewer by visualization software.

2. Sequence alignment

BLAST suite of tools for pairwise alignment.
Multiple sequence alignment using CLUSTALW.

3. Phylogenetic analysis

Generating phylogenetic tree using PHYLIP.

4. Protein structure prediction and analysis

Primary sequence analyses (Protparam).
Secondary structure prediction (GOR, nnPredict, SOPMA).
Tertiary structure prediction (SWISSMODEL).
Protein structure evaluation - Ramachandran map (PROCHECK).

5. Gene structure prediction and analysis

Gene prediction using GENSCAN and GLIMMER.

16BCU501-A **CLINICAL BIOCHEMISTRY** **Semester V**
3H-3C

Instruction hours/week: L:3 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

Equip the students on:

- Organization of clinical laboratory
- Specimen collection
- Precision, accuracy
- Quality control
- Automated systems
- Assessment of organ functions

Course outcomes (CO's)

After successful completion of the course, the student will

1. Know about organization of clinical laboratory
2. Specimen collection
3. Precision, accuracy calculations
4. Quality control
5. Automated systems
6. Know to use the diagnosis to assess organ functioning

Unit 1

Introduction

Organization of clinical laboratory, Introduction to instrumentation and automation in clinical biochemistry laboratories safety regulations and first aid. General comments on specimen collection, types of specimen for biochemical analysis. Precision, accuracy, quality control, precautions and limitations.

Unit 2

Evaluation of biochemical changes in diseases

Basic hepatic, renal and cardiovascular physiology. Biochemical symptoms associated with disease and their evaluation. Diagnostic biochemical profile.

Unit 3

Assessment of glucose metabolism in blood

Clinical significance of variations in blood glucose. Diabetes mellitus.

Lipid profile

Composition and functions of lipoproteins. Clinical significance of elevated lipoprotein.

Unit 4

Liver function tests

Renal function tests and urine analysis

Use of urine strip / dipstick method for urine analysis.

Unit 5 Tests for cardiovascular diseases

Involvement of enzymes in diagnostics of heart disease including aspartate transaminase, isoenzymes of creatine kinase and lactate dehydrogenase and troponin.

Semester V

16BCU501-B BIOCHEMICAL CORRELATION OF DISEASE 3H-3C

Instruction hours/week: L:3 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Inborn errors of metabolism
- Nutritional disorders
- Life style disorders
- Autoimmune diseases
- Contagious diseases
- Vaccine strategies

Course outcomes (CO's)

After successful completion, the students will understand:

1. Inborn errors of metabolism
2. Nutritional disorders
3. Life style disorders
4. Autoimmune diseases
5. Contagious diseases
6. Vaccine strategies

Unit 1

Inborn errors of metabolism

Alkaptonuria, Phenylketonuria, Glycogen and Lipid storage diseases, SCID, Clotting disorders.

Unit 2

Nutritional deficiency based diseases

Kwashiorkar, Marasmus, Beri-beri, Scurvy, Pellagra, Anaemia, Night blindedness, Rickets, Osteomalacia, Osteoporosis, Wilson's disease.

Unit 3

Life style diseases

Obesity, Cardiovascular diseases, Atherosclerosis, Diabetes mellitus-II. Inflammatory Bowel Disease (IBD).

Hormonal Imbalances

Outline of hormone action and imbalances leading to disease - precocious puberty, hyper and hypopituitarism. Hyper and hypothyroidism.

Unit4

Autoimmune diseases

Concepts in immune recognition - self and non self discrimination, organ specific autoimmune diseases – Hashimoto's thyroiditis, Grave's disease, myasthenia gravis;. Systemic diseases - SLE, rheumatoid arthritis; Diabetes Mellitus-I.

Diseases caused due to misfolded proteins

Alzheimer's, Huntington's disease, Kuru, Creutzfeldt-Jakob disease, Sickle cell anaemia, Thalessemia.

Unit 5
Infectious diseases
Viral infection (polio, measles, mumps, influenza, HIV); Bacterial infections (tetanus, diphtheria, tuberculosis, typhoid, cholera); Protozoan (*Plasmodium* and *Trypanosoma*) and parasitic infections. Vaccines against diseases. General strategies in the design and development of vaccines.

3H-1C

Instruction hours/week: L:0 T:0 P:3 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training on

- Collection and processing of serum
- Collection and processing of urine sample
- Assessment of liver function
- Assessment of renal function
- Assessment of cardiac function
- Principles behind Dipstick method for fast diagnosis

Course outcomes (CO's)

After successful completion, the students will understand

1. How to Collectand process serum/plasma samples
2. How to Collect and process urine samples
3. Assessment of liver function
4. Assessment of renal function
5. Assessment of cardiac function
6. Principles behind Dipstick method for fast diagnosis

Experiments

1. Collection of blood and storage
2. Separation and storage of serum
3. Estimation of blood glucose by glucose oxidase peroxidase method.
4. Estimation of triglycerides.
5. Estimation of bilirubin (direct and indirect).
6. Quantitative determination of serum creatinine and urea.
7. Estimation of creatine kinase.

Instruction hours/week: L:0 T:0 P:3 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training on

- The execution of glucose challenge and tolerance test
- Measurement of cholesterol
- Basis of cell counting using hemocytometer
- Principles behind automated cell counters
- Assessment of bone mineral density
- Measurement of thyroid hormones using ELISA

Course outcomes (CO's)

After successful completion, the students will understand

1. the execution of glucose challenge and tolerance test
2. Measurement of cholesterol
3. Basis of cell counting using hemocytometer
4. Principles behind automated cell counters
5. Assessment of bone mineral density
6. Measurement of thyroid hormones using ELISA

Experiments

1. Glucose tolerance test.
2. Lipid profile: triglycerides and total cholesterol.
3. Obesity parameters.
4. RBC counting and haemoglobin estimation.
5. Blood pressure measurements.
6. Bone density measurements (visit to a nearby clinic).
7. T4/TSH assays.

16BCU502-A BASIC MICROBIOLOGY 4H-4C

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Origin of microbiology field and theories
- Diverse nature of microbial organisms
- Life cycle of viruses
- Life cycle of bacteria
- Life cycle of algae, fungi and protozoa

Course outcomes (CO's)

After successful completion, the students will understand:

1. Origin of microbiology field and theories
2. Diverse nature of microbial organisms
3. Life cycle of viruses
4. Life cycle of bacteria
5. Life cycle of algae, fungi and protozoa
6. Emerging microbial threats

Unit 1

History of Development of Microbiology

Development of microbiology as a discipline, Spontaneous generation vs. biogenesis. Contributions of Anton von Leeuwenhoek, Louis Pasteur, Robert Koch, Joseph Lister, Alexander Fleming. Role of microorganisms in fermentation, Germ theory of disease, Development of various microbiological techniques and golden era of microbiology, Establishment of fields of medical microbiology and immunology through the work of Paul Ehrlich, Elie Metchnikoff, Edward Jenner

Unit 2

Diversity of Microbial world

Binomial Nomenclature, Whittaker's five kingdom and Carl Woese's three kingdom classification systems and their utility. Difference between prokaryotic and eukaryotic microorganisms. General characteristics of different groups: acellular microorganisms (Viruses, Viroids, Prions) and Cellular microorganisms (Bacteria, Algae, Fungi and Protozoa) with emphasis on distribution and occurrence, morphology, mode of reproduction and economic importance.

Unit 3

Viruses, viroids and prions

An introduction to viruses with special reference to the structure and replication of the following: Poxvirus, Poliovirus, HIV, T4 and λ phage, lytic and lysogenic cycles.

Unit 4

Bacteria

An account of typical eubacteria, chlamydiae & rickettsiae (obligate intracellular parasites), mycoplasma, and archaebacteria (extremophiles). Applications of bacteria in industry, environment and food.

Unit 5

Algae, Fungi and Protozoa

History of phycology; General characteristics of algae including occurrence, thallus organization, algae cell ultra structure, pigments, flagella, eyespot food reserves and vegetative, asexual and sexual reproduction. Applications of Algae in agriculture, industry, environment and food. Historical developments in the field of Mycology, significant contributions of eminent mycologists. General characteristics of fungi including habitat, distribution, nutritional requirements, fungal cell ultra- structure, thallus organization and aggregation, fungal wall structure and synthesis, asexual reproduction, sexual reproduction, heterokaryosis, heterothallism and parasexual mechanism. Economic Importance of Fungi in Agriculture, environment, Industry, medicine, food, biodeterioration, mycotoxins. General characteristics with special reference to Amoeba.

Semester V

16BCU502-B NUTRITIONAL BIOCHEMISTRY 4H-4C

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with

- Concepts of nutrition
- Calorific value of carbohydrates, fats and proteins
- Recommended dietary allowances
- Nutrition as a strategy to prevent diseases
- Nutrition deficiency disorders
- Food drug interactions

Course outcomes (CO's)

After successful completion, the students will understand

1. Concepts of nutrition
2. Calorific value of carbohydrates, fats and proteins
3. Recommended dietary allowances
4. Nutrition as a strategy to prevent diseases
5. Nutrition deficiency disorders
6. Food drug interactions

Unit 1

Introduction to Nutrition and Energy Metabolism

Defining Nutrition, role of nutrients. Unit of energy, Biological oxidation of foodstuff. measurement of energy content of food, Physiological energy value of foods, SDA. Measurement of energy expenditure. Direct and Indirect Calorimetry, factors affecting thermogenesis, energy utilization by cells, energy output – Basal and Resting metabolism, physical activity, factors affecting energy input - hunger, appetite, energy balance Energy expenditure in man. Estimating energy requirements, BMR factors Recommended Nutrient Intakes (RNI) and Recommended Dietary Allowances for different age groups.

Unit 2

Dietary carbohydrates, lipid and health

Review functions of carbohydrates. Digestion, absorption ,utilization and storage, hormonal regulation of blood glucose. Dietary requirements and source of carbohydrates, Dietary fiber, role of fibre in lipid metabolism, colon function, blood glucose level and GI tract functions.

Review of classification, sources, functions, digestion, absorption, utilization and storage. Essential Fatty Acids; Functions of EFA, RDA, – excess and deficiency of EFA. Lipotropic factors, role of saturated fat, cholesterol, lipoprotein and triglycerides. Importance of the following: a) Omega – fatty acids. Omega 3/ omega 6 ratio b) Phospholipids c) Cholesterol in the body d) Mono, Polyunsaturated and Saturated Fatty Acids. Dietary implications of fats and oils, Combination ratios of n6 and n3, MUFA, PUFA and SFA.

Unit 3

Dietary Proteins and health

Review of functions of proteins in the body, Digestion and absorption. Essential and Non-essential amino acids. Amino Acid Availability Antagonism, Toxicity and Imbalance, Amino acid Supplementation. Effects of deficiency. Food source and Recommended Dietary Allowances for different age group. Amino acid pool. NPU, Biological Value , Nitrogen balance. PEM and Kwashiorkor.

Unit 4

Fat and water soluble Vitamins, Minerals

Vitamin A, C, E,K and D Dietary sources, RDA, Adsorption, Distribution, Metabolism and excretion(ADME), Deficiency. Role of Vitamin A as an antioxidant, in Visual cycle, dermatology and immunity. Role of Vitamin K in Gamma carboxylation. Role of Vitamin E as an antioxidant. Extra-skeletal role of Vitamin D and its effect on bone physiology. Hypervitaminosis. Vitamin C role as cofactor in amino acid modifications. Niacin-Metabolic interrelation between tryptophan, Niacin and NAD/ NADP. Vitamin B6-Dietary source, RDA, conversion to Pyridoxal Phosphate. Role in metabolism, Biochemical basis for deficiency symptoms. Vitamin B12 and folate; Dietary source, RDA, absorption, metabolic role Biochemical basis for deficiency symptoms. Calcium, Phosphorus and Iron - Distribution in the body digestion, Absorption, Utilization , Transport, Excretion, Balance, Deficiency, Toxicity, Sources, RDA. Calcium: Phosphorus ratio, Role of iron in prevention of anemia. Iodine and iodine cycle. Iodine, Fluoride, Mg, Cu, Zn, Se, Manganese, Chromium, Molybdenum Distribution in the human body, Physiology, Function, deficiency, Toxicity and Sources

Unit 5

Assessment of Nutritional status, Food and drug interactions and Nutriceuticals

Anthropometric measurements; Z scores, BMI, skinfold, circumference ratios. Biochemical assessment; Basal metabolic panel, Comprehensive metabolic panel, CBC, Urine Analysis, Assessment of Anemia, ROS assessment, GTT and glycosylated Hb, Differential diagnosis of B12 and folate.Nutrient interactions affecting ADME of drugs, Alcohol and nutrient deficiency, Anti-depressants, psychoactive drugs and nutrient interactions, Appetite changes with drug intakes and malnutrition. Food as medicine.

Semester V

15BCU503-A **PLANT BIOCHEMISTRY** **4H-4C**

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with

- Plant cell structure
- Synthesis of proteins by plants
- Metabolism in plants
- Microenvironment for plant growth
- Nitrogen fixation
- Biosynthesis of secondary metabolites by plants

Course outcomes (CO's)

After successful completion, the students will understand

1. The difference between Animal and Plant cell structure
2. Significance of plant proteins
3. Metabolism in plants
4. Various microenvironment required for plant growth
5. The process of nitrogen fixation
6. Biosynthesis of secondary metabolites by plants

Unit 1

Plant cell structure and Photosynthesis

Structure of Plasma membrane, Vacuole and tonoplast membrane, cell wall, plastids and peroxisomes. Photosynthesis - Structure of PSI and PSII complexes, Light reaction, Cyclic and non cyclic photophosphorylation.

Unit 2

Carbon assimilation and Plant Respiration

Carbon assimilation - Calvin cycle and regulation; C4 cycle and Crassulacean acid metabolism (CAM). Respiration - Overview of glycolysis, Alternative reactions of glycolysis, Regulation of plant glycolysis, Translocation of metabolites across mitochondrial membrane, TCA cycle, Alternative NAD(P)H oxidative pathways; Cyanide resistant respiration and Photorespiration.

Unit 3

Nitrogen metabolism

Biological Nitrogen fixation by free living and in symbiotic association, structure and function of enzyme Nitrogenase. Nitrate assimilation: Nitrate and Nitrite reductase. Primary and secondary ammonia assimilation in plants; ammonia assimilation by Glutamine synthetase- glutamine oxoglutarate amino transferase (GS-GOGAT) pathway. Seed storage proteins in legumes and cereals.

Unit 4

Regulation of plant growth and Plant tissue culture

Introduction to plant hormones and their effect on plant growth and development, Regulation of plant morphogenetic processes by light. Plant tissue culture - Cell and tissue culture techniques, types of cultures: organ and explants culture, callus culture, cell suspension culture and protoplast culture. Plant regeneration pathways: organogenesis and somatic embryogenesis. Applications of cell and tissue culture and somoclonal variation.

Unit 5

Plant Secondary metabolites

Representatives alkaloid group and their amino acid precursors, function of alkaloids, Examples of major phenolic groups; simple phenylpropanoids, Coumarins, Benzoic acid derivatives, flavonoids, tannins and lignin, biological role of plant phenolics, Classification of terpenoids and representative examples from each class, biological functions of terpenoids.

Semester V

16BCU503-B ADVANCED CELL BIOLOGY 4H-4C

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students:

- To understand the organization of plasma membrane
- To understand the cell- cell interactions
- To understand the cell cycle and cell division
- On the structure and functions of various sub-cellular organelle
- To understand the cancer biology
- To grow and characterize the cancer cell

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Composition of plasma membrane and transport in nucleus
2. Understand the methods of cell-cell interactions
3. Know the stages in cell cycle and cell division
4. Recognise the mechanism behind the protein sorting and transport to their destinations
5. Ensure the stages of cancer
6. Cell culture studies and instrumentation analysis.

Unit 1

Plasma Membrane and Nuclear Transport

Properties and Composition of Cell Membrane; Structure of Nuclear Envelope; Nuclear Pore Complex; Transport Across Nuclear Envelope; Regulation of Nuclear Protein Import and Export. **Transport across plasma membrane**

Unit 2

Cell-Cell Interaction

Cell-Cell Interactions and Cell-Matrix Interactions; Components of Extracellular Matrix: Collagen and Non-Collagen Components; Tight Junctions; Gap Junctions; Desmosomes; Hemidesmosomes: Focal adhesions and plasma desmata; Cell wall; Role of cell interaction in development

Unit 3

Cell Cycle and Programmed Cell Death

Overview of The Cell Cycle; Eukaryotic Cell Cycle; Events Of Mitotic Phase; Cytokinesis; Events Of Meiosis And Fertilization; Regulation Of Cell Division And Cell Growth; Apoptosis And Necrosis, Stem Cells And Maintenance of Adult Tissues, Hematopoiesis,
Embryonic Stem Cells and Therapeutic Cloning.

Unit 4

Cancer Biology

Development and causes Of Cancer; Genetic Basis of Cancer; Oncogenes, Tumor Viruses; Molecular Approach to Cancer Treatment.

Unit 5

Advanced Methods in Cell Biology

Ultracentrifugation, Fluorescence Microscopy- FACS, Confocal Microscopy, Electron Microscopy, Plant and Animal Cell Culture, Immunohistochemistry.

Semester V

16BCU504-A MOLECULAR BASIS OF NON- INFECTIOUS HUMAN DISEASE 4H-4C

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with

- Concept of infection
- Classification of infectious pathogens
- Steps involved in the infection of a pathogenic bacteria
- Steps involved in the infection of a pathogenic viruses
- Steps involved in the infection of a pathogenic parasites
- Methods to prevent/treat infections

Course outcomes (CO's)

After successful completion, the students will understand

1. Concept of infection
2. Variety of infectious pathogens
3. The process of infection by pathogenic bacteria
4. The process of infection by pathogenic viruses
5. The process of infection by pathogenic parasites
6. How to prevent/treat infections

Unit 1

Nutritional disorders

Overview of major and minor nutrient components in the diet. Balanced diet and the concept of RDA. Nutrient deficiencies; Kwashiorkor and Marasmus, Scurvy, beri beri, pellagra and B12 deficiency, Xerophthalmia and Night blindness, Vitamin D deficiency, Vitamin K deficiency. Discuss with relation to biochemical basis for symptoms. Obesity and eating disorders like Anorexia nervosa and Bullemia.

Unit 2

Metabolic and Lifestyle disorders

Diabetes mellitus A metabolic syndrome and the relationship with hypertension, obesity, hypothyroidism and stress. Cardio vascular disorders and Atherosclerosis- defining the broad spectrum of ailments that fall in this category, understanding the factors that contribute to the syndrome, stages of disorder and the management of the condition. Irritable bowel syndrome- biochemistry behind the disorder and the influence of diet, stress and environment on the condition.

Unit 3

Cancer: Initiation and stages of progression

Cancer: characteristics of a transformed cell, causes and stages of Cancer, molecular basis for neoplastic growth and metastasis, Proto-oncogenes and tumor suppressor genes; Cancer causing mutations; Tumor viruses; Biochemical analysis of cancer; Molecular approaches to cancer treatment.

Unit 4

Diseases due associated with misfolded proteins and multifactorial complex disorders

Introduction to protein folding and proteosome removal of misfolded proteins; etiology and molecular basis for Alzheimer's, Prion diseases, Huntington's Chorea, sickle cell anemia, Thalassemia. Understanding the definition of multifactorial diseases. Polygenic diseases and the relationship of environmental factors and genetic makeup in the onset of diseases.

Disorders of mood : Schizophrenia, dementia and anxiety disorders. Polycystic ovarian syndrome, Parkinson's disease, ALS

Unit 5

Monogenic diseases

In born errors in metabolism: PKU, Alkaptonuria, Maple syrup urine disease; Receptor and transport defects: Cystic fibrosis, Long QT syndrome, familial hypercholesterolemia, Achondroplasia. Hemoglobinopathies and clotting disorders.

Semester V

16BCU504-B MOLECULAR BASIS OF INFECTIOUS DISEASES 4H-4C

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with

- Concept of infection
- Classification of infectious pathogens
- Steps involved in the infection of a pathogenic bacteria
- Steps involved in the infection of a pathogenic viruses
- Steps involved in the infection of a pathogenic parasites
- Methods to prevent/treat infections

Course outcomes (CO's)

After successful completion, the students will understand

1. Concept of infection
2. Variety of infectious pathogens
3. The process of infection by pathogenic bacteria
4. The process of infection by pathogenic viruses
5. The process of infection by pathogenic parasites
6. How to prevent/treat infections

Unit 1

Classification of infectious agents

Bacteria, Viruses, protozoa and fungi. Past and present emerging and re-emerging infectious diseases and pathogens. Source, reservoir and transmission of pathogens, Antigenic shift and antigenic drift. Host parasite relationship, types of infections associated with parasitic organisms. Overview of viral and bacterial pathogenesis. Infection and evasion.

Unit 2

Overview of diseases caused by bacteria

Detailed study of tuberculosis: History, causative agent, molecular basis of host specificity, infection and pathogenicity, Diagnostics, Therapeutics, inhibitors and vaccines. Drug resistance and implications on public health. Other bacterial diseases including Typhoid, Diphtheria, Pertussis, Tetanus, Typhoid and Pneumonia.

Unit 3

Overview of diseases caused by Viruses

Detailed study of AIDS, history, causative agent, pathogenesis, Diagnostics, Drugs and inhibitors. Other viral diseases including hepatitis, influenza, rabies, chikungunya and polio.

Unit 4

Overview of diseases caused by Parasites

Detailed study of Malaria, history, causative agents, Vectors, life cycle, Host parasite interactions, Diagnostics, Drugs and Inhibitors, Resistance, Vaccine development.

Other diseases including leishmaniasis, amoebiasis.

Unit 5

Overview of diseases caused by other organisms

Fungal diseases, General characteristics. Medical importance of major groups, pathogenesis, treatment.

Semester V

16BCU512-A BASIC MICROBIOLOGY PRACTICAL-A 4H-2C

Course objectives

To impart hands-on training on

- Sterilization methods
- Autoclave, filtration techniques
- Preparation of microbial culture media
- Assessment of bacterial strains
- Pure cultures using streaking methods
- Colony counting

Course outcomes (CO's)

After successful completion, the students will understand

1. Sterilization methods
2. Autoclave, filtration techniques
3. Preparation of microbial culture media
4. Assessment of bacterial strains
5. Pure cultures using streaking methods
6. Colony counting

Experiments

1. Microbiology Laboratory Practices and Biosafety.
2. To study the principle and applications of important instruments (biological safety cabinets, autoclave, incubator, BOD incubator, hot air oven, light microscope, pH meter).
3. Preparation and sterilization of culture media for bacterial cultivation.
4. Study of different shapes of bacteria, fungi, algae, protozoa using permanent slides/pictographs.
5. Staining of bacteria using Gram stain.
6. Isolation of pure cultures of bacteria by streaking method.
7. Estimation of CFU count.

Semester V

16BCU512-B **NUTRITIONAL BIOCHEMISTRY PRACTICAL-B** **4H-2C**

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

To impart hands-on training on

- Estimation of vitamin
- Homocysteine measurements
- Assessment of protein energy malnutrition
- Obesity assessments
- Oxidative stress measurements
- BMD assessments

Course outcomes (CO's)

After successful completion, the students will understand

1. Estimation of vitamin
2. Homocysteine measurements
3. Assessment of protein energy malnutrition
4. Obesity assessments
5. Oxidative stress measurements
6. BMD assessments

Experiments

1. Bioassay for vitamin (Any one).
2. Homocystiene estimation by colorimetric method.
3. Serum/ urine MMA estimation.
4. Anthropometric identifications for Kwashiorkor, Marasmus and Obesity.
5. Determination of oxidative stress: TBARS, antioxidant enzymes in hemolysate.
6. Vitamin A/E estimation in food item.
7. Bone densitometry /bone ultrasound test demonstration (visit to a nearby clinic)

16BCU513-A PLANT BIOCHEMISTRY PRACTICAL-A 4H-2C

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives:

To impart hands-on training on

1. Preparation of plant tissue lysates
2. Estimation of enzymes during germination
3. Extraction of enzymes from plant source
4. Separation of plant metabolites using TLC
5. PTC media preparation, culturing techniques
6. Vitamin assessments.

Course outcomes (CO's)s:

After successful completion, the students will understand

1. Preparation of plant tissue lysates
2. Estimation of enzymes during germination
3. Extraction of enzymes from plant source
4. Separation of plant metabolites using TLC
5. PTC media preparation, culturing techniques
6. Vitamin assessments

Experiments

1. Induction of hydrolytic enzymes proteinases /amylases/lipase during germination
2. Extraction and assay of Urease from Jack bean
3. Estimation of carotene/ascorbic acid/phenols/tannins in fruits and vegetables
4. Separation of plant pigments by TLC
5. Culture of plants (explants).

16BCU513-B ADVANCED CELL BIOLOGY PRACTICAL-B 4H-2C

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

To impart hands-on training:

- Sterilization analysis and good culture pracice
- On how to visualize the cells
- On phase contrast microscopy
- On how to identify different stages of mitosis and meiosis
- On staining techniques to identify the cell types
- On how to count the cells using hemocytometer

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Follow the good practice in lab
2. Be able to visualize the cells
3. Use the phase contrast microscopy at appropriate magnifications
4. Identify the cells using staining techniques
5. Interpret various stages of cell division
6. Count the cells manually using hemocytometer

Experiments

1. Aseptic technique and good culture practice
2. Measurement of the size of the cells in light microscope
3. Isolation of organelles by sub-cellular fractionation.
4. Study of cell viability /death assay by use of trypan blue and MTT assay.
5. Study of apoptosis through analysis of DNA fragmentation patterns in mitochondria.
6. Identification and study of cancerous cells using permanent slides and photomicrographs.
7. Histopathology procedure (Demo)

16BCU601-A GENETIC ENGINEERING AND BIOTECHNOLOGY 3H-3C

Instruction hours/week: L:3 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objective

Equip the students on:

- Principles behind recombinant DNA technology
- Tools required for recombinant DNA technology
- Cloning and expression vectors
- Production of industrial relevant proteins
- Production of drugs for clinical applications
- Application of rDNA technology in crop improvement

Course outcomes (CO's)

After successful completion, the students will understand

1. The principles behind recombinant DNA technology
2. Various tools required for recombinant DNA technology
3. Cloning and expression vectors
4. Production of industrial relevant proteins
5. Production of drugs for clinical applications like insulin
6. Application of rDNA technology in crop improvement

Unit 1

Introduction to recombinant DNA technology : Overview of recombinant DNA technology. Restriction and modification systems, restriction endonucleases and other enzymes used in manipulating DNA molecules, separation of DNA by gel electrophoresis. Extraction and purification of plasmid and bacteriophage DNA.

Joining of DNA fragments : Ligation of DNA molecules. DNA ligase, sticky ends, blunt ends, linkers and adapters. Synthetic oligonucleotides, synthesis and use.

Unit 2

Cloning vectors for prokaryotes and eukaryotes : Plasmids and bacteriophages as vectors for gene cloning. Cloning vectors based on *E. coli* plasmids, pBR322, pUC8, pGEM3Z. Cloning vectors based on M13 and λ bacteriophage. Vectors for yeast, higher plants and animals.

DNA sequencing : DNA sequencing by Sanger's method, modifications based on Sanger's method. Automated DNA sequencing. Pyrosequencing.

Unit 3

Introduction of DNA into cells and selection for recombinants : Uptake of DNA by cells, preparation of competent cells. Selection for transformed cells. Identification for recombinants - insertional inactivation, blue-white selection. Introduction of phage DNA into bacterial cells. Identification of recombinant phages. Introduction of DNA into animal cells, electroporation.

Methods for clone identification

The problem of selection, direct selection, marker rescue. Gene libraries, identification of a clone from gene library, colony and plaque hybridization probing, methods based on detection of the translation product of the cloned gene.

Unit4

Polymerase chain reaction: Fundamentals of polymerase chain reaction, designing primers for PCR. Studying PCR products. Cloning PCR products. Real time PCR.

Expression of cloned genes : Vectors for expression of foreign genes in *E. coli*, cassettes and gene fusions. Challenges in producing recombinant protein in *E. coli*. Production of recombinant protein by eukaryotic cells. Fusion tags and their role in purification of recombinant proteins.

Unit 5

Applications of genetic engineering in Biotechnology: Site–directed mutagenesis and protein engineering. Applications in medicine, production of recombinant pharmaceuticals such as insulin, human growth hormone, factor VIII.

Recombinant vaccines. Gene therapy. Applications in agriculture - plant genetic engineering, herbicide resistant crops, problems with genetically modified plants, safety concerns.

16BCU601-B RECOMBINANT DNA TECHNOLOGY 4H-4C

Instruction hours/week: L:3 T:0 P:0 Marks: Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Handling of *Escherichia coli*
- Isolation of plasmid DNA from *Escherichia coli*
- Restriction digestion using enzymes
- Amplification using PCR
- Transformation of plasmid into *Escherichia coli*
- Western blotting demonstration

Course outcomes (CO's)

After successful completion, the students will

1. Know the precautions of handling *Escherichia coli*
2. Isolate the plasmid DNA from *Escherichia coli*
3. Restriction digestion using enzymes such as ECoRI, Hind III
4. Amplify the rDNA using PCR
5. Understand the techniques related to transformation of plasmid into *Escherichia coli*
6. Understand the steps involved in Western blot analysis

Unit 1

Work flow for *in silico* cloning

Unit 2

Preparation of media, antibiotic solution, culturing of *E. coli*, isolation of single Colonies

- Preparation of LB broth and agar.
- Inoculation of medium.
- Preparation of glycerol stocks of bacterial strains.
- Obtaining isolated colonies by streak plate method.
- Preparation of stock solutions.

Unit 3

Overview of plasmid vectors and methods of isolation Isolation of plasmid by alkaline lysis method.

- Isolation of plasmid DNA using column chromatography (kit).

Unit 4

Characterization of plasmid by gel electrophoresis

- Digestion of plasmid DNA with restriction enzymes and analysis of the fragments.

Unit 5

Cloning of a gene in a vector and functional analysis No. of Hours : 12

Polymerases chain reaction (parametric optimization, primer designing), ligation, introduction of DNA construct into host cells, selection of recombinants.

- Amplification of DNA segment/gene of interest by PCR.
- Purification of PCR product, digestion of insert and vector by restriction enzymes for directional cloning, purification of insert and digested vector by gel extraction.
- Ligation of vector and insert.
- Preparation of competent cells of *E. coli* DH5α and transformation with the ligation mixture.
- Functional selection of recombinants (blue/white selection and eGFP fluorescence).

Semester VI

16BCU602-A BIOSTATISTICS 4H-4C

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Definition and representation styles of data
- Analysis of data using correlation to understand the interdependence
- Analysis of data using regression to understand the interdependence
- To learn various measures of central values and standard deviation.
- To understand the relationship between two variables.
- To test the significance of a particular data by various parameters.

Course outcomes (CO's)

After successful completion, the students will:

1. Use appropriate representation styles to present the data
2. Perform correlation analysis
3. Perform regression analysis
4. Calculate mean, median, mode and standard deviation.
5. Calculate the relationship between two variables.
6. Test the significance of a particular data by various parameters.

Unit 1

Definitions-Scope of Biostatistics- Variables in biology, collection, classification and tabulation of data- Graphical and diagrammatic representation.

Unit 2

Measures of central tendency – Arithmetic mean, median and mode. Measures of dispersion-Range, standard deviation, Coefficient of variation.

Unit 3

Correlation – Meaning and definition - Scatter diagram –Karl Pearson's correlation coefficient. Rank correlation.

Unit 4

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

Unit 5

Test of significance: Tests based on Means only-Both Large sample and Small sample tests - Chi square test - goodness of fit.

Semester VI

16BCU602-B FUNDAMENTALS OF NANO TECHNOLOGY 4H-4C

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with

- Structure and modeling of Nanoparticles
- Interactions between atoms and molecules
- Building block of nanostructures
- Synthesis and formation of nanotubes
- Nanomachine and devices
- Characteristic feature of nanomachine

Course outcomes (CO's)

After successful completion, the students will understand

1. Structure and properties of nanoparticles
2. Types of forces formed between atoms and molecules
3. Biological building blocks and nanostructures
4. Synthesis and application of nanomaterial
5. Types of nanomachines and nanodevices
6. Applications of nanodevices

Unit 1

Nanostructre and Properties: Structure- size Dependence of properties, Localized particles- Donors, Acceptors and Deep Traps, Mobility, Excitons Properties of nanoparticles-Metal nanoclusters –theoretical modeling of nanoparticles, geometric structure, electronic structure, Semiconducting nanoparticles-optical properties, photofragmentation, coulombic explosion.

Unit 2

Forces Between Atoms and Molecules: Thermodynamic aspects of intermolecular forces – Strong intermolecular forces – Covalent and coulomb interactions – Interactions involving polar molecules – Interactions involving thepolarization of molecules – Van der Waals forces – Repulsive forces, total intermolecular pairpotentials, and liquid structure – Special Interactions – Hydrogen bonding, Hydrophobic, and Hydrophilic interactions.

Unit 3

Biological Materials: Biological building blocks-sizes of building blocks and nanostructures, polypeptide Nanowire and protein nanoparticles. Nucleic acids-DNA Double nanowire, biological nanostructures-examples of proteins, miscelles and vesicles, multilayer films.

Unit 4

Synthesis of Nanomaterials: Top down – ball milerling; Bottom up – co-precipitaion – sol-gel – electrodeposition – using natural nanoparticles – chemical vapor deposition. The

Carbon Nanotube – New Forms of Cabon – Types of Nanotubes – Formation of Nanotubes – Uses for nanotubes – Biological Applications

Unit 5

Applications of nanotechnology: Nanomachines and nanodevices- Microelectromechanical systems (MEMSs), Nanoelectrochemical systems (NEMSs)- fabrication, nanodevices and nanomachines, molecular and supramolecular switches- photochemical switching, current-voltage characteristics

Semester VI

16BCU603-A **DRUG BIOCHEMISTRY** **4H-4C**

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Definition and classification of drugs
- Basics of Pharmacokinetics of a drug
- Basics of Pharmacodynamics in living system
- Mechanism of action of drugs
- Toxicity assessment
- Drug abuse

Course outcomes (CO's)

After successful completion, the students will understand

1. Definition and classification of drugs
2. Basics of Pharmacokinetics of a drug
3. Basics of Pharmacodynamics in living system
4. Mechanism of action of drugs
5. Toxicity assessment
6. Drug abuse

Unit 1

Introduction to drug Biochemistry: Classification, routes of administration – factors influencing dosage and drug action, Absorption and distribution of drugs, binding of drugs to plasma proteins, Drug Dose relationship (LD_{50}, ED_{50}, therapeutic index), Drug – Receptor interaction, Drug binding forces, Receptor theories, Drug – Receptor interaction. Bioavailability; Pharmaco kinetics.

Unit 2

Drug metabolism: Drug Biotransformation pathways - phase I – oxidation, reduction and hydroxylation. Phase II- Conjugation, Elimination of drugs from body system. Storage of drugs in adipose tissue.

Unit 3

Drug abuse; drug dependence; drug resistance- Biological mechanism, ways to overcome.

Chemotherapy: Antibacterials – Mode of action of sulfonamides, penicillin, streptomycin, tetracycline, chloramphenicol, antiviral drugs, antifungal drugs; Antimetabolites of folate, purines & pyrimidines, Anti tubercular drugs.

Unit 4

Mechanism of action drugs used in the treatment of diabetes mellitus (Acarbose, Biguanides), AIDS (Azidophymidine, Didanosine), cancer(Mechlorethamine, Busulfan), heart (Amrinone, Digoxin) and kidney disorder (Benzophiadiazines, furosemide); antiepileptic drug(Lamictal, Tapclob), drugs for cough (Dextromethorphane Hydrobromide, Noscapine) and bronchial asthma (Salbutamol, Aminophylline), diuretics

(Manitol, Xanthine), anti ulcer drugs (Cimetidine, Ranitidine) and drugs for fever (Paracetamol, Ibuprofen).

Unit 5

Toxicology- Introduction, definition and disciplines of toxicology, classification of toxicity and toxicants, Mechanisms of toxic effect, treatment of intoxication, methods in toxicology testing, heavy metal toxicity and chelation therpy. Environmental pollution, mycotoxins, mushroom poisons

Semester VI

16BCU603-B FOOD PRESERVATION TECHNOLOGY 4H-4C

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with

- Microorganisms in food
- Methods of food preservation
- Types and applications of Preservation Technology
- Principle and processing of packaging
- Importance and functions of quality control
- Methods of quality and processed the food products.

Course outcomes (CO's)

After successful completion, the students will understand

1. Microorganism in natural food and control mechanism
2. Principles and food preservative methods
3. Types and applications of Preservation Technology
4. Introduction and development of Packaging
5. Objectives of food quality
6. Assessment of food quality and integrated food law

Unit 1

Microbiology of Food: History of microbiology of food. Types of micro-organism normally associated with food -mold, yeast, and bacteria, Microbial growth pattern, physical and chemical factors influencing destruction of micro-organisms. Micro-organisms in natural food products and their control mechanisms. Food chemistry-definition and importance

Unit 2

Principles of Food Processing: Principles of Preservation methods. Dehydration: Novel evaporation /dehydration techniques, spray drying. Vacuum drying- osmotic dehydration - efficient drying systems, High salt and high sugar preservations, infrared heating Freezing of foods, freeze concentration and drying, methods of freeze concentration. High Temperature operations, sterilization and Pasteurization.

Unit 3

Types of Preservation Technology: Microwave Processing: Microwave, properties, heating mechanism. Applications of microwave in food processing, effect of microwave on food nutrient. Food Irradiation Technology: General aspects of irradiation, ionizing radiation, irradiation process, units, mechanism, advantages and disadvantages of irradiation process. Ultrasound in food processing and preservation: Introduction and its application in food processing.

Unit 4

Food Packaging: Introduction to packaging. Packaging operation, package-functions and design. Principle in the development of protective packaging. Deteriorative changes in foodstuff and packaging methods for prevention, shelf life of packaged foodstuff, methods to extend Shelf-life. Evaluation of packaging, and package performance, packaging equipment, package standards and regulation, bar coding material. Biodegradable packaging.

Unit 5

Food Quality and Food Laws: Objectives, Importance and functions of quality control. Methods of quality, assessment of food materials-fruits, vegetables, cereals, dairy products, meat, poultry, egg and processed food products. Sanitation and hygiene - Integrated Food Laws

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

To impart hands-on training in the usage of software's to perform:

- Measures of central tendency
- Coefficient of variation
- Correlation analysis
- RANK Correlation test
- Regression analysis
- T-test

Course outcomes (CO's)

After successful completion, the student will:

1. Measure mean, median and mode
2. Perform Coefficient of variation
3. Execute Correlation analysis
4. Perform Regression analysis
5. Perform RANK correlation test
6. Analysis the difference between means using T-test

Experiments

1. Mean for individual, discrete series using SPSS Package.
2. Mean for continuous series using SPSS Package.
3. Median for individual and discrete series using SPSS Package..
4. Median for continuous series using SPSS Package..
5. Mode for individual and discrete series using SPSS Package..
6. Standard deviation for individual and discrete series using SPSS Package.
7. Coefficient of variation for individual and discrete series using SPSS Package.
8. Karl Pearson's Correlation using SPSS Package.
9. Rank Correlation Coefficient for Untied Rank using SPSS Package.
10. Rank Correlation Coefficient for Tied Rank using SPSS Package.

Semester VI

16BCU612-B FUNDAMENTALS OF NANO TECHNOLOGY PRACTICAL-B 4H-2C

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Synthesis of silver nanoparticles
- Synthesis of nanoparticles using leaf extract
- Synthesis of nanoparticles using fungal part
- Synthesis of Nanoparticles using *Actinomyces*
- Characterization of nanoparticles by UV spectroscopy
- Synthesis and Characterization of nanoparticles using FTIR

Course outcomes (CO's)

After successful completion, the students will

1. Know the synthesis of nanoparticles
2. Synthesis of nanoparticles from plant extract
3. Synthesis of nanoparticles from fungi
4. Synthesis of nanoparticles from Actinomycete
5. Characterization of nanoparticles by UV spectroscopy
6. Analysis of chemical composition by FTIR

Experiments

1. Nanoparticles synthesis using chemical methods
2. Synthesis of nanoparticles using plant extracts
3. Nanoparticles synthesis using fungal species
4. Nanoparticles synthesis using *Actinomyces*
5. UV-Visible spectra analysis of nanoparticles (Demo)
6. FT-IR spectra analysis of nanoparticles (Demo)

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

To impart hands-on training in:

- Handling of small experimental animals
- Enteral and parenteral route of drug administration
- Assessment of behavioual changes
- Assessment of drug toxicity
- Calculation of LD_{50}
- Monitoring for adverse effects of drugs

Course outcomes (CO's)

After successful completion, the student will:

1. Handle small experimental animals such as rats, mice and rabbits
2. Learn Enteral and parenteral route of drug administration
3. Learn to assess behavioual changes
4. Learn to assess drug toxicity
5. Learn the basis of LD_{50}
6. Monitor adverse effects of drugs

Experiments

1. Behavioural Changes upon drug Adminstration
2. Liver toxicity Studies
    SGOT
    SGPT
    GGT
3. Renal toxicity studies
    Urea
    Uric acid
    Creatinine
4. LD_{50} Determination

16BCU613-B FOOD PRESERVATION TECHNOLOGY PRACTICAL-B 4H-2C

Instruction hours/week: L:0 T:0 P:4 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

To impart hands-on training on

- Preparation of syrups with fruits
- Assessment of product quality and shelf-life
- Measurement of carrier gas movement
- Determine the presence of coliform in food
- Determine the heterotrophic plate count of bacteria.
- Identification of microflora in food.

Course outcomes (CO's)

After successful completion, the students will understand

1. Preparation of syrups with fruits
2. Measurement of water vapour in carrier gas
3. Determine the types of chemicals migrate from packaging into food.
4. Heterotrophic plate count of bacteria in packed food
5. Determine the counts of staphylococcus aureus in bread.
6. Identification of the microflora behavior and physicochemical changes undertaken in a food

Experiments

1. Preparation of syrups, Grape squash and orange squash.
2. Water vapor transmission rate of different packaging materials
3. Determination of migration characteristics of packaging materials
4. Determination of migration characteristics of packaging materials using different simulants
5. Determination of bacterial counts of polymer – packed foods during storage
6. Determination of tensile strength of given packaging material
7. Determination of bursting strength of given packaging material
8. Determination of coliforms and fungal counts of polymer – packed foods during storage
9. Microwave and radiation preservation of meat, poultry and fish
10. Identification and chemical resistance of plastic films.
11. Estimation of shelf-life of packaged food stuff.
12. Detection of adulteration in foods.

DEPARTMENT OF BIOCHEMISTRY
FACULTY OF ARTS, SCIENCE AND HUMANITIES
KARPAGAM UNIVERSITY
Karpagam Academy of Higher Education
(Deemed University, Established Under Section 3 of UGC Act 1956)
Eachanari PO, Coimbatore – 641 021, India.

M.Sc., - BIOCHEMISTRY

PREAMBLE

- Biochemistry is the study of chemistry and relating to biological organisms.
- Biochemistry is sometimes viewed as a hybrid branch of organic chemistry which specializes in the chemical processes and chemical transformations that take place inside of living organisms.
- Biochemistry incorporates everything in size between a molecule and a cell and all the interactions between them.
- Biochemistry essentially remains the study of the structure and function of cellular components (such as enzymes and cellular organelles) and the processes carried out both on and by organic macromolecules - especially proteins, but also carbohydrates, lipids, nucleic acids and other biomolecules.
- All life forms alive today are generally believed to have descended from a single proto-biotic ancestor, which could explain why all known living things naturally have similar biochemistries.
- Biochemistry is most simply put the chemistry of life.

OBJECTIVE

- To inspire and educate students, today and for the future, in the concepts and skills of Biochemistry; to prepare them to think about, to work with, and to enjoy the concepts of Biochemistry and apply them at appropriate situation in practical life.

Blue – Employability
Green – Entrepreneurship
Red – Skill Development

Code: 16BCP101

16	- Academic Year
BC	- Biochemistry
P	- Masters Degree
First Digit	- Semester number (1, 2, 3 and)
Second digit	- Theory (0); Practical (1); Project (9)

Last digit **-** Paper number in the concerned semester (1, 2…)
***** The candidate has to select any one elective course from three options in each semester

PROGRAMME OUTCOMES (POs)

PG biochemistry graduate will be able to achieve

a. **Critical Thinking and Effective Communication:** The teaching is intended to kindle the critical thinking of the student to address problems (Problem based learning) and equip them to list out their understanding (Activity based learning). The syllabus also includes journal paper presentation and analysis on specific topics of all subjects which will be evaluated by faculty handling the subject.

b. **Future Career:** To prepare students for future careers in the various fields of biochemistry such as academic and research institution.

c. **Societal Contribution and Social Interaction:** The Biochemistry Program will benefit the society on the whole by adding to the highly skilled scientific workforce, particularly for the biomedical research sectors, in the academic, industry as well as for research laboratories across the country and the globe. Inside the classrooms group discussion is encouraged on topics during the last five minutes of class to improve the understanding and to share the knowledge and view point. Outside the classroom, various outreach programis conducted on various health initiatives.

d. **Identification and Differential Diagnosis:** To acquire **b**iochemistposition in leading hospitals and scientist position in industries.

e. **Ethics:** Students learn about the significance of having right moral features to develop good interpersonal skills.

f. **Environment and Sustainability:** Understand the role of citizen to maintain sustainable environment and encourage Eco-friendly initiatives.

g. **Self-directed and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context of health and disease.

PROGRAMME SPECIFIC OUTCOME (PSOs)

h.To prepare students for future careers in various fields of biochemistry by enhancing analytical and critical-thinking skills in which a core understanding of the chemistry of biological processes are important for the understanding of human health and disease.

i. To equip highly skilled scientific workforce, particularly for the biomedical research sectors, in the academic, industry as well as for research laboratories across the country and the globe.

j.The skills acquired in the program will help the students in acquiring scientific, academic and industrial positions such as Analyst, Research Scientist at Pharma (R&D) Industries, Academician, Project Associates (JRF, SRF), Doctoral Research positions abroad at India and abroad. Clinical biochemist at renowned hospitals, medical coding, Scientific writers.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

I. The course aims to impart advanced and in depth understanding on all the human physiological and pathological state. To understand the molecular process and their perturbation during disease.

II. The program covers various aspects of Biomolecule estimation and regulation to ascertain health and disease state. metabolic pathways alterations along with their regulation at the replication, transcriptional, translational, and post-translational levels including by studying DNA, RNA and protein molecules, immunology, endocrinology, advancements in rDNA technologies to circumvent genetic disorders.

III. Further to enrich research understanding various genomic, proteomic and bioinformatics tools are added. Animal cell culture, IPR, Biostatistics, research methodology, clinical research and Plant tissue culture are offered as elective papers to get specialized in a specific area. The final semester is devoted exclusively to enrich the students to address specific research objective.

16BCP101 CHEMISTRY OF BIOPOLYMERS 4H-4C

Instruction hours/week: L: 4 T: 0 P: 0Marks: Internal: **40** External: **60**Total: **100**
End Semester Exam: 3 Hours

Course objectives
Equip the students:

- To understand the biological significance of polysaccharides in living systems
- To understand thestructure of amino acids and proteins and their biological significance in living systems
- To know the structure, properties and biological significance of lipids in biological systems
- To understand lipid peroxidation and the importance of antioxidants in degenerative diseases
- To understand the structure and functional role of nucleic acid in living systems
- To understand the nucleic acid interaction with proteins and their molecular aspects.

Course outcomes (CO's)
After successful completion of the course, the student will:

1. Understand the structure and organization of storage and structural polysaccharides in living system
2. Recognize the structure and importance of proteins and amino acids in biological system.
3. Recall the role of lipids in bio membrane including signal transduction
4. Equip with the knowledge on antioxidants and their importance
5. Differentiate the structure, types, properties and functions of DNA and RNA
6. Recognize the nucleic acid interaction with proteins and gain knowledge in molecular techniques.

UNIT I

Polysaccharides: Occurrence, structure and biological functions of cellulose, chitin, starch and glycogen. Fructans, arabinans and galactans (brief account). Dietary fibre. Occurrence, structure, and biological functions of bacterial cell wall polysaccharides and blood group antigens. Structure and significance of glycoconjucates - Glycosaminoglycans – structure and biological role of hyaluronic acid, chondroitin sulfate and heparin, sialic acid; glycoproteins and glycolipids.

UNIT II

Proteins: Orders of protein structure. Primary structure – determination of amino acid sequence of proteins. The peptide bond – The Ramachandran plot. Secondary structures – α-helix, β-sheet and β-turns. Fibrous proteins- Collagen triple helix-Structure and assembly. Globular proteins-forces involved, folding process and folding patterns. Tertiary structure –Myoglobin organisation. Quarternary structure of proteins- Structure of haemoglobin. Models for haemoglobin allostery. Quintinary structure-basics only.

Protein function as enzymes, defensive and transport.

UNIT III

Lipids: Introduction- simple lipid, compound lipids-phospholipids, glycolipids and storage lipids. Properties of lipids-Micelles, bilayers and liposomes. Significance of lipid anchored protein-prenylated, fatty acylated and GPI anchored proteins. Lipoproteins – classification and composition. Lipids as signals,cofactors and pigments(Brief account).Lipid peroxidation and antioxidants.

UNIT IV

Nucleic acids: DNA double helical structure – Watson and Crick model. A, B and Z forms of DNA. Tertiary and quadraplex structures of DNA. DNA supercoiling and linking number. Properties of DNA – DNA bending, buoyant density, viscosity, denaturation and renaturation – The cot curve – Chemical synthesis of DNA. Major classes of RNA – mRNA, rRNA, tRNA, sn RNA, siRNA, hn RNA – structure and biological functions. Secondary and tertiary structure of tRNA and rRNA.

UNIT V

Nucleic acid interaction with proteins: DNA binding motifs in proteins – the basic helix loop helix (bHLH) motif, zinc finger, the leucine zipper, helix-loop helix and homeo domain. RNA binding motifs in proteins. Molecular aspects of protein-nucleic acid binding – direct interactions. Techniques characterizing nucleic acid-protein complex – gel retardation assay, DNase I footprinting.

Semester I

16BCP102 ENZYMES AND MICROBIAL TECHNOLOGY 4H-4C

Instruction hours/week:L: 4 T: 0 P:0 Marks: Internal: **40** External: **60**Total: **100**

End Semester Exam: 3 Hours

Course objectives
Equip the students:

- To understand the structure of enzymes and their classifications.
- To analyse the active site of enzymes by various experimental approaches.
- To learn the kinetics of enzyme catalysed reactions.
- To learn the importance of enzyme immobilization and its wide applications in medicine and industries.
- To study various fermentor designs, culture systems and the application of fermentation process in industry.
- To learn the fermented products preparation, downstream processing and its industrial applications.

Course outcomes (CO's)
After successful completion of the course, the student will:

1. Understand the mechanism of action of enzymes and their classifications.
2. Recall the kinetics of enzyme catalyzed reactions
3. Understand the enzyme immobilization concept and apply the knowledge to produce more products out of it.
4. Gain knowledge in designing fermentor based on Industrial needs
5. Have clear understanding of microbe's implication to derive a product and the role of enzymes in downstream process.
6. Clear in concept of various culture techniques and apply the suitable one for a particular application.

UNIT I

Proteins: Enzymes - Nomenclature and classification of Enzymes with examples; coenzymes and cofactors. Active site rule: catalytic triad; Mechanism of enzyme action - Lock and key model, Induced fit model. Factors affecting enzyme activity. Isolation, purification and characterization of enzymes.

UNIT II

Enzyme Kinetics : Derivation of MM equation, LB plot, Eadie Hofstee plot and Hanes plot. Enzyme inhibition-Types and differentiation of competitive, uncompetitive, Non-competitive inhibition, Allosteric inhibition, feed-back inhibition and regulation. Allosteric enzymes- cooperativity, Hills equation, Physiological significance of sigmoidal behaviour. R and T states and K and V series. Mechanism of action of enzymes - chymotrypsin and lysozyme. Enzyme based diagnostic techniques.

UNIT III

Immobilization of enzymes: Methods of immobilization - adsorption, covalent binding, entrapment, membrane confinement. Effect of immobilization on enzyme. Use of enzymes in detergents, Leather Industry, Wool Industry, Food, Dairy, Juice and Beverage Industry, Sugar Industry. Uses in medicine. Enzyme engineering. Artificial enzymes and synzymes, Abzymes, ribozymes, enzymes in organic solvents.

UNIT IV

Microbial Growth: Balanced and Unbalanced microbial growth; Measurement of growth; Principles of microbial growth and culture systems-batch culture, fed batch culture, semi-continuous culture and continuous culture. Isolation and screening of industrially important microbes. Important strains for better yield. Design of a fermenter. Types of bioreactor-Continuous stirred tank, Bubble column, Airlift, Fluidized bed, Packed bed and Photobioreactor.

Solid substrate fermentation and Media fermentation. Examples of bioprocess for the production of biomass. Microbial metabolic products-primary and secondary metabolites.

UNIT V

Production of fermented products and downstream processing: Production of alcohol and alcoholic beverages. Microbial production of Organic acids: Source, recovery and uses of Citric acid, Lactic acid, Acetic acid and L-ascorbic acid. Production of antibiotics: Penicillin and Tetracyclin. Bioinsecticides: Production of Bacterial and fungal polysaccharides, commercial production of Xanthan gum and pullulan. Production of edible mushroom and SCP.

Biofertilizers (*Phosphobcterium* and *Rhizobium sp*.,- Basics only).

Semester I

16BCP103 BIOINSTRUMENTATION AND GOOD LABORATORY PRACTICE

4H-4C

Instruction hours/week:L: 4 T: 0 P:0 **Marks: I**nternal**: 40** External**: 60Total: 100**

End Semester Exam: 3 Hours

Course objective

Equip the students:

- To learn centrifugation techniques and their applications in biological system.
- To understand the principle of colorimetry and advanced spectrophotometric techniques
- To learn the basics, advanced techniques and applications of chromatography
- To learn the importance of calibration of analytical instruments.
- To learn the principle and applications of electrophoresis and radioisotopic techniques in biological sample analysis
- In good laboratory practices procedures.

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Apply the centrifugation techniques in biological system
2. Use colorimetry and spectrophotometry for sample analysis
3. Use chromatographic techniques for sample analysis
4. Calibrate analytical instruments
5. Detect radioisotopes and analyze samples using electrophoretic techniques
6. Follow the good laboratory practices procedures.

UNIT I

Centrifugation: Principle, types of centrifuges, Principles and applications of analytical and preparative centrifuges, density gradient and ultra centrifugation. Relative molecular mass determination and sedimentation coefficient. Sub cellular fractionation of cellular components. Applications.

Colorimetry: Beer's law and Lambert's law. Principle of photoelectric colorimeter, Spectroscopy – Properties of electromagnetic radiations, Instrumentation and applications of UV Visible and mass spectroscopy, FTIR, NIR, Raman Spectroscopy, reverse spectroscopy. Spectrofluorimetery, atomic spectroscopy, NMR spectroscopy.

UNIT II

Chromatography: Principles, Types – paper chromatography, thin layer chromatography and HPTLC, Column chromatography - Ion exchange chromatography, affinity chromatography, gel filtration chromatography, Low pressure liquid chromatography (LPLC) and High Performance Liquid Chromatography (HPLC)- Normal and Reverse Phase Gas -liquid chromatography Mass spectroscopy (GC – MS), LC-MS, MALDI-TOF, ICPMS, Application of Chromatography.

UNIT III

Electrophoresis: Principle, instrumentation and applications of agarose gel electrophoresis, sodium dodecyl sulphate – polyacrylamide gel electrophoresis (SDS-PAGE), native PAGE, isoelectric focusing, immunoelectrophoresis, 2D gel electrophoresis. Pulse field gel electrophoresis, capillary electrophoresis, gel documentation – Applications.

UNIT IV

Radioisotopic techniques : Introduction, nature of radio activity, types and rate of radio active decay, units of radio activity, detection and measurement of radioactivity-Geiger-Muller counter, solid and liquid scintillation counter. Autoradiography, X-ray diffraction and circular dichorism. Non radioactive, fluorescent methods.
Flowcytometry: Principles and applications**.**
Western Blot: Principles and applications**.**

UNIT V

Good Laboratory Practices: Quality concepts, personal protective equipment. General safety-biological safety, chemical safety and fire safety. data generation and storage, quality control documents, retention samples, records, audits of quality control facilities. List of Regulations to be followed**.** Laboratory safety procedure- glass ware, equipment safety, hands protection, precaution to be undertaken to prevent accident and contamination.
GLP – an overview and basic information, Scope. Principles of GLP: Test Facility Organization and Personnel, Test Systems, Test and Reference Items, Standard Operating Procedures, Performance of the Study, Reporting of Study Result, Storage and Retention of Records and Materials. Responsibilities in GLP. Implementing of GLP in non GLP analytical laboratory.

Semester I

16BCP104 **CELLULAR BIOCHEMISTRY** **4H-4C**

Instruction hours per week: L: 4 T: 0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students

- To recall the knowledge in organization and dynamics of mitochondria.
- To understand the molecules within the cell and interaction between cells that allows construction of multicellular organisms.
- To understand cytoskeleton network and extracellular matrix.
- To learn cell signaling mechanisms and pathways
- To understand cell cycle, cell division and cell death process.
- To recognize cancer and mutational changes at gene level.

Course outcomes (CO's)

Upon successful completion of this course, participants will be able to:

1. Recognize the organization and dynamics of mitochondria.
2. Recognize cell cell interaction and their mechanism.
3. Maintain cytoskeleton structure and functions of micro, macro and intermediary filaments.
4. Recognize the cell signaling mechanisms and pathways.
5. Enumerate the phases of cell cycle, events in cell division and mechanism of cell death
6. Relate properties of cancerous cells to mutational changes in gene function.

UNIT I

Membrane: Membrane bilayer- models, Membrane lipids- fluidity, asymmetry, phase transition, Liposomes.

Membrane proteins – Types, Orientation, Mobility – Experiments, flippases, proteins of RBC membrane, RBC ghosts, Bacteriorhodopsin, Porins – aquaporin.

solubilisation of proteins, lipid anchored proteins, Carbohydrates – cell surface carbohydrates – Lectins and selectins.

UNIT II

Membrane transport: Passive diffusion, facilitated diffusion in erythrocytes, Carriers and ion channels, Ion concentration gradients.

Uniporter Catalyzed transport, active transport systems. Transport process driven by ATP- Ion pumps: Calcium ATP ase; Na^+ K^+ ATPase; Mechanism, Gastric H^+ K^+ ATPase, ABC superfamily – ATPases that transport peptides and drugs (MDR proteins).

Co-transport by Symporters and antiporters, Group translocation.

Osmosis and receptor mediated endocytosis.

UNIT III

Mitochondria – Reduction potential, electron transport chain – Complexes, Q-cycle, Cyt C oxidase complex, Translocation of protons and the establishment of a proton motive force, machinery for ATP formation and chemi-osmotic mechanism, ATP synthase – Experiments, inhibitors and uncouplers of oxidative phosphorylation.
Microfilaments – Actin – Stuctures, Assembly, Myosin. Microtubules – Organisation and dynamics, kinesin and dynein. Cilia and flagella – Structure and functions, intermediary filaments.

UNIT IV
Cell – Matrix interaction: Cell – Cell interaction: Extra cellular matrix; Collagen, hyaluronan and proteoglycans, laminin, integrins and fibronectins.
Cell – Cell adhesion: Specialised junctions – Desmosomes, Gap junctions, Tight junctions. Adhesion molecules – Cadherins, Connexins.

Cell – Cell signaling – Signalling molecules and their receptors; functions of cell surface receptors, pathways of intracellular signal transduction, second messengers, G-protein coupled receptors, receptor tyrosine kinases, Ras, MAP kinases.

UNIT V
Cell cycle and cancer: Cell cycle and its control, Cell cycle control in mammalian cells, checkpoints in cell cycle regulation.
Cancer: Properties of tumour cells and genetic basis and onset of cancer.
Tumour viruses – DNA & RNA Viruses as transforming agents – mechanism.
Tumour suppressor genes and functions of their products. Carcinogenic effect of chemicals and radiation. Apoptosis (Programmed cell death) – pathways, regulators and effectors on apoptosis.

Semester I

16BCP105A **CORE ELECTIVE -I** **4H-4C**

PLANT BIOCHEMISTRY

Instruction hours/week:L: 4 T: 0 P: 0Marks: Internal: **40** External: **60**Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students

- To recollect the knowledge in plant cell organelles and their functions
- To understand the functions and regulations of major biosynthetic pathways of plants,
- To learn and understand the role of plant growth substances in various stages of plant growth
- Obtaining knowledge on tissue culture techniques
- To learn metabolic engineering to increase the production of plant secondary metabolites
- To become familiar with the transformation process and its applications

Course outcomes (CO's)

Upon successful completion of this course, participants will be able to:

1. Recall the understanding of plant cell organelles and their functions
2. Recognize the source of food for other organisms and their synthesis in plants
3. Recall the role of plant growth substances in various stages of plant growth
4. Equip with tissue culture techniques
5. Understand the role of secondary metabolites and their production and importance
6. Equip with gene transfer techniques

UNIT I

Plant cell: Structure of plant cell – cell wall, vacuoles, plastids, mitochondria, peroxisomes and Golgi complex. Overview of photosynthesis: photosynthetic apparatus, reaction center, photosystems I and II, mechanism of photosynthesis-cyclic and non cyclic photophosphorylation; evidences in support of light and dark reactions.

UNIT II

Assimilatory mechanisms in plants: Photorespiration and water consumption, CO_2 assimilation by C3 and C4 plants, CAM plants. Nitrogen assimilation; reduction of nitrate, nitrogen fixation in symbiotic and non-symbiotic plants, nitrogen cycle. Sulphate metabolism in leaf; sulfite reduction and sulphur cycle, glutathione synthesis. Carbon and phosphorus cycles.

UNIT III

Lipid metabolism in plants: Biosynthesis of fatty acids in plastids, synthesis of waxes, triacyl glycerols and glycolipids. Synthesis of chlorophyll. Carotenoid formation. Synthesis of nitrogenous compounds: caffiene synthesis, ureide synthesis in nodulated legumes.

Secondary oxidative mechanisms: β- oxidation, ω- oxidation, glyoxylate pathway.

UNIT IV

Plant growth substances: chemistry, biosynthesis, mode of action and physiological role of auxins, gibberellins, cytokinins, abscisic acid and ethylene. Factors influencing endogenous growth- Biotic and Abiotic factors. Phytochromes: molecule, biological display, functions as light sensor. Senescence: biochemical changes, regulation.

UNIT V

Plant secondary metabolites: Synthesis of secondary metabolites- shikimate pathway. Alkaloids, flavonoids, terpenoids, phenols and glycosteroids-Occurrence, distribution & functions, Production of secondary metabolites in plants, stages of secondary metabolite production, PTC- Totipotency, meristematic and nodal cultures-Callus induction. Somatic embryogenesis. Metabolic engineering for increased production of secondary metabolites.

Semester I

16BCP105 B **CORE ELECTIVE –I** **4H-4C**

PLANT TISSUE CULTURE

Instruction hours/week:L: 4 T: 0 P:0 **Marks:** Internal**: 40** External**: 60Total: 100**

End Semester Exam: 3 Hours

Course Objectives:
Equip the students

- To understand the role of nutrients and hormones in plant growth and development
- To gain knowledge on media composition for plant tissue culture
- To maintain aseptic condition in laboratory
- To gain knowledge on setting up of plant tissue culture laboratory
- To understand plant transformation techniques
- To understand the applications of plant tissue culture

Course Outcomes (COs):
After completion of this course the student will be able to

1. Understand the role of nutrients and hormones in plant growth and development
2. Design media composition for plant tissue culture
3. Maintain aseptic condition in laboratory
4. set up a plant tissue culture laboratory
5. Carryout plant transformation techniques
6. Apply plant tissue culture for mass production of significant products.

UNIT I
Growth and Development:
Role of Plant Hormones in growth & development. Plant Nutrition - Effect of soil pH on mineral availability, uptake & assimilation of minerals and their physiological role.
Impact of macro, micro, vitamins in plant growth development. Allelopathic effect.

UNIT II
Introduction to plant tissue culture: Totipotency, Tissue culture Media (Composition and preparation). Nutritional components of tissue culture media. Plant Hormones- Types, structures, biosynthesis & metabolism. Basic concepts of aseptic cultures and its uses Different areas and applications of plant tissue culture.

UNIT III
Basic techniques in tissue culture: Design & lab setup of Tissue Culture laboratory. Types of culture, Initiation of callus and suspension cultures, Micro propagation (Organogenesis, Somatic Embryogenesis, Shoot tip culture, Rapid clonal propagation, Embryo Culture and Pollen culture).Production of haploids and their application, Storage of plant genetic

resources and Cryopreservation.

UNIT IV

Plant transformation technology: Ti &Ri Plasmid and thier transfer mechanisms, Use of Ti &Ri as vectors, Binary vectors, Use of 35s & other promoters genetic markers- methods of nuclear transformation, viral vectors & their applications, Use of reporter gene, Particle bombardment ,electroporation, Microinjection, Chloroplast transformation- transplastomics, Transformation of monocots, Transgene stability & gene silencing in Plant transformation.

UNIT V

Plant tissue culture and its applications: Transgenic plants - for– biotic (weeds, insects, viruses, fungi and bacteria) and abiotic (drought, salt, temperature, poor soil quality and oxidative) stress tolerance. Production of secondary metabolites. Molecular farming(improvement in protein, lipids, carbohydrates). Plant antibodies, vaccines, therapeutic proteins and active principles. Biofortication of important crops (rice and banana).

Semester I

16BCP105C **CORE ELECTIVE -I BIOPHARMACY** **4H-4C**

Instruction hours/week:L:4 T:0 P:0 **Marks:** Internal: **40** External: **60**Total: **100**
End Semester Exam: 3 Hours**Course**

Course objectives
Equip the student

- To explain the relationship among physicochemical and biological factors, dosage forms,
- To understand the routes of administration and therapeutic outcomes;
- To illustrate the principles of pharmaceutics and biopharmaceutics in dosage form design and development;
- To describe production procedures
- To learn quality control measurements and stability improvements for tablets and sterile products and different routes of drug administration in principles and applications
- To identify the needs and differences in drug use for various patient groups, and devise appropriate strategies from perspectives of dosage forms.

Course outcomes (CO's)
After completion of this course the student will

1. Explain biopharmaceutical, physiological, biochemical and cell biology-related aspects
2. Understand the transport and metabolism of drugs in the gastrointestinal tract and in the liver.
3. Explain mechanisms behind the transport of drug and metabolism and how drugs can interact with other drugs and food and methods to study these
4. Have developed its ability to plan, compile, analyse and report experiment that has importance for biopharmaceutical issues -
5. Recognize the regulatory requirements within the biopharmaceutical area
6. Describe the role of biopharmaceutics in drug development within the pharmaceutical industry

UNIT I
Phytochemistry: Authentication of medicinal palnts,Biosynthesis of primary and secondary metabolites - alkaloids, terpenoids. Phenolic compounds and coumarins.Classification and sources of alkaloids. Major classes in phenolic compounds – carotenoids, flavonoids, tannins and phenolic acids. Classification of terpenoids.

UNIT II
General extraction and isolation techniques for compounds from plants. Techniques involved in extraction of phytochemicals – Perculation, Soxhlet extraction,

Supercritical Fluid extraction, Pilot scale extraction, reflux and other methods. Factors affecting extraction.

UNIT III

Isolation and purification techniques – Thin layer and Column chromatography. Chemical fingerprinting – HPLC, HPTLC, FTIR, NMR and GC-MS.

UNIT IV

Biotechnology of medicinal plants: Production of secondary metabolites from plant culture. Indian Standard Specifications (ISI) laid down for sampling and testing of various drugs in finished form by the Bureau of Indian Standards. Toxicity testing in drugs and Safety.

UNIT V

Bioactive studies: Anticancer, antidiabetic, anti-inflammatory, hepatoprotectives, antimicrobials from medicinal plants. Antioxidants of plant origin – Reactive Oxygen Species (ROS), antioxidant polyphenols.

Semester I

16BCP111 **PRACTICAL- I** **4H-2C**

QUANTITATIVE ESTIMATION AND SEPARATION TECHNIQUES

Instruction hours / week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60**Total: **100**
End Semester Exam: 3 Hours

Course objectives

- To provide hands on experience on preparation of buffers and determination of pH of solutions
- To estimate the macromolecules quantitatively thro colorimetric procedures
- To perform fluorometric experiments and titrimetry
- To separate the macromolecules using TLC and column chromatography.
- To perform the secondary metabolite quantification using HPLC.
- Gain hands on training in protein extraction and purification techniques.

Course outcomes (CO's)
After completion of this course the student will

1. Prepare buffers and reagents based on the needs of experiments
2. Estimate macromolecules quantitatively thro colorimetric procedures
3. Estimate vitamins and calcium using fluorimetry and titrimetry
4. Quantify secondary metabolites using HPLC
5. Separate the macro molecules using TLC and column chromatography
6. Extract and purify protein from various source

Colorimetry
1. Isolation and estimation of starch from potato (Anthrone method)
2. Isolation and estimation of glycogen from liver (Anthrone method)
3. Estimation of Total carotenoids (Spectroscopic method)
4. Estimation of fructose in fruits (Resorcinol method)
5. Estimation of ascorbic acid (DNPH method)
6. Estimation of Vitamin E (Dipyrridyl method)

Fluorimetry
7. Estimation of thiamine from cereals or fruits
8. Estimation of riboflavin

Titrimetry
9. Estimation of lactose in milk
10. Estimation of calcium in milk

Separation techniques
11. Separation of amino acids by paper chromatography- circular, ascending & Descending.
12. Separation of plant pigments by TLC.

13. Separation of plant pigments by column chromatography.
14. Estimation of quercetin using HPLC (Demo).

Cell biology:

15. Preparation of standard buffer and determination of pH of buffers.
16. Subcellular fractionation by differential centrifugation and purity assessment with marker enzymes (Group Experiment).
17. Salting out of proteins using ammonium sulphate precipitation

Semester I

16BCP112 **PRACTICAL – II** **4H-2C**

PLANT BIOCHEMISTRY AND MICROBIOLOGY

Instruction hours/week: L:0 T:0 P: 4 **Marks:** Internal: **40** External**: 60Total: 100**

End Semester Exam: 3 Hours

Course objectives

Equip the students

- To screen phytochemicals and estimate the amount of secondary metabolites
- To handle microbiological techniques
- To identify microbes in soil and water samples
- To isolate, characterize and purify microbial enzymes
- To perform antibacterial activity of active compounds
- To gain hands on experience in plant tissue culture

Course outcomes (CO's)

After completion of this course the student will perform

1. Phytochemical screening and secondary metabolite estimation
2. Microbiological techniques
3. Microbial identification in soil and water samples
4. Isolation, characterization and purification of microbial enzymes.
5. Antibacterial activity of active compounds
6. Callus induction and regeneration of plantlets

Plant Biochemistry

1. Phytochemical screening of any one selected medicinal plant
2. Estimation of Tannins
3. Estimation of Flavonoids
4. Estimation of Chlorophyll
5. Estimation of Phenols

MICROBIOLOGY

6. Isolation of pure culture – serial dilution, pour plate, spread plate, streak plate methods.
7. Colony morphology – colony counting.
8. Staining techniques- simple, differential, spore, and fungal staining.
9. Antibiotic resistance / sensitivity test (Disc method)
10. Estimation of bacteria- growth curve of bacteria and generation time.
11. Identification of microorganisms – biochemical tests (IMVIC test)(Group Experiment)
12. Microbiology of potable water
13. Isolation, characterization and purification of ANY one of the following microbial enzymes
    a) Amylase
    b) Protease
14. Assay of Antibacterial of ANY ONE selected medicinal plant by Disc or Well diffusion and broth dilution method.

15. Assay of antifungal activity of ANY ONE selected medicinal plant by Disc or Well diffusion. TLC- Bioautography.

PLANT TISSUE CULTURE (Group experiment)

16. Preparation of tissue culture media
17. Surface sterilization
18. Induction of meristem culture
19. Callus induction.
20. Regeneration of shoot and root from callus culture.

Semester II

16BCP201 REGULATION OF METABOLIC PATHWAYS 4H-4C

Instruction hours/week:L: 4 T:0 P:0Marks: Internal: **40** External: **60**Total: **100**

End Semester Exam: 3 Hours

Course objectives

- To shed knowledge on generation and transformation of energy in metabolic pathways.
- To know the metabolic pathway of carbohydrate and their regulation with associated disorders.
- To learn fatty acid synthesis and degradation and their regulation
- To study the regulation of amino acid metabolismand its regulations with Metabolic disorders.
- To understand the inter relationship of carbohydrate, lipid , protein and nucleic acid metabolism and understand the importance of TCA cycle.
- To aware about the homeostatis of glucosemetabolites by intrinsic and extrinsic control mechanism.

Course outcomes (CO's)

After completion of this course the student will perform

1. Gain knowledge on glucose anabolic and catabolic pathways that ultimately control the glucose homeostatis.
2. know the metabolic pathway of amino acid and their regulation with associated disorders.
3. learn fatty acid synthesis and degradation and their regulation
4. Able to explain the role of lipids, their metabolism and their stringent control by hormones and other factors.
5. Understand the anabolic and catabolic processes associated with amino acids and nucleic acids and their regulation.
6. Able to understand the energy homeostatis during starvation and energy excess

UNIT I

Introduction to control of enzyme activity: Allosteric interaction; Reversible covalent modification; proteolytic action; control of amount of enzyme; control of rates of enzyme degradation; feed back inhibition; feed forward stimulation. Role of compartmentation. Elucidation of Metabolic pathways- Single-and Multi-step pathways. Experimental approaches to study the metabolism- using metabolic inhibitors and isotopes.

UNIT II

Carbohydrate Metabolism: An overview of Glycolysis and Gluconeogenesis. Regulation of Glycolysis and Gluconeogenesis-Reciprocal control of Glycolysis and Gluconeogenesis, TCA cycle- steps, regulation at branch points; Glycogen Metabolism: Overview of glycogenesis and glycogenolysis. Reciprocal control of glycogenesis and glycogenolysis. Hormonal regulation of fuel metabolism; Metabolic disorders-Diabetes mellitus and insipidus.

UNIT III

Lipid metabolism: An overview of fatty acid synthesis and degradation, Regulation of fatty acid synthesis- control of acetyl CoA carboxylase and fatty acid synthetase complex; Reciprocal control of fatty acid synthesis and degradation. Biosynthesis of triacyl glycerol, phosphatidyl choline, phosphotidyl ethanolamine and sphingomyelin and their regulation. Synthesis and degradation of cholesterol and its regulation. Obesity and regulation of body mass. Metabolic disorders- Atherosclerosis, Hyper and hypo lipoproteinemia.

UNIT IV

Amino acid metabolism: Regulation of synthesis of aspartate and aromatic family of aminoacids. Key role of glutamate dehydrogenase and glutamine synthetase in nitrogen metabolism and their allosteric regulations. Amino acid degradation- deamination, decarboxylation and transamination. Regulation of urea cycle. Biosynthesis of heme (porphyrin) and its regulations. Molecules derived from aminoacids. Metabolic disorders- Alkaptonuria, phenyl ketonuria.

UNIT V

Nucleic acid metabolism: De novo synthesis of purine and its regulation – Role of PRPP amino transferase. De novo synthesis of pyrimidine and its regulation – Role of aspartate carbomyl transferase. Regulation of deoxy ribonucleotides by activators and inhibitors. Tissue specific metabolism- Metabolic profile of major organs- Brain, Muscle, Liver and Adipose tissue. Intergration of metabolism. Metabolic disorders- Gout, SCID.

16BCP202	MOLECULAR BIOLOGY	4H-4C

Instruction hours/week:L: 4 T:0 P:0Marks: Internal: **40** External: **60**Total: **100**
End Semester Exam: 3 Hours

Course objectives
Equip the students

- To acquire the knowledge on Organization of DNA in a genome and transposons
- To know the mechanism behind replication and repair.
- To enable the knowledge on transcription and translation.
- To understand the mechanism of Regulation of gene expression in prokaryotes
- To study the structure and remodeling of chromatin
- To learn the mechanism of Eukaryotic gene regulation

Course outcomes (CO's)
After completion of this course the student will

1. Acquire the knowledge on molecular structure of genes.
2. Understand the structure of nucleic acids and the DNA replication process
3. Learn about the process of transcription
4. Understand the mechanism of translation
5. Learn about gene regulation in prokaryotes
6. Learn about gene regulation in eukaryotes

UNIT I
Molecular structure of genes: Molecular definition of gene, chromosomal organization of genes and non-coding DNA, protein coding genes, tandomly repeated genes, single sequence DNA. Structural organization of eukaryotic chromosomes- histone proteins, chromatin, functional elements. Mobile DNA elements- bacterial IS elements, transposons, viral transposons and non- viral transposons. Mutation- types.

UNIT II
DNA replication and repair: General features of chromosomal replication. Enzymology of DNA replication, DNA replication machinery. Replication in prokaryotes and eukaryotes- Initiation, elongation and termination. DNA damage-types. Repair mechanism of DNA damage-all types.

UNIT III
Transcription: prokaryotic gene transcription**-** Initiation, elongation and termination. Eukaryotic gene transcription- transcription unit, RNA polymerases- types, Transcription and processing of mRNA, tRNA and rRNA. Regulatory sequences in protein coding genes-TATA box, initiators, CpG island, promoter-proximal element, activators and repressors of transcription, Multiple transcription control elements. Regulation of transcription factor activity by lipid-soluble hormones.

UNIT IV
Translation: Deciphering genetic code, features. Wobble hypothesis. Initiation, elongation and termination of prokaryotic and eukaryotic translation. Fidelity of translation. Post translational modifications-all types; Protein targeting-Targeting protein to nucleus, ER, Golgi complex. Protein degradation- ubiquitin mediated degradation.

UNIT V

Prokaryotic gene regulation: Operon model, Lac, trp and ara operons. Regulatory proteins-DNA binding domain, protein- protein interaction domain. Recombination- holiday model, Rec BCD enzymes, Rec A protein, Messelson Radding model, site- specific recombination. Antisense RNA technology.

Eukaryotic gene regulation: Transcriptionally active chromatin, chromatin remodeling, DNA binding transactivators and coactivators. Regulation of gene expression by intracellular and intercellular signal, RNAi.

Semester II

16BCP203 **ENDOCRINOLOGY** **4H-4C**

Instruction hours/week:L: 4 T:0 P:0 **Marks:** Internal: **40**External: **60**Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Hypothalamo - Hypophyseal axis
- Classification of hormones
- Mechansim of action of peptide and steroid hormones
- Endocrine pathologies
- Endocrinology of pregnancy
- Investigative techniques in endocrinology

.

Course outcomes (CO's)

After successful completion, the students will understand:

1. Hypothalamo - Hypophyseal axis
2. Different classification of hormones
3. Functioning of peptide and steroid hormones
4. The molecular and cellular basis of endocrine pathologies
5. Role of hormones in different stages of gestation
6. The techniques involved in the assessment of endocrine functions

Unit I: General Introduction and Hypothalamo-hypophyseal axis

Chemical signaling – endocrine, paracrine, autocrine, intracrine and neuroendocrine mechanisms. Chemical classification of hormones, transport of hormones in the circulation and their half-lives. Hormone receptors – extracellular and intracellular. Receptor – hormone binding, Scatchard analysis. Releasing/release inhibiting hormones (TRH, GnRH, CRH, GHTH, somatostatin, dopamine) their structure, secretion and regulation

.

Unit II: Protein/Peptide hormones, Steriod and Thyroid hormones

GH, Prolactin, ACTH, insulin, glucagon, PTH and calcitonin) and glycoprotein hormones (TSH, FSH, LH) – Structure, Syntheisis – release and regulation. Sex steroids and adrenal corticoids – structure, synthesis, release, transport, regulation and metabolism. Structure, synthesis, secretion, regulation, transport and metabolism of thyroid hormones.

Unit III: Hormones and gonads

Physiological action of hormone in the regulation of spermatogenesis, sperm maturation, Oogenesis and menstrual/estrus cycles. Gonadal and adrenal steroidogenesis. Cell-cell communication – Two cellconcept. Hormonal control of implantation, gestation and lactation; hormonal contraception. Oxytocin and parturition.

Unit IV: Hormone action

Protein and steroid hormone receptors and their ignaling cascades; non-genomic modes of action; Ras-Raf-MAPK ignaling- PI3K ignaling and genomic actions of hormones- thyroid hormone nuclear receptor super family- Angiotensin- Rennin angiotensin system- , atrial natriuretic hormones, recycling and degradation of receptors. Vasopressin and water retention.

Unit V: Investigative techniques in endocrinology

Hormone assays, RIA, IRMA, Radio receptor assay, extraction, purification, and quantification of hormone receptors (cell surface, cytosolic and nuclear receptors, semen analysis. Radiolabeling techniques – Radioiodination of peptides, autoradiography. Properties of different types of radioisotopes commonly used in biology, radioactivity, detection and measurement of radioactivity, safely guidelines and disposal procedures.

Semester II

16BCP204 BIOINFORMATICS 4H-4C

Instruction hours / week:L: 4 T:0 P:0 **Marks:** Internal**: 40** External**: 60** Total**: 100**

End Semester Exam: 3 Hours

Course objective

Equip the students

- To make students understand the essential features of the interdisciplinary field of science for better understanding the biological data.
- To retrieve the sequence analysis of Nucleic acid and protein
- To create opportunity to interact with algorithms, tools and data in current scenario.
- To make the students look at a biological problem from a computational point of view.
- To find out the methods for analyzing the expression, structure and function of proteins,
- To understand the relationships between species.

Course outcomes (CO's)

After completion of this course the student will perform

1. Acquire the knowledge on biological data, submission and retrieval from databases.
2. Able to make experiment pair wise and multiple sequence alignment
3. Analyze the secondary and tertiary structures of protein sequences.
4. Understand the data structure (databases) used in bioinformatics and interpret the information (especially: find genes; determine their functions),
5. Understand and be aware of current research and problems relating to this area.
6. Knowledge on applications of bioinformatics

UNIT I

Definition, concepts of Bioinformatics: Objectives, History of Bioinformatics, Milestones, Genome sequencing projects, Human Genome Project- Science, applications and ELSI.
Introduction to Biological databases: Types of databases, sequence databases-nucleic acid sequence databases, GenBank, protein sequence database, Swiss-Prot, PIR, motif database-PROSITE, structural databases, bibliographic databases and organism specific databases-GMOD- Searching and retrieval of data-Entrez and SRS.

UNIT II

Introduction to sequence Alignment: Pairwise and multiple sequence alignment, substitution matrices, Similarity searching programs, BLAST, FASTA, Multiple sequence alignment – CLUSTAL, Phylogenetic analysis-PHYLIP theory of phylogeny, tree building methods.

UNIT III

Protein prediction strategies and programs: Protein Secondary Structure Prediction, three dimensional structure prediction-Comparative modeling, threading, protein folding and visualization of molecules – Visualization tools-RasMol, Deep View.

UNIT IV

Gene Identification and Prediction: Gene Mark, Gene Scan, Pattern Recognition, Global gene expression studies-DNA Micro array.

UNIT V

Applications of Bioinformatics-Molecular medicine, biotechnology, agricultral, Computer Aided Drug Designing- Lead molecules, properties, ADME profiles, QSAR. receptors, docking.

Semester II

16BCP205A **CORE ELECTIVE –II** **4H-4C**

RECOMBINANT DNA TECHNOLOGY

Instruction hours/week:L:4 T:0 P:0 **Marks:** Internal: **40** External: **60**Total: **100**

End Semester Exam: 3 Hours

Course objective

Equip the students

To make the student to understand the concept of gene manipulation and gene transfer technologies.

- To understand the concept of recombinant DNA technology or genetic engineering
- To interpret the characterization of recombinant protein
- To infer the knowledge on cDNA
- To expose students to the application of recombinant DNA technology in biotechnological research.
- To train students in strategizing research methodologies employing genetic engineering techniques.
- To understand the applications of recombinant DNA technology

Course outcomes (CO's)

After completion of this course the student will

1. Understand the application of genetic engineering techniques in basic and applied experimental biology
2. Learn the concept of recombinant DNA technology or genetic engineering
3. Understand the expression of gene cloning vectors
4. Explore the knowledge on genomic library
5. Proficiency in designing and conducting experiments involving genetic manipulation.
6. Describe DNA fingerprinting, and restriction fragment length polymorphism (RFLP) analysis and their applications.

UNIT I

Introduction to gene manipulation: Basic techniques- Isolation and purification of nucleic Acids, Agarose gel Electrophoresis. Hybridization of nucleic acids-probes and types. Hybridization techniques-Southern, Northern, Western blotting. DNA and RNA markers.

UNIT II

Gene cloning vectors: Plasmids, bacteriophages, phagemids, cosmids, Artificial chromosomes- BAC, YAC, HAC. Restriction mapping of DNA fragments, Map construction, Cloning in *E. coli*- Vector engineering and codon optimization. Gene expression in *E.coli.* Expression vector- PET vector. Genomic library.

UNIT III

Isolation and characterization of gene transcripts: Introduction, Converting mRNA transcripts into cDNA, Screening representative cDNA libraries, Functional sequencing of cDNA expression libraries. Expressed cDNAs compared with computer databases. Characterization of recombinant proteins- Processing, purification and refolding and stabilization-Insulin, hGH, tpA.

UNIT IV

Mutagenesis: Site-directed mutagenesis, *In vitro* mutagenesis-Linkers, synthetic oligonucleotides and transposons, Role of Tagging in gene analysis, Identification and isolation of genes through T-DNA or transposons.

Gene therapy- Different strategies for gene therapy, therapeutics based on targeted exhibition of gene expression and mutation correction *in vivo*, Gene therapy for inherited diseases, ADA, FH, Cystic fibrosis.

UNIT V

Transgenics: Gene transfer techniques- Microinjection, biolistic methods, vector based transfer.

Transgenic plants: Agrobacterium & Ti plasmids. Methods of engineering herbicide resistance plants, Stress resistance plants and modification of plant nutritional content (amino acids, β- carotene) Plants as bioreactors: edible vaccines.

Transgenic animals: Method of Engineering transgenic mice, transgenic cattle- applications

Biosafety- regularities and concerns. Societal impact of genetically modified food.

Semester II

16BCP205B **CORE ELECTIVE –I I** **4H-4C**

ANIMAL TISSUE CULTURE

Instruction hours/week:L:4 T:0P:0 **Marks:** Internal: **40** External**: 60Total: 100**

End Semester Exam: 3 Hours

Course objectives

Equip the students

- To impart the knowledge on basic tissue culture techniques and limitations in products
- To study about tissue culture laboratory and safety – biohazards
- To extrapolate the different types of culture media
- To understand the various types of cultures
- To learn synchronization of cell cultures and cell division
- To know the importance of stem cell research and its applications.

Course outcomes (CO's)

After completion of this course the student will be able to

1. Demonstrate foundational knowledge of Cell culture techniques and competence in laboratory techniques.
2. Set up a tissue culture lab to carry out research based on cell lines.
3. Extrapolate the different types of culture media
4. Understand the various types of cultures
5. Learn synchronization of cell cultures and cell division
6. Know the importance of stem cell research and its applications.

UNIT I

Introduction, importance, history of cell culture development, different tissue culture techniques including primary and secondary culture, continuous cell lines, suspension culture, organ culture, advantages and limitations medical/pharmaceutical products of animal cell culture-genetic engineering of animal cells and their applications. Risks in a tissue culture laboratory and safety - biohazards.

UNIT II

Different types of cell culture media, growth supplements, serum free media, balanced salt solution, other cell culture reagents, culture of different tissues and its application. Facilities for animal cell culture-infrastructure, equipment, culture vessels. Biology and characterization of cultured cells-cell adhesion, proliferation, differentiation, morphology of cells and identification.

UNIT III

Primary cell culture techniques - mechanical disaggregation, enzymatic disaggregation, separation of viable and non-viable cells. Mass culture of cells - manipulation of cell line selection - types of cell lines -maintenance of cell lines - immobilization of cells and its application - synchronization of cell cultures and cell division - production of secondary metabolites - biotransformation - Induction of cell line mutants and mutations - cryopreservation – germplasm conservation and establishment of gene banks.

UNIT IV

Animal cell culture scale up: Scale up in suspension - stirrer culture, continuous flow culture, air-lift fermentor culture; Scale up in monolayer - Roller bottle culture, multi surface culture, multi array disks, spirals and tubes - monitoring of cell growth. Organ culture - whole embryo culture - specialized culture techniques - measurement of cell death.

UNIT V

Tissue engineering: Design and engineering of tissues - tissue modeling. Embryonic stem cell engineering - ES cell culture to produce differential cells - Human embryonic stem cell research. Transgenic animals-transgenic animals in xenotransplantation

Semester II

16BCP205C **CORE ELECTIVE –II** **4H-4C**

GENOMICS AND PROTEOMICS

Instruction hours/week:L: 4 T:0 P:0 Marks: Internal: **40** External: **60**Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students

- To provide a comprehensive theoretical knowledge on genomics and proteomics
- To learn the fundamentals, current techniques and applications.
- To update and strengthen basic concepts in proteomics and genomics
- To address the modern biological issues.
- To use the different methodologies, techniques and tools commonly used in genome sequencing, assembly and annotation.
- To understand the Characterization of protein complexes

Course outcomes (CO's)

After completion of this course the student will be able to

1. Identify and describe the different components in prokaryotic and eukaryotic genomes and proteomes.
2. Identify molecular mechanisms responsible for diseases.
3. Use the different methodologies, techniques and tools commonly used in genome sequencing, assembly and annotation.
4. Use the different methodologies, techniques and tools commonly used in proteomics.
5. Address the modern biological issues.
6. Characterize the protein complexes

UNIT I

Genome Sequencing: Introduction to Genes, Genome organization –prokaryotes and eukaryotes, Genetic markers- RFLP, Mini and Micro satellite, STS, EST, SSCP, RAPD, RFLP, SNP and SSR. Human Genome and Genomic analysis: Size, features, composition and characteristics of human genome – Sequence repeats, transposable elements, gene structure and pseudogenes.

UNIT II

Sequencing Genomes- methodology, chain termination method, chemical degradation method, shotgun sequencing and assembly of contiguous DNA sequence. cDNA and genomic library construction. Genomic Mapping: Different types of Genome maps and their uses, Genetic and Physical mapping techniques. Map resources. Practical uses of genome maps, NGS

UNIT III

Gene Expressions and Microarrays: Gene structure and pseudo genes. Concepts of microarrays, spotter analysis, Normalization –total intensity, using regression techniques, ratio statistics. Clustering Gene expression profiles-hierarchical, single-linkage, complete linkage, and average linkage. Tools for microarray analysis- MADAM, spot finder, SAGE Applications of Microarrays- Bioinformatics challenges in micro array design and analysis.

UNIT IV

Analytical Proteomics:RP-HPLC, Mass Spectrometry – ESI MS and MALDI techniques and applications. Characterization of protein complexes – protein-protein interactions, yeast two-hybrid system and protein micro arrays. Proteomics in drug discovery.

UNIT V

Experimental Proteomics: Proteome analysis- 2D gel electrophoresis: general strategy, immobilized pH gradients, sample preparation, isoelectric focusing, second dimension PAGE, staining, transfer of proteins from 2D gels, image acquisition and analysis of 2D gels. 2DE databases.

Semester II

16BCP211 PRACTICAL – III 4H-2C

MOLECULAR BIOLOGY AND ANIMAL BIOTECHNOLOGY

Instruction hours/week: L:0 T:0 P:4 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students

- To understand the Molecular structure, functions of cells, molecules such as DNA, RNA, proteins.
- To understand the principles of animal cell culture and its application.
- To learnthe knowledge on quantity of DNA by Diphenylamine method
- To infer the Estimation of RNA by Orcinol method
- To know the Preparation of competent E coli- transformation
- To explore the knowledge on Ligation of DNA

Course outcomes (CO's)

After completion of this course the student will perform

1. To demonstrate knowledge and understanding of the molecular machinery of living cells, cell and tissue culture to manipulate.
2. Toexplore the genomes of animals for ways to improve the livestock for food production and biomedical purpose as well as and to analyse, interpret, and participate in reporting to their peers on the results of their laboratory experiments.
3. Identification of DNA by Agarose gel electrophoresis
4. Estimation of RNA by Orcinol method
5. Preparation of competent E coli- transformation
6. Ligation of DNA

MOLECULAR BIOLOGY

1. Isolation of DNA and RNA from liver
2. Estimation of DNA and RNA - UV method
3. Estimation of DNA by Diphenylamine method
4. Estimation of RNA by Orcinol method
5. Estimation of Protein by Lowry's method
6. Culturing and Isolation of Plasmid DNA
7. Agarose gel electrophoresis of DNA
8. Restriction digestion analysis of DNA (Demonstration)
9. Preparation of competent *E coli*- transformation (demonstration)
10. Determination of Molecular weight of polypeptides by SDS PAGE (group)
11. Polymerase Chain Reaction for amplification of DNA (demonstration)
12. Ligation of DNA
13. Southern Blot Analysis (Demonstration)
14. Western Blotting (Demonstration)

ANIMAL TISSUE CULTURE (Demonstration)

15. Preparation and Sterilization of media

16. Cell lines and maintenance -Trypsinisation, Passaging, Staging
17. Cell counting and cell staining
18. Cell viability determination – Tryphan blue exclusion.

Semester II

16BCP212 **PRACTICAL – IV** **4H-2C**

BIOLOGICAL DATABASES AND ANALYSIS

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

To make the students

- To provide hands on experience on various biological databases
- To learn the retrieval of data from the biological databases
- To make them learn about pair wise and multiple sequence analysis.
- To learn and apply the statistical approaches
- To study the models for phylogenetic analysis and tree reconstruction.
- To teach them protein prediction methods and its validation.

Course outcomes (CO's)

The students shall be able to

1. The course will enable students to use various biological databases
2. The importance functions in the biological system.
3. The use computational approaches for pair wise, multiple and phylogenetic analysis.
4. Aware to predict the physio-chemical properties, protein structure and validation using computer-based labs.
5. Solve the biological problems using various computational tools and techniques.
6. Visualization of Protein structure by RASMOL.

Experiments

1.Biological Databanks Sequence databases, Structure Databases, Specialized databases

2. Data base file formats.

3. Data retrieval tools and methods (PUBMED, ENTREZ, SRS)

4. Sequence Similarity searching (NCBI- BLAST, FASTA)

5. Protein sequence analysis (ExPASY proteomics tools)

6. Multiple sequence alignment (Clustal-W)

7. Gene structure and function prediction (Using ORF Finder, Genscan, GeneMark)

8. Molecular Phylogeny (PHYLIP)

9.Sequence Analysis using EMBOSS

10. Protein structure visualization – RASMOL (Menu function and Command line entries), Deep View.

16BCP301 **IMMUNOLOGY** **Semester III** **4H-4C**

Instruction hours/week:L:4 T:0 P:0 **Marks:** Internal**: 40** External**: 60**Total**: 100**
End Semester Exam: 3 Hours Course

objectives

Equip the students with

1. Specialized immune cells and their function
2. Mechanisms of humoral immunity
3. Mechanisms of cell mediated immunity
4. Hyperactivation of immune cell and associated pathogenesis
5. Basis behind immunodeficiency diseases
6. Utility of immune based principles in diagnostic field

Course outcomes (CO's)

After successful completion, the students will understand:

1. The structure and functions of specialized immune cells
2. Basis of humoral immunity
3. Basis of cell mediated immunity
4. Hypersensitivity reactions (I-V)
5. Hereditary and acquired immunodeficiency diseases
6. Utility of immune based principles in diagnostic field

UNIT I

Cells of the immune system: Haematopoiesis. Overview of Immune stem cells-Lymphoid cells, mononuclear, granulocytes, mast cells and dentritic cells. Lymphoid classes B, T and NK – B & T Cell maturation, activation and differentiation; Lymphocyte surface markers, CD nomenclature. Cell-mediated and humoral response.

UNIT II

Antigen: Epitope, B cell and T cell epitope, haptens, viral and bacterial antigens; factors influencing adjuvant technology. Immunoglobulins-domains, B cell receptors, antigenic determinants on immunoglobulins, Immunoglobulin super family. Immunoglobulin genes: multigene family; Immunoglobulin rearrangement- antibody diversity.

UNIT III

Hyper sensitivity: Type I, II, III, IV, V and VI. Complement-definition, classical and alternate pathway, MHC: organization, MHC molecules and genes, MHC and immune responsiveness, Transplantation and rejection.

UNIT IV

Immunity to infection: Definition and types of immunity, Primary and secondary immunodeficiency diseases. Auto-immune diseases, Tumor immunology Vaccines: Active and passive immunization, Types of vaccines with example. Monoclonal Antibodies- Production and Applications.

UNIT V

Immuno Techniques: Antigen-Antibody interactions- precipitation reaction, agglutination tests- haemagglutination; Complement fixation test. Direct and indirect immunofluorescence, RIA, ELISA, CMIA, ECLIA, Immunoblotting, effector cell assay, Heamolytic plaque assay and Elispot assay.

Semester III

16BCP302 **CLINICAL BIOCHEMISTRY** **4H-4C**

Instruction hours/week:L:4 T:0 P:0 **Marks:** Internal: **40** External: **60**Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Biological fluid collection and analysis
- Blood cell counting
- Assessment of inflammatory markers
- Estimation of clinically relevant enzymes
- Diagnosis of cancer
- Assessment of endocrine pathophysiology

Course outcomes (CO's)

After successful completion, the students will:

1. Collect and analyze biological fluid
2. Count the total RBC and different WBC using hemocytometer
3. Learn the assessment of CRP, RA and ESR
4. Perform estimation of clinically relevant enzymes
5. Understand the cancer marker assessment
6. Understand the endocrine pathophysiology

UNIT I

Clinical Samples: Blood collection, processing and transfusion process. Normal blood profile. Cerebrospinal fluid: Composition, clinical investigation of CSF in meningitis. Amniotic fluid: Origin, composition and analysis of amniotic fluid. Collection of urine Urine preservatives. Test for urine compounds. Clinical significance of urinary components.

UNIT II

Serology and Hematology: C- reactive protein test, immunological test for pregnancy. Rheumatoid arthritis (RA) test, ESR. Coagulation test, prothrombin test. Haemoglobin Normal and abnormal Hb, separation of haemoglobin, Thalassemia, Hemoglobinopathies. Disorder of erythrocyte metabolic pathways, erythrocyte enzyme disorders. Porphyrins and disorder: porphyrias.

UNIT III

Clinical Parameters: Myocardial infarctions, hepatobiliary disease. - Enzyme tests in determination of myocardial infarction. Diagnostic enzymes: Principles of diagnostic enzymology. Clinical significance of aspartate aminotransferase, alanine aminotransferase, creatine kinase, aldolase and lactate dehydrogenase. Enzymes of pancreatic origin and biliary tract. Clinical significance of electrolytes.

UNIT IV

Oncology- oncogenes and cell cycle, Etiology-Free radical induced cancer. Free radical scavengers. Antioxidants in disease prevention. Benign and malignant types- Different stages of cancer progression- Cancer Markers. Therapy-Chemotherapy, radiotherapy, hormonal therapy and phytotherapy. Diagnosis of various cancers.

UNIT V

Pathophysiology of – hypothalamus and pituitary (dwarfism, Klienfelter syndrome, adenoma, galactorrhea, amenorrhea). Pathophysiology of thyroid cretinism, myxodema, hashimoto's (autoimmune thyroid disorder), hypo- and hyperparathyroidism, bone (osteopenia and osteoporosis), adrenal (Cushing syndrome and Addison's disease) Pancreas (IDDM and NIDDM) and gonads (cystic ovaries, endometriosis, hypogonadism, cryptorchidis and testicular carcinoma).

Semester III

16BCP303 **CHEMISTRY OF NATURAL PRODUCTS** **4H-4C**

Instruction hours/week: L:4 T:0 P:0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course objectives

Equip the students

- To learn and understand the methods of plant analysis
- To gain knowledge on natural products from plant sources
- To extract the natural products from plant sources
- To gain knowledge on natural products from plant sources
- To learn extraction of secondary metabolites from marine organisms
- To extract drugs from natural sources

Course outcomes (CO's)

After successful completion, the students will

1. Learn and understand the methods of plant analysis
2. Gain knowledge on natural products from plant sources
3. Extract the natural products from plant sources
4. Gain knowledge on natural products from plant sources
5. Learn extraction of secondary metabolites from marine organisms
6. Extract drugs from natural sources

UNIT I

Introduction to phytochemistry: Primary and secondary metabolites, preliminary phytochemical analysis, quality standardization of herbal drugs, physico-chemical parameters.

Unit-II

Methods of plant analysis-Extraction- sequential and percolation techniques. Separation techniques-Column chromatography, TLC, GLC and HPLC. Methods of identification-UV, IR, NMR and MS; Analysis of results- Qualitative and quantitative methods.

UNIT III

Natural products from plant sources: Chemistry, distribution and techniques for triterpenoids, essential oils, steroids, carotenoids and alkaloids, phenolics, flavonol and flavones, tannin and quinines (General discussion only).

UNIT IV

Natural products from microbes: Sample collection; Screening tests- antiviral, antibacterial, anticancer, antihypercholesterolemic. Commercial production of microbial enzymes - Invertase and beta galactosidase.

UNIT V

Marine organism and animals: Secondary metabolite from marine algae, bacteria, fungi and vertebrates. Separation and isolation techniques- Desalting, ion exchange and reverse phase column chromatography; Bio assay directed fractionation. Isolation of simple peptides. Drugs from animal sources – hormones, carbohydrate and proteins.

Semester III

16BCP304 DRUG BIOCHEMISTRY AND NEUROCHEMISTRY 4H-4C

Instruction hours / week:L:4 T:0 P:0 **Marks:** Internal**: 40** External**: 60**Total**: 100**

End Semester Exam: 3 Hours Course

Objectives

Equip the students with

- Pharmacokinectics
- Pharmacodynamics
- Drug tolerance and dependence
- Genetically engineered drugs
- Mechansim of action of drugs
- Undesired effects of drugs

Course outcomes (CO's)

After successful completion, the students will understand

1. What the body does to a drug
2. What a drug does to a body
3. Drug dependence
4. The principles and procedure for genetically engineered drugs
5. How the drugs elicit the desired effect
6. Undesired effects of drugs

UNIT I

Drugs – Introduction, sources and routes of administration, Structural features and pharmacological activity, prodrug concept, Adsorption – factors modifying drug absorption. Distribution, metabolism - phase I, II reactions, action of cytochrome P450 and excretion of drugs.

Drug receptors – Localization, types and subtypes, models and theories. G-protein coupled receptor and ion-channel linked receptors. Examples of drug-receptor interactions. Agonists and antagonists. Bioavailability of drug

UNIT II

Drug tolerance and drug dependence. Principles of basic pharmacokinetics. Adversse response to drugs, drug intolerance, pharmacogenetics, drug allergy, tachyphylaxis, drug abuse, vaccination against infection, factors modifying drug action and effect. Assay of drug potency: chemical, bioassay and immunoassay.

UNIT III

Genetically engineered protein and peptide agents as drugs, Novel drug delivery systems, anti-AIDS drug development, oncogenes as targets for drugs, multidrug resistance phenotypes, production of secondary metabolites by plant tissue culture. Genome based medicine.

UNIT IV

Mechanism of action of drugs used in therapy of Respiratory system – cough, bronchial asthma, pulmonary tuberculosis. Antimicrobial drugs – sulphonamides, trimethoprim, penicillins, aminoglycosides and bacterial resistance, Cancer chemotherapy. Thyroid and antithyroid drugs, insulin and oral antidiabetic drugs, antifertility and ovulation inducing drugs. Pharmacotherapy of gout and rheumatoid arthritis, Immuno therapy – Immunosuppressants and immunostimulants, Enzymes in therapy.

UNIT V

Brain – Neurotransmitters, encephalins and endorphins; general function of autonomic and somatic nervous system; cholinergic transmission and receptors; adrenergic transmission and receptors; muscarinic receptors. Non steroidal and anti inflammatory drugs; adrenergic blocking drugs; cholinergic blocking drugs; muscatrinic blocking drugs; parkinson's disease; Alzhiemier's disease. Neurodegenerative disorders – Amylotropic, lateral sclerosis, senile dementia, schizophrenia, Huntington's disease.

Semester III

16BCP305A **CORE ELECTIVE – III** **4H-4C**

BIOSTATISTICS AND RESEARCH METHODOLOGY

Instruction hours/week: L:4 T:0 P :0 **Marks:** Internal**: 40**External**: 60**Total**: 100**

End Semester Exam: 3 Hours Course

Course objectives

Equip the students with:

- Definition and representation styles of data
- Analysis of data using correlation to understand the interdependence
- Analysis of data using regression to understand the interdependence
- To learn various measures of central values and standard deviation.
- To understand the relationship between two variables.
- To test the significance of a particular data by various parameters.

Course outcomes (CO's)

After successful completion, the students will:

1. Use appropriate representation styles to present the data
2. Perform correlation analysis
3. Perform regression analysis
4. Calculate mean, median, mode and standard deviation.
5. Calculate the relationship between two variables.
6. Test the significance of a particular data by various parameters.

.

UNIT I

Definitions-Scope of Biostatistics- Variables in biology, collection, classification and tabulation of data- Graphical and diagrammatic representation.

Measures of central tendency – Arithmetic mean, median and mode. Measures of dispersion- Range, standard deviation, Coefficient of variation.

UNIT II

Correlation: Meaning and definition - Scatter diagram –Karl Pearson's correlation coefficient. Rank correlation.

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

UNIT III

Test of significance: Tests based on Means only-Both Large sample and Small sample tests – Student's t test, F-test, Chi square test - goodness of fit. Analysis of variance – one way and two way classification. CRD, RBD Designs.

UNIT IV

Research: Scope and significance – Types of Research – Research Process – Characteristics of good research – Problems in Research – Identifying research problems. Research

Designs – Features of good designs.

UNIT V

Sampling Design : Meaning – Concepts – Steps in sampling – Criteria for good sample design. Scaling measurements – Techniques – Types of scale.

Semester III

16BCP305B CORE ELECTIVE –III 4H-4C

CLINICAL RESEARCH AND IPR

Instruction hours/week:L:4 T:0 P:0 Marks: Internal: **40** External: **60**Total: **100**

End Semester Exam: 3 Hours**Course**

Course objectives

Equip the students with:

1. The process of drug discovery
2. Pre-clinical studies
3. Components of clinical research (Phases)
4. Questionaire preparation
5. Fundamentals of IPR
6. Patents laws

Course outcomes (CO's)

After successful completion, the student will understand:

1. Steps involved in drug discovery
2. Using small experimental animals
3. Phase 2 and Phase 3 trials
4. Questionaire preparation
5. Intellectual property rights
6. Patents laws

UNIT I

Drug discovery and Development: Introduction to Pharmaceutical Industry, New drug discovery-Target Identification- Target Prioritization/ validation, Lead identification, Lead optimization ; Preclinical studies - Preclinical technology, Chemistry manufacturing and controls / Pharmaceutics Pharmacology/Toxicology

UNIT II

Basics of Clinical Research: Definition of clinical research and development, History of randomized trial Literature - Finding and Evaluation databases of Scientific Literature; Critiquing of Research Projects, Time management and resource implications

UNIT III

Epidemiology: Experimental Procedures - Controlled Experiments, Sampling Techniques, Questioner Design, Validity and reliability of observations, Primary variables, Acquisition and using secondary data, Randomization and Blinding: Theory and practice

UNIT IV

IPR: Introduction to Copyright - Conceptual Basis, International Protection of Copyright and Related rights- An Overview (International Convention/Treaties on Copyright). Indian Copyright Law -The Copyright Act, 1957 with its amendments, Ownership, transfer and duration of Copyright, Renewal and Termination of Copyright.

UNIT V

Patent: Introduction to Patent Law - Paris Convention, Patent Cooperation Treaty, WTO-TRIPS, Harmonisation of CBD and TRIPs. Indian Patent Law- The Patents Act, 1970, Amendments to the Patents Act, Patentable Subject Matter, Patentability Criteria, Procedure for Filing Patent Applications, Patent Granting Procedure.

DIETETIC MANAGEMENT OF DISEASE

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: **40** External: **60**Total: **100**
End Semester Exam: 3 Hours **Course**

Course objectives

Equip the students with

- Nutrition as a drug
- Dietary management of diabetes
- Dietary management of obesity
- Dietary management of cardiovascular diseases
- Nutrition deficiency affecting hematopoiesis and diet for individual with cancer
- Dietary management of musculoskeletal diseases

Course outcomes (CO's)

After successful completion, the students will understand:

1. Nutrition as a drug
2. Dietary management of diabetes
3. Dietary management of obesity
4. Dietary management of cardiovascular diseases
5. Nutrition deficiency affecting hematopoiesis and diet for individual with cancer
6. Dietary management of musculoskeletal diseases

UNIT-1

Nutrition- Foods for normal nutrition. Diets in gastrointestinal diseases-Acute gastrointestinal conditions, chronic and non-acute disorders of the upper gastrointestinal tract, lower gastrointestinal conditions, pancreatitis, liver diseases, gall stones, appendicitis, cholelithiasis. Diet for hepatitis

Nutrition for critically ill- Burns, Enteral nutrition, Enteral feeding vs parenteral feeding, Indications of enteral nutrition, Types of enteral feed formula, Complications of enteral feeding. Parenteral nutrition- Techniques of infusion, Complications of parenteral feeding.

UNIT II

Diet for diabetes mellitus- Nutrition recommendations for patient with diabetes, Meal planning, Exchange list of different food groups, Diabetic diets based on exchange list, Diabetic diets menu wise.

Diets in Renal disease-Acute renal failure, Proteinuria, Indoor diet charts for renal patients.

UNIT III

Diet for Cardiovascular Diseases- Risk Factors, Hypertension, Atherosclerosis, Stroke and other peripheral diseases, Cardiomyopathy and cardiac failure, Rheumatic heart disease, dietary management, general guidelines for coronary heart disease, Dietary recommendations of WHO.Diet for Acute cardiac diseases

Obesity- Body fat distribution, Health risks of obesity, Weight reduction, Factors contributing to obesity.

UNIT IV

Cancer and diet therapy- Influence of diet on carcinogenesis, Dietary risk factors and cancers at various sites in the human body, diet therapy, eating well during cancer treatment, managing eating problems during treatment

Diet for inborn errors of metabolism- phenylketonuria, Galactosaemia, Celiac disease.

UNIT V

Nutrition related bone disease- osteoporosis.

Dietary factors in dental disease- Starch & dental cavities, protective factor in food

Blood –Nutrition deficiency affecting hematopoiesis.

Semester III

16BCP311 PRACTICAL – V 4H-2C

CLINICAL ENZYMES AND IMMUNOLOGY

Instruction hours/week: L:0 T:0 P: 4 Marks: Internal**: 40** External**: 60Total: 100**

End Semester Exam: 3 HoursCourse

Course objectives

To impart hands-on training in:

- Assays of clinically relevant enzymes
- Diagnostic utility of enzyme assays
- Radial immunodiffusion
- Double immunodiffusion
- Immunoelectrophoresis
- Glucose tolerance test

Course outcomes (CO's)

After successful completion, the students will understand:

1. Various methods of assaying clinically relevant enzymes
2. The diagnostic significance of enzyme assays
3. Working knowledge principle of Radial immunodiffusion
4. Working knowledge principle of Double immunodiffusion
5. Working knowledge principle of Immunoelectrophoresis
6. Working knowledge principle of Glucose tolerance test

ENZYMOLOGY

1. Determination of the activity of the following serum enzymes:
    a. LDH
    b. Acid phosphatase
    c. Alkaline phosphatase
    d. Aspartate amino transferase
    e. Alanine amino transferase
    f. 5' nucleotidase
    g. Sodium potassium ATPase
    h. Ceruloplasmin

IMMUNOLOGY (DEMONSTRATION)

2. Raising of antibodies- single soluble and particulate antigen
3. Immunodiffusion- single radial and double diffusion.
4. Immunoelectrophoresis.
5. Rocket immunoelectrophoresis
6. ELISA

Case study-Report

7. Serum enzyme in liver disease
8. Serum enzyme in cardiac disease

9. Serum enzyme in cancer disease
10. Glucose Tolerance Test

Semester III

16BCP312 **PRACTICAL – VI** **4H-2C**

CLINICAL BIOCHEMISTRY AND ANIMAL STUDIES

Instruction hours/week: L:0 T:0 P:4 **Marks:** Internal**: 40** External**: 60**Total**: 100**

End Semester Exam: 3 Hours

Course objectives

To impart hands-on training in:

- The estimation of biomolecules such as glucose and cholesterol
- Assessment of renal function through the analysis of urea and uric acid in serum
- Assessment of liver function through the estimation of bilirubin
- The determination and significance of A/G ratio
- Handling experimental animals
- Various routes of injections

Course outcomes (CO's)

Upon successful completion of this course, students will be able to:

1. Explain the physiopathological bases and the biochemical markers of the most prevalent diseases in our population
2. Perform the estimation of biomolecules such as glucose and cholesterol
3. Assess renal function through the analysis of urea and uric acid in serum
4. Assess liver function through the estimation of bilirubin
5. Determine A/G ratio and interpret its relevance
6. Handle the small experimental animals
7. Understand the differences and significance of routes of injections

Clinical analysis

1. Estimation of glucose in serum
2. Estimation of cholesterol in serum
3. Estimation of urea in the urine and serum
4. Estimation of chloride in the urine and serum
5. Estimation of calcium in the urine and serum
6. Estimation of magnesium in the urine and serum
7. Analysis of urinary calculi
8. Estimation of Bilirubin in serum(Kit method)
9. Estimation of triglyceride in serum (Kit method)
10. Estimation of HDL in serum (Kit method)

ANIMAL STUDIES (Group experiment)

11. Handling of animals
12. Methods of injection
13. Induction of liver toxicity
14. Assay of lipid peroxidation in rat liver.

PROGRAMME OUTCOMES (POs)

a) Graduates will acquire in-depth understanding of basic concept, knowledge about biochemistry and cell organelles, their functions for applied field, allied subject and life skills.

b) The students will be able to discuss the metabolic aspects of biomolecules.

c) The Graduates will gain the technical capability of handling, isolating and identifying various organisms from different sources.

d) Understanding and better knowledge of the causes, types and control methods for environmental pollution by the students.

e) The student will be able to discuss the mechanisms associated with gene expression system in prokaryotes and eukaryotes.

f) Understand the role of different types of cells, effectors and effectors mechanisms in immune-technology by the students.

g) Develop skills associated with screening of industrially important strains, various aspects of bioprocess technology and rDNA technology by the graduates.

h) The student will be able to understand the production of enzymes from different sources and enzyme characterization and kinetic actions in living organisms.

i) The student will be able to understand the production of transgenic plants and animals for human and environmental welfare.

j) Understand the basic concepts and modern knowledge of bioinformatics by graduates.

k) Apply the knowledge and skills gained from molecular aspects should be useful in developing new innovations in different life forms by the graduates.

l) The student will be able design, solve the application-oriented problem in biotechnological field through project-based learning.

PROGRAMME SPECIFIC OUTCOMEs (PSOs)

To enable the student to emerge as:

m) Proficiency to work on biotechnological concepts and interdisciplinary areas of science and technology towards product and process development for industrial and academic research applications.

n) An expert in Biotechnology and allied fields (medical, microbial, agricultural, environmental, plant and animal) for utilizing the practical skills to address biotechnological challenges.

o) Proficiency to demonstrate entrepreneurial and leadership skills with life-long learning.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

To impart the following PEOs to the students of Under-graduates in Biotechnology:

PEO I : To obtain detailed information about the fundamentals of Biotechnology, allied subjects and life skills.

PEO II : To provide information about the molecular methods which involved in cellular processes of living systems such as microbes to higher order organisms for applied aspects. To address the emerging need for skilled scientific manpower with research ethics involving organisms.

PEO III : To impart the basics and current molecular tools in the areas of Molecular Diagnostics, Fermentation Technology, Plant, Animal & Environmental Biotechnology are included to train the students for man power development and also sensitize them to scope for research. The practical subjects will provide information about the careers in the industry and applied research where biological system is employed.

PEO IV : To make the graduates of Biotechnology to learn and to adopt in a competitive world of technology update and contribute to all forms of life.

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)
முதல் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 16LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வு நோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, ‘தமிழ் இலக்கிய வரலாறு’ குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, ‘அறிவியல் தமிழ்’ ; ‘இணைய தமிழ்’ குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

அலகு – I : இக்கால இலக்கியம்: **(10 மணிநேரம்)**

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.
இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை – ஒற்றுமையே உயிர்நிலை.
மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் –மலையாளக் காற்று.
சூழலியல் : கவிஞர். வைதீஸ்வரன் - விரல் மீட்டிய மழை.
பெண்ணியம் : கவிஞர். சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்: **(10 மணிநேரம்)**

கொன்றை வேந்தன்: 1-50 பாடல்கள்
திருக்குறள்: பண்புடைமை, வினைத்திட்பம் – 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: **(10 மணிநேரம்)**

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை: **(10 மணிநேரம்)**

1. **உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்**
2. **கட்டிடக்கலை** - அ. இராசமாணிக்கனார்
3. **வாழ்க்கை** - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஶ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: **(8 மணிநேரம்)**

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

SEMESTER I

16ENU101 **ENGLISH** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

- To help students enhance their Language skills.
- To introduce different kinds of literary works.
- To familiarize different genres of Literature.
- To instruct moral values through literature.
- To improvise their productive and receptive skills.
- To strengthen the basic knowledge about grammar.

Course Outcomes

1. Develop the four types of skills.
2. Reading and comprehending literary works.
3. Genres of literature to provide moral education.
4. Develop communication skills in business environment.
5. Interpersonal skills will be developed.
6. Betterment of language competence.

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefixes, Antonyms, Sentence Completion
Grammar: Articles, Adverbs, Pronouns
Composition: Proverb Expansion

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman **–** Arun Kolatkar
Vocabulary: Suffixes, Analogies **Grammar:**
Nouns, Adjectives
Composition: Dialogue Writing

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verbs, Conjunctions and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan
One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Prepositions, Voice- Active and Passive
Composition: Letter Writing- Informal

UNIT V

Short Story: The Bird **–** Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitute
Grammar: Questions, Pronunciation
Composition: Letter Writing- Formal

Prescribed Text

Rao, G. Chandralekha et al. *Spring* (2013). Emerald Publishers: Chennai.

Suggested Readings

Shyamala, V. *English for Communication*. (2006). Emerald Publishers: Chennai

SEMESTER I

16BTU101 **BIOCHEMISTRY AND METABOLISM** 4H -4C

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The objectives of the course are to make the students to

- Understand the basic concepts of cellular structure and organization of various biomolecules.
- Understand the functions and importance of various biomolecules.
- Describe the various metabolic pathways involved in cells for its normal functioning.
- Obtain basic knowledge on disorders associated with metabolism of biomolecules.
- Understand enzymes and their classification
- Understand about Carbohydrates Metabolism

Course Outcomes

On successful completion of the course, students will be able to:

1. Understand Biochemistry as discipline and milestone discoveries in life sciences that led to establishment of Biochemistry as separate discipline.
2. Understand fundamental properties of elements, their role in formation of biomolecules and in chemical reactions within living organisms.
3. Draw or describe the structure of amino acids, proteins, enzymes, chemical messengers, carbohydrates, lipids, and nucleic acid.
4. Describe the metabolism of carbohydrates, lipids, proteins and amino acids, and write chemical reactions for the individual steps in each pathway.
5. Write the chemical reactions involved in biochemical pathways that produce ATP, such as citric acid cycle and electron transport.
6. Be familiar with the enzymes (biocatalysts), and their salient attributes including unique conformation and amazing catalytic properties.

UNIT- I

Introduction to Biochemistry: Amino acids &Proteins: Structure, properties and function of Aminoacids and Protein, Aminoacid and protein classification. Protein Purification. Denaturation and renaturation of proteins. Fibrous and globular proteins. Carbohydrates: Structure, Function and properties of Monosaccharides, Disaccharides and Polysaccharides. Bacterial cell wall polysaccharides, Glycoprotein's and their biological functions

UNIT-II

Lipids: Structure and functions –Classification, nomenclature and properties of fatty acids, essential fatty acids. Phospholipids, sphingolipids, glycolipids, cerebrosides, gangliosides, Prostaglandins, Cholesterol. ß-oxidation of fatty acids.

UNIT-III

Nucleic acids: Structure and functions: Physical &chemical properties of Nucleic acids, Nucleosides &Nucleotides, purines & pyrimidines, Biologically important nucleotides, Double helical model of DNA structure, A, B & Z – DNA, denaturation and renaturation of DNA

UNIT-IV

Enzymes: Nomenclature and classification of Enzymes, Holoenzyme, apoenzyme, Cofactors, coenzyme, groups, metalloenzymes, monomeric &oligomeric enzymes, activation energy and transition state, enzyme activity, specific activity, common features of active sites, Role of: NAD+, NADP+, FMN/FAD, coenzymes A, Thiamine pyrophosphate, Pyridoxal phosphate, lipoic-acid, BiotinvitaminB12, Tetrahydrofolate and metallicions. Photosynthesis– Photosystem I and II.

UNIT-V

Carbohydrates Metabolism: Glycolysis: Fate of pyruvate under aerobic and anaerobic conditions. Pentose phosphate pathway and its significance, Gluconeogenesis, Glycogenolysis and glycogen synthesis. TCA cycle.

SEMESTER I

16BTU102 **CELL BIOLOGY** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total: 100**

Course Objectives

The objectives of the course are to make the students to

- Understand the structures and functions of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles
- Understand how the cellular components are used to generate and utilize energy in cells
- Understand the cellular components underlying cell division.
- Obtain knowledge of various cellular events to understand various physiological processes.

Course Outcomes

On successful completion of Cell Biology course, students will be able to:

1. Describe the importance of cell biology in fundamental functions of living systems.
2. Describe the structures and basic components of prokaryotic and eukaryotic cells.
3. Illustrate how the cellular components are used for various cellular activities.
4. Demonstrate the pathways involved in various cellular events including cell cycle and cell division.
5. Describe cellular events associated with cell death and cancer formation.

UNIT- I

Cell: Introduction and classification of organisms by cell structure, cytosol, compartmentalization of eukaryotic cells, cell fractionation. Cell Membrane and Permeability: Chemical components of biological membranes, organization and Fluid Mosaic Model, membrane as a dynamic entity, cell recognition and membrane transport.

