165BESHOE05 SOLID WASTE MANAGEMENT L T P C
3 0 0 3

OBJECTIVES:

- To understand about the solid waste
- To study about the waste treatment
- To gain knowledge on the disposal of waste and waste management.
- To get the information on energy conservation.

INTENDED OUTCOME:

- The students will know solid waste and energy conservation. They will understand the methodologies to disposal of solid waste and its management.

UNIT I SOLID WASTE (9)

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT (9)

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL (9)

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods &Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT (9)

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE (9)

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

16BESHOE06 **GREEN CHEMISTRY** **L T P C**

3 0 0 3

OBJECTIVES:

- To understand about the green chemistry
- To study the atom efficient process and synthesis elaborately.
- To gain knowledge on the green technology and renewable energy resources.
- To get the information on catalysis

INTENDED OUTCOMES:

- Students will know the chemistry and application of green technology for energy sources. They will understand the role of green catalyst in industries.

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES (9)

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES (9)

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIO TECHNOLOGY AND GREEN CHEMISTRY (9)

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES (9)

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY (9)

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

16BESHOE07 APPLIED ELECTROCHEMISTRY **L T P C**

3 0 0 3

OBJECTIVES:

- To get the information on electrochemical material.
- To study about the conducting polymers
- To understand about the fuel
- To gain knowledge on the batteries and power sources.

INTENDED OUTCOMES:

- Students will understand about the fuel. They will get knowledge on the batteries and power sources.

UNIT I METAL FINISHING (9)

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electro plating for electronic industry- Alloy plating, brass plating-Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS (9)

Lector polymerization- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I (9)

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II (9)

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE (9)

Solar cells- Preparation of CdS/Cu_2S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

16BESHOE08 INDUSTRIAL CHEMISTRY **L T P C**

3 0 0 3

OBJECTIVES:

- To understand about the fuel
- To study about the abrasives and lubricants.
- To gain knowledge on inorganic chemicals and explosive materials.
- To get the information on agriculture chemicals

INTENDED OUTCOMES:

- The student will acquire basic knowledge on cement. The student will understand the interaction of engineering materials and their utilization in industries.

UNIT I CEMENT AND LIME (9)

Manufacture of Portland cement – settling of hardening of port land cement – re gauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – Magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES (9)

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT IIIINORGANIC CHEMICALS (9)

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3, caustic soda and color-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, Sulphur and sulphuric acid – extraction of Sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES (9)

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS (9)

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

LIST OF OPEN ELECTIVES OFFERED BY
COMPUTER SCIENCE ENGINEERING

16BECSOE01 **INTERNET PROGRAMMING**

L	T	P	C
3	0	0	3

Course Objectives:

- To introduce the Java programming language and explore its current strengths and Weaknesses
- To study the way that object-oriented concepts are implemented in the Java programming language
- To write working Java code to demonstrate the use of applets for client side programming
- To study the way that exceptions are detected and handled in the Java programming language
- To write working Java code that demonstrates multiple threads of execution

UNIT I Introduction **9**
Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML **9**

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL **9**

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV Client-Server programming **9**

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V Internet Telephony **9**
Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

Total Hours: 45

16BECSOE02 MULTIMEDIA AND ANIMATION

L	T	P	C
3	0	0	3

Course Objectives:

- To study the graphics techniques and algorithms.
- To study the multimedia concepts and various I/O technologies.
- To enable the students to develop their creativity
- To impart the fundamental concepts of Computer Animation and Multimedia.

UNIT I Introduction 9

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II Creating Animation in Flash 9

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D Animation & its Concepts 9

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV Motion Caption 9

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V Concept Development 9

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

Total Hours: 45

Text Books:

1. Computer Graphics, Multimedia and Animation-Malay K. Pakhira,PHI Learning PVT Ltd,2010

References:

16BECSOE03 PC HARDWARE AND TROUBLE SHOOTING

L	T	P	C
3	0	0	3

Course Objectives:

- Assemble/setup and upgrade personal computer systems
- Perform installation, configuration, and upgrading of microcomputer hardware and software.
- Install/connect associated peripherals.
- Diagnose and troubleshoot microcomputer systems hardware and software, peripheral equipment.

UNIT I Introduction **9**

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices **9**

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC Hardware Overview **9**

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV Installation and Preventive Maintenance **9**

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting **9**

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

16BECSOE04 JAVA PROGRAMMING

L	T	P	C
3	0	0	3

Course Objectives:

- Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Be aware of the important topics and principles of software development.
- Have the ability to write a computer program to solve specified problems.

  Be able to use the Java SDK environment to create, debug and run simple Java programs

UNIT I INTRODUCTION TO JAVA

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES

Arrays – Strings - Packages – Java-Doc comments –- Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING

Exceptions – Syntax of exception handling code – Multiple catch statements – Using finally statements – Throwing our own exceptions – Using exceptions for debugging

UNIT V THREADS

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

TEXT BOOKS:

1. Cay S. Horstmann and Gary Cornell Core Java: Volume I – Fundamentals Sun Microsystems Press 2008

REFERENCE BOOKS:

LIST OF OPEN ELECTIVES OFFERED BY
ELECTRICAL AND ELECTRONICS ENGINEERING DEPARTMENT

16BEEEOE01 ELECTRIC HYBRID VEHICLE L T P C
3 0 0 3

Course Objectives

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the efficiency manipulation in drives
- To understand and gain the knowledge about various energy storage devices

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION 9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS 9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT 9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE 9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES 9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

16BEEEOE02 ENERGY MANAGEMENT AND ENERGY AUDITING L T P C
3 0 0 3

Course Objectives:

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behaviour changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

.

UNIT I ENERGY MANAGEMENT 9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS 9

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT 9

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS 9

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blower's pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS
9

Power factor - methods of improvement, location of capacitors, p.f with nonlinear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

16BEEEOE03 PROGRAMMABLE LOGIC CONTROLLER L T P C
3 0 0 3

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION 9

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING 9

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS 9

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS 9

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES 9

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

16BEEEOE04 RENEWABLE ENERGY SOURCES **L T P C**

3 0 0 3

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION 9

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY 9

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY 9

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY 9

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES 9

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

OPEN ELECTIVES
(COURSES OFFERED BY OTHER DEPARTMENTS)
BIO TECHNOLOGY

16BTBTOE01 **BIO REACTOR DESIGN** **L T P C**
3 0 0 3

INTENDEDOUTCOMES

- To understand the basic design of bioreactors
- To understand the principle of heat transfer inside a bioreactor
- To understand the principle of heat transfer inside bioreactor
- To design bio reactors for various operations

UNITI ENGINEERINGPROPERTIES AND STORAGE TANK (9)

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNITII REACTOR DESIGN (9)

Design of Airlift ferment or, Bubble column reactor and Continuous stirred tank reactor.

UNITIII HEATTRANSFER EQUIPMENTS (9)

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNITIV MASSTRANSFER EQUIPMENTS (9)

Design of Boll man extractor, fractionating column, packed tower and spray tray absorber

UNITV SEPERATIONEQUIPMENTS (9)

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rot art drum drier and Swenson–walker crystallizer.

TEXTBOOKS:

S.No	Author(s)Name	Title of the book	Publisher	Year o Publications
1	James Edwin Bailey, DavidF.Ollis	Biochemical Engineering Fundamentals	McGraw-Hill	2007
2	DonW.Green,RobertH. Perry	Chemical Engineer Handbook	The McGraw-Hill Companies	2008

REFERENCE BOOKS

S.No	Author(s)Name	Title of the book	Publisher	Year of Publications
1	Pauline.M.Doran	Bioprocess Engineering Principles	Academic Press	2013

16BTBTOE02 **FOOD PROCESSING AND PRESERVATION** **L T P C**

3 0 0 3

INTENDED OUTCOMES

The students are exposed to

- Properties of food material
- Various methods used for preserving fruits and vegetables.

UNITI SCOPE AND IMPORTANCE OF FOOD PROCESSING (9)

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation -Cleaning, sorting, grading, peeling.

UNITII PROCESSING METHODS (9)

Heating- Blanching and Pasteurization. Freezing - De hydration- canning- additives-fermentation- extrusion cooking -hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing –Infrared radiation processing- Concepts and equipment used.

UNITIII FOOD CONVERSION OPERATIONS (9)

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation-filtration-equipment and application.

UNITIV FOOD PRESERVATION BY COOLING (9)

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNITV PRESERVATION METHODS FOR FRUITS ANDVEGETABLES (9)

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration –chemical preservation –preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

TEXT BOOKS

3	MirceaEnachescuDauthy	Fruit and Vegetable Processing	FAO agricultural services bulletin	1995

REFERENCEBOOKS

S.No	Author(s)Name	Title of the book	Publisher	Year of Publications
1	M.A. Rao, Syed S.H. Rizvi, Ashim K.Datta	Engineering properties Of foods	CRC Press	2005
2	B.Sivasankar	Food processing and preservation	PHI Learning Pvt.Ltd	2002

16BTBTOE03 **BASIC BIO INFORMATICS** **L T P C**

3 0 0 3

INTENDED OUTCOMES

1. To enable the students to get aware of available tools and databases for performing research in bioinformatics.
2. To provide the thorough understanding of protein structure in detail.

UNITI OVERVIEW OFBIOINFORMATICS (9)

The scope of bio informatics; bio informatics & the internet; useful bio informatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases–contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNITII RETRIEVAL OF BIOLOGICAL DATA (9)

Data retrieval with Entrez &DBGET/ Link DB; data retrieval with SRS (sequence retrieval system).Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices ; database searches, FASTA & BLAST; sequence filters; iterative database searches &PSI-BLAST .Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNITIII PHYLO GENETICS (9)

Phylogenetic, cladistics &ontology; building phylogenetic trees; evolution of Macro molecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNITIV STRUCTURAL BIOINFORMATICS (9)

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNITV MICROARRAYDATAANALYSIS (9)

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling &SAGE. Bioinformatics in pharmaceutical industry: informatics &drug discovery; pharma informatics resources. Basic principles of computing in bio informatics: running computer software; computer operating systems; software downloading &installation; data base management.

16BTBTOE04 FUNDAMENTALS OF NANO BIOTECHNOLOGY L T P C
3 0 0 3

INTENDED OUTCOMES

1. To develop skills of the students in the field of Nano biotechnology and its applications in various fields.
2. Thecoursewillserveasaneffectivecoursetounderstand Socio-economicissuesof Nano biotechnology.

UNITI INTRODUCTION (9)

Introduction, Scope and Overview, Length scales , Importance of Nano scale and Technology, History of Nanotechnology, Future of Nanotechnology:Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different,Fields:Nanobiotechnology,Materials,Medicine,Dentalcare.

UNITII NANOPARTICLES (9)

Introduction, Types of Nano particles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterial's, Significance of Nanoparticles Nanofabrications-MEMS/NEMS,AtomicForceMicroscopy,Selfassembledmonolayers/Dip-pen Nanolithography, Soft Lithography, PDMS Molding, Nanoparticles, Nanowires and Nanotubes.

UNITIII APPLICATIONS (9)

Nano medicine, Nano biosensor and Nano fluidics. Nano crystals in biological detection, Electrochemical DNA sensors and Integrated Nano liter systems. Nano-Bio devices and Systems. Fabrication of Novel Biomaterials through molecular self-assembly- Small scale systems for in vivo drug delivery-Future Nano machine.

UNITIV NANO BIOTECHNOLOGY (9)

Clinical applications of Nano devices. Artificial neurons. Real-time Nano Sensors-Applications in cancerbiology. Nanomedicine.Syntheticretinylchipsbasedonbacteriorhodopsins. Highthroughput DNA sequencing with Nano carbon tubules. Nano surgical devices.

UNITV ETHICAL ISSUES IN NANOTECHNOLOGY (9)

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nano medicine, Nano medicine Applied in Nonmedical Contexts, Social Issues Relating to Nano medicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nano technology and Future Socio-economic challenges.

MECHANICAL ENGINEERING
OPEN ELECTIVES
(COURSES OFFERED TO OTHER DEPARTMENTS)

16BEMEOE01 COMPUTER AIDED DESIGN **L T P C**
3 0 0 3

OBJECTIVE

1. To provide an overview of how computers are being used in mechanical component design

UNIT I OVERVIEW OF CAD SYSTEMS **9**

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS **9**

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING **9**

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION **9**

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT **9**

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

16BEMEOE02 INDUSTRIAL SAFETY AND ENVIRONMENT L T P C

3 0 0 3

OBJECTIVE

1. Upon completion of this course, the students can able to understand the role of logistics and understand the phases of supply chain

UNIT I INTRODUCTION TO LOGISTICS 9

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN 9

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS 9

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES 9

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM 9

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

16BEMEOE03 **TRANSPORT PHENOMENA** **L T P C**
3 0 0 3

OBJECTIVE

1. Upon completion of this course, the students can able to understand the relationship between free energy, entropy, internal energy, and enthalpy

UNIT I INTRODUCTION AND BASIC CONCEPTS 9

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS 9

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT 9

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT 9

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT 9

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion-Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

16BEMEOE04 INTRODUCTION TO BIOMECHANICS L T P C

3 0 0 3

OBJECTIVE

1. Biomechanics provides key information on the most effective and safest movement patterns, equipment, and relevant exercises to improve human movement.

UNIT I INTRODUCTION 9

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS 9

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY 9

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION 9

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM 9

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

OPENEL ECTIVES
(COURSES OFFERED TO OTHER DEPARTMENTS)
AUTOMOBILE ENGINEERING

16BEAEOE01 AUTOMOBILE ENGINEERING L T P C
3 0 0 3

INTENDED OBJECTIVES:

- This course enables the students to know about all the main and auxiliary systems of automobile with its base construction and working.

UNIT-I ENGINE AND FUEL FEED SYSTEMS
Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburetor working principle, requirements of an automotive carburetor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT –II TRANSMISSION SYSTEMS
Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT -III SUSPENSION SYSTEM
Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT-IV BRAKES
Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT -V ELECTRICAL SYSTEM
Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

16BEAEOE02 BASICS OF TWO AND THREE WHEELERS **L T P C**
3 0 0 3

INTENDED OBJECTIVES:

- The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.

UNIT I INTRODUCTION
Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS
2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburetor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION
Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES
Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS
Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

16BEAEOE03 **AUTOMOBILE MAINTENANCE** **L T P C**
3 0 0 3

INTENDED OBJECTIVES:

- The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES
Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE
Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE
Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE
Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY
Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

3.	Service Manuals from Different Vehicle Manufacturers			

16BEAEOE04 INTRODUCTION TO MODERN VEHICLE TECHNOLOGY **L T P C**
3 0 0 3

INTENDED OBJECTIVES:

- This course enables the students to have a knowledge about the recent technologies that is in use in automobile.

UNIT I TRENDS IN POWER PLANTS
Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS
Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti-spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY
Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION
Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS
Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

CIVIL ENGINEERING

16BECEOE01 HOUSING, PLAN AND MANAGEMENT **L T P C**
3 0 0 3

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING 9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES 9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighborhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organizations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS 9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL 9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

2. UNCHS, National Experiences with Shelter Delivery for the Poorest Groups, UNCHS (Habitat), Nairobi, 2000.

16BECEOE02 **BUILDING SERVICES** **L T P C**

3 0 0 3

COURSE OBJECTIVES

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to
1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES **9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS 9

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN 9

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilization factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS 9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION 9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

3 0 0 3

OBJECTIVES

1. To enable the students for a successful career as water management professionals.
2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
3. To expose the students the need for an interdisciplinary approach in irrigation water management
4. To providing a platform to work in an interdisciplinary team.
5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

OUTCOME

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I. IRRIGATION SYSTEM REQUIREMENTS 9

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II. IRRIGATION SCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III. MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV. OPERATION 9

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNIT V. INVOLVEMENT OF STAKE HOLDERS 9

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL HRS : 45

TEXT BOOKS

1. Dilip Kumar Majumdar, "Irrigation Water Management – Principles and Practice", Prentice Hall of India Pvt. Ltd., New Delhi, 2000
2. Hand book on Irrigation Water Requirement, R.T. Gandhi, et. al., Water Management Division, Department of Agriculture, Ministry of Agriculture, New Delhi

REFERENCES

1. Hand Book on Irrigation System Operation Practices, Water Resources Management and Training Project, Technical report No. 33, CWC, New Delhi, 2000

16BECEOE04 ADVANCED CONSTRUCTION TECHNOLOGY **L T P C**
3 0 0 3

OBJECTIVE:

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

OUTCOMES:

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT - I MODERN CONSTRUCTION METHODS 9
Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT - II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9
Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT - III MODERN CONSTRUCTION EQUIPEMENTS -I 9
Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting

UNIT - IV MODERN CONSTRUCTION EQUIPEMENTS -II 9
Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES 9
Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipment's

OPEN ELECTIVES OFFERED BY

ELECTRONICS AND COMMUNICATION ENGINEERING TO OTHER DEPARTMENTS

16BEECOE01 REAL TIME EMBEDDED SYSTEMS **L T P C**
3 0 0 3

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT-I INTRODUCTION TO EMBEDDED SYSTEM

Introduction- Embedded systems description, definition, design considerations & requirements-Overview of Embedded System Architecture (CISC and RISC)-Categories of Embedded Systems-embedded processor selection & tradeoffs- Embedded design life cycle -Product specifications-hardware / software partitioning- iterations and implementation- hardware software integration – product testing techniques–ARM7

UNIT-II OPERATING SYSTEM OVERVIEW

Introduction–AdvantageandDisadvantageofUsingRTOS–Multitasking–Tasks-RealTime Kernels – Scheduler- Non-Preemptive Kernels – Preemptive Kernels – Reentrancy- Reentrant Functions– Round Robin Scheduling- Task Priorities- Static Priorities– Mutual Exclusion–Deadlock– Inter task Communication–Message Mailboxes–Message Queues- Interrupts- Task Management–Memory Management-Time Management–Clock Ticks.

UNIT-III TASK MANAGEMENT

Introduction-µ C/OS-II Features-Goals ofµ C/OS-II-Hardware and Software Architecture–Kernel Structures: Tasks–Task States–Task Scheduling–Idle Task–Statistics Task–Interrupts Under µ C/OS-II–Clock Tick-µ C/OS- II Initialization. Task Management: Creating Tasks–Task Stacks–StackChecking–Task'sPriority–SuspendingTask–ResumingTask.TimeManagement: Delaying a Task–Resuming a Delayed Task–System Time. Event Control Blocks-Placing a Task in the ECB Wait List–Removing a Task from an ECB wait List.

UNIT-IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

Semaphore Management: Semaphore Management Overview– Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox –Deleting Mailbox–Waiting for a Message box–Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue–Deleting a Message Queue–Waiting for a Message Queue–Sending Message to a Queue– Flushing a Queue.

UNIT-V MEMORY MANAGEMENT

Memory Management: Memory Control Blocks–Creating Partition-Obtaining a Memory Block–Returning a Memory Block. Getting Started withµC/OS-II–Installingµ C/OS-II–PortingµC/OS-II: Development Tools–Directories and Files– Testing a Port -IAR Workbench withµ C/OS-II-µ C/OS- II Porting on a 8051CPU– Implementation of Multitasking- Implementation of Scheduling and Rescheduling –Analyze the Multichannel ADC with help ofµC/OS-II.

16BEECOE02 CONSUMER ELECTRONICS **L T P C**

3 0 0 3

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters – Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT–II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system–interlacing–composite video signal. Colour TV– Luminance and Chrominance signal; Monochrome and Colour Picture Tubes- Color TV systems– NTSC, PAL, SECAM-Components of a Remote Control.

UNIT–III OPTICAL RECORDING AND REPRODUCTION

Audio Disc– Processing of the Audio signal–readout from the Disc –Reconstruction of the audio signal–Video Disc–Video disc formats- recording systems–Playback Systems.

UNIT–IV TELECOMMUNICATION SYSTEMS

Telephone services-telephone networks–switching system principles–PAPX switching–Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT–VHOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software;
Components of air conditioning and refrigeration systems.

TEXT BOOK:

1.S.P. Bali, “Consumer Electronics”, PearsonEducation,2005.

16BEECOE03 NEURAL NETWORKS AND ITS APPLICATIONS

L T P C
3 0 0 3

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve real-world problems

UNIT I INTRODUCTION TO NEURAL NETWORKS

Introduction-biological neurons and their artificial models-learning, adaptation and neural network's learning rules-types of neural networks-single layer, multiple layer-feed forward, feedback networks

UNIT II LEARNING PROCESS

Error– correction learning– memory based learning- hebbian learning-competitive learning-Boltzmann learning-supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION

Single layer Perception-Adaptive filtering-unconstrained Optimization-Least-mean square algorithm-Leaning Curve-Annealing Technique-perception convergence Theorem-Relationship between perception and Baye's Classifier-Back propagation algorithm

UNIT IV ATTRACT OR NEURAL NETWORK AND ART

Hopfield model-BAM model -BAM Stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield Design-Application to TSP problem-ART-layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNIT V SELF ORGANIZATION

Self-organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical Vector Quantization. Applications of self-organizing maps: The Neural Phonetic Type Writer Learning Ballistic Arm Movements

16BEECOE04 FUZZY LOGIC AND ITS APPLICATIONS **L T P C**
3 0 0 3

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy fiction and de fuzzy fiction procedures

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT-I

Basics of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT–II

Theory of Approximate Reasoning: Linguistic variables, Fuzzy proportions, Fuzzy if-then statements, inference rules, compositional rule of inference-fuzzy models

UNIT-III

Fuzzy Knowledge Based Controllers (Fkbc): Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzy fiction and de fuzzy fiction procedures–Design of Fuzzy Logic Controller

UNIT-IV

Adaptive Fuzzy Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V

Fuzzy based systems: Simple applications of FKBC-washing machines-traffic regulations-lift control-fuzzy in medical Applications-Introduction to ANFIS.

V A C: Value Added Course

Total Credits earned: 23+24+22+22+23+22+21+22=179

against the specified range –[175-190 Credits]

* Credits for **Mandatory Courses (MC)** are not counted for computation of CGPA.The passing minimum for **Mandatory Courses (MC)** is 50 marks out of 100 Marks.There will be two tests, of which one will be class test covering 50% of syllabus for 50 marks and other class test covering next 50% of syllabus for 50 marks.[Total 50+50=100Marks].

Interested students can opt one self study course in the Seventh semester from open electives which will be reflected in the mark sheets, only if he/she passes in the course.

7	Project work, seminar and internship	PW
8	Mandatory Courses(Value addition)	MC

**--Skill Development
**--Employability
**--Entrepreneurship

PROGRAM OUTCOMES: On successful completion of the programme,

a	Apply the Mathematical knowledge and the basics of Science and Engineering to solve the problems pertaining to Electronics and Instrumentation Engineering.
b	Identify and formulate Electrical and Electronics Engineering problems from research literature and be ability to analyze the problem using first principles of Mathematics and Engineering Sciences.
c	Come out with solutions for the complex problems and to design system components or process that fulfill the particular needs taking into account public health and safety and the social, cultural and environmental issues.
d	Draw well-founded conclusions applying the knowledge acquired from research and research methods including design of experiments, analysis and interpretation of data and synthesis of information and to arrive at significant conclusion.
e	Form, select and apply relevant techniques, resources and Engineering and IT tools for Engineering activities like electronic prototyping, modeling and control of systems and also being conscious of the limitations.
f	Understand the role and responsibility of the Professional Electrical and Electronics Engineer and to assess societal, health, safety issues based on the reasoning received from the contextual knowledge.
g	Be aware of the impact of professional Engineering solutions in societal and environmental contexts and exhibit the knowledge and the need for Sustainable Development.
h	Apply the principles of Professional Ethics to adhere to the norms of the engineering practice and to discharge ethical responsibilities.
i	Function actively and efficiently as an individual or a member/leader of different teams and multidisciplinary projects.
j	Communicate efficiently the engineering facts with a wide range of engineering community and others, to understand and prepare reports and design documents; to make effective presentations and to frame and follow instructions.
k	Demonstrate the acquisition of the body of engineering knowledge and insight and Management Principles and to apply them as member / leader in teams and multidisciplinary environments.
l	Recognize the need for self and life-long learning, keeping pace with technological challenges in the broadest sense.

PROGRAM SPECIFIC OUTCOMES:

m	Apply the Mathematical knowledge and the basics of Science and Engineering to solve the problems pertaining to Electronics and Instrumentation Engineering
n	Identify and formulate Electrical and Electronics Engineering problems from research literature and be able to analyze the problem using first principles of Mathematics and Engineering Sciences.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO 1	Have successful technical and professional careers in their chosen fields such as circuit theory, Field theory, control theory and computational platforms.
PEO 2	Engross in life long process of learning to keep themselves abreast of new developments in the field of Electronics and their applications in power engineering

SEMESTER I

16BECC101 COMMUNICATIVE ENGLISH L T P C 3 0 0 3

Course Objectives:

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- To study formal context

Course Outcomes :

Students undergoing this course will be able to

- Use English language for communication: verbal & non –verbal.
- Enrich comprehension and acquisition of speaking & writing ability.
- Gain confidence in using English language in real life situations.
- Improve word power: lexical, grammatical and communication competence.
- Acquire good vocabulary for easy communication.
- Be familiar with sentence structure and sentence formation

Unit I 9

Listening – Types of listening - Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self - Introduction on one's friend. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative. **Writing** – Formal and Informal letters- Free writing on any topic –My favorite place, hobbies, dreams, goals, etc- - To fill in different application forms. **Grammar** – Articles- WH questions –Yes/No Question - Subject Verb agreement. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit II 10

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions - Telephone etiquette. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages. **Grammar** – Parts of speech – Noun – Verb – Adjectives - Adverbs. **Vocabulary** – Compound Nouns/Adjectives – Irregular verbs.

Unit III **10**

Listening – Listening for specific task – Fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** – Reading and Comprehension. **Writing** - Autobiographical writing – Biographical writing - Instruction writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

Unit IV **8**

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) Letters to the Editor. **Grammar** – Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit V **8**

Listening - Listening to different accents, speeches/presentations. **Speaking**- Extempore talk – Just-a-minute talk. **Reading**-Reading strategies–Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars and notices – Writing proposal. **Grammar** – Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

TOTAL:45 HOURS

TEXT BOOK:

16BECC102 ENGINEERING MATHEMATICS –I L T P C 3 2 0 4

Course Objectives:

1. To develop analyzing skills for solving different engineering problems.
2. To understand the concept of Matrices.
3. To remember the basics of differential calculus and its applications.
4. To apply the problems in differential equations.
5. To Create knowledge about functions of several variables and Sequence
6. To study the algebraic manipulation

Course Outcomes:

The student will be able to

- Acquire the basic knowledge and understanding of mathematics
- Apply advanced matrix knowledge to engineering problems.
- Improve their ability in evaluating geometrical applications of differential calculus problems.
- To solve the problems by applying the differential Equations.
- Evaluating engineering problems involving functions of several variables.
- Understand the concepts of sequences and series.

UNIT I MATRICES 12

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS 12

Overview of Derivatives - Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes- Evolutes as Envelope of normals – Maxima and Minima of functions of two or more Variables – Method of Lagrangian Multipliers

UNIT III DIFFERENTIAL EQUATIONS 11

Linear Differential equations of second and higher order with constant coefficients - Euler's form of Differential equations – Method of variation parameters.

UNIT -IV FUNCTIONS OF SEVERAL VARIABLES 12

Partial derivatives – Euler's theorem for homogeneous functions – Total derivatives – Differentiation of implicit functions – Jacobians –Maxima and Minima of functions of two or more

Variables - Method of Lagrangian multipliers.

UNIT V SEQUENCES AND SERIES **13**

Sequences: Definition and examples – **Series:** Types and Convergence – Series of positive terms – Tests of convergence: Comparison test, Integral test and D'Alembert's ratio test – Alternating series – Leibnitz's test – Series of positive and negative terms – Absolute and conditional convergence.

TOTAL: 60 HOURS

16BEPH103 ENGINEERING PHYSICS L T P C 3 0 0 3

Course Objectives:

- To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology
- Understand the basics of laser and optical fiber with appropriate applications.
- Introduce the concepts of quantum mechanics for diverse applications.
- Impart the basic knowledge of crystal and its various crystal structures.
- Disseminate the fundamentals of nuclear physics and their applications.
- To study the quantum mechanics.

Course Outcomes:

Upon completion of this course, the students will be able to

- Identify the elastic nature of materials and its thermodynamic properties.
- Infer the characteristics of laser and optical fibers for engineering applications.
- Develop the idea of quantum mechanics through applications.
- Identify the different atomic arrangements of crystals and its defects
- Make use of the concepts of sound waves for medical applications
- Illustrate the basic ideas of nuclear reactors for energy resources

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS 9

Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation), poison ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniform bending Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS 9

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER -CO_2, Semiconductor LASER- Applications of LASER in industry and medicine. Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS 9

Introduction to quantum theory – Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electron microscope.

UNIT IV CRYSTAL PHYSICS 9

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS 9

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C –scan displays, Medical applications – Sonogram Introduction – basics about nuclear fission and fusion, nuclear composition –Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

16BECH103 ENGINEERING CHEMISTRY L T P C 3 0 0 3

Course Objectives:

- To gain knowledge on adsorption phenomena.
- To make the students conversant with basics of water technology.
- To make the student acquire sound knowledge of electrochemistry and storage devices.
- To acquaint the student with concepts of fuels and rocket propellants.
- To develop an understanding of the basic concepts of corrosion science.
- To acquaint the students with the basics of surface chemistry

Course Outcomes:

At the end of this course, students will be able to

- Outline the basic principles of chemistry for water treatment (K)
- Examine the electrochemical properties to design non – conventional energy storage devices (S)
- Apply the concepts combustion of different fuels (S)
- Identify the concepts of corrosion and its protection in the engineering field (S)
- Apply the concepts of surface chemistry in the field of engineering (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I WATER TECHNOLOGY 9

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES 9

Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+}vs dichromate) –Electrolytic conductance-application (conductometric titration)-Batteries-Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2-O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION 9

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method -

Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel- Introduction-GCV-NCV-Flue gas analysis.

UNIT IV CORROSION SCIENCE **9**

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings- Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating - Hot dipping.

UNIT V SURFACE CHEMISTRY AND PHASE RULE **9**

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).Phase Rle: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

16BEEE104 BASIC ELECTRICAL ENGINEERING L T P C 3 0 0 3

Course Objectives

- To impart the basic knowledge about the DC Electric circuits.
- To study the working of various Electrical Machines.
- To study the basic concepts of Electrical safety and wiring
- To get the knowledge of Magnetic circuits and its properties
- To impart the basic knowledge about the DC Electric circuits.
- To study the basic of power system

Course Outcomes:

At the end of this course, students will be able to

1. To understand and analyze basic electric and magnetic circuits.
2. Attributing the electric circuits with DC and AC excitation by applying various circuit laws.
3. Attributing the electrical machines and transformer.
4. Evaluate the various digital circuits in real time applications.
5. Analysis various semiconductor devices in real time applications.
6. Reproduce the Measuring Instruments and Electrical Installation.

UNIT I – FUNDAMENTALS OF DC CIRCUITS 9

Introduction to DC and AC circuits, Active and passive two terminal elements, Ohms law, Voltage-Current relations for resistor, inductor, capacitor, Kirchhoff's laws, Mesh analysis, Nodal analysis –equivalent resistor, current division, voltage division

UNIT II – MAGNETIC CIRCUITS 9

Introduction to magnetic circuits-Simple magnetic circuits-Faraday's laws, Lenz law-Flemings rules - induced emfs and inductances-self and mutual inductance.

UNIT III – AC CIRCUITS (Elementary treatment only) 9

Generation of AC, Average and RMS values, Form and peak factors, concept of phasor representation, J operator – representation of AC in rectangular and polar form – power and power factor - Introduction to three phase systems - types of connections, relationship between line and phase values.

UNIT IV–ELECTRICAL MACHINES (Elementary treatment only) 9

Working principle, construction, types and applications of DC machines and AC machines –single phase transformers - single phase induction motors: capacitor start and capacitor start & run motors

UNIT V–ELECTRICAL SAFETY, WIRING AND INTRODUCTION TO POWER SYSTEM 9

Safety measures in electrical system- types of wiring- wiring accessories staircase, fluorescent lamps & corridor wiring- Basic principles of earthing-Types of earthing- protection devices MCB- Fuses and its types –calculation of fuses.

16BEEE105 BASIC ELECTRONICS ENGINEERING L T P C 3 0 0 3

Course Objectives

- To impart the basic knowledge about the basic electronic components.
- To get the operation and characteristics of various semiconductor devices.
- To get the operation and characteristics of various transducers.
- To study the OPTO electronic devices
- To study the different operation of OPTO devices
- To understand the basic concepts of digital electronics.

Course Outcomes:

The students shall develop an

- Intuitive understanding of basic electronic components,
- Intuitive understanding of basic concepts of semiconductor devices,
- Intuitive understanding of basic concepts of Transducers.
- Intuitive understanding of basic concepts of digital electronics
- Able to apply them in practical situation.
- Analysis the real time application of it.

UNIT I- ELECTRONIC COMPONENTS 9

Passive components – resistors, capacitors and inductors -properties, common types, I-V relationship and uses.

UNIT II- SEMICONDUCTOR DEVICES 9

Semiconductor Devices - Overview of Semiconductors - basic principle, operation and characteristics of PN diode, zener diode, BJT, JFET.

UNIT III – OPTOELECTRONIC DEVICES 9

LED, LCD, LDR, Photodiode, Phototransistor, Solar cell, Opto couplers

UNIT IV- TRANSDUCERS 9

Transducers - Instrumentation – general aspects, classification of transducers, basic requirements of transducers, passive transducers - strain gauge, thermistor, Hall-Effect transducer, LVDT, and active transducers – piezoelectric and thermocouple.

UNIT V- DIGITAL ELECTRONICS 9

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressions using logic gates - standard forms of Boolean expression.

16BEPH111 ENGINEERING PHYSICS LABORATORY L T P C 0 0 4 2

Course Objective

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- To learn the band gap of semiconductor

Course Outcome

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young's modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille's method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

16BECH111 ENGINEERING CHEMISTRY LABORATORY L T P C 0 0 4 2

Course Objective

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of alkalinity ions, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To acquaint the students with the determination of molecular weight of a polymer by viscometry
- To carried out different types of titrations for estimation of concerned

Course Outcome

- The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
- Estimate the amount of alkalinity ions, hardness, chloride in water sample
- Measure molecular/system properties of conductance of solutions, EMF etc
- Acquaint the students with the determination of molecular weight of a polymer by visocometry
- Determine the corrosion rate of steel by weight loss method.
- Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Water sample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using $BaCl_2$ vs Na_2 SO_4.
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or $K_2Cr_2O_7$).
10. Estimation of Ferric ion by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometry.
13. Determination of chemical oxygen demand.

16BEEE112 ENGINEERING WORKSHOP PRACTICES LABORATORY L T P C 0 0 4 2

Course Objectives

1. To prepare the students to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
2. to prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice
3. To prepare for understanding operations of CNC machines
4. To prepare for assembling different components in engineering division
5. To prepare for carpenter working tools handling
6. To prepare students for handling the tools in engineering and furnace division

Course Outcomes

At the end of this course, students will be able to

1. Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry, to fabricate components using different materials.
2. Students will be able to fabricate components with their own hands.
3. They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
4. By assembling different components, they will be able to produce small devices of their interest.
5. Acquire knowledge of various different tools handling in engineering division
6. Knowledge gathering in casting and welding process too

PART – A (MECHANICAL)

i. WELDING

i. Preparation of arc welding of butt joints, lap joints and tee joints.

ii. BASIC MACHINING

i. Simple Turning and Taper turning
ii. Drilling and Tapping
iii. Sheet Metal Work
iv. Model making – Trays, funnels, etc.

iii. DEMONSTRATION ON

i. Smithy operations
ii. Foundry operations
iii. Plumbing Works
iv. Carpentary Works

PART –B (ELECTRICAL & ELECTRONICS)

iv. **ELECTRICAL ENGINEERING**

i. Study of electrical symbols and electrical equipments.
ii. Construct the wiring diagram for Stair case wiring and Fluorescent lamp wiring.
iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter.
iv. Measurement of electrical quantities – voltage, current, power & power factor in R load.
v. Measurement of energy using single phase energy meter.

v. **ELECTRONICS ENGINEERING**

i. Study of Electronic components– Resistor (color coding), capacitors and inductors.
ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
iii. Study of logic gates AND, OR, NOT, NOR and NAND.
iv. Study of HWR and FWR.

16BEEE113 COMPUTER PRACTICE AND PROGRAMMING LABORATORY
L T P C 1 0 4 3

Course Objectives

- Identify and understand the working of key components of a computer program.
- Identify and understand the various kinds of keywords and different data types of C programming
- Understand, analyze and implement software development tools using algorithm
- Understand, analyze and implement software development tools using linux
- Acquire and analyze the roots of equations
- Study, analyze and understand logical structure of a computer program, and different construct to develop a program in "C" language

Course Outcomes:

The course will enable the students.

1. To formulate simple algorithms for arithmetic and logical problems.
2. To translate the algorithms to programs(in C language).
3. To test and execute the programs and correct syntax and logical errors.
4. To implement conditional branching, iteration and recursion.
5. To decompose a problem in to functions and synthesize a complete program using divide and conquer approach. and use arrays, pointers and structures to formulate algorithms and programs.
6. To apply programming to solve matrix addition and multiplication problems and searching and sorting problems.

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords-General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings-Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheet and presentation software in Linux
2. Programming in Scratch:
   Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming

3. C Programming:
   Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

TOTAL: 45 HOURS

16BECC151* **HUMAN VALUES** **L T P C** **1 0 0**

Course Objectives

1.To help the students appreciate the essential complementarily between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity, which are the core aspirations of all human beings

2. To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of Existence.

3. To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behaviour and mutually enriching interaction with Nature.

4.To know the value of being a human being.

5.To provide a much needed orientational input in value education to the young enquiring minds.

6.To study the value of being a useful citizen.

Course Outcomes

1.To involves a systematic and rational study of the human being vis-à-vis the rest of existence.

2. To make free from any dogma or value prescriptions.

3. To analysis process of self-investigation and self-exploration, and not of giving sermons.

4. This process of self-exploration takes the form of a dialogue between the teacher and the students to begin with, and then to continue within the student leading to continuous self-evolution.

5. This self-exploration also enables them to critically evaluate their pre-conditionings and present beliefs.

6. To Educate the values and meaning of life in the young minds and to transform them as responsible citizens

UNIT I **4**

Human life on Earth - Concept of Human Values - Value Education - Aim of education and value education - Types of values - Components of values – Attitudes – types of attitudes

UNIT II **4**

Self Development : Self analysis – Goal Setting - Thought Analysis – Guarding against Anger - Respect to age, experience, maturity, family members, neighbors, co-workers

UNIT III **5**

Individual Qualities – Truthfulness – Constructivity – Sacrifice – Sincerity - Self Control – Altruism – Tolerance - Scientific Vision – Regulating Desire

UNIT IV **4**

Mind Culture - Modern Challenges of Adolescent - Emotions and behavior - Sex and spirituality - Adolescent Emotions - Meditation

UNIT V **3**

Body and Mind Fitness : (a) Physical Exercises (b) Activities: (i) Moralization of Desires (ii) Neutralization of Anger (iii) Eradication of Worries (iv) Benefits of Blessings .

TOTAL: 20 HOURS

SEMESTER II

16BECC201A BUSINESS COMMUNICATION L T P C 3 0 0 3

Course Objectives:

- To help students comprehend the role of listening skills in effective communication.
- To familiarize students with verbal and non-verbal communication.
- To expose students to neutral accent.
- To develop emotional intelligence skills in them for enhancing their self-esteem.
- To assist them in setting goals and developing positive attitude.
- To enable students to acquire decision making skills, problem solving

Course Outcomes:

- Design and deliver a persuasive presentation that convinces the audience of the topic's relevance and overcomes resistance, using appropriate visual support and adhering to a specified time limit.
- Use a strategic communication model and critical thinking to identify objectives, analyze audiences, and choose the most effective structure and style for delivering strategically sound written and spoken messages.
- Practice principles of effective business writing and document design in all written documents.
- Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
- Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.
- Acquire decision making skills, problem solving skills and assertive skills.

UNIT I 9

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II 9

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- Description of Graphics and visual aids - interpretation of graphs using expressions of comparison and contrast .

UNIT III 9

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone Etiquette-

Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body langage – Etiquette- Organization of presentation – brain storming- Negotiations.

UNIT - IV **9**

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT - V **9**

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

16BECC201B TECHNICAL ENGLISH L T P C 3 0 0 3

Course Objectives:

- To motivate learners to acquire listening & speaking skills in both formal and informal context
- To focus on question forms & to make them understand the important of using question tags and also the functional use of transformation of sentences.
- To improve their reading habit and to train them in critical and analytical reading
- To equip them to write for academic as well as work place context
- To enable students to face interviews
- To study the receptive and productive skills

Course Outcomes:

Students undergoing this course will be able to

- Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
- Enhance them reading texts critically and analytically
- Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
- Enrich the ability to face interviews with confidence.
- Enable to write documents and formal written communication
- Admire and appreciate elegancy in communication.

UNIT-1 10

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentences - Question tags. **Vocabulary** – Homonyms and Homophones.

UNIT-II 8

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar** - Modal verbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs - Idioms.

UNIT – III 9

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R)**Writing** - Essay writing -Minutes of meeting - Agenda – **Grammar** - Active and Passive voice - Purpose expression. **Vocabulary** - Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV **8**

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication. **Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Job application - Resume writing - Checklist preparation. **Grammar** - Numerical expressions – Collocations - **Vocabulary** - Singular and Plural (Nouns)

UNIT- V **10**

Listening – Types of listening- Improving listening comprehension**. Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing- **Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

TOTAL: 45 HOURS

16BECC202 ENGINEERING MATHEMATICS- II L T P C 3 2 0 4

Course Objectives:

- To have knowledge in integral calculus and Vector calculus
- To expose the concept of Analytical function and Complex integration.
- The syllabus is designed to develop the use of integrals techniques which is needed by Engineers for practical applications.
- It aims to equip the students in integration to solve engineering problems
- To learn Basic concepts of multiple and vector integrals.
- To study complex integration

Course Outcomes:

The student will be able to

- Solve problems in Fluid Dynamics, Theory of Elasticity, heat and mass transfer etc.
- Find the areas and volumes using multiple integrals
- Improve their ability in Vector calculus
- Expose to the concept of Analytical function.
- Apply Complex integration in their Engineering problems
- Analysis the real time application of it.

UNIT-I MULTIPLE INTEGRALS 11

Double integral – Cartesian coordinates – Polar coordinates – Change of order of integration – Triple integration in Cartesian co-ordinates – Area as double integrals.

UNIT-II VECTOR CALCULUS 13

Gradient, Divergence and Curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector integration – Green's theorem, Gauss divergence theorem and Stoke's theorems (Statement Only)- Surfaces : hemisphere and rectangular parallelopipeds.

UNIT- III PARTIAL DIFFERENTIAL EQUATIONS 11

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

UNIT-IV ANALYTIC FUNCTIONS 12

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: w = z+a, az, 1/z and bilinear transformation.

UNIT-V COMPLEX INTEGRATION 13

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi circle (excluding poles on the real axis).

16BEPH203	ENGINEERING PHYSICS	L T P C	3 0 0 3

Course Objectives:

- To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology
- Understand the basics of laser and optical fiber with appropriate applications.
- Introduce the concepts of quantum mechanics for diverse applications.
- Impart the basic knowledge of crystal and its various crystal structures.
- Disseminate the fundamentals of nuclear physics and their applications
- To inculcate the characteristics of electronic materials through basics.

Course Outcomes

- Identify the elastic nature of materials and its thermodynamic properties.
- Infer the characteristics of laser and optical fibers for engineering applications.
- Develop the idea of quantum mechanics through applications.
- Identify the different atomic arrangements of crystals and its defects
- Make use of the concepts of sound waves for medical applications
- Illustrate the basic ideas of nuclear reactors for energy resources

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS 9

Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation), poison ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniform bending Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS 9

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER -CO_2, Semiconductor LASER- Applications of LASER in industry and medicine.Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS 9

Introduction to quantum theory – Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electron microscope.

UNIT IV CRYSTAL PHYSICS **9**

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS **9**

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C –scan displays, Medical applications – Sonogram Introduction – basics about nuclear fission and fusion, nuclear composition –Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

16BECH203 **ENGINEERING CHEMISTRY** **L T P C** **3 0 0 3**

Course Objectives:

- To gain knowledge on adsorption phenomena.
- To make the students conversant with basics of water technology.
- To make the student acquire sound knowledge of electrochemistry and storage devices.
- To acquaint the student with concepts of fuels and rocket propellants.
- To develop an understanding of the basic concepts of corrosion science.
- To acquaint the students with the basics of surface chemistry.

Course Outcomes

Upon completion of the course the students will be able to

- Outline the basic principles of chemistry for water treatment (K)
- Examine the electrochemical properties to design non – conventional energy storage devices (S)
- Apply the concepts combustion of different fuels (S)
- Identify the concepts of corrosion and its protection in the engineering field (S)
- Apply the concepts of surface chemistry in the field of engineering

UNIT I WATER TECHNOLOGY **9**

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES **9**

Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+} vs dichromate) –Electrolytic conductance-application (conductometric titration)-Batteries-Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2-O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION **9**

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and

Fischer-Tropsch method - Knocking
- Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel- Introduction-GCV-NCV-Flue gas analysis.

UNIT IV CORROSION SCIENCE **9**

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings- Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating - Hot dipping.

UNIT V SURFACE CHEMISTRY AND PHASE RULE **9**

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

16BECC204 ENVIRONMENTAL SCIENCES L T P C 3 0 0 3

Course Objectives

- To give a comprehensive insight into natural resources, ecosystem and biodiversity.
- To educate the ways and means of the environment
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures
- To impart knowledge on ecosystem and biodiversity.
- To motivate public to participate in environment protection and improvement.

Course Outcomes (COs)

Upon completion of the course the students will be able to

- Recognize the importance of natural resources (S)
- Associate themselves with the various ecosystems (S)
- Describe the importance of biodiversity (S)
- Identify and minimize the difference pollutions (S)
- Prioritize and analyses the social issues (S)
- Integrate the environmental principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES **9**

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over- exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM **9**

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY **9**

Introduction to biodiversity, Definition- Genetic diversity, Species diversity and Ecosystem diversity, Bio-geographical classification of India, Importance of biodiversity- Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION **9**

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT **9**

From Unsustainable to Sustainable development, Urban problems related to energysources,Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

Course Objectives

- To gain knowledge on the principles and procedure for the Analysis of Circuits.
- To enable the students to understand the DC circuit analysis and network theorems.
- To learn the Sinusoidal steady state analysis.
- To Obtain the solution of first and Second order system
- To learn and analyze the electrical circuits using Laplace Transforms.
- To understand transients and resonance in RLC circuits and coupled circuits.

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Apply network theorems for the analysis of electrical circuits.
- Obtain the solution of first and Second order system
- Analyze the electrical circuits using Laplace Transforms.
- Obtain the transient and steady-state response of electrical circuits.
- Analyze circuits in the sinusoidal steady-state (single-phase and three-phase).
- Analyze two port circuit behavior.

UNIT I BASIC CIRCUITS ANALYSIS 12

Ohm's Law – Kirchoffs laws – DC and AC Circuits – Resistors in series and parallel circuits – Mesh current and node voltage method of analysis for D.C and A.C. circuits.

UNIT II NETWORK REDUCTION AND NETWORK THEOREMS FOR DC 12

Network reduction: voltage and current division, source transformation – star delta conversion. Thevenin's and Norton & Theorem – Superposition Theorem – Maximum power transfer theorem – Reciprocity Theorem.

UNIT III RESONANCE AND COUPLED CIRCUITS 12

Series and parallel resonance – their frequency response – Quality factor and Bandwidth - Self and mutual inductance – Coefficient of coupling – Tuned circuits – Single tuned circuits.

UNIT IV TRANSIENT RESPONSE FOR DC CIRCUITS 12

Transient response of RL, RC and RLC Circuits using Laplace transform for DC input and A.C. with sinusoidal input.

UNIT V ANALYSING THREE PHASE CIRCUITS 12

Three phase balanced / unbalanced voltage sources – analysis of three phase 3-wire and 4-wire circuits with star and delta connected loads, balanced & un balanced – phasor diagram of voltages and currents – power factor measurements in three phase circuits.

16BEPH211 ENGINEERING PHYSICS LABORATORY L T P C 0 0 4 2

Course Objective

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure
- To learn the bandgap of semiconductor

Course Outcome

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric circuits

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young’s modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille’s method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

16BECH211 ENGINEERING CHEMISTRY LABORATORY L T P C 0 0 4 2

Course Objective

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of alkalinity ions, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To acquaint the students with the determination of molecular weight of a polymer by viscometry
- To carried out different types of titrations for estimation of concerned in materials
- To study the molecular weight and degree of polymerization using viscometry.

Course Outcome

- The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
- Estimate the amount of alkalinity ions, hardness, chloride in water sample
- Measure molecular/system properties of conductance of solutions, EMF etc
- Acquaint the students with the determination of molecular weight of a polymer by visocometry
- Determine the corrosion rate of steel by weight loss method.
- Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Water sample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using $BaCl_2$ vs Na_2 SO_4.
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or $K_2Cr_2O_7$).
10. Estimation of Ferric ion by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometry.
13. Determination of chemical oxygen demand.

16BEEE212 ELECTRIC CIRCUITS LABORATORY L T P C 0 0 3 2

Course Objective

- To impart the basic knowledge about the Electric circuits.
- To understand the different electrical measurements.
- To understand the working of oscilloscope.
- To acquire the knowledge of network theorems
- To observe and analyze the electrical parameters in RLC resonance circuits
- To experiment the basic laws in voltage and current

Course Outcomes (Cos)

At the end of this course, students will demonstrate the ability

- To understand and analyze basic electric circuits.
- Getting basic practical knowledge about the DC Electric circuits.
- Getting knowledge about the testing of different network theorems using simple circuits.
- To introduce basic electrical equipments in the lab
- To enable the students to analysis the basic laws using simple circuits.
- Apply the knowledge in real time application.

LIST OF EXPERIMENTS

1. Study of Electrical Measurements and the Oscilloscope.
2. Study of Potentiometers and Rheostats.
3. Study and verify of Series Circuits, Parallel Circuits and Series-Parallel Circuits in DC Circuits.
4. Study and verify of Ohm's Law and Kirchoff's law.
5. Study and verify of Mesh Analysis.
6. Study and verify of Nodal Analysis.
7. Verification of Superposition Theorem
8. Verification of Thevenin's Theorem
9. Verification of Maximum Power Transfer Theorem
10. Verification of Series RLC Resonance and Parallel RLC Resonance.

16BEEE213 ENGINEERING GRAPHICS L T P C 1 0 4 3

Course Objectives

- To prepare the students to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice
- To prepare the students for creating drawings in engineering
- To prepare the students for getting experience in engineering graphics
- To prepare the students for getting experience in engineering solid modelling and computer aided design
- To prepare the students to get better understandings in projection of solids.

Course Outcomes

On Completion of the course the student will be able to

- Perform free hand sketching of basic geometrical constructions and multiple views of objects.
- Do orthographic projection of lines and plane surfaces.
- Draw projections and solids and development of surfaces.
- Prepare isometric and perspective sections of simple solids.
- Demonstrate computer aided drafting.
- Analysis the real time application of it

UNIT I INTRODUCTION (3 +10)

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES (3 + 10)

SCALES: Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING (3 + 12)

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES (3 + 12)

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS (3 + 12)

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

INTRODUCTION TO DRAFTING SOFTWARE/PACKAGE (NOT FOR EXAM) (4)
Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

16BECC251* **APTITUDE TRAINING** **L T P C** **1 0 0 -**

COURSE OBJECTIVES

1. To understand the basic concepts of QUANTITATIVE ABILITY
2. To understand the basic concepts of LOGICAL REASONING Skills
3. To acquire satisfactory competency in use of VERBAL REASONING
4. To solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
5. To solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
6. To compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

COURSE OUTCOMES

1. Understand the basic concepts of QUANTITATIVE ABILITY
2. Understand the basic concepts of LOGICAL REASONING Skills
3. Acquire satisfactory competency in use of VERBAL REASONING
4. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
5. Solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
6. Compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc

UNIT I

Introduction, Speed Math's, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT II

Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest

UNIT III

Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation and Combination

SEMESTER III

16BEEE301A METHODS OF APPLIED MATHEMATICS L T P C 3 2 0 4

Course Objectives

1. To hone the analytical skills in the minds of Engineers.
2. To provide sound foundation in the mathematical fundamentals necessary to formulate, solve and analyze Engineering problems.
3. To study the Fourier series
4. To study the basic principles of different transforms.
5. To study the application of PDE
6. To study the difference equations

Course Outcomes:

Upon Completion of this course the students will be able to:

1. Explain the fundamental concepts of probability and standard distributions which can describe real life phenomenon.
2. Explain the basic concepts of one- and two-dimensional random variables and their applications in engineering.
3. Apply the concept of testing of hypothesis for small and large samples in real life problems.
4. Apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.
5. Discuss the notion of sampling distributions and statistical techniques used in engineering and management problems.
6. Discuss about the techniques in quality control that model engineering problems.

UNIT I LAPLACE TRANSFORM 13

Transforms of elementary functions – Basic properties – Transforms of derivatives and integrals – Initial and final value theorems. Inverse Laplace transforms – Convolution theorem (statement only) – Solution of Ordinary Differential Equations with constant coefficients using Laplace transforms – Transform of periodic functions.

UNIT II FOURIER SERIES 12

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT III FOURIER TRANSFORM 12

Fourier integral theorem (Statement Only) – Fourier transform pair –Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity – Relation between Fourier and Laplace transforms

UNIT IV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS 12

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded)

UNIT V Z -TRANSFORM AND DIFFERENCE EQUATIONS 10

Z-transform - Elementary properties – Inverse Z- transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z - transform.

16BEEE301B LINEAR ALGEBRA AND SPECIAL FUNCTIONS L T P C 3 2 0 4

Course Objectives:

1. To develop analytical skills for solving engineering problems
2. To make the students to study about linear algebra and some useful special functions.
3. To study the linear transformations
4. To get knowledge about inner product spaces
5. To study the hyperbolic function
6. To study the Bessel function

Course Outcomes:

- Be able to acquire basic knowledge on vector spaces and linear transformations.
- Be able to build and solve the special functions.
- Apply the concept of testing of hyperbolic functions for small and large samples in real life problems.
- Apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.
- Discuss the notion of sampling distributions and statistical techniques used in engineering and management problems.
- Discuss about the techniques in quality control that model engineering problems

UNIT I VECTOR SPACES 12

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II LINEAR TRANSFORMATIONS 12

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT III INNER PRODUCT SPACES 12

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

UNIT IV HYPERBOLIC FUNCTIONS, BETA AND GAMMA FUNCTIONS 12

Hyperbolic functions: Hyperbolic functions and Inverse Hyperbolic functions – Identities – Real and imaginary parts – solving problems using hyperbolic functions.

Beta And Gamma Functions : Definitions – Properties – Relation between beta and gamma integrals – Evaluation of definite integrals in terms of beta and gamma functions.

UNIT V BESSEL FUNCTIONS 12

Bessel Functions – Preliminaries – Definitions – Bessel Differential Equation – Differential recurrence relations – the pure recurrence relation – A generating function – Bessel's integral – Index half and odd integer.

16BEEE302 **ELECTRICAL MACHINES- I** **L T P C 3 0 0 3**

Course Objectives

- To study the working principles of electrical machines using the concepts of electromechanical energy conversion principles and derive expressions for generated voltage and torque developed in all Electrical Machines.
- To stidy the concepts of magnetic fields
- To study the concepts of magnetic circuits.
- To study the working principles of DC machines as Generator types, determination of their no-load/load characteristics, starting and methods of speed control of motors.
- To estimate various losses taking place in D.C. Motor
- To study the different testing methods to arrive at their performance.

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Understand the concepts of magnetic fields
2. Understand the concepts of magnetic circuits.
3. Understand the operation of dc machines.
4. Analyze the differences in operation of different dc machine configurations.
5. Analyze the single phase transformers circuits.
6. Analyze the three phase transformers circuits.

UNIT I DC GENERATORS **9**

Definitions – Basic laws and rules – Construction and operation - types - Emf equation - Commutation – Armature reaction Applications

UNIT II DC MOTORS **9**

Definitions – Basic laws and rules - Operation - types – Back Emf equation - Torque equation - Starters – Speed control - Applications

UNIT III TESTING OF DC MACHINES **9**

Losses and efficiency – Swinburne's, Hopkinson's and load tests – Retardation test – Electric braking.

UNIT IV SINGLE PHASE TRANSFORMER **9**

Principle of operation – Types and construction–EMF equation-. Phasor diagram - Open Circuit and Short circuit test– Equivalent circuit – Load test – Regulation and efficiency -All day efficiency – Sumpner's tes- applications.

UNIT V THREE PHASE TRANSFORMER **9**

Principle of operation – Types and construction -Three phase transformers connections – Scott connection – Parallel operation - Auto transformers- Inrush current phenomenon and its prevention – Off-load and On-load tap changing- applications

16BEEE303 ELECTROMAGNETIC THEORY L T P C 3 0 0 3

Course Objectives

- To introduce the basic mathematical concepts related to electromagnetic vector fields
- To impart knowledge on the concepts of electrostatics, electrical potential, energy density and their applications.
- To impart knowledge on the concepts of magnetostatics, magnetic flux density, scalar and vector potential and its applications.
- To impart knowledge on the concepts of Faraday's law, induced emf and Maxwell's equations
- To impart knowledge on the concepts of Concepts of electromagnetic waves and Pointing vector.
- To study the different thermodynamic fields

Course Outcomes

At the end of the course, students will demonstrate the ability

1. To understand the basic laws of electromagnetism.
2. To obtain the electric and magnetic fields for simple configurations under static conditions.
3. To understand the concept of Conductors, Dielectrics and Capacitance.
4. To analyze time varying electric and magnetic fields.
5. To understand Maxwell's equation in different forms and different media.
6. To understand the propagation of EM waves.

UNIT I INTRODUCTION 9

Sources and effects of electromagnetic fields – Vector fields – Different co- ordinate systems – Divergence theorem – Stoke's theorem.

UNIT II ELECTROSTATICS 9

Coulomb's Law – Electric Field Intensity – Field Due to Point, Line, Surface and Volume Charges – Electric Flux Density - Gauss's law and its Application – Electrical Potential — Electrical Field in Free space, conductors – Electric Field due to infinite long Conductors, circular loop – Boundary Conditions, Poisson's and Laplace's equations – Capacitance – Energy Stored in Capacitance – Energy Density .

UNIT III MAGNETOSTATICS 9

Lorentz law of force, Magnetic Field Intensity- Biot Savarts law – Ampere's Law – Magnetic Field due to Straight Conductors, circular loop,– Magnetic flux density (B) – B in free space, conductor, Magnetic Materials- Magnetization – Magnetic Field in Multiple Boundary Conditions – Magnetic Force – Self Inductance and Mutual Inductance – Inductance of Solenoids, Toroids.

UNIT IV ELECTRODYNAMIC FIELDS 9

Faraday's laws, Maxwell's Equations (differential and integral forms) – Conduction Current and Displacement Current – Relation between Field Theory and Circuit Theory.

UNIT V ELECTROMAGNETIC WAVES 9

Generation – Electromagnetic Wave Equations –Wave Propagation in Free Space, Dielectrics and conductors – Skin Depth, Pointing Theorem – Plane Wave Reflection and Refraction.

16BEEE304 ELECTRONIC DEVICES AND CIRCUITS L T P C 3 0 0 3

Course OBJECTIVES

- Understand electronic systems with a continuously variable signal
- Understand proportional relationship between a signal and a voltage or current that represents the signal.
- To learn function of basic component's use in linear circuits.
- Understand component symbol, working principle, classification and specification.
- To get more understanding about amplifies and oscillators
- To learn different theorems for simplification of basic linear electronics circuits.

Course Outcomes

- To impart knowledge on semiconductor devices,
- Understand the working of amplifiers,
- Understand the working of oscillators,
- Understand the working of pulse circuits.
- Analysis the real time application of semiconductor diode
- Analysis the application of amplifier, transistor and special devices

UNIT I SEMICONDUCTOR DIODE 9

Theory of p-n junction – p-n junction as diode – p-n diode currents – Volt-amp characteristics –
Diode resistance – Temperature effect of p-n junction – Transition and diffusion capacitance of p-n diode – zener diode -Diode switching times.

UNIT II TRANSISTOR 9

Junction transistor – Transistor construction CE, CB and CC configurations – Transistor switching times Voltage rating –Junction field effect transistor–pinch off voltage– output and transfer characteristics

UNIT III AMPLIFIER 9

CE, CC and Common base amplifiers –Differential amplifiers-Push-pull amplifiers - Negative feedback amplifiers - Voltage / current, series/shunt -Single and double tuned amplifier.

UNIT IV MISELLANEOUS DEVICES 9

Construction and operation: Solar cell, photodiode, photo transistor, opto coupler and laser diode, UJT, thermistors, piezo electric devices, MOSFETS–FET as a variable resistor.

UNIT V OSCILLATORS AND PULSE CIRCUITS 9

Oscillators – Colpitts, Hartley, Phase shift, Wien bridge and crystal oscillators. RC Diode clampers and clippers, Wave shaping circuits: Multivibrators types – Schmitt triggers – UJT based saw tooth oscillators- varactor diode**,** tunnel diode -LDR, LEDs, LCDs.

16BEEE305A RENEWABLE ENERGY SOURCES L T P C 3 0 0 3

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.

Course Outcomes

At the successful completion of this course, the student is expected to have/be able to:

- List and generally explain the main sources of energy and their primary applications in the US, and the world.
- Describe the challenges and problems associated with the use of various energy sources, including fossil fuels, with regard to future supply and the environment.
- Discuss remedies/potential solutions to the supply and environmental issues associated with fossil fuels and other energy resources.
- List and describe the primary renewable energy resources and technologies.
- Analyze the different energy sources
- Students gathered the real time inter connected system modeling in wind power

UNIT I INTRODUCTION 9

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY 9

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY 9

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines . Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY 9

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES 9

Bio energy and types –Ful cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

16BEEE305B POWER PLANT ENGINEERING L T P C 3 0 0 3

Course Objectives

- To learn the economics connected with power generation.
- To understand the measurements of various parameter in power plant and their control.
- To study about Powerplant instrumentation
- To acquire knowledge of renewable power system
- To study about technologies of distributed system
- To study layout and working of thermal, nuclear and hydropower plants.

Course Outcomes

At the end of the course the student will gain knowledge about

1. Economics of power generation, layout and working of thermal, nuclear and hydropower plants.
2. Distributed generation, boiler turbine monitoring system.
3. Assess the instrumentation available in the plant
4. Demonstrate the monitoring control in the plant
5. Analyze the various cost arrivals for various TARIFF consumers
6. Analysis the real time application of it.

UNIT I ECONOMICS OF POWER GENERATION 9

Choice of power plant; Load management; Number and size of generating unit; Cost of electrical energy; All types of tariff – Calculation – Power factor improvement.

UNIT II THERMAL POWER PLANT 9

Plant layout; Selection of site – Types of thermal power plants; Steam power plant based on fossil fuels; Thermal power plant equipment: Boiler, economizer, super heater, condenser, combustion chamber and gas loops, turbines, auxiliaries; Instrumentation and control; Heat balance.

UNIT III GAS POWER PLANT 9

Open and close cycles; Regeneration; Inter–cooling and reheating; Steam – gas power plant; Combined cycle power plant ; Plant protection ; Instrumentation and Control; Plant management; Plant layout; Optimized Generation; Load flow.

UNIT IV HYDRO POWER PLANT 9

Mass curve and storage capacity; Classification; Components; Turbines – Characteristics and their selection; Governor; Plant layout and design; Auxiliaries; Underground, automatic, remote controlled, and pumped storage plants. Optimized Generation.

UNIT V NUCLEAR AND DIESEL – ELECTRIC POWER PLANTS 9

Nuclear reactors and fuels; Radioactivity; Mass defect and binding energy; Chain reaction; Materials used in nuclear plants; Types of reactors. Diesel–electric Power Plant: Fields of use; Sub–systems; Starting and stopping; Heat balance; Plant layout and design; Remote operation; Auxiliaries.

16BEEE311 ELECTRICAL MACHINES – I LABORATORY L T P C 0 0 3 2

Course Objective

- To impart the basic knowledge about the Electric circuits.
- To understand the working of Electrical Machines and Transformers.
- To observe the speed control experiments in DC motor
- To acquire the knowledge of energy consumption measurements in single phase system
- To observe and analyze the electrical parameters in R load
- To experiment the basic laws in voltage and current

Course Outcomes (Cos)

At the end of this course, students will demonstrate the ability

- To understand and analyze basic electric and magnetic circuits.
- Getting basic practical knowledge about the Electric circuits.
- Getting knowledge about the testing of Electrical Machines and Transformers.
- To observe the speed control experiments in DC moto
- To study the working principles of electrical machines and power converters.
- Gathered knowledge of commercial system energy calculations

LIST OF EXPERIMENTS

1. Open circuit characteristics and load test on separately excited DC generator.
2. Open circuit characteristics and load test on DC compound generator.
3. Open circuit characteristics and load test on DC shunt generator.
4. Load test on DC shunt motor.
5. Load test on DC series motor.
6. Load test on DC compound motor.
7. Swinburne’s test and speed control on DC shunt motor.
8. OC and SC tests on single phase transformer.
9. Load test on single phase transformer.
10. Sumpner’s test.

16BEEE312 ELECTRONIC DEVICES AND CIRCUITS LABORATORY L T P C 0 0 3 2

Course Objectives

- To introduce the fundamentals of BJT
- To impact FET input and output characteristics
- To impact JFET input and output characteristics
- To learn knowledge of transistor
- To study about oscillator
- To study the design and implementation of various electronic circuits

Course Outcomes

- To analysis FET input and output characteristics
- To analysis JFET input and output characteristics
- To demonstrate the knowledge of transistor
- To analysis real time application of oscillator
- To design and implementation of various electronic circuits
- To analysis the real time application of it

LIST OF EXPERIMENTS

1. Static characteristics of semiconductor diode.
2. Characteristics of Zener diode and study of simple voltage regulator circuits.
3. Static Characteristics of transistor configuration.
4. Static and transfer characteristics of JFET.
5. Differential amplifier using FET.
6. Static characteristics of UJT.
7. Characteristics of Photodiode and Phototransistor.
8. Colpitts oscillator.
9. RC Phase shift oscillator.
10. Frequency response of common emitter amplifier.

16BEEE313 BASIC SIMULATION LABORATORY FOR ELECTRICAL SYSTEMS

L T P C 0 0 3 2

Course Objectives

- To impart knowledge on the MATLAB software
- To study about Simulink creation using MATLAB
- To study Electrical CAD
- To get knowledge about proteus
- To get knowledge about PLC
- To study about PLC language

Course Outcomes (COs)

- To analysis real time project in MATLAB software
- To analysis real time project using MATLAB coding
- To analysis real time project in Electrical CAD
- To analysis real time project in proteus
- To analysis real time project in PLC
- To analysis real time project using PLC language

LIST OF EXPERIMENTS

1. Introduction to MATLAB, Starting and Quitting MATLAB, Basic Commands, Working with Matrices.
2. MATLAB Expressions, Relational and Logical Operations, Plotting Function Complex and Statistical Functions, Input / Output of Variables Flow Control.
3. MATLAB Simulink Basic; Starting Simulink - Basic Elements - Building a System - Gathering Blocks - Modifying the Blocks - Connecting the Blocks - Running Simulations.
4. Introduction to Electrical CAD : Schematic components and Symbol Builder.
5. Electrical CAD: Circuit Builder Component tools and Wire/Wire number tools.
6. Introduction to Proteus: Create and name a new file, Insert segment(s) into the session, Edit each segment and Segment Parameters.
7. Proteus: Test segments in real time, save the finished session and Transfer it to Proteus.
8. Proteus: Create a model and test it.
9. Introduction to Programmable Logic Controller (PLC): Program Files, Data Files and input/ output table file operation.
10. Programmable Logic Controller (PLC): Program Scan, Scan Process, Data flow overview, Scan Patterns and PLC Programming Language.

16BEEE351*　　INTRODUCTION TO SOLAR PV DESIGN　　L T P C　　1 0 0 –

Course Objectives

- Understanding the basic concepts of solar power plant.
- Learn the working of PV cell
- Learn the different types of modules
- Learn the application of it
- Gain information regarding maintenance of solar power plant.
- Gain information regarding installation of solar power plant.

Course Outcomes

The students will able to

- Acquire knowledge on PV Module and equipment present in solar power plant
- Understand the installation and maintenance procedures of PV plant
- Design and Select batteries and inverters for PV module.
- Sizing and selection of PV panels
- Arriving the models of accessories needed for solar power plant
- Analysis the real time application

UNIT I INTRODUCTION

Introduction about Solar Energy- History of Photovoltaic System- PV module (Solar Cell) – Types of PV Module – Manufacturing of PV Module – Testing of PV Module – Working Principle of PV Cell – Overview of Solar Power Plant – working Principle of Solar Power Plant – Grid Tie System – Stand Alone System – India 2030 – Selection of PV Module – Inverter – Selection of Inverter – Battery – Selection of Battery – Cable – Selection of Cable – Charger Controller Unit – MPPT – Junction Box.

UNIT II PV SYSTEM

Load List Preparation – Design Sizing & Calculation on PV Panels – Series & Parallel Connection – Site selection – Detailed Introduction on Installation – Installation Techniques – Maintenance of PV Panel & Battery – Importance of Maintenance – Application of photovoltaic system – Advantages & Disadvantages of photovoltaic system.

UNIT III SELECTION & DESIGN

Hands on Practice – Sizing & Calculation on PV Panels to find the number of Panels required for given load - Design & Selection of Battery – Selection of Inverters.

16BEEE401 **ELECTRICAL MACHINES II** **L T P C 3 2 0 4**

Course Objectives

- To learn Construction and performance of salient and non–salient type synchronous generators.
- To get the knowledge of operation and performance of synchronous motor.
- To study and understand the concept of AC machine windings.
- To study and understand the concepts of rotating magnetic fields.
- To study the operation and performance of 3 Phase induction motors and its starting and speed control.
- To study the Construction, principle of operation and performance of single phase induction motors and few special machines

Course Outcomes

At the end of this course, students will demonstrate the ability to
1. Understand the concept of AC machine windings.
2. Understand the concepts of rotating magnetic fields.
3. Understand the operation of ac machines.
4. Analyze performance characteristics Induction Machines.
5. To understand the different types of single phase induction motor based on its starting methods.
6. Understand the operation of synchronous motor and analyze the performance of motor under different loading and excitation conditions.

UNIT I ALTERNATORS 12

Alternators - Types and constructional features - Emf equation-parallel operation - Armature reaction - Load characteristics – Phasor diagram - Predetermination of regulation by EMF, MMF and ZPF methods.

UNIT II TWO REACTION THEORY 12

Basic ideas of two reaction theory - Direct and quadrature axis reactances and their determination - Phasor diagram and regulation of salient pole alternators - Parallel operation - Synchronizing torque - Expression for synchronizing power.

UNIT III SYNCHRONOUS MOTORS 12

Synchronous motors - Principle of operation - Synchronous machines on infinite bus bars - Phasor diagram - V and inverted V curves - Current and power circle diagrams - Hunting and its suppression - Starting methods – Synchronous condenser.

UNIT IV INDUCTION MOTORS 12

Polyphase induction motors - Types and constructional features - Principle of operation - Torque - slip characteristics -Effect of rotor resistance - Equivalent circuit - Circle diagram - Starting and speed control of Induction motor-Introduction to Induction generator.

UNIT V SINGLE PHASE INDUCTION MOTOR 12

Construction and Principle of operation of single phase induction motor- Double revolving field theory –Methods of starting – types- Applications.

16BEEE402 TRANSMISSION AND DISTRIBUTION SYSTEMS L T P C 3 0 0 3

Course Objectives

- To develop expression for computation of fundamental parameters of lines.
- To categorize the lines into different classes and develop equivalent circuits for these classes.
- To study the voltage distribution in insulator strings and cables and methods to improve the same
- To learn the modeling of transmission line parameters.
- To study the different insulation materials
- To learn about the use of cables in transmission line parameters

Course Outcomes

At the end of the course the students will be able

- To understand the transmission and distribution systems of electric power,
- To understand electrical and mechanical design parameters of lines.
- To understand the transmission line parameters
- To analyze and modeling the transmission line parameters
- To understand the different cables for transmission lines
- To understand the different insulation materials for transmission lines

UNIT I INTRODUCTION 12

Structure of electric power system: Generation, transmission and distribution; HVDC and EHV AC transmission: comparison of economics of transmission, technical performance and reliability, application of HVDC transmission system.

UNIT II TRANSMISSION LINE PARAMETERS 12

Parameters of single and three phase transmission lines with single and double circuits: Resistance, inductance and capacitance of solid, stranded and bundled conductors: Symmetrical and unsymmetrical spacing and transposition; skin and proximity effects; interference with neighbouring communication circuits. Typical configuration, conductor types and electrical parameters of 400, 220, 110, 66 and 33 kV lines.

UNIT III MODELING AND PERFORMANCE OF TRANSMISSION LINES 12

Classification of lines: Short, medium and long line; equivalent circuits, attenuation constant, phase constant, surge impedance; transmission efficiency and voltage regulation; real and reactive power flow in lines: Power-angle diagram; surge-impedance loading, loadability limits based on thermal loading, angle and voltage stability considerations; shunt and series compensation; Ferranti effect and corona loss. Sag computations. FACTS (qualitative treatment only): SVC, TCSC, STATCOM and UPFC.

UNIT IV INSULATORS AND CABLES 12

Insulators: Types, voltage distribution in insulator string and grading, improvement of string efficiency. Underground cables: Constructional features of LT and HT cables, capacitance, dielectric stress and grading, thermal characteristics.

UNIT V SUBSTATION, GROUNDING SYSTEM AND DISTRIBUTION SYSTEM 12

Types of substations: bus-bar arrangements; substation bus schemes: single bus scheme, double bus with double breaker, double bus with single breaker, main and transfer bus, ring bus, breaker-and-a-half with two main buses, double bus-bar with bypass isolators. Resistance of grounding systems: Resistance of driven rods, resistance of grounding point electrode, grounding grids, design principles of substation grounding system; neutral grounding. Radial and ring-main distributors, interconnectors. AC distribution: AC distributor with concentrated load; three-phase four wire distribution system sub-mains; stepped and tapered mains.

16BEEE403A MEASUREMENTS AND INSTRUMENTATION L T P C 3 0 0 3

Course Objectives

- To study the units, dimensions and standards.
- To study the different types of measuring instruments.
- To provide adequate knowledge in electrical and electronic measurement techniques and instruments.
- To make the students to have a clear knowledge of the basic laws governing the operation of the instruments, relevant circuits and their working.
- Introduction to general instrument system, error, calibration etc.
- Emphasis is laid on analog and digital techniques used to measure voltage, current, energy and power, etc.

Course Outcomes

At the end of the course the students will have

- Learn units, dimensions and standards.
- Learn basics of different types of measuring instruments to measure different electrical quantites
- Apply their knowledge to measure electrical quantities using standard analog and digital measuring instruments
- Basic knowledge of measurement systems towards measurements, including error analysis, interpretation, experimental uncertainty, calibration, etc.
- To apply basic concepts of measurement systems with electrical signals, including signal conditioners (gain, attenuation), indicating and recording devices
- Measure different electrical parameters usin conventional bridges and acquire data through digital measuring instruments and interpret the data.

UNIT I INTRODUCTION 9

Functional elements of an instrument – Units and standards of measurements – Static and dynamic characteristics – Sources of Errors in measurement – DC and AC bridges –Wheatstone, Kelvin's double, Maxwell, Anderson, Wien and Schering bridges–Measurement of high resistance – Standards and calibration.

UNIT II MEASURING INSTRUMENTS 9

Classification of instruments – working principle of potentiometers – Principle of operation and construction of PMMC, MI, type instruments – Principle types and working of analog and digital voltmeters, ammeters and multimeters – Determination of B–H curve and measurement of iron loss – Instrument transformers – CT and PT – Instruments for measurement of frequency and phase.

UNIT III MEASUREMENT OF POWER AND ENERGY 9

Dynamometer type wattmeter – Single and three phase wattmeters – Induction type instruments – Single and three phase energy meters – calibration of energy meters – direct and phantom loading – Grounding techniques – Megger - Power factor meter- Principle of operation, construction and types of digital frequency meters, Digital Energymeters.

UNIT IV STORAGE, DISPLAY DEVICES AND TRANSDUCERS 9

Magnetic measurements – Magnetic disk and tape–recorders – Strip chart recorder – XYrecorder. Digital plotters and printers – Cathode ray Oscilloscope– digital CRO and dot matrix display. Classification of transducers – Selection of transducers – Resistive – capacitive and inductive

transducers – LVDT – Piezo-electric, optical and digital transducers.
.

UNIT V VIRTUAL INSTRUMENTATION **9**

Concept of VIs and sub VI - Display types – Digital – Analog – Chart and Graphs. Loops - structures - Arrays – Clusters. Local and global variables – String and file I/O. Timers and dialog control.

16BEEE403B TRANSDUCER ENGINEERING L T P C 3 0 0 3

Course Objectives

- To impart knowledge about the principles and analysis of sensors.
- Discussion of errors and error analysis.
- Emphasis on characteristics and response of transducers.
- To have an adequate knowledge in resistance transducers.
- Basic knowledge in inductance and capacitance transducers and exposure to other transducers
- To get the knowledge of recent development in it

Course Outcomes

At the end of the course the student will be able to

1. Understand all types of sensors and transducers.
2. Justify the concept and working principle of different transducers and sensors
3 Justify the transducers that will be utilised in the electrical industries
4. Identify recent developments in transducer domain
5. Discover the knowledge for small technology up gradations in it
6. Analysis the real time application.

UNIT I SCIENCE OF MEASUREMENTS AND INSTRUMENTATION OF TRANSDUCERS 9

Units and standards – Calibration methods – Static calibration – Classification of errors – Error analysis – Statistical methods – Odds and uncertainty – Classification of transducers – Selection of transducers.

UNIT II CHARACTERISTICS OF TRANSDUCERS 9

Static characteristics – Accuracy, precision, resolution, sensitivity, linearity etc.
Dynamic characteristics – Mathematical model of transducer – Zero, I and II order transducers.
Response to impulse, step, ramp and sinusoidal inputs.

UNIT III VARIABLE RESISTANCE TRANSDUCERS 9

Principle of operation, construction details, characteristics and application of resistance potentiometer, strain gauge, resistance thermometer, thermistor, hot-wire anemometer, piezo resistive sensor and humidity sensor.

UNIT IV VARIABLE INDUCTANCE AND VARIABLE CAPACITANCE TRANSDUCERS 9

Induction potentiometer – Variable reluctance transducers – EI pick up – LVDT – Capacitive transducer and types – Capacitor microphone – Frequency response.

UNIT V OTHER TRANSDUCERS **9**

Piezoelectric transducer, magnetostrictive – IC sensor – Digital transducers – Smart sensor – Fibre optic transducer.

16BEEE404 PULSE AND DIGITAL LOGIC CIRCUITS L T P C 3 0 0 3

Course Objectives

- To study characteristics; realize circuits; design for signal analysis using Op–amp ICs.
- To study the applications of Op–amp.
- To introduce the fundamentals of Digital Circuits, combinational and sequential circuits.
- To study various number systems and to simplify the mathematical expressions using Boolean functions – simple problems.
- To study the implementation of combinational circuits
- To study the design of various synchronous and asynchronous circuits

Course Outcomes

At the end of the course the students will be able to understand the characteristics ,applications of operational amplifier and importance of analysis and design of digital circuits.

1. Obtain discrete representation of LTI systems.
2. Analyze stability of open loop and closed loop discrete-time systems.
3. Design and analyze digital controllers.
4. Design state feedback and output feedback controllers.
5. Analysis the real time application of digital controllers.
6. Analysis the real time application of State space approach

UNIT I INTRODUCTION AND CHARACTERISTICS OF OPAMP 9

Ideal OP-AMP characteristics-Non ideal characteristics- DC characteristics- Input bias current-Input bias voltage-Input offset current-Thermal drift.AC characteristics –Frequency response-Frequency compensation techniques- Slew rate. Basic applications of op-amp – summer, differentiator and integrator.

UNIT II APPLICATIONS OF OPAMP 9

Instrumentation amplifier, first and second order active filters, V/I and I/V converters, comparators, multivibrators, waveform generators, clippers, clampers, peak detector, S/H circuit, D/A converter (R-2R ladder and weighted resistor types), A/D converter - Dual slope, successive approximation and flash types.

UNIT III NUMBER SYSTEM AND BOOLEAN ALGEBRA 9

Review of number system; types and conversion, codes. Boolean algebra: De–Morgan’s theorem, switching functions and simplification using K–maps and Quine McCluskey method.

UNIT IV COMBINATIONAL CIRCUITS 9

Design of Logic gates. Design of adder, subtractor, comparators, code converters, encoders, decoders, multiplexers and demultiplexers. Function realization using gates and multiplexers.

UNIT V SYNCHRONOUS AND ASYNCHRONOUS SEQUENTIAL CIRCUITS 9

Flip flops – SR, D, JK and T. Design of synchronous sequential circuits – Counters, state diagram; state reduction and state assignment. Analysis of asynchronous sequential machines, state assignment and asynchronous design problem – Hazards.

16BEEE405A BASIC THERMODYNAMICS AND ENERGY CONVERSION DEVICES
L T P C 3 0 0 3

Course Objectives

- Basic concepts and first law of thermodynamics
- Second law of thermodynamics
- Gas power cycles
- Refrigeration and Air conditioning systems.
- Different modes of Heat Transfer
- Different modes of energy conservation

Course Outcomes

At the end of the course the student will be able to understand the following

- Basic laws of thermal engineering
- Concepts of Entropy and heat engines of the closed system
- To gain experience in gas cycles and its performance
- Need of R&AC in various climatic conditions and its factors
- To gain knowledge of all heat transfer systems
- To understand the application of it.

UNIT I - BASIC CONCEPTS OF THERMODYNAMICS 9

System - Ideal gas laws - Perfect gas, thermodynamic equilibrium, property, state, process, path and cycle, zeroth law of thermodynamics - Point and path functions - Quasi static process, reversible and irreversible processes. First law of thermodynamics, energy, work, heat, PMM1, applications of First law to closed and open systems. Pressure - Volume diagrams, steady flow process, application of steady flow energy equation.

UNIT II - SECOND LAW OF THERMODYNAMICS 9

Limitations of first law, statements of second law of Thermodynamics, PMM II, Clausius inequality, heat engine, heat pump, refrigerator, Carnot cycle, Carnot theorem, entropy, temperature - Entropy diagram, entropy changes for a closed system. Third law of thermodynamics.

UNIT III - GAS POWER CYCLES 9

Otto, Diesel, dual cycles: Efficiency, mean effective pressure, comparison. Introduction to Brayton cycle - Reheat and regeneration.

UNIT IV - REFRIGERATION AND AIR-CONDITIONING 9

Vapour compression refrigeration: Working principle, simple problems in vapour compression refrigeration cycle with sub-cooling and superheating. Introduction to vapour absorption system.

Air-conditioning - Factors affecting air-conditioning, types of air-conditioning - Summer, winter, window and central air-conditioning.

UNIT V - HEAT TRANSFER **9**

Modes of heat transfer, steady state heat conduction - Plane wall, composite wall, hollow and composite cylinders. Overall heat transfer coefficient. Convection, empirical relations. Laws of radiations - Concept of block body - Radiant heat transfer between two surfaces. TOTAL 60 hours

TOTAL: 45 HOURS

16BEEE405B ENGINEERING MATERIALS L T P C 3 0 0 3

COURSE OBJECTIVE

Students will learn

- various types of materials
- Ferrous metals and their properties
- Non ferrous metals and their properties
- Ceramic materials and their properties
- Polymers and composites
- the applications of it in engineering and technology

COURSE OUTCOMES

- At the end of the course the student will be able to understand the concepts of engineering materials
- To acquire the difference need of ferrous and non ferrous materials in various applications
- To understand the properties of ceramic and glasses in real time need
- Future requirement of microstructural activities and its need in real time world
- Valued the mechanical behaviour of various composites
- Observe the temperature deviation in various metals

UNIT I INTRODUCTION TO ENGINEERING MATERIALS 9

Atomic bonding and Crystal structure of engineering materials. Chemical and Physical properties of engineering materials. Mechanical Properties and Behaviours of Materials – Stress - Strain Relationships, Tensile Strength, Hardness, Impact Strength, Fatigue & Stress Rupture, Creep & Stress Rupture, Comparison of Material Properties

UNIT II FERROUS METALS AND THEIR PROPERTIES 9

Iron - Carbon Equilibrium Diagram, Carbon Steel & AISI Numerical Identification Systems. Properties, processing and applications of Alloy Steel, Tool Steel, Stainless Steel. General characteristics of metal alloys, Fundamentals of heat treatment and the use of TTT diagrams. Production, forming, and joining of metals.

UNIT III NONFERROUS METALS 9

Properties, processing and applications of Aluminum, Magnesium & Titanium, Copper and its Alloys, Low Melting Temperature Alloys. Production, forming, and joining of metals. The Chemistry and prevention of corrosion

UNIT IV CERAMIC MATERIALS 9

Microstructural features of ceramics and glasses - Mechanical properties of ceramics and glasses - Production, forming, and joining of ceramics

UNIT V POLYMERS AND COMPOSITES 9

Microstructural features of polymers and composites - Mechanical behaviour of polymers and composites - Production, forming, and joining of polymers and composites.

16BEEE411 ELECTRICAL MACHINES LABORATORY –II L T P C 0 0 3 2

Course Objectives

- To expose the students to the operation of synchronous machines and induction motors and give them experimental skills
- To study the operation of synchronous motor on infinite bus for different excitation condition
- To Study the performance of single phase induction motor by conducting direct and indirect testing
- To study the performance of three phase induction motor by conducting direct and indirect testing
- To study the importance of various components in alternators
- To study the importance need of ZPF methods

Course Outcomes

1. Compare the different indirect testing methods to predetermine the voltage regul salient and non-salient pole alternator
2. Determine the positive, negative and zero sequence impedance of alternators
3. Analyze the operation of synchronous motor on infinite bus for different excitati
4. Assess the performance of three phase induction motor by conducting direct and
5. Assess the performance of single phase induction motor by conducting direct an
6. Choose the appropriate induction motor starter for various industrial and comme

LIST OF EXPERIMENTS

1. Regulation of Alternator by EMF and MMF Methods
2. Load test on three phase Alternator
3. Regulation of salient pole Alternator by Slip Test
4. Regulation of Alternator by ZPF method
5. Parallel operation of alternator with bus bar
6. V and Inverted V curves of Synchronous Motor
7. Equivalent Circuit of three phase Induction Motor
8. Load Test on three phase Induction Motor
9. Performance characteristics of three phase Induction Motor by Circle Diagram
10. Load Test on single phase Induction Motor
11. Speed control of Induction Motor
12. Study of different types of starting of Induction Motors

16BEEE412 **SCIENTIFIC COMPUTING LAB** **L T P C 0 0 2 2**

Course Objectives:

- To introduce the scientific computing, covering some important aspects of solving algebraic equations, IVP, BVP.
- To implement the methods using the spread sheet in Excel
- To implement solution of numerical integration
- To implement solution of initial value problems governed by ODE
- To implement solution of BVP governed by PDE
- To implement solution of transcendental equation.

Course Outcomes:

- To develop analytical skills for solving different engineering problems.
- To understand the concepts of Matrices, sequences and series.
- To solve problems by applying Differential Calculus and Differential equations.
- To analysis initial value problems governed by ODE
- To analysis BVP governed by PDE
- To analysis transcendental equation.

LIST OF EXPERIMENTS

1. Finding solution of Transcendental equation
    i) Newton – Raphson Method
    ii) Bisection method
    iii) Iterative method by reducing the equation to the form x= f(x)

2. Finding the dominant eigenvalue and eigenvector by power method

3. Numerical integration
    i) Gauss 2 point and 3 point formulae
    ii) Trapezoidal method
    iii) Simpson's 1/3 rule

4. Solution of initial value problems governed by ODE
    i) Runge - Kutta 4^{th} order method
    ii) Modified Euler's method
    iii) Milne's method
    iv) Adam – Bashforth method

5. Solution of BVP governed by PDE
    i) Laplace Equation
    ii) One – dimensional heat equation
        a) Explicit method : Bender – Schmidt's method
        b) Implicit method : Crank - Nicolson's method
    iii) One dimensional wave equation
        Implicit method

16BEEE413 MEASUREMENTS AND INSTRUMENTATION LABORATORY

L T P C 0 0 3 2

Course Objectives

- To deal with measurement of inductance and capacitance.
- To deal with measurement of resistance.
- To deal with calibration of current transformer
- To deal with calibration of single phase energy meter.
- To get the knowledge of two watt meter method to measure 3 phase power and power factor
- To deal with calibration of voltmeter, ammeter and wattmeter.

Course Outcomes

- Learn units, dimensions and standards.
- Learn basics of different types of measuring instruments to measure different electrical quantities
- Apply their knowledge to measure electrical quantities using standard analog and digital measuring instruments
- basic knowledge of measurement systems towards measurements, including error analysis, interpretation, experimental uncertainty, calibration, etc.
- To apply basic concepts of measurement systems with electrical signals, including signal conditioners (gain, attenuation), indicating and recording devices
- Measure different electrical parameters using conventional bridges and acquire data through digital measuring instruments and interpret the data.

LIST OF EXPERIMENTS

1. Calibration of Pressure and Displacement Transducer.
2. Measurement of inductance & capacitance.
3. Measurement of resistance using wheatstone bridge
4. Calibration of current transformer and Study of instrument transformers.
5. Calibration of single phase energy meter.
6. Conversion of Galvanometer into Voltmeter and Ammeter.
7. Measurement of three phase power and power factor using two wattmeter method.
8. Measurements of resistance using Kelvin's bridge.
9. Calibration of Voltmeter, Ammeter and Wattmeter
10. Study of phantom loading.
11. Study of Smart Energy Meter.

**16BEEE451*	ELECTRICITY STANDARDS L T P C	1 0 0 –**

Course Objectives

- Understanding the basic knowledge of electricity standards.
- Gain information regarding various electricity equipment standards.
- Learn the battery norms and standards
- Learn the harmonic norms and standards

Course Outcomes

The Students will able to

- Acquire knowledge on various Indian and International standards.
- Understand the standards used for transformer and their sizing.
- Understand the information regarding various electricity equipment standards.
- Understand the battery norms and standards
- Understand the harmonic norms and standards
- Analysis the real time implementation

UNIT I INDIAN AND INTERNATIONAL STANDARDS

Indian Standards – IS – International Standards – ANSI – IEEE – IEC – Transformers – IEC 60076 & IS 2026, Rotating Machines – IEC 60034 & IS 34.

UNIT II STANDARDS FOR SIZING

Battery – IEEE 1115 – Instrument Transformers – IEC 60044 & IS 2705 – Short Circuit study – IEC 60909 & IEC 61363 – Harmonic Study – IEEE 519.

SEMESTER V

16BEEE501 **POWER ELECTRONICS** **L T P C 3 0 0 3**

Course Objectives

- To introduce the application of electronic devices for conversion, control and conditioning of electric power.
- To get an overview of different types of power semi–conductor devices and their switching characteristics.
- To understand the operation, characteristics and performance parameters of controlled rectifiers and basic topologies of DC–DC switching regulators.
- To learn the different modulation techniques of pulse width modulated inverters and to understand the harmonic reduction methods.
- To know the practical application for power electronics converters in conditioning the power supply.
- To get the knowledge of real time application of it

Course Outcomes

At the end of this course students will demonstrate the ability to

1.Understand the differences between signal level.

2. Understand the differences between power level devices.

3.Analyze controlled rectifier circuits.

4.Analyze the operation of DC-DC choppers.

5.Analyze the operation of voltage source inverters.

6.Understand different modulation techniques.

UNIT I POWER SEMI CONDUCTOR DEVICES 9

Silicon Controlled Rectifier(SCR),TRIAC,DIAC - Structure, V-I Characteristics- Two Transistor Model, Structure and characteristics of Power Diode, Power BJT, MOSFET, IGBT, GTO, Comparisons of Power Semiconductor Devices-Firing circuits.

UNIT II PHASE CONTROLLED CONVERTERS 9

Operation and Analysis of Single Phase Half and Fully Controlled Converter using R, RL load- Three Phase Half and Fully Controlled Converter using R, RL load-Effects of Source Impedance, Dual converter (only Block diagram approach).

UNIT III CHOPPERS 9

Step-Down and Step-up Choppers-Control Strategies of Chopper- Multi Quadrant Operation of Chopper- Switched Mode Regulators: Buck, boost, Buck–Boost Regulator- Applications of DC Chopper.

UNIT IV DC-AC CONVERTER 9

Single phase half bridge and full bridge inverters - three phase bridge inverters (120 and 180 degree modes of operation)- Multilevel inverter (block diagram Approach only)- PWM techniques- single PWM, multiple PWM, Sinusoidal PWM, Current source inverter(CSI).

UNIT V AC-AC CONVERTER AND APPLICATIONS 9

Single phase cyclo converter, Single phase AC voltage controller- Applications- Uninterrupted Power Supply topologies (On line and Off line) – Flexible AC Transmission Systems –Unified Power Flow Controller– HVDC Transmission.

16BEEE502 POWER SYSTEM ANALYSIS L T P C 3 2 0 4

Course Objectives

- To become familiar with different aspects of modeling of components and system
- To study different methods of analysis of power system for power system planning and operation.
- To model steady-state operation of large sized power system
- To understand the power flow problem using efficient numerical methods suitable for computer application.
- To model and analyses power systems under abnormal (fault) conditions.
- To model and analyses the dynamics of power system for small signal and large signal disturbances and to design the system for enhancing stability.

Course Outcomes

At the end of this course, students will demonstrate the ability to
1.Use numerical methods to analyze a power system in steady state.
2. Understand stability constraints in a synchronous grid.
3. Understand methods to control the voltage, frequency.
4. Understand methods to control the power flow.
5. Understand the monitoring and control of a power system.
6. Understand the basics of power system economics

UNIT I THE POWER SYSTEM – AN OVERVIEW AND MODELING 12
Modern Power System - Basic Components of a power system - Per Phase Analysis Generator model - Transformer model - line model. The per unit system -Change of base.

UNIT II POWER FLOW ANALYSIS 12
Introduction - Bus Classification - Bus admittance matrix, Nodal method, Singular transformation method without mutual coupling - Solution of non-linear Algebraic equations - Gauss Seidal method - Newton Raphson method - Fast decoupled method - Flow charts and comparison of the three methods.

UNIT III FAULT ANALYSIS - BALANCED FAULT 12
Introduction – Balanced three phase fault – short circuit capacity – systematic fault analysis using bus impedance matrix – algorithm for formation of the bus impedance matrix.

UNIT IV FAULT ANALYSIS – SYMMETRICAL COMPONENTS AND 12
UNBALANCED FAULT
Introduction – Fundamentals of symmetrical components – sequence impedances – sequence networks – single line to ground fault – line fault - Double line to ground fault – Unbalanced fault analysis using bus impedance matrix.

UNIT V POWER SYSTEM STABILITY 12
Basic concepts and definitions – Rotor angle stability – Voltage stability – Mid Term and Long

Term stability – Classification of stability – An elementary view of transient stability – Equal area criterion – Reponses to a short circuit fault- factors influencing transient stability – Numerical integration methods – Euler's method – modified Euler's method – Runge Kutta methods.

16BEEE503 CONTROL SYSTEM ENGINEERING L T P C 3 2 0 4

Course Objectives

- To understand the use of transfer function models for analysis physical systems and introduce the control system components.
- To provide adequate knowledge in the time response of systems and steady state error analysis.
- To accord basic knowledge in obtaining the open loop and closed–loop frequency responses of systems.
- To introduce stability analysis
- To introduce state variable representation of physical systems
- To introduce the design of compensators.

Course Outcomes

1. Derive the transfer function of electrical and mechanical systems using various reduction techniques
2. Analyze the response of the control system by investigating steady state error and time domain specifications
3. Construct the root locus to find the stability of the system and explain the effects of different types of controller
4. Construct the frequency response of the system using various plots and correlate the time and frequency domain specifications and effect of compensation
5. Design the different types of compensators using frequency response plots to stabilize the control system
6. Explain the state variable representation of physical systems with the effects of state feedback its assessment for linear-time invariant systems.

UNIT-I CONTROL SYSTEM MODELLING 12

System concept, differential equations and transfer functions. Modeling of electric systems, translational and rotational mechanical systems, Simple electromechanical systems. Block diagram representation of systems – Block diagram reduction methods – Closed loop transfer function, determination of signal flow graph. Mason's gain formula – Examples.

UNIT-II TIME DOMAIN ANALYSIS 12

Test signals – time response of first order and second order systems – time domain specifications – types and order of systems – generalized error co-efficient – steady state errors – concepts of stability – Routh-Hurwitz stability – root locus.

UNIT-III FREQUENCY DOMAIN ANALYSIS 12

Introduction – correlation between time and frequency response – stability analysis using Bode plots, Polar plots, Nichols chart and Nyquist stability criterion – Gain margin – phase margin.

UNIT-IV COMPENSATORS 12

Realization of basic compensators – cascade compensation in time domain and frequency domain and feedback compensation – design of lag, lead, lag-lead compensator using Bode plot. Introduction to P, PI and PID controllers.

UNIT-V CONTROL SYSTEM COMPONENTS AND APPLICATION OF CONTROL SYSTEMS 12

Stepper motors – AC servo motor – DC servo motor – Synchros – sensors and encoders – DC tachogenerator – AC tachogenerator – Hydraulic controller – Pneumatic controller – Typical application of control system in industry.

16BEEE511 POWER ELECTRONICS LABORATORY L T P C 0 0 3 2

Course Objectives

- To study the characteristics of switching devices and its applications in rectifier inverter, chopper and resonant converter.
- To study about power electronic circuits
- To study about industrial control of power electronic circuits
- To study about the various characteristic of SCR and TRIAC
- To study about the various characteristic of PWM inverter
- To study power electronic circuits for different loads

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. The students will be able to demonstrate the all power semiconductor devices.
2. To expose students to operation and characteristics of power semiconductor devices and passive components, their practical application in power electronics.
3. To provide a practical exposure to operating principles, design and synthesis of different power electronic converters.
4. To introduce students to industrial control of power electronic circuits as well as safe electrical connection and measurement practices.
5. Able to analyze power electronics circuits
6. Able to apply power electronic circuits for different loads

LIST OF EXPERIMENTS

1. Demonstrate the characteristics of SCR.
2. Demonstrate the characteristics of MOSFET.
3. Demonstrate the characteristics of IGBT.
4. Design and Simulation studies on single half and fully controlled convertor using R, RL load.
5. Design and simulation studies on boost convertor using power semiconductor devices..
6. Design and Simulation studies on buck convertor using power semiconductor devices..
7. Design and Simulation studies on single phase invertors using power semiconductor devices.
8. Implementation of single phase half controlled converter using SCR.

9. Implementation of single phase fully controlled convertor using SCR

10. Implementation of DC-DC Boost convertor using MOSFET.

11. Implementation of DC-DC Buck convertor using MOSFET.

12. Implementation of three phase induction motor using PWM inverter

16BEEE512 ANALOG AND DIGITAL CIRCUITS LABORATORY L T P C 0 0 3 2

Course Objectives

- To understand Basic Analog Circuits and their applications using Active Devices
- To learn basic function of single stage amplifier, multistage amplifier and power Amplifier and their working principle.
- To understand the Boolean functions, Adder and subtractor circuits.
- To understand Basic Analog Circuits and their applications using Active Devices
- To understand basic construction of feedback circuits and their application in Oscillators
- Understand basic amplifier and oscillator circuits and their application in analog circuits.

Course Outcomes (COs)

1. Determine the output wave forms of Full Wave Rectifiers with and without filters.
2. Draw the equivalent circuit of MOSFET and sketch the V-I characteristics.
3. Design the Darlington amplifier and develop the circuit.
4. Compare the theoretical and practical frequency response of Wein bridge oscillators.
5. Design of astable and Monostable multivibrators for generation of different waveforms
6. Design of clipper and clamper.

LIST OF EXPERIMENTS

1. Verification of truth table of Logic Gates and Flip Flops.
2. Implementation of Boolean Functions, Adder and Subtractor circuits.
3. a. Code converters, Excess 3, 2’s Complement, Binary to gray code, Parity generator and parity checker using suitable ICs.
   b. Encoders and Decoders.
4. Counters: Design and implementation of 4–bit modulo counters as synchronous and asynchronous types using FF IC’s and specific counter IC.
5. Shift Registers: Design and implementation of 4–bit shift registers in SISO, SIPO, PISO, PIPO modes using suitable IC’s.
6. Multiplexer and De–multiplexer (4:1, 8:1 and 1:4, 1:8)
7. Study of NE/SE 555 timer in astable and Monostable operation.
8. Inverting and non–inverting amplifiers, Adder and comparator using Op–Amps.
9. Integrator and Differentiator using Op–Amps.
10. Study of Analog to Digital Converter and Digital to Analog Converter: Verification of A/D conversion using dedicated ICs.
11. Voltage to frequency characteristics of NE/ SE 566 VCO IC.
12. Frequency multiplication using NE/SE 565 PLL IC.

16BEEE513 CONTROL SYSTEM ENGINEERING LAB0RATORY L T P C 0 0 3 2

Course Objectives

Students will learn

- To provide a platform for understanding the basic concepts of linear control theory and its application to practical systems
- The transfer function of DC Shunt Motor.
- To find the frequency response of different compensators
- To find the step response of P Controller.
- To find the step response of PI & PID Controller.
- To identify the type of damping from the given Characteristic equation.
- The speed control of Dc motor..

Course Outcomes (COs)

- Determine the transfer function of DC Shunt Motor.
- Ability to find the frequency response of different compensators
- Ability to find the step response of P Controller.
- Ability to find the step response of PI & PID Controller.
- Ability to identify the type of damping from the given Characteristic equation.
- Evaluate the speed control of Dc motor.

LIST OF EXPERIMENTS

1. Transfer function of separately Excited DC generator.
2. Transfer function of armature controlled DC shunt motor.
3. Transfer function of field controlled DC shunt motor.
4. Transfer function of AC servomotor.
5. Step response of P, PI, and PID controllers.
6. Identification of type of damping from the given characteristic equation of second order system.
7. Simulation of step response & step response of second order under damped system using ‘C’ and MATLAB simulink.
8. Frequency response of Lead compensator network.
9. Frequency response of Lag compensator network.
10. DC Motor speed control.

16BEEE552A* **CONTROL AND MAINTENANCE OF ELECTRICAL APPLIANCES**
L T P C 0 0 1 0

Course Objectives

- Make use of various types of control circuit elements like industrial switches, relays, timers, solenoids, contactors and interlocking arrangement.
- Construct various types of automatic starters for electrical motors.
- Construct control circuits for braking, jogging, reversing operations.
- To make use of PLCs for control applications.
- To study PLCs for controlling the motors.
- To study the single phase preventer circuits using PLC

Course Outcomes

The students will be able to

- Analysis the types of automatic starters for electrical motors.
- Analysis control circuits for braking, jogging, reversing operations.
- Analysis PLCs circuit for control applications.
- Program PLCs for controlling the motors.
- Analysis the single phase preventer circuits using PLC
- Analysis various types of control circuit elements like industrial switches, relays, timers, solenoids, contactors and interlocking arrangement.

LIST OF EXPERIMENTS

1. Conduct acidity test on transformer oil.
2. Wire and test the control circuit for DOL starter and jogging in cage motor.
3. Wire and test the control circuit for automatic and semi-automatic star-delta starter.
4. Wire and test the control circuit for dynamic braking of cage motor.
5. Wire and test the control circuit for Synchronization of Three Phase Alternators by bright lamp method.
6. Test the working of single phase preventer.
7. Wire and test the DOL starter using PLC.
8. Wire and test the Star-Delta starter using PLC.
9. Wire and test the control circuit for jogging, forward and reverse operations using PLC.
10. Wire and test the single phase preventer using PLC.

16BEEE552B* PROGRAMMABLE LOGIC CONTROLLER (PLC) L T P C 1 0 0 –

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder
- To understand the principles of spray process system

Course Outcome

At the end of the course the student will be able

- To understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION

PLC- Introductions to the purpose, functions - Identification of various components of the PLC - Typical areas of Application- operations of the PLC in industrial applications.

UNIT II PLC LADDER LOGIC PROGRAMMING

Basic ladder logic symbols – Basic Steps in Ladder logic diagram - Ladder logic evaluation - Start/stop logic – Ladder Logic for simple applications.

UNIT III APPLICATIONS

Ladder logic for motor control - Star Delta PLC Ladder Diagram - Ladder Diagram for DOL Motor Starter.

SEMESTER VI

16BEEE601 SOLID STATE DRIVES L T P C 3 0 0 3

Course Objectives

1. To study and understand the operation of electric drives controlled from a power electronic converter and to introduce the design concepts of controllers.
2. To understand the stable steady–state operation and transient dynamics of a motor–load system.
3. To study and analyze the operation of the converter/chopper fed dc drive and to solve simple problems.
4. To study and understand the operation of both classical and modern induction motor drives.
5. To understand the differences between synchronous motor drive and induction motor drive and to learn the basics of permanent magnet synchronous motor drives.
6. To analyze and design the current and speed controllers for a closed loop solid–state d.c motor drives.

Course Outcomes

At the end of the course the students will be able to

1. Understand the concept of drive characteristics and various converters used for drives.
2. Understand the operation of electric drives controlled from a power electronic converter.
3. Understand the stable steady–state operation and transient dynamics of a motor–load system.
4. Analyze the operation of the converter/chopper fed dc drive and to solve simple problems.
5. Understand the operation of both classical and modern induction motor drives.
6. Understand the differences between synchronous motor drive and induction motor drive and to learn the basics of permanent magnet synchronous motor drives.

UNIT I DRIVE CHARACTERISTICS 9

Concept of Electric Drives –parts of electrical Drives – Dynamics of electric drive – torque equation – Selection of power rating of motor-Four quadrant operation of electric drives– Loads with rotational and translational motion – Steady state stability- components of load torques-Modes of operation and Characteristics.

UNIT II CONVERTER AND CHOPPER FED DC MOTOR DRIVES 9

Steady state analysis of the single and three phase converter fed separately excited DC motor drive – continuous and discontinuous conduction -Chopper controlled DC drives - Time ratio control and current limit control - Single, two and four quadrant operations.

UNIT III INDUCTION MOTOR DRIVES 9

Three phase induction motor drives-AC Voltage controlled drives- variable frequency control –V/f control -Slip Power recovery schemes- rotor frequency control -VSI fed induction motor drive and CSI fed induction motor drive- Basic of vector control.

UNIT IV SYNCHROUNOUS MOTOR DRIVES 9

V/f control and self control of synchronous motor: Margin angle control and power factor control - permanent magnet synchronous motor –Sinusoidal and Trapezoidal types, closed loop control of synchronous motor, Basics of Traction drives.

UNIT V CONTTROLLER FOR DRIVES 9

Transfer function for DC motor / load and converter – closed loop control with current and speed feedback , design of controllers; current controller and speed controller-converter selection and Characteristics.

TOTAL: 45 HOURS

16BEEE602 POWER SYSTEM OPERATION AND CONTROL L T P C 3 0 0 3

Course Objectives

- To become familiar with different aspects of modeling of components and system
- To study different methods of analysis of power system for power system planning and operation.
- To model steady-state operation of large sized power system
- To understand the power flow problem using efficient numerical methods suitable for computer application.
- To model and analyze power systems under abnormal (fault) conditions.
- To model and analyze the dynamics of power system for small signal and Large signal disturbances and to design the system for enhancing stability.

Course Outcomes

At the end of this course, students will demonstrate the ability to
1.Understand the concepts of power systems.
2. Understand the various power system components.
3. Evaluate fault currents for different types of faults.
4. Understand the generation of over-voltages and insulation coordination.
5. Understand basic protection schemes.
6. Understand concepts of HVDC power transmission and renewable energy generation.

UNIT I INTRODUCTION 9

System load variation: System load characteristics, load curves - daily, weekly and annual, load-duration curve, load factor, diversity factor. Reserve requirements: Installed reserves, spinning reserves, cold reserves, hot reserves. Overview of system operation: Load forecasting, unit commitment, load dispatching. Overview of system control: Governor Control, LFC, EDC, AVR, system voltage control, security control.

UNIT II REAL POWER - FREQUENCY CONTROL 9

Fundamentals of speed governing mechanism and modeling: Speed-load characteristics – Load sharing between two synchronous machines in parallel; concept of control area, LFC control of a single-area system: Static and dynamic analysis of uncontrolled and controlled cases, Economic Dispatch Control. Multi-area systems: Two-area system modeling; static analysis, uncontrolled case; tie line with frequency bias control of two-area system derivation.

UNIT III REACTIVE POWER–VOLTAGE CONTROL 9

Typical excitation system, modeling, static and dynamic analysis, stability compensation; generation and absorption of reactive power: Relation between voltage, power and reactive power at a node; methods of voltage control: Injection of reactive power. Tap-changing transformer, numerical problems - System level control using generator voltage magnitude setting, tap setting of OLTC transformer and MVAr injection of switched capacitors to maintain acceptable voltage profile and to minimize transmission loss.

UNIT IV UNIT COMMITMENT AND ECONOMIC DISPATCH 9

Statement of Unit Commitment (UC) problem; constraints in UC: spinning reserve, thermal unit constraints, hydro constraints, fuel constraints and other constraints; UC solution methods: Priority-list methods, forward dynamic programming approach, numerical problems only in priority-list method using full-load average production cost. Incremental cost curve, co-ordination equations without loss and with loss, solution by direct method and λ-iteration method. (No derivation of loss coefficients) Base point and participation factors. Economic dispatch controller added to LFC control.

UNIT V COMPUTER CONTROL OF POWER SYSTEMS 9

Energy control centre: Functions – Monitoring, data acquisition and control. System hardware configuration – SCADA and EMS functions: Network topology determination, state estimation security analysis and control. Various operating states: Normal, alert, emergency, inextremis and restorative. State transition diagram showing various state transitions and control strategies.

16BEEE603A MICROPROCESSOR AND MICROCONTROLLER L T P C 3 0 0 3

Course Objectives

- To study the Architecture of 8085 and 8051.
- To study the addressing modes and instruction set of 8085 and 8051.
- To introduce the need and use of Interrupt structure.
- To develop skill in simple program writing.
- To introduce commonly used peripheral/interfacing ICs and Advanced Processors.
- To study the advanced processors

Course Outcomes

.

1. At the end of this course, students will demonstrate the ability to Explain about the architecture of 8051 microprocessor, pin configuration, interrupts and the timing diagram of 8085
2. Develop the assembly language program using mnemonics and corresponding machine code based on architecture of 8051 microprocessor
3. Define the 8051 microcontroller with its architecture, pinouts, memory organization, interrupts and compare the programming concepts with 8051
4. Illustrate the interfacing of 8085 with various peripheral devices for transmission, reception and control of data
5. Make use of the data conversion technique such as ADC and DAC and to interface with 8085 processor and 8051 microcontroller
6. Develop the microcontroller assembly language program for various real time applications

UNIT I 8085 PROCESSOR 9

Architecture – Functional block diagram – Signals – Memory interfacing – I/O ports and data transfer concepts – Timing Diagram – Interrupt structure.

UNIT II INSTRUCTION SETS 9

Instruction format and addressing modes – Assembly language format – Data transfer, data manipulation and control instructions.

UNIT III PERIPHERAL INTERFACING 9

Study of Architecture and programming of ICs: 8255 PPI, 8259 PIC, 8251 USART, 8279 Key board / display controller and 8253 Timer/ Counter – Interfacing with 8085 – A/D and D/A converter interfacing.

UNIT IV 8051 MICRO CONTROLLER 9

Architecture – Functional block diagram – Instruction format and addressing modes – Interrupt structure – Timer –I/O ports – Serial communication.

UNIT V ADVANCED PROCESSORS 9

Architecture of PIC 16C7X MICROCONTROLLER - memory organization – Addressing modes – Instruction set – Introduction to TMSLF2407 DSP controller and ARM Processors.

16BEEE603B MICROCONTROLLER BASED SYSTEM DESIGN L T P C 3 0 0 3

Course Objectives

- To expose the students to the fundamentals of microcontroller based system design.
- To teach I/O and RTOS role on microcontroller.
- To impart knowledge on PIC Microcontroller based system design. To introduce Microchip PIC 8 bit peripheral system Design
- To give case study experiences for microcontroller based applications
- To study interface systems for 8051

Course Outcomes

- At the end of the course the student will be able to understand the concepts of PIC
- Define the 8051 microcontroller with its architecture, pinouts, memory organization, interrupts and compare the programming concepts with 8051
- Illustrate the interfacing of 8085 with various peripheral devices for transmission, reception and control of data
- Make use of the data conversion technique such as ADC and DAC and to interface with 8085 processor and 8051 microcontroller
- Develop the microcontroller assembly language program for various real time applications

UNIT I 8051 ARCHITECTURE **9**

Architecture – memory organization – addressing modes – instruction set –Timers - Interrupts - I/O ports, Interfacing I/O Devices – Serial Communication.

UNIT II 8051 PROGRAMMING **9**

Assembly language programming – Arithmetic Instructions – Logical Instructions –Single bit Instructions – Timer Counter Programming – Serial Communication Programming Interrupt Programming – RTOS for 8051 – RTOSLite – FullRTOS – Task creation and run – LCD digital clock/thermometer using FullRTOS

UNIT III PIC MICROCONTROLLER **9**

Architecture – memory organization – addressing modes – instruction set – PIC progrmming in Assembly & C –I/O port, Data Conversion, RAM & ROM Allocation, Timer programming, MP- LAB.

UNIT IV PERIPHERAL OF PIC MICROCONTROLLER **9**

Timers – Interrupts, I/O ports- I2C bus-A/D converter-UART- CCP modules -ADC, DAC and Sensor Interfacing –Flash and EEPROM memories.

UNIT V SYSTEM DESIGN – CASE STUDY **9**

Interfacing LCD Display – Keypad Interfacing - Generation of Gate signals for converters and Inverters - Motor Control – Controlling DC/ AC appliances – Measurement of frequency - Stand alone Data Acquisition System.

16BEEE604 DESIGN OF ELECTRICAL APPARATUS L T P C 3 0 0 3

Course Objectives

- To provide sound knowledge about constructional details and design of various electrical machines.
- To study mmf calculation and thermal rating of various types of electrical machines.
- To design armature and field systems for D.C. machines.
- To design core, yoke, windings and cooling systems of transformers.
- To design stator and rotor of induction machines.
- To design stator and rotor of synchronous machines and study their thermal behaviour.

Course Outcomes

At the end of this course, students will demonstrate the ability to
1. Understand the construction of electrical machines.
2. Understand the various factors which influence the design: electrical, magnetic and thermal loading of electrical machines
3. Understand the principles of electrical machine design
4. Carry out a basic design of an AC and DC machine.
5. Use software tools to do design calculations.
6. Understand performance characteristics of electrical machines

UNIT I MAGNETIC CIRCUITS AND COOLING OF ELECTRICAL MACHINES 9

Major consideration in electrical machine design –electrical engineering materials –design limitations and specifications- concept of magnetic circuit – mmf calculation for various types of electrical machines – Gap Contraction Factor –Net Length of Iron -real and apparent flux density of rotating machines -direct and indirect cooling methods – cooling of turbo alternators.

UNIT II DC MACHINES 9

Constructional details – output equation – main dimensions - choice of specific loadings – choice of number of poles – armature design – winding diagrams – design of field poles and field coil – design of commutator and brushes

UNIT III TRANSFORMERS 9

Constructional details of core and shell type transformers – output rating of single phase and three phase transformers — design of core, yoke and windings of transformers – equivalent circuit parameters from designed data – design of tank and cooling tubes of transformers.

UNIT IV THREE PHASE INDUCTION MOTORS 9

Constructional details of squirrel cage and slip ring motors – output equation – main dimensions – choice of specific loadings – design of stator – winding diagrams - design of squirrel cage and slip ring rotor - introduction to computer aided design.

UNIT V SYNCHRONOUS MACHINES 9

Output equation – choice of specific loadings – main dimensions – short circuit ratio – design of stator and rotor of cylindrical pole and salient pole machines - design of field coil - performance calculation from designed data - introduction to computer aided design.

16BEEE611 MICROPROCESSOR AND MICRO CONTROLLER LABORATORY

L T P C 0 0 3 2

OBJECTIVES

On completion of the course, students are able to:

- To understand the basic architecture of 8- bit microprocessors.
- Able to write programs on 8085 microprocessor based systems.
- Identify the addressing modes of an instruction.
- Develop programming skills in assembly language
- To understands the basic architecture of microcontroller.

COURSE OUTCOMES (COs)

1. Apply the basic arithmetic and logical operations using 8085 microprocessor with the help of assembly language programming
2. Analyze the performance of different weighted and non weighted codes, its conversions with logic diagram using 8085 microprocessor
3. Illustrate the interfacing of 8085 with various peripheral devices for serial and parallel communication of data
4. Demonstrate the basic instructions with 8051 microcontroller execution including conditional jumps, looping and calling subroutines
5. Make use of the basic conversion techniques of ADC and DAC to interface it with 8085 processor and 8051 microcontroller
6. Develop a model using processor to apply computing platform and software for engineering problems

LIST OF EXPERIMENTS

8-bit Microprocessor

1. Simple arithmetic operations
   - Multi precision addition / subtraction / multiplication / division
2. Programming with control instructions
   - Increment / Decrement
   - Ascending / Descending order
   - Maximum / Minimum of numbers
   - Rotate instructions.
   - Hex / ASCII / BCD code conversions
3. Interface Experiments
   - A/D Interfacing
   - D/A Interfacing
   - Traffic light controller
4. Simple Interfacing experiments using 8251, 8279 and 8254
5. Programming practice on assembler and simulator tools

8-bit Micro controller

6. Demonstration of basic instructions with 8051 Micro controller execution, including

- Conditional jumps, looping
- Calling subroutines
- Stack parameter testing

7. Parallel port programming with 8051 using port 1 facility
    - Stepper motor and D/A converter
8. Programming Exercise on
    - RAM direct addressing
    - Bit addressing
9. Programming practice using simulation tools and C - compiler
    - Initialize timer
    - Enable interrupts
10. Study of micro controllers with flash memory.

Additional Experiments Using 8051 Microcontroller:

1. A/D Conversion with LCD display.
2. Speed control of DC Motor using PWM technique.
3. Programming with flash controller (EPROM, EEPROM).
4. Interfacing Monitor and Keyboard.
5. Seven Segment display interface.
6. Interfacing of I/O devices (Relay, LED and Buzzer).
7. PLC programming using 8051microcontroller.
8. Study of “In Circuit Debugger”.

16BEEE612 ELECTRICAL ESTIMATION AND REWINDING LABORATORY
L T P C 0 0 1 0

Course Objectives

- To introduce the basic electrical Estimation in the lab.
- To be able to deal with motor rewinding and transformer winding connections.
- To study the electrical design of party hall.
- To study the electrical design of saw mill.
- To study the electrical design of primary health centre.
- To study the electrical design of university building

Course Outcomes

At the end of the course the students will be able

- To do wiring and winding for all electrical equipment‟s.
- To analysis the electrical estimation for residential flat
- To analysis the electrical estimation for University building
- To analysis the electrical estimation for Primary health centre
- To analysis the electrical estimation for Party hall
- To analysis the electrical estimation for Saw mill

LIST OF EXPERIMENTS

ELECTRICAL ESTIMATION:

1. Residential single bed room Flat.
2. Industrial power wiring having 2 or 3 machines and Irrigation Pump motor (5hp) wiring.
3. University building having 6 class rooms with Computer centre having 35 computers, a/c unit, UPS, light and fan.
4. Primary Health Centre having minimum 6 rooms.
5. Lighting scheme of a party hall having minimum 20 twin TL fittings and Street Light service having 12 lamp light fittings
6. Erection of one no. 15hp induction motor in Saw mill / Flour mill and 3 phase Service connection to a building having 5 KW load.

REWINDING:

7. Design and wind 230/12-0-12 volt, 500mA Transformer and test it.
8. Design and wind a No volt coil used in starter.
9. Study about the winding connection diagram for Single Phase Induction Motor.

10. Study about the winding connection diagram for Three Phase Induction Motor.
11. Wind and insert the coils for ceiling fan motor (minimum 2 coils).
12. Give end connection for a 3 phase Induction motor winding for a 2 pole/ 4 pole operations and run it. Measure the No load current and speed.

16BEEE651*   PCB DESIGN AND SERVICING OF DOMESTIC APPLIANCES

L T P C   1 0 0 –

Course Objectives

Students will learn

- Specification and classification of PCBs
- PCB Fabrication
- Different application of PCB
- Service to domestic appliances
- Installation to domestic appliances
- Repair of domestic appliances

Course Outcomes

Students will able to analysis

- Techniques of PCBs
- PCB Fabrication
- Real time application of PCB
- Service to domestic appliances
- Installation to domestic appliances
- Repair of domestic appliances

UNIT I PCB BASIC PRINCIPLE

Specification and classification of PCBs - Techniques of layout design - Artwork generation Methods - General design factor for digital and analog circuits .

UNIT II PCB FABRICATION

Introduction to PCB technology - PCB Fabrication techniques-single, double sided and multilayer - Etching: chemical principles and mechanisms - Post operations- stripping, black oxide coating and solder masking - PCB component assembly processes

UNIT III INSTALL, SERVICE AND REPAIR OF DOMESTIC APPLIANCES

Installation procedure of electric iron, mixer grinder, ceiling and table fan - Working of Ceiling and Table Fan - circuit description, fault finding - removal of faulty component

SEMESTER VII

16BECC701 PROFESSIONAL ETHICS, PRINCIPLE OF MANAGEMENT AND ENTREPRENEURSHIP L T P C 3 0 0 3

Course Objective

- To enable the students to create an awareness on Engineering Ethics, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.
- To study ethics in society and realize the responsibilities and rights in the society
- To study advanced philosophical knowledge of the profession of recreation and leisure
- To study synthesis of trends and issues as related to current professional practice
- To evaluation of organizational theories and human resource management principles
- To study the ethical practice and ethical management

Course Outcome

At the end of this course, students will be able to

- Apply ethics in society and realize the responsibilities and rights in the society
- Discuss the ethical issues related to engineering
- Advanced philosophical knowledge of the profession of recreation and leisure
- Synthesis of trends and issues as related to current professional practice
- Evaluation of organizational theories and human resource management principles
- Ethical practice and ethical management

UNIT I ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self–interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OF CHANGES 9

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING, ORGANISING 9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – **Course Objectives** – Setting **Course Objectives** – Process of Managing by **Course Objectives** – Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informal organization

– Organization Chart –.

UNIT IV DIRECTING AND CONTROLLING 9

Human Factors – Creativity and Innovation – Harmonizing **Course Objectives** – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT V ENTREPRENEURSHIP AND MOTIVATION 9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, **Course Objectives**.

16BEEE702 POWER SYSTEM PROTECTION AND SWITCHGEAR L T P C 3 0 0 3

Course Objectives

- To expose the students to the various faults in power system
- To learn the various methods of protection scheme
- To understand the current interruption in Power System and study the various switchgears.
- Discussion on various earthing practices, usage of symmetrical components to estimate fault current and fault MVA.
- Study of Relays, protection scheme, and solid state relays.
- To understand the method of circuit breaking, various arc theories, Arcing phenomena – capacitive and inductive breaking, Types of circuit breakers.

Course Outcomes

At the end of this course, students will demonstrate the ability to
1. Understand the different components of a protection system.
2. Evaluate fault current due to different types of fault in a network.
3. Understand the protection schemes for different power system components.
4. Understand the basic principles of digital protection.
5. Understand system protection schemes, and the use of wide-area measurements.
6. Analysis the Real time application of it.

UNIT I INTRODUCTION 9

Principles and need for protective schemes – nature and causes of faults –Power system earthing - Zones of protection and essential qualities of protection – Protection scheme.

UNIT II OPERATING PRINCIPLES AND RELAY CONSTRUCTIONS 9

Electromagnetic relays – Over current, directional, distance and differential, under frequency Relays, Reverse power relay, Relay Coordination, Microprocessor based Relay – static relays.

UNIT III APPARATUS PROTECTION 9

Apparatus protection: Transformer, generator, motor; protection of bus bars and transmission lines – CTs and PTs and their applications in protection schemes.

UNIT IV THEORY OF CIRCUIT INTERRUPTION 9

Physics of arc phenomena and arc interruption. Restriking voltage, Recovery voltage, rate of rise of recovery voltage, resistance switching, current chopping, and interruption of capacitive current – DC circuit breaking.

UNIT V CIRCUIT BREAKERS 9

Types of Circuit Breakers – Air blast, Air break, oil, SF_6 and Vacuum circuit breakers – comparative merits of different circuit breakers – Testing of circuit breakers.

16BEEE711 POWER SYSTEM SIMULATION LABORATORY L T P C 0 0 3 2

Course Objectives

- To acquire software development skills and experience in the usage of standard package necessary for analysis and simulation of power system required for its planning, operation and control.
- The various line parameters.
- The voltage regulation and efficiency of different types of transmissions.
- A network under unsymmetrical fault conditions and interpret the results.
- The bus impedance and admittance matrix.
- A network under symmetrical fault conditions and interpret the results

Course Outcomes

- Apply load flow analysis to an electrical power network and interpret the results using Gauss-Seidel and Newton Raphson Methods.
- Apply load flow analysis to an electrical power network and interpret the results using Fast-Decoupled Methods.
- Explain the transient stability analysis of single and multi machine infinite bus system
- Examine the electromagnetic transients and its impact in power system studies
- Evaluate the frequency dynamics, economic dispatch of single and two area power systems.
- Evaluate the Economic dispatch in power systems

LIST OF EXPERIMENTS

1. Computation of Parameters and Modeling of Transmission Lines.
2. Formation of Bus Admittance and Impedance Matrices and Solution of Networks.
3. Load Flow Analysis - I: Solution of Load Flow and related Problems using

   Gauss-Seidel Method
4. Load Flow Analysis - II: Solution of Load Flow and related Problems using Newton-Raphson and Fast-Decoupled Methods
5. Study of symmetrical and unsymmetrical Fault Analysis.
6. Transient and Small Signal Stability Analysis: Single-Machine Infinite Bus System
7. Transient Stability Analysis of Multi-machine Power Systems
8. Electromagnetic Transients in Power Systems.

9. Load – Frequency Dynamics of Single- Area and Two-Area Systems.
10. Economic Dispatch in Power Systems without considering transmission losses.
11. Economic Dispatch in Power Systems with transmission losses.

16BEEE751* **ETAP AND PSCAD** **L T P C** **1 0 0 –**

Course Objectives

Students will learn

- Component block of ETAP
- To Draw Single Line Diagram of Power System
- Component block of PSCAD
- Case study of it

Course Outcomes

Students will analysis

- Component block of ETAP
- Single Line Diagram of Power System
- Component block of PSCAD
- Case study of it

UNIT I INTRODUCTION – ETAP

Introduction – Study of components block – To draw Single Line Diagram of Power System.

UNIT II APPLICATION

Load flow Analysis of three bus System and Fault Analysis.

UNIT III INTRODUCTION – PSCAD

PSCAD- Introduction, Features- Study of components block- Creating a small simulation case using PSCAD.

SEMESTER VIII

16BECC801A ENERGY MANAGEMENT, UTILIZATION AND ENERGY AUDITING

L T P C 3 0 0 3

Course Objectives

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behavior changes of PF requirement in motor currents

Course Outcomes

At the end of this course, students will demonstrate the ability to

- understand and analyse the energy data of industries
- carryout energy accounting and balancing
- conduct energy audit and suggest methodologies for energy savings
- understand the principle, design of illumination systems and energy efficiency lamps.
- analysis the methods of industrial heating and welding.
- understand the electric traction systems and their performance

UNIT I ENERGY MANAGEMENT 9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS 9

Economics analysis – Depreciation Methods, time value of money, Calculation of simple payback, net preset value, internal rate of return, present worth method, replacement analysis, life cycle costing analysis.

UNIT III ILLUMINATION, HEATING AND WELDING 9

Nature of radiation – definition – laws – photometry – lighting calculations – design of illumination systems (for residential, industrial, commercial, health care, street lightings, sports, administrative complexes) - types of lamps - energy efficiency lamps. Methods of heating, requirement of heating material – design of heating element – furnaces – welding generator – welding transformer and its characteristics.

UNIT IV ELECTRIC TRACTION 9

Introduction – requirements of an ideal traction system – supply systems – mechanics of train movement – traction motors and control – multiple units – braking – current collection systems – recent trends in electric traction.

UNIT V BASIC PRINCIPLES OF ENERGY AUDIT **9**

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

16BECC801B **SMART GRID** **L T P C 3 0 0 3**

Course Objectives

- To study about the characteristics of smart grid, models and operating principles.
- To study about energy storage and communication systems used in smart grid.
- To study the models and operating principles of smart grid
- To study the different batteries technology
- To get knowledge about communication system in smart grid
- To study about reliability and stability process

Course Outcomes

At the end of the course the student will be able to

1. Gain the knowledge about Distributed Generations.
2. Acquire the knowledge about Island mode of operation**.**
3. Understand the basic knowledge about storage devices
4. Analysis the different batteries technology.
5. Understand the communication system in smart grid
6. Analysis the reliability and stability process

UNIT I INTRODUCTION : SMART GRID AND EMERGING TECHNOLOGIES 9

Defining a smart grid – Characteristics of smart grid - Values of a smart grid – The economic Case – The environmental Case – Benefits to utilities – Benefits to consumers – Power system components – Power system protection: Traditional Vs Smart – Case study – Generation fundamentals – Traditional Generations – Distributed Generations – micro grid generation – Generator Protection – Challenges and Opportunities – Cost of smart grid – Government Regulations – Emerging Technologies - FACTS – optimizing integration systems – Multi generation buildings – Case study.

UNIT II SMART GRID: MODELS AND OPERATING PRINCIPLES 9

Solar Photovoltaic models and grid Integration – Design of a 2 MVA PV station – DG system as part of utility power system – The smart grid PV - UPS DG system – Split DC Bus UPS – PV DG system – Island mode of operation – Parallel operation of Inverters – Power Quality. Wind turbine model and grid Integration – Micro turbine model & Grid Integration. Electric Vehicle model and Grid Integration.

UNIT III SMART GRID: DISTRIBUTED GENERATION SYSTEMS 9

Power Converter System – Control System Development – Current limit and Saturation Control, Simulation using simulate and MATLAB. Inverter Parallel operation – Load sharing control Algorithm – Distributed Generation System and Newton Raphson method in power flow – Plant modeling and 3 phase 4 wire DG unit topology – Single distributed generation System –MIMO Linear system Stability robustness – PWM rectifier control – 3 Phase AC – DC – AC topology.

UNIT IV ENERGY STORAGE AND COMMUNICATION 9

State–of–the art storage devices – Battery types – Ultra capacitors based Energy Storage System – Flywheel – Wide Area Network – Substation Information System – Wireless Networks – Distribution Automation – AMI Networks – Utility monitoring and Control – Inter-system Coordination – Industrial systems – Consumer Residential Systems – Network Protection – Channel model Fundamental – Low, medium, High voltage, main Topologies – Residential and Business Indoor wiring Topologies – The Power line Channel model – Digital Transmission Techniques - Threats – IEC61850 Considerations.

UNIT V SMART GRID: RELIABILITY, STABILITY AND COMPONENT INTEGRATION 9

Smart Grid Programming – Virtual Power Producer – Intelligent reconfiguration using SCADA – Problems in distributed grids – Solutions. Integration of Mini – Micro generation in distribution Grids – Power supply Quality generic standards – Renewable Energies specific standards – Smart Grid stability analysis schemes – Supply guarantee and Power quality – Integration in power systems – Distributed Generation advantages and needs.

LIST OF DEPARTMENT ELECTIVES

ELECTIVE – I (ONLY APPLICABLE FOR FIFTH SEMESTER)

16BEEE5E01 NETWORK ANALYSIS AND SYNTHESIS L T P C 3 0 0 3

Course Objectives

- To understand the concept of network analysis.
- To understand the basic principles of network theorems.
- To study the electrical circuits using Laplace Transforms
- To study the transient and steady-state response of electrical circuits.
- To study the sinusoidal steady-state (single-phase and three-phase).
- To get the knowledge of two port circuit behavior.

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Apply network theorems for the analysis of electrical circuits.
2. Obtain the solution of first and Second order system
3. Analyze the electrical circuits using Laplace Transforms.
4. Obtain the transient and steady-state response of electrical circuits.
5. Analyze circuits in the sinusoidal steady-state (single-phase and three-phase).
6. Analyze two port circuit behavior.

UNIT-I INTRODUCTION 9

Circuits elements, Independent and dependent sources, signals and wave forms; periodic and singularity voltages, step, ramp, impulse, Doublet. Development of circuit concept, Conventions for describing networks.

UNIT-II GRAPH THEORY 9

Graph of a Network, definitions, tree, co tree, link, basic loop and basic cut set, Incidence matrix, cut set matrix, Tie set matrix Duality, Loop and Node methods of analysis.

UNIT-III NETWORK THEOREMS (APPLICATIONS TO AC NETWORKS) 9

Super-position theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem, Reciprocity theorem. Millman's theorem, compensation theorem, Tellegen's theorem.

UNIT-IV FILTERS SYNTHESIS 9

Classification of filters, Ladder network, T section, IT section, terminating half section. Pass bands and stop bands. Design of constant-K, m-derived filters. Composite filters.

UNIT-V NETWORK SYNTHESIS 9

Positive real function, definition and properties; Properties of LC, RC and RL driving point functions, synthesis of LC, RC and RL driving point admittance functions using Foster and Cauer first and second forms.

16BEEE5E02 ADVANCED CONTROL SYSTEM L T P C 3 0 0 3

Course Objectives

- To study the state variable analysis
- To provide adequate knowledge in the phase plane analysis and also describing function analysis.
- To study the analysis discrete time systems using conventional techniques.
- To analyze the stability of the systems using different techniques.
- To study the design of optimal controller.
- To study the types of compensators

Course Outcomes

At the end of the course the student will be able to

- understand the state variable analysis, Z- transform, state equation
- Construct the frequency response of the system using various plots
- Correlate the time and frequency domain specifications and effect of compensation
- Design the different types of compensators using frequency response plots to stabilize the control system
- Explain the state variable representation of physical systems with the effects of state feedback its assessment for linear-time invariant systems.

UNIT 1 STATE VARIABLE ANALYSIS 9

Concept of state – State Variable and State Model – State models for linear and continuous time systems – Solution of state and output equation – controllability and observability - Pole Placement –State observer Design of Control Systems with observers

UNIT II PHASE PLANE AND DESCRIBING FUNCTION ANALYSIS 9

Features of linear and non-linear systems - Common physical non-linearities – Methods of linearising non-linear systems - Construction of phase portraits – Singular points – Limit cycles Basic concepts, derivation of describing functions for common non-linearities – Describing function analysis of non-linear systems – Conditions for stability – Stability of oscillations.

UNIT III Z-TRANSFORM AND DIGITAL CONTROL SYSTEM 9

Z transfer function – Block diagram – Signal flow graph – Discrete root locus – Bode plot.

UNIT 1V STATE-SPACE DESIGN OF DIGITAL CONTROL SYSTEM 9

State equation – Solutions – Realization – Controllability – Observability – Stability – Jury's test.

UNIT V OPTIMAL CONTROL 9

Introduction -Decoupling - Time varying optimal control – LQR steady state optimal control – Optimal estimation – Multivariable control design.

16BEEE5E03 ELECTRIC HYBRID VEHICLE L T P C 3 0 0 3

Course Objectives

- To study the basic concepts of electric hybrid vehicles.
- To study about energy storage system for hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the efficiency manipulation in drives

Course Outcomes

- At the end of the course the student will be able to understand the concepts of electric hybrid vehicle.
- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION 9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS 9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT 9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE 9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES 9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

16BEEE5E04 COMMUNICATION ENGINEERING L T P C 3 0 0 3

Course Objectives

- To introduce the fundamental techniques of analog, digital and data communication.
- To explain satellite and fibre optic communication and Networking systems.
- To understand basic signals, analog modulation, demodulation and radio receivers.
- To explain the characteristics and model of transmission medium
- To study the recent techniques.
- To get the knowledge about the application of it

Course Outcomes

- Ability to understand and analyze analog circuits.
- Gain Knowledge on digital modulation techniques.
- Understand coding techniques
- Analysis the real time application of it.
- Analysis the model of transmission medium
- To able to modulation and demodulation techniques.

UNIT I MODULATION SYSTEMS 9

Time and frequency domain representation of signals, amplitude modulation and demodulation, frequency modulation and demodulation, super heterodyne radio receiver. Frequency division multiplexing. Pulse width modulation.

UNIT II TRANSMISSION MEDIUM 9

Transmission lines – Types, equivalent circuit, losses, standing waves, impedance matching, bandwidth; radio propagation – Ground wave and space wave propagation, critical frequency, maximum usable frequency, path loss, white Gaussian noise.

UNIT III DIGITAL COMMUNICATION 9

Pulse code modulation, time division multiplexing, digital T–carrier system. Digital radio system. Digital modulation: Frequency and phase shift keying – Modulator and demodulator, bit error rate calculation.

UNIT IV DATA COMMUNICATION AND NETWORK PROTOCOL 9

Data Communication codes, error control. Serial and parallel interface, telephone network, data modem, ISDN, LAN, ISO–OSI seven layer architecture for WAN.

UNIT V SATELLITE AND OPTICAL FIBRE COMMUNICATION 9

Orbital satellites, geostationary satellites, look angles, satellite system link models, satellite system link equations. Advantages of optical fibre communication – Light propagation through fibre, fibre loss, light sources and detectors.

16BEEE5E05 INTRODUCTION TO NEURAL NETWORKS L T P C 3 0 0 3

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To study about the perception concept in design
- To study about the design using ART phenomena
- To study about the vector quantization
- To have a solid understanding of Basic Neural Network

Course Outcomes

At the end of the course the student will be able to sove problems using neural

1. Understand the basic concepts of neural networks and its applications in various domains
2. Gain knowledge about learning process in Neural Networks
3. Apply perception concept in design
4. Design using ART phenomena
5. Gain knowledge on SOM concepts
6. Ability to develop the use of Soft Computing to solve real-world problems

UNIT I INTRODUCTION TO NEURAL NETWORKS 9

Biological Neuron, artificial neuron-comparison, neuron model, architectures-Feedforward and recurrent types. Perceptron -learning rule-graphical, algorithmn, limitations, multilayer network.

UNIT II BACKPROPAGATION NETWORKS 9

Backpropagation algorithm-derivation of up-dation rules, drawbacks. Variants of Backpropagation algorithm-momentum, variable learning rate-simple problems. Data based modeling using backpropagation algorithm – applications - example.

UNIT III ASSOCIATIVE AND SELF-ORGANIZING NETWORKS 9

Associative Learning –supervised and unsupervised types- Instar , outstar and Kohonen networks, Bidirectional associative memories, Hopfield Network. Self organizing map algorithm –Simple problems.

UNIT IV SUPERVISED AND UNSUPERVISED LEARNING NETWORKS 9

Supervised Learning Neural Networks – Radial Basis Function Networks - Reinforcement Learning – Unsupervised Learning Neural Networks – Adaptive Resonance architectures – Advances in Neural networks.

UNIT V APPLICATIONS 9

Applications – Electric drives-Speed control of DC Shunt motor- Neural Network Toolbox in Mat lab-Steepest Descent Backpropogation.

16BEEE5E06 COMPUTER ARCHITECTURE L T P C 3 0 0 3

Course Objectives

- To study the various representations of data, register transfer language for micro operations and organization and design of a digital computer.
- To teach the concept of micro–programmed control unit, the central processing unit, stack and instruction formats.
- To Study the various arithmetic operation's algorithms
- To study the hardware implementations and concept of pipelining and vector processing.
- To illustrate the techniques to communicate with input and output devices.

Course Outcomes

1. Understand the concepts of microprocessors, their principles and practices.
2. Write efficient programs in assembly language of the 8086 family of microprocessors.
3. Organize a modern computer system and be able to relate it to real examples.
4. Develop the programs in assembly language for 80286, 80386 and MIPS processors in real and protected modes.
5. Implement embedded applications using ATOM processor.
6. Analysis the real time application of it.

UNIT I DATA REPRESENTATION, MICRO–OPERATIONS, ORGANIZATION AND DESIGN 9

Data representation: Data types, complements, fixed–point representation, floating–point representation, other binary codes and error detection codes.Register transfer and micro operations: Register transfer language, bus and memory transfers, arithmetic micro–operations, logic micro–operations, shift micro–operations, arithmetic logic shift unit.Basic computer organization and design: Instruction codes, computer registers, computer instructions, timing and control, instruction cycle, memory reference instructions, input–output and interrupt. Complete computer description, design of basic computer, design of accumulator.

UNIT II CONTROL AND CENTRAL PROCESSING UNIT 9

Micro programmed control: memory, address sequencing, micro–program example, design of control unit.Central processing unit: General registers and organization, stack and pointer organization, instruction formats, modes, data transfer and manipulation, program control, reduced Instruction set computer.

UNIT III COMPUTER ARITHMETIC, PIPELINE AND VECTOR PROCESSING 9

Computer arithmetic: Addition, subtraction, multiplication and division algorithms, floating–point arithmetic operations, decimal arithmetic unit, decimal arithmetic operations.Pipeline and vector processing: Parallel processing, pipelining, arithmetic pipeline, instruction pipeline, RISC pipeline, vector processing array processors.

UNIT IV INPUT–OUTPUT ORGANIZATION 9

Input–output organization: Peripheral devices, input–output interface, asynchronous data transfer (UART and USART), modes of transfer, priority interrupt, direct memory access, input–output processor, serial communication.

UNIT V MEMORY ORGANIZATION 9

Memory organization: Memory hierarchy, main memory, auxiliary memory, associative memory, cache memory, virtual memory, memory management.

16BEEE5E07 FUZZY LOGIC AND ITS APPLICATIONS L T P C 3 0 0 3

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models
- To study about the development of fuzzy controllers
- To Understand the concepts of adaptive fuzzy control
- To study the fuzzy based model system

Course Outcomes

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT I FUZZY SETS AND RELATIONS 9

Classical sets, fuzzy sets-operation, properties. Fuzzy relations-Equivalence and tolerance relation, Fuzzification- membership function-types, methods.

UNIT II FUZZY INFERENCE SYSTEM 9

Building Blocks of a Fuzzy system, fuzzification, fuzzy Rule-based Systems. Composition of rules, types of inference, defuzzification methods.

UNIT III FUZZIFICATION AND FUZZY ARITHMETIC 9

Lambda-cuts for fuzzy sets-lambda cuts for fuzzy relations- defuzzification methods - Extension principle-functions of fuzzy sets- fuzzy transform-fuzzy numbers-approximate methods of extension-vertex method-DSW algorithm

UNIT IV FUZZY LOGIC AND FUZZY RULE BASED SYSTEMS 9

Fuzzy logic –approximate reasoning-fuzzy tautologies-contradictions-equivalence-and logical proofs-other forms of implication operation and composition operation-linguistic hedges-rule based systems-fuzzy associative memories- multi objective decision making.

UNIT V APPLICATIONS 9

Fuzzy Tool box in Mat lab – Case Study – Temperature Control in a Shower-Water level Control in a Tank.

16BEEE5E08 DISTRIBUTED GENERATION L T P C 3 0 0 3

Course Objectives

- To study about the distributed generation system.
- To study about the relaying and protections in the distributed system.
- To get the knowledge of distributed generation, boiler turbine monitoring system.
- To get the knowledge in Planning of distributed system
- To know the control of DG inverter
- To gather knowledge of protection of distributed systems

Course Outcomes

At the end of the course the students will

- Understand the distributed generation system , boiler turbine monitoring system.
- Understand the Planning of distributed system
- Analysis the control of DG inverters
- Analysis the protection of distributed systems
- Understand the rel time system
- Analysis the norms and standards used in it

UNIT I INTRODUCTION TO DISTRIBUTED GENERATION 9

Introduction to the concept of distributed generation - Distributed generation advantages and needs - Radial distribution system protection: Fuse, circuit breakers, reclosers- Per-unit analysis, fault analysis, sequence component analysis, sequence models of distribution system components. Implications of DG on distribution system protection coordination.

UNIT II DISTRIBUTION SYSTEM LOADING 9

Introduction – Distribution system loading, line drop model, series voltage regulators and on line tap changers- Power quality requirements and source switching using SCR based static switches- Loop and secondary network distribution grids and impact of DG operation.

UNIT III RELAYING AND PROTECTION 9

Relaying and protection, distributed generation interconnection relaying, sensing using CTs and PTs- Intentional and unintentional islanding of distribution systems. Passive and active detection of unintentional islands, non detection zones - EMI considerations in DG applications.

UNIT IV DISTRIBUTED GENERATION PLANNING 9

DG planning and forecasting techniques - Load characteristics: Definitions - tariffs and metering of energy, cost implications of power quality, cost of energy and net present value calculations and implications on power converter design- Distribution Transformers: Types. Distribution sub-stations and primary systems: Voltage drop and power loss calculations: Distribution feeder costs.

UNIT V DG INVERTERS CONTROL 9

Control of DG inverters, phase locked loops, current control and DC voltage control for stand alone and grid parallel operations. Protection of the converter.

16BEEE5E09 DIGITAL SIGNAL PROCESSING L T P C 3 0 0 3

Course Objectives

- To introduce the concept of analyzing discrete time signals and systems in the time and frequency domain.
- To classify signals and systems and their mathematical representation.
- To analyze the discrete time systems.
- To study various transformation techniques and their computation.
- To study about filters and their design for digital implementation.
- To study about a programmable digital signal processor and quantization effects.

Course Outcomes

1. Represent signals mathematically in continuous and discrete-time, and in the frequency domain.
2. Analyze discrete-time systems using z-transform.
3. Understand the Discrete-Fourier Transform (DFT) and the FFT algorithms.
4. Design digital filters for various applications.
5. Apply digital signal processing for the analysis of real-life signals.
6. Analysis the real time application of it

UNIT I INTRODUCTION 9

Classification of systems: Continuous, discrete, linear, causal, stable, dynamic, recursive, time variance; classification of signals: continuous and discrete, energy and power; mathematical representation of signals; sampling techniques, quantization, quantization error, Nyquist rate, aliasing effect, analog to digital conversion.

UNIT II DISCRETE TIME SYSTEM ANALYSIS 9

Discrete Fourier series, Fourier transform of discrete sequence, Z-transform and its properties, inverse z-transforms; difference equation – Solution by z-transform, application to discrete systems - Stability analysis, frequency response – Convolution.

UNIT III DISCRETE FOURIER TRANSFORM & COMPUTATION 9

Discrete Fourier Transform and its properties - Computation of DFT using FFT algorithm – DIT & DIF - FFT using radix 2 – Butterfly structure.

UNIT IV DESIGN OF DIGITAL FILTERS 9

FIR design: Windowing Techniques - Rectangular, Hamming, Hanning – Need and choice of windows – Linear phase characteristics.

IIR design: Analog filter design - Butterworth filter design using impulse invariant and bilinear transformation - Warping, prewarping - Frequency transformation.

UNIT V PROGRAMMABLE DSP CHIPS 9

Architecture and features of TMS 320C54 signal processing chip – Overview of instruction set and addressing modes of TMS 320C54

16BEEE5E10 INDUSTRIAL AUTOMATION L T P C 3 0 0 3

Course Objectives

- To study and gain knowledge about various sensors.
- To study and gain knowledge about controllers.
- To study the concept of sensors,
- To study the concept of actuators
- To study the various tuning controllers
- To study the application of SCADA.

Course Outcomes

At the end of the course the student will be able to
1. Understand the concept of sensors,
2. Understand the concept of actuators
3. Analyze the various tuning controllers
4. Analyze the various advanced control techniques used in industrial automation.
5. Understand the application of SCADA.
6. Analyze the SCADA usuage in Industries.

UNIT I SENSORS, ACTUATORS 9

Sensors, Actuators and Signal conditioning Sensors: Displacement sensors, Force sensors, Ultrasonic sensors, Temperature sensors, Pressure sensors etc Actuators: Dc motors, Servo motors, Stepper motors, Piezo electric actuators, Pneumatic actuators etc. Signal Conditioning: Filtering, Amplifying, Isolation, ADC, DAC, Sensor protection circuits, Signal transmission and noise suppression, Estimation of errors and calibration.

UNIT II CONTROLLER TUNING 9

PI controller, PD controller, PID controller and tuning methods: Ziegler-Nichols tuning method, Cohen coon tuning method, Implementation of PID controllers (digital and analog).

UNIT III AUTOMATION 9

PLC (Programmable logic controllers): Overview, operation and architecture, PLC programming, Application examples. DCS (Distributed control systems): Overview, Advantages, Functional requirements of Distributed control systems, Communication for distributed control

UNIT IV APPLICATIONS 9

Application examples SCADA (supervisory control and data acquisition): Introduction to SCADA, SCADA system components, architecture and communication, SCADA applications.

UNIT V ADVANCED CONTROL TECHNIQUES 9

Feed forward control, Ratio control, Cascade control, Adaptive control, Duplex or split range control, Override control, internal mode control.

16BEEE5E011 SENSOR AND TRANSDUCER L T P C 3 0 0 3

Course Objectives

- It deals with various types of Sensors & Transducers and their working principle
- It deals with resistive transducers
- It deals with capacitive transducers
- It deals with inductive transducers
- It deals with some of the miscellaneous transducers
- It deals with characteristics of transducers

Course Outcomes

At the end of the course the student will be able to understand all types of sensors and transducers.

1. Understand all types of sensors and transducers.
2. Justify the concept and working principle of different transducers and sensors
3 Justify the transducers that will be utilised in the electrical industries
4. Identify recent developments in transducer domain
5. Discover the knowledge for small technology up gradations in it
6. Analysis the real time application

UNIT I INTRODUCTION OF TRANSDUCERS 9

Transducer – Classification of transducers – Basic requirement of transducers.

UNIT II CHARACTERISTICS OF TRANSDUCERS 9

Static characteristics – Dynamic characteristics – Mathematical model of transducer – Zero, first order and second order transducers – Response to impulse, step, ramp and sinusoidal inputs.

UNIT III RESISTIVE TRANSDUCERS 9

Potentiometer –Loading effect – Strain gauge – Theory, types, temperature compensation – Applications – Torque measurement – Proving Ring – Load Cell – Resistance thermometer – Thermistors materials – Constructions, Characteristics – Hot wire anemometer.

UNIT IV INDUCTIVE AND CAPACITIVE TRANSDUCER 9

Self inductive transducer – Mutual inductive transducers– LVDT Accelerometer – RVDT – Synchros – Microsyn – Capacitive transducer – Variable Area Type – Variable Air Gap type – Variable Permittivity type – Capacitor microphone.

UNIT V MISCELLEANEOUS TRANSDUCERS 9

Piezoelectric transducer – Hall Effect transducers – Smart sensors – Fiber optic sensors – Film sensors – MEMS – Nano sensors, Digital transducers.

16BEEE5E12 INTELLECTUAL PROPERTY RIGHTS L T P C 3 0 0 3

Course Objectives

- To study about the concept of intellectual property laws.
- To study about the trademarks and copy rights.
- To study trademarks and its importance
- To get the knowledge of principles of copyrights and the legal process
- To acquire the knowledge of Trade secrets and its security
- To gain various practical case studies of patent programme

Course Outcomes

- At the end of the course the student will be able to understand the concepts of IPR.
- Ability to need of trademarks and its importance
- To gain the knowledge of principles of copyrights and the legal process
- To acquire the knowledge of Trade secrets and its security
- To gain various practical case studies of patent programmes
- Ability of handling higher level management legality in patent and trading

UNIT I INTRODUCTION 9

Introduction to Intellectual Property Law – The Evolutionary Past - The IPR Tool KitPara -Legal Tasks in Intellectual Property Law – Ethical obligations in Para Legal Tasks in Intellectual Property Law - Introduction to Cyber Law – Innovations and Inventions Trade related Intellectual Property Right.

UNIT II TRADE MARK 9

Introduction to Trade mark – Trade mark Registration Process – Post registration Procedures – Trade mark maintenance - Transfer of Rights - Inter partes Proceeding – Infringement - Dilution Ownership of Trade mark – Likelihood of confusion - Trademarks claims – Trademarks Litigations – International Trade mark Law.

UNIT III COPY RIGHTS 9

Introduction to Copyrights – – Principles of Copyright Principles -The subjects Matter of Copy right – The Rights Afforded by Copyright Law – Copy right Ownership, Transfer and duration – Right to prepare Derivative works – Rights of Distribution – Rights of Perform the work Publicity Copyright Formalities and Registrations - Limitions - Copyright disputes and International Copyright Law – Semiconductor Chip Protection Act.

UNIT IV TRADE SECRET 9

Introduction to Trade Secret – Maintaining Trade Secret – Physical Secrurity – Employee Limitation - Employee confidentiality agreement - Trade Secret Law - Unfair Competation – Trade Secret Letigation – Breach of Contract – Applying State Law.

UNIT V CASE STUDIES 9

Case Studies on – Patents (Basumati rice, turmeric, Neem, etc.) – Copyright and related rights – Trade Marks – Industrial design and Integrated circuits – Geographic indications – Protection against unfair competition.

ELECTIVE – III AND ELECTIVE- IV (ONLY APPLICABLE FOR SIXTH SEMESTER)

16BEEE6E01 COMPUTER ORGANIZATION AND ARCHITECTURE L T P C 3 0 0 3 Course Objectives

Course Outcomes:

- To study the various representations of data, register transfer language for micro operations and organizations and design of digital computer
- To teach the concept of micro program control unit ,CPU, stack and instruction formats
- To study the concepts of microprocessors, their principles and practices
- To study the write efficient programs in assembly language of the 8086 family of microprocessors.
- To illustrate the technique to communicate with input and output devices
- To study the organization and operation of various memories and memory

At the end of this course, students will demonstrate the ability to

1. Understand the concepts of microprocessors, their principles and practices.
2. Write efficient programs in assembly language of the 8086 family of microprocessors.
3. Organize a modern computer system and be able to relate it to real examples.
4. Develop the programs in assembly language for 80286, 80386 and MIPS processors in real and protected modes.
5. Implement embedded applications using ATOM processor.
6. Analysis the real time application of it.

UNIT I DATA REPRESENTATION, MICRO-OPERATIONS, ORGANIZATION AND DESIGN 9

Data representation: Data types, complements, fixed–point representation, floating-point representation, other binary codes, error detection codes. Register transfer and micro operations: Register transfer language, register transfer, bus and memory transfers, arithmetic micro- operations, logic micro-operations, shift micro-operations, arithmetic logic shift unit-Basic computer organization and design: Instruction codes, computer registers, computer instructions, timing and control, instruction cycle, memory reference instructions, input output and interrupt. Complete computer description, design of basic computer, design of accumulator logic.

UNIT II CONTROL AND CENTRAL PROCESSING UNIT 9

Micro programmed control: Control memory, address sequencing, micro-program example, design of control unit-Central processing unit: General register organization, stack organization, instruction formats, addressing modes, data transfer and manipulation, program control, reduced instruction set computer.

UNIT III COMPUTER ARITHMETIC, PIPELINE AND VECTOR PROCESSING 9

Computer arithmetic: Addition and subtraction, multiplication algorithms, division algorithms, floating-point arithmetic operations, decimal arithmetic unit, decimal arithmetic operations- Pipeline and vector processing: Parallel processing, pipelining, arithmetic pipeline, instruction pipeline, RISC pipeline, vector processing array processors.

UNIT IV INPUT-OUTPUT ORGANIZATION 9

Input-output organization: Peripheral devices, input-output interface, asynchronous data transfer, modes of transfer, priority interrupt, direct memory access, input-output processor, serial communication.

UNIT V MEMORY ORGANIZATION 9

Memory organization: Memory hierarchy, main memory, auxiliary memory, associative memory, cache memory, virtual memory, memory management hardware.

16BEEE6E02 EMBEDDED SYSTEM L T P C 3 0 0 3

Course Objectives

- To provide a clear understanding of embedded system terminologies and its devices.
- Various Embedded software Tools
- Design and architecture of Memories.
- Architecture of processor and memory organizations.
- Input/output interfacing
- Various processor scheduling algorithms.
- Basics of Real time operating systems.
- Introduction to PIC and its applications

Course Outcomes

At the end of the course the student will be able to program using embedded

1. Understand overview of embedded systems architecture
2. Acquire knowledge on embedded system, its hardware and software.
3. Gain knowledge on overview of Operating system
4. Discuss about task Management
5. Gain knowledge about semaphore management and message passing.
6. Gain knowledge about memory management.

UNIT I INTRODUCTION TO EMBEDDED SYSTEMS 9

Introduction to embedded real time systems – The build process for embedded systems – Types of memory – Memory management methods.

UNIT II EMBEDDED SYSTEM ORGANIZATION 9

Structural units in processor , selection of processor & memory devices – DMA – I/O devices : timer & counting devices – Serial communication using I2C , CAN USB buses – Parallel communication using ISA , PCI ,PCI/X buses – Device drivers.

UNIT III PROGRAMMING AND SCHEDULING 9

Intel I/O instructions – Synchronization - Transfer rate, latency; interrupt driven input and output - Nonmaskable interrupts, software interrupts, Preventing interrupts overrun - Disability interrupts. Multithreaded programming –Context Switching, Preemptive and non-preemptive multitasking, semaphores. Scheduling-thread states, pending threads, context switching.

UNIT IV REAL-TIME OPERATING SYSTEMS 9

Introduction to basic concepts of RTOS, Unix as a Real Time Operating system – Unix based Real Time operating system - Windows as a Real time operating system – POSIX – RTOS-Interrupt handling - A Survey of contemporary Real time Operating systems:PSOS, VRTX, VxWorks, QNX, чC/OS-II, RT Linux – Benchmarking Real time systems – Basics.

UNIT V PIC MICROCONTROLLER BASED EMBEDDED SYSTEM DESIGN 9

PIC microcontroller – MBasic compiler and Development boards – The Basic Output and digital input – Applications.

16BEEE6E03 PROGRAMMABLE LOGIC CONTROLLER AND ITS APPLICATIONS

L T P C 3 0 0 3

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flo charts of ladder and spray process system
- To understand the principles of PID.

Course Outcomes

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION 9

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING 9

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS 9

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS 9

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES 9

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

16BEEE6E04 COMPUTER NETWORKS L T P C 3 0 0 3

Course Objectives

- To study about various network architecture
- To study and analyze about various switching.
- To study about web security and its need
- To study about protocols and its controls
- To study about subnetting and domains basics
- To study about real time need of network management

Course Outcomes

At the end of the course the student will be able

- To understand the computer networks and network protocols.
- To gain switching mechanisms of various interlink networks
- To know web securities and its need in real time digital world
- To gather D-link concepts
- To acquire wireless communication software and its related devices
- Gather protocols of dealing network accessories

UNIT I INTRODUCTION 9

Network architecture – layers – Physical links – Channel access on links – Hybrid multiple access techniques - Issues in the data link layer - Framing – Error correction and detection – Link-level Flow Control

UNIT II WIRELESS NETWORKS 9

Medium access – CSMA – Ethernet – Token ring – FDDI - Wireless LAN – Bridges and Switche

UNIT III SWITCHING 9

Circuit switching vs. packet switching / Packet switched networks – IP – ARP – RARP – DHCP – ICMP – Queueing discipline – Routing algorithms – RIP – OSPF – Subnetting – CIDR – Interdomain routing – BGP – Ipv6 – Multicasting – Congestion avoidance in network layer

UNIT IV NETWORK PROTOCOLS 9

UDP – TCP – Adaptive Flow Control – Adaptive Retransmission - Congestion control – Congestion avoidance – QoS

UNIT V WEB SECURITY 9

Email (SMTP, MIME, IMAP, POP3) – HTTP – DNS- SNMP – Telnet – FTP – Security – PGP - SSH

16BEEE6E05 HIGH VOLTAGE ENGINEERING L T P C 3 0 0 3

Course

- To understand the various types of over voltages in power system and Protection methods.
- To study about generation of over voltages in laboratories.
- To know about measurement of over voltages.
- To study about the nature of Breakdown mechanism in solid, liquid and gaseous Dielectrics
- To study about discussion on commercial insulates.
- To study about testing of power apparatus and insulation coordination

Course Outcomes

1. Identify the causes of over voltages and its effects and estimate the reflection and refractions of travelling waves in transmission lines
2. Discuss the various types of breakdown mechanisms and analyze the breakdown mechanisms in solid, liquid, gases and composite dielectrics
3. Explain the generation and design of different types of Generating circuits for high voltage and currents of AC, DC and impulse
4. Measure AC and DC high voltage and current using high resistance with series ammeter, dividers, peak voltmeter and generating voltmeters
5. Discuss the testing methodologies related to various high voltage equipment with reference to national and international standards
6. Estimate the AC and DC high voltage and current using CVT, electrostatic voltmeters, sphere gaps, high current shunts and digital techniques in high voltage measurement

UNIT I OVER VOLTAGES IN ELECTRICAL POWER SYSTEMS 9

Causes of over voltages and its effect on power system – Lightning, switching surges and temporary over voltages – protection against over voltages.

UNIT II ELECTRICAL BREAKDOWN IN GASES, LIQUIDS AND SOLIDS 9

Gaseous breakdown in uniform and non–uniform fields – corona discharges – Vacuum breakdown – conduction and breakdown in pure and commercial liquids – breakdown mechanisms in solid and composite dielectrics.

UNIT III GENERATION OF HIGH VOLTAGES AND HIGH CURRENTS 9

Generation of High DC, AC, impulse voltages and currents. Tripping and control of impulse generator.

UNIT IV MEASUREMENT OF HIGH VOLTAGES AND HIGH CURRENTS 9

Measurement of High voltages and High currents – digital techniques in high voltage measurement.

UNIT V HIGH VOLTAGE TESTING AND INSULATION COORDINATION 9

High voltage testing of electrical power apparatus – power frequency, impulse voltage and DC testing – International and Indian standards – Insulation Coordination.

16BEEE6E06 SPECIAL ELECTRICAL MACHINES L T P C 3 0 0 3

Course Objectives

- To expose the students to the concepts of special electrical machines and analyze their performance and to impart knowledge on
- Construction and performance of synchronous reluctance motors.
- Principle of operation and performance of stepping motors .
- To study the knowledge on construction and operation of permanent magnet brushless D.C. motors.
- To study the real time need of special machines
- Construction, principle of operation and performance of switched reluctance motors, permanent magnet synchronous motors.

Course Outcomes

1. Analyze and design controllers for special Electrical Machines.
2. Acquire the knowledge on construction and operation of stepper motor.
3. Understand the concept of construction and operation of stepper switched reluctance motors.
4. Acquire the knowledge on construction and operation of permanent magnet brushless D.C. motors.
5. Acquire the knowledge on construction and operation of permanent magnet synchronous motors.
6. Determine a special Machine for a particular application.

UNIT I SYNCHRONOUS RELUCTANCE MOTORS 9

Constructional features – Types – Axial and radial air gap motors – Operating principle – Reluctance – Phasor diagram – Characteristics – Vernier motor – Driver circuits – Applications of AC motors.

UNIT II STEPPING MOTORS 9

Construction and Principle of operation – Types: Permanent Magnet, Hybrid and Variable reluctance motor – Single and multi stack configurations – Theory of torque predictions – Dynamic Characteristics – Driver circuits – Applications of stepper motors.

UNIT III SWITCHED RELUCTANCE MOTORS 9

Construction and Principle of operation – Torque prediction – Power controllers – Non–linear analysis – Microprocessor based control – Characteristics – Driver circuits.

UNIT IV PERMANENT MAGNET BRUSHLESS DC MOTORS 9

Construction and Principle of operation – Electronic Commutator – Difference between electronic and Mechanical Commutator – Types of PMBLDC motors – Magnetic circuit analysis – EMF and torque equations – Power controllers – Motor characteristics and control – Applications of DC motors.

UNIT V PERMANENT MAGNET SYNCHRONOUS MOTORS 9

Construction and Principle of operation – EMF and torque equations – Torque-speed characteristics – Reactance – Phasor diagram – Power controllers –Volt-ampere requirements of Converter – Self, Vector and Current control schemes.

16BEEE6E07 FIBRE OPTICS AND LASER INSTRUMENTS L T P C 3 0 0 3

Course Objectives

- To expose the students to the basic concepts of optical fibres and their properties.
- To provide adequate knowledge about the Industrial applications of optical fibres.
- To expose the students to the Laser fundamentals.
- To study the source and detectors in optical system
- To provide adequate knowledge about Industrial application of lasers.
- To provide adequate knowledge about holography and Medical applications of Lasers.

Course Outcomes

At the end of the course the student will be understand

- the concept of fibre optics and about laser instruments.
- Introduce the characteristics of laser for engineering applications.
- Develop the idea of quantum mechanics through applications.
- Gain knowledge in industrial application about optical fibre
- Develop the new strategies in laser technology in industries
- Acquire knowledge in advanced medical system utility under this technology

UNIT I OPTICAL FIBRES AND THEIR PROPERTIES 9

Principles of light propagation through a fibre - Different types of fibres and their properties, fibre characteristics – Absorption losses – Scattering losses – Dispersion – Connectors and splicers – Fiber termination – Optical sources – Optical detectors.

UNIT II INDUSTRIAL APPLICATION OF OPTICAL FIBRES 9

Fibre optic sensors – Fibre optic instrumentation system – Different types of modulators – Interferometric method of measurement of length – Moire fringes – Measurement of pressure, temperature, current, voltage, liquid level and strain.

UNIT III LASER FUNDAMENTALS 9

Fundamental characteristics of lasers – Three level and four level lasers – Properties of laser – Laser modes – Resonator configuration – Q-switching and mode locking – Cavity damping – Types of lasers – Gas lasers, solid lasers, liquid lasers, semiconductor lasers.

UNIT IV INDUSTRIAL APPLICATION OF LASERS 9

Laser for measurement of distance, length, velocity, acceleration, current,voltage and Atmospheric effect – Material processing – Laser heating, welding,melting and trimming of material – Removal and vaporization.

UNIT V HOLOGRAM AND MEDICAL APPLICATIONS 9

Holography – Basic principle - Methods – Holographic interferometry and application, Holography for non-destructive testing – Holographic components – Medical applications of lasers, laser and tissue interactive – Laser instruments for surgery, removal of tumors of vocal cards, brain surgery, plastic surgery, gynaecology and oncology.

16BEEE6E08 MOBILE COMMUNICATION L T P C 3 0 0 3

Course Objectives

- To understand the mobile channel environment, communication techniques and wireless standards for mobile communication.
- To learn cellular concept including handoff mechanism, cell coverage and capacity.
- To understand the mobile radio propagation models for indoor and outdoor conditions.
- To study the digital modulation and equalization techniques suitable for mobile communication.
- To learn speech coding and multiple access techniques for mobile communication.
- To familiarize with the international wireless network standards.

Course Outcomes

At the end of the course the student will be able to understand the cellular concept, mobile propagation, wireless systems and standards.

- Understand past, present and future trends in mobile communication.
- Gain knowledge about mobile cellular communication
- Understand various standards in use for wireless communication and its application.
- Demonstrate some basic application of GPS.
- Gain knowledge about RADAR working and its applications
- Analysis the real time application of it.

UNIT I CELLULAR CONCEPT AND SYSTEM DESIGN FUNDAMENTALS 9

Introduction to wireless communication: Evolution of Mobile Communication, mobile radio systems – Examples, trends in cellular radio and personal communications. Cellular concept: Frequency reuse, channel assignment hand off, interference and system capacity, tracking and grade of service, improving coverage and capacity in cellular systems.

UNIT II MOBILE RADIO PROPAGATION 9

Free space propagation model, reflection, diffraction, scattering, link budget design, outdoor propagation models, indoor propagation models, small scale multipath propagation, impulse model, small scale multipath measurements, parameters of mobile multipath channels, types of small scale fading.

UNIT III MODULATION TECHNIQUES AND EQUALIZATION 9

Modulation techniques: Minimum Shift Keying (MSK), Gaussian MSK, M–array QAM, Performance of MSK modulation in slow–flat fading channels. Equalization: Survey of equalization techniques, linear equalization, non–linear equalization, algorithms for adaptive equalization. Diversity Techniques, RAKE receiver.

UNIT IV CODING AND MULTIPLE ACCESS TECHNIQUES 9

Coding: Vocoders, linear predictive coders, selection of speech coders for mobile communication, GSM coders. Multiple access techniques: FDMA, TDMA, CDMA, SDMA, capacity of cellular CDMA.

UNIT V WIRELESS SYSTEMS AND STANDARDS **9**

Second generation and third generation wireless network and standards, WLL, blue tooth, GSM, IS–95 and DECT.

16BEEE6E09 SWITCHED MODE POWER CONVERSION L T P C 3 0 0 3

Course Objectives

At the end of the course the student will be understand

- The concept of fibre optics and about laser instruments.
- Introduce the characteristics of laser for engineering applications.
- Develop the idea of quantum mechanics through applications.
- Gain knowledge in industrial application about optical fibre
- Develop the new strategies in laser technology in industries
- Acquire knowledge in advanced medical system utility under this technology

Course Outcomes

- At the end of the course the student will be able to understand the concept of power converters, resonant converters and about harmonics.
- At the end of the course the student will be able to understand the concept of capacitors and inductor design.
- To understand the working of Power Converters and components of low-voltage electrical installation
- To acquire knowledge of Steady state and dynamic functions in various applications
- To know the importance of power quality system in advanced equipments
- To know the design of conversion ratio

UNIT I INTRODUCTION 9

Reactive elements in power electronics system- electromagnetics – design of inductor- design of transformer – capacitors for power electronic applications – types of capacitor

UNIT II POWER CONVERTERS 9

Switched mode power converters – continuous and discontinues mode of operation in buck, boost and boost-buck converter – isolated DC to DC: forward converter- pushpull converter – fly back converter

UNIT III STEADY STATE AND DYNAMIC FUNCTIONS 9

Pulse width modulated converter: average modeled of the converter – steady state solution – transfer function of the converter- generalized stste space mode of the converter – linear small signal model – dynamic functions of the converter.

UNIT IV RESONANT CONVERTERS 9

Resonant converters – ZCS Resonant converters – L and M type – ZVS Resonant converters- comparison between ZCS and ZVS converters – resonant switch converters – buck converter with zero current switching – operation of the circuit – conversion ratio of the converter – boost converter with zero voltage switching

UNIT V HARMONICS **9**

Sub harmonic instability in current programmed control – determination of duty ratio for current programmed control – power circuit of UPF rectifiers – average current mode control – resistor emulator UPF rectifiers

16BEEE6E10 BIOMEDICAL INSTRUMENTATION L T P C 3 0 0 3

Course Objectives

- The course is designed to make the student acquire an adequate knowledge of the physiological systems of the human body and relate them to the parameters that have clinical importance
- To study about instruments for physiological measurements
- To study about devices of non–electrical devices.
- To study about modern methods of imaging techniques.
- To study about nervous system
- To study about medical assistance / techniques and therapeutic

Course Outcomes

At the end of the course the student will be to

- Acquaintance of the physiology of the heart, lung, blood circulation and circulation respiration. Methods of different transducers used.
- Understand the student to the various sensing and measurement devices of electrical origin.
- Analysis the latest ideas on devices of non–electrical devices.
- Analysis the important and modern methods of imaging techniques.
- Analysis latest knowledge of medical assistance / techniques and therapeutic equipment.
- Analysis the real time application of it

UNIT I PHYSIOLOGY AND TRANSDUCERS 9

Cell and its structure – Action and resting potential – Potential propagation of action potential – Sodium pump – Nervous system – CNS – PNS – Nerve cell – Synapse – Cardio pulmonary system – Physiology of heart and lungs – Circulation and respiration – Transducers – Different types – Piezo electric, ultrasonic, resistive, capacitive and inductive transducers – Selection criteria.

UNIT II ELECTRO – PHYSIOLOGICAL MEASUREMENTS 9

Basic components of a biomedical system – Electrodes – Micro, needle and surface electrodes – Amplifiers – differential, chopper, Isolation and Pre-amplifiers. ECG – EEG – EMG – ERG – Lead systems and recording methods – Typical waveforms.

UNIT III NON–ELECTRICAL PARAMETER MEASUREMENTS 9

Measurement of blood pressure – Cardiac output – Cardiac rate – Heart sound – Respiratory rate – Gas volume – Flow rate of CO_2, O_2 in exhaust air – pH of blood, ESR and GSR measurements – Plethysmography.

UNIT IV MEDICAL IMAGING AND PATIENT MONITORING SYSTEM 9

X–ray machine – Radiographic and fluoroscopic techniques – Computer Tomography – MRI – Ultrasonography – Endoscopy – Thermography – Different types of biotelemetry systems and patient monitoring – Electrical safety.

UNIT V ASSISTING AND THERAPEUTIC EQUIPMENT 9

Pacemakers – Defibrillators – Ventillators – Nerve and muscle stimulators – Diathermy – Heart-Lung machine – Audio meters – Dializers.

16BEEE6E11 MODERN SEMICONDUCTOR DEVICES L T P C 3 0 0 3

Course Objectives

- To study the power semiconductor switches.
- To study about the characteristics and applications of Power diode, power BJT, Thyristor, GTO, IGBT, MOSFET.
- To study the real time application of it.
- To study the basics of thyristor technologies
- To study the new semiconductor material of power devices
- To study the safe operating area of the power devices

Course Outcomes

At the end of the course the student will be able to

- Understand the concepts of modern semiconductor devices
- Understand the different characteristics of conductor devices
- Analysis the real time application of it.
- To learn deep knowledge of thyristor technologies
- To study about real time applications of inverters and rectifiers
- To learn about protection of device circuits

UNIT I OVERVIEW OF POWER SEMICONDUCTOR SWITCHES 9

Introduction - Diodes, Thyristors, BJTs, JFETs, MOSFETs, GTOs, IGBTs, Comparison of these as switching devices, Drive and Protection circuit for these devices – New Semiconductor materials for Power devices.

UNIT II POWER DIODE AND POWER BJT 9

Basic structure and I-V & Switching characteristics of Power diode, Schottky diode - Structure and switching characteristics of Power BJT - Breakdown voltage considerations - Safe operating area - Drive circuits for BJT – Snubber design for Power diode.

UNIT III THYRISTORS AND GTOs 9

Basic structures - I-V characteristics - Physics of device operation - Switching characteristics of Thyristors and GTOs – Derive circuits - Snubber circuits for Thyristors and GTOs - Over current protection of GTO.

UNIT IV IGBT AND POWER JFET & MOSFETS 9

Basic structures - I-V characteristics, physics of device operation - Switching characteristics – Safe operating area of IGBT and Power JFET & MOSFET - Derive circuits and Protection.

UNIT V APPLICATIONS 9

Single phase rectifiers and Three phase rectifiers using Diodes and Thyristors, Choppers, Inverters using GTOs-IGBTs and power JFETs & MOSFETs.

PROFESSIONAL ELECTIVE- V

(ONLY APPLICABLE FOR SEVENTH SEMESTER)

16BEEE7E01 ARTIFICIAL INTELLIGENCE AND EXPERT SYSTEMS L T P C 3 0 0 3

Course Objectives

- To study about representing knowledge.
- To study the reasoning and decision making in uncertain world. To construct plans and methods for generating knowledge.
- To study the concepts of expert systems.
- To study the knowledge about the various searching strategies
- To study about first order logic
- To study the need of real time world about robotics

Course Outcomes

At the end of the course the student will be able to

- understand concepts about artificial intelligence, reasoning and also about expert tools.
- To understand about representing knowledge.
- To acquire knowledge about the reasoning and decision making in uncertain wor construct plans and methods for generating knowledge.
- To acquire knowledge about the concepts of expert systems.
- To acquire knowledge about the various searching strategies for solutions

UNIT I INTRODUCTION 9

Introduction to AI: Intelligent agents – Perception – Natural language processing – Problem solving agents – Searching for solutions: Uniformed search strategies – Informed search strategies.

UNIT II KNOWLEDGE AND REASONING 9

Adversarial search – Optimal and imperfect decisions – Alpha, Beta pruning – Logical agents: Propositional logic – First order logic – Syntax and semantics – Using first order logic – Inference in first order logic.

UNIT III UNCERTAIN KNOWLEDGE AND REASONING 9

Uncertainty – Acting under uncertainty – Basic probability notation – Axioms of probability – Baye's rule – Probabilistic reasoning – Making simple decisions.

UNIT IV PLANNING AND LEARNING 9

Planning: Planning problem – Partial order planning – Planning and acting in non–deterministic

domains.
Learning: Learning decision trees – Knowledge in learning – Neural networks – Reinforcement learning – Passive and active.

UNIT V EXPERT SYSTEMS **9**
Definition – Features of an expert system – Organization – Characteristics – Prospector – Knowledge Representation in expert systems – Expert system tools – MYCIN – EMYCIN.

16BEEE7E02 HVDC AND EHVAC L T P C 3 0 0 3

Course Objectives

- To study about HVDC systems
- To study about HVDC control systems
- To Study the control strategies used in HVdc transmission system.
- To Study the improvement of power system stability using an HVdc system.
- To Study and Analysis the components of HVDC system
- To study about aspects of EHVAC systems

Course Outcomes

At the end of the course the student will

- Justify the advantages of dc transmission over ac transmission.
- Reproduce the operation of Line Commutated Converters and Voltage Source Converters.
- Evaluate the control strategies used in HVdc transmission system.
- Identify and propose the improvement of power system stability using an HVdc system.
- gain knowledge about HVDC transmission, converters used and about EHVAC systems.
- Analysis the real time application of it.

UNIT I EHV TRANSMISSION 9

Introduction-Necessity for EHV Transmission-Problems involved in EHV Transmission-Operational Aspects of EHV power transmission-Compensation of EHV systems-Gas insulated EHV lines-Environmental and biological aspects.

UNIT II GENERAL BACKGROUND OF EHVAC TRANSMISSION SYSTEMS 9

Standard Voltage levels for Transmission lines-Hierarchical levels of Transmission Network-Average values of line parameters-Power handling capacity and line losses-Cost of Transmission line and Equipments-Mechanical consideration in line performance-Comparison of Overhead and Underground lines-Examples of Giant power pools in the world.

UNIT III ASPECTS OF EHVAC SYSTEM 9

Power Transferability of Ac line – Line losses-Conductor cost -Transient stability of Ac line – control of power flow through line Right – of- way(Row)-Corona- Towers(support)-Insulation Coordination and surge arrester protection-Line insulation-Clearance and Creepage distances.

UNIT IV HVDC TRANSMISSION SYSTEMS 9

Choice of HVDC Transmission - Comparison of AC and DC Transmission – Economics of DC power Transmission, Technical Performance and Reliability – Description of HVDC Converter station- Types of HVDC Links- Merits and Limitations of HVDC System - Applications -Modern Trends in HVDC transmission –Case Studies of HVDC links in the world.

UNIT V CONVERTERS AND HVDC SYSTEM CONTROL 9

Pulse number – Choice of Converter Configuration – Simplified analysis of Graetz circuit –

Principles of HVDC link Control –DC Breaker - Harmonic Elimination – AC and DC Filter design –Protection Systems in HVDC Substation-HVDC Simulator.

16BEEE7E03 POWER SYSTEM ECONOMICS L T P C 3 0 0 3

Course Objectives

- To study about the economic aspects.
- To study about the economic dispatch and operation.
- To study about stability constraints in a synchronous grid.
- To study the methods to control the voltage, frequency.
- To study the problem formulation of power flow
- To study the basics of power system economics

Course Outcomes

At the end of the course student will be able to .
1. Understand the concept of power generation economics
2. Understand stability constraints in a synchronous grid.
3. Understand methods to control the voltage, frequency.
4. Understand methods to control the power flow.
5. Understand the monitoring and control of a power system.
6. Understand the basics of power system economics.

UNIT I ECONOMIC CONSIDERATIONS 9

Cost of electrical energy-expressions for cost of electrical energy-capital-interest-depreciation-different methods-factors affecting cost of operation-number and size of generating units-importance of high load factor-importance of power factor improvement-most economical power factor-meeting the KW demand on power stations-power system tariffs.

UNIT II ECONOMIC DISPATCH 9

Economic scheduling of generators in a plant-economic coordination of generation among a number of plants-losses neglected, with generator limits, losses included-losses of economy in incremental cost data- automatic load dispatch in power systems-analog and digital computers for application to load dispatch.

UNIT III ECONOMIC OPERATION 9

General loss formula-evolution of incremental transmission loss rate-method of calculation of loss coefficients-systematic development of transmission loss formula-Transmission loss as a function of plant generation, voltage and phase angle-economic dispatch computers.

UNIT IV ECONOMIC CONTROL 9

Interconnected operation-economic operation of hydro thermal power plants-λ-γ iteration scheme-gradient approach-modeling and solution approach to short term and long term hydro-thermal scheduling problem using dynamic programming.

UNIT V OPTIMAL POWER FLOWS 9

Problem formulation-cost minimization-loss minimization-solution using NLP and successive LP methods.

16BEEE7E04 POWER SYSTEM RESTRUCTURING AND DEREGULATION

L T P C 3 0 0 3

Course Objectives

- To study about key issues in electric utilities restructuring.
- To study about open access same time information systems.
- Gain the knowledge about power system restructure.
- To study about ISO and its types, roles.
- To known about electricity markets
- To study about knowledge of various trades

Course Outcomes

At the end of the course student will be able to

- Analysis about electric energy trading, electric pricing.
- Analysis about open access same time information systems.
- Gain the knowledge about power system restructure.
- Analysis the real time application of it
- Acquiring knowledge of embedded cost and pricing models in various countries
- Acquiring knowledge of various trades

UNIT I **9**

Deregulation Of Electric Utilities - Introduction-Unbundling-Wheeling-Traditional Central utility model-Reform motivations-Separation of Ownership and operation- competition and direct access in the Electricity market –ISO-components of ISO-types of ISO-role of ISO-Electric utility market in different countries.

UNIT II **9**

Transmission Expansion In The New Environment - Introduction – role of transmission planning – vertically integrated utility – three models of electricity market – Profit transmission planning – pool – bilateral trades – multilateral trades.

UNIT III **9**

Transmission Pricing In Open Access System - Introduction – rolled in pricing methods – marginal pricing method – embedded cost recovery – pricing models in different countries.

UNIT IV **9**

Total transfer capability – CBM and TRM – Available transfer capability (ATC) – methods to compute ATC – concept of congestion management – inter and inter zone congestion – congestion pricing management – Transmission congestion contracts – Ancillary services.

UNIT V **9**

Salient features of Indian Electricity Act 2003 – TSO – Availability based tariff – Electric supply industry structure under deregulation in India – regulatory and policy development in Indian power Sector – Opportunities for IPPs and CPPs under electricity Act 2003.

16BEEE7E05 **POWER QUALITY** **L T P C 3 0 0 3**

Course Objectives

- To study the production of voltages sags, over voltages and harmonics and methods of control.
- To study various methods of power quality monitoring.
- To understand the concept of power and power factor in single phase and three phase systems supplying non linear loads
- To understand the conventional compensation techniques used for power factor correction and load voltage regulation.
- To understand the active compensation techniques used for power factor correction.
- To understand the active compensation techniques used for load voltage regulation.

Course Outcomes

At the end of the course the student will be able to

1.Evaluate the characteristics of ac transmission
2.Reproduce the effect of shunt and series reactive compensation.
3.Justify the working principles of FACTS devices and their operating characteristics.
4.Reproduce the basic concepts of power quality.
5.Rewrite the concept of Harmonics
6.Reproduce and justify the working principles of devices to improve power quality.

UNIT I INTRODUCTION TO POWER QUALITY 9

Terms and definitions: Overloading, under voltage, sustained interruption; sags and swells; waveform distortion, Total Harmonic Distortion (THD), Computer Business Equipment Manufacturers Associations (CBEMA) curve.

UNIT II VOLTAGE SAGS AND INTERRUPTIONS 9

Sources of sags and interruptions, estimating voltage sag performance, motor starting sags, estimating the sag severity, mitigation of voltage sags, active series compensators, static transfer switches and fast transfer switches.

UNIT III OVER VOLTAGES 9

Sources of over voltages: Capacitor switching, lightning, ferro resonance; mitigation of voltage swells: Surge arresters, low pass filters, power conditioners – Lightning protection, shielding, line arresters, protection of transformers and cables, computer analysis tools for transients, PSCAD and EMTP.

UNIT IV HARMONICS 9

Harmonic distortion: Voltage and current distortion, harmonic indices, harmonic sources from commercial and industrial loads, locating harmonic sources; power system response characteristics, resonance, harmonic distortion evaluation, devices for controlling harmonic distortion, passive filters, active filters, IEEE and IEC standards.

UNIT V POWER QUALITY MONITORING 9

Monitoring considerations: Power line disturbance analyzer, power quality measurement equipment, harmonic / spectrum analyzer, flicker meters, disturbance analyzer, applications of expert system for power quality monitoring.

TOTAL 45 HOURS

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Roger C Dugan, Mark, F., McGranagham, Surya Santoso, Wayne Beaty, H	Electrical Power Systems Quality	McGraw Hill, New York	2003
2	C. Sankaran	Power Quality	CRC Press, Florida	2002

Course Objectives

- To learn about the controlling of excitation system and speed governing system.
- To impart knowledge on dynamic modeling of a synchronous machine in detail
- To describe the modeling of excitation and speed governing system in detail.
- To understand the fundamental concepts of stability of dynamic systems and its classification.
- To understand and enhance small signal stability problem of power systems.Model different power system components for the study of stability
- To Study the methods to improve stability.

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Understand the problem of power system stability and its impact on the system.
2.Analyze linear dynamical systems and use of numerical integration methods.
3.Model different power system components for the study of stability.
Understand the methods to improve stability.
4. Understand real time difficulties in machine analysis
5. To get known about modelling system and its control
6. To understand the transient and dynamic stability of power systems.

UNIT I INTRODUCTION 9

Concept and importance of stability in power system operation and design- distinction between transient and dynamic stability- complexity of stability problem in large system- Need for reduced models- stability of interconnected systems.

UNIT II MACHINE MODELING 9

Park's transformation- flux linkage equations, current space model- per unit conversion- normalizing the equations- equivalent circuit- flux linkage state space model- Simplified models (one axis and constant flux linkage)- steady state equations and phasor diagrams.

UNIT III MACHINE CONTROLLERS 9

Exciter and voltage regulators- function of excitation systems, types of excitation systems- typical excitation system configuration-block diagram and state space representation of IEEE type 1 excitation system- saturation function- stabilizing circuit- Function of speed governing systems- block diagram and state space representation of IEEE mechanical hydraulic governor and electrical hydraulic governors for hydro turbines and steam turbines.

UNIT IV TRANSIENT STABILITY 9

State equation for multi machine simulation with one axis model- transient stability simulation of multi machine power system with one axis machine model including excitation system and speed governing system using R-K method of fourth order (Gill's technique)- power system stabilizer.

UNIT V DYNAMIC STABILITY 9

System response to small disturbances- Linear model of the unregulated synchronous machine and its modes of oscillation- regulated synchronous machine- distribution of power impact- linearization of the load equation for the one machine problem – Simplified linear model- effect of excitation on dynamic stability- approximate system representation- supplementary stabilizing signals- dynamic performance measure- small signal performance measures.

16BEEE7E07 COMPUTER AIDED ANALYSIS AND DESIGN OF ELECTRICAL APPARATUS **L T P C 3 0 0 3**

Course Objectives

- To study the structure and behaviour of processors, memories and input and output units and to study their interactions.
- To get basic knowledge on geometric modeling
- To study the graphic transformation needs
- To study about the basics of parametric design and object representation
- To get basic knowledge in product design and development.
- To study about 3D design introduction

Course Outcomes

At the end of the course the student will be able to

- Draw electrical drawings using CAD.
- Acquire basic knowledge on geometric modeling
- Acquire knowledge on graphic transformation needs
- Gaining CAD software application in engineering
- Gaining basics of parametric design and object representation
- Analyse the real time application of it

UNIT I INTRODUCTION **9**

Conventional design methodology overview – Computer aided design aspects – Need for CAD – Nature of design problems- Analysis and synthesis approaches-advantages.

UNIT II FINITE ELEMENT ANALYSIS **9**

Mathematical formulation – Discretisation – Shape functions – Stiffness matrix – Solution techniques – Post processing.

UNIT III CAD PACKAGES **9**

Recent developments – Preprocessing – Modeling - Meshing – Boundary conditions -Material characteristics – Problem formulation – Solution – Post processing.

UNIT IV CAD SOFTWARE **9**

Program files – Installation – Screen menu structure_ Fixing the size of a drawing – Set up option- On line help- Text fonts, Shapes – Blocks – Copy – Array- Erasing facilities -Editing – Fill – Zoom pan – Hatching – Isoplane – Elevation – View point – Dimension techniques – Introduction to 3D drawing.

UNIT V DESIGN EXAMPLES **9**

Design of actuator – Solenoid -Transformer - Induction motor – Synchronous machines - Switched reluctance motor.

16BEEE7E08 DIGITAL SYSTEM DESIGN USING VHDL L T P C 3 0 0 3

Course Objectives

- To introduce design concept and VHDL.
- To study implementation techniques using various PLDs.
- To study the design of various combinational, synchronous and asynchronous circuits.
- To study about design combinational and sequential circuits.
- To study about CAD tools
- To expose the students to design and testing.

Course Outcomes

At the end of the course the student will be able

- To understand the VHDL principles.
- Students will be able to design combinational and sequential circuits.
- Understand the implementation techniques using various PLDs.
- To analysis the design of various combinational, synchronous and asynchronous circuits.
- To analysis the students to design and testing.
- Analysis the real time application of it.

UNIT I INTRODUCTION TO DESIGN 9

Design concepts – Design Process, design of Digital hardware, Variables and functions, truth tables, Boolean Algebra – Synthesis using Gates – Introduction to CAD Tools – VHDL.

UNIT II IMPLEMENTATION TECHNOLOGY 9

MOS Logic gates – PLDs – practical aspects, implementation details for SPLDs, CPLDs and FPGAs, optimized implementation of logic functions - multilevel synthesis, analysis of multilevel circuits – minimization techniques.

UNIT III DESIGN OF COMBINATIONAL CIRUITS 9

Number representation – signed, unsigned, combinational circuits – adder, multiplier, multiplexer, decoder and encoder, code converters - using signal assignment statements - concurrent and sequential – process and case statements, operators.

UNIT IV DESIGN OF SEQUENTIAL CIRCUITS 9

Latch – Flip-flops, registers and counters, finite state machines using CAD tools. Basic design steps with examples - Design of simple processor, vending machine controller.

UNIT V DIGITAL SYSTEM DESIGN 9

Building block circuits – Design examples – clock synchronization, testing of logic circuits – fault model, test set – path sensitizing, testing of sequential circuits.

16BEEE7E09 **OPTIMIZATION TECHNIQUES** **L T P C 3 0 0 3**

Course Objectives

- To have knowledge on optimization techniques applied to power systems
- To understand the different evolutionary computation techniques
- To study about optimal power flow problems
- To study about evolution computation techniques
- To study about the basics of MOOP
- To study about the solution of OPF

Course Outcomes

- At the end of the course the students will be able to understand the various optimization techniques.
- To get knowledge in optimization problems
- Acquire knowledge about power flow problem and solutions
- Experience in various algorithm and programming
- Gaining knowledge in velocity updation principle
- Gain knowledge about Economic emission dispatch

UNIT I OPTIMIZATION FUNDAMENTALS 9

Definition- Classification of optimization problems- Unconstrained and Constrained optimization- Optimality conditions- Classical Optimization techniques.

UNIT II OPTIMAL POWER SYSTEM OPERATION 9

Economic Dispatch problem-Unit commitment-Optimal Power Flow Problem- Solution Using Classical methods

UNIT III EVOLUTIONARY COMPUTATION TECHNIQUES 9

Evolution in nature-Fundamentals of Evolutionary algorithms-Working Principles of Genetic Algorithm- Evolutionary Strategy and Evolutionary Programming-Genetic Operators-Selection, Crossover and Mutation-Issues in GA implementation-GA solution of economic dispatch and unit commitment.

UNIT IV PARTICLE SWARM OPTIMIZATION 9

Fundamental principle-Velocity Updating-Advanced operators-Hybrid approaches Implementation issues-Solution of OPF problem

UNIT V MULTI OBJECTIVE OPTIMIZATION 9

Concept of pareto optimality-Conventional approaches for MOOP-Multi objective GA-Fitness assignment-Sharing function-Economic Emission dispatch using MOGA

16BEEE7E10 REAL TIME OPERATING SYSTEM L T P C 3 0 0 3

Course Objectives

- To create an awareness on Operating Systems.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To study about memory management
- To study about integration of hardware and software
- To know about application procedures of RTOS

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT I INTRODUCTION TO EMBEDDED SYSTEM 9

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) -Categories of Embedded Systems - Embedded processor selection & tradeoffs - Embedded design life cycle - Product specifications - Hardware/software partitioning - Iterations and implementation - Hardware software integration - Product testing techniques – ARM 7.

UNIT II OPERATING SYSTEM OVERVIEW 9

Introduction –Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-pre-emptive Kernels - Pre-emptive Kernels – Re-entrancy- Re-entrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management -Time Management – Clock Ticks.

UNIT III TASK MANAGEMENT 9

Introduction - µC/OS-II Features - Goals of µC/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks –Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under µC/OS-II – Clock Tick - µC/OS-II Initialisation. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB wait List.

UNIT IV SEMAPHORE MANAGEMENT 9

Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue.

UNIT V MEMORY MANAGEMENT 9

Memory Control Blocks – Creating Partition- Obtaining a Memory Block – Returning a Memory Block .Getting Started with µC/OS-II – Installing µC/OS-II – Porting µC/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with µC/OS-II – µC/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Analyze the Multichannel ADC with help of µC/OS-II.

16BEEE7E11 ADVANCES IN SOFT COMPUTING L T P C 3 0 0 3

Course Objectives

- To study basics of Fuzzy logic and modeling.
- To study various Genetic algorithms
- To educate how to use Soft Computing to solve real-world problems
- To study about the perception concept in design
- To study basics of various Neural networks.
- To expose the students to Neuro fuzzy modeling and its applications.

Course Outcomes

- At the end of the course the students will gain knowledge in various soft computing techniques and also analyse the genetic algorithm approach.
- The students will know the applications of various soft computing techniques.
- Gaining knowledge about use of Soft Computing to solve real-world problems
- Acquire knowledge about the perception concept in design
- Experience in fuzzy models preparation
- Experience about automobile fuel efficiency improvements

UNIT I FUZZY LOGIC 9

Introduction to Neuro – Fuzzy and soft Computing – Fuzzy Sets – Basic Definition and Terminology – Set-theoretic operations – Member Function Formulation and parameterization – Fuzzy Rules and Fuzzy Reasoning - Extension principle and Fuzzy Relations – Fuzzy If-Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models-Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

UNIT II GENETIC ALGORITHM 9

Derivative-based Optimization – Descent Methods – The Method of steepest Descent – Classical Newton's Method – Step Size Determination – Derivative-free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

UNIT III NEURAL NETWORKS 9

Introduction -Supervised Learning Neural Networks – Perceptrons - Adaline – Back propagation Multilayer perceptrons – Radial Basis Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Hebbian Learning.

UNIT IV NEUROFUZZY MODELING 9

Adaptive Neuro-Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – learning Methods that Cross-fertilize ANFIS and RBFN – Coactive Neuro-Fuzzy Modeling – Framework – Neuron Functions for Adaptive Networks – Neuro Fuzzy Spectrum.

UNIT V APPLICATIONS 9

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency prediction – Soft Computing for Color Recipe Prediction.

PROFESSIONAL ELECTIVE- VI (ONLY APPLICABLE FOR VIII SEMESTER)

16BEEE8E01 FLEXIBLE AC TRANSMISSION SYSTEMS L T P C 3 0 0 3

Course Objectives

- To study the various FACTS controllers and its applications.
- To study the characteristics of ac transmission
- To study the effect of shunt and series reactive compensation.
- To study the controllers of FACTS
- To study the coordination of FACT controlling systems
- To study about the reactive compensation according to the need

Course Outcomes

- At the end of the course the student will gain knowledge about various FACTS controller and its applications.
- At the end of the course the student will gain knowledge about various FACTS controller and its applications.
- Evaluate the characteristics of ac transmission
- Reproduce the effect of shunt and series reactive compensation.
- Justify the working principles of FACTS devices and their operating characteristics
- Getting knowledge in FACTS controller and its coordination
- Real time application studied about FACTS

UNIT I INTRODUCTION TO FACTS 9

Reactive power control in electrical power transmission lines - series compensation -Concepts of SVC, TCSC and UPFC.

UNIT II SVC AND ITS APPLICATIONS 9

Objective of shunt compensation – Principle and operating characteristics of Thyristor Controlled Reactor(TCR) – Thyristor Switched Capacitor(TSC)-Voltage control by SVC – Advantages of slope in dynamic characteristics – Applications: Enhancement of transient stability – steady state power transfer – Enhancement of power system damping – prevention of voltage instability.

UNIT III TCSC AND ITS APPLICATIONS 9

Series compensation and it **Course Objectives**-Operation of the TCSC – Different modes of operation Application: Improvement of the system stability limit -Enhancement of system damping –Voltage collapse prevention

UNIT IV EMERGING FACTS CONTROLLERS 9

Static Synchronous Compensator (STATCOM) – Principle of operation – V-I Characteristics – Unified Power Flow Controller (UPFC) – Principle of operation –Modes of Operation-Applications – Modeling of UPFC for Power Flow – Studies.

UNIT V COORDINATION OF DIFFERENT FACTS CONTROLLERS 9
Controller interactions – SVC – SVC interaction – Co-ordination of multiple controllers using linear control techniques – Control coordination using genetic algorithms.

16BEEE8E02 **POWER SYSTEM STABILITY** **L T P C 3 0 0 3**

Course Objectives

- To study the generation of switching transients and their control using circuit – theoretical concept. To study the mechanism of lightning strokes and the production of lightning surges.
- To study the propagation, reflection and refraction of travelling waves.
- To study the problem of power system stability and its impact on the system.
- To study the different power system components for the study of stability.
- To understand the methods to improve stability.
- To study the impact of voltage transients caused by faults, circuit

Course Outcomes

At the end of the course the student will be able to understand and observe the generation of switching transients and their control using circuit– theoretical concept.

- The students will be able to analyze mechanism of lighting strokes and the production of lighting surges and design the propagation, reflection and refraction
- Understand the problem of power system stability and its impact on the system.
- Analyze linear dynamical systems and use of numerical integration methods.
- Model different power system components for the study of stability. Understand the methods to improve stability.
- Understand real time difficulties in machine analysis
- To get known about modelling system and its control

UNIT-I

Concept and importance of stability in power system operation and design. Steady state, transient and dynamic stability. The swing equation of machines connected to infinite bus bar and machines connected together

UNIT -II

Swing curves-Solution by point by point and Euler’s method. Qualitative treatment of stability studies on Network analyzers and digital computers..

UNIT -III

Equal area criterion, calculation of critical clearing angle by equal area criterion of various fault conditions. Effect of reclosure. Factors affecting transient stability and its improvement.

UNIT-IV

Types of excitation systems, AVR, calculation of exciter response by graphical integration and step-by-step methods. Effect of speed governing system inertia and damping on steady state and transient stability.

UNIT-V

Significance of steady state stability, power limit of transmission systems. Clarke's diagram of two machine systems with and without losses. Steady stability of one machine connected to an infinite bus bar.

16BEEE8E03 POWER GENERATION SYSTEMS L T P C 3 0 0 3

Course Objectives

- To learn generation of electrical power from different types of power plants like thermal nuclear and hydro power stations.
- To understand the concepts of generation of electrical power using non conventional energy resources.
- To learn the economics connected with power generation.
- To understand the measurements of various parameter in power plant and their control.
- To study about Power plant instrumentation
- To acquire knowledge of renewable power system

Course Outcomes

- At the end of the course the student will gain knowledge about economics of power generation, layout and working of thermal, nuclear and hydropower plants.
- The student also gain knowledge about distributed generation, boiler turbine monitoring sytem.
- To get knowledge in Powerplant instrumentation
- Students acquire knowledge of renewable power system
- Acquire knowledge about economics in power generation
- Knowledge in Load demand and factor

UNIT I ECONOMICS OF GENERATION 9

Load and load duration curve – Load, demand and diversity factors – Plant capacity and plant use factors – choice of type of generation – choice of size and number of unit – cost of energy generated – Tariffs.