UNIT- II

Membrane Vacuolar System, Cytoskeleton and Cell Motility: Structure and function of microtubules, Microfilaments, Intermediate filaments. Endoplasmic reticulum: Structure, function including role in protein segregation. Golgi complex: Structure, biogenesis and functions including role in protein secretion.

UNIT-III

Lysosomes: Vacuoles and micro bodies: Structure and functions Ribosomes: Structures and function including role in protein synthesis. Mitochondria: Structure and function, Genomes, biogenesis. Chloroplasts: Structure and function, genomes, biogenesis Nucleus: Structure and function, chromosomes and their structure.

UNIT- IV

Extracellular Matrix: Composition, molecules that mediate cell adhesion, membrane receptors for extra cellular matrix, macromolecules, regulation of receptor expression and function.

UNIT-V

Cancer: Carcinogenesis, agents promoting carcinogenesis, characteristics and molecular basis of cancer. Signal transduction.

16BTU103 **CHEMISTRY-1** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The objectives of the course are to know

- The molecular orbital theory, preparation and properties of inorganic compounds.
- Theory of covalent bond, polar effects and stereochemistry of organic compounds.
- About important industrial chemicals like silicones, fuel gases and fertilizers and their impact on environment.
- Elements of photochemistry, chemical kinetics and chromatography.
- About the dyes, chemotherapy and vitamins.
- About the Column, Paper and Thin Layer Chromatography.

Course Outcomes

The student understands

1. The molecular orbital theory, preparation and properties of inorganic compounds.
2. Theory of covalent bond, polar effects and stereochemistry of organic compounds.
3. About important industrial chemicals like silicones, fuel gases and fertilizers and their impact on environment.
4. Elements of photochemistry, chemical kinetics and chromatography.
5. About the dyes, chemotherapy and vitamins.
6. Principles and applications of Column, Paper and Thin Layer Chromatography.

Unit-I

Chemical Bonding: Molecular orbital theory-linear combination of atomic orbitals-bonding and antibonding molecular orbitals-energy level diagram-bond order- M.O. configuration of H_2, N_2 and F_2 molecules. Diborane: Preparation, properties and structure. $NaBH_4$: Preparation and uses. Borazole: Preparation and properties. Interhalogen compounds: ICl, BrF_3, IF_5 - preparation, properties, uses and structure. Basic properties of iodine. Compounds of sulphur: Sodium hydrosulphite- preparation, properties, uses and structure. Per acids of sulphur: Preparation, properties, uses and structure.

Unit-II

Industrial Chemistry: Silicones: Synthesis, properties and uses. Fuels gases: Natural gas-water gas-semi water gas-carbureted water gas-producer gas- oil gas (Manufacturing details not required). Fertilizers: NPK fertilizer-ammonium sulphate-urea-superphosphate of lime- triple superphosphate-potassium nitrate-ammonium nitrate. Pollution: Water, air and soil pollution-sources and remedies-acid rain-ozone hole-greenhouse effect.

Unit- III

Covalent Bond and Stereoisomerism:

Covalent Bond: Orbital overlap, hybridization and geometry of CH_4, C_2H_4 and C_2H_2. Polar effects: Inductive effect-electromeric effect- mesomeric effect- steric effect- hyperconjugation.

Stereoisomerism: Elements of symmetry-polarised light and optical activity-isomerism in tartaric acid-racemisation- resolution- geometrical isomerism of maleic and fumaric acids-keto-enol tautomerism of acetoacetic esters.

Unit- IV

Dyes, Chemotherapy and Vitamins: Dyes: Terms used chromophore, auxochrome, bathachromic shift and hypsochromic shift- classification of dyes – based on chemical structure and application-one example each for azo, triphenylmethane, vat and mordant dyes- preparation. **Chemotherapy:** Preparation, uses and mechanism of action sulpha drugs- preparation and uses of prontosil, sulphadiazine and sulphafurazole-structure and uses of pencillins and chloromycetin. **Vitamins:** Diseases caused by the deficiency of vitamins A, B_1, B_2, C and D-sources of these vitamins.

Unit- V

Elements of Photochemistry, Chemical Kinetics and Chromatography: Elements of Photochemistry: Photochemical laws-Beer Lambert's law-Grotthuss-Draper law-Stark- Einstein law (statement only).

Chemical Kinetics: Rate-order-molecularity-pseudo first order reactions-zero order reactions-determination of order of reaction-measurement of order and rates of reactions- effect of temperature on reaction rate-energy of activation.

Chromatography: Principles and applications of Column, Paper and Thin Layer Chromatography.

SEMESTER I

16BTU111 BIOCHEMISTRY & METABOLISM PRACTICAL 4H -2C

Total hours/week: L:0 T:0 P:4 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To acquire skill on various experimental methods and techniques on order to analyse the given biological samples.
- To know the standard procedures for handling the biochemical assays and instruments.
- To know the threshold levels of primary biochemicals.
- To analyse common organic reagents and compounds based on their properties.
- To analyse biological compounds from unknown mixture/origin.
- To Understand Good laboratory practices in a laboratory.

Course Outcomes

The learners will be able to,

1. Gain skills on quantitative estimation methods for various biomolecules from natural sources.
2. Acquire handling skills to handle the instrumentations.
3. Obtain skills on primary screening of samples.
4. Develop skills to prepare useful reagents in the laboratory.
5. Use of handling of glass wares, minor equipment for conducting experiments.
6. Learn safety and precautionary measures for working in a laboratory.

List of Practicals

1. Preparation of buffers.
2. Qualitative tests for Carbohydrates, lipids and proteins
3. Principles of Colorimetry**: (i)** Beer's law, estimation of protein. (**ii)** To study relation between absorbance and %transmission.
4. Separation of Amino acids by paper chromatography.
5. Estimation of blood glucose by glucose oxidase method.
6. Determination of - pH optima, temperature optima, Km value, V_{max}, Effect of inhibitor (Inorganic phosphate) on the enzyme activity.
7. To study the effect of pH, temperature on the activity of salivary amylase enzyme.
8. To study activity of any enzyme under optimum conditions.

SEMESTER I

16BTU112 CELL BIOLOGY PRACTICAL 3H -2C

Total hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To enable students to learn the basics of prokaryotic and eukaryotic cells
- To develop practical biological skills such as staining, sterilization, dialysis etc.
- To prepare students for subsequent biological courses that require an understanding of the physiology of organisms such as cell division, enzyme activity etc.
- To understand the basics of techniques to study cells.
- To prepare students to handle the equipment available and identify the suitable and appropriate experiments.
- To learn aseptic techniques in the lab.

Course Outcomes

The learners will be able to,

1. Understand the unique features of plant and animal cells.
2. Gain the practical skills on tissue mounting techniques to visualize the cell morphology.
3. Acquire knowledge about cell's response to various environmental conditions.
4. Able to differentiate the cells of various living organisms and get awareness of physiological processes of cell.
5. Able to observe and correctly identify different cell types, cellular structures.
6. Able to handle the equipment available and identify the suitable and appropriate experiments.

List of Practicals

1. Study the effect of temperature and organic solvents on semipermeable membrane.
2. Demonstration of dialysis.
3. Study of plasmolysis and de-plasmolysis.
4. Cell fractionation and determination of enzyme activity in organelles using sprouted seed or any other suitable source.
5. Study of structure of any Prokaryotic and Eukaryotic cell.
6. Microtomy: Fixation, block making, section cutting, double staining of animal tissues like liver, pancreas, kidney.
7. Cell division in onion root tip.
8. Preparation of Nuclear, Mitochondrial and cytoplasmic fractions.

SEMESTER I

16BTU113 **CHEMISTRY-1 PRACTICAL** **3H -2C**

Total hours/week: L:0 T:0 P:3 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The student should know

- The molecular orbital theory, preparation and properties of inorganic compounds.
- Theory of covalent bond, polar effects and stereochemistry of organic compounds.
- Theory about important Aromatic or aliphatic
- About the preliminary test
- Elements of chemical confirmatory test.
- Understand the concepts of safe laboratory practices.

Course Outcomes

The student understands

1. The molecular orbital theory, preparation and properties of inorganic compounds.
2. Theory of covalent bond, polar effects and stereochemistry of organic compounds.
3. About importance of the preliminary test
4. About the chemical confirmatory test
5. Elements of photochemistry, chemical kinetics.
6. About the safety measures to handle the chemicals in the lab.

List of Practicals

1. Preliminary tests
2. Detection of elements present
3. Aromatic or aliphatic
4. Saturated or unsaturated
5. Nature of the functional group
6. Confirmatory tests– aldehydes, ketones, amines, diamide, carbohydrates, phenols, acids, esters & nitro compounds.

Note: Each student should analyses minimum 6 compounds.

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 16LSU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் – 'சிறுதினை மலரொடு' என்பதிலிருந்துதொடங்கி,
'அறிந்தவாறே' என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – 'தெய்வம் சான்ற' என்பதிலிருந்து தொடங்கி, 'நல்குமதி' என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம் (6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – **கண்ணகியின் சிறப்பு:**
'நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி,
'கண்ணகி என்பாண் மன்னோ' என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) **- சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்:** 'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) **- செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்:** 'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை (10 மணிநேரம்)

1. **குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்**
2. **காட்டில் ஒரு மான் - அம்பை**
3. **நாற்காலி – கி.ராஜநாராயணன்**
4. **நகரம் – சுஜாதா**

அலகு- V : மொழிப்பயிற்சி (7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

SEMESTER II

16BTU201 **GENETICS** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To deliver the basic concepts of heredity in different living organisms
- To gain the information about the level of genome organization in various living organisms
- To obtain the knowledge about transmission of genetic information across generation at the individual and population level
- To understand how to identify and classify mutations in DNA.
- To relate the structure and function of the DNA molecule to its functional role in encoding genetic material.
- To describe the basic aspects of the flow of genetic information.

Course Outcomes

The learners will be able to,

1. Acquire knowledge about the central theories and methodologies traditional, molecular and population genetics.
2. Acquire information on sex- linked inheritance and associated diseases.
3. Understand the role of genetics in breeding and natural selection.
4. Apply the principles of inheritance as formulated by Mendel.
5. Apply the Hardy-Weinberg Law in analyzing population genetics for gene frequency, sex linkage, equilibrium, and heterozygote frequency.
6. Acquire knowledge about the relationship between genetic, physical, and cytogenetic maps.

UNIT- I

Introduction: Historical developments in the field of genetics. Organisms suitable for genetic experimentation and their genetic significance. Cell Cycle: Mitosis and Meiosis: Control points in cell-cycle progression in yeast. Role of meiosis in life cycles of organisms.

UNIT-II

Mendelian Genetics: Mendel's experimental design, monohybrid, di-hybrid and tri hybrid crosses, Law of segregation &Principle of independent assortment. Verification of segregates by test and back crosses, Chromosomal theory of inheritance, Allelic interactions: Concept of dominance, recessiveness, incomplete dominance, co-dominance, semi-dominance, pleiotropy, multiple alleles, pseudo-allele, essential and lethal genes, penetrance and expressivity.

UNIT-III

Chromosome and Genomic Organization: Eukaryotic nuclear genome nucleotide sequence composition–unique & repetitive DNA, satellite DNA. Centromere and telomere DNA sequences, repetitive transposed sequences- SINEs &LINEs. Genetic organization of prokaryotic and viral genome. Structure and characteristics of bacterial and eukaryotic chromosome, chromosome morphology, concept of euchromatin and heterochromatin. Concept of cistron, exons, introns, genetic code, gene function.

UNIT-IV

Chromosome and Gene Mutations: Definition and types of mutations, causes of mutations, Ames test for mutagenic agents, screening procedures for isolation of mutants and uses of mutants, variations in chromosomes structure - deletion, duplication, inversion and translocation (reciprocal and Robertsonian).

Sex determination, sex linkage, sex linked diseases: Mechanisms of sex determination, Fragile- X-syndrome and chromosome, sex influenced dominance, sex limited gene expression, sex linked inheritance.

UNIT-V

Genetic Linkage, Crossing Over and Chromosome Mapping: Linkage and Recombination of genes in a chromosome crossing over. Extra chromosomal inheritance: Rules of extra nuclear inheritance, maternal effects, maternal inheritance, cytoplasmic inheritance, organelle heredity, genomic imprinting. Evolution and population genetics: In breeding and out breeding, Hardy Weinberg law (prediction, derivation), allelic and genotype frequencies, changes in allelic frequencies, systems of mating, evolutionary genetics, natural selection.

SEMESTER II

16BTU202 CHEMISTRY-2 4H -4C

Total hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

- To make the student to be conversant with the extraction of metals, coordination chemistry, preparation, properties uses and structure of naphthalene and heterocyclic compounds.
- To make the student acquire sound knowledge of electrochemistry, biological functions of amino acids and proteins.
- To educate students on chemistry of carboxylic acids, nitro compounds and carbohydrates.
- To impart basic understanding on Thermodynamics
- To educate students on topics Electrochemistry
- To educate on thermodynamic laws, entropy, enthalpy change and the principles of electroplating.

Course Outcomes

1. The students will be able to understand the metallurgy of metals and the theories of coordination compounds and the industrial importance of EDTA, haemoglobin and chlorophyll.
2. The students will be able to understand the concept of aromaticity and preparation of aromatic compounds including heterocyclic compounds.
3. The students will be able to understand the preparation, classifications and properties of amino acids, proteins and carbohydrates.
4. The students will be able to understand the concepts of first and second laws of thermodynamics.
5. The students will be able to understand the fundamentals of electrochemistry.
6. To expose students on radical analysis in inorganic mixtures; Determination of surface tension and viscosity of liquids.

Unit-I

Metals and Coordination Chemistry:

Metals: General methods of extraction of metals-methods of ore dressing-types of furnaces- reduction methods-electrical methods-types of refining-Van Arkel Process-Zone refining.

Coordination Chemistry: Nomenclature-theories of Werner, Sidgewick and Pauling- chelation and its industrial importance-EDTA-haemoglobin-chlorophyll-applications in qualitative and quantitative analysis.

Unit-II

Aromatic Compounds and Heterocyclic Compounds:

Aromatic Compounds: Aromaticity-Huckel's (4n+2) rule- aromatic electrophilic substitution in benzene- mechanism of nitration, halogenation, alkylation, acylation and sulphonation. Naphthalene: Isolation, preparation, properties and structure. **Heterocyclic Compounds:** Preparation and properties of pyrrole, furan, thiophene and pyridine.

Unit-III

Amino acids, Proteins and Carbohydrates: Amino acids: Classification, preparation and properties. Peptides-preparation of peptides (Bergmann method only). **Proteins:** Classification, properties, biological functions and structure. **Carbohydrates:** Classification, preparation and properties of glucose and fructose- discussion of open chain and ring structures of glucose and fructose-glucose-fructose interconversion.

Unit-IV

Energetics: Type of systems-processes and their types - isothermal, adiabatic, reversible, irreversible and spontaneous processes-statement of first law of thermodynamics-need for the second law of thermodynamics-heat engine-Carnot cycle-efficiency-Carnot theorem- thermodynamics scale of temperature-Joule-Thomson effect- Enthalpy- Entropy and its significance-Free energy change.

Unit-V

Electrochemistry: Kohlrausch law-conductometric titrations-hydrolysis of salts-galvanic cells-E.M.F.-standard electrode potentials-reference electrodes- electrochemical series and its applications-buffer solution-buffer solution in the biological systems-pH and its determination-principles of electroplating.

SEMESTER II

16BTU203	**GENERAL MICROBIOLOGY**	**4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40** **External: 60** **Total: 100**

Course Objectives

The main objectives of the course are

- To inculcate knowledge on fundamentals of microorganisms.
- To learn the structural organization, morphology and reproduction of microbes.
- To know the principles of Microscopy and advancements in Microscopy
- To deal with the study of genetic, metabolic strategies and ecology of microorganisms.
- To learn the basic knowledge of the main microbiological techniques to be applied in the laboratory.
- To develop understanding about microbial metabolism, growth, energy generation and disease caused.

Course Outcomes

On completion of the course, students are able to

1. Gain rigorous knowledge on historical perspective of Microbiology
2. Acquire basic knowledge on different structure of microbes.
3. Get Ideas on different type of microscope.
4. Acquire basic knowledge the different applications of microbiology in biotechnology.
5. Acquire basic knowledge of genetic, metabolic strategies and ecology of microorganisms.
6. Acquire basic knowledge about microbial metabolism, growth, energy generation and disease caused.

UNIT-I

Fundamentals, History, Scope and Evolution of Microbiology. Classification of microorganisms: Microbial taxonomy, criteria used including molecular approaches, Microbial phylogeny and current classification of bacteria. Microbial Diversity: Distribution and characterization Prokaryotic and Eukaryotic cells, Morphology and cell structure of major groups of microorganisms eg. Bacteria, Algae, Fungi, Protozoa and Unique features of viruses.

UNIT-II

Cultivation and Maintenance of microorganisms: Nutritional categories of micro-organisms, Media, Types of media, Methods of isolation, Stating and types, Purification and preservation.

UNIT-III

Microbial growth: Growth curve, Microbial growth kinetics, batch and continuous culture, Measurement of growth, growth factors, factors affecting growth of bacteria. Bacterial Reproduction: Transformation, Transduction and Conjugation. Endospores and sporulation in bacteria.

UNIT-IV

Water Microbiology: Bacterial pollutants of water, coliforms and non coliforms. Sewage composition and its disposal. Food Microbiology: Important microorganism in food Microbiology: Moulds, Yeasts, bacteria. Major food born infections and intoxications, Preservation of various types of foods. Fermented Foods.

UNIT-V

Causative agent, pathology, diagnosis, treatment and control of Microbial diseases. TB, Cholera, Malaria, Amoebiasis, AIDS Control of Microorganisms: By physical, chemical and chemotherapeutic Agents.

SEMESTER II

16BTU211 GENETICS PRACTICAL 3H -2C

Total hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To learn about prokaryotic and eukaryotic genetic system using modern techniques.
- To inculcate knowledge on cell division stages.
- To develop skills on cell mounting techniques.
- To develop skills on karyotyping
- To inculcate knowledge on pedigree analysis.
- To learn about the mendelian laws and the experiment outcomes.

Course Outcomes

The learners will be able to

1. Gain rich knowledge on genetic model system used in research.
2. Acquire basic knowledge on different stages in cell division.
3. Get Ideas on pedigree analysis for detection of genetic disorders.
4. Acquire basic knowledge on karyotyping
5. Acquire basic knowledge of genetic variations among microorganisms.
6. Apply the principles of inheritance as formulated by Mendel.

List of Practicals

1. Permanent and temporary mount of mitosis.
2. Permanent and temporary mount of meiosis.
3. Mendelian deviations in dihybrid crosses
4. Demonstration of - Barr Body -*Rhoeo* translocation.
5. Karyotyping with the help of photographs
6. Pedigree charts of some common characters like blood group, color blindness and PTC tasting.
7. Study of polyploidy in onion root tip by colchicine treatment.

SEMESTER II

16BTU212 CHEMISTRY -2 PRACTICAL 3H -2C

Total hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100

Course Objectives

- To make the student to be conversant with the extraction of metals, coordination chemistry, preparation, properties uses and structure of naphthalene and heterocyclic compounds.

- To make the student acquire sound knowledge of electrochemistry, biological functions of amino acids and proteins.
- To educate students on chemistry of carboxylic acids, nitro compounds and carbohydrates.
- To impart basic understanding on Thermodynamics
- To educate students on topics Electrochemistry
- To educate on thermodynamic laws, entropy, enthalpy change and the principles of electroplating.

Course Outcomes

1. The students will be able to understand the metallurgy of metals and the theories of coordination compounds and the industrial importance of EDTA, haemoglobin and chlorophyll.
2. The students will be able to understand the concept of aromaticity and preparation of aromatic compounds including heterocyclic compounds.
3. The students will be able to understand the preparation, classifications and properties of amino acids, proteins and carbohydrates.
4. The students will be able to understand the concepts of first and second laws of thermodynamics.
5. The students will be able to understand the fundamentals of electrochemistry.
6. To expose students on radical analysis in inorganic mixtures; Determination of surface tension and viscosity of liquids.

VOLUMETRIC ANALYSIS

A. Acidimetry & Alkalimetry

1. Estimation of sodium carbonate using standard sodium hydroxide.
2. Estimation of sodium hydroxide using standard sodium carbonate.
3. Estimation of sulphuric acid using standard oxalic acid.
4. Estimation of potassium permanganate using standard sodium hydroxide.

B. Permanganometry

1. Estimation of ferrous sulphate using standard Mohr's salt.
2. Estimation of oxalic acid using standard ferrous sulphate.
3. Estimation of calcium-direct method.

SEMESTER II

16BTU213 GENERAL MICROBIOLOGY PRACTICAL

3H -2C

Total hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are

- To understand the basic principles of microscopy ultra-structure of microbes along with staining and sterilization methods
- To understand various accessories for microbiology practicals.
- To acquaint the students with various aspects of basic microbiology.
- To understand the biochemical characterization of isolated microbes.
- To develop practical biological skills such as staining, sterilization etc.
- To develop skills on primary screening of microorganisms.

Course Outcomes

On completion of the course, students are able to

1. Develop basic skill in aseptic techniques
2. Have outline knowledge on isolation, sub culture and maintenance of microbes.
3. Gain experience in microbiological laboratory practices and skills in the design and execution of microbiology related research.
4. Develop skills to prepare useful medias for microbial growth in the laboratory.
5. Use of handling of glass wares, minor equipment for conducting experiments.
6. Learn safety and precautionary measures for working with microbes in a laboratory.

List of Practicals

1. Preparation of media & sterilization methods
2. Methods of Isolation of bacteria from different sources.
3. Staining methods: simple staining, Gram staining, spore staining, negative staining, hanging drop.
4. Biochemical characterization of isolated microbes.
5. Enumeration of microorganism - total & viable count.
6. Determination of bacterial cell size by micrometry.

16AEC201 **ENVIRONMENTAL STUDIES** **4H –4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks: Internal: 40 External: 60 Total: 100**

Course Objectives

The main objectives of the course are,

- To create awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To learn about the environment, resources available, biodiversity and its conservation
- To understand the current scenarios- to find ways for protection and betterment of or habitat.
- To Understand the concepts and methodologies to analyze the interactions between social and environmental processes.

Course Outcomes

The learners will be able to,

1. Understand the concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Study the concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Learn the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Creating the awareness about environmental problems among people.

UNIT-I

Introduction: Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II

Renewable and Non-renewable Resources: Natural Resources- Renewable and Non- renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over- utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fireworks.

Unit III

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV

Environmental Pollution: Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit V

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population. growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

SEMESTER III

16BTU301 **PLANT PHYSIOLOGY** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To understand the physiological conditions of the plants and metabolism.
- To understand the basic concepts of Photosystems and their importance in plant growth.
- To gain the information about the economic importance of algae and fungi.
- To develop familiarity with plant development, biochemistry, and metabolism.
- To be familiar with cutting edge technology employed in contemporary plant biology.
- To integrate their knowledge of plant physiology to relevant cultural, social, and legal aspects of their lives.

Course Outcomes

The learners will be able to,

1. Gain adequate knowledge on plant physiology and importance.
2. Understand the molecular mechanisms of macro and micro nutrients in plant growth.
3. Get the basic and applied knowledge of plant growth, development and metabolism.
4. Impart an insight into the various plant water relations
5. Understand the mechanism of various metabolic processes in plants
6. Equip students with skills and techniques related to plant physiology so that they can design their own experiments

UNIT-I: Anatomy: The shoot and root apical meristem and its histological organization, simple &complex permanent tissues, primary structure of shoot &root, secondary growth, growth rings, leaf anatomy (dorsi-ventral and isobilateral leaf).

UNIT-II: Plant water relations and micro &macro nutrients: Plant water relations: Importance of water to plant life, diffusion, osmosis, plasmolysis, imbibition, guttation, transpiration, stomata &their mechanism of opening &closing. Micro &macro nutrients: criteria for identification of essentiality of nutrients, roles and deficiency systems of nutrients, mechanism of uptake of nutrients, mechanism of food transport.

UNIT-III: Carbon and nitrogen metabolism: Photosynthesis- Photosynthesis pigments, concept of two photo systems, photphosphorylation, calvin cycle, CAM plants, photorespiration, compensation point
Nitrogen metabolism- inorganic &molecular nitrogen fixation, nitrate reduction and ammonium assimilation in plants.

UNIT-IV: Growth and development: Growth and development: Definitions, phases of growth, growth curve, growth hormones (auxins, gibberlins, cytokinins, abscisic acid, ethylene). Physiological role and mode of action, seed dormancy and seed germination, concept of photoperiodism and vernalization.

UNIT-V: Plant adaptation: Stress adaptation mechanism: Definitions, Indicators of stress response - morphological, physiological, biochemical and molecular level. Stress adaptation and tolerance mechanism – biotic and abiotic stress, Effect of stress on crop productivity, Global warming - physiological effects on crop productivity.

SEMESTER III

16BTU302 MOLECULAR BIOLOGY 4H -4C

Total hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100

Course Objectives

The main objectives of the course are

- To emphasize the basic knowledge about the structure and functions of nucleic acids (DNA/RNA) and proteins.
- To obtain the adequate knowledge on the structure and functions of biomolecules.
- To gain the information about the DNA damage and repair mechanisms.
- To understand the mechanisms behind gene regulations.
- To understand the mechanism behind translation and transcription
- To understand the mutations and its significance

Course Outcomes

The learners will be able to,

1. Achieve knowledge about the functions of nucleic acids and proteins.
2. Acquire an in-depth knowledge of chemical and molecular processes that occur in and between the cells.
3. Gain an insight into the most significant molecular and cell-based methods used today to expand our understanding of biology.
4. Acquire knowledge about the mechanisms behind gene regulations.
5. Gain knowledge about mechanism behind translation and transcription
6. Acquire an in-depth knowledge about mutation and its significance

UNIT-I: DNA structure and organization: DNA as genetic material, Structure of DNA, Types of DNA, Organization of DNA in prokaryote and eukaryotic cells, Chromosome biology – histone and non-histone proteins, organization.

UNIT-II: DNA structure and replication: Replication of DNA in prokaryotes and eukaryotes: Semi-conservative nature of DNA replication, Bi-directional replication, DNA polymerases, Replication complex: Pre-priming proteins, primosome, replisome, Rolling circle replication, Unique aspects of eukaryotic chromosome replication, Fidelity of replication.

UNIT-III: DNA damage, repair and homologous recombination: DNA damage and repair: causes and types of DNA damage, mechanism of DNA repair: Photoreactivation, base excision repair, nucleotide excision repair, mismatch repair, trans-lesion synthesis, recombinational repair, nonhomologous end joining. Homologous recombination: models and mechanism.

UNIT-IV: Transcription and RNA processing: RNA structure and types of RNA, Transcription in prokaryotes: Prokaryotic RNA polymerase, role of sigma factor, promoter, Initiation, elongation and termination of RNA chains Transcription in eukaryotes: Eukaryotic RNA polymerases, transcription factors, promoters, enhancers, mechanism of transcription initiation, promoter clearance and elongation RNA splicing and processing: processing of pre- mRNA: 5' cap formation, polyadenylation, splicing, rRNA and tRNA splicing.

UNIT-V: Regulation of gene expression and translation: Regulation of gene expression in prokaryotes: Operon concept (inducible and repressible system), Genetic code and its characteristics, Prokaryotic and eukaryotic translation: ribosome structure and assembly, Charging of tRNA, aminoacyl tRNA synthetases, Mechanism of initiation, elongation and termination of polypeptides, Fidelity of translation, Inhibitors of translation, Posttranslational modifications of proteins.

SEMESTER III

16BTU303 **IMMUNOLOGY** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total: 100**

Course Objectives

The main objectives of the course are,

- To understand the basic concepts of immunology.
- To expose students to use these principles of immune system to combats infections.
- To gain the information about the auto immune diseases.
- To elucidate the genetic basis for immunological diversity and the generation of adaptive immune responses
- To understand the basic knowledge of immunological processes at a cellular and molecular level
- To learn central immunological principles and concepts

Course Outcomes

The learners will be able to,

1. Gain about the various cells and organs involved in the immune system.
2. Understand the molecular mechanisms of antigen-antibody interactions and also the molecular mechanisms behind the immune response evoked after infection by various pathogens.
3. Learn the theoretical basis for the various immunological techniques.
4. Describe which cell types and organs present in the immune response
5. Apply basic techniques for identifying antigen antibody interactions.
6. Illustrate various mechanisms that regulate immune responses and maintain tolerance

UNIT-I

Immune Response: An overview, components of mammalian immune system, Antigens- Essential features of Ag, haptens, Carrier molecule, Immunological valence, Antigenic determinants. Adjuvants: Freund's complete and incomplete. Antibodies - Molecular structure of Immuno-globulins or Antibodies, Humoral &Cellular immune responses, T lymphocytes & immune response (cytotoxic T-cell, helper T-cell, suppressor T-cells), T-cell receptors, genome rearrangements during B-lymphocyte differentiation, Antibody affinity maturation class switching, assembly of T-cell receptor genes by somatic recombination.

UNIT-II

Regulation of immunoglobulin gene expression: Clonal selection theory, all of types & idiotypes, allelic exclusion, immunologic memory, heavy chain gene transcription, genetic basis of antibody diversity, hypotheses (germ line &somatic mutation), antibody diversity.

UNIT-III

Hypersensitivity Reactions (HS): Type I: Allergies and anaphylaxis; Type II: Antibody mediated HS reactions; Mechanism and pathogenicity; Type III: Immune complex mediated HS reactions: Mechanism & pathogenicity; Type IV: Delayed type (or) cell-mediated HS reactions; Mechanisms and pathogenicity. Type V: Stimulatory HS reactions. Mechanism and pathogenesis.

UNIT-IV

Major Histocompatibility complexes: Class I &class II MHC antigens, antigen processing. Immunity to infection – immunity to different organisms, pathogen defense strategies, avoidance of recognition. Autoimmune diseases, Immunodeficiency-AIDS.

UNIT-V

Vaccines &Vaccination – adjuvants, cytokines, DNA vaccines, recombinant vaccines, bacterial vaccines, viral vaccines, vaccines to other infectious agents, passive &active immunization Introduction to immunodiagnostics – RIA, ELISA.

SEMESTER III

16BTU304A MOLECULAR DIAGNOSTICS 3H -3C

Total hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100

Course Objectives

The main objectives of the course are

- To obtain basic concepts of molecules and its effect on human and other animals.
- To ascertain the diagnostics tools for infectious diseases.
- To achieve a complete knowledge about molecular diagnostics techniques on human welfare.
- To understand the utility and limitations of various molecular diagnostic tests used for managing patient care.
- To attain the concepts of molecular methods used in clinical microbiology.
- To recognize the importance of proper specimen collection and preparation for molecular detection.

Course Outcomes

On completion of the course, students are able to

1. Get hold of the knowledge on fundamentals of molecular diagnostic techniques.
2. Expertise on the concepts of infection, diagnosis and control assortment.
3. Acknowledge on the qualitative studies based on biomarker observations.
4. Apply methodologies of laboratory diagnostics to relevant states of health.
5. Be aware of characteristics signs of clinical manifestations.
6. Comprehend and analyse the concept of disease management.

UNIT-I

Enzyme Immunoassays: Comparison of enzymes available for enzyme immunoassays, conjugation of enzymes. Solid phases used in enzyme immunoassays. Homogeneous and heterogeneous enzyme immunoassays. Enzyme immunoassays after immuno blotting. Enzyme immuno histochemical techniques. Use of polyclonal or monoclonal antibodies in enzymes immunoassays. Applications of enzyme immunoassays in diagnostic microbiology.

UNIT-II

Molecular methods in clinical microbiology: Applications of PCR, RFLP, Nuclear hybridization methods, Single nucleotide polymorphism and plasmid finger printing in clinical microbiology Laboratory tests in chemotherapy: Susceptibility tests: Micro-dilution and macro- dilution broth procedures. Susceptibility tests: Diffusion test procedures. Susceptibility tests: Tests for bactericidal activity. Automated procedures for antimicrobial susceptibility tests.

UNIT-III

Diagnosis and Standardization: Automation in microbial diagnosis, rapid diagnostic approach including technical purification and standardization of antigen and specific antibodies.

UNIT-IV

Diagnostic Immunology: Concepts and methods in idiotypes. Anti-idiotypes and molecular mimicry and receptors. Epitope design and applications. Immunodiagnostic tests. Immuno- florescence. Radioimmunoassay.

UNIT-V

GLC, HPLC, Electron microscopy, flow cytometry and cell sorting. Transgenic animals.

SEMESTER III

16BTU304B BIOTECHNOLOGY AND HUMAN WELFARE 3H -3C

Total hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives:

The main objectives of the course are

- learn the basics and lay strong foundation in understanding the biotechnological techniques in human welfare.
- To ascertain the knowledge about solid waste management and wastewater treatment.
- To achieve a novel treatment strategy for waste.
- To learn DNA based methods used in forensic science laboratory
- To obtain knowledge about biotechnological approaches beneficial for industries
- Exposure of simple concepts that will complement the course "Biotechnology in Human Welfare

Course Outcomes:

On completion of the course, students are able to

1. Apply the biotechnology concept for environmental and social welfare.
2. Expertise on the concepts of treatment strategies for waste to renewable energy.
3. Able to produce by-products from waste with help of biotechnology techniques.
4. Able to apply DNA based methods used in forensic science laboratory
5. Able to entry into a wide range of biotechnology industries and research enterprises.
6. Development of non-toxic therapeutic agents, recombinant live and DNA vaccines and gene therapy.

UNIT- I

Industry: protein engineering; enzyme and polysaccharide synthesis, activity and secretion, alcohol and antibiotic formation.

UNIT-II

Agriculture: N2 fixation: transfer of pest resistance genes to plants; interaction between plants and microbes; qualitative improvement of livestock.

UNIT-III

Environments: e.g. chlorinated and non-chlorinated organ pollutant degradation; degradation of hydrocarbons and agricultural wastes, stress management, development of biodegradable polymers such as PHB.

UNIT-IV

Forensic science: e.g. solving violent crimes such as murder and rape; solving claims of paternity and theft etc. using various methods of DNA finger printing.

UNIT-V

Health: e.g. development of non-toxic therapeutic agents, recombinant live vaccines, gene therapy, diagnostics, monoclonal in *E.coli*, human genome project.

SEMESTER III

16BTU311 **PLANT PHYSIOLOGY PRACTICAL** **4H -2C**

Total hours/week: L:0 T:0 P:4 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives:

The main objectives of the course are,

- Know importance and scope of plant physiology.
- To understand the plants and plant cells in relation to water.
- Understand the process of photosynthesis in higher plants with and their pigments.
- Understand the respiration in higher plants with particular emphasis on aerobic and anaerobic respiration.
- Learn about the movement of sap and absorption of water in plant body.
- Understand the plant movements.

Course Outcomes:

The learners will be able to

1. Study and impart knowledge about the occurrence, distribution, structure and life history of plants.
2. Enable the students to learn in detail about mono and dicot plant activity.
3. Learn the phylogeny concepts in plants.
4. Understand water relation of plants with respect to various physiological processes.
5. Explain root nodules from a leguminous plant
6. Classify stress indicators

List of Practicals

1. Preparation of stained mounts of anatomy of monocot and dicot's root, stem & leaf.
2. Demonstration of plasmolysis by *Tradescantia* leaf peel.
3. Demonstration of opening & closing of stomata
4. Demonstration of guttation on leaf tips of grass and garden nasturtium.
5. Separation of photosynthetic pigments by paper chromatography.
6. Demonstration of aerobic respiration.
7. Preparation of root nodules from a leguminous plant.
8. Estimation of stress indicators – Proline and osmolyte estimation

References

4. Taiz, L., & Zeiger, E. (2006). *Plant Physiology* (4th ed.). MA: USA, Sinauer Associates Inc.

Course Objectives
The main objectives of the course are,

- To inculcate practical skill in chromosomal and plasmid DNA separation by electrophoresis.
- To develop skills on extraction of proteins from plant and animal sources
- To detect the reverse mutation for carcinogenicity.
- To learn what genes are and how they are inherited
- To learn what are the solutions required for molecular biology experiments and how to prepare it
- To understand the principles and applications of molecular biology

Course Outcomes
The learners will be able to

1. Perform the experiments for isolation, purification and visualize the nucleic acid from various sources
2. Acquire skills on plasmid DNA extraction.
3. Gain basic knowledge on protein extraction and separation by electrophoresis.
4. Know the protocol for detection of mutation in microbes.
5. Understand what genes are and how they are inherited
6. Know how they control cellular activity and they respond to environment

List of Practicals

1. Preparation of solutions for Molecular Biology experiments.
2. Isolation of chromosomal DNA from bacterial cells.
3. Isolation of Plasmid DNA by alkaline lysis method
4. Agarose gel electrophoresis of genomic DNA &plasmid DNA
5. Preparation of restriction enzyme digests of DNA samples
6. Demonstration of AMES test or reverse mutation for carcinogenicity

16BTU313 IMMUNOLOGY PRACTICAL 4H -2C

Total hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To understand the basic concepts of immunology.
- To expose students to use these principles of immune system to combats infections.
- To gain the information about the auto immune diseases.
- To familiarize students with the various immunological techniques
- To identify the cellular and molecular basis of immune responsiveness.
- To describe immunological response and how it is triggered and regulated.

Course Outcomes

The learners will be able to,

1. Gain about the various cells and organs involved in the immune system.
2. Understand the molecular mechanisms of antigen-antibody interactions and also the molecular mechanisms behind the immune response evoked after infection by various pathogens.
3. Learn the theoretical basis for the various immunological techniques.
4. Transfer knowledge of immunology into clinical decision-making through case studies presented in class.
5. Demonstrate a capacity for problem-solving about immune responsiveness.
6. Describe the roles of the immune system in both maintaining health and contributing to disease.

List of Practicals

1. Differential leucocytes count
2. Total leucocytes count
3. Total RBC count
4. Hemagglutination assay
5. Hemagglutination inhibition assay
6. Separation of serum from blood
7. Double immunodiffusion test using specific antibody and antigen.
8. ELISA.

SEMESTER III

16BTU314A MOLECULAR DIAGNOSTICS PRACTICAL 3H -1C

Total hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are

- To obtain basic concepts of molecules and its effect on human and other animals.
- To ascertain the diagnostics tools for infectious diseases – RFLP, RAPD.
- To achieve a complete knowledge about molecular diagnostics techniques on microbial infection.
- To understand the utility and limitations of various molecular diagnostic tests used for managing patient care.
- To attain the concepts of molecular methods used in clinical microbiology.
- To recognize the importance of proper specimen collection and preparation for molecular detection.

Course Outcomes

On completion of the course, students are able to

1. Get hold of the knowledge on fundamentals of molecular diagnostic techniques.
2. Expertise on the concepts of infection, diagnosis and control assortment.
3. Acknowledge on the qualitative studies based on biomarker observations.
4. Apply methodologies of laboratory diagnostics to relevant states of health.
5. Be aware of characteristics signs of clinical manifestations.
6. Comprehend and analyse the concept of disease management.

List of Practicals

1. Perform/demonstrate RFLP, RAPD and analysis
2. Kirby-Bauyer method (disc-diffusion method) to study antibiotic sensitivity of a bacterial culture
3. A kit-based detection of a microbial infection (Widal test)
4. Study of Electron micrographs (any four).
5. Perform any one immuno diagnostic test (Typhoid, Malaria, Dengue)

SEMESTER III

16BTU314B BIOTECHNOLOGY AND HUMAN WELFARE PRACTICAL 3H -1C

Total hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are

- Learn the basics and lay strong foundation in understanding the biotechnological techniques in human welfare.
- To ascertain the knowledge about Endophyte.
- To achieve an estimation treatment strategy.
- To learn about ethical issues.
- To obtain knowledge about biotechnological approaches beneficial for industries
- To expose simple experiments that will complement the course “Biotechnology in Human Welfare

Course Outcomes

On completion of the course, students are able to

1. Apply the biotechnology concept for industry products.
2. Expertise on the concepts of treatment strategy.
3. Able to understand the plant part infected with a microbe.
4. Able to enter into a wide range of research enterprises.
5. Get expertise in Bioethics.
6. Understand the concepts of complement course “Biotechnology in Human Welfare

List of Practicals

1. Ethanol fermentation using Baker’s yeast
2. Study of a plant part infected with a microbe
3. To perform quantitative estimation of residual chlorine in water samples
4. Isolation and analysis of DNA from minimal available biological samples
5. Case studies on Bioethics (any two)

(Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

SEMESTER IV

16BTU401 **BIOPROCESS TECHNOLOGY** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total: 100**

Course Objectives

The main objectives of the course are,

- To learn the procedure for isolation, screening of industrial important microbes
- To derive industrially important products from microbes.
- To acquire knowledge on Downstream processing.
- To learn the principle and applications of bioprocess technology.
- To learn the fundamental calculation in bioprocessing.
- To learn the schematic diagram of upstream and downstream processing for product recovery and purification.

Course Outcomes

The learners will be able to

1. Gain overall knowledge of industrial biotechnology.
2. Obtain information about the application of industrially important microbes.
3. Know the screening, extraction and purification of enzymes.
4. Designing of bioreactors and control necessary for maximizing production.
5. Select and optimize media for maximum production of microbial metabolites.
6. Designing of protocols for strain improvement and separation of molecules after fermentation process.

UNIT- I

Introduction to bioprocess technology: Range of bioprocess technology and its chronological development. Basic principle components of fermentation technology. Types of microbial culture and its growth kinetics– Batch, Fed batch and Continuous culture.

UNIT-II

Design of bioprocess vessels: Significance of Impeller, Baffles, Sparger; Types of culture/production vessels- Airlift; Cyclone Column; Packed Tower and their application in production processes. Principles of upstream processing– Media preparation, Inocula development and sterilization.

UNIT-III

Bioreactor control and monitoring: Introduction to oxygen requirement in bioprocess; mass transfer coefficient; factors affecting KLa. Bioprocess measurement and control system with special reference to computer aided process control.

UNIT-IV

Downstream processing: Filtration, Centrifugation, Cell disruption, Chromatography, liquid- liquid extraction, product recovery and purification. Effluent treatment- product recovery, sludge process, waste disposal.

UNIT-V

Applications: Microbial production of ethanol, amylase, lactic acid, penicillin G and Single Cell Proteins. Fermentation economics. Microbial cell immobilization.

SEMESTER IV

16BTU402 RECOMBINANT DNA TECHNOLOGY 4H -4C

Total hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To learn the procedure for isolation nucleic acids and Protein.
- To learn the strategies for gene transfer in plants and animals.
- To acquire knowledge on genome mapping.
- To familiarize the student with emerging field of biotechnology
- To acquaint the students to versatile tools and techniques employed in recombinant DNA technology.
- To learn the history and recent developments in rDNA technology, Enzymes used in rDNA technology

Course Outcomes

On completion of the course, students are able to

1. Outline the fundamental steps in a genetic engineering procedure.
2. Describe the mechanism of action and the use of restriction enzymes in biotechnology research and recombinant protein production.
3. Explain the usefulness of plasmid preparations, how they are performed, and how the concentration and purity of plasmid samples can be determined.
4. Discuss cloning strategies and techniques used to probe DNA for specific genes of interest.
5. Conceptualize PCR technique in medical and forensic science.
6. Summarize various applications of rDNA technology in human health care and safety regulations.

UNIT-I

Introduction to r-DNA technology: Basic tools and applications – isolation and purification of nucleic acids, Enzymes used in cloning - restriction enzymes, ligases, polymerases, kinases, phosphatases. Gene recombination and gene transfer – transformation, episomes, plasmids and other cloning vectors (bacteriophage-derived, artificial chromosomes), microinjection, electroporation, ultrasonication.

UNIT-II

Selection and screening of recombinant clones: Probes – radio labeled and
non radiolabeled, guessmers and degenerate probes. Sequence dependent and independent screening, southern, northern hybridization, colony and plaque hybridization, *in situ* chromosomal hybridization, chromosome walking, Genome mapping, DNA fingerprinting, Polymerase chain reaction (PCR), RT- (Reverse transcription) PCR.

UNIT-III

Expression and Characterization of Cloned DNA: Expression vectors, optimization of protein expression in heterologous systems, Fusion proteins, *In vitro* translation systems. Preparation and comparison of Genomic and cDNA library.

UNIT-IV

Random and Site-directed Mutagenesis: Primer extension and PCR based methods of site directed mutagenesis, Random mutagenesis, Gene shuffling, production of chimeric proteins, Protein engineering concepts and examples (any two).

UNIT-V

Applications of Genetic Engineering: In plants: use of *Agrobacterium tumefaciens* and *A. rhizogenes*, Ti plasmids, Strategies for gene transfer to plant cells, Direct DNA transfer to plants, Gene targeting in plants, Use of plant viruses as episomal expression vectors.

In animals: Production and applications of transgenic mice, role of ES cells in gene targeting in mice, Therapeutic products - blood proteins, human hormones, immune modulators and vaccines (one example each). Ethical, legal and social issues.

SEMESTER IV

16BTU403 **GENOMICS AND PROTEOMICS** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To import the basic and recent developments in the field of genome sequencing, genome mapping, proteomic data analysis
- To develop the knowledge on gene sequencing methods.
- To know the structure and interactions of proteins.
- To describe advanced genomics and proteomics technologies and the ways in which their data are stored
- To use bioinformatics techniques to query examples of genomic and proteomic databases to analyse cell biology
- To describe the different types of genome variation and their relationship to human diseases

Course Outcomes

On completion of the course, students are able to

1. Have a clear understanding on the application of genetic markers in genome mapping.
2. Application of 2D technique to analyze the structure of protein.
3. Analyze the genomic and proteomic data.
4. Acquire knowledge and understanding of fundamentals of genomics and proteomics, transcriptomics and metabolomics and their applications in various applied areas of biology.
5. Discuss how biological systems information relating to genes, proteins and cellular structures can be used to model living cells, and even to create new synthetic cells
6. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.

UNIT-I

Introduction to Genomics: Gene and Pseudogenes, Gene structure, DNA sequencing methods – manual and automated: Maxam and Gilbert and Sangers method. Pyrosequencing, Genome Sequencing: Shotgun and Hierarchical (clone contig) methods, Computer tools for sequencing projects: Genome sequence assembly software.

UNIT-II

Managing and Distributing Genome Data: Web based servers and software for genome analysis: ENSEMBL, VISTA, UCSC Genome Browser, NCBI genome. Selected Model Organisms' Genomes and Databases.

UNIT-III

Genomic mapping: Genetic markers: VNTR, mini and micro satellites, STS, SNP, ESTs. Types of genome maps, Mapping techniques – Physical and genetic mapping, Map resources, Practical uses genome maps.

UNIT-IV

Protein and structure determination: Introduction to protein structure, Chemical properties of proteins. Physical interactions that determine the property of proteins. Short-range interactions, electrostatic forces, van der Waal interactions, hydrogen bonds, Hydrophobic interactions. Determination of sizes -Sedimentation analysis, gel filteration, Native PAGE, SDS-PAGE. Determination of covalent structures – Edman degradation.

UNIT-V

Proteomics: Introduction to Proteomics, Analysis of proteomes. 2D-PAGE. Sample preparation, solubilization, reduction, resolution. Reproducibility of 2D-PAGE. Mass spectrometry basedmethods for protein identification. De novo sequencing using mass spectrometric data.

SEMESTER IV

16BTU404A INDUSTRIAL FERMENTATION 3H -3C

Total hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100

Course Objectives

The main objectives of the course are,

- To import the basic and recent developments in the field of Industrial fermentation
- To impact knowledge about biological and biochemical technology, with a focus on biological products, the design and operation of industrial practices.
- To discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.
- To learn how to conduct experiments related to industrial fermentation and produce microbial metabolites
- To learn about the downstream and upstream process in fermentation technology.
- To learn about the influence of factors affecting the production of various microbial metabolites

Course Outcomes

On completion of the course, students are able to

1. Have a clear understanding on the application of growth kinetics.
2. Design a fermenter and parameters to be monitored and controlled in fermentation process.
3. Gain knowledge about the principle of sterilization necessary for fermentation.
4. Acquire knowledge about the cell growth and product formation.
5. Evaluate the kinetics and mechanism of microbial growth.
6. Develop protocol for scale-up and harvesting from shake flask to bench top fermenter.

UNIT-I

Production of industrial products: Production of industrial chemicals, biochemicals and chemotherapeutic products. Propionic acid, butyric acid, 2-3 butanediol, gluconic acid, itaconic acid, Biofuels: Biogas, Ethanol, butanol, hydrogen, biodiesel, microbial electricity, starch conversion processes; Microbial polysaccharides; Microbial insecticides; microbial flavours and fragrances, newer antibiotics, anti-cancer agents, amino acids.

UNIT-II

Microbial products and enzymes production: Microbial products of pharmacological interest, steriod fermentations and transformations. Over production of microbial metabolite, Secondary metabolism – its significance and products. Metabolic engineering of secondary metabolism for highest productivity. Enzyme and cell immobilization techniques in industrial processing, enzymes in organic synthesis, proteolytic enzymes, hydrolytic enzymes, glucose isomerase, enzymes in food technology/ organic synthesis.

UNIT-III

Purification and characterization techniques: Purification &characterization of proteins, Upstream and downstream processing, solids and liquid handling. Distribution of microbial cells, centrifugation, filtration of fermentation broth, ultra-centrifugation, liquid extraction, ion- exchange recovery of biological products. Experimental model for design of fermentation systems, Anaerobic fermentations.

UNIT-IV

Kinetics: Rate equations for enzyme kinetics, simple and complex reactions. Inhibition kinetics; effect of pH and temperature on rate of enzyme reactions. Mathematical derivation of growth kinetics, mathematical derivations of batch and continuous culture operations.

UNIT-V

Mass transfer determination and Metabolic engineering: Single stage CSTR; mass transfer in aerobic fermentation; resistance encountered; overall mass transfer co-efficient (Ka) determination, factors depending on scale up principle and different methods of scaling up. Metabolic engineering of antibiotic biosynthetic pathways.

Reference

SEMESTER IV

16BTU404B **ENZYMOLOGY** **3H -3C**

Total hours/week: L:3 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To understand the kinetics and mechanisms of action of enzymes, to become familiar with the basic methods of studying enzymes, and to appreciate how individual reactions are controlled and integrated into the metabolic pathways of the cell.
- To acquire theoretical and experimental knowledge will enable students to find appropriate employment in different development, scientific-research laboratories.
- To understand the topics related to the practical use of enzymes, including nomenclature and kinetics, preparation and storage methods, use of enzymes in biotechnology and bioanalytics including biosensors and enzyme reactors.
- To provide general knowledge on protein structure and function, as well as the experimental techniques in protein chemistry and protein engineering
- To develop the ability of identifying the experimental techniques required to solve specific problems related to proteins and enzyme functions
- To train students in the evaluation of the consequences of biochemical and biological tools in their professional activities

Course Outcomes:

On completion of the course, students are able to

1. Understand the chemical principles of enzyme catalysis, including cofactor chemistry
2. Show insight in the action of enzymes as biocatalysts and in factors that influence enzyme activity
3. Understand the kinetics of enzymatic reactions
4. Show awareness of the influence of enzyme structure on catalytic properties
5. Show experience with purification, handling and characterization of proteins
6. Show insight in the physico-chemical properties of proteins that underlie purification methods.

UNIT-I

Enzymes and Enzyme kinetics: Isolation, crystallization and purification of enzymes, test of homogeneity of enzyme preparation, methods of enzyme analysis. Enzyme classification (rationale, overview and specific examples) Zymogens and their activation (Proteases and Prothrombin). Enzyme substrate complex: concept of E-S complex, binding sites, active site, specificity, Kinetics of enzyme activity, Michaelis-Menten equation and its derivation, Different plots for the determination of Km and V_{max} and their physiological significance, factors affecting initial rate, E, S, temp. & pH. Collision and transition state theories, Significance of activation energy and free energy.

UNIT-II

Enzyme inhibition and regulation: Two substrate reactions (Random, ordered and ping-pong mechanism) Enzyme inhibition types of inhibition, determination of Ki, suicide inhibitor. Mechanism of enzyme action: General mechanistic principle, factors associated with catalytic efficiency: proximity, orientation, distortion of strain, acid-base, nucleophilic and covalent catalysis. Techniques for studying mechanisms of action, chemical modification of active site groups, specific examples-: chymotrypsin, lysozyme, GPDH, aldolase, RNase, Carboxypeptidase and alcohol dehydrogenase. Enzyme regulation: Product inhibition, feed back control, covalent modification.

UNIT-III

Types of Enzymes and its reaction: Allosteric enzymes with special reference to aspartate transcarbomylase and phosphofructokinase. Qualitative description of concerted and sequential models. Negative cooperativity and half site reactivity. Enzyme - Enzyme interaction, Protein ligand binding, measurements analysis of binding isotherm, cooperativity, Hill and scatchard plots, kinetics of allosteric enzymes. Isoenzymes– multiple forms of enzymes with special reference to lactate dehydrogenase.

Multienzyme complexes. Ribozymes. Multifunctional enzyme-eg Fatty Acid synthase.

UNIT-IV

Enzyme Technology: Methods for large scale production of enzymes. Immobilized enzyme and their comparison with soluble enzymes, Methods for immobilization of enzymes. Immobilized enzyme reactors. Application of Immobilized and soluble enzyme in health and industry. Application to fundamental studies of biochemistry. Enzyme electrodes.

UNIT-V

Enzyme engineering: Thermal stability and catalytic efficiency of enzyme, site directed mutagenesis and enzyme engineering–selected examples, Delivery system for protein pharmaceuticals, structure function relationship in enzymes, structural motifs and enzyme evolution. Methods for protein sequencing. Methods for analysis of secondary and tertiary structures of enzymes. Protein folding *in vitro* &*in vivo*.

16BTU411 BIOPROCESS TECHNOLOGY PRACTICAL 4H -2C
Total hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To learn the procedure for isolation, screening of industrial important microbes
- To derive industrially important products from microbes.
- To acquire knowledge on growth curve.
- To learn the principle and applications of bioprocess technology.
- To learn the fundamental calculation in bioprocessing.
- To learn the schematic diagram of upstream and downstream processing for product recovery and purification.

Course Outcomes

The learners will be able to

1. Gain overall knowledge of bioprocess technology.
2. Obtain information about the application of industrially important microbes.
3. Know the screening, extraction and purification of enzymes.
4. Understand the analysis and control necessary for maximizing production.
5. Select and optimize media for maximum production of microbial metabolites.
6. Designing of protocols for strain improvement and separation of molecules after fermentation process.

List of Practicals

1. Bacterial growth curve.
2. Calculation of thermal death point (TDP) of microbial samples.
3. Production and analysis of ethanol.
4. Production and analysis of amylase.
5. Production and analysis of lactic acid.
6. Isolation of industrially important microorganism from natural resources.

16BTU412 RECOMBINANT DNA TECHNOLOGY PRACTICAL 4H -2C

Total hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To learn the procedure for isolation nucleic acids and Protein.
- To learn the strategies for gene transfer in plants and animals.
- To acquire knowledge on genome mapping.
- To familiarize the student with emerging field of biotechnology
- To acquaint the students to versatile tools and techniques employed in recombinant DNA technology.
- To learn the history and recent developments in rDNA technology, Enzymes used in rDNA technology

Course Outcomes

On completion of the course, students are able to

1. Outline the fundamental steps in a recombinant DNA technique.
2. Describe the mechanism of action and the use of restriction enzymes in biotechnology research and recombinant protein production.
3. Explain the usefulness of plasmid preparations, how they are performed, and how the concentration and purity of plasmid samples can be determined.
4. Discuss cloning strategies and techniques used to probe DNA for specific genes of interest.
5. Conceptualize PCR technique in medical and forensic science.
6. Utilize versatile tools and techniques employed in recombinant DNA technology.

List of Practicals

1. Isolation of chromosomal DNA from plant cells
2. Isolation of chromosomal DNA from *E. coli*
3. Qualitative and quantitative analysis of DNA using spectrophotometer and agarose gel Electrophoresis.
4. Plasmid DNA isolation
5. Restriction digestion of DNA/ Plasmid DNA
6. Ligation of DNA insert into plasmid vector
7. Preparation of Competent cells
7. Transformation of competent cells.
8. Demonstration of PCR

SEMESTER IV

16BTU413 GENOMICS AND PROTEOMICS PRACTICAL 4H -2C

Total hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To import the basic and recent developments in the field of genome sequencing, genome mapping, proteomic data analysis
- To develop the knowledge on gene sequencing methods.
- To know the structure and interactions of proteins.
- To describe advanced genomics and proteomics technologies and the ways in which their data are stored
- To use bioinformatics techniques to query examples of genomic and proteomic databases to analyse cell biology
- To describe the different types of genome variation and their relationship to human diseases

Course Outcomes

On completion of the course, students are able to

1. Have a clear understanding on the application of genetic markers in genome mapping.
2. Application of 2D technique to analyze the structure of protein.
3. Analyze the genomic and proteomic data.
4. Acquire knowledge and understanding of fundamentals of genomics and proteomics, transcriptomics and metabolomics and their applications in various applied areas of biology.
5. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
6. Utilize the various databases at NCBI and other sites for protein localization

List of Practicals

1. Use of SNP databases at NCBI and other sites
2. Use of OMIM database
3. Detection of Open Reading Frames using ORF Finder
4. Proteomics 2D PAGE database
5. Software for Protein localization.
6. Software for protein secondary sequencing prediction
7. Hydropathy plots
8. Native PAGE
9. SDS-PAGE

SEMESTER IV

16BTU414A INDUSTRIAL FERMENTATION PRACTICAL 3H -1C

Total hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To import the basic and recent developments in the field of Industrial fermentation
- To impact knowledge about biological and biochemical technology, with a focus on biological products, the design and operation of industrial practices.
- To discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.
- To learn how to conduct experiments related to industrial fermentation and produce microbial metabolites
- To learn about the downstream and upstream process in fermentation technology.
- To learn about the influence of factors affecting the production of various microbial metabolites

Course Outcomes

On completion of the course, students are able to

1. Have a clear understanding on the application of growth kinetics
2. Design a fermenter and parameters to be monitored and controlled in fermentation process.
3. Gain knowledge about the principle of sterilization necessary for fermentation.
4. Acquire knowledge about the cell growth and product formation.
5. Evaluate the kinetics and mechanism of microbial growth.
6. Develop protocol for scale-up and harvesting from shake flask to bench top fermenter.

List of Practicals

1. Comparative analysis of design of a batch and continuous fermenter.
2. Calculation of Mathematical derivation of growth kinetics.
3. Solvent extraction & analysis of a metabolite from a bacterial culture.
4. Perform an enzyme assay demonstrating its hydrolytic activity (protease/peptidase/glucosidase etc.)

SEMESTER IV

16BTU414B **ENZYMOLOGY PRACTICAL** **3H -1C**

Total hours/week: L:0 T:0 P:3 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To understand the kinetics and mechanisms of action of enzymes, to become familiar with the basic methods of studying enzymes, and to appreciate how individual reactions are controlled and integrated into the metabolic pathways of the cell.
- To acquire experimental knowledge will enable students to find appropriate employment in different development, scientific-research laboratories.
- To understand the topics related to the practical use of enzymes, including nomenclature and kinetics, preparation and storage methods, use of enzymes in biotechnology and bioanalytics including biosensors and enzyme reactors.
- To provide practical knowledge on protein
- To develop the ability of identifying the experimental techniques required to solve specific problems related to proteins and enzyme functions
- To train students in the evaluation of the consequences of biochemical and biological tools in their professional activities

Course Outcomes

On completion of the course, students are able to

1. Understand the chemical principles of enzyme catalysis, including cofactor chemistry
2. Show insight in the action of enzymes as biocatalysts and in factors that influence enzyme activity
3. Understand the kinetics of enzymatic reactions
4. Show awareness of the influence of enzyme structure on catalytic properties
5. Show experience with purification, handling and characterization of proteins
6. Show insight in the physico-chemical properties of proteins that underlie purification methods.

List of Practicals

1. Purification of an enzyme from any natural resource
2. Quantitative estimation of proteins by Bradford/Lowry's method.
3. Perform assay for the purified enzyme.
4. Calculation of kinetic parameters such as Km, V_{max}, K_{cat}

SEMESTER V

16BTU501A PLANT DIVERSITY-I 3H -3C

Total hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To understand the physiological conditions of the plants and metabolism.
- To understand the basic concepts of photosystems and their importance in plant growth.
- To gain the information about the economic importance of algae and fungi.
- Learn about the structure, pigmentation, food reserves and methods of reproduction of Algae
- Learn about the structure, pigmentation, food reserves and methods of reproduction of Fungi
- Studied some plant diseases with special reference to the causative agents, symptoms, etiology and control measures.

Course Outcomes

The learners will be able to,

- Gain adequate knowledge on plant biodiversity and importance.
- Understand the molecular mechanisms of macro and micro nutrients in plant growth.
- Get the basic and applied knowledge of plant physiology, growth, development and metabolism.
- Discuss about importance of morphological structure, classification, reproduction and economic importance of Algae.
- Know the control measures of plant diseases.
- Explain about structure, classification, reproduction, life cycle and economic importance of Bryophytes.

UNIT-I

Algae: General character, classification and economic importance. Life histories of algae belonging to various classes: Chlorophyceae – *Volvox, Oedogonium,* Xanthophyceae –*Vaucheria,* Phaeophyceae– *Ectocarpus* Rhodophyceae-*Polysiphonia*

UNIT-II

Fungi: General characters, classification & economic importance. Life histories of Fungi: Mastigomycontina- *Phytophthora,* Zygomycotina-*Mucor,* Ascomycotina- *Saccharomyces,* Basidomycotina - *Agaricus,* Deutromycotina-*Colletotrichum*

UNIT-III

Lichens: Classification, general structure, reproduction and economic importance. Plant diseases: Casual organism, symptoms and control of following plant diseases. Rust and Smut of Wheat. White rust of Crucifers. Late blight of Potato. Red rot of Sugarcane. Citrus Canker.

UNIT-IV

Bryophytes: General characters, classification & economic importance. Life histories of following: *Marchantia. Funaria.*

UNIT-V

Rust and Smut of Wheat. White rust of Crucifers. Late blight of Potato. Red rot of Sugarcane. Citrus Canker.

SEMESTER V

16BTU501B BASICS OF FORENSIC SCIENCE 3H -3C

Total hours/week: L:3 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To give knowledge on molecular analysis in forensic science.
- To offer knowledge to assess DNA finger printing
- To understand the evidence for suspecting victims in crime
- To handle the evidences left out at the crime scene.
- To understand the basic methods for examine the different types of questioned documents.
- To understand the Classification of fire arms.

Course Outcomes

On completion of the course, students are able to

- Demonstrate competency in the collection, processing, analyses, and evaluation of evidence.
- Demonstrate competency in the principles of crime scene investigation, including the recognition, collection, identification, preservation, and documentation of physical evidence.
- Demonstrate an understanding of the scientific method and the use of problem-solving within the field of forensic science.
- Identify the role of the forensic scientist and physical evidence within the criminal justice system.
- Demonstrate the ability to document and orally describe crime scenes, physical evidence, and scientific processes.
- Identify and examine current and emerging concepts and practices within the forensic science field.

UNIT- I

Introduction and principles of forensic science, forensic science laboratory and its organization and service, tools and techniques in forensic science, branches of forensic science, causes of crime, role of modus operand in criminal investigation. Classification of injuries and their medico-legal aspects, method of assessing various types of deaths.

UNIT-II

Classification of fire arms and explosives, introduction to internal, external and terminal ballistics. Chemical evidence for explosives. General and individual characteristics of handwriting, examination and comparison of handwritings and analysis of ink various samples.

UNIT-III

Role of the toxicologist, significance of toxicological findings, Fundamental principles of fingerprinting, classification of fingerprints.

UNIT-IV

Principle of DNA fingerprinting, application of DNA profiling in forensic medicine, Investigation Tools, eDiscovery, Evidence Preservation, Search and Seizure of Computers,

UNIT-V

Introduction to Cyber security and recent techniques. development of finger print as science for personal identification,

SEMESTER V

16BTU502A **BIOINFORMATICS** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To give knowledge on Bioinformatics and its application
- To offer knowledge to assess biological databases
- To understand and to analyze protein/nucleotide sequences and to predict its 3D structure
- To understand the various online databases for submitting and retrieving data's
- To understand how the phylogeny plays a vital role in finding ambiguities.
- To get practiced with the tools and techniques for analyzing the data.

Course Outcomes

On completion of the course, students are able to

1. Understand The relationship between sequence - structure - function of genes
2. Familiarize with the algorithms required to compare sequences and require to know the phylogenetic relationship between the gene sequences
3. Inculcate knowledge on building 3D structures of genes.
4. Locate and use the main databases at the NCBI and EBI resources
5. Know the difference between databases, tools, repositories and be able to use each one to extract specific information
6. Use selected tools at NCBI and EBI to run simple analyses on genomic sequences

UNIT-I

History and milestone of Bioinformatics. The notion of Homology. Sequence Information Sources, EMBL, GENBANK, Entrez, Unigene, Understanding the structure of each source and using it on the web. Genome sequencing projects – Steps, Human Genome Project and other genome projects.

UNIT-II

Basic concepts of biomolecules – Protein and amino acid, DNA and RNA - Sequence, Structure and function. Protein Information Sources, PDB, SWISSPROT, TREMBL, Understanding the structure of each source and using it on the web. Introduction of Data Generating Techniques and Bioinformatics problem posed by them- Restriction Digestion, Chromatograms, Blots, PCR, Microarrays, Mass Spectrometry.

UNIT-III

Sequence and Phylogeny analysis, Detecting Open Reading Frames, Outline of sequence Assembly, Mutation/Substitution Matrices, Pairwise Alignments, Introduction to BLAST, using it on the web, Interpreting results, Multiple Sequence Alignment, Phylogenetic Analysis. Introduction to BLAST, using it on the web, Interpreting results, Multiple Sequence Alignment, Phylogenetic Analysis.

UNIT-IV

Biological databases: Types of databases, Sequence databases, Nucleic acid sequence databases - Primary (GenBank, EMBL, DDBJ), Secondary (Uni Gene, SGD, EMI Genomes, Genome Biology), Protein sequence database – Primary (PIR, SWISS-PROT), Secondary (PROSITE, Pfam), Structural databases (PDB, SCOP, CATH), Bibliographic databases and Organism specific databases.

UNIT-V

Searching Databases: SRS, Entrez, Sequence Similarity Searches-BLAST, FASTA, Data Submission. Genome Annotation: Pattern and repeat finding, Gene identification tools. Gene prediction: Gene prediction in prokaryote and eukaryotes. Extrinsic approaches and Ab initio approaches. Predicting the protein secondary structure (Domain, blocks, motifs), Predicting protein tertiary structure (Homology, Ab-initio, threading and fold recognition) and visualization of predicted structure.

SEMESTER V

16BTU502B **PLANT DIVERSITY-II** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To develop the skills on morphological identification of plants.
- Understand the diversity among various plants
- Know the systematic morphology and structure of Pteridophytes.
- Learn about the general characters and classification in Pteridophytes, heterospory and origin of seed habit.
- Know about the structure, life history and Economic importance of Gymnosperms.
- Studied the methods of fossilization and fossil plants

Course Outcomes

The learners will be able to

1. Study and impart knowledge about the occurrence, distribution, structure and life history of plants
2. Learn in detail about vegetative and reproductive parts of plants.
3. Learn the phylogeny and evolutionary concepts in plants.
4. Learn how to handle a fossilized specimen
5. Acquire knowledge about the structure, life history and Economic importance of Gymnosperms
6. Learn the skills on morphological identification of plants

UNIT-I

Pteridophytes: General characters of pteridophytes, affinities with bryophytes and gymnosperms, classification, economic importance study of life histories of fossil pteridophytes – *Rhynia.*

UNIT-II

Pteridophytes: Type studies: Life histories of *Selaginella*- (Heterospory and seed habit), *Equisetum, Pteris, Lycopodium.*

UNIT-III

Gymnosperms: General characters, classification, geological time scale, theories of fossil formation, types of fossils, fossil gymnosperms- *Williamsonia* & *Glossopteris,* telome and stele concept.

UNIT-IV

Gymnosperms: Type studies: Life histories of *Cycas* and *Pinus* and economic importance of gymnosperms.

UNIT-V

Gymnosperms: Type studies: Life histories of *Pinus*, economic importance of gymnosperms

Reference

1. Sambamurty, (2008). *A Textbook of Bryophytes, Pteridophytes, Gymnosperms and Paleobotany*. IK International Publishers.

SEMESTER V

16BTU503A **PLANT BIOTECHNOLOGY** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total: 100**

Course Objectives

The main objectives of the course are,

- To introduce biotechnological methods for production of transgenic plants.
- To give knowledge about various methods of gene transfer in plants.
- To cognize and get the knowledge on micro propagation to protect endangered plants.
- To explain the basics of the physiological and molecular processes that occur during plant growth and development and during environmental adaptations
- To use basic biotechnological techniques to explore molecular biology of plants
- To understand the processes involved in the planning, conduct and execution of plant biotechnology experiments

Course Outcomes

On completion of the course, students are able to

1. Understand the growth conditions required to culture the plants in *invitro* conditions.
2. Inculcate the deep understanding of Gene expression system of plants
3. Acquire knowledge on producing Transgenic plants
4. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of plant biotechnology experiments
5. Learn the structure and organization of plant genome
6. Learn the basic techniques for hybridization in producing transgenic plants

UNIT-I

Introduction, Cryo and organogenic differentiation, Types of culture: Seed, Embryo, Callus, Organ, Cell and Protoplast culture. Micropropagation Axillary bud proliferation, Meristem and shoot tip culture and culture, organogenesis, embryogenesis, advantages and disadvantages of micropropagation

UNIT-II

In vitro haploid production Androgenic methods: Anther culture, Microspore culture and oogenesis. Significance and use of haploids, Ploidy level and chromosome doubling, diplodization, Gynogenic haploids, factors effecting gynogenesis, chromosome elimination techniques for production of haploids in cereals.

UNIT-III

Protoplast Isolation and fusion Methods of protoplast isolation, Protoplast development, Somatic hybridization, identification and selection of hybrid cells, Cybrids, Potential of somatic hybridization limitations. Somaclonal variation Nomenclature, methods, applications basis and disadvantages. Plant Growth Promoting bacteria. Nitrogen fixation, Nitrogenase, Hydrogenase, Nodulation, Bio control of pathogens, Growth promotion by free-living bacteria.

UNIT-IV

Structure and organization of plant genome, regulation of plant genome expression, transcriptional, translational and post transcriptional regulation of plant genome. Transfer of nucleic acid to plant cells- Direct transformation by electroporation and particle gun bombardment. - *Agrobacterium*, Ti plasmid vector Theory and techniques for the development of new genetic traits.

UNIT-V

Transgenic plants, herbicides and pest resistant plants; Molecular farming/ pharming: carbohydrates, lipids, therapeutic proteins, edible vaccines, purification strategies; Oleosin partition technology.

SEMESTER V

16BTU503B EVOLUTIONARY BIOLOGY 4H -4C

Total hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100

Course Objectives

The main objectives of the course are

- To obtain basic concepts of life and gradual evolution of human and other animals
- To ascertain the evolutionary concepts through fossil study of Eukaryotes from Prokaryotes
- To explain Origin of Life especially Prokaryotes as well as Eukaryotes in detail.
- To give detailed explanation of key concepts of Population Genetics in terms of Hardy-Weinberg Law, Genetic Drift and Types of Natural Selection.
- To provide adequate knowledge about Micro-evolutionary changes, Speciation and Adaptive Radiation.
- To impart descriptive knowledge regarding Origin and Evolution of Man

Course Outcomes

On completion of the course, students are able to

1. Get hold of the knowledge on fundamentals of Evolutionary Biology.
2. Expertise on the concepts of evolution, chromosomal aberrations; recombination and random assortment.
3. Acknowledge on the Qualitative Studies Based on Field Observations
4. To develop comprehensive knowledge regarding various Sources of Variations and their role in evolution.
5. To explore salient features of various theories of evolution comprising of Lamarckism, Darwinism and Neo-Darwinism.
6. To impart detailed understanding of Qualitative Studies Based on Field Observations

UNIT- I

Historical Review of Evolutionary Concept. Pre-Darwinian ideas – List of contributors influencing Darwin indicated as a *timeline.* Lamarckism – Merits and demerits. Darwinism – Merits and demerits, Post-Darwinian era –Modern synthetic theory; biomathematics and the theory of population genetics leading to Neo-Darwinism

UNIT- II

Life's Beginnings. Chemogeny– An overview of pre-biotic conditions and events; experimental proofs to abiotic origin of micro- and macro-molecules. Current concept of chemogeny– RNA first hypothesis. Biogeny – Cellular evolution based on proto-cell models (coacervates and proteinoid micro-spheres). Origin of photosynthesis – Evolution of oxygen and ozone buildup. Endosymbiotic theory – Evolution of Eukaryotes from Prokaryotes

UNIT-III

Evidences of Evolution. Paleobiological– Concept of Stratigraphy and geological timescale; fossil study (types, formation and dating methods). Anatomical – Vestigial organs; Homologous and Analogous organs (concept of parallelism and convergence in evolution). Taxonomic – Transitional forms/evolutionary intermediates; living fossils. Phylogenetic – a) Fossil based – Phylogeny of horse as a model. b) Molecule based – Protein model (Cytochrome C); gene model (Globin gene family)

UNIT-IV

Sources of Evolution – Variations as Raw Materials of Change. Types of variations – Continuous and discontinuous; heritable and non-heritable. Causes, classification and contribution to evolution – Gene mutation; chromosomal aberrations; recombination and random assortment (basis of sexual reproduction); gene regulation. Concept of micro- and macro-evolution – A brief comparison

UNIT-V

Forces of Evolution – Qualitative Studies Based on Field Observations. Natural selection as a guiding force – Its attributes and action Basic characteristics of natural selection. Colouration, camouflage and mimicry, Co-adaptation and co-evolution, Man-made causes of change – Industrial melanism; brief mention of drug, pesticide, antibiotic and herbicide resistance in various organisms. Modes of selection, Polymorphism, Heterosis and Balanced lethal systems. Genetic Drift (Sewall Wright effect) as a stochastic/random force – Its attributes and action. Basic characteristics of drift; selection vs. drift, Bottleneck effect. Founder principle.

16BTU504A **ANIMAL BIOTECHNOLOGY** **SEMESTER V** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To introduce biotechnological methods for production of transgenic animals.
- To give knowledge about various methods of gene transfer in animals.
- To cognize and get the knowledge on techniques to protect endangered animals.
- To explain the basics of the physiological and molecular processes for animals facing environmental adaptations
- To use basic biotechnological techniques to explore molecular biology of animals
- To understand the processes involved in the planning, conduct and execution of animal biotechnology experiments

Course Outcomes

On completion of the course, students are able to

1. Understand the growth conditions required to culture the animals in *invitro* conditions.
2. Inculcate the deep understanding of Gene expression system of animals
3. Acquire knowledge on producing Transgenic animal
4. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of animal biotechnology experiments
5. Learn the structure and organization of animal genome
6. Learn the basic techniques for hybridization in producing transgenic animal

UNIT- I

Animal Tissue Culture: Laboratory design: aseptic techniques– handling instruments: Microscopes, Clean-bench, etc., and bio safety. Animal Cell Culture Media: Natural and artificial media – their constituents; Physicochemical properties of media; Serum supplemented and serum-free media; Sterilization methods.

UNIT - II

Primary Cell Culture: Methods of tissue disaggregation - isolations of tissues from chick embryo, mouse and human; Continuous and established cell cultures; Cell separation and characterization; Organ culture- types.

UNIT-III

Gene transfer methods in Animals – Microinjection, Embryonic Stem cell, gene transfer, Retrovirus &Gene transfer. Introduction to transgenesis. Transgenic Animals – Mice, Cow, Pig, Sheep, Goat, Bird, Insect.

UNIT-IV

Animal propagation – Artificial insemination, Animal Clones. Conservation Biology – Embryo transfer techniques. Introduction to Stem Cell Technology and its applications. Expression of bovine growth hormone; production of human proteins in milk and meat. Animal diseases need help of Biotechnology – Foot-and mouth disease, Coccidiosis, Trypanosomiasis, Theileriosis.

UNIT-V

Production and applications; transgenic animals: mouse, cow, sheep, fish, hen. Genetic modification in Medicine - gene therapy, types of gene therapy, vectors in gene therapy, molecular engineering, human genetic engineering, problems and ethics.

SEMESTER V

16BTU504B **ANIMAL DIVERSITY-I** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To provide the students with an in-depth knowledge of the diversity in form, structure and habits of invertebrates.
- To learn the basics of systematic and understand the hierarchy of different categories.
- To learn the diagnostic characters of different phyla through brief studies of examples.
- To obtain an overview of economically important invertebrate fauna.
- To explain the organizational hierarchies and complexities of invertebrates.
- To describe the evolutionary trends in external morphology and internal structure.

Course Outcomes

The learners will be able to

1. Outline the origin and classification of animal kingdom
2. Describe the origin of animals and how they differ from other living organisms;
3. Explain the relationship between animal diversity and evolutionary derived changes in animal body plans
4. Analyse the various modes of adaptations in animals
5. Identify and classify with examples the invertebrates
6. Analyse the various modes of adaptations in animals

UNIT- I

a) Outline of classification of Non- Chordates up to subclasses. Coelomata, Acoelomata, Symmetries, Deutrostomes, Protostomes.

b) Protozoa: Locomotion, Reproduction, evolution of Sex, General features of *Paramecium* and *Plasmodium*. Pathogenic protozoans

c) Porifera: General characters, outline of Classification; skeleton, Canal System

UNIT-II

a) Coelenterata: General Characters, Outline of classifications Polymorphism, Various types of stinging cells; Metagenesis, coral reefs and their formation.

b) Platyhelminthes- General Characters; Outline of classification; Pathogenic flatworms: Parasitic adaptations.

c) Aschelminthes: General features, Outline of classification, Pathogenic roundworms and their vectors in relation to man: Parasite adaptation.

UNIT-III

a) Annelida: - General features, Outline of classification, Coelom: Metameric segmentation, General features of Earthworm, Vermicomposting.

b) Arthropoda: General Features, Outline of Classification; Larval forms of crustacean, Respiration in Arthropoda; Metamorphosis in insects; Social insects; Insect vectors of diseases; Apiculture, Sericulture.

UNIT-IV

a) Mollusca: general features, Outline of classification, Shell Diversity; Torsioning astropoda,

b) Echinodermata: General features, Outline of Classification Larval forms

c) Hemichordata: Phylogeny: Affinities of *Balanoglossus*

SEMESTER V

16BTU511A PLANT DIVERSITY-I PRACTICAL 3H -1C

Total hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To understand the physiological conditions of the plants and metabolism.
- To understand the basic concepts of diversified growth.
- To gain the information about the economic importance of algae and fungi.
- Learn about the structure, pigmentation, food reserves and methods of reproduction of Algae
- Learn about the structure, pigmentation, food reserves and methods of reproduction of Fungi
- Studied some plant diseases with special reference to the causative agents, symptoms, etiology and control measures.

Course Outcomes

The learners will be able to,

1. Gain adequate knowledge on plant biodiversity and importance.
2. Understand the molecular mechanisms of macro and micro nutrients in plant growth.
3. Get the basic and applied knowledge of plant physiology, growth, development and metabolism.
4. Discuss about importance of morphological structure, classification, reproduction and economic importance of Algae.
5. Know the control measures of plant diseases.
6. Explain about structure, classification, reproduction, life cycle and economic importance of Bryophytes.

List of Practicals

1. Comparative study of thallus and reproductive organs of various algae mentioned in theory.
2. Comparative study of vegetative and reproductive parts of various fungi mentioned in theory.
3. Study and section cutting and lactophenol mount of plant disease materials studied in theory.
4. Study of various types of lichens.
5. Study of external features & anatomy of vegetative and reproductive parts of Marchantia and Funaria.
6. Collection of algae, fungi, plant diseases materials and bryophytes available locally.

SEMESTER V

16BTU511B BASICS OF FORENSIC SCIENCE PRACTICAL 3H –1C

Total hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To give knowledge on molecular analysis in forensic science.
- To offer knowledge to assess DNA finger printing
- To understand the evidence for suspecting victims in crime
- To handle the evidences left out at the crime scene.
- The basic methods for examine the different types of questioned documents.
- Identify the E-Mail Investigation and related Recovering deleted evidences

Course Outcomes

On completion of the course, students are able to

1. Apply the Laboratory skills to participate in the career needs of Forensic community.
2. Become trained in the laboratory skills of different division of Forensic Science.
3. Be able to work with different R& D organizations.
4. Identify the role of the forensic scientist and physical evidence within the criminal justice system.
5. Demonstrate the ability to document and orally describe crime scenes, physical evidence, and scientific processes.
6. Identify and examine current and emerging concepts and practices within the forensic science field.

List of Practicals

1. Documentation of crime scene by photography, sketching and field notes.
2. a. Simulation of a crime scene for training.
   b. To lift footprints from crime scene.
3. Case studies to depict different types of injuries and death.
4. Separation of nitro compounds (explosives)/ ink samples by thin layer chromatography.
5. Investigate method for developing fingerprints by Iodine crystals.
6. PCR amplification on target DNA and DNA profiling,
7. E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery, Recovering deleted evidences, Password Cracking.

SEMESTER V

16BTU512A **BIOINFORMATICS PRACTICAL** **4H -2C**

Total hours/ week: L:0 T:0 P:4 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To give knowledge on Bioinformatics and its application
- To offer knowledge to assess biological databases
- To understand and to analyze protein/nucleotide sequences and to predict its 3D structure
- To understand the various online databases for submitting and retrieving data's
- To understand how the phylogeny plays a vital role in finding ambiguities.
- To get practiced with the tools and techniques for analyzing the data.

Course Outcomes

On completion of the course, students are able to

1. Understand The relationship between sequence - structure - function of genes.
2. Familiarize with the algorithms required to compare sequences and require to know the phylogenetic relationship between the gene sequences.
3. Inculcate knowledge on building 3D structures of genes.
4. Locate and use the main databases at the NCBI and EBI resources
5. Know the difference between databases, tools, repositories and be able to use each one to extract specific information.
6. Use selected tools at NCBI and EBI to run simple analyses on genomic sequences.

List of Practicals

1. Sequence information resource
2. Understanding and use of various web resources: EMBL, Genbank, Entrez, Unigene, Protein information resource (PIR)
3. Understanding and using: PDB, Swissprot, TREMBL
4. Using various BLAST and interpretation of results.
5. Retrieval of information from nucleotide databases.
6. Sequence alignment using BLAST.
7. Multiple sequence alignment using Clustal W.

SEMESTER V

16BTU512B PLANT DIVERSITY II PRACTICAL 4H -2C

Total hours/week:T:0P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To develop the practical skills on morphological identification of plants.
- Understand the diversity among various plants
- Know the systematic morphology and structure of Pteridophytes.
- Learn about the general characters and classification in Pteridophytes, heterospory and origin of seed habit.
- Know about the structure, life history and Economic importance of Gymnosperms.
- Studied the methods of fossilization and fossil plants

Course Outcomes

The learners will be able to

1. Study and impart practical knowledge about the occurrence, distribution, structure and life history of plants
2. Learn in detail about vegetative and reproductive parts of plants.
3. Learn the phylogeny and evolutionary concepts in plants.
4. Learn how to handle a fossilized specimen
5. Acquire knowledge about the structure, life history and Economic importance of Gymnosperms
6. Learn the skills on morphological identification of plants

List of Practicals

1. Examination of morphology and anatomy of vegetative and reproductive parts of *Selaginella, Equisetum* and *Pteris*.
2. Examination of morphology and anatomy of vegetative and reproductive parts of – *Cycas &Pinus*
3. Plant collection (pteridophytes &gymnosperms).

References

Total hours/week: T:0 L: 0 P:4 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To develop the skills on morphological identification of suitable explants.
- Understand the growth hormones of culture medium
- Know the systematic morphology and structure of plants.
- Learn about the general culture techniques.
- Know about the sterilization process in PTC Lab.
- Studied the methods of Micropropagation

Course Outcomes

The learners will be able to

1. Study and impart knowledge about the occurrence, distribution, of plants and suitable explants.
2. Learn in detail about growth hormones.
3. Learn the sterilize and prepare an explant of plants.
4. Learn how to handle a PTC equipments
5. Acquire knowledge about aseptic condition maintained in lab
6. Learn the skills on plant culture techniques.

List of Practicals

1. Preparation of simple growth nutrient (knop's medium), full strength, half strength, solid and liquid.
2. Preparation of complex nutrient medium (Murashige & Skoog's medium).
3. To selection, Pure, sterilize and prepare an explant for culture.
4. Significance of growth hormones in culture medium.
5. To demonstrate various steps of Micropropagation using banana/tomato/potato.

SEMESTER V

16BTU513A EVOLUTIONARY BIOLOGY PRACTICAL 4H -2C

Total hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100

Course Objectives

The main objectives of the course are

- To obtain practical concepts of types of fossils
- To ascertain the evolutionary concepts through fossil study of Eukaryotes from Prokaryotes
- To explain Origin of Life especially Prokaryotes as well as Eukaryotes in detail.
- To give detailed explanation of key concepts of living fossil
- To provide adequate knowledge about Micro-evolutionary changes, Speciation and Adaptive Radiation.
- To impart descriptive knowledge regarding Origin and Evolution of Man

Course Outcomes

On completion of the course, students are able to

1. Get hold of the practical knowledge on fundamentals of Evolutionary Biology.
2. Expertise on the Sampling techinques.
3. Acknowledge on the Qualitative Studies Based on Field Observations
4. To develop comprehensive knowledge regarding various Sources of Variations and their role in evolution.
5. To explore salient features of various theories of evolution comprising of Lamarckism, Darwinism and Neo-Darwinism.
6. To impart detailed understanding of Analogy, Homology, Paleontological Evidences, Embryological Evidences and Molecular Phylogeny.

List of Practicals

(A) Evidence of fossils

1. Study of types of fossils (e.g. trails, casts and moulds and others) and Index fossils of Palaeozoic era
2. Connecting links/transitional forms - Eg. Euglena, Neopilina, Balanoglossus, Chimaera, Tiktaalik, Archaeopteryx, Ornithorhynchus
3. Living fossils - Eg. Limulus, Peripatus ,Latimeria, Sphaenodon
4. Vestigial, Analogous and Homologous organs using photographs, models or specimen.

(B) Variations

1. Sampling of human height, weight and BMI for continuous variation.
2. Sampling for discrete characteristics (dominant *vs* recessive) for discontinuous variations e.g hitch-hiker's thumb, dexterity, tongue rolling, ear lobe (data categorization into 16 groups based on the combination of 4 traits; assigning each subject to the respective group).

(C) Selection Exemplifying Adaptive strategies (Colouration, Mimetic form, Co-adaptation and co-evolution; Adaptations to aquatic, fossorial and arboreal modes of life) using Specimens.

(D) Neo-Darwinian Studies

1. Calculations of genotypic, phenotypic and allelic frequencies from the data provided
2. Simulation experiments using coloured beads/playing cards to understand the effects of Selection and Genetic drift on gene frequencies (E) Phylogeny.

4. Barton, Briggs, Eisen, Goldstein, & Patel, (2007). *Evolution.* Cold Spring Harbor Laboratory Press.

SEMESTER V

16BTU514A ANIMAL BIOTECHNOLOGY PRACTICAL 4H -2C

Total hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100

Course Objectives

The main objectives of the course are,

- To introduce biotechnological methods for ATC.
- To give knowledge about various methods of gene transfer in animals.
- To cognize and get the knowledge Theory and Practical: Glass ware sterilization, Media sterilization, Laboratory sterilization.
- To explain the basics of the physiological and molecular processes for animals facing environmental adaptations
- To use basic biotechnological techniques to explore molecular biology of animals
- To understand the processes involved in the planning, conduct and execution of animal biotechnology experiments

Course Outcomes

On completion of the course, students are able to

1. Understand the growth conditions required to culture the animals in *invitro* conditions.
2. Inculcate the deep understanding of Laboratory sterilization
3. Acquire knowledge on DNA isolation from animal tissue
4. Understand the Minimal Essential Growth medium
5. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of animal biotechnology experiments
6. Learn the structure and organization of animal genome

List of Practicals

1. Sterilization techniques: Theory and Practical: Glass ware sterilization, Media sterilization, Laboratory sterilization.
2. Sources of contamination and decontamination measures.
3. Preparation of Hanks Balanced salt solution
4. Preparation of Minimal Essential Growth medium
5. Isolation of lymphocytes for culturing
6. DNA isolation from animal tissue
7. Quantification of isolated DNA.
8. Resolving DNA on agarose gel.

16BTU514B **ANIMAL DIVERSITY -I PRACTICAL** **SEMESTER V** **4H -2C**

Total hours/week: L:4 T:0 P:4 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To provide the students with an in-depth knowledge of the diversity in form, structure and habits of invertebrates
- To learn the basics of systematic and understand the hierarchy of different categories
- To learn the diagnostic characters of different phyla through brief studies of examples
- To obtain an overview of economically important invertebrate fauna
- To explain the organizational hierarchies and complexities of invertebrates
- To describe the evolutionary trends in external morphology and internal structure

Course Outcomes

The learners will be able to

1. Outline the origin and classification of animal kingdom
2. Describe the origin of animals and how they differ from other living organisms
3. Explain the relationship between animal diversity and evolutionary derived changes in animal body plans
4. Analyze the various modes of adaptations in animals
5. Identify and classify with examples the invertebrates
6. Analyze the various modes of adaptations in animals

List of Practicals

1. Identification and Classification of Any these of the following–Porifera:*Scypha, Leucosolenia, Euspongia, Hylonema, Euplectella Cnidaria: Medrepora, Millepora, Physalia, Porpita, Valella, Aurelia, Metridium* Platyhelminthes: *Taenia, Fasciola*, Aschelminthes*: Ascaris, Ancylostoma, Enterobius* Annelida: *Pheretima, Hirudinaria, Chaetopterus, Nereis, Aphrodite* Arthropoda: *Julus, Scolopendra, Peripatus, Carcinus, Limulus, Lepisma, Dragonfly, Musca, Acheta* ollusca: *Pila, Unio, Mytilus, Loligo, Sepia, Octopus, Solen* Echinodermata: *Asterias, Ophiothrix, Echinus, Holothuria, Astrophyton* Hemichordata:*Balanoglossus*

2. Identification of slides with two points of identification. *Amoeba, Paramoecium, Ceratium, Plasmodium, Opalina*, L.S. Sponge, Spicules of sponges, L.S. *Hydra, Obelia, Bougainvillia*, Larvae of *Fasciola,* Seta of Earthworm, Radula 3. Ecological Note – On any of the specimens in Exercise No 1 Models of dissection of Earthworm, Cockroach Earthworm: Digestive, Nervous System, Cockroach: Digestive Reproductive, Nervous System.

SEMESTER VI

16BTU601A I.P.R., ENTREPRENEURSHIP, BIOETHICS & BIOSAFETY 3H -3C

Total hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are

- To understand the basic knowledge of copy rights and related property rights.
- To develop the entrepreneurship skills using biological product formation.
- To provide the information of filling the patents and copy rights
- To disseminate knowledge on trademarks and registration aspects
- To disseminate knowledge on Design, Geographical Indication (GI), Plant Variety and Layout Design Protection and their registration aspects
- To learn about current trends in IPR and Govt. steps in fostering IPR

Course Outcomes

On completion of the course, students are able to

- Acquire the knowledge on filling and submission of copy rights and related property rights.
- Gain knowledge in developing new pilot scale / large scale industries and associated formalities
- Understand the importance of patenting /copyrights/Trade marks
- Acquire the knowledge on fundamental aspects of Intellectual property Rights to students who are going to play a major role in development and management of innovative projects in industries.
- Disseminate knowledge on patents, patent regime in India and abroad and registration aspects \
- Disseminate knowledge on copyrights and its related rights and registration aspects

UNIT-I

Introduction to Indian Patent Law. World Trade Organization and its related intellectual property provisions. Intellectual/Industrial property and its legal protection in research, design and development. Patenting in Biotechnology, economic, ethical and depository considerations.

UNIT II

Entrepreneurship: Selection of a product, line, design and development processes, economics on material and energy requirement, stock the product and release the same for making etc. The basic regulations of excise: Demand for a given product, feasibility of its production under given constraints of raw material, energy input, financial situations export potential etc.

UNIT III

Bioethics – Necessity of Bioethics, different paradigms of Bioethics – National & International. Ethical issues against the molecular technologies.

UNIT IV

Biosafety– Introduction to biosafety and health hazards concerning biotechnology. Introduction to the concept of containment level.

UNIT V

Good Laboratory Practices (GLP) and Good Manufacturing Practices (GMP).

SEMESTER VI

16BTU601B BIO-ANALYTICALTOOL 3H -3C

Total hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To study the bio-analytical tools and their applications.
- To have sufficient knowledge on the separation of compounds from a mixture.
- To know the application of chromatography in biotechnology.
- To develop the skills to understand the theory and practice of bio analytical techniques.
- To provide scientific understanding of analytical techniques and detail interpretation of results.
- To learn how to design experiments and understand the instrumentation.

Course Outcomes

On completion of the course, students are able to

1. Know the working principle, maintenance, and calibrations of bioanalytical tools and technique
2. Estimate the number of biomolecules using the Bioanalytical tool
3. Implement the bioanalytical techniques to analyze the biomolecules
4. Use selected analytical techniques.
5. Be familiar with working principals, tools and techniques of analytical techniques.
6. To understand the strengths, limitations and creative use of techniques for problem-solving.

UNIT I

Simple microscopy, phase contrast microscopy, florescence and electron microscopy (TEM and SEM), pH meter, absorption and emission spectroscopy

UNIT II

Principle and law of absorption fluorimetry, colorimetry, spectrophotometry (visible, UV, infrared), centrifugation, cell fractionation techniques, isolation of sub-cellular organelles and particles.

UNIT III

Introduction to the principle of chromatography. Paper chromatography, thin layer chromatography, column chromatography: silica and gel filtration, affinity and ion exchange chromatography, gas chromatography, HPLC.

UNIT IV

Introduction to electrophoresis. Starch-gel, polyacrylamide gel (native and SDS-PAGE), agarose-gel electrophoresis,

UNIT V

Pulse field gel electrophoresis, immuno- electrophoresis, isoelectric focusing, Western blotting. Introduction to Biosensors and Nanotechnology and their applications.

SEMESTER VI

16BTU602A **MEDICAL MICROBIOLOGY** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total: 100**

Course Objectives

The main objectives of the course are

- To identify common infectious agents and the diseases that they cause.
- To evaluate methods used to identify infectious agents in medical microbiology lab.
- To recall microbial physiology including metabolism, regulation and replication of pathogenic microbes.
- To explain general and specific mechanisms by which an infectious agent causes disease.
- To recognize and diagnose common infectious diseases from the clinical presentation and associated microbiology.
- To describe the epidemiology of infectious agents including how infectious diseases are transmitted.

Course Outcomes

On completion of the course, students are able to

1. Apply the biotechnology concept for controlling infectious agents.
2. Expertise on the concepts of metabolism, regulation and replication of pathogenic microbes.
3. Able to get knowledge on the toxins released by microbes.
4. Able to enter into a wide range of biotechnology industries with research enterprises.
5. Develop of non-toxic therapeutic agents from microbes
6. Able to get knowledge on Fungal and Protozoan infections

UNIT- I

Introduction: Normal microflora of human body, nosocomial infections, carriers, septic shock, septicemia, pathogenicity, virulence factors, toxins, biosafety levels. Morphology, pathogenesis, symptoms, laboratory diagnosis, preventive measures and chemotherapy of gram positive bacteria: *S.aureus, S.pyogenes, B.anthracis, C.perferinges, C.tetani, C.botulinum, C.diphtheriae, M.tuberculosis, M. leprae.*

UNIT-II

Morphology, pathogeneis, symptoms, laboratory diagnosis, preventive measures and chemotherapy caused by gram negative bacteria: *E.coli, N. gonorrhoea, N. meningitidis, P. aeruginosa, S. typhi, S. dysenteriae, Y. pestis, B. abortus, H. influenzae, V. cholerae, M. pneumoniae, T. pallidum M. pneumoniae, Rickettsiaceae, Chlamydiae.*

UNIT- III

Diseases caused by viruses- Picornavirus, Orthomyxoviruses, Paramyxoviruses, Rhabdoviruses, Reoviruses, Pox virus, Herpes virus, Papova virus, Retro viruses (including HIV/AIDS) and Hepatitis viruses.

UNIT- IV

Fungal and Protozoan infections. Dermatophytoses (*Trichophyton, Microsporun and Epidermophyton*) Subcutaneous infection (*Sporothrix, Cryptococcus*),systemic infection (*Histoplasma, Coccidoides).*

UNIT- V

Opportunistic fungal infections (*Candidiasis, Aspergillosis*), Gastrointestinal infections (Amoebiasis, Giardiasis), Blood-borne infections (Leishmaniasis, Malaria).

SEMESTER VI

16BTU602B ENVIRONMENTAL BIOTECHNOLOGY 4H -4C

Total hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100

Course Objectives

The main objectives of the course are

- To obtain basic concepts of biotechnology to solve the environmental problems
- To ascertain the knowledge about solid waste management and wastewater treatment.
- To achieve a novel treatment strategy for waste to Bioenergy.
- To gain knowledge about the biological and biotechnological measures for restoring environment.
- To involve in the present scenarios and find valuable solutions for remedy
- To update about the management strategies followed up by the industries and government.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. Bio-management of soil
2. Bio-management of Petroleum Contaminants
3. Environmental significance of genetically modified microbes, plants and animals
4. Bioleaching
5. Treatment of municipal waste and Industrial effluents
6. Bioremediation concepts

UNIT-I

Conventional fuels and their environmental impact – Firewood, Plant, Animal, Water, Coal and Gas. Modern fuels and their environmental impact – Methanogenic bacteria, Biogas, Microbial hydrogen Production, Conversion of sugar to alcohol Gasohol

UNIT-II

Bioremediation of soil & water contaminated with oil spills, heavy metals and detergents. Degradation of lignin and cellulose using microbes. Phyto-remediation. Degradation of pesticides and other toxic chemicals by micro-organisms-degradation aromatic and chlorinates hydrocarbons and petroleum products.

UNIT- III

Waste management, Treatment of municipal waste and Industrial effluents Bio-fertilizers Role of symbiotic and asymbiotic nitrogen fixing bacteria in the enrichment of soil. Algal and fungal biofertilizers (VAM)

UNIT- IV

Bioleaching, Enrichment of ores by microorganisms (Gold, Copper and Uranium). Solid waste management (an introduction).

UNIT- V

Environmental significance of genetically modified microbes, plants and animals.

SEMESTER VI

16BTU603A	**BIOSTATISTICS**	**4H -4C**
Total hours/week: L:4 T:0 P:0	**Marks: Internal: 40 External: 60 Total:100**	

Course Objectives

The main objectives of the course are

- To gain mathematical approach for analyzing the data.
- To learn the knowledge about graphical and diagrammatic representation of Statistical data.
- To learn the knowledge about Scope and applications of biostatistics
- To learn the knowledge about collection, processing and presentation of data and Testing of hypothesis
- To learn the knowledge about Measures of central tendency, Measures of dispersion
- To learn the knowledge about Correlation analysis and regression analysis

Course Outcomes

On completion of the course, students are able to

1. Apply the statistical tool knowledge for research data analysis.
2. Understand the concept of various hypothesis regarding data analysis.
3. To perform analysis for the data based on graphical representation (Bar, multiple bars, histogram, pie chart etc.)
4. To perform analysis to determine the mean, median, mode and standard deviation of given sample/data
5. To perform analysis, determine the probability of given sample/data
6. To perform the t-test/F-Test and Chi-square test of given data

UNIT I

Statistics – Meaning, Definitions, Introduction to Bio-Statistics -Types of Data, Collection of data; Primary & Secondary data, Classification and tabulation of data, construction of frequency distribution. Graphical and diagrammatic representation of Statistical data.

UNIT II

Measures of central tendency – Mean, Median and Mode. Measures Dispersion – Absolute and relative measures dispersion – Range, Standard deviation and coefficient of variation. Measures of Skewness and Kurtosis.

UNIT III

Probability classical & axiomatic definition of probability, Theorems on total and compound probability), Elementary ideas of Binomial, Poisson and Normal distributions.

UNIT IV

Population and Sample, parameter and statistic, sampling, methods of sampling, confidence level, critical region, testing of hypothesis and standard error, large sample test and small sample test. Problems on test of significance, t-test, *chi*-square test for goodness of fit and analysis of variance (ANOVA)

UNIT V

Correlation –types of correlation, degrees of correlation, methods of calculating correlation coefficient – scatter diagram, Karl Pearson and Spearman rank correlation coefficients. Regression – regression lines, regression equation, regression coefficients, methods of forming regression equations. Emphasis on examples from Biological Sciences.

SEMESTER VI

16BTU603B **ENVIRONMENT MANAGEMENT** **4H -4C**

Total hours/week: L:4 T:0 P:0 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are

- To obtain basic concepts of Geological consideration of Atmosphere
- To ascertain the knowledge about Energy transfer in an Ecosystem.
- To obtain knowledge Pollution and environmental Health.
- To gain knowledge about the biotechnological measures for restoring environment.
- To involve in the present scenarios and find valuable solutions for remedy
- To update about the management strategies by Bio-transformation.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. Principles & Concepts of Ecosystem
2. Ecological efficiencies
3. Environmental significance of Detection of Environmental pollutants
4. Bio-geochemical cycles
5. Hazardous wastes Environmental cleanup
6. Genetic engineering of bacteria and their potential for bioremediation

UNIT-I

Our Environment: Geological consideration of Atmosphere, Hydrosphere, Lithosphere Scope of Ecology. Development &Evolution of Ecosystem. Principles &Concepts of Ecosystem. Structure of ecosystem. Strata of an ecosystem. Types of ecosystem including habitats. Cybernetics &Homeostasis. Biological control of chemical environment.

UNIT-II

Energy transfer in an Ecosystem. Food chain, food web, Energy budget, Production &decomposition in a system. Ecological efficiencies, Trophic structure &energy pyramids, Ecological energetic, principles pertaining to limiting factors, Bio-geochemical cycles (Nitrogen, Carbon and Phosphate cycles).

UNIT-III

Pollution and environmental Health related to Soil, Water, Air, Food, Pesticides, Metals, Solvents, Radiations Carcinogen, Poisons. Detection of Environmental pollutants. Indicators & detection systems.

UNIT-IV

Environmental biotechnologies, Biotechnologies in protection and preservation of environment. Bioremediation, Waste disposal.

UNIT-V

Bio-transformation, Plastic, Aromatics, Hazardous wastes Environmental cleanup: Case studies

SEMESTER VI

16BTU611A I.P.R., ENTREPRENEURSHIP, BIOETHICS &BIOSAFETY PRACTICAL 3H -1C

Total hours/week: L:0 T: 0 P:3 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are

- To understand the basic knowledge of copy rights and related property rights.
- To develop the entrepreneurship skills using biological product formation.
- To provide the information of filling the patents and copy rights
- To disseminate knowledge on trademarks and registration aspects
- To disseminate knowledge on Design, Geographical Indication (GI), Plant Variety and Layout Design Protection and their registration aspects
- To learn about current trends in IPR and Govt. steps in fostering IPR

Course Outcomes

On completion of the course, students are able to

1. Acquire the knowledge on filling and submission of copy rights and related property rights.
2. Gain knowledge in developing new pilot scale / large scale industries and associated formalities
3. Understand the importance of patenting /copyrights/Trade marks
4. Acquire the knowledge on fundamental aspects of Intellectual property Rights to students who are going to play a major role in development and management of innovative projects in industries.
5. Disseminate knowledge on patents, patent regime in India and abroad and registration aspects
6. Disseminate knowledge on copyrights and its related rights and registration aspects

List of Practicals

1. Proxy filing of Indian Product patent
2. Proxy filing of Indian Process patent
3. Planning of establishing a hypothetical biotechnology industry in India
4. A case study on clinical trials of drugs in India with emphasis on ethical issues.
5. Case study on women health ethics.
6. Case study on medical errors and negligence.
7. Case study on handling and disposal of radioactive waste

SEMESTER VI

16BTU611B **BIO-ANALYTICAL TOOL PRACTICAL** **3H -1C**

Total hours/week: L:0 T:0 P:3 **Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To study the bio-analytical tools and their applications.
- To have sufficient knowledge on the separation of compounds from a mixture.
- To know the application of PCR in biotechnology.
- To develop the skills to understand the theory and practice of bio analytical techniques.
- To provide scientific understanding of analytical techniques and detail interpretation of results.
- To learn how to design experiments and understand the instrumentation.

Course Outcomes

On completion of the course, students are able to

1. Know the working principle, maintenance, and calibrations of bioanalytical tools and technique
2. Estimate the number of biomolecules using the Bioanalytical tool
3. Implement the bioanalytical techniques to analyze the biomolecules
4. Use selected analytical techniques.
5. Be familiar with working principals, tools and techniques of analytical techniques.
6. To understand the strengths, limitations and creative use of techniques for problem-solving.

Practical

1. Native gel electrophoresis of proteins
2. SDS-polyacrylamide slab gel electrophoresis of proteins under reducing conditions.
3. Preparation of the sub-cellular fractions of rat liver cells.
4. Preparation of protoplasts from leaves.
5. Separation of amino acids by paper chromatography.
6. To identify lipids in a given sample by TLC.
7. To verify the validity of Beer's law and determine the molar extinction coefficient of NADH.

SEMESTER VI

16BTU612A MEDICAL MICROBIOLOGY PRACTICAL 4H -2C

Total hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are

- To obtain basic concepts of Identification of pathogenic bacteria
- To ascertain the diagnostics tools for infectious diseases – RFLP, RAPD.
- To achieve a complete knowledge about molecular diagnostics techniques on microbial infection.
- To understand the utility and limitations of various molecular diagnostic tests used for managing patient care.
- To attain the concepts of molecular methods used in clinical microbiology.
- To recognize the importance of proper specimen collection and preparation for molecular detection.

Course Outcomes

On completion of the course, students are able to

1. Get hold of the knowledge on fundamentals of molecular diagnostic techniques.
2. Expertise on the concepts of infection, diagnosis and control assortment.
3. Acknowledge on the qualitative studies based on biomarker observations.
4. Apply methodologies of laboratory diagnostics to relevant states of health.
5. Be aware of characteristics signs of clinical manifestations.
6. Comprehend and analyse the concept of disease management.

List of Practicals

1. Identification of pathogenic bacteria (any two) based on cultural, morphological and biochemical characteristics.
2. Growth curve of a bacterium.
3. To perform antibacterial testing by Kirby-Bauer method.
4. To prepare temporary mounts of *Aspergillus* and *Candida* by appropriate staining.
5. Staining methods: Gram's staining permanent slides showing acid fast staining, Capsule staining and spore staining.

SEMESTER VI

16BTU612B ENVIRONMENTAL BIOTECHNOLOGY PRACTICAL 4H -2C

Total hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are

- To obtain practical knowledge to solve the environmental problems
- To ascertain the knowledge about wastewater treatment.
- To achieve a water treatment strategy.
- To gain knowledge about for restoring environment
- To involve in the present scenarios and find valuable solutions for remedy
- To update about the microbial load in water sample.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. Environmental problems
2. Wastewater treatment
3. BOD and its calculation
4. COD and its calculation
5. Bacterial Examination of Water
6. Biofertilizers

List of Practicals

1. Calculation of Total Dissolved Solids (TDS) of water sample.
2. Calculation of BOD of water sample.
3. Calculation of COD of water sample.
4. Bacterial Examination of Water by MPN Method.

SEMESTER VI

16BTU613A BIOSTATISTICS PRACTICAL 4H -2C

Total hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are

- To gain mathematical approach for analyzing the data.
- To learn the knowledge about graphical and diagrammatic representation of Statistical data.
- To learn the knowledge about Scope and applications of biostatistics
- To learn the knowledge about Dispersion
- To learn the knowledge about SPSS
- To learn the knowledge about Distributions analysis

Course Outcomes

On completion of the course, students are able to

1. Apply the statistical tool knowledge for research data analysis.
2. Understand the concept of various hypothesis regarding data analysis.
3. To perform analysis for the data based on graphical representation (Bar, multiple bars, histogram, pie chart etc.)
4. To perform analysis to determine the mean, median, mode and standard deviation of given sample/data
5. To perform analysis, determine the probability of given sample/data
6. To perform the analysis of given data using SPSS

List of Practicals

Based on graphical Representation

1. Drawing of bar and multiple bar diagram
2. Drawing of Histogram
3. Drawing of Pie diagram Based on measures of Central Tendency
4. Calculation of Mean for individual, discrete series using SPSS Package.
5. Mean for continuous series using SPSS Package.
6. Median for individual and discrete series using SPSS Package.
7. Median for continuous series using SPSS Package.
8. Mode for individual and discrete series using SPSS Package.
   Based on measures of Dispersion
9. Standard deviation for individual and discrete series using SPSS Package.
10. Coefficient of variation for individual and discrete series using SPSS Package. Based on Distributions Binomial, Poisson and Normal
11. Calculation of Mean and variance for binomial distribution using SPSS Package.
12. Calculation of Mean and variance for Poisson distribution using SPSS Package. Based on t, f, z and Chi-square
13. Karl Pearson's Correlation using SPSS Package.
14. Rank Correlation Coefficient for Untied Rank using SPSS Package.
15. Rank Correlation Coefficient for Tied Rank using SPSS Package.

4. Danial, W. (2004). *Biostatistics: A foundation for Analysis in Health Sciences*. John Wiley and Sons Inc.

SEMESTER VI

16BTU613B ENVIRONMENT MANAGEMENT PRACTICAL 4H -2C

Total hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are

- To obtain basic concepts of biotic and abiotic components of any simple ecosystem
- To ascertain the knowledge about Simpson's and Shannon- Weiner diversity index.
- To achieve a life table and fecundity table.
- To gain knowledge about Principle of GPS.
- To involve in the present scenarios of types of soil, their texture
- To update about the endangered/ threatened species.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. Ecosystem of soil
2. GPS and related concepts
3. Soil and their texture
4. Population density
5. Treatment of municipal waste and Industrial effluents
6. Species variation and threatened species.

List of Practicals

1. Study of all the biotic and abiotic components of any simple ecosystem- natural pond or terrestrial ecosystem or human modified ecosystem.
2. Determination of population density in a terrestrial community or hypothetical community by quad rate method and calculation of the Simpson's and Shannon- Weiner diversity index for the same community.
3. Principle of GPS (Global Positioning System).
4. Study of the life table and fecundity table, plotting of the three types of survivorship curves from the hypothetical data.
5. Study of the types of soil, their texture by sieve method and rapid tests for –pH, chlorides, nitrates, carbonates and organic carbon
6. Study any five endangered/ threatened species- one from each class.

16BTU691 **PROJECT – *VIVA VOCE*** **8H-6C**

Total hours/week:**8 hrs** **Marks:** Internal:40 External:**60** Total: **100**

Course Objectives

The main objectives of the course are

- The hands-on training through one full semester project with thesis gives special expertise within one of the research areas represented at The Department of Biotechnology

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. This dissertation programme provides the candidate with knowledge, general competence, and analytical skills on an advanced level, needed in industry, consultancy, education and research

*Electives are Transborder /cross disciplinary/ Discipline centric elective nature.

Blue – Employability **Green – Entrepreneurship** **Red- Skill Development**

PROGRAMME OUTCOMES (POs)

a) Graduates will able to have knowledge on the basic and applied theories.

b) Providing a broad educational and analytical knowledge necessary to make the students for appearing in competitive examinations

c) Ability to design and conduct experiments as well as to interpret the results.

d) An expert to work on Biotechnological concepts and allied fields (immuno, medical, microbial, Food, agricultural, environmental, plant and animal) with modern tools and techniques towards product and process development for academic, industrial and research application.

e) Generating the graduates with an ability to identify, formulate and solve to deliver process/product with professional, societal and ethical responsibilities.

f) Graduates will be able to visualize and work on multidisciplinary laboratory problems.

g) Graduates will be able to update the current knowledge of interdisciplinary subjects related to biotechnology

PROGRAMME SPECIFIC OUTCOMEs (PSOs)

To enable the student to emerge as:

h) Biotechnologist to recognize the societal need and lifelong learning.

i) Proficient to demonstrate entrepreneurial and leadership skills with life-long learning.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO I: The post-graduates of Biotechnology will able to acquire in-depth knowledge of the basic and applied subjects of Biotechnology and allied fields.

PEO II: The post-graduates of Biotechnology are equipped to design, analyze, conduct and interpret the experiments and data for the development of process/product within the realistic constraints.

PEO III: The post-graduates of Biotechnology will able to acquire the knowledge and ability to use the concept of theories, practical skills and recent technological tools in solving any technological and professional issues independently in a global and societal context.

PEO IV: The graduates of Biotechnology will continue learning to update and to become an entrepreneur in a competitive world of technology and also contribute to all forms of life.

MAPPING OF PEOs AND POs

PEO IV							×	×	×

Semester -I

16BTP101 **BIOCHEMISTRY** **4H – 4C**

Total hours/week: **L: 4 T: 0 P: 0** **Marks:** Internal: **40** External: **60** Total: **100**

Course Objectives

The main objectives of the course are

- To understand the key concepts of cellular structure and organization of various biomolecules
- To attain strong theoretical knowledge on three-dimensional construction of biological macromolecules and the principles of molecular recognition
- To understand the functions and importance of various biomolecules
- To describe the various metabolic pathways involved in cells for its normal functioning
- To obtain strong background on how the DNA is selectively expressed as functional proteins
- To obtain necessary knowledge on disorders associated with metabolism of biomolecules

Course Outcomes

On completion of the course, students are able to

1. Understand Biochemistry as discipline and milestone discoveries in life sciences that led to establishment of Biochemistry as separate discipline
2. Understand fundamental properties of elements, their role in formation of biomolecules and in chemical reactions within living organisms
3. Draw or describe the structure of amino acids, proteins, enzymes, chemical messengers, carbohydrates, lipids, and nucleic acid
4. Describe the metabolism of carbohydrates, lipids, proteins and amino acids, and write chemical reactions for the individual steps in each pathway
5. Write the chemical reactions involved in biochemical pathways that produce ATP, such as citric acid cycle and electron transport
6. Be familiar with the enzymes (biocatalysts), and their salient attributes including unique conformation and amazing catalytic properties

UNIT - I

Introduction: Chemical basis of life; Composition of living matter; Water – properties, pH, ionization and hydrophobicity; Emergent properties of biomolecules in water; Biomolecular hierarchy; Macromolecules; Molecular assemblies; Structure-function relationships.

UNIT - II

Biomolecules: Structure and properties of carbohydrates, fatty acids amino acids, proteins. Structure and properties of purines, pyrimidines, nucleosides, nucleotides, polynucleotides, Ribonucleic acids and deoxy ribonucleic acids, nucleoprotein complexes.

UNIT - III

Enzymology: Enzymes classification and nomenclature, Mechanism of action, regulation of enzymatic activity, enzyme kinetics – Michaelis Menton equation, Line Weaver Burk plot and Eadie Hoffstee and Haneswoll equation, enzyme inhibition.

UNIT- IV

Metabolism: Biosyntheses and degradation of fatty acids and cholesterol, Biosyntheses and degradation of amino acids, peptides and proteins; Biosynthesis and degradation of amino acids, peptides and proteins, Biosyntheses and degradation of purines, pyrimidines and nucleic acids.

UNIT –V

Bioenergetics: TCA Cycle, glycolysis, gluconeogenesis, Pentose phosphate shunt, Embden-Meyerhof pathway, urea cycle, interconnection of pathways, Metabolic regulation, Bioenergetics: Respiratory chain, ATP cycle, energy-rich compounds.

Semester -I

16BTP102 **MICROBIOLOGY** **4H – 4C**

Total hours/week: **L: 4 T: 0 P: 0** **Marks:** Internal: **40** External: **60** Total: **100**

Course Objectives

The main objectives of the course are

- To understand landmark discoveries in Microbiology and different domains classification of living organisms
- To be familiar with general characters of prokaryotes for conventional and molecular characterization using modern methods
- To understand the conceptual knowledge on metabolism of microorganisms
- To attain essential knowledge of cellular organization and life cycle of microorganisms
- To understand the economic importance of microorganisms
- To obtain information regarding diseases caused by microorganisms

Course Outcomes

On completion of the course, students are able to

1. Demonstrate the principles and applications of microscopic techniques
2. Demonstrate microbial structure and similarities and differences among various groups of microorganisms such as bacteria and fungi
3. Illustrate microbial diversity using different methods and systematics of bacteria
4. Discuss the various methods for identification of isolated and unculturable microorganisms
5. Comprehend the various methods for identification of unknown microorganisms
6. Discuss the industrial applications of microorganisms

UNIT -I

Microbial Diversity: Definition, history, scope, discovery and development of microorganisms. Diversity-Bacteria, fungi, algae - distribution, reproduction and characteristics divisions. Autotropic and heterotopic utilization.

UNIT –II

Microscopy Techniques: Principles, types and applications of light, phase contrast, fluorescence, scanning and transmission electron microscopy, cytophotometry and flow cytometry, fixation and staining. Types of media preparation, methods of sterilization, techniques of pure culture, maintenance and preservation. Staining – types of stains and dyes, staining methods. Microbial growth study.

UNIT –III

Microbial metabolism: Common nutrient requirements, nutritional types, uptake of nutrients, culture media, isolation of pure cultures. Microbial growth, growth curve, measurement of microbial growth, continuous culture, influence of environmental factors on growth, control of microorganisms by physical and chemical agents.

UNIT –IV

Biomass production: Production of carbohydrates - higher alkanes and methanol; Edible mushroom and its types. Oyster, paddy straw, button and medicinal mushroom production and their applications.

UNIT - V

Microbial Diseases: Causative agent, pathology, diagnosis, control and treatment of Bacterial - TB, Cholera and Typhoid. Protozoan – Amoebiasis and Malaria. Viral - AIDS. Control of microorganisms – drugs, chemotherapy, antimicrobial agents.

Semester - I

16BTP103 CELL BIOLOGY AND MOLECULAR GENETICS 4H – 4C

Total hours/week: **L: 4 T: 0 P: 0** **Marks:** Internal: **40** External: **60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Understand the structures and functions of basic components of eukaryotic cells especially macromolecules, membranes, and organelles
- Understand how the cellular components are used to generate and utilize energy in cells
- Understand the cellular components underlying cell division
- To impart knowledge in genetics and genome organizations in organisms
- To understand the principles of extensions to Mendelian inheritance, including multiple allelism, lethal alleles, and gene interactions
- To obtain knowledge on normal chromosome number, structure, and behaviour in human cells, and understand the cause and effect of alterations in chromosome number and structure

Course Outcomes

On successful completion of the course, students will be able to

1. Describe the structures and basic components of eukaryotic cells
2. Illustrate how the cellular components are used for various cellular activities
3. Demonstrate the pathways involved in various cellular events including cell cycle
4. Understand the inheritance of genes among plants and animals and the genetic makeover as well as the physical appearance of organisms
5. Describe Mendelian inheritance, the interaction of genes among organism and to determine the inheritance of gene in human beings
6. Illustrate the effect of chromosomal abnormalities in human diseases

UNIT-I

Cell Organization: Structure of prokaryotic and eukaryotic cells, cellular organelles – Plasma membrane – Properties and functions, cell wall, mitochondria, chloroplast, peroxisomes, golgi complex, Endoplasmic reticulum and lysosome. Cell division.

UNIT - II

Nucleic Acid - Replication –Types of replication, Transcription, Post Transcriptional Modification, Translation and Post Translational modification, regulation of gene expression.

UNIT -III

Genetics: Mendelian and Non-Mendelian principles. Genetic recombination, Genetic mapping, linkage and crossing over. Mutations- Types of Mutation, Genetic analysis of Mutations, DNA repair Mechanisms.

UNIT - IV

Transposons: Types of bacterial transposons, Transposition, Detection of Transposition in Bacteria, Excision of Transposons, Types of Transposons in Eukaryotic cells.

UNIT -V

Bacterial genetics - Gene transfer in Bacteria, Transformation, Transduction and Conjugation. Bacteriophages - General properties, Structure, Lytic- and Lysogenic phages, Role of phages as vectors.

16BTP104 **FOOD BIOTECHNOLOGY** **4H-4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Understand the concepts of food biotechnology along with principles of genetics in food industry
- Attain strong knowledge on primary sources of microorganisms in food
- Explore the methods for development and preservation of fermented foods
- Recognize the nutritive values of fermented foods
- Understand the concepts of food adulteration and food safety
- Obtain strong knowledge on food spoilage

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the beneficial role of microorganisms in fermented foods and in food processing and the microbiology of different types of fermented food products
2. Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
3. Know the spoilage mechanisms in foods and thus identify methods to control deterioration and spoilage
4. Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods
5. Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
6. Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation

Unit – I

Introduction: History and Scope of Food Biotechnology, Nutritive value of food, Role of microbes in food biotechnology – bacteria, fungi and yeast. Fermented foods – Types, Changes during Fermentation, Nutritive value of fermented foods.

Unit - II

Food Microbiology: Primary Sources of Microorganisms in food. Food-borne Bacteria, Molds and Yeasts. Intrinsic- and Extrinsic Parameters of food affecting microbial count. Detection of Microorganisms in food - SPC, Membrane filters, Dry films. Bacterial Toxins - Botulism and Staphylococcal toxin. Fungal Toxins - Aflatoxins.

Unit - III

Fermented Foods: Origin, scope and development and preservation- Cheese, Yoghurt, Butter, miso, tempeh, kefir, koumiss, acidophilus milk, sourkraut, pickles and vinegar. Fresh juice production –Mango, orange, and pineapple. Technological aspects of industrial production of beer, wine and baker's yeast.

Unit - IV

Food Adulteration and Food Safety: HACCP System to food protection, Responsibility for food safety. Food Additives - Definition, Types and Functional characteristics. Natural Colors -Types, Applications, Advantages of natural colors. Sweeteners - Types and Applications. Food packaging materials, and their properties.

Unit - V

Food Spoilage and Preservation: Causes of Food Spoilage, Spoilage of Fruits, Vegetables, Meat, Soft Drinks, Eggs, Dairy products. Food Preservation through chemicals - Acids, Salts, Sugars, Antibiotics, Ethylene oxide, Antioxidants. Other Methods of Food Preservation -Radiations, Low and High temperature and Drying.