UNIT II THERMAL, NUCLEAR AND HYDRO POWER PLANTS 9

Location, Layout and working of steam ,diesel and gas power plants - Principles of nuclear power generation, Types of nuclear power plants and their comparison, Layout and working of nuclear power plants, Advantages and disadvantages of nuclear energy- Layout and working, Types of hydroelectric power plants, Advantages of hydro generation, Environmental issues.

UNIT III POWER PLANT INSTRUMENTATION 9

Importance of instrumentation in power plants, UP & I diagram of boiler- Measurements of non electrical parameters, flow of feed water, air, steam, radiation detector, smoke density measurement-analyzers, flue gas oxygen analyzer, chromatography, PH meter, pollution monitoring instruments.

UNIT IV BOILER, TURBINE-MONITORING AND CONTROL 9

Combustion control - furnace draft control-drum level control- de-aerator control- boiler interlocks-speed, vibration, temperature monitoring control of turbine lubrication and cooling system of turbine.

UNITV DISTRIBUTED GENERATION AND NON CONVENTIONAL PLANTS 9

Introduction to the concept of distributed generation –basics on distributed generation

Technologies- Effect on system operation. Basic concepts, Principle of working and layout of MHD, Solar, Wind, Tidal, Biomass and Geothermal Power Generation Systems.

16BEEE8E04 TOTAL QUALITY MANAGEMENT L T P C 3 0 0 3

Course Objectives

- To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management.
- To understand the statistical approach for quality control.
- To create an awareness about the ISO and QS certification process and its need for the industries.
- To study the fundamentals of quality controls.
- To study the concepts of total quality management.
- To study the concepts of total education

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Understand the principles and basic concepts.
2. Understand the fundamentals of quality controls.
3. Explain the concepts of total quality management.
4. Explain the concepts of total education
5. Diagnose problems in the quality improvement process, SPC etc.
6. Diagnose problems in the production planning, control and decision making.

UNIT I INTRODUCTION 9

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs – Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management (TQM), Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT II TQM PRINCIPLES 9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Triology, PDSA Cycle, 5S Kaizen, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, Strategy and Performance Measures.

UNIT III STATISTICAL PROCESS CONTROL 9

The seven QC tools, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

UNIT IV TQM TOOLS 9

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance – Concept, Improvement Needs, FMEA – Stages of FMEA.

UNIT V QUALITY SYSTEMS 9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, QS 9000, ISO 14000 – Concept, Requirements and Benefits. TOTAL: 45 HOURS

16BEEE8E05 VIRTUAL INSTRUMENTATION L T P C 3 0 0 3

Course Objectives

- To introduce concepts of Lab view software.
- To study graphical programming, interfacing instruments and its protocols.
- To introduce data acquisition methods.
- To introduce signal processing and network automation tools.
- To study about data cards in instrumentation
- To study the interface bus and signals

Course Outcomes

- At the end of the course the student will be able understand the concepts of virtual instrumentation.
- Knowledge about VI programming
- Gain experience in Standards and protocols of instrumentation
- Real time automation activity in instrumentation
- DSP based instrumentation control and its applications
- Gain Knowledge of automated control in instrumentation

UNIT I REVIEW OF DIGITAL INSTRUMENTATION 9

Representation of analog signals in the digital domain – Review of quantization in amplitude and time axes, sample and hold, sampling theorem, ADC and DAC.

UNIT II GRAPHICAL PROGRAMMING AND LABVIEW 9

Concepts of graphical programming – LABVIEW software – Concept of VIs and sub VI - Display types – Digital – Analog – Chart and Graphs. Loops - structures - Arrays – Clusters. Local and global variables – String and file I/O. Timers and dialog controls.

UNIT III INSTRUMENT INTERFACES AND PROTOCOLS 9

RS232, RS 422, RS 485 and USB standards - IEEE 488 standard – Introduction to bus protocols of MOD bus and CAN bus. Electronic standards for signals – noise and EMI effects. Signal conditioning chassis and extension modules. Image acquisition cards.

UNIT IV PC BASED DATA ACQUISITION 9

Concept of PC based data acquisition – Typical on board DAQ card – Resolution and sampling frequency - analog inputs and outputs – Single-ended and differential inputs –DAQ cards terminal boxes - Use of timer-counter and analog outputs on the universal DAQ card.

UNIT V SIGNAL PROCESSING AND NETWORK BASED AUTOMATION 9

Mathematical tools for statistical calculation – Signal processing tools- Windowing and filtering tools –Control system tools – PID controller – CRO – function generator –illustration and case study – Web publishing tool –configuring VI server.

16BEEE8E06 ROBOTICS AND AUTOMATION L T P C 3 0 0 3

Course Objectives

- To study the various parts of robots and fields of robotics.
- To study the various kinematics and inverse kinematics of robots.
- To study the Euler, Lagrangian formulation of Robot dynamics.
- To study the trajectory planning for robot.
- To study the sensors of robot
- To study the control of robots for some specific applications.

Course Outcomes

Upon completion of the course, the student should be able to:

- Explain the basic concepts of working of robot
- Analyze the function of sensors in the robot
- Write program to use a robot for a typical application
- Use Robots in different applications
- Experience in various power source availability in real time application
- Get experience in robots in manufacturing plant

UNIT I BASIC CONCEPTS 9

Definition and origin of robotics – different types of robotics – various generations of robots – degrees of freedom – Asimov's laws of robotics – dynamic stabilization of robots.

UNIT II POWER SOURCES AND SENSORS 9

Hydraulic, pneumatic and electric drives – determination of HP of motor and gearing ratio – variable speed arrangements – path determination – micro machines in robotics – machine vision – ranging – laser – acoustic – magnetic, fiber optic and tactile sensors.

UNIT III MANIPULATORS, ACTUATORS AND GRIPPERS 9

Construction of manipulators – manipulator dynamics and force control – electronic and pneumatic manipulator control circuits – end effectors – U various types of grippers – design considerations.

UNIT IV KINEMATICS AND PATH PLANNING 9

Solution of inverse kinematics problem – multiple solution jacobian work envelop – hill Climbing Techniques – robot programming languages

UNIT V CASE STUDIES 9

Mutiple robots – machine interface – robots in manufacturing and non- manufacturing applications– robot cell design – selection of robot.

LIST OF OPEN ELECTIVES

LIST OF OPEN ELECTIVES OFFERED BY OTHER DEPARTMENTS

SCIENCE AND HUMANITIES

16BESHOE01 PROBABILITY AND RANDOM PROCESS L T P C 3 0 0 3

Course Objectives

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- To study statistical methods of the sample data.

Course Outcomes

1. Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
2. The students will have an exposure of various distribution functions, correlation and spectral densities.
3. To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
4. To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
5. To apply the concept random processes in engineering disciplines.
6. To understand and apply the concept of correlation and spectral densities

UNIT- I MEASURES OF CENTRAL TENDENCY AND PROBABILITY 9

Measures of central tendency – Mean, Median, Mode - Standard Deviation
Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem.

UNIT- II STANDARD DISTRIBUTIONS 9

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev's inequality.

UNIT -III TWO DIMENSIONAL RANDOM VARIABLES 9

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT- IV CLASSIFICATION OF RANDOM PROCESS 9

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT -V CORRELATION AND SPECTRAL DENSITIES 9

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

16BESHOE02 **FUZZY MATHEMATICS** **L T P C 3 0 0 3**

Course Objectives

- Be able to understand basic knowledge of fuzzy sets and fuzzy logic
- Be able to apply basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations
- Be able to apply basic fuzzy inference and approximate reasoning
- To know the applications of fuzzy Technology.
- To study and acquire the knowledge to comprehend the concepts of fuzzy relations

Course Outcomes

- To gain the main subject of fuzzy sets.
- To understand the concept of fuzziness involved in various systems and fuzzy set theory.
- To gain the methods of fuzzy logic.
- To comprehend the concepts of fuzzy relations.
- To analyze the application of fuzzy logic control to real time systems.
- The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS 9

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS 9

Operations on Fuzzy Sets Operations on [0,1] – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS 9

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES 9

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE 9

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

16BESHOE03 LINEAR ALGEBRA L T P C 3 0 0 3

Course Objectives

- To introduce the basic concepts of vector space
- To know the fundamentals of linear Algebra
- To solve system of linear equations
- To study about the linear transformations
- To introduce the concepts of inner product spaces

Course Outcomes

student will be able to

- To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- To describe the fundamental concepts of Eigen values and Eigen vectors by using Power method.
- To apply the fundamental concepts in their respective engineering fields
- To visualize linear transformations as matrix form
- To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- To articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNIT I VECTOR SPACES 9

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS 9

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS 9

Direct methods, Gauss elimination method, Gauss Jordan method, Crout’s method, iterative methods, Gauss-Jacobi method, Gauss–Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS 9

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigen values and Eigenvectors Eigen values and Eigen vectors – Diagonalization

UNIT V INNER PRODUCT SPACES **9**

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

16BESHOE04 ENGINEERING ACOUSTICS L T P C 3 0 0 3

Course Objectives

- To disseminate the fundamentals of acoustic waves. (K)
- To inculcate the characteristics of radiation and reception of acoustic waves. (K)
- To divulge knowledge on the basics of pipe resonators and filters.(S)
- To introduce the features of architectural acoustics
- To impart the basic knowledge of transducers and receivers.(K)
- To study about the pipes resonant and filters

Course Outcomes

- Develop the idea of the fundamentals of acoustic waves.
- Apply the concepts of radiation and reception of acoustic waves.
- Explain the basic ideas of pipe resonators and filters.
- Illustrate the basics of architectural acoustics..
- Illustrate the transducers and receivers and its applications in various electronic devices.
- Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION 9

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES 9

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS 9

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS 9

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION 9

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

TOTAL : 45 HOURS

16BESHOE05 SOLID WASTE MANAGEMENT L T P C 3 0 0 3

Course Objectives

- To make the students conversant with basics of Solid wastes and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of Hazardous waste managements.
- To acquaint the students with the basics of energy generation from waste materials.
- To understand about the solid waste and to get the information on energy conservation.

Course Outcomes:

- Outline the basic principles of Solid waste and separation of wastes (K)
- Identify the concepts of treatment of solid wastes (S)
- Identify the methods of wastes disposals. (S)
- Examine the level of Hazardousness and its management. (S)
- Examine the possible of the energy production using waste materials. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I SOLID WASTE 9

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT 9

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL 9

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT 9

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE 9

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

16BESHOE06 **GREEN CHEMISTRY** **L T P C 3 0 0 3**

Course Objectives

1. To make the students conversant about the green chemistry
2. To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
3. To acquaint the student with concepts of green technology.
4. To develop an understanding of the basic concepts of renewable energy resources.
5. To acquaint the students with the basic's information on catalysis.
6. To gain knowledge on the green technology and renewable energy resources

Course Outcomes

- Outline the basic principles of green chemistry (K)
- Examine the different atom efficient process and synthesis elaborately (S)
- Apply the concepts combustion of green technology (S)
- Identify and apply the concepts of renewable energy (S)
- Apply the concepts of green catalysts in the synthesis (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES **9**

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES **9**

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY **9**

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES **9**

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY 9

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

16BESHOE07 APPLIED ELECTROCHEMISTRY L T P C 3 0 0 3

Course Objectives

- To get the information on electrochemical material.
- To study about the conducting polymers.
- To acquaint the student with concepts of Energy storage devices.
- To gain knowledge on the batteries and power sources.
- To develop energy storage devices.
- To study and identify the concepts of storage devices and its applications. (S)

Course Outcomes

1. Outline the basic principles of chemistry in **electrochemical material (K).**
2. Examine the properties of conducting polymers (S).
3. Apply the concepts of electrochemistry in storage devices. (S)
4. Identify the concepts of storage devices and its applications. (S)
5. Apply the suitable materials for the manufacturing of storage devices. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING 9

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS 9

Electro polymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I 9

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II 9

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries-construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE **9**

Solar cells- Preparation of CdS/Cu_2S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

16BESHOE08 **INDUSTRIAL CHEMISTRY** **L T P C 3 0 0 3**

Course Objectives

- To make the students conversant with **cement and lime** and its uses.
- To make the student acquire sound knowledge of abrasives and refractories.
- To acquaint the student with concepts of inorganic chemicals.
- To develop an understanding of the basic concepts **explosives**.
- To acquaint the students with the basics of **agriculture chemicals**.
- To study the concepts of explosives and smoke screens(S)

Course Outcomes

- Outline the basic chemistry of **cement and lime (K)**
- Examine the uses of abrasives and refractories (S)
- Identify the usage of the inorganic chemicals. (S)
- Identify the concepts of explosives and smoke screens (S)
- Identify the usage of the **agriculture** chemicals (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENT AND LIME **9**

Manufacture of Portland cement – settling of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesium lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES **9**

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS **9**

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3, caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES **9**

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS 9

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

COMPUTER SCIENCE ENGINEERING

16BECSOE01 **INTERNET PROGRAMMING** **L T P C 3 0 0 3**

Course Objectives

- To study concepts of Internet, IP addresses and protocols
- To explain the concept of web page development through HTML
- To introduce the PERL and explore its current strengths and Weaknesses
- To write working Java code to demonstrate the use of applets for client-side programming
- To study Internet telephony and various multimedia applications
- To Elaborate on the principles of web page development

Course Outcomes

Upon completion of this course, the student will be able to:

- Learn the advanced concepts& techniques of Internet and Java.
- Analyze the requirements for and create and implement the principles of web page development
- Understand the concepts of PERL
- Implement client-side programming using java applets
- Generate internet telephony based upon advanced concepts
- Develop applications on internet programming based on java applets and scripts

UNIT I INTRODUCTION **9**

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML **9**

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL **9**

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets-Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV CLIENT-SERVER PROGRAMMING **9**

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V INTERNET TELEPHONY 9

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

16BECSOE02 **MULTIMEDIA AND ANIMATION** **L T P C 3 0 0 3**

Course Objectives

- To impart the fundamental concepts of Computer Animation and Multimedia
- To study the graphic techniques and algorithms using flash
- Explain various concepts available in 3D animation
- Explain various devices available for animation
- To study the multimedia concepts and various I/O technologies for concept development
- To understand the three-dimensional graphics and their transformations

Course Outcomes

Upon completion of this course, the student will be able to:

- Develop their creativity using animation and multimedia
- Understand the concepts of Flash and able to develop animation using it
- Understand about various latest interactive 3D animation concepts
- Know the various devices and software available in motion capture
- Understand the concept development process
- Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I INTRODUCTION **9**

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II CREATING ANIMATION IN FLASH **9**

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D ANIMATION & ITS CONCEPTS **9**

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV MOTION CAPTION **9**

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V Concept Development **9**

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

16BECSOE03 PC HARDWARE AND TROUBLE SHOOTING L T P C 3 0 0 3

Course Objectives

- To study the basic parts of computer in detail
- Introduce various peripheral devices available for computer and its detailed working concepts
- Overview of various interfaces and other hardware overview
- Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- To study basic concepts and methods in troubleshooting
- To study the installation/connection and maintenance of computer and its associated peripherals.

Course Outcomes

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
- Identify various peripheral devices available and its working
- Understand various concepts of hardware and its interface and control
- Perform basic installation of PC. Importance of maintenance is understood
- Understand Various faults and failures are identified and troubleshooting in detail
- Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I INTRODUCTION 9

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II PERIPHERAL DEVICES 9

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC HARDWARE OVERVIEW 9

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV INSTALLATION AND PREVENTIVE MAINTENANCE 9

Introduction – system configuration – pre installation planning – Installation practice – routine checks

– PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting **9**

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

16BECSOE04 **JAVA PROGRAMMING** **L T P C 3 0 0 3**

Course Objectives

- To understand Object Oriented Programming concepts and basic characteristics of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads, generics classes and swings
- To explain the need for generic programming
- To design and build simple Graphical User Interfaces

Course Outcomes

- Develop Java programs using OOP principles
- Develop Java programs with the concepts of inheritance and interfaces
- Build Java applications using exceptions and I/O streams
- Develop Java applications with threads and generics classes and swings
- Understand various aspects for motivation of generic programming
- Develop various interactive Java programs using OOP concepts of Java

UNIT I INTRODUCTION TO JAVA **9**

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES **9**

Arrays – Strings - Packages – Java-Doc comments –- Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS **9**

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING **9**

Exceptions – Syntax of exception handling code – Multiple catch statements – Using finally statements – Throwing our own exceptions – Using exceptions for debugging

UNIT V THREADS **9**

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

16BEECOE01 REAL TIME EMBEDDED SYSTEMS L T P C 3 0 0 3

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT - I INTRODUCTION TOEMBEDDED SYSTEM 9

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection &tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM 7

UNIT - II OPERATING SYSTEM OVERVIEW 9

Introduction –Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – Clock Ticks.

UNIT - III TASK MANAGEMENT 9

Introduction - µ C/OS-II Features - Goals of µ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks –Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under µ C/OS-II – Clock Tick - µ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB waits List.

UNIT - IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING 9

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue –

Flushing a Queue.

UNIT - V MEMORY MANAGEMENT **9**

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memory Block – Returning a Memory Block .Getting Started with µ C/OS-II – Installing µ C/OS-II – Porting µ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with µ C/OS-II - µ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Analyze the Multichannel ADC with help of µ C/OS-II.

TOTAL: 45 HOURS

16BEECOE02 **CONSUMER ELECTRONICS** **L T P C 3 0 0 3**

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES **9**

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT – II TELEVISION STANDARDS AND SYSTEMS **9**

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a Remote Control.

UNIT – III OPTICAL RECORDING AND REPRODUCTION **9**

Audio Disc – Processing of the Audio signal –read out from the Disc – Reconstruction of the audio signal – Video Disc – Video disc formats- recording systems – Playback Systems.

UNIT – IV TELECOMMUNICATION SYSTEMS **9**

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT – V HOME APPLIANCES **9**

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

16BEECOE03 NEURAL NETWORKS AND ITS APPLICATIONS L T P C 3 0 0 3

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes:

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve real-world problems

UNIT I INTRODUCTION TO NEURAL NETWORKS **9**

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNIT II LEARNING PROCESS **9**

Error – correction learning – memory based learning - hebbian learning-competitive learning-Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCE PTION **9**

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye’s classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORK AND ART **9**

Hopfield model-BAM model- BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNIT V SELF ORGANIZATION 9

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

TOTAL: 45 HOURS

16BEECOE04 FUZZY LOGIC AND ITS APPLICATIONS L T P C 3 0 0 3

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy fiction and de fuzzy fiction procedures

Course Outcomes:

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT – I **9**

Basics Of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT – II **9**

Theory Of Approximate Reasoning**:** Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNIT – III **9**

Fuzz y Knowledge Based Controllers (Fkbc**):** Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures – Design of Fuzz y Logic Controller

UNIT – IV **9**

Adaptive Fuzz y Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V FUZZY BASED SYSTEMS **9**

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzz y in medical applications-Introduction to ANFIS.

TOTAL: 45 HOURS

BIO TECHNOLOGY

16BTBTOE01 **BIOREACTOR DESIGN** **L T P C 3 0 0 3**

Course Objectives

- To impart basic knowledge in bioprocess Engineering
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipments.
- To extend the knowledge in principle of heat transfer inside a bioreactor
- To construct the equipments used in mass transfer operations.
- To learn the equipments used in separation process.

Course Outcomes

- Summarize the basic concepts in bioprocess Engineering.
- Ability to design the bioreactors for various operations.
- Ability to develop the heat transfer equipments for Bioprocess Engineering.
- Ability to construct the equipments used in mass transfer operations.
- To acquire the knowledge of regulatory constraints in bioprocess
- Categorize the equipments used in separation process

UNIT I ENGINEERING PROPERTIES AND STORAGE TANK 9

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNIT II REACTOR DESIGN 9

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNIT III HEAT TRANSFER EQUIPMENTS 9

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV MASS TRANSFER EQUIPMENTS 9

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNIT V SEPARATION EQUIPMENTS 9

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotart drum drier and Swenson –walker crystallizer.

TOTAL: 45 HOURS

16BTBTOE02 FOOD PROCESSING AND PRESERVATION L T P C 3 0 0 3

Course Objectives

- To understand the importance of food processing
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarize the students on the concepts of preservation methods for fruits.
- To create deeper understanding on preservation methods for vegetables.

Course Outcomes

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarize the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

UNIT I SCOPE AND IMPORTANCE OF FOOD PROCESSING 9

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNIT II PROCESSING METHODS 9

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives- fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing- Concepts and equipment used.

UNIT III FOOD CONVERSION OPERATIONS 9

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING 9

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V PRESERVATION METHODS FOR FRUITS AND VEGETABLES 9

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

16BTBTOE03 BASIC BIOINFORMATICS L T P C 3 0 0 3

Course Objectives

- To enable the students to get aware of available tools and databases for performing research
  in bioinformatics.
- To provide the thorough understanding of protein structure in detail.
- To construct the phylogenetic trees for evolution.
- To get familiar with the 3D structure of protein and classification.
- To acquire basic knowledge in protein secondary structure prediction.
- To extend the brief knowledge in Micro array data analysis.

Course Outcomes

- Summarize the basic concepts and importance of Bioinformatics in various sectors.
- Demonstrate the sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Analyze the three dimensional protein structure and classification using various tools.
- Illustrate the protein secondary structure prediction by comparative modeling.
- Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I OVERVIEW OF BIOINFORMATICS 9

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA 9

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system).Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III PHYLOGENETICS 9

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV STRUCTURAL BIOINFORMATICS 9

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNIT V MICROARRAY DATA ANALYSIS 9

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

16BTBTOE04 FUNDAMENTALS OF NANOBIOTECHNOLOGY L T P C 3 0 0 3

Course Objectives

- To develop skills of the students in the field of nano biotechnology and its applications in various fields.
- The course will serve as an effective course to understand Socio-economic issues of nano biotechnology.
- To extend the knowledge in types and application of nano particles in sensors.
- To define the concepts of biomaterials through molecular self assembly.
- To equip students with clinical applications of nano devices.
- To describe deeper understanding of the socio-economic issues in nanobiotechnology

Course Outcomes

- Develop skills in the field of nano biotechnology and its applications.
- Summarize the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nano particles in sensors.
- Define the concepts of biomaterials through molecular self assembly.
- Outline the clinical applications of nano devices.
- Describe the socio-economic issues in nanobiotechnology.

UNIT I INTRODUCTION 9

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT II NANO PARTICLES 9

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III APPLICATIONS 9

Nanomedicine, Nanobiocensor and Nanofludics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems.Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IV NANOBIOTECHNOLOGY 9

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology.Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nanocarbon tubules.Nanosurgical devices.

UNIT V ETHICAL ISSUES IN NANOTECHNOLOGY 9

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

16BEMEOE01 COMPUTER AIDED DESIGN L T P C 3 0 0 3

Course Objective

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

Course Outcomes

Upon completion of the course, the students will be able to

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS 9

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS 9

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING 9

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION 9

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT 9

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

16BEMEOE02 INDUSTRIAL SAFETY AND ENVIRONMENT L T P C 3 0 0 3

Course Objective

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyses the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

At the end of the course, student will be able to

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNIT I INTRODUCTION TO LOGISTICS 9

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN 9

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS 9

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES 9

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM 9

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

16BEMEOE03 **TRANSPORT PHENOMENA** **L T P C 3 0 0 3**

Course Objective

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

Course Outcomes

Upon completion of this course, the students can be able to

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS **9**

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS **9**

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT **9**

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT **9**

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT **9**

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

16BEMEOE04 **INTRODUCTION TO BIOMECHANICS** **L T P C 3 0 0 3**

Course Objective

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

Course Outcomes

Upon completion of this course, the students will be able to,

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION **9**

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS **9**

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY **9**

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION **9**

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM **9**

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

16BEAEOE01 **AUTOMOBILE ENGINEERING** **L T P C 3 0 0 3**

Course Objectives:

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Identify and explain the types of steering system.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

UNIT I ENGINE AND FUEL FEED SYSTEMS 9

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT II TRANSMISSION SYSTEMS 9

Requirements of transmission system.Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. **Course Objectives** of the gearbox - Determination of gear ratios for vehicles.Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNITIII SUSPENSION SYSTEM 9

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNITIV BRAKES 9

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNITV ELECTRICAL SYSTEM 9

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator.Starting System and charging system.

TOTAL: 45 HOURS

16BEAEOE02 BASICS OF TWO AND THREE WHEELERS L T P C 3 0 0 3

Course Objectives

- The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION 9

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNITII POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS 9

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION 9

Types of clutches for 2 and 3 wheelers.Design of clutch system.Gears for two and three wheelers.Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES 9

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS 9

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

16BEAEOE03 AUTOMOBILE MAINTENANCE L T P C 3 0 0 3

Course Objectives

- The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES 9

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE 9

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE 9

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE 9

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY 9

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

16BEAEOE04 INTRODUCTION TO MODERN VEHICLE TECHNOLOGY L T P C 3 0 0 3

Course Objectives:

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWER PLANTS 9

Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS 9

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY 9

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION 9

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS 9

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

CIVIL ENGINEERING

16BECEOE01 HOUSING, PLAN AND MANAGEMENT L T P C 3 0 0 3

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING 9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, **Course Objectives** and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES 9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS 9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL 9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing o f Housing Units, Rents, Recovery Pattern (Problems).

16BECEOE02 **BUILDING SERVICES** **L T P C 3 0 0 3**

COURSE OBJECTIVES

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES **9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS **9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN **9**

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS **9**

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant –

Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION **9**

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

16BECEOE03 MANAGEMENT OF IRRIGATION SYSTEMS L T P C 3 0 0 3

OBJECTIVES

1. To enable the students for a successful career as water management professionals.

2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.

3. To expose the students the need for an interdisciplinary approach in irrigation water management

4. To providing a platform to work in an interdisciplinary team.

5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.

6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

OUTCOME

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.

2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management

3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.

4. Gain insight on local and global perceptions and approaches to participatory water resource management

5. Learn from successes and failures in the context of both rural and urban communities of water management.

6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I IRRIGATION SYSTEM REQUIREMENTS 9

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II IRRIGATION SCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV OPERATION 9

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNIT V INVOLVEMENT OF STAKE HOLDERS 9

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL: 45 HOURS

16BECEOE04 ADVANCED CONSTRUCTION TECHNOLOGY L T P C 3 0 0 3

OBJECTIVE:

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

OUTCOMES:

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT - I MODERN CONSTRUCTION METHODS 9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT - II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT - III MODERN CONSTRUCTION EQUIPEMENTS -I 9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting,Tunneling and hoisting

UNIT - IV MODERN CONSTRUCTION EQUIPEMENTS -II 9

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES 9

Principles and Practices of Temporary structures, Shoring, and Strutting,Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

TOTAL: 45 HOURS

LIST OF OPEN ELECTIVES OFFERED BY

ELECTRICAL AND ELECTRONICS ENGINEERING DEPARTMENT

16BEEEOE01 ELECTRIC HYBRID VEHICLE L T P C 3 0 0 3

Course Objectives

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the efficiency manipulation in drives
- To understand and gain the knowledge about various energy storage devices

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION 9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS 9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT 9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE 9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES 9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

16BEEEOE02 ENERGY MANAGEMENT AND ENERGY AUDITING L T P C 3 0 0 3

Course Objectives:

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behaviour changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT 9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS 9

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT 9

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS 9

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps-air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS 9

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

16BEEEOE03 PROGRAMMABLE LOGIC CONTROLLER L T P C 3 0 0 3

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flowcharts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION 9

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING 9

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS 9

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS 9

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES 9

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

16BEEEOE04 RENEWABLE ENERGY RESOURCES L T P C 3 0 0 3

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION 9

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY 9

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY 9

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY 9

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES 9

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

TOTAL: 45 HOURS

2. Credits for value added courses are not counted for computation ofCGPA.
3. Interestedstudentscanoptoneselfstudycourseineighthsemesterfromopenelectives which willbereflectedinthe mark sheet only if he / shepasses

Programme Educational Objectives (PEO's)

1:Graduates will more conscious about their profession with social awareness and responsibility.

2:Graduates will be engineering experts, who would help solve industry's technological problems.

3:Graduates will be engineering professionals, consultants or entrepreneurs engaged in technology development.

4:Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.

Programme Outcomes (PO's)

1: Ability to apply knowledge of mathematics and science in solving engineering problems.

2: In-depth knowledge on the fundamental principles, construction and auxiliary systems of mechanical sciences.

3: To understand the principles involved in evaluating the structural, functional and safety requirements of mechanical systems.

4: Hands on knowledge to develop analytical skills for designing and analyzing various mechanical components and processes.

5: To understand and apply appropriate techniques and IT tools for the design and analysis of mechanical systems.

6: Understanding the mechanism of pollutant formation and its control techniques.

7: Understanding of human and ethical responsibilities towards the profession and society.

8: Ability to understand the economics and cost analysis in order to take economically sound decisions.

9: Ability to apply modem techniques and tools necessary for engineering practice with appropriate considerations for public health, safety, cultural and environmental limitations.

10: Understand the impact of engineering solutions in a societal context and to be able to respond effectively to the needs for sustainable development.

11: Function effectively as an individual, and as a member or a leader in diverse teams, and in multi-disciplinary situations.

12: To recognize the need for, and have the ability to engage in independent and lifelong learning.

ProgrammeSpecific Outcomes (PSO's)

13: Ability to design a mechanical system, component, or process to meet desired needs of the nation, industries, institutions within realistic constraints such as economic, environmental, social, political, ethical, health care, and safety, manufacturability, and sustainability.

14: Ability to develop and use of software tools and Information Technology for mechanical engineering domain.

15: Ability to perform effectively first level managerial responsibilities for large or medium engineering organizations.

SEMESTER I

16BECC101 **COMMUNICATIVEENGLISH** **3 0 0 3 100**

COURSE OBJECTIVES

1. To enable students to attain fluency and accuracy to inculcate proficiency in professionalcommunication.
2. To make the students to meet the growing demand in the field of Globalcommunication.
3. To help students acquire their ability to speak effectively in real lifesituations.
4. To inculcate the habit of reading and to develop their effective readingskills.
5. To ensure that students use dictionary to improve their active and passivevocabulary.
6. To enable students to improve their lexical, grammatical and communicativecompetence.

COURSE OUTCOMES

Students undergoing this course will be able to

1. Use English language for communication: verbal & non –verbal.
2. Enrich comprehension and acquisition of speaking & writingability.
3. Ensure students proficiency in professionalcommunication.
4. Developed their active and passivevocabulary.
5. Gain confidence in using English language in real lifesituations.
6. Improve word power: lexical, grammatical and communication competence

UNIT I **9**

Listening – Types of listening - Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self - Introduction on one's friend. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative,objective,conversationalandargumentative.**Writing**–FormalandInformalletters-Freewritingonanytopic –My favorite place, hobbies, dreams, goals, etc- - To fill in different application forms. **Grammar** – Articles- WH questions –Yes/No Question - Subject Verb agreement. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

UNIT II **10**

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions - Telephone etiquette. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages. **Grammar** – Parts of speech – Noun – Verb – Adjectives - Adverbs. **Vocabulary** – Compound Nouns/Adjectives – Irregular verbs.

UNIT III **10**

Listening – Listening for specific task – Fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** – Reading and Comprehension. **Writing** - Autobiographical writing – Biographical writing - Instruction writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

UNIT IV **8**

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) Letters to the Editor. **Grammar** – Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

UNITV **8**

Listening -Listening to different accents, speeches/presentations. **Speaking**- Extemporetalk –Just-a-minute talk. **Reading**-Reading strategies–Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars andnotices – Writing proposal. **Grammar** – Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

16BECC102 ENGINEERING MATHEMATICS – I 3 2 0 4 100

COURSE OBJECTIVES

The objective of this course is

1. To familiarize the prospective engineers with techniques in calculus, and multivariate analysis.
2. To familiarize the prospective engineers with techniques in linear algebra.
3. To equip the students with standard concepts and tools at an intermediate to advanced level.
4. To equip the students will serve them to wards tackling more advanced level of mathematics.
5. To make the students will serve them to find the useful applications in their disciplines.
6. To make the students to solve the real time problems using standard concepts and tools.

COURSE OUTCOMES

The students will learn:

1. To apply differential and integral calculus to notions of curvature and to improperintegrals.
2. Apart from some other applications they will have a basic understanding of Beta and Gammafunctions.
3. The tool of power series and Fourier series for learning advanced EngineeringMathematics.
4. To deal with functions of several variables that are essential in most branches ofengineering.
5. The essential tool of matrices and linear algebra in a comprehensivemanner.
6. Students can solve real time problems using standard concepts and tools

UNITI MATRICES 12

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonalreduction.

UNITII DIFFERENTIALCALCULUS 12

Overview of Derivatives - Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes- Evolutes as Envelope of normals – Maxima and Minima of functions of two or more Variables – Method of Lagrangian Multipliers

UNITIII DIFFERENTIALEQUATIONS 11

Linear Differentialequations of second and higher order with constant coefficients - Euler's form of Differential equations – Method of variation parameters.

UNITIV FUNCTIONS OFSEVERALVARIABLES 12

Partial derivatives – Euler's theorem for homogeneous functions – Total derivatives – Differentiation of implicit functions – Jacobians –Maxima and Minima of functions of two or more Variables - Method of Lagrangian multipliers.

UNITV SEQUENCES ANDSERIES 13

Sequences: Definition and examples – **Series:** Types and Convergence – Series of positive terms – Tests of convergence: Comparision test, Integral test and D'Alembert's ratio test – Alternating series – Leibnitz's test – Series of positive and negative terms – Absolute and conditional convergence.

16BEPH103 **ENGINEERING PHYSICS** **3 0 0 3 100**

COURSE OBJECTIVES

1. To introduce the basic physics concepts relevant to different branches of Engineering and Technology.
2. To acquire the knowledge of Electromagnetic field theory.
3. To make the student to learn scientific, mathematical and engineeringprinciples.
4. To make the students to understand the basics of vacuum science.
5. To make the students to understand the process of production and measurement.
6. To make the students to understand the working of Gauges like Pirani, McLeod and Penning

COURSE OUTCOMES

1. Formulate potential problems within electrostatics, magneto statics.
2. Formulate stationary current distributions in linear, isotropic media.
3. Acquire knowledge on properties of matter, quantum physics.
4. Understand the basics of vacuum science.
5. Understand the process of production and measurement.
6. Understand the working of Gauges like Pirani, McLeod and Penning

UNITI PROPERTIES OF MATTERANDTHERMODYNAMICS 9

Three types of modulus of elasticity – basic definitions, relation connecting the modulii (Derivation), poison ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniform bending

Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNITII LASER ANDFIBEROPTICS 9

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER -CO_2, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNITIII QUANTUM PHYSICS 9

Introduction to quantum theory – Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electronmicroscope.

UNITIV CRYSTALPHYSICS 9

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surfacedefects

UNITV ULTRASONICS AND NUCLEARPHYSICS 9

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmissionandreflectionmodes-A,BandC–scandisplays,Medicalapplications–SonogramIntroduction – basics about nuclear fission and fusion, nuclear composition –Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

16BECH103 ENGINEERING CHEMISTRY 3 0 0 3 100

COURSEOBJECTIVES

1. To understand the terminologies of atomic and molecularstructure
2. To study the basics of Periodic properties, Intermolecularforces
3. To study about spectroscopictechnique
4. To understand the working of electromagnetic spectrum and spectroscopictechniques
5. To understand the thermodynamicfunctions
6. To comprehend the basic organic chemistry and to synthesis simpledrug.

COURSEOUTCOMES

1. Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecularforces.
2. Rationalise periodic properties such as ionization potential, electronegativity, oxidation states andelectronegativity.
3. Understand the ranges of the electromagnetic spectrum used for exciting different molecular energy levels.
4. Understand the concept of various spectroscopictechniques.
5. Rationalise bulk properties and processes using thermodynamicconsiderations.
6. List major chemical reactions that are used in the synthesis ofmolecules

UNIT I WATERTECHNOLOGY 9

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverseosmosis.

UNIT II ELECTROCHEMISTRY ANDSTORAGEDEVICES 9

Electrochemical cells – EMF – Measurement of EMF – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+}vs dichromate) –Electrolytic conductance-application (conductometric titration)-Batteries- Primary batteries-Leclanche cell-Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2-O_2 Fuel Cell.

UNIT III FUELSANDCOMBUSTION 9

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV-Flue gas analysis.

UNIT IV CORROSIONSCIENCE 9

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings- Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating - Hotdipping.

UNIT V SURFACE CHEMISTRY ANDPHASERULE 9

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

16BEME104 BASIC MECHANICAL ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES

1. To impart the basic knowledge of various basic fields of mechanicalengineering.
2. To Study about basic manufacturing and machiningprocesses.
3. To study about powerplants.
4. To study about automobileengineering
5. To study about boiler and hydraulic machines.
6. To study about Refrigeration and Airconditioning

COURSE OUTCOMES

1. Design different sheet metal working processes
2. Select appropriate Joining Processes to join Work piece.
3. Differentiate various metal forming processes such as Hot and Cold Working, Rolling, Forging, Extrusion and Drawing Processes.
4. Students will be able to apply these basics in the designing of the automotive components and engines.
5. Students will be able to get employed in Private Companies like Automotive Sector involving Manufacturing and Design as Graduate Trainees Engineer also in government firms like pollution control board.
6. Students should be able to calculate cooling load for air conditioning systems used for various applications

INTRODUCTION (Not included forexamination) **3**

Engineering and Technology - History of Mechanical Engineering- Mechanics - Statics and dynamics - Broad areas in Mechanical Engineering.

UNIT I MANUFACTURINGPROCESSES 8

FOUNDRY - Principles - Patterns - Types, Molding Processes, Cupola and Induction Furnaces. METAL FORMING - Principles - Hot and cold working of metals - Forging, rolling, extrusion and wire drawing, sheet metal operations. WELDING - Principles - Oxy-Acetylene Welding and Manual Metal Arc Welding, Brazing and Soldering.

UNIT II MACHINETOOLS 8

Machining principles - Construction and working principles of basic machine tools - Lathe, Drilling, Shaper, Planer and Milling machine. Introduction to CNC machines.

UNIT III AUTOMOBILEENGINEERING 8

Working principle of petrol and diesel engines - Four stroke and two stroke cycles - Comparison between four stroke and two stroke engines - Working principle of simple carburetor - Lubrication system and coolingsystem.

UNIT IV ENERGY ENGINEERING &HYDRAULIC MACHINES 9

Introduction to Boilers - Working principle of Thermal, Hydro - Electric and Nuclear Power Plants - Merits and demerits. Solar – Wind power plants.

Turbines - Impulse turbine - Pelton wheel, Reaction turbines - Kaplan and Francis turbines - Pumps - Working principle of Reciprocating pumps and Centrifugal pumps.

UNIT V REFRIGERATION ANDAIR-CONDITIONING 9

Terminology of Refrigeration and Air Conditioning - Basic principles of Vapour Compression and Absorption Refrigeration System – Window and Split Room Air Conditioners.

16BEME105A BASIC ELECTRICAL AND ELECTRONICS ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES

1. To impart the basic knowledge about the Electriccircuits.
2. To understand the working of Electrical Machines andTransformers.
3. To understand the working of Power Converters and components of low-voltage electricalinstallations.
4. To understand and analyze basic electric and magnetic circuits.
5. To study the working principles of electrical machines and power converters.
6. To introduce the components of low-voltage electrical installations.

COURSE OUTCOMES

1. Gain the basic knowledge about the Electriccircuits.
2. Understand the working of Electrical Machines andTransformers.
3. Understand the working of Power Converters and components of low-voltage electricalinstallations
4. Understand and analyze basic electric and magneticcircuits.
5. Acquire knowledge on the working principles of electrical machines and powerconverters.
6. Understand the components of low-voltage electricalinstallations

UNITI ELECTRIC CIRCUITS& MEASUREMENTS 9

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits WaveformsandRMSValue–PowerandPowerfactor–SinglePhaseandThreePhasebalancedCircuits.

UNITII ELECTRICALMACHINES 9

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNITIII MEASURINGINSTRUMENTS 9

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNITIV SEMICONDUCTOR DEVICESANDAPPLICATIONS 9

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNITV DIGITALELECTRONICS 9

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – A/D and D/A Conversion (single concepts).

4	Premkumar N	Basic Electrical Engineering	Anuradha Publishers	2003

16BEME105B ELEMENTS OF CIVIL ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES

1. To know about different materials and theirproperties
2. To know about engineering aspects related tobuildings
3. To know about importance of surveying and the transportationsystems
4. To get exposed to the rudiments of engineering related to dams, water supply, and sewagedisposal
5. To know about importance of drawings
6. To know about importance of electrical fittings.

COURSE OUTCOMES

1. Students are able to understand the property, use, advantage and disadvantage of different material used in construction
2. Students are able to understand the component of building with their function
3. Students are able to understand construction procedure of different components
4. After completion of this students will able to understand basic principles of building design and planning.
5. They will explore building drawing as a way of discovering and developing ideas for designing residential, commercial and public buildings.
6. Students will identify suitable method of irrigation and drainage of waterlogged area.

UNITI BUILDINGMATERILAS 9

Introduction – Civil Engineering – Materials: Bricks – composition – classifications – properties – uses. Stone – classification of rocks – quarrying – dressing –properties –uses. Timber – properties – uses –ply wood. Cement – grades –types – properties –uses. Steel – types –properties – uses – market forms. Concrete – grade – properties –uses.

UNITII BUILDINGCOMPONENTS 9

Building – selection of site – classification – components. Foundations –functions – classifications – bearing capacity. Flooring – requirements – types – cement concrete – marble – terrazzo floorings. Roof – types and requirement

UNITIII SURVEYING 9

Surveying – objectives – classification – principles of survey – survey instruments , their care and adjustments – Ranjing and Chaining .Compass – types –Prismatic Compass. Bearing – types. Levelling –Levels and staves – types. Contouring

UNITIV WATER SUPPLY AND SEWAGE DISPOSAL 9

Dams – purpose – selection of site – types –gravity dam (cross section only). Water supply – objective – quantity of water – sources – standards of drinking water – distribution system. Sewage – classification — septic tank – components andfunctions.

UNITV BUILDINGDRAWING 9

Types of drawing with appropriate scale & Uses of index map, key plan, village map, site plan, Layout plan –Types of Projection adopted in Building Drawing (Plan, Elevation and sections) – Scales for various types of Drawings– Working drawing, large scale drawing– Symbols, Conventions and Abbreviations for – Electrical fittings , water supply ,sanitary fittings, materials of construction – Sizes of various standard papers.

16BEPH111 ENGINEERING PHYSICS LABORATORY 0 0 4 2 100

COURSE OBJECTIVES

1. To learn the basic concepts in physics relevant to different branches of Engineering andTechnology.
2. To study the concept of semiconductor andconductivity.
3. To learn the properties ofmaterials.
4. To learn the basic concept of Numerical Aperture and acceptanceangle.
5. To make the students to determination of wavelength usinggrating.
6. To learn the basic concept about viscosity of liquids.

COURSE OUTCOMES

1. Understand the basic concepts in physics relevant to different branches of Engineering andTechnology.
2. Understand the concept of semiconductor andconductivity.
3. Acquire knowledge on the properties ofmaterials.
4. Understand the basic concept of Numerical Aperture and acceptanceangle.
5. Understand the students to determination of wavelength usinggrating.
6. Acquire knowledge on the basic concept about viscosity of liquids

LIST OF EXPERIMENTS

PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonicinterferometer.
2. Determination of wavelength of mercury spectrum – spectrometergrating.
3. Determination of Young’s modulus of the material – Non uniform bending (or) Uniformbending.
4. Determination of Viscosity of liquid – Poiseuille’smethod.
5. Spectrometer Dispersive power of aprism.
6. Torsional pendulum – Determination of Rigiditymodulus.
7. Particle size determination using DiodeLaser
8. Determination of Laser parameters – Wavelength, and angle ofdivergence.
9. Determination of acceptance angle in an opticalfiber.
10. Determination of thickness of a thin wire – Air wedgemethod
11. Determination of Band Gap of a semiconductormaterial.
12. Determination of Specific resistance of a given coil of wire – WheatstoneBridge

TOTAL 45

16BECH111 ENGINEERING CHEMISTRY LABORATORY 0 0 4 2 100

COURSEOBJECTIVES

1. To understand the terminologies of atomic and molecularstructure
2. To study the basics of Periodic properties, Intermolecularforces
3. To study about spectroscopictechnique
4. To understand the working of electromagnetic spectrum and spectroscopictechniques
5. To understand the thermodynamicfunctions
6. To comprehend the basic organic chemistry and to synthesis simpledrug.

COURSEOUTCOMES

1. Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecularforces.
2. Rationalise periodic properties such as ionization potential, electronegativity, oxidation states andelectronegativity.
3. Understand the ranges of the electromagnetic spectrum used for exciting different molecular energy levels.
4. Understand the concept of various spectroscopictechniques.
5. Rationalise bulk properties and processes using thermodynamicconsiderations.
6. List major chemical reactions that are used in the synthesis ofmolecules

LIST OF EXPERIMENTS

CHEMISTRY

1. Estimation of alkalinity of Watersample
2. Estimation of hardness of Water byEDTA
3. Estimation of Chloride in Water sample (Argentometricmethod)
4. Determination of corrosion rate by weight lossmethod.
5. Determination of molecular weight and degree of polymerization usingviscometry.
6. Conductometric Titration (Simple acidbase).
7. Conductometric Titration (Mixture of weak and strongacids).
8. Conduct metric Titration using $BaCl_2$ vs Na_2SO_4.
9. pH Titration (acid &base).
10. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or$K_2Cr_2O_7$).
11. Determination of water of crystallization of a crystalline salt (Coppersulphate).
12. Estimation of Ferric ion byspectrophotometry.
13. Determination of Chemical OxygenDemand.

TOTAL 45

16BEME112 ENGINEERING WORKSHOP PRACTICE 0 0 4 2 100

COURSE OBJECTIVES

1. To prepare the students to design a system, component, or process.
2. To meet desired needs within realistic constraints such as economic, environmental, social, and ethical.
3. To make the component with health and safety, manufacturability, andsustainability
4. To prepare the students to communicate effectively and to use the techniques, and skills.
5. To make the students to use modern engineering tools necessary for engineeringpractice.
6. To make the students to assemble different components.

COURSE OUTCOMES

Upon completion of this course,

1. The students will gain knowledge of the different manufacturing processes.
2. To fabricate components using differentmaterials.
3. Students will be able to fabricate components with their ownhands.
4. They will also get practical knowledge of the dimensional accuracies and dimensionaltolerances
5. By assembling different components with different processes.
6. They will be able to produce small devices of theirinterest

PART – A (CIVIL & MECHANICAL)

1. WELDING **6**

i. Preparation of arc welding of butt joints, lap joints and teejoints.

2. BASICMACHINING **6**

i. Simple Turning and Taperturning
ii. Drilling andTapping

3. SHEETMETALWORK **6**

i. Model making – Trays, funnels,etc.

4. DEMONSTRATIONON **4**

i. Smithyoperations
ii. Foundryoperations
iii. PlumbingWorks
iv. CarpentaryWorks

PART –B (ELECTRICAL & ELECTRONICS)

5. ELECTRICALENGINEERING **10**

i. Study of electrical symbols and electricalequipments.
ii. Construct the wiring diagram for Stair case wiring and Fluorescent lampwiring.
iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energymeter.
iv. Measurement of electrical quantities – voltage, current, power & power factor in Rload.
v. Measurement of energy using single phase energymeter.

6. ELECTRONICSENGINEERING **13**

i. Study of Electronic components– Resistor (color coding), capacitors andinductors.
ii. Soldering practice – Components Devices and Circuits – Using general purposePCB.
iii. Study of logic gates AND, OR, NOT, NOR andNAND.
iv. Study of HWR andFWR.

16BEME113 ENGINEERING GRAPHICS – I 0 0 4 2 100

COURSE OBJECTIVES

1. To make the students to design a system, component, or process to meet desired needs.
2. To prepare the students to design the components with realistic constraints.
3. To make the students to consider economic, environmental, ethical, health and safety when they design.
4. To make the students to design the components with considering manufacturability, andsustainability
5. To prepare the students to communicate effectively using the techniques, skills, and modern engineering tools.
6. To make the students to understand to use necessary for engineeringpractice.

COURSE OUTCOMES

The student will alsolearn:

1. Introduction to engineering design and its place insociety
2. Exposure to the visual aspects of engineering design and engineering graphicsstandards
3. Exposure to engineeringcommunication effectively.
4. Exposure to 3D free hand sketching.
5. Acquired the knowledge of projections of points, lines and plane surfaces.
6. Understand the basic concept of projection of solids

UNITI INTRODUCTION 9

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNITII SCALES ANDPLANECURVES 8

SCALES: Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNITIII FREEHANDSKETCHING 9

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNITIV PROJECTION OF POINTS, LINES ANDPLANESURFACES 9

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNITV PROJECTIONOFSOLIDS 9

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

16BECC151 **HUMAN VALUES** **1 0 0 -100**

COURSE OBJECTIVES

1. To know the value of being a human being and the value of being a usefulcitizen
2. To develop a critical ability to distinguish between essence and form, or between what is of value and what is superficial, in life.
3. To move from discrimination to commitment.
4. To recognize and determine the role of engineers in the economic and social development of the society.
5. To develop social responsibility &human professional ethics.
6. To develop the knowledge of social impact of economic liberalization and technology.

COURSE OUTCOMES

1. Identify and analyze an ethical issue in the subject matter under investigation or in arelevant field
2. Identify the multiple ethical interests at stake in a real-world situation or practice
3. Articulate what makes a particular course of action ethically defensibleAssess their own ethical values and the social context of problems
4. Identify ethical concerns in research and intellectual contexts, including academic integrity,use and citation of sources, the objective presentation of data, and the treatment of humansubjects
5. Demonstrate knowledge of ethical values in non-classroom activities, such as servicelearning, internships, and field work
6. Integrate, synthesize, and apply knowledge of ethical dilemmas and resolutions in academic settings, including focused and interdisciplinary research.

UNIT I **3**

Human life on Earth - Concept of Human Values - Value Education - Aim of education and value education - Types of values - Components of values – Attitudes – types of attitudes

UNIT II **3**

Self Development :Self analysis – Goal Setting - Thought Analysis – Guarding against Anger - Respect to age, experience, maturity, family members, neighbors,co-workers

UNIT III **3**

Individual Qualities– Truthfulness – Constructivity – Sacrifice – Sincerity - Self Control – Altruism– Tolerance - Scientific Vision – Regulating Desire

UNIT IV **3**

Mind Culture - Modern Challenges of Adolescent - Emotions and behavior - Sex and spirituality - Adolescent Emotions - Meditation

UNIT V **3**

Body and Mind Fitness : (a) Physical Exercises (b) Activities: (i) Moralization of Desires (ii) Neutralization of Anger (iii) Eradication of Worries (iv) Benefits of Blessings

TOTAL **15**

SEMESTER II

16BECC201A **BUSINESS COMMUNICATION** **3 0 0 3 100**

COURSE OBJECTIVES

1. To help students comprehend the role of listening skills in effectivecommunication
2. To familiarize students with verbal and non-verbalcommunication
3. To expose students to neutralaccent
4. To develop emotional intelligence skills in them for enhancing theirself-esteem
5. To assist them in setting goals and developing positiveattitude
6. To enable students to acquire decision making skills, problem solving skills and assertiveskills

COURSE OUTCOMES

1. CO1. To be familiar with the complete course outline/Course Objectives/Learning Outcomes/ Evaluation Pattern & Assignments
2. To participate in an online learning environment successfully by developing the implication-based understanding of Paraphrasing, deciphering instructions, interpreting guidelines, discussion boards & Referencing Styles.
3. To demonstrate his/her ability to write error free while making an optimum use of correct Business Vocabulary & Grammar.
4. To distinguish among various levels of organizational communication and communication barriers while developing an understanding of Communication as a process in an organization.
5. To draft effective business correspondence with brevity and clarity.
6. To stimulate their Critical thinking by designing and developing clean and lucid writing skills.

UNIT I **9**

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II **9**

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- Description of Graphics and visual aids - interpretation of graphs using expressions of comparison and contrast .

UNIT III **9**

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body langage – Etiquette- Organization of presentation – brain storming-Negotiations.

UNIT IV **9**

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNITV **9**

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

16BECC201B **TECHNICAL ENGLISH** **3 0 0 3 100**

COURSE OBJECTIVES

1. To enable students to attain fluency and accuracy to inculcate proficiency in professionalcommunication.
2. To make the students to meet the growing demand in the field of Globalcommunication.
3. To help students acquire their ability to speak effectively in real lifesituations.
4. To inculcate the habit of reading and to develop their effective readingskills.
5. To ensure that students use dictionary to improve their active and passivevocabulary.
6. To enable students to improve their lexical, grammatical and communicativecompetence.

COURSE OUTCOMES

Students undergoing this course will be able to

1. Use English language for communication: verbal & non –verbal.
2. Enrich comprehension and acquisition of speaking & writingability.
3. Ensure students proficiency in professionalcommunication.
4. Developed their active and passivevocabulary.
5. Gain confidence in using English language in real lifesituations.
6. Improve word power: lexical, grammatical and communication competence

UNITI **10**

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a Covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentence - Question tags. **Vocabulary** – Homonyms and Homophones.

UNIT II **8**

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome Address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar** - Modal verbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs - Idioms.

UNIT III **9**

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid Reading – Skimming, Scanning and Surveying. (SQ3R)**Writing**- Essay writing -Minutes of Meeting - Agenda – **Grammar** - Active and Passive voice - Purpose Expression. **Vocabulary** - Same words used as noun and verb - often misspelt and confusedwords.

UNIT IV **8**

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication. **Reading** – Reading Comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Job Application - Resume Writing - Checklist Preparation. **Grammar** - Numerical Expressions – Collocations - **Vocabulary** - Singular and Plural(Nouns)

UNITV **10**

Listening – Types of Listening- Improving listening comprehension**. Speaking** - Oral presentation - Vocal communication techniques - voice, quality, volume, pitch etc., **Reading** -Note Making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation Writing – Short Essays Writing- **Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabulary with their meanings.

TOTAL **45**

Note:Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

16BECC202 ENGINEERING MATHEMATICS – II 3 2 0 4 100

COURSE OBJECTIVES

The objective of this course is

1. To familiarize the prospective engineers with techniques in Multivariate integration.
2. To familiarize the concept of ordinary and partial differential equations and complex variables.
3. To equip the students to deal with advanced level of mathematics and applications.
4. To make the students to formulate and solve problems involving random variables.
5. To equip the students to Understand the basic concepts of one- and two-dimensional random variables.
6. To understand the concept of testing of hypothesis for small and large samples in real life problems.

COURSE OUTCOMES

The students will learn:

1. The mathematical tools needed in evaluating multiple integrals and theirusage.
2. The effective mathematical tools for the solutions of differential equations that model physicalprocesses.
3. The tools of differentiation and integration of functions of a complex variable that are used in various techniques dealing engineeringProblems.
4. Understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
5. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data
6. Apply the concept of testing of hypothesis for small and large samples in real life problems

UNITI MULTIPLEINTEGRALS 11

Double integral – Cartesian coordinates – Polar coordinates – Change of order of integration – Triple integration in Cartesian co-ordinates – Area as double integrals.

UNITI VECTORCALCULUS 13

Gradient, Divergence and Curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector integration – Green's theorem, Gauss divergence theorem and Stoke's theorems (Statement Only)- Surfaces : hemisphere and rectangular parallelopipeds.

UNITIII PARTIALDIFFERENTIALEQUATIONS 11

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

UNITIV ANALYTIC FUNCTIONS 12

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: w = z+a, az, 1/z, and bilinear transformation.

UNITV COMPLEXINTEGRATION 13

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi circle (excluding poles on the real axis).

16BECC204 ENVIRONMENTAL SCIENCES 3 0 0 3 100

COURSE OBJECTIVES

1. To create the awareness about environmental problems amongpeople.
2. To develop an attitude of concern for theenvironment.
3. To motivate public to participate in environment protection andimprovement.
4. To demonstrate proficiency in quantitative methods, qualitative analysis, and critical thinking.
5. To develop writing and oral communication needed to conduct high-level work as interdisciplinary scholars and / orpractitioners.
6. To Learn about the systems concepts and methodologies to analyze and understand interactions.

COURSE OUTCOMES

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problemsolving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies andinstitutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to globalscales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnectedworld

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES 9

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources- Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM 9

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY 9

Introduction to biodiversity,Definition-Genetic diversity,Species diversityand Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity- Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation ofbiodiversity.

UNIT IV ENVIRONMENTALPOLLUTION 9

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUESAND ENVIRONMENT 9

From Unsustainable to Sustainable development,Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights-Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

16BEME212 COMPUTER PRACTICEANDPROGRAMMING LABORATORY 1 0 4 3 100

COURSE OBJECTIVES

1. To provide an awareness to Computing and CProgramming
2. To know the correct and efficient ways of solvingproblems
3. To learn to develop algorithm for simple problemsolving.
4. To Study, analyze and understand logical structure of a computer program
5. To be able to declare pointers of different types and use the mind defining self- referential structures.
6. To be able to create, read and write to and from simple textfiles.

COURSE OUTCOMES

1. To formulate the algorithms for simpleproblems
2. To translate given algorithms to a working and correctprogram
3. To be able to correct syntax errors as reported by thecompilers
4. To be able to identify and correct logical errors encountered at runtime
5. To be able to write iterative as well as recursiveprograms
6. To be able to represent data in arrays, strings and structures and manipulate them through a program

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords- General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings-Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheet and presentation software inLinux

2. Programming inScratch:
   Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming

3. CProgramming:
   Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

16BEME213 ENGINEERING GRAPHICS – II 0 0 3 2 100

COURSE OBJECTIVES

1. To prepare the students to make section of solids like Prism, Cylinder, and Pyramid.
2. To prepare true shape of section.
3. To gain the knowledge on lateral surfaces.
4. To acquire the knowledge about development of surfaces like Prisms, pyramids, cylinders and cones.
5. To gain the knowledge on 2D drawing using CAD software.
6. To acquire the knowledge on basics of 3D modeling packages.

COURSE OUTCOMES

1. The students to draw section of solids like Prism, Cylinder, and Pyramid.
2. Students can prepare true shape of section.
3. Students gain the knowledge on lateral surfaces.
4. Students acquire the knowledge about development of surfaces like Prisms, pyramids, cylinders and cones.
5. Students gain the knowledge on 2D drawing using CAD software.
6. Students acquire the knowledge on basics of 3D modeling packages

UNITI SECTIONOFSOLIDS 9

Sectioning of above solids in simple vertical position by cutting planes inclined to one reference plane and perpendicular to the other – Obtaining true shape of section.

UNITII DEVELOPMENTOFSURFACES 9

Developmentoflateralsurfacesofsimpleandtruncatedsolids–Prisms,pyramids,cylindersandcones– Development of lateral surfaces of solids with cylindrical cutouts, perpendicular to the axis.

UNITIII ISOMETRIC PROJECTIONS 9

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones.

UNITIV PERSPECTIVEPROJECTIONS 9

Perspective projection of prisms, pyramids, cylinders and cone by visual ray method and vanishing point method.

UNITV COMPUTERGRAPHICS 9

Introduction to 3D modeling packages. Drafting practices - modeling of simple engineering components, sections and extraction of 2D drawings.

16BEME251 **APTITUDE TRAINING** **1 0 0 -100**

COURSE OBJECTIVES

1. To understand the basic concepts of QUANTITATIVE ABILITY
2. To understand the basic concepts of LOGICAL REASONING Skills
3. To acquire satisfactory competency in use of VERBAL REASONING
4. To solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
5. To solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
6. To compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

COURSE OUTCOMES

1. Understand the basic concepts of QUANTITATIVE ABILITY
2. Understand the basic concepts of LOGICAL REASONING Skills
3. Acquire satisfactory competency in use of VERBAL REASONING
4. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
5. Solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
6. Compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc

UNIT I **5**

Introduction, Speed Math's, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT II **5**

Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest

UNIT III **5**

Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation and Combination

TOTAL **15**

SEMESTER III

16BEME301 METHODS OFAPPLIEDMATHEMATICS 3 2 0 4 100

COURSE OBJECTIVES

1. To introduce the basic concepts of PDE for solving standard partial differentialequations
2. To acquaint the student with Fourier series techniques in solving heat flow problems used in varioussituations.
3. To provide an overview of probability and statistics toengineers
4. To introduce the basic concepts of two-dimensional randomvariables
5. To acquaint the knowledge of testing of hypothesis for small and large samples.
6. To apply testing of hypothesis in important role in real lifeproblems.

COURSE OUTCOMES

After successfully completing the course, the student will have a good understanding of the following topics and their applications

1. Thefundamentalconceptsofpartialdifferentialequationsandthevarioussolutionproceduresforsolvingthefirst order non-linear partial differentialequations.
2. Appreciate the physical significance of Fourier series techniques in solving one- and two-dimensional heat flow problems and one-dimensional waveequations.
3. Understand the basic concepts of one knowledge of the concepts of probability and have knowledge of standard distribution which can describe real life phenomenon.
4. Understand the basic concepts of one- and two-dimensional random variables and apply in engineeringapplications.
5. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimentaldata
6. Apply the concept of testing of hypothesis for small and large samples in real lifeproblems

UNITI LAPLACETRANSFORM 13

Transforms of elementary functions – Basic properties – Transforms of derivatives and integrals – Initial and final value theorems. Inverse Laplace transforms – Convolution theorem (statement only) – Solution of Ordinary Differential Equations with constant coefficients using Laplace transforms – Transform of periodic functions.

UNITII FOURIERSERIES 12

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNITIII FOURIERTRANSFORM 12

Fourier integral theorem (Statement Only) – Fourier transform pair –Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity – Relation between Fourier and Laplace transforms

UNITIV APPLICATIONS OF PARTIALDIFFERENTIALEQUATIONS 12

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded)

UNITV Z -TRANSFORM ANDDIFFERENCEEQUATIONS 11

Z-transform - Elementary properties – Inverse Z- transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z - transform.

16BEME302 **ENGINEERING MECHANICS** **3 1 0 4 100**

COURSE OBJECTIVES

1. To develop capacity to predict the effect of force and motion.
2. To understand the importance of free body diagram for complex machine structure.
3. To perform force analysis using law of mechanics.
4. To introduce the concepts of static equilibrium condition for particles and rigid bodies
5. To Understand the concepts of kinematics of particles and friction.
6. To make the students conversant to solve the problems using equation of motions.

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the basic concepts of force and laws of mechanics.
2. Develop free body diagram for complex machine structure and to perform force analysis.
3. Apply static equilibrium condition for particles and rigid bodies.
4. Locate the center of gravity and moment of inertia for planes and solids.
5. Understand the concepts of kinematics of particles and friction.
6. Solve the problems using equation of motions

UNIT I STATICSOFPARTICLES **12**

Forces – system of forces – concurrent forces in plane and space– resultant – problems involving the equilibrium of a particle–free body diagram–equilibrium of particle in space.

UNIT II STATICS OF RIGID BODIES INTWODIMENSIONS **12**

Rigid bodies–moment of force about an axis–moments and couples–equivalent system of coplanar forces–Rigid body in equilibrium–problems involving equilibrium of rigid body–types of supports–reactions of beams.

UNIT III CENTROID, CENTRE OF GRAVITY AND MOMENTOFINERTIA **12**

Centroids of areas, composite areas, determination of moment of inertia of plane figures, polar moment of inertia – radius of gyration – mass moment of inertia of simple solids.

UNIT IV KINEMATICS OFPARTICLES **12**

Introduction – plane, rectilinear motion – time dependent motion – rectangular coordinates – projectilemotion.

UNIT V KINETICS OF PARTICLESANDFRICTION **12**

KINETICS OF PARTICLES: Equations of motion–rectilinear motion–Newton's II law – D'Alembert's principle – Energy – potential energy–kinetic energy–conservation of energy–work done by a force – work energy method.

16BEME303 MANUFACTURING TECHNOLOGY I 3 0 0 3 100

COURSE OBJECTIVES

1. To familiarize the students to apply suitable molding and casting methods for producing components.
2. To develop anunderstanding of types of metal joining processes.
3. To explain types of deformation processes.
4. To understand the concept of sheet metal operations and metal forming processes.
5. To provide an overview of various plastic component manufacturing processes for various applications.
6. To Study and acquire knowledge of process variables to manufacture defect free products.

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Apply suitable molding and casting methods for producing components.
2. Decide the type of metal joining processes.
3. Select the type of deformation processes.
4. Work with various sheet metal operations and metal forming processes.
5. Select the various plastic component manufacturing processes for various applications.
6. Identify the effect of process variables to manufacture defect free products

UNITI METALCASTINGPROCESSES 9

Introduction to Sand casting – Sand moulds – Type of patterns – Pattern materials – Pattern allowances – Types of Moulding sand – Properties – Core making – Types – CO_2 process - Moulding machines – Types of moulding machines – Types of melting furnaces (cupola, induction) – Working principle of Special casting processes – Shell moulding, Investment casting, Pressure die casting, Centrifugal casting – Casting defects – Inspectionmethods.

UNITII JOININGPROCESSES 9

Fusion welding processes – Types of Gas welding – Equipments used – Flame characteristics – Filler and Flux materials and properties – Arc welding equipments – Electrodes – Coating and specifications – Principles of Resistance welding – Gas metal arc welding – Submerged arc welding – TIG, MIG welding – Friction Stir Welding – Weld defects – Brazing and soldering process.

UNITIII BULKDEFORMATIONPROCESSES 9

Hot working and cold working of metals – Ingots – Forging processes – Open, impression and closed die forging – Types of Forging Machines – Rolling of metals – Types of Rolling mills – Defects in rolled parts – Principle of rod and wire drawing – Tube drawing — Principles of Extrusion – Types of Extrusion – Hot and Cold extrusion — Equipments used.

UNITIV SHEETMETALPROCESSES 9

Sheet metal characteristics – Press – Types of press – Principle of punching, blanking, coining, piercing, notching, embossing – Typical shearing operations, bending, drawing and deep drawing operations – Metal spinning, Stretch forming operations – Formability of sheet metal – Test methods.

UNITV MANUFACTURING OFPLASTIC COMPONENTS 9

Types of plastics – Characteristics of the forming and shaping processes – Moulding of Thermoplastics – Working principles and typical applications of – Injection moulding – Plunger and screw machines – Compressionmoulding,Transfermoulding–Typicalindustrialapplications–IntroductiontoBlowmoulding – Rotational moulding – Film blowing – Extrusion – Thermoforming – Bonding of Thermoplastics.

16BEME304 FLUID MECHANICS AND MACHINERY 3 2 0 4 100

COURSE OBJECTIVES

1. To enrich the understanding of fluid properties
2. To make the students conversant with types of flow and calculate Major and minor loses in pipes.
3. To acquaint the student with the concepts of Buckingham's π theorem.
4. To explain the working of different pumps
5. To explain the working of different turbines.
6. To equip students with skills to produce analytical solutions to various simple problems

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Demonstrate basic knowledge of fluid properties
2. Find types of flow and calculate Major and minor loses in pipes.
3. Apply Buckingham's π theorem for problem solving.
4. Understand the working of different pumps
5. Understand the working of different turbines.
6. produce analytical solutions to various simple problems

UNITI FLUID PROPERTIES ANDFLOW CHARACTERISTICS 12

Fluid properties: Mass density, weight density, specific gravity, viscosity, compressibility, surface tension and capillarity. Buoyancy and floatation– metacentre and metacentric height (definition only)

Flow characteristics: concepts of system and control volume, application of control volume to continuity equation, energy equation, momentum equation and moment ofmomentum equation.

UNITII FLOW THROUGHCIRCULARPIPES 12

Hydraulic and energy gradient – Types of fluid flow – Laminar flow through circular conduits – Boundary layer concepts – types of boundary layer thickness – Darcy Weisbach equation –friction factor – Moody diagram – commercial pipes – minor losses – Flow through pipes in series and parallel.

UNITIII DIMENSIONALANALYSIS 12

Dimension and units, dimensional homogeneity, applications of Buckingham's π theorem, model and similitude, similaritylaws.

UNITIV HYDRAULIC TURBINES 12

Classification of turbines – heads and efficiencies – velocity triangles. Axial, radial and mixed flow turbines. Pelton wheel, Francis turbine and Kaplan turbines- working principles - work done by water on the runner – draft tube. Specific speed - unit quantities – performance curves for turbines – governing of turbines.

UNITV HYDRAULICPUMPS 12

Classification of pumps – centrifugal pump–working principle–head, discharge, efficiencies and losses – performance curves – specific speed. Reciprocating pump–components and working–slip–indicator diagram – air vessel – Jet pump – Gear pump – Submersible pump.

16BEME305A ELECTRICAL DRIVES AND CONTROLS 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the basic concepts of different types of electrical machines and theirperformance.
2. To study the different methods of starting D.C motors and inductionmotors.
3. To study the conventional and solid-statedrives
4. To expose students to the operation, application and control of power conversion systems employing electric drive to cater to industrial needs.
5. To familiarize the operation principles, and design of starting, braking, and speed control arrangements for electric motors and their applications.
6. To provide strong foundation to asses performance of different industrial drives considering issues such as, energy efficiency, power quality, economic justification, environmental issues, and practical viabilities.

COURSE OUTCOMES

1. Examine various applications in industrial and domestic areas where use of electric drives isessential.
2. Classify types of electric drives systems based on nature of loads, control objectives,performance and reliability.
3. Combine concepts of previously learnt courses such as, electrical machines, Control and powerelectronics to cater to the need of automations in industries.
4. Select most suitable type and specification of motor drive combination for efficient conversionand control of electric power.
5. Identify the critical areas in application levels, and derive typical solutions.
6. Design and justify new control and power conversion schemes for implementing alternativesolutions considering the critical and contemporary issues.

UNITI INTRODUCTION 9

Basic Elements – Types of Electric Drives – factors influencing the choice of electrical drives – Loading conditions and classes of duty – Selection of power rating for drive motors with regard to thermal overloading and Load variation factors. Multi quadrant operation.

UNITII DRIVEMOTORCHARACTERISTICS 9

Mechanical and electrical characteristics of various types of load and drive motors – Braking of Electrical motors – DC Shunt, series Motors – Three phase induction motors.

UNITIII STARTINGMETHODS 9

Types of D.C Motor starters – Typical control circuits for shunt and series motors – Three phase squirrel cage and slip ring induction motors.

UNITIV SPEED CONTROLOFD.C.DRIVES 9

SpeedcontrolofDCseriesandshuntmotors–Armatureandfieldcontrol,Ward-Leonardcontrolsystem– Using controlled rectifiers and DC choppers –applications.

UNITV SPEED CONTROL OFA.C.DRIVES 9

Speed control of three phase induction motor – Voltage control, voltage / frequency control, Rotor resistance control –slip power recovery scheme

3.	Gopal K.Dubey	Fundamentals of Electrical drives	Narosa Publishing House	2003

16BEME305B ELECTRONICS AND MICROPROCESSORS 3 0 0 3 100

COURSE OBJECTIVES

1. To provide an overview of various analogdevice
2. To provide an overview of Digitalconcepts
3. To learn working of amplifier and its application.
4. To understand the concept of RC-timing circuits.
5. To learn cellular concept and block diagram of GSM system.
6. To provide a review of communicationsystem

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the principles of semiconductor devices and theirapplications.
2. Understand the concept of voltageregulators
3. Design an application using Operationalamplifier.
4. Understand the working of timing circuits andoscillators.
5. Understand logic gates, flip flop as a building block of digitalsystems.
6. Learn the basics of Electronic communicationsystem.

UNITI SEMICONDUCTORSANDRECTIFIERS 9

Classification of solids based on energy band theory-Intrinsic semiconductors-Extrinsic semiconductors-P type and N type-PN junction-Zenor effect-Zenor diode characteristicsHalf wave and full wave rectifiers -Voltage regulation

UNITII TRANSISTORSANDAMPLIFIERS 12

Bipolar junction transistor- CB, CE, CC configuration and characteristics-Biasing circuits Class A, B and C amplifiers- Field effect transistor-Configuration and characteristic of FET amplifier-SCR, Diac, Triac, UJT-Characteristics and simple applications.

UNITIII DIGITALELECTRONICS 9

Binary number system - AND, OR, NOT, NAND, NOR circuits-Boolean algebra Exclusive OR gate - Flip flops-Half and full adders-Registers-Counters-A/D and D/A conversion.

UNITIV 8085MICROPROCESSOR 9

Block diagram of microcomputer-Architecture of 8085-Pin configuration-Instruction setAddressing modes-Simple programs using arithmetic and logical operations.

UNITV INTERFACING AND APPLICATIONSOFMICROPROCESSOR 6

Basic interfacing concepts - Interfacing of Input and Output devices-Applications of microprocessor Temperature control, Stepper motor control, traffic light control.

16BEME311 FLUID MECHANICS AND MACHINERYLABORATORY 0 0 3 2 100

COURSE OBJECTIVES

1. To supplement the theoretical knowledge gained in Fluid Mechanics and Machinery with practical testing
2. To understand the concepts of coefficient of discharge for Orifice meter and Venturi meter.
3. To explain the Calibration of Rotameter.
4. To understand the importance of friction factor for flow through pipes.
5. To impart knowledge on the performance of various pumps.
6. To impart knowledge on the performance of turbines.

COURSE OUTCOMES

1. Calculate the coefficient of discharge for Orifice meter and Venturimeter.
2. Calibrate the Rotameter
3. Estimate the friction factor for flow through pipes.
4. Asses the performance of centrifugal pump and submergible pump.
5. Asses the performance of reciprocating pump and gear pump.
6. Asses the performance of turbines

LIST OF EXPERIMENTS

1. Determination of the Coefficient of discharge of given Orificemeter.
2. Determination of the Coefficient of discharge of givenVenturimeter.
3. Calculation of the rate of flow using Rotameter.
4. Determination of friction factor for a given set ofpipes.
5. Conducting experiments and drawing the characteristic curves of centrifugalpump
6. Conducting experiments and drawing the characteristic curves of submersiblepump
7. Conducting experiments and drawing the characteristic curves of reciprocatingpump.
8. Conducting experiments and drawing the characteristic curves of Gearpump.
9. Conducting experiments and drawing the characteristic curves of Peltonwheel.
10. Conducting experiments and drawing the characteristics curves of Francisturbine.

TOTAL 45

16BEME312 **MACHINE DRAWING** **0 0 3 2 100**

COURSE OBJECTIVES

1. To explain the surfaces for sheet metal working applications.
2. To Understand the representation of details in machine drawing.
3. To introduce tolerances and fits of machine elements.
4. To equip them with skills to Construct an assembly drawing using part drawings of machine components.
5. To equip them with skills to Construct an assembly drawing of machine components using 2D drafting.
6. To equip them with skills to develop employability.

COURSEOUTCOMES

Learners should be ableto

1. Express the importance of machine drawing andGD&T.
2. Interpret drawings of machinecomponents.
3. Create assembled machinedrawings.
4. Make part drawings from an assemblydrawing.
5. Interpret the details of complex parts in cross sectionviews.
6. Sketch production drawing from assemblydrawing.

INTRODUCTION **3**

Introduction to machine drawing. Importance of sectional views. Computer-aided drafting.

CONVENTIONS **6**

Code of practice for engineering drawing-conventional representation of details- drilled and tapped holes, countersunk and counter bored holes, internal and external threads, undercuts, grooves, chamfers, fillet radii and keyways. Conventions to represent standard components-bolts, nuts, washers, screws, cotters, pins, circlips, bearings, gears, springs andflanges.

FITSANDTOLERANCES **6**

Limits, fits and tolerances-need, types, representation of tolerances on drawing, calculation of minimum and maximum clearances and allowances. Geometric tolerance-uses, types of form and position tolerances, symbols, method of indicating geometric tolerances on part drawings.

ASSEMBLY DRAWINGPRACTICE **15**

Making free hand sketches of typical subassemblies-flange coupling, stuffing box, journal bearings, rolling element bearings, keyed joints, cotter joints, C clamp.

ASSEMBLY USING2DDRAFTING **15**

Assembly drawing with sectioning and bill of materials from given detailed drawings of assemblies: Lathe Tail stock, Machine vice, Pedestal bearing and Drill jigs and Milling fixture.

TOTAL **45**

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication

16BEME313 ELECTRICAL DRIVES AND MICROPROCESSORLABORATORY 0 0 3 2 100

COURSE OBJECTIVES

1. **To provide students the creative application of scientific principles to design or develop structures, machines, apparatus or works.**
2. To train students with good scientific and technical breadth so as to embody inventions and put his ideas in concrete terms and design something that promotes and helps in fulfilling the ever expanding energy requirements.
3. To inculcate in students professional and ethical attitude, Communication Skills, teamwork Skills, computer programming skill and an ability to relate engineering issues to broader social context.
4. To provide the excellent learning environment, which can enhance the learning ability of student to generate awareness of surrounding, attentiveness to details, experimental analysis.
5. To impart knowledge on Performance of the fundamental control practices associated with AC and DC machines (starting, reversing, braking, plugging, etc.) using power electronics
6. To evaluate the use of computer-based analysis tools to review the major classes of machines and their physical basis for operation

COURSE OUTCOMES

1. Graduates will demonstrate an ability to identify, formulate, pinpoint and solve Electrical engineering problems keeping in view the present-day power and energy requirement and its future prospect.
2. Graduates will demonstrate an ability to design study and analyze the digital and analog systems and components that serve as the fundamental components of the power engineering methods being increasingly used with the new technological advances.
3. Graduate will understand the impact of engineering solutions on the society and also be aware of contemporary issues relating to the exhausting resources and alternatives to continue uninterrupted power supply.
4. Graduate will be able to communicate effectively in both verbal and written form. They will develop a better presentation skill on academic and personal grounds that will enhance their personality in all aspects.
5. Graduates will demonstrate knowledge of professional and computer language skills that will eventually develop them into skilled researchers in an atmosphere that is technically advanced and conductive.

Graduates will demonstrate knowledge of advanced mathematics, science and electrical engineering with the ability to apply the theoretical knowledge and concepts to the disciplines of electrical engineering.

LIST OF EXPERIMENTS

ELECTRICAL MACHINES

1. Load Test on DC ShuntMotor
2. Load Test on DC SeriesMotor
3. Load Test on DC CompoundMotor
4. Speed control of D.C. motor. (Armature and Fieldcontrol)
5. Speed control of three phase Induction motor. (VoltageControl)
6. Speed control of three phase Induction motor. (Voltage / frequencyControl)
7. Load test on single phase InductionMotor.
8. Load test on three phase InductionMotor.
9. Speed control of three phase slip ring InductionMotor.

MICROPROCESSOR

1. Addition of two 8 – bit numbers, sum of 8 – bits and 16bits.
2. 8 - bitsubtraction.
3. Additional of two 16 – bit numbers, Sum: 16 bits ormore.
4. 8 – bit Multiplication.
5. 8 – bit Division.

TOTAL	**45**

16BEME351 SOFTSKILLS 1 0 0 -100

COURSE OBJECTIVES

1. To enable students to attain fluency and accuracy to inculcate proficiency in professionalcommunication.
2. To make the students to meet the growing demand in the field of Globalcommunication.
3. To help students acquire their ability to speak effectively in real lifesituations.
4. To inculcate the habit of reading and to develop their effective readingskills.
5. To ensure that students use dictionary to improve their active and passivevocabulary.
6. To enable students to improve their lexical, grammatical and communicativecompetence.

COURSE OUTCOMES

Students undergoing this course will be able to

1. Use English language for communication: verbal & non –verbal.
2. Enrich comprehension and acquisition of speaking & writingability.
3. Ensure students proficiency in professionalcommunication.
4. Developed their active and passivevocabulary.
5. Gain confidence in using English language in real lifesituations.
6. Improve word power: lexical, grammatical and communication competence.

UNIT I **4**

Overview to communication, self Introduction, Presentation on their own topic, Extempore, Group Activity

UNIT II **3**

Group Discussion, Do's and Don'ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III **4**

Introduction to HRM – Questions - Do's and Don't's - Interview - Mock GD - Stress Management

UNIT IV **4**

Personality Development - Presentation skills, Interpersonal skills, Critical thinking, Confidence building and Stress management.

TOTAL 15

SEMESTER IV

16BEME401 STRENGTHOFMATERIALS 3 2 0 4 100

COURSE OBJECTIVES

1. To understand the concepts of stress and strain on deformation of solids.
2. To introduce the Concepts of safe working stresses and load carrying capacity of beams.
3. To enrich the understanding of deflection in beams and columns in engineering applications.
4. To understand the importance of the effect of torsion on shafts and springs.
5. To provide knowledge on principal stresses and analyze thin cylinders and shells subjected to pressure forces.
6. To provide knowledge on components subjected to various loadings with the help of various theories of failures.

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Determine stress and strain on deformation of solids.
2. Compute safe working stresses and load carrying capacity of beams.
3. Estimate the deflection in beams and columns in engineering applications.
4. Analyze the effect of torsion on shafts and springs.
5. Determine principal stresses and analyze thin cylinders and shells subjected to pressure forces.
6. Design the components subjected to various loadings with the help of various theories of failures

UNIT I STRESS, STRAIN AND DEFORMATIONOF SOLIDS 12

Rigid and Deformable bodies – Strength, Stiffness and Stability – Stresses; Tensile, Compressive and Shear – Deformation of simple and compound bars under axial load – Thermal stress – Elastic constants – Strain energy and unit strain energy – Strain energy in uniaxialloads.

UNITII BEAMS – LOADSAND STRESSES 12

Types of beams: Supports and Loads – Shear force and Bending Moment in beams – Cantilever, Simply supported and Overhanging beams – Relationship between load, shear force and bending moment – Stresses in beams – Theory of simple bending – Stress variation along the length and in the beam section.

UNIT III BEAMDEFLECTION 12

Elastic curve of Neutral axis of the beam under normal loads – Evaluation of beam deflection and slope: Macaulay Method – Columns – End conditions – Equivalent length of a column – Euler equation – Slenderness ratio – Rankine's formula forcolumns

UNITIV TORSION 12

Analysis of torsion of circular bars – Torsional Shear stress – Bars of solid and hollow circular section – Stepped shaft – Torsional rigidity – Compound shafts – Fixed and simply supported shafts – Application to close–coiled helical springs – Maximum shear stress in spring section including Wahl Factor – Deflection of helical coil springs under axial loads – Design of helical coil springs – stresses in helical coil springs under torsion loads

UNITV ANALYSIS OF STRESSES INTWODIMENSIONS 12

Biaxial state of stresses – Thin cylindrical and spherical shells – Deformation in thin cylindrical and spherical shells – Biaxial stresses at a point – Stresses on inclined plane – Principal planes and stresses.

16BEME402 MANUFACTURING TECHNOLOGY II 3 0 0 3 100

COURSE OBJECTIVES

1. To Explain the mechanics of metal cutting, cutting tool materials, tool wear and cutting fluids.
2. To understand the concept of constructional features of different types of lathe and their operations.
3. To provide knowledge on construction & working of shaping, milling &drilling machines and gear cutting & finishing process.
4. To expose students to various types of grinding machines and broaching machines.
5. To Explain the construction features of different types of CNC machine and manual part programming for a given component.
6. To Perform part programming for CNC machines.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Explain the mechanics of metal cutting, cutting tool materials, tool wear and cutting fluids.
2. Discuss about the constructional feature of different types of lathe and their operations.
3. Describe the construction & working of shaping, milling &drilling machines and gear cutting & finishing process.
4. Illustrate the various types of grinding machines and broaching machines.
5. Explain the construction feature of different types of CNC machine and manual part programming for a given component.
6. Perform part programming for CNC machines

UNIT I THEORY OF METAL CUTTING ANDCUTTING TOOLS 9

Introduction: material removal processes, types of machine tools – theory of metal cutting: chip formation, orthogonal cutting, oblique cutting – Cutting tool materials, tool wear, tool life, surface finish, cutting fluids, heat generation, Merchant circle.

UNITII CENTRE LATHE AND SEMI AUTOMATICLATHES 9

Centre lathe– constructional features, various operations, taper turning methods, thread cutting methods, special attachments, machining time and power estimation. Capstan and turret lathes – automats – single spindle, Swiss type, automatic screw type, multi spindle – Tool layout for Capstan, Turret and Automats.

UNIT III RECIPROCATING MACHINE TOOLS &MILLING MACHINES 9

Shaper – construction, working, work and tool holding device, quick return mechanism, planer – construction, working, mechanism, operations. Slotter – construction, working.
Milling machine – constructions, types, Indexing mechanism, operations, milling cutter, gear hobbing – principle.

UNITIV OTHER MACHINETOOLS 9

Drilling – types, radial drilling machine, construction, operations, Boring, types, Jig boring machine – construction, operations, Broaching – types, construction, Grinding – grinding wheel, specifications and selection, cylindrical grinding, surface grinding, centreless grinding – honing, lapping, super finishing, polishing and buffing.

UNITV CNC MACHINES 9

CNC Machines – Construction – Types of control systems, Manual Part Programming – Computer assisted part programming – Computer aided part programming, Machining centers – principle, Turning centers – principle, CAD/CAM & Integration, Application of CNC Machines.

16BEME403 **ENGINEERING THERMODYNAMICS** **3 2 0 4 100**

COURSE OBJECTIVES

1. To understand the Model of physical systems into relevant thermodynamic system and apply energy balance equation for closed and open system.
2. To provide knowledge on entropy change in thermodynamic processes.
3. To Study and acquire knowledge on various thermodynamic properties of pure substances in real time problems.
4. To establish the basic thermodynamic relations and properties of ideal and real gases for physical systems.
5. To facilitate the understanding of properties of air using psychometric chart.
6. To acquaint the student with the concepts and applications of the thermodynamics to the various real-life systems.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Model the physical systems into relevant thermodynamic system and apply energy balance equation for closed and open system.
2. Determine entropy change in thermodynamic processes.
3. Identify the various thermodynamic properties of pure substances in real time problems.
4. Establish the basic thermodynamic relations and properties of ideal and real gases for physical systems.
5. Calculate the properties of air using psychometric chart.
6. Explain the basic principles and applications of the thermodynamics to the various real life systems

UNIT I BASIC CONCEPTS ANDFIRSTLAW 12

Basic concepts - Classical and Statistical approaches - Thermodynamic systems - closed, open, isolated. Property – State - Process-adiabatic - Quasi-static process – Cycle - Point and Path function – Energy - Work transfer - Concept of temperature and heat- Zeroth law of thermodynamics - Concept of ideal gases - First law of thermodynamics –PMM1, internal energy, specific heat capacities, enthalpy, and its application to closed system and open system-steady flow energyequation.

UNITII SECOND LAWAND ENTROPY 12

Physical description of the second law - Kelvin-Planck and Clausius statements –Equivalence - Reversible processes and cycles- Carnot cycle – Corollaries - Absolute temperature scale – Clausius Theorem, inequality - Entropy- Principle, transfer, generation, balance - Third law of thermodynamics

UNIT III PROPERTIES OF PURE SUBSTANCE ANDGASMIXTURES 12

Puresubstance-Phasechangeprocess-Propertydiagrams-PVTsurface-Steam–types,drynessfraction-Avogadro's law - Ideal Gas - Equations of state-Vander Waal's equation - Real Gas - Compressibility and its chart - Mixtures ofGases – Properties.

UNITIV THERMODYNAMIC AVAILABILITYANDRELATIONS 12

Basics-Dead state, quality of energy, degradation of energy - Reversible processes – Maximum work - Exergy – Closed system - Steady flow system – Irreversibility - Exergy Balance - Second law efficiency – Exact differentials - Tds Relations - Maxwell's Relation – Clausius – Clapeyron Equation - Joule-Thompson Coefficient.

UNITV PSYCHROMETRY 12

Psychrometry - Psychrometric charts - Property calculations of air vapour mixtures- Psychrometric process-Adiabatic mixing - Evaporative cooling.

TOTAL 60

(Permitted to use standard thermodynamic table, Mollier diagram, and Psychometric chart in the examination)

16BEME404A INDUSTRIAL METALLURGY 3 0 0 3 100

COURSE OBJECTIVES

1. To impart knowledge on metallurgical aspects ofmetals.
2. To understand heat treatment processes on different grades ofsteel.
3. To familiarize on selection of ferrous and non-ferrous materials for variousapplications.
4. To impart knowledge on non-metallicmaterials
5. To learn about the strengthening mechanisms for Non-ferrousalloys.
6. To comprehend the significance of Non-Destructive Testing (NDT)methods

COURSEOUTCOMES

Learners should be ableto

1. Identify the metallurgical aspects ofmetals.
2. Identify suitable heat treatment processes for variousapplications.
3. Select appropriate ferrous and non-ferrous materials for variousapplications.
4. Identify and select suitable non-metallicmaterials.
5. Identify suitable strengthening mechanisms for Non-ferrousalloys.
6. Work with non-destructive testingmethods

UNITI CONSTITUTION OF ALLOYS ANDPHASEDIAGRAMS 9

Constitution of alloys – Solid solutions, substitutional and interstitial – phase diagrams, Isomorphous, eutectic, peritectic, eutectoid and peritectoid reactions, Iron – Iron carbide equilibrium diagram -Classification of steel and cast Iron, microstructure, properties and applications.

UNITII HEATTREATMENT 9

Definition – Full annealing, stress relief, recrystallisation and spheroidizing –normalising, hardening and tempering of steel. Isothermal transformation diagrams – cooling curves superimposed on TTT diagram,CCT - Hardenability, Jominy end quench test – Austempering, martempering – case hardening - carburising, nitriding, cyaniding, carbonitriding – Flame and Induction hardening, Microstructure study and specimen preparation.

UNITIII FERROUS AND NONFERROUS METALS 9

Effect of alloying elements on steel (Mn, Si, Cr, Mo, V, Ti& W) - stainless and tool steels – HSLA - maraging steels – Gray, White malleable, Spheroidal Graphite irons - Copper and Copper alloys – Brass, Bronze and Cupronickel – Aluminum and Al-Cu – precipitation, strengthening treatment – Bearing alloys.

UNITIV NON-METALLIC MATERIALS 9

Polymers – types of polymer, commodity and engineering polymers – Properties and Applications of thermoplastics (PP, PVC, ABS, and PMMA) and thermosetting plastics (PF, UF, MF) –Engineering Ceramics.

UNITV TESTING OF MECHANICAL PROPERTIESANDINSPECTION 9

Mechanism of plastic deformation, slip and twinning – Types of fracture – Testing of materials under tension, compression and shear loads – Hardness tests (Brinell, Vickers and Rockwell), Impact test - Izod and Charpy, Fatigue and creep test, S-N curve.

COURSE OBJECTIVES

1. To impart knowledge on metallurgical aspects ofmetals.
2. To understand heat treatment processes on different grades ofsteel.
3. To familiarize on selection of ferrous and non-ferrous materials for variousapplications.
4. To impart knowledge on non-metallicmaterials
5. To learn about the strengthening mechanisms for Non-ferrousalloys.
6. To comprehend the significance of Non Destructive Testing (NDT)methods.

COURSE OUTCOMES

Learners should be ableto

1. Identify the metallurgical aspects ofmetals.
2. Identify suitable heat treatment processes for variousapplications.
3. Select appropriate ferrous and non-ferrous materials for variousapplications.
4. Identify and select suitable non-metallicmaterials.
5. Identify suitable strengthening mechanisms for Non-ferrousalloys.
6. Work with non destructive testingmethods.

UNITI INTRODUCTION TO ENGINEERINGMATERIALS 9

Atomic bonding and Crystal structure of engineering materials. Chemical and Physical properties of engineering materials. Mechanical Properties and Behaviours of Materials – Stress - Strain Relationships, Tensile Strength, Hardness, Impact Strength, Fatigue & Stress Rupture, Creep & Stress Rupture, Comparison of Material Properties

UNITII FERROUS METALS ANDTHEIR PROPERTIES 9

Iron - Carbon Equilibrium Diagram, Carbon Steel & AISI Numerical Identification Systems. Properties, processing and applications of Alloy Steel, Tool Steel, Stainless Steel. General characteristics of metal alloys, Fundamentals of heat treatment and the use of TTT diagrams. Production, forming, and joining of metals.

UNITIII NONFERROUSMETALS 9

Properties, processing and applications of Aluminum, Magnesium & Titanium, Copper and its Alloys, Low Melting Temperature Alloys. Production, forming, and joining of metals. The Chemistry and prevention of corrosion

UNITIV CERAMICMATERIALS 9

Microstructural features of ceramics and glasses - Mechanical properties of ceramics and glasses - Production, forming, and joining of ceramics

UNITV POLYMERS ANDCOMPOSITES 9

Microstructural features of polymers and composites - Mechanical behaviour of polymers and composites - Production, forming, and joining of polymers and composites.

16BEME405A **KINEMATICS OF MACHINERY** **3 0 0 3 100**

COURSE OBJECTIVES

1. To understand the principles in analyzing the assembly with respect to the displacement, velocity, and acceleration at any point in a link of a mechanism and cam mechanisms for specified outputmotions.
2. To understand the basic concepts of toothed gearing and kinematics of gear trains and the effects of friction in motion transmission and in machinecomponents.
3. To understand the force-motion relationship in components subjected to external forces and analysis of standardmechanisms.
4. To understand the concept of inertia force and inertia torque.
5. To understand the undesirable effects of unbalances resulting from prescribed motions inmechanism.
6. To understand the effect of Dynamics of undesirablevibrations.

COURSE OUTCOMES

Upon completionof this course, the students can able to

1. Identify the type and mechanism and will be able to perform velocity and accelerationanalysis
2. Classify the types of friction and understand the friction applications used in screw threads, clutches, brakes.
3. Specify the gear terminology and to select appropriate gear trains for engineeringapplications.
4. Perform force analysis of reciprocating engine and balancing of rotating & reciprocatingmasses.
5. Describe the vibration phenomenon and its types along with the vibrationterminologies.
6. Analyze the systems subjected tovibration

UNITI BASICSOFMECHANISMS 9

Terminology and Definitions–Degree of Freedom – Mobility–Kutzbach criterion–Grashoff's law–Kinematic Inversions of four bar chain and slider crank –Mechanical Advantage–Transmission angle –-Single, double and offset slider mechanisms – Quick return mechanisms – Ratchets and escapements – Indexing Mechanisms – Straight line generators.

UNITII KINEMATICS 9

Displacement, velocity and acceleration – analysis in simple mechanisms – Graphical Method –velocity and acceleration polygons – Kinematic analysis by Complex Algebra methods–Vector Approach, Instantaneous center – Coriolis Acceleration.

UNITIII KINEMATICSOFCAM 9

Classifications – Displacement diagrams–parabolic, Simple harmonic and Cycloidal motions – Layout of plate cam profiles – Derivatives of Follower motion – High speed cams – circular arc and tangent cams – Standard cam motion – Pressure angle and undercutting.

UNITIV GEARS 9

Spur gear - Terminology and definitions–Fundamental Law of toothed gearing and involute gearing–Interchangeable gears–gear tooth action – Terminology – Interference and undercutting–Non standard gear teeth– Helical, Bevel, Worm, Rack and Pinion gears (Basics only)–Gear trains–Parallel axis gear trains–Epicyclic gear trains.

UNITV FRICTIONIN DRIVES 9

Surface contacts–Sliding and Rolling friction – Friction drives – Friction in screw threads – Friction clutches– Belt and rope drives, Friction aspects in Brakes.

IS 12328 : Part 2: 1988 Bevel Gear Systems Part – 2 Spiral Bevel Gears

16BEME405B **INDUSTRIAL ENGINEERING** **3 0 0 3 100**

COURSE OBJECTIVES

1. To Understand and apply the principles of science, technology, engineering, and math to solve industry–relatedproblems.
2. To Understand the concepts and terminologies inIndustries
3. To Study and acquire knowledge in creating an industrial designlayout
4. To introduce the methods involved in materialshandling
5. To understand the knowledge in analysis of work processing happening inindustries
6. To equip them with skills to perform work measurement in anindustry

COURSE OUTCOMES

Upon completion of this course, the student can able to

1. Understand the concepts and terminologies inIndustries
2. apply their knowledge in creating an industrial designlayout
3. understand the methods involved in materialshandling
4. apply their knowledge in analysis of work processing happening inindustries
5. perform work measurement in anindustry
6. understand the role of human involvement in industrial work systemdesign

UNITI INTRODUCTION TOINDUSTRIALENGINEERING 9

for layout study – types of layout. Plant location analysis – factors, costs, location decisions – simple problems in single facility location models, network location problems.

UNITII LAYOUTDESIGN 9

Design cycle – SLP procedure manpower, machinery requirements – computer algorithms – ALDEP, CORELAP, CRAFT

UNITIII QUANTITATIVE METHODS ANDMATERIALS HANDLING 9

Group technology – Production Flow analysis (PFA), ROC (Rank Order Clustering) – Line balancing. Principles, unit load concept, material handling system design, handling equipment types, selection and specification, containers and packaging, Material Handling—Automatic Storage and Retrieval System (ASRS)

UNITIV OPERATIONS ANALYSIS ANDWORKMEASUREMENT 9

Productivity and living standards, Productivity measurement, work design and Productivity – processplanning – types. Total time for a job or operation, total work content and ineffective time, methods and motions, graphic tools.

UNITV HUMAN FACTORS IN WORKSYSTEM DESIGN 9

Human factors Engineering/Ergonomics, human performance in physical work, anthropometry, design of work station, design of displays and controls.

16BEME406A ENGINEERING METROLOGY 3 0 0 3 100

COURSE OBJECTIVES

1. To provide knowledge on various Metrological equipments available to measure the dimension of the components.
2. To provide knowledge on the correct procedure to be adopted to measure the dimension of the components.
3. To enrich the understanding of principles of measuring instruments and gauges
4. To give exposure to inspection of spur gear and thread elements.
5. To equip them with skills to linear measurements using various measuringinstruments
6. To give exposure toprocedures involved in erectingmachineries

COURSE OUTCOMES

Upon completion of this course, the students will able to

1. Understand the basics of measurements and qualitystandards.
2. Perform linear measurements using various measuringinstruments
3. Perform the geometrical measurements of variouscomponents
4. Measure the various dimensions of a screwthread
5. Measure the dimensions of the simple spurgear.
6. Know the procedures involved in erectingmachineries

UNITI CONCEPTOFMEASUREMENT 9

General concept – Generalised measurement systems – units and standards–measuring instruments–sensitivity, readability, range of accuracy, precision–static and dynamic response–repeatability–systematic and random errors – correction, calibration, interchangeability – Basics of Measurement SystemAnalysis.

UNITII LINEAR ANDANGULARMEASUREMENT 9

Definition of metrology–Linear measuring instruments: Vernier, micrometer, interval measurement, Slip gauges and classification, limit gauges– Comparators: Mechanical, pneumatic and electrical types,applications – Angular measurements: –Sine bar, auto-collimeter, angle Decker.

UNITIII FORMMEASUREMENT 9

Measurement of screw threads – Thread gauges, floating carriage micrometer–measurement of gears–tooth thickness – constant chord and base tangent method – Eccentricity Measurements – radius measurements–surface finish, straightness, flatness and roundness measurements.

UNITIV LASER AND ADVANCESINMETROLOGY 9

Precision instruments based on laser–Principles– laser interferometer–application in linear, angular measurements and machine tool metrology - Coordinate measuring machine (CMM) – computer aided inspection - Nano metrology, techniques and applications.

UNITV MEASUREMENT OF POWER, FLOW ANDTEMPERATURERELATED PROPERTIES 9

Force, torque, strain:–mechanical and electrical type – Flow measurement: Venturi, orifice, rotometer, – Electrical pressure transducers, Temperature: Thermocouples, Resistance temperature detectors, bimetallic strip thermometers, thermister,pyrometry

16BEME406B INDUSTRIAL METROLOGY 3 0 0 3 100

COURSE OBJECTIVES

1. To provide knowledge on various Metrological equipments available to measure the dimension of the components.
2. To provide knowledge on the correct procedure to be adopted to measure the dimension of the components.
3. To enrich the understanding of principles of measuring instruments and gauges
4. To give exposure to inspection of spur gear and thread elements.
5. To equip them with skills to linear measurements using various measuringinstruments
6. To give exposure to procedures involved in erectingmachineries

COURSE OUTCOMES

Upon completion of this course, the students will able to

1. Understand the basics of measurements and qualitystandards.
2. Perform linear measurements using various measuringinstruments
3. Perform the geometrical measurements of variouscomponents
4. Measure the various dimensions of a screwthread
5. Measure the dimensions of the simple spurgear.
6. Know the procedures involved in erectingmachineries

UNITI BASICS OF MEASUREMENT, DEVICES ANDQUALITY STANDARDS 12

Definition of metrology, economics of measurement, measurement as a comparative process, dimensional properties, terminology and accuracy of measurement, measuring errors, Abbe’s Principle, Principle of interferometry- flatness testing, optical interferometer, laser interferometer. Holography and speckle metrology.