		Semester- I
16BTP105A	**BIOINSTRUMENTATION AND BIOSTATISTICS**	**4H-4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Understand fundamental principles of bioinstrumentation commonly used in biomedical engineering research labs and hospitals
- Comprehend the colorimetric principles
- Recognize the concepts on centrifugation and chromatography
- Obtain key knowledge on electrophoresis
- Understand key concepts on biostatistics and its various parameters
- Attain strong knowledge on the applications of biostatistics and its relevant softwares

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate an understanding the bioinstrumentation principles with respect to device design and applications
2. Identify, explain and judge safety issues related to biomedical instrumentation
3. Apply the principles in the context of bioinstrumentation interactions with tissues, organs and human body to explain the measurement results and to develop the instrumentations
4. Define the principal concepts about biostatistics
5. Recognize the definition of statistics, its subject and its relation with the other sciences.
6. Collect data relating to variable/variables which will be examined and calculate descriptive statistics from these data

UNIT - I

Colorimetry: Color and absorption spectra, Beer's and Lambert's law. Principle of photoelectric colorimeter, Spectroscopy – Properties of electromagnetic radiations, Instrumentation and applications of – UV Visible light spectroscopy, Spectrofluorimeter, atomic spectroscopy, NMR spectroscopy and MALDI –TOF, Mass spectroscopy GC – MS, IR and FTIR.

UNIT - II

Centrifugation: Principle, types of centrifuges, Principles and applications of analytical- and preparative centrifuge, density gradient and ultra-centrifuge. **Chromatography:** Principles, Type – Paper, thin layer, ion-exchange, affinity, gel filtration, HPLC and HPTLC

UNIT - III

Electrophoresis: Principle, instrumentation and applications of agarose gel electrophoresis, sodium dodecyl sulphate – polyacrylamide gel (SDS-PAGE), native PAGE, isoelectric focusing, immuno, pulse field, gel, capillary, 2D electrophoresis, gel documentation.

UNIT- IV

Biostatistics: Data collection, classification and presentation of tabulation. Measures of central tendency – mean, median and mode. Measures of dispersion – mean deviation, standard deviation, standard error and analysis of variance.

UNIT- V

Applications of biostatistics: Probability and probability distribution – theorems, binomial, poisson and normal distribution. Correlation and regression – simple correlation, correlation co-efficient, simple and linear regression analysis. Test of significance -F, t, DMRT and chi-square test. Statistical and graphical software.

Semester- I

16BTP105B **NANO BIOTECHNOLOGY** **4H-4C**

Total hours/week: **L: 4 T: 0 P: 0** **Marks:** Internal: **40** External: **60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Obtain fundamental concepts of nanobiotechnology
- Offer a strong knowledge in the interface between chemistry, physics and biology on the nanostructural level with a focus on biotechnological usage
- Provide advanced training in the area of nanobiotechnology
- Understand the interaction of nanomaterials with biological molecules and cells
- Learn nanomaterials and their use with biocomponents to synthesize and address larger systems
- Produce highly skilled individuals suited for the fast-changing requirements of today's advanced workforce

Course Outcomes:

On successful completion of the course, students will be able to

1. Recognize the role of bionanotechnology as an interdisciplinary tool and to understand how to use these new tools in to solve problems in biological systems.
2. Demonstrate knowledge and understanding of biomolecules and biomolecular interactions, and the relationship between molecular dynamics, nanoscale physics and macroscopic system behaviour
3. Explain biophysical mechanisms in the context of nanobiotechnology application areas.
4. Analyze and discuss the engineering requirements of multidisciplinary technology based on biology.
5. Explain the challenges of commercializing new technologies.
6. Demonstrate technical and cognitive skills associated with nanobiotechnology.

UNIT – I

Nanotechnology: Definition, The fundamental Science behind nanotechnology- electrons, atoms and ions, molecules, metals, Biosystems. Nanoanalysis

UNIT - II

Microfluidics and Lab-on-a-chip: Materials of Microfluidic Components. Silicon, Glass, polymers, fluid structure, fabrication methods. Surface modifications, Spotting, Detection mechanics.

UNIT - III

Natural Nano-scale sensors. Biosensors. Biomedical applications: drugs, drug delivery, molecular motors. Neuro electronic interfaces, Nanoluminescent tags, imaging and mapping. Defined networks of Neuronal cells *in vitro,* physiology of information processing within Neuronal Networks, Topographical patterning, Photolithographic patterning, Photochemical patterning.

UNIT – IV

Microcontact printing of proteins: Strategies for printing proteins on surfaces, Contact processing with hydrogel stramps, Affinity contact printing, Micro contact printing polypeptides and proteins, Printing one type of biomolecules, substrates, resolution and contrast of patterns, Activity of printed molecules, Printing multiple types of proteins, Molds and stamps, Surface chemistry, Characterization of printed patterns.

UNIT – V

Applications of Nanotechnology: Nanoparticles in bio- degradation, nano-material-based adsorbents for water treatment, possible mutagenic properties of nanoparticles, nanoparticle bioaccumulation. Nanoparticles in biomedical and clinical applications

Semester- I

16BTP105C **BIO-ENERGY TECHNOLOGY** **4H - 4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Provide an overview of the basic process of bioenergy
- Understand different strategies to convert biomass to biofuels
- Obtain knowledge on the available technologies and how these could meet the growing demand for energy in the future
- Understand biomass biodegradability and bioconversion rate in relation to energy yields
- Describe biochemical processes of biomass conversion to bioenergy production with focus on fermentation and anaerobic digestion
- Understand technological potentials of biogas, bioethanol, biofuel and biohydrogen

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate bioenergy production processes adequate to diverse biomass characteristics
2. Discuss state-of-the-art technologies of generating biofuels from sustainable bioresources
3. Discuss and propose feasible biofuel technologies and biofuel products from selected biomasses
4. To illustrate a bio-energy thermo-chemical conversion process
5. Design biogas reactor capacity and propose optimal and economically viable technical operational condition
6. Demonstrate sequential bioethanol and biogas production and compare bioethanol and biogas scenarios with respect to energy recovery

UNIT – I

Biofuel: Introduction, features, undesirable features, Energy crops – wood, sugar and starch crops, hydrocarbon producing crops. Modes of utilization of biomass.

UNIT - II

Biogas: Substrate, digester, microorganisms, process of biogas production, factors affecting biogas yield, precautions, advantages and disadvantages.

UNIT – III

Bioethanol: Introduction, bioethanol vs. petrol, production of bioethanol – yeast, sugar and starch crops, ethanol recovery.

UNIT – IV

Biodiesel: Introduction, lipids as a source of biodiesel – algae, sunflower, rapeseed, linseed, soybean, jatropha, peanut, biodiesel from hydrocarbons. Biobutanol – *Clostridium,* molasses.

UNIT – V

Biohydrogen: Hydrogen as fuel – production - methods - electrolysis of water, gasification, biological agents. Biohydrogen production – anaerobic fermentation, photolyses and photosynthetic methods.

Semester – I

16BTP111 **4H - 2C**

BIOCHEMISTRY, CELL BIOLOGY AND MOLECULAR GENETICS –PRACTICAL I

Total hours/week: L: 0 T: 0 P: 4 **Marks:** Internal**: 40** External**: 60** Total**: 100**

Course Objectives

The objectives of the course are to make the students to

- Give knowledge on Biochemistry, Cell Biology and Molecular Genetics and its application.
- Offer knowledge to execute the experiments flawlessly
- Understand quantification of sugars, aminoacids and lipids
- Understand various cell types and its components
- Understand how to perform fractionation of cellular components
- Get practiced with the tools and techniques for analyzing conjugation and transduction

Course Outcomes

On successful completion of the course, students will be able to

1. Describe the quantification of sugars, aminoacids and lipids
2. Interpret the outcome of experiments that involve the use of cell biology and molecular genetics techniques
3. Discuss the various macromolecular components of cells and their functions
4. Describe cell permeability in plants and animal cells
5. Explain the basic steps involved in Drosophila giant chromosome preparation and nuclear staining
6. Perform conjugation and transduction experiments

List of Practicals

Biochemistry

1. Quantification of proteins – Lowry *et al/* Bradford method
2. Quantification of sugars – Anthrone method
3. Total free amino acids
4. Quantification of lipids
5. Quantification of Ascorbic acid
6. Membrane-based séparation (e.g. Microfiltration/ Ultrafiltration)
7. Thin Layer Chromatography (Amino acids / fatty acids/ sugar/ nucleic acids)
8. Effect of pH, temperature, substrate concentration (any one enzyme - Catalase / SOD by OD method)

Cell Biology

1. Identification of cell types- Microbe/plant /Human
2. Fractionation of cellular component – Nuclear Components, Mitochondria, Chloroplast.
3. Sucrose Fractionation of Castor Bean
4. Lipid Solubility of Membranes
5. Cell permeability – RBC/plant cells.

Molecular Genetics

1. Drosophila Giant Chromosome preparation.
2. Nuclear staining (Giemsa / acridine orange /feulgen)
3. Metaphase preparation and karyotyping (Human leucocytes/ onion root tip)
4. Conjugation
5. Transduction

Semester- I

16BTP112 **4H-2C**

MICROBIOLOGY AND FOOD BIOTECHNOLOGY - PRACTICAL II

Total hours/week: **L:0 T:0 P:4** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Give knowledge Microbiology and Food Biotechnology techniques
- Offer knowledge to execute the experiments flawlessly
- Understand pure culture technique and microbiological staining techniques
- Gain practical knowledge on Isolation and identification of microbes from food samples
- Attain hands on experience on the production of industrially important enzymes
- Learn how to run fermentor

Course Outcomes

On successful completion of the course, students will be able to

1. Know microbial techniques for isolation of pure cultures of microbes from different food, agricultural and environmental sources
2. Have hands on experience in microbial staining techniques
3. Illustrate motility analyses for bacteria
4. Perform Isolation and identification of microbes from food samples
5. Carry out the production of Industrially important enzymes such as protease and amylase
6. Have practical knowledge on fermentor operation

Microbiology

1. Pure culture technique –pour spread, loop out technique and streaking, preservation
2. Staining technique – Simple, grams, negative, endospore and fungal
3. Motility –Flagellar staining, hanging drop and soft agar analysis
4. Isolation of Mutants - physical and chemical
5. Growth curve
6. Biomass estimation

Food Biotechnology

- Isolation and identification of microbes from food samples
- Wine production
- Citric acid production
- Production of Industrially important enzymes – protease, amylase
- Immobilization of enzymes
- Working of fermenters

JOURNAL PAPER ANALYSIS AND PRESENTATION 2H-0C

Semester- II

16BTP201 RECOMBINANT DNA TECHNOLOGY 4H-4C

Total hours/week: **L: 4 T: 0 P: 0** **Marks:** Internal: **40** External: **60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Be familiarize with emerging field of biotechnology: Recombinant DNA Technology
- Understand the basic concepts of recombinant DNA Technology and genetic engineering
- Acquaint versatile tools and techniques employed in recombinant DNA technology
- Obtain the principles of versatile DNA modifying enzymes, cloning strategies and vector types for selection and screening of recombinant clones
- Understand the concepts of nucleic acid labeling techniques
- Illustrate creative use of modern tools and techniques for manipulation and analysis of genomic sequences and to use recombinant DNA technology in biotechnological research

Course Outcomes

On successful completion of the course, students will be able to

1. Outline the fundamental steps in recombinant DNA technology
2. Demonstrate the mechanism of action and the use of restriction enzymes in biotechnology research and recombinant protein production
3. Explain the value of plasmid preparations and how the concentration and purity of plasmid samples can be determined
4. Confer cloning strategies and techniques used in DNA probing for specific genes of interest.
5. Conceptualize PCR technique in clinical research
6. Recapitulate various applications of recombinant DNA technology in human health care and safety regulations

UNIT - I

Tools in Genetic Engineering: Nucleic acid manipulating enzymes- restriction-nucleases, ligases, polymerases, modification enzymes - kinases, phosphatases, adapters and linkers. Polynucleotide tailing.

UNIT -II

Cloning Vectors: Plasmid - conjugative and non-conjugative plasmid, Types of Plasmid- Natural plasmids, Artificial plasmid- pBR322 and PUC series. Phage vectors. Plant Vector – Ti plasmid. Animal viral vectors - Retroviral viral vectors, Shuttle vectors, cosmid, phagemid, phasmid. Artificial chromosomes –BACs, YACs.

UNIT-III

Gene transfer methods: Physical, chemical and biological methods of gene transfer- prokaryotes - eukaryotes. Screening and analysis of recombinants, DNA and RNA probes – construction. Analysis of cloned foreign genes. Hybridization techniques – Southern Blotting, Northern Blotting and Western Blotting.

UNIT -IV

Analytical Techniques: PCR, RAPD, RFLP, AFLP, SSCP, protein engineering- site directed mutagenesis, PCR mediated. Alteration of restriction sites, Molecular diagnosis and therapy of cancer, DNA based detection of microbial infection/ contamination, sequence analysis, SNP, NGS, gene editing tool CRISPR.

UNIT -V

Application: Antisense technology, RNAi technology, terminator gene technology, gene therapy- *in vivo* and *ex vivo*. Gene delivery systems - viral and non-viral; DNA marker technology in plants, DNA fingerprinting, genetically engineered biotherapeutics and vaccines.

Semester -II

16BTP202 FERMENTATION TECHNOLOGY 4H-4C

Total hours/week: **L: 4 T: 0 P: 0** **Marks:** Internal: **40** External: **60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Be familiarize with knowledge about biological and biochemical technology, with a focus on biological products, the design and operation of industrial practices
- Describe power requirements in bioreactors, modeling of bioprocesses, and traditional and new concepts in bioprocess monitoring, and the biological basis for industrial fermentations
- Understand biological and engineering principles for cultivating microorganisms in fermentors
- Obtain knowledge on assessing biological and engineering principles for cultivating microorganisms in fermentors
- Understand the importance of monitoring foam control, nutrient dosing, sterile sampling and filter sterilization
- Attain key concepts in calibration and maintenance of process critical for fermentation such as aeration, agitation and pH

Course Outcomes

On successful completion of the course, students will be able to

1. Evaluate factors that contribute in enhancement of cell and product formation during fermentation process
2. Analyze kinetics of cell and product formation in batch, continuous and fed-batch cultures
3. Differentiate the rheological changes during fermentation process
4. Develop protocol for scale-up and harvesting from shake flask to bench top fermentor
5. Analyze the bioprocess paradigms including scale-down, bioprocess simulation and economics in biological manufacturing
6. Examine considerations in bioprocess simulation and economics, sterilization in biological manufacturing, and clinical implications of bioprocesses

UNIT -I

Introduction: Isolation and screening of industrially important strains- primary and secondary screening. Strain improvement, mutation, selection of mutants, recombination – bacteria, fungi and actinomycetes, assay and fermented products. Fermentations- submerged, solid state.

UNIT - II

Media: Media formulation – sterilization – batch and continuous sterilization, sterilization of air, fibrous filters. Microbial kinetics: batch, fed-batch and continuous cultures, phases of batch growth. kinetics of cell growth, product formation, substrate utilization, product inhibition kinetics, yield concept and productivity.

UNIT - III

Design of fermenter: types – CSTR, Tower, jet loop, air lift fermenter, bubble column, packed bed. Fundamentals of process control and monitoring – on line and off line analysis, feed back control, PID controller, computer aided control.

UNIT - IV

Kinetics: Transport phenomena – Rheological properties, determination of O_2 mass transfer, heat transfer, role of aeration and agitation, factors affecting O_2 transfer. Production of chemicals – alcohol, antibiotics – Penicillin and Streptomycin, Single cell proteins.

UNIT -V

Downstream processing: Cell distribution methods for intracellular products; foam separation, precipitation. Filtration – micro and ultra-filtration; Solvent extraction-, chromatographic separation- FPLC, HPLC, dialysis, centrifugation, distillation, drying, crystallization, turbidity analysis and cell yield determination. Fermentation products- available in market.

16BTP203 **ENVIRONMENTAL BIOTECHNOLOGY** **4H-4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Understand the various components of the environmental biotechnology including ecosystems, biodiversity, threats and policy
- Obtain knowledge on the sources for environmental pollution and its remedial measures
- Understand toxic chemicals and their impact on environment and human health
- Attain key concepts on the role of microbes in remediation of environmental pollutants
- Learn various technologies, tools and techniques in the field of environmental biotechnology
- Understand the importance of biological techniques in controlling air pollution

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate various types of ecosystems, biodiversity components, environmental threats and Policy
2. Discuss the impact of environmental pollution and its remediation measures
3. Recognize various global and regional environmental concerns due to natural causes and/or human activities
4. Illustrate the role of Toxic chemicals in the environment and their associated health issues in humans
5. Investigate some examples of different types of environmental pollution and their impacts
6. Appreciate the scientific, ethical and/or social issues associated with certain applications of biotechnology for alleviating the environmental concerns

Unit - I

Limiting factors, energy transfer and biogeochemical cycling in ecological systems; Response of microbes, plant and animals to environmental stresses; Concept of ecosystems and ecosystem management, Environmental problems- ozone depletion, greenhouse effect, water, air and soil pollution, land degradation.

Unit - II

GEMs in environment; Role of environmental biotechnology in management of environmental problems, Bioremediation, advantages and disadvantages; In situ and ex-situ bioremediation; slurry bioremediation; Bioremediation of contaminated ground water and phytoremediation of soil metals; microbiology of degradation of xenobiotics.

Unit - III

Sewage and waste water treatment and solid waste management, chemical measure of water pollution, conventional biological treatment, role of microphyte and macrophytes in water treatment; Recent approaches to biological waste water treatment, composting process and techniques, use of composted materials.

Unit – IV

Biological decomposition of organic carbon, Nitrogen and Phosphate removal. Biological removal, biotransformation, and biosorption of metal ions. Aerobic- and Anaerobic degradation of Xenobiotics.

Bioaugmentation for degradation of Xenobiotics. Industrial sources of waste water. Treatment strategies.

Unit - V

Biofuels and biological control of air pollution, plant derived fuels, biogas, landfill gas, bioethanol, biohydrogen; use of biological techniques in controlling air pollution; Removal of chlorinated hydrocarbons from air.

16BTP204 **IMMUNOTECHNOLOGY** **4H-4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Understand about our immune system and the immune response of cells and organs
- Obtain key concepts on gene-re-arrangement of immunoglobulin and T-cell receptor genes, and antigen processing and presentation
- Comprehend the principles of immunological techniques like hybridoma technology and catalytic antibodies synthesis
- Understand strong fundamental knowledge in tumor immunology
- Attain the principles involved in vaccine technology including recombinant vaccines
- Recognize the basic concepts in bone marrow and other organs transplantation

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate various immunological process including innate and adaptive immunity, cells and organs of immune system, antigen and antibody interaction, immunogenicity and antigenicity, epitopes and antibody structure
2. Describe the organization of Ig genes, class switching in constant regions of genes and expression and regulation of Ig genes
3. Recognize how antigens are processed, presented and immune activation occurs via B- and T- cells activation
4. Appreciate the underlying mechanisms of auto-immune diseases and allergic reactions
5. Illustrate the role of immune system in tumor formation
6. Apply the knowledge of this course in research and pharmacological industries

UNIT -I

Introduction: History and scope, Immunity – types, Antigen and Antibody - biology, structure and functions, super antigens, antigen- antibody interactions, primary and secondary immune response. Humoral and cell mediated immunity**.**

UNIT -II

Immune system: Hematopoiesis and differentiation, Lymphocytes, Lymphoid organs**:** Primary and secondary lymphoid organs. Antigen recognition and presentation, activation of B and T lymphocytes, cytokines and their role in immune regulation. **Complement system** - Classical and alternate pathway.

UNIT-III

Transplantation: MLR, MHC and HLA typing, bone marrow transplantation, organ transplants, immunosuppressive therapy. Hybridoma technology and monoclonal antibodies, immuno-diagnosis and application of monoclonal antibodies in biomedical research, human monoclonal antibodies and catalytic antibodies, Xeno transplantation from various species.

UNIT -IV

Hyper-sensitivity reactions, auto-immune disorders. Tumor immunology: Tumor antigens, immune response to tumours, cancer immunotherapy. Immunodeficiencies – primary and secondary.

UNIT -V

Vaccines: Vaccine technology including DNA vaccines, identification of B and T epitopes for vaccine development. Immunodiagnosis of infectious diseases, immuno screening of recombinant library.

Semester - II

16BTP205 A **PHARMACEUTICAL BIOTECHNOLOGY** **4H-4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives:
The objectives of the course are to make the students to

- Obtain basic skills necessary for employing biotechnology principles in together with various pharmaceutical parameters
- Understand novel formulation approaches for better delivery of biotechnology derived drugs, such as reverse micelles, liposomes, microemulsions and microencapsulation
- Attain knowledge on the delivery of peptides and proteins by the parenteral, oral, transdermal and nasal routes of administration
- Recognize novel biotechnology products and their use in therapeutics and diagnostics
- Comprehend the physical and chemical properties of the solution/colloidal/dispersion that influence physical stability of the bioactive macromolecule with emphasis on aggregation behavior, its identification and its impact on bioactivity
- Learn about special storage, handling, reconstitution and administration conditions and techniques for drug delivery systems containing bioactive macromolecules

Course Outcomes:
On successful completion of the course, students will be able to

1. Evaluate different pharmaceutical parameters of current biotechnology products
2. Determine parameters related to stability and formulation of biotechnology products
3. Discuss quality control procedures related to biotechnology products
4. Demonstrate novel formulation methods for better delivery of biotechnology derived drugs
5. Evaluate different techniques related to separation and purification of cell types; conduct techniques for measuring cell turnover and growth, conduct cytotoxicity assays
6. Join pharmaceutical biotechnology lab and industries as a research assistant

UNIT -I
Introduction: Classification of Pharmaceuticals - Solutions, suspensions, tablets, capsules. Drugs and its sources, Routes of Drug Administration, Absorption and Bioavailability, Distribution, Drug metabolism, Drug theories, Drug Receptor interactions, Pro-drug concept.

UNIT -II
Biotechnology and health: Drug design; drug development; random screen up, target identification and validation, drug discovery, drug delivery. Drug abuse, self-poisoning. pharmacogenomics, biochip.

UNIT -III
Biotechnology and Pharmacy: Genetically engineered protein and peptide agents, novel drug delivery systems – non convectional routes of administration, Anti-AIDS drug development, oncogenes as targets for drugs, Multi-drug resistance, vaccine development and role of genetic engineering in controlling infectious diseases, gene therapy, and stem cell therapy.

UNIT -IV

Enzyme Technology: Sources of enzymes, extraction and purification: Applications pharmaceutical, therapeutic and clinical. Production of amyloglucosidase, glucose isomerase, amylase and trypsin, Techniques of immobilization of enzymes and their applications in the industry. Reactors for immobilized systems and perspective of enzyme engineering.

UNIT -V

Novel Drug Delivery Systems: Introduction to the drug carrier, liposome as a drug carrier, biodegradable polymers as a drug-carrier. Modified Drug Release: The sustained release, first order release approximation, multiple dosing.

16BTP205B **BIOSAFETY AND IPR** **4H-4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Introduce basic concepts of safety that is essential for different disciplines of science and procedures involved and protection of intellectual property and related rights
- Discuss about various aspects of biosafety regulations and IPR concerns arising from the commercialization of biotech products
- Understand balanced integration of scientific and social knowledge in sustainable development
- Attain the benefits of GM technology and related issues
- Identify and discuss the issues and concepts salient to the research process
- Recognize and discuss the complex issues inherent in selecting a research problem, selecting an appropriate research design, and implementing a research project

Course Outcomes

On successful completion of the course, students will be able to

1. Interpret basics of biosafety and its impact on all the biological sciences and the quality of human life
2. Recognize importance of biosafety practices and guidelines in research
3. Apply intellectual property law principles including copyright, patents, designs and trademarks to real problems and analyze the social impact of intellectual property law and policy
4. Comprehend the importance of protection of new knowledge and innovations and its role in business
5. Gain more insights into the regulatory affairs
6. Demonstrate knowledge of research processes such as reading, evaluating, and developing, and to identify, explain, compare, and prepare the key elements of a research proposal and report

UNIT -I

Biosafety: Introduction; Historical Background; Biological Safety Cabinets; Primary Containment for Biohazards; Biosafety Levels; Biosafety Levels of Specific Microorganisms; Recommended Biosafety Levels for Infectious Agents. Cartagena protocol on biosafety

UNIT –II

Biological risk assessment: Biosafety guidelines for Genetically Modified Microorganisms (GMM) and Plants (GMP)-Risk assessment and contained use of GMM and GMPs-guidelines for research activities-import and shipment quality control of biologicals produced by rDNA technology. Guidelines for environmental release of GMM, GMP and GLP.

UNIT –III

Intellectual Property Rights: Types of IP: Patents, Trademarks, Copyright and Related Rights. **Agreements and Treaties:** History of GATT and TRIPS Agreement; Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty; PCT; Indian Patent Act 1970 and recent amendments

UNIT – IV

Research methodology: Scope and significance – Types of Research – Research Process – Characteristics of good research – Problems in Research – Identifying research problems. Research Designs – Features of good designs, Report writing – Introduction, review of Literature, Result interpretation, bibliography.

UNIT – V

Sampling Design: Meaning – Concepts – Steps in sampling – Criteria for good sample design. Scaling measurements – Techniques – Types of scale.

16BTP205C **TISSUE ENGINEERING** **4H-4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Understand tissue growth and development as well as the tools and theoretical information necessary to design tissues and organs
- Recognize the need of controlling all factors related to biomaterials architecture such as cell biology, biochemistry pathways, and surface characterization and modification
- Comprehend various physical and chemical stimuli that control the structure of biomaterials
- Get knowledge in which cell types are available to be used in tissue engineering applications
- Understand the relevance of the extracellular matrix and its interaction with materials
- Obtain knowledge on bioreactors used in tissue engineering

Course Outcomes

On successful completion of the course, students will be able to

1. Describe and use the fundamental tools and techniques used in tissue engineering
2. Compare and contrast various strategies for repairing tissues
3. Show mastery of fundamental topics in tissue engineering including stem cells, plasticity, trans differentiation, and cloning
4. Describe and the developments of biomaterials for regenerative therapies and tissue engineering
5. Discuss and give an example of how biomaterials are used to fabricate devices for clinical use
6. Illustrate the basic concepts of cell culture and critical components of bioreactor/tissue design

Unit I

Tissue engineering –Introduction to tissue engineering; Basic definition; Cell sources and stem cells; Cell isolation and selection; Tissue preservation; Tissue types; Structure and organization of tissues; Epithelial, connective; vascularity and angiogenesis; Extracellular matrices; Cell-matrix interactions; development and use in therapeutic and *in-vitro* testing.

Unit II

Cell culture types and morphology: cell biology, Isolation, cell growth, Different cell types, progenitor cells and differentiations, different kind of matrix, cell-cell interaction. sterile techniques, plastics, enzymes, reactors and cryopreservation and migration; cell expansion, cell transfer, cell storage and cell characterization, Bioreactors.

Unit III

Cell analysis: Different cell types, staining, hormones, growth factors (receptor- ligand binding) and chemokines in signaling (eg. G-proteins). Growth factor- delivery and applications (angiogenesis) in tissue engineering. Cell junctions in tissues, Growth factor delivery in tissue engineering and cell surface markers.

Unit IV

Scaffold and transplant: Engineering biomaterials, Degradable materials (collagen, silk and polylactic acid), porosity, mechanical strength, 3-D architecture and cell incorporation. Engineering tissues for replacing bone, cartilage, tendons, ligaments, skin and liver.

Unit V

Bioreactors in Tissue engineering: Importance of tissue engineering, applications in pharmaceuticals industry. Case study and regulatory issues: Case study of multiple approaches: cell transplantation for liver, musculoskeletal, cardiovascular, neural, visceral tissue engineering. Ethical, FDA and regulatory issues of tissue engineering.

16BTP211 **4H-2C**

RECOMBINANT DNA TECHNOLOGY, IMMUNOLOGY -PRACTICAL III

Total hours/week: **L: 0 T: 0 P: 4** **Marks:** Internal: **40** External: **60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Be familiarize with practical knowledge in the emerging field of biotechnology: Recombinant DNA technology
- Perform basic molecular biology techniques including DNA and RNA isolation from microbes, plants and animals
- Acquaint versatile tools and techniques employed in recombinant DNA technology such as restriction and digestion, ligation, transformation and PCR
- Obtain practical knowledge on basic immunological techniques such as serum/plasma preparation and ABO blood grouping
- Gain hands on experience in immunological tools used in diagnosis, such as Immunoelectrophoresis, ELISA and WIDAL test
- Comprehend the applications of recombinant DNA technology and Immunological techniques in human health care

Course Outcomes

On successful completion of the course, students will be able to

1. Carry out DNA and RNA isolation from microbes, plants and animals
2. Perform recombinant DNA techniques including restriction and digestion, ligation, transformation and PCR
3. Explain the preparation of antigens and antibody in the blood sample
4. Describe the basic knowledge about antigen and antibody interaction using Rocket immune electrophoresis
5. Perform various techniques like Immunoelectrophoresis, and ELISA etc.
6. Join in research and clinical labs as a project/ research assistant

List of Practicals

Recombinant DNA Technology

1. Isolation of total DNA from Microbes (*E. coli*), plant and animal cells
2. Isolation of plasmid DNA
3. Isolation of total RNA from Yeast
4. Quality and quantity checking of Nucleic acids
5. Restriction digestion of DNA
6. Ligation of DNA
7. Transformation of plasmid DNA using calcium chloride
8. Amplification by PCR
9. SDS-Polyacrylamide gel electrophoresis method
10. Southern blotting

11. Northern blotting
12. Western blotting

Immunology

1. ABO blood grouping
2. Preparation of serum from blood
3. Methods of immunization
4. Methods of bleeding
5. Hemolysis
6. Single radial immunodiffusion
7. Double immunodiffusion
8. Immunoelectrophoresis
9. Rocket Immunoelectrophoresis
10. Counter Current Immunoelectrophoresis
11. WIDAL test
12. DOT-ELISA

FERMENTATION TECHNOLOGY AND ENVIRONMENTAL BIOTECHNOLOGY – PRACTICAL IV

Total hours/week: **L: 0 T: 0 P: 4** **Marks:** Internal: **40** External: **60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Be familiarize with practical knowledge in fermentation and environmental biotechnology fields.
- Perform isolation and secondary screening of industrially important microorganisms.
- Acquaint versatile tools and techniques employed in fermentation biotechnology such as enzyme immobilization, wine production and downstream processing.
- Obtain practical knowledge on basic environmental techniques such as water quality test.
- Gain hands on experience in quantifying chemical oxygen demand and biological oxygen demand.
- Comprehend the protocol to analyze heavy metals.

Course Outcomes

On successful completion of the course, students will be able to

1. Carry out isolation and screening of industrially important microorganisms
2. Perform analytical techniques including thermal death point and thermal death time
3. Explain the principles of enzyme immobilization, wine production and downstream processing
4. Describe the basic knowledge about testing the water quality via pH analysis
5. Perform various techniques to quantify total solids, chemical oxygen demand and biological oxygen demand
6. Join as a technician in quality control section in fermentation-based industries and environmental analysis labs

List of Practicals

Fermentation Technology

1. Isolation and secondary screening of industrially important microorganisms
2. Auxotrophic mutants
3. Thermal death point and Thermal death time
4. Production of amylase and protease
5. Enzyme immobilization
6. Wine Production an alcohol determination by chromic acid method
7. Downstream processing by Solvent extraction
8. Partial purification by Ammonium sulphate precipitation
9. Partial purification by Dialysis
10. Quality checking by SDS PAGE

Environmental Biotechnology

1. Water quality tests for pH
2. Determination of total solids
3. Determination of Chemical Oxygen Demand
4. Determination of Biological Oxygen Demand
5. Analysis of heavy metals (Iron/Chromium)

Semester- III

16BTP301 **PLANT BIOTECHNOLOGY** **4H-4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Introduce biotechnological methods for production of transgenic plants
- Give knowledge about various methods of gene transfer in plants
- Cognize and get the knowledge on micro propagation to protect endangered plants
- Explain the basics of the physiological and molecular processes that occur during plant growth and development and during environmental adaptations
- Use basic biotechnological techniques to explore molecular biology of plants
- Understand the processes involved in the planning, conduct and execution of plant biotechnology experiments

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the growth conditions required to culture the plants in *in vitro* conditions
2. Inculcate the deep understanding of Gene expression system of plants
3. Acquire knowledge on producing Transgenic plants
4. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of plant biotechnology experiments
5. Learn the structure and organization of plant genome
6. Learn the basic techniques for hybridization in producing transgenic plants

Unit I

Introduction: Principles of Plant Breeding: Important conventional methods of breeding – self, cross pollinated and vegetatively propagated crops. Non-conventional methods. Polyploidy, Genetic variability. Genome organization in plants – mitochondria and chloroplast. Cytoplasmic male sterility.

Unit II

Micropropagation: Tissue culture media – composition and preparation, Callus and suspension culture, somaclonal variation, micropropagation, organogenesis, somatic embryogenesis, Embryo culture and embryo rescue. Haploidy; protoplast fusion and somatic hybridization; cybrids; anther, pollen and ovary culture for production of haploid plants and homozygous lines. Plant hardening transfer to soil, green house technology.

Unit III

Plant Genome Organization – Chloroplast, Mitochondria, and Nucleus Strategies in bioconversion. Production of pharmaceutical compounds. Mass cultivation of plant cells. Secondary metabolite Production from Suspension Culture, Bioreactors – Photo bioreactor. Production of secondary metabolite in plants, stages of secondary metabolite production, uses of tissue culture techniques in secondary metabolites.

Unit IV

Plant genetic Engineering: Methodology; Plant transformation with Ti plasmid of *Agrobacterium tumifacians*; Ti plasmid derived vector systems, Ri plasmids; Physical methods of transferring genes to plants - Microprojectile bombardment, Electroporation; Manipulation of gene expression in plants; Production of marker free transgenic plants.

Unit V

Application of Genetic transformation: Productivity and performance: herbicide resistance, insect resistance, virus resistance, fungal resistance, nematode resistance, Induction of abiotic stress and cold stress. Delay in fruit ripening, LEA protein, plantibodies, edible vaccines - primary and secondary metabolite modification, biopolymers, plant-based enzyme engineering.

Semester - III

16BTP302 **ANIMAL BIOTECHNOLOGY** **4H-4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Introduce biotechnological methods for production of transgenic animals
- Give knowledge about various methods of gene transfer in animals
- Cognize and get the knowledge on techniques to protect endangered animals
- Explain the basics of the physiological and molecular processes for animals facing environmental adaptations
- Use basic biotechnological techniques to explore molecular biology of animals
- Understand the processes involved in the planning, conduct and execution of animal biotechnology experiments

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the growth conditions required to culture the animals *in invitro* conditions
2. Inculcate the deep understanding of Gene expression system of animals
3. Acquire knowledge on producing Transgenic animals
4. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of animal biotechnology experiments
5. Discuss the structure and organization of animal genome
6. Demonstrate the basic techniques for hybridization in producing transgenic animals

UNIT -I

Animal cells: culture media, types of media, balances salt solutions. Physical, chemical and metabolic functions of different constituents of culture medium; role of carbon dioxide, serum, growth factors, glutamine in cell culture; serum and protein free defined media and their applications.

UNIT -II

Cell culture: Types, disaggregation of tissue, primary culture, established culture; suspension culture, organ culture, three-dimensional culture and tissue engineering, feeder layers; cell synchronization; cryopreservation. Biology and characterization of cultured cells, tissue typing; cell – cell interaction; measuring parameters of growth; measurement of cell death – apoptosis and its determination.

UNIT-III

Molecular cell techniques: cell transformation- physical, chemical and biological methods; manipulation of genes; cell and organism cloning; green fluorescent protein and its application. Gene therapy.

UNIT -IV

Embryology: Collection and preservation of embryos; culturing of embryos; gametogenesis and fertilization in animals; types of cleavage pattern; role of maternal contributions in early embryonic development; *In vitro* fertilization and stem cell research.

UNIT -V

Transgenics: Transgenic animals; production and application; transgenic animals as models for human diseases; transgenic animals in live- stock improvement; expression of the bovine growth hormone; transgenics in industry. Ethical issues in animal biotechnology.

Total hours/week: **L: 4 T: 0 P: 0** **Marks:** Internal: **40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Give knowledge on Bioinformatics and its applications
- Offer knowledge to assess biological databases
- Understand and to analyze protein/nucleotide sequences and to predict its 3D structure
- Understand the various online databases for submitting and retrieving data
- Attain how the phylogeny plays a vital role in finding ambiguities
- Get practiced with the tools and techniques for analyzing the data

Course Outcomes

On successful completion of the course, students will be able to:

1. Understand The relationship between sequence - structure - function of genes
2. Familiarize with the algorithms required to compare sequences and require to know the phylogenetic relationship between the gene sequences
3. Inculcate knowledge on building 3D structures of genes
4. Locate and use the main databases at the NCBI and EBI resources
5. Know the difference between databases, tools, repositories and be able to use each one to extract specific information
6. Use selected tools at NCBI and EBI to run simple analyses on genomic sequences

Unit - I

Introduction: Definitions, Objectives, Scope, Applications of Bioinformatics, History and milestones of bioinformatics, Genome sequencing projects – Steps, Human Genome Project and other genome projects.

Unit - II

Basic concepts of biomolecules and computers: Basic concepts of biomolecules – Protein and amino acid, DNA and RNA - Sequence, Structure and function.

Basic Computer components - Hardware, software, operating systems, computer networks, programming, internet, browsers, search engines, email, databases.

Unit - III

Biological databases: Types of databases, Sequence databases, Nucleic acid sequence databases - Primary (GenBank, EMBL, DDBJ), Secondary (UniGene, SGD, EMI Genomes, Genome Biology), Protein sequence database – Primary (PIR, SWISS-PROT), Secondary (PROSITE, Pfam), Structural databases (PDB, SCOP, CATH), Bibliographic databases and Organism specific databases.

Unit - IV

Database searching and Sequence Alignment: Similarity searching programs-BLAST, Sequence alignment - Pair-wise and Multiple-sequence alignment (Methods and Algorithms), CLUSTAL-W, Protein structure alignment (Methods, algorithms- DALI) Phylogenetic analysis (Methods, algorithms).

Unit - V

Gene prediction: Gene prediction in prokaryote and eukaryotes. Extrinsic approaches and Ab initio approaches. Predicting the protein secondary structure (Domain, blocks, motifs), predicting protein tertiary structure (Homology, Ab-initio, threading and fold recognition) and visualization of predicted structure.

Semester -III

16BTP304 **GENOMICS AND PROTEOMICS** **4H – 4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Import the basic and recent developments in the field of genome sequencing, genome mapping, proteomic data analysis
- Develop the knowledge on gene sequencing methods
- Know the structure and interactions of proteins
- Describe advanced genomics and proteomics technologies and the ways in which their data are stored
- Use bioinformatics techniques to query examples of genomic and proteomic databases to analyse cell biology
- Describe the different types of genome variation and their relationship to human diseases

Course Outcomes

On successful completion of the course, students will be able to

1. Have a clear understanding on the application of genetic markers in genome mapping
2. Application of 2D technique to analyze the structure of protein
3. Analyze the genomic and proteomic data
4. Acquire knowledge and understanding of fundamentals of genomics and proteomics, transcriptomics and metabolomics and their applications in various applied areas of biology
5. Discuss how biological systems information relating to genes, proteins and cellular structures can be used to model living cells, and even to create new synthetic cells
6. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study

UNIT -I

Genome Sequencing: Gene and pseudogenes, Gene structure, Genomes, Sequencing Genomes- methodology, chain termination method, chemical degradation method, automated DNA sequencing, shotgun sequencing and assembly of contiguous DNA sequence. cDNA and Genomic library construction.

UNIT -II

Genomic Mapping: Different types of genome maps and their practical uses, Genetic and Physical mapping techniques. Map resources. Practical uses of genome maps, Association mapping, Haplotypes. Genetic Markers - Mini and Micro satellite, STS and EST, SNPs,.

UNIT -III

Gene Expressions and Microarrays: Expression systems - Bacteria, Yeast and Viral. Concepts of microarrays, spotter analysis, Normalization –total intensity, using regression techniques, ratio statistics. Clustering Gene expression profiles-hierarchical, single-linkage, complete linkage, and average linkage. Tools for microarray analysis- MADAM, spot finder, SAGE Applications of Microarrays- Bioinformatics challenges in micro array design and analysis.

UNIT -IV

Experimental Proteomics: Proteome analysis- 2D gel electrophoresis: general strategy, immobilized pH gradients, sample preparation, isoelectric focussing, staining, transfer of proteins from gels, image acquisition and analysis of gels. 2DE databases.

UNIT -V

Analytical Proteomics: RP-HPLC, Mass Spectrometry – ESI MS and MALDI techniques and applications. Characterization of protein complexes – Protein - DNA, Protein-protein interactions, yeast two-hybrid system and protein micro-arrays – biomarkers.

Semester -III

16BTP305 A MEDICINAL PLANT BIOTECHNOLOGY 4H – 4C

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Learn about the biochemical parameters used in the in the identification and utilization of medical plants
- Understand about the extraction of phytochemicals and to procedures
- Exploit and explore the medicinal values of plants
- Gain knowledge about various drugs, its effects, drug metabolism, drug receptors, drug tolerance, dependence and resistance with therapeutic monitoring of drugs
- Understand comprehensive information and insights in pharmaceutical biotechnology and the development of biopharmaceuticals in pharmaceutical industry
- Obtain scientific knowledge of designing and mechanism of action of drugs

Course Outcomes

On successful completion of the course, students will be able to:

1. Recall the biosynthesis of primary and secondary metabolites involved in plants
2. Understand the concept of phyto-chemical extraction and principles involved in DNA and chemical fingerprinting techniques
3. Know about applications of phyto-constituents in development of drug
4. Validate the results obtained using the techniques involved in photochemical analysis
5. Imparting a comprehension of basic skills necessary for employing biotechnology principles
6. Understand and evaluate the different pharmaceutical parameters of the current and future biotechnology related products on the market

UNIT – I

Phytochemistry: Biosynthesis of primary and secondary metabolites - alkaloids, terpenoids, Phenolic compounds and coumarins. Classification of alkaloids and phenolic compounds.

UNIT – II

General extraction and isolation techniques: Alkaloids and phenolic compounds from plants. Techniques involved in extraction of phytochemicals – Perculation, Soxhlet extraction, reflux and other methods.

UNIT –III

Biotechnology of medicinal plants: Production of secondary metabolites from cultured plant cells, elicitation, immobilization and biotransformation. DNA bar coding. DNA finger-printing of medicinal plants – DNA isolation and fingerprinting techniques.

UNIT – IV

Bioactive studies: Anticancer, antidiabetic, anti-inflammatory, hepatoprotectives, antimicrobials from medicinal plants. Antioxidants of plant origin – Reactive Oxygen Species (ROS). Toxicity studies on medicinal plant products and herbal formulations.

UNIT - V

Pharmacognosy: Authentication of medicinal plants – Organoleptic and other pharmacognostic studies. Anatomical studies. Organic cultivation of medicinal plants

16BTP305 B **INDUSTRIAL TOXICOLOGY** **4H – 4C**

Total hours/week: L: 4 T: 0 P: 0 **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Students will acquire knowledge and learn the terminology of the field of Industrial toxicology, understand and be able to describe in detail the toxicological effects of certain dangerous substances
- Describe the relationship of dose - response, and the principle of determining the theoretical expertise on the mutagenic, teratogenic and carcinogenic effects of toxic substances
- Obtain knowledge of current legislation on health protection while working with chemical agents, carcinogenic and mutagenic factors, and biological factors
- Learn about toxic effects of elements and their compounds. Toxic effects of heavy metals.
- Understand the classification of substances under the new legislation
- Gather and critically interpret toxicological information from diverse resources for human health hazard and risk assessment

Course Outcomes

On successful completion of the course, students will be able to

1. Describe toxicology as a discipline in the overall health sciences framework
2. Explain the basic concepts of chemical hazard and exposure as determinants of chemical toxicity
3. Describe key pathways and mechanisms of chemical absorption, distribution, metabolism, storage and excretion in the human body
4. Explain dose-response relationships as the basis of toxicity
5. Outline the derivation of reference dose and other related measures of occupational exposure
6. Describe the scientific basis of occupational exposure assessments and practical methods for their determination

UNIT – I

Introduction: Scope, Divisions of Toxicology, General principles of toxicology, - Classification of Toxic Agents. Mechanism of action of toxicants, Routes of exposure-absorption and translocation.

UNIT - II

Toxicokinetics: Absorption, Distribution, Metabolism and Excretion, Factors influencing Toxicity, Dose-effect and Dose response relationship- LD50, LC50.

UNIT - III

Human Toxicology: Pollution induced biochemical, hematological and pathological changes, Immunotoxicity, genotoxicity and carcinogenic effects

UNIT -IV

Ecotoxicology: Influence of ecological factors on the effects of toxicity; Pollution of the Ecosphere by industries; degradable and non-degradable toxic substances; food chain. Eco-system influence on the fate and transport of toxicants.

UNIT - V

Regulatory issues and testing: Bacterial mutation assays, Mammalian cell mutation assays, *in vitro* chromosome aberration assays, *In vivo* carcinogenicity assays and Comet assay.

Semester -III

16BTP305 C **SYSTEM BIOLOGY** **4H – 4C**

Total hours/week: **L:4 T:0 P:0** **Marks:** Internal: **40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Understand the new concept of system biology applied to the area of biotechnology
- Build the knowledge in computational methods in biotechnology
- Acquire requisite skills for the design and development of high throughput screening and to retrieve and submit the data, genome database and other databases and analysis
- Learn the computational tools for applying biotechnology in research
- Study the techniques involved in structural and functional proteomics
- Utilize the bioinformatics tools to design and development of novel drugs

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the basic concepts of System Biology
2. Differentiate various Metabolic Networks and Models in System Biology
3. Understand the various databases available for data collection and interpretation
4. Understand the scope and applications of tools
5. Utilize the computational tools for applying biotechnology in research
6. Study and deduce the molecular characterization of human genome

Unit -I

Introduction to Systems Biology: Introduction to Systems Biology. Need for System Analysis in Biology. Basic Concepts in System Biology: Component vs System, Links and Functional States, Links to Networks, Hierarchical Organization in Biology.

systems, scales, static/dynamic, approaches, limitations, reductionism; central dogma; mathematical models; computational analysis; statistics of prokaryotes and eukaryotes.

Unit- II

Metabolic Networks and Models in System Biology: Basic Features of Metabolic Networks. Reconstruction Methods of Metabolic Networks. Models as Dynamical Systems. SYN1, SYN3 and molecular simulation, Parameter Problem. Meanings of Robustness.

Unit -III

Systems Biology Databases KEGG (Kyoto Encyclopedia of Genes and Genomes). BRENDA (BRaunschweigENzymeDAtabase). BioSilico. EMP (Embden-Meyerhof-Parnas). MetaCyc and AraCyc. SABIO-RK (System for the Analysis of Biochemical Pathways - Reaction Kinetics). BioModels.

Unit -IV

Tools for System Biology: Cell Designer. Ali Baba. Cell Profiler. JDesigner. Bio-SPICE (Biological Simulation Program for Intra and Inter Cellular Evaluation). SBML (Systems Biology Markup Language). SBGN (Systems Biology Graphical Notation). SBML-SAT (SBML based Sensitivity Analysis Tool).

Unit - V

Premises & Promises of Systems Biology: Premise of Systems Biology. Promise of Systems Biology. Challenges of Systems Biology. Applications of Systems Biology.

16BTP311 PLANT AND ANIMAL BIOTECHNOLOGY - PRACTICAL V 4H-2C

Total hours/week: **L:0 T:0 P:4** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Understand the new concept of system biology applied to the area of biotechnology
- Gain hands-on experience and to learn the principles behind plant and animal biotechnology
- Know the process involved in isolation, separation, manipulation of plant and animal tissues
- Apply the technology in research and development and pharmaceutical industries
- Execute the recent technology involved in plant and animal cell culture
- Describe the principles of gene manipulation

Course Outcomes

On successful completion of the course, students will be able to

1. Acquaint with principles, technical requirement, scientific and commercial applications in plant and animal biotechnology
2. Support methodologies in plant and animal tissue/cell culture
3. Be able to describe basic principles and techniques in genetic manipulation and genetic engineering
4. Be able to describe gene transfer technologies in plants and animals
5. Be able to describe techniques and problems in plant and animal cloning
6. Become motivated to set goals towards pursuing higher-level positions, such as lab manager and key scientist in plant and animal biotechnological research institutes and industries

Plant Tissue Culture Techniques

1. Laboratory organization for plant tissue culture.
2. Media Preparation
3. *In vitro* Germination of Seeds
4. Micropropagation
5. Callus induction, differentiation and regeneration
6. Suspension culture
7. Embryo Culture
8. Synthetic seed production.
9. Protoplast Isolation
10. Agrobacterium-mediated gene transformation

11. Preparation and Filter-sterilization of Animal Tissue Culture Medium
12. Chicken embryo fibroblast Culture
13. Quantification of cells by haemocytometer
14. Quantification of viable and non-viable cells by trypan blue dye exclusion method
15. Identification of leukocyte subsets and total count.
16. Blood leukocyte culture
17. Soft agar assay
18. Cryopreservation and revival of cell lines
19. Transfection

16BTP312 BIOINFORMATICS -PRACTICAL VI 4H-2C

Total hours/week: L:0 T:0 **P:4** **Marks:** Internal:**40** External:**60** Total: **100**

Course Objectives

The objectives of the course are to make the students to

- Give knowledge on Bioinformatics and its application
- Offer knowledge to assess biological databases
- Understand and to analyze protein/nucleotide sequences and to predict its 3D structure
- Understand the various online databases for submitting and retrieving data
- Understand how the phylogeny plays a vital role in finding ambiguities
- Get practiced with the tools and techniques for analyzing the data

Course Outcomes

On successful completion of the course, students will be able to

1. Understand The relationship between sequence - structure - function of genes
2. Familiarize with the algorithms required to compare sequences and require to know the phylogenetic relationship between the gene sequences
3. Inculcate knowledge on building 3D structures of genes
4. Locate and use the main databases at the NCBI and EBI resources
5. Know the difference between databases, tools, repositories and be able to use each one to extract specific information
6. Use selected tools at NCBI and EBI to run simple analyses on genomic sequences

List of Practicals

Bioinformatics

1. Using RasMol through command line
2. Quaternary structural analysis
3. Investigation of molecular interactions using the program KineMage
4. Similarity search using the Blast and interpretation of the results
5. Pair-wise and multiple sequence sequence alignment by using ClustalW
6. Introduction of BioEdit
7. Phylogenetic analysis using web tools
8. Protein Structure Prediction (Homology Modeling) using SPDBV
9. Molecular modeling using SPARTAN
10. Model Building and Energy minimization
11. Quantum chemical and molecular mechanics practicals
12. Basic UNIX commands, pine, telnet, ftp
13. Molecular dynamics simulation using GROMACS etc.
14. Molecular Docking and Drug designing by using Chimera

16BTP491 **PROJECT – *VIVA VOCE*** **15C**

Total hours/week: **L:0 T:0 P:0** **Marks:** Internal:**80** External:**120** Total: **200**

Course Objectives

The main objectives of the course is

- The hands-on training through one full semester project with thesis gives special expertise within one of the research areas represented at The Department of Biotechnology.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. This dissertation programme provides the candidate with knowledge, general competence, and analytical skills on an advanced level, needed in industry, consultancy, education and research

பகுதி – I, தமிழ்பருவம் I

16LSU101 : தமிழ்முதல்தாள் 4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, ‘தமிழ் இலக்கிய வரலாறு’ குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, ‘அறிவியல் தமிழ்’ ; ‘இணைய தமிழ்’ குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

அலகு – I :இக்காலஇலக்கியம்: (10 மணிநேரம்)

கல்வி : மகாகவிபாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.
இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை–
ஒற்றுமையே உயிர்நிலை.
மனிதநேயம் :கவிஞர்சிற்பிபாலசுப்பிரமணியன் –மலையாளக் காற்று.
சூழலியல் :கவிஞர்வைதீஸ்வரன் - விரல் மீட்டிய மழை.
பெண்ணியம் :கவிஞர்சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II :அறஇலக்கியம்: (10 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்பம் – 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III :சிற்றிலக்கியம்: (10 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV :கட்டுரை: (10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V :மொழிப்பயிற்சி: **(8 மணிநேரம்)**

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை,கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாடநூல்:கற்பகச்சோலை – தமிழ்ஏடு.கற்பகம்பல்கலைக்கழகத்தமிழ்த்துறைவெளியீடு.

Semester-I

16ENU101 **ENGLISH – 1** **4H 4C**

Instruction Hours/week:L:40 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

- To enable the learners to acquire English language skills at a faster pace.
- To train the learners to reflect on the literary works and communicate flexibly.
- Know about the Prose and Poetry
- To develop the Short Story:
- Learn about Vocabulary, Grammar and Composition:
- Know about Proverb Expansion

Course Outcomes

1. Enable the learners to acquire English language skills at a faster pace.
2. Trained the learners to reflect on the literary works and communicate flexibly.
3. Knowledge about the Prose and Poetry
4. Development of the Short Story:
5. Learnt about Vocabulary, Grammar and Composition:
6. Knowledge about Proverb Expansion

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman **–** Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan
One-Act Play: While the Auto Waits- O’ Henry
Vocabulary: Words Often Confused, Anagrams

Grammar: Preposition, Voice- Active and Passive

UNIT V

Short Story: The Bird – Amar Jalil

One-Act Play: The Cellphone Epidemic – Claudia I. Haas

Vocabulary: Portmanteau Words, One Word Substitution

Grammar: Question, Pronunciation

Prescribed Text:

Rao, G. Chandralekha et al. *Spring* 2013**.** Emerald Publishers: Chennai.

Suggested Book:

Shyamala, V. (2006). *English for Communication*. Chennai, Emerald Publishers.

Semester-I

16CHU101 ATOMIC STRUCTURE AND CHEMICAL BONDING5H 5C

Instruction Hours/week:L: 5 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

Students should be able

- To discuss the limitations of classical mechanics and its drawbacks.
- To discuss the radial and angular part of orbitals
- To explain the fundamentals of quantum mechanics and Schrödinger equation for simple atoms.
- To predict and write the electronic configuration of elements.
- To explain a different types of bonding like ionic and covalent bonding.
- To interpret a knowledge about the various theories of bonding like VSEPR, Valence Bond Theory and Molecular Orbital Theory of covalent bonding.

Course Outcomes

The students

1. Explain the atomic theory of matter, composition of the atom, which defines the identity of a given element.
2. Understood the radial and angular part of orbitals
3. Explain the relative sizes, masses, and charges of the proton, neutron, and electron, and their assembly to form different atoms.
4. Define the term isotope, and their atomic and mass numbers.
5. Use the Periodic Table to rationalize similarities and differences of elements, including physical and chemical properties and reactivity.
6. Predict common ionic charges of group 1A, 2A, 3A, 6A, and 7A elements based on position in the periodic table.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

Atomic Structure:

UNIT I

Review of: Bohr's theory and its limitations, dual behaviour of matterand radiation, de Broglie's relation, Heisenberg Uncertainty principle. Hydrogen atomspectra. Need of a new approach to atomic structure.What is Quantum mechanics? Time independent Schrodinger equation and meaning ofvarious terms in it. Significance of ψ and ψ^2, Schrödinger equation for hydrogen atom. Radial and angular parts of the hydrogenic wavefunctions (atomic orbitals) and their variations for 1*s*, 2*s*, 2*p*, 3*s*, 3*p* and 3*d* orbitals (Only graphical representation). Radial and angular nodes and their significance. Radial distribution functions and the concept of the most probable distance with special reference to 1*s* and 2*s* atomic orbitals.

UNIT II

Significance of quantum numbers, orbital angular momentum and quantum numbers *ml* and *ms*. Shapes of *s*, *p* and *d* atomic orbitals, nodal planes. Discovery of spin, spin quantum number (*s*) and magnetic spin quantum number (*ms*).Rules for filling electrons in various orbitals, Electronic configurations of the atoms. Stabilityof half-filled and completely filled orbitals, concept of exchange energy. Relative energies ofatomic orbitals, Anomalous electronic configurations.

Chemical Bonding and Molecular Structure
UNIT III
.
Ionic Bonding: General characteristics of ionic bonding. Energy considerations in ionic bonding, lattice energy and solvation energy and their importance in the context of stability and solubility of ionic compounds. Statement of Born-Landé equation for calculation of lattice energy, Born-Haber cycle and its applications, polarizing power and polarizability. Fajan's rules, ionic character in covalent compounds, bond moment, dipole moment and percentage ionic character

UNIT IV
Covalent bonding: VB Approach: Shapes of some inorganic molecules and ions on the basisof VSEPR and hybridization with suitable examples of linear, trigonal planar, square planar,tetrahedral, trigonal bipyramidal and octahedral arrangements. Concept of resonance and resonating structures in various inorganic and organic compounds.

UNIT V

MO Approach: Rules for the LCAO method, bonding and antibonding MOs and theircharacteristics for *s-s*, *s-p* and *p-p* combinations of atomic orbitals, nonbonding combinationof orbitals, MO treatment of homonuclear diatomic molecules of 1^{st} and 2^{nd} periods(including idea of *s-p* mixing) and heteronuclear diatomic molecules such as CO, NO andNO^+. Comparison of VB and MO approaches.

Suggested Readings:

Semester-I

5H 5C

16CHU102 PHYSICAL CHEMISTRY I(States of matter and ionic equilibrium)

Instruction Hours/week:L: 5 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

Enable the students

- To understand the Kinetic molecular model of a gas and about the molecular velocities
- To provide a knowledge about the behaviour of real gases
- To provide knowledge about the structure of the liquid state and its properties like surface tension and viscosity.
- To provide knowledge about the solid state, symmetries present and different types of crystals.
- To provide a knowledge about the theory of ionic equilibria, ionisation of electrolytes and salt hydrolysis.
- To provide a knowledge about the buffer solutions and acid-base titrations.

Course outcomes (CO's)
Students are able to

1. Understand the postulates of Kinetic theory of gases, kinetic molecular model of gases and about the molecular velocities
2. Has the knowledge, why real gases deviate from ideal gases, Vander Waals equation of state
3. and about critical constants.
4. Has the knowledge about the structure of the liquid state and its properties like surface tension and viscosity.
5. Understood about the solid state, symmetries present and different types of crystals.
6. Has knowledge about the theory of ionic equilibria, ionisation of electrolytes and salt hydrolysis.
7. Know to formulate the buffer solutions and the choice of indicators to acid-base titrations

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Gaseous state: Kinetic molecular model of a gas: postulates and derivation of the kinetic gas equation; collision frequency; collision diameter; mean free path and viscosity of gases, including their temperature and pressure dependence, relation between mean free path and coefficient of viscosity, calculation of ζ from η; variation of viscosity with temperature and pressure. Maxwell distribution and its use in evaluating molecular velocities (average, root mean square and most probable) and average kinetic energy, law of equipartition of energy, degrees of freedom and molecular basis of heat capacities.

UNIT II

Behaviour of real gases: Deviations from ideal gas behaviour, compressibility factor, Z, and its variation with pressure and temperature for different gases. Causes of deviation from ideal behaviour. Van der Waals equation of state, its derivation and application in explaining real gas behaviour, calculation of Boyle temperature. Isotherms of real gases and their comparison with Van der Waals isotherms, continuity of states, critical state, relation between critical constants and Van der Waals constants, law of corresponding states.

Liquid state: Qualitative treatment of the structure of the liquid state; physical properties of liquids, vapour pressure, surface tension coefficient of viscosity, and their determination. Effect of addition of various solutes on surface tension and viscosity. Explanation of cleansing action of detergents. Temperature variation of viscosity of liquids and comparison with that of gases.

UNIT III

Solid state: Nature of the solid state, law of constancy of interfacial angles, law of rational indices, Miller indices, elementary ideas of symmetry, symmetry elements and symmetry operations, qualitative idea of point and space groups, seven crystal systems and fourteen Bravais lattices; X-ray diffraction, Bragg's law, a simple account of rotating crystal method and powder pattern method. Analysis of powder diffraction patterns of NaCl, CsCl and KCl.

UNIT IV

Ionic equilibria: Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, ionization constant and ionic product of water. Ionization of weak acids and bases, pH scale, common ion effect; dissociation constants of mono and diprotic acids. Salt hydrolysis-calculation of hydrolysis constant, degree of hydrolysis and pH for different salts.

UNIT V

Buffer solutions; derivation of Henderson equation and its applications. Solubility and solubility product of sparingly soluble salts – applications of solubility product principle. Qualitative treatment of acid – base titration curves (calculation of pH at various stages). Theory of acid–base indicators; selection of indicators and their limitations.

Suggested Readings:

Text Books:

1. Atkins, P. W. & Paula, J. de Atkin's. (2006).*Physical Chemistry Ed*. Oxford University Press.
2. Ball D. W. (2007).*Physical Chemistry*.India : Thomson Press.

Reference Books:

1. Castellan, G. W. (2004). *Physical Chemistry*. 4th Ed. Narosa.

Semester-I

16CHU103 ORGANIC CHEMISTRY I(Basics and Hydrocarbon) 4H 4C

Instruction Hours/week:L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

- To describe knowledge on the basics of organic chemistry
- To gain knowledge in particularly the shapes of molecules, electron displacement effects, reagents, intermediates and fundamental types of reactions.
- To explain the students about the stereochemistry, projection formulae of molecules, geometrical isomerism and optical isomerism
- To explain the preparation and conformation analysis of alkanes.
- To paraphase a knowledge about the preparation and properties of alkenes and alkynes, mechanisms of reactions and rules behind the reactions.
- To summarise a knowledge about the aromaticity of molecules and about electrophilic aromatic substitutions.

Course outcomes

1. Describe molecular structure and bonding in organic molecules.
2. Classify organic compounds by structure, use the IUPAC nomenclature, and identify conformational effects in organic compounds.
3. Predict the products of reactions of alkenes and describe the mechanisms showing how the products are formed.
4. Draw and interpret reaction coordinate diagrams, and relate the energetic changes associated with chemical reactions to equilibrium constants and rate; and differentiate kinetic versus thermodynamic control of reactions.
5. Identify the types of isomerism in organic compounds, to identify and classify chiral centers, and explain the physical and chemical consequences of chirality.
6. Correctly represent the structures and bonding of alkynes, and describe the mechanisms for reactions of alkynes and predict the products of such reactions.
7. Identify compounds in which resonance is important, predict the effect of resonance on the stability of compounds and reactive intermediates, and draw resonance structures.
8. Identify conjugated pi systems and explain the effect of conjugation on molecular structure and reactivity; and predict the products of reactions of dienes.
9. Describe mechanisms for substitution and elimination reactions, and predict the effect of nucleophile, leaving group, and solvent on the relative rates of S 1 versus S 2 reactions, and E1 versus E2 reactions, as well as on the relative rates of substitution versus elimination.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Basics of Organic Chemistry

Hybridization, Shapes of molecules
Electronic Displacements: Inductive, electromeric, resonance and mesomeric effects, hyperconjugation anddipole moment; Hydrogen bonding (Applications to be discussed with relevant topics) Homolytic and Heterolytic fission with suitable examples. Curly arrow rules, formal charges; Electrophiles and Nucleophiles; Types, shape and relative stability of Carbocations, Carbanions, Free radicals and Carbenes. Introduction to types of organic reactions: Addition, Elimination and Substitution reactions.

UNIT II
Stereochemistry:
Fischer,Newmann and Sawhorse Projection formulae and their interconversions; Geometrical isomerism: cis–trans , syn-anti and E/Z notations with C.I.P rules.
Optical Isomerism: Optical Activity, Specific Rotation, Chirality/Asymmetry, Enantiomers, Molecules with two or more chiral-centres, Diastereoisomers, meso structures, Racemic mixture and their resolution. Relative and absolute configuration: D/L and R/S designations.

UNIT III
Chemistry of Aliphatic Hydrocarbons
Carbon-Carbon sigma bonds
General methods of preparation, physical and chemical properties of alkanes: Wurtz Reaction, Wurtz-Fittig Reactions, Free radical substitutions: Halogenation-relative reactivity and selectivity.

Cycloalkanes and Conformational Analysis
Conformational analysis of alkanes: Relative stability and Energy diagrams. Types of cycloalkanes and their relative stability, Baeyer strain theory: Chair, Boat and Twist boat forms of cyclohexane with energy diagrams; Relative stability of mono substituted cycloalkanes.

Unit IV
Chemistry of Aliphatic Hydrocarbons
Carbon-Carbon pi bonds:
General methods of preparation, physical and chemical properties of alkenes and alkynes, Mechanism of E1, E2, E1cb reactions. Saytzeff and Hofmann eliminations. Electrophilic additions and their mechanisms (Markownikoff/ Anti Markownikoff addition), mechanism of oxymercuration-demercuration, hydroboration- oxidation, ozonolysis, reduction (catalytic and chemical), syn and anti-hydroxylation(oxidation). 1,2-and 1,4-addition reactions in conjugated dienes and Diels-Alder reaction; Allylic and benzylic bromination and mechanism, e.g. propene, 1-butene, toluene, ethyl benzene.
Reactions of alkynes: Acidity, Electrophilic and Nucleophilic additions. Hydration to form carbonyl compounds, Alkylation of terminal alkynes.

UNIT V
Aromatic Hydrocarbons
Aromaticity: Hückel’s rule, aromatic character of arenes, cyclic carbocations/carbanions and heterocyclic compounds with suitable examples. Electrophilic aromatic substitution: halogenation, nitration, sulphonation and Friedel-Craft’s alkylation/acylation with their mechanism. Directing effects of the groups.

Semester-I

16CHU111 ATOMIC STRUCTURE AND CHEMICAL BONDING PRACTICAL **2H 1C**

Instruction Hours/week:L: 0 T:0 P:2 Marks: Internal:40 External: 60 Total:100

Course objectives

- To illustrate the principles of volumetric analysis.
- To categorize a versatile knowledge of solution preparations
- To prepare solutions with appropriate concentrations, titrations
- How to handle the apparatus while doing a titration.
- To analyse the knowledge about the calculations involved in the estimation of compounds using volumetric analysis.
- To estimate the amount of solution present quantitatively.

Course outcomes (CO's)

The Students are able

1. Summarize the principles of volumetric analysis.
2. Gained knowledge about the preparations of solutions
3. Understood the preparation of appropriate concentrations, titrations
4. Handled the respective apparatus while doing a titration.
5. Analyse the calculations involved in volumetric analysis and in the estimation of compounds using volumetric analysis.
6. The lab will also provide hands-on opportunities to develop and apply this knowledge

Methodology

Titrations, Volumetric analysis.

Inorganic Chemistry - Volumetric Analysis

1. Estimation of sodium carbonate and sodium hydrogen carbonate present in a mixture.
2. Estimation of oxalic acid by titrating it with $KMnO_4$.
3. Estimation of water of crystallization in Mohr's salt by titrating with $KMnO_4$.
4. Estimation of Fe (II) ions by titrating it with $K_2Cr_2O_7$ using internal indicator.
5. Estimation of Cu (II) ions iodometrically using $Na_2S_2O_3$.

Suggested Readings:

Text Book:

1. Svehla, G. (2012).*Vogel's Qualitative Inorganic Analysis*. Pearson Education.

Reference Book:

1. Mendham, J. (2009) *Vogel's Quantitative Chemical Analysis*, Pearson.

Semester-I

16CHU112 STATES OF MATTER AND IONIC EQUILIBRIUM PRACTICAL 2H 1C

Instruction Hours/week:L: 0 T:0 P:2 Marks: Internal:40 External: 60 Total:100

Course Objectives

The students develop the skills to categorize

- Surface tension of a liquid
- Study the variation of surface tension with different concentration of detergent solutions.
- Viscosity of a liquid
- Prepare a buffer solution and to measure its pH.
- Monitor the pH of a solution during the course of a titration.
- Indexing of a given powder diffraction pattern of a cubic crystalline system.

Course Outcomes

The students develops the practical skill have categorized the

1. Determination of surface tension of a liquid
2. Determination the viscosity of a liquid
3. Prepare a buffer solution and to measure the pH of a solution
4. Monitor the pH of a solution during the course of a titration.
5. The lab will also provide hands-on opportunities to develop and apply this knowledge
6. Indexing of a given powder diffraction pattern of a cubic crystalline system.

Methodology

Surface tension & viscosity measurements, XRD data, PH meter and buffer solutions.

1. **Surface tension measurements**
   a. Determination of the surface tension of a liquid.
   b. Study the variation of surface tension with different concentration of detergent solutions.

2. **Viscosity measurement.**
   a. Determination of co-efficient of viscosity of an unknown aqueous solution.
   b. Study the variation of co-efficient of viscosity with different concentration of Poly Vinyl Alcohol (PVA) and determine molar of PVA.
   b. Study the variation of viscosity with different concentration of sugar solutions.

3. **Solid State:**
   a. Indexing of a given powder diffraction pattern of a cubic crystalline system.

4. **pH metry**:
   a. Study the effect of addition of HCl/NaOH on pH to the solutions of acetic acid, sodium acetate and their mixtures.
   b. Preparation of buffer solutions of different pH values (i). Sodium acetate-acetic acid (ii). Ammonium chloride-ammonium hydroxide
   c. pH metric titration of (i) strong acid with strong base, (ii) weak acid with strong base.

Determination of dissociation constant of a weak acid.

Suggested Readings:

2. Halpern, A. M. & McBane, G. C.(2003).*Experimental Physical Chemistry*. 3rd Ed. New York : W.H. Freeman & Co.

Semester-I 16CHU113 BASICS AND HYDROCARBON PRACTICAL4H 2C

Course objectives

To develop skills in

- To purify organic compounds by crystallisation.
- To calibrate the thermometer, determine the melting point, and to analyse the effect of
- impurities on the melting point.
- To determine the boiling point of a liquid by distillation method.
- To explain the principles of chromatography and to separate organic compounds by paper and thin layer chromatography.
- To detect the elements present in an organic compound.
- To prepare few organic compounds using standard organic reactions.

Course Outcomes (CO's)

The student will be able to

1. Purify organic compounds by crystallisation.
2. Characterisation of the compounds by elemental analysis, melting point, and effect of impurities on the melting point.
3. To separate organic compounds by paper chromatographic and TLC methods
4. To Preparation of organic compounds.
5. The lab will also provide hands-on opportunities to develop and apply this knowledge.
6. Understood the principles of chromatography and to separate organic compounds by paper and thin layer chromatography

Methodology

Laboratory experiments, Melting point apparatus, paper chromatography, Heating mantles

1. Checking the calibration of the thermometer
2. Purification of organic compounds by crystallization using the following solvents:
   a.Water, b.Alcohol, c.Alcohol-Water
3. Determination of the melting points of unknown organic compounds.
4. Effect of impurities on the melting point – mixed melting point of two unknown organic Compounds
5. Determination of boiling point of liquid compounds. (boiling point lower than and more than 100 °C by distillation)
6. Chromatography
   a.Separation of a mixture of two amino acids by ascending paperchromatography
   b.Separation of a mixture of two sugars by ascending paper chromatography
   c.Separation of a mixture of o-and p-nitrophenol or o-and p-aminophenol by thin layer chromatography (TLC)
7. Detection of extra elements
8. Organic Preparations
   (i) Bromination of acetanilide / aniline / phenol
   (ii) Nitration of nitrobenzene / toluene.

16CHU201 PHYSICAL CHEMISTRY II(ChemicalSemester-II Thermodynamics and its applications)5H 5C

Instruction Hours/week:L: 5 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

- To provide the basics of chemical thermodynamics and the concept of first law of Thermodynamics.
- To provide the knowledge about the thermo chemistry and to explain about the 2nd law of Thermodynamics.
- To explain the concepts of third law of thermodynamics and systems of variable composition.
- To explain about the usage of chemical thermodynamics in chemical equilibrium.
- To provide a knowledge about solutions and colligative properties.
- To recognise the forces which drive the chemical reactions in forward direction and the concept of the interchange of energy in a system.

Course Outcomes

1. Students will explain and apply the concepts of thermodynamics to chemical and physical systems. Know to calculate Q, W, ΔU and ΔH for various process.
2. Students understood the concepts of thermochemistry and the concept of entropy.
3. Students know about the third law of thermodynamics, free energy functions and about the Systems of Variable Composition
4. Students will be able to derive essential mathematical relationships in thermodynamics, and chemical equlibria.
5. Know to list the colligative properties of solutions, explaining how and why each property is affected by an increase by the amount of solute
6. Recognise the forces which drive the chemical reactions in forward direction and the concept of the interchange of energy in a system.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Chemical Thermodynamics: Intensive and extensive variables; state and path functions;isolated, closed and open systems.

First law: Concept of heat, Q, work, W, internal energy, U, and statement of first law; enthalpy, H, relation between heat capacities, calculations of Q, W, ΔU and ΔH for reversible, irreversible and free expansion of gases (ideal and Van der Waals) under isothermal and adiabatic conditions.

UNIT II

Thermochemistry: Heats of reactions: standard states; enthalpy of formation and enthalpy of combustion and its applications; effect of temperature (Kirchhoff's equations) and pressure on enthalpy of reactions.

Second Law: Concept of entropy; thermodynamic scale of temperature, statement of the second law of thermodynamics. Calculation of entropy change for reversible and irreversible processes.

UNIT III

Third Law: Statement of third law, concept of residual entropy, calculation of absolute entropy of molecules. Free Energy Functions: Gibbs and Helmholtz energy; variation of S, G, A with T, V, P; Free energy change and spontaneity. Relation between Joule-Thomson coefficient and other thermodynamic parameters; inversion temperature; Gibbs-Helmholtz equation; Maxwell relations; thermodynamic equation of state.

Systems of Variable Composition: Partial molar quantities, dependence of thermodynamic parameters on composition; Gibbs Duhem equation, chemical potential of ideal mixtures, change in thermodynamic functions in mixing of ideal gases.

UNIT IV

Chemical Equilibrium: Criteria of thermodynamic equilibrium, degree of advancement of reaction, chemical equilibria in ideal gases. Thermodynamic derivation of relation between Gibbs free energy of reaction and reaction quotient. Equilibrium constants and their quantitative dependence on temperature, pressure and concentration (Le Chatelier Principle, Quantitatively). Free energy of mixing and spontaneity. equilibrium between ideal gases and a pure condensed phase.

UNIT V

Solutions and Colligative Properties: Dilute solutions; lowering of vapour pressure, Raoult's and Henry's Laws and their applications. Thermodynamic derivation using chemical potential to derive relations between the four colligative properties [(i) relative lowering of vapour pressure, (ii) elevation of boiling point, (iii) Depression of freezing point, (iv) osmotic pressure] andamount of solute. Applications in calculating molar masses of normal, dissociated and associated solutes in solution.

Semester-II
16CHU202 INORGANIC CHEMISTRY II(Metallurgy and S-Block and P-block elements) 4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

The student will recite knowledge on

- The general principles of metallurgy
- S-block elements
- Complexes of s-block elements
- Chemistry of p-block elements
- Chemistry Hydrides, oxides and oxacids
- Preparation, properties, structure and uses of some types of inorganic compounds.

Course Outcomes

It enabled the students have discuss

1. The basic principles and methods involved in the metallurgy
2. The basic properties of s-block elements and their compounds
3. The complex formation tendency of s-block elements and their structure
4. The basic properties of p-block elements and their compounds.
5. Chemistry Hydrides, oxides and oxacids
6. The preparation, properties, structure and uses of borazine, silicates, silicones, interhalogen compounds, phosphonitrilic and clathrates.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

General Principles of Metallurgy

Chief modes of occurrence of metals based on standard electrode potentials. Ellingham diagrams for reduction of metal oxides using carbon and carbon monoxide as reducing agent. Electrolytic Reduction, Hydrometallurgy with reference to cyanide process for silver and gold. Methods of purification of metals: Electrolytic process, Van Arkel-de Boer process and Mond's process, Zone refining.

UNIT II

Chemistry of *s* Block Elements:

(i) General characteristics: melting point, flame colour, reducing nature, diagonal relationships and anomalous behavior of first member of each group.

(ii) Reactions of alkali and alkaline earth metals with oxygen, hydrogen, nitrogen and water.

(iii) Common features such as ease of formation, thermal stability and solubility of the following alkali and alkaline earth metal compounds: hydrides, oxides, peroxides, superoxides, carbonates, nitrates, sulphates.

UNIT III

(i) Complex formation tendency of s-block elements; structure of the followingcomplexes: crown ethers and cryptates of Group I; basic beryllium acetate, beryllium

nitrate, EDTA complexes of calcium and magnesium.
(ii) Solutions of alkali metals in liquid ammonia and their properties.

UNIT IV

Chemistry of *p* Block Elements:
Electronic configuration, atomic and ionic size, metallic/non-metallic character, melting point, ionization enthalpy, electron gain enthalpy, electronegativity, Allotropy of C, P, S; inert pair effect, diagonal relationship between B and Si and anomalous behaviour of first member of each group.

Structure, bonding and properties: acidic/basic nature, stability, ionic/covalent nature, oxidation/reduction, hydrolysis, action of heat of the following:
Hydrides: hydrides of Group 13 (only diborane), Group 14, Group 15 (EH_3 where E = N, P, As, Sb, Bi), Group 16 and Group 17.
Oxides: oxides of phosphorus, sulphur and chlorine
Oxoacids: oxoacids of phosphorus and chlorine; peroxy acids of sulphur
Halides: halides of silicon and phosphorus

UNIT V
Preparation, properties, structure and uses of the following compounds:
• Borazine
• Silicates, silicones,
• Phosphonitrilic halides {$(PNCl_2)_n$ where n = 3 and 4}
• Interhalogen and pseudohalogen compounds
• Clathrate compounds of noble gases, xenon fluorides (MO treatment of XeF_2).

Suggested Readings:

Semester-II

16CHU203 ORGANIC CHEMISTRY II 5H 5C
(Oxygen containing Functional Groups)

Instruction Hours/week:L:5 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

To provide the students a knowledge on

- Chemistry of halogenated compounds alkyl
- The preparation, properties and relative reactivity of alcohols and phenols
- Preparation, properties and standard reactions of carbonyl compounds.
- Chemistry of Organometallic compounds, Ethers and Epoxides and Addition reactions
- Chemistry of carboxylic acids and their derivatives.
- Chemistry of aryl halidies and their uses

Course Outcomes (CO's)

The students will able to

1. Understand the chemistry of alkyl halides and aryl halides.
2. Understand the preparation, properties and relative reactivity of alcohols and phenols
3. Understand Preparation, properties and standard reactions of carbonyl compounds
4. Understand the preparations, reactions and applications of epoxides, ethers and organometallic compounds
5. Understand the preparations and properties of carboxylic acid and its derivatives.
6. Explain the chemistry of aryl halides.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Chemistry of Halogenated Hydrocarbons:

Alkyl halides: Methods of preparation and properties, nucleophilic substitution reactions – SN1, SN2 and SNi mechanisms with stereochemical aspects and effect of solvent; nucleophilic substitution vs. elimination.

Aryl halides: Preparation (including preparation from diazonium salts) and properties, nucleophilic aromatic substitution; SNAr, Benzyne mechanism.
Relative reactivity of alkyl, allyl, benzyl, vinyl and aryl halides towards nucleophilic substitution reactions.

UNIT II

Alcohols, Phenols:

Alcohols: preparation, properties and relative reactivity of 1°, 2°, 3° alcohols, Bouvaelt-BlancReduction; Oxidation of diols by periodic acid and lead tetraacetate, Pinacol-Pinacolone rearrangement;

Phenols: Preparation and properties; Acidity and factors affecting it, Ring substitution reactions, Reimer–Tiemann and Kolbe's–Schmidt Reactions, Fries and Claisen rearrangements with mechanism;

UNIT III

Carbonyl Compounds:

Structure, reactivity, preparation and properties; Nucleophilic additions, Nucleophilic addition-elimination reactions with ammonia derivatives with mechanism; Mechanisms of Aldol and Benzoin condensation, Knoevenagel condensation, Claisan-Schmidt, Perkin, Cannizzaro and Wittig reaction, Beckmann and Benzil-Benzilic acid rearrangements, haloform reaction and Baeyer Villiger oxidation, α – substitution reactions, oxidations and reductions (Clemmensen, Wolff-Kishner,$LiAlH_4$, $NaBH_4$, MPV, PDC)

UNIT IV

Organometallic compounds, Ethers and Epoxides and Addition reactions

Organometallic compounds of Mg (Grignard reagent) – Use in synthesis of organic compounds. *Ethers and Epoxides:* Preparation and reactions with acids. Reactions of epoxides with alcohols, ammonia derivatives and $LiAlH_4$

Addition reactions of α, β- unsaturated carbonyl compounds: Michael addition.
Active methylene compounds: Keto-enol tautomerism. Preparation and synthetic applications of diethyl malonate and ethyl acetoacetate.

UNIT V

Acids and their Derivatives:

General methods of preparation, physical properties and reactions of monocarboxylic acids, effect of substituents on acidic strength. Typical reactions of dicarboxylic acids , hydroxy acids and unsaturated acids.
Preparation and reactions of acid chlorides, anhydrides, esters and amides; Comparative study of nucleophilicsustitution at acyl group -Mechanism of acidic and alkaline hydrolysis of esters, Claisen condensation, Dieckmann and Reformatsky reactions, Hofmann- bromamide degradation and Curtius rearrangement.

Suggested Readings:

Text Books:

1. Morrison, R. T. & Boyd, R. N. (1992). *Organic Chemistry*. Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).

Reference Books:

1. Finar, I. L. (2002). *Organic Chemistry.* Volume 1. Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).
2. Graham Solomons, T.W. (2012).*Organic Chemistry*. John Wiley & Sons, Inc.

Semester-II16CHU211 CHEMICAL THERMODYNAMICS AND ITS APPLICATIONS PRACTICAL 2H 1C

Instruction Hours/week:L: 0 T:0 P:2 Marks: Internal:40 External: 60 Total:100

Course Objectives

The Students have a present knowledge

- To measure the heat capacity of a calorimeter
- To determine the enthalpy of neutrilisation.
- To determine the ionisation of solution.
- To determine the enthalpy of hydration of salt.
- To measure the integral enthalpy of solution
- To determine the basicity of a diprotic acid

Course Outcomes (CO's)

It enables the students calculate

1. The heat capacity of a calorimeter
2. The enthalpy of neutrilisation,
3. Calculated the ionisation of solution.
4. Calculated the enthalpy of hydration of salt.
5. The integral enthalpy of solution
6. The basicity of a diprotic acid

Methodology

Calorimeters, thermometers,

Thermochemistry:

(a) Determination of heat capacity of a calorimeter for different volumes using (i) change ofenthalpy data of a known system (method of back calculation of heat capacity of calorimeterfrom known enthalpy of solution of sulphuric acid or enthalpy of neutralization), and (ii) heatgained equal to heat lost by cold water and hot water respectively

(b) Determination of enthalpy of neutralization of hydrochloric acid with sodium hydroxide.

(c) Determination of the enthalpy of ionization of ethanoic acid.

(d) Determination of integral enthalpy (endothermic and exothermic) solution of salts.

(e) Determination of basicity of a diprotic acid by the thermochemical method in terms of the changes of temperatures observed in the graph of temperature versus time for different additions of a base. Also calculate the enthalpy of neutralization of the first step.

(f) Determination of enthalpy of hydration of salt.

(g) Study of the solubility of benzoic acid in water and determination of ΔH.

SuggestedReadings:

Text Books:

1. Khosla, B. D.; Garg, V. C. & Gulati, A.(2011). *Senior Practical Physical Chemistry*. New Delhi: R. Chand & Co.

Reference Books:

Semester-II

16CHU212 S-BLOCK ANDP-BLOCK ELEMENTS PRACTICAL4H 2C

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

The students have to be analyse

- The estimate the metal ions by iodimetric titrations
- The estimate the metal ions by complexemetric titrations using EDTA
- The carryout the preparations of inorganic metal complexes.
- Prepare cuprous chloride
- Prepare Manganese (III) phosphate
- Prepare potash alum and chrome alum.

Course Outcomes

The students have analyse

1. The iodometric titration methods.
2. The complexometric titration methods
2. The preparation the s and p-block metal complexes.
4. Preparation of cuprous chloride
5. Preparation of Manganese (III) phosphate
6. Preparation of potash alum and chrome alum.

Methodology

Iodimetric titrations, Complexometric titrations, Inorganic preperations.

(A) Iodo / Iodimetric Titrations

(i) Estimation of Cu(II) and $K_2Cr_2O_7$ using sodium thiosulphate solution (Iodometrically).

(ii) Estimation of antimony in tartar-emetic iodimetrically

(B) Complexometric titrations using disodium salt of EDTA

(i) Estimation of Mg^{2+}, Zn^{2+}

(ii) Estimation of $Ca^{2+}$by substitution method

(C) Inorganic preparations

(i) Cuprous Chloride, Cu_2Cl_2

(ii) Manganese(III) phosphate, $MnPO_4.H_2O$

(iii) Aluminium potassium sulphate $KAl(SO_4)_2.12H_2O$ (Potash alum) or
Chrome alum.

Suggested Readings

Text Books

1. Vogel, A.I. (1978). *A Textbook of Quantitative Inorganic Analysis*, ELBS.

Reference Books

2. Marr, G. and Rockett, R.W. (1972). *Practical Inorganic Chemistry*, Van Nostrand Reinhold.
3. Deepak Pant.P. (2010). *Inorganic Chemistry Practical*, BookRix.

Semester-II

16CHU 213 OXYGEN CONTAINING FUNCTIONAL GROUPS PRACTICAL **2H 1C**

Instruction Hours/week:L: 0 T:0 P:2 Marks: Internal:40 External: 60 Total:100

Course Objectives

The Students have a present knowledge

- To analyse the organic functional groups like alcohols, phenols carbonyl and carboxylic acid groups
- To demonstrate the preparations of organic compounds by acylation reactions
- To demonstate the preparations of organic compounds by benzyloation reactions.
- To carry out the iodoform reactions and selective reductions.
- To prepare semicarbazone derivatives of ketones
- To prepare S-Benzylisothiouronium salt of aromatic acids.

Course Outcomes

The student know to classifying the

1. Identification the organic functional groups like alcohols, phenols carbonyl and carboxylic acid groups
2. Preparation organic compounds by acylation reactions
3. Preparation organic compounds by benzoylation reactions.
4. Iodoform reactions and selective reductions.
5. Preparations semicarbazone derivatives of ketones
6. Preparations S-Benzylisothiouronium salt of aromatic acids.

Methodology

Laboratory experiments, acylation, benzyolation

1.Functional group tests for alcohols, phenols, carbonyl and carboxylic acid group.

2.Organic preparations:

i. Acetylation of one of the following compounds: amines (aniline, o-, m-, p- toluidines and o-, m-, p-anisidine) and phenols (β -naphthol, vanillin, salicylic acid) by any one method:

a. Using conventional method.

b. Using green approach

ii. Benzolyation of one of the following amines (aniline, o-, m-, p- toluidines and o-, m-,p-anisidine) and one of the following phenols (β -naphthol, resorcinol, p- cresol)by Schotten-Baumann reaction.

iii. Oxidation of ethanol/ isopropanol (Iodoform reaction).

iv. Selective reduction of meta dinitrobenzene to m-nitroaniline.

v. Hydrolysis of amides and esters.

vi. Semicarbazone of any one of the following compounds: acetone, ethyl methyl ketone, cyclohexanone, benzaldehyde.

vii. S-Benzylisothiouronium salt of one each of water soluble and water insoluble acids (benzoic acid, oxalic acid, phenyl acetic acid and phthalic acid).

viii. Aldol condensation using either conventional or green method.

The above derivatives should be prepared using 0.5-1g of the organic compound. The solid samples must be collected and may be used for recrystallization and melting point.

SuggestedReadings

Text Books:

Reference Books:

1. Ahluwalia, V.K. &Aggarwal, R. (2000).*Comprehensive Practical Organic Chemistry: Preparation and Quantitative Analysis*. University Press.
2. Ahluwalia, V.K. &Dhingra, S. (2000). *Comprehensive Practical Organic Chemistry: Qualitative Analysis*. University Press.

Semester-II

16AEC201 ENVIRONMENTAL STUDIES4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

It enables the students to

- The fundamental terms and definitions of environment
- Recall the Renewable and Non-renewable Resources.
- Quote the Biodiversity and Its Conservation
- Outline about Environmental Pollution
- Discuss the disaster management
- Discuss the Social Issues and the Environment

Course outcomes (CO's)

The students know about the explanation of

1. Fundamental terms and definitions of environment
2. Renewable and Non-renewable Resources.
3. Biodiversity and Its Conservation
4. Environmental Pollution
5. Gained knowledge about disaster management
6. Social Issues and the Environment

UNIT-I

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II: Natural Resources

Renewable and Non-renewable Resources:

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Fire accidents and prevention.

UNIT III: Biodiversity and Its Conservation

Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV: Environmental Pollution

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution , Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Diaster management: Foods, earthquake, cyclone and landslides.

UNIT V: Social Issues and the Environment

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rahabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions.Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation.Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Semester-III

16CHU301 PHYSICAL CHEMISTRY III 4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The students should be able

- To illustrate the phase equilibrium.
- Understand the Clacius-Clapeyron equation and its applications.
- To explain the theory behind three component systems
- To summarize about electrochemical cells and EMF measurements
- To discuss the applications of EMF measurements
- To contrast the fundamentals of surface chemistry

Course Outcomes

The students have gained knowledge to summarise

1. The concept of Phase equilibria and phase diagrams
2. Understood the Clacius-Clapeyron equation and its applications.
3. About three component systems and their characteristic properties
4. Different types of electrochemical cells and EMF measurements
5. Applictions of EMF measurements in determining thermodynamic properties
6. The basics of surface chemistry.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Phase Equilibria: Concept of phases, components and degrees of freedom, derivation of Gibbs Phase Rule for nonreactive and reactive systems; Clausius-Clapeyron equation and itsapplications to solid-liquid, liquid-vapour and solid-vapour equilibria, phase diagram for onecomponent systems (H_2O and S), with applications. Phase diagrams for systems of solid-liquid equilibria involving eutectic, congruent and incongruent melting points.

UNIT II

Three component systems: triangular plots, water-chloroform-acetic acid system. Binary solutions: Gibbs-Duhem-Margules equation, its derivation and applications to fractional distillation of binary miscible liquids (ideal and non ideal), azeotropes, lever rule, partial miscibility of liquids, CST, miscible pairs, steam distillation. Nernst distribution law: its derivation and applications.

UNIT III

Electrochemical Cells: Rules of oxidation/reduction of ions based on half-cell potentials,applications of electrolysis in metallurgy and industry. Chemical cells, reversible and irreversible cells with examples. Electromotive force of a cell and its measurement, Nernst equation; Standard electrode (reduction) potential and its application to different kinds of half-cells.

UNIT IV

Application of EMF measurements in determining (i) free energy, enthalpy and entropy of a cell reaction, (ii) equilibrium constants, and (iii) pH values, using hydrogen, quinone-hydroquinone, glass and SbO/Sb_2O_3 electrodes. Concentration cells with and without transference, liquid junction potential; determination of activity coefficients and transference numbers. Qualitative discussion of potentiometric titrations (acid-base, redox, precipitation).

UNIT V

Surface chemistry: Physical adsorption, chemisorption, adsorption isotherms (Langmuir and Freundlich). nature of adsorbed state. Qualitative discussion of BET.

Suggested Readings:

Semester-III

16CHU302 INORGANIC CHEMISTRY III

(Coordination Chemistry) 4H 4C

Instruction Hours/week:L:40 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The students should be able

- To discuss the key features of coordination compounds,
- Understand the nomenclature, isomerism and types in coordination compounds.
- To describe thevarious theories to explain the characteristics of coordination compounds.
- To contrast the nature of transition elements and their compounds.
- To contrast about the occurrence, preparation and properties of Lanthanides and actinides.
- To discuss about the fundamentals of Inorganic reaction mechanisms.

Course Outcomes

The students have gained knowledge to summarise

1. Recognise the role played by transition metal complexes play in Inorganic Chemistry.
2. Understood the nomenclature, isomerism and types in coordination compounds.
3. Describe the structure and bonding theories, electronic and magnetic properties of the transition metal complexes and their kinetic studies.
4. Explain the theories of bonding in coordination compounds and their experimental behaviour.
5. Recognise and explain the interaction of metal ions with biological ligands.
6. Explain the role of Inorganic “substances” in living systems and the use of metal ions in medicinal therapy and diagnosis

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Coordination Chemistry:

Werner’s theory, valence bond theory (inner and outer orbital complexes), electroneutrality principle and back bonding. Crystal field theory, measurement of 10 Dq (Δo), CFSE in weak and strong fields, pairing energies, factors affecting the magnitude of 10 Dq (Δo, Δt). Octahedral vs. tetrahedral coordination, tetragonal distortions from octahedral geometry Jahn-Teller theorem, square planar geometry. Qualitative aspect of Ligand field and MO Theory.

UNIT II

IUPAC nomenclature of coordination compounds, isomerism in coordination compounds. Stereochemistry of complexes with 4 and 6 coordination numbers. Chelate effect, polynuclear complexes, Labile and inert complexes.

UNIT III

Transition Elements:

General group trends with special reference to electronic configuration, colour, variable valency, magnetic and catalytic properties, ability to form complexes. Stability of various oxidation states and e.m.f. (Latimer diagrams) Different between the first, second and third transition series. Chemistry of Cr, Mn, Fe and Co in various oxidation states with special reference to the following compounds: peroxo compounds of chromium, potassium dichromate, potassium permanganate, potassium ferrocyanide, potassium ferricyanide, sodium nitroprusside and sodium cobaltinitrite.

UNIT IV

Lanthanoids and Actinoids:

Electronic configuration, oxidation states, colour, spectral and magnetic properties, lanthanide contraction, separation of lanthanides (ion-exchange method only).

UNIT V

Inorganic Reaction Mechanism

Introduction to inorganic reaction mechanisms. Substitution reactions in square planarcomplexes, Trans- effect, theories of trans effect. Thermodynamic and Kinetic stability.

Suggested Readings

Text Books:

1. Purcell, K.F & Kotz, J.C. (1980).*An Introduction toInorganic Chemistry*.W.B. Saunders Co.
2. Huheey, J.E. (1993).*Inorganic Chemistry*. Prentice Hall.

Reference Books

2. Greenwood, N.N. & Earnshaw A. (2006).*Chemistry of the Elements*. Butterworth-Heinemann.
3. Miessler, G. L. &. Tarr, Donald A. (2009).*Inorganic Chemistry.* 3rd Ed.(adapted),Pearson.

Semester-III

16CHU303 ORGANIC CHEMISTRY III 4H 4C

(Nitrogen Containing Functional Groups, Heterocyclic chemistry and natural products)

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

CourseObjectives

The students should be able

- To contrast the preparation and properties of compounds with nitrogen containing functional groups.
- Understand the preparation and properties of diazoniumsalts.
- Learn about polynuclear hydrocarbons,
- Know about five, six and fused membered heterocyclic compounds.
- To discuss the preparation and reactions of alkaloids
- To discuss the preparation and reactions of terpenes.

CourseOutcomes

The students have summarise

1. The preparation and properties of compounds with nitrogen containing functional groups.
2. Understood the preparation and properties of diazonium salts.
3. Learned about the polynuclear hydrocarbons.
4. Knowledge about five, six and fused membered heterocyclic compounds.
5. The preparation and reactions of alkaloids
6. The preparation and reactions of terpenes.

Methodology

Blackboard teaching, Power point presentation and group discussion.

UNIT I

Nitrogen Containing Functional Groups

Preparation and important reactions of nitro compounds, nitriles and isonitriles.

Amines: Preparation and properties: Effect of substituent and solvent on basicity; Gabriel phthalimide synthesis, Carbylamine reaction, Mannich reaction, Hoffmann's exhaustive methylation, Hofmann-elimination reaction; Distinction between 1°, 2° and 3° amines with Hinsberg reagent and nitrous acid.

UNIT II

Diazonium Salts: Preparation and their synthetic applications.

Polynuclear Hydrocarbons

Aromaticity of polynuclear hydrocarbons, structure elucidation of naphthalene; Preparation and properties of naphthalene, phenanthrene and anthracene.

UNIT III

Heterocyclic Compounds

Classification and nomenclature, Structure, aromaticity in 5-numbered and 6-membered rings containing one heteroatom; Synthesis, reactions and mechanism of substitution reactions of: Furan, Pyrrole (Paal-Knorr synthesis, Knorr pyrrole synthesis, Hantzsch synthesis), Thiophene, Pyridine (Hantzsch synthesis),

UNIT IV

Indole(Fischer indole synthesis and Madelung synthesis), Quinoline and isoquinoline, (Skraup synthesis, Friedlander's synthesis, Knorr quinoline synthesis, Doebner- Miller synthesis, Bischler-Napieralski reaction, Pictet-Spengler reaction, Pomeranz-Fritsch reaction)

UNIT V

Alkaloids

Natural occurrence, General structural features, Isolation and their physiological action, Hoffmann's exhaustive methylation, Emde's modification; Structure elucidation and synthesis of Nicotine. Medicinal importance of Nicotine, Hygrine, Quinine, Morphine, Cocaine, and Reserpine.

Terpenes

Occurrence, classification, isoprene rule; Elucidation of stucture and synthesis of Citral.

SuggestedReadings

Semester-III

16CHU311 PHASE EQUILIBRIA AND CHEMICAL KINETICS4H 2C PRACTICAL

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

It enables the students to Paraphrase the

- To Determine of critical solution temperature (CST) and
- To Determine of eutectic temperature
- To Determine distribution coefficients of two immisible solutions.
- To construct of the phase diagram using cooling curves or ignition tube method: a. simple eutectic and b. congruently melting systems.
- To apply their knowledge in Potentiometry to laboratory.
- To perform the potentiometric titrations.

Course Outcomes

The students able to determine,

1. Apply their knowledge in Phase equilibria
2. Determination of critical solution temperature (CST) and
3. Determination of eutectic temperature
4. Determination distribution coefficients of two immisible solutions.
5. Apply their knowledge in Potentiometry to laboratory.
6. Perform the titrations potentiometrically.

Methodology

Potentiometer, electrochemical experiments

Phase Equilibria:

I. Determination of critical solution temperature and composition at CST of the phenolwater system and to study the effect of impurities of sodium chloride and succinic acid on it.

II. Phase equilibria: Construction of the phase diagram using cooling curves or ignition tube method: a. simple eutectic and b. congruently melting systems.

III. Distribution of acetic/ benzoic acid between water and chloroform or cyclohexane.

IV. Study the equilibrium of at least one of the following reactions by the distribution method:

(i) $I_2(aq) + I^-(aq) \rightarrow I_3(aq)$

(ii) $Cu^{2+}(aq) + nNH_3 \rightarrow Cu(NH_3)_n^{2+}$

Potentiometry:

V. Perform the following potentiometric titrations: i. Strong acid vs. strong base ii. Weak acid vs. strong base iii. Dibasic acid vs. strong base iv. Potassium dichromate vs. Mohr's salt

SuggestedReadings

Text Books:

1. Khosla, B. D., Garg, V. C. & Gulati, A. (2011). *Senior Practical Physical Chemistry*.25. New Delhi: R. Chand& Co.
2. Garland, C. W.; Nibler, J. W. & Shoemaker, D. P. (2003).*Experiments in Physical Chemistry*. 8th Ed. McGraw-Hill: New York.

Reference Books

Semester-III

16CHU312 COORDINATION CHEMISTRY PRACTICAL 4H 2C

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

- Explain the principle of gravimetric analysis
- To estimate the amount of nickel present in the NiDMG
- Prepare coordination complexes
- To measure the 10Dq by spectrophotometrically.
- Justify the properties of coordination complexes
- To synthesise the ligand transfer reaction by substitution method.

Course outcomes

The students have to

1. Determine metals like Ni, Cu and Fe using the principle of gravimetric analysis
2. Estimate the amount of nickel present in the NiDMG
3. Prepare coordination complexes
4. Measurement of 10 Dq by spectrophotometric method
5. Justify the properties of coordination complexes
6. Synthesis of ammine complexes of Ni(II) and its ligand exchange reactions (e.g.bidentate ligands like acetylacetone, DMG, glycine) by substitution method.

Methodology

Precipitation and estimation, preparation of complexes, Measurement of properties

Gravimetric Analysis:

i. Estimation of nickel (II) using Dimethylglyoxime (DMG).
ii. Estimation of copper as CuSCN
iii. Estimation of iron as Fe_2O_3 by precipitating iron as $Fe(OH)_3$.
iv. Estimation of Al(III) by precipitating with oxine and weighing as $Al(oxine)_3$ (aluminium oxinate).

Inorganic Preparations:

i. Tetraamminecopper (II) sulphate, $[Cu(NH_3)_4]SO_4.H_2O$
ii. Acetylacetonate complexes of Cu^{2+}/Fe^{3+}
iii. Tetraamminecarbonatocobalt (III) nitrate
iv. Potassium tri(oxalato)ferrate(III)

Properties of Complexes

i. Measurement of 10 Dq by spectrophotometric method
ii. Synthesis of ammine complexes of Ni(II) and its ligand exchange reactions (e.g. bidentate ligands like acetylacetone, DMG, glycine) by substitution method.

Suggested Readings

TextBook

1. Vogel, A.I. (2002).*A text book of Quantitative Analysis*. ELBS.

Reference Book

1. Marr, G. & Rockett, B.W. (1972).*Practical Inorganic Chemistry*. Van Nostrand Reinhold.

Semester-III

16CHU313 NITROGEN CONTAINING FUNCTIONAL GROUPS, 4H 2C HETEROCYCLICCHEMISTRY AND NATURAL PRODUCTS PRACTICAL

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objective

This course enables the student to

- Identify the presence of nitro
- Identify the presence of amine
- Identify the presence of amide groups
- Identify functional groups like alcohols.
- Identify functional groups of carboxylic acids.
- Identify the functional groups like phenols , carbonyl compounds and esters

Course Outcome

The students have analyse the

1. Functional group tests for nitrogen containing organic compounds
2. Identification of nitro group
3. Identification of amine group
4. Identification of amide
5. Tests used in the Identification of functional groups like alcohols, carboxylic acids
6. Identification of phenols , carbonyl compounds and esters

Methodology

Qualitative analysis of organic compounds

1.Functional group test for nitro, amine and amide groups.

2.Qualitative analysis of unknown organic compounds containing simple functional groups (alcohols, carboxylic acids, phenols , carbonyl compounds and esters)

SuggestedReadings

Text Books:

1. Mann, F.G. & Saunders, B.C.(2009). *Practical Organic Chemistry*. Pearson Education
2. Furniss, B.S., Hannaford, A.J., Smith, P.W.G. & Tatchell, A.R. (2012). *Practical Organic Chemistry*.5th Ed. Pearson.
3. Ahluwalia, V.K. &Aggarwal, R.(2000).*Comprehensive Practical Organic Chemistry: Preparation and Quantitative Analysis*. University Press

Reference Books

1. Ahluwalia, V.K. &Dhingra, S. (2000).*Comprehensive Practical Organic Chemistry: QualitativeAnalysis*. University Press.

Semester-III

16CHU304A PHARMACEUTICAL CHEMISTRY 3H 3C

Instruction Hours/week:L:03 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the students to

- Perform the drug discovery process.
- To utalize the software to predict the ADMET.
- Build the synthesis of analgesic, antipyretic, anti-inflammatory agents
- Build the synthetic process of Central Nervous System and cardiovascular drugs.
- Restate the fermentation process
- Modify to prepare antibiotics and related compounds.

Course Outcome

The students have knowledge to create about the

1. Drug discovery
2. Utalization of the software using prediction of ADMET
3. Procedures to prepare analgesic, antipyretic, anti-inflammatory agents
4. Synthesis of Central Nervous System and cardiovascular drugs.
5. Fermentation process and preparation of antibiotics.
6. Modified the preparation of antibiotics and related compounds

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT 1

Drug discovery, design and development; Basic Retrosynthetic approach.

UNIT II

Synthesis of the representative drugs of the following classes: analgesic agents, antipyretic agents, anti-inflammatory agents (Aspirin, paracetamol, lbuprofen); antibiotics (Chloramphenicol); antibacterial and antifungal agents (Sulphonamides; Sulphanethoxazol, Sulphacetamide, Trimethoprim); antiviral agents (Acyclovir),

UNIT III

Synthesis of the representative drugs of the following classes: Central Nervous System agents (Phenobarbital, Diazepam),Cardiovascular (Glyceryl trinitrate), antilaprosy (Dapsone), HIV-AIDS related drugs (AZT- Zidovudine).

Fermentation

UNIT IV

Aerobic and anaerobic fermentation. Production of Ethyl alcohol and citric acid,

UNIT V

Production of (i) Antibiotics; Penicillin, Cephalosporin, Chloromycetin and Streptomycin, (iii) Lysine, Glutamic acid, Vitamin B2, Vitamin B12 and Vitamin C.

Suggested Readings

Text Books:

1. Patrick, G.L.(1995). *Introduction to Medicinal Chemistry*.65. UK: Oxford University Press
2. Hakishan, V.K. Kapoor,(1996). *Medicinal and Pharmaceutical Chemistry,* New Delhi: Vallabh Prakashan. Pitampura.

Reference Books

1. William O. Foye, Thomas L., Lemke & David A. William.(2008).*Principles of MedicinalChemistry*. New Delhi: B.I. Waverly Pvt. Ltd.

Semester-III

16CHU304B IT SKILLS FOR CHEMISTS3H 3C

Instruction Hours/week: L:3 T:0 P:0Marks: Internal: 40 External: 60 Total:100

Course Objectives

The course enables the student to gain knowledge in the mathematics and computer science to

- Interpret the Uncertainty in experimental techniques
- Statistical treatment
- Error analysis
- Summarise the types of algeberic operations
- Explain computer programming and to handle numeric data
- Illustrate the numerical modelling

Course Outcomes

1. Interpret the Uncertainty in experimental techniques and Statistical treatment
2. Under stood the knowledge of error analysis.
3. Formulate a set of calculations that can address a relevant research question;
4. Use one or several computer programs and extract useful information;
5. Write a research paper that describes methods, results, and interpretation;
6. Assess the meaning and validity of calculations that appear in the chemical literature

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Mathematics

Fundamentals, mathematical functions, polynomial expressions, logarithms, the exponential function, units of a measurement, interconversion of units, constants and variables, equation of a straight line, plotting graphs. Uncertainty in experimental techniques: Displaying uncertainties, measurements in chemistry, decimal places, significant figures, combining quantities. Uncertainty in measurement: types of uncertainties, combining uncertainties. Statistical treatment. Mean, standard deviation, relative error. Data reduction and the propagation of errors. Graphical and numerical data reduction. Numerical curve fitting: the method of least squares (regression).

UNIT II

Algebraic operations on real scalar variables (e.g. manipulation of Van der Waals equation in different forms).Roots of quadratic equations analytically and iteratively (e.g. pH of a weak acid). Numerical methods of finding roots (Newton-Raphson, binary –bisection, e.g. pH of a weak acid not ignoring the ionization of water, volume of a van der Waals gas, equilibrium constant expressions). Differential calculus: The tangent line and the derivative of a function, numerical differentiation (e.g., change in pressure for small change in volume of a Van der Waals gas, potentiometric titrations). Numerical integration (Trapezoidal and Simpson's rule, e.g. entropy/enthalpy change from heat capacity data).

UNIT III

Computer programming:

Constants, variables, bits, bytes, binary and ASCII formats, arithmetic expressions, hierarchy of operations, inbuilt functions. Elements of the BASIC language. BASIC keywords and commands. Logical and relative operators. Strings and graphics. Compiled versus interpreted languages. Debugging. Simple programs using these concepts. Matrix addition and multiplication. Statistical analysis.

UNIT IV

Introductory writing activities: Introduction to word processor and structure drawing (ChemSketch) software. Incorporating chemical structures, chemical equations, expressions from chemistry (e.g. Maxwell-Boltzmann distribution law, Bragg's law, van der Waals equation, etc.) into word processing documents.

Handling numeric data: Spreadsheet software (Excel), creating a spreadsheet, entering and formatting information, basic functions and formulae, creating charts, tables and graphs. Incorporating tables and graphs into word processing documents. Simple calculations, plotting graphs using a spreadsheet (Planck's distribution law, radial distribution curves for hydrogenic orbitals, gas kinetic theory- Maxwell-Boltzmann distribution curves as function of temperature and molecular weight), spectral data, pressure-volume curves of van der Waals gas (van der Waals isotherms), data from phase equilibria studies. Graphical solution of equations.

UNIT V

Numeric modelling: Simulation of pH metric titration curves. Excel functions LINEST and Least Squares. Numerical curve fitting, linear regression (rate constants from concentrationtime data, molar extinction coefficients from absorbance data), numerical differentiation (e.g. handling data from potentiometric and pH metric titrations, pKa of weak acid), integration (e.g. entropy/enthalpy change from heat capacity data).

Statistical analysis: Gaussian distribution and Errors in measurements and their effect on data sets. Descriptive statistics using Excel.

Suggested Readings

Semester-III

16CHU314A PHARMACEUTICAL CHEMISTRY PRACTICAL 3H 1C

Instruction Hours/week:L:0 T:0 P:03 Marks: Internal:40 External: 60 Total:100

Course Objective

The course enables the student to

- Develop the synthesis of pharmaceutical drugs like aspirin
- Synthesis of magnesium bisilicate.
- Determine the melting point of aspirin
- Spectral characterization of aspirin
- Determine the melting point of antacid
- Spectral characterization of antacid

Course Outcome

The students restate the

1. Synthesis of pharmaceutical drugs like aspirin
2. Synthesis of magnesium bisilicate.
3. Determination of the melting point of aspirin
4. Spectral characterization of aspirin
5. Determine the melting point of antacid
6. Spectral characterization of antacid

Methodology

Practicals

1. Preparation of Aspirin and its analysis.
2. Preparation of magnesium bisilicate (Antacid).

Suggested Readings

Text Books:

1. Patrick G.L. (1995): Introduction to *Medicinal Chemistry*. UK:Oxford UniversityPress.
2. Hakishan, V.K. Kapoor, (1996)*Medicinal and Pharmaceutical Chemistry*.New Delhi: VallabhPrakashan. Pitampura.

Semester-III

16CHU314B IT SKILLS FOR CHEMISTS PRACTICAL3H 1C

Instruction Hours/week: L:0 T:0 P:3Marks: Internal: 40 External: 60 Total:100

Course Objectives

The course enables the student to

- Describe the rules and the methods to be followed in the computer programming.
- Describe the basic programme of curve fitting
- Describe the numerical differentiation and intergration.
- Interpret Statistical analysis of the numeric data.
- Draw the chemical structure using software
- Understand the statistical significance testing.

Course Outcome

The students have to explained the

1. The rules and the methods to be followed in the computer programming.
2. the basic programme of curve fitting
3. The numerical differentiation and intergration.
4. Interpretion of Statistical analysis of the numeric data.
5. Draw the chemical structure using software
6. Under stood the statistical significance testing.

Methodology

Computer programming, Chem draw or related softwares.

BASIC programs for curve fitting, numerical differentiationand integration (Trapezoidal rule, Simpson's rule), finding roots (quadratic formula, iterative, Newton-Raphson method).
Structure drawing software.

Statistical significance testing: The *t* test. The *F* test.
Presentation: Presentation graphics

Semester-IV

16CHU401 PHYSICAL CHEMISTRY IV(Electrochemistry) 4H 4C

Instruction Hours/week:L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the students to

- Explain the types of conductance measurements and the factors affecting it
- Describe the ionic mobilities and the applications of conductance measurements
- Discuss the order and molecularity of reactions and the integrated rate expressions for different types of first order reactions.
- To knowledge about chemical kinetics
- Summarize the fundamentals of catalysis
- Restate the fundamentals of photochemistry.

Course Outcome

The students have to restated

1. The types of conductance measurements and the factors affecting it.
2. The ionic mobilities and the applications of conductance measurements
3. The order and molecularity of reactions and the integrated rate expressions for different types of first order reactions.
4. Gained knowledge about chemical kinetics.
5. The fundamentals of catalysis
6. The fundamentals of photochemistry.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Conductance: Quantitative aspects of Faraday's laws of electrolysis Arrhenius theory ofelectrolytic dissociation. Conductivity, equivalent and molar conductivity and their variationwith dilution for weak and strong electrolytes. Molar conductivity at 29 infinite dilution.Kohlrausch law of independent migration of ions. Debye-Hückel-Onsager equation, Wien effect,Debye-Falkenhagen effect, Walden's rules.

UNIT II

Ionic velocities, mobilities and their determinations,transference numbers and their relation to ionic mobilities, determination of transferencenumbers using Hittorf and Moving Boundary methods. Applications of conductancemeasurement: (i) degree of dissociation of weak electrolytes, (ii) ionic product of water (iii)solubility and solubility product of sparingly soluble salts, (iv) conductometric titrations, and (v)hydrolysis constants of salts.

UNIT III

Chemical Kinetics: Order and molecularity of a reaction, rate laws in terms of the advancementof a reaction, differential and integrated form of rate expressions up to second order reactions,experimental methods of the determination of rate laws, kinetics of complex reactions (integratedrate expressions up to first order only): (i) Opposing reactions (ii) parallel reactions and (iii)consecutive reactions and their differential rate equations (steady-state approximation in reactionmechanisms) (iv) chain reactions.

Unit IV

Temperature dependence of reaction rates; Arrheniusequation; activation energy. Collision theory of reaction rates, Lindemann mechanism,qualitative treatment of the theory of absolute reaction rates.
Catalysis: Types of catalyst, specificity and selectivity, mechanisms of catalyzed reactions at solid surfaces. Enzyme catalysis, Michaelis-Menten mechanism, acid-base catalysis.

Unit V
Photochemistry: Characteristics of electromagnetic radiation, Lambert-Beer's law and itslimitations, physical significance of absorption coefficients. Laws, of photochemistry, quantumyield, actinometry, examples of low and high quantum yields, photochemical equilibrium and thedifferential rate of photochemical reactions, photosensitised reactions, quenching. Role of
photochemical 34 reactions in biochemical processes, photostationary states,chemiluminescence.

Suggested Readings

Semester-IV

16CHU402 INORGANIC CHEMISTRY IV(Organometallic Chemistry)4H 4C

Instruction Hours/week:L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the student to discuss

- The Theoretical Principles in Qualitative Analysis to identify the cations and anions
- The classification of organometallic compounds based on bond type
- The few important metal complexes of commercial importance
- About 18 electron rule
- The catalytic property of organometallic compounds.
- The Metal ions present in biological systems

Course Outcome

The student have discussed

1. The Theoretical Principles in Qualitative Analysis to identify the cations and anions
2. The classification of organometallic compounds based on bond type
3. Few important metal complexes of commercial importance
4. About 18 electron rule
5. The catalytic property of organometallic compounds.
6. The Metal ions present in biological systems

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Theoretical Principles in Qualitative Analysis (H_2S Scheme)

Basic principles involved in analysis of cations and anions. Solubility products, common ion effect. Principles involved in separation of cations into groups and choice of group reagents. Interfering anions (fluoride, borate, oxalate and phosphate) and need to remove them after Group II.

UNIT II

Organometallic Compounds

Definition and classification of organometallic compounds on the basis of bond type.

Concept of hapticity of organic ligands. Metal carbonyls: 18 electron rule, electron count of mononuclear, polynuclear and substituted metal carbonyls of 3d series. General methods of preparation (direct combination, reductive carbonylation, thermal and photochemical decomposition) of mono and binuclear carbonyls of 3d series. Structures of mononuclear and binuclear carbonyls of Cr, Mn, Fe, Co and Ni using VBT. π-acceptor behaviour of CO (MO diagram of CO to be discussed), synergic effect and use of IR data to explain extent of back bonding.

UNIT III

Zeise's salt: Preparation and structure, evidences of synergic effect and comparison of synergic effect with that in carbonyls. Metal Alkyls: Important structural features of methyl lithium (tetramer) and trialkyl aluminium (dimer), concept of multicentre bonding in these compounds. Ferrocene: Preparation and reactions (acetylation, alkylation, metallation, Mannich Condensation). Structure and aromaticity. Comparison of aromaticity and reactivity with that of benzene.

UNIT IV

Metal ions present in biological systems, classification of elements according to their action in biological system. Geochemical effect on the distribution of metals. Sodium / K-pump, carbonic anhydrase and carboxypeptidase. Excess and deficiency of some trace metals. Toxicity of metal ions (Hg, Pb, Cd and As), reasons for toxicity, Use of chelating agents in medicine, Cisplatin as an anti-cancer drug.

Iron and its application in bio-systems, Haemoglobin, Myoglobin; Storage and transfer of iron.

UNIT V

Catalysis by Organometallic Compounds

Study of the following industrial processes and their mechanism:

1. Alkene hydrogenation (Wilkinson's Catalyst)
2. Synthetic gasoline (Fischer Tropsch reaction)
3. Polymerisation of ethene using Ziegler-Natta catalyst

Suggested Readings

Semester-IV

16CHU403 ORGANIC CHEMISTRY IV(Organic spectroscopy)4H 4C

Instruction Hours/week:L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students to

- Discuss the principle and the theory behind the UV spectroscopy.
- Discuss the principle and the theory behind the IR spectroscopy.
- Explain the principle and the theory behind the NMR spectroscopy.
- Summarize about the occurrence, classification and their biological importance carbohydrates
- Justify about the classification of dyes.
- Justify about polymers and their types, prepartion and uses.

Course Outcome

The Student have gained knowledge about

1. The principle and the theory behind the UV spectroscopy.
2. The principle and the theory behind the IR spectroscopy.
3. The principle and the theory behind the NMR spectroscopy.
4. The occurrence, classification and their biological importance carbohydrates
5. The classification of dyes
6. Preparation ,types, properties and uses of polymers.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT 1

Organic Spectroscopy

General principles to absorption and emission spectroscopy.

UV Spectroscopy: Types of electronic transitions, λ_{max}, Chromophores and Auxochromes, Bathochromic and Hypsochromic shifts, Intensity of absorption; Application of Woodward Rules for calculation of λmax for the following systems: α,β-unsaturated aldehydes, ketones, carboxylic acids and esters; Conjugated dienes: alicyclic, homoannular and heteroannular; Extended conjugated systems (aldehydes, ketones and dienes); distinction between cis and trans isomers.

UNIT II

IR Spectroscopy: Fundamental and non-fundamental molecular vibrations; IR absorption positions of O, N and S containing functional groups; Effect of H-bonding, conjugation, resonance and ring size on IR absorptions; Fingerprint region and its significance; application in functional group analysis.

UNIT III

NMR Spectroscopy: Basic principles of Proton Magnetic Resonance, chemical shift and factors influencing it; Spin – Spin coupling and coupling constant; Anisotropic effects in alkene, alkyne, aldehydes and aromatics, Interpetation of NMR spectra of simple compounds.
Applications of IR, UV and NMR for identification of simple organic molecules.

UNIT IV

Carbohydrates

Occurrence, classification and their biological importance.
Monosaccharides: Constitution and absolute configuration of glucose and fructose, epimers and anomers, mutarotation, determination of ring size of glucose and fructose, Haworth projections and conformational structures; Interconversions of aldoses and ketoses; Killiani- Fischer synthesis and Ruff degradation;
Disaccharides – Structure elucidation of maltose, lactose and sucrose.
Polysaccharides – Elementary treatment of starch, cellulose and glycogen.

UNIT V

Dyes

Classification, Colour and constitution; Mordant and Vat Dyes; Chemistry of dyeing;
Synthesis and applications of: Azo dyes – Methyl orange; Triphenyl methane dyes -
Malachite green and Rosaniline ; Phthalein Dyes – Phenolphthalein; Natural dyes – structure elucidation and synthesis of Alizarin and Indigotin; Edible Dyes with examples.

Polymers

Introduction and classification including di-block, tri-block and amphiphilic polymers;
Polymerisation reactions -Addition and condensation -Mechanism of cationic, anionic and free radical addition polymerization; Metallocene-based Ziegler-Natta polymerisation of alkenes;
Preparation and applications of plastics – thermosetting (phenol-formaldehyde, Polyurethanes) and thermosoftening (PVC, polythene); Fabrics – natural and synthetic (acrylic, polyamido, polyester); Rubbers – natural and synthetic: Buna-S, Chloroprene and Neoprene; Vulcanization; Polymer additives; Introduction
to; Biodegradable and conducting polymers with examples.

Semester-IV

16CHU411 ELECTROCHEMISTRY PRACTICAL 4H 2C

Instruction Hours/week:L:0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students to

- Perform in the conductance measurement,
- Determine of cell constant
- Determine the conductometric titrations
- Determine the kinetic aspects and rate measurements of different types of reactions.
- Determine the Acid hydrolysis of methyl acetate with hydrochloric acid.
- Determine the Saponification of ethyl acetate

Course Outcome

The Student have interpreted to

1. Measured the conductance
2. Determination of the cell constant
3. Determination of conductometric titrations
4. The kinetic aspects and rate measurements of different types of reactions.
5. Determination the Acid hydrolysis of methyl acetate with hydrochloric acid.
6. Determination of the Saponification of ethyl acetate

Methodology

Measurements with conductivity meters, reaction rate measurements

Conductometry:

I. Determination of cell constant

II. Determination of conductivity, molar conductivity, degree of dissociation and dissociation constant of a weak acid.

III. Perform the following conductometric titrations: i. Strong acid vs. strong base ii. Weakacid vs. strong base iii. Mixture of strong acid and weak acid vs. strong base iv. Strongacid vs. weak base

Chemical Kinetics:

IV. Study the kinetics of the following reactions.

1. Iodide-persulphate reaction (i) Initial rate method; (ii)Integrated rate method
2. Acid hydrolysis of methyl acetate with hydrochloric acid.
3. Saponification of ethyl acetate.
4. Comparison of the strengths of HCl and H_2SO_4 by studying kinetics of hydrolysis ofmethyl acetate.