General cares and rules in measurement, International standardization, SI units and quantities, BIS- NPL – advantages, ISO 9000 quality standards, QS 9000 standards, Environment standards, metrology room measuring standards room.

UNITII LINEARMEASUREMENTS 8

Material length standards –line and end measurement – calibration of end bars, datum and reference surfaces, surface plates, gauges – feeler gauges, micrometers, dial test indicator, slip gauges, care of gauge blocks, Comparators- mechanical, electrical, optical and pneumatic, optical projector.

UNITIII GEOMETRICALMEASUREMENT 9

Angular measurement – plain vernier and optical protractors, sine bar, optical instruments, flatness, parallelism and roundness measurement, need for limit gauge, design of plug gague, Taylor’s principle, three basic types of limit gauges, surface texture, reasons for controlling surface texture, parameters used , specification of surface texture, drawing and symbols, Tomilson surface meter.CMM.

UNITIV METROLOGY OFMACHINEELEMENTS 8

Types of screw threads, terminology, proportions of ISO metric thread, measurement of major, minor and effective diameters. Gear terminology and standard proportions, spur gear measurement, checking of composite errors, base pitch measurement, clean roomenvironment.

UNITV MACHINE INSTALLATIONANDTESTING 8

Equipment erection, commissioning, testing procedure for lathe, milling, continuous process line. First aid, safety precautions in installation of equipment, protocol for repair and testing, inspection check list.

16BEME411 STRENGTH OF MATERIALS AND METALLURGYLABORATORY 0 0 3 2 100

COURSE OBJECTIVES

1. To perform different destructivetesting
2. To learn the characteristicmaterials.
3. To understand the stress and strain relationship.
4. To determine the shear force for various materials.
5. To determine the impact load for various materials.
6. To determine the hardness for various materials

COURSE OUTCOMES

1. Ability to perform different destructivetesting
2. Ability to characteristicmaterials
3. Understand the stress and strain relationship.
4. Determine the shear force for various materials.
5. Determine the impact load for various materials.
6. Determine the hardness for various materials

LIST OF EXPERIMENTS

1. Tensile test on metals–stress straincharacteristics
2. Cupping test on metal sheets–load deformation characteristics, cupping load, cuppingnumber.
3. Hardness test on metals–Brinell and Rockwell Hardnesstests.
4. Impact test on metals–Charpy, Izod impacttests.
5. Shear test on metals–direct shear strength, single shear, doubleshear.
6. Tests on helical springs–compression, tension springs–load deformation characteristics, stiffness, shear stress, modulus of rigidity,energy.
7. Torsion test on beams–torque and angle of twist characteristics, shear stress, modulus of rigidity,energy.
8. Microscopic examination of i) Hardened samples ii) Hardened and temperedsamples.
9. Tempering – Improvement of Mechanical properties –Comparison for i) Unhardenedspecimen ii) Quenched specimen iii) Quenched and tempered specimen.
10. Study of low carbon steel and medium carbonsteel.

TOTAL 45

16BEME412 MANUFACTURING TECHNOLOGY LABORATORY 0 0 4 2 100

COURSE OBJECTIVES

1. To facilitate the understanding of shaping operation in shaper.
2. To provide practical knowledge on Preparing a flat and contour surface using milling machine.
3. To provide practical knowledge on Preparing holes with higher finish by Drilling / Tapping / Reaming.
4. To facilitate the understanding of surface and cylindrical grinding operations for surface finish.
5. To introduce single and multi point cutting tools.
6. To impart knowledge on the operations in Capstan and Turret Lathe.

COURSE OUTCOMES

1. Perform shaping operation in shaper.
2. Prepare a flat and contour surface using milling machine.
3. Prepare holes with higher finish by Drilling / Tapping / Reaming.
4. Perform surface and cylindrical grinding operations for surface finish.
5. Prepare the single and multi point cutting tools.
6. Perform operations in Capstan and Turret Lathe.

LIST OF EXERCISES

1. Exercises inshaping.
2. Exercises inMilling.
3. Exercises inslotting.
4. Exercises in Drilling / Tapping /Reaming.
5. Exercises in Surface grinding and cylindrical grindingprocess.
6. Exercises in Tool grinding – single point and multi pointtools.
7. Exercises in Capstan and TurretLathe.

TOTAL 45

16BEME451 PRODUCTION DRAWING ANDCOSTESTIMATION 1 0 0 -100

COURSE OBJECTIVES

1. To gain knowledge in sequence of process planning and cost estimation of variousproducts.
2. To introduce the concepts of dimensional and toleranceanalysis
3. To expose students to manufacturingdrawings
4. To equip them with skills to apply their knowledge in re-dimensioning and tolerancecharting
5. To understand the process chart for a givencomponent
6. To Estimate the cost of a givencomponent

COURSE OUTCOMES

Upon completion of this course, the student can able to

1. Apply the various standards and conventions used in a drawingsheet
2. Perform dimensional and toleranceanalysis
3. Understand the manufacturingdrawings
4. Apply their knowledge in re-dimensioning and tolerancecharting
5. Prepare process chart for a givencomponent
6. Estimate the cost of a givencomponent

UNIT I **5**

Geometric Dimensioning and Representation - Tolerancing, Tolerancing of form, orientation, location and run-outs, Datums and Datum Systems.

UNIT II **5**

Surface texture indication on drawing. Welds - Symbolic representing ofdrawings. Preparation of process - Chart for a given component.

UNIT III **5**

Cost Estimation of setting time and machining time - estimation of material cost, labour cost and overhead cost based on supplied data.

TOTAL 15

SEMESTER V

16BEME501 **HEATPOWERENGINEERING** **3 0 0 3 100**

COURSE OBJECTIVES

1. To incorporate the concepts and laws in thermodynamic analysis of cyclicprocesses.
2. To impart the mechanisms of combustion offuels.
3. To apply the thermodynamic concepts in steam turbines andnozzles.
4. To learn about the performance ofcompressors.
5. To understand the concept of cogeneration and waste heat recovery in engineeringapplications.
6. To introduce concepts of refrigeration and air conditioning in engineeringapplications

COURSE OUTCOMES

Learners should be able to

1. Calculate the efficiency of various gas powercycles.
2. Calculate the performance characteristics ofengines.
3. Analyze combustion mechanism in ICengines.
4. Evaluate the characteristic of steam turbines andnozzles.
5. Evaluate the performance characteristics ofcompressors.
6. Identify and utilize the concepts of refrigeration and air conditioning in engineeringapplications

UNITI GAS POWER CYCLES ANDICENGINES 9

Otto, Diesel, Dual, Brayton cycles – Calculation of mean effective pressure and air standard efficiency – actual and theoretical PV and TS diagrams of two stroke and four stroke engines–valve timing diagram and port timing diagram – calculation of engine performance, heat balance sheet, retardation – Morse test.

UNITII BOILER AND STEAMPOWERCYCLES 9

Generation of steam, Boiler–Classification, fire tube boiler, water tube boiler, comparison, boiler mountings and accessories, performance of steam boilers – dryness fraction, properties of steam, T–S diagram, Mollier diagram, steam tables, Rankine Cycle – incomplete evaporation – superheated steam –modified cycle.

UNITIII STEAM NOZZLES ANDSTEAM TURBINES 9

Steam nozzles – flow through steam nozzles, effect of friction, critical pressure ratio, super saturated flow – Steam turbines– impulse and reaction turbine, compounding, velocity diagram, condition for maximum efficiency – multi stage turbines, cycles with reheating and regenerating heating – reheat factor, degree of reaction - governing of turbines.

UNITIV AIR COMPRESSORS 9

Classifications of compressors – Reciprocating air compressor – performance characteristics, effect of clearance volume, free air delivery and displacement, intercooler, after cooler – Rotary compressor – vane type, centrifugal and axial, flow performancecharacteristics.

UNITV REFRIGERATION ANDAIR CONDITIONING 9

Fundamentals of refrigeration – COP – Vapour compression refrigeration system – cycle, p–h chart, Vapour absorption system – comparison, properties of refrigerants. Fundamentals of air conditioning system, cycle, controls, air handling and distribution, simple cooling and heat load estimation

TOTAL 45

(Permitted to use standard thermodynamic table, Mollier diagram, Psychometric chart and Refrigeration property table in the examination)

16BEME502 DESIGN OF MACHINE ELEMENTS 3 2 0 4 100

COURSE OBJECTIVES

1. To understand the various types of stresses induced in different machine members.
2. To Study and acquire knowledge on design shaft and couplings for effective transmission of power.
3. To study the features of welded joints and fasteners required for various industrial applications.
4. To give exposure to design springs and flywheels for various engineering applications.
5. To understand the importance design bearings and levers for engineering applications.
6. To make the students conversant to implement design procedure for designing a machine.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Determine various types of stresses induced in different machine members.
2. Design shaft and couplings for effective transmission of power.
3. Select the type of welded joints and fasteners required for various industrial applications.
4. Design springs and flywheels for various engineering applications.
5. Design bearings and levers for engineering applications.
6. Implement design procedure for designing a machine

UNITI STEADY STRESSES AND VARIABLE STRESSESIN MACHINE MEMBERS 12

Introduction to the design process – factors influencing machine design, selection of materials based on mechanical properties – Factor of safety. Direct, Bending and torsional stress equations – Impact and shock loading – calculation of principle stresses for various load combinations, eccentric loading – Design of curved beams – crane hook and 'C' frame – theories of failure – stress concentration – design for variable loading – Soderberg, Goodman and Gerber relations.

UNITII DESIGN OF SHAFTS ANDCOUPLINGS 12

Design of solid and hollow shafts based on strength, rigidity and critical speed – Design of keys and keyways – Design of rigid and flexible couplings – Introduction to gear and shock absorbing couplings – design of knuckle joints.

UNITIII DESIGN OF FASTENERS ANDWELDEDJOINTS 12

Threaded fasteners – Design of bolted joints including eccentric loading – Design of welded joints for pressure vessels and structures – theory of bonded joints.

UNITIV DESIGN OF SPRINGS 12

Design of helical, leaf, disc and torsional springs under constant loads and varying loads – Concentric torsion springs – Belleville springs.

UNITV DESIGN OF BEARINGS 12

Selection of bearings – sliding contact and rolling contact types – Cubic mean load – Selection of journal bearings – McKees equation – Lubrication in journal bearings – calculation of bearing dimensions.

TOTAL 60

16BEME503A DYNAMICS OF MACHINERY 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the principles in analyzing the assembly with respect to the displacement, velocity, and acceleration at any point in a link of a mechanism and cam mechanisms for specified outputmotions.
2. To understand the basic concepts of toothed gearing and kinematics of gear trains and the effects of friction in motion transmission and in machinecomponents.
3. To understand the force-motion relationship in components subjected to external forces and analysis of standardmechanisms.
4. To understand the concept of inertia force and inertia torque.
5. To understand the undesirable effects of unbalances resulting from prescribed motions inmechanism.
6. To understand the effect of Dynamics of undesirablevibrations.

COURSE OUTCOMES

Upon completionof this course, the students can able to

1. Identify the type and mechanism and will be able to perform velocity and accelerationanalysis
2. Classify the types of friction and understand the friction applications used in screw threads, clutches, brakes.
3. Specify the gear terminology and to select appropriate gear trains for engineeringapplications.
4. Perform force analysis of reciprocating engine and balancing of rotating & reciprocatingmasses.
5. Describe the vibration phenomenon and its types along with the vibrationterminologies.
6. Analyze the systems subjected tovibration

UNITI FORCEANALYSIS 9

Rigid Body dynamics in general plane motion – Equations of motion – Dynamic force analysis – Inertia force and Inertia torque – D'Alemberts principle – The principle of superposition – Dynamic Analysis in Reciprocating Engines – Gas Forces – Equivalent masses – Bearing loads – Crank shaft Torque – Turning moment diagrams – Fly wheels.

UNITII BALANCING 9

Static and dynamic balancing – Balancing of rotating masses – Balancing a single cylinder Engine – Balancing Multi–cylinder Engines – Partial balancing in locomotive Engines.

UNITIII FREEVIBRATION 9

Basic features of vibratory systems – idealized models – Basic elements and lumping of parameters – Degrees of freedom – Single degree of freedom – Free vibration – Equations of motion – natural frequency – Damping Types of Damping – Damped vibration, critical speeds of simple shaft.

UNITIV FORCED VIBRATION ANDTORSIONALVIBRATION 9

Response to periodic forcing – Harmonic Forcing – Forcing caused by unbalance – Support motion – Force transmissibility and amplitude transmissibility – Vibration isolation.

UNITV MECHANISMSFOR CONTROL 9

Governors – Types – Centrifugal governors – Gravity controlled and spring controlled centrifugal governors – Characteristics – Effect of friction – Controlling Force – other Governor mechanisms.
Gyroscopes – Gyroscopic forces and Torques – Gyroscopic stabilization – Gyroscopic effects in Automobiles, ships and airplanes

16BEME503B **THEORY OF MACHINES** **3 0 0 3 100**

COURSE OBJECTIVE

1. To understand the principles in analyzing the assembly with respect to the displacement, velocity, and acceleration at any point in a link of a mechanism and cam mechanisms for specified outputmotions.
2. To understand the basic concepts of toothed gearing and kinematics of gear trains and the effects of friction in motion transmission and in machinecomponents.
3. To understand the force-motion relationship in components subjected to external forces and analysis of standardmechanisms.
4. To understand the concept of inertia force and inertia torque.
5. To understand the undesirable effects of unbalances resulting from prescribed motions inmechanism.
6. To understand the effect of Dynamics of undesirablevibrations.

COURSE OUTCOMES

Upon completionof this course, the students can able to
1. Identify the type and mechanism and will be able to perform velocity and accelerationanalysis
2. Classify the types of friction and understand the friction applications used in screw threads, clutches, brakes.
3. Specify the gear terminology and to select appropriate gear trains for engineeringapplications.
4. Perform force analysis of reciprocating engine and balancing of rotating & reciprocatingmasses.
5. Describe the vibration phenomenon and its types along with the vibrationterminologies.
6. Analyze the systems subjected tovibration

UNITI KINEMATIC ANALYSIS **9**
Introduction- General concepts, Introduction of Simple mechanism, Different types of Kinematics pair, Grublers rule for degree of freedom, Grashof's Criterion for mobility determination.
Kinematic Analysis- Concepts of vectorial analysis. Velocity and Acceleration Analysis of planar mechanisms

UNITII CAMS ANDGEARS **9**
Cams- Classifications – Displacement diagrams–parabolic, Simple harmonic and Cycloidal motions – Layout of cam profiles – Knife and Roller followers.
Gears- Geometry of tooth profiles, Law of gearing, Involute profile, interference, helical, spiral and worm gears, simple, compound gear trains. Epicyclic gear trains

UNITIII DYNAMICANALYSIS **9**
Dynamic Analysis of Slider-crank mechanisms, turning moment computations.
Balancing- Static and Dynamic balancing Balancing of revolving & reciprocating masses in single and multi-cylinder engines.

UNITIV VIBRATION **9**
Vibration analysis of SDOF systems, Natural, damped forced vibrations, Based-excited vibrations, transmissibility ratio.

UNITV MECHANISMSFOR CONTROL **9**
Governors – Types – Centrifugal governors – Gravity controlled and spring controlled centrifugal governors – Characteristics – Effect of friction – Controlling Force – other Governor mechanisms.
Gyroscopes – Gyroscopic forces and Torques – Gyroscopic stabilization – Gyroscopic effects in Automobiles, ships and airplanes

16BEME5E-- PROFESSIONAL ELECTIVEI 3 0 0 3 100

16BEME5E-- PROFESSIONAL ELECTIVEII 3 0 0 3 100

16BEME511 SCIENTIFICCOMPUTINGLABORATORY 2 0 2 3 100

COURSE OBJECTIVES

1. To introduce the scientific computing, covering some important aspects of solving algebraic equations, IVP,BVP.
2. To implement the methods using the spread sheet inExcel.
3. To make students familiar with the concepts of programming and the get them accustomed with high-level languages like Matlab, Mathematica, etc.
4. To provide an overview of some of the issues and problems that arise in scientific computation, such as (non-)linear systems, numerical and symbolic integration
5. To provide an overview of some of the issues and problems that arise in scientific computation, such as (non-)linear systems, numerical and differential equations and simulation.
6. To make students to get knowledge about real-time problem-solving skill.

COURSE OUTCOMES

1. Apply numerical methods to find our solution of algebraic equations using different methods.
2. Understand the different conditions, and numerical solution of system of algebraic equations.
3. Apply various interpolation methods and finite difference concepts.
4. Can apply numerical differentiation and integration whenever and wherever routine methods are not applicable.
5. Work numerically on the ordinary differential equations using different methods through the theory of finite differences.
6. Work numerically on the partial differential equations using different methods through the theory of finite differences.

LIST OF EXPERIMENTS

1. Finding solution of Transcendentalequation
   i) Newton – RaphsonMethod
   ii) Bisectionmethod
   iii) Iterative method by reducing the equation to the form x=f(x)

2. Finding the dominant eigenvalue and eigenvector by powermethod

3. Numericalintegration
   i) Gauss 2 point and 3 pointformulae
   ii) Trapezoidal method
   iii) Simpson’s 1/3rule

4. Solution of initial value problems governed byODE
   i) Runge - Kutta 4^{th} ordermethod
   ii) Modified Euler’smethod
   iii) Milne’smethod
   iv) Adam – Bashforthmethod

5. Solution of BVP governed byPDE
   i) LaplaceEquation
   ii) One – dimensional heat equation
      a) Explicit method : Bender – Schmidt’smethod
      b) Implicit method : Crank - Nicolson’smethod
   iii) One dimensional wave equation Implicitmethod

16BEME512 DYNAMICS AND METROLOGY LABORATORY 0 0 4 2 100

COURSE OBJECTIVE

1. To Understand the working of various governors.
2. To introduce jump speed and profile of the cam
3. To understand the importance of moment of inertia by oscillation method for connecting rod and flywheel.
4. To introduce the concepts to Characterize and calibrate measuring devices.
5. To expose students to measuring taper angle straightness, flatness, surface finfish and thread parameters.
6. To explain the limits of dimensional tolerances using comparators

COURSE OUTCOME

1. Understand the working of various governors.
2. Determine of jump speed and profile of the cam
3. Determine moment of inertia by oscillation method for connecting rod and flywheel.
4. Characterize and calibrate measuring devices.
5. Measure taper angle straightness, flatness, surface finfish and thread parameters
6. Examine the limits of dimensional tolerances using comparators

LIST OF EXPERIMENTS

DYNAMICS

1. Governors – Determination of sensitivity, effort, etc. for Watt, Porter, Proell, and springcontrolled Governors
2. Cam – Determination of jump speed and profile of thecam.
3. Motorized Gyroscope–Verification of laws –Determination of gyroscopiccouple.
4. Whirling of shaft–Determination of critical speed of shaft with concentratedloads.
5. Balancing of rotating and reciprocatingmasses.
6. Determination of moment of inertia by oscillation method for connecting rod andflywheel.
7. Vibrating system – spring mass system – Determination of damping co–efficient of single degree of freedomsystem
8. Determination of torsional frequencies for compound pendulumand flywheel system with lumped moment ofinertia.
9. Transverse vibration –free– Beam. Determination of natural frequency and deflection ofbeam.
10. Strain gauge measurementsystem.

METROLOGY

1. Calibration of Vernier / Micrometer / Dialgauge
2. Checking dimensions of part using slipgauges
3. Measurement of gear tooth dimensions – addendum, dedendum, pitch circle diameter and tooththickness
4. Measurement of taper angle using sine bar / tool makersmicroscope
5. Measurement of straightness andflatness
6. Measurement of threadparameters
7. Checking the limits of dimensional tolerances using comparators (Mechanical / Pneumatic /Electrical)
8. Surface finish measurement

TOTAL 45

16BEME513 THERMAL ENGINEERINGLABORATORYI 0 0 4 2 100

COURSE OBJECTIVES

1. To impart knowledge on valve timing diagram and port timing diagram for single cylinder four stroke diesel engine and two stroke petrol engine.
2. To understand the importance of mechanical efficiency of four stroke SI engine by Morse test.
3. To provide an overview of performance of four stroke single cylinder CI engine.
4. To provide an overview of performance of steam generator and steam turbines.
5. To expose students to the flash and fire point of various fuel
6. To expose students to the flash and fire point of various lubricants

COURSE OUTCOMES

1. Sketch the valve timing diagram for four stroke diesel engine andpetrol engines.
2. Sketch the port timing diagramfor single cylinder two stroke diesel engine andpetrol engines.
3. Calculate the mechanical efficiency of four stroke SI engine by Morse test.
4. Evaluate the performance of four stroke single cylinder CI engine.
5. Evaluate the performance of steam generator and steam turbines.
6. Measure the flash and fire point of various fuel/lubricants.

LIST OF EXPERIMENTS

1. Valve Timing and Port TimingDiagrams.
2. Performance Test on 4–stroke DieselEngine.
3. Heat Balance Test on 4–stroke DieselEngine.
4. Load test on 4–stroke DieselEngine.
5. Morse Test on multicylinder PetrolEngine.
6. Retardation Test to find Frictional Power of a DieselEngine.
7. Determination of Viscosity – Red WoodViscometer.
8. Determination of Flash Point and FirePoint.
9. Study of Steam Generators andTurbines.
10. Performance and energy balance test on a steamgenerator

TOTAL 45

16BEME551 IN–PLANTTRAINING --100

COURSE OBJECTIVES

1. To expose students to problem definitions
2. To understand the Fabricate device/system/component (s) for problem solving.
3. To equip them subject knowledge to solve real world problems.
4. To acquaint the student to newer techniques to improve the performance of a device/system.
5. To develop the skill to prepare the project reports
6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSE OUTCOMES

1. Formulate problem definitions
2. Fabricate device/system/component (s) for problem solving.
3. Apply subject knowledge to solve real world problems.
4. Implement newer techniques to improve the performance of a device/system.
5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

Students will undergo industrial training for four weeks during the vacation at the end of IV semester and a report with the training completion certificate from the industry will be subsequently submitted to the department with in a week after completion. Viva – Voce exam will be conducted at the end of V semester and 100 marks will be awarded.

16BEME552 GEOMETRICAL DIMENSIONINGANDTOLERANCE 1 0 0 -100

COURSE OBJECTIVES

1. To understand the concepts of geometrical dimensioning andTolerancing
2. To study the physical importance of them in industrial point ofview
3. To know the various types of Tolerancing, its measurement anddesign.
4. To translate geometric callouts into plain English with one meaning.
5. To explain the major rules found in ASME Y14.5-2009
6. To understand the hierarchy of geometric tolerancing.

COURSE OUTCOMES

1. Ability to learn and apply geometric dimensioning and tolerance standards to communicate designintent
2. Ability to Learn how the knowledge of certain processes can affect part design anddocumentation
3. Gain added insight on working in a team designenvironment.
4. Translate geometric callouts into plain English with one meaning.
5. Explain the major rules found in ASME Y14.5-2009
6. Understand the hierarchy of geometric tolerancing

UNITI INTRODUCTION TO GDANDT 5

Introduction to Geometric dimensioning and Tolerancing – working of geometric system – Terms and definitions – Common symbols and Terminology – Fundamental Rules (Drawing)– Feature definition – With Size and Without Size – Material Condition (Maximum, Least, Regard of Material Condition)– Limit Tolerancing – Dimension Origin –Limits of Size, Rule 1 or Envelope Principle – Go– No Go Gauges.

UNITII FORM ANDORIENTATIONTOLERANCE 5

and design considerations – Flatness and Circularity measurement concepts – Orientation tolerance specification and application design.

UNITIII POSITION ANDRUNOUTTOLERANCE 5

Profile of surface and line tolerance design and application – Location tolerance, Position, applied and material condition consideration – Coaxial controls and design – Concentricity, Symmetry – Measurement and application – Design considerations – Position, Composite tolerance concept, design and Measurement – Runout, Total Runout tolerances – Measurement and considerations.

SEMESTER VI

16BEME601 OPERATIONSRESEARCH 3 2 0 4 100

COURSE OBJECTIVE

1. To Formulate and solve engineering and managerial situations as LPP.
2. To understand the Engineering and Managerial situations in Transportation.
3. To Study and acquire knowledge on engineering and Managerial solutions in Assignment and scheduling problems.
4. To give exposure to inventory in industry.
5. To make the student acquire sound knowledge on sequences to perform operation among various alternatives.
6. To provide an overview of various tools in various sections of industries like marketing, material handling etc.

COURSE OUTCOMES

At the end of the course, student will be able to understand the

1. Formulate and solve engineering and managerial situations as LPP.
2. Solve Engineering and Managerial situations in Transportation.
3. Give Engineering and Managerial solutions in Assignment and scheduling problems.
4. Manage inventory in industry.
5. Select better sequence to perform operation among various alternatives.
6. Apply the various tools in various sections of industries like marketing, material handling etc

UNITI INTRODUCTION TOOPERATIONS RESEARCH 12

Operations research and decision–making – types of mathematical models and constructing the model – Role of computers in operations research –Linear Programming Techniques: Formulation of linear programming problem, applications and limitations, graphical method, simplex method – The Big –M method – the two–phase method.

UNITII TRANSPORTATIONPROBLEMS 12

Least cost method, North west corner rule, Vogel's approximation method, modified distributionmethod, optimization models, unbalance and degeneracy in transportation model.

UNITIII ASSIGNMENT MODELSANDSCHEDULING 12

Assignment models - Hungarian algorithm, unbalanced assignment problems - maximization case in assignment problems, traveling salesman problem. Scheduling – processing n jobs through two machines, processing n jobs through three machines, processing two jobs through 'm' machines, processing n jobs through m machines.

UNITIV INVENTORY CONTROL ANDQUEUINGTHEORY 12

Variables in inventory problems, inventory models with penalty, shortage and quantity discount, safety stock, multi item deterministic model.

Queuing Models: Queues – Notation of queues, performance measures, The M/M/1 queue, The M/M/m queue, batch arrival queuing system, queues with breakdowns.

UNITV PROJECT MANAGEMENT, GAME THEORY,REPLACEMENTMODELS 12

Basic terminologies, constructing a project network, network computations in CPM and PERT, cost crashing – Replacement Models: Replacement of Items due to deterioration with and without time value of Money, Group replacement policy, Staff replacement

16BEME602 DESIGN OF TRANSMISSION SYSTEMS 3 0 0 3 100

COURSE OBJECTIVES

1. To Study and acquire knowledge on design the power transmission components like belts, pulleys, ropes, chains and sprockets.
2. To Study and acquire knowledge on design spurs and parallel axis helical gears.
3. To give exposure to dimensions for bevel and worm gears.
4. To provide an overview of design procedures of gear boxes for industrial applications.
5. To provide an overview of clutches and brakes for engineering applications.
6. To make the student acquire sound knowledge of mechanical system

COURSE OUTCOMES

Upon completion of this course, the students will able to

1. Design the power transmission components like belts, pulleys, ropes, chains and sprockets.
2. Design spurs and parallel axis helical gears.
3. Estimate the dimensions for bevel and worm gears.
4. Practice the design procedures of gear boxes for industrial applications.
5. Design clutches and brakes for engineering applications.
6. Design a mechanical system

UNITI DESIGN OF TRANSMISSION SYSTEMS FORFLEXIBLEELEMENTS 9

Design of V belts and pulleys – Selection of Flat belts and pulleys – Wire ropes and pulleys – Selection of Transmission chains and Sprockets – Design of sprockets.

UNITII DESIGN OF SPUR ANDHELICALGEARS 9

Gear Terminology – Speed ratios and number of teeth–Force analysis – Tooth stresses – Dynamic effects – Fatigue strength – Factor of safety – Gear materials – Module and Face width–power rating calculations based on strength and wear considerations – Parallel axis Helical Gears – Pressure angle in the normal and transverse plane– Equivalent number of teeth–forces and stresses – Estimating the size of the helical gears.

UNITIII DESIGN OF BEVEL ANDWORMGEARS 9

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears. Worm Gear: Merits and demerits– terminology – Thermal capacity, materials–forces and stresses, efficiency, estimating the size of the worm gear pair – Cross helical: Terminology–helix angles–Estimating the size of the pair of cross helical gears.

UNITIV DESIGN OFGEARBOXES 9

Geometric progression – Standard step ratio – Ray diagram, kinematics layout –Design of sliding mesh gear box –Constant mesh gear box. – Design of multi speed gear box.

UNITV DESIGN OF CLUTCHESANDBRAKES 9

Design of plate clutches –axial clutches–cone clutches–internal expanding rim clutches–internal and external shoe brakes.

16BEME603 HEAT AND MASS TRANSFER 3 2 0 4 100

COURSE OBJECTIVES

1. To Study and acquire knowledge on heat transfer for conduction.
2. To introduce the concepts of heat transfer coefficients for natural and forced convection for different fluid flows.
3. To understand the performance of heat exchanger.
4. To study the features of radiation heat transfer between the surfaces.
5. To give exposure to mass transfer.
6. To make the students conversant to solve complex problems where heat and mass transfer takes place.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Determine the rate of heat transfer for conduction.
2. Evaluate heat transfer coefficients for natural and forced convection for different fluid flows.
3. Analyze performance of heat exchanger.
4. Estimate the radiation heat transfer between the surfaces.
5. Calculate the coefficient of mass transfer.
6. Solve complex problems where heat and mass transfer takes place

UNITI CONDUCTION 12

Basic Concepts – Mechanism of Heat Transfer – Conduction, Convection and Radiation – General Differential equation of Heat Conduction – Fourier Law of Conduction – Cartesian and Cylindrical Coordinates – One Dimensional Steady State Heat Conduction – Conduction through Plane Wall, Cylinders and Spherical systems – Composite Systems – Conduction with Internal Heat Generation – Extended Surfaces – Unsteady Heat Conduction – Lumped Analysis – Use of HeislersChart.

UNITII CONVECTION 12

Basic Concepts – Convective Heat Transfer Coefficients – Boundary Layer Concept – Types of Convection – Forced Convection – Dimensional Analysis – External Flow – Flow over Plates, Cylinders and Spheres – Internal Flow – Laminar and Turbulent Flow – Combined Laminar and Turbulent – Flow over Bank of tubes – Free Convection – Dimensional Analysis – Flow over Vertical Plate, Horizontal Plate, Inclined Plate, Cylinders andSpheres.

UNITIII PHASE CHANGE HEAT TRANSFER ANDHEATEXCHANGERS 12

Nusselts theory of condensation–pool boiling, flow boiling, correlations in boiling and condensation. Types of Heat Exchangers – LMTD Method of heat Exchanger Analysis – Effectiveness – NTU method of Heat Exchanger Analysis – Overall Heat Transfer Coefficient – Fouling Factors.

UNITIV RADIATION 12

Basic Concepts, Laws of Radiation – Stefan Boltzman Law, Kirchoff Law –Black Body Radiation –Grey body radiation - Shape Factor Algebra – Electrical Analogy – Radiation Shields –Introduction to Gas Radiation.

UNITV MASS TRANSFER 12

Basic Concepts – Diffusion Mass Transfer – Fick’s Law of Diffusion – Steady state Molecular Diffusion – Convective Mass Transfer – Momentum, Heat and Mass Transfer Analogy – Convective Mass Transfer Correlations

TOTAL 60

(Permitted to use standard Heat and Mass Transfer Table in the examination)

16BEME604 ECONOMICS FOR ENGINEERS 3 0 0 3 100

COURSE OBJECTIVES

1. To enable students to understand the fundamental economic concepts applicable to engineering
2. To learn the techniques of incorporating inflation factor in economic decision making.
3. To Understand the measures of national income, the functions of banks and concepts of globalization
4. To Apply the concepts of financial management for project appraisal
5. To Understand accounting systems and analyze financial statements using ratio analysis
6. To Understand Financial planning, economic basis for replacement.

COURSE OUTCOMES

1. Evaluate the economic theories, cost concepts and pricing policies.
2. Understand the market structures and integration concepts
3. Understand the measures of national income, the functions of banks and concepts of globalization
4. Apply the concepts of financial management for project appraisal
5. Understand accounting systems and analyze financial statements using ratio analysis
6. Understand the impact of inflation, taxation, depreciation. Financial planning, economic basis for replacement, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems

UNIT1 FUNDAMENTALS OF ENGINEERINGECONOMICS 9

Introduction to Engineering Economics – Definition, Scope and Significance – Demand and supply analysis – Definition – Law of Demand – Elasticity of Demand – Demand Forecasting – Supply – Law of supply – Elasticity of Supply.

UNITII COMMERCIALBANKING 9

Law of contracts, negotiable instruments, its types and regulations there on – New Industrial Policy – MSME sector – Development financial institutions and their relevance – Export Promotion - DICGC, ECGCI, EXIM Bank - Import and export concepts - Letter of credit, forward contracts / hedging.

UNITIII CAPITALMARKET 9

Stock Exchanges – Functions – Listing of Companies – Role of SEBI – Capital Market Reforms. Money and banking - Money – Functions –Inflation and deflation – Commercial Bank and its functions – Central bank and its functions.

UNITIV FINANCIALCONCEPTS 9

Introduction, scope and objectives of basic financial concepts – time value of money – Interest - simple & compound interest, annuity and effective rate of interests. Appraisal of project for profitability, internal rate of return – payback period – net present value. NPV comparison – cost benefit analysis. Sources of finance – internal and external.

UNITV COST ANALYSIS AND BREAKEVENANALYSIS 9

Cost analysis - Basic cost concepts – Financial accounting, account posting rules, Trial balance, Profit and loss account and Balance sheet aspects – Cost output in the short and long run. Depreciation -meaning – Causes – Methods of computing Depreciation (simple problems in Straight Line Method, Written Down Vale Method). Meaning – Break Even Analysis - Managerial uses ofBEA.

16BEME6E - - **PROFESSIONAL ELECTIVE III** **3 0 0 3 100**

16BEME6E -- **PROFESSIONALELECTIVEIV** **3 0 0 3 100**

16BEME611 **COMPUTER AIDED MODELINGANDSIMULATION LABORATORY** **0 0 3 2 100**

COURSE OBJECTIVE

1. To gain practical experience in handling 2D drafting and 3D modeling softwaresystems.
2. To impart training on SOLID WORKS for modelling
3. To provide knowledge on assembly ofcomponents
4. To facilitate the understanding of manufacturing drawings from the modelscreated
5. To understand the importance of MAT Lab for simulating different systems
6. To acquaint the student with the concepts of MAT lab for performing various mathematical operations

COURSE OUTCOME

Upon completion of this course, the students can able to

1. use computer and CAD software's for modeling of mechanicalcomponents
2. use various options in SolidWorks for modeling of givencomponents
3. create assembly ofcomponents
4. prepare manufacturing drawings from the modelscreated
5. Use MAT Lab for simulating different systems like hydraulic and pneumaticcircuits
6. Use mat lab for performing various mathematicaloperations

COMPUTER AIDED DESIGN

1. 3D modeling of various machine elements using various options like protrusion, cut,sweep, draft, loft, blend,rib.
2. Assembly – creating assembly from parts – assemblyconstraints
3. Conversion of 3D solid model to 2D drawing – different views, sections, isometric view and dimensioning.
4. Introduction to SurfaceModeling.
5. Introduction to File Import, Export – DXF, IGES, STL,STEP

Note: Any one of the 3D MODELING software's like SOLIDWORKS, CREO, CATIA, NX Software, AutoCADetc.

COMPUTER AIDED SIMULATION

1. Simulation of Air conditioning system with condenser temperature and evaporatortemperatures as input to get COP usingSoftware
2. Simulation of Hydraulic / Pneumatic cylinder usingSoftware
3. Simulation of cam and follower mechanism usingSoftware
4. MATLAB basics, Dealing with matrices, Graphing-Functions of one variable and twovariables
5. Use of MATLAB to solve simple problems invibration

TOTAL **45**

16BEME612 THERMAL ENGINEERING LABORATORY II 0 0 3 2 100

COURSE OBJECTIVE

1. To impart knowledge on thermal conductivity of various engineering materials.
2. To acquaint the student with the concepts of heat transfer rate in free and forced convection environment.
3. To Study and acquire knowledge of grey surface.
4. To study the features of Stefan–Boltzmann constant.
5. To provide an overview of the effectiveness of parallel and counter flow heat exchanger.
6. To provide an overview of COP of refrigeration and air conditioning system and performance of air compressor and fluidized bed cooling tower

COURSE OUTCOME

1. Conduct a test to find thermal conductivity of various engineering materials.
2. Measure heat transfer rate in free and forced convection environment.
3. Measure emissivity of grey surface.
4. Determine Stefan–Boltzmann constant.
5. Measure the effectiveness of parallel and counter flow heat exchanger.
6. Measure COP of refrigeration and air conditioning system and performance of air compressor and fluidized bed cooling tower

LIST OF EXPERIMENTS

HEAT TRANSFER

1. Heat transfer through a compositewall
2. Thermal conductivity measurement by guarded platemethod
3. Natural convection heat transfer from a verticalcylinder
4. Heat transfer from pin–fin (natural and forced convectionmodes)
5. Effectiveness of Parallel/counter flow heat exchanger
6. Determination of Stefan–Boltzmannconstant
7. Determination of emissivity of a greysurface

REFRIGERATION AND AIR CONDITIONING

1. Performance test on single/two stage reciprocating aircompressor.
2. Determination of COP of a refrigerationsystem
3. Experiments on air–conditioningsystem

TOTAL 45

16BEME651 MINI PROJECT 0 0 1 -100

COURSE OBJECTIVE

1. To expose students to problem definitions
2. To understand the Fabricate device/system/component (s) for problem solving.
3. To equip them subject knowledge to solve real world problems.
4. To acquaint the student to newer techniques to improve the performance of a device/system.
5. To develop the skill to prepare the project reports
6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSEOUTCOMES

1. Formulate problem definitions
2. Fabricate device/system/component (s) for problem solving.
3. Apply subject knowledge to solve real world problems.
4. Implement newer techniques to improve the performance of a device/system.

5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

The students may be grouped into 2 to 4 and work under a project supervisor. The device/ system/component(s) to be fabricated may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the fabricated model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

16BEME652 TECHNICALPRESENTATION 1 0 0 -100

COURSE OBJECTIVES

1. To equip the students with effective technicalpresentation
2. To understand the barriers and bridges tocommunication
3. To improve the public speaking capabilities, body language andposture.
4. To improve the literature survey skill.
5. To develop presentation skill using power point presentation
6. To improve skill to face viva voce examination.

COURSE OUTCOMES

1. Develop the ability to fabrication skill.
2. Ability to make literature review till the successful solution.
3. Ability to identify specific problems.
4. Gain the knowledge about data collection and conducting experiments.
5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination

During the seminar session each student is expected to prepare and present a topic on engineering/ technology, for duration of about 8 to 10 minutes. In a session of three periods per week, 15 students are expected to present the seminar. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models.

TOTAL 15

SEMESTER VII

16BECC701 PROFESSIONAL ETHICS, PRINCIPLESOFMANAGEMENT AND ENTREPRENEURSHIPDEVELOPMENT 3 0 0 3 100

COURSE OBJECTIVE

1. To understand objectives, Strategies, Policies and Plan.
2. To introduce pans by directing and controlling.
3. To Understand the need of Engineering Ethics.
4. To Understand the forces that shape culture.
5. To develop the entrepreneurial skills.
6. To make the students conversant to execute an engineering plan with ethics

COURSE OUTCOME

1. Prepare objectives, Strategies, Policies and Plan.
2. Execute plans by directing and controlling.
3. Understand the need of Engineering Ethics.
4. Understand the forces that shape culture.
5. Show the entrepreneurial skills.
6. Execute an engineering plan with ethics

UNITI HISTORICAL DEVELOPMENT,PLANNING, ORGANISING 9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informal organization – Organization Chart –.

UNITII DIRECTINGANDCONTROLLING 9

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNITIII ENGINEERINGETHICS 9

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of ProfessionalRoles – theories about right action – Self–interest – customs and religion – uses of ethical theories.

UNITIV FACTORSOFCHANGES 9

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNITV ENTREPRENEURSHIPANDMOTIVATION 9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need,Objectives.

16BEME702 **MECHATRONIC SYSTEMS** **3 0 0 3 100**

COURSE OBJECTIVE

1. To impart knowledge about the elements and techniques involved in Mechatronics systems which are very much essential to understand the emerging field ofautomation.
2. To understand the concepts of sensors andtransducers.
3. To provide an overview of actuationsystems.
4. To expose students to controller model for electrical, mechanical and thermalsystems.
5. To provide knowledge about various types ofcontrollers
6. To facilitate the understanding of PLC program using ladderlogic.

COURSE OUTCOME

Upon completion of this course, the students can able to
1. Implement the concepts of sensors andtransducers.
2. Design the actuationsystems.
3. Develop the controller model for electrical, mechanical and thermalsystems.
4. Explain about various types ofcontrollers
5. Create the PLC program using ladderlogic.
6. Design Mechatronicssystem.

UNITI MECHATRONICS SENSORSANDTRANSDUCERS 9

Introduction to Mechatronics – Systems – Measurement Systems – Control Systems –Traditional design – Microprocessor based Controllers. Introduction to sensors – Performance Terminology – Static and Dynamic characteristics – Displacement – Position and Proximity – Velocity and Motion – Fluid Pressure – Temperature Sensors – Light Sensors – Selection of Sensors – Signal processing – Servosystems.

UNITII ACTUATORS ANDSYSTEM MODELS 9

Pneumatic and Hydraulic Systems – Directional Control Valves – Rotary Actuators. Mechanical Actuation Systems – Cams – Gear Trains – Ratchet and pawl – Belt and Chain Drives – Bearings. Electrical Actuation Systems – Mechanical Switches – Solid State Switches – Solenoids – D.C Motors – A.C Motors – Stepper Motors.

Introduction to system models– Building block of Mechanical, Electrical, Fluid and Thermal Systems.

UNITIII MICROPROCESSORS INMECHATRONICS 9

Introduction – Architecture – pin configuration Instruction set – Programming of Microprocessors using 8085 instructions – Interfacing. Input and output devices – interfacing D/A converters and A/D converters – Application – Temperature control – Stepper motor control.

UNITIVCONTROLLERS 9

Introduction –Continuous and discrete process Controllers – Control Mode – Two – Step mode – Proportional Mode –Derivative Mode – Integral Mode – PID Controllers –Digital Controllers – Adaptive Control – Digital Logic Control – Micro Processors Control. Introduction to PLC – Basic Structure – Input / Output Processing – Programming – Mnemonics – Timers, Internal relays and counters – Data Handling – Analog Input / Output – Selection of aPLC.

UNIT V DESIGN OFMECHATRONICSYSTEMS 9

StagesindesigningMechatronicsSystems–TraditionalandMechatronicDesign–PossibleDesignSolutions
– Case Studies of Mechatronics Systems, Pick and place robot – automatic Car Park Systems – Engine Management Systems – Introduction to MEMS.

OPENELECTIVE I 3 0 0 3 100

OPENELECTIVE II 3 0 0 3 100

16BEME711 CAE /CAMLABORATORY 0 0 3 2 100

COURSE OBJECTIVE

1. To study the features of the software tools needed to analyze engineering problems.
2. To introduce the concepts of the different applications of simulation and analysis tools.
3. To familiarize the students to understand the features of CNC Machine Tool.
4. To make the student acquire sound knowledge on part programming for machining a work.
5. To make the students to perform operations in CNC lathe using Siemens
6. To make the students to perform operations in CNC Vertical Machining Centre using Fanuc

COURSE OUTCOME

1. Describe the software tools needed to analyze engineering problems.
2. Describe the different applications of simulation and analysis tools.
3. Understand the features of CNC Machine Tool.
4. Prepare part programming for machining a work.
5. Perform operations in CNC lathe using Siemens.
6. Perform operations in CNC Vertical Machining Centre using Fanuc

LIST OF EXPERIMENTS

COMPUTER AIDED ENGINEERING (Simple Analysis using ANSYS Tool)

1. Stress analysis of rectangular Lbracket
2. Stress analysis of beams (Cantilever, Simply supported, Fixedends)
3. Mode frequency analysis of beams (Cantilever, Simply supported, Fixedends)
4. Harmonic analysis of a 2Dcomponent
5. Thermal stress analysis of a 2Dcomponent
6. Modeling a 3D component. (Single point cutting tool, I beams,etc.,)

COMPUTER AIDED MANUFACTURING (CAM)

1. MANUAL PART PROGRAMMING (Using G and M Codes) in CNCMachine.
2. Part programming for Linear, Circular interpolation, and Contourmotions.
3. Part programming using standard canned cycles for Thread cutting, Drilling, Peck drilling, andBoring.
4. NC code generation using software’s like Edge CAM, CREO, etc. CNC Controllers likeFANUC, Siemens, and Hiedenhain etc.

TOTAL 45

16BEME712 MECHATRONICSLABORATORY 0 0 3 2 100

COURSE OBJECTIVE

1. To introduce the program for arithmetic functions and the program for sorting, code conversion functions.
2. To enrich the understanding of the program codes to interface with stepper motor.
3. To understand the importance of set speed with actual speed of DC motor by interfacing suitable speed sensors.
4. To introduce the concepts of all the hydraulic, pneumatic and electro pneumatic circuits by using simulation software.
5. To understand the concept of displacement, force and temperature measurement.
6. To understand the concept of Computerized data logging system

COURSE OUTCOME

1. Create the program for arithmetic functions and the program for sorting, code conversion functions.
2. Formulate the program codes to interface with stepper motor.
3. Compare the set speed with actual speed of DC motor by interfacing suitable speed sensors.
4. Integrate all the hydraulic, pneumatic and electro pneumatic circuits by using simulation software.
5. Perform the displacement, force and temperature measurement.
6. Perform the process like pressure and flow control using computerized data logging system

LIST OF EXPERIMENTS

1. Design and testing of fluid power circuits tocontrol
   (i) Velocity (ii) direction and (iii) force of single and double actingactuators
2. Design of circuits with logic sequence using Electro pneumatic trainerkits.
3. Simulation of basic Hydraulic, Pneumatic and Electric circuits usingsoftware
4. Circuits with multiple cylinder sequences in Electro pneumatic usingPLC.
5. Servo controller interfacing for open loop
6. PID controllerinterfacing
7. Stepper motor interfacing with 8051 Microcontroller
   (i) Full step resolution (ii) Half stepresolution
8. Modeling and analysis of basic electrical, hydraulic and pneumatic systems using LABVIEW
9. Computerized data logging system with control for process variables like pressure, flow andtemperature
10. Measurement of displace usingLVDT
11. Measurement of temperature usingThermocouples
12. Measurement of Force using StrainGage

TOTAL 45

16BEME791 PROJECT WORKPHASEI 0 0 8 4 100

COURSE OBJECTIVES

1. To expose students to problem definitions
2. To understand the Fabricate device/system/component (s) for problem solving.
3. To equip them subject knowledge to solve real world problems.
4. To acquaint the student to newer techniques to improve the performance of a device/system.
5. To develop the skill to prepare the project reports
6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSE OUTCOMES

1. Formulate problem definitions
2. Fabricate device/system/component (s) for problem solving.
3. Apply subject knowledge to solve real world problems.
4. Implement newer techniques to improve the performance of a device/system.
5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of theDepartment.

TOTAL 120

16BEME751A ROBOTICSANDAUTOMATION 1 0 0 -100

COURSE OBJECTIVES

1. To develop the student's knowledge in various robot structures and their workspace.
2. To develop student's skills in performing spatial transformations associated with rigid body motions.
3. To develop student's skills in perform kinematics analysis of robot systems.
4. To provide the student with knowledge of the singularity issues associated with the operation of robotic systems.
5. To provide the student with some knowledge and analysis skills associated with trajectory planning.
6. To provide the student with some knowledge and skills associated with robot control.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Understand the fundamentals of therobots
2. Describe the robot celldesign
3. Know the safety considerations in roboticapplications.
4. The student with knowledge of the singularity issues associated with the operation of robotic systems.
5. The student with some knowledge and analysis skills associated with trajectory planning.
6. The student with some knowledge and skills associated with robot control.

UNIT I FUNDAMENTALSOF ROBOT 5

Robot – Definition – Robot Anatomy – Co–ordinate Systems, Work Envelope, types and classification – Specifications – Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and Their Functions – Need for Robots – Different Applications. Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features. End Effectors – Grippers. Requirements of a sensor, Principles and Applications of sensors – Position of sensors, Proximity Sensors, Touch Sensors – Camera, Frame Grabber, Sensing and DigitizingImage.

UNITII ROBOTCELLDESIGN 5

Robotcelldesign–simulationsoftware(RoboWave).Robotcelllayouts–Multiplerobotsandmachineinterference– robot cell planning – robot cycle time analysis for assembly, welding and painting shop.

UNIT III SAFETY CONSIDERATIONS 5

Safety Considerations for Robot Operations, Economic Analysis of Robots – Pay back Method, EUAC Method, Rate of Return Method.

TOTAL 15

16BEME751B MOTORS ANDPUMPS 1 0 0 -100

COURSE OBJECTIVES

1. To understand the working principles ofpumps
2. To understand the working principles andmotors

UNIT I SINGLE PHASEINDUCTIONMOTOR 5

Constructional details of single phase induction motor – Principle of operation – Types – Losses and Efficiency – Performance analysis – Starting methods of single–phase induction motors. – Design aspects of motors for usage in submersible pumps– Motors Rating and selection criteria.

UNITII THREE PHASE INDUCTION MOTOR 5

Constructional details – Types of rotors – Principle of operation – Need for starters – Types of starters – DOL, Stator resistance and reactance, rotor resistance, autotransformer and star–delta starters – Speed control – Change of voltage, torque, number of poles and slip – Losses and Efficiency – Performance analysis – Design aspects of motors for usage in submersible pumps – Motors Rating and selection criteria.

UNIT III PUMPS 5

Pumps: definition and classifications – Sewage, fire fighting and Pressure boosting pumps
Classification, working principle, indicator diagram, work saved by air vessels and performance curves – cavitations in

pumps – rotary pumps: working principles of gear and vane pumps

SEMESTER VIII

16BEME801 TOTALQUALITYMANAGEMENT 3 0 0 3 100

COURSE OBJECTIVE

1. To introduce the concepts of essentiality of quality.
2. To understand the importance of various TQM principles.
3. To introduce the concepts of the various TQM principles.
4. To Understand the techniques for quality management.
5. To introduce the standard quality systems in industries.
6. To familiarize the students to understand the various techniques to improve the quality in industries.

COURSE OUTCOMES

At the end of the course the student would be able to

1. Understand the essentiality of quality.
2. Summarize various TQM principles.
3. Understand the various TQM principles.
4. Understand the techniques for quality management.
5. Implement standard quality systems in industries.
6. Apply various techniques to improve the quality in industries.

UNIT I ESSENTIALSOF TQM 9

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs – Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNITII TQMPRINCIPLES 9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT III TQMTOOLS 9

The new seven management tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma – APQP.

UNITIV TQMTECHNIQUES 9

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

UNITV QUALITY ANDENVIRONMENTSYSTEMS 9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2002 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 and ISO 18001 – Concept, Requirements and Benefits.

16BEME8E -- PROFESSIONALELECTIVEVI 3 0 0 3 100

16BEME891 PROJECT WORK - PHASE II&VIVA-VOCE 0 0 32 16 300

COURSE OBJECTIVE

1. To understand the concept and basics of thrust areas of Mechanical Engineering.
2. To explain the Review literature to identify gaps and define objectives & scope of the work.
3. To make the student appreciate the purpose of innovative ideas for social benefit.
4. To understand the importance of a prototypes/models, experimental set-up and software systems necessary to meet the objectives.
5. To familiarize the students to understand the methods and materials to carry out experiments/develop code.
6. To Reorganize the procedures with a concern for society, environment and ethics

COURSE OUTCOME

1. Identify thrust areas of Mechanical Engineering.
2. Review literature to identify gaps and define objectives & scope of the work.
3. Generate and implement innovative ideas for social benefit.
4. Develop a prototypes/models, experimental set-up and software systems necessary to meet the objectives.
5. Identify methods and materials to carry out experiments/develop code.
6. Reorganize the procedures with a concern for society, environment and ethics

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of theDepartment.

TOTAL 480

DEPARTMENT ELECTIVES

16BEME5E01 MATERIAL ASPECTSINDESIGN 3 0 0 3 100

COURSE OBJECTIVES

1. To select Material Properties have to suit the purpose of an application.
2. To designing a machine or component, many factors have to be considered and optimised.
3. To covers most issues for mechanical designoptimisation.
4. To know about the selective assembly process
5. To know about the fracture mechanism.
6. To know about spring design.

COURSE OUTCOMES

1. Sudents able to select material properties have to suit the purpose of an application.
2. create designing a machine or component, many factors have to be considered and optimised.
3. Solve most issues for mechanical designoptimisation.
4. selective assembly process
5. Finding of fracture mechanism of given material
6. Create spring design for Absorption system.

UNITI MATERIAL SELECTIONIN DESIGN 9

Introduction – relation of materials selection to design – general criteria for selection – performance characteristics of materials – materials selection process – design process and materials selection – economics of materials – recycling and materials selection

UNITII MATERIALS PROCESSINGANDDESIGN 9

Role of Processing in Designing – classification of manufacturing processes – types of processing systems – factors determining process selection. Design for manufacturability, assembly, machining, casting, forging and welding

UNITIII MANUFACTURING CONSIDERATIONSINDESIGN 9

Surface finish – texture – dimensional tolerances in fitting – interchangeability – selective assembly – geometric tolerance. Selection of fits and tolerances

UNITIV MATERIALS PROPERTIESANDDESIGN 9

Stress – Strain diagram – design for strength, rigidity – design under static loading, variable loading, eccentric loading – stress concentration. Design examples with shaft design, spring design and C frames.

UNITV MATERIALS INDESIGN 9

Design for brittle fracture, fatigue failure, corrosion resistance. Designing with plastics, brittle materials

2	Bhandari	Design of Machine Elements	Tata McGraw Hill	2010

16BEME5E02 COMPUTER INTEGRATED MANUFACTURING 3 0 0 3 100

COURSE OBJECTIVE

1. To understand the application of computers in various aspects of Manufacturing viz., Design, proper planning, Manufacturing cost, Layout & Material Handlingsystem.
2. To know the application of principles of group technology in computer aided processplanning.
3. To impart knowledge on working of the shop floorcontrol
4. To Study and acquire knowledge on data collection system in FMS.
5. To familiarize the students to understand CIM architecture for practicalapplication.
6. To expose students to generate database for computer integrated manufacturingprocesses.

COURSE OUTCOME

Upon completion of this course, the student can able to
1. Implement computer integrated manufacturing concepts inindustries.
2. Apply the principles of group technology in computer aided processplanning.
3. Understand the working of the shop floorcontrol
4. Implement automated data collection system in FMS.
5. Develop CIM architecture for practicalapplication.
6. Generate database for computer integrated manufacturingprocesses

UNITI INTRODUCTION 9
The meaning and origin of CIM– the changing manufacturing and management scene – External communication – islands of automation and software–dedicated and open systems–manufacturing automation protocol – product related activities of a company– marketing engineering – production planning – plant operations – physical distribution– business and financial management.

UNITII GROUPTECHNOLOGY 9
Group technology– – part families – Classification and coding – Approaches to computer aided process planning –variant approach and generative approaches

UNITIII SHOP FLOOR CONTROL AND INTRODUCTIONOFFMS 9
Shop floor control–phases –factory data collection system –automatic identification methods– Bar code technology–automated data collection system. FMS–components of FMS – types –FMS workstation –material handling and storage systems– FMS layout –computer control systems–application and benefits.

UNITIV CIM IMPLEMENTATION ANDDATACOMMUNICATION 9
CIM and company strategy – system modeling tools –IDEF models – activity cycle diagram – CIM open system architecture (CIMOSA)– manufacturing enterprise wheel–CIM architecture – Product data management–CIM implementation software. Communication fundamentals– local area networks –topology – LAN implementations – network management and installations –MRP, ERP concepts

UNITV OPEN SYSTEM AND DATABASEFOR CIM 9
Open systems–open system inter connection – manufacturing automations protocol and technical office protocol (MAP /TOP).
Development of databases –database terminology– architecture of database systems–data modeling and data associations –relational data bases – database operators – advantages of data base and relational database.

16BEME5E03 **AUTOMOBILE ENGINEERING** **3 0 0 3 100**

COURSE OBJECTIVES

1. To make the student acquire sound knowledge on the types of vehicle structures, cooling and lubrication systems required.
2. To acquaint the student with the concepts of type of engines to be used for modern automobiles.
3. To familiarize the students to Distinguish between the manual transmissions systems with automatic transmission systems.
4. To provide knowledge on appropriate transmission systems for the optimal power transmission.
5. To provide knowledge on steering, brakes and suspension systems for effective functioning.
6. To acquaint the student with advanced technologies in automotive Engineering.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Identify the types of vehicle structures, cooling and lubrication systems required.
2. Determine the type of engines to be used for modern automobiles.
3. Distinguish between the manual transmissions systems with automatic transmission systems.
4. Select appropriate transmission systems for the optimal power transmission.
5. Select steering, brakes and suspension systems for effective functioning.
6. Implement the advanced technologies in automotive

UNITI AUTOMOBILE ARCHITECTUREANDPERFORMANCE 9

Automotive components, subsystems and their positions – Chassis, frame and body, front, rear and four wheel drives – Operation and performance – Traction force and traction resistance, Power required for automobile– Rolling, air and gradient resistance.

UNITII TYPES OFENGINES 9

Types of engines – multi valve engine – in–line engine, vee–engine, Petrol engine–direct – single point and multipoint injection, diesel engine–common rail diesel injection, supercharging and turbo charging.

UNITIII TRANSMISSIONSYSTEMS 9

Clutch : Types – coil spring and diaphragm type clutch, single and multi plate clutch, centrifugal clutch, Gear box : Types – constant mesh, sliding mesh and synchromesh gear box, layout of gear box, gear selector and shifting mechanism, overdrive, automatic transmission, Propeller shaft, universal joint, slip joint, differential and real axle arrangement, hydraulic coupling.

UNITIV WHEEL AND TYRES ANDSUSPENSIONSYSTEM 9

Types of wheels, construction, wired wheels, Tyres– construction, Radial, bias and belted bias, slip angle, Tread patterns, Tyre retreading - cold and hot, Tubeless tyres, Types–front and rear suspension, conventional and independent type suspension, leaf springs, coil springs, dampers, torsion bars, stabilizer bars, arms, air suspension systems – Balancing of Wheels.

UNITV STEERING SYSTEM ANDBRAKINGSYSTEM 9

Types of steering systems, Ackermann principle, Davis steering gear, steering gear boxes, steering linkages, power steering, wheel geometry–caster, camber, toe–in, toe out etc., wheel Alignment. Braking System – Forces on vehicles, tyre grip, load transfer, braking distribution between axles, stopping distance, Types of brakes, Mechanical, Hydraulic, Air brakes, Disc and Drum brakes, Engine brakes.

16BEME5E04 HYDRAULICS AND PNEUMATICS POWER CONTROL 3 0 0 3 100

COURSE OBJECTIVES

1. To recognize symbols and fundamentals in fluid power generation anddistribution.
2. To identify power source for hydraulicsystems.
3. To select appropriate components used in various hydraulicsystems.
4. To design hydraulic circuits for givenapplications
5. To distinguish the components used in pneumaticcircuits.
6. To create the logic circuits for controlling electro-hydraulic/ pneumaticsystems.

COURSE OUTCOMES

At the end of the course, the students will be able to

1. Recognize symbols and fundamentals in fluid power generation anddistribution.
2. Identify power source for hydraulicsystems.
3. Select appropriate components used in various hydraulicsystems.
4. Design hydraulic circuits for givenapplications
5. Distinguish the components used in pneumaticcircuits.
6. Create the logic circuits for controlling electro-hydraulic/ pneumaticsystems.

UNITI FLUID POWER SYSTEMSANDFUNDAMENTALS 9

Introduction to fluid power, Advantages of fluid power, Application of fluid power system. Types of fluid power systems, Properties of hydraulic fluids – General types of fluids – Fluid power symbols. Basics of Hydraulics–Applications of Pascals Law– Laminar and Turbulent flow – Reynold's number – Darcy's equation – Losses in pipe, valves andfittings.

UNITII HYDRAULIC SYSTEMANDCOMPONENTS 9

Sources of Hydraulic Power: Pumping theory – Pump classification – Gear pump, Vane Pump, piston pump, Pressure boosting pumps, construction and working of pumps – pump performance – Variable displacement pumps. Fluid Power Actuators: Linear hydraulic actuators – Types of hydraulic cylinders – Single acting, Double acting special cylinders like tanden, Rodless, Telescopic, Cushioning mechanism, Construction of double acting cylinder, Rotary actuators.

UNITIII DESIGN OFHYDRAULICCIRCUITS 9

Construction of Control Components : Direction control valve – 3/2 way valve – 4/2 way valve – Shuttlevalve – check valve – pressure control valve – pressure reducing valve, sequence valve, Flow control valve – Fixed and adjustable, electrical control solenoid valves, Relays, ladder diagram. Accumulators and Intensifiers: Types of accumulators – Accumulators circuits, sizing of accumulators, intensifier – Applications ofIntensifier – Intensifiercircuit.

UNITIV PNEUMATIC SYSTEMSANDCOMPONENTS 9

Pneumatic Components: Properties of air – Compressors – Filter, Regulator and Lubricator UNIT Air control valves, Quick exhaust valves, pneumatic actuators. Fluid Power Circuit Design, Speed control circuits, synchronizing circuit, Penumo hydraulic circuit, Sequential circuit design for simple applications using cascade method.

UNITV DESIGN OFPNEUMATICCIRCUITS 9

Servo systems – Hydro Mechanical servo systems, Electro hydraulic servo systems and proportional valves. Fluidics – Introduction to fluidic devices, simple circuits, Introduction to Electro Hydraulic Pneumatic logic circuits, ladder diagrams, PLC applications in fluid power control.

16BEME5E05 DESIGN OF JIGS, FIXTURES AND PRESS TOOLS 3 0 0 3 100

COURSE OBJECTIVES

1. To impart knowledge on the principles of locating and clamping devices in machining process.
2. To familiarize the students to understand design of jigs for a given component.
3. To Study and acquire knowledge on design fixtures for a given component.
4. To make the student acquire sound knowledge on appropriate type of press tool for a given component.
5. To expose students to drawing die for a given component.
6. To give exposure to the use computer aids for sheet metal forming analysis

COURSE OUTCOMES

Upon the completion of this course the students will be able to

1. Summarize the principles of locating and clamping devices in machining process.
2. Design jigs for a given component.
3. Design fixtures for a given component.
4. Design an appropriate type of press tool for a given component.
5. Develop a drawing die for a given component.
6. Use computer aids for sheet metal forming analysis

UNITI PURPOSE TYPES AND FUNCTIONS OF JIGSAND FIXTURES 9

Tool design objective – Production devices – Inspection devices – Materials used in Jigs and Fixtures – Types of Jigs – Types of Fixtures–Mechanical actuation–pneumatic and hydraulic actuation.

UNITII JIGS 9

Drill bushes –different types of jigs–plate latch, channel, box, post, angle plate, angular post, turnover, pot jigs–Automatic drill jigs–Rack and pinion operated. Air operated Jigs components. Design and development of Jigs for given components.

UNITIII FIXTURES 9

General principles of boring, lathe, milling and broaching fixtures– Grinding, planning and shaping fixtures, assembly, Inspection and welding fixtures– Modular fixtures, Quick change fixtures.

UNITIV PRESS WORKING TERMINOLOGIES AND ELEMENTS OFDIESAND STRIP LAY OUT 9

Press working terminology–Presses and press accessories–Computation of capacities and tonnage requirements. Elements of progressive combination and compound dies:Die block–die shoe. Bolster plate–punch plate–punch holder–guide pins and bushes – strippers – knockouts–stops –pilots–Selection of standard die sets strip lay out–strip lay out calculations, SMEDtechnique.

UNIT V DESIGN AND DEVELOPMENTOFDIES 9

Design and development of progressive and compound dies for Blanking and piercing operations. Tool and DIE Materials, Bending dies – development of bending dies–forming and drawing dies.

16BEME5E06 RENEWABLE ENERGY SOURCES 3 0 0 3 100

COURSE OBJECTIVES

1. To explain importance of renewable energy resources.
2. To understand the importance of basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
3. To understand the importance of principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas and hydrogen.
4. To study the features ofdesign principles of biogas plants.
5. Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
6. To give exposure to power plants working with non-conventional energy

COURSE OUTCOMES

1. Understand the importance of renewable energy resources.
2. Understand the basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
3. Understand principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas and hydrogen.
4. Implement design principles of biogas plants.
5. Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
6. Get exposure on the power plants working with non-conventional energy

UNITI ENERGYANDENVIRONMENT 9

Primary energy sources – world energy resources–Indian energy scenario–energy cycle of the earth – environmental aspects of energy utilisation, CO_2 emissions and Global warming–renewable energy resources and their importance. Potential impacts of harnessing the different renewable energy resources.

UNITII SOLARENERGY 9

Principles of solar energy collection – solar radiation – measurements – instruments – data and estimation– types of collectors – characteristics and design principles of different type of collectors – performance of collectors – testing of collectors.

UNITIII WIND, TIDAL AND GEOTHERMALENERGY 9

Energy from the wind – general theory of windmills – types of windmills – design aspects of horizontal axis windmills – applications. Energy from tides and waves – working principles of tidal plants and ocean thermal energy conversion plants – power from geothermal energy – principle of working of geothermal power plants.

UNITIV BIOENERGY 9

Energy from bio mass and bio gas plants –various types – design principles of biogas plants – applications. Energy from wastes – waste burning power plants – utilization of industrial and municipal wastes – energy from the agricultural wastes.

UNITV OTHER RENEWABLEENERGYSOURCES 9

Direct energy conversion (Description, principle of working and basic design aspects only) – Magneto hydrodynamic systems (MHD) – thermoelectric generators – thermionic generators – fuel cells – solar cells – types, Emf generated, power output, losses and efficiency and applications.

16BEME5E07 INDUSTRIAL ROBOTICS 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the anatomy, basic concepts and applications ofrobot.
2. To learn the drives and end effectors used inrobot.
3. To study the various types of sensors used inrobot.
4. To familiarize robot kinematics and robotprogramming
5. To provide knowledge on simple offline robot program
6. To impart knowledge on economic analysis ofrobots

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Identify the various types ofrobots.
2. Select appropriate drive systems and end effectors for industrialapplication.
3. Decide the types of sensors required according to the applications ofrobot.
4. To identify the different types of machine visiontechnologies
5. Develop simple offline robot program for differentapplications.
6. Calculate the economic analysis ofrobots

UNITI FUNDAMENTALS OFROBOT 9

Robot – Definition – Robot Anatomy – Co–ordinate Systems, Work Envelope, types and classification – Specifications – Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and Their Functions – Need for Robots – Different Applications

UNITII ROBOT DRIVE SYSTEMS ANDENDEFFECTORS 9

Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features, Applications and Comparison of all these Drives

End Effectors – Grippers – Mechanical Grippers, Pneumatic and Hydraulic Grippers, Magnetic Grippers.

UNITIII SENSORS ANDMACHINEVISION 9

Requirements of a sensor, Principles and Applications of the following types of sensors – Position sensors (Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, Pneumatic Position Sensors), Range Sensors (Triangulation Principle, Structured, Lighting Approach, Time of Flight Range Finders, Laser Range Meters), Proximity Sensors (Inductive, Hall Effect, Capacitive, Ultrasonic and Optical Proximity Sensors), Touch Sensors, (Binary Sensors, Analog Sensors), Wrist Sensors, Compliance Sensors, Slip Sensors

Camera, Frame Grabber, Sensing and Digitizing Image Data – Signal Conversion, Image Storage, Lighting Techniques. Image Processing and Analysis – Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms.

UNITIV ROBOT KINEMATICS ANDROBOTPROGRAMMING 9

Forward Kinematics, Inverse Kinematics and Differences; Forward Kinematics and Reverse Kinematics of Manipulators with Two, Three Degrees of Freedom (In 2 Dimensional), Four Degrees of Freedom (In 3 Dimensional) – Deviations and Problems.

UNITV IMPLEMENTATION AND ROBOTECONOMICS 9

RGV, AGV; Implementation of Robots in Industries – Various Steps; Safety Considerations for Robot Operations; Economic Analysis of Robots – Pay back Method, EUAC Method, Rate of Return Method, Process application of Robots and Collaborativerobots.

16BEME5E08 DESIGN AND ANALYSIS OF EXPERIMENTS 3 0 0 3 100

COURSE OBJECTIVE

1. To provide foundations on design of experiments and statistical analysis of experimental data obtained from laboratory and/or industrialprocesses.
2. To understand the important concepts of single factorial designs
3. To Study and acquire knowledge on various methodologies involved in single factorial designs
4. To know the application of testing of factorial experiment
5. To enrich the understanding of special experimental designs
6. To impart knowledge on basic concepts of Taguchi method in parameter design

COURSE OUTCOMES

Upon successful completion of the course, students will be able to:

1. Understand the knowledge of various techniques for experimentalplanning
2. Understand the concepts of single factorialdesigns
3. List the various methodologies involved in single factorialdesigns
4. Apply the concept of testing of factorialexperiment
5. Solve the partial and ordinary differential equations special experimentaldesigns
6. Apply the basic concepts of Taguchi method in parameterdesign

UNITI INTRODUCTION 9

Planning of experiments – Steps – Need - Terminology: Factors, levels, variables, experimental error, replication, Randomization, Blocking, Confounding.

UNITII SINGLEFACTOREXPERIMENTS 9

ANOVA rationale - Sum of squares – Completely randomized design, Randomized block design, effect of coding, Comparison of treatment means – Newman Kuel‘s test, Duncan‘s Multiple Range test, Latin Square Design, Graeco-Latin Square Design, Balanced incomplete design.

UNITIII FACTORIALEXPERIMENTS 9

Main and interaction effects –Two and three Factor full factorial Designs, 2 k deigns with Two and Three factors-Unreplicated design- Yate‘s Algorithm

UNITIV SPECIALEXPERIMENTALDESIGNS 9

Blocking in factorial design, Confounding of 2k design, nested design-Response Surface Methods.

UNITV TAGUCHI TECHNIQUES 9

Fundamentals of Taguchi methods, Quality Loss function, orthogonal designs, application to Process and Parameter design.

16BEME6E01 POWER PLANT ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES

1. To give exposure to accessories and layout required for a steam power plant depending upon the requirements.
2. To study performance of steam power plant.
3. To make the student acquire sound knowledge of working of nuclear and hydel power plant.
4. To study the features of gas turbine power plant.
5. To make the student acquire sound knowledge of economics of the power plant.
6. To make the student acquire sound knowledge on renewable energy technologies and availability.

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Select the accessories and layout required for a steam power plant depending upon the requirements.
2. Compute performance of steam power plant.
3. Explain the working of nuclear and hydel power plant.
4. Compute performance of gas turbine power plant.
5. Calculate the economics of the power plant.
6. Apply appropriate type of renewable energy technologies depending upon the application and availability.

UNITI INTRODUCTION TO POWER PLANTSANDBOILERS 9

LayoutofSteam,Hydel,Diesel,MHD,NuclearandGasTurbinePowerPlants–CombinedPowerCycles–Comparison and Selection, Load Duration Curves.

Steam Boilers and Cycles – High Pressure and Super Critical Boilers – Fluidised Bed Boilers – Industrial Standards.

UNITII STEAM POWERPLANT 9

Fuel and Ash Handling, Combustion Equipment for burning coal, Mechanical Stokers, Pulveriser, Electrostatic Precipitator, Draught – different types, Surface Condenser Types, Cooling Towers

UNITIII NUCLEAR AND HYDELPOWERPLANTS 9

Nuclear Energy – Fission, Fusion Reaction, Types of Reactors, pressurized water reactor, Boiling Water Reactor, Waste Disposal and safety.

Hydel Power Plant – Essential Elements, Selection of Turbines, Governing of Turbines– Micro Hydel developments.

UNITIV DIESEL AND GAS TURBINEPOWERPLANT 9

Types of Diesel Plants, Components, Selection of Engine Type, Applications Gas Turbine Power Plant –Fuels – Gas Turbine Material – Open and Closed Cycles – Reheating – Regeneration and Intercooling – Combined Cycle.

UNITV OTHER POWER PLANTS AND ECONOMICS OFPOWERPLANTS 9

Geo thermal –OTEC – Tidel – Pumped storage – Solar thermal central receiver system.

Safety aspects and Cost of Electric Energy – Fixed and operating Costs – Energy Rates – Types of Tariffs – Economics of load sharing, comparison of economics of various power plants.

16BEME6E02 ADVANCED MANUFACTURING PROCESSES 3 0 0 3 100

COURSE OBJECTIVE

1. To provide knowledge on different aspects of powder metallurgy parameters.
2. To understand the importance of principle of advanced welding processes and its application.
3. To understand the importance of advanced forming processes and its application.
4. To familiarize the students to advanced manufacturing process for processing of different materials.
5. To acquaint the student to apply the suitable rapid prototyping mechanism for industry need.
6. To provide knowledge on optimum parametric for advanced manufacturing process.

COURSE OUTCOME

Upon the completion of this course, the students will be able to

1. Understand different aspects of powder metallurgy parameters.
2. Understand basic principle of advanced welding processes and its application.
3. Understand basic principle of advanced forming processes and its application.
4. Select the best suitable advanced manufacturing process for processing of different materials.
5. Apply the suitable rapid prototyping mechanism for industry need.
6. Select the optimum parametric for advanced manufacturing process

UNITI POWDERMETALLURGYPROCESS 9

Introduction to powder metallurgy process – preparation of powders – types and functions of binders – green compaction – sintering process and its effect on the product.

UNITII ADVANCEDWELDINGPROCESSES 9

Percussion Welding– Electro Slag Welding, Plasma Arc Welding – Thermit Welding – Electron Beam Welding – Friction and Inertia Welding – Friction Stir Welding – Under Water WeldingProcess.

UNITIII SHEET METAL ANDFORMINGPROCESS 9

Sheet metal process –Laser welding and Cutting, Working principle and application of special forming process – Hydro Forming– Rubber Pad Forming– Explosive Forming – Magnetic Pulse Forming– Peen Forming – Super Plastic Forming – Deep Drawing Process.

UNITIV ADVANCEDMACHININGPROCESS 9

Modern machining process: Abrasive Jet Machining, Water Jet Machining, Abrasive Water Jet Machining, Ultrasonic Machining, Electro chemical Machining, Electro chemical Grinding, Electro Discharge Machining, wire cut EDM, Electron Beam Machining, plasma arc machining, Laser Beam Machining. Ultrasonic Machining, High speed machining process – deep hole drilling process

UNITV RAPIDPROTOTYPING 9

Introduction to Rapid Prototyping – Need for RPT– Stereo–lithography – Selective Laser Sintering, Fused Deposition Modeling, Laminated Object Manufacturing, Solid Ground Curing, Ballistic Particle Manufacturing

16BEME6E03 COMPUTATIONAL FLUID DYNAMICS 3 0 0 3 100

COURSE OBJECTIVES

1. To introduce Governing Equations of viscous fluidflows
2. To introduce numerical modeling and its role in the field of fluid flow and heattransfer
3. To enable the students to understand the various discretization methods, solution procedures and turbulencemodeling.
4. To create confidence to solve complex problems in the field of fluid flow and heat transfer by using high speedcomputers.
5. To equip them with skills to solve convection and diffusionproblems
6. To understand the importance continuity and momentum equations for different types of fluidflow

COURSE OUTCOMES

Upon completion of this course, the students can able

1. Identify, solve engineering problems by computational fluiddynamics.
2. Understand the importance of governing equations involved inCFD
3. Formulate and solve problems in the field of fluid flow and heattransfer.
4. Solve the heat conduction problems using finite differencemethod.
5. Analyze and provide solutions for convection and diffusionproblems.
6. Develop continuity and momentum equations for different types of fluidflow

UNITI GOVERNING EQUATIONS ANDBOUNDARY CONDITIONS 9

Basics of computational fluid dynamics – Governing equations of fluid dynamics – Continuity, Momentum and Energy equations – Chemical species transport – Physical boundary conditions – Time–averaged equations for Turbulent flow.

UNITII DISCRETIZATIONMETHOD 9

MethodsofDerivingtheDiscretizationEquations–TaylorSeriesformulation–Finitedifferencemethod– Control volume Formulation – Spectral method.

UNITIII HEATCONDUCTION 9

Finite difference and finite volume formulation of steady/transient one–dimensional conduction equation, Source term linearization, Incorporating boundary conditions, Finite volume formulations for two and three dimensional conduction problems

UNITIV CONVECTIONANDDIFFUSION 9

Finite volume formulation of steady one–dimensional convection and Diffusion problems, Central, upwind, hybrid and power–law schemes – Discretization equations for two dimensional convection and diffusion.

UNITV CALCULATION OFFLOWFIELD 9

Representation of the pressure – Gradient term and continuity equation – Staggered grid – Momentum equations – Pressure and velocity corrections – Pressure – Correction equation, SIMPLE algorithm and its variants. Turbulence models: mixing length model, two equation (k–ε) models.

16BEME6E04 MANUFACTURE AND INSPECTION OF GEARS 3 0 0 3 100

COURSE OBJECTIVES

1. To gain knowledge in production, gear materialselection
2. To introduce the concepts of gear manufacturing
3. To Study and acquire knowledge on mechanism involve in conicalgears
4. To Study and acquire knowledge on the procedures that involves in gear materialselection
5. To expose students to detailed view of gear finishingmethods
6. To impart knowledge modern gear productionmethods

COURSE OUTCOMES

Upon the completion of this course the students will be able to

1. Understand the overview on classification of gears and itterminology
2. Explain the various methods of gear manufacturing
3. Understands the concepts and mechanism involve in conicalgears
4. Understand the procedures that involves in gear materialselection
5. Attain a detailed view of gear finishingmethods
6. Understanding the modern gear productionmethods

UNITI INTRODUCTIONTOGEARS 9

Types of gears-classification, application of gears, gearboxes, drawings for gears, gear production method an overview, types of blanks and blank preparation. Production Of Cylindrical Gears: Procedure of cutting gears and obtainable quality in hobbing and gear shaping, cutter selection and work holding methods, setting calculations. Rack type gear shaping machine description and application. Internal gear cutting methods, CNC gear hobbing and gear shapingmachines.

UNITII PRODUCTION OF CONICALGEARS 9

Production of straight bevel gears by bevel gear generator, duplex rotary cutter method, Gleason Reva cycle method, spiral and hybrid bevel gear generation. Description of machine, cutter and machine setting.

UNITIII GEAR MATERIAL SELECTION ANDHARDENINGMETHODS 9

Properties of gear materials-non-metallic, non-ferrous and plastic gears, selection of material for power transmission, high speed application. Selection of material for worm and wheel. Hardening by through hardening, case hardening, induction hardening, flame hardening, nitriding and tuftriding, hardening defects.

UNITIV GEARFINISHINGMETHODS 9

Gear finishing advantages, finishing of gears by grinding, shaving, lapping and honing methods, cold rolling of gears - description of process, machine, cutters and process parameters setting.

Gear Inspection: Type of gear errors-gear quality standards and allowable limits-tooth thickness, base tangent length measurement, pitch error, radial run out, involute profile error measurements methods and analysis, composite error measurement, computerized gear inspection, gear failure reasons and remedies.

UNITV MODERN GEARPRODUCTIONMETHODS 9

Gear production by stamping, die casting, powder metal process, injection and compression moulding of plastic gears, cold and hot rolling. Mass production methods, shear speed shaping, gear broaching, Gleayson G-TRAC – gear generation methods. Economical and Quality Production of Gears: Gear production systems – batch production, gear production cells, lean and agile production practices, automobile gear and gear boxes, heavy engineering gear production, gear for instruments and appliances, process and cutter selection for quantity, cost and qualitycriteria.

16BEME6E05 DESIGN FOR MANUFACTURE AND ASSEMBLY 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the importance of the DFM approach and guidelines
2. To enrich the understanding of the selective assembly and Datum systems
3. To introduce the concepts of demonstrate true Position tolerancing theory.
4. To develop an understanding of the standard techniques and redesigning cast members using weldments and plastic component manufacturing.
5. To equip them with skills on Tolerance Charting Technique.
6. To Study and acquire knowledge of the various factors influencing the manufacturability of components and the use of tolerances in manufacturing

COURSE OUTCOMES

Upon completion of this course, the students will be able to,

1. Understand the DFM approach and guidelines
2. Understand the selective assembly and Datum systems
3. Demonstrate true Position tolerancing theory.
4. Understand redesigning cast members using weldments and plastic component manufacturing.
5. Demonstrate the Tolerance Charting Technique.
6. Know the various factors influencing the manufacturability of components and the use of tolerances in manufacturing

UNITI DFM APPROACH, SELECTION AND SUBSTITUTION OFMATERIALSIN INDUSTRY 9

DFM approach, DFM guidelines, standardisation, group technology, value engineering, comparison of materials on cost basis, design for assembly, DFA index, Poka – Yoke principle; 6σ concept; Tolerance Analysis: Process capability, process capability metrics, Cp, Cpk, cost aspects, feature tolerances, geometric tolerances, surface finish, review of relationship between attainable tolerance grades and different machining process, cumulative effect of tolerances, sure fit law, normal law and truncated normal law.

UNITII SELECTIVEASSEMBLY 9

Interchangeable and selective assembly, deciding the number of groups, Model–I: group tolerances of mating parts equal; Model–II: total and group tolerances of shaft, control of axial play.

Datum Systems: Grouped datum systems–different types, two and three mutually perpendicular grouped datum planes, grouped datum system with spigot and recess, pin and hole, and tongue–slot pair, computation of translational and rotational accuracy.

UNITIII TRUE POSITIONTOLERANCINGTHEORY 9

Comparison between co–ordinate and convention method of feature location tolerancing and true position tolerancing, zero true position tolerance, virtual size concept, floating and fixed fasteners, projected tolerance zone, functional gauges, paper layout gauging, compound assembly, examples.

UNITIV FORM DESIGN OF CASTINGSANDWELDMENTS 9

Redesign of castings based on parting line considerations, minimising core requirements, redesigning cast members using weldments, use of welding symbols – design considerations for plastic component manufacturing.

UNITV TOLERANCECHARTING 9

Tolerance Charting Technique: Operation sequence for typical shaft type of components, preparation of process drawings for different operations, tolerance worksheets and centrality analysis, examples, design features to facilitate machining. Datum features – functional and manufacturing, component design–machining considerations, redesign for manufacture,examples.

16BEME6E06 GAS DYNAMICS AND JET PROPULSION 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the basic difference between incompressible and compressibleflow.
2. To understand the phenomenon of shock waves and its effect on flow. To gain some basic knowledge about jet propulsion and RocketPropulsion.
3. To introduce the concepts of various conditions of compressible fluidflows
4. To Study and acquire knowledge on performance analysis of subsonic and supersonicinlets, combustors, afterburners and exhaustnozzles
5. To understand the concept of working of various types of rocketengines
6. To study the features of thrust equation for rocket propulsionsystem

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Analyze various conditions of compressible fluidflows.
2. Calculate mass flow rate in flow through variable areaducts.
3. Carryout simple performance analysis of subsonic and supersonicinlets.
4. Perform performance analysis of combustors, afterburners and exhaustnozzles.
5. Understand the working of various types of rocketengines
6. Use thrust equation for rocket propulsionsystem

UNITI BASIC CONCEPTS ANDISENTROPICFLOWS 9

Energy and momentum equations of compressible fluid flows – Stagnation states, Mach waves and Machcone –Effect of Mach number on compressibility – Isentropic flow through variable area ducts – Nozzle and Diffusers –area ratio as a function of Mach number, mass flow rate through nozzles and diffusers, effect of friction in flow through nozzles. Use of Gas tables.

UNITII FLOW THROUGHDUCTS 9

Flow through constant area ducts with heat transfer (Rayleigh flow) and Friction (Fanno flow) – Variation of flow properties – Isothermal flow with friction in constant area ducts –Use of tables and charts – Generalised gas dynamics.

UNITIII NORMAL ANDOBLIQUESHOCKS 9

Governing equations – Variation of flow parameters across the normal and oblique shocks – Prandtl – Meyer relations – Use of table and charts – Applications.

UNITIV JETPROPULSION 9

Theory of jet propulsion – Thrust equation – Thrust power and propulsive efficiency – Operation principle, cycle analysis and use of stagnation state performance of ram jet, turbojet, turbofan and turbo prop engines – Aircraft combustors.

UNITV ROCKETPROPULSION 9

Types of rocket engines – Propellants – Ignition and combustion – Theory of rocket propulsion – solid and liquid propellants, comparison of different propulsion systems .Performance study – Staging – Terminal and characteristic velocity – Applications – Space flights.

TOTAL 45

(Permitted to use standard Gas Tables in the examination)

16BEME6E07 ADVANCED I.C. ENGINES 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the underlying principles of operation of different IC Engines andcomponents.
2. To provide knowledge on pollutant formation, control, alternate fueletc.
3. To Study and acquire knowledge to Identify parts, terminology and fuel supply system of internal combustionengine
4. To introduce the concepts of cooling and lubrication systems of ICengines
5. To make the student acquire sound knowledge on combustion, knocking and super charging of internal combustionengines
6. To expose students to recent trends associated with ICengines

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Explain the construction and operation of internal combustionengine.
2. Identify parts, terminology and fuel supply system of internal combustionengine.
3. Recognize the component used in cooling and lubrication systems of ICengines.
4. Describe the function of combustion, knocking and super charging of internal combustionengines.
5. Implement strategies for pollution control.
6. Know about the recent trends associated with ICengines

UNITI SPARKIGNITIONENGINES 9

Mixture requirements – Fuel injection systems – Monopoint, Multipoint & Direct injection - Stages of combustion – Normal and Abnormal combustion – Knock - Factors affecting knock – Combustion chambers.

UNITII COMPRESSIONIGNITIONENGINES 9

Diesel Fuel Injection Systems - Stages of combustion – Knocking – Factors affecting knock – Direct and Indirect injection systems – Combustion chambers – Fuel Spray behaviour – Spray structure and spray penetration – Air motion - Introduction to Turbocharging.

UNITIII POLLUTANT FORMATIONANDCONTROL 9

Pollutant – Sources – Formation of Carbon Monoxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter – Methods of controlling Emissions – Catalytic converters, Selective Catalytic Reduction and Particulate Traps – Methods of measurement – Emission norms and Drivingcycles.

UNITIV ALTERNATIVEFUELS 9

Alcohol, Hydrogen, Compressed Natural Gas, Liquefied Petroleum Gas and Bio Diesel - Properties, Suitability, Merits and Demerits - EngineModifications.

UNITV RECENTTRENDS 9

Air assisted Combustion, Homogeneous charge compression ignition engines – Variable Geometry turbochargers – Common Rail Direct Injection Systems - Hybrid Electric Vehicles – NOx Adsorbers - OnboardDiagnostics.

16BEME6E08 **FINITE ELEMENT METHODS** **3 0 0 3 100**

COURSE OBJECTIVE

1. To explain the steps involved in FEA and also the types of weight residual methods
2. To impart knowledge to formulate and solve problems in one dimensional structures including trusses, beams and frames.
3. To enrich the understanding of two dimensional thermal and torsion problems.
4. To enrich the understanding of axisymmetric bodies, plate and shell.
5. To develop an understanding of the standard techniques on matrix solution techniques to dynamic problems.
6. To impart knowledge on FE equation for structural, heat transfer and vibration problems.

COURSE OUTCOME

1. Explain the steps involved in FEA and also the types of weight residual methods
2. Formulate and solve problems in one dimensional structures including trusses, beams and frames.
3. Predict finite element equations for two dimensional thermal and torsion problems.
4. Predict finite element equations for axisymmetric bodies, plate and shell.
5. Apply matrix solution techniques to dynamic problems.
6. Formulate FE equation for structural, heat transfer and vibration problems.

UNITI INTRODUCTION 9

Historicalbackground–Matrixapproach–Applicationtothecontinuum–Discretization–Matrixalgebra–Governing equations for continuum – Classical Techniques in FEM – Weighted residual method – Ritzmethod

UNITII ONEDIMENSIONALPROBLEMS 9

Finite element modeling – Coordinates and shape functions– Potential energy approach – Galerkin approach – Assembly of stiffness matrix and load vector – Finite element equations – Quadratic shape functions – Applications to plane trusses

UNITIII TWODIMENSIONALCONTINUUM 9

Introduction – Finite element modeling – Scalar valued problem – Poisson equation –Laplace equation – Triangular elements – Element stiffness matrix – Force vector – Galerkin approach – Stress calculation – Temperature effects

UNITIV AXISYMMETRIC CONTINUUM 9

Axisymmetric formulation – Element stiffness matrix and force vector – Galerkin approach – Body forces and temperature effects – Stress calculations – Boundary conditions – Applications to cylinders under internal or external pressures

UNITV ISOPARAMETRIC ELEMENTS FOR TWODIMENSIONALCONTINUUM 9

The four node quadrilateral – Shape functions – Element stiffness matrix and force vector – Numerical integration – Stiffness integration – Stress calculations – Four node quadrilateral element.

16BEME7E01 MACHINE TOOL DESIGN 3 0 0 3 100

COURSE OBJECTIVE

1. To gain knowledge in design and material selection of various machinetools.
2. To provide an overview of regulation of speeds and feeds
3. To study the features of machine toolstructures
4. To understand the importance of constructional features of machine toolstructures
5. To expose students to design in machine tool structures, guide ways, power screws andspindles
6. To expose students to design spindles and spindlesupports
7.

COURSE OUTCOMES:

Upon the completion of this course the students will be able to

1. Discuss the basics machine tool drives andmechanisms
2. Get knowledge on regulation of speeds and feeds
3. Understand the importance of machine toolstructures
4. Explain the constructional features of machine toolstructures
5. Design in machine tool structures, guide ways, power screws andspindles
6. Design spindles and spindlesupports

UNITI INTRODUCTION TO MACHINE TOOL DRIVESANDMECHANISMS 9

Introduction to the course, Working and Auxiliary Motions in Machine Tools, Kinematics of Machine Tools, Motion Transmission

UNITII REGULATION OF SPEEDS ANDFEEDS 9

Aim of Speed and Feed Regulation, Stepped Regulation of Speeds, Multiple Speed Motors, Ray Diagrams and Design Considerations, Design of Speed Gear Boxes, Feed Drives, Feed Box Design

UNITIII DESIGN OF MACHINETOOLSTRUCTURES 9

Functions of Machine Tool Structures and their Requirements, Design for Strength, Design for Rigidity, Materials for Machine Tool Structures, Machine Tool Constructional Features, Beds and Housings, Columns and Tables, Saddles and Carriages

UNITIV DESIGN OF GUIDEWAYS, POWER SCREWSANDSPINDLES 9

Functions and Types of Guideways, Design of Guideways, Design of Aerostatic Slideways, Design of Anti-Friction Guideways, Combination Guideways, Design of Power Screws.

UNITV DESIGN OF SPINDLES ANDSPINDLESUPPORTS 9

Functions of Spindles and Requirements, Effect of Machine Tool Compliance on Machining Accuracy, Design of Spindles, Antifriction Bearings. Dynamics of Machine Tools - Machine Tool Elastic System, Static and Dynamic Stiffness

16BEME7E02 ADDITIVE MANUFACTURING 3 0 0 3 100

COURSE OBJECTIVES

1. To know the principle methods, areas of usage, possibilities and limitations as well as environmental effects of the Additive Manufacturingtechnologies
2. To be familiar with the characteristics of the different materials those are used in Additive Manufacturing.
3. To introduce process involved in Additive manufacturingtechnology
4. To understand the importance of knowledge on software's used in additive manufacturingtechnology
5. To enrich the understanding of the working of SLS and othertechniques
6. To provide an overview of additive manufacturing technology in medicalfield and biostream

COURSE OUTCOMES

On completion of this course, students will be able to

1. Understand the need for additive manufacturingtechnology
2. Explain the process involved in Additive manufacturingtechnology
3. Get knowledge on software's used in additive manufacturingtechnology
4. Describe the working of SLS and othertechniques
5. Apply the additive manufacturing technology in medicalfield
6. Applications of additive manufacturing technology in biostream

UNITI INTRODUCTION 9

Overview – History - Need-Classification -Additive Manufacturing Technology in product development-Materials for Additive Manufacturing Technology – Tooling - Applications.

UNITII CAD &REVERSEENGINEERING 9

Basic Concept – Digitization techniques – Model Reconstruction – Data Processing for Additive Manufacturing Technology: CAD model preparation – Part Orientation and support generation – Model Slicing –Tool path Generation – Softwares for Additive Manufacturing Technology: MIMICS,MAGICS.

UNITIII LIQUID BASED AND SOLID BASED ADDITIVEMANUFACTURINGSYSTEMS 9

Classification – Liquid based system – Stereolithography Apparatus (SLA)- Principle, process, advantages and applications - Solid based system –Fused Deposition Modeling - Principle, process, advantages and applications, Laminated Object Manufacturing

UNITIV POWDER BASED ADDITIVEMANUFACTURINGSYSTEMS 9

Selective Laser Sintering – Principles of SLS process - Process, advantages and applications, Three Dimensional Printing - Principle, process, advantages and applications- Laser Engineered Net Shaping (LENS), Electron BeamMelting.

UNITV MEDICAL ANDBIO-ADDITIVEMANUFACTURING 9

Customized implants and prosthesis: Design and production. Bio-Additive Manufacturing- Computer Aided Tissue Engineering (CATE) – Case studies

16BEME7E03 COMPOSITE MATERIALS 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the fundamentals of composite material strength and its mechanicalbehavior
2. Understanding the analysis of fiber reinforced Laminate design for different combinations of plies with different orientations of thefiber.
3. Thermo-mechanical behavior and study of residual stresses in Laminates duringprocessing.
4. Implementation of Classical Laminate Theory (CLT) to study and analysis for residual stresses in an isotropic layered structure such as electronicchips.
5. To introduce the concepts of carbon-carbon composite for different industrialapplication
6. To impart knowledge on various advances incomposites

COURSE OUTCOMES

Learners should be able to

1. Select the various types of composite matrix required for anapplication.
2. Choose appropriate manufacturing process for polymer matrix composite.
3. Opt appropriate manufacturing process for metal matrixcomposite.
4. Use the concepts of ceramic composites and its productiontechniques.
5. Identify the type of carbon-carbon composite for different industrialapplication.
6. Explain the various advances incomposites

UNITI INTRODUCTION TOCOMPOSITES 9

Fundamentalsofcomposites-needforcomposites–Enhancementofproperties-classificationofcomposites – Matrix-Polymer matrix composites (PMC), Metal matrix composites (MMC), Ceramic matrix composites (CMC) – Reinforcement – Particle reinforced composites, Fibre reinforced composites. Applications of various types ofcomposites.

UNITII POLYMERMATRIX COMPOSITES 9

Polymer matrix resins – Thermosetting resins, thermoplastic resins – Reinforcement fibres – Rovings – Woven fabrics – Non woven random mats – various types of fibres. PMC processes - Hand lay up processes – Spray up processes – Compression moulding – Reinforced reaction injection moulding - Resin transfer moulding – Pultrusion – Filament winding – Injection moulding. Fibre reinforced plastics (FRP), Glass fibre reinforced plastics(GRP).

UNITIII METALMATRIX COMPOSITES 9

Characteristics of MMC, Various types of Metal matrix composites Alloys - MMC, Advantages of MMC, Limitations of MMC, Metal Matrix, Reinforcements – particles – fibres. Effect of reinforcement - Volume fraction – Rule of mixtures. Processing of MMC – Powder metallurgy process - diffusion bonding – stir casting – squeezecasting.

UNITIV CERAMICMATRIX COMPOSITES 9

Engineeringceramicmaterials–properties–advantages–limitations–Monolithicceramics-NeedforCMC – Ceramic matrix - Various types of Ceramic Matrix composites- oxide ceramics – non oxide ceramics – aluminium oxide – silicon nitride – reinforcements – particles- fibres- whiskers. Sintering - Hot pressing – Cold isostatic pressing (CIPing) – Hot isostatic pressing(HIPing).

UNITV ADVANCESINCOMPOSITES 9

Carbon /carbon composites – Advantages of carbon matrix – limitations of carbon matrix Carbon fibre – chemical vapour deposition of carbon on carbon fibre perform. Sol gel technique. Composites for aerospace applications.

16BEME7E04 REFRIGERATION ANDAIRCONDITIONING 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the underlying principles of operations in different Refrigeration & Air conditioning systems andcomponents.
2. To provide knowledge on design aspects of Refrigeration & Air conditioningsystems
3. To introduce the concepts on use of unconventional refrigerant system for industrialapplication
4. To expose students to properties of air using psychrometricchart
5. To provide knowledge on cooling load for a givensystem
6. To know the application of air conditioning system for industrial and domestic purpose

COURSE OUTCOMES

Learners should be able to

1. Calculate COP of various refrigerationcycles.
2. Choose appropriate refrigerants for variousapplications.
3. Identify the use of unconventional refrigerant system for industrialapplication.
4. Calculate the properties of air using psychrometricchart.
5. Calculate cooling load for a givensystem
6. Select the appropriate air conditioning system for industrial and domesticapplications

UNIT I REFRIGERATIONCYCLE 9

Review of thermodynamic principles of refrigeration. Concept of refrigeration system. Vapour compression refrigeration cycle – use of P–H charts – multistage and multiple evaporator systems – cascade system – COP comparison. Vapor absorption refrigeration system. Ammonia water and Lithium Bromide water systems. Steam jet refrigeration system

UNIT II REFRIGERANTS, SYSTEM COMPONENTSANDBALANCING 9

Compressors – reciprocating and rotary (elementary treatment.) – Condensers – evaporators – cooling towers. Refrigerants – properties – selection of refrigerants, Alternate Refrigerants, Refrigeration plant controls – testing and charging of refrigeration units. Balancing of system components. Applications to refrigeration systems – ice plant – food storage plants – milk –chilling plants – refrigerated cargo ships.

UNITIII PSYCHROMETRY 9

Psychrometric processes– use of psychrometric charts – – Grand and Room Sensible Heat Factors – bypass factor – requirements of comfort air conditioning – comfort charts – factors governing optimum effective temperature, recommended design conditions and ventilation standards

UNITIV COOLINGLOADCALCULATIONS 9

Types of load – design of space cooling load – heat transmission through building. Solar radiation –infiltration – internalheatsources(sensibleandlatent)–outsideairandfreshairload–estimationoftotalload– Domestic, commercial and industrial systems – central air conditioning systems.

UNIT V AIRCONDITIONING 9

Air conditioning equipments – air cleaning and air filters – humidifiers – dehumidifiers – air washers – condenser – cooling tower and spray ponds – elementary treatment of duct design – air distribution system. Thermal insulation of air conditioning systems. – Applications: car, industry, stores, and public buildings

16BEME8E01 **QUALITY CONTROL AND RELIABILITY ENGINEERING** **3 0 0 3 100**

COURSE OBJECTIVES

1. To Understand the concept of SQC.
2. To enrich the understanding of control charts to analyze for improving the process quality.
3. To familiarize the students to understand different sampling plans
4. To Understand the importance of need and types of life testing.
5. To introduce the reliability of a system.
6. To introduce the concepts of quality control and reliability techniques in industries.

COURSE OUTCOMES

Upon the completion of this course the students will be able to

1. Understand the concept of SQC.
2. Use control charts to analyze for improving the process quality.
3. Describe different sampling plans
4. Understand the need and types of life testing.
5. Improve the reliability of a system.
6. Implement quality control and reliability techniques in industries

UNITI INTRODUCTION AND PROCESS CONTROLFORVARIABLES 9

Introduction, definition of quality, basic concept of quality, definition of SQC, benefits and limitation of SQC, Quality assurance, Quality cost–Variation in process– factors – process capability – process capability studies and simple problems – Theory of control chart– uses of control chart – Control chart for variables – X chart, R chart and σ chart.

UNITII PROCESS CONTROLFOR ATTRIBUTES 9

Control chart for attributes –control chart for proportion or fraction defectives – P chart and NP chart – control chart for defects – C and U charts, State of control and process out of control identification in charts.

UNITIII ACCEPTANCESAMPLING 9

Lot by lot sampling – Types – probability of acceptance in single, double, multiple sampling techniques – O.C. curves – producer's Risk and consumer's Risk. AQL, LTPD, AOQL concepts–standard sampling plans for AQL and LTPD– uses of standard sampling plans.

UNITIV LIFE TESTING– RELIABILITY 9

Life testing – objective: – failure data analysis, Mean failure rate, mean time to failure, mean time between failure, hazard rate, system reliability, series, parallel and mixed configuration – simple problems. Maintainability and availability – simple problems. Acceptance sampling based on reliability test – O.C Curves.

UNITV QUALITYANDRELIABLITY 9

Reliability improvements – techniques– use of Pareto analysis – design for reliability – redundancy unit and standby redundancy – Optimization in reliability – Product design – Product analysis – Product development – Product life cycles – Maintenance.

TOTAL 45

Note: Permitted to use approved statistical table in the examination.

16BEME8E02 PRODUCTION PLANNING AND CONTROL 3 0 0 3 100

COURSE OBJECTIVES

1. To impart knowledge of need for planning and control in various aspects.
2. To develop an understanding of the standard techniques in various work study methodologies.
3. To familiarize the students to understand the product and process plan.
4. To introduce the concepts of a production schedule based on different facets.
5. To enrich the understanding of the level of inventory
6. To understand the importance the recent advancements in production planning and control.

COURSE OUTCOMES

Student will be able to

1. Indicate the need for planning and control in various aspects.
2. Understand various work study methodologies.
3. Construct product and process plan.
4. Prepare a production schedule based on different facets.
5. Estimate the level of inventory
6. Understand the recent advancements in production planning and control

UNITI INTRODUCTION 9

Objectives: and benefits of planning and control–Functions of production control–Types of production–job–batch and continuous–Product development and design–Marketing aspect – Functional aspects–Operational aspect–Durability and dependability aspect–aesthetic aspect. Profit consideration–Standardization, Simplification and specialization–Break even analysis–Economics of a new design.

UNITII WORKSTUDY 9

Method study, basic procedure–Selection–Recording of process – Critical analysis, Development – Implementation – Micro motion and memo motion study – work measurement – Techniques of work measurement – Time study – Production study – Work sampling – Synthesis from standard data – Predetermined motion time standards.

UNITIII PRODUCT PLANNING ANDPROCESSPLANNING 9

Product planning–Extending the original product information–Value analysis–Problems in lack of product planning–Process planning and routing–Pre requisite information needed for process planning–Steps in process planning–Quantity determination in batch production–Machine capacity, balancing.

UNITIV PRODUCTIONSCHEDULING 9

Production Control Systems–Loading and scheduling–Master Scheduling–Scheduling rules–Gantt charts–Perpetual loading–Basic scheduling problems – Line of balance – Flow production scheduling–Batch production scheduling–Product sequencing – Production Control systems–Periodic batch control–Material requirement planning Kanban.

UNITV INVENTORY CONTROL AND RECENT TRENDSINPPC 9

Inventory control–Purpose of holding stock–Effect of demand on inventories–Ordering procedures.
Two bin system –Ordering cycle system–Determination of Economic order quantity and economic lot size–ABC analysis–Recorder procedure–Introduction to computer integrated production planning systems–elements of JIT Systems.

16BEME8E03 COGENERATION AND WASTE HEAT RECOVERY SYSTEMS 3 0 0 3 100

COURSE OBJECTIVES

1. To study the significance of waste heat recovery systems and carry out its economicanalysis
2. To know the concepts of cogeneration, its types and probable areas ofapplications
3. To enrich the understanding of thermodynamics, heat transfer, and fluid Mechanics principles to design and analysis of thisemerging technology.
4. To impart knowledge on operational issues and challenges cogenerationtechnologies.
5. To Understand the impact of this technology in waste heat recoverysystems
6. To introduce the concepts of various systems involved in waste heat recoveryprocess

COURSE OUTCOMES

The student will be able to

1. Understand the various methods ofcogeneration.
2. Apply knowledge of thermodynamics, heat transfer, and fluid Mechanics principles to design and analysis of thisemerging technology.
3. Have thorough understanding, operational issues and challenges cogenerationtechnologies.
4. Understand the impact of this technology in waste heat recoverysystems
5. Get the knowledge over various systems involved in waste heat recoveryprocess
6. Begin a career as an engineer in an organization economicanalysis

UNITI INTRODUCTION 9

Introduction – principles of thermodynamics – cycles – topping - bottoming – combined cycle - organic rankine cycles – performance indices of cogeneration systems – waste heat recovery – sources and types – concept of trigeneration.

UNITII COGENERATIONTECHNOLOGIES 9

Configuration and thermodynamic performance – steam turbine cogeneration systems – gas turbine cogeneration systems – reciprocating IC engines cogeneration systems – combined cycles cogeneration systems – advanced cogeneration systems: fuel cell, Stirling enginesetc.,

UNITIII ISSUES AND APPLICATIONS OFCOGENERATIONTECHNOLOGIES 9

Cogeneration plants electrical interconnection issues – utility and cogeneration plant interconnection issues – applications of cogeneration in utility sector – industrial sector – building sector – rural sector – impacts of cogeneration plants – fuel, electricity and environment

UNITIV WASTE HEATRECOVERYSYSTEMS 9

Election criteria for waste heat recovery technologies - recuperators - Regenerators - Economizers - plate heat exchangers - thermic fluid heaters - Waste heat boilers classification, location, service conditions, design Considerations - fluidized bed heat exchangers - heat pipe exchangers - heat pumps – sorption systems.

UNITV ECONOMIC ANALYSIS 9

Investment cost – economic concepts – measures of economic performance – procedure for economic analysis – examples – procedure for optimized system selection and design – load curves - sensitivity analysis– regulatory and financial frame work for cogeneration and waste heat recovery systems.

TOTAL 45

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	R.Kehlhofer, B. Rukes, F. Stirnimann	Combined-cycle gas & steam turbine power plants	PennWell Books	2009

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication

16BEME8E04 ENERGY CONSERVATION METHODS AND ENERGY AUDIT 3 0 0 3 100

COURSE OBJECTIVES

1. To understand and analyze the energy data ofindustries
2. To carryout energy accounting andbalancing
3. To conduct energy audit and suggest methodologies for energysavings
4. To utilize the available resources in optimalways
5. To make the students conversant with concepts of industrialfurnaces
6. To equip them with skills to perform Energyaudit

COURSE OUTCOMES

At the end of the course, student will be able to

1. Understand the Environmental aspects of energyutilization
2. Perform combustionanalysis
3. Explain the concepts of industrialboiler
4. understand how to work with the steam generated from the boilers in the industrial point ofview
5. Explain the concepts of industrialfurnaces
6. Perform Energyaudit

UNITI ENERGYSCENARIO 9

Present status, rate of growth, energy utilization (sector wise), concept of energy conservation, energy economics.

COMBUSTION: Fuel analysis, combustion calculations, air requirements, theoretical and excess air requirements, excess air control, flue gas analysis and measurement, types of draught, draught calculations, chimney size calculations. F.D and I.D fan draught requirements and power requirements, furnace pressure requirements.

UNITII INDUSTRIALBOILERS 9

Types and characteristics of industrial boilers, heat balance in boilers, efficiency trials in boilers, energy conservation opportunities in boilers operation and maintenance, water treatment requirements, soot blowing requirements, super heaters and superheat controls, waste heat recovery systems.

STEAM: Distribution requirements of steam and streamlines, efficient utilization of steam, steam trapping and air venting, flash steam recovery, condensate recovery, thermal insulation for systems including HVAC, stream balancecalculations.

UNITIII INDUSTRIALFURNACES 9

Furnace types and characteristics, heat balance in furnaces, furnace efficiency calculations, energy conservation opportunities in furnaces, refractories types and properties, waste heat recovery system, insulating refractories, ceramic fibers, heat loss reduction calculations, wall and stored heat lossreduction.

UNITIV DRYING 9

Principle of drying and types of driers, mass and heat balance in driers, energy conservation opportunities in drying operations.

EVAPORATION: Principle of evaporation and types of evaporations, mass and heat balance, single and multiple effect evaporation, capacity and steam economy calculations, vapour recompression system.

UNITV ENERGY AUDITANDAPPLICATIONS 9

Types, methodology, questionnaire development, specific energy consumption (unitwise/section wise), identification of energy conservation measures/ technologies, economic and cost benefit analysis, case studies, Energy rating for thermal equipment ,Energy saving measurement – Star status –National awards.

OPEN ELECTIVES
(COURSES OFFERED BY OTHER DEPARTMENTS)
SCIENCE AND HUMANITIES

16BESHOE01 PROBABILITY ANDRANDOMPROCESS 3 0 0 3 100

COURSE OBJECTIVES

1. To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
2. To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
3. To understand the basic concepts of random processes which are widely used in IT fields.
4. To understand the concept of correlation and spectral densities.
5. To understand the significance of linear systems with random inputs.
6. To understand the response of random inputs to linear time invariant systems.

COURSE OUTCOMES

1. Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
2. The students will have an exposure of various distribution functions, correlation and spectral densities.
3. To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
4. To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
5. To apply the concept random processes in engineering disciplines.
6. To understand and apply the concept of correlation and spectral densities

UNITI MEASURES OF CENTRAL TENDENCY ANDPROBABILITY 9

Measures of central tendency – Mean, Median, Mode - Standard Deviation Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem.

UNITII STANDARDDISTRIBUTIONS 9

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev'sinequality.

UNITIII TWO DIMENSIONAL RANDOM VARIABLES 9

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNITIV CLASSIFICATION OFRANDOM PROCESS 9

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNITV CORRELATION ANDSPECTRALDENSITIES 9

Autocorrelation-Crosscorrelation-Properties–Powerspectraldensity–Crossspectraldensity–Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input andoutput.

16BESHOE02 FUZZY MATHEMATICS 3 0 0 3 100

COURSE OBJECTIVES

1. Be able to understand basic knowledge of fuzzy sets
2. Be able to understand basic knowledge of fuzzy logic
3. Be able to apply basic knowledge of fuzzy operations.
4. To know the basic definitions of fuzzy relations
5. Be able to apply basic fuzzy inference and approximate reasoning
6. To know the applications of fuzzy Technology.

COURSE OUTCOMES

1. To gain the main subject of fuzzy sets.
2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
3. To gain the methods of fuzzy logic.
4. To comprehend the concepts of fuzzy relations.
5. To analyze the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNITI FUZZYSETS **9**

Fuzzy Sets: Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – F u z z y functions - Zadeh's Extension Principle

UNITII OPERATIONS ONFUZZYSETS **9**

Operations on Fuzzy Sets Operations on [0,1] – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNITIII FUZZYRELATIONS **9**

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNITIV FUZZYMEASURES **9**

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNITV FUZZYINFERENCE **9**

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

16BESHOE03 **LINEAR ALGEBRA** **3 0 0 3 100**

COURSE OBJECTIVES

1. To introduce the basic concepts of vector space
2. To introduce the fundamental concepts in their respective engineering fields
3. To know the fundamentals of linear Algebra
4. To solve system of linear equations
5. To study about the linear transformations
6. To introduce the concepts of inner product spaces

COURSE OUTCOMES

1. To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
2. To describe the fundamental concepts of Eigen values and Eigen vectors by using Power method.
3. To apply the fundamental concepts in their respective engineering fields
4. To visualize linear transformations as matrix form
5. To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
6. To articulate the importance of Linear Algebra and its applications in branches of Mathematics.

UNITI VECTORSPACES 9

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space

UNITII EIGEN VALUES ANDEIGENVECTORS 9

Eigen values and Eigen vectors - diagonalization - Power method - QR decomposition

UNITIII SYSTEM OFLINEAR EQUATIONS 9

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss–Seidel method, convergence criteria.

UNITIV LINEARTRANSFORMATIONS 9

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNITV INNERPRODUCTSPACES 9

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

16BESHOE04 ENGINEERING ACOUSTICS 3 0 0 3 100

COURSE OBJECTIVES

1. To disseminate the fundamentals of acoustic waves.
2. To inculcate the characteristics of radiation and reception of acoustic waves.
3. To teach the concepts of radiation and reception of acoustic waves
4. To divulge knowledge on the basics of pipe resonators and filters.
5. To introduce the features of architectural acoustics.
6. To impart the basic knowledge of transducers and receivers.

COURSE OUTCOMES

1. Develop the idea of the fundamentals of acoustic waves.
2. Apply the concepts of radiation and reception of acoustic waves.
3. Explain the basic ideas of pipe resonators and filters.
4. Illusrate the basics of architectural acoustics.
5. Illustrate the transducers and receivers and its applications in various electronic devices.
6. Apply the knowledge inputs of the course for engineering applications.

UNITI INTRODUCTION 9

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves -Energy density – Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNITII RADIATION AND RECEPTION OFACOUSTIC WAVES 9

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNITIII PIPES RESONATORS ANDFILTERS 9

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – detection threshold – the ear – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNITIV ARCHITECTURALACOUSTICS 9

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Weighted sound levels speech interference – highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNITV TRANSDUCTION 9

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker – loudspeaker cabinets – horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

16BESHOE05 SOLID WASTE MANAGEMENT 3 0 0 3 100

COURSE OBJECTIVES:

1. To make the students conversant with basics of Solid wastes and its classification.
2. To make the student acquire sound knowledge of different treatments of solid wastes.
3. To acquaint the student with concepts of waste disposals.
4. To develop an understanding of the basic concepts of Hazardous waste managements.
5. To acquaint the students with the basics of energy generation from waste materials.
6. To get the information on energy conservation.

COURSE OUTCOMES:

1. Outline the basic principles of Solid waste and separation of wastes (K)
2. Identify the concepts of treatment of solid wastes (S)
3. Identify the methods of wastes disposals. (S)
4. Examine the level of Hazardousness and its management. (S)
5. Examine the possible of the energy production using waste materials. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNITI SOLIDWASTE 9

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNITII WASTETREATMENT 9

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNITIII WASTEDISPOSAL 9

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classficaition, Types, Methods &Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfillRemediation

UNITIV HAZARDOUS WASTEMANAGEMENT 9

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediaiton, riskassessment.

UNITV ENERGY GENERATION FROM WASTE 9

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, energy recovery systems. Biological & chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

16BESHOE06 GREEN CHEMISTRY 3 0 0 3 100

COURSE OBJECTIVES

1. To make the students conversant about the green chemistry
2. To make the student acquire sound knowledge of the atom efficient process
3. To make the student acquire sound knowledge of the synthesis elaborately.
4. To acquaint the student with concepts of green technology.
5. To develop an understanding of the basic concepts of renewable energy resources.
6. To acquaint the students with the basic's information on catalysis.

COURSE OUTCOMES

1. Outline the basic principles of green chemistry.
2. Examine the different atom efficient process and synthesis elaborately.
3. Apply the concepts combustion of green technology.
4. Identify and apply the concepts of renewable energy.
5. Apply the concepts of green catalysts in the synthesis.
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology

UNITI INTRODUCTION TO GREENCHEMICALPRINCIPLES 9

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNITII ATOM EFFICIENTPROCESSES 9

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis

UNITIII BIOTECHNOLOGY AND GREENCHEMISTRY 9

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNITIV RENEWABLERESOURCES 9

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomassconversion

UNITV CATALYSIS INGREENCHEMISTRY 9

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

16BESHOE07 APPLIED ELECTROCHEMISTRY 3 0 0 3 100

COURSE OBJECTIVES

1. To get the information on electrochemical material.
2. To study about the conducting polymers.
3. To study about electrochemistry in storage devices
4. To acquaint the student with concepts of Energy storage devices.
5. To gain knowledge on the batteries and power sources.
6. To develop energy storage devices.

COURSE OUTCOMES

1. Outline the basic principles of chemistry in electrochemical material**.**
2. Examine the properties of conducting polymers.
3. Apply the concepts of electrochemistry in storage devices.
4. Identify the concepts of storage devices and its applications.
5. Apply the suitable materials for the manufacturing of storage devices.
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNITI METALFINISHING 9

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning

UNITII CONDUCTING POLYMERSANDELECTROCHEMICALS 9

Electropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers-poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNITIII BATTERIES ANDPOWERSOURCES-I 9

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types ofelectrolytes.

UNITIV BATTERIES ANDPOWERSOURCES-II 9

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNITV ELECTROCHEMICALMATERIALSCIENCE 9

Solar cells- Preparation of CdS/Cu2S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

16BESHOE08 INDUSTRIAL CHEMISTRY 3 0 0 3 100

COURSE OBJECTIVES

1. To make the students conversant with cement and lime
2. To make the students to aware about uses of cement and lime.
3. To make the student acquire sound knowledge of abrasives and refractories.
4. To acquaint the student with concepts of inorganic chemicals.
5. To develop an understanding of the basic conceptsexplosives.
6. To acquaint the students with the basics of agriculture chemicals.

COURSE OUTCOMES

1. Outline the basic chemistry of **cement and lime.**
2. Examine the uses of abrasives and refractories.
3. Identify the usage of the inorganic chemicals.
4. Identify the concepts of explosives and smoke screens .
5. Identify the usage of the **agriculture** chemicals
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology.

UNITI CEMENTANDLIME 9

Manufacture of Portland cement – settling of hardening of Portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNITII ABRASIVES ANDREFRACTORIES 9

Abrasives–hardabrasives–siliceousabrasives–softabrasives –artificialabrasives–uses.Refractories–definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNITIII INORGANIC CHEMICALS 9

Common salt and soda ash – Manufacture – Different grades – products – alkalis – Na2CO3, Caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture–absorption–uses,Sulphurandsulphuricacid–extractionofsulphur–manufactureofH2SO4 – chamber – contact processes – industrialuses.

UNITIV EXPLOSIVES 9

Explosives–uses–propertiesandtests–explosivesforwar–nitrocellulose–picricacidandT.N.T.– industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gasmask.

UNITV AGRICULTURECHEMICALS 9

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

16BECSOE01 INTERNETPROGRAMMING 3 0 0 3 100

COURSE OBJECTIVES:

1. To study concepts of Internet, IP addresses and protocols
2. To explain the concept of web page development through HTML
3. To introduce the PERL and explore its current strengths and Weaknesses
4. To write working Java code to demonstrate the use of applets for client side programming
5. To study Internet telephony and various multimedia applications
6. To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

1. Learn the advanced concepts& techniques of Internet and Java.
2. Analyze the requirements for and create and implement the principles of web page development
3. Understand the concepts ofPERL
4. Implement client side programming using java applets
5. Generate internet telephony based upon advanced concepts
6. Develop applications on internet programming based on java applets and scripts

UNITI INTRODUCTION 9

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNITII HTML 9

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods

UNITIII PERL 9

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets-Container Class, Components, Applet Life Cycle, Update method,Applications

UNITIV CLIENT-SERVERPROGRAMMING 9

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNITV INTERNETTELEPHONY 9

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP-Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

16BECSOE02 MULTIMEDIA AND ANIMATION 3 0 0 3 100

COURSE OBJECTIVES:

1. To impart the fundamental concepts of Computer Animation and Multimedia
2. To study the graphic techniques and algorithms using flash
3. Explain various concepts available in 3D animation
4. Explain various devices available for animation
5. To study the multimedia concepts and various I/O technologies for concept development
6. To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

1. Develop their creativity using animation and multimedia
2. Understand the concepts of Flash and able to develop animation using it
3. Understand about various latest interactive 3D animation concepts
4. Know the various devices and software available in motion capture
5. Understand the concept development process
6. Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology

UNITI INTRODUCTION 9

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNITII CREATING ANIMATIONINFLASH 9

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNITIII 3D ANIMATION &ITSCONCEPTS 9

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation

UNITIV MOTIONCAPTION 9

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNITV CONCEPTDEVELOPMENT 9

Story Developing –Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

16BECSOE03 PC HARDWARE AND TROUBLE SHOOTING 3 0 0 3 100

COURSE OBJECTIVES:

1. To study the basic parts of computer in detail
2. Introduce various peripheral devices available for computer and its detailed working concepts
3. Overview of various interfaces and other hardware overview
4. Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
5. To study basic concepts and methods in troubleshooting
6. To study the installation/connectionand maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

1. Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
2. Identify various peripheral devices available and its working
3. Understand various concepts of hardware and its interface and control
4. Perform basic installation of PC. Importance of maintenance is understood
5. Understand Various faults and failures are identified and troubleshooting in detail
6. Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNITI INTRODUCTION 9

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC andUser.

UNITII PERIPHERALDEVICES 9

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNITIII PCHARDWAREOVERVIEW 9

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNITIV INSTALLATION ANDPREVENTIVEMAINTENANCE 9

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – DataRecovery.

UNITV TROUBLESHOOTING 9

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI’s – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROMProblems.

16BECSOE04 JAVA PROGRAMMING 3 0 0 3 100

COURSE OBJECTIVES:

1. To understand Object Oriented Programming concepts and basic characteristics of Java
2. To know the principles of packages, inheritance and interfaces
3. To define exceptions and use I/O streams
4. To develop a java application with threads, generics classes and swings
5. To explain the need for generic programming
6. To design and build simple Graphical User Interfaces

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

1. Develop Java programs using OOP principles
2. Develop Java programs with the concepts inheritance and interfaces
3. Build Java applications using exceptions and I/O streams
4. Develop Java applications with threads and generics classes and swings
5. Understand various aspects for motivation of generic programming
6. Develop various interactive Java programs using OOP concepts of Java

UNITI INTRODUCTION TOJAVA 9

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation–inheritance–abstractclasses–polymorphism.-ObjectsandclassesinJava–definingclasses – methods - access specifiers – static members –constructors – finalizemethod

UNITII PACKAGES 9

Arrays – Strings - Packages – Java-Doc comments –- Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNITIII I/OSTREAMS 9

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes

UNITIV EXCEPTIONHANDLING 9

Exceptions–Syntaxofexceptionhandlingcode–Multiplecatchstatements–Usingfinallystatements–Throwing our own exceptions – Using exceptions for debugging

UNITV THREADS 9

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

TOTAL 45

ELECTRICAL AND ELECTRONICS ENGINEERING

16BEEEOE01 ELECTRICHYBRIDVEHICLES 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the basic concepts of electric hybrid vehicle.
2. To gain the knowledge about electric propulsion unit.
3. To gain the concept of Hybrid Electric Drive-Trains.
4. To gain the different Energy Management Strategies.
5. To study about the efficiency manipulation in drives
6. To understand and gain the knowledge about various energy storage devices

COURSE OUTCOMES:

1. Summarize the basic concepts in bioprocess Engineering.
2. Explain the concept of Hybrid Electric Vehicles.
3. Understand the concept of Hybrid Electric Drive-Trains.
4. Identify the different Energy Management Strategies.
5. Understand the concept of different Energy Storage devices
6. Analyze the different motor drives used in Hybrid Electric Vehicles

UNITI INTRODUCTION 9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNITII HYBRID ELECTRIC DRIVE-TRAINS 9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNITIII ELECTRIC PROPULSIONUNIT 9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNITIV ENERGYSTORAGE 9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNITV ENERGYMANAGEMENTSTRATEGIES 9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

16BEEEOE02 ENERGY MANAGEMENT & ENERGY AUDITING 3 0 0 3 100

COURSE OBJECTIVES:

1. To gain the knowledge about energy management.
2. To understand the basic concepts in economic analysis in energy management.
3. To understand the basic principles of energy audit.
4. To gain the knowledge about the basic concept of types of Energy Audit
5. To gain and Evaluate the different energy efficient motors
6. Understand the concept of Energy conservation.

COURSE OUTCOMES:

At the end of this course, students will demonstrate the ability to

1. Understand the concept of Energy Management.
2. Analyze the different methods for economic analysis
3. Knowledge about the basic concept of Energy Audit and types.
4. Evaluate the different energy efficient motors
5. Understand the concept of Energy conservation.
6. Investigate the different methods to improve power factor

UNITI ENERGYMANAGEMENT 9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNITII ECONOMIC ASPECTSANDANALYSIS 9

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNITIII BASIC PRINCIPLES OFENERGYAUDIT 9

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNITIV ENERGYEFFICIENTMOTORS 9

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNITV POWER FACTOR IMPROVEMENT, LIGHTING ANDENERGY INSTRUMENTS 9

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control–Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application ofPLCs.

16BEEEOE03 PROGRAMMABLE LOGIC CONTROLLER 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the basic principles of PLC systems.
2. To gain the knowledge about data handling functions.
3. To gain the knowledge of storage techniques in PLC
4. To acquire the knowledge about how to handle the data and functions
5. To study about flow charts of ladder and spray process system
6. To understand the principles of PID.

COURSE OUTCOME

1. At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
2. To acquire the knowledge of storage techniques in PLC
3. Students know how to handle the data and functions
4. Students known about advanced controller in PLC applications
5. Students gather real time industrial application of PLC
6. Students gathered and evaluate the flow charts of ladder and spray process system

UNITI INTRODUCTION 9

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNITII PLCPROGRAMMING 9

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNITIII REGISTERS ANDPLCFUNCTIONS 9

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNITIV DATAHANDLINGFUNCTIONS 9

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNITV PIDPRINCIPLES 9

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing, analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

16BEEEOE04 RENEWABLE ENERGY RESOURCES 3 0 0 3 100

COURSE OBJECTIVES

1. To gain the knowledge about environmental aspects of energy utilization.
2. To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
3. To study about solar energy collectors and its storages
4. To study about the inter connected system in wind power
5. To understand the basic principles fuel cell, Geo thermal power plants.
6. To gain the knowledge about hydro energy.

COURSE OUTCOMES

At the end of this course, students will demonstrate the ability to

1. Analyze the Energy Scenario in india
2. Understand the concept of Solar Energy
3. Understand the concept of Wind Energy
4. Understand the concept of Hydro Energy
5. Analyze the different energy sources
6. Students gathered the real time inter connected system modelling in wind power

UNITI INTRODUCTION 9

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNITII SOLARENERGY 9

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNITIII WINDENERGY 9

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNITIV HYDROENERGY 9

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNITV OTHERSOURCES 9

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

ELECTRONICS AND COMMUNICATION ENGINEERING

16BEECOE01 REAL TIMEEMBEDDEDSYSTEMS 3 0 0 3 100

COURSE OBJECTIVES

1. To introduce students to the embedded systems, its hardware and software.
2. To introduce devices and buses used for embedded networking.
3. To study about task management
4. To learn about semaphore management and message passing
5. To study about memory management
6. To imparts knowledge on

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand overview of embedded systems architecture
2. Acquire knowledge on embedded system, its hardware and software.
3. Gain knowledge on overview of Operating system
4. Discuss about task Management
5. Gain knowledge about semaphore management and message passing.
6. Gain knowledge about memory management

UNITI INTRODUCTION TO EMBEDDEDSYSTEM 9

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection &tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM 7

UNITII OPERATINGSYSTEMOVERVIEW 9

Introduction –Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – Clock Ticks.

UNITIII TASK MANAGEMENT 9

Introduction - µ C/OS-II Features - Goals of µ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks –Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under µ C/OS-II – Clock Tick - µ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB waits List.

UNITIV SEMAPHORE MANAGEMENT ANDMESSAGEPASSING 9

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue

UNITV MEMORYMANAGEMENT 9

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memor y Block – Returning a Memor y Block .Getting Started with µ C/OS-II – Installing µ C/OS-II – Porting µ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with µ C/OS-II - µ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Anal yze the Multichannel ADC with help of µ C/OS-II

16BEECOE02 **CONSUMER ELECTRONICS** **3 0 0 3 100**

COURSE OBJECTIVES

1. To study about various speakers and microphone
2. To learn the fundamental of television systems and standards
3. To learn the process of audio recording and reproduction
4. To study various telephone networks
5. To discuss about the working of home appliances
6. To familiarize with TV services like ISDN.

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand working of various type of loud speakers
2. Acquire knowledge on various types of picture tubes
3. Demonstrate the working of various optical recording systems
4. Distinguish various standards for color TV system
5. Acquire knowledge on various telecommunication networks
6. Demonstrate the working of various home appliances

UNITI LOUDSPEAKERS ANDMICROPHONES 9

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones

UNITII TELEVISION STANDARDSANDSYSTEMS 9

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a RemoteControl

UNITIII OPTICAL RECORDINGANDREPRODUCTION 9

AudioDisc–ProcessingoftheAudiosignal–readoutfromtheDisc–Reconstructionoftheaudiosignal– Video Disc – Video disc formats- recording systems – Playback Systems

UNITIV TELECOMMUNICATIONSYSTEMS 9

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellularmodems

UNITV HOME APPLIANCES 9

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

TOTAL 45

TEXT BOOK

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	S.P.Bali	Consumer Electronics	Pearson Education	2005

16BEECOE03 NEURAL NETWORKS AND ITS APPLICATIONS 3 0 0 3 100

COURSE OBJECTIVES

1. To introduce the basic concepts of neural networks and its applications in various domain
2. To educate how to use Soft Computing to solve real-world problems
3. To have a solid understanding of Basic Neural Network.
4. To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
5. To gain exposure in the field of neural networks and relate the human neural system into the digital world
6. To provide knowledge of computation and dynamical systems using neural networks

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the basic concepts of neural networks and its applications in various domains
2. Gain knowledge about learning process in Neural Networks
3. Apply perception concept in design
4. Design using ART phenomena
5. Gain knowledge on SOM concepts
6. Ability to develop the use of Soft Computing to solve real-world problems

UNITI INTRODUCTION TO NEURALNETWORKS 9

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNITII LEARNINGPROCESS 9

Error – correction learning – memory based learning - hebbian learning-competitive learning-Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNITIII PERCEPTION 9

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye’s classifier-Back propagation algorithm

UNITIV ATTRACTOR NEURAL NETWORKANDART 9

Hopfield model-BAM model- BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNITV SELFORGANIZATION 9

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

16BEECOE04 FUZZY LOGIC AND ITS APPLICATIONS 3 0 0 3 100

COURSE OBJECTIVES

1. To introduce the basic concepts of Fuzzy logic and its applications in various domain
2. To educate how to use Fuzzy computation to solve real-world problems
3. To have a solid understanding of Basic fuzzy models.
4. Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
5. To learn about applications on Fuzzy based systems
6. To familiarize with fuzzy fiction and de fuzzy fiction procedures

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the basic concepts of Fuzzy logic and its applications in various domain
2. Gain knowledge on theory of Reasoning
3. Develop fuzzy controllers
4. Understand concepts of adaptive fuzzy control
5. Ability to develop how to use Fuzzy computation to solve real- world problems
6. Design fuzzy based model for any application

UNITI BASICS OFFUZZYLOGIC 9

Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNITII THEORY OFAPPROXIMATEREASONING 9

Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNITIII FUZZY KNOWLEDGE BASEDCONTROLLERS(FKBC) 9

Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures – Design of Fuzzy Logic Controller

UNITIV ADAPTIVEFUZZYCONTROL 9

Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNITV FUZZYBASEDSYSTEMS 9

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzzy in medical applications- Introduction to ANFIS.

BIOTECHNOLOGY

16BTBTOE01 BIOREACTORDESIGN 3 0 0 3 100

COURSE OBJECTIVES

1. To impart basic knowledge in bioprocessEngineering
2. To design the bioreactors for variousoperations.
3. To understand the principle and working of heat transferequipments.
4. To extend the knowledge in principle of heat transfer inside abioreactor
5. To construct the equipments used in mass transferoperations.
6. To learn the equipments used in separationprocess.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Summarize the basic concepts in bioprocessEngineering.
2. Design the bioreactors for variousoperations.
3. Understand the principle and working of heat transferequipments.
4. Develop the heat transfer equipments for BioprocessEngineering.
5. Construct the equipments used in mass transferoperations.
6. Categorize the equipments used in separationprocess.

UNITI ENGINEERING PROPERTIES ANDSTORAGETANK 9

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNITII REACTORDESIGN 9

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNITIII HEATTRANSFEREQUIPMENTS 9

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulationevaporator.

UNITIV MASS TRANSFEREQUIPMENTS 9

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNITV SEPERATIONEQUIPMENTS 9

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotart drum drier and Swenson –walker crystallizer.

16BTBTOE02 FOOD PROCESSING AND PRESERVATION 3 0 0 3 100

COURSE OBJECTIVES

1. To learn the scope and importance of foodprocessing.
2. To impart basic knowledge in different food processing methods carried out in the food techcompanies.
3. To extend the brief knowledge in food conservationoperations.
4. To study the methods of food preservation bycooling.
5. To familiarize the students on the concepts of preservation methods forfruits.
6. To create deeper understanding on preservation methods forvegetables.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Describe the scope and importance of foodprocessing.
2. Outline the various processing methods forfoods.
3. Extend the knowledge in food conservationoperations.
4. Describe the methods of food preservation bycooling.
5. Summarize the preservation methods forfruits.
6. Demonstrate the preservation methods forvegetables.

UNITI SCOPE AND IMPORTANCE OFFOODPROCESSING 9

Properties of food - Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNITII PROCESSINGMETHODS 9

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing- Concepts and equipmentused.

UNITIII FOODCONVERSIONOPERATIONS 9

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipment andapplication.

UNIT IV FOOD PRESERVATION BY COOLING 9

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control wateractivity.

UNITV PRESERVATION METHODS FOR FRUITSANDVEGETABLES 9

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

16BTBTOE03 BASIC BIOINFORMATICS 3 0 0 3 100

COURSE OBJECTIVES

1. To understand the available tools and databases for performing research inbioinformatics.
2. To expose students to sequence alignment tool inbioinformatics.
3. To construct the phylogenetic trees forevolution.
4. To get familiar with the 3D structure of protein andclassification.
5. To acquire basic knowledge in protein secondary structureprediction.
6. To extend the brief knowledge in Micro array dataanalysis.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Summarize the basic concepts and importance of Bioinformatics in varioussectors.
2. Demonstrate the sequence alignment tool inbioinformatics.
3. Construct the phylogenetic trees forevolution.
4. Analyze the three dimensional protein structure and classification using varioustools.
5. Illustrate the protein secondary structure prediction by comparativemodeling.
6. Extend the knowledge in micro array technology and applications of bioinformatics in varioussectors.

UNITI OVERVIEW OFBIOINFORMATICS 9

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNITII RETRIEVAL OFBIOLOGICALDATA 9

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system).Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNITIII PHYLOGENETICS 9

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNITIV STRUCTURALBIOINFORMATICS 9

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNITV MICROARRAYDATAANALYSIS 9

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

16BTBTOE04 FUNDAMENTALS OF NANO BIOTECHNOLOGY 3 0 0 3 100

COURSE OBJECTIVES

1. To impart the skills in the field of nano biotechnology and itsapplications.
2. To acquire knowledge in the nano particles and its significance in variousfields.
3. To extend the knowledge in types and application of nano particles insensors.
4. To define the concepts of biomaterials through molecular selfassembly.
5. To equip students with clinical applications of nanodevices.
6. To describe deeper understanding of the socio-economic issues innanobiotechnology.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Develop skills in the field of nano biotechnology and itsapplications.
2. Summarize the nanoparticles and its significance in variousfields.
3. Extend the knowledge in types and application of nano particles insensors.
4. Define the concepts of biomaterials through molecular selfassembly.
5. Outline the clinical applications of nanodevices.
6. Describe the socio-economic issues innanobiotechnology.

UNITIINTRODUCTION 9

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT IINANOPARTICLES 9

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications-MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNITIII APPLICATIONS 9

Nanomedicine, Nanobiocensor and Nanofludics.Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems.Nano-Biodevices and Systems.Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNITIV NANOBIOTECHNOLOGY 9

Clinical applications of nanodevices.Artificialneurons.Real-time nanosensors- Applications in cancer biology.Nanomedicine.Synthetic retinyl chips based on bacteriorhodopsins.High throughput DNA sequencing with nanocarbon tubules.Nanosurgical devices.

UNITV ETHICAL ISSUESINNANOTECHNOLOGY 9

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

AUTOMOBILE ENGINEERING

16BEAEOE01 AUTOMOBILEENGINEERING 3 0 0 3 100

COURSE OBJECTIVES:

1. To impart knowledge on the constructional details and principle of operation of various automobile components.
2. To learn the function and working of various components in transmission and drive lines.
3. To study the concept and working of steering and suspension systems in an automobile.
4. To give knowledge on the wheels, tyres and brakes of automobiles.
5. To provide information on the current and future trends in automobiles.
6. Identify and explain the types of steering system.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

1. Demonstrate the operating principles and constructional details of various automobile components.
2. Explain the function and working of components in transmission and drive lines.
3. Identify and explain the types of steering system.
4. Identify and explain the types of suspension system.
5. Classify and describe the types of wheels, tyres and brakes of automobiles.
6. Discuss the current and future trends in the automobiles

UNITI ENGINE AND FUELFEEDSYSTEMS 9

Classification of Engine , construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNITII TRANSMISSIONSYSTEMS 9

Requirements of transmission system.Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propellar Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNITIII SUSPENSIONSYSTEM 9

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNITIV BRAKES 9

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theoryBrake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNITV ELECTRICALSYSTEM 9

Principle and construction of lead acid battery.Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator.Starting System and charging system.

16BEAEOE02 BASICS OF TWO AND THREE WHEELERS 3 0 0 3 100

COURSE OBJECTIVES

1. The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
2. Construct the frames of two and three wheelers of different layouts.
3. Demonstrate the constructional details and principle of operation of various engine components.
4. Identify and explain the types of transmission systems.
5. Identify and explain the types of steering and suspension systems.
6. Classify and describe the types of wheels, tyres and brakes for two and three wheelers

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

1. Construct the frames of two and three wheelers of different layouts.
2. Demonstrate the constructional details and principle of operation of various engine components.
3. Identify and explain the types of transmission systems.
4. Identify and explain the types of steering and suspension systems.
5. Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
6. Explain the servicing of two and three wheelers

UNITI INTRODUCTION 9

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNITII POWER UNITS, IGNITION SYSTEMS AND OTHERELECTRICALSYSTEMS 9

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNITIII CLUTCHES ANDTRANSMISSION 9

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNITIV FRAMES, SUSPENSION, WHEELS ANDTYRES 9

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNITV THREEWHEELERS 9

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

16BEAEOE03 AUTOMOBILE MAINTENANCE 3 0 0 3 100

COURSE OBJECTIVES

1. The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems inAutomobile.
2. Describe and differentiate the types of maintenance.
3. List the procedure for dismantling, servicing and assembling of engine components.
4. Demonstrate the servicing of transmission and driveline components.
5. Discuss the procedure for steering and suspension
6. Discuss the procedure for wheel and brake maintenance.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

1. Describe and differentiate the types of maintenance.
2. List the procedure for dismantling, servicing and assembling of engine components.
3. Demonstrate the servicing of transmission and driveline components.
4. Discuss the procedure for steering and suspension
5. Discuss the procedure for wheel and brake maintenance.
6. Explain the fault diagnosis in the electrical and air conditioner systems

UNITI MAINTENANCE OF RECORDSANDSCHEDULES 9

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNITII ENGINEMAINTENANCE 9

Dismantling of engine components and cleaning, cleaning methods, visual anddimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNITIII CHASSIS MAINTENANCE 9

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheelbalancing.

UNITIV ELECTRICALSYSTEM MAINTENANCE 9

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNITV MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLEBODY 9

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating systemmaintenance.

16BEAEOE04 INTRODUCTION TO MODERN VEHICLETECHNOLOGY 3 0 0 3 100

COURSE OBJECTIVES:

1. To impart knowledge on trends in the vehicle power plants.
2. To learn the various advanced driver assistance systems.
3. To study the working of advanced suspension and braking systems in an automobile.
4. To give information about motor vehicle emission and noise pollution control.
5. To provide knowledge of the vehicle telematics.
6. To give information about the noise control techniques

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

1. Distinguish and describe the various modern vehicle power plant systems.
2. List and explain the various driver assistant mechanisms.
3. Identify and describe the working of advanced suspension and braking systems.
4. Apply the knowledge of motor vehicle emission and noise pollution control.
5. Describe the noise control techniques
6. Describe the vehicle telematics and its applications

UNITI TRENDS INPOWERPLANTS 9
Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNITII DRIVERASSISTANCESYSTEMS 9
Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNITIII SUSPENSION BRAKESANDSAFETY 9
Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passengercomfort.

UNITIV NOISE&POLLUTION 9
Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNITV TELEMATICS 9
Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

CIVIL ENGINEERING

16BECEOE01 HOUSING, PLANANDMANAGEMENT 3 0 0 3 100

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOMES

The students will be able to

1. Know the Importance of basic housing policies and building bye laws.
2. Use Housing Programmes and Schemes.
3. Plan and Design of Housing projects.
4. Examine Innovative construction methods and Materials.
5. Know Housing finance and loan approval procedures.
6. Understand Construction as well as managing techniques.

UNITI INTRODUCTIONTOHOUSING 9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNITII HOUSINGPROGRAMMES 9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNITIII PLANNING AND DESIGN OFHOUSINGPROJECTS 9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNITIV CONSTRUCTION TECHNIQUES ANDCOST-EFFECTIVEMATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNITV HOUSING FINANCE ANDPROJECTAPPRAISAL 9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing o f Housing Units, Rents, Recovery Pattern (Problems).

16BECEOE02 BUILDING SERVICES 3 0 0 3 100

COURSE OBJECTIVES

1. Defining and identifying of engineering services systems in buildings.
2. The role of engineering services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOMES

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNITI MACHINERIES 9

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNITII ELECTRICAL SYSTEMSIN BUILDINGS 9

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNITIII PRINCIPLES OF ILLUMINATION& DESIGN 9

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in buildingtypes.

UNITIV REFRIGERATION PRINCIPLES& APPLICATIONS 9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNITV FIRESAFETYINSTALLATION 9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

16BECEOE03 MANAGEMENT OF IRRIGATION SYSTEMS 3 0 0 3 100

COURSE OBJECTIVES

1. To enable the students for a successful career as water management professionals.
2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
3. To expose the students the need for an interdisciplinary approach in irrigation water management
4. To providing a platform to work in an interdisciplinary team.
5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

COURSE OUTCOMES

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNITI IRRIGATIONSYSTEMREQUIREMENTS 9

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNITII IRRIGATIONSCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNITIII MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNITIV OPERATION 9

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNITV INVOLVEMENT OF STAKEHOLDERS 9

Farmer’s participation in System operation – Water user’s associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

16BECEOE04 ADVANCED CONSTRUCTION TECHNOLOGY 3 0 0 3 100

COURSE OBJECTIVES

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

COURSE OUTCOMES

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNITI MODERNCONSTRUCTIONMETHODS 9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNITII CONSTRUCTION METHODS FORSPECIALSTRUCTURES 9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNITIII MODERN CONSTRUCTION EQUIPEMENTS-I 9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting,Tunneling and hoisting

UNITIV MODERN CONSTRUCTION EQUIPEMENTS-II 9

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNITV PRINCIPLES AND PRACTICES OFTEMPORARYSTRUCTURES 9

Principles and Practices of Temporary structures, Shoring, and Strutting,Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

OPEN ELECTIVES
(COURSES OFFERED TO OTHER DEPARTMENTS)

16BEMEOE01 COMPUTERAIDED DESIGN 3 0 0 3 100

COURSE OBJECTIVES

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNITI OVERVIEW OFCADSYSTEMS 9

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNITII INTERACTIVE COMPUTER GRAPHICS ANDGRAPHICSTRANSFORMATIONS 9

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transpformations, Visual Realism, Computer animation, customizing graphics software.

UNITIII GEOMETRIC MODELING 9

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNITIV PARAMETRIC DESIGN ANDOBJECTREPRESENTATION 9

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNITV PRODUCT DESIGNANDDEVELOPMENT 9

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

16BEMEOE02 INDUSTRIAL SAFETYANDENVIRONMENT 3 0 0 3 100

COURSE OBJECTIVES

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

COURSE OUTCOMES

At the end of the course, student will be able to

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNITI INTRODUCTIONTOLOGISTICS 9

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNITII PHASES OFSUPPLYCHAIN 9

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNITIII EVOLUTION OF SUPPLY CHAINMODELS 9

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNITIV SUPPLYCHAIN ACTIVITIES 9

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNITV SCM ORGANISATION ANDINFORMATIONSYSTEM 9

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERPSoftware's

16BEMEOE03 TRANSPORT PHENOMENA 3 0 0 3 100

COURSE OBJECTIVES

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

COURSE OUTCOMES

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNITI INTRODUCTION ANDBASICCONCEPTS 9

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNITII PROPERTIES, UNITS AND OTHERPHYSICALPARAMETERS 9

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNITIII MOMENTUM TRANSPORT 9

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNITIV ENERGYTRANSPORT 9

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heattransfer

UNITV MASS TRANSPORT 9

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion-Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

16BEMEOE04 INTRODUCTION TO BIOMECHANICS 3 0 0 3 100

COURSE OBJECTIVES

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

COURSE OUTCOMES

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNITI INTRODUCTION 9

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNITII KEYMECHANICALCONCEPTS 9

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application ofBiomechanics

UNITIII HUMAN ANATOMY AND SOMEBASICTERMINOLOGY 9

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNITIV ANATOMICALDESCRIPTION 9

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNITV MECHANICS OF THEMUSCULOSKELETALSYSTEM 9

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

Semester I & II

16BTCC101 COMMUNICATIVE ENGLISH 3 0 0 3

OBJECTIVES:

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence
- To acquiregood vocabulary for sentence structure and sentence formation.

OUTCOMES:

- Use English language for communication: verbal & non –verbal.
- Enrich comprehension and acquisition of speaking & writing ability.
- Gain confidence in using English language in real life situations.
- Improve word power: lexical, grammatical and communication competence.
- Acquire good vocabulary for easy communication.
- Be familiar with sentence structure and sentence formation.

Unit I (9)

Listening– Types of listening - Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self - Introduction on one's friend. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative.**Writing** – Formal and Informal letters- Free writing on any topic –My favorite place, hobbies, dreams, goals, etc- - To fill in different application forms. **Grammar** – Articles- WH questions –Yes/No Question - Subject Verb agreement. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit II (10)

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions - Telephone etiquette. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages. **Grammar**– Parts of speech – Noun – Verb – Adjectives - Adverbs. **Vocabulary**– Compound Nouns/Adjectives – Irregular verbs.

Unit III (10)

Listening – Listening for specific task – Fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** – Reading and Comprehension. **Writing** - Autobiographical writing – Biographical writing - Instruction writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

Unit IV **(8)**

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) Letters to the Editor. **Grammar** – Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit V **(8)**

Listening - Listening to different accents, speeches/presentations. **Speaking-** Extempore talk – Just-a-minute talk. **Reading**-Reading strategies–Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars and notices – Writing proposal. **Grammar** – Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

16BTBT102 MATHEMATICS I 3 2 0 4

COURSE OBJECTIVES

1. To develop analytical skills for solving different engineering problems.
2. To understand the concept of Matrices and Theory of equations.
3. To know the basics of differential calculus and its applications.
4. To impart the knowledge of integral calculus and its applications.
5. To learn the basics of ordinary differential equations.
6. To Apply the concept of ordinary differential Equations and solving the problems.

COURSE OUTCOMES

The students will be able to

- Acquire the basic knowledge and understanding of mathematics
- Apply advanced matrix knowledge to engineering problems.
- Improve their ability in evaluating problems by applying theory of equations.
- Evaluating engineering problems involving differential calculus and its applications.
- Understand the concepts involving integral calculus and its applications.
- Applying the concept of ordinary differential Equations and solving the problems.

UNIT-I MATRICES (12)

Fundamentals of Matrix- Inverse of a matrix- Rank of a Matrix – Consistency and Inconsistency of a system of 'm' linear equations in 'n' unknowns – Eigenvalues and Eigenvectors of a real matrix .

UNIT- II THEORY OF EQUATIONS (12)

Relations between coefficients and roots: Irrational and imaginary roots – symmetric functions of the roots – transformation of equations – reciprocal equations and formation of equations whose roots are given.

UNIT - III DIFFERENTIAL CALCULUS AND ITS APPLICATIONS (12)

Differentiation and Derivatives of simple functions – Successive Differentiation – Tangent and Normal-Radius of curvature – Velocity and acceleration.

UNIT - IV INTEGRAL CALCULUS AND ITS APPLICATIONS (12)

Various types of integration - Reduction formula for $e^{ax}x^n$, $\sin^n x$, $\cos^n x$, $\sin^n x\cos^m x$ (Statement only). – Length, Area and Volume of solid revolution.

UNIT - V ORDINARY DIFFERENTIAL EQUATIONS (12)

Differential equations of first order and higher degree – higher order differential equations with constant coefficients- Euler's form of Differential equations.

16BTPH103
16BTPH203 **ENGINEERING PHYSICS** **3 0 0 3**

OBJECTIVES:

- To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology
- To enhance the idea of the thermodynamics properties of the materials
- To Understand the basics of laser and optical fibre with appropriate applications.
- To Introduce the concepts of quantum mechanics for diverse applications.
- To Impart the basic knowledge of crystal and its various crystal structures.
- To Disseminate the fundamentals of nuclear physics and their applications.

OUTCOMES:

- Identify the elastic nature of materials and its thermodynamic properties.
- Infer the characteristics of laser and optical fibers for engineering applications.
- Develop the idea of quantum mechanics through applications.
- Identify the different atomic arrangements of crystals and its defects
- Make use of the concepts of sound waves for medical applications
- Illustrate the basic ideas of nuclear reactors for energy resources

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS (9)

Three types of modulus of elasticity – basic definitions, relation connecting the modulii (Derivation), poison ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniform bending
Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS (9)

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER -CO_2, Semiconductor LASER- Applications of LASER in industry and medicine.
Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS (9)

Introduction to quantum theory – Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electron microscope.

UNIT IV CRYSTAL PHYSICS (9)

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS(9)

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C –scan displays, Medical applications – Sonogram Introduction – basics about nuclear fission and fusion, nuclear composition – Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

Total- 45

16BTCH103
16BTCH203 ENGINEERING CHEMISTRY 3 0 0 3

OBJECTIVES:

- To gain knowledge on adsorption phenomena.
- To make the students conversant with basics of water technology.
- To make the student acquire sound knowledge of electrochemistry and storage devices.
- To acquaint the student with concepts of fuels and rocket propellants.
- To develop an understanding of the basic concepts of corrosion science.
- To acquaint the students with the basics of surface chemistry.

OUTCOMES:

- Outline the basic principles of chemistry for water treatment (K)
- Examine the electrochemical properties to design non – conventional energy storage devices (S)
- Apply the concepts combustion of different fuels (S)
- Identify the concepts of corrosion and its protection in the engineering field (S)
- Apply the concepts of surface chemistry in the field of engineering (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I WATER TECHNOLOGY (9)

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNITII LECTROCHEMISTRY AND STORAGE DEVICES (9)

Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+}vs dichromate) –Electrolytic conductance-application (conductometric titration)-Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2-O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION (9)

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas,Combustion of fuel-Introduction-GCV-NCV-Flue gas analysis.

UNIT IV CORROSION SCIENCE (9)

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings- Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating - Hot dipping.

UNIT V SURFACE CHEMISTRY AND PHASE RULE (9)

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm-Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

16BTBT104 INTRODUCTION TO BIOTECHNOLOGY 3 0 0 3 100

Course Objectives

- To explain the basics of biology
- To summarize the overview of biotechnology and its applications
- To describe the scope of industrial biotechnology
- To elaborate the production of SCP and other metabolites
- To discuss the application of biotechnology in agriculture
- To outline the production of bioproducts and ethical considerations in Biotechnology.

Course Outcomes

- Outline the basics of biology and its importance
- Elaborate the scope of biotechnology and its application in rDNA technology
- Describe the production of primary and secondary metabolites
- Discuss how biotechnology involves in crop improvement
- Explain the various techniques and applications involved in Biotechnology.
- Discuss the development of bioproducts with social and ethical considerations.

UNIT I BASICS OF BIOLOGY (9)

Cell theory and Cell structure: Prokaryotic and eukaryotic cells, Biomolecules: Nucleic acid-DNA & RNA, Proteins and carbohydrates, Types of bonds involved in biomolecules,

UNIT II GENERAL BIOTECHNOLOGY (9)

Biotechnology: An overview – biotechnology – an interdiscipilinary pursuit, old and new biotechnology, scope and importance, Isolation and screening of microorganisms, microbial growth curve, basics of rDNA technology - cloning

UNIT III INDUSTRIAL BIOTECHNOLOGY (9)

Production of single cell protein (SCP): advantages and nutritional value, Overview of enzymes and its applications in various fields, Production of primary and secondary metabolites from microbial source - citric acid, ethanol fermentation and penicillin.

UNIT IV BIOTECHNOLOGY IN AGRICULTURE AND HEALTH CARE (9)

Biotechnology methods of crop improvement – plant tissue culture, Genetically modified crops – golden rice and Bt cotton, Conventional vaccines, concept of recombinant vaccines, recombinant insulin.

UNIT V ENVIRONMENTAL BIOTECHNOLOGY AND ETHICAL CONSIDERATIONS (9)

Biofuels, bioinsecticides, biofertilizers andBiosafety.

16BTBT105 BASIC ELECTRICAL AND ELECTRONICS ENGINEERING 3 0 0 3 100

OBJECTIVES

- To impart the basic knowledge about the DC Electriccircuits.
- To study the working of various ElectricalMachines.
- To study the basic concepts of Electrical safety andwiring
- To get the knowledge of Magnetic circuits and its properties
- To impart the basic knowledge about the DC Electriccircuits.
- To study the basic of power system

INTENDED OUTCOMES

At the end of this course, students will be able to

1. To understand and analyse basic electric and magnetic circuits.
2. Attributing the electric circuits with DC and AC excitation by applying various circuit laws.
3. Attributing the electrical machines and transformer.
4. Evaluate the various digital circuits in real time applications.
5. Analysis various semiconductor devices in real time applications.
6. Reproduce the Measuring Instruments and Electrical Installation.

UNIT I ELECTRIC CIRCUITS & MEASUREMENTS

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES 9

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURING INSTRUMENTS 9

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS 9

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNIT V- DIGITAL ELECTRONICS 9

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressionsusing logic gates - standard forms of Boolean expression.

16BTPH111

16BTPH211 ENGINEERING PHYSICS LABORATORY 0 0 4 2

OBJECTIVES:

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- The ability to use modern engineering physics techniques and tools, including laboratory instrumentation.

OUTCOMES:

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young's modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille's method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

16BTCH111
16BTCH211ENGINEERING CHEMISTRY LABORATORY 0 0 4 2
OBJECTIVES:

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of alkalinity ions, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To acquaint the students with the determination of molecular weight of a polymer by viscometry
- To carried out different types of titrations for estimation of concerned in materials
- To gain practical knowledge by applying the experimental methods to correlate with the theory.

OUTCOMES:

- The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
- Estimate the amount of alkalinity ions, hardness, chloride in water sample
- Measure molecular/system properties of conductance of solutions, EMF etc
- Acquaint the students with the determination of molecular weight of a polymer by visocometry
- Determine the corrosion rate of steel by weight loss method.
- Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Water sample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using $BaCl_2$ vs Na_2 SO_4.
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or $K_2Cr_2O_7$).
10. Estimation of Ferric ion by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometry.
13. Determination of chemical oxygen demand.

16BTBT112 COMPUTER PRACTICE AND PROGRAMMING LABORATORY 1 0 4 3

COURSE OBJECTIVES

- To familiarize with open source office packages
- To write programs for Understand the basic concept of C Programming, and its different modules that includes conditional and looping expressions, Arrays, Strings and Functions.
- To discuss the fundamental principles of C Programming, as well as in-depth data and information processing techniques
- To solve problems, explore real-world software development challenges, and create practical and contemporary applications
- To learn about data structures
- To apply the string handling functions to solve the given problem

COURSE OUTCOMES

- Study logical structure of a computer program
- analyze logical structure of a computer program
- understand computer program, and different constructor to develop a program in 'C' language
- Utilize the basic data structures.
- Distinguish and use the fundamental data types.
- Utilize a simple programming environment, compile programs and interpret compiler errors.

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords-General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings-Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheet and presentation software in Linux

2. Programming in Scratch:

   Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming

3. C Programming:

   Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

Total Hours: 45

16BTBT113 ENGINEERING GRAPHICS 0 0 4 2 100

COURSE OBJECTIVES:

- To understand the importance graphics in engineering
- To learn basic engineering drawing formats
- To develop the graphical skills for communication of concepts, ideas and design of engineering products through technical drawings.
- To learn to take data and transform it into graphic drawings.
- To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Know and understand the conventions and the method of engineering drawing.
- Interpret engineering drawings using fundamental technical mathematics.
- Construct basic and intermediate geometry.
- Improve their visualization skills so that they can apply these skill in developing new products.
- Improve their technical communication skill in the form of communicative drawings.
- Comprehend the theory of projection.

UNIT I INTRODUCTION 9

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES 8

SCALES:Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING 9

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES 8

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS 8

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam) 3

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

16BTCC151 **HUMAN VALUES** **1 0 0 - 100**

OBJECTIVE

1. To know the value of being a human being and the value of being a useful citizen

UNIT I **3**

Human life on Earth - Concept of Human Values - Value Education - Aim of education and value education - Types of values - Components of values – Attitudes – types of attitudes

UNIT II **3**

Self Development : Self analysis – Goal Setting - Thought Analysis – Guarding against Anger - Respect to age, experience, maturity, family members, neighbors, co-workers

UNIT III **3**

Individual Qualities – Truthfulness – Constructivity – Sacrifice – Sincerity - Self Control – Altruism – Tolerance - Scientific Vision – Regulating Desire

UNIT IV **3**

Mind Culture - Modern Challenges of Adolescent - Emotions and behavior - Sex and spirituality - Adolescent Emotions - Meditation

UNIT V **3**

Body and Mind Fitness : (a) Physical Exercises (b) Activities: (i) Moralization of Desires (ii) Neutralization of Anger (iii) Eradication of Worries (iv) Benefits of Blessings

TOTAL **15**

16BTCC201A BUSINESS COMMUNICATION 3 0 0 3

OBJECTIVES:

- To help students comprehend the role of listening skills in effective communication.
- To familiarize students with verbal and non-verbal communication.
- To expose students to neutral accent.
- To develop emotional intelligence skills in them for enhancing their self-esteem.
- To assist them in setting goals and developing positive attitude.
- To develop soft skills and inter personal skills which will make excel in their job.

OUTCOMES:

- Design and deliver a persuasive presentation that convinces the audience of the topic's relevance and overcomes resistance, using appropriate visual support and adhering to a specified time limit.
- Use a strategic communication model and critical thinking to identify objectives, analyse audiences, and choose the most effective structure and style for delivering strategically sound written and spoken messages.
- Practice principles of effective business writing and document design in all written documents.
- Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
- Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.
- Acquire decision making skills, problem solving skills and assertive skills.

UNIT I

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- Description of Graphics and visual aids - interpretation of graphs using expressions of comparison and contrast .

UNIT III

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body langage – Etiquette- Organization of presentation – brain storming- Negotiations.

UNIT - IV

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT - V

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

16BTCC201B

TECHNICAL ENGLISH 3 0 0 3

OBJECTIVES:

- To motivate learners to acquire listening & speaking skills in both formal and informal context
- To focus on question forms & to make them understand the important of using question tags and also the functional use of transformation of sentences.
- To improve their reading habit and to train them in critical and analytical reading
- To equip them to write for academic as well as work place context
- To enable students to face interviews
- To develop admire and appreciate elegancy in communication.

OUTCOMES:

- Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
- Enhance them reading texts critically and analytically
- Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
- Enrich the ability to face interviews with confidence.
- Enable to write documents and formal written communication
- Admire and appreciate elegancy in communication.

UNIT-1 (10)

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentences - Question tags. **Vocabulary** – Homonyms and Homophones.

UNIT-II (8)

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar** - Modal verbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs - Idioms.

UNIT – III (9)

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R)**Writing** - Essay writing -Minutes of meeting - Agenda – **Grammar** - Active and Passive voice - Purpose expression. **Vocabulary** - Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV (8)

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication. **Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Job application - Resume writing - Checklist preparation. **Grammar** - Numerical expressions – Collocations - **Vocabulary** - Singular and Plural (Nouns)

UNIT- V **(10)**

Listening – Types of listening- Improving listening comprehension**. Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing- **Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

16BTBT202 MATHEMATICS II 3 2 0 4

OBJECTIVES:

- To impart analytical ability in solving mathematical problems as applied to the respective branches of Engineering.
- To understand the concepts ofMultiple integrals, Functions of several variables and Fourier series
- Fourier series to apply physical science and signal systems.
- To understand the concepts ofBoundary value problems and Statistics.
- To acquire knowledge on the Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.
- To enhance the knowledge on the various measures of central tendencies, dispersion, moments, skewness, kurtosis and to interpret them.

OUTCOMES:

- The students will be able to understand mathematical tools needed in evaluating multiple integrals and their usage
- To Calculate and establish identities connecting these quantities, to Evaluate line, surface and volume integrals in simple coordinate systems.
- The students will be able to familiarize functions of several variables which is used in many physical engineering problems. Apply differentiation to solve maxima and minima problems.
- To solve differential equations using Fourier series analysis which plays a vital role in engineering applications
- To introduce the Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.
- To compute various measures of central tendencies, dispersion, moments, skewness, kurtosis and to interpret them.

UNIT -I MULTIPLE INTEGRALS (12)

Double integration in Cartesian – Change of order of integration – Area as a double integral – Triple integration in Cartesian coordinates.

UNIT -II FUNCTIONS OF SEVERAL VARIABLES (12)

Function of two variables – Taylor's expansion – maxima and minima – constrained maxima and minima by Lagrangian multiplier method – Jacobians.

UNIT- III FOURIER SERIES (12)

Dirchlet's conditions – statement of Fourier theorem – Fourier coefficients – change of scale – Half range series – Harmonic Analysis.

UNIT- IV BOUNDARY VALUE PROBLEMS (12)

Method of separation of variables – one dimensional wave equation – one dimensional heat equation – steady state conditions – zero and non – zero boundary conditions.

UNIT – V STATISTICS (12)

Measures of central tendency – Mean, Median, Mode, Standard deviation – moments – skewness and kurtosis-correlation – rank correlation.

16BTCC204 ENVIRONMENTAL SCIENCES 3 0 0 3

OBJECTIVES:

- To give a comprehensive insight into natural resources, ecosystem and biodiversity.
- To educate the ways and means of the environment
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures
- To impart knowledge on ecosystem and biodiversity.
- To inculcate the environmental principles in the field of engineering and technology

OUTCOMES:

- Recognize the importance of natural resources (S)
- Associate themselves with the various ecosystems (S)
- Describe the importance of biodiversity (S)
- Identify and minimize the difference pollutions (S)
- Prioritize and analyses the social issues (S)
- Integrate the environmental principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES (9)

Definition, Scope and Importance – Need for public awareness -Forestresources: Useandover-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM (9)

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY (9)

Introduction to biodiversity, Definition- Genetic diversity, Species diversity and Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION (9)

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT (9)

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

16BTBT205 **BIOCHEMISTRY-I** **3003100**

Course Objectives

- To understand the foundations of biochemistry
- To discuss the properties of water and its interactions
- To explain the structure and properties of carbohydrates
- To explain the structure and properties of amino acids, Peptides, Proteins and lipids
- To understand the chemistry and function of nucleotides and nucleic acids.
- To discuss the various functions and properties of important biomolecule.

Course Outcomes

1. Outline the cellular foundations of Biochemistry
2. Interpret different types of biomolecules and its interaction with water.
3. Analyze the function and properties of carbohydrates.
4. Explain the importance of amino acids, Peptides, Proteins and lipids.
5. Examine the structure, function and properties of nucleotides, nucleic acid, DNA.
6. Assess various functions and properties of important biomolecule.

UNIT-I THEFOUNDATIONSOFBIOCHEMISTRY (8)

Cellularfoundations: theuniversalfeaturesoflivingcells,phylogeny ofthreedomainoflife, classificationoforganisms basedonenergy.Chemicalfoundation: essentialelements,common functionalgroupsofbiomolecules, molecularcomponent ofan*E.coli*cell,macromoleculesofcells Physicalfoundation:Energy interconversion inlivingorganisms,entropy,enthalpy,Gibbstheory, Geneticfoundations:DNAtoRNAtoprotein,Evolutionary foundations:geneticmutation,roleof geneticmutation,stimulationofchemicalevaluation,moleculararanatomy revealingevolutionary relationship.

UNIT-II WATER (9)

Weak interactions in aqueous systems, Hydrogen bonding, structure of water molecules, bond dissociationenergy,commonhydrogenbondsinbiologicalsystems,directionality ofhydrogenbond, electrostatic interaction of water with charged solutes, Polar, Nonpolar, and Amphipathic Biomolecules,Entropy changesupondissolving crystallinesubstances,clathrates,micelles,Vander Waalsinteraction,hydrophobic interaction,fourtypesofnoncovalentinteractionsinbiomoleulesin aqueoussolvent,colligativeproperties,osmosisandthemeasurementofosmoticpressure,ionization ofweak acid and weakbases,buffers.

UNIT-III (a)AMINOACIDS, PEPTIDES, PROTEINS (10)

Generalstructureofaminoacid,properties, conventions of aminoacids, classification of aminoacids By R group,uncommon aminoacids, Zwitterion. Peptides: Peptide bond, polypeptides, oligomers, protomers.Proteins: hierarchy, four levels of structure in protein, steps in sequencing of a polypepide, locating disulfide bond.Chemical synthesis of peptides.

(b)LIPIDS

Fattyacids,structural lipids in membrane, galactolipids, sphingolipids,and sterols, lipid extraction.

UNIT-IV CARBOHYDRATESANDGLYCOBIOLOGY (9)

Monosaccharides: aldose, ketose, epimers, pyronoses, furanoses, anomers, Haworth formula, conformation of pyranoses, sugars as reducing agents, Disaccharides: Glycosidic bonds,hydrolysis, Polysaccharides:starch,glycogen,dextrans,homopolysaccharides, chitin. Glyconjugates: Glycoproteins, proteoglycan, and glycolipids.Sugarcode, methods of carbohydrate analysis

UNIT-V NUCLEOTIDESANDNUCLEICACIDS (9)

Nucleotides and nucleic acid nomenclature, Phosphodiesterase Linkage, structure of purine and pyrimidine, Absorption spectra of the common nucleotide,Nucleic acid structure: DNA stores genetic information, DNA is a Double helix, Watson-Crick structure, RNA-three dimensional structure, nucleicacid chemistry:denaturation and annealing, DNA sequences determination,chemical synthesis of DNA, purine, pyrimidine synthesis.

16BTBT206 **MATERIALS SCIENCE** **3 0 0 3**

OBJECTIVE:

- To enrich the understanding of various types of materials and their applications in engineering and technology

INTENDED OUTCOME:

- The students will have the knowledge on different types of materials and that knowledge will be used by them in different engineering and technology

UNIT I CONDUCTING MATERIALS (9)

Conductors – classical free electron theory of metals – Electrical and thermal conductivity – Wiedemann – Franz law – Lorentz number – Draw backs of classical theory – Quantum theory – Fermi distribution function – Effect of temperature on Fermi Function – Density of energy states – carrier concentration in metals.

UNIT II SEMICONDUCTING MATERIALS (9)

Intrinsic semiconductor – carrier concentration derivation – Fermi level – Variation of Fermi level with temperature – electrical conductivity – band gap determination – extrinsic semiconductors – carrier concentration derivation in n-type semiconductor – variation of Fermi level with temperature and impurity concentration – compound semiconductors – Hall effect –Determination of Hall coefficient – Applications.

UNIT III MAGNETIC AND SUPERCONDUCTING MATERIALS (9)

Origin of magnetic moment – Dia and para magnetism – Ferro magnetism – Domain theory – Hysteresis – soft and hard magnetic materials – anti – ferromagnetic materials – Ferrites – applications.

Superconductivity : properties - Types of super conductors – BCS theory of superconductivity(Qualitative) - High Temperature superconductors – Applications of superconductors – Magnetic levitation.

UNIT IV DIELECTRIC MATERIALS (9)

Electrical susceptibility – dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – internal field – Claussius – Mosotti relation (derivation) – dielectric loss – dielectric breakdown – Applications of dielectric materials – ferroelectricity and applications.

UNIT V ADVANCED MATERIALS (9)

Metallic glasses: preparation, properties and applications.

Shape memory alloys (SMA): Characteristics, properties of NiTi alloy, applications.

Composite materials, Aircraft materials and non-metallic materials.

Nano materials: synthesis – Physical and chemical vapour deposition – ball milling - properties of nanoparticles and applications. Carbon nanotubes: structure – properties and applications.

16BTBT212 BIOCHEMISTRYLABORATORY 0032100

COURSE OBJECTIVE:

To experiment with sugar quantification method
To perform analysis to distinguish reducing and non-reducing sugars
To understand the protein quantification using Lowry's method
To explain the quantification of lipid and amino acid
To experiment the separation of solutes through chromatography
To demonstrate the DNA and RNA estimation though DPA and Orcinol method.

COURSE OUTCOMES:

1. Outline the sugar quantification through anthrone method
2. Illustrate the procedure for distinguishing reducing and non-reducing sugars
3. Perform the protein quantification
4. Recall the procedure for distinguishing immino and amino acids using ninhydrin test.
5. Interpret the solutes separated through chromatography
6. Discuss the DNA and RNA estimation.

LIST OF EXPERIMENTS:

1. Quantificationofsugars(Anthronemethod)
2. Distinguishreducingandnonreducingsugars.
3. Quantificationof proteins(Lowry*et al*Method)
4. UsingninhydrinfordistinguishingIminoand aminoacids
5. Quantificationoflipids
6. Analysisofoils-Acidnumber
7. PaperChromatography
8. EstimationofDNA(DPAmethod)
9. EstimationofRNA(Orcinolmethod)

16BTBT301 PROBABILITY AND STATISTICS 3 2 0 4

OBJECTIVES:

- This course aims at providing the required skill to apply the statistical tools in engineering problems.
- To introduce the basic concepts of probability and random variables.
- To introduce the basic concepts of two-dimensional random variables.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.
- To acquaint the student with concepts ofsampling distributions and statistical techniques used in engineering and management problems.

OUTCOMES:

- To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
- To apply the concept of testing of hypothesis for small and large samples in real life problems.
- To apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.
- To have the notion of sampling distributions and statistical techniques used in engineering and management problems.
- To make the student acquire sound knowledge of techniques in quality control that model engineering problems.

UNIT- I PROBABILITY (11)

Probability – Definition – Law - conditional probability-Bayes theorem- Probability mass function - Probability density functions.

UNIT- II RANDOM VARIABLES (13)

Introduction to one dimensional random variables – Discrete – Continuous - Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Regression.

UNIT- III TESTING OF HYPOTHESIS (12)

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions – Tests for independence of attributes and Goodness of fit.

UNIT – IV DESIGN OF EXPERIMENTS (12)

Analysis of variance – one way classification – CRD – Two-way classification – RBD – Latin square.

UNIT – V RELIABILITY AND QUALITY CONTROL (12)

Concepts of reliability – hazard functions – Reliability of series and parallel systems – control charts for measurement ($\bar{X}$ and R $charts$) - Control charts for attributes (p, c and np charts).

16BTBT302 CELL BIOLOGY 3003100

Course Objectives

- To explain the cell structure of Prokaryotes and Eukaryotes
- To understand how cells undergo mitosis
- To outline the views on transport across the cell membranes.
- To explain the signaling process involved in the cell.
- To illustrate the function of mitochondria and chloroplast.
- To recall the importance of cell signaling process to understand diseases.

Course Outcomes

1. Summarize the structure and function of cell components
2. Understand the role of the cytoskeletal proteins and link it with cell cycle.
3. Illustrate the transport process across the cell membrane.
4. Outline the basic ideas on signaling process through the receptors.
5. Explain the electron transfer in mitochondria.
6. Relate the importance of cell signaling process to understand diseases.

UNIT-I CELLSTRUCTUREANDCELLORGANELLES (9)

Historyofcell biology,comparisonofeukaryoticandprokaryoticcells,principlesofmembrane organisation,membrane proteins; Structure ofprokaryoticcells - cilia, flagella,cell wall;Structureofeukaryoticcellorganelles:cytoplasm,endoplasmic reticulum, mitochondria, chloroplast, peroxisomes, nucleus, Microscopic techniques for viewing cell organelles.

UNIT-II CYTOSKELETALPROTEINS &CELL DIVISION (9)

Cytoskeletal proteins, contractileproteins–actin&myosin, cell adhesion proteins;extracellular matrix; Typesofcelldivision:mitosis&meiosis, Cell cycle and molecules that control cell cycle

UNIT-III TRANSPORTACROSSCELLMEMBRANES (9)

Passive&activetransport,permeases,sodiumpotassiumpump,Ca2+ATPasepumps, lysosomal and vacuolarmembraneATPdependentprotonpumps,cotransportsymport, antiport, active group translocation; endocytosisandexocytosis;Entryofviruses andtoxinsintocells.

UNIT-IV RECEPTORSANDMODESOFCELLSIGNALLING (9)

Cytosolic,nuclearandmembraneboundreceptors,examplesofreceptors, identify cation and purification of cell surface receptors, autocrine, paracrineand endocrinemodesofaction

UNIT-V FUNCTIONOFMITOCHONDRIAANDCHLOROPLAST (9)

ElectronTransportinMitochondria:Electrontransportchain, ReductionPotentialsof ElectronCarriers, Electrontransferfromreducedcytochrome*c*toO_2,Chloroplast:photosyntheticstages andlight-absorbingpigments.

16BTBT303 MICROBIOLOGY 3003100

Course Objectives

- To illustrate the basic concepts of microbiology and different microbial identification techniques.
- To explain the structure and multiplication of microorganism.
- To interpret the microbial growth and its metabolism.
- To outline the mechanism for the control of microorganisms.
- To infer the application of microorganism in industries.
- To explain the role of microorganisms in bioremediation.

Course Outcomes

1. Outline the history of microbiology and microbial staining techniques.
2. Discuss the microbial structural organization and multiplication.
3. Infer the basic requirements for microbial growth towards the biosynthesis of important molecules.
4. Discuss the controlling mechanism of microorganisms.
5. Illustrate the production of various metabolites and its applications.
6. Explain the role of microorganisms in bioremediation.

UNIT-I INTRODUCTION (8)

History of microbiology,classificationandnomenclatureof microorganism, Microbes in soil, air and water microscopicexaminationofmicroorganisms, lightandelectronmicroscopy,principlesofdifferent stainingtechniqueslikegramstaining,acidfast, capsular staining,flagellar staining.

UNIT-II MICROBES-STRUCTUREANDMULTIPLICATION (10)

Structuralorganizationandmultiplicationofbacteria,viruses,algaeandfungiwithaspecialmention oflifehistoryofactinomycetes,yeast,mycoplasmaandbacteriophage.

UNIT-III MICROBIALNUTRITION,GROWTHANDMETABOLISM (10)

Thecultivationofbacteria,Nutritionalrequirementsofbacteriaanddifferentmediausedforbacterial culture; growth curve and different methods to quantify thebacterial growth, aerobic and anaerobic bioenergeticsandutilizationofenergyforbiosynthesisofimportantmolecules.

UNIT–IV CONTROLOFMICROORGANISMS (8)

Physicaland chemical controlofmicroorganisms,host-microbeinteractions,antibacterial, anti-fungalandanti-viralagents,modeofactionandresistancetoantibiotics,clinicallyimportant microorganisms.

UNIT–V INDUSTRIALANDENVIRONMENTAL MICROBIOLOGY (9)

Primarymetabolites;secondarymetabolitesandtheirapplications- preservationoffood;Microorganismusedfortheproduction ofpenicillin,alcohol,vit.B-12;biogas;bioremediation; mycorrhiza;BiologicalNitrogen fixation,microorganismsandpollutioncontrol.

16BTBT304 PRINCIPLES OF CHEMICAL ENGINEERING 3003100

COURSE OBJECTIVES

- To understand the basic laws and concepts of chemical calculations.
- To explain the first and second laws of thermodymics.
- To explain the overall material balances of chemical reactions and its basic calculations.
- To discuss the fluid flow mechanics and its concepts.
- To understand the fluid transportation.
- To understand the basic principles of chemical calculations and measurements.

COURSE OUTCOMES

1. Outline the basic chemical calculations and the basic laws governing it.
2. Illustrate basic laws of thermodynamics.
3. Infer the overall material balances of chemical reactions and its basic calculations.
4. Outline the application of fluid flow mechanics in chemical engineering.
5. Discuss the fluid flow and its measurements.
6. Understand the basic principles of chemical calculations and measurements.

UNIT-I BASICCHEMICALCALCULATIONS (9)

SIunits,stoichiometry,basicchemicalcalculations:mole,atomicmassandmolarmass,equivalentmass,conversionof massfunctionto molefraction,molarity,normality,density,specific gravity.Ideal gaslaw-Idealmixturesandsolutions–Dalton's lawofadditivevolumes, Henry'slaw,Raoult'slaw, ConceptsofSimpson'sruleandtheirapplicationstodifferentsystems.

UNIT-II FIRSTANDSECONDLAWSOFTHERMODYNAMICS (8)

Energybalances,sensibleheat,latentheat,vapourpressure,steadyandunsteadystatecalculations.

UNIT-III MATERIALBALANCES (10)

Overalland componentbalances,material balanceswithoutandwithchemicalreactions,degreesoffreedom,steadyandunsteadystate,unit operations,recycle andbypasshumiditycalculations.

UNIT-IV FLUIDMECHANICS (10)

Fluids;fluidstaticsandapplicationsin chemicalengineering;fluidflow;laminar; Turbulentpressuredrops;compressiblefluidflowconcepts;multiphaseflowconcepts.

UNIT-V FLOWTHROUGHPACKEDCOLUMNS (8)

Fluidisation,centrifugalandpistonpumps,characteristics,compressors,work.

Total Hours: 45

16BTBT305 BIO-ORGANICCHEMISTRY 3003100

COURSE OBJECTIVES

- To explain the basic reactions in organic chemistry
- To discuss the kinetics of enzymes using different methods
- To illustrate the enzyme inhibition process
- To outline the various enzymatic reactions in relation with stereochemistry
- To determine the specific enzyme structure and mechanism
- To classify the protein folding kinetics

COURSE OUTCOMES

1. Interpret the basic reactions in stereochemistry
2. Derive and calculate the kinetics of enzymes in different orders
3. Summarize the enzymatic reactions in stereochemistry
4. Illustrate the mechanism behind specific enzymes
5. Explain the protein folding kinetics
6. Discuss the protein folding pathways

UNIT-I CONCEPTSINORGANICCHEMISTRY (9)

Stereochemistry:opticalactivity,chiralcenter – enantiomers - *R*, *S* notation, stereo selectiveand stereospecificreactions-Zand E isomers, *Re*, *Si* faces, conformationalanalysis,ethane,n-butane mechanismsof SN1 SN2 reactions, E_1E_2 reactions, ester formation and hydrolysis,reaction rates, hammond'spostulate,h/deffects,catalysis:generalacid –base andcovalentcatalysis.

UNIT-II ENZYMEKINETICSANDINHIBITION (9)

Steadystatekinetics,derivationandsignificanceofMichaelis Mentenequation,Lineweaver-Burke Plot,singleanddoubledisplacementreactions, co-operativitywithrespectto oxygenbindingby haemoglobin.Inhibition–reversibleandirreversible–competitive,non-competitive, uncompetitive inhibition(characteristicsandexamples).

UNIT-III STEREOCHEMISTRY OF ENZYMATIC REACTIONS (9)

Stereospecificenzymaticreactions -fumarase catalysed reactions -NADdependentoxidation and reductionreactions -stereochemistryofnucleophilicreactions -chiralmethylgroup, chiralphosphate.

UNIT-IV ENZYMESTRUCTUREANDMECHANISM (9)

The dehydrogenases (alcohol dehydrogenase) - proteases (serine protease),lysozyme, Ribonucleases, Ribozymes.

UNT-V PROTEINFOLDING KINETICS AND FOLDING PATHWAYS (9)

Kineticsofproteinfolding: basicmethods,twostatekinetics,multistate kinetics,transitionstatesinproteinfolding,
$^{1}H/^{2}H$exchangemethods,foldingofpeptides,CI2folding,molecularchaperones.

Total Hours: 45

16BTBT311 CELL BIOLOGY LAB 0032100

Course objective:

- To understand the nature of the cells present in the biological sample through microscope.
- To explain the different staining techniques.
- To understand the stages of mitosis.
- To understand the chloroplast isolation from leaves.
- To demonstrate the different types of blood cells.
- To understand about the osmosis and tonicity.

Course outcomes:

1. Illustrate the handling of microscope and categorize the cells present in the biological sample.
2. Interpret the various staining techniques to identify the cell.
3. Outline the stages of mitosis.
4. Understand the blood cell identification.
5. Understand the knowledge about the cell concentration with osmosis and tonicity.
6. Recall assay to identify the cell condition.

1. Principles of microscopy – Phase contrast and Fluorescent Microscopy.
2. Identification of given plant, animal and bacterial cells and their components by microscopy.
3. Staining Techniques: (i) Leishmann staining (ii) Giemsa staining.
4. Staining for different stages of mitosis in *Allium cepa* (Onion).
5. Separation of plant pigments by Chromatography.
6. Identification of different types of blood cells
7. Isolation of chloroplasts from spinach leaves.
8. Osmosis and Tonicity.
9. Tryphan Blue Assay.

16BTBT312 MICROBIOLOGY LAB 0032100

Course objective:

- To understand the nature of the cells present in the biological sample through microscope.
- To explain the different staining techniques.
- To discuss the different culture media prepation.
- To demonstrate the culturing, growth and control of micro organisms.
- To understand about the chemicals that controls the bacterial growth.
- To optimize the parameters on bacterial growth.

Course outcomes:

1. Illustrate the handling of microscope and categorize the cells present in the biological sample.
2. Interpret the various staining techniques to identify the cell.
3. Outline the different types of media preparation techniques.
4. Understand the growth of the organism and the parameters that influences their stability to grow.
5. Understand the knowledge about the chemicals that controls the bacterial growth.
6. Recall the growth curve and the control of microorganisms.

1. LaboratorySafetyandAsepticTechniques
2. Microscopy-LightMicroscopy
3. Culturemedia–Types,preparationofnutrientbrothandnutrientagar
4. Culturingofmicroorganisms –inbrothandinplates(spread plate, pourplate,streakplate)
5. StainingTechniques & MotilityTest
6. QuantitationofMicroorganisms
7. ChemicalControlofMicroorganisms &AntibioticSensitivityAssay
8. BacterialGrowthCurve
9. Effectofdifferentparametersonbacterial growth(temperature,UVirradiation)

16BTBT313 BIO-ORGANICCHEMISTRY LAB 0032100

COURSE OBJECTIVES

- To understand the synthesis of Aspirin and p-nitroacetanilide
- To explain the preparation method for Acetanilide from Aniline
- To experiment on sucrose hydrolysis
- To perform reactions for the preparation of alpha D-glucopyranose penta acetate and 1,2:5,6-dicyclohexylidine- alpha-D glucofuranose.
- To determine the extraction procedure for lycopene
- To discuss the methods for the preparation of oleic acid and casein

COURSE OUTCOMES

1. Analyze the protocol for aspirin synthesis and p-nitroacetanilide
2. Infer the preparation of Acetanilide from Aniline
3. Outline the inference on sucrose hydrolysis
4. Determine the protocol for preparation of alpha D-glucopyranose penta acetate and 1,2:5,6-dicyclohexylidine- alpha-D glucofuranose.
5. Perform the extraction of lycopene from different sources
6. Experiment the suitable method for the preparation of casein from milk

1. SynthesisofAspirin.
2. Synthesisofp-nitroacetanilide.
3. Preparationof AcetanilidefromAniline.
4. HydrolysisofSucrose.
5. Extractionof Lycopene
6. Preparationof alphaD-glucopyranose penta acetate.
7. Preparationof 1,2:5,6-dicyclohexylidine-alpha-Dglucofuranose.
8. Preparationof Oleicacid.
9. Preparationof casein frommilk

16BTBT351 SOFT SKILLS 1 0 0 - 100

OBJECTIVE

1. To elevate the students into productivity powerhouses who can employ life skills to better their performances

UNIT I **4**

Overview to communication, self Introduction, Presentation on their own topic, Extempore, Group Activity

UNIT II **3**

Group Discussion, Do's and Don'ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III **4**

Introduction to HRM – Questions - Do's and Don't's - Interview - Mock GD - Stress Management

UNIT IV **4**

Personality Development - Presentation skills, Interpersonal skills, Critical thinking, Confidence building and Stress management.

TOTAL 15

16BTBT401 UNIT OPERATIONS 3003100

Course Objectives

- To infer the basic knowledge on agitation and its flow pattern in differentsystems.
- To explain the concept of filtration and its industrialapplication.
- To understand the different modes of heat transfer and its transfer through different dimesnsionalsurfaces.
- To discuss the types of convectional heat transfer and itsapplication.
- To explain the different types and designing parameters of heat exchangers and evaporators.
- To explain the basics of design, equipmentation and calculations of evaporators and heat exchangers.

Course Outcomes

1. Interpret the properties of mixing and agitation in different flowsystems.
2. Outline the basic principle of filtration and its application in different filtrationmethods.
3. Discuss the modes of heattransfer.
4. Illustrate the mechanism of heat transfer through different dimensionalsurfaces.
5. Infer the basics of convectional heat transfer in differentsurfaces.
6. Appraise the basics of design, equipmentation and calculations of evaporators and heat exchangers.

UNIT-I MIXINGANDAGITATION (8)

Purposeofagitation,equipmentsforagitation,flowpatterninagitatorvessels,dimensionalanalysis; powerforagitation;agitationofliquids;gas-liquidsystems;gas-solid suspensions;agitatorscaleup.

UNIT-II FILTRATION (8)

Filtration-typesoffiltration,filtermedia,selectionofmedium,filteraids-filtertheory, constant pressurefiltration,constantvolumebatchfiltration;continuousfiltration;industrialfilters;settlingand sedimentation;centrifugation.

UNIT-III MECHANISMOFHEATTRANSFER (10)

Modesofheattransfer,principlesofconduction,Fourier'sLawofheat conduction,thermal conductivity,steadystate conduction,combinedresistances,heatflowthroughacylinderand sphere,unsteady stateconduction,heattransferfromextendedsurfaces.

UNIT-IV CONVECTIONHEATTRANSFER (10)

Dimensionalanalysis,forcedandnatural convection,convectioninflowoversurfaces throughpipes boilingandcondensation.

UNIT-V HEATEXCHANGERS (9)

Heatexchangertypes,Equipments;overallheattransfercoefficients;designofheatexchangers;NTU concept; Evaporators;single andmultipleeffects;massandenthalpybalances.

Total Hours: 45

16BTBT402 CHEMICAL THERMODYNAMICS 3003100

Course Objectives

- To explain the thermodynamic properties of fluids and itscalculations.
- To discuss the basic concepts of solutionproperties.
- To illustrate the phase equilibria concepts for varioussystems.
- To outline the equilibrium criteria for various chemicalreactions.
- To infer the knowledge on general thermodynamicprocesses.
- To explain the working principles and the process involved in the refrigeration and Liquefactionsystem.

Course Outcomes

1. Discuss the various properties of the fluids and itscalculations.
2. Explain the concept of solution thermodynamics and compositionmodels.
3. Analyze the criteria of phase equilibria for different componentsystem.
4. Apply the concept of chemical reaction equilibria and equilibriumconversion.
5. Analyze the thermodynamic flowprocess.
6. Illustrate the working principles and the process involved in the refrigeration and Liquefactionsystem.

UNIT-I THERMODYNAMICPROPERTIESOFFLUIDS (9)

Volumetricpropertiesof fluidsexhibitingnonidealbehavior;residualproperties;estimationof thermodynamicpropertiesusingequationsofstate; calculationsinvolvingactualpropertyexchanges; Maxwell’srelationsandapplications.

UNIT-II SOLUTIONTHERMODYNAMICS (9)

Partialmolarproperties;conceptsof chemicalpotentialandfugacity;idealandnon-ideal solutions; conceptsand applicationsofexcesspropertiesof mixtures;activitycoefficient; compositionmodels;GibbsDuhemequation.

UNIT-III PHASEEQUILIBRIA (9)

Criteriaforphaseequilibria;v-l-ecalculationsforbinaryandmulticomponentsystems; liquid-liquidequilibriaandsolid-solidequilibria.

UNIT-IVCHEMICALREACTIONEQUILIBRIA (9)

Equilibriumcriteriaforhomogeneouschemicalreactions;evaluationofequilibrium constant;effectoftemperatureandpressureonequilibriumconstant;calculationof equilibriumconversionand yieldsforsingle and multiplereactions.

UNIT-VTHERMODYNAMICANALYSISOFPROCESSES (9)

Thermodynamics of flow processes, Conceptoflostwork;entropygeneration; powercycle (rankine, regenerative, reheat);liquefaction and refrigeration

Total Hours: 45

16BTBT403 INSTRUMENTAL METHODS OF ANALYSIS 3003100

Course Objectives

- To explain the basic concepts of wave properties and radiation sources.
- To discuss the instrumentation and application of various molecular spectroscopy.
- To understand the concept and instrumentation of magnetic resonance spectroscopy and mass spectroscopy.
- To categorize the different separation methods for product purification.
- To outline the thermal analysis techniques and its applications.
- To understand the instrumentation and applications of different thermal analysis techniques.

Course Outcomes

1. Infer the various sources and properties of electromagnetic radiation.
2. Discuss the theory of molecular absorption spectroscopy.
3. Relate the theory, instrumentation and applications of various molecular spectroscopies.
4. Interpret the theory and instrumentation of magnetic resonance and mass spectroscopy.
5. Identify the various chromatographic and electrophoresis techniques for purification.
6. Explain the instrumentation and applications of different thermal analysis techniques.

UNIT I INTRODUCTION TO SPECTROMETRY (9)

Properties of electromagnetic radiation- wave properties – components of optical instruments – Sources of radiation – wavelength selectors – sample containers – radiation transducers – Signal process and read outs – signal to noise ratio - sources of noise – Enhancement of signal to noise - types of optical instruments – Principle of Fourier Transform optical Measurements.

UNIT II MOLECULAR SPECTROSCOPY (9)

Molecular absorption spectrometry – Measurement of Transmittance and Absorbance – Beer's law – Instrumentation - Applications -Theory of fluorescence and Phosphorescence Instrumentation – Applications – Theory of Infrared absorption spectrometry – IR instrumentation – Applications – Theory of Raman spectroscopy – Instrumentation – applications, Circular dichroism spectroscopy.

UNIT III MAGNETIC RESONANCE SPECTROSCOPY AND MASSSPECTROMETRY (9)

Theory of NMR – environmental effects on NMR spectra – chemical shift- NMRspectrometers – applicatons of 1H and 13C NMR- Molecular mass spectra – ion sources – Mass spectrometer. Applications of molecular mass - Electron paramagnetic resonance- g values – instrumentation.

UNIT IV SEPARATION METHODS (9)

General description of chromatography – Band broadening and optimization of column performance- Liquid chromatography – Partition chromatography - Adsorption chromatography – Ion exchange chromatography -size exclusion chromatographyAffinity chromatography- principles of GC and applications – HPLC- Capillary electrophoresis – Applications

UNIT V THERMAL METHODS (9)

Different thermal analysis techniques. Differential scanning calorimetry - instrumentation & application. Differential thermalanalysis - instrumentation & application, DTA curve. Thermogravimetry – instrumentation & application, TG curve.

Total Hours: 45

16BTBT404 MOLECULAR BIOLOGY 3003100

Course Objectives

- To outline the classical genetics concepts of eukaryotes and prokaryotes.
- To explain the structure of nucleic acids and DNAreplication.
- To understand the molecular process oftranscription.
- To understand the basic machinery of translation and its mechanisms.
- To understand the regulation of gene expression and various types of mutation
- To discuss the different types of mutation and DNA repair mechanisms .

.

Course outcomes

1. Discuss the concepts related to eukaryotic and prokaryoticgenetics.
2. Identify the structure of nucleic acids, DNA replication and chromosome organization.
3. Illustrate the prokaryotic and eukaryotic transcription, and its post transcriptional modifications.
4. Outline the concept of genetic code, translation process and post translational modifications.
5. Interpret the process of regulation of gene expression and itsimportance.
6. Identify the different types of mutation and DNA repair mechanisms.

UNIT-I CLASSICALGENETICS (7)

Mendeliangenetics,linkage,crossingover,classicalexperiments–HersheyandChase, AveryMcLeod &McCarty. Bacterialconjugation,transductionandtransformation. Conformation of DNA and RNA.

UNIT-II STRUCTUREOFNUCLEICACIDSANDDNAREPLICATION (10)

Types of RNA, Replication in prokaryotes, D-loop and rollingcircle mode of replication, replication of linear viral DNA. Organisationofeukaryoticchromosome – cot value, replicationoftelomeresin eukaryotes

UNIT-III TRANSCRIPTION (10)

Inprokaryotesandeukaryotes,featuresofpromotersandenhancers, transcription factors,nuclearRNA splicing,regulationoftranscription: prokaryote and eukaryote

UNIT-IV TRANSLATION (9)

Elucidationofgeneticcode, basic machinery of translation and its mechanism, Post translational modifications, codonusage,suppressormutation,regulationoftranslation: prokaryote and eukaryote.

UNIT-V REGULATIONOFGENEEXPRESSION (9)

Lacandtrpoperon,phagelifecycle,mutationand repairof DNA, regulation of gene expression in eukaryotes

16BTBT405 BIOPROCESS PRINCIPLES 3003100

Course Objectives

- To understand the process of fermentation and basic fermentorconfiguration.
- To explain the medium requirements and media optimization methods for fermentation process.
- To explain the different sterilization methods and its kinetics anddesign.
- To discuss and solve the problems related to metabolic stoichiometry andenergetics.
- To understand the modes of operations and various kinetic models for productformation.
- To analyze the different kinetic models for microbial growth and productformation.

Course outcomes

1. Discuss the general process of fermentation and fermentorconfiguration.
2. Analyze the medium requirements and medium formulations for fermentationprocess.
3. Outline the thermal death kinetics and different sterilizationmethods.
4. Solve problems related to stoichiometry of cell growth andenergetic.
5. Illustarte the various modes of operation in fermentationprocess.
6. Analyze the different kinetic models for microbial growth and productformation.

UNIT-I OVERVIEWOFFERMENTATIONPROCESSES (7)

Overviewoffermentationindustry,generalrequirementsoffermentationprocesses,basic configurationof Fermentorandancillaries,mainparameterstobemonitoredandcontrolledin fermentationprocesses.

UNIT-II RAWMATERIALSANDMEDIADESIGNFORFERMENTATION PROCESS (9)

Criteriaforgoodmedium,mediumrequirementsforfermentationprocesses,carbon,nitrogen, minerals,vitaminsandothercomplexnutrients,oxygenrequirements,mediumformulationofoptimal growthandproductformation,examplesofsimpleandcomplexmedia,designofvariouscommercial mediaforindustrialfermentations–mediumoptimizationmethods.

UNIT-III STERILIZATIONKINETICS (9)

Thermaldeathkineticsofmicroorganisms,batch andcontinuousheatsterilizationofliquidmedia, filtersterilizationofliquidmedia,airsterilizationanddesignofsterilizationequipment-batchand continuous.

UNIT-IVMETABOLICSTOICHIOMETRYANDENERGETICS (10)

Stoichiometryofcell growthandproductformation,elementalbalances,degreesof reductionof substrateandbiomass,availableelectronbalances, yieldcoefficientsofbiomassandproduct formation,maintenancecoefficientsenergeticanalysisofmicrobialgrowthandproductformation, oxygenconsumptionandheatevolutionin aerobiccultures,thermodynamicefficiencyof growth.

UNIT-VKINETICSOFMICROBIALGROWTHANDPRODUCTFORMATION (10)

Modesofoperation-batch,fedbatchandcontinuouscultivation.Simpleunstructuredkineticmodels formicrobialgrowth,Monodmodel,growthoffilamentousorganisms,productformationkinetics- leudeking-piretmodels,substrateandproductinhibitiononcell growthand productformation.

16BTBT406BIOCHEMISTRY-II 3003100

Course Objectives:

- To understand the basics of bioenergetics
- To explain the metabolism of carbohydrate
- To explain the nucleic acid synthesis and regulations
- To discuss the synthesis and catabolism of amino acids pathways
- To understand the lipid metabolism and its associated genetic disorders
- To relate the importance of metabolism and how it leads to disorders.

Course Outcomes:

1. Outline the relationship of bioenergetics in biological reactions.
2. Examine the knowledge of carbohydrate metabolic pathways.
3. Describe the concept of nucleic acid synthesis and regulations.
4. Illustrate the synthesis and catabolism of amino acids pathways.
5. Explain the lipid metabolism and its associated genetic disorders.
6. Discuss the importance of metabolism and how it leads to disorders.

UNIT-I BIOENERGETICS (8)

Energy relationship between the catabolic and anabolic pathways, Five major reactions in living cells, Bioenergetics and thermodynamics. Phosphoryl group transfers;ATP hydrolysis in two steps, Ping-Pong mechanism of nucleoside diphosphate kinase.

UNIT-II METABOLISM OF CARBOHYDRATES (9)

Majorpathwaysofglucoseutilization:glycolysis,fermentation,gluconeogenesis: carbohydratesynthesis fromsimpleprecursors. Pentose phosphatepathway;TCAcycle:Reactions and regulations,genetic disordersaffecting carbohydrate metabolism

UNIT III METABOLISM OF NUCLEIC ACIDS (9)

Biosynthesis of nucleotides, denovo and salvage pathways for purines and pyrimidines, regulatory mechanisms: Metabolic disorders associated with nucleic acid metabolism.

UNIT-IV METABOLISM OF AMINOACIDS (10)

Biosynthesisofamino acidsfromacetyl coA, Biosynthesisofessentialaminoacids(Met,Thr,Lys,Ile,Val, Leu, Phe, Trp, Tyr).Glucose-alaninecycle, Ureacycle.Pathways ofdegradation of aromatic, glucogenic and ketogenic aminoacids. Human genetic disordersaffecting aminoacid metabolism.

UNIT-V METABOLISMOFLIPIDS (9)

Biosynthesisoffattyacid,Triacylglycerol.Biosynthesisofcholesterol. Digestion,mobilization,andtransportoffats,fattyacid entryintomitochondriaviatheacyl-carnitine/carnitinetransporter.The β-oxidationpathway.Oxidationofamonounsaturated and polyunsaturatedfattyacid.Genetic defectsinfattyAcyl–CoA dehydrogenases causingseriousdiseases.

Total Hours: 45

16BTBT411 INSTRUMENTALMETHODSOFANALYSISLAB 0032100

Course Objectives

- To understand the basic principle of analytical techniques
- To discuss the instrumental techniques used in chemical and biochemical research labs.
- To explain the fundamentals of spectroscopy operations.
- To carry out qualitative analysis experiments using Lambert's – Beer law using absorption spectroscopy.
- To carry out different spectroscopic techniques.
- To carry out different chromatographic techniques.

Course Outcomes

1. Explain the basic principle of analytical techniques
2. Discuss the instrumental techniques used in chemical and biochemical research labs.
3. Explain the fundamentals of spectroscopy operations.
4. Perform the qualitative analysis experiments using Lambert's – Beer law using absorption spectroscopy.
5. Demonstrate the different spectroscopic techniques.
6. Demonstrate the different chromatographic techniques.

1.Precisionandvalidityin an experimentusingabsorptionspectroscopyandvalidating Lambert-Beer'slawusingkMnO_4
2.DeterminationofanalyticalwavelengthforKMnO_4
3.Determinationofiron concentrationusing1,10phenanthroline.
4.FindingthepKaof4-nitrophenolusingabsorptionspectroscopy.
5.UVspectraofnucleic acids.
6.UV–spectraofproteins.
7.EstimationofSulphatebynephelometry.
8.EstimationofAL+++byflourimetry.
9.DeterminationofRfvalueusingTLC.