Suggested Readings

Text Books:

Semester-IV

16CHU412 ORGANOMETALLIC CHEMISTRY PRACTICAL 4H 2C

Instruction Hours/week:L:0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

This lab course enables the student to

- Identify the anions and the cations in a mixture by Qualitative semimicro analysis
- Understand the chemistry of different reactions
- Identify the interfering anion
- Outline the principles behind the spot tests
- chromatographic separations
- Paper chromatographic separation of nickel and cobalt, copper and cadmium

Course Outcome

The students have

1. Identified the anions and the cations in a mixture by Qualitative semi micro analysis
2. Understood the chemistry of different reactions.
3. Identified the interfering anion
4. Define the principles behind the spot tests and
5. Define the Principles of chromatographic separations
6. Paper chromatographic separation of nickel and cobalt, copper and cadmium

Methodology

Qualitative semimicro analysis

Qualitative semimicro analysis of mixtures containing 3 anions and 3 cations. Emphasis should be given to the understanding of the chemistry of different reactions. The following radicals are suggested:
CO_3^{2-}, NO^{2-}, S^{2-}, SO_3^{2-},$S_2O_3^{2-}$, CH_3COO^-, F^-,Cl^-, Br^-, I-, NO^{3-}, BO_3^{3-}, $C_2O_4^{2-}$, PO_4^{3-}, NH^{4+}, K^+, Pb^{2+}, Cu^{2+}, Cd^{2+}, Bi^{3+}, Sn^{2+}, Sb^{3+}, Fe^{3+}, Al^{3+}, Cr^{3+}, Zn^{2+}, Mn^{2+}, Co^{2+}, Ni^{2+}, Ba^{2+}, Sr^{2+}, Ca^{2+}, Mg^{2+}

Mixtures should preferably contain one interfering anion, **or** insoluble component ($BaSO_4$, $SrSO_4$, $PbSO_4$, CaF_2or Al_2O_3) **or** combination of anions e.g. $CO_3^{2-}$and SO_3^{2-}, NO2-and NO_3^-, Cl-and Br-Cl-and I-, Br-and I, $NO_3^-$and Br^-, $NO_3^-$and I^-

Spot tests should be done whenever possible.
Principles involved in chromatographic separations. Paper chromatographic separation of following metal ions:
i. Ni (II) and Co (II)
ii. Cu(II) and Cd(II)

Suggested Reading

1. Svehla,G. (1996)Vogel's*Qualitative Inorganic Analysis*, Longman, New York.

Semester-IV

16CHU413 ORGANIC SPECTROSCOPY PRACTICAL 4H 2C

Instruction Hours/week:L:0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course objectives

The student will able to develop and identify the

- Extraction caffeine from tea leaves.
- Preparation urea formaldehyde resin
- Qualitative analysis of unknown organic compounds
- Simple organic compounds by IR spectroscopy
- Simple organic compounds by NMR spectroscopy
- Preparation of methyl orange

Course outcome

The students have to catagorize and demonstrate

1. About the Extraction of caffeine from tea leaves.
2. The Preparation of urea formaldehyde resin
3. The qualitative analysis of unknown organic compounds
4. Identify simple organic compounds by IR spectroscopy
5. Identify simple organic compounds by NMR spectroscopy
6. The Preparation of methyl orange

Methodology

Spectroscopic methods UV, IR and NMR

1.Extraction of caffeine from tea leaves.

2.Preparation of urea formaldehyde resin.

3.Qualitative analysis of unknown organic compounds containing monofunctional groups (carbohydrates, aryl halides, aromatic hydrocarbons, nitro compounds, amines and amides) and simple bifunctional groups, e.g. salicylic acid, cinnamic acid, nitrophenols etc.

4.Identification of simple organic compounds by IR spectroscopy and NMR spectroscopy (Spectra to be provided).

5.Preparation of methyl orange.

Suggested Readings

Text Books:

1. Vogel, A.I. (2012).*Quantitative Organic Analysis*. Part 3. Pearson.
2. Mann, F.G. & Saunders, B.C. (2009). *Practical Organic Chemistry*. Pearson Education
3. Furniss, B.S., Hannaford, A.J., Smith, P.W.G. &Tatchell, A.R. (2012). *Practical Organic Chemistry*. 5th Ed. Pearson.

Reference Books

1. Ahluwalia, V.K. &Aggarwal, R. (2000*). Comprehensive Practical Organic Chemistry: Preparation and Quantitative Analysis*. University Press.
2. Ahluwalia, V.K. &Dhingra, S. (2000).*Comprehensive Practical Organic Chemistry: QualitativeAnalysis*. University Press.

Semester-IV

16CHU404A GREEN METHODS IN CHEMISTRY 3H 3C

Instruction Hours/week:L:3 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

This course enables the students to

- Summarize the twelve principles of green chemistry
- To know the special emphasis of an atom economy.
- Explain the catalysis and alternate sources of energy.
- Describe the process involved in the real word cases likeSurfactants for CO_2
- Synthetic azo pigments to replace toxic organic and inorganicpigments.
- Determination of environmentally safe marine antifoulant and plastic (poly lactic acid) made from corn.

Course outcome

1. Recognise the impact of green chemistry on human health and the environment.
2. Knowledge about the special emphasis of an atom economy.
3. Demonstrate the knowledge of the twelve principles of Green Chemistrywhich they can apply to a range of work places for a safer, less toxic and heal thier environment.
4. Described the process involved in the real word cases likeSurfactants for CO_2
5. Synthetic azo pigments to replace toxic organic and inorganicpigments.
6. Determination of environmentally safe marine antifoulant and plastic (poly lactic acid) made from corn.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Theory and Hand-on Experiments

Introduction: Definitions of Green Chemistry. Brief introduction of twelve principles of Green Chemistry, with examples, special emphasis on atom economy, reducing toxicity, green solvents,

UNIT II

Green Chemistry and catalysis and alternative sources of energy, Green energy and sustainability

UNIT III

The following Real world Cases in Green Chemistry should be discussed:

Surfactants for carbon dioxide – Replacing smog producing and ozone depletingsolvents with CO2 for precision cleaning and dry cleaning of garments.

UNIT IV

Designing of environmentally safe marine antifoulant.

Rightfit pigment: Synthetic azo pigments to replace toxic organic and inorganicpigments.

UNIT V

An efficient, green synthesis of a compostable and widely applicable plastic (polylactic acid) made from corn.

Suggested Readings

Text Books:

1. Anastas, P.T. & Warner, J.K. (2005).*Green Chemistry- Theory and Practical*. Oxford University Press.
2. Matlack, A.S. (2001).*Introduction to Green Chemistry*. Marcel Dekker.

Reference Books

1. Cann, M.C. & Connely, M.E. (2000). *Real-World cases in Green Chemistry*, American Chemical Society. Washington.

Semester-IV

16CHU404B ANALYTICAL CLINICAL BIOCHEMISTRY3H 3C

Instruction Hours/week: L:3 T:0 P:0Marks: Internal: 40 External: 60 Total:100

Course objectives

This course enables the student to

- Classify the basic structure of carbohydrates, and fermentation processes.
- Classification and biological importance of Proteins.
- Classification and biological importance of lipids.
- Properties, functions and biochemical functions of steroid hormones
- Know the about enzyme ,classification , mechanism and factors affectingenzyme activity.
- Identify the biochemistry of diseases.

Courseoutcome

The students have knowledge to categorize

1. The basic structure of carbohydrates.
2. Classification and biological importance of Proteins.
3. Classification and biological importance of lipids.
4. Properties, functions and biochemical functions of steroid hormones
5. Knowledge about enzyme, classification, mechanism and factors affectingenzyme activity.
6. The biochemistry of diseases.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

Unit I

Carbohydrates: Biological importance of carbohydrates, Metabolism, Cellular currency of energy (ATP), Glycolysis, Alcoholic and Lactic acid fermentations, Krebs cycle.
Isolation and characterization of polysachharides.

Unit II

Proteins: Classification, biological importance; Primary and secondary and tertiary structures of proteins: α-helix and β- pleated sheets, Isolation, characterization, denaturation of proteins.
Enzymes: Nomenclature, Characteristics (mention of Ribozymes), Classification; Active site, Mechanism of enzyme action, Stereospecificity of enzymes, Coenzymes and cofactors, Enzyme inhibitors, Introduction to Biocatalysis: Importance in "Green Chemistry" and Chemical Industry.

Unit III

Lipids: Classification. Biological importance of triglycerides and phosphoglycerides and cholesterol; Lipid membrane, Liposomes and their biological functions and underlying applications.

Lipoproteins.

Unit IV

Properties, functions and biochemical functions of steroid hormones.
Biochemistry of peptide hormones.
Structure of DNA (Watson-Crick model) and RNA, Genetic Code, Biological roles of DNA and RNA: Replication, Transcription and Translation, Introduction to Gene therapy.
Enzymes: Nomenclature, classification, effect of pH, temperature on enzyme activity, enzyme inhibition.

Unit V

Biochemistry of disease: A diagnostic approach by blood/ urine analysis.
Blood: Composition and functions of blood, blood coagulation. Blood collection and preservation of samples. Anaemia, Regulation, estimation and interpretation of data for blood sugar, urea, creatinine, cholesterol and bilirubin.
Urine: Collection and preservation of samples. 6. Formation of urine. Composition and estimation of constituents of normal and pathological urine.

Suggested Readings

Text Books:

1. Cooper, T.G. (1977). *Tool of Biochemistry.* John Wiley and Sons.
2. Keith Wilson & John Walker.(1994).*Practical Biochemistry*. Cambridge University Press.
3. Alan H Gowenlock,(2005). Varley's.*Practical Clinical Biochemistry*.CBS Publisher.
4. Thomas M. Devlin.(2009).*Textbook of Biochemistry*. Academic Internet Publishers.
5. Berg, J.M., Tymoczko, J.L. & Stryer, L.(2002).*Biochemistry*. W.H. Freeman.

Reference Books

1. Nelson, D. L. & Cox, M. M.(2008).*Lehninger's Principles of Bioch*emistry. 7th Ed.W. H. Freeman.
2. Harwood. (1990). *Series on Analytical Chemistry*. John Wiley & Sons.

Semester-IV

16CHU414A GREEN METHODS IN CHEMISTRY PRACTICAL3H 1C

Instruction Hours/week:L:0 T:0 P:3 Marks: Internal:40 External: 60 Total:100

Course objectives

This course enables the student to

- Apply the principles and the practical aspects of green chemistry
- Prepare biodiesel from vegetable oil.
- Prepare phthalocyaninecomplex of Cu (II).
- Characterise the biodiesel.
- Mechano chemical solvent free synthesis of azomethine.
- Solvent free, microwave assisted one pot synthesis of phthalocyanine complex of copper(II)

Course outcome

The students have to use

1. The basic principles and practical aspects like preparations and characterization in green approach.
2. Preparation and characterization of biodiesel from vegetable oil.
3. Characterization of biodiesel from vegetable oil.
4. Preparation of phthalocyaninecomplex of Cu(II).
5. Mechano chemical solvent free synthesis of azomethine.
6. Solvent free, microwave assisted one pot synthesis of phthalocyanine complex of copper(II).

Methodology

Greener methods of preparation and characterisation

Practical's

1. Preparation and characterization of biodiesel from vegetable oil.
2. Extraction of D-limonene from orange peel using liquid CO2 prepared from dry ice.
3. Mechano chemical solvent free synthesis of azomethine.
4. Solvent free, microwave assisted one pot synthesis of phthalocyanine complex of copper(II).

SuggestedReadings

Text Books:

1. Anastas, P.T. & Warner, J.K.(2005).*Green Chemistry- Theory and Practical*. Oxford University Press.
2. Matlack, A.S. (2001). *Introduction to Green Chemistry*. Marcel Dekker
3. Cann, M.C. & Connely, M.E. (2000).*Real-World cases in Green Chemistry*, American

Chemical Society. Washington.

Reference Books

1. Ryan, M.A. & Tinnesand, M. (2002).*Introduction to Green Chemistry*. American Chemical Society. Washington.
2. Lancaster, M.(2010).*Green Chemistry: An introductory text.* 2ndEdition.RSC publishing

Semester-IV

16CHU414B ANALYTICAL CLINICAL BIOCHEMISTRY PRACTICAL3H 1C

Instruction Hours/week: L:0 T:0 P:3Marks: Internal: 40 External: 60 Total:100

Course outcome

The course enables the student to

- Identify and estimate carbohydrates.
- Identify and estimate lipids.
- Estimate the iodine number of oils
- Determine the saponification number of oils.
- Determine Cholesterol.
- Determine proteins

Course outcome

The students have to perform

1. The Identification and estimation of carbohydrates, iodine number and saponification number of oils
2. The Identification and estimation of lipids.
3. Estimation of the iodine number of oils
4. Determination the saponification number of oils.
5. Determination of Cholesterol
6. The determination of proteins

Methodology

Identification and estimation of the following:

1. Carbohydrates – qualitative and quantitative.
2. Lipids – qualitative.
3. Determination of the iodine number of oil.
4. Determination of the saponification number of oil.
5. Determination of cholesterol using Liebermann- Burchard reaction.
6. Proteins – qualitative.
7. Isolation of protein.
8. Determination of protein by the Biuret reaction.
9. Determination of nucleic acids

Suggested Readings

Text Books:

6. Cooper, T.G. (1977). *Tool of Biochemistry.* John Wiley and Sons.

7. Keith Wilson & John Walker.(1994).*Practical Biochemistry*. Cambridge University Press.
8. Alan H Gowenlock,(2005). Varley's.*Practical Clinical Biochemistry*.CBS Publisher.
9. Thomas M. Devlin.(2009).*Textbook of Biochemistry*. Academic Internet Publishers.
10. Berg, J.M., Tymoczko, J.L. & Stryer, L.(2002).*Biochemistry*. W.H. Freeman.

Reference Books

3. Nelson, D. L. & Cox, M. M.(2008).*Lehninger's Principles of Bioch*emistry. 7th Ed.W. H. Freeman.
4. Harwood. (1990). *Series on Analytical Chemistry*. John Wiley & Sons.

Semester-V

16CHU501A CHEMOINFORMATICS3H 3C

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

This course enables the student to

- Describe the principles of cheminformatics
- Explain the Representation of molecules and chemical reactions
- Predict the searching methods for chemical structures
- Predict the properties of molecules using computational methods
- QSAR studies
- Intepret the computer assisted structure elucidations.

Course outcomes

The students have presented the knowledge about

1. The principles of cheminformatics
2. The Representation of molecules and chemical reactions
3. The searching methods for chemical structures
4. The prediction of the properties of molecules using computational methods
5. QSAR studies
6. The computer assisted structure elucidations

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Introduction to Chemoinformatics: History and evolution of chemoinformatics, Use of chemoinformatics, Prospects of chemoinformatics, Molecular Modelling and Structure elucidation.

UNIT II

Representation of molecules and chemical reactions: Nomenclature, Different types of notations, SMILES coding, Matrix representations, Structure of Molfiles and Sdfiles, Libraries and toolkits, Different electronic effects, Reaction classification.

UNIT III

Searching chemical structures: Full structure search, sub-structure search, basic ideas, similarity search, three dimensional search methods, basics of computation of physical and chemical data and structure descriptors, data visualization.

UNIT IV

Applications: Prediction of Properties of Compounds; Linear Free Energy Relations; Quantitative Structure-Property Relations; Descriptor Analysis; Model Building; Modeling

Toxicity; Structure-Spectra correlations; Prediction of NMR, IR and Mass spectra;

UNIT V

Computer Assisted Structure elucidations; Computer Assisted Synthesis Design, Introduction to drug design; Target Identification and Validation; Lead Finding and Optimization; Analysis of HTS data; Virtual Screening; Design of Combinatorial Libraries; Ligand-Based and Structure Based Drug design; Application of Chemoinformatics in Drug Design.

Suggested Readings

Text Books:

1. Andrew R. Leach & Valerie, J. Gillet (2007). *An introduction to Chemoinformatics.* Springer: The Netherlands.
2. Gasteiger, J. & Engel, T. (2003).*Chemoinformatics: A text-book.* Wiley-VCH.

Reference Book

1. Gupta, S. P. (2011).*QSAR & Molecular Modeling.* New Delhi: Anamaya Pub.

Semester-V

16CHU501B CHEMISTRY OF COSMETICS & PERFUMES3H 3C

Instruction Hours/week: L:3 T:0 P:0Marks: Internal: 40 External: 60 Total:100

Course objectives

This skill enhancement course helps the student to

- Develop the preparation of hair dyes, hair spray and shampoos
- Develop the preparation of Hair spray
- Describe the preparation and uses of lotions,
- Describe the preparation and uses lipsticks
- Describe the preparation and uses talcum powder and Creams.
- Demonstrate the chemistry of essential oils

Course outcome

The students have formulate the knowledge about

1. The preparation of hair dyes, hair spray and shampoos
2. The preparation and uses of lotions,
3. The preparation and uses of lipsticks and
4. The preparation and uses of talcum powder
5. The preparation and uses of creams
6. The chemistry of essential oils

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

Unit I

A general study including preparation and uses of the following: Hair dye, hair spray, Shampoo.

Unit II

preparation and uses of suntan lotions, face powder, lipsticks, talcum powder, nail enamel,

Unit III

preparation and uses of creams (cold, vanishing and shaving creams), antiperspirants and artificial flavours.

Unit IV

Essential oils and their importance in cosmetic industries with reference to Eugenol, Geraniol, sandalwood oil

Unit V

Essential oils and their importance in cosmetic industries with reference to eucalyptus, rose oil, 2-phenyl ethyl alcohol, Jasmone, Civetone, Muscone.

Suggested Readings

Text Books:

1. E. Stocchi. (1990).*Industrial Chemistry*. Vol –I. UK : Ellis Horwood Ltd.
2. P.C. Jain, M. Jain (2004).*Engineering Chemistry*. Delhi: Dhanpat Rai & Sons.

Reference Books

1. Sharma, B.K. & Gaur, H. (1996).*Industrial Chemistry*.Meerut : Goel Publishing House.

Semester-V

16CHU511A CHEMOINFORMATICS PRACTICAL3H 1C

Instruction Hours/week: L:0 T:0 P:3 Marks: Internal:40 External: 60 Total:100

Course objectives

The course helps the student to

- Apply the applications of chemiinformatics in drug design.
- Draw the chemical structure using chemdraw software.
- Molecular docking studies were carried using Autodock software.
- Predict ADME using swissadme software
- Learn Lipinski's rule of five using swissadme software.
- Predict drug likeness

Course outcome

The students know to perform the cheminformatics aspects in the drug designing process.

1. Applied the applications of chemiinformatics in drug design.
2. Draw the chemical structure using chemdraw software.
3. Molecular docking studies were carried using Autodock software.
4. Prediction ADME using swissadme software
5. Learned Lipinski's rule of five using swissadme software.
6. Prediction of drug likeness

Methodology

Computer softwares

Hands-on Exercises

Application of Chemoinformatics in Drug Design

Suggested Readings

Text Books:

1. Andrew R. Leach & Valerie, J. Gillet. (2007). *An introduction to Chemoinformatics.* Springer: The Netherlands.
2. Gasteiger, J. & Engel, T. (2003).*Chemoinformatics: A text-book.* Wiley-VCH.

Reference Book

1. Gupta, S. P. (2011). *QSAR & Molecular Modeling.* New Delhi: Anamaya Pub.

Semester-V

16CHU511B CHEMISTRY OF COSMETICS & PERFUMES PRACTICAL 3H 1C

Instruction Hours/week: L:3 T:0 P:0Marks: Internal: 40 External: 60 Total:100

Course objectives

This course enables the student to

- Prepare of talcum powder.
- Prepare of shampoo.
- Prepare of enamels.
- Prepare of hair remover.
- Prepare of face cream.
- Prepare of nail polish and nail polish remover.

Course outcomes

Students have knowledge to compose about the

1. Preparation of talcum powder.
2. Preparation of shampoo.
3. Preparation of enamels.
4. Preparation of hair remover.
5. Preparation of face cream.
6. Preparation of nail polish and nail polish remover

Methodology

Preparations of cosmetics and perfumes

1. Preparation of talcum powder.
2. Preparation of shampoo.
3. Preparation of enamels.
4. Preparation of hair remover.
5. Preparation of face cream.
6. Preparation of nail polish and nail polish remover.

SuggestedReadings

Text Books:

1. E. Stocchi. (1990).*Industrial Chemistry*, Vol –I. UK: Ellis Horwood Ltd.
2. P.C. Jain, M. Jain(2004). *Engineering Chemistry*. Delhi: Dhanpat Rai & Sons.

Semester-V

16CHU502A POLYMER CHEMISTRY 4H 4C

Instruction Hours/week:L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

This course enables the student to

- Recognize the history of polymeric materials, criteria, kinetics and characterization of polymerisation.
- Criteria for polymeric material formation.
- Learn Kinetics of polymerization.
- Understand Characterisation of polymerisation.
- To know the Structure property relationships of polymer
- Justify the properties of polymers

Course outcome

The students have list the knowledge like

1. History of polymeric materials.
2. Criteria for polymeric material formation.
3. Learned Kinetics of polymerization.
4. Understood Characterisation of polymerisation.
5. Knowledge about Structure property relationships of polymer.
6. Properties of polymers.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Introduction and history of polymeric materials:

Different schemes of classification of polymers, Polymer nomenclature, Molecular forces and chemical bonding in polymers, Texture of Polymers.

Functionality and its importance:

Criteria for synthetic polymer formation, classification of polymerization processes, Relationships between functionality, extent of reaction and degree of polymerization. Bifunctional systems, Poly-functional systems.

UNIT II

Kinetics of Polymerization:

Mechanism and kinetics of step growth, radical chain growth, ionic chain (both cationic and anionic) and coordination polymerizations, Mechanism and kinetics of copolymerization, polymerization techniques.

Crystallization and crystallinity:
Determination of crystalline melting point and degree of crystallinity, Morphology of crystalline polymers, Factors affecting crystalline melting point.

UNIT III

Nature and structure of polymers-Structure Property relationships.

Determination of molecular weight of polymers (*Mn*, *Mw*, etc) by end group analysis, viscometry, light scattering and osmotic pressure methods. Molecular weight distribution and its significance. Polydispersity index.

UNIT IV

Glass transition temperature (Tg) and determination of Tg, Free volume theory, WLF equation, Factors affecting glass transition temperature (Tg).

Polymer Solution – Criteria for polymer solubility, Solubility parameter, Thermodynamics of polymer solutions, entropy, enthalpy, and free energy change of mixing of polymers solutions, Flory- Huggins theory, Lower and Upper critical solution temperatures.

UNIT V

Properties of Polymers (Physical, thermal, Flow & Mechanical Properties).
Brief introduction to preparation, structure, properties and application of the following polymers: polyolefins, polystyrene and styrene copolymers, poly(vinyl chloride) and related polymers, poly(vinyl acetate) and related polymers, acrylic polymers, fluoro polymers, polyamides and related polymers. Phenol formaldehyde resins (Bakelite, Novalac), polyurethanes, silicone polymers, polydienes,
Polycarbonates, Conducting Polymers, [polyacetylene, polyaniline, poly(p-phenylene sulphide polypyrrole, polythiophene)].

Suggested Readings

Text Books:

1. Seymour R.B., Charles E (2003). *Seymour's Polymer Chemistry: An Introduction.*Marcel Dekker, Inc.
2. G. Odian.(2004). *Principles of Polymerization*. John Wiley.
3. F.W. Billmeyer.(1972).*Text Book of Polymer Science*. John Wiley.
4. P. Ghosh. (2001). *Polymer Science & Technology*. Tata Mcgraw-Hill.

Reference Book

1. R.W. Lenz.(1968). *Organic Chemistry of Synthetic High Polymers.*John Wiley.

Semester-V

16CHU502B APPLICATIONS OF COMPUTERS IN CHEMISTRY 4H 4C

Instruction Hours/week: L:04 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

This course enables the student to

- Understand the basics of computers in chemistry
- Understand the numerical methods to find the roots of equation
- Understand the differential and integral calculus
- Understand to handle experimental data using simuntaneous equations
- Understand the molecular modelling.
- Learn about MO methods

Course Outcomes

1. Understood the basics of computers in chemistry
2. Understood the numerical methods to find the roots of equation
3. Understood the differential and integral calculus
4. Understood to handle experimental data using simuntaneous equations
5. Understood the molecular modelling.
6. Learnt about MO methods

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Basics:

Constants, variables, bits, bytes, binary and ASCII formats, arithmetic expressions, hierarchy of operations, inbuilt functions. Elements of the BASIC language. BASIC keywords and commands. Logical and relative operators. Strings and graphics. Compiled versus interpreted languages. Debugging. Simple programs using these concepts. Matrix addition and multiplication. Statistical analysis.

UNIT II

Numerical methods:

Roots of equations: Numerical methods for roots of equations: Quadratic formula, iterative method, Newton-Raphson method, Binary bisection and Regula-Falsi.

UNIT III

Differential calculus: Numerical differentiation.

Integral calculus: Numerical integration (Trapezoidal and Simpson's rule), probability distributions and mean values.

UNIT IV

Simultaneous equations: Matrix manipulation: addition, multiplication. Gauss-Siedal method.

Interpolation, extrapolation and curve fitting: Handling of experimental data.

UNIT V

Conceptual background of molecular modelling: Potential energy surfaces. Elementary ideas of molecular mechanics and practical MO methods.

SuggestedReadings

Text Books:

1. Harris, D. C. (2007). *Quantitative Chemical Analysis*. 6th Ed.(Chapters 3-5). Freeman.
2. Levie, R. De. (2001).*How to use Excel in analytical chemistry and in general scientific data analysis*, Cambridge Univ. Press 487 pages.

Reference Books

1. Noggle, J. H. (1985).*Physical chemistry on a Microcomputer.* Little Brown & Co.
2. Venit, S.M.(1996).*Programming in BASIC: Problem solving with structure and style.* Delhi:JaicoPublishing House.

Semester-V

16CHU503A INORGANIC MATERIALS OF4H 4C
INDUSTRIAL IMPORTANCE

Instruction Hours/week: L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the students to

- Understand about the different types of silicate materials like glass, ceramics and cement and their industrial importance
- Understand the different types of fertilizers
- Understand the surface coatings and their industrial importance
- Understand about the different types of batteries and their industrial importance
- Understand about the types of catalysts and their industrial importance
- Understand about the types of explosives and their industrial importance

Course Outcomes

On successful completion of course the students have the knowledge

1. Understood about the different types of silicate materials like glass, ceramics and cement and their industrial importance
2. Understood the different types of fertilizers
3. Understood the surface coatings and their industrial importance
4. Understood about the different types of batteries and their industrial importance
5. Understood about the types of catalysts and their industrial importance
6. Understood about the types of explosives and their industrial importance

Methodology

Blackboard teaching, Power point presentation and group discussion.

UNIT I

Silicate Industries

Glass: Glassy state and its properties, classification (silicate and non-silicate glasses).

Manufacture and processing of glass. Composition and properties of the following types of glasses: Soda lime glass, lead glass, armoured glass, safety glass, borosilicate glass, fluorosilicate, coloured glass, photosensitive glass.
Ceramics: Brief introduction to types of ceramics. Superconducting and semiconducting oxides, fullerenes, carbon nanotubes and carbon fibre.
Cements: Manufacture of cement and the setting process, quick setting cements.

UNIT II
Fertilizers:
Different types of fertilizers (N, P and K). Manufacture of the following fertilizers: Urea, ammonium nitrate, calcium ammonium nitrate, ammonium phosphates, superphosphate of lime.

Surface Coatings:
Brief introduction to and classification of surface coatings. Paints and pigments - formulation, composition and related properties. Fillers, Thinners, Enamels, emulsifying agents. Special paints (Heat retardant, Fire retardant, Eco-friendly paint, Plastic paint), Dyes, Wax polishing, Water and Oil paints, Metallic coatings (electrolytic and electroless), metal spraying and anodizing.

UNIT III
Batteries:
Working of the following batteries: Pb acid, Li-Battery, Solid state electrolyte battery. Fuel cells, Solar cell and polymer cell.

UNIT IV
Catalysis:
General principles and properties of catalysts, homogenous catalysis (catalytic steps and examples) and heterogenous catalysis (catalytic steps and examples) and their industrial applications, Deactivation or regeneration of catalysts.
Application of zeolites as catalysts.

UNIT V
Chemical explosives:
Origin of explosive properties in organic compounds, preparation and explosive properties of lead azide, PETN, cyclonite (RDX). Introduction to rocket propellants.

SuggestedReadings
Text Books:

1. Stocchi, E. (1990).*Industrial Chemistry*. Vol I. UK : Ellis Horwood Ltd.,
2. Felder, R. M. & Rousseau, R.W. (2005). *Elementary Principles of Chemical Processes*. New Delhi: Wiley Publishers.

Semester-V

16CHU503B ANALYTICAL METHODS IN CHEMISTRY 4H 4C

Instruction Hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

This course enable the student to

- Understand the various Qualitative analysis
- Understand the quantitative aspects of analysis
- Understand the different Optical methods of analysis
- Understand the various methods of Thermal and electroanalytical methods
- Understand various chromatographic separation techniques
- Understand the various instrumentation method of analysis.

Course Outcomes

On successful completion of course the students have the knowledge

1. Understood the various Qualitative analysis
2. Understood the quantitative aspects of analysis
3. Understood the different Optical methods of analysis
4. Understood the various methods of Thermal and electroanalytical methods
5. Understood various chromatographic separation techniques
6. Understood the various instrumentation method of analysis.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Qualitative and quantitative aspects of analysis:

Sampling, evaluation of analytical data, errors, accuracy and precision, methods of their expression, normal law of distribution if indeterminate errors, statistical test of data; F, Q and t test, rejection of data, and confidence intervals.

UNIT II

Optical methods of analysis:

Origin of spectra, interaction of radiation with matter, fundamental laws of spectroscopy and selection rules, validity of Beer-Lambert's law.

UV-Visible Spectrometry: Basic principles of instrumentation (choice of source, monochromator and detector) for single and double beam instrument;

Basic principles of quantitative analysis: estimation of metal ions from aqueous solution, geometrical isomers, keto-enol tautomers. Determination of composition of metal complexes using Job's method of continuous variation and mole ratio method.
Infrared Spectrometry: Basic principles of instrumentation (choice of source, monochromator & detector) for single and double beam instrument; sampling techniques.
Structural illustration through interpretation of data, Effect and importance of isotope substitution.
Flame Atomic Absorption and Emission Spectrometry: Basic principles of instrumentation (choice of source, monochromator, detector, choice of flame and Burner designs. Techniques of atomization and sample introduction; Method of background correction, sources of chemical interferences and their method of removal. Techniques for the quantitative estimation of trace level of metal ions from water samples.

UNIT III

Thermal methods of analysis:
Theory of thermogravimetry (TG), basic principle of instrumentation.
Techniques for quantitative estimation of Ca and Mg from their mixture.

Electroanalytical methods:
Classification of electroanalytical methods, basic principle of pH metric, potentiometric and conductometric titrations. Techniques used for the determination of equivalence points. Techniques used for the determination of pKa values.

UNIT IV

Separation techniques:
Solvent extraction: Classification, principle and efficiency of the technique.
Mechanism of extraction: extraction by solvation and chelation. Technique of extraction: batch, continuous and counter current extractions. Qualitative and quantitative aspects of solvent extraction: extraction of metal ions from aqueous solution, extraction of organic species from the aqueous and nonaqueous media. Chromatography: Classification, principle and efficiency of the technique. Mechanism of separation: adsorption, partition & ion exchange. Development of chromatograms: frontal, elution and displacement methods.
Qualitative and quantitative aspects of chromatographic methods of analysis: IC, GLC, GPC, TLC and HPLC.

UNIT V

Separation and analysis: Measurement of optical rotation, calculation of Enantiomeric excess (ee)/ diastereomeric excess (de) ratios and determination of enantiomeric composition using NMR, Chiral solvents and chiral shift reagents. Chiral chromatographic techniques using chiral columns (GC and HPLC). Role of computers in instrumental methods of analysis.

Semester-V

16CHU504A INSTRUMENTAL METHODS OF4H 4C
CHEMICAL ANALYSIS

Instruction Hours/week: L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students to

- Understand the spectroscopic techniques like IR, spectral analysis
- UV-Visible Spectral analysis
- NMR spectroscopy and
- mass spectroscopy for analytical analysis
- Understand the Chromatographic separation techniques for analysis
- Understand the quantitative techniques like elemental analysis, electro analytical techniques, and XRD analysis

Course Outcomes

On successful completion of course the students have the knowledge

1. Understood the spectroscopic techniques like IR, spectral analysis
2. UV-Visible Spectral analysis
3. NMR spectroscopy and
4. mass spectroscopy for analytical analysis
5. Understood the Chromatographic separation techniques for analysis
6. Understood the quantitative techniques like elemental analysis, electro analytical techniques, and XRD analysis

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Introduction to spectroscopic methods of analysis:

Recap of the spectroscopic methods covered in detail in the core chemistry syllabus: Treatment of analytical data, including error analysis. Classification of analytical methods and the types of instrumental methods. Consideration of electromagnetic radiation.

UNIT II

Molecular spectroscopy:

Infrared spectroscopy:

Interactions with molecules: absorption and scattering. Means of excitation (light sources), separation of spectrum (wavelength dispersion, time resolution), detection of the signal (heat, differential detection), interpretation of spectrum (qualitative, mixtures, resolution), advantages of Fourier Transform (FTIR). Samples and results expected. Applications: Issues of quality assurance and quality control, Special problems for portable instrumentation and rapid detection. *UV-Visible/ Near IR* – emission, absorption, fluorescence and photoaccoustic. Excitation sources (lasers, time resolution), wavelength dispersion (gratings, prisms, interference filters, laser, placement of sample relative to dispersion, resolution), Detection of signal (photocells, photomultipliers, diode arrays, sensitivity and S/N), Single and Double Beam instruments, Interpretation (quantification, mixtures, absorption vs. fluorescence and the use of time, photoaccoustic, fluorescent tags).

UNIT III
Separation techniques
Chromatography: Gas chromatography, liquid chromatography, supercritical fluids, Importance of column technology (packing, capillaries), Separation based on increasing number of factors (volatility, solubility, interactions with stationary phase, size, electrical field), Detection: simple vs. specific (gas and liquid), Detection as a means of further analysis (use of tags and coupling to IR and MS), Electrophoresis (plates and capillary) and use with DNA analysis.
Immunoassays and DNA techniques
Mass spectroscopy: Making the gaseous molecule into an ion (electron impact, chemical ionization), Making liquids and solids into ions (electrospray, electrical discharge, laser desorption, fast atom bombardment), Separation of ions on basis of mass to charge ratio, Magnetic, Time of flight, Electric quadrupole. Resolution, time and multiple separations, Detection and interpretation (how this is linked to excitation).

UNIT IV
Elemental analysis:
Mass spectrometry (electrical discharges).
Atomic spectroscopy: Atomic absorption, Atomic emission, and Atomic fluorescence. Excitation and getting sample into gas phase (flames, electrical discharges, plasmas), Wavelength separation and resolution (dependence on technique), Detection of radiation (simultaneous/scanning, signal noise), Interpretation (errors due to molecular and ionic species, matrix effects, other interferences).

UNIT V
NMR spectroscopy: **P**rinciple, Instrumentation, Factors affecting chemical shift, Spincoupling, Applications.

Electroanalytical Methods: Potentiometry & Voltammetry

Radiochemical Methods

X-ray analysis and electron spectroscopy (surface analysis)

Suggested Readings

Text books:

Semester-V

16CHU504B NOVEL INORGANIC SOLIDS 4H 4C

Instruction Hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course objectives

The course enables the students have to perform

- The Synthesis and modification of inorganic solids of technological importance
- Understand about the inorganic solids of technological importance
- The Synthesis and properties of nanomaterials
- The Synthesis of engineering materials used for mechanical construction
- The Synthesis and properties of composite materials
- The Synthesis and properties of speciality polymers

Course outcome

The student have identified

1. The Synthesis and modification of inorganic solids
2. Understood about inorganic solids of technological importance
3. The Synthesis and properties of nanomaterials
4. The Synthesis of engineering materials used for mechanical construction
5. The Synthesis and properties of composite materials
6. The Synthesis and properties of speciality polymers

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Synthesis and modification of inorganic solids:

Conventional heat and beat methods, Co-precipitation method, Sol-gel methods, Hydrothermal method, Ion-exchange and Intercalation methods.

Inorganic solids of technological importance:

Solid electrolytes – Cationic, anionic, mixed Inorganic pigments – coloured solids, white and

black pigments.
Molecular material and fullerides, molecular materials & chemistry – one-dimensional metals, molecular magnets, inorganic liquid crystals.

UNIT II
Nanomaterials:
Overview of nanostructures and nanomaterials: classification.
Preparation of gold and silver metallic nanoparticles, self-assembled nanostructures-control of nanoarchitecture-one dimensional control. Carbon nanotubes and inorganic nanowires. Bio-inorganic nanomaterials, DNA and nanomaterials, natural and antisical nanomaterials, bionano composites.

UNIT III
Introduction to engineering materials for mechanical construction:
Composition, mechanical and fabricating characteristics and applications of various types of cast irons, plain carbon and alloy steels, copper, aluminium and their alloys like duralumin, brasses and bronzes cutting tool materials, super alloys thermoplastics, thermosets and composite materials.
UNIT IV
Composite materials:
Introduction, limitations of conventional engineering materials, role of matrix in composites, classification, matrix materials, reinforcements, metal-matrix composites, polymer-matrix composites, fibre-reinforced composites, environmental effects on composites, applications of composites.
UNIT V
Speciality polymers:
Conducting polymers - Introduction, conduction mechanism, polyacetylene, polyparaphenylene and polypyrrole, applications of conducting polymers, Ion-exchange resins and their applications. Ceramic & Refractory: Introduction, classification, properties, raw materials, manufacturing and applications.

SuggestedReadings
Text Books:
1. Shriver & Atkins. (2014). *Inorganic Chemistry*, Oxford University Press.
2. Peter Alkins, Tina Overton, Jonathan Rourke,Mark Weller and Fraser Armstrong. (2011-2012). 5th Edition. Oxford University Press.
3. Adam, D.M. (1974) *Inorganic Solids: An introduction to concepts in solid-state structuralchemistry*. John Wiley & Sons.

Reference Books
1. Poole, C.P. & Owens, F.J. (2003). *Introduction to Nanotechnology*.John Wiley & Sons.

Semester-V

16CHU512A POLYMER CHEMISTRY PRACTICAL4H 2C

Instruction Hours/week:L:0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course objectives

This course enables the student have to apply

- Have hands on experience to prepare different types of polymers by various methods
- To do the purification of polymers
- To characterise the polymers by chemical and instrumental methods.
- To prepare isopthaloyl chloride
- Determine hydroxyl number of a polymer using colorimetric method
- Analyse the polymers

Course outcome

The students have demonstrate and perform

1. The preparation of different types of polymers by various methods
2. The purification of polymers
3. The characterization the polymers by chemical and instrumental methods.
4. Preparation of isopthaloyl chloride
5. Determination of hydroxyl number of a polymer using colorimetric method
6. Analysis of the polymers

Polymer synthesis

1. Free radical solution polymerization of styrene (St) / Methyl Methacrylate (MMA) / Methyl Acrylate (MA) / Acrylic acid (AA).

a. Purification of monomer

b. Polymerization using benzoyl peroxide (BPO) / 2,2'-azo-bis-isobutylonitrile (AIBN)

2. Preparation of nylon 66/6

1. Interfacial polymerization, preparation of polyester from isophthaloyl chloride (IPC) and phenolphthalein

a. Preparation of IPC

b. Purification of IPC
c. Interfacial polymerization
3. Redox polymerization of acrylamide
4. Precipitation polymerization of acrylonitrile
5. Preparation of urea-formaldehyde resin
6. Preparations of novalac resin/resold resin.
7. Microscale Emulsion Polymerization of Poly(methylacrylate).

Polymer characterization
1. Determination of molecular weight by viscometry:
(a) Polyacrylamide-aq.NaNO2 solution
(b) (Poly vinyl proplylidine (PVP) in water
2. Determination of the viscosity-average molecular weight of poly(vinyl alcohol) (PVOH) and the fraction of ―head-to-head‖ monomer linkages in the polymer.
3. Determination of molecular weight by end group analysis: Polyethylene glycol (PEG) (OH group).
4. Testing of mechanical properties of polymers.
5. Determination of hydroxyl number of a polymer using colorimetric method.
Polymer analysis
1. Estimation of the amount of HCHO in the given solution by sodium sulphite method
2. Instrumental Techniques
3. IR studies of polymers
4. DSC analysis of polymers
5. Preparation of polyacrylamide and its electrophoresis
*at least 7 experiments to be carried out.

SuggestedReadings
Text Books:

1. Malcohm P. Stevens(1999). *Polymer Chemistry: An Introduction*. 3rd Ed. Oxford University Press.
2. Harry R. Allcock, Frederick W. Lampe and James E. Mark, (2003). *Contemporary Polymer Chemistry*. 3rd ed. Prentice-Hall
3. Fred W. Billmeyer, (1984). *Textbook of Polymer Science*. 3rd ed. Wiley-Interscience
4. Joel R. Fried, (2003). *Polymer Science and Technology*. 2nd ed. Prentice-Hall.

2. Malcolm P. Stevens, (2005). *Polymer Chemistry: An Introduction*. 3rd ed. Oxford University Press.
3. Charles E. Carraher,.(2013). *Seymour/ Carraher's Polymer Chemistry*. 9th ed. Jr.

Semester-V

16CHU512B APPLICATIONS OF COMPUTERS IN CHEMISTRY-4H 2C PRATCTICAL

Instruction Hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

This lab course enable the student to do experiments and to

- Understand the basics of computers in chemistry
- Understand to find the roots of equation
- Understand the the numerical differentiation and integration
- Understand integration
- Understand matrix operations.
- Understand matrix operations

Course Outcomes

The students have the knowledge of

1. Understood the basics of computers in chemistry
2. Understood to find the roots of equation
3. Understood the the numerical differentiation and integration
4. Understood integration
5. Understood matrix operations.
6. Understood matrix operations

Methodology

Computer programmes

Computer programs based on numerical methods for

1. Roots of equations: (e.g. volume of van der Waals gas and comparison with ideal gas, pH of a weak acid).

2. Numerical differentiation (e.g., change in pressure for small change in volume of a van der Waals gas, potentiometric titrations).

3. Numerical integration (e.g. entropy/ enthalpy change from heat capacity data), probability distributions (gas kinetic theory) and mean values.

4. Matrix operations. Application of Gauss-Siedel method in colourimetry.

5. Simple exercises using molecular visualization software.

Suggested Readings

Text Books:

Semester-V

16CHU513A INORGANIC MATERIALS OFINDUSTRIAL4H 2C IMPORTANCE- PRACTICAL

Instruction Hours/week: L:0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

The lab course enables the students to

- Determine the free acidity in fertilizers
- Estimate calcium and phosphoric acid in fertilizers
- Determine the composition of dolomite
- Analysis of metals in alloys
- Estimation of phosphoric acid in superphosphate fertilizer.
- Electroless metallic coatings on ceramic and plastic material.

Course Outcomes

The students have the knowledge of

1. Determineation of the free acidity in fertilizers
2. Estimation calcium and phosphoric acid in fertilizers
3. Determination of the composition of dolomite
4. Analysis of metals in alloys
5. Estimation of phosphoric acid in superphosphate fertilizer.
6. Electroless metallic coatings on ceramic and plastic material.

Methodology

Lab experiments involving titrations

1. Determination of free acidity in ammonium sulphate fertilizer.

2. Estimation of Calcium in Calcium ammonium nitrate fertilizer.
3. Estimation of phosphoric acid in superphosphate fertilizer.
4. Electroless metallic coatings on ceramic and plastic material.
5. Determination of composition of dolomite (by complexometric titration).
6. Analysis of (Cu, Ni); (Cu, Zn) in alloy or synthetic samples.
7. Analysis of Cement.
8. Preparation of pigment (zinc oxide).

SuggestedReadings
Text Books:

Semester-V

16CHU513B ANALYTICAL METHODS IN CHEMISTRYPRACTICAL4H 2C

Instruction Hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

This lab course enables the students to

- Learn the skills in paper chromatography
- Thin layer chromatographic techniques
- Learn the skills in different types of solvent extraction techniques
- Learn the skills in spectrophotometric method of analysis
- Determine PH measurements
- Separation of mixtures

Course Outcomes

On completion of the course the students have knowledge

1. Learnt the skills in paper chromatography
2. Thin layer chromatographic techniques
3. Learnt the skills in different types of solvent extraction techniques

4. Learnt the skills in spectrophotometric method of analysis
5. Determination PH measurements
6. Separation of mixtures

Methodology

Paper chromatography, TLC, solvent extractions methods

I. Separation Techniques

1. Chromatography:

(a) Separation of mixtures

(i) Paper chromatographic separation of $Fe^{3+,}$ $Al^{3+,}$ and $Cr^{3+.}$

(ii) Separation and identification of the monosaccharides present in the given mixture (glucose & fructose) by paper chromatography. Reporting the Rf values.

(b) Separate a mixture of Sudan yellow and Sudan Red by TLC technique and identify them on the basis of their Rf values.

(c) Chromatographic separation of the active ingredients of plants, flowers and juices by TLC

II. Solvent Extractions:

(i) To separate a mixture of Ni^{2+}, & Fe^{2+} by complexation with DMG and extracting the Ni^{2+}-DMG complex in chloroform, and determine its concentration by spectrophotometry.

(ii) Solvent extraction of zisconium with amberliti LA-1, separation from a mixture of irons and gallium.

3. Determine the pH of the given aerated drinks fruit juices, shampoos and soaps.

4. Determination of Na, Ca, Li in cola drinks and fruit juices using flame photometric techniques.

5. Analysis of soil:

(i) Determination of pH of soil.

(ii) Total soluble salt

(iii) Estimation of calcium, magnesium, phosphate, nitrate

6. Ion exchange:

(i) Determination of exchange capacity of cation exchange resins and anion exchange resins.

(ii) Separation of metal ions from their binary mixture.

(iii) Separation of amino acids from organic acids by ion exchange chromatography.

III Spectrophotometry

1. Determination of pKa values of indicator using spectrophotometry.

2 Structural characterization of compounds by infrared spectroscopy.

3 Determination of dissolved oxygen in water.

4 Determination of chemical oxygen demand (COD).

5 Determination of Biological oxygen demand (BOD).

6 Determine the composition of the Ferric-salicylate/ ferric-thiocyanate complex by Job's method.

Suggested Readings

Semester-V

16CHU514A INSTRUMENTAL METHODS OFCHEMICAL ANALYSIS- PRACTICAL 4H 2C

Instruction Hours/week: L:0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the student to

- Understand the testing of chemicals using UV-Visible spectrophotometer
- Understand the testing of chemicals using IR spectrophotometer
- Understand the testing of chemicals using chemical methods
- Titration curve of an amino acid.
- Potentiometric Titration of a Chloride-Iodide Mixture
- Use of fluorescence to do ―presumptive tests‖ to identify blood or other body fluids.

Course Outcomes

On completion of the course the students have knowledge

1. Understood the testing of chemicals using UV-Visible spectrophotometer
2. Understood the testing of chemicals using IR spectrophotometer
3. Understood the testing of chemicals using chemical methods
4. Titration curve of an amino acid.
5. Potentiometric Titration of a Chloride-Iodide Mixtur
6. Use of fluorescence to do ―presumptive tests‖ to identify blood or other body fluids

Methodology

Absorption measurements and potentiometric titrations

1. Safety Practices in the Chemistry Laboratory
2. Determination of the isoelectric pH of a protein.
3. Titration curve of an amino acid.
4. Determination of the void volume of a gel filtration column.
5. Determination of a Mixture of Cobalt and Nickel (UV/Vis spec.)
6. Study of Electronic Transitions in Organic Molecules (i.e., acetone in water)
7. IR Absorption Spectra (Study of Aldehydes and Ketones)

8. Determination of Calcium, Iron, and Copper in Food by Atomic Absorption
9. Quantitative Analysis of Mixtures by Gas Chromatography (i.e., chloroform and carbon tetrachloride)
12. Potentiometric Titration of a Chloride-Iodide Mixture
14. Nuclear Magnetic Resonance
15. Use of fluorescence to do ―presumptive tests‖ to identify blood or other body fluids.
16. Use of ―presumptive tests‖ for anthrax or cocaine
17. Collection, preservation, and control of blood evidence being used for DNA testing
20. Laboratory analysis to confirm anthrax or cocaine
22. Detection of illegal drugs or steroids in athletes
23. Detection of pollutants or illegal dumping
24. Fibre analysis

At least 10 experiments to be performed.

SuggestedReadings

Text Books:

1.Douglas A. Skoog, James Holler,F. & Stanley Crouch (2007). *Principles of Instrumental Analysis* . 6th Edition. (ISBN 0-495-01201-7).

Reference Books

Semester-V

16CHU514BNOVEL INORGANIC SOLIDSPRACTICAL 4H 2C

Instruction Hours/week: L:0 T:0 P:02 Marks: Internal: 40 External: 60 Total:100

Course objectives

The course helps the student to

- Explain the ion exchange method
- Expalin the cation exchange method
- coprecipitation methods of novel inorganic solids
- Discuss the method for the preparation of nanoparticles
- Nano partical preparation using green method
- Prepare the hydrogel by coprecipitation method

Course outcome

The students have demonstrated

1. The cation exchange method
2. The ion exchange method
3. coprecipitation methods of novel inorganic solids
4. The method for the preparation of nanoparticles
5. Nano partical preparation using green method

Preparation of the hydrogel by coprecipitation method

1. Determination of cation exchange method
2. Determination of total difference of solids.
3. Synthesis of hydrogel by co-precipitation method.

4. Synthesis of metal nanoparticles.

Suggested Reading :

1. Fahlman, B.D. (2004).*Materials Chemistry*, Springer.

Semester-VI

16CHU601A BASIC ANALYTICAL CHEMISTRY 3H 3C

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

The course enables the students have to interpret

- The interdisciplinary nature of analytical chemistry
- The various methods involved in the analysis of soil ,
- Analyse water
- Analys food products
- Concepts of *p*H
- The various methods involved in the analysis of cosmetics

Course outcome

The course enables the students have to interpreted

1. The interdisciplinary nature of analytical chemistry
2. The various methods involved in the analysis of soil ,
3. Analysis water
4. Analysis of food products
5. Concepts of *p*H
6. The various methods involved in the analysis of cosmetics

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Introduction: Introduction to Analytical Chemistry and its interdisciplinary nature. Concept of sampling. Importance of accuracy, precision and sources of error in analytical measurements. Presentation of experimental data and results, from the point of view of significant figures.

UNIT II

Analysis of soil: Composition of soil, Concept of pH and pH measurement, Complexometric titrations, Chelation, Chelating agents, use of indicators

a. Determination of pH of soil samples.

b. Estimation of Calcium and Magnesium ions as Calcium carbonate by complexometric titration.

UNIT III

Analysis of water: Definition of pure water, sources responsible for contaminating water, water sampling methods, water purification methods.

a. Determination of pH, acidity and alkalinity of a water sample.

b. Determination of dissolved oxygen (DO) of a water sample.

UNIT IV

Analysis of food products: Nutritional value of foods, idea about food processing and food preservations and adulteration.

a. Identification of adulterants in some common food items like coffee powder, asafoetida, chilli powder, turmeric powder, coriander powder and pulses, etc.

b. Analysis of preservatives and colouring matter.

Chromatography: Definition, general introduction on principles of chromatography, paper chromatography, TLC etc.

a. Paper chromatographic separation of mixture of metal ion ($Fe3+$ and $Al3+$).

b. To compare paint samples by TLC method.

Ion-exchange: Column, ion-exchange chromatography etc.

Determination of ion exchange capacity of anion / cation exchange resin (using batch procedure if use of column is not feasible).

UNIT V

Analysis of cosmetics: Major and minor constituents and their function

a. Analysis of deodorants and antiperspirants, Al, Zn, boric acid, chloride, sulphate.

b. Determination of constituents of talcum powder: Magnesium oxide, Calcium oxide, Zinc oxide and Calcium carbonate by complexometric titration.

Semester-VI

16CHU601B PESTICIDE CHEMISTRY3H 3C

Instruction Hours/week: L:3 T:0 P:0Marks: Internal: 40 External: 60 Total:100

Course objectives

The course enables the students to design

- The synthesis and manufacture of many natural fertilizers
- The synthesis and manufacture of many synthetic fertilizers
- The synthesis and manufacture of organochlorines
- The synthesis and manufacture organophosphorous compounds
- The synthesis and manufacture of quinine pesticides
- The synthesis and manufacture of anilides

Course outcomes

The students have designed

1. The synthesis and manufacture of many natural fertilizers
2. The synthesis and manufacture of many synthetic fertilizers
3. The synthesis and manufacture of organochlorines
4. The synthesis and manufacture organophosphorous compounds
5. The synthesis and manufacture of quinine pesticides
6. The synthesis and manufacture of anilides

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

Unit I

General introduction to pesticides (natural and synthetic), benefits and adverse effects.

Unit II

Changing concepts of pesticides, structure activity relationship.

Unit III

Synthesis and technical manufacture and uses of representative pesticides in the following classes: Organochlorines (DDT, Gammexene,)

Unit IV

Synthesis and technical manufacture and uses of Organophosphates (Malathion, Parathion); Carbamates (Carbofuran and carbaryl)

Unit V

Synthesis and technical manufacture and uses of Quinones (Chloranil), Anilides (Alachlor and Butachlor).

Practicals

1. To calculate acidity/alkalinity in given sample of pesticide formulations as per BIS specifications.
2. Preparation of simple organophosphates, phosphonates and thiophosphates

Suggested Reading

1. Cremlyn, R. (1978). *Pesticides. Preparation and Modes of Action*. New York: John Wiley & Sons.

Semester-VI

16CHU611A BASIC ANALYTICAL CHEMISTRYPRACTICAL3H 1C

Instruction Hours/week: L:0 T:0 P:3 Marks: Internal:40 External: 60 Total:100

Course objectives

The course enables the students to design

- The synthesis and manufacture of many natural fertilizers
- The synthesis and manufacture of many synthetic fertilizers
- The synthesis and manufacture of organochlorines
- The synthesis and manufacture organophosphorous compounds
- The synthesis and manufacture of quinine pesticides
- The synthesis and manufacture of anilides

Course outcomes

The students have designed

1. The synthesis and manufacture of many natural fertilizers
2. The synthesis and manufacture of many synthetic fertilizers
3. The synthesis and manufacture of organochlorines
4. The synthesis and manufacture organophosphorous compounds
5. The synthesis and manufacture of quinine pesticides
6. The synthesis and manufacture of anilides

Methodology

Estimation of metal ion by flame photometry, Spectrophotemetric procedures

Applications (Any one):

a. To study the use of phenolphthalein in trap cases.

b. To analyze arson accelerants.

c. To carry out analysis of gasoline.

Instrumental demonstrations:

a. Estimation of macro nutrients: Potassium, Calcium, Magnesium in soil samples by flame photometry.

b. Spectrophotometric determination of Iron in Vitamin / Dietary Tablets.

c. Spectrophotometric Identification and Determination of Caffeine and Benzoic Acid in Soft Drink.

Semester-VI

16CHU611B PESTICIDE CHEMISTRY3H 1C

Instruction Hours/week: L:3 T:0 P:0Marks: Internal: 40 External: 60 Total:100

Course objectives

The lab course enables the student to solve

- the calculation of acidity in given sample of pesticide formulation
- the calculation of alkalinity in given sample of pesticide formulation
- the synthesis of simple organophosphates,
- the synthesis of phosphonates
- the synthesis of thiophosphates
- Alayse organophosphates, phosphonates and thiophosphates

Course outcomes

The students have solved

1. the calculation of acidity in given sample of pesticide formulation
2. the calculation of alkalinity in given sample of pesticide formulation
3. the synthesis of simple organophosphates
4. the synthesis of phosphonates
5. the synthesis of thiophosphates
6. Alaysis of organophosphates, phosphonates and thiophosphates

Methodology

.PH measurements, Fertilizer preparation

Practicals

1. To calculate acidity/alkalinity in given sample of pesticide formulations.
2. Preparation of simple organophosphates, phosphonates and thiophosphates

Suggested Reading:

1. Cremlyn, R.(1978).*Pesticides. Preparation and Modes of Action*. NewYork: John Wiley & Sons.

Semester-VI

16CHU602A MOLECULAR MODELING AND DRUG DESIGN4H 4C

Instruction Hours/week: L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Scope

The course deals with the concepts of Molecular Modelling used in drug design

Course objectives

The course enables the students to summarize

- The introductory concepts of molecular modelling
- The force fields involved with different types of interactions
- The Energy Minimization and Computer Simulation
- The Molecular Dynamics & Monte Carlo Simulation
- The Structure Prediction and Drug Design
- QSAR studies

Course outcomes

The students are contrast

1. The introductory concepts of molecular modelling
2. The force fields involved with different types of interactions
3. About the Energy Minimization and Computer Simulation
4. About the Molecular Dynamics & Monte Carlo Simulation
5. About the Structure Prediction and Drug Design
6. QSAR studies

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Introduction to Molecular Modelling:

Introduction. Useful Concepts in Molecular Modelling: Coordinate Systems. Potential Energy Surfaces. Molecular Graphics. Surfaces. Computer Hardware and Software. The Molecular Modelling Literature.

UNIT II

Force Fields:
Fields. Bond Stretching. Angle Bending. Introduction to nonbonded interactions. Electrostatic interactions. van der Waals Interactions. Hydrogen bonding in Molecular Mechanics. Force Field Models for the Simulation of Liquid Water.

UNIT III

Energy Minimization and Computer Simulation:
Minimization and related methods for exploring the energy surface. Non-derivative method, First and second order minimization methods. Computer simulation methods. Simple thermodynamic properties and Phase Space. Boundaries. Analyzing the results of a simulation and estimating Errors.

UNIT IV
Molecular Dynamics & Monte Carlo Simulation:
Molecular Dynamics Simulation Methods. Molecular Dynamics using simple models. Molecular Dynamics with continuous potentials. Molecular Dynamics at constant temperature and pressure. Metropolis method. Monte Carlo simulation of molecules. Models used in Monte Carlo simulations of polymers.

UNIT V

Structure Prediction and Drug Design:
Structure prediction - Introduction to comparative Modeling. Sequence alignment. Constructing and evaluating a comparative model. Predicting protein structures by 'Threading', Molecular docking. Structure based de novo ligand design,
Drug Discovery – Chemoinformatics – QSAR.

SuggestedReadings
Text Books:

1. Leach, A.R. (2001). *Molecular Modelling Principles and Application*, Longman.
2. Haile, J.M. (1997). *Molecular Dynamics Simulation Elementary Methods*, John Wiley and Sons.
3. Gupta, S.P. (2008).*QSAR and Molecular Modeling*. Springer. Anamaya Publishers.

Semester-VI

16CHU602B INDUSTRIAL CHEMICALS AND ENVIRONMENT4H 4C

Instruction Hours/week: L:4 T:0 P:0Marks: Internal: 40 External: 60 Total:100

Course Objectives

The course enables the students to

- Understand the industrial gases and inorganic chemicals which have an impact on the environment
- Understand about the general principles of metallurgy
- Understand the environment and its segments
- Understand about the water pollution and water treatment
- Understand about the energy and the environment
- Understand the environment and its segments

Course outcomes

The students are contrast

1. Understood the industrial gases and inorganic chemicals which have an impact on the environment
2. Understood about the general principles of metallurgy
3. Understood the environment and its segments
4. Understood about the water pollution and water treatment
5. Understood about the energy and the environment
6. Understood the environment and its segments

Methodology

Blackboard teaching, Power point presentation and group discussion.

UNIT I

Industrial Gases and Inorganic Chemicals

Industrial Gases: Large scale production, uses, storage and hazards in handling of the following gases: oxygen, nitrogen, argon, neon, helium, hydrogen, acetylene, carbon monoxide, chlorine, fluorine, sulphur dioxide and phosgene.

Inorganic Chemicals: Manufacture, application, analysis and hazards in handling the following chemicals: hydrochloric acid, nitric acid, sulphuric acid, caustic soda, common salt, borax, bleaching powder, sodium thiosulphate, hydrogen peroxide, potash alum, chrome alum, potassium dichromate and potassium permanganate.

UNIT II

Industrial Metallurgy

General Principles of Metallurgy

Chief modes of occurrence of metals based on standard electrode potentials. Ellingham diagrams for reduction of metal oxides using carbon as reducing agent.
Hydrometallurgy, Methods of purification of metals (Al, Pb, Ti, Fe, Cu, Ni, Zn): electrolytic, oxidative refining, Kroll process, Parting process, van Arkel-de Boer process and Mond's process.
Preparation of metals (ferrous and nonferrous) and ultrapure metals for semiconductor technology.

Environment and its segments

Ecosystems. Biogeochemical cycles of carbon, nitrogen and sulphur.
Air Pollution: Major regions of atmosphere. Chemical and photochemical reactions in atmosphere. Air pollutants: types, sources, particle size and chemical nature; Photochemical smog: its constituents and photochemistry.

UNIT III

Environmental effects of ozone, Major sources of air pollution. Pollution by SO2, CO_2, CO, NOx, H_2S and other foul smelling gases. Methods of estimation of CO, NOx, SOx and control procedures.
Effects of air pollution on living organisms and vegetation. Greenhouse effect and Global warming, Ozone depletion by oxides of nitrogen, chlorofluorocarbons and Halogens, removal of sulphur from coal. Control of particulates.

UNIT IV

Water Pollution: Hydrological cycle, water resources, aquatic ecosystems, Sources and nature of water pollutants, Techniques for measuring water pollution, Impacts of water pollution on hydrological and ecosystems. Water purification methods. Effluent treatment plants (primary, secondary and tertiary treatment).
Industrial effluents from the following industries and their treatment: electroplating, textile, tannery, dairy, petroleum and petrochemicals, agro, fertilizer, etc.Sludge disposal. Industrial waste management, incineration of waste. Water treatment and purification (reverse osmosis, electro dialysis, ion exchange). Water quality parameters for waste water, industrial water and domestic water.

UNIT V

Energy & Environment

Sources of energy: Coal, petrol and natural gas. Nuclear Fusion / Fission, Solar energy, Hydrogen, geothermal, Tidal and Hydel, etc. Nuclear Pollution: Disposal of nuclear waste, nuclear disaster and its management.

Biocatalysis

Introduction to biocatalysis: Importance in “Green Chemistry” and Chemical Industry.

SuggestedReadings

Semester-VI

16CHU603A GREEN CHEMISTRY 4H 4C

Instruction Hours/week: L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

- To introduce the concept of Green chemistry.
- To introduce the 12 principles of Green chemistry
- The tools of Green chemistry.
- To demonstrate how to evaluate a reaction or process
- Determine "Greener" alternatives.
- To focus on the application of greener route to improve industrial processes and to produce important products.

Course Outcomes

1. Introduce the concept of Green chemistry.
2. Introduce the 12 principles of Green chemistry as well as
3. the tools of Green chemistry.
4. .Demonstrate how to evaluate a reaction or process
5. Determination of "Greener" alternatives.
6. Focus on the application of greener routes to improve industrial processes and to produce important products.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Introduction to Green Chemistry

What is Green Chemistry? Need for Green Chemistry. Goals of Green Chemistry.
Limitations/ Obstacles in the pursuit of the goals of Green Chemistry

Principles of Green Chemistry and Designing a Chemical synthesis

Twelve principles of Green Chemistry with their explanations and examples and special emphasis on the following: Designing a Green Synthesis using these principles; Prevention of Waste/ byproducts;maximum incorporation of the materials used in the process into the final products , Atom Economy, calculation of atom economy of the rearrangement, addition, substitution and elimination reactions. Prevention/ minimization of hazardous/ toxic products reducing toxicity. risk = (function) hazard × exposure; waste or pollution prevention hierarchy.
Green solvents– supercritical fluids, water as a solvent for organic reactions, ionic liquids, fluorous biphasic solvent, PEG, solventless processes, immobilized solvents and how to compare greenness of solvents.

UNIT II

Energy requirements for reactions – alternative sources of energy: use of microwaves and ultrasonic energy. Selection of starting materials; avoidance of unnecessary derivatization – careful use of blocking/protecting groups. Use of catalytic reagents (wherever possible) in preference to stoichiometric reagents; catalysis and green chemistry, comparison of heterogeneous and homogeneous catalysis, biocatalysis, asymmetric catalysis and photocatalysis. Prevention of chemical accidents designing greener processes, inherent safer design, principle of ISD "What you don't have cannot harm you", greener alternative to Bhopal Gas Tragedy (safer route to carcarbaryl) and Flixiborough accident (safer route to cyclohexanol) subdivision of ISD, minimization, simplification, substitution, moderation and limitation. Strengthening/ development of analytical techniques to prevent and minimize the generation of hazardous substances in chemical processes.

UNIT III

Examples of Green Synthesis/ Reactions and some real world cases

1. Green Synthesis of the following compounds: adipic acid, catechol, disodium iminodiacetate (alternative to Strecker synthesis)
2. Microwave assisted reactions in water: Hofmann Elimination, methyl benzoate to benzoic acid, oxidation of toluene and alcohols; microwave assisted reactions in organic solvents
Diels-Alder reaction and Decarboxylation reaction
3. Ultrasound assisted reactions: sonochemical Simmons-Smith Reaction (Ultrasonic alternative to Iodine)
4 Surfactants for carbon dioxide – replacing smog producing and ozone depleting solvents with CO_2 for precision cleaning and dry cleaning of garments.
5 Designing of Environmentally safe marine antifoulant.

UNIT IV

1. Rightfit pigment: synthetic azopigments to replace toxic organic and inorganicpigments.
2 An efficient, green synthesis of a compostable and widely applicable plastic (polylactic acid) made from corn.
3 Healthier fats and oil by Green Chemistry: Enzymatic interesterification for production of no Trans-Fats and Oils
4 Development of Fully Recyclable Carpet: Cradle to Cradle Carpeting

UNIT V

Future Trends in Green Chemistry
Oxidation reagents and catalysts; Biomimetic, multifunctional reagents; Combinatorial green chemistry; Proliferation of solventless reactions; co crystal controlled solid state synthesis (C_2S_3); Green chemistry in sustainable development.

Suggested Readings

Text Books:

2. Anastas, P.T. & Warner, J.K. (1998). *Green Chemistry - Theory and Practical*. Oxford University Press.
3. Matlack, A.S. (2001). *Introduction to Green Chemistry*. Marcel Dekker.
4. Cann, M.C. & Connely, M.E. (2000). *Real-World cases in Green Chemistry*. Washington: American Chemical Society.

Reference Books:

1. Ryan, M.A. & Tinnesand, M. (2002). *Introduction to Green Chemistry*. Washington: American Chemical Society.
2. Lancaster, M. (2010).*Green Chemistry: An Introductory Text*. 2nd Edition. RSC Publishing.

Semester-VI

16CHU603B MOLECULES OF LIFE 4H 4C

Instruction Hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The course enable the student to

- Understand the structures of different types of carbohydrates
- Understand the synthesis and functions of proteins
- Understand the functions of enzymes
- Understand the synthesis and functions of nucleic acid
- Understand the classification of lipids
- concept of energy in biosystems

Course Outcomes

1. Understopd the structures of different types of carbohydrates
2. Understood the synthesis and functions of proteins
3. Understood the functions of enzymes
4. Understood the synthesis and functions of nucleic acid
5. Understood the classification of lipids
6. concept of energy in biosystems

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

CARBOHYDRATES

Classification of carbohydrates, reducing and non-reducing sugars, General Properties of Glucose and Fructose, their open chain structure. Epimers, mutarotation and anomers. Determination of configuration of Glucose (Fischer proof). Cyclic structure of glucose. Haworth projections. Cyclic structure of fructose. Linkage between monosachharides, structure of disacharrides (sucrose, maltose, lactose) and polysacharrides (starch and cellulose) excluding their structure elucidation.

UNIT II

AMINO ACIDS, PEPTIDES AND PROTEINS

Classification *of Amino Acids*, Zwitterion structure and Isoelectric point. Overview of Primary, Secondary, Tertiary and Quaternary structure of proteins. Determination of primary structure of peptides, determination of N-terminal amino acid (by DNFB and Edman method) and C–terminal amino acid (by thiohydantoin and with carboxypeptidase enzyme). Synthesis of simple peptides (upto dipeptides) by N-protection (tbutyloxycarbonyl and phthaloyl) & C-activating groups and Merrifield solid phase synthesis.

UNIT III

ENZYMES AND CORRELATION WITH DRUG ACTION

Mechanism of enzyme action, factors affecting enzyme action, Coenzymes and cofactors and their role in biological reactions, Specificity of enzyme action(Including stereospecificity), Enzyme inhibitors and their importance, phenomenon of inhibition(Competitive and Noncompetitive inhibition including allosteric inhibition). Drug action-receptor theory. Structure –activity relationships of drug molecules, binding role of –OH group,-NH2 group, double bond and aromatic ring,

UNIT IV

NUCLEIC ACIDS

Components of Nucleic acids: Adenine, guanine, thymine and Cytosine (Structure only), other components of nucleic acids, Nucleosides and nucleotides **(nomenclature**), Structure of polynucleotides; Structure of DNA (Watson-Crick model) and RNA(**types of RNA**), Genetic Code, Biological roles of DNA and RNA: Replication, Transcription and Translation.

UNIT V

LIPIDS

Introduction to lipids, classification. Oils and fats: Common fatty acids present in oils and fats, Omega fatty acids, Trans fats, Hydrogenation, Saponification value, Iodine number. Biological importance of triglycerides, phospholipids, glycolipids, and steroids (cholesterol).

Concept of energy in Biosystems

Calorific value of food. Standard caloric content of carbohydrates, proteins and fats. Oxidation of foodstuff (organic molecules) as a source of energy for cells. Introduction to Metabolism (catabolism, anabolism), ATP: the universal currency of cellular energy, ATP hydrolysis and free energy change. Conversion of food into energy. Outline of catabolic pathways of Carbohydrate- Glycolysis, Fermentation, Krebs Cycle. Overview of catabolic pathways of Fats and Proteins. Interrelationships in the metabolic pathways of Proteins, Fats and Carbohydrates.

Suggested Readings

Text Books:

2. Finar, I. L. (2002). *Organic Chemistry.* Volume 1. Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).
3. Finar, I. L. (2002). *Organic Chemistry.* Volume 2. Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).

Reference Books:

1. Nelson, D. L. & Cox, M. M.(2012)*Lehninger's Principles of Biochemistry*.7th Ed.W. H.Freeman.
2. Berg, J.M., Tymoczko, J.L. & Stryer, L. (2002).*Biochemistry*. W.H. Freeman.

Semester-VI

16CHU612A MOLECULAR MODELING AND DRUG DESIGN PRACTICAL 4H 2C

Instruction Hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course objectives

The lab course enables the students to analyse

- Qualititative and qualitative calculations involved in the molecular modelling and its usefulness in drug design
- Compare the optimized C-C bond lengths in ethane, ethene, ethyne and benzene.Visualize the molecular orbitals of the ethane σ bonds and ethene, ethyne, benzeneand pyridine π bonds.
- Perform a conformational analysis of butane. (b)
- Determine the enthalpy of isomerization of *cis* and *trans*2-butene.
- Relate the charge on the hydrogen atom in hydrogen halides with their acidcharacter.
- Compare the basicities of the nitrogen atoms in ammonia, methylamine,dimethylamine and trimethylamine.
- Compare the shapes of the molecules: 1-butanol, 2-butanol, 2-methyl-1-propanol,and 2-methyl-2-propanol.

Course outcomes

The students have analysed

1. The Qualititative and qualitative calculations involved in the molecular modelling and its usefulness in drug design
2. Comparision of the optimized C-C bond lengths in ethane, ethene, ethyne and benzene.Visualize the molecular orbitals of the ethane σ bonds and ethene, ethyne, benzeneand pyridine π bonds.
3. Performed a conformational analysis of butane.
4. Determination of the enthalpy ofisomerization of *cis a*nd *trans2*-butene.
5. Relate the charge on the hydrogen atom in hydrogen halides with their acidcharacter.
6. Comparision of the shapes of the molecules: 1-butanol, 2-butanol, 2-methyl-1-propanol, and 2-methyl-2-propanol.
7. Compare the shapes of the molecules: 1-butanol, 2-butanol, 2-methyl-1-propanol,and 2-methyl-2-propanol.

Methodology

Free Computer softwares

i. Compare the optimized C-C bond lengths in ethane, ethene, ethyne and benzene. Visualize the molecular orbitals of the ethane σ bonds and ethene, ethyne, benzene and pyridine π bonds.

ii. (a) Perform a conformational analysis of butane. (b) Determine the enthalpy of isomerization of *cis* and *trans* 2-butene.

iii. Visualize the electron density and electrostatic potential maps for LiH, HF, N_2, NO and CO and comment. Relate to the dipole moments. Animate the vibrations of these molecules.

iv. (a) Relate the charge on the hydrogen atom in hydrogen halides with their acid

character. (b) Compare the basicities of the nitrogen atoms in ammonia, methylamine, dimethylamine and trimethylamine.
v. (a) Compare the shapes of the molecules: 1-butanol, 2-butanol, 2-methyl-1-propanol, and 2-methyl-2-propanol. Note the dipole moment of each molecule. (b) Show how the shapes affect the trend in boiling points: (118 ºC, 100 ºC, 108 ºC, 82 ºC,respectively).
vi. Build and minimize organic compounds of your choice containing the following functional groups. Note the dipole moment of each compound: (a) alkyl halide (b) aldehyde (c) ketone (d) amine (e) ether (f) nitrile (g) thiol (h) carboxylic acid (i) ester (j) amide.
vii. (a) Determine the heat of hydration of ethylene. (b) Compute the resonance energy of benzene by comparison of its enthalpy of hydrogenation with that of cyclohexene.
viii. Arrange 1-hexene, 2-methyl-2-pentene, (*E*)-3-methyl-2-pentene, (*Z*)-3-methyl-2-pentene, and 2,3-dimethyl-2-butene in order of increasing stability.
ix. (a) Compare the optimized bond angles H2O, H2S, H2Se. (b) Compare the HAH bond angles for the second row dihydrides and compare with the results from qualitative MO theory.
Note: Software: ChemSketch, ArgusLab (www.planaria-software.com), TINKER 6.2 (dasher.wustl.edu/ffe), WebLab Viewer, Hyperchem, or any similar software.

Suggested Readings

Semester-VI

16CHU612B CHEMISTRY-DSE LAB: INDUSTRIAL CHEMICALS4H 2C AND ENVIRONMENT PRACTICAL

Instruction Hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The course will enable the student to

- Determine the dissolved oxygen,
- Determine the CO_2,
- Determine the COD and
- Determine the BOD in water
- Determine the chloride, alkalinity of water
- Determine the sulphate content and alkalinity of water

Course Outcomes

The studends have the knowledge

1. Determination of dissolved oxygen in water.
2. Determination of Chemical Oxygen Demand (COD)
3. Determination of Biological Oxygen Demand (BOD)
4. Percentage of available chlorine in bleaching powder.
5. Measurement of chloride, sulphate and salinity of water samples by simple titration method (AgNO3 and potassium chromate).
6. Estimation of total alkalinity of water samples (CO_3^{2-}, HCO_3^-) using double titration method.

Methodology

Titrations

1. Determination of dissolved oxygen in water.
2. Determination of Chemical Oxygen Demand (COD)
3. Determination of Biological Oxygen Demand (BOD)
4. Percentage of available chlorine in bleaching powder.
5. Measurement of chloride, sulphate and salinity of water samples by simple titration method (AgNO3 and potassium chromate).
6. Estimation of total alkalinity of water samples (CO_3^{2-}, HCO_3^-) using double titration method.
7. Measurement of dissolved CO_2.
8. Study of some of the common bio-indicators of pollution.
9. Preparation of borax/ boric acid.

Suggested Readings

Text Books:

1. Felder, R.M. & Rousseau, R.W.(2004). *Elementary Principles of Chemical Processes*. New Delhi: Wiley Publishers.

2. Kent, J. A.(1997). *Riegel's Handbook of Industrial Chemistry.* New Delhi: *CBS* Publishers.

Semester-VI

16CHU613A GREEN CHEMISTRY PRACTICAL 4H 2C

Instruction Hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The lab course will enable to

- Select safer raw materials
- Identify to use renewable resources
- Understand avoiding waste
- Understand to use alternate green sources of solvents and energy
- To Avoiding waste
- To Use of enzymes as catalysts

Course Outcomes

1. Select safer raw materials
2. Identifying the use renewable resources
3. Understood avoiding waste
4. Understood to use alternate green sources of solvents and energy
5. Avoiding waste
6. Use of enzymes as catalysts

Methodology

Preparation of nanoparticles, Enzyme catalysis, microwave assisted synthesis.

1. Safer starting materials

Preparation and characterization of nanoparticles using tea leaves.

2. Using renewable resources

Preparation of biodiesel from vegetable/ waste cooking oil.

3. Avoiding waste

Principle of atom economy.

Use of molecular model kit to stimulate the reaction to investigate how the atom economy can illustrate Green Chemistry.

Preparation of propene by two methods can be studied

(I) Triethylamine ion + OH- → propene + trimethylpropene + water

(II) 1-propanol H_2SO_4/propene + water

Other types of reactions, like addition, elimination, substitution and rearrangement should also be studied for the calculation of atom economy.

4. Use of enzymes as catalysts

Benzoin condensation using Thiamine Hydrochloride as a catalyst instead of cyanide.

5. Alternative Green solvents

Extraction of D-limonene from orange peel using liquid CO_2 prepared form dry ice.

Mechanochemical solvent free synthesis of azomethines

6. Alternative sources of energy
Solvent free, microwave assisted one pot synthesis of phthalocyanine complex of copper (II).
Photoreduction of benzophenone to benzopinacol in the presence of sunlight.

Suggested Readings

Semester-VI

16CHU613B MOLECULES OF LIFE PRACTICAL4H 2C

Instruction Hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The lab course enable a student to

- Separate amino acids by paper chromatography
- To determine the concentration of glycine solution by formylation method.
- Study of titration curve of glycine
- Study the action of salivary amylase on starch
- Study the effect of temperature on the action of salivary amylase on starch.
- To determine the saponification value of an oil/fat.
- To determine the iodine value of an oil/fat
- Differentiate between a reducing/ nonreducing sugar.
- Extract of DNA from onion/cauliflower
- To synthesise aspirin by acetylation of salicylic acid and compare it with the ingredient of an aspirin tablet by TLC.

Course Outcomes

1. Separate amino acids by paper chromatography
2. Determination of the concentration of glycine solution by formylation method.
3. Study of titration curve of glycine
4. Study the action of salivary amylase on starch
5. Study the effect of temperature on the action of salivary amylase on starch.
6. Determination of the saponification value of an oil/fat.
7. Determination the iodine value of an oil/fat
8. Differentiate between a reducing/ nonreducing sugar.
9. Extract of DNA from onion/cauliflower
10. synthesis of aspirin by acetylation of salicylic acid and compare it with the ingredient of an aspirin tablet by TLC.

Methodology

Paper chromatography, titrations, extraction of DNA, TLC

1. Separation of amino acids by paper chromatography
2. To determine the concentration of glycine solution by formylation method.
3. Study of titration curve of glycine
4. Action of salivary amylase on starch
5. Effect of temperature on the action of salivary amylase on starch.
6. To determine the saponification value of an oil/fat.
7. To determine the iodine value of an oil/fat
8. Differentiate between a reducing/ nonreducing sugar.
9. Extraction of DNA from onion/cauliflower
10. To synthesise aspirin by acetylation of salicylic acid and compare it with the ingredient of an aspirin tablet by TLC.

M.Sc. CHEMISTRY
CHOICE BASED CREDIT SYSTEM (CBCS)

Curriculum and Syllabus
Regular (2016 – 2017)

Enable | Enlighten | Enrich

KARPAGAM
UNIVERSITY
(Established Under Section 3 of UGC Act, 1956)

DEPARTMENT OF CHEMISTRY
FACULTY OF ARTS, SCIENCE AND HUMANITIES

KARPAGAM UNIVERSITY

(Deemed University Established Under Section 3 of UGC Act, 1956)
Eachanari (Post), Coimbatore – 641 021, Tamil Nadu, India

Preamble

Karpagam University has initiated several measures to bring equity, efficiency and excellence in the Higher Education System of the University. The measures taken to enhance the quality in higher education include innovation and improvements in curriculum, teaching-learning process, and examination and evaluation systems. The grading system is considered to be better than the conventional marks system and is followed. This will facilitate student mobility across institutions within and across countries and also enable potential employers to assess the performance of students.

Choice Based Credit System (CBCS): The CBCS provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses will be evaluated following the grading system, which is considered to be better than the conventional marks system.

Outline of Choice Based Credit System:

1. Core Course: A course, which should compulsorily be studied by a candidate as a core requirement is termed as a Core course.

2. Elective Course: Generally a course which can be chosen from a pool of courses and which may be very specific or specialized or advanced or supportive to the discipline/ subject of study or which provides an extended scope or which enables an exposure to some other discipline/subject/domain or nurtures the candidate's proficiency/skill is called an Elective Course.

3. Project work/Dissertation is considered as a special course involving application of knowledge in solving / analyzing /exploring a real life situation / difficult problem.

Objectives of the Programme

The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature. It provides a broad foundation in chemistry that stresses scientific reasoning and analytical problem solving with a molecular perspective. The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research. The student will learn professionalism, including the ability to work in teams and apply basic ethical principles. The course also prepares the graduates for employment as chemists as well as to pusue research.

Programme Learning Outcomes (PLO)

a. Students will have a firm foundation in the fundamentals and application of current chemical and scientific theories including those in Analytical, Inorganic, Organic and Physical Chemistries.
b. Students will be able to design and carry out scientific experiments as well as accurately record and analyze the results of such experiments.
c. Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
d. Students will be able to clearly communicate the results of scientific work in oral, written and electronic formats to both scientists and the public at large.
e. Students will be able to explore new areas of research in both chemistry and allied fields of science and technology.
f. Students will appreciate the central role of chemistry in our society and use this as a basis for ethical behavior in issues facing chemists including an understanding of safe handling of chemicals, environmental issues and key issues facing our society in energy, health and medicine.
g. Students will be able to function as a member of an interdisciplinary problem solving team.
h. The graduate has specific skills in planning and conducting advanced chemical experiments and applying structural-chemical characterisation techniques.
i. Are able to use modern instrumentation and classical techniques, to design experiments, and to properly record the results of their experiment.
j. Are able to use modern library searching and retrieval methods to obtain information about a topic, chemical, chemical technique, or an issue relating to chemistry.

Programme Specific outcome (PSO)

k. A graduate with a Master's degree in Chemistry has in-depth and detailed functional knowledge of the fundamental theoretical concepts and experimental methods of chemistry.
l. Students should have an advanced level understanding of the following areas of chemistry - Analytical, Inorganic, Organic, and Physical Chemistry. They should master graduate level understanding of their major area(s) of research.
m. Students should be able to communicate scientific results in writing and in oral presentation.
n. Students should become proficient in their specialized area of chemistry and acquire the basic tools needed to carry out independent chemical research

Programme Educational Objectives

PEO-1

The Masters in Chemistry will extend your depth and breadth of knowledge in all branches of chemistry, suitable for a professional chemist capable of conducting research.

PEO-2

To carryout research in the trust areas of chemistry. Will be able to communicate effectively the scientific information and research results in written and oral formats, to both professional scientists and to the public.

PEO-3

To motivate critical thinking and analytical skills to solve complex chemical problems and the Ability to handle problems of practical relevance to society while complying with economical, environmental, ethical, and safety factors.

PEO-4

To practice chemistry by performance of experiments in the laboratory classes. To perform accurate quantitative measurements with an understanding of the theory and use of contemporary chemical instrumentation, interpret experimental results, perform calculations on these results and draw reasonable, accurate conclusions

Semester-I

16CHP101 **ORGANIC CHEMISTRY- I (REACTION MECHANISMS)** **4H 4C**

Instruction Hours/week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

- To understand aromaticity.
- To provide a versatile knowledge of different name reactions and their application in synthesis.
- To learn about familiar addition and elimination reactions.
- To gain knowledge about reaction intermediates.
- To understand the principles and reaction mechanisms involving various electrophilic and nucleophilic, addition and elimination reactions.
- To relate the different organic reaction mechanisms.

Course outcomes (CO's)

1. Learned the concept aromaticity and various types of aromaticity
2. Familiarized the various types of electrophilic and nucleophilic substitution reactions and their Mechanism
3. Learned the familiar addition and elimination reactions
4. Learned the concept of reaction intermediates.
5. Understood about the synthesise aromatic compounds using electrophilic and nucleophilic substitution, addition and elimination reactions.
6. Described the various organic reaction mechanisms.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Aromaticity and chemical methods in mechanisms: Aromaticity - introduction - aromaticity of benzenoid and heterocyclic compounds. Non-benzenoid aromatics – annulenes, azulenes, ferrocenes and fulvenes.

Kinetic and non-kinetic methods of study of reaction mechanisms - kinetic methods- Primary and secondary kinetic isotopic effects. Non-kinetic methods - study of intermediates, isotopic labeling, stereochemical studies, energy profile diagrams and cross over experiments. Hammond's postulate. Kinetic and thermodynamic control.

Linear free energy relationship - Hammett equation and Taft equation.

UNIT – II

Addition reactions: Electrophilic, nucleophilic and free radical addition to double and triple bonds - hydration, hydroxylation, Michael addition, hydroboration and epoxidation. Addition reactions to carbonyl compounds – Mannich reaction, Meerwein Pondroff-

Verley reduction, Grignard, Claisen, Dieckmann, Stobbe, Knovenagel, Darzen, Wittig, Thorpe and Benzoin reactions.

UNIT – III

Electrophilic substitution reactions: Aromatic electrophilic substitution reactions-formylations–Gattermann, Gattermann Koch and Riemer Tiemann reactions. Kolbes, Bischler-Napieralski and Hofmann-Martius reactions. Friedel crafts alkylation and acylations and Vilsmeier-Haack reaction.

Aliphatic electrophilic substitution reactions - mechanisms- SE1, SE2 and SEi - structure reactivity relationship, typical electrophilic substitution reactions - Friedel crafts acylation at olefinic carbon, Stork enamine reaction and decarboxylation of aliphatic acids.

UNIT – IV

Nucleophilic substitution reactions: Aliphatic nucleophilic substitution reactions-mechanisms - SN1, SN2, ion pair and SNi- substitution at vinyl carbon. Stereochemistry of nucleophilic substitution reaction - effect of substrate structure - solvent effects - leaving group effect – nucleophilicity, ambident nucleophiles and ambident substrates-neighbouring group participation.

Aromatic nucleophilic substitution reactions - benzyne mechanism, intermediate complex mechanism and SN1 mechanism, structure reactivity relationship.

Ziegler alkylation and Chichibabin reaction.

UNIT – V

Elimination reactions: Mechanisms - E1, E2, Ei and E1cB mechanisms- stereochemistry of eliminations. Hofmann rule-Saytzeff rule-Bredts rule – Substitution versus Elimination. Typical elimination reaction - Chugaev reaction, Hofmann degradation and Cope elimination.

Carbenes and nitrenes - structure, generation and reactions.

Semester-I

16CHP102 INORGANIC CHEMISTRY-I 4H 4C

(NUCLEAR CHEMISTRY AND METALLIC CLUSTERS)

Instruction Hours/week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

- To learn the nuclear structure, stable and unstable atomic nuclei, nuclear reactions and different modes of radioactive decay and also methods for measurements of radioactivity.
- To analyses the various defects and its application on inorganic crystals.
- To understand the detection of radioactive rays and to measure the radiation.
- To learn about the fundamentals of metallic clusters.
- To understand the chemistry of boranes and related compounds.
- To apply the knowledge to know about the various forms of inorganic compounds

Course outcomes

1. Described the basic concepts of nuclear chemistry and types of nuclear reactions.
2. Discriminate the various defects and also known about its application on inorganic crystals
3. Understood the Basics of metallic clusters, preparation, properties and applications of metallic clusters
4. Learned the structure and bonding in molecules / ions and predict the structure of molecules / ions.
5. Described the type of defects in metals and about semi conductors
6. Understood the inorganic and organometallic chemistry, catalysis in the molecular level

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Inorganic chains – rings - cages and clusters (definition and structure) - metal clusters - dinuclear clusters - trinuclear clusters - tetranuclear clusters - hexanuclear clusters – organometallic clusters.

Boranes, boron hydrides (structure and properties) – carboranes - metallocarboranes - Wade's theory -closo-nido and arachno structures - borazines, phosphazenes – Sulphur-Nitrogen ring compounds. Isopoly and heteropoly acids of V, Cr, Mo and W.

UNIT – II

Metallic state-free electron, band and zone theories - non stoichiometry - point defects in solids - Schottky and Frenkel defects - linear effects - dislocation - effects due to dislocation - electrical properties of solids - insulators-intrinsic semiconductors - n and p type and super conductors - ceramics elementary treatment.
Organometallic compounds in homogeneous catalytic reactions-coordinative unsaturation – acid-base behavior reaction – migration of atoms or groups from metal to ligand –

insertion reaction – reactions of coordinated ligands – catalytic reactions of alkenes – isomerisation of alkenes – hydrogenation – hydroformylation and hydrosilation of alkenes – alkene polymerization and oligomerisation – fluxional molecules.

UNIT – III

Nuclear Chemistry - the nucleus - subatomic particles and their properties, binding energy. N/P ratios in stable and meta stable nuclei - different type of nuclear forces - liquid model- shell model. Modes of radioactive decay - α, β and γ decay radiation, electron capture, nuclear isomerism and internal conversion.

UNIT – IV

Experimental methods - Cloud chamber, nuclear emulsion, bubble chamber, proportional counters-G.M counter, scintillation counters, semi conductor detector.
Particle accelerators - Cyclotron, synchrotron, betatron and bevatron.

UNIT – V

Nuclear reactions - Bethes's notation, Q-value, columbic barrier, cross section, different types of nuclear reactions - projectiles capture - particle emission, spallation, fission, fusion, theories of fission, use of fission products, nuclear reactors - fissile and fertile isotopes- U^{233},U^{235},Pu^{239},Th^{232},-atomic power projects in India, stellar energy, synthetic elements - application of radio isotopes - Hot atom chemistry**.**

Semester-I

16CHP103 PHYSICAL CHEMISTRY- I 4H 4C

(QUANTUM CHEMISTRY AND GROUP THEORY)

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

- To study the fundamentals and applications of classical mechanics and quantum chemistry
- To understand the structure of an atom and different approximation methods
- To learn the concept of Group theory and their applications.
- To discuss the molecular phenomena and its model problems
- To explain the probabilities, amplitudes, averages, expectation values and observables.
- To analyses the concept of group theory to predict the spectroscopic properties of a molecules

Course Outcomes (CO's)

Students have learned and understood

1. The differences between classical and quantum mechanics. The limitations of classical mechanics.
2. the connection of quantum mechanical operators to observables
3. probabilities, amplitudes, averages, expectation values, and observables
4. how molecular phenomena can be related to model problems
5. the fundamentals of group theory
6. the connection between common approximation methods and standard chemical frameworks (Born-Oppenheimer approximation, molecular orbitals, for example)
7. Identified the point groups of molecules and apply the concept of group theory to predict the spectroscopic properties.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Failure of classical mechanics and the success of quantum theory in explaining black body radiation and photoelectric effect.

The time dependent and time independent Schrodinger equations - Born's interpretation of the wave function. Requirements of the acceptable wave function.

Algebra of operators. Sums and products of operators - commutator - linear operators- eigen functions and eigen values - correspondence between physical quantities in classical mechanics and operators in quantum mechanics - Hamiltonian operator - angular momentum operator. Quantization of angular momentum and its spatial orientation - average values - postulates of quantum mechanics.

UNIT – II

Particle in a one-dimensional box - quantization of energy - normalization of wave function - orthogonality of the particle in a one-dimensional box wave functions. Illustration of the uncertainty principle and correspondence principle with reference to the particle in a one-dimensional box - particle in a three dimensional box - separation of variables.

Solving of Schrodinger equation for one-dimensional harmonic oscillator. Harmonic oscillator model of a diatomic molecule. Illustration of the uncertainty principle and correspondence principle with reference to harmonic oscillator.

Solving of Schrodinger equation for a rigid rotor. Rigid rotor model of a diatomic molecule.

UNIT – III

Schrodinger equation for the H-atom (or H-like species)- separation of variables - energy levels. Radial distribution functions - orbitals and orbital shapes. Probability density and radial distribution functions.

Need for approximation methods. The perturbation theory- application of perturbation method to systems such as anharmonic oscillator and He-atom.

The variation method - application of variation method to systems such as anharmonic oscillator and He-atom.

UNIT – IV

Symmetry elements and symmetry operations - definition of identical and equivalent elements configurations - effect of performing successive operations commutative and non-commutative - inverse operations.

Groups and their basic properties - definition of a group - basic properties of a group- definition of abelian - cyclic- isomorphic, finite, infinite groups and subgroup. Symmetry classification of molecules into point groups-Schoenflies symbol (only-difference between point group and space group).

Matrices- Definition of matrix, square matrix, diagonal matrix, null matrix, unit matrix, row matrix, column matrix, symmetric matrix, skew symmetric matrix and conjugate matrix. Multiplication, commutative and non commutative-determination of inverse of a matrix, block multiplication of matrices-addition and subtraction of matrices.

Matrix notations for symmetry operations of C_{2v} and C_{3v} groups-construction of character tables for C_{2v} and C_{3v} point groups**.**

UNIT – V

Definition of reducible and irreducible representations - irreducible representations as orthogonal vectors - direct product rule, the great orthogonality theorem and its consequences - determinations of the characters for irreducible representation of C_{2v} and C_{3v} point groups using the orthogonality theorem.

Group theory and Vibrational spectroscopy - vibrational modes as basis for group representation - symmetry selection rules for IR and Raman spectra, Mutual exclusion principle - classification of vibrational modes.
Group theory and dipole moment.

Semester-I

16CHP104 ORGANIC AND INORGANIC SPECTROSCOPY 4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objective

This course enables the students

- To learn about Electronic spectroscopy.
- To understand about IR spectroscopy.
- To understand the basic concept of NMR spectroscopy
- To apply the different aspects of NMR spectroscopy to predict the structure of compounds.
- To learn about the mass spectroscopy and Mossbauer spectroscopy.
- To learn about the invaluable tools in synthetic chemistry for the confirmation of known molecules and elucidation of shape and structures of unknown compounds of high complexity with a high degree of certainty.

Course outcomes

On completion of this course, students to have

1. Understood the basic concepts of Electronic and IR spectroscopy.
2. Understood the valuable concepts in NMR spectroscopy.
3. Learned the basic knowledge about Mass spectroscopy.
4. Applied the different aspects of NMR spectroscopy to predict the structure of compounds.
5. Analyzed and identified simple organic molecules by using UV, IR, ^{1}H-NMR and ^{13}C-NMR and Mass spectral data.
6. The students learned how to interpret the spectral data and to identify the structure of the molecules

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT- I

Ultraviolet and Visible Spectroscopy: Electronic spectra of diatomic molecules - laws of photochemistry - electronic absorption transitions-correlation of electronic structure with molecular structure - simple chromophoric groups - effects of conjugation - Woodward -Fisher rules for α,β unsaturated carbonyl compounds & dienes - aromatic systems with extended conjugation - applications to organic and inorganic compounds - Instrumentation**.**

UNIT-II

Infrared Spectroscopy: The vibrating diatomic molecules-the simple harmonic oscillator and unharmonic oscillator - the diatomic rotor - factors influencing vibrational frequencies - identification of fundamental groups. Fingerprint region-application to organic and inorganic compounds-Instrumentation**.**

UNIT-III

NMR Spectroscopy: Principle of NMR spectroscopy – description of the PMR instrument, factors affecting chemical shifts-chemical shift equivalence and magnetic equivalence - spin-spin coupling - first order and non first order spectra - Hetero nuclear coupling in ^{1}H NMR - deuterium exchange - high field spectra - double resonance-shift reagents-applications to organic and inorganic compounds. FT NMR.

^{13}C NMR spectroscopy-factors affecting the chemical shifts - broad band and off-resonance decoupling - applications in organic chemistry.

UNIT – IV

Mass Spectroscopy: Principles of mass spectrometry – resolution - description of single focusing and double focusing electron impact mass spectrometers - presentation and analysis of spectra - determination of molecular formulae - Nitrogen rule- Stevenson's rule - isotope abundance analysis - meta stable ions and peaks the molecular ion peak - fragmentation processes - Retro Diels - Alder rearrangement - McLafferty rearrangement - ortho effect - fragmentation associated with functional groups - aldehydes, ketones, carboxylic acids, esters, amides, alcohols, thiols, amine, ethers, sulphides and halides..

UNIT – V

Mossbauer and Problems: Mossbauer spectroscopy – principles - spectrometer - isomer shift - quadrapole interaction - nuclear zeeman splitting – applications.

Problems involving UV, IR, NMR, Mass spectral data (for compounds not more than 10 carbon atoms).

Semester-I

ELECTIVE I

16CHP105-A **GREEN CHEMISTRY** **4H 4C**

Instruction Hours/week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

Course Objectives

This course enables the students

- To introduce the concept of Green chemistry.
- To understand the basics of Medicinal chemistry.
- To introduce the 12 principles of Green chemistry as well as the tools of Gree chemistry.
- To demonstrate how to evaluate a reaction or process and determine “Greener” alternatives.
- To focus on the application of greener routes to improve industrial processes and to produce important products.
- To understand the greener synthetic pathway to produce pharmacological compounds.

Course outcomes

The student understood the following

1. Designed of chemical products and processes that reduce or eliminate the use and generation of hazardous substances.
2. Created awareness for reducing waste, minimizing energy consumption in organic synthesis.
3. Implemented techniques of green synthesis in organic reactions
4. Used the various alternative resources for green technology in organic synthesis.
5. Understood the various greener synthetic pathways and implement it in the production of pharmacological compounds.
6. Applied the concept of microwaves and ionic liquids in various chemical reactions.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Introduction to Green Chemistry and Principles of Green Chemistry:

What is Green Chemistry? Need for Green Chemistry. Goals of Green Chemistry.
Limitations/ Obstacles in the pursuit of the goals of Green Chemistry.
Twelve principles of Green Chemistry with their explanations.

UNIT II

Designing a Green Chemical synthesis:

Designing a Green synthesis using these principles: prevention of waste/ byproducts; maximum incorporation of the materials used in the process into the final products, atom economy, calculation of atom economy of the rearrangement, addition, substitution and elimination reactions. Green solvents– supercritical fluids, water as a solvent for organic reactions, ionicliquids, fluorous biphasic solvent, PEG, solvent less processes, immobilized solvents and how to compare greenness of solvents.

UNIT III

Energy requirements for reactions – alternative sources of energy: use of microwaves and ultrasonic energy.

Microwave assisted reactions in water: Hofmann elimination, methyl benzoate to benzoic acid, oxidation of toluene and alcohols; microwave assisted reactions in organic solvents. Diels-Alder reaction and decarboxylation reaction.
Ultrasound assisted reactions: sonochemical Simmons-Smith Reaction (Ultrasonic alternative to iodine).

UNIT IV

Green synthesis/reaction: Green starting materials, Green reagents, Green solvents, reaction conditions, Green catalysis and Green synthesis- Real world cases (Traditional processes and green ones) Synthesis of Ibuprofen, Adipic acid , disodium iminodiacetate (alternative to Strecker synthesis).

UNIT V

Hazard assessment and mitigation in chemical industry: Future trends in Green Chemistry-oxidation-reduction reagents and catalysts; biomimetic, multifunctional reagents; Combinatorial green chemistry; Proliferation of solventless reactions; Noncovalent derivatization. Biomass conversion, emission control and biocatalysis.

Semester-I

ELECTIVE I

16CHP105-B MEDICINAL CHEMISTRY 4H 4C

Instruction Hours/week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

This course enables the students

- To understand the basics of Medicinal chemistry.
- To know the drug targets, drug metabolism and about clinical training..
- To understand the in-silico techniques involved in drug development.
- To clear discussion about membrane and receptors in drug delivery process.
- To apply the various theoretical laws to predict the pharmaco-kinetics of the compounds.
- To analyses the molecular receptor binding and molecular recognition of the natural and synthetic compounds.

Course Outcomes

On the completion of the course, students to

1. Understood the basics of Medicinal chemistry.
2. Knew the drug targets, drug metabolism and about clinical training.
3. Understood in-silico techniques involved in drug development.
4. Discussed about membrane and receptors in drug delivery process.
5. Applied the various theoretical laws to predict the pharmaco-kinetics of the compounds.
6. Analyzing the molecular receptor binding and molecular recognition of the natural and synthetic compounds.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Drug discovery, design and development: Synthesis of the representative drugs of the following classes: analgesic, antipyretic and anti-inflammatory agents (Aspirin, paracetamol and lbuprofen); antibiotics (Chloramphenicol); antibacterial agents (Sulphonamides), antiviral agents (Acyclovir), Central Nervous System agents (Phenobarbital and Diazepam).

UNIT II

Insilco Drug Design and Computer Assisted New Lead Design: Introduction, historical perspective, drug compounds, preparation and organization for drug seeking, common stages in the drug seeking campaign, sources of hits, leads and candidate drugs, natural products: higher plant and animal products, combinational libraries, lead optimization. Introduction, basic concepts, molecular recognition by receptor and ligand design, active conformation, approaches to discover new functions, approaches to the cases with known and unknown receptor structure and molecular docking study.

Introduction to drug metabolism, toxicity and pharmacokinetics, toxicology considerations, problems and drawbacks on drug discovery and development.

UNIT III

Membranes and Receptors: Drug transport mechanism and absorption processes, pharmacodynamic and pharmacokinetic aspects, prodrugs and bioactivation, receptor theories and receptor models, drug receptor interactions drug design, physiochemical principles and basis of drug design, different methods of drug design,

UNIT IV

QSAR: Electronic effects; Hammett equation, Lipophilicity effects; Hansch equation, Steric Effects; Taft Equation; Experimental and theoretical approaches for the determination of physico-chemical parameters, parameter inter-dependence; linearity versus non-linearity; The importance of biological data in the correct form; Molecular docking and dynamics: Rigid docking, flexible docking and manual docking.

UNIT V

Molecular Recognition in Drug-Receptor Binding: Molecular forces and binding energetic, enzyme inhibitors - modes of inhibition and general approaches. Antibacterial drugs - major drug classes and drug resistance, antiviral drugs- major drug classes and drug resistance, anticancer drugs- major cancer drug targets, major drug classes and drug resistance.

Semester-I

ELECTIVE I

16CHP105-C MOLECULAR MODELLING & DRUG DESIGN 4H 4C

Instruction Hours/week: L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students

- To the students should be acquainted with theoretical and practical knowledge of molecular modeling tools and techniques for drug design and discovery.
- To get knowledge of molecular modeling software will be useful for commercial projects related to drug discovery and developments.
- To understand the detailed knowledge and skill is given in the course and the students get acquired the same after studying the course.
- To study about the importance of pharmacophores in drug discovery process.
- To practice some online softwares to predict the physical and biological properties of natural/synthesized molecules.
- To apply the in-silico techniques to evaluate the drug-receptor binding affinities of the compounds.

Course outcomes (CO's)

On completion of this course, students have

1. Gained the knowledge on the molecular modeling and field effects as a part of drug discovery.
2. Understood on the various stages and various targets of drug discovery.
3. Learned the importance of the pharmacophores in drug discovery.
4. Studied the importance of the role of computer aided drug design in drug discovery.
5. Practiced some online softwares to predict the physical and biological properties of natural/synthesized molecules.
6. Applied the in-silico techniques to evaluate the drug-receptor binding affinities of the compounds.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I

Introduction to Molecular Modelling:

Introduction-Useful concepts in molecular modelling: Coordinate systems.
Potential energy surfaces. Molecular graphics. Surfaces. Computer hardware and software. The molecular modelling literature.

UNIT II

Force Fields:

Fields. Bond stretching. Angle bending. Introduction to nonbonded interactions.
Electrostatic interactions. Van der Waals Interactions. Hydrogen bonding in molecular mechanics. Force field models for the simulation of liquid water.

UNIT III

Basics of molecular modelling, methods, steps involved in MM, selection of target and template, homology modelling, refinement and validation-SAVES server, the critical assessment of protein structure prediction (CASP), superposition of proteins using different tools, RMSD, presentation of protein conformations, hydrophobicity factor, shape complementary.

UNIT IV

Pharmacophore

Historical perspective and viewpoint of pharmacophore, functional groups considered as pharmacophores, Ehrlich's "Magic Bullet", Fischer's "Lock and Key", two-dimensional pharmacophores, three-dimensional approach of pharmacophores, criteria for pharmacophore model, pharmacophore model generation software tools, molecular alignments, handling flexibility, alignment techniques, scoring and optimization, pharmacophores, validation and usage, automated pharmacophore generation methods, GRID-based pharmacophore models, pharmacophores for hit identification, pharmacophores for human ADME/tox-related proteins.

UNIT V

Computer aided Chemistry: Structure Prediction and Drug Design:

Introduction to molecular docking, rigid docking, Flexible docking, manual docking, advantage and disadvantage of flex-X, flex-S, AUTODOCK and other docking software, scoring functions, simple interaction energies, GB/SA scoring (implicit solvation), CScore (consensus scoring algorithms).

SUGGESTED READINGS:

Text Books:

1. Leach, A. R. (2001). *Molecular Modelling Principles and Application* (II Edition). Longman: Prentice Hall.
2. Haile, J. M. (1997). *Molecular Dynamics Simulation Elementary Methods* (I Edition). UK: John Wiley and Sons.

Reference Books:

Semester -I

16CHP111 ORGANIC CHEMISTRY PRACTICAL-I 4H 2C
(QUALITATIVE ANALYSIS AND SINGLE STAGE PREPARATIONS)

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the students should have

- To learn about the qualitative analysis by semi micro-qualitative analysis method.
- To learn the preparation of inorganic complexes.
- To describe the basic concept and advantages of semi- micro qualitative analysis.
- To understand the systematic separation d-block elements
- To study the step wise procedure to predict the anions along with metals
- To identify the d-block elements with their special tests.

Course Outcomes

Students have to,

1. Learned about the qualitative analysis by semi micro-qualitative analysis method.
2. Learned the preparation of inorganic complexes.
3. Described the basic concept and advantages of semi- micro qualitative analysis.
4. Understood the systematic separation d-block elements
5. Studied the step wise procedure to predict the anions along with metals
6. Identified the d-block elements with their special tests.

Methodology

Blackboard teaching and Demonstration.

Contents

Analysis of two – component mixtures: Separation and characterization of compounds.

Note: Each student should analyze a minimum of six organic mixtures.

Preparations involving one stage comprising of the following process: Nitration, acylation, halogenation, diazotisation, rearrangement, hydrolysis, reduction, alkylation and oxidation and one preparation illustrating the following: Benzoin condensation, Canizzaro reaction, Perkin reaction, Reimer-Tiemann reaction, Sandmayer reaction, Fries rearrangement, Skraup synthesis- single stage.

Note: Each student should do a minimum of six preparations involving single stage.

SUGGESTED READINGS:

Text Books:

1. Thomas, A. O., (2003). *Practical Chemistry*. Cannanore: Scientific Book Center.
2. Bansal, R. K, (2008). *Laboratory Manual of Organic Chemistry* (IV Edition). New Delhi: New Age Publishers.
3. Arun Sethi, (2003). *Laboratory experiments in Organic Chemistry*. New Delhi: New Age Publisher.

Semester - I

16CHP112 ORGANIC CHEMISTRY PRACTICAL-II 4H 2C

(QUANTITATIVE ANALYSIS AND DOUBLE STAGE PREPARATIONS)

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

Course enables the students should have

- To learn about the basic principles about quantitative analyses.
- To study the concepts and systematic procedure in gravimetric analysis.
- To must know about the systematic procedure for estimation.
- To describe the synthesis method for in-organic co-ordination complexes
- To separate the molecules and identify its nature through chromatography technique.
- To apply this ideas and concepts to water treatment process, food science and forensic fields.

Course Outcomes

On successful completion of the course the students should have

1. Learned about the basic principles about quantitative analyses.
2. Studied the concepts and systematic procedure in gravimetric analysis.
3. Knew about the systematic procedure for estimation.
4. Described the synthesis method for in-organic co-ordination complexes
5. Known about separate the molecules and identify its nature through chromatography technique.
6. Applied this ideas and concepts to water treatment process, food science and forensic fields.

Methodology

Blackboard teaching and Demonstration.

Contents

Estimation of phenol, ethyl methyl ketone, glucose, nitro, amino and methoxy groups, unsaturation in an organic compound.

Analysis of oils Reichert- Meissl value, Iodine value, saponification value and acetyl value.

Double stage preparations- Anthranilic acid and pthalimides.

Extraction and estimation of active constituents

Only for learning purpose and demo (Not for exam)

a. Lactose from milk.
b. Caffeine from tea.
c. Nicotine from tobacco extract.
d. Citric acid or ascorbic acid from a tablet or from a natural source.
e. Curcumin from turmeric.
f. Lycopene from tomato.

SUGGESTED READINGS:
Text Books:

1. Arun Sethi, (2003). *Laboratory experiments in Organic Chemistry*. New Delhi: New Age Publisher.

Semester - II

16CHP201 ORGANIC CHEMISTRY-II 4H 4C

(REARRANGEMENTS, REACTIONS, PHOTOCHEMISTRY AND PERICYCLIC REACTIONS)

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students

- To know about versatile knowledge of rearrangements
- To understand the different organic (radical and concerted) reactions and their applications in synthesis.
- To learn the principles of conformational analysis and stereochemistry.
- To explain the concepts in organic photochemistry
- To describe the basic ideas about pericyclic reactions
- To implement this basic concept to design and produce the new organic molecules

Course outcomes (CO's)

On successful completion of the course the students should have

1. Understood the versatile knowledge of rearrangements
2. Understood the different organic reactions (radical and concerted).
3. Learned about the principle of conformational analysis and stereochemistry.
4. Explained about the molecular rearrangements, Pericyclic reactions and Cyclo addition and sigmatropic reactions
5. Described the basic ideas of pericyclic reactions.
6. Designed new form of organic compounds using these basic concepts.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Molecular rearrangements: Intramolecular 1,2 - shifts - Wagner - Meerwein and Pinacol-Pinacolone rearrangements.

Migration to carbonyl carbon – Demyanov and Neber rearrangements.

Rearrangements to electron deficient nitrogen and oxygen – Baeyer – Villiger, Dienone - phenol, Favorskii, Fries, Wolff, Benzidine, Hoffmann Rearrangement and Stevens rearrangements.

Non-cyclic rearrangements – Chapman and Wallach rearrangements.

UNIT – II

Conformational analysis and stereochemistry: Stereochemistry of sulphur and nitrogen compounds, stereoselective and stereospecific reactions - R/S-notation of optically active carbon compounds. Optical isomerism of biphenyls, allenes and spiranes. Planar chirality - cyclophanes and ansa compounds - geometrical isomerism - E/Z notation-configuration in aldoximes and ketoximes. Conformation in cyclic system– decalins, perhydrophenanthrene and perhydroanthracene. Conformation and reactivity of cyclohexanes.

UNIT – III

Radical reactions: Configuration and generation of short lived free radicals-characteristics of free radical reactions – radical substitution, radical additions and rearrangement of free radicals. Typical reactions such as Sandmeyer, Gomberg, Pechmann, Ullmann, Pschorr and Hunsdiecker reactions.

Oxidation and reductions- mechanisms – aromatisation, oxidation of alcohols and glycols, ozonolysis, Sommelet reaction and selectivity in reduction-metal hydride reduction- reduction of nitro compounds and acyloin condensation.

UNIT – IV

Organic photochemistry: Introductory theory of light absorption- Jablonski diagram-photophysical processes- excimers and exciplexes - energy transfer-geometry of excited states – quantum efficiency - photochemical reaction of ketones- Norrish type-I and type-II reactions. Paterno Buchi reaction- cis and trans isomerisation-Photo-Fries rearrangement and Ene reaction and Di-pi methine rearrangement.

UNIT – V

Pericyclic reactions: Definition-classification-characteristic features- the electrocyclic reaction-Woodward – Hofmann rules- orbital correlation diagram- the Frontier molecular orbital theory-electrocyclic conversion of 1,3-dienes and 1,3,5-trienes. Cycloaddition – [2+2] addition-Diel's Alder reaction- stereochemistry of Diel's Alder reaction. Sigmatropic reactions – [1,3], [1,5] and [3,3] sigmatropic shifts - Cope and Claisen rearrangements.

Semester-II

16CHP202 INORGANIC CHEMISTRY- II 4H 4C

(CO-ORDINATION CHEMISTRY)

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

This course enables the students

- To understand the theories of bonding in coordination compounds.
- To study the kinetics and mechanisms of reactions of complex compounds.
- To understand the magnetic properties of coordination compounds.
- To learn about the coordination compounds present in the biological systems and their functions.
- To remember the types of coordination compounds like metal carbonyls, carbocyclic pi complex in coordination compounds
- To evaluate the geometries of simple molecules.

Course Outcomes

On the completion of this course, students should have to

1. Learned how to name coordination compounds and to be able to draw the structure based on its name
2. Used Crystal Field Theory to understand the magnetic properties (and in simple terms the colour) of coordination compounds
3. Described the stability of metal complexes by the use of formation constants and to calculate thermodynamic parameters from them
4. Recognized the types of coordination compounds like metal carbonyls, carbocyclic pi complexes in coordination compounds
5. Familiar with some reactions and applications of coordination compounds
6. Predicted the geometries of simple molecules

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT-I

Coordination Chemistry: Nomenclature, isomerism and methods of preparation of coordination complexes- types of ligands.

Bonding: Valence bond theory- Crystal field theory – Crystal field effects in tetrahedral, octahedral and square planar symmetries. Crystal field stabilization energy - weak and strong fields- spectrochemical series. Molecular orbital theory: based on group theoretical approach. M.O. diagram of Oh. Td & square planar symmetries involving pi bonding- experimental evidence for the presence of pi bonding. Magnetic behaviour of the transition metal ions in crystal field and molecular orbital theories.

UNIT-II

Electronic spectra of complexes: Term symbols for d configuration. Characteristics of d-d transition and selection rules. Weak and strong field limits. Orgel and Tanabe -

Sugano diagrams. Jahn-Teller tetrahedral distortion and spin orbit couplings. Nephelauxetic effect - charge transfer spectra.

UNIT-III

Metal carbonyls: Methods of preparation, structure, bonding and reactions. Carbonylate ions. Carbonyl hydrides–Vaska's compound, complexes of molecular nitrogen and oxygen. Nitrosyl complexes, dinitrogen complexes. Complexes of unsaturated hydrocarbons- alkenes, allyl and pentadienyl complexes.

UNIT-IV

Carbocyclic pi complexes: Cyclopendienyl and related complexes synthesis, bonding, structure and reaction. Arene complexes-complexes of biochemical importance: Cytochromes, Haemoglobin, Myoglobin, Cyanocobalamine, Chlorophyll- structure and functions.

UNIT-V

Reaction of coordination compounds: Substitution reactions in square planar and octahedral complexes – Trans effect – mechanism of redox reactions.

Homogeneous catalysis by coordination compounds – hydroformylation –carboxylation of methanol – hydrogenation of unsaturated organic compounds.

Semester-II

16CHP203 PHYSICAL CHEMISTRY- II 4H 4C

(CHEMICAL KINETICS AND ELECTROCHEMISTRY)

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students

- To provide knowledge on fundamental understanding of chemical kinetics and to establish a relationship between the rate of reaction and the concentration of the reactants (the rate law, or rate equation).
- To apply the chemical kinetics concept to study the enzyme mechanisms.
- To provide knowledge to the students about coulometric methods and its application.
- To investigate the adsorption, classification of adsorption and factors affecting of adsorption over corrosion application.
- To remember the basic polarography concepts.
- To understand the theories of catalysis and types of catalysis.

Course outcomes

On the completion of this course, student have to

1. Student understood theories of reaction rates, how reaction rates are measured and represented in rate laws.
2. Understood the applications of chemical kinetics in studying enzyme mechanisms
3. Provided the knowledge of coulometric methods and applications.
4. Evaluated the electrochemical principles involved in corrosion and energy storage.
5. Remembered the basic polarography techniques.
6. Understood the theories of catalysis and types of catalysis

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT-I

Theories of reaction rates: Arrhenius theory- hard - sphere collision theory of gas – phase reactions. Activated complex theory or Absolute reaction rate theory (ARRT) for ideal gas reactions (in terms of partition functions).

Reactions in solution: Comparison between gas-phase and solution reactions. The influence of the solvent on the reactions between ions. Influence of ionic strength on rates of reactions in solution - primary salt effect-influence of pressure on rates of reactions in solution -significance of volume and entropy of activations.

Study of fast reactions: Flow methods, pulse methods, relaxation methods, shock-tube method and nuclear magnetic resonance method.

UNIT-II

Homogeneous catalysis: Specific and general acid - base catalysis. Bronsted catalysis law- Hammett acidity functions. Enzyme catalysis (single substrate reaction only). Michaelis Menten law - Influence of pH and temperature on enzyme catalysis.
Surface phenomenon and heterogeneous catalysis: Adsorption and free energy relation at interfaces. Gibb's adsorption isotherm- physisorption and chemisorptions- Adsorption isotherms (Freundlich & Langmuir). Kinetics of heterogeneous catalysis- Langmuir - Hinshelwood and Langmuir - Rideal - Eley mechanisms.

UNIT-III
Inter ionic attraction theory: Debye – Huckel – Onsager equation - Falkenhagen effect- Wien effect. Activity and activity coefficient- ionic strength- Debye – Huckel limiting law and its applications.
Theories of double layer. Helmholtz – Perrin - Gouy chapmann – Stern theories**.**

UNIT – IV
Polarography: Current – voltage relationships-the dropping mercury electrode. Diffusion current- half – wave potentials. Applications of polarography- Amperometric titrations.
Fundamental principles of coulometric methods- constant current and controlled potential methods- simple applications.

UNIT – V
Kinetics of corrosion: Importance–graphical presentation of kinetic data-exchange current density- different types of polarization of electrodes. Activation polarization and Tafel plots-mixed potential theory-application of electrode kinetics to experimental observations-faradic impedance and corrosion.

16CHP204 INDUSTRIAL CHEMICALS AND ENVIRONMENT 4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the students to

- Understand the industrial gases and inorganic chemicals which have an impact on the environment.
- Study about the general principles of metallurgy.
- Learn the environment and its segments.
- Discuss about the water pollution and water treatment.
- Explain the application of bio-catalysis in energy saving techniques.
- Apply this technique to design energy saving devices with eco-friendly method.

Course Outcomes

The course enables the students to

1. Understood the industrial gases and inorganic chemicals which have an impact on the environment.
2. Studied about the general principles of metallurgy.
3. Learned the environment and its segments.
4. Discussed about the water pollution and water treatment.
5. Explained the application of bio-catalysis in energy saving techniques.
6. Appling this technique to design energy saving devices with eco-friendly method.

Methodology

Blackboard teaching, Power point presentation and group discussion.

UNIT I

Industrial Gases and Inorganic Chemicals:

Industrial Gases: Large scale production, uses, storage and hazards in handling of the following gases: oxygen, nitrogen, argon, neon, helium, hydrogen, acetylene, carbon monoxide, chlorine, fluorine, sulphur dioxide and phosgene.

Inorganic Chemicals: Manufacture, application, analysis and hazards in handling the following chemicals: hydrochloric acid, nitric acid, sulphuric acid, caustic soda, common salt, borax, bleaching powder, sodium thiosulphate, hydrogen peroxide, potash alum, chrome alum, potassium dichromate and potassium permanganate.

UNIT II

Industrial Metallurgy:

General Principles of Metallurgy:

Chief modes of occurrence of metals based on standard electrode potentials. Ellingham diagrams for reduction of metal oxides using carbon as reducing agent.

Hydrometallurgy, methods of purification of metals (Al, Pb, Ti, Fe, Cu, Ni, Zn): electrolytic, oxidative refining, Kroll process, Parting process, Van Arkel-de Boer process and Mond's process. Preparation of metals (ferrous and nonferrous) and ultrapure metals for semiconductor technology.

UNIT III

Environment and its segments:

Ecosystems. Biogeochemical cycles of carbon, nitrogen and sulphur.

Air Pollution: Major regions of atmosphere. Chemical and photochemical reactions in atmosphere. Air pollutants: types, sources, particle size and chemical nature; Photochemical smog: its constituents and photochemistry. Environmental effects of ozone, Major sources of air pollution.

Pollution by SO_2, CO_2, CO, NOx, H_2S and other foul smelling gases. Methods of estimation of CO, NO_x, SO_x and control procedures. Effects of air pollution on living organisms and vegetation. Greenhouse effect and Global warming, Ozone depletion by oxides of nitrogen, chlorofluorocarbons and halogens, removal of sulphur from coal. Control of particulates.

Unit IV

Water Pollution:

Hydrological cycle, water resources, aquatic ecosystems, Sources and nature of water pollutants, techniques for measuring water pollution, Impacts of water pollution on hydrological and ecosystems.

Water purification methods. Effluent treatment plants (primary, secondary and tertiary treatment). Industrial effluents from the following industries and their treatment: electroplating, textile, tannery, dairy, petroleum and petrochemicals, agro, fertilizer, etc. Sludge disposal.

Industrial waste management, incineration of waste. Water treatment and purification (reverse osmosis, electro dialysis, ion exchange). Water quality parameters for waste water, industrial water and domestic water.

Unit V

Energy & Environment:

Sources of energy: Coal, petrol and natural gas. Nuclear fusion / fission, solar energy, hydrogen, geothermal, tidal and hydel, etc. Nuclear pollution: Disposal of nuclear waste, nuclear disaster and its management.

Biocatalysis:

Introduction to biocatalysis: Importance in "Green chemistry" and chemical industry.

SUGGESTED READINGS:

	ELECTIVE-II	**Semester - II**
16CHP205A	**RESEARCH METHODOLOGY FOR CHEMISTRY**	**4H 4C**

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the students to

- Understand how to do literature survey about a particular scientific problem.
- Learn about the digital sources available for the literature collection.
- Study the methods of doing scientific research and how to write scientific papers.
- Discuss about the chemical safety and ethical handling of chemicals.
- Understand about the data analysis.
- Know about, how to handle the chemicals in safer way and how to analysis the data.

Course Outcomes

On the completion of this course, students to

1. Understood how to do literature survey about a particular scientific problem.
2. Learned about the digital sources available for the literature collection.
3. Studied the methods of doing scientific research and how to write scientific papers.
4. Discussed about the chemical safety and ethical handling of chemicals.
5. Understood about the data analysis.
6. Knew about, how to handle the chemicals in safer way and how to analysis the data.

Methodology

Blackboard teaching, Power point presentation and group discussion.

Unit I

Literature Survey:

Print: Sources of information: Primary, secondary, tertiary sources; Journals: Journal abbreviations, abstracts, current titles, reviews, monographs, dictionaries, text-books, current contents, introduction to chemical abstracts and beilstein, subject index, substance index, author index, formula index, and other indices with examples.

Unit II

Digital: Web resources, E-journals, journal access, TOC alerts, hot articles, citation index, impact factor, H-index, E-consortium, UGC infonet, E-books, internet discussion groups and communities, blogs, preprint servers, search engines, scirus, Google scholar, chemindustry, Wiki-databases, chemspider, science direct, scifinder, Scopus.

Information Technology and Library Resources: The Internet and World Wide Web. Internet resources for chemistry. Finding and citing published information.

Unit III

Methods of Scientific Research and Writing Scientific Papers:

Reporting practical and project work. Writing literature surveys and reviews. Organizing a poster display. Giving an oral presentation.

Writing scientific papers – justification for scientific contributions, bibliography, description of methods, conclusions, the need for illustration, style, publications of scientific work. Writing ethics. Avoiding plagiarism.

Unit IV

Chemical Safety and Ethical Handling of Chemicals:

Safe working procedure and protective environment, protective apparel, emergency procedure and first aid, laboratory ventilation. Safe storage and use of hazardous chemicals, procedure for working with substances that pose hazards, flammable or explosive hazards, procedures for working with gases at pressures above or below atmospheric – safe storage and disposal of waste chemicals, recovery, recycling and reuse of laboratory chemicals, procedure for laboratory disposal of explosives, identification, verification and segregation of laboratory waste, disposal of chemicals in the sanitary sewer system, incineration and transportation of hazardous chemicals.

Unit V

Data Analysis:

The Investigative Approach: Making and Recording Measurements. SI Units and their use. Scientific method and design of experiments.

Analysis and Presentation of Data: Descriptive statistics. Choosing and using statistical tests.

Chemometrics. Analysis of variance (ANOVA), Correlation and regression, Curve fitting, fitting of linear equations, simple linear cases, weighted linear case, analysis of residuals, General polynomial fitting, linearizing transformations, exponential function fit, *r* and its abuse. Basic aspects of multiple linear regression analysis.

Electronics:

Basic fundamentals of electronic circuits and their components used in circuits of common instruments like spectrophotometers, typical circuits involving operational amplifiers for electrochemical instruments. Elementary aspects of digital electronics.

SUGGESTED READINGS:

ELECTIVE-II Semester - II

16CHP205B ANALYTICAL CHEMISTRY 4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

This course enables the students

- To learn about quantitative inorganic analysis.
- To understand the different colorimetric analysis.
- To learn about electrochemical methods of analysis.
- To learn different chromatographic techniques.
- To understand how to analyze the data obtained.
- To Explain about various analytical techniques for inorganic compounds.

Course Outcomes (CO’s)

On successful completion of the course the students should have to

1. Learned about quantitative inorganic analysis.
2. Understood the different colorimetric analysis.
3. Learned the electrochemical methods of analysis.
4. Understood the different chromatographic techniques.
5. Learned about how to analyze the data obtained.
6. Explained the various analytical techniques for inorganic compounds.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT-I

Quantitative Inorganic Analysis: Theoretical basis of quantitative inorganic analysis-common ion effect solubility product, effect of acid, temperature and solvent upon the solubility of a precipitate.

Supersaturation-Von Weimarn concept. Formation and treatment of precipitates-co-precipitation and post-precipitation. Precipitation from homogeneous solution. Specific and selective precipitants.

Principles of acid-base, oxidation-reduction, precipitation and complexometric titrations-indicators used in such titrations. Uses of organic reagents in inorganic quantitative and qualitative analysis.

UNIT-II

Data Analysis: Errors in chemical analysis-Defining terms: Mean median, accuracy and precision – classification of errors: Systematic errors and random errors. Improving accuracy of analysis – mean, standard deviation and Q-test. Comparison of results – Least square, ‘t‘-teat, ‘F‘-test and ‘Chi‘ square test.

UNIT-III

Techniques in Inorganic Chemistry: Colorimetry: Theoretical and practical aspects of colorimetric analysis. Flame emission and atomic absorption spectroscopy – types of atomic spectroscopy – emission methods – absorption methods – fluorescence methods –

source and atomizers for atomic spectroscopy – flame atomizers – eletrothermal atomizers – principle and applications of atomic absorption spectroscopy. Advantages of atomic absorption spectrometry over flame photometry.

UNIT-IV

Electrochemical Methods of Analysis: Cyclic votammetry, coulometry and amperometry-principle and applications.

Thermal characterization techniques: Principle and applications of differential thermal analysis (DTA), differentials scanning calorimetry (DSC) and thermogravimetric analysis (TGA) thermometric titration.

UNIT- V

Chromatographic Methods: Classification – techniques and applications in column, size-exclusion, ion exchange, paper and thin layer chromatography.
Gas chromatography and high performance liquid chromatography (HPLC)-principle, equipment design, sample injection system, columns, detectors and applications.

SUGGESTED READINGS:

Text Books:

ELECTIVE-II **Semester - II**

16CHP205C **ORGANOMETALLIC CHEMISTRY** **4H 4C**

Instruction Hours/week:L: 4 T:0 P:0 **Marks: Internal:40 External: 60 Total:100**

Course objectives

This course enables the students

- To learn about nature of the bonding between organic ligands and metals.
- To understand about the metal alkyl complexes.
- To learn about the alkene and cyclopentadienyl complexes.
- To understand about the usage of organometallic compounds as catalysts
- To learn about the organometallic compound used as the catalyst in hydrogenation and hydroxylation of olefins.
- To study the concept of oxidation and polymerization of olefins.

Course Outcomes

On the completion of the course

1. Learned about the Alkyls and Arene complexes
2. Understood the bonding in olefin, acetylene and allyl systems
3. Known about the concepts of synthesis, structure and bonding in metallocenes
4. Understood the Organometallic reaction mechanisms and its applications
5. Learned about the Catalysis, hydrogenation of olefins and oxoprocess
6. Studied the concept of oxidation of olefins and polymerization

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT- I

Metal carbonyls: Definition of organometallic compound - 18 electron rule - effective atomic number rule classification of organometallic compounds - the metal carbon bond types - ionic bond - sigma covalent bond - electron deficient bond - delocalised bond - dative bond - metal carbonyl complexes - synthesis - structure and reactions of metal carbonyls - the nature of M- CO bonding - binding mode of CO and IR spectra of metal carbonyls - metal carbonyls- metal carbonyl anions - metal carbonyl hydrides - metal carbonyl halides - metal carbonyl clusters - Wades rule and isolobal relationship - metal nitrosyls - dinitrogen complexes - dioxygen complexes.

UNIT- II

Metal alkyl complexes: Stability and structure - synthesis by alkylation of metal halides - by oxidative addition - by nucleophilic attack on coordinated ligands - metal alkyl and 18 electron rule - reactivity of metal alkyls - M-C bond cleavage reactions - insertion of CO to M-C bonds - double carbonylation - insertions of alkenes and alkynes - insertions of metals with C-H bonds - alkylidene and alkylidyne complexes - synthesis of alkylidene complexes in low oxidation states and in high oxidation states - bonding in alkylidene complexes - synthesis and bonding in alkylidyne complexes - reactivity of alkylidene and alkylidyne complexes.

UNIT- III

Alkene complexes: Synthesis of alkene complexes by ligand substitutuion - by reduction and by metal atom synthesis - bonding of alkenes to transition metals - bonding in diene complexes - reactivity of alkene complexes - ligand substitution - reactions with nucleophiles - olefin hydrogenation - hydrosilation - Wacker process - C-H activation of alkenes - alkyne complexes - bonding in alkyne complexes - reactivity of alkynes - alkyne complexes in synthesis - cobalt catalysed alkyne cycloaddition.

UNIT- IV

Cyclopentadienyl complexes: Metallocenes - synthesis of metallocenes - bonding in metallocenes - reactions of metallocenes - Cp_2Fe/Cp_2Fe+ couples in biosensors - bent sandwich complexes - bonding in bent sandwich complexes - metallocene halides and hydrides - metallocene and stereospecific polymerisation of 1-alkenes - cyclopentadiene as a non-spectator ligand - monocyclopentadienyl (half-sandwich) complexes - synthesis and structures of allyl complexes - arene complexes - synthesis - structure and reactivity of arene complexes - multidecker complexes.

UNIT - V

Organometallic compounds in homogeneous catalytic reactions: Coordinative unsaturation - acid-base behaviour reaction - migration of atoms or groups from metal to ligand - insertion reaction - reactions of coordinated ligands - catalytic reactions of alkenes - isomerisation of alkenes - hydrogenation - hydroformylation and hydrosilation of alkenes - alkene polymerisation and oligomerisation - fluxional molecules.

SUGGESTED READINGS:

Semester - II

16CHP211 INORGANIC CHEMISTRY PRACTICAL–I 4H 2C
(QUALITATIVE ANALYSIS AND PREPARATIONS)

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the students should have

- To learn about the qualitative analysis by semi micro-qualitative analysis method.
- To learn the preparation of inorganic complexes.
- To describe the basic concept and advantages of semi- micro qualitative analysis.
- To understand the systematic separation d-block elements
- To study the step wise procedure to predict the anions along with metals
- To identify the d-block elements with their special tests.

Course Outcomes

Students have to,

1. Learned about the qualitative analysis by semi micro-qualitative analysis method.
2. Learned the preparation of inorganic complexes.
3. Described the basic concept and advantages of semi- micro qualitative analysis.
4. Understood the systematic separation d-block elements
5. Studied the step wise procedure to predict the anions along with metals
6. Identified the d-block elements with their special tests.

Methodology

Blackboard teaching and Demonstration.

Contents

Thallium, Tungsten, Selenium, Tellurium, Molybdenum, Cerium, Thorium, Titanium, Zirconium, Vanadium, Beryllium, Uranium and Lithium.

Note: Each student should analyze a minimum of six inorganic mixtures.

About ten preparations involving different techniques selected from the following:

Lead tetra acetate, dipyridinium hexaplumbate, hydroxylamine hydrochloride, ortho and para- hydroxy phenyl mercuric chloride, potassium cupric chloride, chrome alum, copperI chloride, tris(thio urea) copper(I) Chloride, potassium trioxalato- aluminato(III), potassium trioxalato-chromate(III), potassium trioxalato- ferrate(III), hexammine cobalt(III)chloride, chloropentammine chromium(III), chloro aquo pentammine chromium(III) nitrate, tetrammine copper(II) sulphate, ammonium hexa chloro stanate(IV).

Note: Each student should do a minimum of ten preparations.

SUGGESTED READINGS:

Text Books:

Semester - II

16CHP212 INORGANIC CHEMISTRY PRACTICAL –II 4H 2C
(QUANTITATIVE ANALYSIS AND COMPLEX PREPARATIONS)

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

Course enables the students should have

- To learn about the basic principles about quantitative analyses.
- To study the concepts and systematic procedure in gravimetric analysis.
- To must know about the systematic procedure for estimation.
- To describe the synthesis method for in-organic co-ordination complexes
- To separate the molecules and identify its nature through chromatography technique.
- To apply this ideas and concepts to water treatment process, food science and forensic fields.

Course Outcomes

On successful completion of the course the students should have

1. Learned about the basic principles about quantitative analyses.
2. Studied the concepts and systematic procedure in gravimetric analysis.
3. Knew about the systematic procedure for estimation.
4. Described the synthesis method for in-organic co-ordination complexes
5. Known about separate the molecules and identify its nature through chromatography technique.
6. Applied this ideas and concepts to water treatment process, food science and forensic fields.

Methodology

Blackboard teaching and Demonstration.

Contents

- Analysis of mixture of ions – volumetry and gravimetry. Any four Complexometric titration- estimation of zinc, nickel, magnesium and calcium ions using Eriochrome black-T or muroxide indicator.
- Titrimetry: Oxidation using ceric and vanadium salts.
- Chromatography: Column, Paper and Thin layer chromatography.
- Titrations in non aqueous solvents.
- Preparation, analysis and study of co-ordination complexes (any 5).

SUGGESTED READINGS:

Text Books:

1. Lepse, P. A., & Peter, L. B. (1986). *Lab Manual for Lingren's Essentials of Chemistry*. New Delhi: Prentice Hall.

Semester-III

16CHP301 ORGANIC CHEMISTRY- III (NATURAL PRODUCTS) 4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

On successful completion of the course the students should have,

- To Study about Isolation, classification and structure determination of simple terpenoids.
- To learn about Isolation, classification and structure determination of simple steroids and alkaloids
- To know the structure of proteins, enzymes and nucleic acids.
- To discuss about the biological application of DNA and RNA.
- To list the various reagents used in organic synthesis
- To apply this fundamentals to clarify the pharmacological and biological activity of organic molecules

Course outcomes

The students have

1. Studied about Isolation, classification and structure determination of simple terpenoids.
2. Learned about Isolation, classification and structure determination of simple steroids and alkaloids
3. Knew the structure of proteins, enzymes and nucleic acids.
4. Discussed about the biological application of DNA and RNA.
5. Remembered the various reagents used in organic synthesis
6. Applied this fundamentals to clarify the pharmacological and biological activity of organic molecules

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT-I

Terpenoids: Isolation and classification of terpenoids – general methods of determining structure of terpenoids –structural elucidation and synthesis of Zingiberene, Eudesmol, Abietic acid, Caryophyllene and Santonin-biosynthesis of monoterpenoids**.**

UNIT-II

Steroids: Introduction – structural elucidation and synthesis of Cholesterol (synthesis not necessary), Ergosterol, Vitamin D, Equilenin, Oestrone, Testosterone and Progesterone. Bile acids – biosynthesis of sterols.

UNIT-III

Alkaloids: Definition of an alkaloid-extraction of alkaloids-general properties - general methods of determining structure of alkaloids – structural elucidation and synthesis of Atropine, Morphine and Quinine -biosynthesis of quinoline alkaloids.

UNIT-IV

Proteins: General nature of proteins - classification of proteins – synthesis of peptides – oxytocin- insulin.

Enzymes: Nomenclature and classification - cofactors – specificity of enzyme action- mechanism of enzyme action. Nucleic acids- structures of RNA and DNA and their biological importance.

UNIT- V

Reagents in organic synthesis: Preparations and synthetic applications of DDQ, DBU, Dimethyl sulfoxide, trimethyl silyl iodide, Osmium tetroxide, Selenium dioxide, Dicyclohexylcarbodiimide (DCC), LDA, DIBAL-H and Mercuric acetate.

SUGGESTED READINGS:

Semester-III

16CHP302 PHYSICAL CHEMISTRY- III (THERMODYNAMICS) 4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the student to

- Understand about thermodynamics and Non-ideal systems
- Learn the third law of thermodynamics
- Study the classical Maxwell-Boltzman and quantum statistics
- Know about partition functions and determining thermodynamic properties
- Understand heat capacity of solids.
- Apply the thermodynamic factors in various organic synthesis processes (how the reaction condition and reaction rate various depend on the thermodynamic factors).

Course Outcomes

The students have to,

1. Understood about thermodynamics and Non-ideal systems
2. Learned the third law of thermodynamics
3. Studied the classical Maxwell-Boltzman and quantum statistics
4. Knew about partition functions and determining thermodynamic properties
5. Understood heat capacity of solids.
6. Applied the thermodynamic factors in various organic synthesis processes (how the reaction condition and reaction rate various depend on the thermodynamic factors).

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Themodynamics and Non-ideal systems: Chemical potential and the definition of fugacity. Determination of fugacity of gases by graphical method and from equations of state. Variation of fugacity with temperature. Fugacity and the standard states for non ideal gases.

Definition of activity. Activity coefficient. Temperature coefficient of activity. Standard states. Applications of activity concept to solutions. The rational and practical approaches. Measurement of activity of solvent from colligative properties. Determination of activity of solute.

UNIT – II

Third Law of Thermodynamics: Probability and third law. Need for third law. Nernst heat theorem and other forms stating third law. Thermodynamic quantities at absolute zero. Statistical meaning of third law and apparent exception.

Mathematical Introduction: Theories of permutation & combination, laws of probability. Distribution laws. Gaussian distribution.

UNIT – III

Classical Maxwell – Boltzmann Statistics: Maxwell distribution law for molecular velocities and molecular speeds in an ideal gas. Velocity and speed distribution functions. Experimental verification of Maxwell distribution law. Evaluation of average speed, root mean square speed and most probable speed from distribution law. Distribution function in terms of the kinetic energy of an ideal gas. The principle of equipartition of energy and the calculation of heat capacities of ideal gases. Limitations of the principle of equipartition of energy.

Quantum statistics: Maxwell-Boltzmann statistics. Thermodynamic probability. Thermodynamic probabilities of systems in equilibrium. Boltzmann expression for entropy. Stirling's approximation. State of maximum thermodynamics probability. Legrangian multipliers. Thermodynamic probabilities of systems involving energy levels. Maxwell-Boltzmann distribution law. Evaluation of alpha and beta in MB distribution law.

UNIT – IV

Partition function: Definition, justification of nomenclature, microcanonical and canonical ensembles. Molecular partition and canonical function. The relation between the total partition function of a molecule and the separate partition functions. Translational partition function, rotational partition function. Effect of molecular symmetry on rotational partition function. Ortho and para hydrogen. Vibrational partition function. Electronic partition function. Evaluation of thermodynamic properties E, H, S, A, G, C_v and C_p from monoatomic and diatomic ideal gas molecules partition functions. Thermodynamic properties of polyatomic ideal gases. Calculation of equilibrium constants of reaction involving ideal gases from partition functions.

UNIT – V

Heat capacities of solids: Einstein's and Debye's theories of heat capacities of solids. Bose-Einstein and Fermi-Dirac Statistics: Bose Einstein distribution law- Entropy of Bose Einstein gas. Planck distribution law of black body radiation. Fermi-Dirac distribution law. Entropy of a Fermi-Dirac gas. Heat capacities of the electron gas and the heat capacities of metals. Negative absolute temperature.

SUGGESTED READINGS:

Text Books:

2. Whittakar, A. G. (2001). *Physical Chemistry*. New Delhi: Mount & Heal Viva Books Pvt. Ltd.

Semester -III

16CHP303 PHYSICAL METHODS IN CHEMISTRY (INSTRUMENTATION) 4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course successfully enables the student,

- To understand different chromatographic methods.
- To discuss about electron spectroscopy and thermal analysis
- To learn Circular Dichroism and Optical Rotatory Dispersion
- To describe the Electron Spin Resonance spectroscopy
- To know about flame emission spectroscopy.
- To apply the chromatographic and spectroscopic concepts for separation and identification of mixture compounds/complex/metals.

Course outcomes

The students have to

1. Understood different chromatographic methods.
2. Discussed about electron spectroscopy and thermal analysis
3. Learned Circular Dichroism and Optical Rotatory Dispersion
4. Described the Electron Spin Resonance spectroscopy
5. Knew about flame emission spectroscopy.
6. Applied the chromatographic and spectroscopic concepts for separation and identification of mixture compounds/complex/metals.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Chromatography: Theory, instrumentation, basic principles & application in the chemical analysis of the following – columns, paper, thin layer and ion exchange-gel permeation-HPLC applications in chemical analysis-gas chromatography**.**

UNIT – II

Thermal analysis: Differential thermal analysis DTA and differential scanning calorimetry DSC - basic principles - thermo gravimetric analysis.

Electron spectroscopy: ESCA XPS: Principle, chemical shifts - description of ESCA spectrometer, X-ray sources, samples, analysis, detectors and recording devices-applications.

Auger electron spectroscopy AES and Ultra-Violet photo electron spectroscopy UPS/PES principles and applications.

UNIT – III

Circular Dichroism and Optical Rotatory Dispersion: Basic principles -cotton effects-octants rule –axial halo ketone rule-application of ORD and CD. Tyndal Scattering-turbidimetry and nephelometry-applications. Atomic absorption spectroscopy.

UNIT – IV

ESR spectroscopy: Theory - derivative curves - g shift - hyperfine splitting-isotropic and anisotropic systems-zero field splitting and Kramer degeneracy. Identification of free radicals – applications to copper complexes.

UNIT – V

Flame Emission Spectroscopy: Introduction, flames and flame spectra, flames temperature, chemical reaction in flame and flame background. Flame photometers, Flame spectrophotometers, photosensitive detectors, single beam and double beam instruments, calibration curve, errors in flame photometers, applications.

SUGGESTED READINGS:

Semester–III

16CHP304 NANOCHEMISTRY 4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the student

- To know the history and perspectives of Nanotechnology.
- To learn about the various types and significant of 1D, 2D and 3D nanoparticles
- To list the various types of nanoparticles and its application.
- To discuss about carbon based nanomaterials and its properties
- To explain the metal oxide based nano materials
- To motivate and lead the student in the field of nanotechnology.

Course Outcomes

The completion of this course, students

1. Knew about the history and perspectives of Nanotechnology.
2. Learned about the various types and significant of 1D, 2D and 3D nanoparticles
3. Remembered the various types of nanoparticles and its application.
4. Discussed about carbon based nanomaterials and its properties
5. Explained the metal oxide based nano materials
6. Motivated and lead them in the pathway of nanotechnology

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I: Introduction: History scope and perspectives of nano-chemistry

UNIT II: Synthesis and stabilization of nanoparticles, chemical reduction; reactions in micelles, emulsions, and dendrimers; photochemical and radiation chemical reduction; cryochemical synthesis: Physical methods, particles of various shapes and films.

UNIT III: Experimental techniques: Electron microscopy: Transmission electron microscopy: probe

Microscopy: Probe microscopy: diffraction techniques X-ray diffraction, neutron diffraction: Miscellaneous

Techniques, comparison of spectral techniques used for elemental analysis

UNIT IV: Size effects in nanochemistry: Models of reactions of metal atoms in matrices; properties;

Kinetic peculiarities of chemical processes on the surface of nanoparticles; Thermodynamic features of nanoparticles.

UNIT V: Applications of nanoparticle in various fundamental research, industries, medical field and environmental issue; toxicity, biosafety and ethical issue in application of nanoparticle

SUGGESTED READINGS:
Text Books:

ELECTIVE-III **Semester-III**

16CHP305A **POLYMER CHEMISTRY** **4H 4C**

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the student

- To study about the basic concepts of polymerization.
- To explains the coordination polymerization and apply the Ziegler-natta catalyst in polymer synthesis.
- To understand the molecular weight determination methods of the polymer and apply it identifies the polymer properties.
- To discuss about the polymer processing and properties of commercial polymers
- To apply the polymer processing technique to prepare the polymer products
- To list out the commercial polymers and its application

Course outcomes

The students have

1. Studied about the basic concepts of polymerization.
2. Explained the coordination polymerization and apply the Ziegler-natta catalyst in polymer synthesis.
3. Understood the molecular weight determination methods of the polymer and apply it identifies the polymer properties.
4. Discussed about the polymer processing and properties of commercial polymers
5. Applied the polymer processing technique to prepare the polymer products
6. Remembered the commercial polymers and its application

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Polymer Basic Concepts: Monomers, repeat units, degree of polymerization, linear, branched and network polymers. Condensation polymerization: Mechanism of stepwise polymerization. Kinetics and statistics of linear stepwise polymerization. Addition polymerization: Free radical, cationic and anionic polymerization. Polymerization conditions. Polymerization in homogeneous and heterogeneous systems.

UNIT – II

Co-ordination Polymerization: Kinetics, mono and bimetallic mechanism of co-ordination polymers. Zeigler Natta catalyst, co-polymerization: Block and graft co-polymers, kinetics of copolymerization. Types of co-polymerization. Reactivity ratio.

UNIT–III

Molecular Weight and Properties: Polydispersion – average molecular weight concept, number, weight and viscosity average molecular weights. Measurement of molecular weights. Viscosity, light scattering, osmotic and ultracentrifugation methods. Polymer structure and physical properties – crystalline melting point T_m. The glass transition temperature. Determination of T_g. Relationship between T_m and T_g.

UNIT – IV

Polymer Processing: Plastics, elastomers and fibres. Compounding, processing techniques: calendering, die casting, rotational casting, film casting, injection moulding, blow moulding extrusion, moulding, thermoforming, foaming, reinforcing and fibre spinning.

UNIT – V

Properties of Commercial Polymers: Polyethylene, polyvinyl chloride, polyamides, polyesters, phenolic resins, epoxy resins and silicone polymers. Functional polymers, fire retarding polymers and electrically conducting polymers. Biomedical polymers – contact lens, dental polymers, artificial heart, kidney, skin and blood cells.

ELECTIVE-III **Semester-III**

16CHP305B **TEXTILE CHEMISTRY** **4H 4C**

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the student

- To understand about the classification, Chemical structure, production, properties and uses of fibers.
- To learn about the dyeing process on fibers.
- To discuss the classification of dyes
- To learn the Pollution Control in Textile Industry.
- To explain the various finishing process of fibers.
- To apply this fundamentals to fabricate the material and its dying process.

Course outcomes

On the successful completion of this course, Students

1. Understood about the classification, Chemical structure, production, properties and uses of fibers.
2. Learned about the dyeing process on fibers.
3. Discussed the classification of dyes
4. Learned the Pollution Control in Textile Industry.
5. Explained the various finishing process of fibers.
6. Applied these fundamentals to fabricate the material and its dying process.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT- I

Fibres: General classification of fibres-chemical structure, production, properties and uses of the following natural fibres (a) natural cellulose fibres (cotton and jute) (b) natural protein fibre (wool and silk).

Chemical structure, production, properties and uses of the following synthetic fibres. (i) Man made cellulosic fibres (Rayon, modified cellulose fibres) (ii) Polyamide fibres (different types of nylons) (iii) Poly ester fibres.

UNIT- II

Dyeing Process: Impurities in raw cotton and grey cloth, wool and silk- general principles of the removal – scouring – bleaching – desizing – kierboiling- chemicking.

Dyeing - Dyeing of wool and silk –fastness properties of dyed materials – dyeing of nylon, terylene and other synthetic fibres.

UNIT- III

Finishing: Finishes given to fabrics- mechanical finishes on cotton, wool and silk, method used in process of mercerizing –anti-crease and anti-shrink finishes –water proofing.

UNIT-IV

Types of Dyes: Quinonoid dyes-examples and structure-Anthroquinone and Mordant dyes-synthesis and applications of Alizarin-Phthalocyanin dyes-Copper Phthalocyanin-synthesis and applications.

Diphenylmethane dyes- Auramine-Triphenylmethane dyes-Malachite green, Crystal violet, Pararosaniline-preparation and applications.

Indigo dyes-preparation and application-derivatives of Indigo- synthesis and uses of Indigosol and tetrahaloindigo.

Phthalein dyes-Phenolphthalein- preparation and applications.

Xanthene dyes-Rhodamine B, Fluorescein-Eosin- preparation and applications.

UNIT-V

Pollution Control in Textile Industry: Textile effluent-characteristics, effect of untreated effluent, degradability of wastes. Effluent treatment plants-aerated lagoon, photo oxidation process.

3. Shenai. V. A. (1973). *Chemistry of Dyes and Principles of Dyeing*. Bombay: Sevak Publication.

ELECTIVE-III **Semester - II**

16CHP305C **INDUSTRIAL CHEMISTRY** **4H 4C**

(APPLIED BIOINORGANIC CHEMISTRY, INORGANIC DRUG TARGETS AND METALS IN MEDICINE)

Instruction Hours/week:L: 4 T:0 P:0 **Marks: Internal:40 External: 60 Total:100**

Course Objectives

This course enables the students

- To give the knowledge of the role of metals in human body
- To learn about the physical methods in bioinorganic chemistry, metal biomolecules interactions, complexes, and drug discovery.
- To give knowledge in Binding of Metal Ions and Complexes to Biomolecules
- To Learn about complexes and chelating agents
- To Provide fundamental knowledge in Drug Discovery and Design
- To apply these parameters to discover new pharmacokinetic molecules.

Course Outcomes

On the completion of this course, student should

1. Knew the knowledge of the role of metals in human body
2. Learned about the physical methods in bioinorganic chemistry, metal biomolecules interactions, complexes, and drug discovery.
3. Understood the knowledge in Binding of Metal Ions and Complexes to Biomolecules
4. Learned about complexes and chelating agents
5. Provided the fundamental knowledge in Drug Discovery and Design
6. Applied these parameters to discover new pharmacokinetic molecules.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT- I

Metals in the Human Body: General principles - the elements in the human body - biological significance, storage and transport of Fe, Zn, Cu, Mo, Co, Cr, V and Ni - metal functions in metalloproteins -metallo enzyme functions -supplying elements to the body - metals and human health.

UNIT- II

Physical Methods in Bioinorganic Chemistry: X-ray methods - magnetic resonance methods - mossbauer spectroscopy - magnetic measurements -other instrumental methods -atomic force microscopy - fast and time-resolved methods - stopped-flow kinetic methods - flash photolysis - time-resolved crystallography.

UNIT- III

Binding of Metal Ions and Complexes to Biomolecules: Nucleic acid structures - fundamental interactions with nucleic acids - binding interactions of tris(phenanthroline) metal complexes with DNA - techniques to monitor binding - applications of metal complexes that bind to nucleic acids -biopolymer promoted metal ligand interactions.

UNIT- IV

Complexes and Cheating Agents: Labile and inert complexes - metal-ligand selectivity-HSAB approach-chelate effect and Irving-William series -survey of metals used for diagnosis and chemotherapy-radiodiagnostic agents-Magnetic Resonance Imaging (MRI) - gold and other metal phosphines-main-group and transition metal compounds - miscellaneous metals in medicine-chelating agents and therapy - EDTA-evolution, chemical properties, *in vivo* chelation of radionuclides, dosage and toxicity .

UNIT-V

Drug Discovery and Design: Outline- therapeutic index, chemotherapeutic index, structure- activity relationship (SAR) and quantitative structure-activity relationship (QSAR)- Factors governing drug design- computer aided drug design-cancer chemotherapy-bioinorganic chemistry (DNA binding) of platinum anticancer drugs (cisplatin and carboplatin)-mechanism of action studies-clinical trials and their significance- production and quality control- patent protection.

Semester-III

16CHP311 PHYSICAL CHEMISTRY PRACTICAL -I 4H 2C

(MOLECULAR WEIGHT DETERMINATION AND CONDUCTOMETRIC TITRATIONS)

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students should have

- To Learn about the heat of solution, determination of molecular weight and distribution coefficient
- To study about basic concepts of conductometric titrations.
- To understand the various laws in electrochemistry.
- To apply the conductometric method for the solutions and measure its conductivity
- To know about how to handle the conductivity meter, spectrophotometer.
- To may realize the how distribution co-efficient influence the solubility of various systems.

Course Outcomes

On the completion of this course, students

1. Learned about the heat of solution, determination of molecular weight and distribution coefficient
2. Studied about basic concepts of conductometric titrations.
3. Understood the various laws in electrochemistry.
4. Applied the conductometric method for the solutions and measure its conductivity
5. Knew about how to handle the conductivity meter, spectrophotometer.
6. Applied the knowledge to realize the how distribution co-efficient influence the solubility of various systems.

Methodology

Blackboard teaching and Demonstration.

Contents

Heat of solution from solubility.

Molecular weight determination by

i. Freezing point depression of solvents benzene and water by Beckmann method

ii. By Rast micro methods

Distribution of activity and activity co-efficient by freezing point method.

Distribution co-efficient and determination of equilibrium constant.

Conductivity experiments:

Determination of

i) Equivalent conductance of a strong electrolyte and verification of Debye-Huckel Onsager law.

ii) Verification of Ostwald dilution law and Kohlraush law for weak electrolytes.

Conductometric determination of pK_a of a weak acid.

Hydrolysis constant of aniline hydrochloride.

Determination of the solubility of a sparingly soluble salt.

Conductometric titrations:

Acid-base and precipitation titrations including mixture of halides.

SUGGESTED READINGS:

Text Books:

1. Lepse, P. A., & Lyle B. P., (1986). *Lab Manual for Lingren's Essentials of Chemistry*. New Delhi: Prentice Hall.
2. Pandey, O. P, Bajpai, D. N., & Giri, S. (2001). *Practical Chemistry* (VIII Edition). New Delhi: S. Chand Publications.
3. Santi Rajan Palit and Sadhan Kumar, (1971). *Practical Physical Chemistry* (I Edition). Calcutta: Joy Publishers.

Reference Books:

3. Venkateswaran, V., Veeraswamy, R., & Kulandaivelu, A. R. (2004). *Basic Principles of Practical Chemistry* (II Edition). New Delhi: S. Chand Publications.

Semester-III

16CHP312 PHYSICAL CHEMISTRY PRACTICAL- II 4H 2C

(CHEMICAL KINETICS AND POTENTIOMETRIC TITRATIONS)

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students should have

- To learn about the principles of electrochemistry and determination EMF
- To understand about the basic needs of Chemical Kinetics and Potentiometric titrations.
- To study the principles about adsorption process.
- To know about how to handle the potentiometer, electrodes and spectrophotometer.
- To apply the knowledge of chemical kinetics in various preparation organic/inorganic compounds.
- To investigate the metal concentration in water samples using adsorption technique.

Course Outcomes

On the completion of this course, students to

1. Learned about the principles of electrochemistry and determination EMF
2. Understood about the basic needs of Chemical Kinetics and Potentiometric titrations.
3. Studied the principles about adsorption process.
4. Knew about how to handle the potentiometer, electrodes and spectrophotometers.
5. Appling the knowledge of chemical kinetics in various preparation organic/inorganic compounds.
6. Investigating the metal concentration in water samples using adsorption technique.

Objectives

On successful completion of the course the students should have

(i) Learnt about the Chemical Kinetics and Potenciometric titrations.

(ii) Learnt the Principles of Adsorption experiments.

Methodology

Blackboard teaching and Demonstration.

Contents

Electromotive force determination of standard potentials of Cu, Zn and Ag.

Determination of pH and pKa values using hydrogen and quinhydrone electrodes and glass electrode pH meter- potentiometric acid-base titrations.

Determination of formal redox potential of a redox system and redox titrations.

Determination of solubility product of a sparingly soluble salt concentration cell and chemical cell.

Determination of activity co-efficients from emf data.

Precipitation titration of a mixture of halides.

Chemical kinetics:

i . Evaluation of Arrhenius parameters using acid hydrolysis of an ester.
ii. Base catalysed hydrolysis of an ester conductometrically.
iii. Rate of reaction between persulphate and iodide ions study of salt over the persulphate- iodide reaction.

Evaluation of catalytic constants for weak acids and verification of Bronsted catalysis law.

Adsorption Experiments:

Adsorption of oxalic acid and acetic acid on activated charcoal-Fruendlich isotherm.

SUGGESTED READINGS:

Text Books:

1. Lepse, P. A., & Lyle B. P., (1986). *Lab Manual for Lingren's Essentials of Chemistry*. New Delhi: Prentice Hall.

PROGRAM OUTCOMES (PO)

a. Graduates will demonstrate solid foundation in bookkeeping, accounting and professional fundamentals required to record the business transaction ability.

b. Graduates will apply IT skills in Accounting, Taxation and business management for effective decision making.

c. Graduates will obtain the ability to analyse and solve the complex business problems using quantitative; qualitative tools and technologies.

d. Graduates will exhibit critical thinking skills in understanding the real-time business issues and advocate solutions.

e. Graduates will acquire and demonstrate the interpersonal and communication skills to convey and negotiate ideas for achieving the common goals.

f. Graduates will attain and exhibit skills to work as team to take effective decisions in achieving the common goals.

g. Graduates will demonstrate the leadership skills to initiate, lead and deliver the best performance together with the team members.

PROGRAM SPECIFIC OUTCOMES (PSO)

h. Graduates will gain lifelong learning practice by identifying, formulating, and analysing complex business problems to reach substantiated conclusions through research considering the changing environmental factors.

i. Graduate will demonstrate legal, ethical code and socially sustainable code of conduct in both personal and professional decision making process pertaining to their career.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

I. Graduates will acquire knowledge in accounting, taxation, finance and management concepts and apply it in business to become qualified professionals.

II. Graduates will possess the professional skills and competence to perform effectively in higher studies, jobs and entrepreneurial ventures.

III. Graduates will develop a lifelong learning by applying the gained knowledge and skills in research and practice.

IV. Graduates will demonstrate high standard of ethical conduct and become socially responsible citizens contributing to the sustainable growth of the career and the community.

Program Educational Objectives	**Program Outcomes**								
	a	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**i**
Graduates will acquire knowledge in accounting, taxation, finance, management concepts and computer applications and apply it in business to become qualified professionals.	✓		√	√			✓	√	✓

Graduates will possess the professional skills, computer skills and competence in field related to accounting and commerce which will enable them to perform effectively in higher studies, KPO/BPO field of IT sector and entrepreneurial ventures.	√	✓			✓	✓ √			√
Graduates will continuously improve accounting and computer skills required to develop a life long learning through IT enabled research and practice.			✓	✓				✓	
Graduates will demonstrate high standard of ethical conduct in application of computer in accounting and finance and become socially responsible citizens contributing to the sustainable growth of profession and the community.	✓		√	√			✓	√	✓

Semester I

L	T	P	C
6	-	-	6

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016-2017)

பகுதி – I, **தமிழ்** **பருவம்** I

16LAU101 : **தமிழ் முதல் தாள்** 6-H,6-C **(இளநிலை கலையியல் பட்ட வகுப்புகளுக்குரியது)**

அலகு – I : இக்கால இலக்கியம்: (20 மணிநேரம்)

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, ' தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.

மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிய விநாயகம் -ஒற்றுமையே உயிர்நிலை

: கவிஞர் அப்துல்ரகுமான் - கால வழு

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் – மலையாளக் காற்று

கவிஞர் தாமரை – மழைக்குறிப்பு

சூழலியல் : கவிஞர் வைதீஸ்வரன் -விரல் மீட்டிய மழை
பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை
கவிஞர் வைரமுத்து – அம்மா
வாழ்க்கை : கவிஞர் தருமுசிவராம் – வாழ்வுப் பாடல்
இயற்கை : பாவேந்தர் பாரதிதாசன் – அழகின் சிரிப்பு – வான்.

அலகு – II : அற இலக்கியம்: (15 மணிநேரம்)

கொன்றை வேந்தன்: 1 - 50 பாடல்கள்
திருக்குறள்: பண்புடைமை, வினைத்திட்பம் -20 குறள்கள்
பழமொழி நானூறு: 5 பாடல்கள்
வேதநாயகம்பிள்ளை நீதிநூல்: 74 -78 பாடல்கள்
பெருவாயின் முள்ளியார் ஆசாரக்கோவை: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: (15 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்
திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்
குற்றாலக்குறவஞ்சி: 5 பாடல்கள்
முக்கூடற்பள்ளு : 5 பாடல்கள்
கலிங்கத்துப் பரணி: போர்பாடியது- 9 பாடல்கள்

அலகு – IV : கட்டுரை: (10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ.இராசமாணிக்கனார்
3. வாழ்க்கை -இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: (12 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. எழுத்து, சொல், பொருள் இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Semester I

L	**T**	**P**	**C**
4	**-**	**-**	**4**

16ENU101 **ENGLISH I**

Course Objectives:

1. To help students enhance their Language skills
2. To introduce different kinds of literary works
3. To familiarize different genres of Literature
4. To instruct moral values through literature.
5. To improvise their productive and receptive skills
6. To strengthen the basic knowledge about grammar

Course Outcome:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman – Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan
One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Preposition, Voice- Active and Passive

UNIT V

Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitution
Grammar: Question, Pronunciation

Semester I

16CMU101	**FINANCIAL ACCOUNTING**	**L**	**T**	**P**	**C**
		5	**-**	**-**	**5**

COURSE OBJECTIVES:
To make the students

1. To make the students learn the basic concepts, conventions, nature of accounting and also to acquire Conceptual Knowledge in different accounting standards.
2. To know about the accounting process and preparation of final accounts
3. To understand about the Accommodation of bills, Average Due Date and Account Current.
4. To understand and apply the techniques for preparing accounts in different business organizations like consignment and joint venture.
5. To know about the Bank Reconciliation Statement process and Accounting Standards
6. To understand overall accounting standards to maintain financial accounting.

COURSE OUTCOMES:
Learners should be able to

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Acquire knowledge on accounting process and preparation of final accounts
3. To apply appropriate judgment derived from knowledge about bill of exchange
4. Recognize the accounting process of financial statement and critically think in preparing
5. Accounts, rectification of errors, Consignment and Joint Venture.
6. Recognize the Bank Reconciliation Statement process and Accounting Standards
7. To apply the correct accounting standards in their business.

Unit I
Theoretical Framework - Accounting information system: Users and their Needs. Characteristics of Accounting - Functions, Advantages and Limitations of Accounting. Branches of Accounting- Bases of Accounting: - Concepts and Conventions –Accounting Standards – Journal- Ledger – Subsidiary Books – Trial Balance

Unit II
Business Income – Revenue Recognition – Depreciation – methods – straight line method – Diminishing Balance Method – Change in method of depreciation – Final Accounts – preparation of final accounts for non- corporate business entities

Unit III
Accounting for Hire-Purchase and Installment System- Transactions - Journal Entries and ledger accounts including Default and Repossession.

Unit IV
Consignment - Features, Accounting treatment - Consignor and Consignee. **Joint Venture -** Accounting procedures: Joint Bank Account, Records Maintained by Co-venturer of (a) all transactions (b) only his own transactions. (Memorandum joint venture account).

Unit V

Accounting for Partnership - Valuation of Goodwill – Calculation of Profit-Sharing Ratio – Admission – Retirement of a Partner.

Note:

Distribution of marks - 20% theory and 80% problems

16CMU111 FINANCIAL ACCOUNTING - (PRACTICAL)

COURSE OBJECTIVES:

To make the students

1. To understand the accounts heads available to create a company in the accounting software
2. To know the mechanics of creating the vouchers and ledgers
3. To be aware of the inventory valuations methods available in the software
4. To understand various financial statements that are built in the software
5. To be aware of financial analysis tools available in the software
6. To understand the recent software application pages with its various functions.

COURSE OUTCOMES:

Learners should be able to

1. Understand the different accounting heads and its importance
2. Create vouchers and ledgers by understanding the reason for posting under different heads
3. Calculate valuation of assets using the software
4. Prepare the financial statements and analyze the financial statement using the option of ratio analysis
5. Exhibit communication skills to communicate the output derived from the program.
6. To know the Accounting software implementation with its functions.

TALLY – PRACTICAL LIST

1. Create a new company in integrate accounts mode and account with inventory mode

2. Create a primary and subgroups using single or multiple ledger mode.

3. Create minimum 10 ledgers using single or multiple ledger and alter and delete any 2 ledger.

4. Create a new company, ledger and record minimum 10 transactions with out adjustment.

5. Create a new company , ledger and record minimum 10 transactions with any five adjustments and display the relevant results.

6. Enter the following voucher

- Payment vouchers
- Receipt
- Purchases
- Sales
- Credit note
- Debit note
- Journals
- Memo

- Optional

7. Prepare trail balance for the company

8. Prepare profit and loss account and balance sheet (with minimum of any 5 adjustments)

Semester I

16CMU102 BUSINESS ORGANIZATION AND MANAGEMENT	L	T	P	C
	6	2	-	6

COURSE OBJECTIVES:
To make the students

1. To provide basic knowledge to the students about the foundation of Indian business and various types of manufacturing sectors.
2. To describe the concept, functions and levels of management and how the different schools of thoughts are integrated into management principles and practices.
3. To Specify how the managerial functions of planning, organizing and controlling are executed in a variety of circumstances
4. To Analyze the behaviour of individual and groups its influence organization\
5. To Resolve group dynamics, handle conflict and manage change.
6. Understand the importance of organization system including of motivation and leadership skills.

Course Outcomes (COs)
Learners should be able to

1. Providing the basic knowledge to the students about the foundation of Indian business and various types of manufacturing sectors.
2. Describing the concept, functions and levels of management and how the different schools of thoughts are integrated into management principles and practices.
3. Specifing how the managerial functions of planning, organizing and controlling are executed in a variety of circumstances
4. Analysing the behaviour of individual and groups its influence organization\
5. Resolving the group dynamics, handle conflict and manage change.
6. Understanding the importance of organization system including of motivation and leadership skills.

Unit I
Foundation of Indian Business: Manufacturing and Service Sectors- Small and Medium Enterprises- Problems and Government policy. India's Experience of Liberalization and Globalization. Make in India - Technological Innovations and Skill Development. Social Responsibility and Ethics Emerging opportunities in business- Franchising, Outsourcing, and E-commerce.

Unit II
Business Enterprises: Forms of Business Organisation- Sole Proprietorship- Joint Hindu Family Firm- Partnership firm- Joint Stock Company- Cooperative society- Limited Liability Partnership- Choice of Form of Organisation. Government - Business Interface; Rationale and Forms of Public Enterprises. International Business. Multinational Corporations.

Unit III
Management and Organisation: The Process of Management- Planning- Decision-making-

Strategy Formulation. Organizing Basic Considerations; Departmentation – Functional, Project, Matrix and Network; Delegation and Decentalisation of Authority; Groups and Teams.

Unit IV

Leadership, Motivation and Control: Leadership: Concept and Styles - Trait and Situational Theory of Leadership. Motivation - Concept and Importance- Maslow Need Hierarchy Theory- Herzberg Two Factors Theory- Communication- Process and Barriers- Control Concept and Process.

Unit V

Functional Areas of Management: Marketing Management- Marketing Concept- Marketing Mix- Product Life Cycle- Pricing Policies and Practices Financial Management: Concept and Objectives- Sources of Funds – Equity Shares, Debentures, Venture Capital and Lease Finance. Securities Market, Role of SEBI. Human Resource Management: Concept and Functions- Basic Dynamics of Employer - Employee Relations.

Semester I

16AEC101	BUSINESS COMMUNICATION	L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To understand the types of communication and barriers of communication.
2. To acquire knowledge on the different business correspondence used in organization
3. To be aware of the different types of reports prepared for the organization.
4. To understand the importance of vocabulary in business communication.
5. To be aware of the use of technology and the oral presentation techniques used in communication.
6. To use updated technology for various types of communication globally.

COURSE OUTCOMES:

Learners should be able to

1. Communicate effectively with the optimal mix of verbal and nonverbal communication mitigating the barriers.
2. Draft business correspondence for the organization requirement.
3. Prepare business reports for organization needs.
4. Use appropriate technology for business communication.
5. Draft the resume and develop the skills to face the interview
6. Use appropriate technology for business communication.

Unit I

Nature of Communication: Process of Communication, Types of Communication (Verbal & Non Verbal), - Importance of Communication- Different forms of Communication- Barriers to Communication Causes - Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers

Unit II

Business Correspondence: Letter Writing – Presentation - Inviting quotations- Sending Quotations- Placing orders- Inviting tenders - Sales letters- Claims and Adjustment Letters and Social Correspondence – Memorandum - Inter -office Memo – Notices- Agenda- Minutes.

Unit III

Report Writing: Business Reports- Types – Characteristics – Importance- Elements of Structure- Process of writing - Order of writing- Final draft, and check lists for Reports.

Unit IV

Application Letters : Preparation of Resume – Interview- Meaning – Objectives and Techniques of Various Types of Interviews – Public Speech – Characteristics of a Good speech- Business Report Presentations.

Unit V

Oral Presentation: Importance- Characteristics- Presentation Plan - Power Point Presentation- Visual Aids.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)

பகுதி – I, **தமிழ்** **பருவம்** II **16LAU201 :**

தமிழ் இரண்டாம் தாள்

6-H,6-C

(இளநிலை கலையியல் பட்ட வகுப்புகளுக்குரியது)

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

அலகு – I : பக்தி இலக்கியம் (10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு

1. **சைவம்** - பெரியபுராணம் - திருமூலநாயனார் புராணம்.
2. **வைணவம்** - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்

அலகு – II : சங்க இலக்கியம் : (25 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). **எட்டுத்தொகை**

நற்றிணை : 1. பிரசம் கலந்த – பாலை-110

2.தடமருப்பு எருமை- மருதம்-130

குறுந்தொகை : 1. கருங்கட்டாக் கலை – குறிஞ்சி- 69

2. உள்ளது சிதைப்போர்- பாலை-283

ஐங்குறுநூறு :1. நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

2. அன்னாய் வாழி வேண்டன்னை-203

பதிற்றுப்பத்து : 1. சிதைந்தது மன்ற-27

2. மீன்வயின் நிற்ப-90

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு:

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : 1.குறிஞ்சிக்கலி-சுடர்தொடீ -15

2. முல்லைக்கலி-தீம்பால் -11

அகநானூறு : 1.அன்னாய் வாழி வேண்டன்னை-குறிஞ்சி-17

புறநானூறு : 1. யாதும் ஊரே யாவருங் கேளிர்-பொதுவியல்-192

2.கெடுக சிந்தை கடிதிவள் துணிவே -279

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள்: சிறுதினை மலரொடு:218-275.

முருகன் அருள்புரிதல்: 286-295.

அலகு - III : காப்பியம் **(12 மணிநேரம்)**

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – கண்ணகியின் சிறப்பு: ‘நாகநீள் நகரொடு’ என்பதிலிருந்து தொடங்கி, ‘கண்ணகி என்பாண் மன்னோ’ என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: ‘அருந்திறலரசர்’ என்பதிலிருந்து தொடங்கி, ‘மன்னவரேறென்’ என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: 'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

சூளாமணி: மந்திர சாலைச் சருக்கம் (தேர்ந்தெடுக்கப்பெற்ற 25 பாடல்கள்)

அலகு – IV : சிறுகதை **(15 மணிநேரம்)**

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. **காட்டில் ஒரு மான் - அம்பை**
3. **நாற்காலி – கி.ராஜநாராயணன்**
4. நகரம் – சுஜாதா
5. எஸ்தர் – வண்ண நிலவன்
6. மரப்பாச்சி – உமா மகேஸ்வரி

அலகு- V : மொழிப்பயிற்சி **(10 மணிநேரம்)**

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை,கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

		Semester II
16ENU201	**ENGLISH II**	**L T P C**
		4 - - 4

Course Objectives:

- To enable the learners to acquire English language skills.
- To familiarize them with English literature.
- To attain basic knowledge on Grammar.
- To help learners imbibe cultural values.
- To gain knowledge of making correct sentences.
- To reflect originality on the application of soft skills and express in writing their views.

Course Outcome:

- Acquire to enjoy the ecstasy of literature.
- The select literary pieces will develop the confidence level of the learners.
- Develop the social values.
- Recognize the importance of communication
- Get sound knowledge in English
- Communicate well for business purpose.

UNIT I

Prose: The Unexpected- Robert Lynd
Poetry: The Village Schoolmaster – Oliver Goldsmith
Short Story: The Lion's Share – Arnold Bennett
Vocabulary: Homonyms
Grammar: Irregular Verb

UNIT II

Prose: Travel by Train – J. B. Priestley
Poetry: The Gift of India – Sarojini Naidu
Grammar: Sentence pattern

UNIT III

Prose: Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi
Short Story: The Necklace – Guy De Maupassant
One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer
Vocabulary: Similes
Grammar: Discourse Markers

UNIT IV

Poetry: Ozymandias – P.B. Shelley
One-Act Play: The Pot of Broth- W.B. Yeats
Vocabulary: Collective Noun

Grammar: Correction of Sentences

UNIT V

Short Story: The Silver Butterfly– Pearl S. Buck
One-Act Play: The Bear – Anton Chekov
Vocabulary: Acronym
Grammar: Question Tag

16CMU201 **BUSINESS LAW**

Semester II			
L	**T**	**P**	**C**
5	**-**	**-**	**5**

COURSE OBJECTIVES:

To make the students

1. To know the essential elements of contract and also the Indian Contract Act 1872.
2. To learn the fundamental regulation about the sale of goods act, 1930.
3. To impart basic knowledge of Partnership Law and Indian Partnership Act 1932.
4. To understand about the Limited Liability Partnership Act, 2008
5. To enhance knowledge in the Negotiable Instruments Act 1881.
6. To familiarize with the concepts in Indian Contract Act.

COURSE OUTCOMES:

Learners should be able to

1. Identify the basic legal principles behind contractual agreements.
2. Understand the relevance of business law in economic and social context.
3. Acquire problem solving techniques and will be able to present coherent, concise legal argument in partnership for achieving common goals.
4. Exhibit attributes in understanding various negotiable instruments, its features and utilization in real-time.
5. Obtain the capacity to do lifelong learning in modifications and revision done in the legal environment of business.
6. Prepare various agreements related to contract.

Unit I

The Indian Contract Act, 1872: General Principles of Contract- Contract – Meaning, Characteristics and Kinds- Essentials of a Valid Contract - Offer and Acceptance, Consideration, Contractual Capacity, Free Consent, Legality of Objects- Void Agreements- Discharge of a Contract – Modes of Discharge, Breach and Remedies against Breach of Contract- Contingent contracts- Quasi – Contracts.

Unit II

The Indian Contract Act, 1872: Specific Contracts - Contract of Indemnity and Guarantee- Contract of Bailment- Contract of Agency-**The Sale of Goods Act, 1930** - Contract of sale, Meaning and Difference Between Sale and Agreement to Sale - Conditions and Warranties- Transfer of Ownership in Goods including Sale by a Non-owner- Performance of Contract of sale- Unpaid Seller – Meaning, Rights of an Unpaid Seller against the Goods and the Buyer.

Unit III

The Partnership Act, 1932: Nature and Characteristics of Partnership- Registration of a Partnership Firms- Types of Partners- Rights and Duties of Partners- Implied Authority of a Partner- Incoming and outgoing Partners- Mode of Dissolution of Partnership.

Unit IV

The Limited Liability Partnership Act, 2008: Salient Features of LLP- Differences Between LLP and Partnership, LLP and Company- LLP Agreement - Partners and Designated Partners-Incorporation Document- Incorporation by Registration- Partners and their Relationship.

Unit V

The Negotiable Instruments Act 1881: Meaning, Characteristics, and Types of Negotiable Instruments: Promissory Note, Bill of Exchange, Cheque - Holder and Holder in Due Course, Privileges of Holder in Due Course. Negotiation - Types of Endorsements- Crossing of Cheque - Bouncing of Cheque

Suggested Readings

		Semester II
16CMU211	**BUSINESS LAW – (PRACTICAL)**	**L T P C**
		- - 3 1

COURSE OBJECTIVES:
To make the students

1. To Prepare a presentation on offer and acceptance of Contract
2. To give a presentation about A Contract is void without Consideration
3. To Discuss in group on the following are unlawful agreements, Contractual Capacity, breach of contract and Remedies for Breach of Contract.
4. To Design Presentation slides like Registration of a Partnership firm, Rights and Duties of Partner and Implied Authority of partner
5. To enhance knowledge in the Negotiable Instruments Act 1881.
6. To familiarize with the concepts in Indian Contract Act.

COURSE OUTCOMES:
Learners should be able to

1. Preparing a presentation on offer and acceptance of Contract
2. Giving presentation about A Contract is void without Consideration
3. Discussion in group on the following are unlawful agreements, Contractual Capacity, breach of contract and Remedies for Breach of Contract.
4. Designing Presentation slides like Registration of a Partnership firm, Rights and Duties of Partner and Implied Authority of partner
5. Enhancing the knowledge in the Negotiable Instruments Act 1881.
6. Familiarizing with the concepts in Indian Contract Act.

List of Practical

1. Prepare a presentation on offer and acceptance of Contract
2. A Contract is void without Consideration – Give a Presentation
3. Discuss in group on the following
   a. unlawful agreements
   b. Contractual Capacity
   c. breach of contract
   d. Remedies for Breach of Contract
   e. Contract of sale
   f. Conditions and Warranties

4. Design Presentation slides on the following topics
   a. Registration of a Partnership firm
   b. Rights and Duties of Partner
   c. Implied Authority of partner
   d. Mode of dissolution of Partner
   e. Limited Liability partnership agreement
   f. Incorporation by Registration
   g. Incorporation Document

h. Partners and their relations

5. Design Slides on negotiable instruments

a. Essential requisites of Negotiable Instruments
b. Promissory Note
c. Bill of Exchange
d. Cheque
e. Holder in due course
f. Negotiation
g. Types of Endorsement
h. Crossing of Cheque

Note: Record note to be submitted and Viva-voce will be conducted.

		L	T	P	C
		Semester II			
16CMU202	**BUSINESS MATHEMATICS AND STATISTICS**	**L**	**T**	**P**	**C**
		6	**2**	**-**	**6**

COURSE OBJECTIVES
To make the students

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
6. To be aware on of issues in the construction of index numbers

COURSE OUTCOMES:
Learners should be able to

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6.Overcoming on issues in the construction of index numbers

Unit I: Matrices & Basic Mathematics of Finance

Definition of a matrix. Types of matrices; Algebra of matrices. Calculation of values of determinants up to third order; Adjoint of a matrix; Finding inverse of a matrix through ad joint; Applications of matrices to solution of simple business and economic problems- Simple and compound interest Rates of interest – nominal, effective and continuous – their interrelationships; Compounding and discounting of a sum using different types of rates

Unit II: Differential Calculus

Mathematical functions and their types – linear, quadratic, polynomial; Concepts of limit and continuity of a function; Concept of differentiation; Rules of differentiation – simple standard forms. Applications of differentiation – elasticity of demand and supply; Maxima and Minima of functions (involving second or third order derivatives) relating to cost, revenue and profit.

Unit III: Uni-variate Analysis

Measures of Central Tendency including arithmetic mean, geometric mean and harmonic mean: properties and applications; mode and median. Partition values - quartiles, deciles, and percentiles. Measures of Variation: absolute and relative. Range, quartile deviation and mean deviation; Variance and Standard deviation: calculation and properties.

Unit IV: Bi-variate Analysis

Simple Linear Correlation Analysis: Meaning, and measurement. Karl Pearson's co-efficient and

Spearman's rank correlation Simple Linear Regression Analysis: Regression equations and estimation. Relationship between correlation and regression coefficients

Unit V: Time-based Data: Index Numbers and Time-Series Analysis

Meaning and uses of index numbers; Construction of index numbers: Aggregative and average of relatives – simple and weighted, Tests of adequacy of index numbers, Construction of consumer price indices. Components of time series; additive and multiplicative models; Trend analysis: Finding trend by moving average method and Fitting of linear trend line using principle of least squares

Semester II

16AEC201	ENVIRONMENTAL STUDIES	L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To understand the ecosystem and its functions
2. To be aware of the difference between the renewable and non-renewable resources.
3. To know about biodiversity and the importance of conservation.
4. To be aware of the different pollution that affects the environment.
5. To know about the social issues prevailing in the environment.
6. To be familiar in Disaster Management.

COURSE OUTCOMES:

Learners should be able to

1. Understand the ecosystem and its impact on human beings.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Avoid the threats to biodiversity habitat loses.
4. Prevent pollution in the environment
5. Apply the laws relevant to the environment conservation
6. Understand the causes of Disaster Management.

UNIT-I: Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III: Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution , Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Semester VI

	L	T	P	C
16CMU601A **MANAGEMENT ACCOUNTING**	5	-	-	5

COURSE OBJECTIVES:

To make the students

1. To understand the objectives of management accounting and Difference between Financial Accounting, Cost accounting and Management Accounting
2. To recognize the concept of Budget and Budgetary control.
3. To identify the Standard Costing and Variance Analysis
4. To understand the concept of marginal costing and Relevant Costs and Benefits
5. To know the operations of fund flow and cash flow statement.
6. To have in-depth knowledge in Accounting Standard.

COURSE OUTCOMES:

Learners should be able to

1. Explain nature and scope of management accounting
2. Evaluate Costing systems, cost management systems, budgeting systems and performance measurement systems
3. Extend Classification of ratios, capital structure and leverage.
4. Analysis performance evaluation applications of management accounting.
5. Prepare management reports by using funds flow and cash flow statement.
6. Prepare the Financial Statement under the defined Accounting standard.

Unit I

Introduction : Meaning – Objectives - Nature and Scope of Management Accounting - Difference between Cost Accounting and Management Accounting - Cost Control - Cost Reduction - Cost Management

Unit II

Budgetary Control: Budgeting and Budgetary Control -Concept of Budget, Budgeting and Budgetary Control –Objectives – Merits- Limitations - Budget Administration - Functional Budgets - Fixed and Flexible Budgets. Zero Base Budgeting. Programme and Performance Budgeting.

Unit III

Standard Costing: Standard Costing and Variance Analysis - Meaning of Standard Cost and Standard Costing – Advantages - Limitations and Applications - Variance Analysis – Material, Labour - Overheads and Sales Variances - Disposition of Variances - Control Ratios.

Unit IV

Marginal Costing: Absorption versus Variable Costing - Distinctive Features and Income Determination - Cost-Volume-Profit Analysis - Profit / Volume ratio - Break-even Analysis-Algebraic and Graphic Methods - Angle of Incidence - Margin of Safety - Key Factor, Determination of Cost Indifference Point - Responsibility Accounting - Concept, Significance, Different Responsibility Centres - Divisional Performance Measurement - Financial and Non-Financial Measures - Transfer Pricing.

Unit V

Decision Making :Steps in Decision Making Process - Concept of Relevant Costs and Benefits - Various short term Decision Making Situations – Profitable Product Mix - Acceptance or Rejection of special/ export offers - Make or Buy, Addition or Elimination of a Product Line, Sell or Process Further, Operate or Shut Down. Pricing Decisions - Major Factors Influencing Pricing Decisions, Various Methods of Pricing

16CMU601B COMPUTER APPLICATION IN BUSINESS

COURSE OBJECTIVES:

To make the students

1. To study the basics of Computer Networks.
2. To provide computer skills and knowledge for commerce students and to enhance the Student understands of usefulness of information technology tools for business operations.
3.To learn about concept of **Word Processing and** Printing Documents.
4. To prepare the **Presentations with** Creating Business Presentations using above facilities
5. To understand the principles of creating **Spreadsheet and its Business Applications**
6. To develop skills in analyzing the usability of a website.

COURSE OUTCOMES:

Learners should be able to

1. Studying the basics of Computer Networks.
2. Providing computer skills and knowledge for commerce students and to enhance the Student understands of usefulness of information technology tools for business operations.
3.Learning the concept of **Word Processing and** Printing Documents.
4. Preparing the **Presentations with** Creating Business Presentations using above facilities
5. Understanding the principles of creating **Spreadsheet and its Business Applications**
6. Developing the skills in analyzing the usability of a website.

Unit – I

Introduction to Computers: Definition - Characteristics and Limitations of Computers – Components of Computer System – Elements of Computers – Hardware – Software – Input and Output Devices – Storage Devices.

Unit 1I

Word Processing: Introduction to Word Processing - Word Processing Concepts - Use of Templates - Working with Word Document - Editing text, Find and replace text, Formatting, spell check, Autocorrect, Autotext; Bullets and numbering, Tabs, Paragraph Formatting, Indent, Page Formatting, Header and footer, Tables - Inserting, filling and formatting a table - Inserting Pictures and Video - Mail Merge - Including linking with Database - Printing Documents Creating Business Documents

Unit III

Preparing Presentations: Basics of Presentations – Slide - Fonts – Drawing – Editing - Inserting Tables, Images, texts, Symbols, Media - Design – Transition – Animation – Slideshow - Creating Business Presentations using above facilities

Unit IV

Spreadsheet and its Business Applications: Spreadsheet Concepts - Managing worksheets- Formatting - Entering data – Editing and Printing a Worksheet; Handling Operators in Formula, Project Involving Multiple Spreadsheets - Organizing Charts and Graphs Generally used

Spreadsheet Functions - Mathematical, Statistical, Financial, Logical, Date and Time, Lookup and reference, Database, and Text functions.

Unit V

Creating Business Spreadsheet: Creating Spreadsheet in the Area of Loan and Lease statement- Ratio Analysis - Payroll Statements Capital Budgeting- Depreciation Accounting- Graphical Representation of Data- Frequency Distribution and its Statistical Parameters- Correlation and Regression.

16CMU611A MANAGEMENT ACCOUNTING (PRACTICAL)

COURSE OBJECTIVES:
To make the students

1.To prepare inventory statements
2.To prepare bank reconciliation statement
3.To prepare various types of ratio analysis
4.To prepare Cash flow statement and Fund flow statement
5.To Create stock group and stock items and enter the vouchers
6.To prepare the various types of reports

COURSE OUTCOMES:
Learners should be able to

1. Preparing various types of inventory statements
2. Preparing the bank reconciliation statement
3. Preparing the various types of ratio analysis
4. Preparing the Cash flow statement and Fund flow statement
5. Creating the stock group and stock items and enter the vouchers
6. Preparing the various types of reports

The following are the list of practicals

1 Prepare inventory statements using (calculate inventory using all methods)
   - FIFO
   - LIFO
   - Simple Average Method
   - Weighted Average Method
2. Prepare bank reconciliation statement
3. Prepare the following ratio analysis
   - Financial ratio
   - Operating ratio
   - Investment ratio
4. Prepare the following
   - Cash flow statement
   - Fund flow statement
5. Create stock and stock groups

6. Create stock group and stock items and enter the vouchers
7. Preparation of reports for the following
    - Profit & loss a/c
    - Balance sheet
    - Bank reconciliation statement
    - Ledgers
    - Ratio analysis
8. Back up and restore the company information

16CMU611B COMPUTER APPLICATION IN BUSINESS (PRACTICAL)

Course Objectives:

To make the students

1. To know the MS-word usage and its commands
2. To be familiar with MS-Excel and its function
3. To be aware of the MS-power point
4. To know about the usage of MS-Access.
5. To be prepare documents and reports for the organization
6. To prepare presentation for business meetings.

Course Outcomes:

Learners should be able to

1. Knowing the MS-word usage and its commands
2. Familiar with MS-Excel and its function
3. Aware of the MS-power point
4. Knowing about the usage of MS-Access.
5. Preparing documents and reports for the organization
6. Preparing presentation for business meetings.

The following are the list of programmes,

MS WORD

1. Type chairman's speech/Auditor's report/Minutes/Agenda and perform the following operations:

   Bold. Underline. Font size. Style. Background color. Text color. Line spacing. Spell check. Alignment. Header & Footer. Inserting pages and page numbers. Find and Replace.

2. Prepare shareholders meeting letter for 10 members' using mail merge operation.
3. Prepare Bio-Data by using Wizard/Template.

MS EXCEL

1. Prepare a mark list of your class (minimum of 5 subjects) and perform the following operation:

   Data entry. Total. Average. Result and Ranking by using arithmetic and logical functions and sorting.

2. Draw the different type of charts (line. Pie. Bar) to illustrate year wise performance of sales. purchase. profit etc. of a company by using chart wizard.

3. Prepare a statement of Bank customer's account showing simple and compound interest calculations for 10 different customers' using mathematical and logical functions.

MS POWERPOINT

1. Design presentation slides for a product of your choice. The slide must include name. brand name. type of product. characteristics. special features. price. special offer etc.
2. Design presentation slides for organization details for 5 levels of hierarchy of a company by using organization chart.

MS ACCESS

1. Prepare a payroll for employee database of an organization with the following details:

   Employee ID. Employee name. Date of Birth. Department and Designation. Date of appointment. Basic pay. Dearness Allowance. House rent Allowance and other deduction if any. Perform queries for different categories.

2. Create mailings labels for student database which should include atleast three tables and each table must have atleast two fields with the following details:

   Roll Number. Name. Course. Year. College Name. University. Address and Phone number.

		Semester VI
16CMU602A	**OFFICE MANAGEMENT AND SECRETARIAL PRACTICE**	**L T P C** **6 2 - 6**

COURSE OBJECTIVES:
To make the students

1. To understand the concept office and office management.
2. To know the different finance sources of business and location of the business.
3. To familiarizes the students with the activities in a modern office
4. To impart the students about the working environment, the tools and equipment's used in office.
5. To understand the concept and procedure about banking facilities.
6. To demonstrate the importance and functions of Modern Office Equipments**.**

COURSE OUTCOMES:
Learners should be able to

1. Understanding the concept office and office management.
2. Knowing the different finance sources of business and location of the business.
3. Familiarizing the students with the activities in a modern office
4. Imparting the students about the working environment, the tools and equipment's used in office.
5. Understanding the concept and procedure about banking facilities.
6. demonstrating the importance and functions of Modern Office Equipments**.**

Unit I

Office and Office Management: Meaning of office - Functions of Office – Primary and Administrative Management Functions - Importance of Office - Duties of the Office Manager - - Qualities - Qualifications. Filing and Indexing: Filing and Indexing –Meaning and Importance - Essentials of Good Filing - Centralized vs. Decentralized Filing - Weeding of old records - Meaning and Need for Indexing - Types

Unit II

Mail and Mailing Procedures: Mailing Procedures – Meaning - Importance - Centralization of - Advantages - Room Equipment and Accessories - Sorting Tables and Rack, Letter Opener, Time and Date Stamps - Inward and Outward Mail – Distributing, Maintenance of Peon Book, Dispatching, Courier Services - Forms and Stationery **-** Office Forms –Meaning - Importance - Advantages - Disadvantages - Type - Factors Affecting Forms Design - Principles of Form Design - Form control. Stationery - Types of - importance - Selection of Stationery - Standardization of stationery.

Unit III

Modern Office Equipments: Modern Office Equipment – Meaning and Importance of Office Automation - Objectives– Advantages and Disadvantages - Factors Determining Office mechanization - Kind of office machines Personal computers – Photocopier – Fax – Telephone - Dictating machines - Audio Visual Aids. Budget: Budget - Annual, revised and estimated -.

Audit: Audit process- Vouching - verification and valuation - Consumables/ Stock register and Asset register - Procedure for disposal of records and assets.

Unit IV

Banking facilities: Types of accounts - Passbook and Cheque book - Other forms used in banks - ATM and money transfer - Abbreviations/Terms used in Offices: Explanation of abbreviations/terms used in offices in day-to-day work. Modes of Payment**: T**ypes of payments handled such as postal orders - Cheque (crossed/uncrossed) - post-dated and pre-dated Cheques - stale Cheque - dishonored Cheque.

UNIT V

Role of Secretary: Definition – Appointment - Duties and Responsibilities of a Personal Secretary - Qualifications for appointment as Personal Secretary - Modern technology and office communication – E - mail - Voice mail – Internet – Multimedia – Scanner - Video-conferencing - Web-casting - Agenda and Minutes of Meeting - Drafting, Fax-messages – E – mail - Maintenance of appointment diary.

பதிற்றுப்பத்து : 1. சிதைந்தது மன்ற-27

2. மீன்வயின் நிற்ப-90

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு:

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : 1.குறிஞ்சிக்கலி-சுடர்தொடீ -15

2. முல்லைக்கலி-தீம்பால் -11

அகநானூறு : 1.அன்னாய் வாழி வேண்டன்னை-குறிஞ்சி-17

புறநானூறு : 1. யாதும் ஊரே யாவருங் கேளிர்-பொதுவியல்-192

2.கெடுக சிந்தை கடிதிவள் துணிவே -279

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள்: சிறுதினை மலரொடு:218-275.

முருகன் அருள்புரிதல்: 286-295.

அலகு - III : காப்பியம் **(12 மணிநேரம்)**

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) - கண்ணகியின் சிறப்பு: 'நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி, 'கண்ணகி என்பாண் மன்னோ' என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: 'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: 'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

சூளாமணி: மந்திர சாலைச் சருக்கம் (தேர்ந்தெடுக்கப்பெற்ற 25 பாடல்கள்)

அலகு - IV : சிறுகதை **(15 மணிநேரம்)**

1. **குளத்தங்கரை அரசமரம் - வ.வே.சு.ஐயர்**
2. **காட்டில் ஒரு மான் - அம்பை**
3. **நாற்காலி - கி.ராஜநாராயணன்**
4. **நகரம் - சுஜாதா**
5. **எஸ்தர் - வண்ண நிலவன்**
6. **மரப்பாச்சி - உமா மகேஸ்வரி**

அலகு- V : மொழிப்பயிற்சி **(10 மணிநேரம்)**

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை,கட்டுரை, உரைநடை)

மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

		Semester II
		L T P C
16ENU201	**ENGLISH II**	**4 - - 4**

COURSE OBJECTIVES:
To make the students

1. To enable the learners to acquire English language skills.
2. To familiarize them with English literature.
3. To acquire Grammar.
4. To help learners imbibe cultural values.
5. To acquire skill of making correct sentences.
6. To reflect originality on the application of soft skills and express in writing their views.

COURSE OUTCOMES:
Learners should be able to

1. Learn to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. To get the social values.
4. To know the importance of communication
5. Get sound knowledge in English
6. Trained to communicate well for business purpose.

UNIT I

Prose: The Unexpected- Robert Lynd
Poetry: The Village Schoolmaster – Oliver Goldsmith
Short Story: The Lion's Share – Arnold Bennett
Vocabulary: Homonyms
Grammar: Irregular Verb

UNIT II

Prose: Travel by Train – J. B. Priestley
Poetry: The Gift of India – Sarojini Naidu
Grammar: Sentence pattern

UNIT III

Prose: Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi
Short Story: The Necklace – Guy De Maupassant

One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer
Vocabulary: Similes
Grammar: Discourse Markers

UNIT IV

Poetry: Ozymandias – P.B. Shelley
One-Act Play: The Pot of Broth- W.B. Yeats
Vocabulary: Collective Noun
Grammar: Correction of Sentences

UNIT V

Short Story: The Silver Butterfly– Pearl S. Buck
One-Act Play: The Bear – Anton Chekov
Vocabulary: Acronym
Grammar: Question Tag

Prescribed Text:

Semester II

5 - - 5

16BPU201 BUSINESS LAW

COURSE OBJECTIVES:

To make the students

1. To know the legal framework of governing the business world.
2. To understand the framework of different modes of contract
3. To provide the student with knowledge of Indian partnership.
4. To understand the sale of goods and sale of agreement.
5. To study the fundamentals of law, negotiable instrument Act, RTI, IPL procedure and process.
6. To familiarize with the concepts in Indian Contract Act.

COURSE OUTCOMES

Learners should be able to

1. Identify the fundamental legal principles behind contractual agreements.
2. To understood the contract, guarantee and kinds of agency
3. Acquire problem solving techniques and to be able to present coherent, concise legal argument
4. Able understood the sale of goods and sale of agreement.
5. To understood the fundamentals of law, negotiable instrument act, RTI, IPL procedure and process.
6. Prepare various agreements related to contract

Unit I

Indian Contract Act 1872: Contract – Definition – Obligation and Agreement – Nature of Contract and Classification – Components of Valid Contract – Offer and Acceptance – Consideration - Capacity – Free Consent – Unlawful Agreements – Quasi Contracts.

Unit II

Different Modes of Discharge of Contract: Remedies for Breach of Contract – Contract of Indemnity and Guarantee – Rights of Surety – Discharge of Surety- Pawn or Pledge – Rights of Payee – Rights and Liabilities of Finder of Lost Goods - Law of Agency – Kinds of Agency – Ex-Post Facto Agency Requirements – Rights and Liabilities of Principals and Agents.

Unit III

Indian Partnership Act 1932: Definition and Tests of Partnership – Implied Authority of Partners – Limitations – Firms Debts and Private Debts – Priority in Discharge – Rights and Liabilities of Partners – Dissolution of Partnership Firm.

Unit IV

Sale of Goods Act 1930: Definition of Sale and Distinction between Sale and Related Transaction Resembling Sale – Sale and Agreement to Sell – Rules Regarding Passing of Property in Goods – Condition and Warranties – Actual and Implied- Principle of Caveat Emptor - Limitations - Rights of Unpaid Vendor.

Unit V

Common Carriers: Definition - Rights and Duties of Common Carriers – Contract of Carriage of Goods by Sea – Bill of Lading and Charter Party – Distinction- **RTI Act**- Features- Procedures. **Negotiable Instrument Act**: Features- Presumption- Types- Promissory Notes- Bills of Exchange-Cheques- Holder in Due Course - Liability of Parties- Rights of Parties- **Intellectual Property Legislations:** Meaning and scope of Intellectual Properties – Patent Act of 1970 – Patentee – True and first inventor – Procedure for grant of Process and Product Patents – TRIPS.

Semester II

		L	**T**	**P**	**C**
16BPU211	**MS-OFFICE AND AUTOMATION-PRACTICAL**	**-**	**-**	**3**	**1**

COURSE OBJECTIVES:
To make the students

1. To impart the knowledge on elements of computers, in all spears of business life.
2. To provide knowledge on Business software for document and presentation
3. To apply the arithmetic and logical functions in excel in business context
4. To prepare business presentation through power point
5. To Understand and apply the knowledge of database creation through Access.
6. To utilize the expertise of the Excel features and functions as a lifelong practice.

COURSE OUTCOMES:
Learners should be able to

1. To prepare business documents / letters
2. Apply the arithmetic and logical functions in excel in business context
3. Able to prepare business presentation through power point
4. Understand and apply the knowledge of database creation through Access.
5. Utilize the expertise of the Excel features and functions as a lifelong practice.
6. Understand the features of Spreadsheet applications and functions.

List of Practical
MS WORD

1. Type chairman’s speech/Auditor’s report/Minutes/Agenda and perform the following operations:

    Bold. Underline. Font size. Style. Background color. Text color. Line spacing. Spell check. Alignment. Header & Footer. Inserting pages and page numbers. Find and Replace.

2. Prepare shareholders meeting letter for 10 members’ using mail merge operation.
3. Prepare Bio-Data by using Wizard/Template.

MS EXCEL

1. Prepare a mark list of your class (minimum of 5 subjects) and perform the following operation:

   Data entry. Total. Average. Result and Ranking by using arithmetic and logical functions and sorting.

2. Draw the different type of charts (line. Pie. Bar) to illustrate year wise performance of sales. purchase. profit etc. of a company by using chart wizard.
3. Prepare a statement of Bank customer’s account showing simple and compound interest calculations for 10 different customers’ using mathematical and logical functions.

MS POWERPOINT

1. Design presentation slides for a product of your choice. The slide must include name, brand name, type of product, Characteristics, Special features, Price, special offer etc.
2. Design presentation slides for organization details for 5 levels of hierarchy of a company by using organization chart.

MS ACCESS

1. Prepare a payroll for employee database of an organization with the following details:

   Employee ID, Employee name, Date of Birth, Department and Designation, Date of appointment, Basic pay, Dearness Allowance, House rent Allowance and other deduction if any perform queries for different categories.

2. Create mailings labels for student database which should include atleast three tables and each table must have at least two fields with the following details: Roll Number. Name. Course. Year. College Name. University. Address and Phone number.

Semester II

16BPU202 BUSINESS MATHEMATICS AND STATISTICS

L	T	P	C
6	2	-	6

COURSE OBJECTIVES

To make the students

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
6. To be aware on of issues in the construction of index numbers

COURSE OUTCOMES:

Learners should be able to

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. To overcome on issues in the construction of index numbers

Unit I

Matrices & Basic Mathematics of Finance: Definition of a matrix. Types of matrices; Algebra of matrices. Calculation of values of determinants up to third order; Adjoint of a matrix; Finding inverse of a matrix through ad joint; Applications of matrices to solution of simple business and economic problems- Simple and compound interest Rates of interest – nominal, effective and continuous – their interrelationships; Compounding and discounting of a sum using different types of rates

Unit II

Differential Calculus: Mathematical functions and their types – linear, quadratic, polynomial; Concepts of limit and continuity of a function; Concept of differentiation; Rules of differentiation – simple standard forms. Applications of differentiation – elasticity of demand and supply; Maxima and Minima of functions (involving second or third order derivatives) relating to cost, revenue and profit.

Unit III

Uni-variate Analysis: Measures of Central Tendency including arithmetic mean, geometric mean and harmonic mean: properties and applications; mode and median. Partition values - quartiles, deciles, and percentiles. Measures of Variation: absolute and relative. Range, quartile deviation and mean deviation; Variance and Standard deviation: calculation and properties.

Unit IV

Bi-variate Analysis: Simple Linear Correlation Analysis: Meaning, and measurement. Karl Pearson's co-efficient and Spearman's rank correlation Simple Linear Regression Analysis: Regression equations and estimation. Relationship between correlation and regression coefficients

Unit V

Time-based Data: Index Numbers and Time-Series Analysis: Meaning and uses of index numbers; Construction of index numbers: Aggregative and average of relatives – simple and weighted, Tests of adequacy of index numbers, Construction of consumer price indices. Components of time series; additive and multiplicative models; Trend analysis: Finding trend by moving average method and Fitting of linear trend line using principle of least squares

Semester II

16AEC201	**ENVIRONMENTAL STUDIES**	**L**	**T**	**P**	**C**
		4	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To understand the basic concepts of environment and ecosystem
2. To create the awareness the environmental problems among people.
3. To developing an attitude of concern for the environment and biodiversity and its conservation.
4. To know the environmental pollution, causes, effects and control measures of urban and industrial waste.
5. To study the special issue and the environment from unsustainable to sustainable development.
6. To be aware on environmental legislation.

Course Outcomes

Learners should be able to

1. Understand key concepts from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
2. Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
5. To understood the environment ethics for climate change, global warming, acid rain and ozone layer depletion.
6. Identify the issues in Public awareness, Population growth, variation among nations

Unit-I

Introduction: Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II

Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV

Environmental Pollution: Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit V

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Semester III

16ENU301	**ENGLISH III**	**L T P C**
		6 2 - 6

COURSE OBJECTIVES:

To make the students

1. To develop confidence to respond in English during situations where the use of English is imperative.
2. To develop fluency in actual conversation in the English language.
3. To develop knowledge about business communication.
4. To develop knowledge about business writing.
5. To acquire knowledge on communication for different purpose.
6. To get knowledge to communicate in day to affairs.

COURSE OUTCOMES:

Learners should be able to

1. Students learnt the basics and purposes of listening skill.
2. Students will know the importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Learnt some effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.
6. Students will have honed the skills of communication which is needed for business purpose.

UNIT I: Listening

Listening and its types, Basic Listening Lessons, Critical Listening Lessons, Advanced Listening Lessons, and Note Taking

UNIT II: Speaking

Basics of speaking, Regular English, Business English, Interview English, and Travel English

UNIT III: Reading

Reading and its purposes, Types of Reading, Reading Techniques, Reading Comprehension, Note Making

UNIT IV: Writing

Writing defined, Types of Writing, Components of Writing, Writing Contexts, Language and Style with accordance to the contexts

UNIT V: Vocabulary Enrichment

Synonyms, Antonyms, Homonyms, Phrasal Verbs, Idioms and Phrases, One Word Substitutes, and Affixes

Suggested Reading:

Semester III

16BPU301	**BUSINESS PROCESS SERVICES IN FINANCE AND ACCOUNTING**	**L T P C** **6 2 - 6**

COURSE OBJECTIVES:

To make the students

1. To understand the basic concepts business process organization and outsourcing.
2. To learn the process of regarding purchase management and distribution strategies.
3. To have an insight about receivable management.
4. To understand the concept of budgeting and ratio analysis.
5. To understand the various accounting standards applicable for BPO.
6. To understand the accounting procedure of BPO

COURSE OUTCOMES

Learners should be able to

1. The students will be familiarized with basic accounting principles for BPO.
2. The students will be capable of formulating and executing purchase order, distribution strategies and payment method.
3. The students will have in-depth knowledge on receivable management.
4. The students will be able to perform ratio analysis and will be capable of doing capital budget.
5. The exposure on basic accounting standards for BPO.
6. Apply accounting procedure in BPO

Unit I

Introduction: Basic Accounting Principles, Concept, Convention - Systems of Book Keeping - Recording, Classifying and Summarizing of Transaction - Final Accounts - Types of Business Organizations - Business Partnerships - Types of BPOs - Merits and De-Merits on various BPO options - Accounting Business Process Cycle - Evolving of Outsourcing - Need for outsourcing Horizontal Services - Current Trend in F&A Outsourcing.

Unit II

Purchase Management: Activities before Purchasing, Quotations, Negotiation, Costs associated with Purchases etc - How a Purchase Order is raised, types of Purchase Orders, Contracts etc., Warehouse Receipt procedures, Returns, Issues and various Documents - Accounting Impact -Inventory Control - Types of discount offered by Vendors - Basics of Distribution Strategies, Integration of Strategic Partnering, Outsourcing and Procurement Strategies Freight Negotiation, FTL, Payments, Conditions etc., Various Activities in Accounts Payable and Accounting Impact - Types of Invoice Matching and resolving issues - Invoice Payment, Procedures and Mode of payment - Employee Payment (T&E and Various Cards) - Debit Balance, Write back, Discount adjustments and various actions - Help desk and support Activities -Vendor Account Reconciliation - Latest developments (Vendor Portal, EDI, E-Invoicing, Tools etc.,) - Effective management of AP leads to working Capital improvement.

Unit III

Receivable Management: Various Activities in Accounts Receivable and Accounting Impact - Background check for Customers (D&B Report, Credit Rating) Credit Limit, Customer Contract / Order - Management) - Mode of receiving Payment, Actions for non-receipt, Netting off - Revenue Recognition - Collection - Cash Applications - Adjustment of Discounts, Rebate, QPS discount, Write off etc., - Disputes Handling procedures - Customer Help desk and support Activities - Customer Account Reconciliation - Latest Developments (Customer Portal, E-Invoicing, Tools etc.,) - Effective management of AR leads to working Capital improvement. Activities in General Ledger - What is Subsidiary and Control Accounts - Chart of Accounts and maintenance, Cost Centre, Profit Centre, - Adjustment journals - Cost Allocation etc. - Bank Reconciliation - Fixed Asset Maintenance - Inter Company - Accounting and Reconciliation - Tax Accounting - Transactional Element - Generation of Final Accounts - Various Reports (Statutory Reports, Schedules, Variance Analysis).

Unit IV

Budgeting and Ratio Analysis: Budgeting and Budgetary Controls - Capital Budgeting - Ratio Analysis - Process of Decison Making - Analysis of Financial Statements and Variances - Management Reporting - Modules and usage of ERPs - Basic Screens required to be understood for F&A process - 3. Report generation - XBRL, Platform, Counting, Data Privacy Law etc.

Unit V

Basics of Accounting Standard - Differences between various GAAPs (US, UK, Indian and IFRS) - COSO, Internal Controls & Audit, ISO Standards (applicable to BPO) / CMMI Certification.etc., - PCI Data Security Standard / Security Audit / Data Privacy and Protection SOX - Compliance / SSAE 16 /ISAE 3402 - SOD, Access, Incident Management, BCP etc., - How the various transaction flows are happening - BPO Terminologies - Importance of Process Documents Service Level Measurements Contractual elements - Governance model - Internal Reporting - Delivery Excellence - Integration of support functions - Future and Challenges

Note: This syllabus has 100% theory

TCS BPS study material

16BPU302	**CORPORATE LAW**	**Semester III** **L T P C** **6 - - 4**

COURSE OBJECTIVES:
To make the students

1. To learn the basic concepts about the company formation and commencement.
2. To understand the legal documents like MOA.
3. To study the capital raising methods through shares and debentures.
4. To study the corporate structure and conducting general meetings and resolution.
5. To understand the process of winding up a company
6. To know the powers and duties of the company management.

COURSE OUTCOMES
Learners should be able to

1. The students will have the understanding about the company formation, incorporation and commencement.
2. The students will be able to draft MOA.
3. The students will be well-versed in issue of share and debentures.
4. The students will be able to appoint board of directors organize and conduct general meetings.
5. The students will be able to execute the process of winding up a company.
6. Manage the legal process of Documentation

UNIT I
Introduction to Company: Company – Definition – Characteristics – Types – Lifting of corporate veil - Formation of a company – Procedure – Certificate of Incorporation – Effects of Registration – Promoters – Pre-incorporation Contracts – Certificate of Commencement.

UNIT II
Company Documents: Memorandum of association – Contents – Alteration - Articles of Association – Contents – Alteration – Doctrine of Ultra Virus – Legal effect of Memorandum and Articles - Constructive Notice of Memorandum and Articles - Doctrine of Indoor Management

UNIT III
Shares and Debentures: Prospectus – Definition – Abridged Prospectus – Statement in Lieu of Prospectus – Information Memorandum – Contents – Misstatement in Prospectus – Issue of Shares – Types – Application and Allotment of Shares, Share Certificate, Share Warrant - Transfer and Transmission of Shares – Buyback of Shares – Debentures – Meaning and Types – Procedure for Declaration of Dividends.

UNIT-IV
Company Management: Company Management – Board of Directors – Managing Director – Qualification, Appointment, Vacation of Office – Position – Powers, Duties and Liabilities – Board of Director's Meetings – General Meetings – Kinds of Meetings and Resolutions –

Procedure relating to Convening and Proceedings in General Meetings.

UNIT-V

Company Winding up: Winding up – Meaning Modes of Winding up – Compulsory Winding up by the Court – Voluntary Winding up – Types of Voluntary Winding up – Members Voluntary Winding up – Creditors Voluntary Winding up – Winding up subject to Supervision of the Court – Consequences of Winding up (general).Liquidator – Powers and Duties. Limited liability Partnership-Definition- Features- Registration - E-filing.

Semester III

		L	T	P	C
16BPU303A	**BUSINESS PROCESS SERVICES IN INSURANCE**	**6**	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To understand the concept of Risk, contract and insurance.
2. To understand the fundamental principles of life insurance.
3. To learn the non -life insurance concepts.
4. To learn to the nuances of health insurance.
5. To study the retirement plans and procedures at global level.
6. To know the life cycle of participants in a plan.

COURSE OUTCOMES

Learners should be able to

1. The students will be able to chart out the risk management in insurance.
2. The students will have theoretical base of life insurance.
3. The students will have an in-depth knowledge about non-life insurance.
4. The students will be able to understand health insurance concepts.
5. The students will have thorough knowledge about retirement plans.
6. Knowledge on various policies in insurance.

Unit I

Concept of Risk: Risk Management - Basic concepts (Hazards, Perils, Assets, etc.) - Fundamentals of Insurance - Characteristics of a valid contract - Insurance contract - Principles & Practices of Insurance Contract - Important terminologies & parties in insurance contract - Types of Insurance (Personal, Commercial, Health, Life, etc. - History of Insurance - Types of Insurance companies - Business units in an Insurance company - Overview of Insurance Life Cycle (Underwriting, Policy Servicing, Claims, etc.) - Reinsurance concept.

Unit II

Life Insurance : Important terminologies in a Life Insurance policy - Parties in a Life Insurance policy - Individual Life Insurance plans - Supplementary Benefits - Policy Provisions - Ownership rights - Life Insurance policy life cycle (New business & Underwriting, Policy servicing, Claims, etc.) - Concept of Annuity - Types of Annuity - Annuity contract provisions - Annuity : USA – Fixed Annuity, Fixed Index Annuity, Variable Annuity - Qualified & Non-Qualified Annuity - Principles of Group Insurance - Group Life Insurance - Group Retirement Plans

Unit III

Non – Life Insurance: concepts : Hazards, Perils, Catastrophe, Property Damage & Business Interruption, Policy exclusions, Indemnity, Deductibles, Retention, Premiums, Limits, Salvage, Subrogation, etc. - Insurance Providers – Co-Insurance, Reinsurance, Captive Insurance - Underwriting process - Policy Servicing process - Claims process – Reinsurance.

Unit IV

Health Insurance: Concept of Healthcare Insurance - How Healthcare Insurance works - Key Challenges of Healthcare Industry - Healthcare Eco System - Healthcare regulations & Standards ; HIPAA – Medicare – Medicaid – Mediclaim - Individual Health Insurance policies - Group Health Insurance policies - Managed Care – Eye Care – Micro Insurance Schemes

Unit V

Retirement Plans: Concept of Retirement Services - Retirement Planning - Asset Allocation & Asset Classes - Life stages of an Investor - Defined Benefit & Defined Contribution - Individual Retirement Arrangement in USA - Third Party Administrator for Retirement Services in USA - Life cycle of Participants in a plan (enrollment, contribution,etc.) - Categories of Pension in UK - DWP & TPR - Annuity & Income Drawdown Plan.

KARPAGAM ACADEMY OF HIGHER EDUCATION
COIMBATORE
SYLLABUS – B.COM (CA)
CANDIDATES ADMITTED FOR THE ACADEMIC YEAR 2016-2017 & ONWARDS

Semester I

பருவம் I

L	T	P	C
6	-	-	6

பகுதி - I, தமிழ்

16LAU101 : தமிழ் முதல் தாள்
(இளநிலை கலையியல் பட்ட வகுப்புகளுக்குரியது)

பாடத்திட்டப் பொதுநோக்கம்

1. கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
2. ஆய்வுநோக்கை மேம்படுத்துதல்.
3. இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
4. மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
5. வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
6. அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

அலகு - I : இக்கால இலக்கியம்: (20 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் - சுயசரிதை - ஆங்கிலக் கல்வி.
இன்றைய நிலை : கவிமணி தேசிய விநாயகம் -ஒற்றுமையே உயிர்நிலை
: கவிஞர் அப்துல்ரகுமான் - கால வழு
மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் - மலையாளக் காற்று கவிஞர் தாமரை -
மழைக்குறிப்பு
சூழலியல் : கவிஞர் வைதீஸ்வரன் -விரல் மீட்டிய மழை
பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் - புதையுண்ட வாழ்க்கை கவிஞர் வைரமுத்து -
அம்மா
வாழ்க்கை : கவிஞர் தருமுசிவராம் - வாழ்வுப் பாடல்
இயற்கை : பாவேந்தர் பாரதிதாசன் - அழகின் சிரிப்பு - வான்.

அலகு - II : அற இலக்கியம்: **(15 மணிநேரம்)**

கொன்றை வேந்தன்: 1 - 50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்பம் -20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

வேதநாயகம்பிள்ளை நீதிநூல்: 74 -78 பாடல்கள்

பெருவாயின் முள்ளியார் ஆசாரக்கோவை: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: **(15 மணிநேரம்)**

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

குற்றாலக்குறவஞ்சி: 5 பாடல்கள்

முக்கூடற்பள்ளு : 5 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது- 9 பாடல்கள்

அலகு - IV : கட்டுரை: **(10 மணிநேரம்)**

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ.இராசமாணிக்கனார்
3. வாழ்க்கை -இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்

5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: (12 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. எழுத்து, சொல், பொருள் இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Semester I

L	T	P	C
4	-	-	4

16ENU101 **ENGLISH – 1**

(For all undergraduate students admitted from 2016 onwards)

COURSE OBJECTIVES:

1. To help students enhance their Language skills
2. To introduce different kinds of literary works

16CCU102	INTRODUCTION TO INFORMATION TECHNOLOGY	Semester I
		L T P C
		5 - - 5

COURSE OBJECTIVES:

1. To know about the various concepts of information technology
2. To enable the students to learn about the various operating system
3. To understand the various applications and information process using MS Word
4. To recognize and process MS Power point
5. To use and create various applications using MS Excel
6. To understand Internet and ECommerce

COURSE OUTCOMES:

1. Understood concepts of information technology
2. Learnt about the various operating system
3. Understood to use and process MS Word
4. Recognized to process MS Power point
5. Learnt to create various applications using MS Excel
6. Understood Internet and ECommerce

Unit I

Introduction to computers: definition, characteristics and limitations of computers – Components of Computer System – Elements of Computers – Hardware – Software – Input and Output devices – storage devices.

Unit II

Operating system: Operating systems – Meaning, Definition, Functions and Types of Operating Systems – Booting process – Disk Operating System: Internal and External Commands -wild card characters – Computer virus, Cryptology. Windows operating system – Desktop, Start menu, Control Panel, Windows Accessories.

Unit III

MS Office: Ms Word – Meaning – Word Processing – Meaning and Features of Word Processing – Advantages and Applications of Word Processing – Toolbars – Creating, Saving and Closing a document – Moving and copying text – Text and Paragraph formatting, Applying Bullets and Numbering.

Unit IV

Ms Excel: Meaning – Features of MS Excel – Insertion and Deletion of Worksheet – Entering and editing data in worksheet – Cell range – Formatting – Auto Fill – Formulas and its disadvantages.

MS Power Point: Meaning – Slides – Creation of Slides – Slide Sorter, Slide Show, Slide Number, Slide Design, Slide Layout, Slide Show – View Show Set up Show, Custom Animation, Slide Transition.

Unit V

Internet, E- Commerce and E-Mail: E-Commerce: Meaning, Advantages and limitations, Application of e-commerce – E-mail – Creation of e-mail Id – Group communication – Tele conferencing – Video Conferencing – File Exchange – Bandwidth – Modem – Network Topologies – Network Types LAN, MAN, WAN and their architecture – Dial Up access.

INTRODUCTION TO INFORMATION TECHNOLOGY (PRACTICAL)

L	T	P	C
-	-	3	1

COURSE OBJECTIVES:

1. To provide basic training in MS Office
2. To gain the practical knowledge about MS word
3. To gain the practical knowledge about MS Excel
4. To create, add, delete slides using MS Power point
5. To insert the slides with animation effects
6. To manipulate the data base information

COURSE OUTCOMES:

1. Understood basic MS Office software
2. Gained practical knowledge about MS word
3. Gained practical knowledge about MS Excel
4. Learnt to create, add, delete slides using MS Power point
5. Learnt to create slides with animation effects
6. Recognized to manipulate the data base information

MS WORD

1. Type Chairman's Speech / Auditors report/ Minutes/ agenda and perform the following operations Bold, Underline, Font Size, Font Style, Background Color, text Color, Line Spacing, Spell Check, Alignment, Header and Footer, Inserting pages and page numbers, Find and replace.
2. Prepare an invitation for the College Function using Text boxes and Clip Arts
3. Design an invoice and Account Sales by using drawing tool bar, clip art, word art, symbols, borders and shading.
4. Prepare a class time table and perform the following operations
5. Inserting the table, data entry, alignment of rows and columns, inserting and deleting and change of table format.
6. Prepare a shareholders' meeting letter (notice) for 10 members using mail merge operation.
7. Prepare bio data by using wizard/ templates.

MS EXCEL

1. Prepare a mark list of your class (minimum 5 subjects) and perform the following operations
2. Data entry, total, average, result and ranking by using arithmetical, logical functions and sorting
3. Prepare final accounts (Trading Profit and Loss account and Balance Sheet) by using formula
4. Draw different types of charts (Line,. Pie, Bar) to illustrate yearwise performance of sales, purchase, profit of a company by using chart wizard.
5. Prepare a statement of Bank's customer account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions
6. Prepare a product life cycle, which should contain the following stages
7. Introduction, growth, maturity, saturation and decline

MS POWERPOINT

1. Design Presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, special features, price, special offer etc, and Add voice if possible to explain the features of the product. The presentation should work in manual mode.
2. Design presentation slides for organisation details for five levels of hierarchy of a company using organisation chart
3. Design slides for the headline news of a popular TV channel. The presentation should contain the following transactions – Top down, Bottom up, Zoom in and Zoom out – The presentation should work in custom mode.
4. Design presentation slides about an organisation and perform frame movement by inserting clip arts to illustrate running of an image automatically
5. Design presentation slides for the seminar, lecture presentation using animation effect and perform the following operations: Creations of different slides, changing background color, font color, using word art.

MS ACCESS

1. Prepare a payroll for employee database of an organisation with the following details

1. Employee id, employee name, date of birth, department, designation, date of appointment, basic pay, dearness allowance, , House Rent allowance and other deductions if any. Perform quires for different categories
2. Create mailing labels for student database which should include atleast three table, must have atleast 2 fields with the following details :Roll no, name, course, year, college name, university, address, phone number
3. Gather price quantity and other descriptions for five products and enter in the access table and create an invoice in the form of design view.
4. Create forms for simple table ASSETS
5. Create report for the PRODUCT database.

16AEC101 BUSINESS COMMUNICATION

COU

COURSE OBJECTIVES:

1. To provide an overview of Prerequisites to Business Communication.
2. To put in use the basic business letter writing concepts.
3. To understand business reports writing and its characteristics
4. To recognize resume preparation and details about interviews
5. Realize Speech. public speaking and business presentation
6. To impart knowledge about visual aids

COURSE OUTCOMES:

1. Learnt the Prerequisites of Business Communication.
2. Understood the basic business letter writing concepts.
3. Understood business reports writing and its characteristics
4. Recognize resume preparation and details about interviews and public speaking
5. Learnt about Speech and business presentation
6. Attained knowledge about visual aids

Unit I

Nature of Communication: Process of Communication, Types of Communication (Verbal & Non Verbal), Importance of Communication, Different forms of Communication; Barriers to Communication Causes, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers

Unit II

Business Correspondence: Letter Writing, presentation, Inviting quotations, Sending quotations, Placing orders, Inviting tenders, Sales letters, Claim & Adjustment Letters and Social Correspondence, Memorandum, Inter -office Memo, Notices, Agenda, Minutes,

Unit III

Report Writing: Business Reports, Types, Characteristics, Importance, Elements of Structure, Process of Writing, Order of Writing, the Final Draft, and Check lists for Reports.

Unit IV

Application Letters – Preparation of Resume – Interview: Meaning – Objectives and Techniques of various types of Interviews – Public speech – Characteristics of a good Speech- Business Report Presentations.

Unit V

Oral Presentation: Importance, Characteristics, Presentation Plan, Power point presentation, Visual aids.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)

பகுதி - I, தமிழ்

பருவம் II

16LAU201 : தமிழ் இரண்டாம் தாள்

(இளநிலை கலையியல் பட்ட வகுப்புகளுக்குரியது)

பாடத்திட்டப் பொதுநோக்கம்

1. கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
2. ஆய்வுநோக்கை மேம்படுத்துதல்.
3. இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
4. மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
5. வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
6. அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

அலகு - I : பக்தி இலக்கியம் **(10 மணிநேரம்)**

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு

1. **சைவம் -** பெரியபுராணம் - திருமூலநாயனார் புராணம்.
2. **வைணவம் -** பெரியாழ்வார் திருமொழி: 10 பாடல்கள்

அலகு - II : சங்க இலக்கியம் : **(25 மணிநேரம்)**

சங்க இலக்கியங்கள் அறிமுகம்

அ). **எட்டுத்தொகை**

நற்றிணை : 1. பிரசம் கலந்த - பாலை-110

2.தடமருப்பு எருமை- மருதம்-130

குறுந்தொகை :1. கருங்கட்டாக் கலை - குறிஞ்சி- 69

2. உள்ளது சிதைப்போர்- பாலை-283

ஐங்குறுநூறு : 1. நெய்தல்-தொண்டிப்பத்து: திரைஇமிழ் இன்னிசை-171

2. அன்னாய் வாழி வேண்டன்னை-203

பதிற்றுப்பத்து : 1. சிதைந்தது மன்ற-27

2. மீன்வயின் நிற்ப-90

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு:

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : 1.குறிஞ்சிக்கலி-சுடர்தொடீ -15

2. முல்லைக்கலி-தீம்பால் -11

அகநானூறு : 1.அன்னாய் வாழி வேண்டன்னை-குறிஞ்சி-17

புறநானூறு : 1. யாதும் ஊரே யாவருங் கேளிர்-பொதுவியல்-192

2.கெடுக சிந்தை கடிதிவள் துணிவே -279

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள்: சிறுதினை மலரொடு:218-275.

முருகன் அருள்புரிதல்: 286-295.

அலகு - III : காப்பியம் **(12 மணிநேரம்)**

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) - கண்ணகியின் சிறப்பு: 'நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி, 'கண்ணகி என்பாண் மன்னோ' என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: 'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: 'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

சூளாமணி: மந்திர சாலைச் சருக்கம்

(தேர்ந்தெடுக்கப்பெற்ற 25 பாடல்கள்)

அலகு - IV : சிறுகதை **(15 மணிநேரம்)**

1. குளத்தங்கரை அரசமரம் -வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி - கி.ராஜநாராயணன்
4. நகரம் - சுஜாதா
5. எஸ்தர் - வண்ண நிலவன்
6. மரப்பாச்சி - உமா மகேஸ்வரி

அலகு- V : மொழிப்பயிற்சி **(10 மணிநேரம்)**

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)

மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

SEMESTER II

L	T	P	C
4	-	-	4

16ENU201- Part II - English II
(For all undergraduate students admitted from 2016 onwards)

COURSE OBJECTIVES:

1. To enable the learners to acquire English language skills.
2. To familiarize them with English literature.
3. To attain basic knowledge on Grammar.
4. To help learners imbibe cultural values.
5. To gain knowledge of making correct sentences.
6. To reflect originality on the application of soft skills and express in writing their views.

COURSE OUTCOMES:

1. Acquire to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. Develop the social values.
4. Recognize the importance of communication
5. Get sound knowledge in English
6. Communicate well for business purpose.

UNIT I

Prose: The Unexpected- Robert Lynd
Poetry: The Village Schoolmaster – Oliver Goldsmith
Short Story: The Lion's Share – Arnold Bennett
Vocabulary: Homonyms
Grammar: Irregular Verb

UNIT II

Prose: Travel by Train – J. B. Priestley
Poetry: The Gift of India – Sarojini Naidu
Grammar: Sentence pattern

UNIT III

Prose: Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi
Short Story: The Necklace – Guy De Maupassant
One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer
Vocabulary: Similes
Grammar: Discourse Markers

UNIT IV

Poetry: Ozymandias – P.B. Shelley
One-Act Play: The Pot of Broth- W.B. Yeats
Vocabulary: Collective Noun
Grammar: Correction of Sentences

UNIT V

Short Story: The Silver Butterfly– Pearl S. Buck
One-Act Play: The Bear – Anton Chekov
Vocabulary: Acronym
Grammar: Question Tag

5 - - 5

16CCU201 BUSINESS LAW

COURSE OBJECTIVES:

1. To understand General principles of Indian Contract Act, 1872
2. To understand Specific contracts and Sale of goods act Indian Contract Act, 1872
3. To Understand Partnership Act, 1932
4. To Understand Limited Liability Partnership Act, 2008
5. TO impart Negotiable Instruments Act 1881
6. To know the Types of Negotiable Instruments

COURSE OUTCOMES:

1. Understood the General principles of Indian Contract Act, 1872
2. Understood Specific contracts and Sale of goods act Indian Contract Act, 1872
3. Understood Partnership Act, 1932
4. Understood Limited Liability Partnership Act, 2008
5. Attained Negotiable Instruments Act 1881
6. Realized Types of Negotiable Instruments

Unit I

The Indian Contract Act, 1872: General Principles of Contract- Contract – Meaning, Characteristics and Kinds- Essentials of a Valid Contract - Offer and Acceptance, Consideration, Contractual capacity, Free Consent, Legality of objects- Void Agreements- Discharge of a Contract – Modes of discharge, Breach and Remedies against breach of Contract- Contingent contracts- Quasi – Contracts.

Unit II

The Indian Contract Act, 1872: Specific Contracts - Contract of Indemnity and Guarantee- Contract of Bailment- Contract of Agency-The Sale of Goods Act, 1930 - Contract of sale, Meaning and difference between sale and agreement to sell-Conditions and warranties- Transfer of ownership in goods including sale by a non-owner- Performance of contract of sale- Unpaid seller – Meaning, Rights of an unpaid seller against the goods and the buyer.

Unit III

Partnership Laws: The Partnership Act, 1932- Nature and Characteristics of Partnership- Registration of a Partnership Firms- Types of Partners- Rights and Duties of Partners- Implied Authority of a Partner- Incoming and outgoing Partners- Mode of Dissolution of Partnership.

Unit IV

The Limited Liability Partnership Act, 2008: Salient Features of LLP- Differences between LLP and Partnership, LLP and Company- LLP Agreement,- Partners and Designated Partners- Incorporation Document- Incorporation by Registration- Partners and their Relationship.

Unit V

The Negotiable Instruments Act 1881: Meaning, Characteristics, and Types of Negotiable Instruments: Promissory Note, Bill of Exchange, Cheque-Holder and Holder in Due Course, Privileges of Holder in Due Course. Negotiation: Types of Endorsements- Crossing of Cheque-Bouncing of Cheque

Suggested Readings:

Text Book:

1. Kapoor N.D.2014). *Elements of Mercantile Law*. New Delhi, S.Chand & Co,

Reference Books:

16CCU211 **BUSINESS LAW (PRACTICAL)** **L T P C**

3 - - 1

COURSE OBJECTIVES:

1. Helps to acquire in depth knowledge in Indian Contract Act
2. Helps to acquire in depth knowledge of agreements Indian Contract Act
3. To demonstrate unlawful agreements, contracts
4. Helps the students to get more knowledge on basics of Partnership Act
5. To let know the partnership features
6. Helps to provide enough knowledge on Negotiable Instrument Act

COURSE OUTCOMES:

1. Helps to acquire in depth knowledge in Indian Contract Act
2. Helps to acquire in depth knowledge of agreements Indian Contract Act
3. To demonstrate unlawful agreements, contracts
4. Helps the students to get more knowledge on basics of Partnership Act
5. To let know the partnership features
6. Helps to provide enough knowledge on Negotiable Instrument Act

List of Practical

1. Prepare a presentation on offer and acceptance of Contract
2. A Contract is void without Consideration – Give a Presentation
3. Discuss in group on the following
   a. unlawful agreements
   b. Contractual Capacity
   c. Breach of contract
   d. Remedies for Breach of Contract
   e. Contract of sale
   f. Conditions and Warranties

4. Design Presentation slides on the following topics
   a. Registration of a Partnership firm
   b. Rights and Duties of Partner
   c. Implied Authority of partner
   d. Mode of dissolution of Partner
   e. Limited Liability partnership agreement
   f. Incorporation by Registration
   g. Incorporation Document

h. Partners and their relations

5. Design Slides on negotiable instruments

a. Essential requisites of Negotiable Instruments
b. Promissory Note
c. Bill of Exchange
d. Cheque
e. Holder in due course
f. Negotiation
g. Types of Endorsement
h. Crossing of Cheque

Note: Record note to be submitted and Viva-voce will be conducted.

Suggested Readings:

2. SN Maheshwari and SK Maheshwari. (2011). *Business Law*. New Delhi, National Publishing House.

3. Agarwal, S K, (2005). *Business Law*. New Delhi, Galgotia Publishers Company.

4. P C Tulsian and Bharat Tulsian. (2000), *Business Law*, New Delhi, McGraw Hill Education

Semester II

16CCU202 **BUSINESS MATHEMATICS AND STATISTICS**

L	T	P	C
6	2	-	6

COURSE OBJECTIVES :

To make the students

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
6. To Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.

COURSE OUTCOMES:

Learners should be able to

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. Analyze problems in economics, business, and accounting to determine appropriate methods for solving them using business math concepts and applications.

UNIT- I: Matrices & Basic Mathematics of Finance

Definition of a matrix. Types of matrices; Algebra of matrices. Calculation of values of determinants up to third order; Adjoint of a matrix; Finding inverse of a matrix through ad joint; Applications of Matrices to solution of simple business and economic problems- Simple and compound interest Rates of interest – Nominal, effective and continuous – their interrelationships; Compounding and discounting of a sum using different types of rates

UNIT-II: Differential Calculus

Mathematical functions and their types – linear, quadratic, polynomial; Concepts of limit and continuity of a function; Concept of differentiation; Rules of differentiation – simple standard forms. Applications of differentiation – elasticity of demand and supply; Maxima and Minima of functions (involving second or third order derivatives) relating to cost, revenue and profit.

UNIT-III: Uni-variate Analysis

Measures of Central Tendency including arithmetic mean, geometric mean and harmonic mean:

properties and applications; mode and median. Partition values - quartiles, deciles, and percentiles. Measures of Variation: absolute and relative. Range, quartile deviation and mean deviation; Variance and Standard deviation: calculation and properties.

UNIT-IV: Bi-variate Analysis

Simple Linear Correlation Analysis: Meaning, and measurement. Karl Pearson's co-efficient and Spearman's rank correlation Simple Linear Regression Analysis: Regression equations and estimation. Relationship between correlation and regression coefficients

Unit V: Time-based Data: Index Numbers and Time-Series Analysis

Meaning and uses of index numbers; Construction of index numbers: Aggregative and average of relatives – simple and weighted, Tests of adequacy of index numbers, Construction of consumer price indices. Components of time series; additive and multiplicative models; Trend analysis: Finding trend by moving average method and Fitting of linear trend line using principle of least squares

Suggested Readings:

Semester II

16AEC201 ENVIRONMENTAL STUDIES

L	T	P	C
4	-	-	4

COURSE OBJECTIVES

1. To know the importance of environmental studies and methods of conservation of natural resources.
2. To describe the structure and function of an ecosystem and explain the values and Conservation of bio-diversity.
3. To explain the sources, environmental effects and control measures of various types of pollutions.
4. To select the appropriate methods for waste management.
5. To recall social issues and legal provision and describe the necessities for environmental act.
6. To recognize Population explosion

COURSE OUTCOMES

1. At the end of the course, students would be able to Know the importance of environmental studies and methods of conservation of natural resources.
2. Describe the structure and function of an ecosystem and explain the values and Conservation of bio-diversity.
3. Explain the sources, environmental effects and control measures of various types of pollutions.
4. Select the appropriate methods for waste management.
5. Recall social issues and legal provision and describe the necessities for environmental act
6. Recognized Population explosion

UNIT I:

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II

Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

UNIT III

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV

Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution , Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

UNIT V:

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

16ENU301 **ENGLISH III**

Semester - III

(For all undergraduate students admitted from 2016 onwards)

L	T	P	C
6	2	-	6

COURSE OBJECTIVES:

1. To develop confidence to respond in English during situations where the use of English is imperative.
2. To develop fluency in actual conversation in the English language.
3. To develop knowledge about business communication.
4. To develop knowledge about business writing.
5. To acquire knowledge on communication for different purpose.
6. To get knowledge to communicate in day to affairs.

COURSE OUTCOMES:

1. Students learnt the basics and purposes of listening skill.
2. Students will know the importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Acquired knowledge on effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.
6. Students will develop knowledge about business writing.

UNIT I: Listening

Listening and its types, Basic Listening Lessons, Critical Listening Lessons, Advanced Listening Lessons, and Note Taking

UNIT II: Speaking

Basics of speaking, Regular English, Business English, Interview English, and Travel English

UNIT III: Reading

Reading and its purposes, Types of Reading, Reading Techniques, Reading Comprehension, Note Making

UNIT IV: Writing

Writing defined, Types of Writing, Components of Writing, Writing Contexts, Language and Style with accordance to the contexts

UNIT V: Vocabulary Enrichment

Synonyms, Antonyms, Homonyms, Phrasal Verbs, Idioms and Phrases, One Word Substitutes, and Affixes

16CCU301 **CORPORATE ACCOUNTING**

COURSE OBJECTIVES:

1. To enable the students to acquire the basic knowledge of the corporate accounting
2. To provide the knowledge on issue of shares
3. To teach the students about under writing and redemption of sharb debentures
4. To know the accounting treatment for profit prior to incorporation
5. To gain the amalgamation and absorption procedures of acompany
6. To understand the concepts of liquidation

COURSE OUTCOMES

1. Attained the knowledge on corporate accounting
2. Secured the knowledge on issue of shares
3. Secured knowledge about under wring and redemption of preference shares & debentures
4. Understood the accounting treatment for profit prior to incorporation
5. Gained the concepts of amalgamation and absorption procedures of a company
6. Understood the concept of Liquidation

UNIT-I

Accounting for Share Capital and Debentures: Issue, forfeiture and reissue of forfeited shares - concept & process of book building - Issue of rights and bonus shares - Buyback of shares - Redemption of preference shares Issue and Redemption of Debentures

UNIT-II

Final Accounts: Preparation of profit and loss account and balance sheet of corporate entities – excluding calculation of managerial remuneration - Disposal of company profits. **Valuation of Goodwill and Valuation of Shares:** Concepts and calculation: simple problem only

UNIT- III

Amalgamation of Companies: Concepts and accounting treatment as per Accounting Standard: 14 (ICAI) (excluding inter- company holdings). Internal reconstruction - concepts and accounting treatment (excluding scheme of reconstruction)

UNIT- IV

Accounts of Holding Companies/Parent Companies: Preparation of consolidated balance sheet with one subsidiary company - Relevant provisions of Accounting Standard: 21 (ICAI).

UNIT-V

Accounts of Banking Companies: Difference between balance sheet of banking and non-banking companies - Prudential norms - Asset structure of a commercial bank - Non-performing assets (NPA).

Suggested Readings:

16CCU311 CORPORATE ACCOUNTING (PRACTICAL)

COURSE OBJECTIVES:

1. To enable the students to acquire the basic knowledge on the application of accounting standards for amalgamation
2. To make the students to learn the techniques and application of accounting standards in the preparation of financial statements
3. To make the students understand the procedure of Goodwill of companies
4. To make the students well versed about Final account preparation
5. To generate knowledge about accounting standard for share trading
6. To generate knowledge about Accounting Standards for Debenture

COURSE OUTCOMES:

1. To enable the students to acquire the basic knowledge on the application of accounting standards for amalgamation
2. To make the students to learn the techniques and application of accounting standards in the preparation of financial statements
3. To make the students understand the procedure of Goodwill of companies
4. To make the students well versed about Final account preparation
5. To generate knowledge about accounting standard for share trading
6. To generate knowledge about Accounting Standards for Debenture

List of Practical

1. Prepare Format and Procedure of Amalgamation Companies as per Accounting
2. Prepare Format and Procedure of Accounting for Holding Companies and parent Companies as per Accounting Standard 21
3. Prepare the procedure for valuation of Goodwill of companies under Accounting Standard 36.
4. Financial Reporting Standard (FRS) 10 – Valuation of Goodwill
5. Prepare final Accounts of Companies as per Accounting Standard
6. Accounting standard for Share
7. Accounting Standards for Debenture

Note: Record note to be submitted and Viva-voce will be conducted.

16CCU302 OBJECT ORIENTED PROGRAMMING WITH C++

COURSE OBJECTIVES

1. To familiarize the students with the fundamental conceptsof C++
2. To enhance the knowledge about loops and arrays in C++.
3. To obtain an execution pattern of control functions andstructure and unions in C++.
4. To gain the knowledge about Pointers in C++
5. To gain the knowledge about Arrays in C++
6. To obtain the knowledge about file processing in C++.

COURSE OUTCOMES

1. Recognized the fundamental concepts of C++.
2. Understood the execution pattern of loops and arraysin C++.
3. Enhance the knowledge about control functions and structure and unions in C++.
4. Obtained the knowledge about Pointers in C++
5. Obtained the knowledge about Pointers in C++
6. Developed the knowledge about file processing in C++.

UNIT I

Principles of Object- Oriented Programming – A Look at Procedure and Object - Oriented Paradigm – Basic Concepts of Object – Oriented Programming – Benefits of Oop – Object-Oriented Languages – Applications of Oop . Beginning with C++ - What is C++? – Applications of C++ - C++ Statements – Structure of C++ Program.

UNIT II

Tokens, Expressions and Control Structures – Tokens – Keywords – Identifiers – Basic & User – Defined Data Types – Operators in C++ - Operator Over Loading – Operator Precedence – Control Structures – Functions in C++ - The Main Function – Function Prototyping – Call By Reference – Return By Reference – In Line Functions – Function Over Loading – Friend and Virtual Functions.

UNIT III

Classes and Objects – Introduction – Specifying a Class – Defining Member Function – Nesting of Member Functions – Private Member Functions – Arrays within a Class- Static Data Members – Static Member Functions – Array of Objects – Objects as Function Arguments – Friendly Functions – Pointers to Members. Constructors & Destructors – Constructors – Copy Constructors – Dynamic Constructors – Construction Two- Dimensional Arrays – Destructors.

UNIT IV

Operator Over Loading -Type Conversion – Introduction – Defining Operator Over Loading – Over Loading Unary & Binary Operators – Over Loading Binary Operators using Friends – Manipulation of String Using Operators – Rules for Over Loading Operators – Types – Conversions – Inheritance – Extending Classes – Defining Derived Classes – Single, Multi Level Multiple, Hierarchical & Hybrid Inheritance – Virtual Base Classes – Abstract Classes.

UNIT V

Pointers, Virtual Functions & Polymorphism – Pointers to Object - Pointers to Derived Classes – Virtual Functions .Working with Files – Classes for File Stream Operations – Opening and Closing a File – File Pointers & their Manipulations - Sequential I/O Operations.

Suggested Readings:

Text Book:

Semester III

	L	T	P	C
16CCU312 OBJECT ORIENTED PROGRAMMING WITH C++ (PRACTICAL)	-	-	4	2

COURSE OBJECTIVES

1. To familiarize the students with the programming concepts of C++
2. To famialrize the creation of Objects and Classes
3. To uderstand the concept of overloading
4. To know the concept of ineritance
5. To uderstand the concept of console Input/Output
6. To identify the concept of file in CPP

COURSE OUTCOMES

1. Understood the programming concepts of C++
2. Famialrized creation of Objects and Classes
3. Uderstood the concept of overloading
4. Understood the concept of ineritance
5. Understood the concept of console Input/Output
6. Identified the concept of file in CPP

Object and Classes

1. Create an class to implement the data structure STACK . Write a constructor to initialize the top of the STACK to zero. Write a member function PUSH () to insert an element and a member function POP () to delete an element. Check for over flow and under flow conditions

2. Create a class ARITH which consists of FLOAT and an INTEGER variable. Write member function ADD () SUB (), MUL (), DIV () MOD () to perform addition, subtraction, mulplication, division and modulus respectively. Write member functions to get and display MAT () object values.

Operator Overloading

3. Create a class "MAT" as a 2D matrix and R, C represents rows and columns of the matrix. Overload the operators +-* t add, subtract, multiply 2 matrices. Write member functions to get and display MAT () object values.

4. Create a class STRING. Write member function to initalise to get and display strings. Overload the operator + to concatenate two strings, == to compare 2 string and a member function to find the length of the strings.

Inheritance

5. Create a class which consist of EMPLOYEE details like eno, ename, dept, basic salary and grade. Write member function to get and display them. Derive a class PAY from the above class and write member function to calculate DA, HRA, PF depending on the grade and display the payslip in a neat format using console I/O.

6. Create a class SHAPE whicb consist of two virtual functions CAL_Area () and CAL_Peri () to calculate area and perimeter of various figures . Derive 3 classes SQUARE, RECTANGLE, TRIANGLE from the class SHAPE and calculate area and perimeter of each separately and display the result.

7. Create two classes, which consist of two private variables, one integer and one float variable in each class. Write member functions to get and display them. Write FRIEND function common to both classes which takes the object of the above two classes as arguments and the integer and float values of both the objects separately and display the results.

Console I/O

8. Write a user defined function USERFUN () which has the formatting commands like setw(), showpos(), precision (). Write a programme which prints a multiplication table and uses userfun() for formatting.

Files

9. Write a program to perform insertion, deletion and updation using files

10. Write a program which takes a file as arguments and copies into anpother file with line numbers using Command Line Arguments.

16CCU303 A **COMPANY LAW**

COURSE OBJECTIVES:

1. The objective of the course is to impart basic knowledge of the provisions of the Companies Act 2013.
2. To impart Basic and broad knowledge in business laws in management.
3. Ability to apply concepts, principles and theories to understand simple business laws.
4. Awareness of the different business laws.
5. Awareness of the global business laws and its impacts on businesses.
6. Case studies involving issues in company law are required to be discussed.