16BTBT412CHEMICALENGINEERINGLAB 003 2100

Course Objectives

- To understand chemical engineering principles and itsoperations.
- To understand the concept of pressure drops inpipes
- To understand the concept of pressure drops in differentreactors.
- To understand the concept of filtration and heattransfer.
- To explain the different separationtechniques.
- To understand the process involved in leaching

Course outcomes

Students undergoing this course will be able to

1. Outline the chemical engineering principles andoperations.
2. Calculate the flow measurements and pressure drop in pipes and differentreactors.
3. Analyze the process of filtration and heat transfer.
4. Perform the distillation andextraction.
5. Demonstrate the process involved in adsorption equilibrium.
6. Demonstrate the process involved in leaching

1. Flowmeasurement and Pressuredropinpipes.
2. Pressuredropacross Fluidizedbed.
3. Pressuredropacrosspackedcolumn
4. Continuousrotaryfiltration
5. Heatexchanger
6. Simpleandsteamdistillation
7. Liquid-liquidequilibriain extraction
8. Adsorptionequilibrium
9. Leaching

16BTBT451PRODUCTION OF COMMERCIALLY VALUABLE BIOPRODUCTS0 0 1 – 100

Course Objective

- To understand the manufacturing of industrially important bioproducts from different natural source.
- To carry out the production of ethanol from molasses andgrapes
- To carry out the production ofBiofertilizers
- To carry out the production of Single cell protein(Spirullina)
- To carry out the mushroom cultivation
- To carry out the production of jam from mixedfruits

Course Outcome

- Demonstrate the production of commercially valuable bioproducts from different natural source.
- Demonstrate the production of ethanol from molasses andgrapes
- Demonstrate the production of Biofertilizers
- Demonstrate the production of Single cell protein (Spirullina)
- Demonstrate the mushroom cultivation
- Demonstrate the production of jam from mixed fruits

1. Production of ethanol from molasses and grapes
2. Production of Biofertilizers
3. Production of Single cell protein (Spirullina)
4. Mushroom cultivation
5. Production of jam from mixed fruits

16BTBT501BIOPROCESSENGINEERING 3003100

Course Objectives

- To understand the basic concepts of fermentation processes.
- To apply the knowledge about the design of bioreactors
- To explain the scale up of bioreactors.
- To illustrate the bioprocess simulation and modeling
- To explain the immobilized enzyme kinetics and its significance.
- To discuss the commercial production of bioproducts.

Course outcomes

1. Understand the fermentation processes.
2. Interpret the design of bioreactors
3. Describe the scale up of bioreactors.
4. Infer the different types of bioprocess simulation and modeling
5. Examine the immobilized enzyme kinetics and its significance.
6. Outline the commercial production of bioproducts.

UNIT-I ANALYSISOFSTR (8)

AnalysisofSTR:Stirredtankreactor-non-ideality,RTDandstabilityanalysis,tanksin seriesanddispersionmodels– applicationtodesignof continuoussterilizer.

UNIT-II ANALYSISOFOTHERCONFIGURATIONS (9)

Analysisofotherconfigurations:Packedbedreactor,airliftreactor,fluidizedbedreactorbubble columnreactors–non-ideality,RTDandstabilityanalysis.

UNIT-III BIOREACTORSCALE–UP (8)

Bioreactorscale-up: Regimeanalysisofbioreactorprocesses,oxygenmasstransferinbioreactors-microbialoxygendemands;methodsforthedetermination ofmasstransfercoefficients;masstransfer correlations.Scale up criteria for bioreactorsbased on oxygentransfer,power consumptionand impellertipspeed.

UNIT-IV MODELLINGANDSIMULATIONOFBIOPROCESSES (10)

Modelling and simulation of bioprocesses: Study of structured models for analysis of various bioprocess–compartmental models,modelsofcellularenergeticsandmetabolism,singlecellmodels, plasmid replicationandplasmidstability model.Dynamicsimulationofbatch,fedbatch,steadyand transientculturemetabolism.

UNIT-V BIOREACTORCONSIDERATIONINENZYMESYSTEMS (10)

Bioreactorconsiderationinenzymesystems:Analysisoffilmandporediffusioneffectsonkineticsof immobilizedenzymereactions;formulationofdimensionlessgroupsandcalculationofeffectiveness factors.Designofimmobilizedenzymereactors–packedbed,fluidizedbedandmembranereactors.

Total Hours: 45

16BTBT502GENETICENGINEERING 3003100

Course Objectives

- To understand the basic concepts in rDNAtechnology.
- To explain the importance of recombinant molecules in rDNAtechnology.
- To understand the gene libraries construction and to perform blottings.
- To outline the concepts involved in gene library construction and differentiate between different gene libraries.
- To explain about the different types of PCR, the main concept in geneticengineering.
- To understand the vast applications of rDNA technology in diversefields.

Course Outcomes

1. Discuss the knowledge on the basics of rDNAtechnology.
2. Outline the usage of recombinant molecules in research anddevelopment.
3. Understand gene libraries construction and to perform blottings.
4. Interpret the indepth knowledge acquired to perform PCR reactions and theirtypes.
5. Infer the importance of DNA sequencingmethods.
6. Summarize the concept of rDNA technology and its importance in cloning, gene therapy and relate itsapplications.

UNIT-I BASICSOFRECOMBINANTDNATECHNOLOGY (6)

Roleofgeneswithincells, geneticelementsthatcontrolgeneexpression,restrictionand modifyingenzymes,safetyguidelinesofrecombinantDNAresearch.

UNIT-II CREATIONOFRECOMBINANTMOLECULES (9)

Restrictionmapping,designoflinkersandadaptors, gene editing.Characteristicsof plasmid and phage vectors, prokaryotic and eukaryotic expression vectors. Insect,Yeast andMammalianvectors.

UNIT-III CONSTRUCTIONOFLIBRARIES (10)

ConstructionofcDNAandgenomiclibraries.ScreeningoflibrarieswithDNAprobesandwith antisera.Cloning:Characterization of recombinant clones by southern, Northern, western and PCR analysis.

UNIT-IV POLYMERASECHAINREACTION (10)

Polymerasechainreaction:InversePCR,NestedPCR,Taqmanassay, RT - PCR, RACE PCR, RAPD,sitedirectedmutagenesis(Kunkel’s Method),methodsofnucleicacidsequencing-Sangersmethod,Maxam Gilbert sequencing

UNIT-V APPLICATIONSOFRECOMBINANTDNATECHNOLOGY (10)

ApplicationsofrecombinantDNATechnology:Cloninginplants,Tiplasmid,Methods of producingtransgenicanimals and their applications, gene silencing, gene therapy.

Total Hours: 45

16BTBT503BASICSOFINDUSTRIALBIOTECHNOLOGY 3003100

Course Objectives

- To explain the basic idea on scope of biotechnology and its commercial production in modern biotechnology.
- To analyse the modern biotechnological processing techniques for the production of commercial bioproducts.
- To discuss the process of primary metabolite production in different industries.
- To discuss the process of secondary metabolite production.
- To explain the basic procedures for production of bioproducts.
- To illustrate the various methods for the production of recombinant products.

Course Outcomes

1. Outline the scope of biotechnology and its commercialpotential.
2. Interpret the modern biotechnological processing techniques for the production of commercialbioproducts.
3. Illustrate the production methods of primarymetabolites.
4. Illustrate the production methods of secondarymetabolites.
5. Infer the knowledge on commercial enzyme and bioproductproduction.
6. Explain the production of various commercially available products using recombinant technology.

UNIT-I INTRODUCTIONTOINDUSTRIALBIOPROCESS (8)

Biotechnology: Scope and importance, Commercial potential of Biotechnology in India. Traditionalandmodernbiotechnology.productsrelatingtomodernbiotechnology A briefsurveyof industrially important organisms, fermentation processes – modes of operation-pictorialrepresentation of fermentation process

UNIT-II PRODUCTIONOFPRIMARYMETABOLITES (10)

Abriefoutlineofprocessesfortheproductionofsomecommerciallyimportantorganicacids (e.g. citricacid,lactic acid,acetic acid)aminoacids(glutamicacid,phenyalanine,asparticacid) andalcohols(ethanol,butanol)

UNIT-III PRODUCTIONOFSECONDARYMETABOLITES (10)

Studyofproductionprocessesforvariousclasses ofsecondarymetabolites:antibiotics:beta-lactams (penicillin,cephalosporin),aminoglycosides(streptomycin) macrolides(erythromycin), vitamins (B12) andsteroids (progesterone).

UNIT-IV PRODUCTIONOFENZYMESANDOTHERBIOPRODUCTS (9)

Productionofindustrialenzymessuchasproteases,amylases,lipases,cellulasesetc.,Productionof biopesticides,biofertilizers,biopreservatives(Nisin),cheese,biopolymers(xanthangum,PHB), singlecell protein.

UNIT-V PRODUCTIONRECOMBINANTDNAPRODUCTS (8)

Productionofrecombinantproteinshavingtherapeuticanddiagnosticapplications,productionof vaccines(hepatitisBvaccine),hormones(insulin).Productionofmonoclonalantibodies-commercial scale, productsof plant(humangrowthhormone)andanimalcell culture(interferons).

Total Hours: 45

16BTBT504A BIOINFORMATICS 3 0 0 3 100

Course Objectives

- To understand the basics of operating systems and biological databases.
- To explain the various methods for analysis of DNA, RNA and protein sequences.
- To explain the dynamic programming approach and methods of pair wisealignment.
- To explain the multiple sequence alinment techniques for analysis.
- To understand the machine learning techniques and protein structureanalysis.
- To understand the basics on available tools and databases for performing research in bioinformatics.

Course Outcomes

1. Illustrate the basics of operating systems and biologicaldatabases.
2. Analyze the DNA, RNA AND protein sequences using common databases.
3. Discuss the different algorithms for the pairwise sequenceanalysis
4. Outline the various biological databases used for multiple sequence alignment.
5. Summarize the machine learning techniques and various techniques for protein structure analysis.
6. Understand the use of bioinformatics tools for research.

UNIT-I INTRODUCTION TO BIOLOGICAL DATABASES (9)

Introduction- types, Biological databases, Information Retrieval from Biological Databases: for example Nucleic acid databases: Genbank, Protein Databases- Swissprot, Sequence Formats, Sequence storage, Sequence submission to sequence Database.

UNIT-II ANALYZING DNA, RNA AND PROTEIN SEQUENCES IN DATABASES (9)

Database technology, Genbank:organisms in Genbank, genomic DNA databases, cDNA databases corresponding to expressed genes, Introduction to phylogenetics- distance based trees, UPGMA, neighbour joining trees, Expressed sequence tags, Sequence tagged sites, Genome survey sequences, High throughput genomic sequence

UNIT-III PAIRWISE SEQUENCE ALIGNMENT (9)

Alignment Types: Local alignment, Global alignment, Scoring matrices- PAM, BLOSUM, Gaps, Dot Plots. Dynamic programming Approach: Needleman and Wunsch Algorithm, Smith and waterman Algorithm, Heuristic Approach: BLAST, FASTA

UNIT-IV MULTIPLE SEQUENCE ALIGNMENT (9)

Exhaustive Algorithm**-** Divide and Conquer alignment**,** Heuristic Algorithm: Progressive Alignment- ClustalW, Tcoffee, Iterative Alignment- PRRN, Block based method- Match-Box, DIALIGN2

UNIT-V INTRODUCTION TO PROTEIN STRUCTURE PREDICTION (9)

Secondary structure prediction for Globular and Trans-membrane proteins, 3DProtein structure file format: PDB, mmCIF, MMDB, Methods of Tertiary structure prediction: Threading and fold recognition methods, Homology modeling, Fold recognition databases.

Total Hours: 45

16BTBT504BENZYMOLOGYANDENZYMETECHNOLOGY 3003100

Course Objectives

- To understand the knowledge on enzyme mechanism of action.
- To explain the production & purification ofenzymes.
- To explain about the kinetics of single substrate enzyme action
- To understand the kinetics of multi substrate enzyme action
- To illustrate on immobilization and applications.
- To understand the features of enzyme biosensors and its application.

Course Outcomes

1. Discuss the overview of enzyme mechanism of action.
2. Outline the knowledge on extraction, purification and characterization ofenzymes.
3. Understand the kinetics of multisubstrate enzyme action.
4. Interpret the various enzyme immobilization techniques and its application in bioreactor.
5. Summarize the basics of enzyme engineering.
6. Explain the features of enzyme biosensors and its application.

UNIT-I INTRODUCTIONTOENZYMES (9)

Chemicalnature,apoenzyme,coenzyme,cofactor,prostheticgroup.Nomenclature–IUBsystemof classification-Sixmainclasseswithexamples.Mechanisms ofenzyme-action; Specificity,typeof enzyme specificity,Active site,Models ofenzyme action–Lockandkey,inducedfit,transitionstate theory.metalioncatalysis,proximity&orientation.metal-activatedenzymeandmetalloenzyme.

UNIT-II EXTRACTION,PURIFICATIONANDCHARACTERIZATIONOFENZYMES (9)

Productionand purificationof crudeenzyme extracts from plant, animal and microbialsources; methodsofcharacterizationofenzymes;developmentofenzymaticassays,

UNIT-III KINETICSOFMULTISUBSTRATE-ENZYMEACTION (9)

Kinetics of Single substrate reaction – estimation of Michaelis- Menten parameters and Multisubstratereactionsmechanisms;Turnovernumber;typesofinhibitionAllostericregulationofenzymes,Monod-Changeux-Wyman model,pHand temperatureeffectonenzymes&deactivationkinetics.

UNIT-IV ENZYMEIMMOBILIZATION (9)

Physicaland chemicaltechniquesforenzymeimmobilization– adsorption,matrixentrapment, encapsulation,cross-linking,covalentbindingetc.,- examples, applications, advantagesanddisadvantages. applications. Immobilised enzymebioreactors.

UNIT-V ENZYMEENGINEERINGANDBIOSENSORS (9)

Chemicaland geneticmethods,Propertyalteration,Predictionofenzymestructure,designand constructionofnovelenzymes;Classification andDesignofenzymebiosensors.Applicationof enzymebiosensorinindustry,healthcare,foodand environment.

16BTBT505APLANTBIOTECHNOLOGY 3003100

Course Objectives

- To illustrate the genetic material and its biological significance in organization.
- To explain the basic ideas on structure and function on genetic material.
- To list the various functions of Nitrogen fixation.
- To label the basic theory of genes involved in the pathogenesis.
- To develop a picture about applications of plant biotechnology.
- To discuss the different stages of developments in gene analysis and its recombination.

Course Outcomes

1. Summarize about the importance of genetic material and its uses.
2. Determine the structure and function of the genetic material.
3. Express the functions of fixing nitrogen to soil through microbes.
4. Be aware of the conceptuation behind various genes involved in pathogenesis.
5. Describe the various functions and application of plant biotechnology through tissue culture.
6. Summarize and predict the different stages of developments in gene analysis and its recombination.

UNIT-I ORGANIZATIONOFGENETICMATERIAL (9)

Geneticmaterialofplant cells –nucleosomestructureanditsbiologicalsignificance;junkand repeat sequences;outlineoftranscriptionandtranslation.

UNITII CHLOROPLAST&MITOCHONDRIA (9)

Structure,functionand geneticmaterial;rubiscosynthesisand assembly,coordination,regulation andtransportofproteins.Mitochondria:Genome,cytoplasmicmalesterility andimportof proteins.

UNIT-III NITROGENFIXATION (9)

Nitrogenaseactivity,nod genes,nifgenes,bacteroids.

UNIT-IV AGROBACTERIUM&VIRALVECTORS (9)

Pathogenesis,crowngalldisease, genesinvolvedinthepathogenesis,Ti plasmid–t-DNA, importanceingenetic engineering.ViralVectors:Geminivirus,cauliflowermosaicvirus,viral vectorsanditsbenefits.

UNIT-V APPLICATIONOFPLANTBIOTECHNOLOGY (9)

Outlineofplanttissueculture,transgenicplants,herbicideandpestresistantplants,molecular pharming,theraputicproducts.

Total Hours: 45

16BTBT505BFOODBIOTECHNOLOGY 3003100

Course Objectives

- To understand the constituents of food and energy.
- To classify the different sources of microbes in food that assist food spoilage.
- To record the basic notion on fermented food products.
- To differentiate and organize the distinct food additives used.
- To explain the basic theory of food processing and preservation.
- To discuss the problems related to food deterioration and its preventive measures.

Course Outcomes

1. Compare and contrast different food constituents and their effectiveness.
2. Summarize the controlling measures for food spoilage.
3. Prioritize diverse properties of fermented foods.
4. Construct and design the food additives for food preservation.
5. Apply the knowledge on basics of food processing and preservation methods.
6. Examine and solve the problems related to food deterioration and its preventive measures.

UNITI FOODANDENERGY (9)

ConstituentsofFood-Water : importance, water in food, activity and shelf life of food; Carbohydrates: functional properties of sugars and polysaccharides in food; Llipids: uses, physical and chemical properties; Proteins and amino acids: physical and chemical properties, distribution, functions and functional properties;VitaminsandMinerals:Dietarysources; Nutritive value of foods, food as a source of energy, food health and disease.

UNITII FOODMICROBIOLOGY (9)

Typesofmicro-organismnormallyassociatedwithfood -mold,yeast,and bacteria.Micro-organisms in naturalfoodproducts.Biochemicalchangescausedbymicro-organisms.Foodpoisoningand microbialtoxin.Spoilageofvegetables, fruit,meat,poultry,beveragesand otherfoodproducts.Food safety.

UNITIII FERMENTATIONPRODUCTS (9)

Enzymesinfoodsandfoodindustry,Natureandtypeofstarters,RoleofstartersinFermentedfoods, FermentationofMilkproducts-Fermentedsoyand peanutmilk,Idli,Fermentedfishproducts,Pickles, FermentedOlives; Productionofdistilledbeveragealcohol,wine,brandy,andbeer.Mycoprotein production.

UNITIV FOODADDITIVES (9)

Chemicalandphysicalmethodsoffoodanalysisfordeterminationoffoodcomposition;Pigmentsin food,foodflavours,foodadditivesandtoxicants.Naturalsweetenersandartificialsweeteners-rolein controllingdiseases.

UNITV FOODPROCESSING&PRESERVATION (9)

Basicprinciples,unitoperations Involvedinthefoodprocessingmethods;Objectives,importanceand functionsofqualitycontrol.Principlesinvolvedintheuseofsterilization,pasteurizationand blanching, thermaldeathcurvesofmicroorganisms,canning,frozenstoragecharacteristicsoffoods, microbialactivityat lowtemperatures,factorsaffectingqualityoffoodsinfrozenstorage;irradiation preservationoffoods.

Total Hours: 45

16BTBT511BIOPROCESSLAB 0032100

Course Objectives

- To understand the concept of thermal death kinetics.
- To understand the concept of batch sterilization.
- To predict the design for media components using Plackett Burman and RSM.
- To perform the batch cultivation and practice k_La estimation methods.
- To understand the procedure to calculate the residence time distribution.
- To demonstrate enzyme kinetis and enzyme immobilization techniques.

Course Outcomes

1. Evaluate the thermal death kinetics.
2. Perform the batch sterilization batch cultivation.
3. Identify and perform media optimization using Plackett Burman and RSM.
4. Demonstrate the different k_La estimation methods.
5. Perform the experiment on residence time distribution.
6. Interpret enzyme kinetis and enzyme immobilization techniques.

1. Thermaldeathkinetics
2. Batchsterilizationdesign
3. Media designing using Plackett Burman and RSM
4. Batch cultivation
5. Estimationofk_La–dynamicgassingmethod
6. Estimationofk_La–sulphiteoxidationmethod
7. Estimationofk_La–powercorrelationmethod
8. Residencetimedistribution
9. Enzymekinetics–MichaelisMentenparameters.
10. Enzymeimmobilization.

16BTBT512MOLECULARBIOLOGYAND GENETIC ENGINEERING LAB0032100

Course Objectives

- To outline and evaluate the methods for isolation and purification of DNA from plant and animalsamples.
- To explain the protocol to run the agarose gel electrophoresis sampleanalysis.
- To demonstrate the DNA ligation techniques for transformation and screening ofrDNA.
- To understand the methods involved in optimization protocol for recombinant protein expression.
- To explain the importance of high throughput screening, SDS PAGE andPCR.
- To compile the overall structure of rDNA technology and implement its techniques in research anddevelopment.

Course Outcomes

1. Carry out agarose gel electrophoresis and isolation of DNA samplesindividually.
2. Develop the knowledge of techniques involved in DNA isolation andpurification.
3. Perform the restriction enzyme digestion and ligation of DNAsamples.
4. Produce recombinant DNA and implement blue white screening techniques to screenthem.
5. Develop methods to produce recombinant proteins and understand their applications and perform SDS PAGE and PCRreactions.
6. Summarize the overall structure of rDNA technology and implement its techniques in research anddevelopment.

1. Agarosegelelectrophoresis
2. IsolationofbacterialplasmidDNA
3. Isolationofplant cellgenomicDNA
4. Elution of DNA
5. Restrictionenzymedigestion and ligation
6. Competentcellspreparation
7. Transformationandscreeningforrecombinants
8. Blueand whiteselectionforrecombinants
9. Optimization of inducer concentration and time of induction for recombinant protein expression.
10. SDS PAGE
11. PCR

TEXTBOOKS

S.No.	Author(s)Name	Titleofthe book	Publisher	Yearof Publication
1	David,L. GandMichael,K.W	Basic Methodsin Molecular Biology	PrenticeHall Inc	1994
2	Sambrook,J.andRussel,D.W	Molecular Cloning Laboratory Manual	ColdSpringHarbor LaboratoryPress	2001

16BTBT513ABIOINFORMATICSLAB 0032100

Course Objectives

- To perform the NCBI database search.
- To understand the usage of BLAST for similar DNA sequence search.
- To predict the nucleotide and protein sequence using various database.
- To perform the gene prediction.
- To understand the protein sequence analysis tools.
- To build the phylogenetic tree

Course Outcomes

1. Discuss the database search through NCBI.
2. Perform the similar DNA sequence search using BLAST.
3. Identify the nucleotide and protein sequence.
4. Demonstrate the experiment to predict the genes.
5. Tell the method to build the phylogenetic tree.
6. Interpret the protein sequence using analysis tools.

1. NCBI database.
2. BLAST – Similar DNA sequences search
3. EMBL – Nucleotide sequence database
4. SWISSPROT/TREMBL – Protein sequence database
5. Analysis of Protein sequence using PIR database
6. Analysis of structural features of proteins using protein data bank and SWISS PDB viewer
7. Eukaryotic gene prediction
8. Phylogenetic tree.
9. Protein sequence analysis tools
10. Multiple sequence alignment
11. Design of primers for cloning.

16BTBT513B PROTEIN AND ENZYME TECHNOLOGY LAB 0 0 3 2 100

Course Objectives

- To explain the types of chromatography
- To illustrate the partial purification of enzymes
- To understand the ultrafiltration process
- To carry out ion exchange & gel filtration chromatography
- To carry out affinity chromatography
- To understand the application of chromatography

Course outcomes

- Outline the types of chromatography
- Explain the partial purification of enzymes.
- Elaborate the process of ultrafiltration
- Perform the ion exchange & gel filtration chromatography
- Perform the affinity chromatography
- Compile the application of chromatography

1. Ammonium Sulphate /TCA/ Organic solvent precipitation
2. Ultrafiltration using tangential-flow membrane separation
3. Ion Exchange Column Chromatography
4. Gel Filtration chromatography
5. Affinity chromatography

Mini project

16BTBT551 SEPARATION OF BIOACTIVE COMPOUNDS FROM PLANT MATERIAL

1 0 0 - 100

Course Objective

- To explain the basic concepts of natural product isolations.
- To explain the principles of chromatography.
- To discuss the applications of modern NMR.
- To understand the extraction process.
- To demonstrate the extraction and isolation of caffeine from tea leaves.
- To understand the concept of separation of bioactive compounds.

Course Outcome

- Outline the general concepts of bioproduct isolation from various natural sources.
- Elaborate the principles of chromatography.
- Summarize the applications of modern NMR.
- Outline the extraction process.
- Carry out the experiments related to extraction and isolation of caffeine from Tea Leaves.
- Discuss the concept of separation of bioactive compounds.

UNIT- I GENERAL CONCEPT OF NATURAL PRODUCT ISOLATION

Natural Product Isolation, Extraction of Plant Secondary Metabolites, Selecting General Separation Conditions, Principles of Chromatography, An Introduction to Planar Chromatography, Applications of Liquid Chromatography, Isolation of Natural Products by Low-Pressure Column Chromatography, Crystallization in Final Stages of PurificationDetermination of the Nature of the Compound, Applications of Modern NMR Techniques in the Structural Elucidation, Identification and Characterization

UNIT-I I LABORATORY- EXTRACTION AND ISOLATION OF CAFFEINE FROM TEA LEAVES

General background and overview of the experiment, Caffeine extraction: Solid-liquid Extraction, Overview of the extraction process, Purification, Isolation of caffeine from tea leaves

16BTBT601 MASSTRANSFTEROPERATIONS 3204 100

Course Objectives

- To understand the basics of molecular diffusion and mass transfer concepts.
- To explain the gas absorption and its related concepts.
- To explain the various vapour liquid operations and its concepts.
- To understand the HETP, HTU and NTU concepts.
- To outline the extraction and leaching principles.
- To outline the Solid Fluid operations.

Course Outcomes

1. Discuss the molecular diffusions and mass transfer operation in different system.
2. Outline the absorption principles and its concepts for gas liquid operations.
3. Infer the basic concept of equilibria and distillation concepts in vapour liquid operations.
4. Understand the HETP, HTU and NTUconcepts.
5. Interpret the equilibria of different systems in extraction and leaching operations.
6. Outline the concepts of adsorption and drying in solid – fluid operations.

UNIT-I DIFFUSIONANDMASSTRANSFER (9)

Moleculardiffusioninfluidsandsolids;InterphaseMassTransfer;MassTransfercoefficients; AnalogiesinTransportPhenomenon.

UNIT-II GASLIQUIDOPERATIONS (9)

Principlesofgasabsorption;SingleandMulticomponentabsorption;Absorptionwithchemical reaction;Designprinciplesofabsorbers;Industrialabsorbers;HTU,NTUconcepts.

UNIT-III VAPOURLIQUIDOPERATIONS (9)

V-LEquilibria;Simple,SteamandFlashDistillation;Continuousdistillation;McCABE-THIELE& PONCHON-SAVARITPrinciples;Industrialdistillationequipments,HETP,HTUandNTUconcepts.

UNIT-IV EXTRACTIONOPERATIONS (9)

L-Lequilibria,Stagedandcontinuousextraction,Solid-liquidequilibria,Leachingprinciples.

UNIT-V SOLIDFLUIDOPERATIONS (9)

Adsorptionequilibria– Batch andfixedbedadsorption;Drying-Mechanism-Dryingcurves - TimeofDrying;Batch andcontinuousdryers.

Total Hours: 45+15 = 60

16BTBT602IMMUNOLOGY 3003100

Course objectives:

- To understand the basic knowledge of cells and organs of Immune system.
- To explain the different cellular responses and its functions.
- To understand the basic views on monoclonal antibodies and antigen- antibody interactions.
- To outline the Immune responses to various disease and different immunologic reactions in Human body.
- To explain the organ transplantation and tumor immunology.
- To outline the basics of autoimmunity.

Course outcomes:

1. Discuss the cells and components of immune system.
2. Explain the basics of B, T cells, genes and generation of antibody and its functions.
3. Infer the basic views on monoclonal antibodies and antigen- antibody interactions.
4. Discuss the concept of immunity and various immunological responses toinfections.
5. Discuss the basics of Transplantation and tumortherapies.
6. To illustrate the current trends in treatment of auto immunedisease.

UNIT-I INTRODUCTION (7)

Cellsofimmunesystem,innateandacquiredimmunity,primaryandsecondary lymphoidorgans, antigens,haptens,adjuvants,typesofimmuneresponses,theoryofclonalselection.

UNIT-II CELLULARRESPONSES (10)

Development, maturation,activationanddifferentiationofT-cellsandB-cells:TCR, antibodies, structureandfunctions;antibodies:genesandgenerationofdiversity;antigen-antibody reactions; monoclonalantibodies:principles andapplications;antigenpresentingcells;majorhistocompatibility complex;antigenprocessingandpresentation;regulationofT-celland B-cellresponses.

UNIT-III INFECTIONANDIMMUNITY (11)

Injuryandinflammation;immuneresponsestoinfections:immunity toviruses,bacteria,fungiand parasites,cytokines,complement,immunosuppression,tolerance,allergyandhypersensitivity,resistanceandimmunization:Vaccines.

UNIT-IV TRANSPLANTATIONAND TUMOR IMMUNOLOGY (10)

Transplantation:geneticsoftransplantation,lawsoftransplantation,problemsintransplantation:Basis of Graft rejection, specificity and memory of graft rejection;Role of cell mediated response in graft rejection, Transplantationantigens,MechanismsinvolvedinGraftrejections, tumor immunology-immune therapy

UNIT-V AUTOIMMUNITY (7)

Autoimmunity, Auto immune diseases and diagnosis, proposed mechanisms for induction ofAutoimmunity,Treatment ofAutoimmunediseases;currenttherapies,monoclonalantibody anddiagnosis, treatment.

Total Hours: 45

16BTBT603A BIOPHARMACEUTICALTECHNOLOGY 3003 100

Course Objectives

- To understand the foundation and advanced information on biopharmaceutical aspects in relation to drug development.
- To understand the basics of pharmacokinetics.
- To discuss the drug manufacturing, process and its application.
- To explain the manufacture of solid dosage forms of drugs.
- To understand the manufacture process of liquid orals and topical.
- To discuss the legal steps involved in progressing a new drug to market.

Course Outcomes

1. Illustrate the different pharmaceutical parameters for the current and future biotechnology related products on themarket.
2. Outline the concepts of Pharmacokinetics.
3. Infer the basic knowledge on drug process, manufacturing methods and its application.
4. Discuss about the solid dosage forms of drug manufacturing.
5. Explain the manufacturing process of liquid orals andtopical.
6. Interpret the legal steps involved in progressing a new drug to market.

UNIT- I INTRODUCTION (7)

History of pharmacy, pharmacopeia, monograph, types of various dosage forms, economics and regulatory aspects.

UNIT- II BASICS OF PHARMACOKINETICS (10)

Mechanism of drug action; physico-chemical properties and principles of drug metabolism; pharmaco kinetics.

UNIT- III MANUFACTURE OF DRUGS, PROCESS AND APPLICATIONS (9)

Types of reaction process and special requirements for bulk drug manufacture.

UNIT- IV MANUFACTURE OF SOILD DOSAGE FORMSS (9)

Compressed tablets; dry and wet granulation; slugging or direct compression; tablet presses; coating of tablets; capsule preparation.

UNIT- V MANUFACTURE OF LIQUID ORALS AND TOPICALS (10)

Oral liquids – vegetable drugs – topical applications; preservation of drugs; analytical methods and other tests used in drug manufacture; packing techniques; quality management; GMP.

Total Hours: 45

16BTBT603B MOLECULARMODELLING 3003100

Course Objectives

- To define the basic view of concept of molecular modelling.
- To demonstrate the computational quantum mechanics through different methods.
- To explain the general features of molecular mechanics.
- To discuss the molecular dynamics simulation methods.
- To outline the basic concept on cheminformatics molecular modeling.
- To explain the diverse techniques on molecular modeling.

Course Outcomes

1. Identify different views on global and local energy minima through molecular modeling.
2. Differentiate various calculations on molecular properties.
3. Illustrate the concept behind molecular mechanics through derivative methods.
4. Evaluate and characterize molecules simulation through dynamics methods.
5. Analyze and categorize the structure based drug design for targets.
6. Explain the diverse techniques on molecular modeling.

UNIT-I MOLECULARMODELLING (9)

Introductiontoconceptofmolecularmodeling,molecularstructureandinternalenergy,applicationsof molecugraphics,coordinatesystems,potentialenergysurfaces,discussionoflocalandglobalenergy minima

UNIT-II QUANTUMMECHANICS (9)

Introduction tothecomputationalquantum mechanics;oneelectronatom,ply electronicatomsand molecules, HartreeFockequations;calculatingmolecular properties usingabinitioandsemiempirical methods.

UNIT-III MOLECULARMECHANICS (9)

Molecular mechanics;generalfeaturesofmolecular mechanicsforcefield,bondstretching,angle bending,torsionalterms,non–bondedinteractions;forcefieldparameterizationandtransferability;energy minimization;derivativeandnon–derivativemethods,applicationsofenergyminimization.

UNIT-IV MOLECULARDYNAMCS (9)

Molecular dynamicssimulation methods;moleculardynamics usingsimple models, molecular dynamicswithcontinuouspotential, setting upandrunningamolecular dynamicsimulation,constraint dynamics;MonteCarlosimulation;MonteCarlosimulationofmolecules.

UNIT-V MODELLINGANDDRUGDESIGN (9)

Macromolecular modeling,designofligandsforknownmacromoleculartargetsites,Drug-receptor interaction,classicalSAR/QSARstudiesandtheirimplicationstothe3Dmodeler,2-Dand3-Ddatabase searching,pharmacophore identificationandnoveldrugdesign,moleculardocking,Structure-based drug design forallclassesoftargets.

16BTBT604ACHEMICALREACTIONENGINEERING 3003100

Course Objectives

- To illustrate the rate equation with different parameters.
- To explain the basic ideas on first order reaction in reactor design.
- To list the various functions of Non Ideal flow of fluidized bed.
- To label the basic theory of rate equation systems in heterogenous reactions.
- To develop a picture about rate controlling mechanism in solid catalyzed reaction.
- To understand the various biochemical reactions.

Course Outcomes

1. Summarize about the rate equation.
2. Determine the first order reaction in reactor design.
3. Express the functions of non ideal flow of fluidized bed.
4. Be aware of the conceptuation behind various rate equations in heterogenous systems.
5. Describe the various rate controlling mechanism in solid catalyzed reaction.
6. Summarize and predict the various reactions.

UNIT-I KINETICS OFHOMOGENOUS REACTIONS (9)

Concentration andtemperature dependenttermofrateequation–searchingfor mechanism–predictability ofreaction ratefromtheory;Interpretation ofbatchreactordata–constantvolume andvariablevolume batchreactors–temperatureandreactionrate-development ofrateequationsfordifferent homogeneous reactions(up tosecondorderreactionsbothreversibleandirreversiblereactions).

UNIT-II REACTORDESIGN (9)

Idealbatchreactors–steadystate MFR&PFR–holdingtimeforflowsystems;Designforsinglereactions-performanceequations forsinglereactors ;multiplereactorsystems–PFRinseries/parallel–equal sizeanddifferent sizeMixedreactorsinseries;reactorsof differenttypes inseries. Design forMultiple reactions (firstorderreactionsonly)

UNIT-III NONIDEALFLOW (9)

RTDoffluidinvessel–relationshipbetweenF,C&Ecurve–conversion fromtracerinformation; non-idealflowmodels–Dispersion modelandTanksinseriesModel;Multiparametermodels–modelsfor fluidizedbeds.

UNIT-IV DESIGNFORHETEROGENOUSSYSTEMS (9)

Rateequations–contactingpatternsfortwophasesystems;fluidparticlereactions–unreactedcore modelforsphericalparticlesofunchanging size–rateofreactionforshrinking sphericalparticles–determinationofratecontrolling step–applicationtodesign;reactionssteps;resistancesandrate equations;Fluid–Fluidreactions–rateequations.

UNIT-V SOLIDCATALYSEDREACTIONS (9)

Rateequation–ratecontrolling mechanisms–experimentalmethodsforfinding rates–product distributioninmultiplereactions–applicationof design;Deactivatingcatalysts–mechanism–rateequation.

Total Hours: 45

16BTBT604BNANOBIOTECHNOLOGY 3003100

Course Objectives

- To explain basic knowledge on nanotechnology.
- To demonstrate the structural and functional principles of bionanotechnology.
- To discuss various methods for microfluidic components.
- To explain the effects of various protein and DNA based nanostructures.
- To outline the basic concepts of nanoparticles in cancer therapy.
- To identify the different nanoparticles using different controlling measures.

Course Outcomes

1. Summarize the characteristics different nanoparticles.
2. Evaluate the different structural and functional principles of biotechnology.
3. Explain the microfluidic devices.
4. Discuss the protein and DNA based nanostructures.
5. Recognize cancer curingnanoparticles.
6. Identify and list different nanoparticles for different controlling measures.

UNIT-I INTRODUCTIONTONANOTECHNOLOGY (9)

Backgroundanddefinitionofnanotechnology, chemicalbondsinnanotechnology–Scalesatthebio-nanointerface–Basiccapabilitiesofnanobiotechnology andnanomedicine–Biologicaltraditionand mechanicaltraditionbiotechnology–Applicationsinbiotechnology.

UNIT-II STRUCTURAL AND FUNCTIONAL PRINCIPLES OF BIONANOTECHNOLOGY (9)

Biomolecular structure and stability – Protein folding – Self-assembly – Self-organization – Molecularrecognition– Information driven nanoassembly – Energetics –Chemical transformation– Biomaterials – Biomolecular motors – Traffic across membranes – Biomolecular sensing – Self-replication – Machine-phase bionanotechnology.

UNIT-III MICROFLUIDICS (9)

Conceptsandadvantagesofmicrofluidic devices–Materialsandmethodsforthemanufactureof microfluidiccomponent–Fluidicstructures–Surfacemodifications–Lab-on-a-chip forbiochemical analysis.

UNIT-IV PROTEIN AND DNA BASEDNANOSTRUCTURES (9)

S-Layers–Engineerednanopores–Microbialnanoparticleproduction–DNA-Proteinnanostructures–Biomimeticfabricationof DNAbasedmetallic nanowiresand networks–DNA-Goldnanoparticleconjugates–Nanoparticlesasnon-viraltransfectionagents.

UNIT-V NANOPARTICLES IN CANCER THERAPY (9)

Magnetic nano and microparticles for embolotherapy - hyperthermic therapy-delivery of chemotherapeutic drugs-brachytherapy, Thermoresponsive liposomes for hyperthermic chemotherapy assemblies and ultrasound activation.

Total Hours: 45

16BTBT611 IMMUNOLOGYLAB 0032100

Course Objectives

- To discuss the handling techniques of animals and immunization.
- To understand the isolation and identification of cells and blood group.
- To explain the methods for the detection ofanitigen-antibody.
- To outline the techniques for antigen identification.
- To understand the techniques of T-cell rossetting.
- To understand the techniques of Western blotting.

Course Outcomes:

1. Infer the basic handling techniques for animal studies.
2. Outline the basics of isolation and identification of cells and blood group.
3. Illustrate the Immuno electrophoresis and Immuno diffusion for determination of antibody.
4. Understand the knowledge about ELISA and western blotting for identification of various diseases.
5. Explain the identification of typhoid antigens by Widal test.
6. Discuss principles of T-cell rossetting.

1.Handlingofanimals,immunizationandraisingantisera

2.Identificationofcellsinabloodsmear

3.Identificationofbloodgroup

4.Immunodiffusion

5. Immunoelectrophoresis

6.TestingfortyphoidantigensbyWidaltest

7.EnzymeLinkedImmunoSorbentAssay(ELISA)

8.Isolationofperipheralbloodmononuclearcells

9.Identificationof t cellsbyT-cellrossettingusingsheepRBC.

16BTBT612A BIOPHARMACEUTICAL TECHNOLOGY LAB 0 0 3 2 100

Course Objectives

- To understand the wet granulation method for granules preparation.
- To explain the dry and wet granulation protocol for tablet preparation.
- To predict the steps for the analysis of tablets for its quality control.
- To perform the preparation of liquid orals-syrup.
- To understand the procedure for the preparation of topical formulations.
- To illustrate the assay techniques for tablets and injection..

Course Outcomes

1. Perform the granules preparation using wet granulation method.
2. Experiment the tablet preparation using wet and dry granulation techniques.
3. Identify the quality of tablets using different analysis.
4. Demonstrate the protocol for liquid-orals syrup preparation.
5. Perform the assay for riboflavin tablets.
6. Interpret dextrose injection using basic assays.

1. Preparation of granules by wet granulation
2. Preparation of Tablets by wet and dry granulation
3. Quality control test for tablets
4. Preparation of liquid orals-syrup
5. Preparation of topical preparation-lotion, ointment, cream
6. Assay of Riboflavin tablets
7. Assay of Dextrose Injection

16BTBT612B MOLECULAR MODELING LAB 0 0 3 2 100

Course Objectives

- To understand how to visualize and understand macromolecule-ligand interactions
- To explain various computational tools used for drug design
- To predict the properties of small molecules
- To perform homology modeling of proteins
- To understand the active site prediction
- To illustrate the protein ligand docking and protein-protein docking

Course Outcomes

1. Perform the QSAR study.
2. Experiment the visualization tools to understand the macromolecule – ligand interactions.
3. Identify the the properties of small molecules
4. Demonstrate the homology modeling of proteins.
5. Perform the active site prediction.
6. Interpret the protein ligand docking and protein-protein docking.

1. Explore Visualization tools
2. Learn to calculate properties of small molecules
3. Perform a QSAR study
3. Homology modeling of proteins
4. Virtual screening using Zinc database
5. Protein ligand docking
6. Protein-Protein docking
7. Molecular Dynamics using simple models

16BTBT651 MINI PROJECT 0 0 1 - 100

OBJECTIVES

- To provide exposure in practical aspects
- To equip the students to meet the industry standards .

The students will be directed to do a project work during VI semester and their projects will be evaluated for, forty percentages for Continuous Internal Assessment and sixty percentage for End Semester Examination.

End Semester Examination evaluation will be based on the report submitted by the student after the completion of the project work.

16BTBT652TECHNICALPRESENTATIONANDSEMINAR 0 0 1 - 100

OBJECTIVES

- Toequipthestudentsfor effectivetechnicalpresentation
- Toimprovebodylanguageandpostureforeffectivepublicspeaking.

INTENDED OUTCOMES:

- To get familiarize in the teaching presentation skills.
- To gain confidence in the teaching process.

During theseminarsessioneachstudentisexpectedtoprepareandpresentatopicon biotechnology,fordurationofabout8to10minutes.Inasessionofthreeperiodsperweek,15 studentsareexpectedtopresentseminars.Afaculty guideistobeallottedandhe/shewillguide and monitortheprogressofthestudentandmaintainattendancealso.

Studentsareencouraged tousevariousteachingaidssuchasoverheadprojectors,powerpoint presentation and demonstrativemodels. This will enable themtogainconfidence in facingthe placementinterviews.

16BTCC701 PROFESSIONAL ETHICS, PRINCIPLES OF MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT 3 0 0 3 100

Course Objectives:

- To create an awareness on Engineering Ethics
- To incorporate Moral and Social Values and Loyalty
- To appreciate the rights of other
- To motivate the leadership skills
- To train to become an entrepreneur
- To learn the management skills

Course Outcomes:

1. Explain the engineering ethics
2. Outline the Moral and Social Values and Loyalty
3. Justify the rights of other
4. Illustrate the values of leadership skills
5. Assess the skills ofentrepreneur
6. Discuss the management skills

UNIT I ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self–interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OF CHANGES 9

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING, ORGANISING 9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informal organization – Organization Chart –.

UNIT IV DIRECTING AND CONTROLLING 9

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT V ENTREPRENEURSHIP AND MOTIVATION 9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

16BTBT702DOWNSTREAMPROCESSING 3003100

Course Objectives:

- To understand the importance of downstream processing and various cell disruption techniques.
- To discuss the various cell disruption techniques for product release.
- To explain the physical methods of separation.
- To understand the methods for the isolation of products.
- To understand the methods for the purification of the bioproducts.
- To explain the various methods for final product formulation and finishing operations.

Course Outcomes:

1. Outline the principles involved in downstream processing and characteristics of biomolecules.
2. Discuss the various cell disruption techniques for product release.
3. Illustrate the different physical methods of separation of bioproducts.
4. Relate and apply the methods available for the isolation of products.
5. Discuss the techniques used for the product purification.
6. Outline the principles for the final product formulation and finishing operations.

UNIT-I DOWNSTREAMPROCESSING (9)

Introductiontodownstreamprocessingprinciplescharacteristicsofbiomoleculesandbioprocesses. Celldisruptionforproductrelease–mechanical,enzymaticand chemicalmethods.Pretreatmentand stabilizationofbio-products.

UNIT-II PHYSICALMETHODSOFSEPARATION (9)

Unitoperationsforsolid-liquidseparation-filtrationandcentrifugation, flocculation and sedimentation

UNIT-III ISOLATIONOFPRODUCTS (9)

Adsorption,liquid-liquidextraction,aqueoustwo-phaseextraction,membraneseparation,ultrafiltration andreverseosmosis,dialysis,precipitationofproteinsbydifferentmethods.

UNIT-IV PRODUCTPURIFICATION (9)

Chromatography– principles, instrumentsand practice, adsorption,reverse phase,ion-exchange, size exclusion, hydrophobic interaction, bio-affinityand pseudo affinitychromatographic techniques.

UNIT-VFINALPRODUCTFORMULATIONANDFINISHINGOPERATIONS (9)

Crystallization: principles, batch crystallizers, process crystallization of proteins; Drying: Principles, heat and mass transfers, dryers description, batch and continuous dryers, freeze and spray dryers infinalproductformulation.

Total Hours: 45

16BTBT711 DOWNSTREAMPROCESSINGLAB 0032100

Course Objectives

- To illustrate the rate equation with different parameters.
- To explain the basic ideas on first order reaction in reactor design.
- To list the various functions of Non Ideal flow of fluidized bed.
- To label the basic theory of rate equation systems in heterogenous reactions.
- To develop a picture about rate controlling mechanism in solid catalyzed reaction.
- To understand the various biochemical reactions.

Course Outcomes

1. Summarize about the rate equation.
2. Determine the first order reaction in reactor design.
3. Express the functions of non ideal flow of fluidized bed.
4. Be aware of the conceptuation behind various rate equations in heterogenous systems.
5. Describe the various rate controlling mechanism in solid catalyzed reaction.
6. Summarize and predict the various reactions.

1.ProteinPurificationbyisoelectricpointprecipitation.

2.AmmoniumSulphateprecipitation.

3.Liquid–Liquidextraction.

4.Solid–Liquidextraction.

5.Crystallization.

6.Cellfractionationusingcentrifuge.

7. Drying of solid by heatsource.

8. Dialysis

9.Purificationofα–Amylasefrom*Bacillus*.

16BTBT791 PROJECT WORK PHASE I 0 0 8 4 100

The students will be directed to do a project work which will be the Phase I if their main project work that will be performed in the eigth semester during.Their projectswill be evaluated for, forty percentages for Continuous Internal Assessment and sixty percentagefor End Semester Examination.

End Semester Examination evaluation will be based on the report submitted by the student
after the completion of the project work.

16BTBT891 PROJECT WORK PHASE II AND VIVA-VOCE 0 0 32 16 300

The students will be performing their main project work as a continuation of the Phase I project completed in the seventh semester.Their projectswill be evaluated for a total of three hundred marks, out of which one twenty marks will be for Continuous Internal Assessment and one hundred and eighty marks for End Semester Examination.

End Semester Examination evaluation will be based on the report submitted and presentation of his/her work by the studentto a panel of evaluators after the completion of the project work.

PROFESSIONAL ELECTIVES

16BTBT5E01ANIMALBIOTECHNOLOGY 3003100

Course Objectives

- To define the basic view of tissue culture techniques.
- To illustrate the breeding of farm animals.
- To propose an opinion on transgenic animal technology.
- To explain the characterization techniques for bacterial and viral diseases in animals.
- To justify the basic concept on recombinant cytokines.
- To discuss the diverse techniques on animal cell culturing and its mechanism.

Course Outcomes

1. Identify the different views on tissue culturing.
2. Differentiate various breeding farm animals.
3. Illustrate the concept behind transgenic animal technology.
4. Evaluate the bacterial and viral diseases that attack animals.
5. Analyze and categorize the best approach on recombinant cytokines.
6. Discuss the diverse techniques on animal cell culturing and its mechanism.

UNITI ANIMALCELLCULTURE (10)

Introductiontobasictissueculturetechniques,equipmentsandinstrumentsinATC - chemically definedandserumfreemedia-animalcellcultures-maintenance andpreservation– varioustypesof cultures;suspension cultures-continuousflowcultures-immobilizedcultures– somaticcellfusion- organcultures.

UNITII ANIMALDISEASESANDTHEIRDIAGNOSIS (9)

Bacterialandviraldiseasesinanimals-monoclonal antibodies–diagnosis-molecular diagnostic techniques;PCR-in-situhybridization-northern-southernblotting-RFLP.

UNITIII THERAPYOFANIMALDISEASES (9)

Recombinantcytokines–therapeuticapplicationsofmonoclonal antibody, vaccines- DNA, subunit, cocktailvaccines-genetherapyforanimaldiseases

UNITIV MICROMANIPULATION OFEMBRYOS (9)

Micromanipulation technology-equipments-enrichmentofxandybearingsperms fromsemen samples-artificialinsemination -germcellmanipulations –Invitro fertilization-embryo transfer- micromanipulationtechnologyandbreedingof farmanimals.

UNITV TRANSGENICANIMALS (8)

Conceptsoftransgenicanimaltechnology;strategiesfortheproduction oftransgenicand knockout animals–significanceinbiotechnology-stemcellcultures and induced pluoripotent stem cells in the productionof transgenicanimals.

Total Hours: 45

16BTBT5E02 ENTREPRENEURSHIPINBIOTECHNOLOGY 3003100

Course Objectives

- To explain basic knowledge on biotech industries in various field.
- To demonstrate the various lab construction through new ventures.
- To construct various parameters of research and development in production of bio based products.
- To explain the case studies of different industries and their strategic planning.
- To outline the basic concepts of IPR and ethics in biotechnology.
- To discuss the different techniques for entrepreneurship in biotechnology.

Course Outcomes

1. Summarize the characteristics of different biotechindustries.
2. Evaluate the different lab construction through newventures.
3. List the various parameters of research and developmental techniques.
4. Explain the opportunities to know different industrial strategic plans.
5. Recognize basic concepts of IPR and ethics in biobased product production.
6. Identify and list different techniques for entrepreneurship in biotechnology.

UNITI OVERVIEWOFBIOTECHNOLOGYINDUSTRIES (9)

Scope - Biotechnology Industries in India and Abroad - Fundamentals of Biotechnology for biobusiness-TrendsandkegissuesinBiotechnology anddevicesindustries-Technology basisin industrysegment,emergingtechnologiesandtechnicalconvergencesissues.

UNITII NEWVENTURECREATION–ENTREPRENEURSHIP (9)

Plant tissueculturelabconstruction–Equipment,glasswareandchemicalrequirements -techniquesin culturing of plants. Export of tissue cultured plants to aboard – Vermi technology– Mushroom cultivation-singlecellprotein-Biofertilizertechnology -production-Commercialization ofR&D-Fermentationtechnology:Bakery,Dairyproducts.

UNITIII PRODUCTDEVELOPMENT (9)

Beer,wineandethanolproductionusingdifferentsources–Enzyme:production, purificationand characterization-Organicacids(Citric,lactic)production-Antibioticproduction-Biogastechnology-Azollacultivation-Productdevelopmentandprojectmanagement, transitionfromR&Dtobusiness units.Institute–industryinteractionandpartnership/alliances.

UNITIV INTELLECTUALPROPERTY,BIOETHICSANDLEGALISSUES (9)

Intellectualpropertyrightsin Biotech,Patentlaws-Bioethics andcurrentlegalissues-Marketing and public perceptions in product development – Genetically modified products and organisms

(Transgenicproducts)-Technologylicensingand brandingconcerns.

UNITV BIOBUSINESSPLANS (9)

Healthcare,theBiomedicalSciences,agricultureandAgrobiotechnology. Transferandbusiness planning-Bankloanandfinancestrategy–Budgetplan–licensingandBranding Concernsand Opportunities, Policy and regulatory Concerns and Opportunities Financial assistance for R&D projectsandentrepreneurship.Corporatepartnersmarketing–Modelproject:Casestudiesofdifferent industriesandtheirstrategicplanning.

16BTBT5E03INDUSTRIALSAFETYANDHAZARDSMANAGEMENT 3003100

Course Objectives

- To explain descriptive views of fire and explosion.
- To illustrate Differentiating relief systems in various explosions.
- To descriminate various hazards and toxicity.
- To evaluate various spills and leakage of liquids.
- To interpret different situations of explosions and toxicity through case studies.
- To discuss the different global and local explosive issues.

Course Outcomes

1. Elaborate the concept of fire and explosion.
2. Learn and evaluate relief systems in various explosions.
3. Explain the hazards and toxicity in various situations.
4. Discuss the various spills and leakage preventive measures.
5. Identify basic views in different situations of explosions and toxicity.
6. Make up perspective techniques and create data on different global and local explosive issues.

UNITIFIREANDEXPLOSION (9)

Introduction-Industrial processes and hazards potential, mechanicalelectrical, thermal andprocess hazards. Safetyandhazardsregulations,Industrialhygiene.FactoriesAct,1948and Environment (Protection) Act,1986andrulesthereof.Shock wavepropagation, vapourcloudandboilingliquid expanding vapours explosion (VCE and BLEVE), mechanical and chemical explosion, multiphasereactions,transporteffectsandglobalrates.

UNITIIRELIEFSYSTEMS (9)

Preventiveandprotectivemanagementfromfiresandexplosion-inerting, staticelectricitypassivation, ventilation,andsprinkling,proofing,reliefsystems– relief valves,flares,scrubbers.

UNITIIITOXICOLOGY (9)

Hazards identification-toxicity,fire, static electricity, noise and dust concentration;Material safety data sheet, hazards indices- Dowand Mond indices, hazard operability (HAZOP)and hazard analysis (HAZAN).

UNITIVLEAKSANDLEAKAGES (9)

Spilland leakageofliquids,vapors,gasesand theirmixturefromstoragetanksand equipment; Estimationofleakage/spillratethrough hole, pipes and vessel burst; Isothermal and adiabatic flows ofgases, spillage and leakage of flashing liquids, pool evaporation andboiling;Release oftoxicsanddispersion.Naturallybuoyantanddensegasdispersionmodels;Effects of momentum andbuoyancy;Mitigationmeasuresforleaksandreleases.

UNITVCASESTUDIES **(9)**

Flixborough,Bhopal,Texas,ONGCoffshore,HPCL Vizagand Jaipur IOC oil-storage depot incident;Oil,naturalgas,chlorineandammoniastorageandtransportationhazards.

16BTBT5E04 DEVELOPMENTALBIOLOGY 3003100

Course Objectives

- To illustrate the origin of developmental biology.
- To explain the basic ideas on specifications of germ layers.
- To list the various functions of vertebrates development by its differentiation.
- To discuss the basic theory of morphogenesis and organogenesis.
- To understand embryogenesis and its functions.
- To discuss the different stages of developmental biology.

Course Outcomes

1. Summarize about the cell commitment and differentiation in developmental biology.
2. Determine the postulation of germ cells and patterning of vertebrate body plan.
3. Express the functions of cell differentiation in vertebrate development.
4. Explain the conceptuation behind morphogenesis and organogenesis.
5. Describe the various functions and stages in embryogenesis.
6. Summarize and predict the different stages of developmental biology.

UNITI INTRODUCTION (8)

Originsofdevelopmentalbiology;Conceptsindevelopment–Developmentalsignalsincelldivision& differentiation;Role of gene expression in development; Identifying developmental genes, Cell commitment&differentiation;Determination&inductionofcell fate, Conceptofmorphogen& positional information; Model vertebrate organisms: Mouse, Zebrafish, Model invertebrate organisms:*D.melanogaster,C.elegans*,Modelplant:*A.thaliana*

UNITII GERMCELLSANDPATTERNINGTHEVERTEBRATEBODYPLAN (9)

Genotypic&phenotypicsex-determination inmammals,*D.melanogaster*and*C.elegans*,Structure&Formationofgermcells,Fertilization;axes&germl ayers;Settingupthebody axes;theorigin& specificationofthegermlayers.

UNIT III DEVELOPMENTOFVERTEBRATES (10)

DevelopmentoftheDrosophila,Nematodes&CellularSlimeMolds: BodyPlan;Specificationof bodyaxes&roleofmaternalgenes;Polarizationofbodyaxesduringoogenesis; Patterning, Segmentation-&roleof pair-rulegenes;celldifferentiationandaggregation.

UNIT IV MORPHOGENESIS ANDORGANOGENESIS (10)

Morphogenesis;Kindsofcleavage&blastulation; Typesoftissuemovementingastrulation; Gastrulationinamphibians&mammals;Neuraltubeformation&neuralcrestmigration; Cell Differentiation&Organogenesis;Modelsofcelldifferentiation;Insectimaginaldisc&wingdevelopment; metamorphosis.

16BTBT6E01PHYTOCHEMICALSANDHERBALMEDICINE 3003100

Course Objectives

- To illustrate the scope and importance of crude drugs.
- To understand the basic ideas on cultivation and utilization of medicinal and aromatic plants.
- To list the various functions of plant tissue culture as asource.
- To label the basic theory of methods of drug evaluation.
- To develop a picture about applications of phytochemicals in industry and healthcare.
- To discuss the different stages of developments in using phytochemicals and medicinal plants.

Course Outcomes

1. Summarize about the importance of crude drugs in different medicinal system.
2. Determine the modern cultivation techniques through plants.
3. Express the functions of plant tissue culturing.
4. Be aware of the conceptuation behind various methods for drug evaluation.
5. Describe the various functions and application of phytochemicals in different industries.
6. Summarize and predict the different stages of developments in using phytochemicals and medicinal plants.

UNITI CRUDEDRUGS (9)

CrudeDrugs–Scope&Importance,Classification(Taxonomical,Morphological Chemical, Pharmacological); Cultivation,Collection&processing ofCrudeDrugs.IndianSystemofmedicine: Ayurveda,SiddhaandUnanianditssignificance

UNITII MEDICINAL&AROMATICPLANTS (9)

Cultivation andUtilizationofMedicinal&Aromatic PlantsinIndia.GeneticsasappliedtoMedicinal herbs.ModernBiotechnologicaltoolsanditsinfluenceinMedicalandAromaticplantcultivation.

UNITIII TISSUECULTUREOFMEDICINALPLANTS (9)

PlantTissueCultureassourceofmedicines,Secondary metaboliteproductioninplants;PlantTissue Culture for enhancing secondarymetabolite production (Withaniasomnifera,Rauwolfiaserpentina, Catheranthusroseus,Andrographispaniculata, Dioscoreasp.);Anticancer,Antiinflammatory, Antidiabetic,Analgesicdrugs,BiogenesisofPhytopharmaceuticals.

UNITIV ANALYSISOFPHYTOCHEMICALS (9)

MethodsofDrugevaluation(Morphological, Microscopic,Physical&Chemical).Preliminary screening,Assay ofDrugs–Biologicalevaluation/assays,Microbiological methods. Types of Phytochemicals: Glycosides - extraction methods(Aloe);VolatileOilsextractionmethods(Clove);Alkaloids-extractionmethods(Cinchona); Flavonoids extractionmethods,Resins-extractionmethods;Lectins.

UNITV APPLICATIONSOFPHYTOCHEMICALS (9)

Applicationofphytochemicalsinindustry andhealthcare;Biocides,Biofungicides, Biopesticides. Nutraceuticalsandtheirsignificance.

Total Hours: 45

16BTBT6E02METABOLICENGINEERING 3003100

Course Objectives

- To explain the gene expression and its regulation.
- To determine the methods for the synthesis of primary metabolites.
- To discuss the procedure for biosynthesis of secondary metabolites.
- To distinguish the features of bioconversion.
- To tell about the regulation of enzyme production.
- To summarize the repressions in enzyme production.

Course Outcomes

1. Illustrate the gene expression and its regulation.
2. Demonstrate the primary metabolite synthesis.
3. Discuss the methods for secondary metabolites production.
4. Outline the features of bioconversion.
5. Explain the regulation of enzyme production.
6. Describe the repressions in enzyme production.

UNITI INTRODUCTION (9)

JacobMonodmodelforgeneexpression regulation–Lacoperon,cataboliteregulation - glucose effect-cAMPdeficiency.Regulation of RNAsynthesisby aminoacid.Feedbackregulation, regulationinbranchedpathways-differential regulation inisozymes,concertedfeedback regulation, cumulative feedback regulation, permeability control: passive diffusion, active transport,grouptransportation.

UNITII SYNTHESISOFPRIMARYMETABOLITES (9)

Alterationoffeedback regulation,limitingaccumulationofend products,feedbackresistant mutants,alterationofpermeabilityformetabolites.

UNITIII BIOSYNTHESISOFSECONDARYMETABOLITES (9)

Producersofsecondarymetabolites,Precursor effects,trophophase-idiophaserelationship,enzyme induction,feedbackregulation,cataboliteregulationbypassingcontrolof secondarymetabolism.

UNITIV BIOCONVERSIONS (9)

AdvantagesofBioconversions,specificity,yields,factorsimportantforbioconversion,regulation of enzyme synthesis,mutation, permeability, co-metabolism,avoidanceof product inhibition, mixedorsequentialbioconversions,conversionofinsolublesubstances.

UNITV REGULATIONOFENZYMEPRODUCTION (9)

Strainselection,improving fermentation, recognizinggrowth cyclepeak,induction, feedback repression,catabolite repression,mutantsresistanttorepression,genedosage.

Total Hours: 45

16BTBT6E03 GENOMICSANDPROTEOMICS 3003100

Course Objectives

- To explain basic knowledge on genome organization of prokaryotes and eukaryotes.
- To discuss the effects of cytogenetic mapping.
- To construct various methods for gene finding and annotations in functional genomics.
- To explain the effects of various protein level estimation in proteomics
- To understand the different protein analysis techniques.
- To outline the post translational modification and other protein interactions.

Course Outcomes

1. Summarize the characteristics of genomic organization of prokaryotes and eukaryotes.
2. Evaluate the different physical mapping techniques.
3. Discuss the gene findings in functional genomics.
4. Explain the protein estimation through different techniques.
5. Recognize different protein analysis techniques.
6. Identify and list different protein interactions.

UNITI OVERVIEWOFGENOMESOFBACTERIA,ARCHAEANDEUKARYOTA (9)

Genome organization ofprokaryotesandeukaryotes,genestructureofbacteria,archaebacterial and eukaryotes,Humangenomeproject,Introductionof functionalandcomparativegenomics.

UNITII PHYSICALMAPPINGTECHNIQUES (9)

Cytogeneticmapping, radiation hybrid mapping, Fish, STSmapping, SNPmappingopticalmapping, Topdownandbottomupapproach,linkingandjumping ofclones,gapclosure,pooling strategies, genomesequencing.

UNITIII FUNCTIONALGENOMICS (9)

Genefinding;annotation;ORFandfunctionalprediction;SubstractiveDNAlibraryscreening; differentialdisplayand representationaldifferenceanalysis;SAGE.

UNITIV TECHNIQUES IN PROTEOMICS (9)

Proteinlevelestimation; Edmanproteinmicrosequencing;protein cleavage; 2Dgelelectrophoresis; metabolic labeling; detectionofproteinsonSDSgels.Mass spectrometry-principlesofMALDI-TOF;TandemMS-MS;Peptide massfingerprinting.

UNITV PROTEINPROFILING (9)

Posttranslationalmodification;protein-protein interactions;glycoprotein analysis;phosphor protein analysis.

Total Hours: 45

16BTBT6E04 BIOPROCESSPLANTDESIGN 3003100

Course Objectives

- To discuss the mass and energy balance.
- To explain the scale up of equipments.
- To describe the scale down of equipments.
- To explain design of equipments.
- To understand the facility design with safety.
- To outline the process economics in biological products production.

Course Outcomes

1. Calculate the mass and energy balance.
2. Evaluate the scaling up process for equipments.
3. Discuss the scale down process for equipments.
4. Describe the design of equipments.
5. Tell about the facility design in euipmentation.
6. Summarize the process economic calculations in plant design.

UNITI MASSANDENERGYBALANCE (9)

Introduction: Generaldesigninformation-Materialandenergy balancecalculations-ProcessFlow sheeting.

UNITII SCALEUPANDSCALEDOWNOFEQUIPMENTS (9)

HeatandMassTransferstudies: Effectofscaleonoxygenation,mixing,sterilization, pH,temperature, inoculumdevelopment, nutrientavailabilityandsupply.Bioreactorscale-up-constantpower consumptionpervolume,mixingtime,impellertipspeed(shear)-masstransfercoefficients.Scaleup ofdownstreamprocesses-Adsorption(LUBmethod),Chromatography (constantresolutionetc.), Filtration(constantresistanceetc.)-Centrifugation(equivalenttimesetc.)-Extractors(geometry basedrules)-Scale-downrelatedaspects.

UNITIII DESIGNOFEQUIPMENTS (9)

Selection of bioprocess equipment (upstream and downstream) - Specifications of bioprocess equipment-Mechanicaldesignofreactors,heattransferandmasstransferequipment. Design considerationsformaintaining sterilityofprocessstreamsandprocessequipment-Pipingand instrumentation-Materialsofconstructionforbioprocessplants.

UNITIV FACILITYDESIGN (9)

Facilitydesignaspects-Utility supplyaspects-Equipmentcleaningaspects-Culturecellbanks-cGMPguidelines–Validation-Safety.

UNITV ECONOMICSANDCASESTUDY (9)

Processeconomics-Casestudies.Commoditychemicalsandproductionofpharmaceuticalproducts.

16BTBT6E05MOLECULARPATHOGENESIS 3003100

Course Objectives

- To define the basic view of infectious diseases in host microbe interactions.
- To illustrate the diverse host defense mechanism and pathogenic strategies.
- To propose an opinion on molecular pathogenesis.
- To explain the characterization techniques for host pathogen interactions.
- To understand the basic concept on modern approaches to control pathogens.
- To explain the diverse pathogens and its controlling measures.

Course Outcomes

1. Identify different views on host microbe interactions.
2. Differentiate various host defense mechanisms.
3. Illustrate the concept behind molecular pathogenesis.
4. Evaluating and characterizing host pathogen interactions.
5. Analyze and categorize the best approach to control pathogens.
6. Explain the diverse pathogens and its controlling measures.

UNIT-I HOST-MICROBE INTERACTIONS (7)

Normal Flora-Protective role-dyanamic nature, Principles of Infectious diseases-pathogenicity-pathogen types and modes of entry, causes of infectious disease-Koch's postulates molecular postulates-mechanisms of pathogenesis. Epidemiology-principles.

UNIT-II HOST-DEFENSEAGAINSTPATHOGENSANDPATHOGENICSTRATEGIES (10)

Hostdefense:skin,mucosa,cilia,secretions,physical movements,limitationoffree iron, antimicrobial compounds,mechanismofkillingbyhumoral andcellular defensemechanisms,complements,inflammationprocess,generaldisease symptoms.

UNIT-III MOLECULARPATHOGENESIS (10)

Virulencefactors-generegulationinvirulenceofpathogens-labile&stabletoxins;*VibrioCholerae*-Choleratoxin-*E.coli*pathogens: -ETEC–EPEC- EHEC-EIECHemolyticUremicSyndrome-Shigella toxin-PlasmodiumLifecycle-Antimalarialsbasedontransport processes-Influenzavirus-action of amantidine.

UNIT-IV EXPERIMENTALSTUDIESONHOST-PATHOGENINTERACTIONS (9)

Virulenceassays:adherence,invasion,cytopathic,cytotoxic effects.Criteria&testsinidentifying virulence factors,attenuatedmutants,molecularcharacterizationofvirulence factors,signaltransduction& hostresponses.

UNIT-V MODERNAPPROACHESTOCONTROLPATHOGENS (9)

Classicalapproachesbasedonserotyping.Moderndiagnosisbasedonhighlyconservedvirulencefactors, immuno&DNA-basedtechniques.Newtherapeuticstrategiesbasedonrecentfindingsonmolecular pathogenesisofavarietyofpathogens,Vaccines -DNA,subunit andcocktail vaccines

Total Hours: 45

16BTBT6E06BASICSOFDRUGACTION 3003100

Course Objectives

- To explain the general concepts of pharmacology.
- To discuss the systemic pharmacology with drug action.
- To describe the experimental pharmacology in drug discovery.
- To tell about the general aspects on the pharmacognosy.
- To infer the knowledge on methods and quality control for following pharmacognosy.
- To discuss the protocol for isolation of phytochemicals.

Course Outcomes

1. Tell about the basics of paharmacology in drug action.
2. Explain the systemic pharmacology.
3. Discuss the methods for experimental pharmacology.
4. Describe the action of drugs in pharmacognosy.
5. Outline the methods for isolation of phytochemicals.
6. Understand the characterization of phytochemicals.

UNIT I BASICSOFPHARMACOLOGY (9)

General concepts of Pharmacology, ADME process, drug action- mechanism, factors affecting drugaction.Dose-effectrelationship

UNITII SYSTEMICPHARMACOLOGY (9)

DrugsAffectingtheCentralNervousSystem,CardiovascularandRenalSystems,Immune system, RespiratorySystem, Gastrointestinal System and Nutrition, Endocrine System, Integumentary systemandEyes/Ears.Drugsaffectinguterinemotility,Chemotherapy ofparasiteinfections, Chemotherapyofmicrobialdiseases.Antineoplasticagents,Immunomodulators.Drugsactingon bloodandbloodformingorgans

UNITIII EXPERIMENTALPHARMACOLOGY (9)

Experimentalmethodologiesinvolvedinthediscovery ofdrugs(*invivo,invitro,exvivo*).Animal handlingandanimalcare.Methodsofanaesthetisinganimalsandmethodsofeuthanasia. Restraining andbloodcollectingmethods.

UNITIV PHARMACOGNOSY (9)

General aspects of sources of natural medicinal products**.** Marine Pharmacognosy and its applications. Generalcultivationofmedicinalplants,theirmeritsandDemerit-a.Generalaspects,b. Factors involved,c. Methodsused to improve the Qualityand d. Pest control.Roleofnatural pesticides–Preparationanduses.

UNITV ISOLATION AND CHARACTERIZATION OF PHYTOCHEMICALS (9)

GeneralmethodsandPrinciplesofextractionmethods,typesofextractionandtheirmerits and demerits. Selectionandpurificationofsolvents forextraction,methods ofisolation,purification and identificationofphytoconstituents.

Total Hours: 45

16BTBT6E07MARINEBIOTECHNOLOGY 3003100

Course Objectives

- To explain descriptive properties of seawater.
- To illustrate differentiating marine organisms and their industrial applications.
- To descriminate various pollution controlling marine organisms.
- To evaluate various marine toxins used in pharmaceutical industries.
- To interpret recombinations in marine aquaculture.
- To understand the usage of marine organism for different situations.

Course Outcomes

1. Discuss the basic knowledge on biogeochemical cycles.
2. Organize and manage marine organism in different industries.
3. Organize and manage pollution controlling measures through marine organisms.
4. Perceive the basics on combining marine toxins in pharma industries.
5. Compile different proteins of marine organism to develop a new variety.
6. Explain how to use marine organism for different situations.

UNITI INTRODUCTIONTOMARINEENVIRONMENT (9)

Worldoceansandseas–oceancurrents–physicalandchemicalproperties ofseawater–abioticand bioticfactorsofthesea–ecologicaldivisionsofthesea–historyofmarinebiology–biogeochemical cycles–foodchainandfoodweb**.**

UNITII MARINEORGANISMS AND THEIR INDUSTRIAL APPLICATIONS (9)

Phytoplanktons–zooplanktons–nektons–benthos–marinemammals–marinealgae–mangroves–coralreefs– algal products, fuels from algae, algal cell culture

UNITIII MARINEENVIRONMENTALBIOTECHNOLOGY (9)

Marinepollution–biologicalindicators(marinemicro,algae)–biodegradation&bioremediation–marinefoulingandcorrosion.

UNITIV MARINEPHARMACOLOGY (9)

Medicinalcompoundsfrom marineflora andfauna–marinetoxins, anti cancer agents, antiviralandantimicrobialagents. Marine Toxins

UNITV AQUACULTURETECHNOLOGY (9)

Importanceofcoastalaquaculture–marinefisheryresources–commonfishingcraftsandgears–Aqua farmdesignandconstruction, transgenic fish.

Total Hours: 45

16BTBT6E08PROTEINENGINEERING 3003100

Course Objectives

- To identify the basic structural principles of protein.
- To classify the different techniques of mutagenesis in bioimprinting.
- To record the basic notion on enzyme engineering and protein purification.
- To differentiate and organize the distint metagenomics and ecosystem biology.
- To explain the basic theory of protein engineering in industries.
- To examine the problems related to engineering enzymes.

Course Outcomes

1. Compare and contrast structural and functional properties of proteins.
2. Summarize the diverse techniques of mutagenesis.
3. Prioritize diverse methods for protein purification.
4. Construct and design the techniques of metagenomics and ecosystem biology.
5. Apply the knowledge on applications of protein engineering in industries.
6. Examine and solve the problems related to engineering enzymes.

UNIT-I BASICSTRUCTURALPRINCIPLESOFPROTEINS (9)

AminoAcids properties (size,solubility,charge,pKa), Kyle-Doolittle(Hydropathy)Index; Peptides as buildingblocksofproteins;Torsional(dihedral)angles,RamachandranPlot;Secondary Structuresof proteins; Loops – Types and Functions;Biosynthesis and chemical synthesisof Peptides. Lesk, RichardsonandTopologySchematics

UNIT-II TECHNIQUESOFMUTAGENESIS (9)

Rational Design, Non rational design , Mutagenesis library construction- Chemical, Staggered Extension, RandomElongation, Randompriming,ErrorpronePCR,Impactofstructureanalysisand prediction- structure and modeling, role of biocomputing, denova design, Effect of protein conformationandbioimprinting.

UNIT-III ENGINEERINGENZYMES (9)

Engineeringstability(*Bacillussubtilis*neturalprotease,Pseudomonasisoamylase,carbamylasefrom Agrobacterium radiobacter),specificityandfeaturestoeaseproteinpurification,Engineering antibodies-Engineering signal molecules (hormones/receptors), Engineeringprotein to facilitate recovery.Affinitypurification(Strep-Tag)

UNIT-IV METAGENOMICS (9)

Metegenomics and ecosystems Biology- conceptual framework, tools and methods- Analyses of metagenomics, Singlegeneapproach,Targetedpartialmetagenomesequencing,Analysesof metatranscriptome-Limitationinanlaysingthemetatranscriptome- 16srRNasequencing and metatranscriptomepyrosequencing, metaproteome-molecularmethodstostudycomplexmicrobial communities,metabolomics-metabolomeofanecosystemandmetagenomics. Metabolomicsfornaturalproductperception

UNIT-V PROTEINENGINEERINGININDUSTRIES (9)

Proteinengineeringforindustrialenzymology,Biosensor-chemicallyengineeredelectronicprotein, geneticallyfusedprotein,Geneengineeringformolecularnetworkingandprotein assembly;molecular bioscreening inoncology- mechanismbaseddrugdiscovery.Proteinengineeringinvaccine development.

Total Hours: 45

16BTBT7E01IMMUNOTECHNOLOGY 3003100

Course Objectives

- To explain basic knowledge on antigen structure and preparation.
- To discuss the structural and functional principles of antibodies and immunodiagnosis.
- To construct various parameters of B cells and T cells.
- To explain the effects of preparation and storage of tissues in immunopathology.
- To outline the basic concepts of preparations of vaccine in molecular immunology.
- To discuss the different techniques for antigen and antibody synthesis.

Course Outcomes

1. Summarize the characteristics of different methods of antigensproduction.
2. Evaluate the different structural and functional principles of antibodies and immunodi
3. List the various parameters of B cells and Tcells.
4. Explain the preparation and storage of antibodies and immunodiagnosis.
5. Recognize basic concepts of vaccine preparation in molecular immunology.
6. Identify and list different techniques for antigen and antibody synthesis.

UNIT I ANTIGENS (7)

Types of antigens, their structure, preparation of antigens for raising antibodies, handling of animals,adjuvantsandtheirmodeofaction.

UNITII ANTIBODIES&IMMUNODIAGNOSIS (10)

Monoclonal andpolyclonalantibodies–theirproductionandcharacterization,Westernblotanalysis, Immunoelectrophoresis,SDS-PAGE-purificationandsynthesisofantigens,ELISA–principleand applications,adioimmunoassay(RIA)-principlesandapplications,nonisotopicmethodsofdetection of antigens-enhancedchemiluminescenceassay.

UNIT III ASSESMENTOFCELLMEDIATEDIMMUNITY (10)

Identificationoflymphocytesandtheirsubsetsinblood.Tcellactivationparameters,estimation of cytokines,macrophageactivation,macrophage microbicidalassays,in-vitroexperimentation– applicationoftheabovetechnologytounderstandthepathogenesisofinfectiousdiseases.

UNITIV IMMUNOPATHOLOGY (9)

Preparationof storageof tissues,identificationofvariouscelltypesand antigensintissues,isolation andcharacterizationofcelltypesfrominflammatorysitesandinfectedtissues,functionalstudies onisolatedcells,immunecytochemistry–immunofluoresecence,immune enzymaticandimmuno ferritintechniques,immunoelectronmicroscopy.

UNITV MOLECULARIMMUNOLOGY (9)

Preparationofvaccines,applicationofrecombinantDNAtechnology forthestudy oftheimmune system,productionofantiidiotypicantibodies,catalyticantibodies,applicationofPCRtechnology to produceantibodiesandotherimmunologicalreagents, immunotherapywithgeneticallyengineered antibodies–Tetramer,recombinantvaccines.

Total Hours: 45

16BTBT7E02 ENVIRONMENTALBIOTECHNOLOGY 3003100

Course Objectives

- To explain basic knowledge on soil microbes and its characteristics.
- To demonstrate the effects of xenobiotic compounds.
- To discuss various methods for industrial waste water management.
- To explain the effects of various industrial wastes and to infer basic concepts for its management.
- To outline the natural and engineered bio-treatment methods to remediate the pollutants.
- To discuss the different environmental issues using biotechnology.

Course Outcomes

1. Summarize the characteristics of soil microbes and its interactions.
2. Evaluate the different xenobiotics present and methods to degrade them.
3. Describe the industrial waste management systems.
4. List the opportunities in waste treatment industries and its management.
5. Recognize natural and engineered biotreament methods to remediate pollutants.
6. Identify and list different environmental issues and its remedy.

UNITI INTRODUCTION (8)

Microbialfloraofsoil,growthandecologicaladaptationsofsoilmicroorganisms, interactions amongsoilmicroorganisms,biogeochemicalroleofsoilmicroorganisms.

UNITII DEGRADATIONOFXENOBIOTICCOMPOUNDS (9)

Aromatics -benzene, pentachlorophenol, Polyaromatic hydrocarbons (PAHs)–naphthalene,, Polychlorinatedbiphenyls(PCBs)hexachloro biphenyl,Pesticides-DDTandSurfactants–LAS

UNIT III INDUSTRIALWASTEWATERMANAGEMENT (10)

Wastewater characteristics–physical,chemicalandbiological,Biologicalprocesses-unit operations,aerobictreatmentprocesses,activatedsludgeprocess–characteristicsof activatedsludge andprocessconfiguration,anaerobictreatmentbymethanogenesis

UNITIV TREATMENTOFINDUSTRIALWASTES (9)

Dairy, Paper & Pulp, Textile, leather, hospital and pharmaceutical industrial waste management, e-waste-radioactive and nuclear power waste management.

UNITV DEVELOPMENTSPERTAININGTOENVIRONMENTALBIOTECHNOLOGY (9)

Solidwaste management,RoleofbiosensorsinEnvironmentalmonitoring,Heavymetalpollution and theircontrolstrategies,Preventionofenvironmental damagewithrespecttonitrogenfixation, Bioremediation,Productionofbioelectricity frommicrobialfuelcell(MFC),Improvementofwater qualitybydenitrification,Roleofbiotechnologyonagriculturalchemical use.

16BTBT7E03 RECOMBINANTDNATECHNOLOGY 3003100

Course Objectives

- To present basic knowledge about the various cloning vectors and its features.
- To demonstrate the various techniques and enzymes involved in cloning.
- To explain and practice diverse concepts on expression vectors for cloning.
- To practice the basic views on preparation of genomic and cDNA library.
- To identify and organize differeing views on applications of gene cloning in rDNA research.
- To compile the basic concepts of rDNA technology.

Course outcomes

1. Compose about basic concepts about the features of cloning vectors.
2. Assemble different techniques and enzymes involved in cloning.
3. Classify about expression vectors for cloning.
4. List the techniques in preparation of genomic and cDNA library.
5. Propose knowledge on applications for rDNA research.
6. Summarize concepts of rDNA technology.

UNITI CLONINGVECTORS (9)

Idealfeaturesofcloning vectors–plasmidsandbacteriophages–cloningvectorsforE.coli;pBR322, pUCvectors,M13andotherplasmidvectors–Cosmids, Phagemids–vectorsforBacillus, StreptomycesRestrictionmappingand analysis

UNITII ENZYMESANDTECHNIQUESFORCLONING (9)

DNAmodifying enzymes–ligases–Nucleicacidprobepreparation;Radioactiveandnonradioactive labels–Hybridizationtechniques–PCR;differenttypesandapplications–DNAsequencing –DNA fingerprinting–RFLP,RAPD– chromosomewalking.

UNITIII EXPRESSIONVECTORS (9)

Expression vectors in prokaryotes – Expression vectors in Eukaryotes-Yeast cloning vectors – selectablemarkersforeukaryotes–SV40,Papilloma,Retrovirus,Baculoviralvectors–mammalian cellexpression system–Genetransfertechniques–Agrobacterialplasmids–Tiplasmidandviral vectors– cloninginplants.

UNITIV GENOMICANDcDNALIBRARY (9)

Differentstrategiesforinvitroandinvivocloning–Preparation ofrDNA, Preparation ofcDNAand genomicDNAlibraries–screeningprocedures–linkers,adapters,homopolymertailingandTA cloning–genetransfertechnologies–Mutagenesis–sitedirectedmutagenesis– application.

UNITV APPLICATIONOFGENECLONING (9)

Fusionprotein-down-streamprocessingofrecombinantproteinsApplications inmedicine–Gene therapy- Diagnostics, pathogenesis, recombinant vaccines –humanized antibodies and their applicationsgeneticallymodifiedfood–bioremediation withrecombinant microorganisms– forensic science–geneticdiversity –Agriculture,cropimprovement–productionofbiosensors,enzymes–safetyguidelinesinrDNAresearch–containmentanddisposal.

16BTBT7E04 CANCERBIOLOGY 3 0 0 3 100

Course Objectives

- To explain the fundamentals of cancer biology
- To understand the principles ofcarcinogenesis
- To explain the principles of molecular cell biology
- To explain the principles of cancer metastasis
- To outline the different types of cancer therapy.
- To understand the molecular tools for cancer diagnosis.

Course Outcomes

At the end of the course students will be able to

1. Understand the fundamentals of cancer biology
2. Interpret the mechanism ofcarcinogenesis
3. Outline the principles of molecular cellbiology
4. Understand the significance of cancer metastasis
5. Summarize the different types of cancertherapy
6. Recall the molecular tools of cancer diagnosis

UNIT I FUNDAMENTALSOFCANCERBIOLOGY (8)

Epidemiologyofcancer:environmentalfactors:tobacco,alcohol,diet,occupationalexposure,hormones.Regulationofcell cycle, modulation of cell cycle in cancer. Different forms of cancers. Specific type of cancer hepato cellular, melanoma, breast,lungcancer.Geneticbasisofcancer-DNArepair.mutationsthatcausechangesinsignalmolecules,signalswitches.

UNIT II PRINCIPLESOFCARCINOGENESIS (9)

Theoryofcarcinogenesis,Chemicalcarcinogenesis,metabolismofcarcinogenesis,principlesofphysicalcarcinogenesis,x- rayradiation-mechanismsofradiationcarcinogenesis.

UNIT III PRINCIPLESOFMOLECULARCELLBIOLOGYOFCANCER (10)

Signal amplification:Current models of signal amplification– Phosphorlyation of protein kinases;regulation of protein kinases: serine threonine kinase, TNF receptor families,tumorsuppressorgenes,Oncogenes,identificationofoncogenes,detectionofoncogenes.Oncogenes/protooncogeneactivity.Growthfactorsrelatedto transformation. Telomerases.

UNIT IV PRINCIPLESOFCANCERMETASTASIS (10)

Clinicalsignificancesofinvasion,heterogeneityofmetastaticphenotype,metastaticcascade,basementmembranedisruption, threesteptheoryofinvasion,proteinasesandtumourcellinvasion.

UNIT V CANCERTHERAPY **(8)**

Cancerscreeningandearlydetection,Detectionfusingbiochemicalassays,tumormarkers,moleculartoolsforearl ydiagnosis ofcancer. Advancesincancerdetection.Differentformsoftherapy,chemotherapy,radiationtherapy,immunotherapy, moleculartherapy,useofsignaltargetstowardstherapyofcancer;Genetherapy.

16BTBT8E01 TISSUEENGINEERING 3003100

Course Objectives

- To explain the various cell types and their advances in tissue engineering.
- To demonstrate the various biomaterials for tissue engineering.
- To explain and practice diverse concepts on tissue engineering and tissue creation.
- To discuss the techniques in tissue typing.
- To practice the basic views on gene therepy.
- To identify and organize differeing views on advances on tissue engineering.

Course outcomes

1. Compose about basic concepts in tissue engineering
2. Assemble different biomaterials for tissue engineering
3. Classify about methods for Tissue Engineering.
4. List the techniques in tissue typing
5. Explain the principles of gene therapy
6. Summarize the concepts of tissue engineering in different fields.

UNITI INTRODUCTIONTOTISSUEENGINEERING (9)

Celltherapies.TissueConstructs, OrganModules,CosmeticMeasures.ConceptsofTissueCreation: Sources,StemCells,CellsfromTissues,CultureMethodsforTissueEngineering.Maturationof TissueConstructs.Musculo–skeletal tissueengineering;Modificationsoftissuering; Receptorsligand interaction;Receptor.

UNITII BIOMATERIALSFORTISSUEENGINEERING (9)

Biomaterials:Degradablepolymericscaffolds,Acellular Bio-Matrices, Biologicalderived polymersin tissueengineering:NaturalBDPolymers&SyntheticBDpolymers, Cellseedingofscaffolds, Cell source:Allogeniccells,Autologous cells&stemcells.Bioreactorsusedintissueengineering:Nail Naughtom’sBioreactor,PulsatileBioreactor.

UNITIII BIOLOGICALSTUDYOFDIFFERENTCELLTYPES (9)

Cellline,Establishment ofcelllines,Differentcelltypes:Endothelialcell,Fibroblastcells,Epithelial cell,Myoblastcells,chromaffincell,Smoothmusclecells&plasmacell.

UNITIV PRINCIPLESANDPRACTICE OFGENETHERAPY (9)

Introductiontogenetherapy,Requirements ofgenetherapy,Geneticdefects,Targetcellsforgene therapy,processof genetherapy,Factorsresponsibleforgenetherapyformakingeffectivetreatment ofgeneticdisease,Recentdevelopments ingenetherapyresearch,ethicalconsiderationsofgene therapy.

UNITV ADVANCESINTISSUEENGINEERING (9)

Developmentofartificialtissues;Transplantation biology:Tissue typing,Techniquesoftissuetyping, Minorhistocompatibilityantigens,Immuno-suppression,Sideeffectsofimmuno-suppression.

Total Hours: 45

16BTBT8E02 CLINICAL TRIAL AND MANAGEMENT 3003100

Course Objectives

- To explain descriptive views of clinical practices and its scope.
- To illustrate Differentiating ethical theories and foundations of clinical trials.
- To discuss various evolution and regulation of clinical research.
- To evaluate various designing protocols and amendments of clinical research.
- To interpret different biostatistics and data management.
- To create data on different clinal research.

Course Outcomes

1. Elaborate the concept of scope and types of clinal research.
2. Evaluate the ethical theories of clinical research.
3. Discuss the history and regulation of clinical research.
4. Explain the various protocol developments in clinical research.
5. Identify basic views in different situations of biostatictics in clinical trials.
6. Make up perspective techniques and create data on different clinal research.

UNITI INTRODUCTIONTOCLINICALRESEARCH (9)

Definition,TypesandScopeofClinicalResearch,GoodClinicalPractices-Introduction tostudy designsand clinicaltrials-CareersinClinicalResearch.

UNITII ETHICSINCLINICALRESEARCH (9)

Ethical Theories and Foundations, Ethics Review Committee, Ethics and Historically derived principles-Nuremberg Code,DeclarationofHelsinki,BelmontReport,Equipoise,Informedconsent, Integrity&Misconduct.

UNITIII REGULATIONSINCLINICALRESEARCH (9)

EvolutionandHistoryofRegulationsinClinicalResearch,PatentsUSRegulatory Structure,IND, NDA,ANDA, PostDrugApproval Activities,PMS,FDAAuditsandInspectionsEURegulatory Affairs,EMEAOrganizationandFunction,INDIANRegulatorysystem,ScheduleY-Rules and Regulations,Descriptionoftrialphases(Phase0,PhaseI,II,III,andIV),Trialcontexts(typesof trials:pharma,devices,etc.),Trialexamples

UNITIV CLINICALRESEARCHMETHODOLOGYANDMANAGEMENT (9)

DesigningofProtocol,CRF,e-CRF,IB,ICF,SOP; Study Protocol-Introduction, background,Objectives-Eligibility,Design,Randomization- Intervention details,assessmentsanddatacollection,casereportforms–Violations-.Amendments. Study/TrialDesign-PhaseIdesigns-Dose-findingdesigns.PhaseIIdesigns-Pilotstudies,Single arm,Historicalcontroldesigns.PhaseIIIdesigns-Factorialdesigns,Crossover designs,Multicenter studies,Pilotstudies.PhaseIVdesigns-Preparationofasuccessfulclinicalstudy,Studymanagement, ProjectmanagementDocumentation,Monitoring,AuditsandInspections,Pharmacovigilancetraining in clinicalresearchbudgetingin clinicalresearch,Suppliesandvendormanagement.

UNITV BIOSTATISTICSANDDATAMANAGEMENT (9)

Introduction toPowerandSampleSize-Hypothesis testing,P-values,confidenceintervals,General power/sample size,estimatingeffectsize,Matching samplesizecalculationstoendpoints.Importance ofstatisticsinclinicalresearchStatisticalconsiderationsatthedesign,analysisandreportingstage Datamanagement-Datacollection,Paperorelectronic,Parsimony, Datavalidation,SAE reconciliation,querymanagement Softwareconsiderations. DataMonitoring,TrialConduct-Data qualityassurance,Datadelinquency, DataMonitoring,d.TrialConduct,Occurrenceandcontrolof variationandbias.

Total Hours: 45

16BTBT8E03 STEM CELL TECHNOLOGY 3003100

Course Objectives

- To explain basic knowledge on definition and scope of stem cells.
- To demonstrate the structural and functional principles of in vitro fertilization.
- To discuss the various identification and cell differentiation of somatic stem cells.
- To explain the effects of stem cell in drug discovery and tissue engineering.
- To outline the basic concepts of cellular therapy and gene therapy of stem cells.
- To compile the application of stem cells.

Course Outcomes

1. Summarize the characteristics stem cells.
2. Evaluate the different structural and functional parameters of invitro fertilization.
3. List the properties of adult stem cells in differentiation.
4. Explain the uses of stem cells in drug discovery and tissue engineering.
5. Recognize various stem cell therapies.
6. Summarize the application of stem cells.

UNITI STEMCELLSANDCELLULARPEDIGREES (9)

Scopeofstemcells–definitionofstemcells–conceptsofstemcells–differentiation, maturation , proliferation,pluripolericy,self – maintenanceand self – renewal–problemsinmeasuring stem cells–preservationprotocols.

UNITII EMBRYONIC STEMCELLS (9)

In vitro fertilization –culturing of embryos-isolation of human embryonic stem cells – blastocyst – inner cell mass – growing ES cells in lab – laboratory tests to identify ES cells – stimulation ES cells for differentiation – properties of ES cells.

UNIT III ADULT STEM CELLS (9)

Somatic stem cells – test for identification of adult stem cells – adult stem cell differentiation – trans differentiation – plasticity – different types of adult stem cells – IPS and cancer stem cells.

UNIT IV STEM CELL IN DRUG DISCOVERY AND TISSUE ENGINEERING (9)

Target identification – Manipulating differentiation pathways – stem cell therapy Vs cell protection - stem cell in cellular assays for screening – stem cell based drug discovery, drug screening and toxicology, stem cell markers

UNITV POTENTIALUSESOFSTEMCELLS (9)

Cellulartherapies–vaccines–genetherapy–immunotherapy –tissueengineering–bloodandbone marrow–Fccells.

Total Hours: 45

16BTBT8E04 BIOMASS ENERGY 3003100

Course Objectives

- To explain the variations of renewable and nonrenewable energy and its usage.
- To classify the different sources for the production of biomass and bioenergy.
- To record the basic notion on assorted properties of fuels.
- To design the bioenergy production through agricultural wastes.
- To differentiate and organize the distint agricultural wastes used for bioenergy production.
- To understand the basic theory of bioprocess principles.

Course Outcomes

1. Compare and contrast energy use as renewable and non-renewable energy.
2. Synthesize the biomass for renewable energy production.
3. Prioritize diverse properties of fuels.
4. Construct and design the bioenergy production through agricultural wastes.
5. Apply the knowledge on downstream processing for bioenergy production.
6. Examine and solve the problems related to bioenergy production.

UNITI OVERVIEWOFENERGYUSE (9)

Fossil fuels - past, present &future, Remedies &alternativesforfossilfuels,Today's energy use,Fossilfuelsandenvironmentalimpact,Renewableenergysourceanddevices, SolarEnergy, windenergyandhydroenergy.

UNITII BIOMASSANDBIO-ENERGY (9)

Biomasspotential-terrestial,aquaticandmarine-collection-storageandutilization, Dedicated bioenergycrops,Woodybiomass,Liquidbiofuels, Syntheticfuelsfrom thebiomass,biomassto biofuelconversion,Alcoholproduction- cellulosedegradation.

UNITIII PROPERTIESOFFUELS (9)

Fuelproperties-alcohol,biogas,producergas,vegetableoil.Combustion-airrequirement – Octane andCetane numbers.Analysisof productsofcombustion.Fuelblending-fuelefficiency indualfuel operation,Biogasandproducergasengines.

UNITIV AGRICULTURAL BIOMASS (9)

Bioenergy fromwastes,agriculturalwastesandbyproducts-sourcesandavailability, utilisation pattern - as fuel, Biochemical conversion of organic wastes, anaerobic digesters, methane production-sludgetreatment-suitabilityofwastesasfuel.

UNITV DOWNSTREAMPROCESSING (9)

Introduction todownstreamprocessingprinciples,characteristicsofbiomolculesand bioprocesses. Celldisruptionforproductrelease–mechanical, enzymaticand chemicalmethods,fileration, centrifugation,chromatography,esterification,pyrolysis.

Total Hours: 45

16BTBT8E05 BIOSEPARATIONS 3003100

Course Objectives

- To explain cell disruption techniques.
- To illustrate different chromatographic methods for separation of active components.
- To descriminate separation techniques for analyzing the biological samples.
- To discuss the importance of separation of biomolecules from a mixture..
- To describe the isolation, purification and behavior of biomolecules.
- To understand the basic downstream process for treating the samples.

Course Outcomes

1. Discuss the basic knowledge on forensic activities.
2. Analyze the forensic criminalities.
3. Describe the analysis for the evidences of forensic samples.
4. Perceive the procedure for forensic sample analyzing using different assays.
5. Compile different properities and functions of digital imaging in forensic.
6. Explain the forensic ethics.

UNIT I CELLDISRUPTION (9)

Mechanicalandenzymatic methodsofcelldisruption, importanceofcelldisruption inproduct release,homogenization,ultrasonication,extraction,absorption,adsorption.

UNITII CHROMATOGRAPHICMETHODS (9)

Chromatographicmethods,paperchromatography, thinlayerchromatography, gaschromatography, GLC, HPLC,affinitychromatography, ion exchangechromatography, reverse phase chromatography

UNITIII SEPARATIONTECHNIQUES (9)

Basicseparationtechniques:sedimentation, centrifugation,ultracentrifugation,gradient centrifugation, filtration,micro/ultrafiltration,useofmembranes (semipermeable)inpurification, reverse osmosis. Separation of bioconversion products/ secondarymetabolites e.g. Steroids and antibiotics.

UNIT IV PHYSICO-CHEMICALSEPARATION (9)

Importance ofseparationtechniquesinbiotechnology,itsscopefromresearchtoindustry,chemical, physicalandbiochemical aspectsofseparationandisolation,purificationofbiomolecules. Behavior ofbiomoleculesinbodyfluids

UNITV DOWNSTREAMPROCESSES (9)

Leaching,crystallization,lyophilzation,drying.Chemistryofextraction,selectionofsolvent,useof solvent extraction in antibiotic separation, affinity extraction/ chromatography. Industrial applicationswithexamples.

Total Hours: 45

16BTBT8E06 BIOCONJUGATE TECHNOLOGY 3003100

Course Objectives

- To illustrate the modification of biomolecules.
- To describe the chemical reactions of active biomolecules.
- To list the importance and uses of bioconjugate reagents.
- To infer the chemical modifications of enzymes and nucleic acids.
- To tell about the enzyme and nucleic acid conjugation
- To discuss the various applications of bioconjugation of molecules.

Course Outcomes

1. Tell about the modifications of common biomolecules.
2. Determine the basic chemical reactions for active groups.
3. Express the functions ofbioconjugate reagents.
4. Summarize the steps for enzyme and nucleic acid modification.
5. Describe the protocol for enzyme and nucleic acid conjugation.
6. Summarize applications of bioconjugation.

UNIT I FUNCTIONALTARGETS (9)

ModificationofAminoAcids, PeptidesandProteinsModificationofsugars,polysaccharidesand glycoconjugates–modificationof nucleicacidsandoligonucleotides.

UNITII CHEMISTRYOFACTIVEGROUPS (9)

Aminereactivechemicalreactions–Thiolreactivechemical reactions–carboxylatereactivechemical reactions–hydroxyl reactivechemical reactions–aldehydeandketone reactivec hemical reactions–Photoreactivechemicalreactions.

UNITIII BIOCONJUGATEREAGENTS (9)

Zero length crosslinkers – Homo bifunctional crosslinkers–Hetero bifunctional crosslinkers–Trifunctionalcrosslinkers–Cleavablereagentsystems–tagsandprobes.

UNIT IV ENZYMEANDNUCLEICACIDMODIFICATIONANDCONJUGATION (9)

Propertiesofcommonenzymes–Activatedenzymesforconjugation –biotinylatedenzymes–chemicalmodificationofnucleicacids–biotinlabelingofDNA–enzymeconjugation toDNA–Fluorescenceof DNA.

UNITV BIOCONJUGATEAPLICATIONS (9)

PreparationofHapten-carrierImmunogenconjugates–antibody modificationandconjugation–Immunotoxinconjugationtechniques–liposome conjugationandderivatives-Colloidal–gold-labeled proteins–modificationwithsyntheticpolymers.

16BTBT8E07 IPR AND ETHICAL ISSSUES IN BIOTECHNOLOGY 3003 100

Course Objectives

- To illustrate about the biosafety in biotechnology.
- To explain basic knowledge on Intellectual property rights.
- To rephrase different views on policies of IPR.
- To solve the IPR issues and Bioethics.
- To list and examine about the case studies of copyright and patents.
- To understand the basics of IPR and ethical issues in biotechnology.

Course Outcomes

1. Classify the different techniques involved in biosafety in biotechnology based industries.
2. Manage and organize the knowledge about the intellectual property rights.
3. Label an idea about the policies of IPR.
4. Relate about the IPR issues and bioethics.
5. Diagnose about the case studies on patents.
6. Summarize the basics of IPR and ethical issues in biotechnology.

UNITI BIOSAFETY (8)

Biosafety–BiotechnologydevelopmentinIndia,Safetyissuesconcerningbiotechnologicalproducts, governingbiosafety,Cartagenaprotocolonbiosafety,ConservationofBiodiversity.

UNITII INTELLECTUALPROPERTYRIGHTS (10)

Introduction-InventionandCreativity-IntellectualProperty(IP)-Importance-Protectionof IPR-Basictypesofproperty(i.MovablePropertyii.ImmovablePropertyandiii.IntellectualProperty).IP- Patents-Copyrightsand relatedrights-TradeMarksandrightsarisingfromTrademarkregistration- Definitions-IndustrialDesignsandIntegratedcircuits-ProtectionofGeographicalIndicationsat nationaland Internationallevels-ApplicationProcedures.

UNITIII IPR–POLICIES (9)

Internationalconventionrelatingtoİntellectual Property-Establishmentof WIPO-Missionand Activities-History-GeneralAgreementonTradeandTariff(GATT).IndianPositionVsWTOand Strategies-Indian IPRlegislations- commitmentstoWTO-PatentOrdinanceandthe Bill-Draftof a nationalIntellectualPropertyPolicy-Presentagainstunfaircompetition.

UNITIV CASESTUDIES (9)

CaseStudieson -Patents(Basumatirice,curcumin,Neem,etc.)-Copyrightandrelated rights-Trade Marks-Industrialdesignand Integratedcircuits-Geographicindications- Protectionagainstunfair competition.