COURSE OOUTCOMES:

1. Received basic knowledge of the provisions of the Companies Act 2013.
2. Understood Basic and broad knowledge in business laws in management.
3. Familiarized with the principles and theories of business laws.
4. Awareness accomplished about different business laws.
5. Understood the global business laws and its impacts on businesses.
6. Present Case studies involving issues in company law

UNIT I

Introduction – Administration of Company Law [including National Company Law Tribunal (NCLT), National Company Law Appellate Tribunal (NCLAT), Special Courts]; Characteristics of a company; lifting of corporate veil; types of companies-; formation of company-

UNIT II

Documents – Memorandum of association, Articles of association, Doctrine of constructive notice and indoor management prospectus-shelf and red herring prospectus, Misstatement in prospectus, GDR; Book building; Issue, allotment and forfeiture of share, Transmission of shares, Buyback and provisions regarding buyback; Issue of bonus shares.

UNIT III

Management: Classification of directors, women directors, independent director, small shareholder's director; Disqualifications, director identity number (DIN); Appointment; Legal positions, powers and duties; removal of directors; Key managerial personnel, managing director, manager; Meetings of shareholders and board; Types of meeting, conduct of meetings, Committees of Board of Directors - Audit Committee, Nomination and Remuneration Committee, Corporate Social Responsibility Committee.

UNIT IV

Dividends, Accounts, Audit– Provisions relating to payment of Dividend, Provisions relating to Books of Account, Provisions relating to Audit, Auditors' Appointment, Rotation of Auditors, Auditors' Report, Secretarial Audit.

UNIT V

Winding Up - Concept and modes of Winding Up. **Insider-Trading, Whistle-Blowing** – Insider-Trading; meaning and legal provisions; Whistleblowing: Concept and Mechanism.

Suggested Readings :

Text Book:

1. Kapoor N.D. (2009) *Elements of Mercantile Law*. [4th Edition] New Delhi, S.Chand & Co.

Semester III

16CCU303 B **RETAIL MANAGEMENT** **L T P C**

6 - - 4

COURSE OBJECTIVES:

1. Introduce retailing and its evaluation in the Indian and Global markets
2. To know about the retail functions and challenges in India.
3. To understand the Retailing and its evolution, in the Indian and Global Markets.
4. To give exposure to Customer Relationship Management and its Operations in Retailing.
5. To provide exposure and skills to establish service operations and
6. To give awareness a gain the knowledge about the role of agriculture and green revolution about the marketing channel systems.

COURSE OUTCOMES:

1. Understand retail markets Locally and Globally
2. Know the one of the fastest growing careers in the industry with the tremendous growth in the economy.
3. Get knowledge about the retail business models
4. Understanding the knowledge of Customer Relationship Management and its Operations in Retailing
5. strives to create a new generation of smart retail professional of international caliber
6. Insight into the operations of the marketing channel systems.

UNIT- 1: INTRODUCTION TO RETAIL BUSINESS

Retail Functions – Rise of Retailing – Consumerism – challenges – Consumer Proximity – Technology – Rise of Retailing in India – Key Markets – FDI in retail – Challenges in India – New Entrants – Emerging Sectors – Suppliers and buyers Rivalry

UNIT-2: EVALUATION OF RETAILING

Theories – Retail lifecycle – Business Models – Ownership – Merchandise offered , Franchise, Non Store, Direct Marketing – Tele, Vending Machines, Kiosks, Cash and Carry Global Experience – Brand Management.

UNIT- 3: RETAIL OPERATIONS

Factors influencing location of Store - Market area analysis – Trade area analysis – Rating Plan Method - Site evaluation. Retail Operations: Stores Layout and visual merchandising, Stores designing, Space planning, Inventory management, Merchandise Management, Category Management.

UNIT- 4: RETAIL MARKETING MIX

Introduction -Product: Decisions related to selection of goods (Merchandise Management revisited) – Decisions related to delivery of service. Pricing : Influencing factors – approaches to pricing – price sensitivity - Value pricing – Markdown pricing. Place : Supply channel – SCM principles – Retail logistics – computerized replenishment system – corporate replenishment policies. Promotion : Setting objectives – communication effects - promotional mix. Human Resource Management in Retailing – Manpower planning – recruitment and training – compensation – performance appraisal Methods.

UNIT-5: IMPACT OF INFORMATION TECHNOLOGYIN RETAILING.

Non store retailing (e-retailing) - The impact of Information Technology in retailing – Integrated systems and networking – EDI – Bar coding – Electronic article surveillance – Electronic shelf labels – customer database management system. Legal aspects in retailing, Social issues in retailing, Ethical issues in retailing.

Suggested Readings:

		L	**T**	**P**	**C**
16ENU401	**ENGLISH IV (THEORY & PRACTICAL)**	**6**	**2**	**-**	**6**

(Communication Lab/BEC/IELT) EC-4

(For all undergraduate students admitted from 2016 onwards)

COURSE OBJECTIVES:

1. To train students in understanding the concepts of communication.
2. To be familiar with the four basic skills of English.
3. To train students in developing their written communication.
4. To train students in developing their presentation skills.
5. To acquire the skill of making grammatically correct sentences.
6. To reflect originality on the application of soft skill views and express in writing their views.

COURSE OUTCOMES:

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Developed the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Enhanced communication competency through LSRW skills.

UNIT I: Integrated Skills

Development of speaking, listening and grammar skills.

UNIT II: Advanced Reading Skills

Outcomes include improved reading speed, increased reading fluency and increased vocabulary.

UNIT III: Advanced Writing Skills

Planning and writing complex tasks

UNIT IV: News and World Affairs

Newspapers, magazines, the Internet, TV and radio are used to develop listening, reading and discussion skills.

UNIT V: Project Work

The class works together to write and produce a group project. This class is particularly useful for building confidence in using English and improving pronunciation.

16CCU401 **COST ACCOUNTING**

COURSE OBJECTIVES:

1. To acquaint the students with basic concepts used in cost accounting, various methods involved in cost ascertainment and cost accounting book keeping systems.
2. To enable the students to learn the basic concepts of Cost Accounting and enable them to compute the cost of products and services.
3. To familiarize students with the knowledge of methods of valuation of material issues and calculation of labour turnover cost
4. To create cost consciousness of manufacturing sectors among the students.
5. To provide the knowledge about use of costing data for planning, controls and decision making.
6. To varying procedures for the collection of expenses give rise to the different systems of costing as Historical or Actual Costs, Estimated Costs, Standard Costs etc.

COURSE OUTCOMES:

1. Understand cost accounting book keeping systems
2. Understand the basic concepts of cost accounting and enable them to various elements of cost.
3. Familiar with the methods of valuation of material issues and calculation of labour turnover cost
4. Analyze the allocation and apportionment of overheads for the various department of the organization.
5. Aware and calculation of total cost for each process.
6. Gain the knowledge for the collection of expenses and give rise to the different methods of costing.

UNIT-I

Introduction: Meaning, objectives and advantages of cost accounting; Difference between cost accounting and financial accounting; Cost concepts and classifications; Elements of cost; Installation of a costing system; Role of a cost accountant in an organization- Preparation of Cost Sheet

UNIT- II

Elements of Cost: Materials: Material/inventory control techniques. Accounting and control of purchases, storage and issue of materials. Methods of pricing of materials issues — FIFO, LIFO, Simple Average, Weighted Average, Replacement, Standard Cost. Treatment of Material Losses.

UNIT-III

Labour: Accounting and Control of labour cost. Time keeping and time booking. Concept and treatment of idle time, over time, labour turnover and fringe benefits. Methods of wage payment and the Incentive schemes- Halsey, Rowan, Taylor's Differential piece wage.

UNIT- IV

Elements of Cost: Classification, allocation, apportionment and absorption of overheads; Under- and over-absorption; Capacity Levels and Costs; Treatments of certain items in costing like interest on capital, packing expenses, bad debts, research and development expenses; Activity based cost allocation.

UNIT- V

Methods of Costing: Unit costing, Job costing, Contract costing, Process costing (process losses, valuation of work in progress, joint and by-products), Service costing (only transport).

Suggested Readings:

Text Books

Semester IV

16 CCU411 COST ACCOUNTING (PRACTICAL)

L	T	P	C
-	-	3	1

COURSE OBJECTIVES:

1. To provide practical knowledge on accounting practices
2. To process bank reconciliation statement
3. To understand and generate ratio analysis
4. To analyses and create Cash/Fund flow statement
5. To create Stock and Stock group
6. To Process Final Account reports

COURSE OUTCOMES:

1. Practical knowledge achieved on accounting practices
2. Understood to create bank reconciliation statement
3. Understood to generate ratio analysis
4. Recognize Cash/Fund flow statement
5. Understood creation of Stock and Stock group
6. Ability to prepare Final Account reports

List of Programs

The following are the list of practical

1 Prepare inventory statements using (calculate inventory using all methods)
   - FIFO
   - LIFO
   - Simple Average Method
   - Weighted Average Method

2. Prepare bank reconciliation statement
3. Prepare the following ratio analysis
   - Financial ratio
   - Operating ratio
   - Investment ratio
4. Prepare the following
   - Cash flow statement
   - Fund flow statement
5. Create stock and stock groups
6. Create stock group and stock items and enter the vouchers
7. Preparation of reports for the following
   - Profit & loss a/c
   - Balance sheet
   - Bank reconciliation statement
   - Ledgers
   - Ratio analysis

8. Back up and restore the company information

Suggested Readings

4 - - 4

16CCU402 DATABASE MANAGEMENT SYSTEMS

COURSE OBJECTIVES:

1. To enable the students to learn the data base operations and process
2. Understand management and implementation issues pertinent to databases in public and private organizations
3. Understand the database development process and technology
4. To enable students to understand ER Model
5. Understand structured query languages (SQL)
6. Understand PL/SQL

COURSE OUTCOMES:

1. Learnt the data base operations and process
2. Understood management and implementation issues pertinent to databases in public and private organizations
3. Understood the database development process and technology
4. Recognized the importance of ER Model
5. Understood structured query languages (SQL)
6. Understood PL/SQL

UNIT-I

Purpose of Database - Overall System Structure - Entity Relationship Model -Mapping Constraints - Keys - E-R Diagrams.

UNIT- II

Relational Model - Structure - Formal Query Language - Relational Algebra - Tuple and Domain Relational Calculus.

UNIT- III

Structured Query Language - Basic Structure - Set Operations - Aggregate Functions - Date, Numeric, and Character Functions - Nested Sub queries -Modification Of Databases - Joined Relations-DDL - Embedded SQL.

UNIT- IV

Relational Database Design - Pitfalls - Normalisation Using Functional Dependencies - First Normal Form-Second Normal Form-Third Normal Form-Fourth Normal Form And BCNF.

UNIT- V

Oracle - Introduction - SQL (DDL,DML, DCL Commands) - Integrity Constraints - PL/SQL - PL/SQL Block - procedure, function - Cursor management - Triggers - Exception Handling.

Suggested Readings:

-	-	4	2

16CCU412 DATABASE MANAGEMENT SYSTEM -PRACTICAL

COURSE OBJECTIVES

1. Acquire the skills in SQL
2. To enable the students to learn DDL
3. To enable the students to learn DML
4. Understand the database development process and technology
5. Understand structured query languages (SQL)
6. Understand PL/SQL

COURSE OUTCOMES

1. Acquired the necessary skills in SQL
2. Understood the concepts and execution of DDL
3. Understood the concepts and execution of DML
4. Understood the database development process and technology
5. Understood structured query languages (SQL) concepts and execution
6. Understood PL/SQL concepts and execution

1. Create Table Company with the following fields and insert the values for 10 employees

Field Name	**Field Type**	**Field size**
Company name	Character	15
Proprietor	Character	15
Address	Character	25
Supplier name	Character	15
Number of employees -	Character	4
GP Percent	number	6 decimal places

Queries

a) Display all the records of the company, which are in ascending order of GP percent

b) Display the name of the company whose GP percent is greater than 20 and order by GP percent

c) Display the details of the company having the employee ranging from 300 to 1000

d) Display the name of the company whose supplier's name is as the data's

2. Create table named Employee with the following fields and insert the values

Field name	**Field Type**	**Field Size**

Employee name	character	15
Employee Code	number	6
Address	Character	25
Designation	Character	15
Grade	Character	1
Date of joining	Date	-
Salary	number	10 with two decimal places

Queries:

a) Display the name of the employee whose salary is greater than Rs. 10000

b) Display the details of employee in ascending order according to employee code

c) Display the total salary of the employee whose grade is 'A'

d) Display the details of employees earning the highest salary

e) Display the name of the employee who earn more than 'Ravi'

3. Create table named student with the following fields and insert the values

Field name	**Field Type**	**Field Size**
Student name	character	15
Gender	Character	6
Roll No	Character	10
Department name	Character	15
Address	Character	25
Percent	number	4 with 2 decimal places

Queries

a) Calculate the average percentage of the students

b) Display the name of the student whose percentage is greater than 80

c) Display the detail of the students who got the highest percentage

d) Display the details of the student whose percentage is between 50 and 70

e) Display the details whose percentage is greater than the percentage of roll no = 12CA01

4. Create table named Product with the following fields and insert the values

Field name	Field Type	Field Size
Product number	number	6
Product name	Character	15
Unit of measure	Character	15
Quantity	number	6 decimal places
Total Amount	number	8 decimal places

Queries

a) Using update statement calculate the amount and then record

b) Select the records whose unit of measure is KG

c) Select the record whose quantity is greater than 10 and less than or equal to 20

d) Calculate the number of record whose unit price is greater than 50 with count operation

5. Create table payroll with the following fields and insert the values

Field name	Field Type	Field Size
Employee number	number	8
Employee name	Character	8
Department	Character	10
Basic Pay	number	8 with 2 decimal places
HRA	number	6 with 2 decimal places
DA	number	6 with 2 decimal places
PF	number	6 with 2 decimal places
NET PAY	number	8 with 2 decimal places

Queries

a) Update the record to calculate the net pay

b) Arrange the record of employee in ascending order to their net pay

c) Display the details of the employee whose department is sales

d) Select the details of employee whose HRA greater than or equal to 1000 and DA<= 900

e) Select the record in descending order

6. Create table Deposit and Loan with the following fields

Field name	Field Type	Field Size
Account	Varchar	6
Branch name	Varchar	15
Customer name	Varchar	20
Balance Amount	Varchar	10
Loan	Varchar	7
Loan Amount	Varchar	6

Queries

a) Find the number of loan with amount between 10000 and 50000

b) List in the alphabetical order the name of all customers who have a loan of the Coimbatore branch

c) Find the average account balance of the Coimbatore branch

d) Update deposit to add interest at 5% to the balance

e) Arrange the record in descending order of the loan amount

f) Find the maximum loan amount

g) Find the total amount of deposit in Erode branch

16CCU403 B STOCK MARKET INVESTMENTS

COURSE OBJECTIVE:

1. To impart basic introduction to stocks
2. To enable student to take up investment in stock market independently.
3. To provide basic skills to operate in stock market and the ways of investing in it.
4. To understand the process of Stock Analysis and Valuation
5. To understand about Mutual Funds and the factors that affect choice of Mutual Funds
6. To understand Derivative Trading

COURSE OUTCOMES:

1. Recognized the virtue of stocks
2. Understood about the mechanism of investment in stock market independently.
3. Acquired the basic skills to operate in stock market and the ways of investing in it.
4. Understood the process of Stock Analysis and Valuation
5. Understood Mutual Funds and the factors that affect choice of Mutual Funds
6. Recognized Derivative Trading

UNIT- I

Investing Fundamentals: Types of Investment – Equity Shares, IPO/ FPO, Bonds. Indian Securities Market: the Market participants, Trading of Securities, Security market Indices. Sources of Financial Information. Stock Exchanges in India: BSE, NSE, MCX. Buying and Selling of Stocks: Using brokerage and analysts' recommendations. Use of Limit order and Market order.

UNIT- II

Stock Analysis and Valuation: Online Trading of Stocks. Understanding Stock Quotations, Types and Placing of Order. Risk: its Valuation and Mitigation, Analysis of the company: financial characteristics (as explained by Ratio analysis, Future prospects of the company, Assessing quality of management using Financial and Non-Financial data, Balance Sheet and Quarterly results, Cash flows and Capital Structure).

UNIT- III

Comparative analysis of companies, Stock valuations: using ratios like PE ratio, PEG ratio, and Price Revenue ratio. Use of Historic prices, simple moving average, basic and advanced interactive charts. Examining the shareholding pattern of the company. Pitfalls to avoid while investing: high P/E stocks, low price stocks, stop loss, excess averaging,

UNIT- IV

Investing in Mutual Funds: Background of Mutual Funds: Needs and advantages of investing in Mutual Funds. Net Asset Value, Types of Mutual funds: Open ended, closed ended, equity, debt, hybrid, money market, Load vs. no load funds, Factors affecting choice of mutual funds. CRISIL Mutual Fund Ranking and its Usage.

UNIT- V:

Share price indices: need, importance, compiling and their interpretation. Derivative Trading: Meaning, importance, Methods of trading. Types of traders, specification of derivative contracts and Derivative market in India. Options: Types, option trading, margin. Future: Futures contracts, future market and trading. Swaps: mechanics and valuation.

16CCU501A SOFTWARE DEVELOPMENT WITH VISUAL BASIC

COURSE OBJECTIVES:

1. To understand the concepts and procedures of visual programming.
2. To enable the students to develop a front-end tool for customer interaction in business.
3. To learn event-driven models to design a software.
4. To educate various control tools for designing a form.
5. To make the student develop an application using Visual Basic.
6. To enable the students develop an application using Front end and Back end

COURSE OUTCOMES:

1. Understood the GUI programming interface and Procedures.
2. Able to develop a front end tool for business
3. Develop a relationship with database.
4. Acquire the knowledge to handle the errors.
5. Display the outcome through front end application.
6. Develop a complete tool with front end and back end software using visual basic

UNIT- I

Introduction to VB – steps in VB application – Project Explorer Window – Property Window – Form Layout – Code Window – Event driven programming – Working with Forms.

UNIT-II

Variables – Constants – Literals – Data Types – Operators – Sub routine and Functions Programme Flow Control – String function – Numeric function – Date function.

UNIT-III

Pointers – Label – Frame – Check Box – Compo Box – Scroll Bar – Timer – Shape and Line Control - Command Button – List Box - Image Box - Picture Box – text Box – SDI and MDI form – Data Grid - Flex Grid – Menus – Dialog Boxes.

UNIT-IV

DAO – Creating a Data base – Types of Record set – ActiveX Data Object (ADO).

UNIT- V

Data Report: Data Environment – Designer – Connection object – Command object – Data Report control – Sections of Report designer. Case Study: Automated system for student mark list – Automated system for Railway reservation.

Semester V

16CCU501B	PRINCIPLES OF MARKETING	L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

1. To Know the concepts and Functions of Marketing
2. To familiarize the concepts of market segmentation
3. To recognize customer relationship Management.
4. To provide the knowledge about the Product Life Cycle.
5. To Understand the pricing Strategies of Marketing
6. To Know the Promotional Steps in Marketing

COURSE OUTCOMES:

1. Understood the concepts of Marketing.
2. Identify the various channels of distribution and sales promotion methods.
3. Recognized CRM concepts
4. Develop the new product policies and strategies.
5. Know the different methods of pricing methods.
6. Be conversant with the importance of promotional aspects.

UNIT-I

Introduction: Nature, Scope and Importance of Marketing; Evolution of Marketing; Selling vs Marketing; Marketing mix, Marketing Environment: Concept, Importance, and Components (Economic, Demographic, Technological, Natural, Socio- Cultural and Legal).

UNIT-II

Consumer Behaviour: Nature and Importance, Consumer Buying Decision Process; Factors influencing Consumer Buying Behaviour. **Market segmentation:** Concept, Importance and Bases; Target market selection; Positioning concept, Importance and Bases; Product differentiation vs. Market Segmentation.

UNIT-III

Product: Concept and importance, Product classifications; Concept of product mix; Branding, Packaging and Labeling; Product-Support Services; Product life -Cycle; New Product Development Process; Consumer adoption process

UNIT-IV

Pricing: Significance. Factors affecting price of a product. Pricing policies and strategies. **Distribution Channels and Physical Distribution:** Channels of distribution -meaning and importance; Types of distribution channels; Functions of middle man; Factors affecting choice of distribution channel; Wholesaling and retailing; Types of Retailers; e-tailing, Physical Distribution.

UNIT-V

Promotion: Nature and importance of promotion; Communication process; Types of promotion: advertising, personal selling, public relations & sales promotion, and their distinctive characteristics; Promotion mix and factors affecting promotion mix decisions;

Recent developments in marketing: Social Marketing, online marketing, direct marketing, services marketing, green marketing, Rural marketing; Consumerism

16CCU511A SOFTWARE DEVELOPMENT WITH VISUAL BASIC (PRACTICAL)	-	-	4	2

COURSE OBJECTIVES:

1. To develop the front-end application using Visual Basic
2. To use the controls in the tool box and develop a Windows based application software
3. To develop modern software programs using the Visual Basic
4. To develop Logic solving mathematical problems
5. To recognize string operations
6. To understand database connectivity

COURSE OUTCOMES:

1. Understood to develop the front-end application using Visual Basic
2. Acquired the knowledge in using controls in the tool box and develop a Windows based application software
3. Able to develop modern software programs using the language Visual Basic
4. Able to develop Logic solving mathematical problems
5. Recognized string operations
6. Understood database connectivity

1. Write VB Program to perform the text manipulation using alignment and format function
2. Write VB Program to find the given is Prime or not
3. Write VB Program to calculate the simple interest and compound interest
4. Write VB Program to compute the total marks and display the results of a student in the exams
5. Write VB Program to calculate the Quadratic Equation
6. Write VB Program for performing String Operations
7. Write VB Program to implement the calculator
8. Write VB Program to perform Menu Operations
9. Write VB Program to implement flex grid
10. Write VB Program to present product details like purchase, sales, profit etc., by declaring array functions and present details in a Rich Text Book Box (RTF)
11. Write VB Program to implement Employee Details using ADO
12. Write VB Program to implement pay slip for an organization and create a database using SQL and ADO Control
13. Write VB Program to create a bank customer database by declaring simple array and multiple arrays using ADO Control
14. Write VB Program to display tree view and list view of folders and files from a directory of an organization
15. Write VB Program to implement the Animated Dice.

16CCU511B	PRINCIPLES OF MARKETING (PRACTICAL)	L	T	P	C
		-	-	4	2

COURSE OBJECTIVES:

1. Helps the students to get in-depth knowledge on Marketing Segmentation
2. Helps to know about the proper Distribution channels
3. Helps to identify the media of Advertisement
4. To provide the on-hand knowledge to the students on the current marketing scenario
5. To helps them to acquire the sufficient knowledge in the marketing field
6. To help them get good presentation skills

COURSE OUTCOMES:

1. Acquired in-depth knowledge on Marketing Segmentation
2. Understood the proper Distribution channels
3. Understood media concepts
4. Recognized on-hand knowledge on the current marketing scenario
5. Acquired the sufficient knowledge in the marketing field
6. Achieved good presentation skills

List of Practical

1. Prepare and Present the Development of Market Segmentation for any FMGC products
2. Give a Presentation of the Selection of distribution channel for Baby Product
3. Present in which media of Advertisement will you select for Cosmetic products
4. How to develop online marketing for apparels? Present and Defend
5. Give a Brief Account on Social Marketing
6. Give a Presentation on the following
    i. Green Marketing
    ii. Rural Marketing
    iii. Service Marketing
7. Design a presentation on Consumer Exploitation - Food Products
8. Discuss in Group – “The Consumer Movements in India”

Note: Record note to be submitted and Viva-voce will be conducted.

16CCU601A INTERNET AND WEB DESIGN

COUSE OBJECTIVES:

1. To know the working of Internet, uses of search engines and procedures to develop a web page.
2. To make the student expertise in creating web page.
3. To ensure that the student know the concepts of Internet and design a web page.
4. To know HTML Forms.
5. To make the students expertise in creating Web Page with JavaScript.
6. the skill in the application of scripting languages like HTML, Java script and ASP, Net

COUSE OUTCOMES:

1. Recognized the working of Internet, uses of search engines and procedures to develop a web page.
2. Grasped the needed techniques in creating web page.
3. Understood the concepts of Internet and design a web page.
4. Understood to create HTML Forms.
5. Understood to create Web Page with JavaScript.
6. Acquired the necessary skill in scripting languages like HTML, Java script and ASP.Net

UNIT- I

Introduction to Internet: Internet basics – World wide Web – browser portability – Features of Internet Explorer. Introduction to HTML ; Mark up languages – common Tags – Headers – text styling – Linking – Images – formatting text – special characters – Horizontal rules and Line text – unrecorded lists – nested unordered lists- basic HTML tables – Intermediate HTML tables.

UNIT- II

Formatting – Basic HTML forms – creating and using Image maps – meta tags – frameset – nested frameset. Introduction to DHTML: cascading Style Sheet – Inline style – creating style sheets with style elements – conflicting styles – Linking external style sheets – Position elements – Backgrounds – element dimension – text flow – Box models.

UNIT-III

Introduction to Java Script – Operators – Arithmetic Operators – Precedence of Operators – Relational Operators – Control Structures – Assignment Operators – Increment and Decrement Operators – For loops – Switch – Do While – Break – Continues – Arrays – Functions .

UNIT- IV

Active Server Page (ASP): Introduction – How ASP work – five objects of ASP – Client Side Scripting Vs Server Side Scripting – Server Side ActiveX component – Session Tracking and Cookies – file system objects.

UNIT-V

Introduction to XML : Introduction – The Syntax of XML – XML Document Structure – Document Type Definitions – Namespaces – XML Schemas – Displaying Raw XML Documents – Displaying XML Documents with CSS – XML Processors.

Semester VI

	L	T	P	C
16CCU611A INTERNET AND WEB DESIGN (PRACTICAL)	-	-	3	1

COURSE OBJECTIVES:

To make the students

1. To familiar with graphic design principles that relate to web design and learn how to implement theories into practice.
2. To Develop skills in analyzing the usability of a web site.
3. To Understand how to plan and conduct user research related to web usability.
4. To Learn the language of the web: HTML and CSS grid layout and flexbox.
5. To Learn techniques of responsive web design, including media queries and digital imaging (Adobe Photoshop.)
6. Develop basic programming skills using Javascript and jQuery and embed social media content into web pages

COURSE OUTCOMES:

Learners should be able to

1. Students will develop an understanding of the formalistic (aesthetic) aspects of design and visual communication. [MM/MAC]
2. Students will demonstrate cross-platform (web, mobile, broadcast, print) storytelling skills. [MM/MAC: 4.2]
3. Students will become familiar with graphic design and/or game theory and be able to apply this theory to real world projects. [IM]
4. Analyze a web page and identify its elements and attributes.
5. Create web pages using XHTML and Cascading Style Sheets and Build dynamic web pages using JavaScript (Client side programming).
6. Create XML documents and Schemas. Create web pages for a business organization using HTML frames.

1. .Create web pages for a business organization using HTML frames
2. Create a program using HTML to display the ordered list and unordered list of a departmental store
3. Program to display image and text using HTML Tag for an advertisement of a company product
4. Create a table to list out products using HTML Tags
5. Create a document using formatting and alignment using JAVA script to display sales letter
6. Create a Resume using JAVA Script
7. Create a Website of your department with minimum five links using HTML
8. Create a document using Form to support local process of order form using JAVA script
9. Create a form of the customer survey of the user to enter general name and address information using JAVA Script

10. Create a frame to display multi form document using JAVA script

Suggested Readings:

பகுதி – I, தமிழ் பருவம் I

16LAU101 : தமிழ் முதல் தாள் 6-H,6-C

(இளநிலை கலையியல் பட்ட குப்புகளுக்குரியது)

COURSE OBJECTIVES

To make the students

1. Learning way of thinking and expressive ability.
2. Improving the scope of research.
3. Realizing the subtle parts of life that literature conveys.
4. Realizing the role that literature plays in the maturation of the human mind.
5. Awareness raising on awareness, culture etc. in the growing community.
6. Preparing students for government exams.

COURSE OUTCOMES

Learners should be able to

1. Complete introduction to 'History of Tamil Literature', which is an optional subject in competitive examinations such as Indian Citizenship.
2. Access to literature with a research-oriented approach to inscriptional, manuscript, and archaeological research.
3. 'Scientific Tamil', the field of development of Tamil; Development of multi-pronged research thinking on 'Internet Tamil'.
4. Having creative self-improvement and creativity development for employment.
5. An attitude of seeking literature in support of social and biological values.
6. Skill development for translation based employment.

அலகு – I : இக்கால இலக்கியம்: (20 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.
இன்றைய நிலை : கவிமணி தேசிய விநாயகம் -ஒற்றுமையே உயிர்நிலை
: கவிஞர் அப்துல்ரகுமான் - கால வழு
மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் – மலையாளக் காற்று கவிஞர் தாமரை – மழைக்குறிப்பு
சூழலியல் : கவிஞர் வைதீஸ்வரன் -விரல் மீட்டிய மழை
பெண்ணியம் :கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை கவிஞர் வைரமுத்து – அம்மா
வாழ்க்கை : கவிஞர் தருமுசிவராம் – வாழ்வுப் பாடல்
இயற்கை : பாவேந்தர் பாரதிதாசன் – அழகின் சிரிப்பு – வான்.

அலகு – II : அற இலக்கியம்: (15 மணிநேரம்)

கொன்றை வேந்தன்: 1 - 50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்பம் -20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

வேதநாயகம்பிள்ளை நீதிநூல்: 74 -78 பாடல்கள்

பெருவாயின் முள்ளியார் ஆசாரக்கோவை: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: (15 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

குற்றாலக்குறவஞ்சி: 5 பாடல்கள்

முக்கூடற்பள்ளு : 5 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது- 9 பாடல்கள்

அலகு – IV : கட்டுரை:(10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ.இராசமாணிக்கனார்
3. வாழ்க்கை -இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: (12 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. எழுத்து, சொல், பொருள் இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Semester I

16ENU101	ENGLISH-I	L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

To make the students

1. To help students enhance their Language skills
2. To introduce different kinds of literary works
3. To familiarize different genres of Literature
4. To instruct moral values through literature.
5. To improvise their productive and receptive skills

Semester I

		L	T	P	C
16PAU111	**ACCOUNTING PACKAGE – TALLY (PRACTICAL)**	**-**	**-**	**4**	**2**

COURSE OBJECTIVES:

To make the students

1. To understand the accounts heads available to create a company in the accounting software
2. To know the mechanics of creating the vouchers and ledgers
3. To be aware of the inventory valuations methods available in the software
4. To understand various financial statements that are built in the software
5. To be aware of financial analysis tools available in the software
6. To understand the recent software application pages with its various functions.

COURSE OUTCOMES:

Learners should be able to

1. Understand the different accounting heads and its importance
2. Create vouchers and ledgers by understanding the reason for posting under different heads
3. Calculate valuation of assets using the software
4. Prepare the financial statements and analyze the financial statement using the option of ratio analysis
5. Exhibit communication skills to communicate the output derived from the program.
6. To know the Accounting software implementation with its functions.

PRACTICAL LIST

1. Create a new company in Integrate Accounts mode and Account with Inventory mode
2. Create a primary and sub groups using single or multiple Ledger mode
3. Create minimum 10 ledgers using single or multiple ledger, and alter and delete any 2 ledger
4. Enter the following voucher
   - Payment vouchers
   - Receipt
   - Purchase
   - Sales
   - Credit note
   - Debit note
   - Journals
   - Memo
   - Optional
5. Create stock, stock groups and enter the vouchers
6. Prepare inventory statements using (calculate inventory using all methods)
   - FIFO
   - LIFO

- Simple Average Method
- Weighted Average Method

7. Prepare the following ratio analysis
    - ➢ Financial ratio
    - ➢ Operating ratio
    - ➢ Investment ratio
8. Prepare the following
    - ➢ Cash flow statement
    - ➢ Fund flow statement
9. Preparation of reports for the following
    - ➢ Trial Balance
    - ➢ Statement of Profit and Loss
    - ➢ Balance sheet
    - ➢ Bank Reconciliation Statement
    - ➢ Back up and restore the company information

COURSE OUTCOMES:
Learners should be able to

1. Know the procedures in opening for savings account, current account and to open various deposits schemes.
2. Feminized in fund transfer procedures.
3. Knowledge on Online Application and its procedure for Form Filling for SWIFT and E - Connect
4. Understand on procedure to register a Partnership Firm and Partnership Deed
5. Understand the Specimen of Promissory note and Bill of Exchange.
6. Knowledge on current business current business practical practices under law with its procedure.

PRACTICAL LIST

1. Opening Online Saving Account and Current Account
2. Opening Online Recurring deposit and Fixed deposit
3. Online Application Form Filling for RTGS / NEFT
4. Procedure for Fund Transfer through RTGS / NEFT
5. Online Application Form Filling for SWIFT
6. Procedure for Fund Transfer through SWIFT
7. Procedure for forming E-Contract
8. Procedure to register a Partnership Firm
9. Format for Partnership Deed
10. Specimen of Promissory note and Bill of Exchange

		Semester I
16AEC101	**BUSINESS COMMUNICATION**	**L T P C**
		4 - - 4

COURSE OBJECTIVES:

To make the students

1. To understand the types of communication and barriers of communication.
2. To acquire knowledge on the different business correspondence used in organization
3. To be aware of the different types of reports prepared for the organization.
4. To be aware of the use of technology.
5. To know the oral presentation techniques used in communication.
6. To aware in visual aid presentation and its techniques.

COURSE OUTCOMES:

Learners should be able to

1. Communicate effectively with the optimal mix of verbal and nonverbal communication mitigating the barriers.
2. Draft business correspondence for the organization requirement.
3. Prepare business reports for organization needs.
4. Draft the resume and develop skills to face the interview
5. Use appropriate technology for business communication.
6. Use appropriate techniques to access visual aid presentation.

UNIT I

Nature of Communication: Process of Communication, Types of Communication (verbal & Non Verbal), Importance of Communication, Different forms of Communication; Barriers to Communication Causes, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers

UNIT II

Business Correspondence: Letter Writing, presentation, Inviting quotations, Sending quotations, Placing orders, Inviting tenders, Sales letters, claim & adjustment letters and social correspondence, Memorandum, Inter -office Memo, Notices, Agenda, Minutes.

UNIT III

Report Writing: Business reports, Types, Characteristics, Importance, Elements of structure, Process of writing, Order of writing, the final draft, and check lists for reports.

UNIT IV

Application Letters – Preparation of Resume – Interview: Meaning – Objectives and Techniques of various types of interviews – public speech – Characteristics of a good Speech- Business Report Presentations.

UNIT V
Oral Presentation: Importance, Characteristics, Presentation Plan, Power point presentation, Visual aids.

SUGGESTED READINGS:

TEXT BOOKS

1. Rajendra Pal, J.S. Korlhalli, (2008), Essentials of Business Communication, Sultan.Chand & Sons, New Delhi.

REFERENCES

1. Bovee, and Thill, Business Communication Today, Pearson Education
2. Shirley Taylor, Communication for Business, Pearson Education
3. Locker and Kaczmarek, Business Communication: Building Critical Skills, TMH
4. Leena Sen, Communication Skills, PHI Learning

பகுதி – I, தமிழ் பருவம் II

16LAU201 : தமிழ் இரண்டாம் தாள் 6-H,6-C

(இளநிலை கலையியல் பட்ட வகுப்புகளுக்குரியது)

COURSE OBJECTIVES

To make the students

1. Learning way of thinking and expressive ability.
2. Improving the scope of research.
3. Realizing the subtle parts of life that literature conveys.
4. Realizing the role that literature plays in the maturation of the human mind.
5. Awareness raising on awareness, culture etc. in the growing community.
6. Preparing students for government exams.

COURSE OUTCOMES

Learners should be able to

1. Complete introduction to 'History of Tamil Literature', which is an optional subject in competitive examinations such as Indian Citizenship.
2. Access to literature with a research-oriented approach to inscriptional, manuscript, and archaeological research.
3. 'Scientific Tamil', the field of development of Tamil; Development of multi-pronged research thinking on 'Internet Tamil'.
4. Having creative self-improvement and creativity development for employment.
5. An attitude of seeking literature in support of social and biological values.
6. Skill development for translation-based employment.

அலகு – I : பக்தி இலக்கியம் (10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு

1. சைவம் - பெரியபுராணம் - திருமூலநாயனார் புராணம்.

2. வைணவம் - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்

அலகு – II : சங்க இலக்கியம் : (25 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). **எட்டுத்தொகை**

நற்றிணை : 1. பிரசம் கலந்த – பாலை-110

2.தடமருப்பு எருமை- மருதம்-130

குறுந்தொகை : 1. கருங்கட்டாக் கலை – குறிஞ்சி- 69

2. உள்ளது சிதைப்போர்- பாலை-283

ஐங்குறுநூறு : 1. நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

2. அன்னாய் வாழி வேண்டன்னை-203

பதிற்றுப்பத்து : 1. சிதைந்தது மன்ற-27

2. மீன்வயின் நிற்ப-90

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு:

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : 1.குறிஞ்சிக்கலி-சுடர்தொடீ -15

2. முல்லைக்கலி-தீம்பால் -11

அகநானூறு : 1.அன்னாய் வாழி வேண்டன்னை-குறிஞ்சி-17

புறநானூறு : 1. யாதும் ஊரே யாவருங் கேளிர்-பொதுவியல்-192

2.கெடுக சிந்தை கடிதிவள் துணிவே -279

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - **பழமுதிர்ச்சோலையின் சிறப்பு**

முருகன் இருப்பிடங்கள்: சிறுதினை மலரொடு:218-275.

முருகன் அருள்புரிதல்: 286-295.

அலகு - III : காப்பியம் (12 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – கண்ணகியின் சிறப்பு: ‘நாகநீள் நகரொடு’ என்பதிலிருந்து தொடங்கி, ‘கண்ணகி என்பாண் மன்னோ’ என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: ‘அருந்திறலரசர்’ என்பதிலிருந்து தொடங்கி, ‘மன்னவரேறென்’ என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: ‘என்னே’ என்பதிலிருந்து தொடங்கி, ‘விசும்பில் தோன்றுமால்’ என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: ‘நீர்வார் கண்ணை’ என்பதிலிருந்து தொடங்கி, ‘புகாரென் பதியே’ என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: ‘வன்னி மரமும்’ என்பதிலிருந்து தொடங்கி, ‘பதிப்பிறந்தேன்’ என்பது வரையிலான தொடர்கள்.

சூளாமணி: மந்திர சாலைச் சருக்கம் (தேர்ந்தெடுக்கப்பெற்ற 25 பாடல்கள்)

அலகு – IV : சிறுகதை (15 மணிநேரம்)

1. **குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்**
2. **காட்டில் ஒரு மான் - அம்பை**
3. **நாற்காலி – கி.ராஜநாராயணன்**
4. **நகரம் – சுஜாதா**
5. **எஸ்தர் – வண்ண நிலவன்**
6. **மரப்பாச்சி – உமா மகேஸ்வரி**

அலகு- V : மொழிப்பயிற்சி (10 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை,கட்டுரை, உரைநடை)

மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

16ENU201	ENGLISH-II	Semester II
		L T P C
		4 - - 4

COURSE OBJECTIVES:

To make the students

1. To enable the learners to acquire English language skills.
2. To familiarize them with English literature.
3. To attain basic knowledge on Grammar.
4. To help learners imbibe cultural values.
5. To gain knowledge of making correct sentences.
6. To reflect originality on the application of soft skills and express in writing their views.

COURSE OUTCOME:

Learners should be able to

1. Acquire to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. Develop the social values.
4. Recognize the importance of communication
5. Get sound knowledge in English
6. Communicate well for business purpose.

UNIT I

Prose: The Unexpected- Robert Lynd
Poetry: The Village Schoolmaster – Oliver Goldsmith
Short Story: The Lion's Share – Arnold Bennett
Vocabulary: Homonyms
Grammar: Irregular Verb

UNIT II

Prose: Travel by Train – J. B. Priestley
Poetry: The Gift of India – Sarojini Naidu
Grammar: Sentence pattern

UNIT III

Prose: Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi
Short Story: The Necklace – Guy De Maupassant
One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer
Vocabulary: Similes
Grammar: Discourse Markers

UNIT IV

Poetry: Ozymandias – P.B. Shelley
One-Act Play: The Pot of Broth- W.B. Yeats
Vocabulary: Collective Noun
Grammar: Correction of Sentences

UNIT V

Short Story: The Silver Butterfly– Pearl S. Buck
One-Act Play: The Bear – Anton Chekov
Vocabulary: Acronym
Grammar: Question Tag

Prescribed Text:

Wings of Communication 2014. Board of Directors. Emerald Publishers: Chennai

Suggested Reading:

Syamala, V. *English for Communication*. 2006. Emerald Publishers: Chennai.

Semester II

16PAU201	CORE- HIGHER FINANCIAL ACCOUNTING	L	T	P	C
		6	2	-	6

COURSE OBJECTIVES

To make the students

1. To understand the concept of depreciation.
2. To knowledge in departmental accounts
3. To knowledge in various accounting standards
4. To understand the concepts Branch Accounts
5. To be aware of the Partnership Accounts
6. To be aware on various standards related to partnership account.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend the accounting methods in depreciation accounting.
2. Acquire knowledge on accounting process and preparation of branch accounts
3. To apply appropriate judgment derived from knowledge about Hire Purchase and Installment System.
4. Acquire knowledge on partnership accounts.
5. Recognize the concepts of Accounting Standards
6. Acquire knowledge on various standards related to partnership account.

UNIT I

Depreciation - Meaning - Importance - Causes of Depreciation - Methods of Depreciation - Straight Line Method - Written Down Value Method - Annuity Method - Valuation of Inventory.

UNIT II

Branch Accounts Excluding Foreign Branches - Hire purchase and Installment System including hire Purchase trading accounts - Royalty Accounts - Minimum Rent - Fixed Rent - Short Working - Recouping Short Workings.

UNIT III

Single Entry System - Meaning and Features - Statement of Affairs Method and Conversion Method - Departmental Accounts - Distribution of Expenses - Inter department Transfers.

UNIT IV

Partnership Accounts - Division of Profits - Fixed and Fluctuating Capital - Past Adjustments - Guarantee of Profits - Admission - Retirement - Death

UNIT V

Dissolution of Partnership - Insolvency of Partners - Rule in Garner Vs. Murray - Piecemeal Distribution - Sale to a company - Accounting Standards (Theory Only) - AS 2: Valuation of Inventory - AS 6: Depreciation Accounting - AS 7: Construction Contracts - AS 8: Revenue Reorganization, AS 13 Accounting for Investments.

Note: Distribution of marks for theory and problems shall be 20% and 80% respectively.

Semester II

16PAU202	**BUSINESS STATISTICS**	**L**	**T**	**P**	**C**
		5	**-**	**-**	**5**

COURSE OBJECTIVES

To make the students

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
6. To be aware on of issues in the construction of index numbers

COURSE OUTCOMES:

Learners should be able to

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. To overcome on issues in the construction of index numbers

UNIT I

Statistical Data and Descriptive Statistics: Nature and Classification of data: univariate, bivariate and multivariate data- time-series and cross-sectional data Measures of Central Tendency Mathematical averages including arithmetic mean, geometric mean and harmonic mean. Properties and applications. ii. Positional Averages Median and Mode (and other partition values including quartiles, deciles, and percentiles - including graphic determination). Measures of Variation: absolute and relative. Range, quartile deviation, mean deviation, standard deviation, and their coefficients, Properties of standard deviation/variance - Skewness: Meaning, Measurement using Karl Pearson and Bowley's measures- Concept of Kurtosis

UNIT II

Probability and Probability Distributions: Theory of Probability. Approaches to the calculation of probability- Calculation of event probabilities. Addition and multiplication laws of probability (Proof not required)- Conditional probability and Bayes' Theorem (Proof not required) Expectation and variance of a random variable, Probability distributions. Binomial distribution: Probability distribution function, Constants, Shape, Fitting of binomial distribution. Poisson distribution: Probability function, (including Poisson approximation to binomial distribution), Constants, Fitting of Poisson distribution. Normal distribution: Probability distribution function, Properties of normal curve, Calculation of probabilities

UNIT III

Simple Correlation and Regression Analysis: Correlation Analysis: Meaning of Correlation: simple, multiple and partial- linear and non-linear, Correlation and Causation, Scatter diagram, Pearson's coefficient of correlation- calculation and properties (Proof not required). Correlation and Probable error- Rank Correlation.

b. **Regression Analysis**: Principle of least squares and regression lines, Regression equations and estimation- Properties of regression coefficients- Relationship between Correlation and Regression coefficients- Standard Error of Estimate and its use in interpreting the results.

UNIT IV

Index Numbers: Meaning and uses of index numbers- Construction of index numbers: fixed and chain base: univariate and composite. Aggregative and average of relatives – simple and weighted Tests of adequacy of index numbers, Base shifting, splicing and deflating. Problems in the construction of index numbers- Construction of consumer price indices: Important share price indices, including BSE SENSEX and NSE NIFTY

UNIT V

Time Series Analysis: Components of time series- Additive and multiplicative models- Trend analysis: Fitting of trend line using principle of least squares – linear, second degree parabola and exponential. Conversion of annual linear trend equation to quarterly/monthly basis and vice-versa- Moving averages- Seasonal variations: Calculation of Seasonal Indices using Simple averages, Ratio-to-trend, and Ratio-to-moving averages methods. Uses of Seasonal Indices

Semester-II

16PAU211	CORE – STATISTICAL PACKAGE USING SPSS (PRACTICAL)	L	T	P	C
		-	-	3	1

Course Objective

To make the students

1. To understand the Usage of Statistical Package and its functions
2. To know about calculation of descriptive statistics and various charts.
3. To analyses the data with various correlation analysis.
4. To understand the Histogram and Pie diagram by using SPSS
5. To understand the simple and multiple bar diagram by using SPSS
6. To know the overall features and functions to evaluate the result by using SPSS.

COURSE OUTCOMES:

Learners should be able to

1. Use the Statistical Package to make appropriate decision
2. Evaluate the data by descriptive statistics and various charts.
3. To analyse the data with various correlation analysis.
4. To draw the Histogram and Pie diagram by using SPSS
5. To draw the simple and multiple bar diagram by using SPSS.
6. Evaluate the results by accessing various features and function by using SPSS.

PRACTICAL LIST

1. Introduction to SPSS Package
2. Working with windows of SPSS
3. Defining variables in variable view window in SPSS
4. Drawing of Simple and multiple bar diagrams in SPSS Package
5. Drawing of Histogram and Pie diagram
6. Calculation of Mean for individual, discrete series using SPSS Package.
7. Mean for continuous series using SPSS Package.
8. Median for individual and discrete series using SPSS Package..
9. Median for continuous series using SPSS Package..
10. Mode for individual and discrete series using SPSS Package..
11. Standard deviation for individual and discrete series using SPSS Package.
12. Coefficient of variation for individual and discrete series using SPSS Package.
13. Karl Pearson's Correlation using SPSS Package.
14. Rank Correlation Coefficient using SPSS Package.

16AEC201	ENVIRONMENTAL STUDIES	Semester – II L T P C 4 - - 4

COURSE OBJECTIVES:
To make the students

1. To understand the ecosystem and its functions
2. To be aware of the difference between the renewable and non-renewable resources.
3. To know about biodiversity and the importance of conservation.
4. To be aware of the different pollution that affects the environment.
5. To know about the social issues prevailing in the environment.
6. To be familiar in Disaster Management.

COURSE OUTCOMES:
Learners should be able to

1. Understand the ecosystem and its impact on human beings.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Avoid the threats to biodiversity habitat loses.
4. Prevent pollution in the environment
5. Apply the laws relevant to the environment conservation
6. Understand the causes of Disaster Management.

UNIT-I: Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III: Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution , Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment

Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

SUGGESTED READINGS:

Semester III

16ENU301 **ENGLISH-III**
Communicative English

L	T	P	C
4	-	4	6

COURSE OBJECTIVES:
To make the students

1. To develop confidence to respond in English during situations where the use of English is imperative.
2. To develop fluency in actual conversation in the English language.
3. To develop knowledge about business communication.
4. To develop knowledge about business writing.
5. To acquire knowledge on communication for different purpose.
6. To get knowledge to communicate in day to affairs.

COURSE OUTCOME:
Learners should be able to

1. Students learnt the basics and purposes of listening skill.
2. Students will know the importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Acquired knowledge on effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.

UNIT I: Listening

Listening and its types, Basic Listening Lessons, Critical Listening Lessons, Advanced Listening Lessons, and Note Taking

UNIT II: Speaking

Basics of speaking, Regular English, Business English, Interview English, and Travel English

UNIT III: Reading

Reading and its purposes, Types of Reading, Reading Techniques, Reading Comprehension, Note Making

UNIT IV: Writing

Writing defined, Types of Writing, Components of Writing, Writing Contexts, Language and Style with accordance to the contexts

UNIT V: Vocabulary Enrichment

Synonyms, Antonyms, Homonyms, Phrasal Verbs, Idioms and Phrases, One Word Substitutes, and Affixes

Suggested Reading:

Learning to Learn: Study Skills in English Cambridge, 2015
Advanced Skills; Simon Harenes – CUP. 2015

Function in English. Jonathan Middlemiss et al, OUP

Semester III

16PAU301	**CORE- CORPORATE ACCOUNTING**	**L**	**T**	**P**	**C**
		6	**2**	**-**	**6**

COURSE OBJECTIVES:

To make the students

1. To understand the accounting process for Share capital and debenture and its application
2. To prepare final accounts for corporate
3. To understand the accounting standard and its application in inter-holding companies
4. To solve problems relating to Holding Company Accounts,
5. To understand the process related to Liquidation of Companies.
6. To know accounting standard to Liquidation of Companies.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend and apply the accounting process related corporate accounting
2. Prepare final accounts for corporate entity.
3. Understand the accounting standard and apply the same for corporate entity and amalgamation.
4. Understand the accounting for Holding Companies.
5. Enhance the problem-solving skills and analytical skills in the accounting context.
6. Understand the accounting standard and its application of Liquidation of Companies.

UNIT I

Accounting for Share Capital and Debentures Issue - Forfeiture and Reissue of Forfeited Shares - Concept and process of book building - Issue of rights and bonus shares - Buyback of shares - Redemption of preference shares - Issue and Redemption of Debentures

UNIT II

Final Accounts - Statement of Profit and Loss and Balance sheet of Corporate Entities (Excluding Calculation of Managerial Remuneration) - Disposal of Company Profits

UNIT III

Valuation of Goodwill and Valuation of Shares - Concepts and calculation.

UNIT IV

Accounts of Holding Companies / Subsidiary Companies - Preparation of consolidated balance sheet with one subsidiary company. Relevant provisions of Accounting Standard: 21 (ICAI).

UNIT V

Liquidation of Companies - Modes of winding UP or Liquidation - Winding up Under Supervision of the Court - Order of Payment - Form of Statement of Affairs - Procedure - Liquidators Final Statement of Accounts - Liquidators Remuneration. Accounting Standards (Theory Only) - AS 16: Borrowing Costs - AS 19: Leases - AS 20 : Earnings Per Share - AS 26 : Intangible Assets.

Note: Distribution of marks for theory and problems shall be 20% and 80 % respectively.

Semester III

16PAU302	CORE - DIRECT TAXATION - I	L	T	P	C
		6	2	-	6

COURSE OBJECTIVES:

To make the students

1. To understand the basic principles underlying the provisions of direct tax laws and to develop a broad understanding of the tax laws and accepted tax practices.
2. To recognize the income from property and profession and mode of assessing the same in income tax.
3. To understand the computation of Profits and Gains of Business or Profession of an Individual
4. To obtain the importance of capital gain in computation of Income tax.
5. To gain the exposure on practical aspects of tax planning as an important managerial decision-making process.
6. To gain knowledge on recent Rates of tax for individuals and its procedure.

COURSE OUTCOMES:

Learners should be able to

1. Distinguish sources of income
2. Distinguish between deductible and nondeductible expenses
3. Acquire knowledge on business income and Computation of Profits and Gains of Business
4. Apply the tax code provisions and calculate tax for natural and legal persons
5. Comprehend and apply the practical aspects of tax planning
6. Acquire knowledge on recent Rates of tax for individuals and its procedure.

UNIT I

Income Tax Act 1961- Definition of Income - Assessment Year - Previous Year - Assessee - Assessee in default - Scope of income - Charge of tax - Residential status of Individual, HUF - Company - Income which do not form part of total income.

16PAU501A	**DSE : 1 - RESEARCH METHODOLOGY**	**L**	**T**	**P**	**C**
		6	**2**	**-**	**6**

COURSE OBJECTIVES:

To make the students

1. Explain need of Research, introduction to business research
2. Analyze various types of research and the sampling techniques
3. Analyze collections of data and to draft the questionnaire
4. Describe Knowledge on the application of various statistical tools
5. Experiment preparation of reports
6. To Analyze and to interpret the data by different technique and to present the report in an order.

COURSE OUTCOMES:

Learners should be able to

1. Describe the Basics, types and the stages of the research process and enables to apply and adapt them with relevance to specific research context
2. Apply an advanced understanding of business research design options, methodologies, sampling technique in a research.
3. Analyze the collected data using appropriate statistical tools for interpretation of the data.
4. Apply various statistical tools in a research.
5. Understand and prepare and present research findings in the report.
6. Interpret the data by using different techniques and to able to present the report effectively.

UNIT I

Research - Meaning - Scope and Significance - Utility of Research - Qualities of Good Researcher - Types of Research - Research Process - Identification - Selection and Formulation of Research Problems - Hypothesis - Research Design

UNIT II

Sampling - Methods and techniques - Sample size - Sampling Error - Field work and Data Collection - Tools of Data Collection - Interview Schedule - Questionnaire - Observation - Interview and Mailed Questionnaire - Pilot Study and Final Collection of Data – Secondary Data

UNIT III

Measurement and Scaling Techniques - Processing and Analysis of Data - Editing and Coding - Transcription and Tabulation - Statistical tools used in Research - Measures of Central Tendency – Median – Mode – Standard Deviation – Correlation Analysis – Regression Analysis.

UNIT IV

Hypothesis – Meaning – Sources –Types – Formulation – Data Analysis – Z test (mean, diff. of mean, diff. of proportion) – t-test (mean) – Paired t-test – Chi square test – Introduction to theoretical concept of ANOVA – Factor Analysis and Discriminant Analysis.

UNIT V

Interpretation - Meaning - Techniques of Interpretation - Report writing - Significance - Report Writing - Steps in Report Writing - Layout of report - Types of Reports – Oral Presentation - Executive Summary -

Mechanics of Writing Research Report - Precautions for Writing Report - Norms for using Tables - Charts - and Diagrams - Appendix - Norms for using Index and Bibliography.

Note: The question paper shall cover 60% theory and 40% problem

Semester -V

16PAU503A	SEC 3 - APPLIED COST ACCOUNTING	L	T	P	C
		5	1	-	4

COURSE OBJECTIVES:

To make the students

1. To Understand the cost concepts, types of costing methods and book keeping for cost accounting
2. To learn the tools and techniques to calculate cost and solve the problems.
3. To select the best methods of costing and apply critically based on the situation
4. To communicate orally and in written form the cost accounting concepts, methods and book keeping procedure for cost accounting.
5. To gain a lifelong learning for applying the cost concepts in analyzing the business problems.
6. To Learn standards of book keeping in cost accounting.

COURSE OUTCOMES:

Learners should be able to

1. Understand the cost concepts, types of costing methods and book keeping for cost accounting
2. Apply tools and techniques to calculate cost and solve the problems.
3. Select the best methods of costing by critically analyzing and apply the same to appropriate situation
4. Communicate orally and in written the cost concepts
5. Gain the lifelong learning of cost concepts and apply in the business environment.
6. Apply the procedures of book keeping in cost accounting of a company.

UNIT I

Introduction - Meaning - Objectives and Advantages of Cost Accounting - Difference between Cost Accounting and Financial Accounting - Cost Concepts and Classifications - Elements of Cost - Installation of a Costing System - Role of a Cost Accountant in an Organisation - Preparation of Cost Sheet in Lien with Cost Accounting Standards.

UNIT II

Elements of Cost: Material and Labour - Materials - Material/Inventory Control Techniques - Accounting and Control of Purchases - Storage and Issue of Materials - Methods of Pricing of Materials Issues - FIFO – LIFO - Simple Average - Weighted Average - Replacement - Standard Cost - Treatment of Material Losses - Labour - Accounting and Control of Labour Cost - Time Keeping and Time Booking - Concept and Treatment of Idle Time - Over Time - Labour Turnover and Fringe Benefits - Methods of Wage Payment and the Incentive Scheme - Halsey, Rowan, Taylor’s Differential Piece Wage.

UNIT III

Elements of Cost - Overheads - Classification - Allocation - Apportionment and Absorption of Overheads - Under and Over absorption - Capacity Levels and Costs - Treatments of Certain Items in Costing like Interest on Capital - Packing expenses - Bad debts - Research and Development Expenses - Activity Based Cost Allocation.

UNIT IV

Methods of Costing - Unit costing - Job costing - Contract costing - Process costing (process losses, valuation of work in progress - Joint and by-products) - Service costing (only transport).

UNIT V

Book Keeping in Cost Accounting - Integral and Non-Integral Systems - Reconciliation of Cost and Financial Accounts

Note: - Distribution of Marks: Theory- 20% and Problems -80% respectively.

Semester -V

		L	T	P	C
16PAU503B	**SEC 3 - HUMAN RESOURCE MANAGEMENT**	**5**	**1**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. Describe nature and scope of Human Resources management
2. Evaluate human resource planning, recruitment process and selection methods in the organization
3. Discuss need for motivating employees in an organization.
4. Assess labour relations, industrial disputes and settlement in the organization
5. To know the concept of industrial relations.
6. To know the concept of Collective Bargaining and its significance to a company.

COURSE OUTCOMES:

Learners should be able to

1. Understand the HR environment in India and human resource functions within organizations
2. Plan human resources requirement and formulate HR policy of the organisation with regard to recruitment, selection, training and career planning.
3. Appraise the employee's performance and formulate compensation policy which helps to make organizational excellence.
4. Understand the importance of career planning, job evaluation and factors influencing compensation levels.
5. Analyse the ethical issues in HR management
6. To take decisions in a manner of Collective Bargaining.

UNIT I

Human Resource Management - Concept - Functions - Roles - Skills and competencies - HRD - Definition - Goals and challenges - The changing environment of HRM - Globalization - Cultural Environment - Technological advances - Workforce Diversity - Corporate Downsizing - Changing skill requirement - HRM support for improvement programs Work life balance - HR role in strategy formulation and gaining competitive advantage - HRM issues in Indian Organizations.

UNIT II

Human Resource Planning - Process - Forecasting demand and supply - Skill inventories Human Resource Information System (HRIS) succession planning - Job analysis - Uses, methods, Job description and Job specifications - HR accounting and Human Resource Development (HRD) audit concept. Recruitment, Selection and Orientation - Internal and External sources, E- recruitment - Selection process - Orientation process.

UNIT III

Training - Concept - Needs - Systematic approach to training - Methods of training - Management Development - Concept and Methods - Performance Management System - Performance Appraisal - Performance Management Methods - Factors that Distort appraisal - Appraisal Interview.

UNIT IV

Career Planning - Career Anchors - Career Life Stages - Compensation - Steps of determining compensation - Job evaluation - Components of pay structure - Factors influencing compensation levels -

Wage differentials and incentives - Profit sharing - Gain sharing - Employees' stock option plans - Social Security - Health - Retirement - other benefits.

UNIT V

Industrial Relations - Introduction to Industrial Relations - Trade unions role - Types - Functions - Problems - Industrial dispute - Concept - Causes and Machinery for settlement of disputes - Grievance, Concepts, Causes and grievance redressal machinery - Discipline concept, aspect of discipline and disciplinary procedure, Collective Bargaining - Concept - Types, Process- Problems - Essentials of Effective Collective Bargaining.

Semester V

16PAU504A	GE 1 - PRINCIPLES OF MARKETING	L	T	P	C
		6	2	-	6

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of marketing, and 4Ps of Marketing
2. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. To apply the marketing concepts and skills lifelong.
4. To understand the recent trends in marketing strategies of a companies.
5. To understand the consumer behavior and to adopt the decision according to the consumer.
6. To know the promotion strategies followed by a company.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. Apply the marketing strategies of a company's effectively.
5. To be familiar in behavior of consumer in related to market and to take decision effectively.
6. To implement the correct promotion strategies.

UNIT I

Introduction - Nature - Scope and Importance of Marketing - Evolution of Marketing - Selling Vs Marketing - Marketing Mix - Marketing Environment - Concept - Importance and Components (Economic, Demographic, Technological, Natural, Socio-Cultural and Legal).

UNIT II

Consumer Behaviour - Nature and Importance - Consumer Buying Decision Process - Factors Influencing Consumer Buying Behaviour - Market Segmentation - Concept - Importance and Bases - Target Market Selection - Positioning Concept - Importance and Bases - Product differentiation Vs. Market Segmentation.

UNIT III

Product - Concept and Importance - Product Classifications - Concept of Product mix - Branding - Packaging and Labeling - Product-Support Services - Product Life Cycle - New Product Development Process - Consumer Adoption Process.

UNIT IV

Pricing - Significance - Factors Affecting Price of a Product - Pricing Policies and Strategies - Distribution Channels and Physical Distribution - Channels of Distribution - Meaning and Importance - Types of Distribution Channels - Functions of Middle man - Factors Affecting Choice of Distribution Channel - Wholesaling and Retailing - Types of Retailers - e-tailing - Physical Distribution.

UNIT V

Promotion - Nature and Importance of Promotion - Communication Process - Types of Promotion - Advertising - Personal Selling - Public Relations and Sales Promotion and their Distinctive Characteristics - Promotion Mix and Factors Affecting Promotion Mix Decisions - Recent developments in marketing - Social Marketing - Online Marketing - Direct Marketing - Services Marketing - Green Marketing - Rural Marketing- Consumerism.

Semester V

16PAU504B	GE 1 - MICRO ECONOMICS	L	T	P	C
		6	2	-	6

COURSE OBJECTIVES:

To make the students

1. To understand the demand, supply functions and its applicability.
2. To know the importance of the production function and cost and revenue concepts.
3. To gain knowledge on the market structure and price determination.
4. To understand the importance of macroeconomic indicators like National income, GDP, Inflation etc.
5. To understand the concepts of Monetary policy, Balance of payment and Money supply.
6. To understand the power of monopoly in a market.

COURSE OUTCOMES:

Learners should be able to

1. Apply the demand and supply concept in managerial decisions
2. Calculate the Cost, Revenue and breakeven point and apply it in decision making process.
3. Formulate the pricing strategies based on the market structure.
4. Gain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payments and make business decision based on the Macroeconomic indicators, inflation and business cycle and understand the impact of monetary policy, money supply and Balance of payments on running a business.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills.
6. To gain knowledge on power of monopoly in a market

UNIT I

Demand and Consumer Behaviour - Concepts of Revenue - Marginal and Average - Revenue Under Conditions of Perfect and Imperfect Competition Elasticity of Demand - Price - Income and Cross - Consumer Behaviour - Indifference Curve Analysis of Consumer Behavior - Consumer’s Equilibrium (necessary and sufficient conditions) - Price Elasticity and Price Consumption Curve - Income Consumption Curve and Engel Curve - Price Change and Income and Substitution Effects. Indifference Curves as an Analytical Tool (Cash Subsidy Vs. Kind Subsidy). Revealed Preference Theory.

UNIT II

Production and Cost - Production isoquants - Marginal Rate of Technical Substitution - Economic Region of

Production - Optimal Combination of Resources - The Expansion Path - isoclines- Returns to scale using isoquants. Cost of Production - Social and Private Costs of Production - Long run and Short run Costs of Production - Economies and Diseconomies of Scale and the Shape to the Long Run Average Cost. Learning Curve and Economies of Scope.

UNIT III

Perfect Competition - Perfect Competition - Assumptions - Equilibrium of the Firm and the Industry in the Short and the Long runs - Including Industry’s Long Run Supply Curve - Measuring Producer Surplus Under Perfect Competition - Stability Analysis - Walrasian and Marshallian - Demand - Supply Analysis Including Impact of Taxes and Subsidy.

UNIT IV

Monopoly - Monopoly Short run and Long run Equilibrium - Shifts is Demand Curve and the Absence of the Supply Curve - Measurement of Monopoly Power and the Rule of Thumb for Pricing - Horizontal and Vertical Integration of Firms - The Social Costs of Monopoly Power Including Deadweight Loss - Degrees of Price Discrimination.

UNIT V

Imperfect Competition - Monopolistic Competition and Oligopoly - Monopolistic Competition Price and Output Decision-Equilibrium - Monopolistic Competition and Economic Efficiency Oligopoly and Interdependence - Cournot's Duopoly Model - Stackelberg model - Kinked demand model - Prisoner's Dilemma - Vollusive Oligopoly - Price-leadership Model - Dominant Firm - Cartels - Sales Maximization -Contestable Markets theory - Pricing Public Utilities.

		L	T	P	C
16PAU603A	**SEC 4 - MANAGEMENT ACCOUNTING**	**5**	**1**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To understand the objectives of management accounting and Difference between Financial Accounting, Cost accounting and Management Accounting
2. To recognize the concept of Budget and Budgetary control.
3. To identify the Standard Costing and Variance Analysis
4. To understand the concept of marginal costing and Relevant Costs and Benefits
5. To know the operations of fund flow and cash flow statement.
6. To have in-depth knowledge in Accounting Standard.

COURSE OUTCOMES:

Learners should be able to

1. Explain nature and scope of management accounting
2. Evaluate Costing systems, cost management systems, budgeting systems and performance measurement systems
3. Extend Classification of ratios, capital structure and leverage.
4. Analysis performance evaluation applications of management accounting.
5. Prepare management reports by using funds flow and cash flow statement.
6. Prepare the Financial Statement under the defined Accounting standard.

UNIT I

Introduction - Meaning - Objectives - Nature and Scope of Management Accounting - Difference between Financial Accounting, Cost Accounting and Management Accounting - Cost Control and Cost Reduction - Cost Management - Financial Statement Analysis - Trend Analysis - Comparative Statement - Common Size Statement.

UNIT II

Budgetary Control - Budgeting and Budgetary Control - Concept of Budget - Budgeting and Budgetary control - Objectives - Merits and Limitations - Budget Administration - Functional Budgets - Fixed and Flexible Budgets - Zero Base Budgeting - Programme and Performance Budgeting.

UNIT III

Standard Costing - Standard Costing and Variance Analysis - Meaning of Standard Cost and Standard Costing - Advantages - Limitations and Applications - Variance Analysis - Material - Labour - Overheads and Sales Variances - Disposition of Variances - Control Ratios - Ratio Analysis - Short term Solvency - Profitability - Turnover

UNIT IV

Marginal Costing - Absorption versus Variable Costing - Distinctive Features and Income Determination - Cost Volume Profit Analysis - Profit / Volume Ratio - Break-even analysis - Algebraic and Graphic Methods. Angle of Incidence - Margin of Safety - Key Factor - Determination of Cost Indifference Point - Decision Making - Steps in Decision Making Process - Concept of Relevant Costs and Benefits - Various Short Term Decision Making Situations - Profitable Product Mix - Acceptance or Rejection of Special / Export Offers - Make or Buy - Addition or Elimination of a Product Line - Sell or Process Further - Operate or Shut Down - Pricing Decisions - Major factors influencing pricing decisions, various methods of pricing.

UNIT V

Contemporary Issues - Funds Flow Statement - Schedule of Changes in Working Capital - Calculation of Funds from Operation - Sources and Applications of Funds - Cash Flow Statement - Cash from Operation - Inflow and Outflow of Funds - Responsibility Accounting - Concept - Significance - Different Responsibility Centres - Divisional Performance Measurement - Financial and Non-Financial measures - Transfer Pricing - Accounting Standards (Theory Only) - AS 3: Cash flow Statement - AS 21: Consolidated Financial Statement - AS 23: Accounting for Investments in Associates in Consolidated Financial Statement.

Note: - Distribution of Marks: Theory- 20% and Problems -80% respectively.

Semester VI

16PAU603B	SEC 4 - RETAIL BUSINESS MANAGEMENT	L	T	P	C
		5	1	-	4

COURSE OBJECTIVES:

To make the students

1. To make the students understand the features of Retailing.
2. To enhance the students knowledge in the theories of Retail Development
3. To enlighten the students knowledge in global Retail Markets.
4. To communicate orally and in written form Concept of management in retail business.
5. To have in-depth knowledge on Retail strategies.
6. To understand the importance of Servicing the Retail Customer

COURSE OUTCOMES:

Learners should be able to

1. Understand the features of Retailing.
2. Knowledge in the theories of Retail Development
3. Knowledge in global Retail Markets.
   Communicate orally and in written form Concept of management in retail business.
4. Understand the Concept of management, Behaviour as individual, group and organization.
5. Implement the right retail strategies to make success the retail business.
6. Follow and take decisions related to Servicing the Retail Customer

UNIT I

Retail - Meaning – Functions and Special Characteristics of Retailer - Types of Retailers – Franchising – The Evolution of retail in India – Retailing as a Career– Consumer Behaviour in Retail Context

UNIT II

Retail Strategies – Retail Location – Site Selection – Merchandise Management – Managing Service and Quality – Strategic planning - Global retail markets: Strategic planning process for global retailing - Factors affecting the Success of a Global Retailing Strategy .

UNIT III

Organization Structure and Human Resource Management in Retail – Retail Store Operations – Financial Aspects of Retail – Retail Marketing and Communication.

UNIT IV

Servicing the Retail Customer – Retail Store Design and Visual Merchandising – Retail Management Information Systems – Supply Chain Management.

UNIT V

IT Applications in Retail – Data Base Marketing – Electronic Retailing – International Retailing Trends – Ethics in Retailing – Competition Commission of India.

SUGGESTED READING:

TEXT BOOKS

Semester VI

16PAU691	PROJECT	L	T	P	C
		-	-	8	6

COURSE OBJECTIVES:

To make the students

1. To identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/ International business etc.
3. To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills
7. To utilise the IT applications for analysis and preparation of report.

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/ International business etc.
3. Analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills
7. Utilise the IT applications for analysis and preparation of report.

The students should select a problem in Accounting, Finance, Marketing or any other arears related to commerce.

Report should contain

- Introduction
    - Introduction about the industry
    - Introduction about the Company
    - Review of literature – Minimum 10 papers from referred journal
    - Need for the Study
    - Objectives
- Research Methodology
    - Research Design
    - Sampling Design
    - Sources of Data Collection
    - Tools used for analysis
    - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibiliography (APA format)

KARPAGAM ACADEMY OF HIGHER EDUCATION,
(Deemed to be University)
(Established Under Section 3 of UGC Act 1956)
MASTER OF COMMERCE (Computer Applications)
M.Com.
(For the Students admitted during the year 2016 – 2018 Batch onwards)

Scheme of Examination

Course Code	Name of the Course	Objectives and Outcomes		Instruction Hours / Week			Credits	Maximum Marks		
		PEOs	Pos	L	T	P		CIA	ESE	Total
								40	60	100
Semester 1										
16CMP101	Corporate Finance	I,II	a,e,	4	-	-	4	40	60	100

				7	**0**	**23**	**15**	**160**	**240**	**400**
							87	**1000**	**1500**	**2500**

PROGRAMME OUTCOMES (PO)

a) Postgraduates will develop an understanding of various commerce functions such as finance, accounting, financial analysis, project evaluation, cost accounting.

b) Postgraduates will have exposure to solve complex commerce problems and analyze problems critically through research based or project based approach of learning.

c) Postgraduates will excerpt information from various sources and apply mathematical, analytical, statistical and IT tools for financial and accounting analysis.

d) Postgraduates will develop an ability to effectively communicate both orally and in written forms.

e) Postgraduates will appreciate the importance of working independently and in a team in order to achieve common goals.

f) Postgraduates will acquire critical and analytical thinking and will be able to apply the same in effective decision making.

g) Postgraduates will acquire professional and intellectual integrity, professional code of conduct, ethics and values to contribute for sustainable development of society by becoming socially responsible citizen.

PROGRAMME SPECIFIC OUTCOMES (PSO)

h) Postgraduates will apply the lifelong learning and exhibit high level of commitment to identify a timely opportunity and use business innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.

i) Postgraduates will acquire managerial positions or take up entrepreneurial ventures by applying the skills and knowledge gained.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

I. Postgraduates will gain advanced knowledge in the domain of commerce, management and finance

II. Postgraduates will be able to apply the accounting, finance and management tools and techniques to implement systematic decision making process.

III. Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path.

IV. Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.

Program Educational Objectives	Program Outcomes								
	a	b	c	d	e	f	g	h	i
Postgraduates will gain advanced knowledge in the domain of commerce, management and finance	✓				✓				
Postgraduates will be able to apply the accounting, finance and management tools and techniques to implement systematic decision making process.	✓				✓				
Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path.			✓	✓		✓			
Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.		✓					✓	✓	✓

		Semester – I			
		L	T	P	C
16CMP101	**CORPORATE FINANCE**	4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Explain the core concepts of corporate finance and its importance in managing a business
2. To understand the nature, importance, structure of corporate finance related areas.
3. To impart knowledge regarding source of finance for a business.
4. To develop a conceptual framework of finance function
5. To acquaint the participants with the tools, techniques
6. To know the process of financial management in the realm of financial decision making.

COURSEOUTCOMES:

Learners should be able to

1. Understand the role of a financial manager and their role intaking decisions professionally.
2. Demonstrate knowledge and compute value of money over time
3. Apply the concept to Evaluate the business proposal applying capital budgeting techniques
4. Computethecostofcapitalandfinancialleveragetoestimatetheoptimalcapitalstructure
5. Comprehendtheknowledgeofassessingtheworkingoforganizationtoassesstheliquidity position of the firm.
6. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to finance decisions.

Unit – I

Scope and Functions of Finance – Role of Financial Manager – Goals of Financial Management – Functions of Controller and Treasurers in India

Unit – II

Cost of Capital – Significance – Concepts of Cost of Capital – Cost of Debt Capital, Preference Capital, Equity Capital and Retained Earnings – Weighted Average Cost of Capital

Unit – III

Capital Structure – Concept – Capital Structure Theories – Net Income Theory, Net Operating Income Theory – MM's Proportion on Capital Structure – Determinants of Optimal Capital Structure – Financial and Operating Leverage

Unit – IV

Capital Budgeting Decisions – Investment Evaluation Criteria – Payback Method – ARR – NPV Method – IRR – Profitability Index – Risk Analysis in Capital Budgeting – Nature of Risk – Conventional and Statistical Technique to handle risk

Unit –V

Management of Working Capital – Determinants of Working Capital – Management of Accounts Receivable, Inventory and Cash – Financing of Working Capital – Dividend Theories – Walter's Model – Gordon's Model – MM's Hypothesis – Dividend Policy – Determinants of Dividend Policy.

Note: Theory :80 Marks and Problems : 20 Marks

SUGGESTED READINGS

Text Book

	Semester – I			
	L	T	P	C
16CMP102 **MANAGERIAL ECONOMICS**	4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To obtain fundamental knowledge on economic concepts and tools that have direct managerial applications.
2. To illustrate the application of economic theory and methodology as an alternative in managerial decisions.
3. To gain a rigorous understanding of competitive markets as well as alternative market structures.
4. To obtain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payment and understand the forces determining macroeconomic variables such as inflation, unemployment, interest rates, and the exchange rate.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills
6. To enable students to obtain managerial problem solving skills.

COURSE OUTCOMES:

Learners should be able to

1. Apply the economic way of thinking to individual decisions and business decisions
2. Measure the responsiveness of consumers' demand to changes in the price of a goods or service, and understand how prices get determined in markets,
3. Understand the different costs of production and how they affect short and long run decisions and derive the equilibrium conditions for cost minimization and profit maximization
4. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run
5. Critically evaluate the consequences of basic macroeconomic policy options under differing economic conditions within a business cycle.
6. Understand and exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit - I

Nature, Objectives and Scope of Managerial Economics – Role and Responsibilities of Managerial Economist – Circular Flow of Economic Activity – Nature of the Firm – Economic Profit – Profits in the Market System

Unit – II

Demand Theory and Analysis – Supply Theory and Analysis

Unit – III

Production Theory – Cost Theory – Cost Concept – Cost Output Relationship – Break Even Analysis

Unit – IV

Perfect Competition, Monopoly, Monopolistic Competition, Oligopoly, Duopoly, Bilateral Monopoly – Monopsony.

Unit – V

Pricing Decision – Pricing of Goods and Services – Pricing and Employment of Inputs – Pricing in Public Sector – Risk and Decision Making – Input – Output Analysis

		Semester – I			
		L	**T**	**P**	**C**
16CMP103	**OPERATIONS RESEARCH**	**4**	**-**	**-**	**4**

COURSE OBJECTIVES:

Course Objectives

This course enables the students

1. To provide essential knowledge on Linear programming
2. To offer practical exposure to transportation and assignment problems
3. To gain the knowledge on Assignment and Queuing Theory Problems
4. To train students on Inventory Control
5. To helps to facilitates the learning of network analysis
6. To enhance learner knowledge in optimal use of performance measures of queues, optimal use of Inventory and Network scheduling with various applications in mathematics

Course Outcomes

On successful completion of this course, the students will be able to

1. Students may gather relevant knowledge for minimizing Operation Cost
2. Students are equipped to cut total cost and able to minimize time required for completing assigned task
3. Students could learn to maintain optimal level of inventory
4. Understand various mathematical applications in industries.
5. Decision making for real time environment.
6. course concentrates on Linear programming, transportation model, Queuing theory and Inventory

Unit – I

Introduction to Operations Research – Application in Management Decision Making – Linear Programming: Formulation of LPP – Graphical Solution to LPP – Simplex Method (using slack variables only)

Unit - II

Transportation Model: Introduction – Mathematical Formulation –Finding Initial Basic Feasible Solutions – Optimum Solution for Nondegeneracy and Degeneracy Model - Unbalanced Transportation Problems and Maximization case in Transportation Problem- Traveling Sales Man Problem.

Unit- III

The Assignment problem - Mathematical Formulation of the Problem – Hungarian Method –Unbalanced Assignment Problem- Maximization Case in

Assignment Problem - Travelling Salesman Problem. Queuing Theory : Introduction – Characteristics of Queuing System. Problems in (M/M/1):(∞/FIFO) and (M/M/1):(N/FIFO) models

Unit - IV

Inventory Control: Introduction – Costs involved in Inventory – Deterministic EOQ Models – Purchasing Model without and with Shortage, Manufacturing Model without and with Shortage -Price Break

Unit - V

PERT and CPM: Network Representation – Calculation of Earliest expected time, latest allowable occurrence time. CPM - Various Floats for Activities – Critical Path- PERT –Time Estimates in PERT- Probability of Meeting scheduled date of Completion of Projects

	Semester – I			
	L	T	P	C
16CMP104 ADVANCED CORPORATE ACCOUNTING	4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To understand the Redemption of Preference shares, Mergers& Acquisitions, Internal Reconstruction, Liquidation of shares, recent Development in Accounting.
2. To Post the journal, ledger Prepare the balance sheet for corporate Accounting.
3. To comprehend on recent developments and accounting standards
4. To enable the students to have working knowledge in corporate and special accounts.
5. To enable the students to have working knowledge in corporate and special accounts.
6. To provide knowledge on the importance of Human Resources Accounting

COURSE OUTCOMES :

Learners should be able to

1. Understand the Redemption of Preference shares, Mergers & Acquisitions, Internal Reconstruction, Liquidation of shares, recent Development in Accounting.
2. Post the journal, ledger Prepare the balance sheet for corporate Accounting.
3. Comprehend on recent developments and accounting standards
4. Demonstrate capabilities of problem-solving, critical thinking, and communication skills related to the discipline of accounting.
5. course includes preparation of final accounts, Amalgamation, Absorption and Reconstruction, Holding Company, Insurance and Banking Company Accounts, Inflation and Human Resource Accounting
6. Provide knowledge on the importance of Human Resources Accounting

Unit – I

Preparation of Company Final Accounts – Treatment and Provisions for Income Tax – Divisible Profit – Bonus Shares – Calculation of Managerial Remuneration

Unit –II

Amalgamation, Absorption and Reconstruction of Companies (Advanced Problems in Amalgamation, Absorption and Reconstruction of Companies including adjustment regarding elimination of Unrealized Profit, Inter Company Owings and Inter-Company Holdings)

Unit – III

Holding Company Accounts – Capital Profit – Revenue Profit – Minority Interest – Cost of Control – Preparation of Consolidated Balance Sheet

Unit – IV

Insurance Company Accounts – Life and General Insurance Accounts – Preparation of Revenue Accounts and Balance Sheet (Under the New Format) - Banking Company Accounts – Rebate on Bills Discounted – Classification of Advances and Investments – Preparation of Profit and Loss Account and Balance Sheet (Under the New Format)

Unit – V

Inflation Accounting – Human Resource Accounting –International Accounting Standards (Theory Only) – International Financial Reporting Standards.

Note: Theory 20%; Problems 80%

		Semester – I			
16CMP105A	**FINANCIAL MARKETS AND INSTITUTIONS**	**L**	**T**	**P**	**C**
		4	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To comprehend on the concept financial markets, instruments and financial institution and its role in economic development
2. To understand the regulatory bodies governing the functioning of financial markets and financial institution
3. To analyze the structure of financial markets and its functions
4. To provide knowledge on Financial System of India and
5. To provide knowledge on Financial System of India and to familiarize the structure of financial markets
6. To familiarize the structure of financial markets

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the concept financial markets, instruments and financial institution and its role in economic development
2. Understand the regulatory bodies governing the functioning of financial markets and financial institution
3. Obtain the capacity to do lifelong learning on financial markets, instruments, financial institution and its applications.
4. To communicate orally and in written format about the financial markets and institutions
5. The course includes Money Market, Money Market Instruments, Capital Market, Depository System and various types of Financial Institutions
6. Course includes Money Market, Money Market Instruments, Capital Market, Depository System and various types of Financial Institutions

Unit – I

Financial Concept: Financial Assets, Intermediaries, Financial Markets, Financial Rate of Return, Financial Instruments. Financial Markets Classification – Development of Financial System in India, Legislative Support – Weakness of Indian Financial System

Unit - II

Money Market – Definition – Money Market Vs Capital Market- Objectives – Importance of Money Market – Composition of Money Market – Participants – Commercial Bill Market – Types of Bills – Importance of Bill Market –Discount Market – Acceptance Market – Bill Market Scheme – Treasury Bill Market – Types of Treasury

Bills –Importance – Commercial Paper – Certificate of Deposit – REPO – Structure of Indian Money Market –Recent Developments in Money Markets.

Unit – III

Capital Market – Meaning – Stock Exchange – Distinction between New Issue Market and Stock Exchange – Relationship between New Issues Market and Stock Exchange – Functions of New Issue Market – Instruments of Issues – Players in the New Issue Market – Book Building – Follow on Public Offer – Recent Trends – Reasons for Poor Performance – Suggestions

Unit - IV

Depository System : Definition and Meaning – Objectives – Interacting Institutions – Depository Process – Trading in a Depository System – Depository System in India – Depository Participants – Benefits – NSDL – Central Depository Services (India) Ltd. – Drawbacks – Remedial Measures - Derivatives

Unit - V

RBI – Commercial Banks – Public and Private – Co-operative Banks - LIC – IDBI – IFCI – ICICI – NHB – SFCs – DIC – TIIC. SEBI – Objectives – Functions of SEBI - Guidelines for Investor Protection

	Semester – I
	L T P C
16CMP105B MARKETING MANAGEMENT	**4 - - 4**

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of marketing, and 4Ps of Marketing
2. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. To apply the marketing concepts and skills lifelong.
4. To understand the recent trends in marketing strategies of a companies.
5. To understand the consumer behavior and to adopt the decision according to the consumer.
6. To know the promotion strategies followed by a company.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. Apply the marketing strategies of a company's effectively.
5. To be familiar in behavior of consumer in related to market and to take decision effectively.
6. To implement the correct promotion strategies.

Unit-I

Definition of Marketing and Marketing Management – Object and Importance of Marketing – Evolution of Concept of Marketing – Recent Development in Marketing Concept – Marketing Functions – Approaches to the Study of Marketing – Market Segmentation – Basis – Criteria – Benefits.

Unit-II

Product Policy: Product Planning and Development – Product Life Cycle – Product Line and Product Mix Strategies. Branding: Features – Types – Functions. Packaging: Features – Types – Advantages – Brand Name and Trademark.

Unit-III

Pricing: Definition - Objectives of Pricing Decisions - Factors influencing Pricing Decisions – Methods of Setting Prices – Cost – Demand and Competition – Pricing Policies and Strategies.

Unit-IV

Sales Promotion: Meaning and Definition – Objectives and Importance of Sales Promotion – Personal Selling – Steps in Personal Selling - Advertising – Meaning – Objectives – Functions and Importance – Kinds of Media – Direct Marketing – Multi-level Marketing. Distribution Channels: Types of Channels – Factors affecting Choice of Distribution.

Unit-V

Marketing of Services – E–Marketing – Marketing Ethics – Consumerism – Meaning – Evolution – Types of Exploitation – Consumer Rights – Laws Protecting the Consumer Interest – Consumer Protection Acts – Consumer Courts - Retail Marketing – Methods – Problems – Retail Marketing in India – Customer Relationship Management

			Semester – I			
			L	T	P	C
16CMP105C	**HUMAN RESOURCE DEVELOPMENT**		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To acquire knowledge in human resource management, HR audit, and HR analytics.
2. To gain knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
3. To understand the concepts and practical implications of performance management, Training methods and career planning.
4. To know about compensation and reward management and its practice in industry.
5. To be familiar with Employee relations and its application for the development of Human resources.
6. To understand the Job analysis and Design

COURSEOUTCOMES:

Learners should be able to

1. Assess the job analysis for a profile and understand its linkage with HR planning
2. Evaluate the training needs and draft a training programme.
3. Understand the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Understand and apply the appropriate employee relations measures.
5. Understand the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. consists of Job Analysis, Job Evaluation, Orientation, Performance Appraisal, Rewards, Punishment, Industrial Relations, Collective Bargaining and Grievances Handling

Unit – I

Introduction to Human Resource Development: Concept and evolution; Relationship between human resource management and human resource development; HRD mechanisms, processes and outcomes; HRD matrix; HRD interventions; Roles and competencies of HRD professionals

Unit –II

HRD Process: Assessing HRD needs; Designing and developing effective HRD programs; Implementing HRD programs; Evaluating HRD programs.

Unit – III

Learning and HRD: Maximizing learning; Individual differences in learning process; Learning strategies and styles; Principles of learning; Learning and motivation; HRD culture and climate.

Unit – IV

HRD Activities and Applications: HRD for Workers; HRD mechanisms for workers; Role of trade unions; Employee training and development- Process, methods, and types; Coaching, counselling and performance management; Career management and development; Organization development.

Unit – V

HRD in Organisations, Trends and Practices: Select cases for HRD Practices in Government organisations, defence, police, private sectors and public sectors units; HRD audit; Balanced scorecard; People capability maturity model; Integrating HRD with technology; Employer branding and other recent trends; Future of HRD.

		Semester – I
16CMP106	**ORGANIZATIONAL BEHAVIOUR**	**L T P C** **4 - - 4**

COURSE OBJECTIVES:

To make the students

1. To understand the basic concepts of organizational behavior.
2. To analyze the individual behavior traits required for performing as individual or group.
3. To obtain the knowledge and skills of perceiving, motivating using different learning styles.
4. To understand how to perform in group and team and how to manage the power, politics and conflict.
5. To recognize the importance of organizational culture and organizational change.
6. The course comprise of Organizational behavior, Personality, Attitude, Stress and Organizational Conflict

COURSE OUTCOMES:

Learners should be able to:

1. Analyze behavior issues in the context of the organizational behavior theories and concepts.
2. Assess the behavior of the individuals and groups in organization by applying personality, motivation and learning theories.
3. Manage team and resolve conflict arising between the members.
4. Explain how organizational changes held in the company
5. and culture affect working relationships within organizations.
6. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit – I

Organizational Behaviour – Nature – Disciplines contributing to Organizational Behavior – Role of Organizational Behavior – Foundations of Organizational Behavior – Implications of Hawathorne Experiments

Unit – II

Individual Difference – Nature – Causes – Models of Man – Perception – Perceptual Process – Perceptual Selectivity – Distortion in Perception – Personality – Determinants of Personality

Unit – III

Attitude – Concepts – Theories of Attitude Formation – Factors in Attitude Formations – Attitude Change. Stress – Causes of Stress – Effects of Stress – Stress Coping Strategies – Individual and Organizational

Unit – IV

Group Dynamics – Concepts and Features of Group – Types of Groups – Formal and Informal Groups – Causes of Informal Organizations – Types of Industrial Organization – Effects of Informal Organization – Group Cohesiveness

Unit – V

Organizational Conflicts – Functional and Dysfunctional Aspects of Conflicts – Role Conflicts – Interpersonal Conflict – Conflict Management

Semester – I

	L	T	P	C
16CMP111 PRACTICAL 1 - COMPUTER APPLICATION IN BUSINESS	-	-	4	2

COURSE OBJECTIVES:

To make the students

1. To prepare template to present the financial data for supporting analysis.
2. To use advanced formula in financial calculations
3. To use visualization tools to represent the financial data graphically
4. To forecast the financial data using the in build tools
5. To Understand and apply Sensitivity analysis on models like Goal Seek , Scenarios; for financial decision-making
6. To insert the slides with animation effects.

COURSEOUTCOMES:

Learners should be able to

1. Apply advanced formulas to lay data in readiness for financial analysis
2. Use advanced techniques for financial report visualizations
3. Leverage on various methodologies of summarizing financial data
4. Understand and apply Sensitivity ("What-if") analysis models like Goal Seek , Scenarios; Excel models for financial decision-making
5. Exhibit communication skills to communicate the output derived from the program.
6. Course includes practical on paragraph formatting, usage of Excel funtions, Automation of Presentation, creation of database and report generation.

I - MS WORD

1. Prepare an research article related to the specialization using Bold, Underline, Font Size, style, Background color, Text color, Line spacing, Spell Check, Alignment, Header & Footer, Inserting pages and page numbers, Find and Replace.
2. Prepare an inter collegiate invitation for the college function using Text boxes and clip parts, Word Art, Symbols, Borders and Shading.
3. Prepare an end semester mark statement through template and perform the following operations: Inserting the table, Data Entry, Alignment of Rows and Columns, Inserting and Deleting the Rows and Columns and Change of table Format.
4. Prepare a Convocation letter for the passed out students for 10 members using mail merge operation.
5. Prepare a resume for attending interview using alignment and formatting.

II - MS EXCEL

1. Prepare a cost sheet and perform the following operations: Data Entry, Total, by using arithmetic function.
2. Draw the different type of charts (Line, Pie, Bar) to illustrate year-wise performance of sales, purchase, profit of a steel manufacturing company by using chart wizard.
3. Prepare a statement of Bank customer's account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions.
4. Prepare a Product Life Cycle which should contain the following stages: Introduction, Growth, Maturity, Saturation, decline of a product.
5. Prepare an income tax filling return as per the income tax department format.
6. Carry out result analysis of your department by employing statistical and mathematical functions.
7. Calculate Electricity statement by making use IF statement.

III - MS POWERPOINT

1. Design presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, special features, price, special offer etc. Add voice if possible to explain the features of the product. The presentation should work in manual mode.
2. Design Presentation slides for Organization details for 5 levels of hierarchy of a company by using organization chart.
3. Design presentation slides about an illustrate story and perform frame movement by interesting clip arts to illustrate running of an image automatically.
4. Design presentation slides for the Seminar/Lecture Presentation using animation effects and perform the following operations: Creation of different slides, changing background color, font color using word art.

IV - MS ACCESS

1. Prepare a payroll for employee database of an organization with the following Details: Employee id, Employee name, Date of Birth, Department and Designation,

Date of appointment, Basic pay, Dearness Allowance, House Rent Allowance and other deductions if any. Perform queries for different categories.

2. Create mailing labels for student database which should include at least three table must have at least two fields with the following details: Roll Number, Name, Course, Year, College Name, University, Address, Phone Number.
3. Gather price, quantity and other descriptions for five products and enter in the Access table. Perform query for calculation total and create an invoice in form design view.
4. Create report for the Product database.

		Semester – II			
		L	**T**	**P**	**C**
16CMP201	**APPLIED COST ACCOUNTING**	**4**	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To Explain the core concepts of costing, costing types and its importance in managing a business
2. To develop a conceptual framework of costing and to acquaint the participants with the tools, techniques
3. To know the process of cost reduction and control in the realm of decision making.
4. To familiarizes students with the various concepts and elements of cost
5. To Create cost consciousness among the students
6. To provide the students knowledge about use of costing data for Planning, Control and decision making

COURSEOUTCOMES:

Learners should be able to

1. Explain the core concepts of costing, costing types and its importance in managing a business
2. Develop a conceptual framework of costing and to acquaint the participants with the tools, techniques and process cost reduction and control in the realm of decision making
3. Compute using different costing methods.
4. Demonstrate capabilities of teamwork, problem-solving and critical thinking
5. Communication skills related to finance decisions.
6. course include Material Cost, Labour Cost, Overheads, Process Costing, Activity Based Costing and Target Costing

Unit – I

Cost Accounting – Meaning and Objectives – Importance – Limitations – Limitations of Financial Accounting – Differences between Cost Accounting and Financial Accounting, Cost Accounting and Management Accounting – Methods of Costing – Elements of Cost – Preparation of Cost Sheet – Tender – Quotations – Reconciliation of Cost and Financial Accounting

Unit – II

Material Control – Objectives – Levels of Inventory – EOQ – Methods of Inventory Control – Methods of Valuing Material Issues – Control over Wages – Scrap and Spoilage - Labour - Labour Cost Control – Importance – Systems of Wage Payment – Incentives – Idle Time – Control Over Idle Time – Labour Turnover

Unit – III

Overheads – Classification of Overheads – Allocation, Apportionment and Absorption of Overheads – Methods of Absorption of Overheads

Unit – IV

Process Costing – Features – General Principles – Comparison between Job Costing and Process Costing – Process Losses – Normal Loss – Abnormal Loss – Abnormal Gains – Inter Process Profit – Equivalent Production – Procedure for Evaluation – Joint Product and by Product

Unit-V

Activity Based Costing: Meaning and Methodology of Activity Based Costing (ABC Analysis)-Merits, Demerits and Suitability of Activity Based Costing-Implementation of Activity Based Costing- Draw Back of Conventional Costing - Target costing**:** Meaning-Characteristics-Principles-Implementation of Target Costing-Installation of Target Costing-Target Costing Vs. Traditional Costing- Life Cycle Costing-Meaning-Definition-Applications of LCC -Importance-Process of LCC

16CMP202 RETAIL MANAGEMENT

***COURSE OBJECTIVES** :*

To make the students

1. To understand the concept of retailing, retailing strategy and the trends of retailing in India
2. To obtain the knowledge on the retail location and importance of choosing the retail location.
3. To gain knowledge on the retail formats and importance of choosing the retail formats.
4. To know the process of retail pricing and merchandising.
5. To recognize the importance of advertising and technology usage in retailing.
6. To develop an understanding of the retail strategy and planning process

LEARNING OUTCOMES :

Learners should be able to

1. Comprehend on the retailing concept, retailing strategy and the trends of retailing in India.
2. Select the appropriate location for the setting up of retail store.
3. Evaluate the importance of the various retail formats
4. Formulate pricings strategies, apply the concept of merchandising and assess the different advertising and technology options suitable for the success of the retail operations.
5. Exhibitthecommunicationskillstoconveythethoughtsandideastotheindividualsandgroup.
6. Course includes Overview of Retailing, Retail location and layout, Merchandizing, Communication, Advertisement and Sales Promotion.

Unit – I

An overview of Retailing - Types of stores - Product Retailing vs. Service Retailing - Non store Retailing - Retail strategy - Achieving competitive advantage and positioning Retailing environment - Legal, Social, Economic, Technological, issues - Trends in the Indian Retailing Industry

Unit – II

Retail store location and layout - Country/Region analysis - Trade area analysis - Site evaluation and selection - Store design and layout - Comprehensive store planning - Exterior design and layout - Interior store design and layout - Interior design elements

Unit – III

Planning merchandise needs and merchandise budgets - Methods for determining inventory evaluation - Assortment planning, buying and vendor relations - Merchandise pricing - Price strategies - Psychological pricing - Mark-up and markdown strategies.

Unit – IV

Communicating with the retail customer - Retail promotion mix-Advertising - Sales promotion - Publicity - Retail selling process - Retail database- In-store customer service.

Unit – V

Globalization and changing retail formats – Online retailing - International Retailing – Opportunities and Challenges - Market entry formulas - New customized formats (customized stores, portable stores, merchandise depots, retail theater, service malls, customer-made stores, interactive kiosk 'shopping arcades')

16CMP203	**DIRECT TAXATION**	**4**	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of assessment, assessee, Income heads and the Income Tax laws.
2. To help students to understand different heads of income
3. To learn the tools and techniques to compute the tax for the various income heads.
4. To select the best ways to compute the income tax based on the income heads for various assesseeandtogainalifelonglearningforapplyingtheITcalculationforvariousincomeheads based on each case of assessee.
5. To communicate orally and in written form the income tax concepts and computations.
6. To be familiar with the laws pertaining to the Income Tax and apply it lifelong.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the concepts related to assessment, assesse, Income heads and the Income Tax laws.
2. Compute Income Tax Returns.
3. Provide the students knowledge about Tax planning
4. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee
5. Communicate orally and in written the Income tax computation under various income heads and deductions.
6. Familiar with the laws pertaining to the Income Tax and its apply it lifelong.

Unit- I

Income Tax Act 1961- Scope of income - Total Income and residential status - income which do not form part of the total income – Income from Salaries.

Unit - II

Income from House Property – Profits and gains of business or profession – Income From business- Income from Profession.

Unit - III

Capital Gains – Capital Gain –Short Term and Long Term Gain - Income from other sources – Aggregation of income- set off and carry forward of losses.

Unit - IV

Deduction out of Gross Total Income - Computation of Total Income-Assessment of Individual.

Unit - V

Tax Planning – Advance payment of tax –Tax Deducted at Source - ETDS Software - Returns to be submitted by various assesses-Different Types of Tax Planning – Tax Software – e-filing Procedure e-filing of income tax return.

Note: The question paper shall cover 40% theory and 60% problems

2. To classify the items under items heads
3. To Generate the financial Reports evaluate the output.
4. To communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerized system as a lifelong learning.
6. To develop practical skills for maintain the book of accounts.

COURSE OUTCOMES:
Learners should be able to
1. Familiarize on the account's heads, vouching, inventory valuations available in the accounting software
2. Classify the items under items heads
3. Generate the financial Reports, evaluate the output.
4. Communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerized system as a lifelong learning.
6. Course covers Company Creation, Ledger, Voucher, Trading and Profit and Loss Account, Balance Sheet, Inventory Valuation and Ratio Analysis

Creating a Company
1. Create a Company with all relevant details including VAT options

Creating Ledger
2. Create the ledgers under appropriate predefined groups

Cash a/c	Computer sales a/c
Buildings a/c	Machinery a/c
Furniture a/c	Commission received a/c
Printer purchase a/c	Commission paid a/c
Rent received a/c	Salary a/c
Rent paid a/c	Indian bank a/c
Wages a/c	Sales returns a/c
Capital a/c	Depreciation a/c
Purchase returns a/c	John & Co. a/c (purchased goods from this company)

Ram agency a/c (sold goods to this company)

Create vouchers
3. **Create vouchers and view Profit and loss a/c and Balance sheet for the following**:
Hindustan Ltd. started the business on 01-04-2011

1 Apr. Contributed capital by cash Rs 2, 00,000
1 Apr. Cash deposited in Indian bank Rs 50,000
2 Apr. Credit purchases from Krishna traders Rs. 20000 invoice no 12
3 Apr. Credit purchases from PRAVIN traders Rs 20,000 invoice no 12
4 Apr. Credit purchase from KRISHNA traders Rs 20000 invoice no 14
5 Apr. Credit purchase from PRAVIN traders Rs 20,000 invoice no 44
6 Apr. Returned goods to KRISHNA traders Rs 5000 invoice no 12
7 Apr. Returned goods to PRAVIN traders Rs 5000 invoice no 44
8 Apr. Credit sales to RAVI & Co Rs 50,000 inv no 1
9 Apr. Credit sales to KUMAR & Co Rs 50,000 inv no 2
10 Apr. Cash sales Rs 20,000 inv no 3
11 Apr. Credit sales to RAVI & Co Rs 50,000 inv no 2
12 Apr. Credit sales to RAVI & Co Rs 50000 inv no 5
14 Apr. Goods returned by RAVI & Co Rs 5000 inv no 1
14 Apr. Goods returned by KUMAR & Co Rs 5000 inv no 1
15 Apr. Payment made by cheque to Krishna Traders Rs 30,000 ch no 505580
16 Apr. Payment made by cheque to Pravin Traders Rs 30,000 ch no 505592
17 Apr. Received cheque from: Ravi & Co and Kumar & Co 75,000 each.

Payments made by cash
3 Apr. Paid to petty cash by cash Rs.1000
4 Apr. Furniture purchased Rs.20000
5 Apr. Salaries paid Rs. 10000
6 Apr. Rent Rs.4000
7 Apr. Electricity charges Rs.3000
8 Apr. Telephone charges Rs.3500
9 Apr. Cash purchases Rs.5000

Payments made by petty cash
10 Apr. Conveyance Rs.150
11 Apr. Postage Rs.100
12 Apr. Stationeries Rs.200
14 Apr. Staff welfare Rs.100
14 Apr. Stationeries purchased from Sriram & Co 1500 on credit
15 Apr. Depreciation on furniture 10%

4. Emerald & Co., started a business of home appliances from 1-4-2011
01-04 received cash for capital 5, 00,000
07-04 credit purchases from LG Limited invoice no 123
Oven 100nos at Rs 800,Mixes 100nos at Rs 1000,DVD player 100nos at Rs 1500,
Fridge 100nos at Rs 2000
10-04 Credit Sales to AMN invoice no 1:
Oven 70nos at Rs 1000,Mixes 70nos at Rs 1500,DVD player 70nos at Rs 2000
Fridge 70nos at Rs 2500+TNGST 4% ON TOTAL SALES
10-04 Cash Sales invoice no 2:
Oven 10nos at Rs 1000,Mixes 10nos at Rs 1500,DVD player 10nos at Rs 2000,

Fridge 10nos at Rs 2500+TNGST 4% ON TOTAL SALES CASH discount 5%
15-4 Paid cheque to LG limitedRs 2,00,000
15-4 Received cheque from AMN&coRs 3,00,000

5.Payment made by cash
Paid to petty cash Rs 2000, Furniture Rs 15000, Salaries Rs 10000
Wages Rs 7000, Carriage inward Rs 1500.
25-04 Payment made by petty cash
Conveyance Rs 200, Postage Rs 150, Stationeries Rs 150, Staff Welfare Rs 200
30-04 Journal depreciate 10% on furniture:
Prepare Trading Profit and Loss Account and Balance sheet.
6. From the Balances of Ms. Kavitha, Prepare Trading A/C, Profit And Loss A/C and Balance Sheet for The Year Ending

Stock - 9,300 Repairs - 310 Machinery - 12,670 Furniture - 1430 Office expenses - 750 Trading expenses - 310 Land & Builiding - 15,400 Bank charges - 50 Capital - 24,500 Loan - 5,000 Closing stock - 7,580	Misc. income - 200 Purchases - 15,450 Purchase return - 440 Sales return - 120 Sundry creditors - 12,370 Advertisement - 500 Cash in hand - 160 Cash at bank - 5,870 Sales - 20,560 Sundry expenses - 150 Insurance - 500 Traveling expenses - 200

INVENTORY VALUATION
7. From the Information given below create unit of measurement, stock groups and stock items
Find the stock summary:
Stock groups: 1. Magazine 2. Baby drinks 3. Cool drinks 4.dailynews paper 5. Hot drinks 6.Stationeries 7. Vegetables
Stock items:

Item	Qty	Rate	Units
Boost	25	80	nos
Sports star	20	15	nos
Potato	260	30	kgs
Star dust	20	25	nos
The Hindu	50	3.25	nos
Tomato	150	15	kgs
Fanta	10	25	lit

Dinamalar	40	2.50	nos
Coco	55	120	nos
Horlicks	60	70	nos
India today	10	10	nos
Lactogin	10	100	nos

MAINTAIN BILLWISE DETAILS

8. Create bill wise details from the following

1. Ravi commenced business with a capital of Rs 2,00,000
2. Purchased goods from Kumar & Co Rs.15, 000 Paid in three installments within 5 days gap
3. Purchased goods for cash Rs.8000
4. Sold goods to Ratna & co Rs. 20,000 amount to be paid in two installment
5. Sold goods for cash for Rs .5000
6. Received cash from Ratna & co Rs. 75000
7. Paid to Kumar & co Rs. 7500
8. Sold goods for cash Rs.5000

CONSOLIDATION OF ACCOUNTS

9. Bharath Agencies, A Wholesaler Gives The Following Information:

Opening balances:
Capital: 20, 00,000 cash at bank: 10, 00,000
Cash in hand: 5, 00,000 furniture: 5, 00,000
Bharath agencies are dealing in stationeries. The selling prices are as follows;
Pen Rs 35 per dozen, pencil Rs. 30 per dozen,Ink pens Rs 140 per dozen

The following transactions take on a particular date:
1.purchased 100 dozens of pens from Ravana bros. @ Rs.25 per dozen for cash
2.purchased 200 dozens of pencils from Gughan bros.@ Rs.21.50 per dozen for credit less discount of Rs 100
3.sold 10 dozens of pens to Dharma bros. For cash
4.sold 10 dozens of pens to Bema bros for credit
5.sold 50 dozens of pencils to Arjuna bros.
6.purchased from Ravana bros 50 dozens of ink pens @ Rs.120 and by cheque.

Prepare following statements using Ex-accounting packages:
Stores ledger, Trading account, Income statement, Balance sheet, Account summary
Ignore dates

FOREIGN GAINS/LOSS

10. Calculate

01.01.2005 Purchased goods from U.K supplier 1000 £
02.01.2005 Sold goods to U.S buyer 1500
03.01.2005 Cash received from U.S buyer 1500
(Selling rate rs.46/$)

04.02.2005 Paid cash to U.K supplier 1000
(Selling rate Rs 53/ £)
Dollar $:
Std rate - 1$ - 43 Rs
Sales rate - 1$ - 44 Rs
Buying rate - 1$ - 42 Rs
Pound £:
Std rate - 1 £ - 51 Rs
Sales rate - 1 £ - 50 Rs
Buying rate - 1 £ - 52 Rs

11. MEMO VOUCHER
An advance amount paid Rs 1500 given to sales executive for traveling. The actual expenses for traveling expenses for the sales is Rs 500

12. CHEQUE PRINTING
Print a cheque:
Company name on cheque: Wipro India Ltd.: name of the bank Indusind bank.
Width 168, height 76, starting location 116, distance from top 23.

13. RATIO ANALYSIS
Enter the following details comment upon the short-term solvency position of the company:
Working capital Rs 20560492
Cash 14500
Bank 18500
Debtors 518260
Creditors 429337
Sales 515252
Purchases 433310
Stock 125982
Net profit …?

14. INTEREST CALCULATIONS
Cash deposited in Scotia bank Rs 1,00,000
Sold goods to Ganesh Rs 25,000
31-12- cash deposited at Scotia bank Rs 50,000
Sold goods to Ganesh 50,000
Interest parameters rate 14% per 365 days year

15. Calculate Interest
Cash deposited in SBI 1, 00,000 Rs
1-12 purchased goods from suppliers Rs 20,000
Deposited in SBI Rs.50, 000
Purchased goods from suppliers Rs 40,000
Interest parameters rate 16% per 365 days year

16. Display the interest calculations for the period 1-4-2011 to 31-12-2011
Opening balance
Ram & Co Rs 25,000
Krishna traders Rs 20,000
Interest parameters rate 12% per 365 days year
Interest parameters rate 12% and 16% for sundry creditors per 365 days year
Purchased goods from Krishna for 25,000(credit period 45 days)
Sold goods to Ram for Rs. 50,000(credit period 30 days)
Paid to Krishna the amount plus interest
Received from Ram plus interest

17. Create stock items, stock groups, sales categories, godowns, units of measure.

Stock	Category	Group	Godown	Unit of measure	Std cost	Sell Price	Op. Qty	Total Value
Inter Celeron	Processor	Celeron	Mumbai	Nos.	15000	20000	2	30000
Intel Premium III	Processor		Chennai	Nos	20000	25000	3	60000
Tally Silver	Accounting	Tally	Chennai	Nos	20000	22500	5	100000
Tally gold	Accounting	Tally	Chennai	Nos	42000	45000	5	210000
								400000

18. Using the above exercise create various vouchers including VAT calculation for the following

Date Transactions	Transcation
O9/4/2006	Intel Pentium III (3 Nos) @ 25,000 delivered to Vijay & CO, from Madras Go down.
10/4/2006	10 Nos of Intel Celeron @ 15000 per unit received from Jayaram and Co, and sent to Madras Go down.
12/4/2006	2Nos of Intel Premium III received from Vijay & CO, as it was not in a working position.
14/4/2006	2Nos of Intel Celeron returned to Jayaram & Co from Madras Go down.
14/4/2006	Physical Stock verification shows Shortage of 1 No Intel Pentium III.

19. Create the following Inventory vouchers with data from any cost accounting book.

a. Purchase order
b. sales order
c. Rejection out
d. Rejection in
e. Stock journal
f. Delivery note
g. Receipt note
h. Physical stock

20. In addition to the above mentioned lab exercises work out a problem from any advanced accountancy book with a minimum of 20 transactions and generate the tally reports in full.

				Semester – III			
				L	**T**	**P**	**C**
16CMP301	**MANAGEMENT ACCOUNTING**			4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To provide the students knowledge about budgetary control.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. course incorporates Financial Statement Analysis, Ratio Analysis, Fund Flow and Cash Flow Analysis, Budgeting and Marginal Costing

Unit – I

Management Accounting – Meaning – Definition – Objectives and Scope – Relationship between Management Accounting and Financial Accounting – Management Accounting and Cost Accounting

Unit – II

Financial Statement Analysis – Types of Financial Statement Analysis - Ratio Analysis – Meaning – Uses – Limitations – Classification of Ratios – Computation of Ratios from Financial Statements

Unit – III

Fund Flow Analysis – Cash Flow Analysis – Working Capital Statements – Funds from Operations

Unit – IV

Budgetary Control – Flexible Budget – Sales Budget – Cash Budget – Production Budget – Purchase Budget

Unit – V

Marginal Costing – Break Even Analysis – Applications of Marginal Costing Techniques – Determination of Sales Mix – Key factor – Make or Buy Decision (Simple Problems Only)

Note: Theory -20% Problems - 80%

16CMP302	**BUSINESS RESEARCH METHODS AND TECHNIQUES**	**Semester – III** **L T P C** **4 - - 4**

COURSE OBJECTIVES:

To make the students

1. To understand the basic framework of research and research process and its important in business decision.
2. To develop an understanding of various research designs and sampling techniques and its application.
3. Toidentifyappropriatesourcesofinformationandmethodsofdatacollectionforsolving abusiness issue.
4. To understand the selection of appropriate tools to analyse the quantitative and qualitative data.
5. To understand the ethical norms for research and select the best type of research report and be familiar with the content to be included in the report.
6. To gain the sampling techniques along with hypothesis testing.

COURSE OUTCOMES :

Learners should be able to

1. Assessthebestsuitableresearchtypeandformulatetheresearchobjectiveforthebusines sproblem.
2. Formulatethesuitableresearchdesignsandselectappropriatesamplingtechniquesforth eresearch.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.
6. The course comprise of Types of Research, Research Design, Sampling, Data Collection, Scaling Techniques, Hypothesis Testing and Statistics

Unit-I

Introduction to Research: Meaning – Purpose – Types of Research – Significance – Qualities of a good research – Steps in Research - Identification, Selection and Formulation of Research Problem. Research Design: Components of Research Design – Methods of Research Design.

Unit-II

Sampling Design: Census and Sample Survey – Characteristics of a Good Sample Plan – Steps in Sampling – Types of Sampling – Advantages and Limitations of Sampling. Data Collection: Primary Data - Meaning – Significance – Methods of Collecting Data: Observation – Interview Schedule – Questionnaire. Secondary Data – Meaning - Sources of Secondary Data – Precautions while using Secondary Data.

Unit-III

Scaling Techniques: Meaning of Scale–Measurement of Scale – Important Scaling Techniques - Processing of Data - Editing – Purpose – Analysis and Interpretation of Data: Meaning – Need for Interpretation – Techniques of Interpretation.- Report Writing: Types of Research Reports – Layout of the Report – Steps in Writing the Report – Contents of Research Reports

Unit-IV

Hypothesis: Characteristics of a good Hypothesis – Formulation of Hypothesis – Procedure for Testing of Hypothesis – T test, F test and Chi Square Test, Analysis of Variance - Business Forecasting – Exponential Smoothing

Unit-V

Descriptive Statistics - Measures of Central Tendency: - Mean, Median and Mode - Standard deviation – Karl Pearson Correlation – Spearman Rank Correlation - Regression Models – Inferential Statistics – Multivariate Analysis - Factor Analysis – Kruskal Wallis Test

Note:

The question paper shall cover 80% theory and 20% problems

16CMP303	INDIRECT TAXATION	Semester – III L T P C 4 - - 4

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of indirect taxes emphasizing VAT and customs law.
2. To learn and compute the VAT liabilities.
3. To know how to register VAT and apply the VAT provisions.
4. To communicate orally and in written form the indirect taxations concepts and provisions.
5. To be familiar with the standards and laws pertaining to the VAT and customs and utilize for lifelong practical application.
6. To understand the statutory compliance under indirect taxes.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the Concept of indirect taxes emphasizing VAT and customs law.
2. Comprehend and compute VAT liabilities.
3. Know the procedure to register VAT and apply VAT provisions to business situations.
4. Communicate orally and in written form the indirect taxations concepts and provisions.
5. Familiar with the standards and laws pertaining VAT and customs and utilize for lifelong practical application.
6. The course covers Indirect Tax, Central Excise, Customs Laws, Service Tax and Central Sales Tax and VAT

Unit-I

Indirect Taxes- Features of Indirect Tax- Indirect Tax Laws-Administration and Relevant Procedures - Advantages and Disadvantages of Indirect Taxes

Unit-II

Central Excise - The Central Excise Law – Goods- Excisable goods, Manufacture and Manufacturer- Classification- Valuation-Related Person-Captive Consumption- Powers of Officers-Tariff Commission and other Tariff Authorities.

Unit-III

Customs Laws -Basic Concepts of Customs Law - Types of Custom Duties.- Anti- Dumping Duty, Safeguard Duty- Valuation -Customs Procedures- Import and

Export Procedures-Baggage- Exemptions – Warehousing- Demurrage - Project Imports and Re- Imports- Penalties and Offences- Export Promotion Schemes- Duty Drawback.

Unit-IV

Service Tax - Introduction, Nature of Service Tax-Service Provider and Service Receiver- Registration procedure- Records to be Maintained - Classification of Taxable Services - Valuation of Taxable Services- Exemptions and Abatements - Payment of Service Tax- Return - Export and Import of Services- Other aspects of Service Tax- Taxable Services.

Unit-V

Central Sales Tax Act & VAT Act- Introduction, Definition of Sale under CST – VAT- Salient Features of State VAT Acts- Treatment of Stock & Branch Transfer under State VAT Acts - Filing & Return under State VAT Act.

	L	T	P	C
16CMP305A INTERNATIONAL FINANCIAL MANAGEMENT	4	-	-	4

Course Objectives
To make the students

1. To make the students understand principles of financial management
2. To enable the students to take investment decisions.
3. To help the students to make financial decisions.
4. To provide the students with the basic knowledge of Dividend decisions.
5. To impart knowledge of working capital and cash management.
6.To provide knowledge on Foreign exchange and its significance in a developing economy

Course Outcomes
Learners should be able to

1. Students will be familiarized with basic concepts of financial management.
2. Students will know the technicalities of making investment decisions.
3. Students will be capable of making financing decisions.
4. Students will be familiarized with concepts of dividend decisions.
5. Students will be capable of making working capitalization and cash management.
6. course includes Balance of Payment, International Monetary System, Foreign Exchange Market, Foreign Exchange Risk and International Financial Market Instruments

Unit - I

IFM- Nature and Scope, IFM and Domestic Financial Management- Balance of payments - Significance- Preparation of BOP Statement - Link between BOP and the Economy.

Unit - II

International Monetary System - Gold Standard - IMF and World Bank Exchange Rate Mechanism - Factors influencing Exchange Rate - Purchasing Power Parity and Interest Rate Parity Theorems.

Unit - III

Foreign Exchange Market Transactions Spot, Forward, Futures, Options and Swaps - Arbitrage and Speculation in Foreign Exchange Market.- Exchange Arithmetic, Spread, Premium and Discount. – Currency Derivatives and Swaps

Unit - IV

Foreign Exchange Exposure - Managing Transaction, Translation and Operating Exposure - Techniques for covering the Foreign Exchange Risk - Internal and External Techniques of Risk.

Unit -V

International Financial Market Instruments - International Equities - ADR and GDR - Foreign Bond and Euro-bond - Short-term and Medium-term instruments.

2. Comprehend on the reforms in Indian insurance industry.
3. Understandthecategorizationandapplicationofthelifeandnon-lifeinsuranceasariskmitigation instrument,
4. Communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. The course encompass Labour Problems, Trade unionism, Industrial Disputes, Management and Personnel Administration and Grievances
6. Course includes Factories Act, Workmen Compensation Act, Wages Act, Gratuity Act, Bonus Act and Industrial Dispute Act

Unit – I

Factories Act 1948 – Definition – Registration of Factories – Health – Safety and Welfare Measures – Provisions relating to Hazardous Process – Working Hours – Holidays – Employment of Young Persons – Women – Annual Leave with Wages – Provision relating to Penalties and its Procedure and Appeal

Unit – II

Workmen Compensation Act 1923 – Definition – Employer's Liability for Compensation – Arising out of and in the course of employment – Amount of Compensation – Notice and Claims – Obligations and Rights of Employers.

Unit – III

Payment of Wages Act 1936 – Application of the Act – Definitions – Rules for Payment of Wages – Deductions from Wages – Enforcement of the Act. Minimum Wages Act 1948 – Object of the Act – Definitions – Fixation and Revision of Wages – Procedure – Advisory Board and Central Advisory Board – Safeguards in Payment of Minimum Wages – Enforcement of the Act – Offences and Penalties

Payment of Gratuity Act 1972 – Definitions – Payment of Gratuity – Forfeiture of Gratuity – Nomination – Determination and Recovery of the amount of Gratuity – Obligations and Rights of Employers and Employees

Unit – IV

Payment of Bonus Act 1965 – Definition – Eligibility – Disqualification – Determination of Bonus – Computation of Gross Profit – Determination of Available Surplus – Allocable Surplus – Amount of Bonus – Payment of Bonus linked with Production or Productivity

Unit - V

Industrial Dispute Act, 1947 – Definition – Types of Disputes – Grievance Settlement Authorities – Procedure for Settlement of Industrial Disputes – Works Committee – Conciliation Officer – Court of Enquiry – Labour Court – Industrial Tribunal – National Tribunal – Award and Settlement – Strikes and Lockouts – Prohibition of Strikes and Lockouts – Illegal Strikes and Lockouts – Layoff and Retrenchment – Closure

SUGGESTED READINGS

4. **Davar, R**. *Mercantile Law including Industrial Law.* Progressive Corporation

		Semester – III
		L T P C
16CMP306	**FINANCIAL SERVICES**	**4 - - 4**

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept financial services its impact on economy
2. To categorise financial services as fund based and fees based services
3. To understand the application of the fee and fund based services in economic development.
4. To communicate orally and in written form the understanding of financial services concepts and application.
5. To expose the students to the contemporary theory and practice of Indian Financial Services Sector
6. To familiarize the students with various types of Financial Services and their role in Social Change.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept financial services its impact on economy
2. Categorise financial services as fund based and fees based services
3. Understand the application of the fee and fund based services in economic development.
4. Communicate orally and in written form the understanding of financial services concepts and application.
5. comprise of Financial Instruments, Merchant Banking, Hire Purchase, Leasing, Venture Capital, Factoring, Mutual Funds and Credit Rating
6. Know the various types of Financial Services and their role in Social Change.

Unit – I

Financial Services – Meaning – Classification – Scope – Fund Based Activities – Non Fund Based Activities – Modern Activities – Sources of Revenue – Causes for Financial Innovation – New Financial Products and Services – Innovative Financial Instruments – Challenges facing the Financial Service Sector. Merchant Banking – Definition – Origin – Merchant Banking in India- Merchant Banks and Commercial Banks – Services of Merchant Banks- Qualities required of Merchant Bankers – Problems – Scope of Merchant Banking in India

Unit – II

Hire Purchase – Meaning – Features – Legal Position – Hire Purchase and Credit Sale – Hire Purchase and Instalment Scale – Hire Purchase and Leasing – Origin and Development – Banks and Hire Purchase Business – Bank Credit for Hire Purchase. Leasing – Definition – Steps in Leasing Transactions – Types of Lease – Advantages and Disadvantage of Lease – Problems of Leasing

Unit – III

Venture Capital – Concept – Meaning – Features – Scope of Venture Capital – Importance – Method of Venture Financing – Suggestion for the Growth of Venture Capital – Factoring – Meaning – Functions – Types – Factoring Vs Discounting – Benefits of Factoring

Unit – IV

Mutual Funds – Types – Importance – Selection of a Fund – Securitization – Stages of Securitization – Benefits – Derivatives – Kinds – Forward, Future, Options and Swaps.

Unit – V

Credit Rating – Definition and Meaning – Functions of Credit Rating – Origin – Credit Rating in India – Benefits of Credit Rating – Credit Rating Agencies in India: CRISIL, ICRA, CARE- Limitations of Rating – Future of Credit Rating in India

		Semester – III
16CMP311	**PRACTICAL 3 -SPSS**	**L T P C**
		- - 4 2

COURSE OBJECTIVES:

To make the students

1. To understand the Importance of SPSS and the features for entering the data according to the variable type.
2. To understand and apply the descriptive analytical tools
3. To know the univariate tools and its application
4. To comprehend the application of Bivariate analysis
5. To understand and compute the multivariate analysis using the package
6. To understand the correlation analysis

COURSEOUTCOMES:

Learners should be able to

1. Create datasheet and enter the data
2. Compute descriptive statistics using the package and graphically represent the data.
3. Perform univariate and bivariate analysis in the software package.
4. Perform multivariate analysis in the software package.
5. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.
6. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.

Workout the following statistics:

1. Descriptive Statistics
2. Chi-square
3. Independent Sample ‘t’ Test
4. Paired ‘t’ Test
5. Analysis of Variance (ANOVA)
6. Karl Pearson Correlation
7. Spearman Rank Correlation
8. Regression
9. Factor Analysis
10. Kolmogorov and Smirnov test
11. Mann Whitney U Test
12. Wilcoxon Test
13. Friedman Rank Test
14. Kruskal Wallis H-Test

15. Garett Ranking

16CMP401	CORPORATE ADMINISTRATION AND SECRETARIAL PRACTICE	Semester – IV			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of auditing, corporate governance
2. To learn the audit techniques, corporate governance
3. To apply the best auditing process as lifelong practice,
4. To communicate orally and in written form the auditing concept and techniques, Corporate governance
5. To be familiar with the standards and laws pertaining to the auditing, Corporate Governance
6. To know the information related to global reporting initiatives.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the Concept of auditing, corporate governance
2. Recall audit techniques, corporate governance practices.
3. Apply lifelong the key learning of best auditing process, Corporate governance practices
4. Communicate orally and in written form the auditing concept and techniques, Corporate governance concepts and practices in business.
5. Familiar with the standards and laws pertaining to the auditing, Corporate Governance.
6. Reminiscence with statistics on global reporting.

Unit – I

Company Administration – Hierarchy – Share Holders – Membership – Termination – Rights and Duties – Board of Directors – Qualification – Appointment – Powers – Duties – Other Managerial Personnel

Unit – II

Company Secretary – Meaning – Types – Qualities – Appointment – Dismissal – Power – Rights – Duties and Liabilities – Role of a Secretary in the Administration of a Company

Unit – III

Meeting – Law Governing Meetings – Requisites of a Valid Meeting – Chairman of a Meeting – Appointment – Duties – Powers – Notice – Agenda – Minutes – Quorum – Motion – Resolution – Methods of Voting

Unit – IV

Kinds of Company Meetings – Board of Directors Meeting – Share holder Meeting – Statutory Meeting – Annual General Meeting – Extraordinary General Meeting – Duties of a Company Secretary relating to the Meetings

Unit – V

Drafting of Correspondence relating to the Meetings – Drafting of Notices – Agenda and Minutes of the Meetings of Shareholders and Directors – Drafting of Chairman's Speech – Annual Report and Auditors Report

SUGGESTED READINGS

1. **Kuchhal, M.C. (2008)**. *Secretarial Practice.* New Delhi, Vikas Publishing House Private Limited.

References

1. **Kapoor, N.D. (2015)**. *Elements of Company Law.* New Delhi, Sultan Chand and Sons.
2. **Ashok K. Bagrial (2007)**. *Company Law.* New Delhi, Vikas Publishing House Private Limited.

16CMP402	ENTREPRENEURSHIP AND SMALL BUSINESS MANAGEMENT	Semester – IV			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
2. To communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. To apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
4. To initiate the required skills for entrepreneurial development.
5. To help students understand the process of establishing and developing an enterprise
6. To make the students Small Business as seed bed of Entrepreneurship

COURSE OUTCOMES:

Learners should be able to

1. Assessthebestsuitableresearchtypeandformulatetheresearchobjectiveforthebusinessproblem.
2. Formulatethesuitableresearchdesignsandselectappropriatesamplingtechniquesfortheresearch.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.
6. The course comprise of Types of Research, Research Design, Sampling, Data Collection, Scaling Techniques, Hypothesis Testing and Statistics

Unit – I

Small Business Enterprise - Small Business framework - Concept and Definition- Nature and Characteristics - Relationship between Small and Large Business - Scope and Types of Small Business - Rationale and Objectives - Small Business as seed bed of Entrepreneurship

Unit –II

Entrepreneurship - Entrepreneur and Entrepreneurship Concept - Distinction between Entrepreneur and Manager - Entrepreneurial Competency - Functions - Types (including women and rural).

Unit – III

Establishing a Small Enterprise - Learning the important steps for starting a Business - Project Identification and Selecting the Product - Generation and Screening the Project Ideas - Market Analysis - Technical Analysis, Financial Analysis (up to cost of production) Project Formulation - Assessment of Project Feasibility - Preparation of Project Report - Dealing with basic startup problems.

Unit –IV

Growth Strategy - Growth strategy for Small Business - Need for Growth - Types of Growth Strategy - Expansion - Diversification-Sub contracting.

Unit-V

Institutional Support - Sources of Finance - Financial Support to Small Business- Various Incentives and Subsidies - Central and State Government Schemes

SUGGESTED READINGS

		Semester – IV			
		L	**T**	**P**	**C**
16CMP491	**PROJECT AND VIVA-VOCE**	-	-	23	8

COURSE OBJECTIVES:

To make the students

1. To identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research processin the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research processin the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills

The students should select a problem in Accounting, Finance, Marketing or any other arears related to commerce.

Report should contain

- Introduction
    - Introduction about the industry
    - Introduction about the Company
    - Review of literature – Minimum 10 papers from referred journal
    - Need for the Study
    - Objectives
- Research Methodology

- Research Design
- Sampling Design
- Sources of Data Collection
- Tools used for analysis
- Limitation

* Data analysis and interpretation
* Findings and Suggestions
* Conclusion
* Bibliography (APA format)

							87	**1000**	**1500**	**2500**

PROGRAMME OUTCOMES (PO)

a) Postgraduates will develop an understanding of various commerce functions such as finance,
accounting, financial analysis, project evaluation, cost accounting and gain expertise in
computer application.

b) Postgraduates will have exposure to solve complex commerce problems and analyze problems critically through research based or project based approach of learning with the support of computer applications.

c) Postgraduates will excerpt information from various sources and apply mathematical, analytical, statistical and IT tools for financial and accounting analysis.

d) Postgraduates will develop an ability to effectively communicate both orally and in written
forms.

e) Postgraduates will appreciate the importance of working independently and in a team in order to achieve common goals.

f) Postgraduates will acquire critical and analytical thinking and will be able to apply the same in effective decision making.

g) Postgraduates will evaluate the implications of uncertainty in global perspective and cross
cultural issues that affect the functioning of the system or business.

h) Postgraduates will acquire professional and intellectual integrity, professional code of conduct, ethics and values to contribute for sustainable development of society by becoming socially responsible citizen.

PROGRAMME SPECIFIC OUTCOMES (PSO)

i) Postgraduates will acquire ability to employ management knowledge and skills in their career
advancement and personal enrichment

j) Postgraduates will acquire ability to utilize the programming skills or the latest computer application for developing a new software or usage of the existing tool in the decision-making process.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

I. Postgraduates will gain advanced knowledge in the domain of commerce, management and finance

II. Postgraduates will understand the system functioning and develop the capability of modeling, designing, implementing and verifying a computing system to meet specified requirements while considering real-world constraints.

III. Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path

IV. Postgraduates will adapt to a rapidly changing global environment and become socially
responsible and value driven citizens committed to sustainable growth.

		Semester – I			
		L	T	P	C
16CCP101	**CORPORATE FINANCE**	4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Explain the core concepts of corporate finance and its importance in managing a business
2. To understand the nature, importance, structure of corporate finance related areas.
3. To impart knowledge regarding source of finance for a business.
4. To develop a conceptual framework of finance function
5. To acquaint the participants with the tools, techniques
6. To know the process of financial management in the realm of financial decision making.

COURSEOUTCOMES:

Learners should be able to

1. Understand the role of a financial manager and their role intaking decisions professionally.
2. Demonstrate knowledge and compute value of money over time
3. Apply the concept to Evaluate the business proposal applying capital budgeting techniques
4. Computethecostofcapitalandfinancialleveragetoestimatetheoptimalcapitalstructure
5. Comprehendtheknowledgeofassessingtheworkingoforganizationtoassesstheliquidity position of the firm.
6. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to finance decisions.

Unit – I

Scope and Functions of Finance – Role of Financial Manager – Goals of Financial Management – Functions of Controller and Treasurers in India

Unit – II

Cost of Capital – Significance – Concepts of Cost of Capital – Cost of Debt Capital, Preference Capital, Equity Capital and Retained Earnings – Weighted Average Cost of Capital

Unit – III

Capital Structure – Concept – Capital Structure Theories – Net Income Theory, Net Operating Income Theory – MM's Proportion on Capital Structure – Determinants of Optimal Capital Structure – Financial and Operating Leverage

Unit – IV

Capital Budgeting Decisions – Investment Evaluation Criteria – Payback Method – ARR – NPV Method – IRR – Profitability Index – Risk Analysis in Capital Budgeting – Nature of Risk – Conventional and Statistical Technique to handle risk

Unit –V

Management of Working Capital – Determinants of Working Capital – Management of Accounts Receivable, Inventory and Cash – Financing of Working Capital – Dividend Theories – Walter's Model – Gordon's Model – MM's Hypothesis – Dividend Policy – Determinants of Dividend Policy.

Note: Theory :80 Marks and Problems : 20 Marks

SUGGESTED READINGS

Text Book

2. **References**
3. **Prasana Chandra (2012)**. *Financial Management – Theory and Practice.* New Delhi, Tata Mc Graw Hill Publishing Company Limited.
4. **Khan, M.Y., and Jain, P.K. (2014)**. *Financial Management.* New Delhi, Tata Mc Graw Hill Publishing Company Limited.

		Semester – I			
		L	T	P	C
16CCP102	**MANAGERIAL ECONOMICS**	4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To obtain fundamental knowledge on economic concepts and tools that have direct managerial applications.
2. To illustrate the application of economic theory and methodology as an alternative in managerial decisions.
3. To gain a rigorous understanding of competitive markets as well as alternative market structures.
4. To obtain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payment and understand the forces determining macroeconomic variables such as inflation, unemployment, interest rates, and the exchange rate.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills
6. To enable students to obtain managerial problem solving skills.

COURSE OUTCOMES:

Learners should be able to

1. Apply the economic way of thinking to individual decisions and business decisions
2. Measure the responsiveness of consumers' demand to changes in the price of a goods or service, and understand how prices get determined in markets,
3. Understand the different costs of production and how they affect short and long run decisions and derive the equilibrium conditions for cost minimization and profit maximization
4. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run

5. Critically evaluate the consequences of basic macroeconomic policy options under differing economic conditions within a business cycle.
6. Understand and exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit - I

Nature, Objectives and Scope of Managerial Economics – Role and Responsibilities of Managerial Economist – Circular Flow of Economic Activity – Nature of the Firm – Economic Profit – Profits in the Market System

Unit – II

Demand Theory and Analysis – Supply Theory and Analysis

Unit – III

Production Theory – Cost Theory – Cost Concept – Cost Output Relationship – Break Even Analysis

Unit – IV

Perfect Competition, Monopoly, Monopolistic Competition, Oligopoly, Duopoly, Bilateral Monopoly – Monopsony.

Unit – V

Pricing Decision – Pricing of Goods and Services – Pricing and Employment of Inputs – Pricing in Public Sector – Risk and Decision Making – Input – Output Analysis

SUGGESTED READINGS

		Semester – I			
		L	T	P	C
16CCP103	**OPERATIONS RESEARCH**	4	-	-	4

COURSE OBJECTIVES:

This course enables the students

1. To provide essential knowledge on Linear programming
2. To offer practical exposure to transportation and assignment problems
3. To gain the knowledge on Assignment and Queuing Theory Problems
4. To train students on Inventory Control
5. To helps to facilitates the learning of network analysis
6. To enhance learner knowledge in optimal use of performance measures of queues, optimal use of Inventory and Network scheduling with various applications in mathematics

Course Outcomes

On successful completion of this course, the students will be able to

1. Students may gather relevant knowledge for minimizing Operation Cost
2. Students are equipped to cut total cost and able to minimize time required for completing assigned task
3. Students could learn to maintain optimal level of inventory
4. Understand various mathematical applications in industries.
5. Decision making for real time environment.
6. course concentrates on Linear programming, transportation model, Queuing theory and Inventory

Unit – I

Introduction to Operations Research – Application in Management Decision Making – Linear Programming: Formulation of LPP – Graphical Solution to LPP – Simplex Method (using slack variables only)

Unit - II

Transportation Model: Introduction – Mathematical Formulation –Finding Initial Basic Feasible Solutions – Optimum Solution for Nondegeneracy and Degeneracy Model

- Unbalanced Transportation Problems and Maximization case in Transportation Problem- Traveling Sales Man Problem.

Unit- III

The Assignment problem - Mathematical Formulation of the Problem – Hungarian Method –Unbalanced Assignment Problem- Maximization Case in Assignment Problem - Travelling Salesman Problem. Queuing Theory : Introduction – Characteristics of Queuing System. Problems in (M/M/1):(∞/FIFO) and (M/M/1):(N/FIFO) models

Unit - IV

Inventory Control: Introduction – Costs involved in Inventory – Deterministic EOQ Models – Purchasing Model without and with Shortage, Manufacturing Model without and with Shortage -Price Break

Unit - V

PERT and CPM: Network Representation – Calculation of Earliest expected time, latest allowable occurrence time. CPM - Various Floats for Activities – Critical Path-PERT –Time Estimates in PERT- Probability of Meeting scheduled date of Completion of Projects

Semester – I

16CCP104	OBJECT ORIENTED PROGRAMMING WITH C	L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To understand the concept of OOPS with C++
2. To familiarize on the classes, objects, pointers.
3. To comprehend on the working with the files.
4. To critically analyse and write appropriate programme with use of classes, objects and pointers.
5. To develop programming based on the need.
6. To develop programming based on the need.

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept of OOPS with C++ and apply the learning for lifelong.
2. Familiarize on the classes, objects, pointers
3. Critically analyse the need and develop the program in OOPS with C++ required for the situation.
4. Write the program and present orally and in written form.
5. Develop programming based on the need. T
6. Develop practical skills by using C++ Program

Unit - I

Oriented programming- Principles of Object Oriented Programming – a Look at Procedure and Object Oriented Paradigm – Basic Concepts of Object Oriented Programming- Basic Concepts of Object Oriented Programming- Benefits of OOP – Object Oriented Languages – Application of OOP, Beginning with C++ - What is C++? – Applications of C++ - C++ Statements – Structure of C++ Program.

Unit - II

Tokens and Control Structures- Tokens , Expressions and Control Structures – Token – Keywords – Identifiers – Basic and User – Defined Data Types – Operators in C++ - Operator Overloading- Operator Precedence – Control Structure Functions in C++ - the Main Function – Call By Reference – Return by Reference – In line Function – Function Overloading.

Unit -III

Classes and objects – Introduction- Specifying a Class – Defining Member Function – Nesting of Member Functions - Private Member Functions- Arrays within a Class – Static Data Members- Static Member Functions- Array of Objects – Objects as Function Arguments- Friendly Functions- Pointers to Members. Constructors and Destructors

Unit - IV

Operator Overloading – Type Conversions – Introduction – Defining Operator Overloading– Manipulation of String using Operators – Rules for Overloading Operators- Types Conversions. Inheritance – Abstract Classes.

Unit - V

Pointers, Virtual functions and Polymorphism – Pointers to Objects – This Pointer – Pointer to Derived Classes – Virtual Functions. Working with Files – Classes for File Stream Operations Opening and Closing a File

16CCP105A FINANCIAL MARKETS AND INSTITUTIONS	**Semester – I**			
	L	**T**	**P**	**C**
	4	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To comprehend on the concept financial markets, instruments and financial institution and its role in economic development
2. To understand the regulatory bodies governing the functioning of financial markets and financial institution
3. To analyze the structure of financial markets and its functions
4. To provide knowledge on Financial System of India and
5. To provide knowledge on Financial System of India and to familiarize the structure of financial markets
6. To familiarize the structure of financial markets

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the concept financial markets, instruments and financial institution and its role in economic development
2. Understand the regulatory bodies governing the functioning of financial markets and financial institution
3. Obtain the capacity to do lifelong learning on financial markets, instruments, financial institution and its applications.
4. To communicate orally and in written format about the financial markets and institutions
5. The course includes Money Market, Money Market Instruments, Capital Market, Depository System and various types of Financial Institutions
6. Course includes Money Market, Money Market Instruments, Capital Market, Depository System and various types of Financial Institutions

Unit – I

Financial Concept: Financial Assets, Intermediaries, Financial Markets, Financial Rate of Return, Financial Instruments. Financial Markets Classification – Development of Financial System in India, Legislative Support – Weakness of Indian Financial System

Unit - II

Money Market – Definition – Money Market Vs Capital Market- Objectives – Importance of Money Market – Composition of Money Market – Participants – Commercial Bill Market – Types of Bills – Importance of Bill Market –Discount Market – Acceptance Market – Bill Market Scheme – Treasury Bill Market – Types of Treasury Bills –Importance – Commercial Paper – Certificate of Deposit – REPO – Structure of Indian Money Market –Recent Developments in Money Markets.

Unit – III

Capital Market – Meaning – Stock Exchange – Distinction between New Issue Market and Stock Exchange – Relationship between New Issues Market and Stock Exchange – Functions of New Issue Market – Instruments of Issues – Players in the New Issue Market – Book Building – Follow on Public Offer – Recent Trends – Reasons for Poor Performance – Suggestions

Unit - IV

Depository System : Definition and Meaning – Objectives – Interacting Institutions – Depository Process – Trading in a Depository System – Depository System in India – Depository Participants – Benefits – NSDL – Central Depository Services (India) Ltd. – Drawbacks – Remedial Measures - Derivatives

Unit - V

RBI – Commercial Banks – Public and Private – Co-operative Banks - LIC – IDBI – IFCI – ICICI – NHB – SFCs – DIC – TIIC. SEBI – Objectives – Functions of SEBI - Guidelines for Investor Protection

16CCP105B MARKETING MANAGEMENT

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of marketing, and 4Ps of Marketing
2. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. To apply the marketing concepts and skills lifelong.
4. To understand the recent trends in marketing strategies of a companies.
5. To understand the consumer behavior and to adopt the decision according to the consumer.
6. To know the promotion strategies followed by a company.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. Apply the marketing strategies of a company's effectively.
5. To be familiar in behavior of consumer in related to market and to take decision effectively.
6. To implement the correct promotion strategies.

Unit-I

Definition of Marketing and Marketing Management – Object and Importance of Marketing – Evolution of Concept of Marketing – Recent Development in Marketing Concept – Marketing Functions – Approaches to the Study of Marketing – Market Segmentation – Basis – Criteria – Benefits.

Unit-II

Product Policy: Product Planning and Development – Product Life Cycle – Product Line and Product Mix Strategies. Branding: Features – Types – Functions. Packaging: Features – Types – Advantages – Brand Name and Trademark.

Unit-III

Pricing: Definition - Objectives of Pricing Decisions - Factors influencing Pricing Decisions – Methods of Setting Prices – Cost – Demand and Competition – Pricing Policies and Strategies.

Unit-IV

Sales Promotion: Meaning and Definition – Objectives and Importance of Sales Promotion – Personal Selling – Steps in Personal Selling - Advertising – Meaning – Objectives – Functions and Importance – Kinds of Media – Direct Marketing – Multi-level Marketing. Distribution Channels: Types of Channels – Factors affecting Choice of Distribution.

Unit-V

Marketing of Services – E–Marketing – Marketing Ethics – Consumerism – Meaning – Evolution – Types of Exploitation – Consumer Rights – Laws Protecting the Consumer Interest – Consumer Protection Acts – Consumer Courts - Retail Marketing – Methods – Problems – Retail Marketing in India – Customer Relationship Management

16CCP105C HUMAN RESOURCE DEVELOPMENT

COURSE OBJECTIVES:

To make the students

1. To acquire knowledge in human resource management, HR audit, and HR analytics.
2. To gain knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
3. To understand the concepts and practical implications of performance management, Training methods and career planning.
4. To know about compensation and reward management and its practice in industry.
5. To be familiar with Employee relations and its application for the development of Human resources.
6. To understand the Job analysis and Design

COURSEOUTCOMES:

Learners should be able to

1. Assess the job analysis for a profile and understand its linkage with HR planning
2. Evaluate the training needs and draft a training programme.
3. Understand the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Understand and apply the appropriate employee relations measures.
5. Understand the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. consists of Job Analysis, Job Evaluation, Orientation, Performance Appraisal, Rewards, Punishment, Industrial Relations, Collective Bargaining and Grievances Handling

Unit – I

Introduction to Human Resource Development: Concept and evolution; Relationship between human resource management and human resource development;

HRD mechanisms, processes and outcomes; HRD matrix; HRD interventions; Roles and competencies of HRD professionals

Unit –II

HRD Process: Assessing HRD needs; Designing and developing effective HRD programs; Implementing HRD programs; Evaluating HRD programs.

Unit – III

Learning and HRD: Maximizing learning; Individual differences in learning process; Learning strategies and styles; Principles of learning; Learning and motivation; HRD culture and climate.

Unit – IV

HRD Activities and Applications: HRD for Workers; HRD mechanisms for workers; Role of trade unions; Employee training and development- Process, methods, and types; Coaching, counselling and performance management; Career management and development; Organization development.

Unit – V

HRD in Organisations, Trends and Practices: Select cases for HRD Practices in Government organisations, defence, police, private sectors and public sectors units; HRD audit; Balanced scorecard; People capability maturity model; Integrating HRD with technology; Employer branding and other recent trends; Future of HRD.

		Semester – I
16CCP111	**PRACTICAL -1 - C++**	**L T P C** **- - 4 2**

COURSE OBJECTIVES:

To make the students

1. To understand the concept of OOPS with C++
2. To familiarize on the classes, objects, pointers.
3. To comprehend on the working with the files.
4. To critically analyse and write appropriate programme with use of classes, objects and pointers.
5. To develop programming based on the need.
6. To develop practical skills by using C++ Program

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept of OOPS with C++, classes, objects, pointers, working with file and apply the learning for lifelong.
2. Develop Program using the Classes, objects and printers.
3. Critically analyse the need and develop the program in OOPS with C++ required for the situation.
4. Write the program and present orally and in written form.
5. Develop programming based on the need.
6. Develop practical skills by using C++ Program

1. Pay Roll calculation (Using simple program)

2. Find out EOQ, Minimum Level, Maximum Level, Re-order level (Using simple program)

3. Write a c++ program to calculate the working capital using class and objects (member Function should be write inside and outside the class)

4. Calculate Simple Interest and compound interest using inline functions.

5. Calculate Depreciation – by using constructors and Destructors
6. Write a C++ program to calculate the sum and product numbers using operator overloading.
7. Write a c++ program to prepare the cost sheet using inheritance
8. Calculation of BEP and MOS (give your own data).
9. Perform bank transactions like deposit, withdrawal, interest's calculation – by using classes and objects.
10. Program to create the student files and prepare the marks slips by accessing the File.
11. Write a perform to calculate over all cost of capital
12. Write a program to calculate funds from operation using (member function outside the class)

Semester – I

	L	T	P	C
16CCP112 PRACTICAL 2 - COMPUTER APPLICATION IN BUSINESS	-	-	4	2

COURSE OBJECTIVES:

To make the students

1. To prepare template to present the financial data for supporting analysis.
2. To use advanced formula in financial calculations
3. To use visualization tools to represent the financial data graphically
4. To forecast the financial data using the in build tools
5. To Understand and apply Sensitivity analysis on models like Goal Seek , Scenarios; for financial decision-making
6. To insert the slides with animation effects.

COURSEOUTCOMES:

Learners should be able to

1. Apply advanced formulas to lay data in readiness for financial analysis
2. Use advanced techniques for financial report visualizations
3. Leverage on various methodologies of summarizing financial data
4. Understand and apply Sensitivity ("What-if") analysis models like Goal Seek , Scenarios; Excel models for financial decision-making
5. Exhibit communication skills to communicate the output derived from the program.
6. Course includes practical on paragraph formatting, usage of Excel funtions, Automation of Presentation, creation of database and report generation.

.

I - MS WORD

1. Prepare an research article related to the specialization using Bold, Underline, Font Size, style, Background color, Text color, Line spacing, Spell Check, Alignment, Header & Footer, Inserting pages and page numbers, Find and Replace.
2. Prepare an inter collegiate invitation for the college function using Text boxes and clip parts, Word Art, Symbols, Borders and Shading.

3. Prepare an end semester mark statement through template and perform the following operations: Inserting the table, Data Entry, Alignment of Rows and Columns, Inserting and Deleting the Rows and Columns and Change of table Format.
4. Prepare a Convocation letter for the passed out students for 10 members using mail merge operation.
5. Prepare a resume for attending interview using alignment and formatting.

II - MS EXCEL

1. Prepare a cost sheet and perform the following operations: Data Entry, Total, by using arithmetic function.
2. Draw the different type of charts (Line, Pie, Bar) to illustrate year-wise performance of sales, purchase, profit of a steel manufacturing company by using chart wizard.
3. Prepare a statement of Bank customer's account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions.
4. Prepare a Product Life Cycle which should contain the following stages: Introduction, Growth, Maturity, Saturation, decline of a product.
5. Prepare an income tax filling return as per the income tax department format.
6. Carry out result analysis of your department by employing statistical and mathematical functions.
7. Calculate Electricity statement by making use IF statement.

III - MS POWERPOINT

1. Design presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, special features, price, special offer etc. Add voice if possible to explain the features of the product. The presentation should work in manual mode.
2. Design Presentation slides for Organization details for 5 levels of hierarchy of a company by using organization chart.
3. Design presentation slides about an illustrate story and perform frame movement by interesting clip arts to illustrate running of an image automatically.

4. Design presentation slides for the Seminar/Lecture Presentation using animation effects and perform the following operations: Creation of different slides, changing background color, font color using word art.

IV - MS ACCESS

1. Prepare a payroll for employee database of an organization with the following Details: Employee id, Employee name, Date of Birth, Department and Designation, Date of appointment, Basic pay, Dearness Allowance, House Rent Allowance and other deductions if any. Perform queries for different categories.
2. Create mailing labels for student database which should include at least three table must have at least two fields with the following details: Roll Number, Name, Course, Year, College Name, University, Address, Phone Number.
3. Gather price, quantity and other descriptions for five products and enter in the Access table. Perform query for calculation total and create an invoice in form design view.
4. Create report for the Product database.

		Semester – II			
		L	**T**	**P**	**C**
16CCP201	**APPLIED COST ACCOUNTING**	**4**	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To Explain the core concepts of costing, costing types and its importance in managing a business
2. To develop a conceptual framework of costing and to acquaint the participants with the tools, techniques
3. To know the process of cost reduction and control in the realm of decision making.
4. To familiarizes students with the various concepts and elements of cost
5. To Create cost consciousness among the students
6. To provide the students knowledge about use of costing data for Planning, Control and decision making

COURSEOUTCOMES:

Learners should be able to

1. Explain the core concepts of costing, costing types and its importance in managing a business
2. Develop a conceptual framework of costing and to acquaint the participants with the tools, techniques and process cost reduction and control in the realm of decision making
3. Compute using different costing methods.
4. Demonstrate capabilities of teamwork, problem-solving and critical thinking
5. Communication skills related to finance decisions.
6. course include Material Cost, Labour Cost, Overheads, Process Costing, Activity Based Costing and Target Costing

Unit – I

Cost Accounting – Meaning and Objectives – Importance – Limitations – Limitations of Financial Accounting – Differences between Cost Accounting and Financial Accounting, Cost Accounting and Management Accounting – Methods of

Costing – Elements of Cost – Preparation of Cost Sheet – Tender – Quotations – Reconciliation of Cost and Financial Accounting

Unit – II

Material Control – Objectives – Levels of Inventory – EOQ – Methods of Inventory Control – Methods of Valuing Material Issues – Control over Wages – Scrap and Spoilage - Labour - Labour Cost Control – Importance – Systems of Wage Payment – Incentives – Idle Time – Control Over Idle Time – Labour Turnover

Unit – III

Overheads – Classification of Overheads – Allocation, Apportionment and Absorption of Overheads – Methods of Absorption of Overheads

Unit – IV

Process Costing – Features – General Principles – Comparison between Job Costing and Process Costing – Process Losses – Normal Loss – Abnormal Loss – Abnormal Gains – Inter Process Profit – Equivalent Production – Procedure for Evaluation – Joint Product and by Product

Unit-V

Activity Based Costing: Meaning and Methodology of Activity Based Costing (ABC Analysis)-Merits, Demerits and Suitability of Activity Based Costing-Implementation of Activity Based Costing- Draw Back of Conventional Costing - Target costing**:** Meaning-Characteristics-Principles-Implementation of Target Costing-Installation of Target Costing-Target Costing Vs. Traditional Costing- Life Cycle Costing-Meaning-Definition-Applications of LCC -Importance-Process of LCC

Semester – II

16CCP202	**RETAIL MANAGEMENT**	**L**	**T**	**P**	**C**
		4	**-**	**-**	**4**

COURSE OBJECTIVES *:*

To make the students

1. To understand the concept of retailing, retailing strategy and the trends of retailing in India
2. To obtain the knowledge on the retail location and importance of choosing the retail location.
3. To gain knowledge on the retail formats and importance of choosing the retail formats.
4. To know the process of retail pricing and merchandising.
5. To recognize the importance of advertising and technology usage in retailing.
6. To develop an understanding of the retail strategy and planning process

LEARNING OUTCOMES :

Learners should be able to

1. Comprehend on the retailing concept, retailing strategy and the trends of retailing in India.
2. Select the appropriate location for the setting up of retail store.
3. Evaluate the importance of the various retail formats
4. Formulate pricings strategies, apply the concept of merchandising and assess the different advertising and technology options suitable for the success of the retail operations.
5. Exhibitthecommunicationskillstoconveythethoughtsandideastotheindividualsandg roup.
6. Course includes Overview of Retailing, Retail location and layout, Merchandizing, Communication, Advertisement and Sales Promotion.

Unit – I

An overview of Retailing - Types of stores - Product Retailing vs. Service Retailing - Non store Retailing - Retail strategy - Achieving competitive advantage and positioning Retailing environment - Legal, Social, Economic, Technological, issues - Trends in the Indian Retailing Industry

Unit – II

Retail store location and layout - Country/Region analysis - Trade area analysis - Site evaluation and selection - Store design and layout - Comprehensive store planning - Exterior design and layout - Interior store design and layout - Interior design elements

Unit – III

Planning merchandise needs and merchandise budgets - Methods for determining inventory evaluation - Assortment planning, buying and vendor relations - Merchandise pricing - Price strategies - Psychological pricing - Mark-up and markdown strategies.

Unit – IV

Communicating with the retail customer - Retail promotion mix-Advertising - Sales promotion - Publicity - Retail selling process - Retail database- In-store customer service.

Unit – V

Globalization and changing retail formats – Online retailing - International Retailing – Opportunities and Challenges - Market entry formulas - New customized formats (customized stores, portable stores, merchandise depots, retail theater, service malls, customer-made stores, interactive kiosk 'shopping arcades')

		Semester – II			
		L	**T**	**P**	**C**
16CCP203	**DIRECT TAXATION**	**4**	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of assessment, assessee, Income heads and the Income Tax laws.
2. To help students to understand different heads of income
3. To learn the tools and techniques to compute the tax for the various income heads.
4. To select the best ways to compute the income tax based on the income heads for various assesseeandtogainalifelonglearningforapplyingtheITcalculationforvariousincomeheads based on each case of assessee.
5. To communicate orally and in written form the income tax concepts and computations.
6. To be familiar with the laws pertaining to the Income Tax and apply it lifelong.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the concepts related to assessment, assesse, Income heads and the Income Tax laws.
2. Compute Income Tax Returns.
3. Provide the students knowledge about Tax planning
4. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee
5. Communicate orally and in written the Income tax computation under various income heads and deductions.
6. Familiar with the laws pertaining to the Income Tax and its apply it lifelong.

Unit- I

Income Tax Act 1961- Scope of income - Total Income and residential status - income which do not form part of the total income – Income from Salaries.

Unit - II

Income from House Property – Profits and gains of business or profession – Income From business- Income from Profession.

Unit - III

Capital Gains – Capital Gain –Short Term and Long Term Gain - Income from other sources – Aggregation of income- set off and carry forward of losses.

Unit - IV

Deduction out of Gross Total Income - Computation of Total Income- Assessment of Individual.

Unit - V

Tax Planning – Advance payment of tax –Tax Deducted at Source - ETDS Software - Returns to be submitted by various assesses-Different Types of Tax Planning – Tax Software – e-filing Procedure e-filing of income tax return.

Note: The question paper shall cover 40% theory and 60% problems

		Semester – II			
		L	T	P	C
16CCP204	**VISUAL BASIC.NET**	4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of Visual Basics.Net and its application.
2. To learn tools and utilize the tools of Visual Basic.net to design programmes.
3. To communicate orally and in written form the Concept of Visual Basics.Net and its application.
4. To understand the Visual Basic Language and Loops
5. To understand the Object-Oriented Programming
6. To understand the Data Access with ADO.NET

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of Visual Basics.Net and its application.
2. Learn tools and utilize the tools of Visual Basic.net to design programmes.
3. Communicate orally and in written form the Concept of Visual Basics.Net and its application.
4. Know the Visual Basic Language and Loops
5. Know the Object-Oriented Programming
6. Exhibit the Menus and Dialog-Boxes

Unit-I

Getting Started With VB.NET: The Integrated Development Environment-IDE Components- Environment Options. Visual Basic: The Language -Variables-Constants-Arrays – Variables as Objects-Flow Control Statements.

Unit-II

Writing and Using Procedures: Module Coding – Arguments. Working with Forms: Appearance of Forms- Loading and Showing Forms -Designing Menus. Multiple Document Interface

Unit- III

Basic Windows Controls: Textbox Control- ListBox, CheckedListBox-Scrollbar and TrackBar Controls. More Windows Control: The common Dialog Controls-The Rich TextBox Control.The TreeView and ListView Controls: Examining the Advanced Controls-The TreeView Control-The ListView Control-Content Page Holder

Unit-IV

Handling Strings, characters and Dates: Handling Strings and Characters – Handling Dates. Working with Folders and Files: Accessing Folders and Files – Accessing Files. Drawing and Painting with Visual Basic: Displaying Images – Drawing with GDI – Co-ordinate Transformation – Bitmaps.

Unit-V

Databases: Architecture and Basic Concepts: What is database? - Server Explorer – Structured Query Language – The Query Builder – Building database Application with ADO.Net: The Architecture of ADO.Net-Creating the dataset – Data Binding – Programming the Data Adapter Objects – The Command and Data Reader Object. Programming the ADO.Net objects: The Structure of the dataset – The DataForm Wizard – Transactions – Performing Update Operations.

16CCP205A	ADVERTISEMENT AND SALES PROMOTION	Semester – II L T P C 4 - - 4

COURSE OBJECTIVES:

To make the students

1. To know about the various types of advertising
2. To understand the motivational aspects of salesmen
3. To understand the concept of sales force management
4. To know about the social effects of advertising
5. To know about the promotional strategy.
6. To introduce the students to latest methods and tools of advertising and sales promotion.

COURSE OUTCOMES:

Learners should be able to

1. Knowing the concepts of advertising.
2. Getting the details about the various types of advertising
3. Understanding the motivational aspects of salesmen
4. Understanding the concept of sales force management
5. Knowing about the social effects of advertising
6. Knowing about the promotional strategy.

Unit - I

Advertising - Features, Purpose, Scope and Function - Classifications - Social and Economic Aspects & Ethical Issues in Advertising - Need for Advertising

Unit – II

Advertising Process - Advertising Strategy - Psychology of Target Audience - Effectiveness of Advertising - Buying Behavior - Audience Perception -Setting Advertising Objectives, Advertisement Planning and Organization -Advertisement Copy.

Unit - III

Advertising Media - Role of Media - Print Media - Radio and Television - Online Advertising - Media research - Media Selection - Advertising Budget - Evaluation of Effectiveness of Advertising - Areas of Assessment - Media testing

Unit – IV

Sales Promotions - Scope - Functions and Importance - Sales Promotional Methods - Fundamental of Successful Selling - Retail Marketing

Unit – V

Salesmanship - Salesmen Recruitment and Training - Personnel Selling - Skills for Good Salesmanship - Training of Sales Personnel - Motivating and Evaluating Sales Personnel - Sales Records - Rewarding Good Salesmanship

		4	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of investing and mechanics for formulating investment decisions.
2. To communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
3. To apply the investing concepts and skills lifelong.
4. To analyse the EIC framework make decisions based on investing in different avenues.
5. To Critically evaluate the risk return parameters and select the best alternative.
6. To Communicate in written form and prepare report

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of investing and mechanics for formulating investment decisions.
2. Communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
3. Apply the investing concepts and skills lifelong.
4. Analyse the EIC framework make decisions based on investing in different avenues.
5. Critically evaluate the risk return parameters and select the best alternative.
6. Communicate in written form and prepare report

Unit- I

Introduction of Investment: Concepts of Investment – Common Forms of Investment - Types of Securities – Government Securities – Government Securities Market — India Money Market and Capital Market Institutions- Risk and Return – Systematic and Unsystematic Risk.

Unit - II

Stock Markets: Concepts – Bull- Bear-PE Ratio-Different Stock Market Ratio - SEBI - Structure – Functioning – NSE and BSE – Functions – Listing of Securities – New Issue Market- Mechanics of Trading in Stock Exchange – Evaluation of Securities, Equity , Preference, Debt, Hybrid Securities, - OTCEI .

Unit - III

Fundamental Analysis - Economic analysis and Industry analysis: Asset Pricing Theories (APT)s s- Option Pricing Theory – Economic Analysis –Economic Forecasting – Stock Investment Decision - Techniques Company Analysis – Industry Analysis

Unit - IV

Technical Analysis–Charting Methods – Market Indicators – Trend Analysis - Trend Reversal – Patterns Moving Average – Exponential Moving Average – Oscillators –RSI - Fundamental Analysis Vs. Technical Analysis.

Unit - V

Portfolio Analysis: Methods of Portfolio Construction – Selection of Portfolio Management- Practical Aspects – Performance Evaluation - Portfolio Revision – Problems.

Note: This Paper consisting of 80% Theory and 20% Problem.

Semester – II

16CCP205C STRATEGIC HUMAN RESOURCE MANAGEME

L	T	P	C
4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To acquire knowledge in human resource management, HR audit, and HR analytics.
2. To gain knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
3. To understand the concepts and practical implications of performance management, Training methods and career planning.
4. To know about compensation and reward management and its practice in industry.
5. To be familiar with Employee relations and its application for the development of Human resources.
6. To understand the Job analysis and Design

COURSEOUTCOMES:

Learners should be able to

1. Assess the job analysis for a profile and understand its linkage with HR planning
2. Evaluate the training needs and draft a training programme.
3. Understand the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Understand and apply the appropriate employee relations measures.
5. Understand the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. consists of Job Analysis, Job Evaluation, Orientation, Performance Appraisal, Rewards, Punishment, Industrial Relations, Collective Bargaining and Grievances Handling

Unit –I

Introduction**:** Concept and context of strategic human resource management (SHRM); Corporate strategy and SHRM; Evolution of SHRM; SHRM & HR; Challenges in SHRM; Resource based view of a firm; Competencies of HR professionals.

Unit – II

HR Strategies**:** Strategic HR planning and acquisition: Recruitment and selection; Strategic training and development; Reward and compensation strategy; Corporate strategy and career systems; Employee separation and retention management, retrenchment; Strategic approach to industrial relations; Managing workforce diversity.

Unit – III

Implementing Strategic Human Resource Management**:** Identifying strategic positions; Human resource analytics; Employee engagement; Matching culture with strategy; Behavioural issues in strategy implementation.

Unit – IV

Linking SHRM to Competitive Success and Corporate Strategy**:** SHRM for competitive advantage; HC Bridge Model and Decision science model; Tools for work analysis and talent strategies; HR implications of mergers and acquisitions; Outsourcing and its HR implications.

Unit – V

Trends and Issues in SHRM**:** Alignment of HR strategies and the impact on business performance; HR metrics; Human resource strategy in international context; Future of SHRM.

16CCP211	**PRACTICAL 3 –VB.NET**	**-**	**-**	**4**	**2**

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of Visual Basics.Net and its application.
2. To learn tools and utilize the tools of Visual Basic.net to design programmes.
3. To communicate orally and in written form the Concept of Visual Basics.Net and its application.
4. To understand the Visual Basic Language and Loops
5. To understand the Object-Oriented Programming
6. To understand the Data Access with ADO.NET

COURSE OUTCOMES:

Learners should be able to

7. Understand the Concept of Visual Basics.Net and its application.
8. Learn tools and utilize the tools of Visual Basic.net to design programmes.
9. Communicate orally and in written form the Concept of Visual Basics.Net and its application.
10. Know the Visual Basic Language and Loops
11. Know the Object-Oriented Programming
12. Exhibit the Menus and Dialog-Boxes

VISUALBASIC .NET

1. Calculate Simple interest and compound Interest
2. Find mouse events and coordinates where the mouse is clicked.
3. Implement Calculator.
4. Implement Notepad

5. Draw several shapes and fill with color.
6. Perform the following in list box
   a) Add an item
   b) Delete an item
   c) List count
   d) Clear the List
7. Calculate the days elapsed between the given two dates.
8. Create Menu and link multiple forms with different colors.
9. Animate the picture using animation control.
10. Check whether given string is a Palindrome or not.
11. Generate Fibonacci series for the input given using Input box.
12. Calculate the total marks of the student and print the grade
13. Maintain details of students. Use Crystal Report to generate report.
14. Implement Employee Payroll.
15. Create and manipulate a File.

16CCP212 PRACTICAL 4 - TALLY

COURSE OBJECTIVES:

To make the students

1. To understand the accounts heads, vouching, inventory valuations, available in the accounting software
2. To classify the items under items heads
3. To Generate the financial Reports evaluate the output.
4. To communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerized system as a lifelong learning.
6. To develop practical skills for maintain the book of accounts.

COURSE OUTCOMES:

Learners should be able to

1. Familiarize on the account's heads, vouching, inventory valuations available in the accounting software
2. Classify the items under items heads
3. Generate the financial Reports, evaluate the output.
4. Communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerized system as a lifelong learning.
6. Course covers Company Creation, Ledger, Voucher, Trading and Profit and Loss Account, Balance Sheet, Inventory Valuation and Ratio Analysis

Creating a Company

1. Create a Company with all relevant details including VAT options

Creating Ledger

2. Create the ledgers under appropriate predefined groups

Cash a/c	Computer sales a/c
Buildings a/c	Machinery a/c

Furniture a/c	Commission received a/c
Printer purchase a/c	Commission paid a/c
Rent received a/c	Salary a/c
Rent paid a/c	Indian bank a/c
Wages a/c	Sales returns a/c
Capital a/c	Depreciation a/c
Purchase returns a/c	John & Co. a/c (purchased goods from this company)

Ram agency a/c (sold goods to this company)

Create vouchers

3. **Create vouchers and view Profit and loss a/c and Balance sheet for the following**:

Hindustan Ltd. started the business on 01-04-2011

1 Apr. Contributed capital by cash Rs 2, 00,000

1 Apr. Cash deposited in Indian bank Rs 50,000

2 Apr. Credit purchases from Krishna traders Rs. 20000 invoice no 12

3 Apr. Credit purchases from PRAVIN traders Rs 20,000 invoice no 12

4 Apr. Credit purchase from KRISHNA traders Rs 20000 invoice no 14

5 Apr. Credit purchase from PRAVIN traders Rs 20,000 invoice no 44

6 Apr. Returned goods to KRISHNA traders Rs 5000 invoice no 12

7 Apr. Returned goods to PRAVIN traders Rs 5000 invoice no 44

8 Apr. Credit sales to RAVI & Co Rs 50,000 inv no 1

9 Apr. Credit sales to KUMAR & Co Rs 50,000 inv no 2

10 Apr. Cash sales Rs 20,000 inv no 3

11 Apr. Credit sales to RAVI & Co Rs 50,000 inv no 2

12 Apr. Credit sales to RAVI & Co Rs 50000 inv no 5

14 Apr. Goods returned by RAVI & Co Rs 5000 inv no 1

14 Apr. Goods returned by KUMAR & Co Rs 5000 inv no 1

15 Apr. Payment made by cheque to Krishna Traders Rs 30,000 ch no 505580

16 Apr. Payment made by cheque to Pravin Traders Rs 30,000 ch no 505592

17 Apr. Received cheque from: Ravi & Co and Kumar & Co 75,000 each.

Payments made by cash

3 Apr. Paid to petty cash by cash Rs.1000

4 Apr. Furniture purchased Rs.20000

5 Apr. Salaries paid Rs. 10000

6 Apr. Rent Rs.4000

7 Apr. Electricity charges Rs.3000

8 Apr. Telephone charges Rs.3500

9 Apr. Cash purchases Rs.5000

Payments made by petty cash

10 Apr. Conveyance Rs.150

11 Apr. Postage Rs.100

12 Apr. Stationeries Rs.200

14 Apr. Staff welfare Rs.100

14 Apr. Stationeries purchased from Sriram & Co 1500 on credit

15 Apr. Depreciation on furniture 10%

4. Emerald & Co., started a business of home appliances from 1-4-2011

01-04 received cash for capital 5, 00,000

07-04 credit purchases from LG Limited invoice no 123

Oven 100nos at Rs 800,Mixes 100nos at Rs 1000,DVD player 100nos at Rs 1500,

Fridge 100nos at Rs 2000

10-04 Credit Sales to AMN invoice no 1:

Oven 70nos at Rs 1000,Mixes 70nos at Rs 1500,DVD player 70nos at Rs 2000

Fridge 70nos at Rs 2500+TNGST 4% ON TOTAL SALES

10-04 Cash Sales invoice no 2:

Oven 10nos at Rs 1000,Mixes 10nos at Rs 1500,DVD player 10nos at Rs 2000,

Fridge 10nos at Rs 2500+TNGST 4% ON TOTAL SALES CASH discount 5%

15-4 Paid cheque to LG limitedRs 2,00,000

15-4 Received cheque from AMN&coRs 3,00,000

5.Payment made by cash

Paid to petty cash Rs 2000, Furniture Rs 15000, Salaries Rs 10000

Wages Rs 7000, Carriage inward Rs 1500.

25-04 Payment made by petty cash

Conveyance Rs 200, Postage Rs 150, Stationeries Rs 150, Staff Welfare Rs 200

30-04 Journal depreciate 10% on furniture:

Prepare Trading Profit and Loss Account and Balance sheet.

6. From the Balances of Ms. Kavitha, Prepare Trading A/C, Profit And Loss A/C and Balance Sheet for The Year Ending

Stock - 9,300 Repairs - 310 Machinery - 12,670 Furniture - 1430 Office expenses - 750 Trading expenses - 310 Land & Builiding - 15,400 Bank charges - 50 Capital - 24,500 Loan - 5,000 Closing stock - 7,580	Misc. income - 200 Purchases - 15,450 Purchase return - 440 Sales return - 120 Sundry creditors - 12,370 Advertisement - 500 Cash in hand - 160 Cash at bank - 5,870 Sales - 20,560 Sundry expenses - 150 Insurance - 500 Traveling expenses - 200

INVENTORY VALUATION

7. From the Information given below create unit of measurement, stock groups and stock items

Find the stock summary:

Stock groups: 1. Magazine 2. Baby drinks 3. Cool drinks 4.dailynews paper 5. Hot drinks 6.Stationeries 7. Vegetables

Stock items:

Item	Qty	Rate	Units
Boost	25	80	nos
Sports star	20	15	nos
Potato	260	30	kgs
Star dust	20	25	nos
The Hindu	50	3.25	nos
Tomato	150	15	kgs
Fanta	10	25	lit
Dinamalar	40	2.50	nos
Coco	55	120	nos
Horlicks	60	70	nos
India today	10	10	nos
Lactogin	10	100	nos

MAINTAIN BILLWISE DETAILS

8. Create bill wise details from the following

1. Ravi commenced business with a capital of Rs 2,00,000
2. Purchased goods from Kumar & Co Rs.15, 000 Paid in three installments within 5 days gap
3. Purchased goods for cash Rs.8000
4. Sold goods to Ratna & co Rs. 20,000 amount to be paid in two installment
5. Sold goods for cash for Rs .5000
6. Received cash from Ratna & co Rs. 75000
7. Paid to Kumar & co Rs. 7500
8. Sold goods for cash Rs.5000

CONSOLIDATION OF ACCOUNTS

9. Bharath Agencies, A Wholesaler Gives The Following Information:

Opening balances:

Capital: 20, 00,000 cash at bank: 10, 00,000

Cash in hand: 5, 00,000 furniture: 5, 00,000

Bharath agencies are dealing in stationeries. The selling prices are as follows;

Pen Rs 35 per dozen, pencil Rs. 30 per dozen,Ink pens Rs 140 per dozen

The following transactions take on a particular date:

1.purchased 100 dozens of pens from Ravana bros. @ Rs.25 per dozen for cash

2.purchased 200 dozens of pencils from Gughan bros.@ Rs.21.50 per dozen for credit less discount of Rs 100

3.sold 10 dozens of pens to Dharma bros. For cash

4.sold 10 dozens of pens to Bema bros for credit

5.sold 50 dozens of pencils to Arjuna bros.

6.purchased from Ravana bros 50 dozens of ink pens @ Rs.120 and by cheque.

Prepare following statements using Ex-accounting packages:

Stores ledger, Trading account, Income statement, Balance sheet, Account summary

Ignore dates

FOREIGN GAINS/LOSS

10. Calculate

01.01.2005 Purchased goods from U.K supplier 1000 £

02.01.2005 Sold goods to U.S buyer 1500

03.01.2005 Cash received from U.S buyer 1500

(Selling rate rs.46/$)

04.02.2005 Paid cash to U.K supplier 1000

(Selling rate Rs 53/ £)

Dollar $:

Std rate - 1$ - 43 Rs

Sales rate - 1$ - 44 Rs

Buying rate - 1$ - 42 Rs

Pound £:

Std rate - 1 £ - 51 Rs

Sales rate - 1 £ - 50 Rs

Buying rate - 1 £ - 52 Rs

11. MEMO VOUCHER

An advance amount paid Rs 1500 given to sales executive for traveling. The actual expenses for traveling expenses for the sales is Rs 500

12. CHEQUE PRINTING

Print a cheque:

Company name on cheque: Wipro India Ltd.: name of the bank Indusind bank.

Width 168, height 76, starting location 116, distance from top 23.

13. RATIO ANALYSIS

Enter the following details comment upon the short-term solvency position of the company:

Working capital Rs 20560492

Cash 14500

Bank 18500

Debtors 518260

Creditors 429337

Sales 515252

Purchases 433310

Stock 125982

Net profit …?

14. INTEREST CALCULATIONS

Cash deposited in Scotia bank Rs 1,00,000

Sold goods to Ganesh Rs 25,000

31-12- cash deposited at Scotia bank Rs 50,000

Sold goods to Ganesh 50,000

Interest parameters rate 14% per 365 days year

15. Calculate Interest

Cash deposited in SBI 1, 00,000 Rs

1-12 purchased goods from suppliers Rs 20,000

Deposited in SBI Rs.50, 000

Purchased goods from suppliers Rs 40,000

Interest parameters rate 16% per 365 days year

16. Display the interest calculations for the period 1-4-2011 to 31-12-2011

Opening balance

Ram & Co Rs 25,000

Krishna traders Rs 20,000

Interest parameters rate 12% per 365 days year

Interest parameters rate 12% and 16% for sundry creditors per 365 days year

Purchased goods from Krishna for 25,000(credit period 45 days)

Sold goods to Ram for Rs. 50,000(credit period 30 days)

Paid to Krishna the amount plus interest

Received from Ram plus interest

17. Create stock items, stock groups, sales categories, godowns, units of measure.

Stock	Category	Group	Godown	Unit of measure	Std cost	Sell Price	Op. Qty	Total Value
Inter Celeron	Processor	Celeron	Mumbai	Nos.	15000	20000	2	30000
Intel Premium III	Processor		Chennai	Nos	20000	25000	3	60000

Tally Silver	Accounting	Tally	Chennai	Nos	20000	22500	5	100000
Tally gold	Accounting	Tally	Chennai	Nos	42000	45000	5	210000
								400000

18. Using the above exercise create various vouchers including VAT calculation for the following

Date Transactions	Transcation
O9/4/2006	Intel Pentium III (3 Nos) @ 25,000 delivered to Vijay & CO, from Madras Go down.
10/4/2006	10 Nos of Intel Celeron @ 15000 per unit received from Jayaram and Co, and sent to Madras Go down.
12/4/2006	2Nos of Intel Premium III received from Vijay & CO, as it was not in a working position.
14/4/2006	2Nos of Intel Celeron returned to Jayaram & Co from Madras Go down.
14/4/2006	Physical Stock verification shows Shortage of 1 No Intel Pentium III.

19. Create the following Inventory vouchers with data from any cost accounting book.

a. Purchase order
b. sales order
c. Rejection out
d. Rejection in
e. Stock journal
f. Delivery note
g. Receipt note

h. Physical stock

20. In addition to the above mentioned lab exercises work out a problem from any advanced accountancy book with a minimum of 20 transactions and generate the tally reports in full.

		Semester – III			
		L	**T**	**P**	**C**
16CCP301	**MANAGEMENT ACCOUNTING**	**4**	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To provide the students knowledge about budgetary control.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. course incorporates Financial Statement Analysis, Ratio Analysis, Fund Flow and Cash Flow Analysis, Budgeting and Marginal Costing

Unit – I

Management Accounting – Meaning – Definition – Objectives and Scope – Relationship between Management Accounting and Financial Accounting – Management Accounting and Cost Accounting

Unit – II

Financial Statement Analysis – Types of Financial Statement Analysis - Ratio Analysis – Meaning – Uses – Limitations – Classification of Ratios – Computation of Ratios from Financial Statements

Unit – III

Fund Flow Analysis – Cash Flow Analysis – Working Capital Statements – Funds from Operations

Unit – IV

Budgetary Control – Flexible Budget – Sales Budget – Cash Budget – Production Budget – Purchase Budget

Unit – V

Marginal Costing – Break Even Analysis – Applications of Marginal Costing Techniques – Determination of Sales Mix – Key factor – Make or Buy Decision (Simple Problems Only)

Note: Theory -20% Problems - 80%

16CCP302 **BUSINESS RESEARCH METHODS AND TECHNIQUES**

Semester – III

L	T	P	C
4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To understand the basic framework of research and research process and its important in business decision.
2. To develop an understanding of various research designs and sampling techniques and its application.
3. Toidentifyappropriatesourcesofinformationandmethodsofdatacollectionforsolving abusiness issue.
4. To understand the selection of appropriate tools to analyse the quantitative and qualitative data.
5. To understand the ethical norms for research and select the best type of research report and be familiar with the content to be included in the report.
6. To gain the sampling techniques along with hypothesis testing.

COURSE OUTCOMES :

Learners should be able to

1. Assessthebestsuitableresearchtypeandformulatetheresearchobjectivefortheresearchbusines sproblem.
2. Formulatethesuitableresearchdesignsandselectappropriatesamplingtechniquesforth eresearch.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.

6. The course comprise of Types of Research, Research Design, Sampling, Data Collection, Scaling Techniques, Hypothesis Testing and Statistics

Unit-I

Introduction to Research: Meaning – Purpose – Types of Research – Significance – Qualities of a good research – Steps in Research - Identification, Selection and Formulation of Research Problem. Research Design: Components of Research Design – Methods of Research Design.

Unit-II

Sampling Design: Census and Sample Survey – Characteristics of a Good Sample Plan – Steps in Sampling – Types of Sampling – Advantages and Limitations of Sampling. Data Collection: Primary Data - Meaning – Significance – Methods of Collecting Data: Observation – Interview Schedule – Questionnaire. Secondary Data – Meaning - Sources of Secondary Data – Precautions while using Secondary Data.

Unit-III

Scaling Techniques: Meaning of Scale–Measurement of Scale – Important Scaling Techniques - Processing of Data - Editing – Purpose – Analysis and Interpretation of Data: Meaning – Need for Interpretation – Techniques of Interpretation.- Report Writing: Types of Research Reports – Layout of the Report – Steps in Writing the Report – Contents of Research Reports

Unit-IV

Hypothesis: Characteristics of a good Hypothesis – Formulation of Hypothesis – Procedure for Testing of Hypothesis – T test, F test and Chi Square Test, Analysis of Variance - Business Forecasting – Exponential Smoothing

Unit-V

Descriptive Statistics - Measures of Central Tendency: - Mean, Median and Mode - Standard deviation – Karl Pearson Correlation – Spearman Rank Correlation - Regression Models – Inferential Statistics – Multivariate Analysis - Factor Analysis – Kruskal Wallis Test

<u>Note:</u>

The question paper shall cover 80% theory and 20% problems

16CCP303 INDIRECT TAXATION	**4**	**-**	**-**	**4**

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of indirect taxes emphasizing VAT and customs law.
2. To learn and compute the VAT liabilities.
3. To know how to register VAT and apply the VAT provisions.
4. To communicate orally and in written form the indirect taxations concepts and provisions.
5. To be familiar with the standards and laws pertaining to the VAT and customs and utilize for lifelong practical application.
6. To understand the statutory compliance under indirect taxes.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the Concept of indirect taxes emphasizing VAT and customs law.
2. Comprehend and compute VAT liabilities.
3. Know the procedure to register VAT and apply VAT provisions to business situations.
4. Communicate orally and in written form the indirect taxations concepts and provisions.
5. Familiar with the standards and laws pertaining VAT and customs and utilize for lifelong practical application.
6. The course covers Indirect Tax, Central Excise, Customs Laws, Service Tax and Central Sales Tax and VAT

Unit-I

Indirect Taxes- Features of Indirect Tax- Indirect Tax Laws-Administration and Relevant Procedures - Advantages and Disadvantages of Indirect Taxes

Unit-II

Central Excise - The Central Excise Law – Goods- Excisable goods, Manufacture and Manufacturer- Classification- Valuation-Related Person-Captive Consumption- Powers of Officers-Tariff Commission and other Tariff Authorities.

Unit-III

Customs Laws -Basic Concepts of Customs Law - Types of Custom Duties.- Anti- Dumping Duty, Safeguard Duty- Valuation -Customs Procedures- Import and Export Procedures-Baggage- Exemptions – Warehousing- Demurrage - Project Imports and Re- Imports- Penalties and Offences- Export Promotion Schemes- Duty Drawback.

Unit-IV

Service Tax - Introduction, Nature of Service Tax-Service Provider and Service Receiver- Registration procedure- Records to be Maintained - Classification of Taxable Services - Valuation of Taxable Services- Exemptions and Abatements - Payment of Service Tax- Return - Export and Import of Services- Other aspects of Service Tax- Taxable Services.

Unit-V

Central Sales Tax Act & VAT Act- Introduction, Definition of Sale under CST – VAT- Salient Features of State VAT Acts- Treatment of Stock & Branch Transfer under State VAT Acts - Filing & Return under State VAT Act.

		Semester – III			
		L	T	P	C
16CCP304	**JAVA**	4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To understand of fundamental programming constructs and concepts
2. To comprehend on the object-oriented programming concepts of Class and Object
3. To gain knowledge on the packages and interface and its applications.
4. To obtain the application of Multi thread models in programming
5. To know about the applet class and its application
6. To know about the Creating an executable applet

COURSEOUTCOMES:

Learners should be able to

1. Obtain programming skills in the Java programming language,
2. Gain knowledge of object-oriented paradigm in the Java programming language
3. Know about the usage of the Java programming language for
   various programming technologies
4. Understand to usage tools to design webpage using the java
   programming and realize the usage of standard and third-party
   Java's API's when writing applications.
5. Exhibit the communication skills to convey the output of the programme.
6. Gain knowledge of Creating an executable applet

Unit – I

An overview of Java: Object oriented programming – Java features – Java environment - Data types, variables and arrays. Operators- Expressions - Control Statements: Branching statements – Iteration statements – Jump statements – Sample java program.

Unit – II

Classes – Objects – Methods – Constructors – The this keyword – finalize () method – Overloading methods – Returning objects – Recursion – Static – Final – Nested inner classes – Command line arguments – Inheritance.

Unit – III

Packages and Interfaces: Packages – Access protection – Importing packages – Interfaces – Exception handling: Fundamentals – Exception types – Try and catch – Multiple catch – Nested try – throw – throws – finally – Build in exception.

Unit – IV

Multithread programming: Thread model –Life cycle of thread – Creating thread – Multiple threads – Thread priorities – Synchronization – Inter thread Communication – Suspending, Resuming and Stopping threads – I/O Applets, and other topics.

Unit – V

The Applet Class: Basics – Building applet code – Applet life cycle – Creating an executable applet – Designing a web page – Running the applet – Getting input from the user – Graphics programming: The graphic class – Lines and rectangles – Circles and ellipses – Using control loops in applets – Drawing bar charts.

	Semester – III			
	L	T	P	C
16CCP305A INTERNATIONAL FINANCIAL MANAGEMENT	4	-	-	4

Course Objectives

To make the students

1. To make the students understand principles of financial management
2. To enable the students to take investment decisions.
3. To help the students to make financial decisions.
4. To provide the students with the basic knowledge of Dividend decisions.
5. To impart knowledge of working capital and cash management.
6. To provide knowledge on Foreign exchange and its significance in a developing economy

Course Outcomes

Learners should be able to

1. Students will be familiarized with basic concepts of financial management.
2. Students will know the technicalities of making investment decisions.
3. Students will be capable of making financing decisions.
4. Students will be familiarized with concepts of dividend decisions.
5. Students will be capable of making working capitalization and cash management.
6. course includes Balance of Payment, International Monetary System, Foreign Exchange Market, Foreign Exchange Risk and International Financial Market Instruments

Unit - I

IFM- Nature and Scope, IFM and Domestic Financial Management- Balance of payments - Significance- Preparation of BOP Statement - Link between BOP and the Economy.

Unit - II

International Monetary System - Gold Standard - IMF and World Bank Exchange Rate Mechanism - Factors influencing Exchange Rate - Purchasing Power Parity and Interest Rate Parity Theorems.

Unit - III

Foreign Exchange Market Transactions Spot, Forward, Futures, Options and Swaps - Arbitrage and Speculation in Foreign Exchange Market.- Exchange Arithmetic, Spread, Premium and Discount. – Currency Derivatives and Swaps

Unit - IV

Foreign Exchange Exposure - Managing Transaction, Translation and Operating Exposure - Techniques for covering the Foreign Exchange Risk - Internal and External Techniques of Risk.

Unit -V

International Financial Market Instruments - International Equities - ADR and GDR - Foreign Bond and Euro-bond - Short-term and Medium-term instruments.

16CCP305B	CONSUMER BEHAVIOUR	Semester – III L T P C 4 - - 4

COURSE OBJECTIVES:

To make the students

1. To understand the consumer behavior concepts, dimensions used in consumer behaviour research.
2. To recognize the Internal Influencing factors that affect the Consumer Behaviour
3. To identify the external Influencing factors that affect the Consumer Behaviour
4. To conceptualize on the consumer decision making process.
5. To know the application consumer behaviour concepts to access the changing behavior of the customers.
6. To appreciate the personal and environmental factors that influence consumer decisions. To understand the strategic implications of consumer influences, and marketing decisions

COURSEOUTCOMES:

Learners should be able to

1. Understand the importance of Culture, Subculture, Social Class, Reference Groups
2. Understand the importance of Family Influences in Consumer Behaviour.
3. Explore, analyze and compare the core theories of consumer behaviour and its application in both consumer and organizational markets
4. Appraise models of Consumer Behaviour and determine their relevance to particular marketing situations
5. Critique the theoretical perspectives associated with consumer decision making, including recognizing cognitive biases and heuristics
6. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to investment decisions.

Unit – I

Definition, Scope, and Application of Consumer Behavior-Evolution of Consumer Behavior as a field of study and its relationship with Marketing; Behavioral Dimension-Interdisciplinary Nature of Consumer Behavior studies

Unit – II

Consumer Decision Making Process - Buying Motives - Buying Roles, Consumer Decision Making Process, Levels of Consumer Decision Making, Perspectives-Models

Unit – III

Psychological Influence on Consumer Decision Making – Consumers Needs & Motivation, Emotions and Mood, Consumer Involvement; Consumer Learning, Personality, Self-concept and Self-image; Consumer Perception, Risk and Imagery; Consumer Attitude: Belief, Attitude and Intention, Formation-Change-Consumer Communication.

Unit – IV

Sociological Influences – Consumer Groups - Consumer Reference Groups, Family and Life cycle, Social Class and Mobility, Lifestyle Analysis - Culture; Sub-Culture, Cross Culture - Interpersonal Communication and influence, Opinion Leadership.

Unit – V

Diffusion of Motivation - Consumer Orientation - Diffusion Process, Adoption Process, Consumer Innovators, Multiplicative Innovation Adoption (MIA) Model.

Semester – III

		L	T	P	C
16CCP305C	**LABOUR LEGISATION**	4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. To comprehend on the reforms in Indian insurance industry.
3. To understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. To communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. To offer knowledge on managing industrial relations and the processes, regulations and the authorities regarding industrial relations.
6. To enable students acquire knowledge on fundamental objects and principles of individual laws; understand the significant provisions of the various Acts applicable to Labour Legislation.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. Comprehend on the reforms in Indian insurance industry.
3. Understandthecategorizationandapplicationofthelifeandnon-lifeinsuranceasariskmitigation instrument,
4. Communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. The course encompass Labour Problems, Trade unionism, Industrial Disputes, Management and Personnel Administration and Grievances
6. Course includes Factories Act, Workmen Compensation Act, Wages Act, Gratuity Act, Bonus Act and Industrial Dispute Act

Unit – I

Factories Act 1948 – Definition – Registration of Factories – Health – Safety and Welfare Measures – Provisions relating to Hazardous Process – Working Hours – Holidays – Employment of Young Persons – Women – Annual Leave with Wages – Provision relating to Penalties and its Procedure and Appeal

Unit – II

Workmen Compensation Act 1923 – Definition – Employer's Liability for Compensation – Arising out of and in the course of employment – Amount of Compensation – Notice and Claims – Obligations and Rights of Employers.

Unit – III

Payment of Wages Act 1936 – Application of the Act – Definitions – Rules for Payment of Wages – Deductions from Wages – Enforcement of the Act. Minimum Wages Act 1948 – Object of the Act – Definitions – Fixation and Revision of Wages – Procedure – Advisory Board and Central Advisory Board – Safeguards in Payment of Minimum Wages – Enforcement of the Act – Offences and Penalties

Payment of Gratuity Act 1972 – Definitions – Payment of Gratuity – Forfeiture of Gratuity – Nomination – Determination and Recovery of the amount of Gratuity – Obligations and Rights of Employers and Employees

Unit – IV

Payment of Bonus Act 1965 – Definition – Eligibility – Disqualification – Determination of Bonus – Computation of Gross Profit – Determination of Available Surplus – Allocable Surplus – Amount of Bonus – Payment of Bonus linked with Production or Productivity

Unit - V

Industrial Dispute Act, 1947 – Definition – Types of Disputes – Grievance Settlement Authorities – Procedure for Settlement of Industrial Disputes – Works Committee – Conciliation Officer – Court of Enquiry – Labour Court – Industrial Tribunal – National Tribunal – Award and Settlement – Strikes and Lockouts – Prohibition of Strikes and Lockouts – Illegal Strikes and Lockouts – Layoff and Retrenchment – Closure

SUGGESTED READINGS

Text Book

1. **Kapoor, N.D.** *Hand Book on Industrial Law.* New Delhi, Sultan Chand and Sons.

Reference Books

16CCP311	**PRACTICAL 5 -JAVA**	**Semester – III** **L T P C** **- - 4 2**

COURSE OBJECTIVES:

To make the students

1. To understand and write programs the JAVA programming language
2. To Use standard and third-party Java's API's when writing applications.
3. To test a Java application of medium complexity, consisting of multiple classes.
4. To understand Java-based software code of medium-to-high complexity by applying it
5. To Understand the basic approaches to the design of software applications.
6. To understand the perform string operations

COURSEOUTCOMES:

Learners should be able to

1. Implement Object Oriented Programming Concepts
2. Use and create packages and interfaces in a Java program
3. Use graphical user interface in Java programs and handle security implementations in Java
4. Create Applets; Implement exception handling in Java;
   implement Multithreading and use Input/output Streams
5. Exhibit the multiplication tables by multithreading
6. Exhibit communication skills to communicate the output derived from the program

1. Write a program to find the sum of series 1+X+X^2+X^3+…….
2. Write a program to find prime or not.
3. Write a program to find average of five numbers.
4. Define a class for employee with name and data of appointment create employee objects and sort them as per their date of appointment.
5. Write a program to find factorial of number using recursion.
6. Write a program to find simple interest getting values from keyboard.

7. Write a program to find maximum of N numbers.
8. Write a program to find maximum and sum of an array.
9. Write a program to perform string operations.
10. Write a program to accept more strings and arrange them in alphabetical order.
11. Write a program to create a window and draw cross lines.
12. Write a program to create an applet and draw the shape.
13. Write a program to create a window with a background color and display the message.
14. Write a program for multiplication tables by multithreading.
15. Write a program to create an exception for mark out of bounds. If mark is greater than 100 throw an exception.

16CCP312	PRACTICAL 6 -SPSS	Semester – III L T P C - - 4 2

COURSE OBJECTIVES:

To make the students

1. To understand the Importance of SPSS and the features for entering the data according to the variable type.
2. To understand and apply the descriptive analytical tools
3. To know the univariate tools and its application
4. To comprehend the application of Bivariate analysis
5. To understand and compute the multivariate analysis using the package.
6. To understand the correlation analysis

COURSEOUTCOMES:

Learners should be able to

1. Create datasheet and enter the data
2. Compute descriptive statistics using the package and graphically represent the data.
3. Perform univariate and bivariate analysis in the software package.
4. Perform multivariate analysis in the software package.
5. Perform the correlation analysis
6. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.

Workout the following statistics:

1. Descriptive Statistics
2. Chi-square
3. Independent Sample ‘t’ Test
4. Paired ‘t’ Test
5. Analysis of Variance (ANOVA)
6. Karl Pearson Correlation
7. Spearman Rank Correlation

8. Regression
9. Factor Analysis
10. Kolmogorov and Smirnov test
11. Mann Whitney U Test
12. Wilcoxon Test
13. Friedman Rank Test
14. Kruskal Wallis H-Test
15. Garett Ranking

16CCP401	CORPORATE ADMINISTRATION AND SECRETARIAL PRACTICE	Semester – IV L T P C 4 - - 4

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of auditing, corporate governance
2. To learn the audit techniques, corporate governance
3. To apply the best auditing process as lifelong practice,
4. To communicate orally and in written form the auditing concept and techniques, Corporate governance
5. To be familiar with the standards and laws pertaining to the auditing, Corporate Governance
6. To know the information related to global reporting initiatives.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the Concept of auditing, corporate governance
2. Recall audit techniques, corporate governance practices.
3. Apply lifelong the key learning of best auditing process, Corporate governance practices
4. Communicate orally and in written form the auditing concept and techniques, Corporate governance concepts and practices in business.
5. Familiar with the standards and laws pertaining to the auditing, Corporate Governance.

Unit – I

Company Administration – Hierarchy – Share Holders – Membership – Termination – Rights and Duties – Board of Directors – Qualification – Appointment – Powers – Duties – Other Managerial Personnel

Unit – II

Company Secretary – Meaning – Types – Qualities – Appointment – Dismissal – Power – Rights – Duties and Liabilities – Role of a Secretary in the Administration of a Company

Unit – III

Meeting – Law Governing Meetings – Requisites of a Valid Meeting – Chairman of a Meeting – Appointment – Duties – Powers – Notice – Agenda – Minutes – Quorum – Motion – Resolution – Methods of Voting

Unit – IV

Kinds of Company Meetings – Board of Directors Meeting – Share holder Meeting – Statutory Meeting – Annual General Meeting – Extraordinary General Meeting – Duties of a Company Secretary relating to the Meetings

Unit – V

Drafting of Correspondence relating to the Meetings – Drafting of Notices – Agenda and Minutes of the Meetings of Shareholders and Directors – Drafting of Chairman's Speech – Annual Report and Auditors Report

SUGGESTED READINGS

Semester – IV

16CCP402 ENTREPRENEURSHIP AND SMALL BUSINESS MANAGEMENT

L	T	P	C
3	-	-	3

COURSE OBJECTIVES:

1. To make the students
2. To Understand the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. To communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
4. To apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
5. To initiate the required skills for entrepreneurial development.
6. To help students understand the process of establishing and developing an enterprise

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of entrepreneurship, entities of business, creating ideas, mobilizing funds and support from government.
2. Communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. Apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
4. course include Entrepreneur and Entrepreneurship, Market and Technical Analysis, Diversification, Sub-contracting, Incentives and Subsidies

Unit – I

Small Business Enterprise - Small Business framework - Concept and Definition-Nature and Characteristics - Relationship between Small and Large Business - Scope and

Types of Small Business - Rationale and Objectives - Small Business as seed bed of Entrepreneurship

Unit –II

Entrepreneurship - Entrepreneur and Entrepreneurship Concept - Distinction between Entrepreneur and Manager - Entrepreneurial Competency - Functions - Types (including women and rural).

Unit – III

Establishing a Small Enterprise - Learning the important steps for starting a Business - Project Identification and Selecting the Product - Generation and Screening the Project Ideas - Market Analysis - Technical Analysis, Financial Analysis (up to cost of production) Project Formulation - Assessment of Project Feasibility - Preparation of Project Report - Dealing with basic startup problems.

Unit –IV

Growth Strategy - Growth strategy for Small Business - Need for Growth - Types of Growth Strategy - Expansion - Diversification-Sub contracting.

Unit-V

Institutional Support - Sources of Finance - Financial Support to Small Business-Various Incentives and Subsidies - Central and State Government Schemes

SUGGESTED READINGS

		Semester – IV			
		L	T	P	C
16CCP491	**PROJECT AND VIVA-VOCE**	-	-	23	8

COURSE OBJECTIVES:

To make the students

1. To identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research processin the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research processin the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report Work in team and exhibit leadership skills
6. Work in team and exhibit leadership skills

The students should select a problem in Accounting, Finance, Marketing or any other arears related to commerce.

Report should contain

- Introduction
    - Introduction about the industry
    - Introduction about the Company
    - Review of literature – Minimum 10 papers from referred journal
    - Need for the Study
    - Objectives
- Research Methodology
    - Research Design
    - Sampling Design
    - Sources of Data Collection
    - Tools used for analysis
    - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibliography (APA format)

4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: (8 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

16CAU101 PROGRAMMING FUNDAMENTALS USING C / C++ 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int.: **40** Ext.: **60** Total: **100**

Course Objectives

Enable the student

- To impart adequate knowledge on the need of programming languages and problem-solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To study the concepts of Call by value and call be reference.
- To learn file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Understand data types and control structures in programming languages.
2. Solve the memory access problems by using pointers
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Apply pointer concepts in C++
6. Use the concepts of preprocessor directives and macros.

Unit-I

Introduction to C and C++: History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++.

Data Types, Variables, Constants, Operators and Basic I/O: Declaring, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Using Comments in programs, Character I/O (getc, getchar, putc, putchar etc), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.h etc).

Expressions, Conditional Statements and Iterative Statements: Simple Expressions in C++ (including Unary Operator Expressions, Binary Operator Expressions), Understanding Operators Precedence in Expressions, Conditional Statements (if construct, switch-case construct), Understanding syntax and utility of Iterative Statements (while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

Unit-II

Functions and Arrays: Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.
Creating and Using One Dimensional Arrays (Declaring and Defining an Array, Initializing an Array, accessing individual elements in an Array, Manipulating array elements using loops), Use Various types of arrays (integer, float and character arrays / Strings) Two-dimensional Arrays (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional arrays.

Unit-III

Derived Data Types (Structures and Unions): Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members.
Pointers and References in C++: Understanding a Pointer Variable, Simple use of Pointers (Declaring and Dereferencing Pointers to simple variables), Pointers to Pointers, Pointers to structures, Problems with Pointers, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions. Pointers vs. References, Declaring and initializing references, using references as function arguments and function return values

Unit-IV
Memory Allocation in C++: Differentiating between static and dynamic memory allocation, use of malloc, calloc and free functions, use of new and delete operators, storage of variables in static and dynamic memory allocation.
File I/O, Preprocessor Directives: Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifdef, #ifndef and #undef), Macros.

Unit-V

Using Classes in C++: Principles of Object-Oriented Programming, Defining & Using Classes, Class Constructors, Constructor Overloading, Function overloading in classes, Class Variables &Functions, Objects as parameters, Specifying the Protected and Private access, Copy Constructors, Overview of Template classes and their use.

Overview of Function Overloading and Operator Overloading: Need of Overloading functions and operators, Overloading functions by number and type of arguments, Looking at an operator as a function call, Overloading Operators (including assignment operators, unary operators)

Inheritance, Polymorphism and Exception Handling: Introduction to Inheritance (Multi-Level Inheritance, Multiple Inheritance), Polymorphism (Virtual Functions, Pure Virtual Functions), Basics Exceptional Handling (using catch and throw, multiple catch statements), Catching all exceptions, Restricting exceptions, Rethrowing exceptions.

Semester – I

16CAU102 **COMPUTER SYSTEM ARCHITECTURE** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To discuss the basic concepts of Logic gates, multiplexers and de multiplexers.
- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- Explain different types of addressing modes.
- To learn CISC and RISC architecture.
- To summarize the types of memory and I/O channels.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Students will acquire a basic knowledge about computer system architecture, arithmetic, digital circuits and the low - level programming skills.
2. Define different number systems, binary addition and subtraction, 2's complement representation and operations with this representation.
3. Understand the inner workings and performance capabilities of microprocessors.
4. Understand the concept of registers and Instruction set.
5. Know the addressing modes and instruction format of various microprocessors.
6. Understand memory and I/O channels.

Unit -I

Introduction: Logic gates, Boolean algebra, circuit simplification, combinational circuits: Adders and Subtractors –Multiplexers and De multiplexers – Encoders and Decoders- sequential circuits: Flip Flop's, registers, counters and memory units.

Unit -II

Data Representation and Basic Computer Arithmetic: Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

Unit–III

Basic Computer Organization and Design: Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

Unit-IV

Central Processing Unit: Register organization, arithmetic and logical micro-operations, stack organization, micro programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining and parallel architecture.

Unit –V

Memory and Input-Output Organization: Cache memory, Associative memory, mapping Input / Output: External Devices, I/O Modules, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels

Suggested readings

1. Carl Hamacher,(2012). *Computer Organization*, (5th ed.), McGrawHill.
2. Dos Reis, A. J.,(2009). *Assembly Language and Computer Architecture using C++ and JAVA*, Course Technology.
3. Mano, M.M.,(2013). *Digital Design*, Pearson Education Asia
4. Stallings, W., (2010). *Computer Organization and Architecture Designing for Performance*, (8th ed.), Prentice Hall of India.

Semester – I

16CAU103 INTRODUCTION TO INFORMATION TECHNOLOGY 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To identify types of computers, how they process information and how individual computers interact with other computing systems and devices.
- To identify the function of computer hardware components.
- To identify the factors that goes into an individual or organizational decision on how to purchase computer equipment.
- To identify how to maintain computer equipment and solve common problems relating to computer hardware.
- To identify how software and hardware work together to perform computing tasks and how software is developed and upgraded.
- To identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Understand the meaning and basic components of a computer system,
2. Define and distinguish Hardware and Software components of computer system,
3. Explain and identify different computing machines during the evolution of computer system,
4. Gain knowledge about five generations of computer system,
5. Explain the functions of a computer,
6. Identify and discuss the functional units of a computer system,

Unit- I

Introduction to Computers-Classification of Digital Computer systems-Anatomy of a digital computer-Computer architecture - Data and Information-Introduction - Types of data -Data processing using a computer - Desktop computer - Acquisition of numbers and textual data-Introduction-input units-Internal representation of numeric data-representation of characters in Computers-Error detecting codes.

Unit-II

Acquiring graphical data-Introduction-Acquisition of textual data and pictures-Storage format for pictures-Image compression fundamentals-Image acquisition with digital camera-Acquiring audio data-Acquisition of video processing textual and multimedia data.

Unit-III
Data storage-Memory cell-physical devices used as memory cells-RAM-ROM-Secondary memory-I/O devices-CPU-Data Organization.

Unit-IV
Computer software and Software Development: Introduction to Computer Software-Operating systems-Functions of an OS-Classification of OS-Programming Languages-Compilers and Interpreters-General software features and trends.

Unit-V
Computers and Communication-Internet Applications-Introduction-E-mail-Information browsing service-world wide web-Information retrieval from worldwide web-other facilities provided by browser-Audio-Graphics-Animation and Video on the Internet-Business Information Systems.

Semester – I

16CAU111 PROGRAMMING FUNDAMENTALS USING C / C++ PRACTICAL **3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To study the concepts of Call by value and call be reference.
- To learn file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Develop programs using the basic elements like control statements, Arrays and Strings .
2. Solve the memory access problems by using pointers
3. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems.
4. Understand the uses of preprocessors and various header file directives.
5. Use the characteristics of an object-oriented programming language in a program.
6. Implement File handling mechanisms.

List of Programs:

1. Write a program to print the sum and product of digits of an integer.
2. Write a program to reverse a number.
3. Write a program to compute the sum of the first n terms of the following series S = 1+1/2+...
4. Write a program to compute the sum of the first n terms of the following series S=1-2+3-4+5..
5. Write a function that checks whether a given string is Palindrome or not. Use this function to find whether the string entered by user is Palindrome or not.
6. Write a function to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.
7. Write a program to compute the factors of a given number.

8. Write a macro that swaps two numbers. Write a program to use it.
9. Write a program to print a triangle of stars as follows (take number of lines from user):

```
*
***
*****
*******
*********
```

10. Write a program to perform following actions on an array entered by the user:
    i) Print the even-valued elements
    ii) Print the odd-valued elements
    iii) Calculate and print the sum and average of the elements of array
    iv) Print the maximum and minimum element of array
    v) Remove the duplicates from the array
    vi) Print the array in reverse order
11. Write a program that swaps two numbers using pointers.
12. Write a program in which a function is passed address of two variables and then alter its contents.
13. Write a program which takes the radius of a circle as input from the user, passes it to another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.
14. Write a program to find sum of n elements entered by the user. To write this program, allocate memory dynamically using malloc() / calloc() functions or new operator.
15. Write a program to calculate Factorial of a number (i)using recursion, (ii) using iteration

Semester – I

16CAU112 COMPUTER SYSTEM ARCHITECTURE (PRACTICAL) 3H – 2C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

(Any 8 Experiments)

Course Objectives

Enable the student

- To discuss the basic concepts of Logic gates, multiplexers and de multiplexers.
- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- Explain different types of addressing modes.
- To learn CISC and RISC architecture.
- To summarize the types of memory and I/O channels.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Students will acquire a basic knowledge about computer system architecture, arithmetic, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. analyze the use of encoder and decoder.
4. Understand the working of half adder and full adder.
5. Design and analyze memory, I/O devices and cache structures for processor.
6. Evaluate the performance of computer systems

List of Programs:

1. Verification of Logic Gates
2. Code converters
3. Realization of Multiplexer using basic gates
4. Encoder and Decoder
5. Realization Half and Full adders
6. Realization of Subtractor
7. Realization of Parity generator
8. Flip-Flop Circuits
9. Digital to analog Converters
10. Demonstrate a Basic Arithmetic Computing operations

Semester – I

16CAU113 INTRODUCTION TO INFROMATION TECHNOLOGY PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- Create a document in Microsoft Word with formatting options.
- Add a graphic to a document.
- Write functions in Microsoft Excel to perform basic calculations and to convert number to text and text to number.
- Indicate the names and functions of the Excel interface components.
- Construct formulas, including the use of built-in functions, and relative and absolute references.
- Create and modify charts.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Modify text using various formatting options from the editing tools under the Home tab
2. Demonstrate the mechanics and uses of Word tables to organize and present data.
3. Demonstrate working knowledge of using Word's themes and clip art to create a variety of visual effects.
4. Create and design a spreadsheet for general office use.
5. Demonstrate the basic mechanics and navigation of an Excel spreadsheet.
6. Demonstrate formatting techniques and presentation styles.

List of Programs:

1. Create a set of slides with sound and animation using power point and to select various styles of slides from slide template.
2. Prepare an organization chart for a company and a college using power point.
3. To perform comparative study of your UG degree subject marks and create a various styles of graph using excel.
4. To perform student and hostel fee particulars in a worksheet. Analysis the results using excel.
5. To create a word document for salary preparation and access the calculation, graph from excel using OLE.
6. Apply the mail merge concept using word.
7. Image compression using Java.
8. Animation using Java.
9. Create simple accounts using Tally.
10. Create balance sheet using Tally.

Semester – I

16VAE101 **ENVIRONMENTAL SCIENCE** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **100** Total: **100**

Course Objectives

Enable the student

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To encourage to learn ecosystems and biodiversity.
- To learn environment pollution and control measures of pollution.
- To create system concepts and methodologies and analyze interactions.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Unit-I

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit- II

Natural Resources: Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Semester – I

16VAE101 ENVIRONMENTAL SCIENCE 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **100** Total: **100**

Unit- III

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit- IV

Environmental Pollution: Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution , Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit-V

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Semester – II

16CAU201 PROGRAMMING IN JAVA 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

Unit-I

Introduction to Java: Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods),

Unit-II

Arrays, Strings and I/O: Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and files.

Object-Oriented Programming Overview: Principles of Object-Oriented Programming, Defining & Using Classes, Controlling access to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

Unit-III

Inheritance, Interfaces, Packages, Enumerations, Autoboxing and Metadata: Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

Unit-IV

Exception Handling, Threading, Networking and Database Connectivity: Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

Unit-V

Java Applets: Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

Semester – II

16CAU202 **DISCRETE STRUCTURES** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To develop logical thinking and its application to computer science
- To write and evaluate a proof or outline the basic structure of and give examples of each proof technique described
- To know the concepts of sets and functions.
- to transform a given problem into a combination of several simpler statements and arrive at a solution to the problem and be able to prove it logically
- To solve problems with the help of tools of mathematical analysis.
- To reason and ability to present a coherent and mathematically accurate argument.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Familiar with elementary algebraic set theory.
2. Demonstrate the ability to write and evaluate a proof or outline the basic structure of and give examples of each proof technique described.
3. Understand the basic principles of sets and operations in sets.
4. Demonstrate an understanding of relations and functions and be able to determine their properties.
5. Demonstrate different traversal methods for trees and graphs.
6. Initiate to knowledge from inference theory.

Unit-I

Sets: Introduction, Sets , finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations, counting , Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

Unit-II

Growth of Functions: Asymptotic Notations, Summation formulas and properties, Bounding Summations, approximation by Integrals

Unit-III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution, Substitution Method, recurrence trees, Master theorem.

Unit-IV

Graph Theory : Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

Unit-V

Prepositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

Suggested readings

1. Kenneth Rosen, (2006). Discrete Mathematics and its Applications, 6th edition, McGraw Hill, New Delhi.

2. Tremblay,J .P., and Manohar, R., (1997). Discrete Mathematical Structures with Applications to Computer Science, McGraw-Hill Book Company, New Delhi.

3. Coremen, T.H., Leiserson, C.E., Rivest, R. L., (2009). Introduction to algorithms, 3rd edition, Prentice Hall on India.

4. Albertson,M. O., and Hutchinson, J. P.,(1988). Discrete Mathematics with Algorithms, John wiley Publication.

5. Hein, J. L., (2009). Discrete Structures, Logic, and Computability, 3rd edition, Jones and Bartlett Publishers.

6. Hunter, D.J., (2008). Essentials of Discrete Mathematics, Jones and Bartlett Publishers.

Semester – II

16CAU203 SCRIPT LANGUAGE 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To study the basics of HTML
- To study the basics of Java Script
- To study the basics of Cascading style sheets and DHTML
- To study the basics of XML
- To understand the principles of creating an effective web page.
- To develop skills in analyzing the usability of a website.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Independently understand basic of web design languages.
2. To develop a website
3. Enumerate the architecture of website.
4. Gain the skills and project-based experience needed for entry into web design and development careers.
5. Develop awareness and appreciation of the many ways that people access the web, and will be able to create standards-based websites that can be accessed by the full spectrum of web access technologies
6. Select and apply markup languages for processing, identifying, and presenting of information in web

Unit- I

HTML: Introduction - SGML - Outline of HTML Document - Head section-Body section - HTML forms.

Unit-II

Introduction - Language elements - Object of java script - Other objects - Arrays.

Unit- III

DHTML: Cascading style sheets - DHTML Document object model and collections - Event Handling - Filters and Transitions - Data binding

Unit- IV

XML: Syntax of XML Document - XML Attributes - XML Validation - XML DTD - XML -DTD Elements - DTD Attributes - DTD Entities - DTD Validation

Unit-V

PHP: Introduction to PHP - Syntax - Saving PHP files - Variables - Constants - If and Switch Statements - Operators - Loops and Strings.

Suggested readings

1. Gopalan,N.P.,.Akilandeswari,J., (2007). Web Technology: A Developer's Perspective , 2nd Edition , Prentice Hall of India. New Delhi. [Unit I – II]
2. Ivan Bayross.,(2009). Web Enabled Commercial Application Development using HTML, DHTML ,JavaScript, Perl CGI 2nd Edition, BPB Publications, New Delhi. [Unit III – V]
3. Ashok Lodha.(2007). Guide to PHP, 1st Edition. LawPoint, Kolkata.
4. Dave W.Mercer, Allan Kent, Steven D.Nowicki, Davd Mercer, Dan Squie, Wankyu Choi.(2006). Beginning PHP5, Wiley India (P) Ltd. New Delhi.
5. Tim Converse ,Joyce Park, Clark Morgan.,(2006). PHP5 & MySQL Bible, 1st Edition, John Wily, India.

3. http://www.mvps.org/scripting/languages

Semester – II

16CAU211 PROGRAMMING IN JAVA PRACTICAL 3H – 2C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To implement the Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

List of Programs:

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of .lenth in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard

7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBufferclasss like setCharAt(, setLength(), append(), insert(), concat()and equals().
9. Write a program to create a ―distance‖ class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer
10. Modify the ―distance‖ class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions(from lower to higher data type)
12. Write a program to show the difference between public and private aCSUess specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate FibonaCSUi series, where the function to generate fibonacii series is given in a different file belonging to the same package.

17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program ―DivideByZero‖ that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the openConnection() method and then use it examine the different components of the URLand content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a banner and then creates a thread to scrolls the message in the banner from left to right across the applet‘s window.
26. Write a program to get the URL/location of code (i.e. java code) and document(i.e. html file).
27. Write a program to demonstrate different mouse handling events like mouseClicked(), mouseEntered(), mouseExited(), mousePressed, mouseReleased() and mouseDragged().
28. Write a program to demonstrate different keyboard handling events.

29. Write a program to generate a window without an applet window using main() function.
30. Write a program to demonstrate the use of push buttons.

Semester – II

16CAU212 **DISCRETE STRUCTURES PRACTICAL** **3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To develop logical thinking and its application to computer science
- To write and evaluate a proof or outline the basic structure of and give examples of each proof technique described
- To know the concepts of sets and functions.
- to transform a given problem into a combination of several simpler statements and arrive at a solution to the problem and be able to prove it logically
- To solve problems with the help of tools of mathematical analysis.
- To reason and ability to present a coherent and mathematically accurate argument.

Course Outcomes(COs)

Upon successful completion of the course, the student will be able to:

1. Familiar with elementary algebraic set theory.
2. Demonstrate the ability to write and evaluate a proof or outline the basic structure of and give examples of each proof technique described.
3. Understand the basic principles of sets and operations in sets.
4. Demonstrate an understanding of relations and functions and be able to determine their properties.
5. Demonstrate different traversal methods for trees and graphs.
6. Initiate to knowledge from inference theory.

List of Programs:

1. Write a C Program to find the number of subsets of a set contains n elements.
2. Write a C Program to find transitive closure of a relation.
3. Write a C Program to prove
   $1/ (1*2) + 1/(2*3) \ldots\ldots\ldots+1/(n(n+1)) = n/(n+1)$

4. Write a C Program to to perform the sum = 1+ (1+2) + (1+2+3) + … + (1+2…+n)

5. Write a C program to print Fibonacci series till Nth term using recursion

6. Write a C program in c to calculate factorial of a number using recursion

7. Write a C Program to find a minimum spanning tree using Prim’s algorithm

8. Write a C program to find the shortest path with the lower cost in a graph using Dijkstra's Algorithm

9. Write a C Program to construct the truth table for the following formula.
   (i) $P \wedge Q \wedge \urcorner R$ (ii) $P \wedge \urcorner Q \wedge R$ (iii) $P \wedge Q \wedge \urcorner R$

10. Write a C Program to prove De – Morgan’s law.

Semester – II

16CAU213 SCRIPT LANGUAGE PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To understand the principles of creating an effective web page.
- To develop skills in analyzing the usability of a website.
- To learn the language of HTML and JavaScript.
- To learn to design web pages using Forms, Tables, Frames, TextBox
- To study the basics of JavaScript
- To learn to validate input in web pages using JavaScript

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Gain the skills and project-based experience needed for entry into web design and development careers.
2. Develop awareness and appreciation of the many ways that people access the web, and will be able to create standards-based websites that can be accessed by the full spectrum of web access technologies
3. Select and apply markup languages for processing, identifying, and presenting of information in web pages.
4. Create and manipulate web media objects using editing software.
5. Create web pages and validate input using JavaScript.
6. Develop web pages and perform computation using JavaScript.

List of Programs:

1. Create a form to reserve a ticket in the railways if the source and destination place is given.
2. Create a web page to display student mark statement.
3. Design an home page for a company
4. Develop DHTML Script to illustrate Color and Background attribute.
5. Create a DHTML page using various filters on images, mask image, mask Text.
6. Design a PHP program to find greatest of three numbers.
7. Design an student application form using PHP program.
8. Write a java script program design a calculator

9. Develop a Java script program for display greetings based on Time
10. Create an XML document for student information with relevant attributes and validation.
11. Develop a program to copy the content of one file to another file using PHP program.
12. Develop an E-mail application using PHP program.

Semester – II

16ENU201 **ENGLISH** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **100** Total: **100**

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

Unit-I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

Unit-II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman **–** Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

Unit-III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

Unit-IV

Poetry: No Sentence – Anjum Hassan
One-Act Play: While the Auto Waits- O’ Henry
Vocabulary: Words Often Confused, Anagrams

Grammar: Preposition, Voice- Active and Passive

Unit-V

Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitution
Grammar: Question, Pronunciation

Prescribed Text:

Rao, G. Chandralekha et al. (2013).*Spring* **.** Emerald Publishers: Chennai.

Suggested Reading:

Shyamala,V. (2006). *English for Communication*. 2006. Emerald Publishers: Chennai.

Semester – III

16CAU301 **DATA STRUCTURES** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand sorting, searching and hashing algorithms
- To develop application using data structures
- Choose appropriate data structures and algorithms for problem solving.

Course Outcome:

Upon completion of this course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Able to use linear and non-linear data structures like stacks, queues , linked list etc.

Unit-I

Arrays-Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation).Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

Unit-II

Linked Lists Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

Unit-III

Trees - Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion , Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

Unit-IV

Searching and Sorting, Linear Search, Binary Search, Comparison of Linear and Binary Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting Techniques

Unit-V

Hashing - Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collusion by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function

Semester – III

16CAU302 **OPERATING SYSTEMS** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- Understand basic resource management techniques.

Course Outcome (COs):

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Appreciate the role of operating system as System software.

Unit-I

Introduction to Operating System: Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems-Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

Unit-II

Operating System Organization: Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources-Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication-Deadlocks.

Unit-III

Memory Management: Physical and Virtual address space-Memory Allocation strategies –Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

Unit-IV
File and I/O Management: Directory structure-File operations-File Allocation methods-Device management.

Unit-V
Protection and Security: Policy mechanism-Authentication-Internal aCSUess Authorization.

Suggested readings

Semester – III

16CAU303 **COMPUTER NETWORKS** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.
- Channel error detection and correction, MAC protocols, Ethernet and WLAN.

Course Outcome:

Upon completion of this course, the student will be able to:

- Describe the functions of each layer in OSI and TCP/IP model.
- Explain the functions of Application layer and Presentation layer paradigms and Protocols.
- Describe the Session layer design issues and Transport layer services.
- Classify the routing protocols and analyze how to assign the IP addresses for the given network.
- Describe the functions of data link layer and explain the protocols.
- Explain the types of transmission media with real time applications

Unit- I

Introduction to Computer Networks : Network definition; network topologies; network classifications; network protocol; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques**: Analog and digital signal; data-ratelimits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission;

Unit-II

Digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media.

Networks Switching Techniques and Access mechanisms: Circuit switching; packetswitching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

Unit-III

Data Link Layer Functions and Protocol: Error detection and error correction techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

Unit-IV

Multiple Access Protocol and Networks: CSMA/CD protocols; Ethernet LANS; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways;

Networks Layer Functions and Protocols: Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit-V

Transport Layer Functions and Protocols: Transport services- error and flow control, Connection establishment and release- three way handshake;

Overview of Application layer protocol: Overview of DNS protocol; overview of WWW &HTTP protocol.

16CAU304A ANDROID PROGRAMMING **Semester – III**
3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To compare the differences between Android and other mobile development environments.
- To learn the Object-oriented features of Kotlin and APIs for Android Development.
- To describe the working of Android applications, life cycle, manifest, and Intents
- To demonstrate the implementation of Form widgets for Android App development.
- To learn the SQLite database connectivity and database operations with android
- To design and develop useful Android applications with compelling user. interfaces .by using, extending, and creating your own layouts and Views and using Menus.

Course Outcome (Cos):

Upon completion of this course, the student will be able to:

1. Analyze the Architecture and features of Android with another Mobile Operating System.
2. Evaluate the standard of Kotlin language for developing Android Applications
3. Apply knowledge for creating user Interface and develop activity for Android App.
4. Evaluate the user interface architecture of Android for developing Android Apps
5. Understand the implementation of SQLite database operations with Android.
6. Design and implement Database Application and Content providers.

Unit-I

Introduction: History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture. (2L)

Unit-II

Overview of object oriented programming using Java: OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine. (4L)

Unit-III

Development Tools: Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device. (5L)

Unit-IV

User Interface Architecture: Application context, intents, Activity life cycle, multiple screen size s.(2L) **User Interface Design:** Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes),Images, Menu, Dialog.(2L)

Unit-V

Database: Understanding of SQL database, connecting with the database. (2L)

16CAU304B	**STRUTS FRAMEWORK**	**Semester – III** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the students to

- Understand the Model, View, Controller (MVC) design pattern and how it is applied by Struts Framework
- Know the components of Struts Application and database connectivity
- Implement JSP functions using Struts
- Perform client and server side validation using Struts Validator Framework
- Develop web applications using Struts
- Develop EJB programs and get familiar with Struts framework

Course Outcome (COs):

Upon completion of the course, the students will be able to:

1. Know about MVC and overview of JSP
2. Identify the components of a Struts Application and how to connect database in web based applications
3. Know about the struts Sub elements and Control Tags
4. Develop programs with Data Tags and Bean Tags
5. Develop programs with HTML Tags and Logic Tags and able to construct enterprise-level web based applications
6. Construct web based applications and Identify where data structures are appearing in them.

Unit-I

Introduction, Understanding the MVC Design Pattern, The Struts Implementation of the MVC, Directory Structure, Web Application Deployment Descriptor, The Tomcat JSP/Servlet Container, Installing and Configuring Tomcat, Testing Your Tomcat Installation, An Overview of the Java Servlet and JavaServer Pages, The GenericServlet and HttpServlet Classes, Life Cycle of a Servlet. Struts OverView, Life Cycle of Struts.

Unit-II

Components of a Struts Application, The Controller, The View, DynaActionForm & LazyDynaBean, ActionServlet, RequestProcessor, ActionForm, IncludeAction, Forward Action, LocaleAction, DispatchAction, LookupDispatchAction, MappingDispatchAction, EventDispatchAction, SwitchAction, Interceptors, Implementing Custom interceptors, Struts Validation, Exception Handling, Managing Errors, Struts Error Management - ActionError, ActionErrors, Creating Custom ActionMappings, Struts JDBC Connection, Using a DataSource in Struts Application, Debugging Struts Applications.

Unit-III

The struts-config.xml, The Struts Subelements, The icon Tag Subelement, display-name Tag Subelement, description Tag Subelement, set-property Tag Subelement, Adding a Struts DataSource, Adding FormBean Definitions, Adding Global Forwards, Adding Actions, Adding a RequestProcessor, Adding Message Resources, Adding a Plug-in. The Bean Tag Library, Installing the Bean Tags, bean:cookie Tag, bean:define Tag, bean:header Tag, bean:include Tag, bean:message Tag, bean:page Tag, bean:parameter Tag ,bean:resource Tag,<bean:size Tag, bean:struts Tag, bean:write Tag

Unit-IV

HTML Tag Library, Base Tag, Button Tag, Cancel Tag, Checkbox Tag, Errors Tag, Form Tag, Hidden Tag, Html Tag, Image Tag, Img Tag, Link Tag, Multibox Tag, Select Tag, Option Tag, Options Tag, Password Tag, Radio Tag, Reset Tag, Rewrite Tag, Submit Tag, Text Tag, Textarea Tag

Unit-V

The Logic Tag Library , Empty Tag, notEmpty Tag ,equal Tag, notEqual Tag, forward Tag, redirect Tag, greaterEqual Tag, greaterThan Tag, iterate Tag, lessEqual Tag, lessThan Tag, match Tag, notMatch Tag, present Tag, notPresent Tag

Suggested readings

1. James Goodwill,(2002). *Mastering Jakarta Struts*, Wiley Publishing, Inc.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand sorting, searching and hashing algorithms
- To develop application using data structures
- Choose appropriate data structures and algorithms for problem solving.

Course Outcome:

Upon completion of this course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Able to use linear and non-linear data structures like stacks, queues , linked list etc.

List of Programs:

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.
2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.
3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).
4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
6. Perform Stack operations using Linked List implementation.
7. Perform Stack operations using Array implementation. Use Templates.

8. Perform Queues operations using Circular Array implementation. Use Templates.
9. Create and perform different operations on Double-ended Queues using Linked List implementation.
10. Write a program to scan a polynomial using linked list and add two polynomial.
11. Write a program to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration
12. Write a program to display Fibonacci series (i)using recursion, (ii) using iteration
13. Write a program to calculate GCD of 2 number (i) with recursion (ii) without recursion
14. Write a program to create a Binary Search Tree and include following operations in tree:
    - (a) Insertion (Recursive and Iterative Implementation)
    - (b) Deletion by copying
    - (c) Deletion by Merging
    - (d) Search a no. in BST
    - (e) Display its preorder, postorder and inorder traversals Recursively
    - (f) Display its preorder, postorder and inorder traversals Iteratively

(g) Display its level-by-level traversals
(h) Count the non-leaf nodes and leaf nodes
(i) Display height of tree
(j) Create a mirror image of tree
(k) Check whether two BSTs are equal or not

15. Write a program to convert the Sparse Matrix into non-zero form and vice-versa.
16. Write a program to reverse the order of the elements in the stack using additional stack.
17. Write a program to reverse the order of the elements in the stack using additional Queue.
18. Write a program to implement Diagonal Matrix using one-dimensional array.
19. Write a program to implement Lower Triangular Matrix using one-dimensional array.
20. Write a program to implement Upper Triangular Matrix using one-dimensional array.
21. Write a program to implement Symmetric Matrix using one-dimensional array.
22. Write a program to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the suCSUessor / predecessor of an element, insert an element, inorder traversal.
23. Write a program to implement various operations on AVL Tree.

		Semester – III
16CAU312	**OPERATING SYSTEMS PRACTICAL**	**4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- Understand basic resource management techniques.

Course Outcome (COs):

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Appreciate the role of operating system as System software.

List of Programs:

1. Write a program (using *fork()* and/or *exec()* commands) where parent and child execute:

   a) same program, same code.

   b) same program, different code.

   c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behavior of Linux kernel including CPU information and. memory information
3. Write a program to print file details including owner a access permissions, file access time, where file name is given as argument.
4. Write a program to copy files using system calls.
5. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.
6. Write program to implement FCFS scheduling algorithm.

7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using *thread* library.

		Semester – III
16CAU313	**COMPUTER NETWORKS PRACTICAL**	**4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.
- Channel error detection and correction, MAC protocols, Ethernet and WLAN.

Course Outcomes (COs):

Upon completion of this course, the student will be able to:

- Describe the functions of each layer in OSI and TCP/IP model.
- Explain the functions of Application layer and Presentation layer paradigms and Protocols.
- Describe the Session layer design issues and Transport layer services.
- Classify the routing protocols and analyze how to assign the IP addresses for the given network.
- Describe the functions of data link layer and explain the protocols.
- Explain the types of transmission media with real time applications

List of Programs:

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Semester – III

16CAU314A ANDROID PROGRAMMING PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To compare the differences between Android and other mobile development environments.
- To learn the Object-oriented features of Kotlin and APIs for Android Development.
- To describe the working of Android applications, life cycle, manifest, and Intents
- To demonstrate the implementation of Form widgets for Android App development.
- To learn the SQLite database connectivity and database operations with android
- To design and develop useful Android applications with compelling user. interfaces .by using, extending, and creating your own layouts and Views and using Menus.

Course Outcome (Cos):

Upon completion of this course, the student will be able to:

1. Analyze the Architecture and features of Android with another Mobile Operating System.
2. Evaluate the standard of Kotlin language for developing Android Applications
3. Apply knowledge for creating user Interface and develop activity for Android App.
4. Evaluate the user interface architecture of Android for developing Android Apps
5. Understand the implementation of SQLite database operations with Android.
6. Design and implement Database Application and Content providers.

List of Programs

1. Create ―Hello World‖ application. That will display ―Hello World‖ in the middle of the screen in the emulator. Also display ―Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and and selected option should appear in text box.

5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

16CAU314B	**STRUTS PRACTICAL**	**Semester – III** **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the students to

- Understand the Model, View, Controller (MVC) design pattern and how it is applied by Struts Framework
- Know the components of Struts Application and database connectivity
- Implement JSP functions using Struts
- Perform client and server side validation using Struts Validator Framework
- Develop web applications using Struts
- Develop EJB programs and get familiar with Struts framework

Course Outcome (COs):

Upon completion of the course, the students will be able to:

1. Know about MVC and overview of JSP
2. Identify the components of a Struts Application and how to connect database in web based applications
3. Know about the struts Sub elements and Control Tags
4. Develop programs with Data Tags and Bean Tags
5. Develop programs with HTML Tags and Logic Tags and able to construct enterprise-level web based applications
6. Construct web based applications and Identify where data structures are appearing in them.

List of Programs:

1. Create a Simple Struts Human Resource (HR) Application
2. Create Struts Login Application Using Action form
3. Create a Strut Global Action Forwards and Action Mappings
4. Create and implement Multiple Struts Configuration File
5. Create Struts Application to implement struts Lookup Dispatch Action
6. Create Struts Application to mapping the struts Action Servlet
7. Create a Feedback form to implement struts HTML Tag
8. Create Struts Application to use of action forms for validating user input.
9. Create Struts Applications to implement Struts Logic Tag
10. Create a Struts LOGIC tag library provides tags that are useful in managing conditional generation of output text

Semester – IV

16CAU401 **SOFTWARE ENGINEERING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To introduce the fundamental concepts of software engineering.
- To Analyze, specify and document software requirements for a software system.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
- Expose the criteria for test cases.
- Be familiar with test management and test automation techniques
- Implement a given software design using sound development practices.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

Unit-I

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

Unit-II

Requirement Analysis; Initiating Requirement EngineeringProcess- Requirement Analysis and Modeling Techniques- FlowOriented Modeling- Need for SRS- Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

Unit-III

Risk Management: Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, **Quality Management-** Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

Semester – IV

16CAU401 SOFTWARE ENGINEERING 4H – 4C

Unit-IV

Design Engineering-Design Concepts, Architectural Design Elements, Software Architecture, Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

Unit-V

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

Semester – IV

16CAU402 **DATA BASE MANAGEMENT SYSTEMS** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To have an introductory knowledge about the PL/SQL concept
- To train the student to translate business requirements into relational database schemas and manipulate databases using the SQL Data Manipulation Language.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Design efficient PL/SQL programs to access Oracle databases
6. Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing.

Unit-I

Introduction: Characteristics of database approach, data models, database system architecture and data independence. **Entity Relationship(ER) Modeling:** Entity types, relationships, constraints.

Unit-II

Relation data model: Relational model concepts, relational constraints, relational algebra.

Unit-III

Relation data model: SQL queries **Database design:** Mapping ER/EER model to relational database, functional dependencies, Lossless decomposition.

Unit-IV

Database design: Normal forms (upto BCNF).**Transaction Processing :** ACID properties, concurrency control

Unit-V

File Structure and Indexing (8 Lectures) Operations on files, File of Unordered and ordered records, overview of File organizations, Indexing structures for files(Primary index, secondary index, clustering index), Multilevel indexing using B and B+ trees.

Suggested Readings

Semester – IV

16CAU403 **WEB PROGRAMMING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To understand the concepts and architecture of the World Wide Web.
- To understand and practice markup languages
- Understand the technologies used in Web Programming.
- Know the importance of object-oriented aspects of Scripting.
- To understand and practice embedded dynamic scripting on client-side Internet Programming
- To develop dynamic web applications, create and consume web services

Course Outcomes (COs)

Upon Completion of the course, the students will be able to

1. Design web pages.
2. Use technologies of Web Programming.
3. Apply object-oriented aspects to Scripting.
4. Create a basic website using HTML and Cascading Style Sheets.
5. Design and implement dynamic web page with validation using JavaScript objects and by applying different event handling mechanisms.
6. Use scripting languages and web services to transfer data and add interactive components to web pages.

Unit-I

Creating an HTML Document – creating list – creating links between document – linking to resources on the internet – working with hypertext attributes – working with fonts and text styles – tables – creating frameset – working with forms – working with cascading style sheets.

Unit-II

JavaScript: Introduction to javascript – Programming fundamentals – Functions and objects – Navigator object model

Unit-III

JavaScript: Form and form elements – Scripting frames and multiple windows – Event object – Functions and custom objects.

Unit-IV

ASP: Client side scripting vs. Server side scripting- Variables & Constants- Procedures – Forms – Cookies – Application - #include – Global.asa - Functions-ASP object model: Response- Request- Application- Session – Server – Error – Array

Unit-V

ASP: Collections & Control Structure-File system object: File System – Text Stream- Drive – File – Folder – Directory – ADO - sql & Databases for data driven applications- ASP Components: Ad Rotator – Browser Cap. – Content Linking – Content Rotator .

Semester – IV

16CAU404A **R PROGRAMMING** **3H – 3C**

Instruction Hours / week: L:3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives :

Enable the student

- To acquire the computing tasks such as using conditional processing statements, loops, and writing one's own functions.
- Performing advanced graphing of data and statistical modeling of data.
- Use statistical distribution functions in R
- Read Structured Data into R from various sources
- Understand split-apply-combine (group-wise operations) in R
- Perform basic statistical modeling of data

Course Outcome(COs):

Upon completion of this course, the students will be able to:

1. Learn how to install and configure software necessary for a statistical programming environment.
2. Discuss generic programming language concepts as they are implemented in a high-level statistical language.
3. The course covers practical issues in statistical computing which includes programming in R, reading data into R, accessing R packages, writing R functions, debugging, and organizing and commenting R code.
4. Import external data into R for data processing and statistical analysis
5. Learn the main R data structures – vector and data frame
6. Learn the file processing in R

Unit-I

History and Overview of R : The S Philosophy - Back to R -Basic Features of R - Free Software -Design of the R System - Limitations of R- R Resources .Getting Started with R :Installation - Getting started with the R interface -.R Nuts and Bolts :Entering Input - Evaluation -R Objects - Numbers - Attributes - Creating Vectors - Mixing Objects - Explicit Coercion - Matrices -Lists -Factors - Missing Values - Data Frames - Names .

Unit-II

Getting Data In and Out of R :Reading and Writing Data - Reading Data Files with read.table() - Reading in Larger Datasets with read.table - Calculating Memory Requirements for R Objects . Using the readr Package .Using Textual and Binary Formats for Storing Data :Using dput() and dump() – Binary Formats - Interfaces to the Outside World : File Connections - Reading Lines of a Text File - Reading From a URL Connection - Subsetting R Objects :Subsetting a Vector - Subsetting a Matrix - Subsetting Lists - Subsetting Nested Elements of a List - Extracting Multiple Elements of a List - Partial Matching -Removing NA Values .

Unit-III

Vectorized Operations :Vectorized Matrix Operations .Dates and Times :Dates in R - Times in R - Operations on Dates and Times .Managing Data Frames with the dplyr package :Data Frames -The dplyr Package - dplyr Grammar - Installing the dplyr package - select() - filter() -arrange() - rename() - mutate() - group_by()-%>%.Control Structures :if-else - for Loops - Nested for loops - while Loops - repeat Loops - next, break .

Unit-IV

Functions: Functions in R - Your First Function - Argument Matching - Lazy Evaluation – The Argument - Arguments Coming After the Argument .Scoping Rules of R : A Diversion on Binding Values to Symbol - Scoping Rules - Lexical Scoping: Why Does It Matter? -Lexical vs. Dynamic Scoping -- Application: Optimization - Plotting the Likelihood. Coding Standards for R .Loop Functions : Looping on the Command Line - lapply() - sapply() - split() - Splitting a Data Frame - tapply - apply() - Col/Row Sums and Means -Other Ways to Apply - mapply()-Vectorizing a Function .

Unit-V

Debugging -:Something's Wrong! - Figuring Out What's Wrong - Debugging Tools in R . Using traceback() - Using debug() - Using recover().Profiling R Code: Using system.time() . Timing Longer Expressions - The R Profiler - Using summaryRprof().Simulation :Generating Random Numbers - Setting the random number seed -Simulating a Linear Model - Random Sampling .

Suggested Readings

Semester – IV

16CAU404B **SOFTWARE TESTING** **3H – 3C**

Instruction Hours / week: L:3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives:

To help students:

- to understand the strengths and weaknesses of a variety of software testing techniques.
- to get familiar with the techniques, and tools in the area of software testing and its practice in the industry
- to become a good software tester
- to gain confidence in and providing information about the level of quality of the software
- to find defects which may get created by the programmer while developing the software.
- Know to develop software

Course Outcome:

1. Investigate the reason for bugs and analyze the principles in software testing to prevent and remove bugs.
2. Implement various test processes for quality improvement
3. Design test planning.
4. Manage the test process
5. Apply the software testing techniques in commercial environment
6. Test the various types in the software application

Unit- I

Assessing Testing Capabilities and Competencies

Who is associated with testing? – The multiple Roles of Testing – Defect – The business perspective for testing – test process and testers ; Building a software testing strategy: Computer System Strategic risks – Economics of Testing – Common Computer Problems – Economics of System Development Life Cycle (SDLC) Testing – Testing-an Organizational Issue – Establishing a testing policy – Structured approach to testing – Test Strategy; Software Testing Methodology: Reduce the cost of testing – Functional and Structural testing – Workbench concept – Eight considerations in developing testing methodologies

Unit -II

Software Testing Fundamentals

Examining the specification: Getting started – Performing a high-level review of the specification – Low-level specification test techniques; Testing the software with blinders on: Dynamic Black-Box Testing- Test-to-Pass and Test-to-Fail- Equivalence Partitioning- Data testing – State testing – Other Black-box test techniques; Examining the code: Static White-Box testing- Formal reviews – Coding Standards and Guidelines- Generic Code Review Checklist; Testing the software with X-Ray glasses: Dynamic White-Box testing- Dynamic White-Box testing versus Debugging- Testing the Pieces- Data Coverage- Code Coverage.

Unit- III

Software Testing Techniques

Determining your software testing techniques: Testing Techniques/Tools selection process – Selecting Techniques/tools – Structural system testing techniques- Functional system testing techniques – Unit testing technique – Functional testing and analysis – Functional testing – Test factor/Test technique matrix

Testing process

The Cost of Computer Testing – Life Cycle Testing concept – Verification and validation in the software. Assess Project Management Development Estimate and Status - Develop Test Plan - Requirements Phase Testing -Design Phase Testing -Program Phase Testing

Unit -IV

Testing process

Execute Test and Record results- Acceptance Test- Report Test Results- Testing Software Installation- Test Software Changes - Evaluate Test Effectiveness.

Unit- V

Testing Specialized Systems and Applications

Testing client/server systems - Testing web-based systems - Testing security - Building tests documentation.

Suggested Readings

1. Ron Patton, (2004). *Software Testing*, (2nd ed.), New Delhi, Pearson Education. (2nd unit)

2. William E.Perry, (2001). *Effective methods for Software Testing*, (2nd ed.), New Delhi: John Wiley & Sons, Inc., (1, 3, 4 & 5 units)

Semester – IV

16CAU411 SOFTWARE ENGINEERING PRACTICAL 4H – 2C

Course Objectives

- To introduce the fundamental concepts of software engineering.
- To Analyze, specify and document software requirements for a software system.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
- Expose the criteria for test cases.
- Be familiar with test management and test automation techniques
- Implement a given software design using sound development practices.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

Sample Projects:

1. **Criminal Record Management**: Implement a criminal record management system for jailers, police officers and CBI officers
2. **DTC Route Information**: Online information about the bus routes and their frequency and fares
3. **Car Pooling: To maintain a web based intranet application that enables the** corporate employees within an organization to avail the facility of carpooling effectively.
4. Patient Appointment and Prescription Management System
5. Organized Retail Shopping Management Software
6. Online Hotel Reservation Service System
7. Examination and Result computation system
8. Automatic Internal Assessment System
9. Parking Allocation System
10. Wholesale Management System

Semester – IV

16CAU412 DATA BASE MANAGEMENT SYSTEMS PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To have an introductory knowledge about the PL/SQL concept
- To train the student to translate business requirements into relational database schemas and manipulate databases using the SQL Data Manipulation Language.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Design efficient PL/SQL programs to access Oracle databases
6. Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing.

List of Programs:

1.Create and use the following database schema to answer the given queries.

EMPLOYEE Schema

Field	**Type**	**NULL**	**KEY**	**DEFAULT**
Eno	Char(3)	NO	PRI	NIL
Ename	Varchar(50)	NO		NIL
Job_type	Varchar(50)	NO		NIL
Manager	Char(3)	Yes	FK	NIL
Hire_date	Date	NO		NIL
Dno	Integer	YES	FK	NIL
Commission	Decimal(10,2)	YES		NIL
Salary	Decimal(7,2)	NO		NIL

DEPARTMENT Schema

Field	**Type**	**NULL**	**KEY**	**DEFAULT**
Dno	Integer	No	PRI	NULL
Dname	Varchar(50)	Yes		NULL
Location	Varchar(50)	Yes		New Delhi

Query List

1. Query to display Employee Name, Job, Hire Date, Employee Number; for each employee with the Employee Number appearing first.
2. Query to display unique Jobs from the Employee Table.
3. Query to display the Employee Name concatenated by a Job separated by a comma.
4. Query to display all the data from the Employee Table. Separate each Column by a comma and name the said column as THE_OUTPUT.
5. Query to display the Employee Name and Salary of all the employees earning more than $2850
6. Query to display Employee Name and Department Number for the Employee No= 7900.

7. Query to display Employee Name and Salary for all employees whose salary is not in the range of $1500 and $2850.

8. Query to display Employee Name and Department No. of all the employees in Dept 10 and Dept 30 in the alphabetical order by name.

9. Query to display Name and Hire Date of every Employee who was hired in 1981.

10. Query to display Name and Job of all employees who don‘t have a current Manager.

11. Query to display the Name, Salary and Commission for all the employees who earn commission.

12. Sort the data in descending order of Salary and Commission.

13. Query to display Name of all the employees where the third letter of their name is _A‘.

14. Query to display Name of all employees either have two _R‘s or have two _A‘s in their name and are either in Dept No = 30 or their Manger‘s Employee No = 7788.

15. Query to display Name, Salary and Commission for all employees whose Commission Amount is 14 greater than their Salary increased by 5%.

16. Query to display the Current Date.

17. Query to display Name, Hire Date and Salary Review Date which is the 1st Monday after six months of employment.

18. Query to display Name and calculate the number of months between today and the date each employee was hired.

19. Query to display the following for each employee <E-Name> earns < Salary> monthly but wants < 3 * Current Salary >. Label the Column as Dream Salary.

20. Query to display Name with the 1st letter capitalized and all other letter lower case and length of their name of all the employees whose name starts with _J‘, ‘A‘ and _M‘.

21. Query to display Name, Hire Date and Day of the week on which the employee started.

22. Query to display Name, Department Name and Department No for all the employees.

23. Query to display Unique Listing of all Jobs that are in Department # 30.

24. Query to display Name, Dept Name of all employees who have an _A‘ in their name.

25. Query to display Name, Job, Department No. And Department Name for all the employees working at the Dallas location.

26. Query to display Name and Employee no. Along with their Manger‘s Name and the Manager‘s employee no; along with the Employees‘ Name who do not have a Manager.

27. Query to display Name, Dept No. And Salary of any employee whose department No. and salary matches both the department no. And the salary of any employee who earns a commission.

28. Query to display Name and Salaries represented by asterisks, where each asterisk (*) signifies $100.

29. Query to display the Highest, Lowest, Sum and Average Salaries of all the employees

30. Query to display the number of employees performing the same Job type functions.

31. Query to display the no. of managers without listing their names.

32. Query to display the Department Name, Location Name, No. of Employees and the average salary for all employees in that department.

33. Query to display Name and Hire Date for all employees in the same dept. as Blake.

34. Query to display the Employee No. And Name for all employees who earn more than the average salary.

35. Query to display Employee Number and Name for all employees who work in a department with any employee whose name contains a _T‘.

36. Query to display the names and salaries of all employees who report to King.

37. Query to display the department no, name and job for all employees in the Sales department.

Semester – IV

16CAU413 WEB PROGRAMMING PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To understand the concepts and architecture of the World Wide Web.
- To understand and practice markup languages
- Understand the technologies used in Web Programming.
- Know the importance of object-oriented aspects of Scripting.
- To understand and practice embedded dynamic scripting on client-side Internet Programming
- To develop dynamic web applications, create and consume web services

Course Outcomes (COs)

Upon Completion of the course, the students will be able to

1. Design web pages.
2. Use technologies of Web Programming.
3. Apply object-oriented aspects to Scripting.
4. Create a basic website using HTML and Cascading Style Sheets.
5. Design and implement dynamic web page with validation using JavaScript objects and by applying different event handling mechanisms.
6. Use scripting languages and web services to transfer data and add interactive components to web pages.