UNITV IPR ISSUES &BIOETHICS (9)

Trade Secrets, Copy Rights, Farmer's Rights, Plant Breeder's rights; Traditional knowledge and their commercial exploitation and protection. Bioethics–DiseasepreventionVsrighttoprivacy,patentabilityofDNA,pre implantationembryo diagnosis,Engineeredorganismsintoenvironment,Genetictestsindiagnosticsandtherapy.

16BTBT8E08 BIOLOGICAL WASTEWATER TREATMENT 3003100

Course Objectives

- To understand the variations of stoichiometry and kinetics of biochemical operations.
- To classify the different activities of microbes in waste water treatment.
- To record the basic notion on design and evaluation of growth process.
- To differentiate and organize the distint methods for modeling reactors..
- To explain the basic applications of bioreactors.
- To discuss the problems related to biochemical operations in different industries.

Course Outcomes

1. Compare and contrast fundamentals and properties of biochemical operations.
2. Demonstrate various waste water treatment activities through biological methods.
3. Prioritize design and evaluation of growth process in bioreactors.
4. Construct and design the methods for modeling bioreactors.
5. Apply the knowledge on applications of modeling bioreactors.
6. Examine and solve the problems related to biochemical operations in different industries.

UNITI BIOCHEMICALOPERATIONS (8)

ClassificationofBiochemicaloperations,fundamentalsofbiochemicaloperations,Stoichiometryand KineticsofBiochemicalOperations.

UNITII REACTORSINWASTEWATERTREATMENT (10)

Theory, modeling of ideal suspended Growth Reactors, Modeling Suspended Growth Systems. AerobicGrowthofHeterotrophsinasingleContinuous StirredTank,ReactorReceivingSoluble Substrate, Multiple MicrobialActivities in a Single Continuous Stirred Tank Reactor, Multiple Microbial Activities inComplexSystems,TechniquesforEvaluating KineticsandStoichiometric parameters.

UNITIII PROCESSESINWASTEWATERTREATMENT (9)

Applications:SuspendedGrowthReactors,DesignandEvaluationofSuspendedGrowthProcesses, ActivatedSludge,BiologicalNutrientRemoval,Aerobic–digestion,AnaerobicProcesses,Lagoons.

UNITIV MODELINGOFREACTORS (9)

Theory: Modeling of Ideal Attached Growth Reactors, Bio-filmModeling. AerobicGrowthof BiomassinPackedTowers,AerobicGrowthofHeterotrophsinRotatingDiscReactors,Fluidized Bed BiologicalReactors.

UNITV APPLICATIONSOFBIOREACTORS (9)

AttachedGrowthReactors,TricklingFilter, RotatingBiological Contactor,SubmergedAttached GrowthBioreactors,FutureChallenges,Fateand Effectsof XenobioticOrganicChemicals.

OPENELECTIVES

COURSES OFFERED BY OTHER DEPARTMENTS

\

OPEN ELECTIVES OFFERED BY S&H

16BTSHOE01 PROBABILITY AND RANDOM PROCESS 3 0 0 3

OBJECTIVES:

- To gain knowledge in measures of central tendency.
- To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
- To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in IT fields.
- To understand the concept of correlation and spectral densities.
- To acquire the knowledge on random process in engineering disciplines.

OUTCOMES:

- Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
- The students will have an exposure of various distribution functions, correlation and spectral densities.
- To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
- To apply the concept random processes in engineering disciplines.
- To understand and apply the concept of correlation and spectral densities.

UNIT- I MEASURES OF CENTRAL TENDENCY AND PROBABILITY(9)

Measures of central tendency – Mean, Median, Mode - Standard Deviation
Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye’s theorem.

UNIT- II STANDARD DISTRIBUTIONS (9)

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev's inequality.

UNIT -III TWO DIMENSIONAL RANDOM VARIABLES (9)

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT- IV CLASSIFICATION OF RANDOM PROCESS (9)

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT -VCORRELATION AND SPECTRAL DENSITIES (9)

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

16BTSHOE02 **FUZZY MATHEMATICS** **3 0 0 3**

COURSE OBJECTIVES:

- Be able to understand basic knowledge of fuzzy sets and fuzzy logic
- Be able to apply basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations
- Be able to apply basic fuzzy inference and approximate reasoning
- To know the applications of fuzzy Technology.
- Be able to acquire the knowledge on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology

COURSE OUTCOME:

- To gain the main subject of fuzzy sets.
- To understand the concept of fuzziness involved in various systems and fuzzy set theory.
- To gain the methods of fuzzy logic.
- To comprehend the concepts of fuzzy relations.
- To analyse the application of fuzzy logic control to real time systems.
- The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS (9)

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS (9)

Operations on Fuzzy Sets Operations on [0,1] – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS (9)

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES (9)

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE (9)

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

16BTSHOE03 LINEAR ALGEBRA 3 0 0 3

OBJECTIVES:

- To introduce the basic concepts of vector space
- To know the fundamentals of linear Algebra
- To solve system of linear equations
- To study about the linear transformations
- To introduce the concepts of inner product spaces
- To give the knowledge on the importance of Linear Algebra.

COURSE OUTCOMES:

The student will be able to

- To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- To apply the fundamental concepts in their respective engineering fields
- To visualize linear transformations as matrix form
- To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- To articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNIT I VECTOR SPACES (9)

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS (9)

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS (9)

Direct methods, Gauss elimination method, Gauss Jordan method, Crout’s method, iterative methods, Gauss-Jacobi method, Gauss–Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS (9)

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES (9)

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

Total : 45

16BTSHOE04 ENGINEERING ACOUSTICS 3 0 0 3

COURSE OBJECTIVES:

- To disseminate the fundamentals of acoustic waves.
- To inculcate the characteristics of radiation and reception of acoustic waves.
- To divulge knowledge on the basics of pipe resonators and filters.
- To introduce the features of architectural acoustics.
- To identify the factors affecting the acoustics of building.
- To impart the basic knowledge of transducers and receivers.

COURSE OUTCOME:

- Develop the idea of the fundamentals of acoustic waves.
- Apply the concepts of radiation and reception of acoustic waves.
- Explain the basic ideas of pipe resonators and filters.
- Illustrate the basics of architectural acoustics.
- Illustrate the transducers and receivers and its applications in various electronic devices.
- Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION (9)

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales.Reflection and Transmission:Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES (9)

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers.Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS (9)

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS (9)

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design.

Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION (9)

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

16BTSHOE05 SOLID WASTE MANAGEMENT 3 0 0 3

OBJECTIVES:

- To make the students conversant with basics of Solid wastes and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of Hazardous waste managements.
- To acquaint the students with the basics of energy generation from waste materials.
- To get the information on energy conservation.

OUTCOMES:

- Outline the basic principles of Solid waste and separation of wastes (K)
- Identify the concepts of treatment of solid wastes (S)
- Identify the methods of wastes disposals. (S)
- Examine the level of Hazardousness and its management. (S)
- Examine the possible of the energy production using waste materials. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I SOLID WASTE (9)

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT (9)

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL (9)

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classficaition, Types, Methods &Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT (9)

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediaiton, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE (9)

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

16BTSHOE06 GREEN CHEMISTRY 3 0 0 3

OBJECTIVES:

- To make the students conversant about the green chemistry
- To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- To acquaint the student with concepts of green technology.
- To develop an understanding of the basic concepts of renewable energy resources.
- To acquaint the students with the basic information on catalysis.
- To inculcate the chemical principles in the field of engineering and technology

OUTCOMES:

- Outline the basic principles of green chemistry (K)
- Examine the different atom efficient process and synthesis elaborately (S)
- Apply the concepts combustion of green technology (S)
- Identify and apply the concepts of renewable energy (S)
- Apply the concepts of green catalysts in the synthesis (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES (9)

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES (9)

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY (9)

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES (9)

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY (9)

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

16BTSHOE07 APPLIED ELECTROCHEMISTRY 3 0 0 3

OBJECTIVES:

- To make the students conversant with **the information on electrochemical material**.
- To make the student acquire sound knowledge of **conducting polymers**.
- To acquaint the student with concepts of Energy storage devices.
- To develop energy storage devices.
- To impart knowledge on basic principals of solar cells and its applications
- To inculcate the chemical principles in the field of engineering and technology

OUTCOMES:

- Outline the basic principles of chemistry in **electrochemical material (K)**
- Examine the properties of conducting polymers (S)
- Apply the concepts of electrochemistry in storage devices. (S)
- Identify the concepts of storage devices and its applications. (S)
- Apply the suitable materials for the manufacturing of storage devices. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING (9)

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS (9)

Electropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I (9)

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II (9)

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE (9)

Solar cells- Preparation of CdS/Cu_2S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

16BTSHOE08 INDUSTRIAL CHEMISTRY 3 0 0 3

OBJECTIVES:

- To make the students conversant with **cement and lime** and its uses.
- To make the student acquire sound knowledge of abrasives and refractories.
- To acquaint the student with concepts of inorganic chemicals.
- To develop an understanding of the basic concepts**explosives**.
- To acquaint the students with the basics of **agriculture chemicals**.
- To inculcate the chemical principles in the field of engineering and technology

OUTCOMES:

- Outline the basic chemistry of **cement and lime (K)**
- Examine the uses of abrasives and refractories (S)
- Identify the usage of the inorganic chemicals. (S)
- Identify the concepts of explosives and smoke screens (S)
- Identify the usage of the **agriculture** chemicals (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENT AND LIME (9)

Manufacture of Portland cement – settling of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES (9)

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT IIIINORGANIC CHEMICALS (9)

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3, caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES (9)

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS (9)

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

OPEN ELECTIVES OFFERED BY DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

16BECSOE01	INTERNET PROGRAMMING	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To study concepts of Internet, IP addresses and protocols
- To explain the concept of web page development through HTML
- To introduce the PERL and explore its current strengths and Weaknesses
- To write working Java code to demonstrate the use of applets for client-side programming
- To study Internet telephony and various multimedia applications
- To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Learn the advanced concepts& techniques of Internet and Java.
- Analyze the requirements for and create and implement the principles of web page development
- Understand the concepts ofPERL
- Implement client-side programming using java applets
- Generate internet telephony based upon advanced concepts
- Develop applications on internet programming based on java applets and scripts

UNITI Introduction (9)

Introduction- Network of Networks,Intranet,ExtranetandInternet. WorldWide Web- Domainand Subdomain,AddressResolution,DNS,Telnet,FTP,HTTP.TCP/IP- Features, Segment,Three-Way Handshaking, Flow Control,ErrorControl,Congestion control,IPDatagram,IPv4andIPv6.IP Subnettingand addressing-Classfuland Classless Addressing, Subnetting

UNITII HTML (9)

Introduction, Editors, Elements, Attributes, Heading, Paragraph.Formatting,Link,Head, Table,List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributesof image area-ExtensibleMarkupLanguage (XML)-Introduction,Tree,Syntax,Elements, Attributes,Validation,Viewing.XHTMLinbrief.CGI Scripts-Introduction-EnvironmentVariable, GET and POST Methods.

UNITIII PERL (9)

Introduction,Variable,Condition,Loop,Array,Implementing datastructure,Hash,String,Regular Expression,File handling,I/Ohandling- JavaScript- Basics, Statements,comments,variable, comparison,condition,switch, loop,break. Object–string, array, Boolean, reg-ex. Function, Errors, Validation.Cookies-Definitionofcookies,Createand Store a cookiewithexample.Java Applets-Container Class, Components, AppletLifeCycle,Update method, Applications.

UNITIV Client-Serverprogramming (9)

Client-ServerprogrammingInJava-JavaSocket,JavaRMI.Threats-Maliciouscode-viruses, Trojan horses,worms;eavesdropping,spoofing,modification,denialof service attacks- Network security techniques-PasswordandAuthentication-VPN,IPSecurity,security inelectronic transaction,Secure SocketLayer(SSL), SecureShell(SSH).Firewall-Introduction,Packetfiltering, Stateful, Application layer, Proxy.

UNITV Internet Telephony (9)

Introduction,VoIP-MultimediaApplications-MultimediaoverIP:RSVP,RTP, RTCPandRTSP-Streamingmedia, Codecand Plugins,IPTV-Search Engine andWeb Crawler-Definition, Metadata, Web Crawler,Indexing, Pagerank, overview of SEO.

Total Hours: 45

TEXT BOOKS:

16BECSOE02	MULTIMEDIA AND ANIMATION	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To impart the fundamental concepts of Computer Animation and Multimedia
- To study the graphic techniques and algorithms using flash
- Explain various concepts available in 3D animation
- Explain various devices available for animation
- To study the multimedia concepts and various I/O technologies for concept development
- To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Develop their creativity using animation and multimedia
- Understand the concepts of Flash and able to develop animation using it
- Understand about various latest interactive 3D animation concepts
- Know the various devices and software available in motion capture
- Understand the concept development process
- Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNITI Introduction (9)

What is mean byAnimation– Whyweneed Animation– Historyof Animation– Uses of Animation –TypesofAnimation–PrinciplesofAnimation–SomeTechniquesofAnimation–Animationon the WEB– 3D Animation– Special Effects-CreatingAnimation.

UNITII Creating AnimationinFlash (9)

IntroductiontoFlashAnimation–IntroductiontoFlash–WorkingwiththeTimelineandFrame-basedAnimation-WorkingwiththeTimelineandTween-basedAnimation–UnderstandingLayers -Action script.

UNITIII 3D Animation& its Concepts (9)

Types of 3DAnimation – Skeleton &Kinetic3DAnimation – Texturing&Lightingof 3D Animation – 3D Camera Tracking– Applications &Softwareof 3DAnimation.

UNITIV MotionCaption (9)

Formats – Methods –Usages – Expression – Motion CaptureSoftware's–Script Animation Usage – DifferentLanguageof Script Animation Among the Software.

UNITV Concept Development (9)

StoryDeveloping–Audio &Video – Color Model– DeviceIndependent Color Model– Gamma and GammaCorrection-Production Budgets-3DAnimated Movies.

Total Hours: 45

16BECSOE03 **PC HARDWARE ANDTROUBLE SHOOTING**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To study the basic parts of computer in detail
- Introduce various peripheral devices available for computer and its detailed working concepts
- Overview of various interfaces and other hardware overview
- Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- To study basic concepts and methods in troubleshooting
- To study the installation/connectionand maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
- Identify various peripheral devices available and its working
- Understand various concepts of hardware and its interface and control
- Perform basic installation of PC. Importance of maintenance is understood
- Understand Various faults and failures are identified and troubleshooting in detail
- Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNITI Introduction (9)

Introduction-ComputerOrganization–Number SystemsandCodes–Memory –ALU–CU– Instruction prefetch–Interrupts–I/OTechniques–DeviceControllers–ErrorDetection Techniques–Microprocessor–PersonalComputer Concepts–AdvancedSystemConcepts– MicrocomputerConcepts–OS–MultitaskingandMultiprogramming–VirtualMemory –Cache Memory– Modern PC and User.

UNITII Peripheral Devices (9)

Introduction–Keyboard–CRTDisplay Monitor–Printer–MagneticStorageDevices–FDD– HDD – Special Types ofDisk Drives– Mouseand Trackball– Modem–Fax-Modem –CD ROM Drive – Scanner – Digital Camera– DVD – Special Peripherals.

UNITIII PC HardwareOverview (9)

Introduction – HardwareBIOS DOSInteraction–ThePC family– PC hardware–Insidethe System Box–MotherboardLogic–Memory Space–PeripheralInterfacesandControllers–Keyboard Interface – CRT Displayinterface– FDC – HDC.

UNITIV InstallationandPreventive Maintenance (9)

Introduction–systemconfiguration–preinstallationplanning–Installationpractice–routine checks–PCAssemblingandintegration–BIOSsetup–Engineering versionsandcompatibility –preventivemaintenance–DOS– Virus – Data Recovery.

UNITV Troubleshooting (9)

Introduction – computerfaults– Natureoffaults– Types offaults– Diagnosticprograms andtools–Microprocessor andFirmware– ProgrammableLSI's–BusFaults–FaultsEliminationprocess–Systematic Troubleshooting–Symptomsobservationandanalysis–faultdiagnosis–fault rectification–Troubleshootinglevels– FDD, HDD, CD ROM Problems.

16BECSOE04 **JAVA PROGRAMMING** **L T P C**

COURSE OBJECTIVES:

- To understand Object Oriented Programming concepts and basic characteristics of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads, generics classes and swings
- To explain the need for generic programming
- To design and build simple Graphical User Interfaces

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- Develop Java programs using OOP principles
- Develop Java programs with the concepts of inheritance and interfaces
- Build Java applications using exceptions and I/O streams
- Develop Java applications with threads and generics classes and swings
- Understand various aspects for motivation of generic programming
- Develop various interactive Java programs using OOP concepts of Java

UNITI INTRODUCTION TO JAVA (9)

Objectorientedprogramming concepts–objects–classes–methodsandmessages–abstraction andencapsulation–inheritance–abstractclasses–polymorphism.- ObjectsandclassesinJava– defining classes – methods- access specifiers – staticmembers –constructors– finalizemethod

UNITII PACKAGES (9)

Arrays – Strings - Packages – Java-Doc comments –- Inheritance – class hierarchy – polymorphism– dynamicbinding– final keyword– abstract classes

UNITIII I/O STREAMS (9)

TheObjectclass–Reflection–interfaces–objectcloning–innerclasses–proxies-I/O Streams-Graphics programming – Frame – Components– working with 2D shapes.

UNITIV EXCEPTION HANDLING (9)

Basicsofeventhandling–eventhandlers–adapter classes– actions–mouse events–AWT eventhierarchy –introductiontoSwing–Model-View-Controllerdesignpattern–buttons– layout management – Swing Components – exception handling – exception hierarchy – throwing and catching exceptions.

UNITV MOTIVATION FOR GENERIC PROGRAMMING (9)

Motivationforgenericprogramming–genericclasses–generic methods–genericcodeand virtual machine – inheritance and generics – reflection and generics - Multi-threaded programming– interrupting threads–threadstates–threadproperties–threadsynchronization– Executors – synchronizers.

OPEN ELECTIVES OFFERED BY

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

16BEEEOE01 ELECTRIC HYBRID VEHICLE L T P C 3 0 0 3

Course Objectives

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the effciency manipulation in drives
- To understand and gain the knowledge about various energy storage devices

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION 9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS 9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT 9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE 9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES 9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

TOTAL: 45 HOURS

16BEEEOE02 ENERGY MANAGEMENT AND ENERGY AUDITING 3 0 0 3

Course Objectives:

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behaviour changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT 9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS 9

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT 9

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS 9

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-
Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS 9

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

16BEEEOE03 PROGRAMMABLE LOGIC CONTROLLER L T P C 3 0 0 3

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowlege of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowlege of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrail application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION 9

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING 9

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS 9

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS 9

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES 9

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

WEBSITE

http://www.mikroe.com/old/books/plcbook/chapter1/chapter1.htm,- Introduction to programmable Logic controller

16BEEEOE04 RENEWABLE ENERGY RESOURCES L T P C 3 0 0 3

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION 9

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY

9

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY

9

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY 9

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES 9

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

OPEN ELECTIVES OFFERED BY DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

16BEECOE01 REAL TIME EMBEDDED SYSTEMS 3 0 0 3 100

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT - I INTRODUCTION TO EMBEDDED SYSTEM

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection &tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM 7

UNIT - II OPERATING SYSTEM OVERVIEW

Introduction –Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – Clock Ticks.

UNIT - III TASK MANAGEMENT

Introduction - μ C/OS-II Features - Goals of μ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks –Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under μ C/OS-II – Clock Tick - μ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB waits List.

UNIT - IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue.

UNIT - V MEMORY MANAGEMENT

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memor y Block – Returning a Memor y Block .Getting Started with μ C/OS-II – Installing μ C/OS-II – Porting μ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with μ C/OS-II - μ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Anal yze the Multichannel ADC with help of μ C/OS-II.

16BEECOE02 CONSUMER ELECTRONICS 3 0 0 3 100

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT – II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a Remote Control.

UNIT – III OPTICAL RECORDING AND REPRODUCTION

Audio Disc – Processing of the Audio signal –read out from the Disc – Reconstruction of the audio signal – Video Disc – Video disc formats- recording systems – Playback Systems.

UNIT – IV TELECOMMUNICATION SYSTEMS

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT – V HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

Text Book:

1. S.P.Bali, “Consumer Electronics”, Pearson Education, 2005.

16BEECOE03 NEURAL NETWORKS AND ITS APPLICATIONS 3 0 0 3 100

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve real-world problems

UNIT I: INTRODUCTION TO NEURAL NETWORKS

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNIT II LEARNING PROCESS

Error – correction learning – memory based learning - hebbian learning-competitive learning-Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCE PTION

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye's classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORK AND ART

Hopfield model-BAM model- BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNIT V SELF ORGANIZATION

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

16BEECOE04 FUZZY LOGIC AND ITS APPLICATIONS 3 0 0 3 100

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy fiction and de fuzzy fiction procedures

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT - I

Basics Of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT – II

Theory Of Approximate Reasoning**:** Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNIT - III

Fuzz y Knowledge Based Controllers (Fkbc)**:** Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures – Design of Fuzz y Logic Controller

UNIT - IV

Adaptive Fuzz y Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V FUZZY BASED SYSTEMS

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzz y in medical applications-Introduction to ANFIS.

TEXT BOOKS:

1. An Introduction to Fuzz y Control- D. Diankar, H. Hellendoom and M. Reinfrank- Narosa Publishers India, 1996.

2. Fuzzy Sets Uncertainty and Information- G. J. Klir and T. A. Folger- PHI IEEE, 1995.

OPEN ELECTIVES OFFERED BY DEPARTMENT OF AUTOMOBILE ENGINEERING

16BEAEOE01 AUTOMOBILE ENGINEERING 3 0 0 3 100

Course Objectives:

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Identify and explain the types of steering system.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

UNIT-I ENGINE AND FUEL FEED SYSTEMS

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT –II TRANSMISSION SYSTEMS

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT -III SUSPENSION SYSTEM

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT-IV BRAKES

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT -V ELECTRICAL SYSTEM

Principle and construction of lead acid battery.Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator.Starting System and charging system.

16BEAEOE02 BASICS OF TWO AND THREE WHEELERS 3 0 0 3 100

Course Objectives

- The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

16BEAEOE03 AUTOMOBILE MAINTENANCE 3 0 0 3 100

Course Objectives

- The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems inAutomobile.
- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

3.	Service Manuals from Different Vehicle Manufacturers			

16BEAEOE04 INTRODUCTION TO MODERN VEHICLE TECHNOLOGY 3 0 0 3 100

Course Objectives:

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWER PLANTS

Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT VTELEMATICS

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

OPEN ELECTIVES OFFERED BY DEPARTMENT OF CIVIL ENGINEERING

16BECEOE01 HOUSING, PLAN AND MANAGEMENT 3 0 0 3 100

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING 9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES 9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS 9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V Housing Finance and Project Appraisal 9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing o f Housing Units, Rents, Recovery Pattern (Problems).

TOTAL HRS : 45

TEXT BOOKS

1. Meera Mehta and Dinesh Mehta, Metropolitan Housing Markets, Sage Publications Pvt. Ltd., New Delhi, 2002.

2. Francis Cherunilam and Odeyar D Heggade, Housing in India, Himalaya Publishing House, Bombay, 2001.

REFERENCES

1. Development Control Rules for Chennai Metropolitan Area, CMA, Chennai, 2002.

2. UNCHS, National Experiences with Shelter Delivery for the Poorest Groups, UNCHS (Habitat), Nairobi, 2000.

16BECEOE02 BUILDING SERVICES 3 0 0 3 100

COURSE OBJECTIVES

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES 9

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS 9

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN 9

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS 9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION 9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

16BECEOE03 MANAGEMENT OF IRRIGATION SYSTEMS 3 0 0 3 100

OBJECTIVES

1. To enable the students for a successful career as water management professionals.
2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
3. To expose the students the need for an interdisciplinary approach in irrigation water management
4. To providing a platform to work in an interdisciplinary team.
5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

OUTCOME

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I. IRRIGATION SYSTEM REQUIREMENTS 9

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II. IRRIGATION SCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III. MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV. OPERATION 9

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNIT V. INVOLVEMENT OF STAKE HOLDERS 9

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL HRS : 45

TEXT BOOKS

1. Dilip Kumar Majumdar, "Irrigation Water Management – Principles and Practice", Prentice Hall of India Pvt. Ltd., New Delhi, 2000

2. Hand book on Irrigation Water Requirement, R.T. Gandhi, et. al., Water Management Division, Department of Agriculture, Ministry of Agriculture, New Delhi

REFERENCES

16BECEOE04 ADVANCED CONSTRUCTION TECHNOLOGY 3 0 0 3 100

OBJECTIVE:

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

OUTCOMES:

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT - I MODERN CONSTRUCTION METHODS 9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT - II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT - III MODERN CONSTRUCTION EQUIPEMENTS -I 9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting,Tunneling and hoisting

UNIT - IV MODERN CONSTRUCTION EQUIPEMENTS -II 9

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES 9

Principles and Practices of Temporary structures, Shoring, and Strutting,Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

OPEN ELECTIVES OFFERED BY DEPARTMENT OF MECHANICAL ENGINEERING

16BEMEOE01 COMPUTER AIDED DESIGN 3 0 0 3 100

Course Objective

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

Course Outcome

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS 9

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS 9

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transpformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING 9

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION 9

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT 9

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

16BEMEOE02 **INDUSTRIAL SAFETY AND ENVIRONMENT** **3 0 0 3 100**

Course Objective

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach studentthe conceptof Industrial Safety & provide useful practical knowledge for workplace safety.
6. Toprevent or mitigate harm or damage to people, property, orthe environment.

Course Outcome

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the conceptof Industrial Safety & provide useful practical knowledge forworkplace safety.
6. Prevent or mitigate harm or damage to people, property, orthe environment.

UNIT I INTRODUCTION TO LOGISTICS 9
Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN 9
The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS 9
Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES 9
Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM 9
The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

16BEMEOE03 **TRANSPORT PHENOMENA** **3 0 0 3 100**

Course Objective

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

Course Outcome

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS 9

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS 9

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT 9

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT 9

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer **-** through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT 9

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion-Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

16BEMEOE04	**INTRODUCTION TO BIOMECHANICS**	**3 0 0 3 100**

Course Objective

2. To describe the principles of the study of human movement.
3. To describe the range of factors that influence the initiation,production and control of human movement.
4. To identify the body's lever systems and their relationship to basicjoint movement and classification.
5. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
6. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
7. To relate the different body systems necessary for human movement to occur.

Course Outcome

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION **9**

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS **9**

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application ofBiomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY **9**

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION **9**

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM 9

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

COURSES OFFERED TO OTHER DEPARTMENTS
OPEN ELECTIVES OFFERED BY BIOTECHNOLOGY

16BTBTOE01 **BIOREACTOR DESIGN** **3003100**

Course Objectives:

- To impart basic knowledge in bioprocess Engineering
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipments.
- To extend the knowledge in principle of heat transfer inside a bioreactor
- To construct the equipments used in mass transfer operations.
- To learn the equipments used in separation process.

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Design the bioreactors for various operations.
- Develop the heat transfer equipments for Bioprocess Engineering.
- Elaborate the principle of heat transfer in bioreactor.
- Construct the equipments used in mass transfer operations.
- Categorize the equipments used in separation process.

UNITI ENGINEERINGPROPERTIESANDSTORAGETANK (9)

Introductiontovariousmechanicalpropertiesofmaterialtobeusedmaterialofconstruction, designofcylindricalstoragetank.

UNITII REACTORDESIGN (9)

DesignofAirliftfermentor,BubblecolumnreactorandContinuousstirredtankreactor.

UNITIII HEATTRANSFEREQUIPMENTS (9)

DesignofShellandtubeHeatexchanger,Doublepipeheatexchanger,longtube verticalevaporatorandforcedcirculation evaporator.

UNITIV MASSTRANSFEREQUIPMENTS (9)

DesignofBollmannextractor,fractionatingcolumn,packedtowerandspraytrayabsorber

UNITV SEPARATIONEQUIPMENTS (9)

Designof plate andframefilter press,leaffilter,rotarydrumfilter,discbowlcentrifuge, rotart drumdrierandSwenson–walkercrystallizer.

16BTBTOE02 FOODPROCESSINGANDPRESERVATION 3003100

Course Objectives

- To learn the scope and importance of food processing.
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarize the students on the concepts of preservation methods for fruits.
- To create deeper understanding on preservation methods for vegetables.

Course Outcomes

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarize the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

UNITI SCOPEANDIMPORTANCEOFFOODPROCESSING (9)

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning,sorting,grading,peeling.

UNITII PROCESSINGMETHODS (9)

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives- fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- microwave processingandasepticprocessing–Infraredradiationprocessing- Conceptsandequipmentused.

UNITIII FOODCONVERSIONOPERATIONS (9)

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation-filtration-equipmentandapplication.

UNITIV FOODPRESERVATIONBYCOOLING (9)

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect oflowtemperature onfood. Water activity, methods tocontrolwateractivity.

UNITV PRESERVATIONMETHODSFORFRUITSANDVEGETABLES (9)

Preprocessing operations-preservation byreductionofwatercontent:drying/dehydration and concentration –chemicalpreservation –preservation ofvegetablesbyacidification, preservation withsugar-Heatpreservation–Foodirradiation-Combinedpreservationtechniques.

16BTBTOE03 BASICBIOINFORMATICS 3003100

Course Objectives

- To understand the available tools and databases for performing research in bioinformatics.
- To expose students to sequence alignment tool in bioinformatics.
- To construct the phylogenetic trees for evolution.
- To get familiar with the 3D structure of protein and classification.
- To acquire basic knowledge in protein secondary structure prediction.
- To extend the brief knowledge in Micro array data analysis.

Course Outcomes

- Summarize the basic concepts and importance of Bioinformatics in various sectors.
- Demonstrate the sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Analyze the three dimensional protein structure and classification using various tools.
- Illustrate the protein secondary structure prediction by comparative modeling.
- Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNITI OVERVIEWOFBIOINFORMATICS (9)

Thescopeofbioinformatics; bioinformatics&theinternet;usefulbioinformatics sites.Data acquisition:sequencingDNA,RNA&proteins;determination ofproteinstructure;gene&protein expression data;proteininteractiondata. Databases–contents,structure&annotation:fileformats; annotatedsequencedatabases;miscellaneousdatabases.

UNITII RETRIEVALOFBIOLOGICALDATA (9)

DataretrievalwithEntrez&DBGET/LinkDB;dataretrievalwithSRS(sequence retrieval system).Searching sequencedatabasesbysequencesimilaritycriteria:sequencesimilarity searches;aminoacidsubstitution matrices;databasesearches,FASTA&BLAST;sequence filters;iterativedatabasesearches&PSI-BLAST.Multiple-sequence alignment,gene&protein families:multiple-sequence alignment&family relationships;proteinfamilies&pattern databases;proteindomainfamilies.

UNITIII PHYLOGENETICS (9)

Phylogenetics, cladistics &ontology; building phylogenetic trees; evolution of macromolecularsequences.Sequenceannotation:principlesofgenomeannotation;annotationtools &resources.

UNITIV STRUCTURALBIOINFORMATICS (9)

Conceptualmodelsofproteinstructure;therelationshipofproteinthree-dimensional structureto proteinfunction;theevolutionofproteinstructure&function;obtaining, viewing&analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure:CATH&SCOP;introduction toproteinstructureprediction;structurepredictionby comparativemodeling;secondary structureprediction;advancedproteinstructureprediction& predictionstrategies.

UNITV MICROARRAYDATAANALYSIS (9)

Microarray data,analysismethods;microarraydata,tools&resources;sequencesampling&SAGE.Bioinformatics inpharmaceuticalindustry:informatics&drugdiscovery; pharmainformatics resources.Basicprinciplesofcomputinginbioinformatics:runningcomputer software;computeroperatingsystems;softwaredownloading &installation;database management.

16BTBTOE04 FUNDAMENTALSOFNANOBIOTECHNOLOGY 3003100

Course Objectives

- To impart the skills in the field of nano biotechnology and its applications.
- To acquire knowledge in the nano particles and its significance in various fields.
- To extend the knowledge in types and application of nano particles in sensors.
- To define the concepts of biomaterials through molecular self assembly.
- To equip students with clinical applications of nano devices.
- To describe deeper understanding of the socio-economic issues in nanobiotechnology.

Course Outcomes

- Develop skills in the field of nano biotechnology and its applications.
- Summarize the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nano particles in sensors.
- Define the concepts of biomaterials through molecular self assembly.
- Outline the clinical applications of nano devices.
- Describe the socio-economic issues in nanobiotechnology.

UNITI INTRODUCTION (9)

Introduction, ScopeandOverview,Lengthscales,Importance ofNanoscaleandTechnology, HistoryofNanotechnology, FutureofNanotechnology:NanoTechnologyRevolution,Silicon basedTechnology,BenefitsandchallengesinMolecularmanufacturing: TheMolecular assemblerconcept,Controversiesandconfusions,Understanding advancedcapabilities, NanotechnologyinDifferent,Fields:Nanobiotechnology,Materials,Medicine,Dentalcare.

UNITII NANOPARTICLES (9)

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, CharacterizationofNanoparticles, Applications,ToxiceffectsofNanomaterials, Significance ofNanoparticlesNanofabrications-MEMS/NEMS,Atomic ForceMicroscopy,Selfassembled monolayers/Dip-penNanolithography, SoftLithography, PDMSMolding,NanoParticles, Nanowires andNanotubes.

UNITIII APPLICATIONS (9)

Nanomedicine,NanobiocensorandNanofludics.Nanocrystals inbiologicaldetection, ElectrochemicalDNAsensorsandIntegratedNanolitersystems.Nano-Biodevices and Systems.Fabricationof NovelBiomaterialsthroughmolecularself assembly-Small scale systemsforinvivodrugdelivery-Futurenanomachine.

UNITIV NANOBIOTECHNOLOGY (9)

Clinicalapplicationsofnanodevices.Artificialneurons.Real-timenanosensors-Applicationsin cancerbiology.Nanomedicine.Synthetic retinylchipsbasedonbacteriorhodopsins.High throughputDNAsequencingwithnanocarbontubules.Nanosurgicaldevices.

UNITV ETHICALISSUESINNANOTECHNOLOGY (9)

Introduction,Socioeconomic Challenges,EthicalIssuesinNanotechnology: WithEspecial ReferencetoNanomedicine, NanomedicineAppliedinNonmedicalContexts,SocialIssues RelatingtoNanomedicine. SocialandEthicalIssues,EconomicImpacts,OtherIssues, Nanotechnologyand FutureSocio-economicchallenges.

Chemical Engineering (B. Tech)

CHOICE BASED CREDIT SYSTEM (CBCS)

Syllabus 2016-2017

DEPARTMENT CHEMICAL ENGINEERING

ENGINEERING

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)

(Establishedundersection3 of UGC Act,1956)

Pollachi Main Road, Eachanari (Post), Coimbatore- 641021, TamilNadu, India

Phone: 0422 –2980011 –15 FaxNo: 0422–2980022-23

Email: info@karpagam.com Web: www. kahedu.edu.in

B.Tech Chemical Engineering **2016-2017**

Semester-I

16BTCE101 **English ForEngineers** **3H-3C**

Instruction Hours/week: L:3 T:1 P:0 **Marks:** Internal**:40** External**:60**Total**:100**

End Semester Exam:3 Hours

COURSE OBJECTIVES:

1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
2. To help students acquire their ability to speak effectively in real life situations.
3. To inculcate the habit of reading and to develop their effective reading skills.
4. To ensure that students use dictionary to improve their active and passivevocabulary.
5. To enable students to improve their lexical, grammatical and communicative competence.
6. To inspire the learner by his work and studies in different fields of engineering andscience.

COURSE OUTCOMES:

Students undergoing this course will be able to

1. Use English language for communication: verbal & non–verbal.
2. Enrich comprehension and acquisition of speaking &writingability.
3. Gain confidence in using English language in real lifesituations.
4. Improve word power: lexical, grammatical and communicationcompetence.
5. Understand the importance of writing skills and its techniques
6. Communicate the necessity to exercise humour in the daily life

Unit-I LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speakingand Representing) **(9)**

Listening–Types of listening- Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, COURSE OBJECTIVES:, conversational and argumentative.**Writing**– Formal and Informal letters- Letters to the Editor.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Tenses -Articles.**Vocabulary**- Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit– II LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) **(8)**

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions. **Reading** – Critical reading – Finding key information in a given text

(Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing shortmessages.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

WH questions –Yes/No Question - Subject Verb agreement. **Vocabulary**– Compound Nouns/Adjectives – Irregular verbs.

Unit-III LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (8)

Listening – Listening for specific task – fill in the gaps.**Speaking**– Phonemes – Syllables – Role play – Conversation Practice.**Reading**–comprehension passages based on general topics or matters of current affairs. **Writing** - Autobiographical writing &Biographicalwriting.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Preposition – Infinitive &Gerund.Vocabulary– Foreign words used in English – British and American usage.

Unit- IV LSRW SKILLS & GRAMMAR, CAREER ORIENTED

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (10)

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars.**Reading**– Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) & Instruction writing.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Parts of Speech, Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit-VLSRW SKILLS & GRAMMAR, FIELD WORK

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (10)

Listening –Distinction between native and Indian English (Speeches by TED and Kalam). **Speaking**-Extempore talk –Just-a-minute talk.**Reading**-Reading strategies–Intensive reading – Text analysis.**Writing-** Creative writing – Writing circulars and notices – Writing proposal.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Direct and Indirect speech – Conditional sentences - Auxiliary verbs.**Vocabulary**– Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory@ 2 periods per each unit.

16BTCE102 ENGINEERINGMATHEMATICSI 3 2 0 4

COURSE OBJECTIVES:

1. To develop analytical skills for solving different engineering problems.
2. To understand the concepts of Matrices and vector differentiation.
3. To solve problems by applying Differential Calculus and Differential equations.
4. To recall and remember basics of matrices, complex numbers, and differential calculus
5. To understand the concepts of basic mathematical methods for matrices, complex numbers and differential calculus
6. To apply methods to solve engineering problems.

COURSE OUTCOMES:

The student will be able to

1. apply advanced matrix knowledge to Engineering problems.
2. improve their ability in solving geometrical applications of differential calculus problems
3. improve their ability in vector differentiation.
4. Students will be able to remember terminologies and formulae in matrices, complex numbers, and differential calculus
5. Students will be able to understand and interpret the concepts of matrices, complex numbers, and differential calculus.
6. Students will be able to compare and analyze the methods in matrices, complex numbers, and differential calculus

UNITI MATRICES (12)

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNITII DIFFERENTIALCALCULUS (12)

Limits, Continuity (Concepts only)- Differentiation- Differentiation Techniques: standard formulae, product rule, quotient rule, chain rule, method of substitution, implicit functions and successive differentiation.

UNITIII GEOMETRICAL APPLICATIONS OFDIFFERENTIALCALCULUS (12)

Curvature – centre, radius and circle of curvature in Cartesian co- ordinates – Evolutes - Envelope – Evolute as envelope of normals.

UNITIV DIFFERENTIALEQUATIONS (12)

Introduction to Ordinary differential equations: Linear ordinary differential equations of second and higher order with constant coefficients.

Introduction to Partial differential equations: Linear Partial differential equations of second and higher order with constant coefficients.

UNITV VECTORDIFFERENTIATION (12)

Vectors-Differentiation of vectors – scalar and vector point functions –vector operator – vector operator applied to scalar point functions: Gradient; vector operator applied to vector point functions: Divergence and curl; Physical interpretation of divergence and curl, Directional derivative, solenoidal and irrotational vectors.

16BTPH103/16BTPH203 ENGINEERINGPHYSICS 3 0 0 3

COURSE OBJECTIVES:

1. To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology
2. To become acquainted with the terminologies of Electrodynamics, Optics and Relativity
3. For interpreting the notions of Electrodynamics, Optics and Relativity
4. For classifying and comparing these notions with respect to their domains of validity
5. In executing procedures toward solving problems in Electrodynamics, Optics and Relativity
6. In differentiating and organising basic ideas and mathematical relations of Electrodynamics, Optics and Relativity

COURSE OUTCOMES:

1. The students will have the knowledge on the basics of physics related to properties of matter, fiber optics, quantum, crystal physics and that knowledge will be used by them in different engineering and technologicalapplications
2. Recall and recognise the terminologies of Electrodynamics, Optics and Relativity
3. Interpret the notions of Electrodynamics, Optics and Relativity
4. Classify and compare these notions with respect to their domains of validity
5. Execute procedures toward solving problems in Electrodynamics, Optics and Relativity
6. Differentiate and organise basic ideas and mathematical relations of Electrodynamics, Optics and Relativity

UNITI PROPERTIES OF MATTERANDTHERMODYNAMICS (9) Three types of modulus of elasticity – basic definitions, relation connecting the modulii (Derivation), Poisson‟s ratio- Torsional pendulum- bending of beams - bending moment – uniform and non uniform bending

Thermodynamics – laws of thermodynamics- concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNITII LASER ANDFIBEROPTICS (9)

Introduction – emission and absorption process- Einstein‟s coefficients derivation. Types of LASER - CO_2, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNITIII QUANTUMPHYSICS (9)

Introductiontoquantumtheory–Blackbodyradiation-dualnatureofmatterand radiation – de Broglie wavelength, uncertainty principle –Schrödinger‟s wave equation – time dependent and time independent equations – particle in one dimensional box- physical significance of wave function, scanning electronmicroscope

UNITIV CRYSTALPHYSICS (9)

Lattice – unit cell – Bravais lattice – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCPstructures,crystal defects – point, line and surfacedefects

UNITV ULTRASONICS ANDNUCLEARPHYSICS (9)

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A, B and C – scandisplays,Medical applications – Sonogram. Introduction – basics about nuclear fission and fusion, Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- powerreactor.

16BTCH103/16BTCH203ENGINEERING CHEMISTRY3 0 0 3 COURSE

OBJECTIVES:

1. To understand about the watertechnology.
2. To get the information on electrochemical cells, batteries, fuels and combustion.
3. To study about the corrosion and protective coatings.
4. To gain knowledge on adsorption phenomena.
5. To learn about properties, characteristics and applications of different molecules based upon chemical bonding and structure.
6. To understand different synthesis routes for preparation of variety of compounds.

#

COURSE OUTCOMES:

1. This course will create an impact on the students and make them to realize the modern utility on electrochemical cells, batteries, fuels and combustion process, corrosion and adsorption methods.
2. To understand nature of chemical bonding in materials and predict their properties.
3. To comprehend various analytical techniques/ methods towards qualitative and quantitative analysis.
4. To outline synthesis procedures and separation techniques of some engineering substances.
5. To apply specific models and processes for better understanding of material properties and applications.
6. The students would be able to apply basic chemical concepts and principles in understanding simple real-life problems.

UNIT IWATERTECHNOLOGY (9)

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination (No problems) – Hardness – Types and estimation by EDTA method (No problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverseosmosis.

UNIT II ELECTROCHEMISTRY ANDSTORAGEDEVICES (9)

Electrolytic conductance-application (conductometric titration)- Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+}vs dichromate) –-Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2-O_2 Fuel Cell.

UNIT III FUELSAND COMBUSTION (9)

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV- Problems on Calculation of GCV & NCV - Flue gas analysis.

UNIT IVCORROSION SCIENCE (9)

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings-Metallic coatings - Electroplating of Cu over Fe and Electro less plating (Ni) - Surface conversion coating - Hot dipping.- Anodizing of Al

UNIT V SURFACE CHEMISTRY ANDPHASERULE (9)

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

16BTCE104 BASIC CHEMICAL ENGINEERING 3 0 0 3 100

OBJECTIVES

1. To study the basic unit operations and unit processes in Chemical industry
2. To study the Process instrumentation and safety
3. To introduce the student with basic concepts of ChemicalEngineering
4. Mastery of the basic principles of science and engineering science that underlie modern chemical and biological technologies
5. Creative application of this mastery of basic principles to the solution of problems in a broad range of career paths
6. Appreciation of the broader context of environmental, social, safety and economic issues that affect their decisions, and highest standards of ethical practice.

COURSE OUTCOMES:

1. Students will be able to convert units of simple quantities from one set of units to another set of units
2. Students will be able to calculate quantities and /or compositions, energy usages, etc.in various processes and process equipment such as reactors, filters, dryers, etc.
3. Gain knowledge of chemical processes and the need of safety in industries.
4. the ability to apply basic mathematics, physics, chemistry and biology that underlie the practice of modern technology.
5. The ability to apply the engineering sciences of mass and energy balances, thermodynamics of physical and chemical equilibria, and heat, mass and momentum transfer that underlie the analysis and design of process engineering components.
6. The ability to apply science and engineering in the analysis and evaluation of process engineering components and systems.

INTRODUCTION (Not included for examination) **3**

Introduction to chemical engineering; history of chemical engineering and chemical technology; Scope of Chemical Engineering, Nature of Industries.

UNIT I BASIC CHEMICAL CALCULATIONS 8

Basic Concepts: concept of mole, weight percent, mole percent, normality, molarity, molality, vapor pressure, partial pressure.

UNIT II UNIT PROCESSES 8

Introduction to unit processes with simple examples like sulfonation, polymerization, oxidation, hydrogenation, saponification, etherification, nitration, chlorination.

UNIT III UNIT OPERATIONS-I 8

Introduction, Definition, examples like Size reduction, sedimentation, filtration, Distillation, evaporation, absorption, extraction, fluid handling, mixing, solid handling, fluid-solid contacting, fluid-solid separation, fluid storage, crystallization, drying, leaching.

UNIT IVUNIT OPERATIONS-II **9**

Heat Transfer- Conduction, Convection, Radiation concepts and Heat Exchangers.Principle of Ion exchange, techniques and applications. Solid and liquid membranes; concept of osmosis; reverse osmosis; electro dialysis; ultrafiltration Fluid properties, fluid flows, flow measurement devices.

UNIT V BASIC CONCEPT OF CHEMICAL PROCESSES **9**

Conversion, Yield, efficiency, flow diagram, flow sheets, & block diagram, with examples.

Total: 45 hours

16BTBT105 BASIC ELECTRICAL ANDELECTRONICSENGINEERING 3 0 0 3

OBJECTIVES

1. To impart the basic knowledge about the Electric circuits.
2. To understand the working of various Electrical Machines.
3. To know about various measuringinstruments.
4. To understand the basic concepts in semiconductor devices and digitalelectronics.
5. Impart a basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context.
6. Provide working knowledge for the analysis of basic DC and AC circuits used in electrical and electronic devices.

COURSE OUTCOMES:

1. The students shall develop an intuitive understanding of the circuit analysis, basic concepts of electrical machines, basics of electronics and be able to apply them in practical situation.
2. Predict the behavior of any electrical and magnetic circuits.
3. Formulate and solve complex AC, Dc circuits.
4. Identify the type of electrical machine used for that particular application.
5. Realize the requirement of transformers in transmission and distribution of electric power and other applications.
6. Function on multi-disciplinary teams.

UNITI ELECTRIC CIRCUITS& MEASUREMENTS 9

Ohm"s Law – Kirchoff"s Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES 9

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURING INSTRUMENTS 9

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS 9

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNITV DIGITALELECTRONICS 9

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressions using logic gates - standard forms of Boolean expression.

16BTPH111/16BTPH211 ENGINEERINGPHYSICSLABORATORY 0 0 4 2

COURSE OBJECTIVES:

1. To develop basic laboratory skills and demonstrating the application of physical principles.
2. Draw the relevance between the theoretical knowledge and to imply it in a practical manner with respect to analyze various electronic circuits and its components.
3. Analyze the behavior and characteristics of various materials for its optimum utilization.
4. Learn about the various electronic communication mechanisms and their usage in a practical manner
5. To design and plan the experimental procedure and to record and process the results.
6. To reach non trivial conclusions of significant of the experiments.

COURSE OUTCOMES:

1. The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technological applications.
2. The student will learn to draw the relevance between theoretical knowledge and the means to imply it in a practical manner by performing various relative experiments.
3. The student will be enabled to know about the characteristics and the behavior of various materials in a practical manner and gain knowledge about various communication mediums and its usage
4. Relate and apply the moment of inertia of the disc.
5. Translate sensory input into physical tasks
6. Recognize standards to perform a skill or task correctly

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonicinterferometer.
2. Determination of wavelength of mercury spectrum – spectrometergrating.
3. Determination of Young’s modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille’smethod.
5. Spectrometer Dispersive power of aprism.
6. Torsional pendulum – Determination of Rigiditymodulus.
7. Particle size determination using DiodeLaser
8. Determination of Laser parameters – Wavelength, and angle ofdivergence.
9. Determination of acceptance angle in an opticalfiber.
10. Determination of thickness of a thin wire – Air wedgemethod
11. Determination of Band Gap of a semiconductormaterial.
12. Determination of Specific resistance of a given coil of wire – WheatstoneBridge

16BTCH111/16BTCH211 ENGINEERING CHEMISTRY LABORATORY0 0 4 2

COURSE OBJECTIVES:

1. To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technicalcompetence.
2. To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence
3. To Provide the students with a solid foundation in Chemistry laboratory required to solve engineering problems.
4. To provide students with the knowledge of practical implementation of fundamental concepts.
5. The students with practical knowledge of the basic phenomenon/concepts of chemistry, the student face during course of their study in the industry and engineering field.
6. The students will be able to understand and explain scientifically the various chemistry related problems in the industry/engineering and develop experimental skills for building technical competence.

COURSE OUTCOMES:

1. The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
2. Analyze & generate experimental skills.
3. Enhance the thinking capabilities in the modern trends in Engineering & Technology.
4. Learn and apply basic techniques used in chemistry laboratory for preparation, purification and identification.
5. Employ the basic techniques used in chemistry laboratory for analyses such as chromatography, spectroscopy, volumetric titrations, conductometric, Pensky-Martens apparatus and stalagmometer.
6. Learn safety rules in the practice of laboratory investigations.

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Watersample.
2. Estimation of hardness of Water byEDTA
3. Estimation of chloride in Water sample (Argentometricmethod)
4. Determination of corrosion rate by weight lossmethod.
5. Conductometric Titration (Simple acidbase).
6. Conductometric Titration (Mixture of weak and strongacids).
7. Conduct metric Titration using $BaCl_2$ vs Na_2SO_4.
8. pH Titration (acid &base).
9. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or$K_2Cr_2O_7$).
10. Estimation of Ferric ion bySpectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Coppersulphate).
12. Determination of molecular weight and degree of polymerization usingViscometry.
13. Determination of chemical oxygendemand.

16BTCE112 ENGINEERING WORKSHOP PRACTICE 0 0 4 2

COURSE OBJECTIVES:

1. To provide exposure to the students with hands on experience on various basic engineering practices in Mechanical, Electrical and Electronics Engineering.
2. The objective of the course to impart fundamental knowledge about some selected aspects of chemistry
3. To present fundamentals of graphics and drafting appropriate for developing functionalskill in computer aided drafting
4. To provide students with adequate knowledge and experience in preparing engineering drawings using AutoCAD
5. To teach students to read, construct and understand basic engineering drawings.
6. To help students acquire the skills pertinent to the production of properly detailed, formatted and dimensioned Engineering drawings.

COURSE OUTCOMES:

1. To provide exposure to the students with hands on experience on various basic Engineering practices in Civil and Mechanical Engineering
2. To provide exposure to the students with hands on experience on various basic Engineering practices in Electrical and ElectronicsEngineering.
3. Students will be able to analyze the material on the basis of their properties and thus assigning different weight age to their use for technical purposes.
4. Understand modern manufacturing operations, including their capabilities, limitations, and how to design economically.
5. Gain insight into how designers influence manufacturing schedule and cost, and cost of different components.
6. Learn how to analyze products and be able to improve their manufacturability and make the cost effectively.

PART – A (MECHANICAL)

i. WELDING

i. Preparation of arc welding of butt joints, lap joints and teejoints.

ii. BASICMACHINING

i. Simple Turning and Taperturning
ii. Drilling andTapping
iii. Sheet MetalWork
iv. Model making – Trays, funnels,etc.

iii. DEMONSTRATIONON

i. Smithyoperations
ii. Foundryoperations
iii. PlumbingWorks
iv. CarpentryWorks

PART –B (ELECTRICAL & ELECTRONICS)

iv. ELECTRICALENGINEERING

i. Study of electrical symbols and electricalequipment.
ii. Construct the wiring diagram for Stair casewiring.
iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energymeter.
iv. Measurement of electrical quantities – voltage, current, power & power factor in Rload.
v. Measurement of energy using single phase energy meter.

v. ELECTRONICSENGINEERING

i. Study of Electronic components– Resistor (color coding), capacitors and inductors.
ii. Soldering practice – Components Devices and Circuits – Using general purpose.
iii. Study of logic gates AND, OR, NOT, NOR and NAND.

16BTBT113 **ENGINEERING GRAPHICS** **1 0 3 3 100**

OBJECTIVES

1. To develop in students, graphic skills for communication of concepts, ideas and design of engineering products.
2. To expose them to existing national standards related to technical drawings.
3. Comprehend general projection theory, with an emphasis on the use of orthographic projection to represent three-dimensional objects in two-dimensional views
4. Understand the application of industry standards and techniques applied in engineering graphics
5. Apply auxiliary or sectional views to most practically represent engineered parts
6. Dimension and annotate two-dimensional engineering drawing

COURSE OUTCOMES:

On Completion of the course the student will be able to

1. perform free hand sketching of basic geometrical constructions and multiple views of objects.
2. do orthographic projection of lines and plane surfaces.
3. draw projections and solids and development of surfaces.
4. prepare isometric and perspective sections of simple solids.
5. demonstrate computer aided drafting.
6. Use the drawing instruments effectively and able to dimension the given figures

UNIT I INTRODUCTION **9**

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES **8**

SCALES:Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING **9**

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES **8**

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS **8**

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam) **3**

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings.Introduction to 3D primitives.

16BTCC151 **YOGA** **1 0 0**

COURSE OBJECTIVES:

1.Yoga Education Helps To Develop The Self Discipline, Self Control, Awareness, Concentration And Higher Level Of Consciousness.

2.Yoga is to impart knowledge of yoga to graduates in order to enable them to teach yoga to the students in schools and colleges and to the interested public of all age groups.

3. To provide the necessary knowledge of the theory and practice of yoga so that the students learn to practice and also to teach yoga to all age groups for promoting their health and effectiveness

4.To give them a basic understanding of Yoga and its nature, scope, Development of yoga through the ages, Different types of yoga like Karma Yoga, Bhakti Yoga, Jnana Yoga, Raja yoga, Hatha yoga and Mantra Yoga, Meditation and Its nature and scope, Different types of meditation, the concepts Hatha Yoga Pradipika and GherandaSamhitha, Chakra theory and Kundalini yoga and relevance to the modern life.

5. To provide the necessary knowledge of human anatomy & physiology of Cell structure. systems in the body like Skeletal system, Muscular system, Digestive system, Circulatory system, Respiratory system, Excretory system, Endocrine system,

6. To provide the necessary knowledge of nature ,characteristics and development of Indian philosophy, Indian Philosophical systems like Vedic thought, Nyaya Philosophy, Vaisesika Philosophy ,Samkya Philosophy and Sankara philosophy.

COURSE OUTCOMES:

1. Demonstrate basic skills associated with yoga activities including strength and flexibility, balance and coordination. Demonstrate the ability to perform yoga movements in various combination and forms.
2. Understand and apply the knowledge of basic sequencing, and effective group management.
3. Demonstrate the ability to create and present various yoga sequences.
4. Demonstrate an understanding of health-related fitness components
5. Demonstrate an understanding of health-related fitness components: cardiorespiratory endurance, flexibility and body composition.
6. The student can understand the knowledge about the theory and practice of Yoga and its nature,scope, Development of yoga through the ages, Different types of yoga like Karma Yoga, Bhakti Yoga, Jnana Yoga, Raja yoga, Hatha yoga and Mantra Yoga, Meditation and Its nature and scope, Different types of meditation, the concepts Hatha Yoga Pradipika and GherandaSamhitha, Chakra theory and Kundalini yoga and relevance to the modern life.

AIM : To Enable The Student To Have Physical Health And Mental Health.

UNIT- I

Introduction To Yoga- Meaning Of Yoga – Concept Of Yoga- Aim And Objectives Of Yoga – History Of Yoga - Systems Of Yoga.- Stages (Or) Limbs Of Yoga

UNIT- II

Asanas-Surya Namashkar- Thdasana- Veerabadhra Asana- Trikonasana- Utkatasana- ArdhaChakrasana- Ardha Kati Chakrasana- Thandasana- Gomugasana- Padmasana- Vajrasana- Paschimottasana- Matsyendrasana-BavanaMukthasana- SuptaPadhangusthasana-Sethubhandhasana- Navasana- ArdhaBavanamukthasana- Mathasyasana- Naukasana- Bujangasana- Salabasana- Makkarasana-Dhanurasana.

UNIT- III

Advance Asanas- Sirasasana- Garudasana- Natrajasana- Rajakoptasana- Chakrasana- Kukutasana- Virikshasana- Sarvagasana- Halasana-. Mayurasana.

UNIT- IV

Pranayama- Meaning- Types Of Pranayama- Bhastrika- Bhramari- Udgeeth- Kabalbhati- Bahya- AnulomVilom- Pranay Pranayama- Benefits Of Pranayama. Neti - JalaNeti , Sutra Neti, Nouli- Three Types, Douthy-Three Types

UNIT- V

Mudras- Uses Of Mudras- Gyan- Shoonya- Apaan- Prana- Vayu- Prithvi- Linga- Apana- AdiMudra-- Agni Mudra- Surya Mudra- Varuna- Hakini Mudra.

SEMESTER II

16BTCC201ABUSINESSCOMMUNICATION 3 0 0 3

COURSE OBJECTIVES:

1. To help students comprehend the role of listening skills in effective communication.
2. To familiarize students with verbal and non-verbal communication.
3. To expose students to neutral accent.
4. To develop emotional intelligence skills in them for enhancing their self-esteem.
5. To assist them in setting goals and developing positive attitude.
6. To enable students to acquire decision making skills, problem solving skills and assertive skills.

COURSE OUTCOMES:

1. Design and deliver a persuasive presentation that convinces the audience of the topic's relevance and overcomes resistance, using appropriate visual support and adhering to a specified time limit.
2. Use a strategic communication model and critical thinking to identify objectives, analyze audiences, and choose the most effective structure and style for delivering strategically sound written and spoken messages.
3. Practice principles of effective business writing and document design in all written documents.
4. Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
5. Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.
6. To draft effective business correspondence with brevity and clarity.

UNIT I

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II

Written Business Communication – Style- word-usage- organization of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application-Letters ofComplaint -Memos- Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- interpretation of graphs using expressions of comparison and contrast .

UNIT III

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior – TelephoneEtiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body langage – Etiquette- Organization of presentation – brain storming- Negotiations.

UNIT - IV

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT - V

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

16BTCC201B TECHNICAL ENGLISH 3 0 0 3

COURSE OBJECTIVES:

1. To motivate learners to acquire listening & speaking skills in both formal and informal context.
2. To focus on question forms & to make them understand the importance of using question tags and also the functional use of transformation of sentences.
3. To improve their reading habit and to train them in critical and analytical reading.
4. To equip them to write for academic as well as work place context.
5. To enable students to face interviews.
6. To prepare students to sit for assessments and evaluations such as tests and quizzes in order to test.

COURSE OUTCOMES:

1. Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicativestrategies.
2. Enhance them reading texts critically andanalytically.
3. Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluativewriting.
4. Enrich the ability to face interviews withconfidence.
5. Understand how to critically analyze data from research; incorporate it into assigned writing clearly, concisely, and logically; and attribute the source with proper citation.
6. Practice the unique qualities of professional rhetoric and writing style, such as sentence conciseness, clarity, accuracy, honesty, avoiding wordiness or ambiguity, using direct order organization, readability, coherence and transitional devices

UNIT-1 LSRW SKILLS &GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Regular & Irregular verbs - Kinds of sentences - Question tags. Homonyms and Homophones.

UNIT-II LSRW SKILLS &GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)

Listening – Note Taking- Improving grasping ability.**Speaking**– Welcome address - Vote of thanks - Master of ceremony.**Reading**– Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story.**Grammar&Vocabulary (Function Grammar & Technical Vocabulary**)

Modal verbs – Conjunction - Expression of cause and effect.Phrasal verbs - Idioms.

UNIT –III LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) **(9)**

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R)**Writing-** Essay writing - Minutes of meeting - Agenda

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Active and Passive voice - Purpose expression. Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV LSRW SKILLS & GRAMMAR, CAREER ORIENTED

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) **(9)**

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication.**Reading**– Reading comprehension (short & long text) - Reading job advertisements and profile of a company.**Writing**– Checklist preparation.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary) **Grammar** - Numerical expressions – Collocations. Singular and Plural (Nouns)

UNIT- V LSRW SKILLS & GRAMMAR, FIELD WORK

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) **(9)**

Listening – Types of listening- Improving listening comprehension**. Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing-

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Transformation of sentences (Simple, Compound & Complex).Collection of Technical Vocabularies with th meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory@ 2 periods each unit.

16BTCE202 ENGINEERINGMATHEMATICSII 3 2 0 4

COURSE OBJECTIVES:

1. To have knowledge in integral calculus and Vector calculus
2. To expose the concept of Analytical function and Complexintegration.
3. To introduce the basic concepts required to understand, construct, solve and interpret differential equations.
4. To teach methods to solve differential equations of various types.
5. To give an ability to apply knowledge of mathematics on engineering problems
6. To introduce the concept of Vector differentiation and integration that finds applications in various fields like solid mechanics, fluid flow, heat problems and potential theory.

COURSE OUTCOMES:

1. Solve problems in Fluid Dynamics, Theory of Elasticity, Heat and Mass Transfer etc.
2. Find the areas and volumes using Multiple Integrals
3. Improve their ability in Vector calculus
4. Expose to the concept of Analytical function.
5. Apply Complex integration in their Engineering problems
6. Students will be able to compare and analyze the methods in differential equations, multiple integration, integral calculus

UNITI INTEGRALCALCULUS (12)

Definite and indefinite integrals – Techniques of integration – Substitution rule, Trigonometric integrals, Integration by parts , Integration of rational functions by partial fraction, Integration of irrational functions – Improper Integrals.

UNITII MULTIPLEINTEGRALS (12)

Double integral – Cartesian coordinates – Polar coordinates – Area as double integrals- Change the order of integration – Triple integration in Cartesian co-ordinates.

UNITIII VECTORINTEGRATION (12)

Integration of vectors – line integral- surface integral- volume integral- Green‟s theorem - Gauss divergence theorem and Stoke‟s theorems (Statement Only), hemisphere and rectangular parallelopipeds problems.

UNITIV ANALYTIC FUNCTIONS (12)

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: w = z+a, az, 1/z and bilinear transformation.

UNITV COMPLEXINTEGRATION (12)

Complex Integration – Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi-circle (excluding poles on the real axis).

16BTCC204 ENVIRONMENTALSCIENCES 3 0 0 3

COURSE OBJECTIVES:

1. To give a comprehensive insight into natural resources, ecosystem and biodiversity.
2. To educate the ways and means of the environment
3. To protect the environment from various types of pollution.
4. To impart some fundamental knowledge on human welfaremeasures.
5. To recognize the interconnectedness of multiple factors in environmental challengesengage constructively with diverse forms of knowledge and experience
6. To identify the multiple scales, actors, and stakes of an issuerecognize and apply methodological approaches of the social sciences, natural sciences, and humanities

COURSE OUTCOMES:

1. Students will prepare themselves to go ecofriendly and help preserving the nature and environment.
2. Students will possess the intellectual flexibility necessary to view environmental questions from multiple perspectives, prepared to alter their understanding as they learn new ways of understanding.
3. Students will solve problems systematically, creatively, and reflexively, ready to assemble knowledge and formulate strategy
4. When encountering environmental problems students will assess necessary scientific concepts and data, consider likely social dynamics, and establish integral cultural contexts.
5. When faced with questions that lie beyond their current knowledge base, students will actively research data, concepts, histories, and narratives necessary for adequate consideration of the issue.
6. Students will communicate with precision, effective art, and sound rhetoric in writing, in speech, and in digital media

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES (9)

Definition, Scope and Importance – Need for publicawareness-Forestresources: Useandover-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM (9)

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere-Concept of an ecosystem- Structure, components and function of an ecosystem Energyflowingthe ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marineecosystem)

UNITIII BIODIVERSITY (9)

Introduction to biodiversity,Definition-Geneticdiversity,Species diversity and Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India–Conservationofbiodiversity-In-Situ and Ex-Situconservationof biodiversity.

UNIT IVENVIRONMENTALPOLLUTION (9)

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone andlandslides.

UNIT V SOCIAL ISSUESANDENVIRONMENT (9)

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozonelayer

depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Populationexplosion.

16BTCE205 ENGINEERINGMECHANICS 3 0 0 3 100

COURSE OBJECTIVES:

1. To develop capacity to predict the effect of force and motion in the course of carrying out the design functions ofengineering.
2. students will learn a process for analysis of static objects; concepts of force, moment, and mechanical equilibrium; how to analyze forces and moments in two and three dimensions
3. They will be able to analyze forces in various systems such as frames, machines, trusses, beams and cables
4. The tools learned in this course will provide the basis for later courses and a career in engineering
5. To make them learn the fundamentals of Mechanics, equation of static equilibrium & dynamic equilibrium of particles and rigid bodies.
6. To learn the effect of friction on equilibrium¬

COURSE OUTCOMES:

1. Ability to explain the differential principles applies to solve engineering problems dealing with force, displacement, velocity andacceleration.
2. Ability to analyse the forces in anystructures.
3. Ability to solve rigid body subjected to dynamicforces.
4. Add forces and moments in two and three dimensions, and find a component of a force or moment in a given direction.
5. Construct free body diagrams of an object or a system of connected objects.
6. Describe conditions of equilibrium and their associated component equations.

UNIT I STATICS OF PARTICLES 9

Forces – system of forces – concurrent forces in plane and space– resultant – problems involving the equilibrium of a particle–free body diagram–equilibrium of particle in space.

UNIT II STATICS OF RIGID BODIES IN TWO DIMENSIONS 9

Rigid bodies–moment of force about an axis–moments and couples–equivalent system of coplanar forces–Rigid body in equilibrium–problems involving equilibrium of rigid body–types of supports–reactions of beams.

UNIT III CENTROID, CENTRE OF GRAVITY AND MOMENT OF INERTIA 9

Centroids of areas, composite areas, determination of moment of inertia of plane figures, polar moment of inertia – radius of gyration – mass moment of inertia of simple solids.

UNIT IV KINEMATICS OF PARTICLES 9

Introduction – plane, rectilinear motion – time dependent motion – rectangular coordinates – projectilemotion.

IMPULSE AND MOMENTUM: Concept of conservation of momentum – Impulse–Momentum principle– Impact – Direct central impact – Oblique central impact – Impact of elastic bodies.

UNIT V KINETICS OF PARTICLES AND FRICTION 9

Kinetics of Particles: Equations of motion–rectilinear motion–Newton's II law – D'Alembert's principle – Energy – potential energy–kinetic energy–conservation of energy–work done by a force – work energy method.

Laws of friction – coefficient of friction–problems involving dry friction – wedge and ladder friction.

16BTCE112 COMPUTER PRACTICE ANDPROGRAMMINGLABORATORY 1 0 43

COURSE OBJECTIVES:

1. To familiarize with open source office packages
2. To write programs for Understand the basic concept of C Programming, and its different modules that includes conditional and looping expressions, Arrays, Strings andFunctions.
3. The students should be able to apply mathematical, scientific, electronic and computer engineering principles to identify, understand, evaluate and formulate solutions to meet industry and societal needs.
4. The students should utilize their aptitude, expertise and experience to solve industry oriented problems regarding Information Technology field and would lead in their professional area with their economic and managerial skill and field oriented knowledge.
5. The students should be able to nourish their research skill and involving themselves to current research oriented works.
6. The students will be provided with an educational foundation that prepares them to become entrepreneurs in the field of development and deployment of software, information systems and information management tools

COURSE OUTCOMES:

1. Study, analyze and understand logical structure of a computer program, and different construct to develop a program in „C language
2. Apply knowledge of mathematics, science and algorithm in solving complex Computer engineering problems.
3. Generate solutions by conducting experiments and applying techniques to analyze and interpret data
4. Design component, or processes to meet the needs within realistic constraints.
5. Identify, formulate, and solve Software Engineering, Networking and Data Mining problems.
6. Comprehend professional and ethical responsibility in computing profession

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords-General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings- Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheet and presentation software inLinux

2. Programming inScratch:
   Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming

3. CProgramming:
   Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control

structures, arrays, Strings and function, implementation of pointers.

Total Hours: 45

REFERENCES:

2. YashavantKanetkar, " Let us C", BPB Publications, 13th Edition,2013

16BTCE213 PHYSICALCHEMISTRYLAB 2 0 2 3 100

OBJECTIVES

1. To Learn the chemical process kinetics and the distribution laws
2. To gain practical knowledge of rate constant and activation energy
3. The course provides training in advanced physical chemistry laboratory techniques.
4. The experiments are guided by demonstrators and are designed both to illustrateϖ applications of theory covered in the Chemical Physics and lecture courses, and to introduce typical instrumentation.
5. The investigation provides an introduction to research methods: a group of 3-4ϖ students are given a theme or problem and some apparatus; they must devise, build and execute experiments using less guidance than for the standard experiments.
6. Data analysis and structured report writing are key components of the course

COURSE OUTCOMES:

1 To determine the properties and characteristics ofsolvents and mixtures

2 Developed expertise relevant to the professional practice of chemistry

3 Developed an understanding of the breadth and concepts of physical chemistry

4 An appreciation of the role of physical chemistry in the chemical sciences and engineering

5 Developed an understanding of the role of the chemist and chemical engineer in tasks employing physical chemistry

6 An understanding of methods employed for problem solving in physical chemistry 6. Experience in some scientific methods employed in basic and applied physical chemistry

UNITI CHEMICAL KINETICS

Rate of a reaction-Order of a reaction – Examples and rate equations for Zero order, First order, Second order and Third order reactions –Molecularity of a reaction – Unimolecular and Bimolecular reactions – Half-life period– Kinetics of parallel and opposing reactions – Activation energy – Arrhenius equation – Collision theory of reaction rates – Theory of absolute reaction rates – Michalis Menton kinetics of enzyme catalyzed reactions.

UNIT II COLLOIDS

Introduction to colloids – properties of colloids – coagulation of solutions – Origin of charge on colloidal particles – Determination of size of colloidal particles – Donnan Membrane equilibrium – Emulsions – Gels – Applications of colloids – Nanoparticles (Au, Ag, Pt)– Preparation – Characterization – Properties – Application in catalysis and drug delivery systems.

UNITIIITHE DISTRIBUTION LAW

Distribution co-efficient - Distribution Law — Conditions for the validity of the Distribution law – I2–CCl4–H2O System – Nature of interaction of the solute with one of the solvents Dissociation-Association

Experiments

1. Determination of partition co-efficient of iodine between two immisciblesolvents

2. Determination of partition co-efficient of benzoic acid between two immisciblesolvents
3. Determination of Ka of the weakacid
4. Conductometric experiments- Verification of Oswald’sDilutionLaw
5. Determination of Rate Constant(K)
6. Determination of Activation Energy(ΔE)
7. Determination of standard electrode potential (Zn, Cu,Ag)
8. To study the adsorption of Acetic acid on charcoal and construct theIsotherm.
9. Application of Phase Rule to Phenol-Watersystem
10. To study the inversion of cane sugar bypolarimeter.
    a. Polarimeter-Inversion of canesugar
    b. Refractometer

17BTCC251 **BUSINESSPLAN** **1 0 0 _**

COURSE OBJECTIVES:

1 To explain relevance of Ethics while taking business decisions.

2 Market & Opportunity Identification Intense market and industry research

3 Basic financial metrics and statements

4 Concepts of organizational structure and design

5 Negotiation and decision making

6 Team styles and leadership techniques

COURSE OUTCOMES:

1. Understands, explains and justifies the need for a business plan for a business venture.
2. An Understanding of Business Functions Providing Global Perspectives
3. Developing Critical and Analytical Thinking Abilities
4. Interpersonal Skill Development
5. Creating Social Sensitivity and Understanding CSR, Ethical and Sustainable
6. Business Practices Demonstrate sensitivity to social, ethical and sustainability issues Developing Entrepreneurship

Unit I

Entrepreneurship – Types- Entrepreneurial Competencies -Business Plan – Meaning - Basic parameters - Project parameters - Factors of successful business - Term Loans and Working Capital Management.

Unit II

Business Plan Process - Sources of Information – Online Resources - Offline Resources - Sources of Market Research - Benefits of market study - Coverage of market study.

Unit III

Business Plan components - Company description - Industry Analysis - Target Market - Competition - Strategic position - Risk assessment - Technology plan - Management and Organization – Government policy

Reference books:

1. Rhonda Abrams " The Successful business Plan Secret $ Strategies " PrenticeHall
2. Rhonda Abrams “The business plan in a day" PrenticeHall.
3. Business plan preparation - Entrepreneurship Development Institute ofIndia

SEMESTER III

16BTCE301 PROBABILITYANDSTATISTICS 3 2 0 4

COURSE OBJECTIVES

1. To introduce the concept of probability and Sampling techniques.
2. To understand the fundamentals of Experimental Designs and Quality Control.
3. Identify the types of data (qualitative, quantitative, discrete, and continuous).
4. Identify the types of sampling (random, stratified, systematic, cluster).
5. Identify the misuses of statistics.
6. Apply graphical methods of displaying data.

COURSE OUTCOMES:

1. The students would be exposed to statistical methods designed to contribute to the process of making scientific judgments in the face of uncertainty and variation.
2. How to calculate and apply measures of location and measures of dispersion -- grouped and ungrouped data cases.
3. How to apply discrete and continuous probability distributions to various business problems.
4. Perform Test of Hypothesis as well as calculate confidence interval for a population parameter for single sample and two sample cases. Understand the concept of p-values.
5. Learn non-parametric test such as the Chi-Square test for Independence as well as Goodness of Fit
6. understand both the meaning and applicability of a dummy variable and the assumptions

UNIT-I PROBABILITY (11)

Probability – Definition – Law - conditional probability-Bayes theorem- Probability mass function - Probability density functions.

UNIT-II RANDOM VARIABLES (13)

Introduction to one dimensional random variables – Discrete – Continuous - Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Regression.

UNIT-III TESTINGOFHYPOTHESIS (12)

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions – Tests for independence of attributes and Goodness of fit.

UNIT –IV DESIGNOFEXPERIMENTS (12)

Analysis of variance – one way classification – CRD – Two-way classification – RBD – Latinsquare.

UNIT –V RELIABILITY ANDQUALITYCONTROL (12)

Concepts of reliability – hazard functions – Reliability of series and parallel systems – control charts for measurement ($\bar{X}$ and R charts) - Control charts for attributes (p, c and np charts).

TOTAL: 60

17BTCE302 **ORGANIC CHEMISTRY** **3 0 0 3 100**

COURSE OBJECTIVES:

1. To enable the students to learn the type of components in which organic reactions take place and also to know the preparation of the essential organic compounds.
2. Laboratory skill acquisition (tactile skills as well as technical skills)
3. Intellectual skill development (including problem solving, scientific thinking, studying, research *etc.*)
4. Development of a scientific curiosity (thinking about how and why things happen in the way that they do)
5. Team / cooperative skill development
6. Understand the language and diagrammatic notation of organic chemistry and be able to communicate and apply this knowledge

COURSE OUTCOMES:

1. At the end of the course students will be in a position to have knowledge on various reaction mechanisms, preparation of organic compounds and their properties.
2. This will be a precursor for the study on Chemical Reaction Engineering.
3. Perform accurate and precise analysis in the field of analytical chemistry
4. students will be able to keep records of all performed analysis in the manner which is required in modern analytical laboratory.
5. Student will be able to do statistical analysis and evaluate repeatability of obtained results
6. Perform quantitative and qualitative analysis of known standards as well as unknown samples

UNITI CARBOHYDRATES 9

Introduction – various definitions and classifications of carbohydrates – Preparation, Physical & Chemical properties, Structure and Uses of Monosaccharides (Glucose & Fructose) Interconversions – Aldo pentose to aldo hexose–Aldo hexose to aldo pentose- aldose to isomeric Ketose – Ketose to isomeric Aldose – Aldose toepimer

UNITII HETEROCYCLIC COMPOUNDS 9

Preparation, Physical & Chemical properties and Uses of Pyrrole, Furan, Furfural, TetrahydroFuran, Thiophene, Indole, Pyridine, Quinoline and Isoquinoline.

UNITIII DYE CHEMISTRY 9

Witt‟s theory and modern theory of colors – Synthesis of Methyl red, Methyl orange, Congo red, Malachite green, para-rosaniline, phenolphthalein, fluorescence, Eosin dyes.

UNITIV SYNTHETIC ORGANIC CHEMISTRY 9

Preparation and Synthetic utilities of Grignard reagent, Ethyl aceto acetate and Malonic ester.

UNITV PHARMACEUTICALCHEMISTRY 9

Synthesis of Antimalarial drugs – isopentaquine and chloroquine Synthesis of Antibacterial drugs – Sulphaniliamide and Sulphapyridine.

16BTCE303 PROCESS CALCULATIONS 3 1 0 4 100

COURSE OBJECTIVES

1. To teach concept of degree of freedom and its application to solution of mass and energy balance equations for single and network of units and introduce to processsimulators.
2. To perform stoichiometric calculations for chemical and non-chemical systems and to understand quantitative relationships between matter and energy involved in physiochemical processes
3. Perform basic engineering calculations
4. Perform mass balance calculations on existing processes (involving single and multiple units).
5. Use basic, applied chemistry/ thermodynamics in material balance calculations.
6. Successfully practice or apply the principles of Chemical Engineering in a variety of employment areas.

COURSE OUTCOMES:

1. understand and apply different systems of dimensions and , calculate compositions mixtures/solutions and determine pressure, volume and temperature of gasesusing equations ofstate
2. apply the law of conservation of mass for different batch and continuous unit operations
3. apply the law of conservation of mass for unit processes andevaluateyield,conversion, recycle ratio /purge /bypass of chemical reactors
4. apply energy balances for reacting systems and understand the effect of temperatureand pressure on heat of reaction
5. understand and apply molarity, molality, normality and molar fraction
6. Apply the heterogeneous mixtures (percentage by weight and by volume).

UNIT I UNITS AND DIMENSIONS 9

Conversion of Equations, Systems of Units,Fundamental Concepts: Basic and derived units, use of different system of units in process calculations. Introduction to Chemical Engineering Calculations: Basis, Mole Fraction and Mole Percent, Mass Fraction and Mass Percent, Concentration of different forms, Conversion from one form to another, Roult"s Law, Henry"s law, Antoine"s Equation. Clausius ClapeyronEquation.

UNIT II MATERIAL BALANCE WITHOUT CHEMICAL REACTION 9

Material Balance during Mixing, Humidity and Application of Psychrometric Chart, Solubility and Crystallization, Evaporator, Distillation Column, Absorption Column, Drier, Liquid - Liquid and Solid - Liquid ExtractionUnits.

UNIT III MATERIAL BALANCE WITH CHEMICAL REACTION 9

Single Reaction, Multiple Reactions, Reactions with Recycle, Purge and By-pass, Combustion Reaction, Calculation of Excess Air, Material Balance of Unsteady State Reaction systems.

UNIT IV ENERGY BALANCE 9

Enthalpy calculation for systems (single component and multi components) without Chemical Reaction with Mean and Temperature dependent Heat Capacity, Enthalpy calculation for systems

with Chemical Reactions.Heat of Reaction from Heat of Formation and Heat of Combustion Data, Effect of Temperature and Pressure on Heat of Reaction, Hess's Law, Adiabatic Flame Temperature, Theoretical Flame Temperature.

UNIT –V COMBUSTION 9

Fuels and combustion; Calculation of theoretical and excess air from combustion of solid, liquid and gaseous fuels.Composition of flue gases by Orsat analyzer.

Lecture:45, Tutorial:15, TOTAL:60

16BTCE304 **FLUID MECHANICS** **3 0 0 3 100**

COURSE OBJECTIVES:

1. To impart to the students the knowledge on fluid properties, fluid statics, dynamic characteristics for through pipes and porous medium, flow measurement and fluid machineries.
2. a foundation in the fundamentals of fluid mechanics;
3. practice in the analytical formulation of fluid mechanics problems using Newton's Laws of motion and thermodynamics;
4. an introduction to experimental methods;
5. an exposure to practical applications, work on a small design project, and the writing of a technical report related to the design project
6. understanding basic laws, principles and phenomena in the area of fluid mechanics

COURSE OUTCOMES:

1. Comprehend the principles of fluid properties, fluid statics and fluid flow problems and apply the same in chemical process industries
2. Analyze flow behavior of solid and liquid and to demonstrate the understanding of packed and fluidized bed
3. Understand and select fluid moving machinery for different applications in process industries
4. Understand and select characteristics of pumps, flow meters and valves for different applications in process industries.
5. Identify how properties of fluids change with temperature and their affect on pressure and fluid flow.
6. Describe fluid pressure and its measurement

UNITI FLUIDPROPERTIES **9**

Methods of analysis and description - fluid as continuum – Velocity and stress field - Newtonian and non-Newtonian fluids – Classification of fluid motion.

UNIT II FLUID STATICS **9**

Fluid statics – basic equation - equilibrium of fluid element – pressure variation in a static fluid - application to manometry – Differential analysis of fluid motion – continuity, equation of motions, Bernoulli equation and Navier- Stokes equation.

UNITIII PRINCIPLES OF FLUID FLOW **9**

The principle of dimensional homogeneity – dimensional analysis, Rayleigh method and the Pi-theorem - non-dimensional action of the basic equations - similitude - relationship between dimensional analysis and similitude - use of dimensional analysis for scale up studies

UNITIV FLUIDFLOWS 9

Reynolds number regimes, internal flow - flow through pipes – pressure drop under laminar and turbulent flow conditions – major and minor losses; Line sizing; External flows - boundary layer concepts, boundary layer thickness under laminar and turbulent flow conditions- Flow over a sphere – friction and pressure drag - flow through fixed and fluidized beds.

UNITV FLOW MEASUREMENT 9

Flow measurement - Constant and variable head meters; Velocity measurement techniques; Types, characteristics and sizing of valves; Classification, performance characteristics and sizing of pumps, compressors and fans

16BTCE305 MECHANICAL OPERATIONS 3 0 0 3 100

COURSE OBJECTIVES:

1. In this course, the students will learn characterization of solids, size reduction techniquesof solid – fluid separation andmixing.
2. To understand particulate solid characterization and storage and transportation of solids
3. To understand principles of size reduction and equipment for size reduction
4. To understand solid-liquid, liquid-liquid, gas-solid and solid-solid Mechanical separation
5. Study different properties of particulate solids, handling and mixing of solid particles.
6. Study principles of communition and different types of equipment for size reduction like crushers, grinders

COURSE OUTCOMES:

1.Apply the principles of size analysis, handling, storage and transportation for handling solids in chemical processindustries

2.Analyze the size reduction techniques of solids by selecting proper equipments such as crushers, grinders,etc.

3.Understand the working principles of gravity settling tank, cyclone separators, Filters and other mechanical separationdevices

4. Recognize mixing and agitation equipments, power calculation and selection of mixing

5. Knowledge of size reduction machineries for various industries and calculate power requirement

6.Knowledge to design Gravity and Centrifugal settling processes for various applications, including pollution control in industry

UNITI CHARACTERISTICS ANDSCREENING 9

Characteristics and General characteristics of solids, different techniques of size analysis, shape factor, surface area determination, estimation of particle size. Screening methods and equipment, screen efficiency, ideal and actualscreens.

UNITII SIZE REDUCTION 9

Laws of size reduction, energy relationships in size reduction, methods of size reduction, classification of equipments, crushers, grinders, disintegrators for coarse, intermediate and fine grinding, power requirement, work index; size enlargement - principle of granulation, briquetting, pelletisation, andflocculation.

UNITIII MECHANICAL SEPARATIONS 9

Gravity settling, sedimentation, thickening, elutriation, double cone classifier, rake classifier, bowl classifier. Centrifugal separation - continuous centrifuges, super centrifuges, design of basket centrifuges; industrial dust removing equipment, cyclones and hydro cyclones, electrostatic and magnetic separators, heavy media separations, floatation, jigging.

UNITIV FILTRATION 9

Theory of filtration, Batch and continuous filters, Flow through filter cake and filter media, compressible and incompressible filter cakes, filtration equipments - selection, operation and design of filters and optimum cycle of operation, filteraids.

UNITV MIXINGAND AGITATION 9

Mixing and agitation - Mixing of liquids (with or without solids), mixing of powders, selection of suitable mixers, power requirement for mixing. Storage and Conveying of solids - Bunkers, silos, bins and hoppers, transportation of solids in bulk, conveyer selection, different types of conveyers and their performancecharacteristics.

16BTCE311 **ORGANIC CHEMISTRY LABORATORY** **0 0 3 2 100**

COURSE OBJECTIVES:

1. To learn basic principles involved in analysis and synthesis of different organic derivatives
2. to provide a solid foundation of organic chemistry for students considering advanced studies in chemistry and other important areas such as biochemistry, medical fields, applied life sciences that require a though understanding of organic chemistry
3. provide practical training on identification of various functional group present in organic compounds
4. To characterize the structure of the organic compound by interpreting IR, UV, 1H NMR and Mass spectral data.
5. To learn about the estimation methods for glucose, Phenol etc. and preparation by multistage method
6. To understand the shapes of different orbitals. nd understand different principles for filling electrons.

COURSE OUTCOMES:

1. The student is able to identify what distinguishes a strong and weak nucleophile and recall the rules ofreactions.
2. The student shows their mastery of nomenclature since ethyl bromide is not drawnout.
3. The student analyzes a list of compounds and determines their reactivity.
4. Gain an understanding of composition of matter and its properties.
5. Recognize the ways that elements are combined to form compounds (ionic, covalent, and dative bonding).
6. Be able to write and balance chemical equations and perform calculations involving equations.

LIST OF EXPERIMENTS

1. Quantitative analysis of organic compounds – Identification of aliphatic/aromatic, saturated/unsaturatedcompounds.
2. Identification and characterization of various functional groups by theircharacteristic reactions:
   a) alcohol, b) aldehyde, c) ketone, d) carboxylic acid, e) phenol, f) ester, g)primary, secondary and tertiary amines h) imide i) nitrocompounds.
3. Analysis of an unknown organic compound and preparation of suitable solidderivatives
4. Analysis of carbohydrates.
5. Analysis ofproteins.
6. Methodology of filtration andrecrystallization.
7. Introduction to organic syntheticprocedures:
   i. Acetylation – Preparation of acetanilide from aniline.
   ii. Hydrolysis – Preparation of salycilic acid from methylsalyciliate.

iii. Substitution – Conversion of acetone toiodoform.

iv. Nitration – Preparation of m-dinitrobenzene fromnitrobenzene.

v. Oxidation – Preparation of benzoic acid from benzaldehyde/ benzylalcohol

TOTAL: 45

16BTCE312 FLUID MECHANICS LABORATORY 0 0 3 2 100

COURSE OBJECTIVES:

1. To learn experimentally to calibrate flow meters, find pressure loss for fluid flows and determine pumpcharacteristics.
2. To provide practice in estimating friction losses.
3. To impart training to use various flow measuring devices for making engineering judgments
4. Demonstrate the classical experiments in fluid mechanics and hydraulic machinery.
5. Correlate various flow measuring devices such as Venturimeter, orifice meter and notches etc.
6. Discuss the performance characteristics of turbines and pumps

COURSE OUTCOMES:

On completion of the course the students will be able to

1. determine the coefficient of discharge for venturi / orifice meter, open drum orifice and-notch, validate the Moody's diagram for flowthrough straight pipe / concentric pipes and helicalcoil
2. assess the frictional loss coefficient for different valves and pipefittings
3. appraise pressure drop through packed bed and estimate minimum fluidization

   velocity influidized bed
4. Understanding of basic physics of fluids,Gaining knowledge to calculate and design engineering applications involving fluid.
5. Understanding of analyzing flow systems in terms of mass, momentum, and energy balance.
6. Having knowledge about current research topics about fluid mechanics.
7. Verification of Bernoulli's Equation and Impact of jet on vanes and Performance test on Pelton wheel turbine

1.

LIST OF EXPERIMENTS

1. Viscosity measurement of nonNewtonian
2. Calibration of constant and variable headmeters
3. Calibration of weirs and notches
4. Open drum orifice and drainingtime
5. Flow through straightpipe
6. Flow through annularpipe
7. Flow through helical coil and spiralcoil
8. Losses in pipe fittings and valves
9. Characteristic curves ofpumps
10. Hydrodynamics of fluidizedbed
11. Drag coefficient of solidparticle

TOTAL: 45

16BTCE313 STRENGTH OF MATERIALS AND METALLURGY LABORATORY 0 0 3 2 100

COURSE OBJECTIVES:

1. To supplement the theoretical knowledge gained in Mechanics of Solids with practical testing for determining the strength of materials under externally appliedloads.
2. This would enable the student to have a clear understanding of the design for strength andstiffness.
3. Develop an understanding of the fundamental principles of mechanics of materials (strength of materials) ;
4. Develop an ability to analyze engineering structures using finite element analysis.
5. Develop an ability to measure mechanical properties of deformable bodies.
6. To supplement the theoretical knowledge gained in Mechanics of Solids with practical testing for determining the strength of materials under externally applied loads.

COURSE OUTCOMES:

On completion of the lab course the students will be able to

1. Analyze how different types of forces are to be considered and how to quantify them.
2. Design. Study of different types of stresses and strains occurring in various components of the structure.
3. Know the advantages and disadvantages of various geometric sections available for engineeringdesign.
4. Understand the concepts of stress and strain at a point as well as the stress-strain relationships for homogenous, isotropic materials.
5. Calculate the stresses and strains in axially-loaded members, circular torsion members, and members subject to flexural loadings.
6. Calculate the stresses and strains associated with thin-wall spherical and cylindrical pressure vessels.

LIST OFEXPERIMENTS

1. Tensile test on metals–stress straincharacteristics
2. Cupping test on metal sheets–load deformation characteristics, cupping load,cupping number.
3. Hardness test on metals–Brinell and Rockwell Hardnesstests.
4. Impact test on metals–Charpy, Izod impacttests.
5. Shear test on metals–direct shear strength, single shear, doubleshear.
6. Tests on helical springs–compression, tension springs–load deformationcharacteristics, stiffness, shear stress, modulus of rigidity, energy.
7. Torsion test on beams–torque and angle of twist characteristics, shear

stress,modulusof rigidity,energy.

8. Microscopic examination of i) Hardened samples ii) Hardened and temperedsamples.
9. Tempering – Improvement of Mechanical properties –Comparison for i)Unhardened specimen ii) Quenched specimen iii) Quenched and temperedspecimen.
10. Study of low carbon steel and medium carbonsteel.

TOTAL	**45**

16BTCE314 COURSE ORIENTED PROJECT I 0 0 2 1 100

17BTCE351 SOFTSKILLS 1 0 0 - 100

COURSE OBJECTIVES:

1. To help the students understand interpersonal skills.
2. To support them in building interpersonal skills.
3. To better the ability to work with others.
4. to help formulate problem solving skills,
5. to guide students in making appropriate and responsible decisions, to create a desire to fulfill individual goals,
6. to educate students about unproductive thinking, self-defeating emotional impulses, and self-defeating behaviors.

COURSE OUTCOMES:

1. ability to communicate smartly and effectively with co-workers, relationship enhancement
2. Improvement of time management and organizational skill.
3. development of leadership teamwork, creativity, efficiency &productivity
4. development of presentation skills
5. ability to recognize stress symptom & develop stress deflecting strategies
6. brain storming &problem-solving strategies to increase creativity and collaborative COURSE OUTCOMES:

UNIT I 4

Overview to communication, self-Introduction, Presentation on their own topic, Extempore, Group Activity

UNIT II 3

Group Discussion, Do's and Don"ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III 4

Introduction to HRM – Questions - Do's and Don"t's - Interview - Mock GD - Stress Management

UNIT IV 4

Personality Development - Presentation skills, Interpersonal skills, Critical thinking, Confidence building and Stress management.

TOTAL 15

SEMESTER IV

16BTCE401 **CHEMICAL TECHNOLOGY** **3 0 0 3 100**

COURSE OBJECTIVES:

1. To impart the basic concepts of chemical technology.
2. To develop understanding about unit process and operations in various chemical industries.
3. To learn manufacturing processes of organic and Inorganic Chemicals and its applications.
4. To study process technologies of various organic and inorganic process industries.
5. Differentiate the different unit operations and unit processes involved in conversion of monomer to polymers
6. Interpret various kinds of applicationoriented problems faced in chemical industries using analytical techniques

COURSE OUTCOMES:

On completion of the course the students will be able to

1. understand the role of chemical engineers in process industries and develop block diagrams and flow charts for manufacture of different chemicals
2. comprehend the unit operations/ processes in chloroalkalies, nitrogen and sulphur industries
3. gain knowledge in the manufacture of plant nutrients, agrichemicals and fertilizers
4. apply principles of chemical engineering in wood chemicals, oils, fats/ soap manufacturing Units.
5. The student learnt the importance of chemical process industries over the other manufacturing industries.
6. The student had a brief introduction of chemical process equipment, the application of thermodynamics, the chemical process principles, the equipment design and so on

UNITI PRODUCTION PROCESSES

Production of pulp, paper and rayon, Manufacture of sugar, starch and starch derivatives, Gasification of coal and chemicals fromcoal.

UNIT II INDUSTRIAL MICROBIAL PROCESSES AND EDIBLE OILS 9

Fermentation processes for the production of ethyl alcohol, citric acid and antibiotics, Refining of edible oils and fats, fatty acids, Soaps and detergents.

UNIT III ALKALIES AND ACIDS 9

Chlor - alkali Industries: Manufacture of Soda ash, Manufacture of caustic soda and chlorine - common salt. Sulphur and Sulphuric acid: Mining of sulphur and manufacture of sulphuric acid. Manufacture of hydrochloric acid.

UNIT IV CEMENT GASES, WATER AND PAINTS 9

Types and Manufacture of Portland cement, Glass: Industrial Gases: Carbon dioxide, Nitrogen, Hydrogen, Oxygen and Acetylene - Manufacture of paints - Pigments

UNIT V FERTILISERS **9**

Nitrogen Fertilisers; Synthetic ammonia, nitric acid, Urea, Phosphorous Fertilisers: Phosphate rock, phosphoric acid, super phosphate and Triple Super phosphate.

16BTCE402 CHEMICAL ENGINEERING THERMODYNAMICS 3 1 0 4 100

COURSE OBJECTIVES:

1. Students will learn PVT behavior of fluids, laws of thermodynamics, thermodynamic property relations and their application to fluid flow, power generation and refrigeration processes.
2. To understand and be able to use the first law of thermodynamics for open and closed systems, to set up energy balances for steady- and unsteady-state processes and to solve them for simple and classic cases.
3. To understand and be able to use the second law of thermodynamics, to set up entropy balances for steady- and unsteady-state processes and to solve them for simple and limiting cases to establish bounds for solutions to engineering problems.
4. To evaluate thermodynamic properties of pure substances with special emphasis on fluids.
5. To understand and be able to use the first law of thermodynamics for open and closed systems, to set up energy balances for steady- and unsteady-state processes and to solve them for simple and classic cases. 2. To understand and be able to use the second law of thermodynamics, to set up entropy balances for steady- and unsteady-state processes and to solve them for simple and limiting cases to establish bounds for solutions to engineering problems.
6. To be able to calculate heat transfer rates associated with processes involving phase changes and reactions. To be able to calculate standard heats of reaction.

COURSE OUTCOMES:

On completion of the course the student will be able to

1. apply thermodynamic concepts and the laws of thermodynamics to various systems and processes
2. understand the properties of solution and determine the partial molar properties from mixture properties and vice-versa
3. apply the criterion for equilibrium between phases to engineering systems with two or more co-existingphases
4. apply chemical reaction equilibrium for thermodynamic analysis of homogeneous reactions
5. Students will derive fundamental equations that govern the estimation of solution properties. *(Understanding)*
6. Students will compute phase equilibrium data and construct P-x-y, T-x-y diagram for ideal binary miscible vapour-liquid systems.

UNIT –I LAWS OFTHERMODYNAMICS 12

Laws of Thermodynamics Laws of Thermodynamics: Basic concepts; Zeroth l aw; First Law - applications to non-flow and flow processes; Second Law - heat engines, Carnot cycle and theorem, Entropy calculations; Third Law ofthermodynamics.

UNIT –II PROPERTIES OF REAL GASES AND THERMODYNAMICS FORMULATIONS 12

Propertiesof Real Gasesand Thermodynamics Formulations: PVT behavior of fluids - compressibility factor, two- and three-parameter theorems of corresponding states; Equation of states- Virial, VanderWaals, Redlich-Kwong and Peng-Robinson equations; Basic energy relations; Maxwellrelations.

UNIT –III PROPERTIESOFSOLUTIONS 12

Partial molar properties; chemical potential; fugacity and activitycoefficients; Gibbs - Duhem equation; enthalpy , entropy and Gibbs free energy changes in mixing of ideal solution.

UNIT –IV PHASEEQUILIBRIA 12

Phase equilibrium and stability; criteria for equilibrium between phases in single and multi - component non-reacting systems; vapor-liquid equilibrium of binary ideal and non-ideal solutions; azeotropes; Raoult's l aw and Henry's law; P-x- y and T-x- y diagrams using Antoineequations.

UNIT – V CHEMICALREACTION EQUILIBRIA 12

Criteria of equilibrium; standard free energy change and react ion equilibrium constant; effect of temperature and pressure on reaction equilibrium constant; homogeneous chemical reactions - thermodynamic analysis and prediction of equilibriumcompositions.

16BTCE403 **HEAT TRANSFER** **3 0 0 3 100**

.COURSE OBJECTIVES:

.

1. To enable the students to learn heat transfer by conduction, convection and radiationand heat transfer equipments like evaporator and heatexchanger
2. to provide opportunity to student for performing actual experiments on heat transfer mechanism and related phenomenon
3. To learn about the numerical treatment of diffusive, convective and transient heat transfer
4. To learn about the numerical treatment of fluid flow problem
5. How to use basic principles of heat transfer to solve thermal problem
6. solve one-dimensional, steady conduction heat transfer problems in various geometries with constant and variable thermal conductivity

INTENDED COURSE OUTCOMES:

On completion of the course the students will be able to

1. Understand the fundamental principles of conduction
2. acquire knowledge in convection and radiation heat transfer
3. familiarize with the fundamentals of boiling and condensation
4. apply the knowledge of heat transfer in the design of evaporators
5. design and analyze the performance of heatexchangers
6. The student should be able to evaluate the amount of heat exchange for plane, cylindrical & spherical geometries and should be able to compare the performance of extended surfaces and heat exchanger

UNITI CONDUCTION 9

Importance of heat transfer in Chemical Engineering operations - Modes of heat transfer - Fourier"s law of heat conduction - one dimensional steady state heat conduction equation for flat plate, hollow cylinder, - Heat conduction through a series of resistances - Thermal conductivity measurement; effect of temperature on thermal conductivity; Heat transfer in extendedsurfaces.

UNITII CONVECTION 9

Concepts of heat transfer by convection - Natural and forced convection, analogies between transfer of momentum and heat - Reynold"s analogy, Prandtl and Coulburn analogy. Dimensional analysis in heat transfer, heat transfer coefficient for flow through a pipe, flow past flat plate, flow through packedbeds.

UNITIII BOILINGAND CONDENSATION 9

Heat transfer to fluids with phase change - heat transfer from condensing vapours, drop wise and film wise condensation, Nusselt equation for vertical and horizontal tubes, condensation of superheated vapours, Heat transfer to boiling liquids - mechanism of boiling, nucleate boiling and film boiling.

UNITIV RADIATION AND EVAPORATION 9

Theory and design procedure of evaporation. Concept and nature of thermal radiations - Concept of Black and grey bodies; Stefan Boltzmann, Kirchhoff,,s, Planck,,s and Wien laws; Radiation between surfaces – configuration factor; radiationshield.

UNITV HEAT EXCHANGERS 9

Types of heat exchangers Log mean temperature difference - use of correction factor charts; ssurface area calculations for double pipe and shell and tube heat exchangers ,heat exchangers effectiveness and number of transfer units - Chart for different configurations – Foulingfactors.