List of Programs:

1. Develop a website for Karpagam University using HTML.
2. Write Online Quiz program (Include Style Sheets)
3. Create a simple animation using DHTML.
4. Write a program to apply Mask into an Image Using Filters in DHTML.
5. Generate web page that represents clock-every 60 see the page updated with server current time Using JavaScript.
6. Design a form and validate it using JavaScript.
7. Show the demo of AD Rotator Component.
8. Write Database Access program using ASP.
9. Program to retrieve Cookies information using ASP

10. Program to count web page hits using ASP
11. Program to create Date & Time, String Manipulation using ASP
12. Write a program to find the visitor's Browser Type, IP Address and More Information

Semester – IV

16CAU414A R PROGRAMMING (PRACTICAL) 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives :

Enable the student

- To acquire the computing tasks such as using conditional processing statements, loops, and writing one's own functions.
- Performing advanced graphing of data and statistical modeling of data.
- Use statistical distribution functions in R
- Read Structured Data into R from various sources
- Understand split-apply-combine (group-wise operations) in R
- Perform basic statistical modeling of data

Course Outcome(COs):

Upon completion of this course, the students will be able to:

1. Learn how to install and configure software necessary for a statistical programming environment.
2. Discuss generic programming language concepts as they are implemented in a high-level statistical language.
3. The course covers practical issues in statistical computing which includes programming in R, reading data into R, accessing R packages, writing R functions, debugging, and organizing and commenting R code.
4. Import external data into R for data processing and statistical analysis
5. Learn the main R data structures – vector and data frame
6. Learn the file processing in R

List of Programs:

1. Write a program to demonstrate functions and operators
2. **Vectors:** Grouping values into vectors, then doing arithmetic and graphs with them
3. **Matrices:** Creating and graphing two-dimensional data sets
4. **Summary Statistics:** Calculating and plotting some basic statistics: mean, median, and standard deviation

5. **Factors:** Creating and plotting categorized data
6. **Data Frames:** Organizing values into data frames, loading frames from files and merging them
7. Write a program to design R as a calculator
8. Write a program to demonstrate Probability distributions
9. Write a program to demonstrate Importing and exporting data
10. Write a program to Establish a Regression

16CAU414B	**Software Testing PRACTICAL**	**Semester – IV** **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course objective

Enable the student

- Basic software debugging methods.
- White box testing methods and techniques.
- Black Box testing methods and techniques.
- Designing test plans.
- Different testing tools (familiar with open source tools)
- Quality Assurance models.

Course outcome

Upon the completion of the course, student able to

1. Apply modern software testing processes in relation to software development and project management.
2. Create test strategies and plans, design test cases, prioritize and execute them.
3. Manage incidents and risks within a project.
4. Contribute to efficient delivery of software solutions and implement improvements in the software development processes.
5. To gain expertise in designing
6. implement and development of computer based systems and IT processes.

List of Programs:

1. Create a VB form with the following fields and create the database also for them. Insert 3 records. Using Win Runner tool record the above 3 transaction and test them and produce the Report. (Blackbox Testing).

2. Create a VB form and then add login dialog form. Using Win Runner tool check the Username and Password and produce the Report. (Security testing).

3. Create a VB form with the following fields and check the calculation is correct or not by using the test toll Win Runner. (Functional Testing) Fields – Name, Designation, Department, Basic, HRA, DA, PF and netsal.

4.using Win Runner test tool check the database values after changing. Using Flight database. (Regression testing).

5. Write a C program for Boundary Testing.

6. Write a C program for Loop Testing.

7. Write a C program for Integration Testing.

8. Write a C program for Interface Testing.

9. Write a C program for Unit testing.

Semester – V

16CAU501A **Oracle (SQL / PL-SQL)** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- create and use table, column, primary key, foreign key,
- Use constraint, data type and view.
- Use SQL DDL commands to on a very basic level create and edit an Oracle database.
- Use SQL DML commands to select, update and delete data in an Oracle database.
- Use built-in functions and dynamic SQL in an Oracle 10g database.
- Use PL/SQL to build procedures, functions and triggers with variables, cursors, flow control and error management in Oracle 10g database

Course Outcomes:

Upon the completion of the course, student able to

1. Develop efficient PL/SQL programs to access Oracle databases
2. Use some of the Oracle supplied PL/SQL packages to generate screen and file outputs
3. Design modular applications using packages
4. Invoke native dynamic SQL to build runtime SQL statements
5. Manage data retrieval with cursors and cursor variables
6. Enhance performance using collection datatypes and bulk operations

Unit-I

Introduction to Oracle as RDBMS SQL Vs. SQL * Plus: SQL Commands and Data types, Operators and Expressions, Introduction to SQL * Plus.

Unit-II

Managing Tables and Data: Creating and Altering Tables (Including constraints) ,Data Manipulation Command like Insert, update, delete, SELECT statement with WHERE, GROUP BY and HAVING, ORDER BY, DISTINCT, Special operator like IN, ANY, ALL BETWEEN, EXISTS, LIKE, Join, Built in functions

Unit-III

Other Database Objects - View, Synonyms, Index

Unit-IV

Transaction Control Statements - Commit, Rollback, Savepoint

Unit-V

Introduction to PL/SQL SQL v/s PL/SQL, PL/SQL Block Structure, Language construct of PL/SQL (Variables, Basic and Composite Data type, Conditions looping etc.) TYPE and % ROWTYPE , Using Cursor (Implicit, Explicit)

Suggested Readings

1. Ivan Bayross, (2010). SQL, *PL/SQL the Programming Language of Oracle Paperback*, BPB Publicatins.

2. John Watson, Roopesh Ramklass,(2008). *OCA Oracle Database11g SQL Fundamentals I Exam Guide*, Oracle Press.

3. Michael Mclaughlin,(2008). *Oracle Database 11g PL/SQL Programming*, Oracle Press.

4. Rajeeb C. Chatterjee,(2012). *Learning Oracle SQL and PL/SQL: A simplified Guide*, PHI.

5. Ron Hardman, Michael Mclaughlin, (2005). *Expert Oracle PL/SQL*, Oracle Press.

6. Steven Feuerstein, Bill Pribyl, (2014). *Oracle PL/SQL Programming*, (6th ed.), O'Reilly Media.

Semester – V

16CAU501B PROGRAMMING IN PYTHON 3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To Learn Syntax and Semantics and create Functions in Python.
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications
- To Use Python interactively

Course Outcomes (COs)

Upon completion of this the course students will be able to:

1. Develop algorithmic solutions to simple computational problems
2. Structure simple Python programs for solving problems.
3. Decompose a Python program into functions.
4. Represent compound data using Python lists, tuples, dictionaries.
5. Read and write data from/to files in Python Programs.
6. Implement database and GUI applications

Unit-I

Planning the Computer Program: Concept of problem solving-Problem definition-Program design-Debugging-Types of errors in programming-Documentation.

Unit-II

Techniques of Problem Solving: Flowcharting-decision table-algorithms-Structured programming concepts-Programming methodologies: top-down and bottom-up Programming.

Unit-III

Overview of Programming: Structure of a Python Program-Elements of Python.

Unit-IV

Introduction to Python: Python Interpreter-Using Python as calculator-Python shell-Indentation. Atoms-Identifiers and keywords-Literals-Strings-Operators(Arithmetic operator, Relational operator, Logical or Boolean operator, Assignment, Operator, Ternary operator, Bit wise operator, Increment or Decrement operator).

Unit-V

Creating Python Programs: Input and Output Statements-Control statements(Branching, Looping, Conditional Statement, Exit function, Difference between break, continue and pass.). Defining Functions-Default arguments.

Suggested Readings

1. Allen Downey, Jeffrey Elkner, Chris Meyers, (2012). How to think like a computer scientist : learning with Python , Freely available online.

2. Budd,T.,(2011). *Exploring Python*, (1st ed.) TMH

Websites

1. http://docs.python.org/3/tutorial/index.html.
2. http://interactivepython.org/courselib/static/pythonds.
3. http://www.ibiblio.org/g2swap/byteofpython/read/.

Semester – V

16CAU502A **INFORMATION SECURITY** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To provides an overview of Information Security and Assurance.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- Gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
- Understand key terms and concepts in cyber law, intellectual property and cyber crimes, trademarks and domain theft.
- To examine secure software development practices.
- To incorporate approaches for incident analysis and response.
- To incorporate approaches for risk management and best practices.

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. State the basic concepts in information security
2. Explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
3. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
4. The learner will gain an understanding of cryptography, how it has evolved, and some key encryption techniques used today.
5. The learner will develop an understanding of security policies (such as confidentiality, integrity, and availability), as well as protocols to implement such policies.
6. The learner will gain familiarity with prevalent network and distributed system attacks, defenses against them, and forensics to investigate the aftermath.

Unit -I

Introduction: Security, Attacks, Computer Criminals, Security Services, Security Mechanisms.

Cryptography : Substitution ciphers, Transpositions Cipher, Confusion, diffusion.

Unit – II

Symmetric, Asymmetric Encryption. DES Modes of DES, Uses of Encryption, Hash function, key exchange, Digital Signatures, Digital Certificates

Unit – III

Program Security: Secure programs, Non malicious Program errors, Malicious codes virus, Trap doors, Salami attacks, Covert channels, Control against program.
Threats: Protection in OS: Memory and Address Protection, Access control, File Protection, User Authentication**.**

Unit – IV

Database Security: Requirements, Reliability, Integrity, Sensitive data, Inference, Multilevel Security**.**
Security in Networks : Threats in Networks, Security Controls, firewalls, Intrusion detection systems, Secure e-mails

Unit -V

Administrating Security: Security Planning, Risk Analysis, Organizational Security Policy, Physical Security. Ethical issues in Security: Protecting Programs and data. Information and law.

Suggested Readings

1. Pfleeger, C. P. , Pfleeger, S. L.,(2006). Security in Computing, Prentice Hall of India.

2. Stallings,W., (2010).Network Security Essentials: Applications and Standards, (4^{th} ed.).

Semester – V

6CAU502B **DATA MINING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Understand Data Mining fundamentals and Characterize the kinds of patterns that can be discovered by association rule mining
- To Compare and evaluate different data mining techniques like classification, prediction.
- To Cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To Design data warehouse with dimensional modelling and apply OLAP operations.
- To program using available data mining tools and general-purpose languages.

Course Outcomes(COs)

Upon completion of this course the students will be able to:

1. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
2. Design and deploy appropriate classification techniques and decision trees.
3. Understand the concept of clustering and its real time applications
4. Explore recent trends in data mining such as web mining, spatial-temporal mining
5. Able to know the basic concepts of data warehouse and OLAP operations
6. Organize and Prepare the data needed for data mining using pre preprocessing techniques

Unit- I

Introduction : Fundamentals of data mining – Data Mining Functionalities – Classification of Data Mining systems – Major issues in Data Mining.
Data Warehouse and OLAP Technology: An Overview – Data Warehouse – Multidimensional Data Model – Data Warehouse Architecture

Unit-II

Data Preprocessing: Needs Preprocessing the Data – Data Cleaning – Data Integration and Transformation – Data Reduction – Discretization and Concept Hierarchy Generation – Online Data Storage.
Preparing Data for Mining: Variable Measures.

Unit-III

Mining Frequent Patterns, Associations and Correlations: Basic Concepts – Efficient and Scalable Frequent item set Mining Methods – From Association Mining to Correlation Analysis.

Unit-IV

Predictive and descriptive data mining techniques, supervised and unsupervised learning techniques, process of knowledge discovery in databases, pre-processing methods

Unit-V

Data Mining Techniques: Association Rule Mining, classification and regression techniques, clustering, Scalability and data management issues in data mining algorithms, measures of interestingness

Suggested Readings

1. Gupta, G.K., (2006). *Introduction to Data Mining with Case Studies*, PHI.
2. Pang-Ning Tan, Michael Steinbach, Vipin Kumar, (2005). *Introduction to Data Mining*, Pearson Education.
3. Richard Roiger, Michael Geatz, (2003). *Data Mining: A Tutorial Based Primer*, Pearson Education.
4. Soman,K.P., Diwakar Shyam, Ajay,V.,(2006*). Insight Into Data Mining: Theory And Practice,* PHI.

Semester – V

16CAU503A **MICROPROCESSOR** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : **40** Ext : **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives:

Enable the student

- To become familiar with the architecture and the instruction set of an Intel microprocessor
- To illustrate the architecture of 8085 and 8086 microprocessors.
- To introduce the programming and interfacing techniques of 8086 microprocessor.
- To analyse the basic concepts and programming of 8051 microcontroller
- To understand the interfacing circuits for various applications of 8051 microcontroller.
- To introduce the architecture of advanced microprocessors and microcontrollers.

Course Outcomes:

Upon the completion of the course, the student will able to:

1. Design and implement programs on 8086, ARM, PIC. CO2 Design I/O circuits.
2. The program prepares students to successfully compete for employment in Electronics, Manufacturing and Embedded fields.
3. Design Memory Interfacing circuits.
4. Design and implement 8051 microcontroller based systems.
5. Describe the architecture and instruction set of ARM microcontroller
6. Assembly language programming will be studied as well as the design of various types of digital and analog interfaces

Unit – I

Introduction to Microprocessor: Introduction to 8085 – Pin Diagram – Microprocessor architecture and its operations– Demultiplexing the Bus – Generation of Control Signals – Fetching, Decoding and Execution of Instruction – Instruction Timing and Status Flag.

Unit – II

Addressing Modes: Instruction Set – Addressing Modes – Instruction Format – Simple Program – Memory and Machine Cycle – Memory Units Machine Cycle.

Unit – III

Interfacing Concepts: Peripheral I/O Instructions – Device Selection and Data Transfer – Types of Data Transfer – Input Interfacing – Input Interfacing using Decoders – Output Interfacing – LED and 7 Segment Display – Interfacing Memory.

Unit – IV

Peripheral Devices: Introduction to Programmable Peripheral Interface 8255 – Pin Diagram – Architecture – Modes of Operation: I/O and BSR – Architecture and Operation of 8251 (USART)

Architecture and Operation of Programmable Interrupt Controller (8259) – Architecture of 254(8253) Programmable Interval Timer/ Counter – DMA Controller(8259).

Unit – V - Applications

Delay Program – Traffic Light Control System – Water Level Controller – Stepper Motor Control – Interfacing DAC – Interfacing ADC – Temperature Measurement.

Suggested Readings:

2. Gupta,M.K.,(2006). *Microprocessor Microcomputer, Microcontroller and Interfacing*, (1^{st} ed.), New Delhi , Paragon International Publisher.
3. Ramesh S.Gaonkar, (2000). *Microprocessor Architecture, Programming and Application with 8085*, (4^{th} ed.), New Delhi, Penram International Publishing.
4. Walter A Triebel, Avtar Singh, (2005). *The 8088 and 8086 Microprocessors Programming, Interfacing, Software, Hardware, and Applications*. (4^{th} ed.)PHI,

16CAU503B PC HARDWARE AND TROUBLE SHOOTING 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

Course Objectives:

Enable the student

- to assemble/setup and upgrade personal computer systems
- perform installation, configuration,
- upgrading of hardware and software,
- install/connect associated peripherals
- diagnose in hardware and software and other peripheral equipment.
- Troubleshoot the problem

Course Outcomes:

Upon the completion of the course, the student will be able to

1. assemble/setup and upgrade personal computer systems
2. perform installation, configuration,
3. upgrading of hardware and software,
4. install/connect associated peripherals
5. diagnose in hardware and software and other peripheral equipment.
6. Troubleshoot the problem

Unit-I

Micro Computer System: Introduction to Micro Computer System – Computer Organization – Number Systems and Codes Memory – Arithmetic and Logic Unit – Control Unit.

Unit-II

Peripheral Devices: Introduction to Peripheral Devices – Keyboard – CRT Display monitor – Printer – Magnetic Storage Devices – Floppy Disk Drive – Hard Disk Drive – Peripherals Interfaces and Controller – Keyboard Interface

16CAU503B PC HARDWARE AND TROUBLE SHOOTING 4H – 4C

Unit-III

Display Adapter: CRT Display — CRT Controller –Auxiliary Subsystems – Data Communication fundamentals – Serial Port in PC – Real time clock (RTC) – Magnetic Tape Subsystems – LAN – Memory Expansion Options

Unit-IV

Installation and Preventive Maintenance: Pre Installation Planning – Installation Practice – Routine Checks – Special Configurations – Memory Up Gradation

Unit-V

Trouble shooting: Troubleshooting – Computer faults – Nature of faults – Types of Faults Diagnostic Programs and Tools — Faults in Elimination Process – Systematic Troubleshooting – POST (Power on Self Test)

Suggested Readings

1. Govindarajalu,B.,(2011). *IBM PC and Clones*,(2nd ed.)Tata McGraw Hill Publishing Company. [UNIT I & II]
2. Michael Meyers, (2003). *Introduction to PC Hardware and Troubleshooting, The Mike Meyers' Computer Skills*, (1st ed.)McGraw Hill, [UNIT III - V]
3. Sanjay K. Bose, (1999). *Hardware and Software of Personal Computers*, New Age International Publishers.

Semester – V

16CAU504A **DIGITAL IMAGE PROCESSING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To apply knowledge of mathematics, science, and engineering
- To design and conduct experiments, as well as to analyze and interpret data

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

Unit-I

Introduction: Light, Brightness adaption and discrimination, Pixels, coordinate conventions, Imaging Geometry, Perspective Projection, Spatial Domain Filtering, sampling and quantization. Spatial Domain Filtering: Intensity transformations, contrast stretching, histogram equalization, Correlation and convolution, Smoothing filters, sharpening filters, gradient and Laplacian.

Unit-II

Hotelling Transform, Fourier Transforms and properties, FFT (Decimation in Frequency and Decimation in Time Techniques), Convolution, Correlation, 2-D sampling, Discrete Cosine Transform, Frequency domain filtering.

Unit-III

Image Restoration, Basic Framework, Interactive Restoration, Image deformation and geometric transformations, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Adaptive filters, Linear, Position invariant degradations, Estimation of Degradation functions, Restoration from projections, Image Compression-Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Entropy of an information source, Shannon's 1st Theorem, Huffman Coding, Arithmetic Coding, Golomb Coding, LZW coding, Transform Coding, Sub-image size selection, blocking artifacts, DCT implementation using FFT, Run length coding.

Unit – IV

FAX compression (CSUITT Group-3 and Group-4), Symbol-based coding, JBIG-2, Bit-plane encoding, Bit-allocation, Zonal Coding, Threshold Coding, JPEG, Lossless predictive coding, Lossy predictive coding, Motion Compensation
Wavelet based Image Compression: Expansion of functions, Multi-resolution analysis, Scaling functions, MRA refinement equation, Wavelet series expansion, Discrete Wavelet Transform (DWT),Continuous Wavelet Transform, Fast Wavelet Transform, 2-D wavelet Transform, JPEG-2000 encoding, Digital Image Watermarking

Unit-V

Morphological Image Processing: Basics, SE, Erosion, Dilation, Opening, Closing, Hit-or-Miss Transform, Boundary Detection, Hole filling, Connected components, convex hull, thinning, thickening, skeletons, pruning, Geodesic Dilation, Erosion, Reconstruction by dilation and erosion. Image Segmentation: Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding, Iterative thresholding, Otsu's method, Moving averages, Multivariable thresholding, Region-based segmentation, Watershed algorithm, Use of motion in segmentation

Suggested Readings

2. Gonzalez, R C., Woods, R E.,(2008). *Digital Image Processing*, (3rd ed.)Pearson Education.
3. Jain,A.K.,(1989). *Fundamentals of Digital image Processing*, Prentice Hall of India.
4. Rafael C. Gonzalez, Richard E. Woods, Steven Eddins, (2004). *Digital Image Processing using* MATLAB', Pearson Education, Inc..
5. Schalkoff, (1989). *Digital Image Processing and Computer Vision*, John Wiley and Sons.

16CAU504B	OPEN SOURCE TECHNOLOGIES	Semester – V 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To introduce open source technology for development of web applications.
- For Study the problems with traditional commercial software.
- To understand open source scripting language for programming in web environment i.e. PHP.
- To study the open source management system and connection with database.
- To learn open source web server, software tools.
- To learn the open source ideals in order to apply those principles

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Leaned the need of open source technology, open source development model, application of open sources, aspects of open source movement
2. The students will be aware about the problems with traditional commercial software.
3. The student will be familiar with basis syntax of PHP, common PHP scripts elements.
4. The student will be familiar with creating of the server side scripting using PHP, implement PHP database connectivity, perform operation on database and open source database management system.
5. The students will be familiar with Working of different web Servers.
6. The students will be aware about the software tool and process like Eclipse IDE, Selenium ID

Unit-I

Why open source, what is Open source, open source principles, open standards requirements for software, open source successes, free software, some example of free software, free software license provider, free software Vs Open source software, Public Domain , FOSS DOES not Mean any cost, proprietary Vs Open Source Licensing Model. Principles and Open Source Methodology: History, open source initiatives, open standards principles-methodologies, philosophy, software freedom, open source software, development, Licenses, copyright.

Unit-II

Open source projects: Starting and maintaining an open source project, open source hardware- open source design-open source teaching (OST).Open Source Ethics: Open Source Vs Closed Source-Open source Government-The ethics of open source-social and financial impacts of open source technology-shared software, shared source.

Unit-III

Apache Web Server: Introduction-Starting, Stopping, and Restarting Apache-Configuration-Securing Apache Create the Web Site-Apache Log Files

Unit-IV

MySQL: Introduction-Tutorial-Database Independent Interface-Table Joins-Loading and Dumping a Database

Unit-V

Perl: Introduction-Perl Documentation-Perl Syntax Rules-A Quick Introduction To Object-Oriented Programming-What We Didn't Talk About

Suggested Readings

1. Andrew M. St. Laurent, (2004). *Understanding Open Source and Free Software Licensing*, O'Reilly Media.
2. Dan Woods, Gautam Guliani, (2005). Open Source for the Enterprise, O'Reilly Media.

Semester – V

16CAU511A **Oracle (SQL/PL-SQL) (PRACTICAL)** **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- create and use table, column, primary key, foreign key,
- Use constraint, data type and view.
- Use SQL DDL commands to on a very basic level create and edit an Oracle database.
- Use SQL DML commands to select, update and delete data in an Oracle database.
- Use built-in functions and dynamic SQL in an Oracle 10g database.
- Use PL/SQL to build procedures, functions and triggers with variables, cursors, flow control and error management in Oracle 10g database

Course Outcomes:

Upon the completion of the course, student able to

1. Develop efficient PL/SQL programs to access Oracle databases
2. Use some of the Oracle supplied PL/SQL packages to generate screen and file outputs
3. Design modular applications using packages
4. Invoke native dynamic SQL to build runtime SQL statements
5. Manage data retrieval with cursors and cursor variables
6. Enhance performance using collection datatypes and bulk operations

[SQL COMMANDS]

1) SQL* formatting commands
2) To create a table, alter and drop table.
3) To perform select, update, insert and delete operation in a table.
4) To make use of different clauses viz where, group by, having, order by, union and intersection,
5) To study different constraints.

[SQL FUNCTION]

6) To use oracle function viz aggregate, numeric, conversion, string function.
7) To understand use and working with joins.
8) To make use of transaction control statement viz rollback, commit and save point.
9) To make views of a table.
10) To make indexes of a table.

[PL/SQL]

11) To understand working with PL/SQL
12) To implement Cursor on a table.
13) To implement trigger on a table

Semester – V

16CAU511B PROGRAMMING IN PYTHON (PRACTICAL) 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To Learn Syntax and Semantics and create Functions in Python.
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications
- To Use Python interactively

Course Outcomes (COs)

Upon completion of this the course students will be able to:

1. Develop algorithmic solutions to simple computational problems
2. Structure simple Python programs for solving problems.
3. Decompose a Python program into functions.
4. Represent compound data using Python lists, tuples, dictionaries.
5. Read and write data from/to files in Python Programs.
6. Implement database and GUI applications

List of Programs:

1. Write a menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.
2. WAP to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades aCSUording to the following criteria :
   Grade A: Percentage >=80
   Grade B: Percentage>=70 and <80
   Grade C: Percentage>=60 and <70
   Grade D: Percentage>=40 and <60
   Grade E: Percentage<40
3. Write a menu-driven program, using user-defined functions to find the area of rectangle, square, circle and triangle by aCSUepting suitable input parameters from user.
4. Write a program in python to display the first n terms of Fibonacci series.
5. Write a program in python to find factorial of the given number.
6. Write a program in python to find sum of the following series for n terms: 1 – 2/2! + 3/3! - - - - - n/n!
7. Write a program in python to calculate the sum and product of two compatible matrices.

Semester – V

16CAU512A INFORMATION SECURITY PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 2 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To provides an overview of Information Security and Assurance.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- Gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
- Understand key terms and concepts in cyber law, intellectual property and cyber crimes, trademarks and domain theft.
- To examine secure software development practices.
- To incorporate approaches for incident analysis and response.
- To incorporate approaches for risk management and best practices.

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. State the basic concepts in information security
2. Explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
3. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
4. The learner will gain an understanding of cryptography, how it has evolved, and some key encryption techniques used today.
5. The learner will develop an understanding of security policies (such as confidentiality, integrity, and availability), as well as protocols to implement such policies.
6. The learner will gain familiarity with prevalent network and distributed system attacks, defenses against them, and forensics to investigate the aftermath.

List of Programs:

1. Demonstrate the use of Network tools: ping, ipconfig, ifconfig, tracert, arp, netstat, whois
2. Use of Password cracking tools : John the Ripper, Ophcrack. Verify the trength of passwords using these tools.
3. Perform encryption and decryption of Caesar cipher. Write a script for performing these operations.
4. Perform encryption and decryption of a Rail fence cipher. Write a script for

performing these operations.

5. Use nmap/zenmap to analyse a remote machine.
6. Use Burp proxy to capture and modify the message.
7. Demonstrate sending of a protected word document.
8. Demonstrate sending of a digitally signed document.
9. Demonstrate sending of a protected worksheet.
10. Demonstrate use of steganography tools.
11. Demonstrate use of gpg utility for signing and encrypting purposes.

Semester – V

16CAU512B **DATA MINING PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

Enable the student

- To Understand Data Mining fundamentals and Characterize the kinds of patterns that can be discovered by association rule mining
- To Compare and evaluate different data mining techniques like classification, prediction.
- To Cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To Design data warehouse with dimensional modelling and apply OLAP operations.
- To program using available data mining tools and general-purpose languages.

Course Outcomes(COs)

Upon completion of this course the students will be able to:

1. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
2. Design and deploy appropriate classification techniques and decision trees.
3. Understand the concept of clustering and its real time applications
4. Explore recent trends in data mining such as web mining, spatial-temporal mining
5. Able to know the basic concepts of data warehouse and OLAP operations
6. Organize and Prepare the data needed for data mining using pre preprocessing techniques

List of Programs:

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). For test options, first choose "Use training set", then choose "Percentage Split" using default 66% percentage split. Report model percent error rate
2. Using iris dataset preprocess and classify it with J4.8 and Naïve Bayes Classifier. examine the tree in the Classifier output panel
3. Using the datasets *ReutersCorn-Train* and *ReutersGrain-Train*. Classify articles using binary attributes and word count attributes.
4. Apply any two association rule based algorithm for the supermarket analysis

5. Using weka Experimenter perform comparison analysis of J48, oneR and ID3 for vote dataset
6. Using Weka Experimenter perform comparison analysis of Naïve Bayes with different datasets
7. Apply ZeroR, OneR, and J48, to classify the Iris data in an experiment using 10 train and test runs, with 66% of the data used for training and 34% used for testing.
8. Using Weka Knowledge flow Sett up a flow to load an ARFF file (batch mode) and perform a cross-validation using J48 (WEKA's C4.5 implementation).

Semester – V

16CAU513A **MICROPROCESSOR PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To become familiar with the architecture and the instruction set of an Intel microprocessor
- To illustrate the architecture of 8085 and 8086 microprocessors.
- To introduce the programming and interfacing techniques of 8086 microprocessor.
- To analyse the basic concepts and programming of 8051 microcontroller
- To understand the interfacing circuits for various applications of 8051 microcontroller.
- To introduce the architecture of advanced microprocessors and microcontrollers.

Course Outcomes:

Upon the completion of the course, the student will able to:

1. Design and implement programs on 8086, ARM, PIC. CO2 Design I/O circuits.
2. The program prepares students to successfully compete for employment in Electronics, Manufacturing and Embedded fields.
3. Design Memory Interfacing circuits.
4. Design and implement 8051 microcontroller based systems.
5. Describe the architecture and instruction set of ARM microcontroller
6. Assembly language programming will be studied as well as the design of various types of digital and analog interfaces

Assembly Language Programming

1. Addition of 8/16 bit and array of Data

2. Subtraction of 8/16 bit and array of Data

3. Multiplication of 8-bit Number

4. Division of 8-bit Number Write a program for 32-bit binary division and multiplication

5. Fill and Transfer an Array of Data

6. Ascending and Descending of an array

7. Data Transfer using Parallel Ports

8. Stepper Motor Interface

9. Traffic Light Interface

10. A/D and D/A Converter

Semester – V

16CAU513B **PC HARDWARE & TROUBLE SHOOTING PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- to assemble/setup and upgrade personal computer systems
- perform installation, configuration,
- upgrading of hardware and software,
- install/connect associated peripherals
- diagnose in hardware and software and other peripheral equipment.
- Troubleshoot the problem

Course Outcomes:

Upon the completion of the course, the student will be able to

1. assemble/setup and upgrade personal computer systems
2. perform installation, configuration,
3. upgrading of hardware and software,
4. install/connect associated peripherals
5. diagnose in hardware and software and other peripheral equipment.
6. Troubleshoot the problem

List of Programs:

1. Identifying External Ports and Interfacing
2. Identifying PC cards and Interfacing.
3. Assembling of PC
4. Preventive Maintenance of a PC
5. Trouble Shooting of SMPS
6. Keyboard Servicing
7. Study of CRT
8. Communication and Bus Interfacing
9. Partitioning and Formatting Hard disks.
10. Installing System And Application Software

Semester – V

16CAU514A DIGITAL IMAGE PROCESSING PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To apply knowledge of mathematics, science, and engineering
- To design and conduct experiments, as well as to analyze and interpret data

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques

List of Programs:

1. Write program to read and display digital image using MATLAB or SCILAB
    a. Become familiar with SCILAB/MATLAB Basic commands
    b. Read and display image in SCILAB/MATLAB
    c. Resize given image
    d. Convert given color image into gray-scale image
    e. Convert given color/gray-scale image into black & white image
    f. Draw image profile
    g. Separate color image in three R G & B planes
    h. Create color image using R, G and B three separate planes
    i. Flow control and LOOP in SCILAB
    j. Write given 2-D data in image file
2. To write and execute image processing programs using point processing method
    a. Obtain Negative image b. Obtain Flip image
    b. Thresholding d. Contrast stretching
3. To write and execute programs for image arithmetic operations
    a. Addition of two images
    b. Subtract one image from other image
    c. Calculate mean value of image
    d. Different Brightness by changing mean value
4. To write and execute programs for image logical operations
    a. AND operation between two images

a. OR operation between two images
b. Calculate intersection of two images
c. Water Marking using EX-OR operation
d. NOT operation (Negative image)

5. To write a program for histogram calculation and equalization using
    a. Standard MATLAB function
    b. Program without using standard MATLAB functions
    c. C Program
6. To write and execute program for geometric transformation of image
    a. Translation
    b. Scaling
    c. Rotation
    d. Shrinking
    e. Zooming
7. To understand various image noise models and to write programs for
    a. image restoration
    b. Remove Salt and Pepper Noise
    c. Minimize Gaussian noise
    d. Median filter and Weiner filter
8. Write and execute programs to remove noise using spatial filters
    a. Understand 1-D and 2-D convolution process
    b. Use 3x3 Mask for low pass filter and high pass filter
    c. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.
9. Write and execute programs for image frequency domain filtering
    a. Apply FFT on given image
    b. Perform low pass and high pass filtering in frequency domain
    c. Apply IFFT to reconstruct image
10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask
11. Write and execute program for image morphological operations erosion and dilation.

Semester – V

16CAU514B OPEN SOURCE TECHNOLOGIES PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives:

Enable the student

- To introduce open source technology for development of web applications.
- For Study the problems with traditional commercial software.
- To understand open source scripting language for programming in web environment i.e. PHP.
- To study the open source management system and connection with database.
- To learn open source web server, software tools.
- To learn the open source ideals in order to apply those principles

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Leaned the need of open source technology, open source development model, application of open sources, aspects of open source movement
2. The students will be aware about the problems with traditional commercial software.
3. The student will be familiar with basis syntax of PHP, common PHP scripts elements.
4. The student will be familiar with creating of the server side scripting using PHP, implement PHP database connectivity, perform operation on database and open source database management system.
5. The students will be familiar with Working of different web Servers.
6. The students will be aware about the software tool and process like Eclipse IDE, Selenium ID

16CAU514B OPEN SOURCE TECHNOLOGIES PRACTICAL 4H – 2C

List of Programs:

1. Create ―Hello World application. That will display ―Hello World in the middle of the screen in the emulator. Also display ―Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder and on changing the spinner value, Image will change.
4. Create a menu with 5 options and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

		Semester – VI
16CAU601A	**PHP PROGRAMMING**	**3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn array data structure using PHP scripts.
- To Create conditional structures

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create PHP scripts using array.
6. Analyze and solve various database tasks using the PHP language.

Unit-I

Introduction to PHP: PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.) -PHP with other technologies, scope of PHP -Basic Syntax, PHP variables and constants -Types of data in PHP , Expressions, scopes of a variable (local, global)-PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwise , ternary and MOD operator-PHP operator Precedence and associativity

UNIT-II

Handling HTML form with PHP: Capturing Form Data-GET and POST form methods-Dealing with multi value fields Redirecting a form after submission -**PHP conditional events and Loops:** PHP IF Else conditional statements (Nested IF and Else) -Switch case, while ,For and Do While Loop -Goto , Break ,Continue and exit

UNIT-III

PHP Functions: Function, Need of Function , declaration and calling of a function -PHP Function with arguments, Default Arguments in Function -Function argument with call by value, call by reference -Scope of Function Global and Local

UNIT-IV

String Manipulation and Regular Expression: Creating and accessing String, Searching & Replacing String -Formatting, joining and splitting String , String Related Library functions-Use and advantage of regular expression over inbuilt function -Use of preg_match(), preg_replace(), preg_split()-functions in regular expression

UNIT-V

Array: Anatomy of an Array ,Creating index based and Associative array ,Accessing array-Looping with Index based array, with associative array using each() and foreach()-Some useful Library function

Suggested Readings

1. David Sklar, Adam Trachtenberg, (2014). *PHP Cookbook: Solutions & Examples for PHP*.
2. Luke Welling, Laura Thompson,(2008). *PHP and MySQL Web Development*, (4th ed.), Addition Paperback, Addison-Wesley Professsional.
3. Robin Nixon,(2014). *Learning PHP, MySQL, JavaScript, CSS & HTML5, (3rd ed.) Paperback*, O'reilly.
4. Steven Holzner, (2007). *PHP: The Complete Reference Paperback*, McGraw Hill Education (India), 2007.
5. Timothy Boronczyk, Martin E. Psinas, (2008). *PHP and MYSQL (Create-Modify-Reuse)*, Wiley India Private Limited.

16CAU601B	UNIX / LINUX PROGRAMMING	Semester – VI 3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student to

- Understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- Understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- Understand how the operating system abstractions can be implemented
- Understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- Understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented. These also include issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.
- provide introduction to UNIX Operating System and its File System
- gain an understanding of important aspects related to the SHELL and the process
- develop the ability to formulate regular expressions and use them for pattern matching.

Course Outcome

Upon completion of this course, students will be able to:

1. Describe the architecture and features of UNIX Operating System and distinguish it from other Operating System
2. Demonstrate UNIX commands for file handling and process control
3. Write Regular expressions for pattern matching and apply them to various filters for a specific task
4. Analyze a given problem and apply requisite facets of SHELL programming in order to devise a SHELL script to solve the problem
5. Implement various file processing commands used in UNIX.
6. Construct various shell scripts for simple applications.

Unit-I

Introduction What is Linux/Unix Operating systems, Difference between linux/unix and other operating systems , Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process

Unit-II

System processes (an overview), External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

Unit-III

User Management and the File System Types of Users, Creating users, Granting rights User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

Unit-IV

Shell introduction and Shell Scripting What is shell and various type of shell, Various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script , Shell variable (user defined and system variables)

Unit-V

System calls, Using system calls Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell, Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

Suggested Readings

1. Michael Jang, (2011). *RHCSA/ RHCE Red Hat Linux Certification: Exams (Ex200 & Ex300)* ,Certification Press.
2. Nemeth Synder & Hein,(2010). *Linux Administration Handbook*, (2nd ed.) Pearson Education
3. Richard Stevens,W., Bill Fenner, Andrew M. Rudoff, (2014). *Unix Network Programming, The sockets Networking*, Vol. 1, 3rd ed.) API.
4. Sumitabha, Das, (2006). *Unix Concepts And Applications*, Tata McGraw-Hill Education.

Semester – VI

16CAU602A **CLOUD COMPUTING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int: **40** Ext: **60** Total: **100**

Course Objectives

Enable the student to

- Basics of cloud computing.
- Key concepts of virtualization.
- Different Cloud Computing services
- Cloud Implementation, Programming and Mobile cloud computing
- Key components of Amazon Web Services
- Cloud Backup and solution

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Define Cloud Computing and memorize the different Cloud service and deployment models
2. Describe importance of virtualization along with their technologies.
3. Use and Examine different cloud computing services
4. Analyze the components of open stack & Google Cloud platform and understand Mobile Cloud Computing
5. Describe the key components of Amazon web Service
6. Design & develop backup strategies for cloud data based on features

Unit-I

Overview of Computing Paradigm: Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing. **Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

Unit-II

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

Unit-III

Case Studies: Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2 , Eucalyptus.

Unit-IV

Service Management in Cloud Computing: Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

Unit-V

Cloud Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

Suggested Readings

1. Barrie Sosinsky,(2010). *Cloud Computing Bible*,Wiley-India.
2. Dimitris N. Chorafas,(2010). Cloud Computing Strategies ,CRC Press.

16CAU602B **DATABASE ADMINISTRATION** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student to

- Installing Oracle Software
- Creating an Oracle Database Using DBCA
- Managing Database instances and ASM instances
- Managing and controlling database network environment
- Define and devise transaction management, concurrency control, crash recovery components
- Managing storage structures

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Design, model and install any database management systems by using Oracle database as sample.
2. Plan, design, construct, control and manage database instances, database network environment, storage structures, user security, database backup and recovery, database maintenance
3. Define and devise transaction management, concurrency control, crash recovery components
4. Examine and perform data base administration roles and operations by using Oracle database system as a sample
5. Compare and contrast by examining the database systems and new trends in data storage, data retrieval and maintenance techniques.
6. Configure, manage and maintain database, to audit and improve database performances and to use tools for database administration.

Unit I

Oracle DBA's: The Oracle DBA's Role- Oracle Database 11g Architecture: Oracle Databases and instances- Oracle Logical Storage structures – Oracle Logical Database structures – Oracle Physical Storage structures- Multiplexing Database Files - Oracle Memory Structures-Oracle Backup and Recovery – Security Capabilities – Tablespace Architecture – Oracle Tablespace installation – Traditional Disk Space Storage – Automatic Storage Management

Unit II

Common Space Management Problems – Oracle Segments, Extents and Blocks – Space Management Methodologies – SYSAUX monitoring and usage – Archived Redo Log

File Management – Built in Space Management Tools: Segment Advisor – Undo Advisor and the Automatic Workload Repository – Index usage – Space Usage Warning Levels – Reusable space allocation – Managing alert and Trace Files with ADR – Transaction Basics – Undo Basics – Managing Undo Tablespaces – Flashback features

Unit III

Tuning Application Design – Tuning SQL – Tuning Memory Usage – Tuning Data Access – Tuning Data Manipulation – Tuning Physical Storage – Reducing Network Security – Database Authentication Methods

Unit IV

Database Authorization Methods – Auditing: Auditing Locations – Statement Auditing – Privilege Auditing Schema Object Auditing – Auditing Related Data Dictionary Views – Logical Backups – Physical Backups – Using Data Pump Export and Import – Data Pump Import Options – Integration of Backup Procedures
Overview of Oracle Net – Using the Oracle Net Configuration Assistant – Using the Oracle Net Manager – Starting the Listener Server Process – Controlling the Listener Server Process Using Data links

Unit-V

Creating Tablespaces in a VLDB Environment: Bigfile Tablespace Basics – Creating and Modifying Bigfile Tablespace – Bigfile Tablespace ROWID format – DBMS_ROWID and Bigfile Tablespaces.- Advanced Oracle Table Types – Using Bitmap Indexes – Oracle Data Pump
Remote queries – Remote Data Manipulation: Two Phase Commit – Managing Distributed Data – Managing Distributed Transactions – Monitoring and Tuning Distributed Database

Suggested Readings

16CAU603A **BIG DATA ANALYTICS** **4H- 4C**

Instruction Hours / week: L: 4T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3Hours

Course Objectives

Enable the student

- To know the fundamental concepts of big data and analytics.
- To explore tools and practices for working with big data
- To learn about stream computing.
- To know about the research that requires the integration of large amounts of data.
- To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Work with big data tools and its analysis techniques
2. Analyze data by utilizing clustering and classification algorithms
3. Learn and apply different mining algorithms and recommendation systems for large volumes of data
4. Perform analytics on data streams
5. Learn NoSQL databases and management.
6. Understand the key issues in big data management and its associated applications in intelligent business and scientific computing

Unit-I

Fundamentals of Big Data - The Evolution of Data Management Understanding the Waves of Managing Data- Defining Big Data - Big Data Management Architecture- The Big Data Journey -Big Data Types-Defining Structured Data-Defining Unstructured Data-Putting Big Data Together.

Unit-II

Big Data Stack- Basics of Virtualization - The importance of virtualization to big data - Server virtualization - Application virtualization - Network virtualization -Processor and memory virtualization - Data and storage virtualization-Abstraction and Virtualization-Implementing Virtualization to Work with Big Data.

Unit-III
Hadoop - Hadoop Distributed File System - Hadoop MapReduce- The Hadoop foundation and Ecosystem.

Unit-IV
Big Data Analytics-Text Analytics and Big Data-Customized Approaches for Analysis of Big Data

Unit-V
Integrating Data Sources-Real-Time Data Streams and Complex Event Processing-Operationalizing Big Data.

Semester – VI

16CAU603B **SYSTEM PROGRAMMING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- Describe the utility of different system programs & system tools.
- Familiarize with the tradeoffs between run-time and compile-time processing (Linking & Loading techniques).
- Explore the use of compiler with its phases.
- Use of Syntax directed scheme for intermediate code generation.
- Construct & use of different compiler tools as LeX, Yacc for code generation & optimization.

Course Outcomes

Upon completion of this course, students will be able to:

1. Organize the functionalities & components of system software & tools into different layers for efficient code generation.
2. Apply the knowledge & technique to develop solutions to real world problems by compiling application programs.
3. ability to identify, formulate, and solve computer engineering problems with proper systematic & semantic approach.
4. Develop possible program constructs for further code generation with Type checking & memory management strategy
5. Design a simple compiler with tools & different with optimized techniques
6. Design and implement system utility programs.

Unit-I

Assemblers & Loaders, Linkers: One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

Unit-II

Lexical Analysis: Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

Unit-III

Parsing: Bottom up parsing- LR parser, yacc. **Intermediate representations: Three** address code generation, syntax directed translation, translation of types, control Statements.

UNIT-IV

Storage organization: Activation records stack allocation.

UNIT-V

Code Generation: Object code generation

Suggested Readings

1. Santanu Chattopadhyaya,(2011). Systems Programming, PHI.
2. Alfred V. Aho, Monica S. Lam, Ravi Sethi, Jeffrey D. Ullman, (2006). Compilers: Principles, Techniques, and Tools, Second edition, Prentice Hall.
3. Dhamdhere, D. M.,(2011). Systems Programming, Tata McGraw Hill.
4. Leland Beck, D.Manjula, (2008). System Software: An Introduction to System Programming, Third edition, Pearson Education.
5. Grune D, Van Reeuwijk . K, Bal H. E, Jacobs C J H, Langendoen K, (2012). Modern Compiler Design, Second edition, Springer.

Semester – VI

16CAU611A PHP PROGRAMMING PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives
Enable the student

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn array data structure using PHP scripts.
- To Create conditional structures

Course Outcomes (COs)
Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create PHP scripts using array.
6. Analyze and solve various database tasks using the PHP language.

List of Programs:

1. Create a PHP page using functions for comparing three integers and print the largest number.
2. Write a function to calculate the factorial of a number (non-negative integer). The function accept the number as an argument.
3. Write a simple PHP program to check whether the given number is prime or not.
4. Create a PHP page which accepts string from user. After submission that page displays the reverse of provided string.
5. Write a PHP function that checks if a string is all lower case.
6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)
7. WAP to sort an array.
8. Write a PHP script that removes the whitespaces from a string.

Sample string : 'The quick " " brown fox' Expected Output : Thequick""brownfox

9. Write a PHP script that finds out the sum of first n odd numbers.
10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.
11. Write a PHP script that checks if a string contains another string.
12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.
13. Create a script to construct the following pattern, using nested for loop.

```
*
* *
* * *
* * * *
* * * * *
```

14. Write a simple PHP program to check that emails are valid.
15. Write a simple PHP program to print first n even numbers.
16. $color = array('white', 'green', 'red")

    Write a PHP script which will display the colors in the following way : Output :

    white, green, red,
17. Using switch case and dropdown list display a ―Hello‖ message depending on the language selected in drop down list.
18. Write a PHP program to print FibonaCSUi series using recursion.
19. Write a PHP script to replace the first 'the' of the following string with 'That'.

Sample : 'the quick brown fox jumps over the lazy dog.'

Expected Result : That quick brown fox jumps over the lazy dog.

Semester – VI

16CAU611B UNIX / LINUX PROGRAMMING PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student to

- Understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- Understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- Understand how the operating system abstractions can be implemented
- Understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- Understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented. These also include issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.
- provide introduction to UNIX Operating System and its File System
- gain an understanding of important aspects related to the SHELL and the process
- develop the ability to formulate regular expressions and use them for pattern matching.

Course Outcome

Upon completion of this course, students will be able to:

1. Describe the architecture and features of UNIX Operating System and distinguish it from other Operating System
2. Demonstrate UNIX commands for file handling and process control
3. Write Regular expressions for pattern matching and apply them to various filters for a specific task
4. Analyze a given problem and apply requisite facets of SHELL programming in order to devise a SHELL script to solve the problem
5. Implement various file processing commands used in UNIX.
6. Construct various shell scripts for simple applications.

List of Programs:

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify ―call command to display calendars of the specified months.
3. Write a shell script to modify ―call command to display calendars of the specified range of months.

4. Write a shell script to accept a login name. If not a valid login name display message –
   ―Entered login name is invalid.
5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of ―who command along
   with the total number of users .
7. Write a shell script to display the multiplication table any number,
8. Write a shell script to compare two files and if found equal asks the user to delete the
   duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then
    display them page by page.
11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.
13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient C(n , x).
15. Write a shell script to find the permutation P(n,x).
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

16CAU612A	**CLOUD COMPUTING PRACTICAL**	**Semester – VI** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student to

- Basics of cloud computing.
- Key concepts of virtualization.
- Different Cloud Computing services
- Cloud Implementation, Programming and Mobile cloud computing
- Key components of Amazon Web Services
- Cloud Backup and solution

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Define Cloud Computing and memorize the different Cloud service and deployment models
2. Describe importance of virtualization along with their technologies.
3. Use and Examine different cloud computing services
4. Analyze the components of open stack & Google Cloud platform and understand Mobile Cloud Computing
5. Describe the key components of Amazon web Service
6. Design & develop backup strategies for cloud data based on features

List of Programs:

1. Create virtual machines that aCSUess different programs on same platform.

2. Create virtual machines that aCSUess different programs on different platforms.

3. Working on tools used in cloud computing online-

    a) Storage

    b) Sharing of data

    c) Manage your calendar, to-do lists,

    d) A document editing tool

4. Exploring Google cloud

5. Exploring Microsoft cloud

6. Exploring Amazon cloud

SEMESTER-VI

16CAU612B DATABASEADMINISTRATIONPRACTICAL 4H-2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

Enable the student to

- Installing Oracle Software
- Creating an Oracle Database Using DBCA
- Managing Database instances and ASM instances
- Managing and controlling database network environment
- Define and devise transaction management, concurrency control, crash recovery components
- Managing storage structures
- Controlling user security
- Designing Database backup and recovery procedures
- Take Decisions related with Database Maintenance

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Design, model and install any database management systems by using Oracle database as sample.
2. Plan, design, construct, control and manage database instances, database network environment, storage structures, user security, database backup and recovery, database maintenance
3. Define and devise transaction management, concurrency control, crash recovery components
4. Examine and perform data base administration roles and operations by using Oracle database system as a sample
5. Compare and contrast by examining the database systems and new trends in data storage, data retrieval and maintenance techniques.
6. Configure, manage and maintain database, to audit and improve database performances and to use tools for database administration.

List of Programs:

1. Demo for Globalization Support
2. Setup Listener Security
3. Configuring Recovery Manager
4. Write a program Using Recovery Manager
5. Write a program for Managing Diagnostic Sources
6. Implement Database Recovery

16CAU612B DATABASEADMINISTRATIONPRACTICAL 4H-2C

7. Demo for Flashback Database
8. Implement User Error Recovery
9. Write a program for Dealing with Corruption
10. Show the demo for Automated Management
11. Creating a database and do the manipulation.
12. Managing index tables

Semester – VI

16CAU613A BIG DATA ANALYTIC PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

Enable the student

- To know the fundamental concepts of big data and analytics.
- To explore tools and practices for working with big data
- To learn about stream computing.
- To know about the research that requires the integration of large amounts of data.
- To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Work with big data tools and its analysis techniques
2. Analyze data by utilizing clustering and classification algorithms
3. Learn and apply different mining algorithms and recommendation systems for large volumes of data
4. Perform analytics on data streams
5. Learn NoSQL databases and management.
6. Understand the key issues in big data management and its associated applications in intelligent business and scientific computing

List of Programs:

1. Implement a quicksort using scala.
2. Implement a auction service using scala.
3. Write a scala function to perform any 10 arithmetic operations.
4. Write a program to find the factorial of a given number using recursion.
5. Write a program for string manipulations.
6. Write a program for alphabetic order arrangement of a set of names.
7. Write a program for student records using scala list.
8. Implement any 5 map methods for maintaining customer details.
9. Implement employee records using Files
10. Write a program to copy the files using command line arguments.

Semester – VI

16CAU613B SYSTEM PROGRAMMING PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- Describe the utility of different system programs & system tools.
- Familiarize with the tradeoffs between run-time and compile-time processing (Linking & Loading techniques).
- Explore the use of compiler with its phases.
- Use of Syntax directed scheme for intermediate code generation.
- Construct & use of different compiler tools as LeX, Yacc for code generation & optimization.

Course Outcome

Upon completion of this course, students will be able to:

1. Organize the functionalities & components of system software & tools into different layers for efficient code generation.
2. Apply the knowledge & technique to develop solutions to real world problems by compiling application programs.
3. ability to identify, formulate, and solve computer engineering problems with proper systematic & semantic approach.
4. Develop possible program constructs for further code generation with Type checking & memory management strategy
5. Design a simple compiler with tools & different with optimized techniques
6. Design and implement system utility programs.

List of Programs:

1. To implement an assembler for a hypothetical language.
2. To get familiar with lex: write a program to recognize numbers, identifiers.
3. To get familiar with yaCSU: write a desk calculator.

Semester-I

16CAP101 **INFORMATION TECHNOLOGY** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To familiarize the students with PC, MS DOS and MS WINDOWS commands such as file creation, editing and directory creation.
- To learn the usage of MS office: MS WORD, use of database and spread sheet, slide creation with PowerPoint.
- To understand about information integrity and security
- To use of a visual programming language such as Visual Basic for various applications.
- To understand the role of hardware components
- To know about client server technology

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Understand the meaning and basic components of a computer system.
2. Define and distinguish Hardware and Software components of computer system.
3. Identify different computing machines during the evolution of computer system.
4. Gain knowledge about five generations of computer system.
5. Identify and discuss the functional units of a computer system.
6. Gain the knowledge on Network security

UNIT I - INFORMATION CONCEPTS AND PROCESSING

Evolution of information processing, data information language and communication.Elements of a computer processing system: Hardware - CPU, storage devices and media, VDU, input-output devices, data communication equipment Software- system software, application software.

UNIT II - PROGRAMMING LANGUAGES

Classification, machine code, assembly language, higher level languages, fourth generation languages. Operating systems: Concept as resource manager and coordinator of processor, devices and memory. Concept of priorities, protection and parallelism. Command interpreter, Typical commands of DOS/ UNIX/Network, GUI- Windows.

UNIT III - COMPUTERS AND COMMUNICATION

Single user, multi-user, work station, client server systems, Computer networks, network protocols, LAN, WAN, Internet facilities through WWW, Mosaic, Gopher, html, elements of Java.

UNIT IV - SECURITY

Information integrity definition, ensuring integrity, Computer security: Perverse software, concepts and components of security, Preventive measures and treatment.

UNIT V - RANGE OF APPLICATION

Scientific, business, educational, industrial, national level weather forecasting, remote sensing, planning, multilingual applications.

SUGGESTED READINGS

1. Rajaraman V. (1996). Fundamental of Computers, 2nd edition, Prentice Hall of India, New Delhi.
2. Sanders, D.H. (1998) .Computers Today, McGraw Hill. India.
3. Trainer T., et al. (1994).Computers, 4th edition, McGraw Hill.
4. V. Rajaraman, Neeharika Adabala. (2014).Fundamentals of Computers, 6th edition, Prentice Hall of India, New Delhi.

Semester-I

16CAP102 **C PROGRAMMING AND DATA STRUCTURES** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3Hours

COURSE OBJECTIVE

Enable the student

- To understand the concept of programming (i.e., computer following a series of instructions)
- To exercise various features of C programs (looping, branching, pointers and structures)
- To write well-structured modular and readable programs with good documentation.
- To understand the concept of a program in a high-level language being translated by a compiler into machine language program and then executed.
- To know about various data structures such as stacks, Queues, linked lists and trees
- To know about pointers and arrays

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Can learn the fundamentals of C programming.
2. Choose the loops and decision making statements to solve the problem.
3. Implement different Operations on arrays.
4. Understand pointers, structures and unions.
5. Implement file Operations in C programming for a given application.
6. Implement the program using pointers and arrays

UNIT I - INTRODUCTION

Introduction to algorithms, Flow charts, Tracing flow charts, Problem solving methods, Need for computer languages, Reading programs written in C language, C character set, Identifiers and keywords, Data types, Declarations, Expressions, statements and symbolic constants, Input-Output: getchar, putchar, scanf, printf, gets, puts, functions, Pre-processor command: # include, define, ifdef. Preparing and running a complete C program.

UNIT II - OPERATORS AND EXPRESSIONS

Arithmetic, unary, logical, bit-wise, assignment and conditional operators, Library functions, Control statements: while, do-while, for statements, nested loops. Ifelse, switch, break, continue and goto statements, comma operator.

UNIT III - FUNCTIONS

Defining and accessing: passing arguments, Function prototypes, Recursion, Use of library functions, Storage classes: automatic, external and static variables, Arrays: Defining and processing, Passing to a function, Multi dimensional arrays. Strings, operations on strings.

UNIT IV - POINTERS

Declarations. Passing to a function. Operations on pointers. Pointers and arrays. Arrays of pointers. Structures: Defining and processing. Passing to a function. Unions. Data files: Open, close, create, process. Unformatted data files.

UNIT V- DATA STRUCTURES

Data Structures: Stacks, queues, lists, trees and their application

SUGGESTED READINGS

1. Hutchison, R. (1990). Programming in C. McGraw Hill, New York.
2. Johnson Baugh. R and Kalin. M (1989). Applications Programming in C, Prentice Hall of India.
3. Rajaraman.V. (1995).Computer Programming in C, Prentice Hall of India, New Delhi.
4. Nanjesh Bennur. (2016). Programming in C and Data Structures , Second edition IPH, India.

SEMESTER-I

16CAP103 COMPUTER ORGANIZATION AND ARCHITECTURE 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To understand the architecture of the basic functional units of the computer such as the input output system, memory systems and secondary storage systems.
- To acquire basic understanding about the hardware and software interaction.
- To acquire knowledge about the Instruction Set used
- To know how the benchmarks that help in evaluating the performance of computer systems.
- To acquire knowledge about the Addressing modes used
- To know about I/O interruption

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Design digital circuits by simplifying the Boolean functions
2. Understand the organization and working principle of computer hardware components
3. Understand mapping between virtual and physical memory
4. Acquire knowledge about multiprocessor organization and parallel processing
5. Trace the execution sequence of an instruction through the processor
6. Understand the data transfer techniques

UNIT I - INTRODUCTION

Principles of Computer design - Software, hardware interaction layers in computer architecture. Central processing unit. Machine language instructions, Addressing modes, instruction types, Instruction set selection, Instruction cycle and execution cycle.

UNIT II - CONTROL UNIT

Control unit, Data path and control path design, Microprogramming Vs hardwired control, RISC Vs CISC, Pipelining in CPU design: Superscalar processors.

UNIT III – MEMORY SYSTEM

Memory system, Storage technologies, Memory array organization, Memory hierarchy, interleaving, cache and virtual memories and architectural aids to implement these.

UNIT IV – I/O DEVICES

Input-output devices and characteristics. Input-output processing, bus interface, data transfer techniques, I/O interrupts, channels.

UNIT V - PERFORMANCE EVALUATION

Performance evaluation - SPEC marks Transaction Processing benchmarks.

SUGGESTED READINGS

1. Mano. M (1994). Computer System and Architecture, 3rd edition, Prentice Hall of India, New Delhi.
2. Pal Chauduri, P. (1994). Computer Organisation and Design, Prentice Hall of India, New Delhi.
3. Rajaraman,V. and Radhakrishnan. T. (1997). Introduction to Digital Computer Design , 4th edition, Prentice Hall of India, New Delhi.
4. Stallings. W. (1999). Computer Organization and Architecture, 2nd edition, Prentice Hall of India, New Delhi.
5. William Stallings.(2016).Computer Organization and Architecture : Designing for Performance, 10th Edition, PEARSON.

SEMESTER-I

16CAP104 **MATHEMATICAL FOUNDATIONS** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3Hours

.

COURSE OBJECTIVES

Enable the student

- To understanding the basics of mathematical logics
- Know about the Predicate and relational calculus
- To enhance the knowledge about the algebraic structures
- To make the fundamental idea of applying Graph theory for data representation on computers
- To apply the acquired knowledge of problem solving in Computers
- To understand the storage representation and manipulation of graphs

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Acquire the basic knowledge of matrix, set theory, functions and relations concepts needed for designing and solving problems
2. Acquire the knowledge of logical operations and predicate calculus needed for computing skill
3. Able to design and solve Boolean functions for defined problems
4. Apply the acquired knowledge of formal languages to the engineering areas like Compiler Design
5. Apply the acquired knowledge of finite automata theory
6. Design discrete problems to solve by computers.

UNIT I - MATHEMATICAL LOGIC

Mathematical logic: Notation, Connectives Normal forms, Theory of inference for statement calculus.

UNIT II - PREDICATE CALCULUS

Predicate calculus, Inference theory of the predicate calculus, Relations and ordering, Functions, Recursion.

UNIT III - ALGEBRAIC STRUCTURES

Algebraic Structures: Groups, Application of residue arithmetic to computers, Group codes.

UNIT IV - GRAPH THEORY

Graph theory: Definition, Paths, reachability, connectedness- Matrix representation of graphs-Trees.

UNIT V - STORAGE REPRESENTATION

Storage representation and manipulation of graphs: Trees- List structures and graphs-Pert and related techniques.

SUGGESTED READINGS

1. Kolman, B., and Busby. R. (1987). Discrete Mathematical Structures for ComJ;luter Science , Prentice Hall.
2. Sahni, S. (1981). Concepts in Discrete Mathematics. Camelot Publisher. U.S.A.
3. Tremblay, J.P., el. al. (1987). Discrete Mathematical Structures with Applications to Computer Science, McGraw Hill.
4. Gerard O'Regan. (2016). Guide to Discrete Mathematics: An Accessible Introduction to the History, Theory, Logic and Applications 1st Edition, Springer.

SEMESTER-I

16CAP105 INTRODUCTION TO MANAGEMENT FUNCTIONS 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To know about the Selection training and appraisal of Human Resource.
- To learn about various Marketing strategies.
- To understand financial management and analysis.
- To apply their knowledge in Manufacturing and Strategic management.
- To understand the implementation of business strategy for running the business firms successfully.
- To apply their knowledge in Strategic management.

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Develop a responsible attitude towards the use of computer as well as the technology.
2. Able to envision the societal impact on the products/ projects they develop in their career
3. Understanding the code of ethics and standards of computer professionals.
4. Analyze the professional responsibility and empowering access to information in the work place.
5. Assess the quality of organization
6. Implement marketing plans for running the companies to make profit

UNIT I - HRD

HRD: selection, appraisal, training and information systems.

UNIT II - MARKETING

Understand the concept of marketing mix. These marketing mix elements consist of product policy and design, pricing, choice of marketing intermediaries, methods of physical distribution, use of personal selling, advertising and sales promotion, marketing research, and marketing organization.

UNIT III - FINANCE

Finance function (concept, scope, and its relationship with other functions) : tools of financial analysis (funds and cash flow analysis, ratio, analysis, risk-return trade-of): financial forecasting (profonna income statement and balance sheet, cash flow forecasting under uncertainty, financial planning): estimation and management of working capital (operating cycle concept, inventory, accounts receivables, cash and accounts payables, working capital requirements).

UNIT IV - MANUFACTURING

Operations Planning and Control (aggregate planning, multiple product batch, production cycles, short term scheduling of job shop, setting production rate in continuous production systems, activity scheduling in projects, introduction to project time calculations through PERT/CPM): Management of supply chain, materials management (introduction to materials management, systems and procedures for inventory management planning, and procurement of materials): quality management (quality concept and planning. standardizations, quality circles).

UNIT V - STRATEGY

Firm and its Environment: strategies and resources; industry structure and analysis; evaluation of corporate strategy; strategies for growth and diversification; process of strategic planning.

SUGGESTED READINGS

1. Agarwal, R.D. (1986). Organization and Management, Tata McGraw Hill, New Delhi.
2. Massie. (1996). Essentials of Management. 4th edition, Prentice Hall of India.
3. Stephen P. Robbins. (2016).Organizational Behavior, Sixteenth edition, Pearson Education

SEMESTER-I

16CAP111 INFORMATION TECHNOLOGY - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To familiarize the students with PC, MS DOS and MS WINDOWS commands such as file creation, editing and directory creation.
- To learn the usage of MS office: MS WORD, use of database and spread sheet, slide creation with PowerPoint.
- To understand about information integrity and security
- To use of a visual programming language such as Visual Basic for various applications.
- To understand the role of hardware components
- To know about client server technology

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Understand the meaning and basic components of a computer system.
2. Define and distinguish Hardware and Software components of computer system.
3. Identify different computing machines during the evolution of computer system.
4. Gain knowledge about five generations of computer system.
5. Identify and discuss the functional units of a computer system.
6. Gain the knowledge on Network security

List of Practicals

1. MS DOS Commands – create file, copy, move, and rename files
2. Design a Word document containing an advertisement/ notification column
3. Create a table in word to show student marks and calculate the total and average using formulas
4. Create a word document to show Mail merge
5. Illustrate the use of Review Tools to track changes made in a document
6. Create an Excel sheet illustrate sorting and filtering of data
7. Create MS-Excel sheets showing conditional formatting
8. Create an Excel applications to demonstrate Chart tools
9. Demonstrate Data validation with an example

10. Create a Power point Presentations for your profile

11. Create a Power point Presentations for an Advertisement with Animations
12. Write a Visual Basic program to perform arithmetic operations
13. Write a Visual Basic program to design and code the user Registration form

SUGGESTED READINGS

1. Rajaraman V. (1996). Fundamental of Computers, 2^{nd} edition, Prentice Hall of India, New Delhi.
2. Sanders, D.H. (1998) .Computers Today, McGraw Hill. India.
3. Trainer T., et al. (1994).Computers, 4^{th} edition, McGraw Hill.
4. V. Rajaraman, Neeharika Adabala. (2014).Fundamentals of Computers, 6^{th} edition, Prentice Hall of India, New Delhi.

SEMESTER-I

16CAP112 **PROGRAMMING IN C - PRACTICAL** **5H - 2C**

Instruction Hours / week: L: 0 T: 0 P: 5 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVE

Enable the student

- To understand the concept of programming (i.e., computer following a series of instructions)
- To exercise various features of C programs (looping, branching, pointers and structures)
- To write well-structured modular and readable programs with good documentation.
- To understand the concept of a program in a high-level language being translated by a compiler into machine language program and then executed.
- To know about various data structures such as stacks, Queues, linked lists and trees
- To know about pointers and arrays

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Can learn the fundamentals of C programming.
2. Choose the loops and decision making statements to solve the problem.
3. Implement different Operations on arrays.
4. Understand pointers, structures and unions.
5. Implement file Operations in C programming for a given application.
6. Implement the program using pointers and arrays

List of Practical

1. SIN and COS Series
2. Array Operations (Insert, Delete and Display)
3. Bubble Sorting.
4. Stack
5. Queue.
6. Implement String functions
7. Pointers and Arrays, Pointers and function
8. Recursive function
9. Dynamic Memory Allocation
10. Matrix Operations (Addition, Subtraction and Multiplication)

11. Linked List Operations.
12. Mark sheet preparation using array of structures
13. Electricity Bill Preparation using Files (Use structures)
14. Implement TWO Dos commands using Command line arguments
15. Design an application using VRAM
16. Display a message every 5 minutes using TSR programming

SUGGESTED READINGS

1. Hutchison, R. (1990). Programming in C. McGraw Hill, New York.
2. Johnson Baugh. R and Kalin. M (1989). Applications Programming in C, Prentice Hall of India.
3. Rajaraman.V. (1995).Computer Programming in C, Prentice Hall of India, New Delhi.
4. Nanjesh Bennur. (2016). Programming in C and Data Structures , Second edition IPH, India.

SEMESTER-I

16CAP113 **TALLY - PRACTICAL** **4H - 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- Designed to impart knowledge regarding concepts of Financial Accounting
- Tally is an accounting package which is used for learning to maintain accounts.
- Useful for students to get placements in different offices as well as companies in Accounts departments.
- To gain the hands-on experience on creating the balance sheets
- To understand the management of accounts in any organization
- To apply their knowledge in Strategic management.

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. To maintain accounts with and without inventory.
2. To help in maintaining accounts in the different languages that are supported by Tally.
3. To understand the Point of Sale and Payroll features of Tally.
4. To implement the account ledgering process of any organization
5. To gain the knowledge of the maintenance of account vouchers in an organization
6. To assess the flow management

List of Practical

1. Create a new company in integrate accounts mode and account with inventory mode
2. Create a primary and sub groups using single or multiple ledger mode
3. Create minimum 10 ledgers using single or multiple ledger, and alter and delete any 2 ledger
4. Create a new company, ledger and record minimum 10 transactions without adjustment
5. Create a new company, ledger and record minimum 10 transactions with any five adjustments and display the relevant results

6. Enter the following voucher
    - Payment vouchers
    - Receipt
    - Purchase
    - Sales
    - Credit note
    - Debit note
    - Journals
    - Memo
    - Optional
7. Prepare trail balance for the company
8. Prepare profit & loss a/c and balance sheet

SUGGESTED READINGS

1. Shraddha Singh,Navneet Mehra. (2014).Tally ERP 9, Latest Revised Edition edition , V&S Publishers

SEMESTER-II

16CAP201 OBJECT-ORIENTED PROGRAMMING WITH C++ 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To understand the Object Oriented Programming concepts and techniques
- To understand the fundamentals of programming in C++
- To understand and utilize the concepts of procedural abstraction, data abstraction and encapsulation, polymorphism and inheritance with respect to C++ programming language
- To apply their programming knowledge for real time software development
- To apply the extensible Class types, User-defined operators and function Overloading in C++
- To know about preprocessor in C++

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Understand and design the solution to a problem using object-oriented programming concepts.
2. Use proper class protection mechanism to provide security.
3. Demonstrate the use of virtual functions to implement polymorphism.
4. Understand and implement the features of C++ including templates, exceptions and file handling
5. Solve complex problems in Object oriented programming
6. Use preprocessor in the object oriented programming

UNIT I - Introduction to Computers and C++ Programming:

Introduction to Computers and C++ Programming: Computer Organization – History of C and C++ - C++ standard Library – Arithmetic- Decision making: Equality and Relational Operators. Control Structures: Pseudocode- if, if/else selection structures – while, for, do while repetition structure- Assignment, Increment, Decrement operators – switch Multiple selection structure – break and continue statements – Logical, Equality, Assignment operators.

Functions: Function Definitions, Prototypes – Storage classes- Recursion- Functions with Empty Parameter Lists – Inline functions- SUGGESTED READINGS and Reference Parameters – Default Arguments – Unary Scope Resolution Operator- Function overloading – Function Templates.

UNIT II – Arrays, Pointers and Strings and Classes and Data Abstraction

Arrays: Declaring Arrays – Passing Arrays to Functions – Sorting Arrays – Linear Search and Binary Search.

Pointers and Strings **:** Pointer variable declaration and initialization- Pointer Operators- Calling functions by reference –Pointer expression and Pointer arithmetic- relationships between Pointer and Arrays – Arrays of Pointers – Function Pointers – Introduction to character and String Processing.

Classes and Data Abstraction : Structure Definitions- Class Scope and Accessing Class Members – Access Functions and Utility Functions- Constructors- Destructors.

UNIT III – Classes & Operator Overloading

Classes **:** Part II : Introduction- friend functions and friend classes- this pointer- new, delete operator- static class members- Data abstraction and Information hiding- Container Classes and Iterators.

Operator Overloading **:** Fundamentals and restriction of operator overloading –Overloading Stream Insertion, Stream Extraction, Unary, Binary, ++ and – operators. Inheritance : Base Classes and derived Classes – Protected Members- casting base class pointers to derived class pointers- Using member Functions- public, protected, private inheritance – Direct Base classes and Indirect Base classes- Using constructors and Destructors in Derived Classes.

UNIT IV - Virtual Functions, Polymorphism and Templates

Virtual Functions and Polymorphism **:** Type Fields and switch statement – virtual functions- abstract base classes and concrete classes- polymorphism- New classes and Dynamic binding – virtual destructors. C++ Stream Input/output : Introduction- Streams- Stream Output- Stream Input- Stream Manipulators- Stream Format states- Stream error states.

Templates **:** Function, Class templates – Overloading template functions- Templates and Inheritance, friends, static members.

UNIT V - Exception Handling, File Processing, The Preprocessor and Standard C++ Language Additions

Exception Handling : Basics of C++ Exception handling: try, throw, and catch – Throwing, catching, and rethrowing an exception, Exception specifications.

File Processing: Data Hierarchy- files and streams- Creating, Reading, Updating sequential Access files and Random Access files.

The Preprocessor **:** #include, # define, #error, # pragma preprocessor directives.

Standard C++ Language Additions : Boolean data type- static_cast, const_cast, reinterpret_cast operator, namespaces.

SUGGESTED READINGS

1. Deitel. H.M & P.J.Deitel. (2006). C++ How to Program, 5th Edition, Pearson Education Asia, New Delhi.
2. Bjarne Stroustroup. (2013). The C++ Programming Language, Thirteenth Impression,Addison Wesley, New Delhi.

3. Herbert Scheildt. (2001). Teach Yourself C++, 3rd Edition, Tata McGraw Hill ,New Delhi.
4. Robert Lafore. (2000). Object-Oriented Programming in Turbo C++, Galgotia Publications, New Delhi.

SEMESTER-II

16CAP202 **OPERATING SYSTEM** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To provide students with Extensive knowledge of principles and modules of operating systems
- To learn about the fundamental operating system abstractions such as processes, threads, files, Semaphores, IPC abstractions, shared memory regions, etc.
- To understand the principles of concurrency and synchronization, and apply them to write correct Concurrent programs/software.
- To learn the Basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- To understand the working of MS-Windows, UNIX and LINUX Operating Systems
- To know about distributed file system

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. To understand the operating system components and i ts services
2. To implement the algorithms in process management and solving the issues of IPC
3. To demonstrate the mapping between the physical memory and virtual memory
4. To understand file handling concepts in OS perspective
5. To understand the operating system components and services with the recent OS
6. To understand the concept of paging and segmentation

UNIT I - Introduction

Introduction: Evolution of operating systems. Types of operating systems. Different views of the operating system, operating system concepts and structure.
Processes: The Process concept, systems programmer's view of processes. The operating system services for process management. Scheduling algorithms. Performance evaluation.

UNIT II - Memory Management

Memory Management :Memory management without swapping or paging, swapping, virtual memory, page replacement algorithms, modeling paging algorithms, design issues for paging systems, segmentation.

UNIT III – Inter process Communication and synchronization and File Systems

Interprocess Communication and synchronization: The need for interprocess synchronization, mutual exclusion, semaphores, hardware sport for mutual exclusion. Queuing implementation of semaphores, classical problems in concurrent programming, critical region and conditional critical region, monitors, messages, deadlocks.
File Systems: File systems, directories, file system implementation, security protection mechanisms.

UNIT IV - Input/Output, Disks, Clocks and Distributed File System
Principles of I/O Hardware: I/O devices, device controllers, direct memory access.
Principles of I/O Software: Goals interrupt handlers, device drivers, device independent I/O software. User space I/O software.
Disks: Disk hardware, .scheduling algorithms, Error handling, trac-at-a-time caching, RAM Disks.
Clocks: Clock hardware, memory mapped terminals, I/O software. Terminals: Terminal hardware, memory mapped terminals, I/O software.
Processes and Processors in Distributed Systems: Threads, system models, processor allocation, scheduling.
Distributed File Systems: Design, implementation, trends.

UNIT V – Case Studies
Performance Measurement, monitoring and evaluation
Introduction, important trends affecting performance issues, why performance monitoring and evaluation are needed, performance measures, evaluation techniques, bottlenecks and saturation, feedback loops.
Case Studies: MS.DOS, MS WINDOWS, LINUX (UNIX) operating system.

SUGGESTED READINGS

5. Tanenbaum. A.S.(2015). Modern Operating Systems. Prentice Hall of India Pvt. Ltd.

SEMESTER-II

16CAP203 INFORMATION SYSTEMS: ANALYSIS, DESIGN AND IMPLEMENTATION 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: **40** External: **60** Total: **100**
End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To understand about complex system development
- To know the importance of classes and objects and their interrelationships
- To analyze and evaluate complex design structures
- To use Unified Modeling Language to construct various UML models
- To implement class diagrams, interaction diagrams, state chart diagrams, activity diagrams for implementing Object oriented Software designs
- To know the basics of software market

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Get an insight into the processes of software development
2. Able to understand the problem domain for developing SRS and various models of software engineering
3. Able to Model software projects into high level design using DFD,UML diagrams
4. Able to Measure the product and process performance using various metrics
5. Able to Evaluate the system with various testing techniques and strategies
6. Know about Object oriented analysis and design through object modeling technique

UNIT I - Overview of Systems Analysis and Design

Overview of Systems Analysis and Design: Systems Development Life Cycle. Concept and Models: requirements determination. Logical design. Physical design, test planning implementation planning and performance evaluation; communication, interviewing, presentation skills; group dynamics; risk and feasibility analysis; group-based approaches. JAD, structures walkthroughs, and design and code reviews; prototyping; database design; software quality metrics; application categories software package evaluation and acquisition.

UNIT II - Information requirement Analysis

Information requirement Analysis: Process modelling with physical and logical data flow diagrams, data modelling with logical entity relationship diagrams; Developing a Proposal: Feasibility study and cost estimation. System Design: Design of input and control, design of output and control, file design/database design, Process design, user interface design; prototyping; software constructions; documentation.

UNIT III - Application Development Methodologies and CASE tools

Application Development Methodologies and CASE tools: Information engineering, structured systems analysis and design and object oriented methodologies for application development data modeling, process modeling, user interface design and prototyping; use of computer aided Software engineering (CASE) tools in the analysis, design and implementation of information systems.

UNIT IV - Design and Implementation of platforms

Design and Implementation of platforms: Object oriented analysis and design through object modeling technique, object modeling, dynamic modeling and functional modeling, object oriented design and object oriented programming systems for implementation, object oriented data bases.

UNIT V - Managerial Issues in Software Projects

Managerial Issues in Software Projects: Introduction to software markets; planning of software projects, size and cost estimations; project scheduling; measurement of software quality and productivity; ISO and capability maturity models for organizational growth. The course should be based on lectures, case analysis and laboratory work. Cases should be used to illustrate each major topic in the course.

SUGGESTED READINGS

2. Rajaraman.V. (1991).Analysis and Design of Information Systems, Prentice Hall of India.
3. Senn, LA. (1986).Analysis and Design of Information Systems, Tata McGraw Hill Book Company.
4. Whiten, 1.K., Bentley, L.D., Beslow, V.M. (1994).Systems Analysis and Design Methods, Galgotia Publications Pvt. Ltd.
5. Kenneth E.Kendal and Julie.(2013). System Analysis and Design. 9th edition, Pearson.

SEMESTER-II

16CAP204 **ACCOUNTING AND MANAGEMENT CONTROL** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To acquaint students with the accounting concepts, tools and techniques for managerial decision.
- To understand the relation of accounting to economic activity
- To organize information for decision-making and the resource acquisition decision
- To manage the uses of cash and non-cash resources
- To apply a range of models and methods in different contexts
- To analyze an organization's activities.

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. To analyze the reasons and consequences of management accounting and control
2. To understand the relationship between strategy development in management accounting and control
3. To maintain the trial balance and financial statements
4. To obtain knowledge and understanding of models and methods in management accounting and control
5. To identify and analyze problems and solutions in real-life situations
6. To develop budgeting and control for any organization

UNIT I - Introduction

Basic Accounting and conventions underlying preparation of Financial Statements (balance sheet highlighting accounting equation. profit and loss statement; accounting processes; basic accounts, trial balance and financial statements; issues such as provisions for bad debts tax, dividends, losses such as bad debts, missing information, classification effect, cost of assets, rentals, etc);

UNIT II - Income

Income Measurement (revenue; recognition and matching costs and revenues; inventory valuation); Depreciation Accounting; Intangible Assets Accounting; Understanding published annual accounts including funds flow statement.

UNIT III - Cost

Basic Cost Concepts: (introduction; cost classification; allocation, appointment and absorption; cost centers); Cost Analysis for Managerial Decisions (direct costing, break-even analysis; relevant costs; pricing; pricing-joint costs; make or buy; relevant fixed costs and sunk costs) Cost Analysis for Control (standard costing; variances; material, labour, overhead, sales, and profit); Standard Cost Accounting (budgeting and control; elements of budgeting; control of manufacturing and manufacturing expenses; performances appraisal, evaluation of cost control systems).

UNIT IV - Introduction to Management Control Systems

Introduction to Management Control Systems; Goals, Strategies, and Key Variables; Performance Measures; Responsibility Centers and Transfer Price; Investment Centers; Reporting Systems; Management by Objectives;

UNIT V - Budgeting and Control

Budgeting and Control; Organizational Relationships in Control; Control Dynamics; Top Management and Control; Strategic and Long-Range Planning; Control of Service Organizations; Control of Projects; Control of Non-Profit Organizations; Control of Multinational Companies.

5. Peter Harish, Profit Planning (2010), 2nd Edition, Butterworth Hannemann publications.

SEMESTER-II

16CAP205 **PROBABILITY AND COMBINATIONS** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To equip the students with the fundamental principle of counting.
- To find the permutation when the all objects are distinct or non distinct.
- To find the combination of objects.
- To understand Connection between Permutations & Combinations.
- To distinguish between Permutations & Combinations
- To know about Recurrence relations

COURSE OUTCOMES (COs)

Upon successful completion of the course, the student will be able to:

1. Demonstrate knowledge of statistical terms.
2. Analyze the four basic sampling techniques for implementing in Statistics
3. Explain the difference between an observational
4. Explain an experimental study in statistics
5. To modify the statistical data in frequency distributions using histograms
6. To summarize data using the measures of central tendency such as mean, median, mode and midrange

UNIT I - Probability
Probability: Sample space. Events. Axioms. Conditional probability. Bayes rule. Random variables: Discrete and continuous.

UNIT II - Distribution and density functions
Distribution and density functions. Marginal and conditional distributions. Stochastic independence.

UNIT III - Expectation
Expectation: Expectation of a function. Conditional expectation and variance. Moment generating function. Cumulant generating functions. Characteristic functions. Distributions: Discrete and continuous distributions.

UNIT IV - Permutations and combinations
Permutations and combinations. Distinct and non-distinct objects. Generating functions for combinations. Enumerators for permutations. Distribution of distinct objects.

UNIT V - Recurrence relations

Recurrence relations: Linear and with two indices. Principles of inclusion and exclusion. Formula derangement. Restrictions on relative positions.

SUGGESTED READINGS

1. Liu, C.L. (1996). Introduction to Combinatorial Mathematics. McGraw Hill.
2. Ross. S .(1976). A First Course in Probability, Collier Macmillan, New York.
3. Duo code.(2017). Probability: Mastering Permutations And Combinations. CreateSpace Independent Publishing Platform; 2 edition

SEMESTER-II

16CAP211 OBJECT ORIENTED PROGRAMMING WITH C++ - PRACTICAL 5H - 2C

Instruction Hours / week: L: 0 T: 0 P: 5 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To understand the Object Oriented Programming concepts and techniques
- To understand the fundamentals of programming in C++
- To understand and utilize the concepts of procedural abstraction, data abstraction and encapsulation, polymorphism and inheritance with respect to C++ programming language
- To apply their programming knowledge for real time software development
- To apply the extensible Class types, User-defined operators and function Overloading in C++
- To know about preprocessor in C++

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Understand and design the solution to a problem using object-oriented programming concepts.
2. Use proper class protection mechanism to provide security.
3. Demonstrate the use of virtual functions to implement polymorphism.
4. Understand and implement the features of C++ including templates, exceptions and file handling
5. Solve complex problems in Object oriented programming
6. Use preprocessor in the object oriented programming

List of Practical

1. Create a class Date whose data members are Day, month, and Year. Write necessary member functions and perform the following operations using overload operators
   Increment a date by a day
2. Compares two dates
3. Create a class String that has a character array as a data member and perform the following operations using overloaded operators.
   - '+' To add two strings
   - '+=' To concatenate one string with the other
   - '==' To compare two strings

4. Create a class Computer and derive two classes Client and Server from it. Have the data members of the classes as follows.
   In the main () program, get the data about n clients and servers and print it back in a neat format.
5. Create four classes with the relationship and data members as in shown in the diagram.
   In the main () program, have the facility to
   - Store the details of n inpatients and outpatients
   - Display the details in a neat format
6. Create a class staff that contains the name, designation, and years of experience of a staff member of a college. Using containership, create two more classes Teaching Staff and Non-Teaching Staff according to the following specifications. In addition to the properties of the staff class, the Teaching Staff class should contain the highest qualification the staff member possesses and the departments he belongs to. The Staff class needs to contain the properties of Staff only. In the main (), get data about some of the teaching and NonTeachingStaff members of your college and print the details in neat format.
7. Create a class Address as whose data members are Name, Street, City, Pin code and Phone Number of a person. In the main () program, using array of pointers, get addresses of n persons, sort it in alphabetical order of names and display it back in a neat format.
8. Create a class Shape that contains two data members of type double to hold the two dimensions of the shape.
   Derive 3 more classes' circle, rectangle, And Triangle from the class Shape. Using appropriate member functions, get the values, calculate and print the area of different shapes using dynamic binding.
   Hint:- write 2 member functions in all the derived classes: one to set the data and the other to calculate and display the area.
9. Create two classes British and Metric to store the measurements of distance in the British (feet and inches) and Metric (meters and centimeters) systems respectively.
   In the main () program, perform the following:
   - Get two measurements: one in British and the other in Metric
   - Ask the user in which system (British or Metric) (s) he wants the output.
   - Add two input measurements and print the result according to the user's choice.
10. Create a class that copies the content of a text file into another file. Write the program in such a way that the program accepts command line arguments and make the program to execute in a way exactly the copy command in Dos works.
11. Sort an integer and a floating –point array using function template.
12. Create a class template stack that accepts a generic data type as a parameter and performs the basic operations of a stack. Using the above class in the main () program, implement stacks for integer and floating point data types separately and perform the operations on the stack.

SEMESTER-II

16CAP212 OPERATING SYSTEM - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To provide students with Extensive knowledge of principles and modules of operating systems
- To learn about the fundamental operating system abstractions such as processes, threads, files, Semaphores, IPC abstractions, shared memory regions, etc.
- To understand the principles of concurrency and synchronization, and apply them to write correct Concurrent programs/software
- To learn the Basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- To understand the working of MS-Windows, UNIX and LINUX Operating Systems
- To know about distributed file system

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. To understand the operating system components and i ts services
2. To implement the algorithms in process management and solving the issues of IPC
3. To demonstrate the mapping between the physical memory and virtual memory
4. To understand file handling concepts in OS perspective
5. To understand the operating system components and services with the recent OS
6. To understand the concept of paging and segmentation

List of Programs:

1. To write a Linux program to display process deadlock state.
2. To write a program to implement signal handling.
3. Write a Shell program to handle student data base with options given below:

   a) Create data base. b) View Data Base. c) Insert a record d) Delete a record.

   e) Modify a record. f) Result of a particular student. g) Exit.
4. To write a simple Linux program using thread.
5. Deadlock avoidance using Banker's Algorithm.
6. To write a program to display the date & time using TCP Sockets.

7. To write a program to display the date & time using UDP Sockets.
8. Simulation of following CPU scheduling algorithms:
   A. FCFS
   B. SJF (preemptive and non-preemptive)
   C. Priority scheduling (preemptive and non-preemptive)
   D. Round Robin Scheduling
9. To write a Linux program to create a lock file.
10. To write a program to display the user information

SEMESTER-II

16CAP213 CASE TOOLS - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To provide students with Extensive knowledge of case tools
- To learn about the relational database design
- To learn about the fundamental application development tools
- To understand the principles of management tools
- To learn about the selenium tool.
- To know about Revision control system

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Outline the history of CASE tools.
2. Outline the cost of using and building CASE tools.
3. Use at least two CASE tools for each software development phase.
4. Evaluate existing CASE Tools.
5. Compare and contrast the fitness of existing CASE Tools to the needs of specific software development context.
6. Know to manage the process of software development

List of Practical

1. CASE tools

Use of diagramming tools for system analysis, such as Turbo analyst, for preparing Data Flow diagrams and E-R diagrams. Use of tools for relational database design such as relational Designer.

2. Application Development Tools:

Use of toots such as Power Builder, Delphi, Magic etc. in developing application software including interactive data-entry screens, transaction processing, report generations, etc.

3. Management Tools:

Use of tools for managing the process of software development such as Source Code Control System (SCCS), Revision Control System (RCS), Make etc.

4. **Program Using Selenium Tool: [web: http://docs.seleniumhq.org]**

i. Using seleniumhq tool perform single webpage test case

ii. Using seleniumhq tool perform testing for multiple webpage

SUGGESTED READINGS

1. Alan W. Brown, David J. Carney, Edwin J. Morris, Dennis B. Smith, Paul Zarrella.(1994). Principles of CASE Tool Integration, Oxford University Press
2. Storr, A., Jarvis, D.H. (1996). Software Engineering for Manufacturing Systems Methods and CASE tools. Springer.

SEMESTER-III

16CAP301 DATABASE MANAGEMENT SYSTEMS 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To able to understand the role and nature of relational database management systems (RDBMS) in today's IT environment.
- To translate written business requirements into conceptual entity-relationship data models.
- To convert conceptual data models into relational database schemas using the SQL Data Definition Language (DDL).
- To manipulate databases using the SQL Data Manipulation Language (DML).
- Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database.
- To take backup and perform recovery.

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Define the terminology, features, classifications, and characteristics embodied in database systems.
2. Analyze an information storage problem and derive an information model expressed in the form of an entity relation diagram and other optional analysis forms, such as a data dictionary.
3. Demonstrate an understanding of the relational data model.
4. Transform an information model into a relational database schema and to use a data definition language and/or utilities to implement the schema using a DBMS.
5. Formulate, using relational algebra, solutions to a broad range of query problems.
6. Perform Database backup and recovery from catastrophic failure

UNIT I – DATABASE CONCEPTS

Basic concepts - Database & Database Users - Characteristics of the Database - Database Systems. Concepts & Architecture-Date Models. Schemas & Instances - DBMS Architecture & Data Independence - Data Base languages & Interfaces – Data Modelling using the Entity - Relationship Approach

UNIT II – RELATIONAL MODEL

Relational Model. Languages & Systems - Relational Data Model & Relational Algebra - Relational Model Concepts - Relational Model Constraints-Relational Algebra - SQL - A Relational Database Language - Date Definition in SQL - View & Queries in SQL - Specifying Constraints & Indexes in SQL - Specifying Constraints & Indexes in SQL - a Relational Database Management Systems - ORACLE/INGRES

UNIT III – HIERARCHICAL MODEL

Conventional Data Models & Systems - Network, Data Model & IDMS Systems - Membership types & options in a set - DML for the network model - Navigation within a network database - Hierarchical Data Model & IMS System - Hierarchical Database structure - HSAM, HISAM, HDAM & HIDAM organization - DML for hierarchical model - Overview of IMS

UNIT IV - NORMALIZATION

Relational Data Base Design - Function Dependencies & Normalization for Relational Databases - Functional Dependencies - Normal forms based on primary keys - (INF, 2NF, 3NF & BCNF) - Lossless join & Dependency preserving decomposition

UNIT V – CONCURRENCY CONTROL

Concurrency Control & Recovery Techniques - Concurrency Control Techniques - Locking Techniques - Time stamp ordering - Granularity of Data items - Recovery Techniques -Recovery concepts - Database backup and recovery from catastrophic failures - Concepts of Object oriented data base management systems.

SUGGESTED READINGS

1. Date, C.J., A.Kannan, S.Swamynathan (2012). An Introduction to Database Systems, Pearson education.
2. Desai. B. (2005). An Introduction to Database Concepts, Galgotia Publications. New Delhi.
3. Elmsari and Navathe.(2011). Fundamentals of Database Systems, Addison Wesley, New York.
4. Ullman. J.D. (2008). Principles of Database Systems, Galgotia Publications. New Delhi.
5. Carolyn E. Begg and Thomas M. Connolly (2005). Database Systems: A Practical. Pearson education.

SEMESTER-III

16CAP302 COMPUTER NETWORKS 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To become familiar with layered communication architectures (OSI and TCP/IP).
- To understand the client/server model and key application layer protocols.
- To learn sockets programming and how to implement client/server programs.
- To understand the concepts of reliable data transfer and how TCP implements these concepts.
- To learn the principles of routing and the semantics and syntax of IP.
- To learn the various network protocols

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able :

1. To master the terminology and concepts of the OSI reference model and the TCP- IP reference model.
2. To master the concepts of protocols, network interfaces, and design/performance issues in local area networks and wide area networks,
3. To be familiar with wireless networking concepts,
4. To be familiar with contemporary issues in networking technologies
5. To understand the functionalities needed for data communication into layers
6. To know the various security methodology in network

UNIT I – INTRODUCTION TO COMPUTER NETWORK

Introduction to computer network

Advantages of networks - Structure of the communications network - point-to-point and multidrop circuits - data flow and physical circuits - network topologies - topologies and design goals - Hierarchical topology - horizontal topology (Bus) - star topology - ring topology - mesh topology. The telephone network, switched and non-switched options - fundamentals of communications theory - channel speed and bit rate - voice communications and analog waveforms - bandwidth and the frequency spectrum - connecting the analog and digital worlds - digital worlds - digital signals- the modem, asynchronous and synchronous transmission.

Wide area and local networks, connection oriented and connectionless networks, classification of communications protocols, time division multiple access (TDMA), time division multiplexing (TDM), carrier sense (Collision) systems, token passing, peer-to-peer priority systems; priority slot, carrier sense (collision free) systems, token passing (priority) systems.

UNIT II – LAYERED PROTOCOLS & LAN

Layered Protocols and the OSI model
Goals of Layered Protocols, network design problems" communication between layers, introduction to standard organizations and the OSI model, standards organizations, Layers of OSI, OSI status.

Local Area Networks: Why LANs?, Primary attributes of a LAN, Broadband and baseband and base LANs, IEEE LAN standards, e1ationship of the 802 standards to the ISO/CCITT model., connection options with LANs, LLC and MAC protocol data units, LAN topologies and protocols., token ring (Priority), token bus and IEEE 802.4, metropolitan area networks (MANs), ANSI fiber distributed data interface.

UNIT III – NETWORK PROTOCOLS

Network Protocols: TCP, UDP, IP, ICMP, SNMP, and RMON.**TCP/IP:** TCP/IP and internetworking, example of TCP/IP operations, related protocols ports and sockets. The IP address structure, major features of IP, IP datagram. Major IP services. IP source routing, value of the transport layer, TCP, Major features of TCP, passive and active operation, the transmission control block (TCP), route discovery protocols, examples of route discovery protocols, application layer protocols.

UNIT IV- PROTOCOLS

Polling/Selection Protocols: Character and bit protocols, binary synchronous control (BSC) HDLC; HOLC options, HDLC frame format, code transparency and synchronization, HDLC transmission process, HDLC subsets, SDLC, Protocol conversion.
Switching and Routing in Networks: Message switching, packet switching, when and when not to use packet switching, packet routing, packet switching support to circuit switching networks.
The X.25 Network and Supporting Protocols: Features of X.25, Layers of X.25 and the Physical layer, X.25 and the data link layer. Companion standards to X.25, features of X.25, X.25 channel options, flow control principles, other packet types, X.25 logical channel states, packet formats. Internetworking, connectionless mode networks, the frame relay and X.25 stacks.

UNIT V – NETWORK SECURITY
Network Security: IP Security: Architecture, Authentication header, Encapsulating security payloads, combines security associations, key management. Web Security: Secure socket layer and transport layer security, secure electronic transaction (SET). System Security: Intruders, Viruses and related threads, firewall design principals, trusted systems

SUGGESTED READINGS
1. Black. V (1996). Computer Networks Protocols, Standards and Interfaces, Prentice Hall of India.
2. Stallings. W 2007). Computer Communication Networks, 4^{th} edition, Prentice Hall of India.
3. Tanneabaum. A.S (2003). Computer Networks, 4^{th} edition ,Prentice Hall of India.
4. B. Forouzan, Debdeep Mukhopadhyay (2015). Cryptography and Network Security, TMH

SEMESTER-III

16CAP303 ADVANCED JAVA AND SPRINGS 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To develop the code with various Java data types, conditions and loops.
- To implement arrays, functions and string handling techniques.
- To understand object oriented programming through Java using Classes, Objects and various Java concepts like Abstract, Final etc.
- To implement multi-threading and exception handling.
- To write a code in JDBC to communicate with Database.
- To know about files and streams in Java

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Able to implement, compile, test and run Java program,
2. Able to make use of hierarchy of Java classes to provide a solution to a given set of requirements found in the Java API
3. Able to understand the components and patterns that constitute a suitable architecture for a web application using java servlets
4. Able to demonstrate systematic knowledge of backend and front end by developing an appropriate application.
5. Write code with spring framework components.
6. Use collection such as list, set, map in java programming

UNIT I – Exception Handling

Exception Handling, Exception-Handling Fundamentals, Exception Types- checked & unchecked, Uncaught Exceptions, Using try and catch, Multiple catch Clauses, Nested try Statements, throw, throws and finally. Multithreaded Programming: Introduction to Threads, Creating and Running Threads, Volatile Variables, Life Cycle of a Thread, Thread Priorities and Thread Scheduling – Creating and Executing Thread – Thread Synchronization Runnable Interface

UNIT II – Files and Streams

Files and Streams: Advanced Input/output Streams, Readers and Writers, Character and Byte Streams, Print Writer, Reading Text, Scanner Class, Reading and Writing Files, Copying a File, Class File, Creating a Sequential, Access File, Reading Data from a Sequential, Access File, Random-Access Files, Creating/Writing/Reading Random-Access Files, New I/O APIs for the Java Platform.

UNIT III - Collections

Collections Framework: Overview, Generics Fundamentals, Auto boxing, The Collection Interfaces-List Interface, Set Interface, Sorted Set Interface, Navigable Set Interface, The Collection Classes- Array List, Linked List, Hash Set, Linked Hash Set, Tree Set, Accessing a Collection via an Iterator, Enumeration Interface, Vector, Hash Table, Properties, String Tokenizer and Date Class. Serialization: Serializable, Externalizable.

UNIT IV – Spring Framework

Introducing the Spring Framework, Spring Framework Run Time & architecture, Inversion of Control (IoC), Dependency Injection, Different Forms of Dependency Injection, Dependency Injection variants, DI classes & Parameter in Spring framework, Bean naming, @Auto wired annotation, The Bean Factory, XML Bean Configuration, Managing the Bean Lifecycle, Basics of Aspect-Oriented Programming (AOP), AOP concepts - Join point, Point cut, Advice, Types of advice, @AspectJ support

UNIT V - JDBC

DAO Support and JDBC Framework, Operations with JdbcTemplate, JdbcTemplate Convenience Methods, Basic Queries Using the JdbcTemplate, Batch Updates, Transaction and Resource Management, Global transaction vs. local transaction, Declarative transaction management, XML-based, Annotation-based, Object/Relational Mapping, Basic O/R Mapping, Object Query Languages, Data Access Objects, Setup in a Spring Context, Introduction to Spring MVC, Dispatch Servlet, Context configuration, Identify the design goals and core concepts of Spring MVC, Spring MVC controllers & Views

SUGGESTED READINGS

SEMESTER-III

16CAP304 STATISTICAL COMPUTING 4H -4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To define concepts of statistical measures, relationship between variables,
- To explain the hypothesis of statistical testing, theory of estimation
- To explain Statistical Quality Control methodologies
- To enter and manipulate data within SAS and R
- To perform basic statistical analyses using SAS and R and interpret the output
- To find information on how to perform advanced statistical analyses using SAS and R, and then undertake such analyses.

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.
2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.
6. Apply computer science theory and software development fundamentals to produce computing-based solutions.

UNIT I – INTRODUCTION TO STATISTICS

Statistical Measures: Introduction to descriptive Statistics-basic definitions, frequency distribution, Measure of Central Tendency: Mean Median and Mode. Measure of Dispersion: Absolute and relative measure of dispersion: Range, Mean deviation, Quartile deviation, Standard deviation and corresponding relative measures.

UNIT II – CORRELATION AND REGRESSION

Correlation and Regression: Types of Correlation – Simple and Multiple, Positive and Negative, Linear and Non-Linear, Partial and Total. Methods of calculating correlation coefficient: Scatter diagram, Karl Pearson and Spearmen (Rank) correlation coefficient, Regression: Types, lines and equations, Linear Regression - least square method of solving regression equations, X on Y and Y on X.

UNIT III - HYPOTHESIS

Testing of Hypothesis: Introduction to Inferential Statistics: Null and alternative hypothesis, Type I and Type II errors, Standard error, level of significance, acceptance and rejection regions and procedure for testing hypothesis. Large sample test - Z test - tests for means, variances and proportions, Small sample tests based on t, F and Chi- square distributions.

UNITIV - ESTIMATIONS

Estimation and Design of Experiment: Point Estimation - characteristics of estimation - interval estimation -interval estimates of mean, standard deviation and\proportion. Design of Experiments: Completely Randomized Design (CRD), Randomized Block Design (RBD) and Latin Square design (LSD) Models

UNIT V - SQC

Statistical Quality Control (SQC): Statistical basis for control charts, control limits. Controlcharts for variables - $\overline{X}$, R charts. Charts for defectives – p and np charts. Chart for defects – C chart. Acceptance Sampling – single and double sampling plans.

SUGGESTED READINGS

5. T.Veerarajan. (2017). Fundamentals of Mathematical Statistics, Yesdee Publishing Pvt Ltd.

SEMESTER-III

16CAP305 MANAGEMENT SUPPORT SYSTEMS 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To build knowledge about decision support system (DSS) which is a computer program application
- To analyze business data and presents it so that they can make business decisions more easily
- To help the students to distinguish it from an "operational application" that collects the data in the course of normal business operation
- To know about expert system in management
- To identify Group Decision in Support Systems (GDSS) and Decision Conferencing.
- To manage the organization in an efficient way

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Discuss today's turbulent business environment and describe how organizations survive and even excel in such an environment.
2. Discuss the need for computerized support of managerial decision making.
3. Describe the conceptual foundation of the decision support system (DSS)
4. Describe the business intelligence (BI) methodology and relate them each other.
5. List the major tools of computerized decision support and major issues in implementing computerized decision support systems.
6. Define the conceptual foundations of decision making.

UNIT I - INTRODUCTION
Introduction to the concept of Decision Support System: Components of DSS: Dialogue Management.

UNIT II – DECISION SUPPORT SYSTEMS
Data Management and Model Management for DSS; Examples of different type of DSS; Systems Analysis and Design for DSS.

UNIT III – MODELS AND ALGORITHMS
Models in the context of DSS; Algorithms and Heuristics; DSS Applications in different functions.

UNIT VI – DESIGN OF INTERFACES

Design of interfaces in DSS; An overview of DSS generators; Group Decision in Support Systems (GDSS) and Decision Conferencing.

UNIT V – EXPERT SYSTEMS

Introduction of Expert Systems. Expert Systems in Management; Case Study on Expert System. Introduction to GlS; MSS based on GIS; Case Studies; Executive Information Systems (EIS).

SEMESTER-III

16CAP311 DATABASE MANAGEMENT SYSTEMS - PRACTICAL 5H -2C

Instruction Hours / week: L: 0 T: 0 P: 5 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To able to understand the role and nature of relational database management systems (RDBMS) in today's IT environment.
- To translate written business requirements into conceptual entity-relationship data models.
- To convert conceptual data models into relational database schemas using the SQL Data Definition Language (DDL).
- To manipulate databases using the SQL Data Manipulation Language (DML).
- Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database.
- To take backup and perform recovery.

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Define the terminology, features, classifications, and characteristics embodied in database systems.
2. Analyze an information storage problem and derive an information model expressed in the form of an entity relation diagram and other optional analysis forms, such as a data dictionary.
3. Demonstrate an understanding of the relational data model.
4. Transform an information model into a relational database schema and to use a data definition language and/or utilities to implement the schema using a DBMS.
5. Formulate, using relational algebra, solutions to a broad range of query problems.
6. Perform Database backup and recovery from catastrophic failure

List of Practical

Tool: MySQL

Some sample applications which may be programmed, are given below

I Create following tables with appropriate constraints.

1. Write SQL statement for following queries.
   a. Age of employees.

  b. Employees whose take home salary is in the range Rs10,000 and 15,000
  c. Employees whose has put 10 years of service.
  d. Employees working under the department head RAGURAMAN
  e. Senior and youngest employee in each department.
  f. Employees who retires after one year.

2. Write cursors
  a. To raise the basic salaries by 25 percent
  b. To retain male employee in the existing employee table and to move female employees to a new table.
3. Create following views
  a. For male employees of age more than 45 years.
  b. For operator with the CHECK OPTION.
  c. For Female employees working under the department head RAJARAMAN.
  d. For male employees with the CHECK OPTION.
4. Create a trigger which fires when one tries
  a. To update records in employee table on Sundays.
  b. To insert records in salary table with basic >30000
5. Generate a pay slip where 40 percent, 20 percent and 15 percent of basic is given as HRA, TA and DA for the employees.

6. Write SQL statement selects all employees and all basic salaries using FULL OUTER JOIN

II Create following tables with appropriate constraints.

1. Take a stock report and list of books in circulation.

2. Write SQL statements for following queries.
  a. Authors of C and C++ books.
  b. List of books issued for UG student
  c. Title of books in computer science department.
  d. Titles of book by the author 'DIETEL'.
  e. Publishers of C and C++ books.
  f. Number of book issued to each student
  g. Publisher details of Commerce Department.

III Write a cursor

  a. To move books costing more than Rs.1500 into a separate table, Reference table.
  b. To move damaged books into a separate table damaged table.

Some sample PL/SQL Programs

1. Write a recursive program for finding the factorial of a given number.
2. Write a recursive program for finding the first n Fibonacci number.
3. Write a PL/SQL program for multiplication tables 3, 4, 5 and 6.
4. Write a recursive program for finding the reverse of a given number.

5. Write SQL queries to illustrate the string functions mathematical functions.
6. Write a program for finding the reverse of a given string.
7. Write a program using triggers, joins and SQL developer programs

SUGGESTED READINGS

1. Date, C.J., A.Kannan, S.Swamynathan (2012). An Introduction to Database Systems, Pearson education.

SEMESTER-III

16CAP312 **COMPUTER NETWORK - PRACTICAL** **4H -2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To become familiar with layered communication architectures (OSI and TCP/IP).
- To understand the client/server model and key application layer protocols.
- To learn sockets programming and how to implement client/server programs.
- To understand the concepts of reliable data transfer and how TCP implements these concepts.
- To learn the principles of routing and the semantics and syntax of IP.
- To learn the various network protocols

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able :

1. To master the terminology and concepts of the OSI reference model and the TCP- IP reference model.
2. To master the concepts of protocols, network interfaces, and design/performance issues in local area networks and wide area networks,
3. To be familiar with wireless networking concepts,
4. To be familiar with contemporary issues in networking technologies
5. To understand the functionalities needed for data communication into layers
6. To know the various security methodology in network

List of Practical

1. Write a networking program in Java to implement a TCP server that provides services for a TCP Client.
2. Write a networking program to implement socket programming using User datagram Protocol in Java.
3. Implement an FTP server using socket programming.
4. Implement a chat server using socket programming.
5. Implement an ECHO server using socket programming.
6. Implement Address Resolution Protocol using socket programming.
7. Implement Ping server and Ping client using socket programming.

8. Using UDP to transfer a text file from one host to another.
9. Implement Remote Command Execution using network programming.
10. Simulate simple Web Browser.
11. Write a Java program to check whether the given DNS is found in the internet or not.
12. Write a network program using HTTP to print the document for the given URL.

SUGGESTED READINGS

1. Black. V (1996). Computer Networks Protocols, Standards and Interfaces, Prentice Hall of India.
2. Stallings. W 2007). Computer Communication Networks, 4^{th} edition, Prentice Hall of India.
3. Tanneabaum. A.S (2003). Computer Networks, 4^{th} edition ,Prentice Hall of India.
4. B. Forouzan, Debdeep Mukhopadhyay (2015). Cryptography and Network Security, TMH

SEMESTER-III

16CAP313 ADVANCED JAVA AND SPRINGS - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To develop the code with various Java data types, conditions and loops.
- To implement arrays, functions and string handling techniques.
- To understand object oriented programming through Java using Classes, Objects and various Java concepts like Abstract, Final etc.
- To implement multi-threading and exception handling.
- To write a code in JDBC to communicate with Database.
- To know about files and streams in Java

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Able to implement, compile, test and run Java program,
2. Able to make use of hierarchy of Java classes to provide a solution to a given set of requirements found in the Java API
3. Able to understand the components and patterns that constitute a suitable architecture for a web application using java servlets
4. Able to demonstrate systematic knowledge of backend and front end by developing an appropriate application.
5. Write code with spring framework components.
6. Use collection such as list, set, map in java programming

List of Practical

1. Write a java Thread java program by Extending thread Class
2. Write a java program to get file list from a folder filtered by Extensions
3. Write a java program to sort Linked List Using Comparator
4. Write a java program to read all elements in Array L[1]ist by using Iterator
5. Write a java program to copy Map content to another Hash Table
6. Write a java program to compare two sets and retain elements which are same on both sides

7. Write a java program to get spring Application Context Object Reference
8. Write a java program to load multiple java based configuration in the spring using IMPORT @ Annotation
9. Write a java spring AOC Advice using PointCuts concept – to check the name match
10. Write a java program to update customer Information Using JDBC Connection
11. Write a java program to Execute select Query Using JDBC Connection
12. Write a java program to get IP Address of a Host in Java

SUGGESTED READINGS

SEMESTER-IV

16CAP401 J2EE 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

Course Objectives

Enable the student

- To understand J2EE as an architecture and platform for building
- To deploy web-based, n-tier, transactional, component-based enterprise applications
- To understand the fundamental concepts of XML and related technologies
- To acquire knowledge on how XML is currently being used in various application areas
- To know how to parse and transform XML documents via tools and through programming APIs
- To understand the EJB architecture and have a good grasp on when to use and how to use various EJB bean types and acquire relevant Java programming experience

Course Outcomes (COs)

Upon completion of this course, Students will be able to :

1. Characterize the concepts J2SE and J2EE
2. Develop Enterprise Applications using Session Bean, Entity Bean and MDB
3. Demonstrate the hierarchy of Java classes to provide software solutions using Java APIs
4. Analyze the components and patterns of Java Servlet architecture for webapplications
5. Apply systematic Java programming knowledge to connect backend and front end
6. Implement the Java Servlet to transfer data

UNIT I – J2EE OVERVIEW

J2EE Overview – Beginning of Java – Java Byte code – Advantages of Java –J2EE and J2SE. J2EE Multi Tier Architecture – Distributive Systems – The Tier – Multi Tier Architecture – Client Tier, Web Tier, Enterprise Java Beans Tier, Enterprise Information Systems Tier Implementation.

UNIT II - J2EE DATABASE CONCEPTS

J2EE Database Concepts:Data – Database – Database Schema. JDBC Objects: Driver Types – Packages – JDBC Process – Database Connection – Statement Objects – Result Set – Meta Data.

UNIT III - JAVA SERVLETS

Java Servlets: Benefits – Anatomy – Reading Data from Client –Reading HTTP Request Headers – Sending Data to client – Working with Cookies.

UNIT IV – ENTERPRISE JAVA BEANS

Enterprise Java Beans – Deployment Descriptors – Session Java Bean –Entity Java Bean – Message Driven Bean.

UNIT V – JAVA SERVER PAGES

Java Server Pages – Java Remote Method Invocation.

SEMESTER-IV

16CAP402 MOBILE COMPUTING 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To introduce an advanced element of learning in the field of wireless communication and the concepts of wireless devices and mobile computing.
- To introduce wireless communication and networking principles, that support connectivity to cellular networks, wireless internet and sensor devices.
- To understand the use of transaction and e-commerce principles over devices to support mobile business concepts
- To learn the basic concepts, aware of the GSM, SMS, GPRS Architecture.
- To understand the mobile operating system development environment such as android.
- To demonstrate the features of Android Mobile Operating System for developing Android Applications

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Gain the knowledge about various types of Wireless Data Networks and Wireless Voice Networks.
2. Analyze the architectures and the challenges of Wireless Networks.
3. Analyze the role of Wireless Protocols in Wireless Networks.
4. Know about different types of Wireless Communication Networks and their functionalities.
5. Develop Mobile Applications Using Android
6. Identify the features involved in Bluetooth technology.

UNIT I - INTRODUCTION

Mobile Computing- Middleware and Gateways-Developing Mobile Computing Applications-Security in Mobile Computing – Architecture of Mobile Computing-Three-Tier Architecture-Design Consideration for Mobile Computing-Mobile Computing through Internet- Mobile Computing through Telephone-Developing an IVR Applications

UNIT II – BLUETOOTH AND GSM

Bluetooth- Features and working of RFID - Wireless Broadband (WiMax)- Mobile IP – IPV6- Java Card –Global System for Mobile Communications – GSM Architecture – Call Routing in GSM – GSM Addresses and Identifiers – Network Aspects in GSM – GSM Frequency Allocation – Authentication and Security- Mobile Computing Over SMS – SMS-Value Added Services through SMS.

UNIT III – GPRS, 3G AND 4G NETWORKS
GPRS and Packet Data Network – GPRS Network Architecture – GPRS Network Operations – Data Services in GPRS- Applications for GPRS – Limitations of GPRS- Spread Spectrum Technology- CDMA Versus GSM – – Features of 3G Networks –Architecture of 3G- Applications of 3G - Features of 4G- Architecture of 4G - Wireless Technologies Used in 4G- Merits and Demerits of 4G

UNIT IV – MOBILE AD-HOC NETWORKS
MOBILE Ad-Hoc Basic Concepts – Characteristics – Applications – Design Issues – Routing – Essential of Traditional Routing Protocols –Popular Routing Protocols – Vehicular Ad Hoc Networks (VANET) – MANET Vs VANET – Security

UNIT V – ANDROID OPERATING SYSTEM
History of Android -Introduction to Android Operating Systems -Android Architecture - Android Virtual Device Manager - Features of Eclipse and Android Studio-Comparison of Kotlin Language to Java- User Interface Architecture of Android: Application context, intents, Activity life cycle, User Interface Design of Android –Features of Android SQLite Database

SEMESTER-IV

16CAP403 ORGANIZATIONAL BEHAVIOUR 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

1. To make the students familiar with basic concepts of management & human behavior in an Organizational context and application of these concepts to managerial problems.
2. To integrate the relevant knowledge drawn from related disciplines like psychology, sociology and anthropology to make them applicable for studying and analyzing organizational behavior.
3. To gain a solid understanding of human behavior in the workplace from an individual, group, and organizational perspective and frameworks and tools to effectively analyze and approach various organizational situations.
4. To maintain decision making
5. To know about perception
6. To gain knowledge on conflict management

COURSE OUTCOMES (COs)

Upon completion of this course, the student will have reliably demonstrated the ability to:

1. Analyze individual and group behavior, and understand the implications of organizational behavior on the process of management.
2. Identify different motivational theories and evaluate motivational strategies used in a variety of organizational settings.
3. Evaluate the appropriateness of various leadership styles and conflict management strategies used in organizations.
4. Describe and assess the basic design elements of organizational structure
5. Evaluate their impact on employees.
6. Explain how organizational change and culture affect working relationships within organizations.

UNIT I - MANAGEMENT OVERVIEW

Management overview: – evolution of management - functions - characteristics and Importance of management - management vs administration - role of manager - planning: Meaning - steps in planning - objectives - management by objectives.

UNIT II - DECISION MAKING

Decision making: meaning, process. Organization – departmentalization - manpower planning - Process of recruitment and selection, placement and orientation - directing – motivation – Communication. Control – need, process, steps in control.

UNIT III – INTRODUCTION TO ORGANIZATION BEHAVIOR

Organization behavior: meaning and definition - fundamental concepts of ob – contributing Disciplines to the ob field - learning – theories of learning - personality – determinants of Personality - theories of personality - psycho-analytical, social learning, job-fit, and trait Theories.

UNIT IV - PERCEPTION

Perception – factors influencing perception – attribution theory – frequently used shortcuts in Judging others - perceptual process - organization errors of perception - attitudes – types of Attitudes - functions of attitudes. Values – types of values- value across cultures – groups - Stages of group development - group norms - group cohesiveness.

UNIT V – CONFLICT MANAGEMENT

Conflict – meaning – functional vs. Dysfunctional conflict - levels of conflict – conflict Management. Stress – causes of stress – effects of occupational stress - coping strategies for Stress. Organizational change - forces for change - resistance to change- overcoming resistance To change.

SEMESTER-IV

16CAP404D DATABASE ADMINISTRATION 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

Course Objective

Enable the student

- To install and configure database
- To create users and assign roles
- To optimize schemas, tables, indexes and views
- To manage database services and clients
- To move the data from one database to another database.
- To take backup and perform recovery.

Course Outcomes(COs)

Upon completion of this course, students will be able to:

1. Design, model and install any database management systems by using Oracle database as sample.
2. Plan, design, construct, control and manage database instances, database network environment, storage structures, user security, database backup and recovery, database maintenance
3. Define and devise transaction management, concurrency control, crash recovery components
4. Examine and perform data base administration roles
5. Examine the database operations by using Oracle database system as a sample.
6. Apply the knowledge of VLDB to control the distributed databases

UNIT I - INTRODUCTION TO ORACLE DBA

Oracle DBA's: The Oracle DBA's Role- Oracle Database 10g Architecture: Oracle Databases and instances- Oracle Logical Storage structures – Oracle Logical Database structures – Oracle Physical Storage structures- Multiplexing Database Files - Oracle Memory Structures-Oracle Backup and Recovery – Security Capabilities – Tablespace Architecture – Oracle Tablespace installation – Traditional Disk Space Storage – Automatic Storage Management

UNIT II – INTRODUCTION TO SPACE MANAGEMENT

Common Space Management Problems – Oracle Segments, Extents and Blocks – Space Management Methodologies – SYSAUX monitoring and usage – Archived Redo Log File Management – Built in Space Management Tools: Segment Advisor – Undo Advisor and the Automatic Workload Repository – Index usage – Space Usage Warning Levels – Reusable space allocation – Managing alert and Trace Files with ADR – Transaction Basics – Undo Basics – Managing Undo Tablespaces – Flashback features

UNIT III – INTRODUCTION TO TUNING APPLICATION
Tuning Application Design – Tuning SQL – Tuning Memory Usage – Tuning Data Access – Tuning Data Manipulation – Tuning Physical Storage – Reducing Network Security – Database Authentication Methods

UNIT IV – AUTHORIZATION METHODS
Database Authorization Methods – Auditing: Auditing Locations – Statement Auditing – Privilege Auditing Schema Object Auditing – Auditing Related Data Dictionary Views – Logical Backups – Physical Backups – Using Data Pump Export and Import – Data Pump Import Options – Integration of Backup Procedures
Overview of Oracle Net – Using the Oracle Net Configuration Assistant – Using the Oracle Net Manager – Starting the Listener Server Process – Controlling the Listener Server Process Using Data links

UNIT-V - CREATING TABLE SPACES IN A VLDB ENVIRONMENT
Creating Table spaces in a VLDB Environment: Big file Table space Basics – Creating and Modifying Big file Tablespace – Big file Tablespace ROWID format – DBMS_ROWID and Big file Tablespaces.- Advanced Oracle Table Types – Using Bitmap Indexes – Oracle Data Pump Remote queries – Remote Data Manipulation: Two Phase Commit – Managing Distributed Data – Managing Distributed Transactions – Monitoring and Tuning Distributed Database

SEMESTER-IV

16CAP404N CRYPTOGRAPHY AND NETWORK SECURITY 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3Hours

Course Objectives

Enable the student

- To teach fundamental aspects of security in a modern networked environment with the focus on system design aspects and cryptography in the specific context of network.
- To build protection mechanisms in order to secure computer networks.
- To write coding to encrypt "Plain Text" into "Cipher Text" and vice versa, using different encryption algorithms.
- To choose a suitable ciphering algorithm according to the required security level.
- To build cryptosystems by applying encryption algorithms,
- To build secure authentication systems by use of message authentication techniques.
- To know about the blockchain technology

Course Outcomes (Cos)

Upon completion of this course, students will be able to:

1. Classify the symmetric encryption techniques
2. Illustrate various Public key cryptographic techniques
3. Evaluate the authentication and hash algorithms.
4. Summarize the intrusion detection and its solutions to overcome the attacks.
5. Demonstrate the basic concepts of system level security
6. Apply the block chain technology for security

UNIT I - INTRODUCTION TO CRYPTOGRAPHY

Introduction to Cryptography – Security Attacks – Security Services – Security Algorithm – Stream cipher and Block cipher – Symmetric and Asymmetric – Key Cryptosystem; Symmetric Key Algorithms: Introduction – DES – Triple DES – AES – IDEA – Blowfish – RC5.

UNIT II - PUBLIC KEY CRYPTOSYSTEM

Public Key Cryptosystem: Introduction to Number Theory – RSA Algorithm – Key Management – Diffie-Hell man key exchange – Introduction to Elliptic Curve Cryptography; Message Authentication and Hash functions – Hash and Mac Algorithm – Digital Signatures and Authentication Protocol.

UNIT III - NETWORK SECURITY PRACTICE

Network Security Practice: Authentication Applications – Kerberos – X.509 Authentication Services and Encryption Techniques:; E-mail security – PGP – s/MIME – IP Security.

UNIT IV - WEB SECURITY

Web Security – Secure Socket Layer – Secure Electronic Transaction; System Security – Intruders and Viruses – Firewalls – Password Security.

UNIT V – CRYPTOGRAPHIC ALGORITHMS, SECURITYAND STEGNOGRAPHY

Case Study: Implementation of Cryptographic Algorithms – RSA – DSA – ECC (C / JAVA Programming). Network Forensic – Security Audit; Other Security Mechanism: Introduction to Stenography – Quantum Cryptography – Water Marking – DNA Cryptography.

SEMESTER-IV

16CAP404S SOFTWARE TESTING 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3Hours

Course Objectives

Enable the student

- To perform test each time they are run, thereby eliminating human error.
- To test how the software reacts under repeated execution of the same operations.
- To program sophisticated tests which bring out hidden information from the application.
- To reuse tests on different versions of an application, even if the user interfaces changes.
- To know the risks in project management system
- To know about various testing

Course Outcomes (COs)

Upon completion of this course, students will be able to

1. Test the software by applying testing techniques to deliver a product free from bugs
2. Evaluate the web applications using bug tracking tools.
3. Investigate the scenario and the able to select the proper testing technique
4. Explore the test automation concepts and tools
5. Deliver quality product to the clients by way of applying standards such as TQM, Six Sigma
6. Evaluate the estimation of cost, schedule based on standard metrics

UNIT I – INTRODUCTION TO TESTING

Introduction: Purpose of Testing – Dichotomies - Model for Testing – consequences of bugs-Taxonomy for bugs

UNIT II – FLOW GRAPHS AND PATH TESTING

Flow/Graphs and Path Testing: Path testing basics-predicates, path predicates and Achievable paths – Path sensitizing– path instrumentation-implementation and application of path testing

UNIT III - INTRODUCTION TO FLOW TESTING

Transaction flow testing: – Transaction flow - Transaction flow testing techniques – implementation comments – testability tips -Data flow testing basics- Data flow testing strategies.

UNIT IV – DOMAINS AND PATHS

Domains and paths-Nice Domains and Ugly Domains-Domain testing-Domains and interface testing-Domains and testability-Metrics-Linguistic metrics-structural metrics-Hybrid metrics-metrics implementations-Testability tips

UNIT V – RISK ANALYSIS

Risk Analysis: Benefits of Risk analysis – Project Management Strategies and Risk – MITs risk Analysis – MITs Ranking Criteria - Using Risk Ranking in Forensics –Test estimation process-MIT totals worksheet-Sizing worksheet