16BTCE404 PROCESS ORGANIC SYNTHESIS 3 0 0 3 100

COURSE OBJECTIVES:

1. To impart knowledge on various aspects of production engineering and enable the students to understand the practical methods of production process in a chemical industry.
2. Organic synthesis allows the synthesis of molecules that broadly impact our lives through application in healthcare, materials science, food processing and fundamental research. Organic chemistry has the reputation of being a difficult topic
3. Introduction to fundamental methods and procedures used in the synthesis of organic compounds at micro and semi-micro scale.
4. The synthetic work will demonstrate how organic reactions provide a basis for different industries such as the pharmaceutical industry, the food industry, animal health, electronics, flavour and fragrance and other industries based on organic fine chemicals
5. The course will also give an introduction to analytical organic chemistry through the use of qualitative analyses and infrared spectroscopy for structural analysis (functional groups) of organic compounds.
6. The principles of structural analysis of organic compounds will be discussed. Experimental laboratory work with modern synthetic reactions will illustrate the importance of organic chemistry for our society.

COURSE OUTCOMES:

1. Understand the various unit processes in synthesis of organiccompounds
2. Understand the application of organic compounds in variousindustries
3. Analyze chemical reactions and reactionconditions
4. Identify reaction schemes and mechanisms for a number of important reactions used in organicsynthesis
5. Fundamental practical knowledge in isolating and purifying synthetic organic compounds
6. Fundamental knowledge on the characterization of organic compounds by the use of infrared spectroscopy

•

UNIT –I NITRATION ANDAMINATION9

Principle of Nitration-N-Nitro compounds and Nitration esters, industrial equipment and processes. Amination; methods – reduction and Ammonolysis. Catalytic reaction and manufacture of amino compounds.

UNIT –II HYDROGENATION AND ALKYLATION9

Production and Properties of Hydrogen, Catalytic hydrogenation and Hydrogenolysis; Methanation and Fischer-Tropsch reactions. Types and Factors affecting alkylation, Industrial alkylation process**.**

UNIT –III OXIDATION, HYDROLYSIS ANDESTERFICATION 9

Types of Oxidation reaction-Liquid-phase and Vapor-phase; Hydrolysis-processes and equipment. Esterification of organic and inorganic acids-applications in chemical industries.

UNIT –IV HALOGENATION, SULFONATION AND SULFATION9

Halogenation- Chlorination reaction; Sulfonation and sulfation; Desulfonation reactions.

UNIT –V DYE AND DRUGSYNTHESIS9

Synthesis of Dyes - Congo red. Triphenylmethane dyes -Malachite green, Para Rosaniline, Alizarin, Eosin; Drug Synthesis - Sulphanilamide, Sulphapyrindine, Chloroquinine, penicillin, erythromycin.

16BTCE405 MATERIAL SCIENCE AND ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES:

1. To impart knowledge on the structure, properties, treatment, testing and applications of metals and non-metallic materials so as to identify and select suitable materials for various engineering applications.
2. To review physics and chemistry in the context of materials science & engineering.
3. To describe the different types of bonding in solids, and the physical ramifications of these differences
4. to give the students the basis for more advanced course work (e.g. materials processing) required for an in-depth and comprehensive program in materials science and engineering
5. To understand the correlation between bonding and structure, and bonding and properties.
6. To introduce concept of crystal structure, and the myriad of structures possible in metals and ceramics, as well as crystalline polymers, including crystal planes and diffraction

COURSE OUTCOMES:

On completion of the course the students will be able to

1 Comprehend the criterion for selection of materials for chemical process industries.
2 outline the properties and applications of smart materials and nano and bio materials
3 apply the knowledge about various materials used in chemical processindustries
4 select materials for high temperature and Sour service and gain knowledge of modern engineering materials.
5 an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
6 an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors

UNITI NATURE OFMATERIALS 9

Selection process of engineering materials (General aspects), Chemical and physical properties of materials, chemical structure, Micro and macro structure, corrosion resistance, chemical reactivity.Mechanical properties, stress, strain, strength, hardness, malleability, ductility, elasticity, plasticity, toughness, thermal stability. Types of deformation: Plastic, viscous; plastic deformation of single crystal, poly crystalline metals, slip, twinning, dislocations, viscoelasticity, creeps in metals, amorphous materials.

UNITII METALLURGY 9

Extractive Metallurgy: Hydro, pyro and electro metallurgy, refining of metals. Powder Metallurgy: methods of production of metal powder, mixing of metal powders, compaction of powders - applications. Extraction process of Iron: manufacture of pig iron, blast furnace operations, chemistry of reactions. Manufacture of cast iron, varieties of cast iron, effect of impurities. Production of steel , Bessemer process ,open-hearth process ,L D methods. Classification of steel, effect of impurities. Heat treatment process: annealing, hardening, tempering, normalizing and gas carburizing. Fe-Carbon phasediagram.

UNITIII COMPOSITES AND ADHESIVES 9

Polymer composites: Introduction, Types of composites, particle reinforced, fiber reinforced, structural composites, examples. Matrix materials, reinforcement materials-, Kevlar, Polyamides, fibers, glass, carbon fibers, ceramics and metals. Techniques for producing FRP, applications.UNITIV BIOMATERIALS 9

Classification of bio-materials (based on tissue response) ,Comparison of properties of some common biomaterials , Metallic implant materials (stainless steel, cobalt-based and titanium-based alloys),Polymericimplantmaterials(Polyamides,polypropylene,AcrylicresinsandHydrogels) ,Tissue replacement implants , Soft and hard tissue replacements ,Skin implants, Tissue engineering, Biomaterials for organ replacement (Bone substitutes), Biosensor.

UNITV MODERNENGINEERINGMATERIALS 9

Smart materials , Shape memory alloys, Electrostatics, Irreversible Marten sites, Domain Walls, Nature of Shape Memory, Shape Memory Alloy Materials, Ferromagnetic Shape Memory Alloys, Relation to Shape Memory Alloys, Actuator and Sensor Materials Chromic materials (Thermo, Photo and Electro) ,Rheological fluids , Metallicglasses.

16BTCE411 SCIENTIFIC COMPUTING LABORATORY 2 0 2 3 100

OBJECTIVES

1. To introduce the scientific computing, covering some important aspects of solving algebraic equations, IVP, BVP.
2. To implement the methods using the spread sheet in Excel.
3. To make students familiar with the concepts of programming and the get them accustomed with high-level languages like Matlab, Mathematica, etc
4. To provide an overview of some of the issues and problems that arise in scientific computation, such as (non-)linear systems, numerical and symbolic integration, differential equations and simulation.
5. To make students familiar with the concepts of programming and the get them accustomed with high-level languages like Matlaben Mathematica
6. to give students a detailed description of the concepts of symbolic

LIST OF EXPERIMENTS

1. Finding solution of Transcendentalequation
   - i) Newton – RaphsonMethod
   - ii) Bisectionmethod
   - iii) Iterative method by reducing the equation to the form x=f(x)
2. Finding the dominant eigenvalue and eigenvector by powermethod
3. Numericalintegration
   - i) Gauss 2 point and 3 pointformulae
   - ii) Trapezoidalmethod
   - iii) Simpson‟s 1/3rule
4. Solution of initial value problems governed byODE
   - i) Runge - Kutta 4^{th} order method
   - ii) Modified Euler‟smethod
   - iii) Milne‟smethod
   - iv) Adam – Bashforth method
5. Solution of BVP governed byPDE
   - i) Laplace Equation
   - ii) One – dimensional heatequation
     - a) Explicit method : Bender – Schmidt‟smethod
     - b) Implicit method : Crank - Nicolson‟smethod
   - iii) One dimensional wave equation Implicit method

TOTAL 60 PERIODS

REFERENCES

2	Steven C. Chapra, Raymond P. Canale	Numerical Methods for Engineers	McGraw - Hill Pub. Co. Ltd	2014

16BTCE412 TECHNICAL ANALYSIS LABORATORY 0 0 3 2 100

COURSE OBJECTIVES:

1	To provide experience on preparation, analysis and testing of chemicals used for industrial raw materials and enduses
2	To train the students on basic principles involved in estimation and characterization of industrially important materials.
3	Describe technical analysis and how it is used,Identify trends, resistance & support
4	Understand the importance of analyzing volume
5	Calculate and interpret moving average indicators
6	Calculate and use technical trading oscillators

COURSE OUTCOMES:

1	At the end of this practical course, the student would have athoroughunderstanding on the estimation and analysis of chemicalcompounds.
2	Familiarization with equipment like viscometers, flash and fire point apparatusetc.
3	Familiarization of methods for determiningTDS
4	Familiarization of a few simple synthetic techniques for soap.
5	analyze the dynamics of financial time series by combining the basic principles of technical analysis (graphical approach) and analysis of the sentiment
6	Identify various semiconductor devices

LIST OF EXPERIMENTS (ANY 10 EXPERIMENTS)

1. SoapAnalysis

   a. Estimation of total fattyacid

   b. Estimation of percentage alkali content

2. OilAnalysis

   a. Estimation of free acid

   b. Determination of Saponificationvalue

   c. Determination of iodinevalue

3. CementAnalysis

   a. Estimation of Silicacontent

   b. Estimation of mixed oxidecontent

   c. Estimation of calcium oxidecontent

   d. Estimation of calcium oxide by rapidmethod

4. CoalAnalysis

   a. Estimation of Sulphur present incoal

   b. Ultimate analysis ofcoal

   c. Proximate analysis of coal

5. Analysis of BleachingPowder

a. Estimation of available chlorine

6. Analysis of Glycerol

   a. Estimation of purity of glycerol

7. Analysis of fuels

   a. Flash point b. Fire point c. Cloud point d. Pour point e. Aniline point.

8. Determination of the molecular weight of the polymer byviscometry.
9. Calorimetricmeasurements
10. Conductivity measurement of an electrolytesolution
11. pHMeasurements
12. Determination of sucrose content insugar
13. Determination of dissolved oxygen inwater
14. Determination of total nitrogen and ammoniacalnitrogen
15. Determination of SS, TDS, and VSS of a wastewatersample
16. Analysis of oil & grease in wastewatersample.
17. Study of analytical instruments: Spectrophotometer, pH meter, Gas Chromatograph, High Performance Liquid Chromatograph (HPLC), FTIR, Organic Carbon Analyser(TOC).

TOTAL: 45

16BTCE413 MECHANICAL OPERATIONS LABORATORY 0 0 3 2 100

COURSE OBJECTIVES:

1. To enable the students to develop a sound working knowledge on different types of crushing equipments
2. To enable the students to develop a sound working knowledge on different types of crushing equipments and separation characteristics of different mechanical operation separators
3. To understand the role of unit operations in Chemical industries, and the characteristics of particulate solids, Principles of size reduction, particle dynamics and separation of particles.
4. To provide an overview of the methods and techniques of Mechanical Operations and use of mechanical forces.
5. To understand the mineral processing techniques for the handling of raw materials for different chemical industries.
6. To identify the important physical mechanisms occurring in processes involving particles.

COURSE OUTCOMES:

1. Estimate crushing characteristics, power requirements and constants of crushing laws using Jaw and Roll Crusher
2. determine the critical speed and work index by using Ball mill
3. determine average particle size and specific surface area by conducting Sieve analysis, Beaker Decantation and Air permeability experiments
4. estimate specific cake and filter medium resistance using Filter press and Leaf filter
5. design a thickener using batch sedimentation data and assess the efficiency of Cyclone separator
6. Calculate size reduction ratio, grindability index using ball mill and jaw crusher.

LIST OF EXPERIMENTS

1. Sieveanalysis
2. Batch filtration studies using a Leaf filter
3. Batch filtration studies using a Plate and Frame Filterpress
4. Characteristics of batch Sedimentation
5. Reduction ratio in JawCrusher
6. Reduction ratio in Ball mill
7. Separation characteristics of Cycloneseparator
8. Reduction ratio of RollCrusher
9. Separation characteristics ofElutriator
10. Reduction ratio of Drop weightcrusher
11. Size separation usingSub-Sieving

TOTAL: 45

16BTCE413 COURSE ORIENTEDPROJECT2 002 1 100

16BTCE451 **PRODUCTION OF COMMERCIALL Y VALUABLE** **1 0 0 -100**

COMPOUNDS

OBJECTIVE:

1. To give hands on training on the development of industrially important biotechnology products
2. Develop marketing strategies based on product, price, place and promotion objectives
3. Analyze marketing problems and provide solutions based on a critical examination of marketing information
4. Assess and evaluate the existing commercials and their contents with suggestions for improvement
5. Customize advertisements based on Segmenting, Targeting and Position
6. Understand the advanced database features, backup and restore of information

COURSE OUTCOMES:

1. 1.Identify good design.
2. List personal goals and values, set living standards
3. Plan a balanced diet, enlist the principles of diet therapy and functioning of food service institutions
4. Comprehend the key aspects of human growth and development and realize the importance of mastering developmental tasks of each life span stage
5. Understand the concept of Extension Education and its importance
6. Identify the major influences on consumer behavior

1. Production of ethanol from molasses andgrapes
2. Production ofBiofertilizers
3. Production of Single cell protein (Spirullina)
4. Mushroom cultivation
5. Production of jam from mixedfruits

SEMESTER V

16BTCE501 CHEMICAL REACTION ENGINEERING - I 3 1 0 4 100

COURSE OBJECTIVES:

1. To impart knowledge on different types of chemical reactors, the design of chemical reactors under isothermal and non-isothermal conditions
2. basic concepts of chemical kinetics and chemical reactor design as related to simple reaction systems will be introduced. Topics covered will include the general mole balance, reactor types, conversion and reactor sizing, rate laws and stoichiometry and isothermal reactor design
3. the concepts developed in the first half of the course to describe real systems that deal with complex reactions and non-ideal reactors
4. students able to non-isothermal reaction design (energy balances), multiple reactions and reaction pathways,
5. students able to non-ideal reactors/residence time distribution, and heterogeneous reaction
6. student with principles and kinetic tools useful in analyzing the rates of chemical reactions for both homogeneous and heterogeneous reactions.

COURSE OUTCOMES:

On completion of the course the students will be able to

1. gain knowledge on the selection of the reactor for the reaction and its design
2. apply the principles of reaction kinetics and formulate rate equations and analyze the batch reactor data
3. understand the ideal reactor concepts and to develop the performance equation to workout conversion and spacetime
4. perform RTD analysis in non-ideal flow reactors and calculation of conversion
5. Describe the algorithm that allows the student to solve chemical reaction engineering problems through logic rather than memorization
6. Size isothermal and non-isothermal reactors for homogeneous and heterogeneous reactions

UNITI RATE EQUATIONS 12

Rate equation, elementary, non-elementary reactions, theories of reaction rate and Prediction; Design equation for constant and variable volume batch reactors, analysis of experimental kinetics data, integral and differential analysis

UNIT I1 DESIGN OF REACTORS 12

Design of continuous reactors - stirred tank and tubular flow reactor, recycle reactors, combination of reactors, size comparison of reactors.

UNIT III DESIGN OF REACTORS FOR MULTIPLE REACTIONS 12

Design of reactors for multiple reactions - consecutive, parallel and mixed reactions - factors affecting choice, optimum yield and conversion, selectivity, reactivity andyield

UNIT IV NON-ISOTHERMAL REACTOR SYSTEMS 12

Non-isothermal homogeneous reactor systems, adiabatic reactors, rates of heat exchanges for different reactors, design for constant rate input and constant heat transfer coefficient, operation of batch and continuous reactors, optimum temperatureprogression.

UNIT V NON-IDEAL FLOW REACTORS 12

The residence time distribution as a factor of performance; residence time functions and relationship between them in reactor; basic models for non-ideal flow; conversion in non-ideal reactors

TOTAL:60

3	Narayanan K.V	A Text Book of Chemical Engineering Thermodynamics	Prentice Hall of India Pvt. Ltd	2001

16BTCE502 **MASS TRANSFER - I** **3 1 0 4 100**

COURSE OBJECTIVES:

1. Students will learn to determine mass transfer rates under laminar and turbulent conditions.
2. The purpose of this course is to introduce the undergraduate students with the most important separation equipment in the process industry, and provide proper understanding of unit operations
3. To give insight of mass transfer basic principle and mass transfer mechanisms.
4. To understand design methods for distillation columns.
5. To understand design of extractor and leaching equipments.
6. To understand membrane separation.

COURSE OUTCOMES:

1. understand diffusional operations and theoriesofm ass transfer
2. understand the concept of interphase masstransfer
3. understand the concept gas-liquid mass transferoper ationslikehumidification
4. apply the knowledge gained in mass transfer toperfo rm simple calculations in drying
5. apply the knowledge gained in mass transfer to rm simple calculationsin perfocrystallizationprocess
6. Use the McCabe-Thiele Method, PonchonSavaritMethod for solving distillation problems and analyze Distillation process

UNITI DIFFUSION **9**

Introduction to mass transfer operations; Molecular diffusion in gases, liquids and solids; diffusivity measurement and prediction; multi-component diffusion

UNIT II INTERPHASE MASS TRANSFER **9**

Eddy diffusion, concept of mass transfer coefficients, theories of mass transfer, different transport analogies, application of correlations for mass transfer coefficients, inter phase mass transfer, relationship between individual and overall mass transfer coefficients. NTU and NTP concepts, Stage-wise and differential contractors.

UNIT III HUMIDIFICATION **9**

Humidification – Equilibrium, humidity chart, adiabatic and wet bulb temperatures; humidification operations; theory and design of cooling towers, dehumidifiers and humidifiers using enthalpy transfer unitconcept.

UNIT IV DRYING **9**

Drying– Equilibrium; classification of dryers; batch drying – Mechanism and time of cross through circulation drying, continuous dryers – material and energy balance; determination of length of rotary dryer using rate concept.

UNIT V CRYSTALLIZATION **9**

Crystallization - Equilibrium, classification of crystallizers, mass and energy balance; kinetics of crystallization – nucleation and growth; design of batch crystallizers; population balance model and design of continuous crystallizers

16BTCE503 CHEMICAL PROCESS PLANT SAFETY AND HAZARD ANALYSIS 3 0 0 3 100

COURSE OBJECTIVES:

1. To impart the importance of safety in industries and the various methods of safety measures and risk analysis in the industry
2. To teach fundamentals of chemical process safety and hazards management
3. To discuss the important component of the Risk Management Plan (RMP) i.e. hazards identification, hazard analysis, consequence analysis and emergency response
4. To discuss the advancement in the field of risk assessment (both intentional and unintentional threats)
5. To demonstrate practical aspects of accidents through case studies
6. Use problem solving sessions with examples to estimate Dow"s Fire & Explosion Index

COURSE OUTCOMES:

On completion of the course the students will be able to

1. demonstrate the awareness of plant safety standards, codes and MSDS in hand lingand storage of chemicals
2. exhibit the skill in classifying chemical, fire, explosion hazards and to understand the occupational diseases
3. investigate safety in operations and process by undergoing HAZOP and HAZAN studies
4. analyze the accident causes, costs, prevention techniques, accident proneness andcase studies
5. examine the legal aspects related to safety and emergency studies to know the basicrules and requirements which govern the chemical industries
6. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics

UNIT –I SAFETYPRINCIPLES 9

Need for safety, Safety programs, Training & Education, Design for ventilation; Personal protective Equipments. Safety codes: NFPA, IS and OSHA standards; colour codes for pipe lines. Materials Safety Data sheets; safety in storage and handling of chemicals.

UNIT –II HAZARDS 9

Hazards- fire, explosion and radiation; Designs to prevent fires and explosions; relief and relief sizing. Occupational diseases - effects.

UNIT –III SAFETY IN OPERATIONSAND PROCESSES 9

Safety in operations and processes. Runaway reactions, unstable products; Safety Studies – HAZOPS, HAZANS, Fault tree, Event tree and risk analysis.

UINTIV INDUSTRIAL ACCIDENTS 9

Industrial accidents –types, nature/effects, causes, costs, prevention, investigation and analysis, accident proneness, case studies.

UNIT VLEGAL ASPECTS 9

Factories act, ESI act and Workmens compensation act, Role of Government, safety organizations, management and trade unions in promoting industrial safety. Emergency response systems for hazardous goods basic rules and requirements which govern the chemical industries.

2	Loss Prevention and Safety Promotion in Chemical Process Industries		Vol. I, II, III Published by Institution of Chemical Engineers U.K	1983.

16BTCE504 INSTRUMENTAL METHODS OF ANALYSIS 3 0 0 3 100

COURSE OBJECTIVES:

1. To make the students understand the working principles of different types of instruments and their applications.
2. To be concerned with the theory and practice of instrumental methods for the separation, identification and quantitative analysis of chemical substances
3. students a working knowledge of analytical instrumentation typically employed in chemical and biochemical research laboratories
4. Recognize interferences in chemical and instrumental analysis.
5. Comprehend the concept of and perform instrument and method calibration.
6. Apply and assess concepts of availability and evaluation of analytical standards and formulate standardization methodology

COURSE OUTCOMES:

On completion of the course the students will be able to

1. comprehend the principles of electromagnetic radiation and classification of instrumental methods
2. grasp the principles and applications of UV, Visible, IR Spectroscopy and Photometric titrations
3. appreciate the importance of AAS and NMR spectroscopy in chemical analysis
4. gain knowledge about thermo gravimetric instruments and their applications
5. understand the principles and applications of chromatographic methods.
6. Proficiency in professional sampling and sample treatment prior to analysis

UNITI ELECTROMAGNETIC RADIATION 9

Various ranges, Dual properties, Various energy levels, Interaction of photons with matter, absorbance& transmittance and their relationship, Permitted energy levels for the electrons of an atom and simple molecules, classification of instrumental methods based on physical properties.

UNITII MOLECULARSPECTROSCOPY 9

Various electronic transitions in organic and inorganic compounds effected by UV, visible and infra-red radiations, various energy level diagrams of saturated, unsaturated andcarbonyl compounds, excitation by UV and Visible radiations, Woodward-Fischer rules for thecalculation of absorption maxima (dienes and carbonyl compounds), Effects of auxochromesandeffects of conjugation on the absorption maxima; Instrumentation for UV, VISIBLE and IRspectroscopies (source, Optical parts and Detectors), Photometric titration (Experimental set-up andvarious types of titrations), Applications of UV, VISIBLE and IR spectroscopies.

UNITIII AAS, NMRSPECTROSCOPY 9

Atomic Absorption Spectrophotometry: Principle instrumentation andapplications. Nuclear Magnetic Resonance: Introduction to NMR, principle and instrumentation (Proton NMR only). Relaxation, Chemical shift and its causes, reference compounds.

UNIT IVTHERMAL METHODS 9

Thermogravimetry: Instrumentation, factors affecting shapes of thermo grams, and applications. Thermogram of important compounds (CaSO4.5H2O; CaC2O4.2H2O) DifferentialThermal Analysis: Principle, instrumentation and applications. Differences between DSC &DTA.Application of DSC (Inorganic & Polymer samples). TGA - Principle, instrumentation andapplications.

UNIT V CHROMATOGRAPHIC METHODS9

Classification of chromatographic methods; Column, Thin layer, Paper, Gas, High Performance Liquid Chromatography (principle, mode of separation and technique).Separation of organic compounds by Column and Thin Layer, Mixture of Cu, Co and Ni by PaperChromatography. Separation of amino acids by Paper Chromatography. Estimation of organiccompounds by GC and HPLC.

16BTCE511 **HEAT TRANSFER LABORATORY** **0 0 3 2 100**

COURSE OBJECTIVES:

1. To enable the students to develop a sound working knowledge on different types of heat transfer equipment
2. Define the fundamental concepts to students in the area of heat transfer and its applications.
3. Recognize the practical significance of various parameters those are involved in different modes of heat transfer.
4. Apply the knowledge of heat transfer in an effective manner for different applications
5. students will study about the various heat transfer processes, so as to train the students practically to utilize this knowledge in industry
6. students will study about the various heat transfer processes, so as to train the students practically to utilize this knowledge in industry

COURSE OUTCOMES:

On completion of the Lab course the student will be able to

1. determine Stefan Boltzmann constant at different temperatures
2. assess the heat transfer coefficient for natural and forced convection systems, double pipe heat
3. exchanger / shell and tube heat exchanger and condensers
4. develop temperature profile in unsteady state heat transfer system
5. evaluate the convective and radiative heat transfer coefficients using radiation experiment
6. appraise the fin efficiency and estimate the steam economy in an evaporator

LIST OF EXPERIMENTS

1. Performance studies on CoolingTower
2. Batch drying kinetics using TrayDryer
3. Heat transfer in Open PanEvaporator
4. Boiling HeatTransfer
5. Heat Transfer through PackedBed
6. Heat Transfer in a Double Pipe HeatExchanger
7. Heat Transfer in a Bare and Finned Tube HeatExchanger
8. Heat Transfer in aCondenser
9. Heat Transfer in HelicalCoils
10. Heat Transfer in Agitated Vessels

TOTAL:45

16BTCE51 PROCESS EQUIPMENT DESIGN ANDDRAWINGI 0 0 3 2100

COURSE OBJECTIVES:

1. To develop skill to design and install process equipment's used widely in the chemical industry
2. Understand general design considerations involving process design development.
3. Learn basic concepts of economic analysis for process, involving equipment cost, and profitability.
4. Acquire basic understanding of design parameters, knowledge of design procedures for pressure vessels.
5. Acquire knowledge of shell & tube heat exchanger Design.
6. Demonstrate procedures in designing of tray distillation columns including minimum reflux ratio, number of stages, feed stage, and column diameter.

COURSE OUTCOMES:

On successful completion of the course the students will be able to

1. design machine elements and Piping system/presentation of PFD andPID
2. apply the skill in thermal design of heat transfer equipment's like shell and tube and double pipe heatexchangers
3. perform the process design ofevaporators
4. apply the skill in design of equipments like crystallizer andcentrifuge
5. understand the concepts involved in design of pressure vessel, storage vessel and tall columns
6. Design and modify process equipment relating to heat and mass transfer Will handle process parameters to alter and design process Equipment

LIST OF EXPERIMENTTS:

- Basic design and drawing considerations of machineelements
- Design of HeatExchangers
- Design ofEvaporators
- Design ofCrystallizers
- Design of Pressurevessel

16BTCE513 **CHEMICAL REACTION ENGINEERING LABORATORY** **0 0 4 2 100**

COURSE OBJECTIVES:

1. To impart knowledge on design of reactors
2. to understand the chemical kinetics for homogeneous and heterogeneous reactions and their applications in design of batch and flow reactors
3. RTD in packed bed and multiphase reactors
4. To understand the basic principle of chemical reaction engineering
5. understanding the basic fundamental principles of chemical reaction engineering by performing different experiments
6. Provide the kinetics and design concepts for these systems

COURSE OUTCOMES:

1. Determine the order and rate constant of the rate equations for Batch/ Mixed / Plug flow reactor
2. estimate the conversion in Batch/Semi-batch/Mixed/Plug flow reactors
3. determine the effect of temperature on rate of reaction to validate Arrhenius equation
4. evaluate the performance of combined Mixed and Plug flow reactor system
5. conduct residence time distribution studies to develop C, E & F- curve for Mixed/Plug flow reactor/Packed-bed reactor
6. Determine the volume of reactor systems based on kinetic data and mass and heat balances

LIST OF EXPERIMENTS

1. Kinetic studies in a Batchreactor
2. Kinetic studies in a Plug flowreactor
3. Kinetic studies in aCSTR
4. Kinetic studies in a Packed bedreactor
5. Kinetic studies in a PFR followed by aCSTR
6. RTD studies in aPFR
7. RTD studies in a Packed bedreactor
8. RTD studies in a CSTR
9. Studies on micellarcatalysis
10. Study of temperature dependence of rate constant usingCSTR.
11. Kinetic studies in Sonochemicalreactor
12. Batch reactivedistillation
13. Kinetics of photochemicalreaction
14. Demonstration of heterogeneous catalyticreaction
15. Demonstration of gas-liquid reaction

	TOTAL	45

16BTCE514 **COURSE ORIENTED PROJECT** **30021 100**

16BTCE551 **PIPE STRESS ANALYSIS(CAEAR-II)** **1 0 0 -100**

OBJECTIVES

1. To understand the engineering principles in a pipe stress analysis
2. To study Nozzle loading and flexibility
3. sufficient flexibility for thermal expansion.
4. Proper pipe routing so that simple & economical supports can be constructed.
5. Piping material & section properties commensurate with the intended services, temperature, pressure & anticipated loading.
6. If necessary, the layout solution should be iterated until a satisfactory balance between stress & layout efficiency is achieved.

COURSE OUTCOMES:

1. Examine piping stress analysis for flexibility and stiffness under different load conditions
2. Assess pipe stress analysis to determine the maximum stresses, displacements, forces and moments at restraints
3. Make recommendations for necessary modifications to satisfy the ASME Code Requirements for limits of sustained, displacement & occasional load allowable stresses
4. Identify the different types of stresses affecting piping flexibility, code criterion's, and methods of analysis, including simple and comprehensive methods and computerized methods
5. Ways of controlling and reducing forces acting on a pipe system in operating conditions.
6. Operation and maintenance considerations as set forward in ASME B.31.3 and piping relevant Norsok standards

UNIT I **4**

Introduction to CAESAR II, General modeling in CAESAR II, Pipe stress theory, Stress analysis according to a design codes

UNIT II **3**

Load-based piping design (e.g. earthquake and wind), Flange and nozzle analysis, Structural steel, Expansion joints

UNIT III **4**

Hanger sizing, Fiberglass piping, Buried piping, Generation of isometric drawings

TOTAL 15

16BTCE552 **IN–PLANT TRAINING** **- - - -100**

OBJECTIVES

- To know the basic knowledge on industry and itsenvironment.
- To understand the psychology of the workers, their habits, attitudes and approach to problems along with the practices followed either at factory orsite.

Students will undergo industrial training for four weeks during the vacation at the end of IV semester and a report with the training completion certificate from the industry will be subsequently submitted to the department within a week after completion. Viva – Voce exam will be conducted at the end of V semester and 100 marks will be awarded.

SEMESTER VI

16BTCE601 CHEMICAL REACTION ENGINEERING - II 3 1 0 4 100

COURSE OBJECTIVES:

1. To enable the students to learn the gas-solid catalytic and non-catalytic reactors and gas-liquid reactors
2. basic concepts of chemical kinetics and chemical reactor design as related to simple reaction systems will be introduced.
3. the concepts developed in the first half of the course to describe real systems that deal with complex reactions and non-ideal reactors
4. non-isothermal reaction design (energy balances), multiple reactions and reaction pathways, non-ideal reactors/residence time distribution
5. To train students how to analyze chemical reactors and reaction systems
6. To provide practice at developing critical and creative thinking skills related to reaction engineering

COURSE OUTCOMES:

1. Understand the ideal reactor concepts and heterogeneous reactors..
2. Understand the basics of catalysis and industrial catalytic reactors such as gas-solid reactors
3. Identify non-ideality present and predict its effects on performance of reactor
4. Understand the behavior of various types of contacting patterns and phases involved in the reaction
5. Develop rate expression, select and design suitable reactor for heterogeneous reaction
6. Prepare and characterize various supported catalysts

UNITI CATALYSTS 12

Nature of catalysts, surface area and pore-volume distribution, catalyst preparation.

UNITII HETEROGENEOUS REACTORS 12

Rate equations for heterogeneous reactions, adsorption isotherms, rates of adsorption and desorption, surface reaction analysis of rate equation and rate controlling steps.

UNITIII GAS-SOLID CATALYTIC REACTORS 12

Diffusion within catalyst particle, effective thermal conductivity, mass and heat transfer within catalyst pellets, effectiveness factor, Thiele Modulus, fixed bed reactors.

UNITIV GAS-SOLID NON-CATALYTIC REACTORS 12

Models for explaining kinetics; volume and surface models; controlling resistances and rate controlling steps; time for complete conversion for single and mixed sizes, fluidized and static reactors.

UNITV GAS-LIQUID REACTORS 12

Absorption combined with chemical reactions; mass transfer coefficients and kinetic constants; application of film, penetration and surface renewal theories; Hatta number and enhancement factor for first order reaction, tower reactor design.

TOTAL: 60

2	Froment G.F & K.B. Bischoff	Chemical Reaction Analysis and Design	John Wiley and Sons	1979

16BTCE602	MASS TRANSFER - II	3 1 0 4 100

COURSE OBJECTIVES:

1. To provide introduction to physical and thermodynamic principles of mass transfer with an emphasis on how these principles affect the design of equipment and result in specific requirements for quality and capacity
2. the most important separation equipments in the process industry, and provide proper understanding of unit operations
3. To teach the students different separation techniques.
4. students will come to know the design of a distillation column
5. TO design of aadsorber and calculations involved in liquid liquid extraction and solid liquid extraction
6. To impart the knowledge of separation processes like distillation, adsorption, and extraction.

COURSE OUTCOMES:

1. Understand absorption and distillation operations and select methods of separation of mixtures based on mass transfer concepts
2. Design a distillation tower
3. Perform calculations in adsorption operation
4. Apply the ternary equilibrium diagram concepts to determine the number of stages required for separation of liquid-liquid and solid -liquid mixtures
5. Ability to calculate material balances and minimum solvent rates of single component absorption operations.
6. Ability to apply mass transfer principles to various phase equilibrium-based separation processes viz. perform graphical calculations for binary distillation.

UNIT I ABSORPTION 12

Gas Absorption and Stripping – Equilibrium; material balance; limiting gas-liquid ratio; tray tower absorber - calculation of number of theoretical stages, tray efficiency, tower diameter; packed tower absorber – rate based approach; determination of height of packing using HTU and NTU calculations

UNIT II DISTILLATION 12

Vapour liquid equilibria - Raoult‟s law, vapor-liquid equilibrium diagrams for ideal and non-ideal systems, enthalpy concentration diagrams. Principle of distillation - flash distillation, differential distillation, steam distillation, multistage continuous rectification, Number of ideal stages by Mc.Cabe - Thiele method and Ponchan - Savarit method, Total reflux, minimum reflux ratio, optimum reflux ratio. Introduction to multi-component distillation, azeotropic and extractive distillation

UNIT III LIQUID-LIQUID EXTRACTION 12

Liquid - liquid extraction - solvent characteristics-equilibrium stage wise contact calculations for batch and continuous extractors- differential contact equipment - spray, packed and mechanically agitated contactors and their design calculations-packed bed extraction with reflux. Pulsed extractors, centrifugal extractors-Supercritical extraction

UNIT IV LEACHING 12

Solid-liquid equilibria- leaching equipment for batch and continuous operations – calculation of number of stages - Leaching - Leaching by percolation through stationary solid beds, moving bed leaching, counter current multiple contact (shank‟s system), equipments for leaching operation, multi stage continuous cross current and counter current leaching, stage calculations, stage efficiency.

UNIT V ADSORPTION 12

Adsorption - Types of adsorption, nature of adsorbents, adsorption equilibria, effect of pressure and temperature on adsorption isotherms, Adsorption operations - stage wise operations, steady state moving bed and unsteady state fixed bed adsorbers, break through curves.

16BTCE603 **PROCESS DYNAMICS CONTROL AND INSTRUMENTATION** **3 0 0 3 100**

COURSE OBJECTIVES:

1. To impart knowledge about the elements and techniques involved in process dynamics and control
2. To provide fundamental knowledge on process control strategies.
3. To impart knowledge on theoretical analysis of open loop and closed loop systems
4. To maintain a process at the desired operating conditions, safely and efficiently, while satisfying environmental and product quality requirements.
5. Proper application of process control can actually improve the safety and profitability of a process
6. assess performance of control loop systems

COURSE OUTCOMES:

On completion of the course the students will be able to

1. understand the prerequisites of control strategies to design different process control systems
2. evaluate the suitable controllers for different chemical process
3. familiarize the closed loop response of control loops and characteristics of control valves
4. analyze and assess the control systems unto stability
5. know the tuning procedures and advanced control techniques
6. explain the working of electric, hydraulic and pneumatic controllers, demonstrate the working and application of different type of actuators and control valves

UNITI INSTRUMENTATION **9**

Principles of measurements and classification of process instruments, measurement of temperature, pressure, fluid flow, liquid weight and weight flowrate, viscosity, pH, concentration, electrical and thermal conductivity, humidity of gases.

UNITII OPEN LOOPSYSTEMS **9**

Laplace transformation and its application in process control. First order systems and their transient response for standard input functions, first order systems in series, linearization and its application in process control, second order systems and their dynamics; transportation lag.

UNITIII CLOSED LOOPSYSTEMS **9**

Closed loop control systems, development of block diagram for feed-back control systems, servo and regulatory problems, transfer function for controllers and final control element, principles of pneumatic and electronic controllers, transient response of closed-loop control systems and their stability.

UNITIV FREQUENCY RESPONSE **9**

Introduction to frequency response of closed-loop systems, control system design by frequency response techniques, Bode diagram, stability criterion, tuning of controllers Z-N tuning rules, C-C tuning rules.

UNITV ADVANCEDCONTROL SYSTEMS 9

Introduction to advanced control systems, cascade control, feed forward control, Smith predictor, control of distillation towers and heat exchangers, introductionto computer control of chemical processes.

16BTCE604 PROCESS ECONOMICS FOR CHEMICAL ENGINEERING 3 0 0 3 100

OBJECTIVES

1. To enable students to understand the fundamental economic concepts applicable to engineering
2. To learn the techniques of incorporating inflation factor in economic decision making, sensitivity and risk analysis.
3. To provide a conceptual and methodological framework for evaluating the cost, revenue, profitability and processes
4. the ability to successfully participate in teams
5. the ability to communicate effectively through oral presentations and written reports
6. (professional and ethical responsibilities and current technological issues

COURSE OUTCOMES:

1. Gain knowledge on cost and asset accounting, time value of money, profitability, alternative investments, and minimum attractive rate of return, sensitivity and risk analysis.
2. Analyze fluid flow problems with the application of the mass, momentum and energy equations and Evaluate practical problems associated with pipe flow systems
3. Conceptualize and describe practical flow systems such as boundary layers and their importance in engineering analysis
4. Estimate fluid properties and solve basic problems using property tables, property diagrams and equations of state
5. Analyze and solve problems related to closed systems and steady-flow devices by applying the conservation of energy principle
6. Analyze the second law of thermodynamics for various systems and to evaluate the performance of heat engines, refrigerators and heat pumps

UNITI PRINCIPLES OF MANAGEMENTAND ORGANISATION 12

Planning, organization, staffing, coordination, directing, controlling, communicating, organization as a process and a structure; types of organizations. Method study; work measurement techniques; basic procedure; motion study; motion economy; principles of time study; elements of production control; forecasting; planning; routing; scheduling; dispatching; costs and costs control, inventory and inventorycontrol.

UNITII INVESTMENT COSTS ANDCOST ESTIMATION 8

Time Value of money; capital costs and depreciation, estimation of capital cost, manufacturing costs and working capital, capital budgeting and project feasibility.

UNITIII PROFITABILITY, INVESTMENT ALTERNATIVE ANDREPLACEMENT9

Estimation of project profitability, sensitivity analysis; investment alternatives; replacement policy; forecasting sales; inflation and its impact.

UNITIV ANNUAL REPORTS AND ANALYSISOFPERFORMANCE 8

Principles of accounting; balance sheet; income statement; financial ratios; analysis of performance and growth.

UNITV ECONOMICBALANCE 8

Economic decisions in Chemical Plant - Economics of size - Essentials of economic balance – Economic balance approach, economic balance for insulation, evaporation, heat transfer.

TOTAL : 45 PERIODS

16BTCE611 **MASS TRANSFER LABORATORY** **0 0 3 2 100**

COURSE OBJECTIVES:

1. To train the students to develop sound working knowledge on different types of mass transfer equipment
2. These experiments will demonstrate the operation and the design of unit operations that incorporate heat and mass transfer phenomena.
3. will provide an overview of mass transfer operations at basic to an intermediate level
4. the concepts of diffusion mass transfer, mass transfer coefficients, convective mass transfer, interphase mass transfer, equipment for gas-liquid operations, absorption, and distillation.
5. Each topic will be covered in logical sequence with relevant examples
6. Basic concepts of Mass Transfer, Staged and Continuous Contact equipment design, gas absorption, humidification and drying

COURSE OUTCOMES:

On completion of the course the students will be able to

- determine diffusivity and mass transfer co-efficient of a given system
- generate vapour liquid equilibrium data and liquid equilibrium data for different systems
- Design experiments to obtain mass transfer coefficients like diffusion coefficient in liquids and gases. CO2 : Apply the concepts of mass transfer and thermodynamics to the design
- evaluate the performance and determine the design Parameters of Simple /Packed / Steam
- distillation units
- appraise the performance of a simple leaching process

LIST OFEXPERIMENTS

1. Separation of binary mixture using Simpledistillation
2. Separation of binary mixture using Steamdistillation
3. Separation of binary mixture using Packed columndistillation
4. Measurement of diffusivity
5. Liquid-liquidextraction
6. Drying characteristics of VacuumDryer
7. Drying characteristics of Traydryer
8. Drying characteristics of Rotarydryer
9. Water purification using ion exchangecolumns
10. Mass transfer characteristics of Rotating disccontactor
11. Estimation of mass/heat transfer coefficient for coolingtower
12. Demonstration of Gas – Liquidabsorption

TOTAL 45

16BTCE612 PROCESS EQUIPMENT DESIGN AND DRAWING-II 0 0 3 2 100

COURSE OBJECTIVES:

1. To enable the students to learn the methods and practices followed in the design of process equipment and to draw the designed equipment to scale.
2. To impart practical knowledge on the shape and drawing of the process equipment
3. To become a design engineers on process equipment design
4. Create awareness amongst students about the social/industrial demands and role of chemical engineer in the society
5. Incorporate a culture of research and Innovation by providing students with latest facilities
6. Provide a platform to the students to interact with leading teachers, scientists and industry practitioners

COURSE OUTCOMES:

1. Apply the skill in thermal design of heat transfer equipments like condensers and reboilers
2. Estimate the design parameters of reactors
3. Perform the process design of distillationcolumn
4. Apply the skill in design of absorptioncolumn
5. Design storage and agitator vessel for the specified requirement as per standard codes.
6. Design shell and tube heat exchangers and evaporators for the industrial demand by considering standard codes.

LIST OFEXPERIMENTS

- Design ofCondensers
- Design ofreactors
- .Design of distillationColumn
- Design of AbsorptionColumn
- Design ofDryers

16BTCE651 **MINI PROJECT** **0 0 1 -100**

COURSE OBJECTIVES:

1. The main objective is to give an opportunity to the student to get hands on training of a complete working model, which is designed bythem.

The students may be grouped into 2 to 4 and work under a project supervisor. The device/ system/component(s) to be set as a model may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the fabricated model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of theDepartment.

16BTCE652	TECHNICAL PRESENTATION	1 0 0 -100

OBJECTIVES

- To equip the students with effective technicalpresentation
- To understand the barriers and bridges tocommunication
- To improve the public speaking capabilities, body language andposture

During the seminar session each student is expected to prepare and present a topic on engineering/ technology, for duration of about 8 to 10 minutes. In a session of three periods per week, 15 students are expected to present the seminar. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Students are encouraged to use various teaching aids such as overhead projectors, power point presentation and demonstrative models.

TOTAL 15

SEMESTER VII

16BTCE701 PROFESSIONAL ETHICS, PRINCIPLES OF MANAGEMENT 3 0 0 3 100
AND ENTREPRENEURSHIP DEVELOPMENT

COURSE OBJECTIVES:

1. To enable the students to create an awareness on Engineering Ethics, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.
2. To acquaint with the basic principles of management, ethics, communication techniques and entrepreneurship
3. to enable the students to understand that management is the specific organ of a modern institution on which the very performance and survival of that institution depends.
4. It is the function of management to use all resources available to their organization for the realization of results, so as to enable the firm to earn surplus funds to meet the growth and expansion of its needs.
5. The main objective of management is to attain maximum results with minimum efforts and resources.
6. Management is basically concerned with discovering and utilizing human, material and financial resources in such a manner that they result in best combination. This combination results in the reduction of various costs.

COURSE OUTCOMES:

On completion of the course the students will be able to

1. Develop managerial skills
2. Cultivate engineering ethics with oneself
3. Develop. stress managing attitude and entrepreneurship.
4. Inputs include raw materials, human resources, capital, technology and information.
5. The transformation process turns these inputs into finished products or services through employees' work activities, management activities, and the organisation's technology and operations methods.
6. Outputs include products and services, financial results (profits, break-even or losses) information, and human results such as employees' levels of job satisfaction and productivity

UNIT I HISTORICAL DEVELOPMENT, PLANNING, ORGANISING 9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informalorganization – Organization Chart–.

UNIT II DIRECTING AND CONTROLLING 9

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT III ENGINEERINGETHICS 9

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self–interest – customs and religion – uses of ethicaltheories.

UNIT IV FACTORS OF CHANGES 9

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT V ENTREPRENEURSHIP AND MOTIVATION 9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur –Achievement

Motivation Training, self rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

16BTCE702	TRANSPORT PHENOMENA	3 0 0 3 100

COURSE OBJECTIVES:

1. Different types of fluids, their flow characteristics and different mathematical models applied to actual situations
2. Mechanism of fluids in motion under different conditions.
3. To impart knowledge about individual and simultaneous momentum, heat and mass transfer, model development along with appropriate boundary conditions.
4. Explain the physical properties of a fluid and their consequences on fluid flow and heat transfer, expressed in terms of the Reynolds number, Nusselt number, and other dimensionless quantities
5. Use conservation principles of mass, momentum, and energy to develop models of fluid flow and heat transfer systems that can be used to predict the behavior of real world systems.
6. To introduce students to the physics and mathematics of momentum, heat, and mass transfer in chemical engineering processes.

COURSE OUTCOMES:

On completion of the course the students will be able to

1. apply the shell momentum balances and velocity distribution in laminar flow and understand
2. equation of continuity and motion
3. establish the shell energy balances and temperature distributions in solids and apply the equations of change to solve heat transfer problems
4. determine the shell mass balance and concentration distributions in systems involving diffusion and reactions
5. analyze the analogy between the transports processes of heat, momentum and mass transfer
6. Determine the interrelationship between the molecular, microscopic and macroscopic descriptions of transport processes and compare the various coordinate systems to formulate Continuity, Navier-Stokes and Euler equations.

UNIT I FUNDAMENTALS OFTRANSPORTPHENOMENA AND VELOCITY DISTRIBUTION IN LAMINAR FLOW 9

Importance of transport phenomena: analogous nature of transport process, basic concepts, conservation laws. Phenomenological laws of transport properties Newtonian and Non-Newtonian fluids, Rheological models, Theories of transport properties of gases and liquids, effects of pressure and temperature.Shell Momentum Balances and Boundary conditions- Flow of a Falling Film- Flow Through a Circular Tube- Flow through an Annulus- Flow of Two Adjacent Immiscible Fluids- Creeping Flow around a Sphere.

UNIT II EQUATION OF CHANGE FOR ISOTHERMAL PROCESS 9

The Equations of Change in Terms of the Substantial Derivative-The Equation of Continuity- The Equation of Motion- Use of the Equations of Change to Solve Flow Problems- Dimensional Analysis of the Equations of Change.

UNIT III VELOCITY DISTRIBUTION IN TURBULENT FLOW 9

Comparisons of Laminar and Turbulent Flows- Time-Smoothed Equations of Change for incompressible Fluids- The Time-Smoothed Velocity Profile near a Wall- Empirical Expressions for the Turbulent Momentum Flux- interphase transport in isothermal system- Definition of Friction Factors- Friction Factors for Flow in Tubes- Friction Factors for Flow around Spheres - Friction Factors for Packed Columns-Ergunequation.

UNIT IV SHELL ENERGY BALANCES ANDTEMPERATURE DISTRIBUTIONS IN SOLIDS AND LAMINARFLOW 9

Shell Energy Balances; Boundary Conditions-Heat Conduction with an Electrical Heat Source-Heat Conduction with a Nuclear Heat Source- Heat Conduction with a Viscous Heat Source- Heat Conduction through Composite Walls- Heat Conduction in a Cooling Fin- Forced Convection-Free Convection-Use of equations of change to setup steady state heat transferproblems.

UNIT V CONCENTRATION DISTRIBUTIONS IN SOLIDS AND LAMINAR FLOW 9

Shell Mass Balances; Boundary Conditions- Diffusion through a Stagnant Gas Film- Diffusion with a Heterogeneous Chemical Reaction- Diffusion with a Homogeneous Chemical Reaction-Diffusion into a Falling Liquid Film (Gas Absorption)- Diffusion into a Falling Liquid Film (Solid Dissolution)- Diffusion and Chemical Reaction inside a Porous Catalyst- Diffusion in a Three-Component Gas System- equations for change for Multi Component Systems- The Equations of Continuity for a MulticomponentMixture.

16BTCE711 COMPUTATIONAL METHODS IN CHEMICAL ENGINEERING LABORATORY 0 0 3 2 100

COURSE OBJECTIVES:

1. To impart computational techniques for chemical engineering calculation
2. Formulate a chemical engineering problem as a mathematical model, and select an appropriate solution method.
3. Understand the computational requirements of various solution options and use this understanding in the selection of the solution method
4. Select the MATLAB to perform the numerical solution to a chemical engineering problem.
5. Formulate and solve process design problems, based on fundamental analysis and using mathematical models of chemical processes
6. deals with solving the various models by means of various numerical methods by computer simulation.

COURSE OUTCOMES:

1. The current rapid development of these combinatorial methods promises solutions to more complex problems, including the creation of new bio synthetic pathways.
2. Computational methods are also developing quickly.
3. The approaches will allow us to generate the efficient, effective catalysts needed by the pharmaceutical, food and chemicals industries and should open up new opportunities for producing energy and chemicals from renewable resources.
4. Analyze a complete chemical process plant and assess alternative process flow sheets by decomposing the process flow sheets with the help of tearing- precedence ordering techniques.
5. Develop MATLAB/C Programming codes to calculate performance indices like batch time, equilibrium conversion of ideal batch and continuous flow reactors.
6. Generate MATLAB or C Programming codes to compute the design parameters for tubular exchanger, surface condenser, evaporator, crystallizer and storage tank.

LIST OFEXPERIMENTS

Writing Programs and Sub ProgramsusingC/C++ and MATLAB/SCILAB forSolving

1. Jacobi Methods, Cramer‟s Rule- "Multiple Effect Evaporator and SimilarProblems."
2. "Phase Equilibrium Problems, Equation of State Determination of Bubble and Dew Poin"t Differential Distillation- Minimum Reflux RatioCalculations.
3. "Mass Transfer Problems- Rayleigh‟s Equation", NTU in Absorption, Determination of Drying time from batch drying data- Determination of reactorsize.
4. "Milne‟s Method, Laplace Equation, Predictor-CorrectorMethods".
5. "Heat conduction problems and chemical reaction" Engineeringproblems

COMPUTER AIDED DESIGN

Design, Rating and Simulation of Chemical Engineering Equipment Using Aspen Plus / ChemcadSoftware:Mixer, Flow splitter; Flash column; pipe line and pipe pressure drop; Pump; Single and multistage compressors; Heat Exchangers; Distillation Columns; Reactors etc.

COMPUTER AIDED SIMULATION

Simulation Exercises Using Aspen Plus /Chemcad: Physical property estimations; Simulation of a flow sheet:Mass and Energy balances; Handling user specifications on output streams.

4

- Introduction to HYSYS Software, HYSYS User Interface, Defining the SimulationBasis, Selecting a Unit Set, Adding a Stream, FlashCalculations

3

- Adding Utilities, The Stream Property Value, Flash Calculations of a Ethanol-Water Mixture, Gas PlantExample**4**
- Optimization in HYSYS, Set and Adjust Logic Operations, Flash Calculation, PFD Preparation, Sizing of Columns, Oil Manager / Characterization, Pipe Sizing and Pressure Drop in HYSYS, Simulation of liveProject

TOTAL 45

16BTCE712 PROCESS CONTROL LABORATORY 0 0 3 2 100

COURSE OBJECTIVES:

1. To determine experimentally the methods of controlling the processes including measurements using process simulationtechniques.
2. To experimentally verify the process control concepts on the selected process control loops.
3. Explain the characteristics and significance of Final Control Element
4. Design and implement controllers for various processes
5. Tune the controller and improve the performance of the process
6. Design and control complex systems

COURSE OUTCOMES:

1. Students would have knowledge on the development and use of right type of control dynamics for process control under different operative conditions.
2. controller tuning
3. type of controller that can be used for specific problems in chemical industry
4. design of controllers for interacting multivariable systems
5. design of digital control systems
6. Demonstrate the concepts of instrumentation for the measurement, control and classification of systems by utilizing the analog / digital control devices.

LIST OF EXPERIMENTS

1. Single capacity liquid levelprocess
2. Time constant of athermocouple
3. Calibration of resistancethermometer
4. Response of a dialthermometer
5. Two capacity liquid level process withoutinteraction
6. Two capacity liquid level process withinteraction
7. Heat transfer dynamics of stirredtank
8. Computer controlled level processanalyser
9. Computer controlled flow processanalyser
10. Computer controlled pressure processanalyser
11. Computer controlled temperature processanalyser
12. Computer controlled heat exchangersystem
13. Triangle simulatortrainer.

TOTAL 45

16BTCE791 **PROJECT WORK PHASE I** **0 0 8 4 100**

COURSE OBJECTIVES:

1. To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same. To train the students in preparing project reports and to face reviews and viva voce examination.

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of theDepartment.

16BTCE891 PROJECT WORK - PHASE II & VIVA-VOCE 0 0 32 16 300

COURSE OBJECTIVES:

- To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same. To train the students in preparing project reports and to face reviews and viva voce examination.

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of theDepartment.

PROFESSIONAL ELECTIVES

16BTCE5E01 **FOOD TECHNOLOGY** **3 0 0 3 100**

COURSE OBJECTIVES:

1. To enable the students to learn to design processing equipment for Food Industries
2. To acquaint with principles of different techniques used in processing and preservation of foods.
3. To acquaint with properties and role of various constituents in foods, interaction and changes during processing.
4. To develop an understanding and methodologies of instrumental techniques in food analysis used for objective methods of food quality parameters
5. To acquaint with different groups of micro-organisms associated with food, their activities, destruction and detection in food
6. To acquaint the students with packaging methods, packaging materials, packaging machineries, modern packaging techniques etc.

COURSE OUTCOMES:

1. Identify the major and minor constituents of food and its standards
2. Analyse the spoilage and deterioration mechanisms in foods and methods to control
3. Apply principles of food preservation and evaluate variation in processing parameters
4. Evaluate the suitability of packaging material for a particular type of food.
5. Point out processing and preservation techniques of cereals, pulses, fruits and vegetables, egg, Meat, and milk and its products.
6. After completion of the course, the students should be able to understand unit operations in food processing, separation and mixing and food biotechnology.

UNIT I AN OVERVIEW **9**

General aspects of food industry; world food needs and Indian situation.

UNIT II FOOD CONSTITUENTS, QUALITY AND DERIVATIVE FACTORS **9**

Constituents of food; quality and nutritive aspects; food additives; standards; deteriorative factors and their control

UNIT III GENERAL ENGINEERING ASPECTS AND PROCESSING METHODS **9**

Preliminary processing methods; conversion and preservation operations.

UNIT IV FOOD PRESERVATION METHODS **9**

Preservation by heat and cold; dehydration; concentration; drying irradiation; microwave heating; sterilization and pasteurization; fermentation and pickling; packing methods.

UNIT V PRODUCTION AND UTILISATION OF FOOD PRODUCTS **9**

Cereal grains; pulses; vegetables; fruits; spices; fats and oils; bakery; confectionery and chocolate products; soft and alcoholic beverages; dairy products; meat; poultry and fish products.

TOTAL **45**

16BTCE5E02 ENERGY TECHNOLOGY AND CONSERVATION 3 0 0 3 100

COURSE OBJECTIVES:

1. To motivate the students by highlighting the importance of Energy technology and various energy management concepts
2. To produce energy professionals, strong in energy resources, technologies and management fundamentals, and capable in addressing the present and potential future energy problems.
3. To produce energy professionals, who are sensitive to, and well aware of, the energy issues and concerns, and who can apply their specialized knowledge for the sustainable energy management
4. List and generally explain the main sources of energy and their primary applications in the US, and the world.
5. Describe the challenges and problems associated with the use of various energy sources, including fossil fuels, with regard to future supply and the environment.
6. Discuss remedies/potential solutions to the supply and environmental issues associated with fossil fuels and other energy resources

COURSE OUTCOMES:

1. Infer environmental sustainability and to implement in more suitable ways to the society.
2. Identify methods for reducing energy consumption and to implement lower carbon technologies to achieve sustainable society.
3. Collect and organize information about historical perspectives of sustainability and for further development of sustainable industries.
4. Compare the balance between food production and population growth to plan the optimal usage of water resources and to evaluate the solution for the problems of urban sprawl.
5. Explore the fossil fuels formation of oil, natural gas and coal, environmental effects of mining and metals processing and it's time to depletion.
6. Understand the current energy scenario and the need for energy auditing.

UNIT I FUELS TECHNOLOGY

Introduction – Solid fuels – Coal origin, analysis and properties, efficient utilisation, storage and applications, Liquid fuels – Petroleum- Production and consumption, refining, properties and petroleum products, Gaseous fuels – natural gas, producer gas, water gas, gasification of coal; gases from biomass

UNIT II COMBUSTION 9

Distinct features of combustion of solid, liquid and gaseous fuels - determination of gross and net calorific values - combustion of solid fuels including pulverized fuels, stoking and ash removal - fluidized bed combustion of solid fuels - combustion of liquid fuels - burners and nozzles - combustion of gaseous fuels - types of combustion: surface combustion, submerged combustion and pulsating combustion

UNIT III HYBRID SYSTEMS 9

Wind-PV systems, Wind-DG systems, Wind-Hydel systems, Gasifier DG- Wind systems and Application areas, Hybrid conventional and geothermal power plants, Integrated coal gasifier and fuel cell power plant

UNIT IV ENERGY AUDIT 9

Energy Audit: Types and Methodology; Energy Audit Reporting Format; Understanding.Energy Costs; Benchmarking and Energy Performance; Matching Energy Usage to Requirement; Maximising System Efficiency; Fuel and Energy Substitution; Energy Audit Instruments; Duties and responsibilities of energyauditors

UNIT V ENERGY MANAGEMENT 9

Definition and objectives of Energy Management; Importance; Indian need of Energy Management; Energy action planning, Energy Organization, energy costing, budgeting, Equipment professionals, staffing, Monitoring and targeting – Data and Information Analysis; Relating Energy Consumption and Production, Design of energy managementprograms

16BTCE5E03 BIOCHEMICAL ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES:

1. This course mainly discusses the role of enzymes and microbes in biotechnology sectors
2. To apply the chemical engineering principles in biological systems.
3. Description of biomolecule and cell types, their structure and composition
4. Gene expression, regulation, protein synthesis, biomolecule and cell conformation, differentiation, ionic transport communication and mutations and recombinant DNA technology
5. Description of the role of enzymes and development of mechanistic models for enzyme kinetics
6. Description of the various pathways by which cells consume and generate the energy currency allowing them to function and grow.

COURSE OUTCOMES:

1. calculate and analyze the kinetic parameters for microbial growth.
2. analyze bioprocess design and operation.
3. select suitable bioreactor
4. Identify suitable process instrumentation for monitoring and control of bioreactors
5. Design a complete bioreactor based on targets, constraints and physical properties.
6. Know and select process unit operations for product recovery and purification

UNIT-1 INTRODUCTION

Industrial biochemical processes with typical examples, comparing chemical and biochemical processes, development and scope of biochemical engineering as a discipline. Industrially important microbial strains; their classification; structure; cellular genetics.

UNIT II KINETICS OF ENZYME ACTION 9

Kinetics of enzyme catalyzed reaction: the enzyme substrate complex and enzyme action, modulation and regulation of enzyme activity, types of inhibition. Immobilized enzyme technology: enzyme immobilization, Immobilized enzyme kinetics: effect of external mass transfer resistance.

UNIT III KINETICS OF MICROBIAL GROWTH 9

Kinetics of cellular growth in batch and continuous culture, models for cellular growth unstructured, structured and cybernetic models , medium formulation. Thermal death kinetics of cells and spores, stoichiometry of cell growth and product formation , Design and analysis of biological reactors

UNIT IV TRANSPORT PHENOMENA 9

Transport phenomena in bioprocess systems: Gas-liquid mass transfer in cellular systems, determination of oxygen transfer rates, power requirements for sparged and agitated vessels, scaling of mass transfer equipment, heattransfer.

UNIT V DOWN STREAM PROCESSING 9

Downstream processing: Strategies to recover and purify products; separation of insoluble products, filtration and centrifugation; cell disruption-mechanical and non-mechanical methods; separation of soluble products: liquid-liquid extractions, membrane separation (dialysis, ultra filtration and reverse osmosis),chromatographic separation-gel permeation chromatography, electrophoresis, final steps in purification –crystallization and drying

16BTCE5E04 FERTILIZER TECHNOLOGY 3 0 0 3 100

COURSE OBJECTIVES:

1. To enable the students to learn the fertilizer manufacturing including new or modified fertilizer products and new techniques.
2. provide exposure to Nitrogenous and Complex fertilizer production technologies.
3. Overview to the most recent Nitrogenous fertilizer production technologies.
4. Improve participants' technical knowledge over a varied range of fertilizer production techniques, understanding the best available technology options with cost effective, minimal energy consumption along with the best approaches to safety and environmental management.
5. Enhance the participants' analytical and trouble-shooting skills by generating awareness to identify and resolve operational inefficiencies, if any, of their facilities.
6. Provide a platform to exchange ideas on a varied range of production topics, opportunity for active interaction with leading technology experts and workshop participants.

COURSE OUTCOMES:

1. Introduce students to the different types of nutrients that plants need to grow upand students to the use of fertilizers to improve soil productivity and crop yield
2. Use reactions and unit operations steps in manufacturing of various fertilizers
3. Characterize fertilizers on the basis of different properties.
4. Identify engineering problems in fertilizer manufacturing.
5. Handle the fertilizers.
6. Select appropriate synthesis fertilizer

UNIT 1 INITROGENOUS FERTILISERS

Methods of production of nitrogenous fertilizer-ammonium sulphate, nitrate, urea and calcium ammonium nitrate; ammonium chloride and their methods of production, characteristics and specifications, storage and handling.

UNIT II PHOSPHATIC FERTILISERS 9

Raw materials; phosphate rock, sulphur; pyrites etc., processes for the production of sulphuric and phosphoric acids; phosphates fertilizers – ground rock phosphate; bone meal-single superphosphate, triple superphosphate, triple superphosphate, thermal phosphates and their methods of production, characteristics and specifications

UNIT III POTASSIC FERTILISERS 9

Methods of production of potassium chloride, potassium schoenite, their characteristics and specifications.

UNIT IV COMPLEX AND NPK FERTILISERS 9

Methods of production of ammonium phosphate, sulphate diammonium phosphate, nitrophosphates, urea, ammonium phosphate, mono-ammonium phosphate and various grades of NPK fertilizers produced in the country.

UNIT V MISCELLANEOUS FERTILISERS 9

Mixed fertilizers and granulated mixtures; biofertilisers, nutrients, secondary nutrients and micro nutrients; fluid fertilizers, controlled release fertilizers, controlled release fertilizers.

16BTCE6E01 FLUIDIZATION ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES:

1. To enable the students to learn the design aspects of fluidized beds.
2. Introduce students to different organic and inorganic fertilizer production methods.
3. Introduce students to the classification of fertilizers: solid, liquid, and suspension fertilizers.
4. Introduce students to the different types of the nitrogenous, phosphatic and potash fertilizers.
5. Expose students to numerical exercises in the compounding of fertilizers.
6. Expose students to a practical exercise to produce NPK fertilizers.

COURSE OUTCOMES:

1. Be familiar with: Various aspects of fertilizers Various types of phosphate fertilizers Various types of potash fertilizers Various types of NPK fertilizers, fluid and mixed fertilizers
2. Various pollution standards of fertilizer industries
3. They will understand the various methods of production and the processes involved in the manufacture of various fertilizers.
4. They will be able to manage and produce NPK fertilizers (liquid, solid, and suspension) practically
5. Use reactions and unit operations steps in manufacturing of various fertilizers
6. Characterize fertilizers on the basis of different properties.

UNITI BASICS OFFLUIDIZATION 9

Packed bed – Velocity – Pressure drop relations – Correlations of Ergun, Kozneykarman – On set of fluidization – Properties of fluidized beds – Development of fluidization from fixed bed.

UNITII FLUIDIZED BED TYPES 9

Minimum fluidization conditions – Expanded bed – Elutriation – Moving solids and dilute phase – spouted bed.

UNIT IIIDESIGN ASPECTS 9

Channeling – Bed expansion in liquid – Solid and gas – Solid fluidizations. Design aspects of fluidized bed systems.

UNIT IV HEAT AND MASS TRANSFER INFLUIDIZED BEDS 9

Heat and mass transfer in fluidized bed systems – Industrial applications and case studies of fluidized bed systems.

UNIT V OTHER TYPESOFFLUIDIZATION 9

Single stage and multistage fluidization – Collection of fines – Use of cyclones.

16BTCE6E02 PETROLEUM REFINING ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES:

1. To understand the formation and composition of petroleum
2. To understand the various treatment techniques of petroleum
3. Making students familiarize with upgrading process of petroleum products
4. To understand and know origin, occurrence, exploration, drilling and production of crude oil and be aware of the challenges involved in crude refining from viewpoint of product specifications, economic considerations and environmental regulations.
5. fundamentals of secondary and finishing refining processes as well as covers advanced concepts of these processes, for both fuel and lube refineries.
6. the current scenario of petrochemical industry in India, together its present and future feed stocks and learn the production techniques and challenges of various intermediate and value-added petrochemicals

COURSE OUTCOMES:

1. Assess the quality of refinery products -Liquified Petroleum Gas (LPG), Gasoline, Jet fuel, Diesel, Kerosene and Lube oils using analytical procedures
2. Ascertain distillation characteristics of crude and analyze the physical and chemical properties of refinery products
3. Illustrate the processes of atmospheric distillation, vacuum distillation, gasoline treatment, kerosene treatment, lube treatment, wax removal from petroleum fractions and sulphur recovery
4. Develop flowcharts for thermal and catalytic processes
5. Design distillation column, tube still heaters and evaluate the economics
6. To Identify different types of petroleum products, their specifications and different quality control test with their significance

UNIT –I FORMATION AND COMPOSITIONOFPETROLEUM 9

Origin and formation of petroleum; composition; types and classification; Petroleum reserves.

UNIT – II PROPERTIES AND TESTING METHODS9

Physical properties and testing methods – crude and petroleum products;

UNIT– III TREATMENT TECHNIQUES9

Desalting of crudes, dehydration and fractionation methods; Thermal and catalytic cracking processes – vis-breaking, Dubbs two coil process, coking, FCC, Hydro crackingprocesses.

UNIT–IV UPGRADINGPROCESSES 9

Solvent extraction; hydro treatment processes; Reforming and Alkylation; Isomerization; polymerization; finishing and purification processes.

UNIT –V MATERIAL ANDENERGYBALANCES 9

Material and Energy balances calculation; controlling hydrocarbon losses in refinery; application of pollution control techniques.

16BTCE6E03 PULP AND PAPER TECHNOLOGY 3 0 0 3 100

COURSE OBJECTIVES:

1. Focused on papermaking science and technology and is intended to be especially valuable to students majoring in programs leading to careers in corporate or government positions which would interface with the paper related industries.
2. Gain a more complete understanding of papermaking terms, equipment, process technology, science, and engineering fundamentals, operations, and variables.
3. Learn how one part of the mill affects other operations.
4. Understand process – product relationships, and troubleshooting product quality problems.
5. Gaining a comprehensive overview of pulp & paper industry, mill operations, products, process variables, equipment, and terminology.
6. Increasing knowledge of how the P&P processes affect product properties

COURSE OUTCOMES:

.

1. Apply reactions and unit operations steps to manufacture pulp.
2. Use reactions and unit operations steps appropriately in manufacturing of paper.
3. Use reactions and unit operations appropriately in manufacturing cellulose and various lignin chemicals.
4. Apply waste disposal techniques.
5. Perform various chemical tests to monitor quality of raw material, output quality and influent/effluent
6. Identify requirements for process control and quality assurance in pulp and paper manufacturing processes.

UNIT I INTRODUCTION 9

Introduction Basic pulp and paper technology – Wood haves dry – Wood as a raw material

UNIT II WOODYARD OPERATION 9

Woodyard operation - Mechanical pulping – Chemical pulping – Secondary fibre pulp processing

UNIT III PAPER MACHINE 9

Paper Machine wet and addition paper machine dry and operation – Paper machine - Wet and operation

UNIT IV PAPER AND PAPERBOARD 9

Paper and paperboard frames and products – Surface treatments – Finishing operation– End uses

UNIT V PROPERTIES AND TESTING OF PULP AND PAPER 9

Properties and Testing of pulp and paper Process control – Quality assurance – Water and air pollution control

TOTAL 45

16BTCE6E04 **POLYMER TECHNOLOGY** **3 0 0 3 100**

COURSE OBJECTIVES:

1. To enable the students to compute molecular weight averages from the molecular weight distribution, Condensation polymerization and transition in polymers.
2. To study industrial manufacturing process advantages disadvantages, process parameters of the thermoplastics like PVC CellulosicsSpeciality polymers etc
3. To give understanding of properties like physical mechanical thermal rheological etc and structure properties and relationship
4. To make aware of practical applications of thermoplastics.
5. To study basic processing methods coating applications related to of the thermoplastics
6. To make aware of basics and developments in biopolymers dendrimers LCP etc

COURSE OUTCOMES:

1. Ability to apply Polymer engineering, Polymer science knowledge for the manufacturing of thermoplastic c Polymers like PVC CellulosicsSpeciality Polymers etc
2. Ability to understand properties of polymers, their structure properties and relation as well as to analyze and interpret data
3. Ability to identify, formulate and know practical applications of thermoplastics
4. Ability to use, know polymer processing techniques, skills and modern engineering tools necessary for polymer fabrication, so as to be easily adaptable to polymer industry and coating industry
5. Understanding basics and developments in biopolymers dendrimers LCP and their impact on environment, engineering community and society at large
6. indicate how the properties of polymeric materials can be exploited by a product designer

UNIT I INTRODUCTION **9**

History of Macromolecules – structure of natural products like cellulose, rubber,proteins – concepts of macro molecules – Staudinger's theory of macromolecules – difference between simple organic molecules andmacromolecules

UNIT II ADDITION POLYMERIZATION **9**

Chemistry of Olefins and Dienes – double bonds – Chemistry of free radicals – monomers – functionality – Polymerization: Initiation – types of initiation – free radical polymerization – cationic polymerization – anionic polymerization – coordination polymerization – industrial polymerization – bulk, emulsion, suspension and solution polymerization techniques – Kinetics – Copolymerization concepts

UNIT III CONDENSATION POLYMERIZATION **9**

Simple condensation reactions – Extension of condensation reactions to polymer synthesis – functional group reactivity – polycondensation – kinetics of polycondensation- Carother's equation – Linear polymers by polycondensation – Interfacial polymerization – crosslinked polymers by condensation – gel point.

UNIT IV MOLECULAR WEIGHTS OF POLYMERS **9**

Difference in molecular weights between simple molecules and polymers – number average and weight average molecular weights – Degree of polymerization and molecular weight – molecular weight distribution – Polydispersity – molecular weight determination. Different methods – Gel Permeation Chromatography – Osmometry, Light Scattering.

UNIT V TRANSITIONS IN POLYMERS **9**

First and second order transitions – Glass transition, Tg – multiple transitions in polymers – experimental study – significance of transition temperatures – crystallinity in polymers – effect of crystallization – in polymers – factors affecting crystallization crystal nucleation and growth – relationship between Tg and Tm – Relationship between properties and crystalline structure

16BTCE6E05 DRUGS AND PHARMACEUTICAL TECHNOLOGY 3 0 0 3 100

COURSE OBJECTIVES:

1. To give the students an understanding of the polytechnical nature of engineeringand drug discovery in the pharmaceutical industry involving Chemical Engineering.
2. To produce pharmacist workforce competent for the society.
3. To produce pharmacy graduates with employable skills and high technical competence in pharmaceutical industry and health care sectors
4. To inculcate research activity and develop passion for discovery and innovations
5. To develop entrepreneurship qualities that support growth of pharmaceutical intellectual property and contribute for economic development throughout the world.
6. Application of preformulation considerations in the development of solid, liquid oral and parenteral dosage forms and its impact on stability of dosage forms.

COURSE OUTCOMES:

1. Students would have studied about the gross morphology, structure and functions of cell, skeletal, muscular, cardiovascular system of the humanbody.
2. They would have understood the various homeostatic mechanisms and their imbalances.
3. Students would able to identify the different types of bones in human body.
4. Students would be able to identify the various tissues of different systems of human body.
5. Students would learn about the various experimental techniques related to physiology.
6. They would have learnt various techniques like blood group determination, blood pressure measurement, blood cells counting

UNITI INTRODUCTION 9

Development of drugs and pharmaceutical industry; organic therapeutic agents uses and economics

UNITII DRUG METABOLISM AND PHARMACO KINETICS MICROBIOLOGICAL ANDANIMALPRODUCTS 9

Drug metabolism; physico chemical principles; pharma kinetics-action of drugs on human bodies. Antibiotics- gram positive, gram negative and broad spectrum antibiotics; hormones

UNITIII IMPORTANT UNIT PROCESSES ANDTHEIRAPPLICATION 9

Chemical conversion processes; alkylation; carboxylation; condensation and cyclisation; dehydration, esterification, halogenation, oxidation, sulfonation; complex chemical conversions fermentation.

UNITIV MANUFACTURING PRINCIPLES & PACKING AND QUALITYCONTROL 9

Compressed tablets; wet granulation; dry granulation or slugging; advancement in granulation; direct compression, tablet presses formulation; coating pills; capsules sustained action dosage forms; parential solutions, oral liquids; injections; ointments; standard of hygiene and manufacturing practice. Packing; packing techniques; qualitycontrol.

UNIT V PHARMACEUTICAL PRODUCTS &PHARMACEUTICAL ANALYSIS 9

Vitamins; cold remedies; laxatives; analgesics; nonsteroidal contraceptives;

external antiseptics; antacids and others. Analytical methods and tests for various drugs and pharmaceuticals - spectroscopy, chromatography, fluorimetry, polarimetry, refractometry,pHmetry

TOTAL : 45 PERIODS

TEXT BOOK

16BTCE6E06 CORROSION ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES:

1. This course will give an appreciation of the fundamental principles on corrosion engineering.
2. To provide an understanding of the corrosion principles and engineering methods used to minimize and prevent the corrosion.
3. Defining corrosion and recognize each form of corrosion, corrosion resistance of materials. Describe the economic, environmental, and safety significance of corrosion.
4. Recognize terms and definitions of basic electrochemistry. Understand electrochemical processes and concepts.
5. Establishing corrosion rate. Understand principal corrosion control methods ƒ Control corrosion by design, materials selection, and modification of environment, protective coatings, and cathodic and anodic protection. Effects of different types of polarization.
6. Understanding mechanisms of corrosion reaction including reduction and oxidation reactions, galvanic series, polarization and passivation.

COURSE OUTCOMES:

1. Students know how to approach the problem of choosing an alloy for a particular application.
2. Students know how to approach the design of a heat treatment for an alloy for a particular application.
3. Students know how to slow or defeat corrosion.
4. Students know how to troubleshoot problems in the use of metals and alloys.
5. Students have a basic knowledge of polymerization
6. Students know basic elements of chainmicrostructure (branching, tacticity, networks, etc)

UNITI **9**

Electrochemical and thermodynamic principles, Nernst equation and electrode potentials of metals, EMF and galvanic series, merits and demerits; origin of Pourbaix diagram and its importance to iron, aluminium and magnesiummetals.

UNITII **9**

Exchange current density, polarization - concentration, activation and resistance, Tafelequation; passivity, electrochemical behaviour of active/passive metals, Flade potential, theories of passivity.

UNITIII **9**

Atmospheric, pitting, dealloying, stress corrosion cracking, intergranular corrosion, corrosion fatigue, fretting corrosion and high temperature oxidation; causes and remedial measures.

UNITIV **9**

Purpose of testing, laboratory, semi-plant and field tests, susceptibility tests for IGC, stress corrosion cracking and pitting, sequential procedure for laboratory and on-site corrosion investigations, corrosion auditing and corrosion map of India.

UNITV **9**

Corrosion prevention by design improvements, anodic and cathodic protection, metallic, non-metallic and inorganic coatings, mechanical and chemical methods and various corrosion inhibitors.

16BTCE6E07	PIPING ENGINEERING	3 0 0 3 100

COURSE OBJECTIVES:

1. To understand the construction and working principle of various piping design.To learn requirements of piping modelling, learn the requirements of piping analysis.
2. Role of a Piping Engineer in various fields of industry.Concept of EPC (Engineering Procurement Construction) Projects
3. Piping design and engineering principles,Terminology, symbols, and abbreviations used in piping design
4. Components of piping systems – fittings, flanges and valves, Pipe Supports,Piping specifications and piping codes
5. Piping materials,Plant layout fundamentals and workflow procedures,terminology and symbols used in plant layout
6. Instrument symbols and abbreviations,Process flow diagrams (PFDs),Piping and instrumentation diagrams (P&IDs)

COURSE OUTCOMES:

1. Describe the responsibilities of piping field engineer and Use pipe's standard tables for different calculations.
2. Describe the functions and features of various piping components/Element
3. Apply various codes and standard for piping in a given situation. Measure pressure in pipes.
4. Explain precautions to be taken in piping fabrication to minimise loss in head due to flow of fluid through piping
5. Interpret and use various simple piping drawings in a given situation
6. Plan and supervise process of surface preparation and painting/coating and Perform the process of pipe shaping, bending and forming

UNIT I INTRODUCTION TO PIPING ENGINEERING 9

Fluid flow, types of fluids and examples, different pipe fittings. Friction factor, pressure drop for flow Newtonian and non-Newtonian fluids, pipe sizing, economic velocity.Pipe line networks and their analysis for flow in branches, restriction orifice sizing.Pressure drop calculations for non-Newtonian fluids.two phase flow, types of two phase flow, two phase flow as encountered in piping for steam, distillation column, pressure drop, vibrations in two phase flow.

UNIT II MATERIALS FOR PIPING 9

Selection of material for piping, desirable properties of piping materials, materials for various temperature and pressure conditions, materials for corrosion resistance. Common ASTM and IS specifications for: Seamless / ERW pipes, pipe fittings, flanges, and fasteners, materials for valves. Gaskets: Functions and properties, types of gaskets and their selection.

UNIT III CONTROL & SAFETY IN PIPING 9

Types of valves, control valves, safety valves, constructional features, criteria for selection.Piping components, pressure relieving devices, constructional features, selection criteria and application, safety features. Calculations for line sizing, steam traps, P.R.V. &condensive systems.

UNIT IV PIPING SYSTEM DESIGN 9

Design principles, calculation of pipe diameter, thickness, important system characteristics and design principles related to steam flow at high and low pressures. Design principles and line sizing for vacuum pipelines, slurry pipelines, surge drums and flare stacks, vacuum devices including ejector system. Considerations governing pump selection, analysis of system and pump characteristics in connection with series, parallel flow, and minimum flow and equalizing lines, NPSH, allowable nozzle loads in various codes. Design principles and line sizing of pneumatic conveying of solids, components of conveying systems, dust and fume extraction systemsprinciples.

UNIT V PIPING LAYOUTS 9

Introduction to P & I Diagrams, Process flow diagrams, standard symbols and notations. Introduction to various facilities required guidelines for Plot Plan / Plant Layout. Introduction to equipment layout, piping layout, piping isometrics and bill of material. Typical piping system layout considerations for following systems: (i) Distillation columns and heat exchangers, (ii) Reactors, (iii) Pipe racks, (iv) Storage tanks, (v) Pumps.

16BTCE6E08 **NANO TECHNOLOGY** **3 0 0 3 100**

COURSE OBJECTIVES:

1. To understand the functions and design principles of nanotechnology
2. Apply the scientific knowledge of Physics, Mathematics, Chemistry, and Engineering for deeper understanding of the matter at nanoscale.
3. Identify, formulate, research literature, and analyze advanced scientific problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
4. Design solutions for advanced scientific problems and design system components or processes.
5. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
6. Create, select, and apply appropriate techniques, resources, and modern scientific and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

COURSE OUTCOMES:

1. Apply principles of basic science concepts in understanding, analysis and prediction of matter at Nano scale.
2. To introduce interdisciplinary subjects/concepts/ideas for interdisciplinary application of Science and engineering concepts.
3. To introduce advanced ideas and techniques required in emergent area of nanotechnology.
4. To develop human resource with specialization in theoretical and experimental techniques required for career in academia and Nano technology driven industry.
5. Engage in lifelong learning and adapt to changing professional and societal needs.
6. Understand and apply principles of physics, chemistry and engineering for understanding the scientific phenomenon in nano domain.

UNIT I **9**

Background and Definition of Nanotechnology. Why Nano? Applications in Different Fields, Chemical Approaches to Nanostructured Materials, Molecular Switches and Logic Gates, Solid StateDevices.

UNIT II **9**

Carbon Nanotubes - Structure of Carbon Nanotubes, Synthesis of Carbon Nanotubes, Growth Mechanisms of Carbon Nanotubes, Properties of Carbon Nanotubes, Carbon Nanotube-Based Nano-Objects, Applications of Carbon Nanotubes, Nano wires – Synthesis, Characterization and Physical Properties of Nanowires, Applications.

UNIT III **9**

Basic Microfabrication Techniques, MEMS Fabrication Techniques, Nanofabrication Techniques, Stamping techniques - High Resolution Stamps, Microcontact Printing, Nanotransfer Printing, Applications.

UNIT IV **9**

Material aspects of NEMS and MEMS – Silicon, Germanium-Based Materials, Metals, GaAs, InP, and Related III-V Materials, MEMS Devices and Applications - Pressure Sensor, Inertial Sensor, Optical MEMS, RF MEMS, NEMS Devices and Applications, Current Challenges and FutureTrends.

UNITV **9**

Microscopy - Scanning Tunneling Microscope, Atomic Force Microscope, Scanning Electron Microscopy, Principles of Noncontact Atomic Force Microscope (NC- AFM)

TOTAL 45

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	B.Bhushan	Springer handbookof nanotechnology	Springer–Verlag	2004
2	Charles P.Poole; Frank K. JOwens	Introduction to Nanotechnology	A John Wiley andSons	2000

16BTCE7E01 ELECTROCHEMICAL ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES:

1. To solve problems related to the production, storage, distribution and utilization of electrochemical energy and the associated environmental issues.
2. learn and retain more, and also to help them develop insight and intuition about electrochemical
3. The knowledge is applied to understand general methodologies for analysis and design of electrochemical systems.
4. To provide knowledge and competency to students in Chemical and Electrochemical Engineering complemented by the appropriate skills and attributes.
5. To make them equally creative and innovative with design and soft skills to carry out various problem solving tasks
6. To enable students to work both individually and as teams on multidisciplinary projects with effective communication skills, individual, supportive and leadership qualities with the right attitudes and ethics.

COURSE OUTCOMES:

1. Understand principles of electrochemical processes.
2. Grasp electroanalytical methods and their use.
3. Have knowledge of different applications of Electrochemistry in areas such as synthesis, materials, environment and energy.
4. Link principles of electrochemistry and electroanalytical results to electrochemical processes and suggest design solutions to engineering problems
5. Students are able to recognize and balance oxidation-reduction reactions.
6. Students recognize the different types of electrochemical cells.

UNIT I 9

Review basics of electrochemistry: Faraday‟s law -Nernst potential –Galvanic cells – Polarography, The electrical double layer: It‟s role in electrochemical processes –Electro capillary curve –Helmoltz layer–Guoy –Steven‟s layer – fields at the interface.

UNIT II 9

Mass transfer in electrochemical systems: diffusion controlled electrochemical reaction –the importance of convention and the concept of limiting current. Over potential, primary-secondary current distribution –rotating disc electrode.

UNIT III 10

Introduction to corrosion, series, corrosion theories derivation of potentialcurrent relations of activities controlled and diffusion controlled corrosion process. Potential-pH diagram, Forms of corrosion- definition, factors and control methods of various forms of corrosion-corrosion control measures industrial boiler water corrosion control –protective coatings –Vapor phase inhibitors –cathodicprotection,sacrificialanodes–Paintremovers.

UNIT IV **8**

Electro deposition –electro refining –electroforming –electro polishing – anodizing –Selective solar coatings, Primary and secondary batteries –types of batteries, Fuel cells.

UNIT V **9**

Electrodes used in different electrochemical industries: Metals-Graphite –Leaddioxide –Titanium substrate insoluble electrodes –Iron oxide –semi conducting type etc. Metal finishing-cell design.types of electrochemical reactors, batch cell, fluidized bed electrochemical reactor, filter press cell, Swiss roll cell, plug flow cell, design equation, figures of merits of different type of electrochemicalreactors.

16BTCE7E02 COMPUTATIONAL FLUID DYNAMICS 3 0 0 3 100

COURSE OBJECTIVES:

1. To make the students to demonstrate competence in setting up computational fluid dynamics models for some industrially important applications. This technical competence in building and conducting CFD simulations is a skill which enhancesemployability.
2. The course covers numerical methods for physical simulations of gas and liquid flows. The course is based on the finite difference method and the finite element method with emphasis on fluid dynamics and includes various computational problems in fluid dynamics such as boundary conditions and meshing
3. the student to widely used techniques in the numerical solution of fluid equations, issues that arise in the solution of such equations, and modern trends in CFD
4. To provide brief introduction of Computational Fluid Dynamics along with chemical engineering application specifically, analysis of fluid mechanics and heat transfer related problems.
5. basic knowledge of CFD which will permit them to function competently in both an industrial setting and in further graduate studies involving CFD and its applications
6. The emphasis of the course is to teach CFD techniques for solving incompressible and compressible N-S equation in primitive variables, grid generation in complex geometry, transformation of N-S equation in

COURSE OUTCOMES:

1.Able to use and develop flow simulation software for the most important classes of flows in engineering and science.
2.Able to critically analyze different mathematical models and computational methods for flow simulations
3.Able undertake flow computations using current best practice for model and method selection, and assessment of the quality of results obtained.
4. The student will demonstrate the ability to use modern CFD software tools to build flow geometries, generate an adequate mesh for an accurate solution, select appropriate solvers to obtain a flow solution, and visualize the resulting flow field.
5.The student will demonstrate the ability to analyze a flow field to determine various quantities of interest, such as flow rates, heat fluxes, pressure drops, losses, etc., using flow visualization and analysis tools.
6. The student will demonstrate an ability to recognize the type of fluid flow that is occurring in a particular physical system and to use the appropriate model equations to investigate the flow.

UNIT I CONSERVATION LAWSANDTURBULENCE MODELS 9

Governing equations of fluid flow and heat transfer –mass conservation, momentum and energy equation, differential and integral forms, conservation and non-conservation form. Characteristics of turbulent flows, time averaged Navier Strokes equations, turbulence models-one and two equation, Reynolds stress, LES and DNS.

UNIT II FINITEDIFFERNCE APPROXIMATION 9

Mathematical behaviour of PDE, finite difference operators, basic aspects of discretization by FDM, explicit and implicit methods, error and stabilityanalysis

UNIT III FINITEVOLUME METHOD 15

Diffusion problems – explicit and implicit time integration; Convection-diffusion problems properties of discretisation schemes, central, upwind, hybrid, QUICK schemes; Solution of discretized equations.

UNIT IV FLOWFIELD COMPUTATION 6

Pressure velocity coupling, staggered grid, SIMPLE algorithm, PISO algorithm for steady and unsteady flows

UNIT VGRIDGENERATION 6

Physical aspects, simple and multiple connected regions, grid generation by PDE solution, grid generation by algebraic mapping.

5	Taylor, C and Hughes, J.B	Finite Element Programming of the Navier Stock Equation	Pineridge Press Limited, U.K	1981

COURSE OBJECTIVES:

1. To focus on the wastewater transport system and the theory and design technique for the wastewater treatmentprocess.
2. Student can apply knowledge of basic water chemistry (equilibrium, thermodynamics) to solve problems associated with water/wastewater treatment and natural water quality.
3. Student can apply knowledge of redox reactions to solve problems associated with water/ wastewater treatment and natural water quality.
4. Student can apply knowledge of Acid-base reactions and alkalinity/acidity to solve problems associated with water/wastewater treatment and natural water quality.
5. Student can apply knowledge of two phase (water and solid) reactions and solubility to solve problems associated with water/wastewater treatment and natural water quality
6. Distinguish between conditioning, thickening, and dewatering .List the factors that affect which conditioning, thickening, and dewatering methods are used. Describe four methods of sludge conditioning

COURSE OUTCOMES:

1. Select or construct appropriate treatment schemes to remove certain pollutants present in water or wastewater.
2. Design a water or wastewater treatment component.
3. Balance chemical reactions and use balanced reactions to determine the distribution of species at equilibrium.
4. Develop a mass balance expression for contaminants under different case scenarios and design a simple system to meet desired needs
5. Learn how to characterize wastewater, and the BAT for physical, chemical and microbiological treatment of wastewater.
6. Understand selected contemporary global water and wastewater issues such as water shortage, wastewater reuse and emerging contaminants.

UNIT I WASTE WATER TREATMENTANOVERVIEW 9

Terminology – Regulatios – Health and Environment Concerns in waste water management – Constituents in waste water inorganic – Organic and metallic constituents.

UNIT II PROCESS ANALYSISAND SELECTION 9

Components of waste water flows – Analysis of Data – Reactors used in waste water treatment – Mass Balance Analysis – Modeling of ideal and non-ideal flow in Reactors – Process Selection.

UNIT III CHEMICALUNIT PROCESSES **9**

Role of unit processes in waste water treatment chemical coagulation – Chemical precipitation for improved plant performance chemical oxidation – Neutralization – Chemical Storage.

UNIT IVBIOLOGICAL TREATMENT **9**

Overview of biological Treatment – Microbial metabolism – Bacterial growth and energatus Aerobic biological oxidation – Anaerobic fermentation and oxidation – Trickling filters – Rotating biological contractors – Combined aerobic processes – Activated sludge film packing.

UNIT V ADVANCED WASTE WATER TREATMENT **9**

Technologies used in advanced treatment – Classification of technologies Removal of Colloids and suspended particles – Depth Filtration – Surface Filtration – Membrane Filtration Absorption – Ion Exchange – Advanced oxidation process.

16BTCE7E04 TOTAL QUALITY MANAGEMENT 3 0 0 3 100

COURSE OBJECTIVES:

- To facilitate the understanding of Quality Management principles and process.
- To understand the concept of Quality
- To understand the Implication of Quality on Business
- To Implement Quality Implementation Programs
- To have exposure to challenges in Quality Improvement Programs

COURSE OUTCOMES:

1. Given a product or a service type, the student manager will be able to enumerate and justify the dimensions of product quality or service quality for the same.
2. Given the quality gurus (Deming/ Juran/ Taguchi/ Crosby), the student manager will be able to justify their philosophies/ contributions in Quality Management.
3. Given a quality problem/ failure mode, the student manager will be able to identify causes and sub causes of the effect/ problem draw and justify Ishikawa Diagram.
4. Given the defective item analysis (type of defect, frequency, number of defects), the student manager will be able to draw and justify the Pareto chart to prioritize the defects.
5. For a given type of organization, the student manager will be able to enlist and justify the four levels of benchmarking and/ or enlist and brief seven step benchmarking model
6. Given a product/ service (at the design stage), the student manager will be able to enlist the customer requirements and technical/ design requirements and draw and justify the house of quality and quality function deployment for the same.

UNITI INTRODUCTION 9

Introduction - Need for quality - Evolution of quality - Definitions of quality - Dimensions of product and service quality - Basic concepts of TQM – TQM Framework - Contributions of Deming, Juran and Crosby - Barriers to TQM - Quality statements - Customer focus - Customer orientation, Customer satisfaction, Customer complaints, Customer retention - Costs of quality.

UNIT IITQM PRINCIPLES 9

Leadership - Strategic quality planning, Quality Councils – Employee involvement - Motivation, Empowerment, Team and Teamwork, Quality circles Recognition and Reward, Performance appraisal - Continuous process improvement - PDCA cycle, 5S, Kaizen - Supplier partnership-Partnering,Supplier selection, Supplier Rating.

UNIT III TQM TOOLS ANDTECHNIQUESI 9

The seven traditional tools of quality - New management tools - Six sigma: Concepts,Methodology, applications to manufacturing, service sector including IT - Bench marking - Reason to bench mark, Bench marking process - FMEA -Stages,Types.

UNIT IV TQM TOOLS ANDTECHNIQUESII **9**

Control Charts - Process Capability - Concepts of Six Sigma - Quality Function Development(QFD) - Taguchi quality loss function - TPM - Concepts, improvement needs - Performancemeasures.

UNIT VQUALITY SYSTEMS **9**

Need for ISO 9000 - ISO 9001-2008 Quality System - Elements, Documentation, Quality Auditing - QS 9000 - ISO 14000 - Concepts, Requirements and Benefits - TQM Implementation in manufacturing and service sectors..

16BTCE8E01 PROCESS OPTIMIZATION 3 0 0 3 100

COURSE OBJECTIVES:

1. To know the design experiments and formulate optimization modelsofchemical processes/equipments.
2. Provide students with the basic mathematical concepts of optimization.
3. Provide students with the modeling skills necessary to describe and formulate optimization problems.
4. Provide students with the skills necessary to solve and interpret optimization problems in engineering.
5. Enhance students' skills related to optimization in chemical engineering, open-ended problem solving, critical thinking and life-long learning.
6. Learn classical optimization techniques and numerical methods of optimization

COURSE OUTCOMES:

1. Apply knowledge of optimization to formulate and solve engineering problems.
2. Understand the different methods of optimization and be able to suggest a technique for a specific problem.
3. Understand how optimization can be used to solve industrial problems of relevance to the chemical and oil industries.
4. Explain the fundamental knowledge of Linear Programming and Dynamic Programming problems.
5. Use classical optimization techniques and numerical methods of optimization.
6. Describe the basics of different evolutionary algorithms.

UNIT –I DEVELOPING MODELSFOR OPTIMIZATION 9

Scope and hierarchy of optimization, Essential features of Optimization problems, Classification of Models, Building a model, Factorial experimental designs, Degree of freedom

UNIT – IIBASIC CONCEPTS 9

Formation of COURSE OBJECTIVES: function, continuity of functions, NLP problem statement, convexity and applications, Interpretation of COURSE OBJECTIVES: function based on its Quadratic approximation

UNIT – III OPTIMIZATION OFUNCONSTRAINEDFUNCTIONS 9

Methods for one dimensional search, Newton,,s method and Quasi – Newton methods for uni dimensional search. Polynomial approximation methods

UNIT – IV UNCONSTRAINEDMULTIVARIABLE OPTIMIZATION 9

Methods using function value only, methods using first derivative, Newton,,s method, Quasi – Newtonmethods.

UNIT – VLINEARPROGRAMMING 9

Simple method, Barrier method, sensitivity analysis, Linear mixed integer programs, Examples

16BTCE8E02 PILOT PLANT AND SCALE UP METHODS 3 0 0 3 100

OBJECTIVES

1. To understand about the pilot plants, models, similarity and scale up methods
2. To understand the scale-up of reactors, columns and dryers, unit operations equipment, sand its limitations
3. To understand the importance of process equipment geometry and to provide concepts, methods and analysis to translate various chemical processes from laboratory scale to plant scale
4. To understand different scale up methods in chemical engineering and applying the knowledge to scale up the reactors for industrial scale operations.
5. Preparation and providing of Master Manufacturing Formula for manufacturing.
6. Evaluation and Validation for process and equipment. and formula to assess the batch stability.

COURSE OUTCOMES:

1. Scale-up the fluid phase and fluid-fluid reactor.
2. Scale-up the mixing units and separation units.
3. Scale-up for mass transfer processes.
4. Demonstrate the practice and the process of technology transfer from lab scale to commercial.
5. Scaling up of equipment like heat exchangers, evaporator, and packed towers, agitated vessel and chemical reactors.
6. Analyze the problems involved in chemical engineering equipment

UNIT –I FUNDAMENTALS OF SCALE UP, DIMENSIONAL ANALYSIS AND SCALE-UP CRITERION 9

Principles of Similarity, Pilot Plants and Models, Introduction to Scale-up Methods, Dimensional Analysis, Regime Concept, Similarity Criterion and Scale up Methods used in Chemical Engineering.

UNIT – II SCALE-UP OF HEATTRANSFER EQUIPMENT 9

Typical Problems in Scale-up of Mixing Equipment and Heat Transfer Equipment.

UNIT – III SCALING UPOFREACTORS 9

Scale-up Techniques available for Tubular Reactor, CSTR and Catalytic Reactors.

UNIT – IV SCALE-UP OF MASSTRANSFER EQUIPMENT 9

Distillation Column and Packed Towers: Scale-up of Distillation Columns and Packed Towers for Continuous and Batch Processes and Dryers

UNIT – V SCALE UP OF MISCELLANEOUS EQUIPMENTAND LIMITATIONS 9

Scaling up of Ball Mill, Pressure Jet Nozzle and Centrifugal Disk Atomizers and Screw Extruders, Furnaces and Kilns, Analogue Models, Limitations of Scale up Techniques.

16BTCE8E03 POLLUTION CONTROL IN PROCESS INDUSTRIES 3 0 0 3 100

OBJECTIVES

1. To impart the basic concepts of industrial pollution control
2. To develop understanding about water, air, light pollution control
3. Characterization and classification of different types of wastes are discussed along with existing norms for waste disposal.
4. Treatment methods of specific pollutant arising out of industrial process are explained.
5. To impart students with strong knowledge base through theory courses and sessional that makes them suitable for industries, academics, research and consultancies.
6. To develop students analytical, computational and research skills through assignments, weekly presentations and modeling software.

UNIT I INTRODUCTION 9

Man and Environment, Types of pollution, Pollution control aspects, Pollution monitoring and analysis of pollutant. Air pollution: Sources and effects, particulate control, control of gaseous pollutants (SOx, NOx, oxides of carbon, hydrocarbon pollutants), Air Quality Management.

UNIT II WATER POLLUTION 9

Types of water pollution, sources, water pollution control. Waste water treatment technologies and Recycle.

UNIT III SOLID WASTE MANAGEMENT 9

Sources, processing methods, waste disposal methods, energy recovery from solid waste

UNIT IV NOISE POLLUTION 9

Hazardous noise exposure, noise measuring instruments and noise pollution control technology. Regulations: ISO 14000, 9000, pollution Acts and Regulations.

UNIT V CASE STUDY 9

Pollution (Air, Water & Solid) control in the following process industries - Fertilizers, Petroleum Refinery and Petrochemical, Pulp and Paper, Cane Sugar, Tannery, Distilleries and Pharmaceutical Industry.

16BTCE8E04 STATISTICAL THERMODYNAMICS 3 0 0 3 100

COURSE OBJECTIVES

1. The student will acquire an introduction to concepts that link classical and statistical thermodynamics.
2. The course will also provide the student with the basic knowledge of statistical thermodynamics and its applications in chemistry and chemical engineering
3. converse with correct concepts of thermodynamics and statistical mechanics,
4. understand statistics of particles and statistics of fields,
5. perform mean field calculations, understand various models in statistical mechanics.
6. understand the significance and characteristics of critical phenomena, and understand the concepts of universality and scaling laws

COURSE OUTCOMES:

1. Account for the physical interpretation of partition functions and be able to calculate thermodynamic properties of model systems with using Boltzmann -, Fermi-Dirac and Bose-Einstein statistics.
2. Account for the physical interpretation of distribution functions and discuss and show how these can be used in calculations of basic thermodynamic properties.
3. Calculate physical characteristics of non-ideal gases and liquids using the most common models for fluids.
4. Account for the fundamental ideas in the Debye-Hückel theory and use the theory for calculations of properties of electrolytes.
5. Student can recover the laws of thermodynamics and the equipartition theorem from the statistical description using microstates.
6. Student uses the partition function for calculations about the canonical ensemble.

UNITI STATISTICAL-MECHANICAL ENSEMBLES AND THERMODYNAMICS 9

Ensembles and Postulates, Canonical Ensemble and Thermodynamics, Grand Canonical Ensemble, Microcanonical Ensemble, Entropy, Other ensembles, characteristic equations, Fluctuations

UNIT II GENERAL RELATIONS FOR INDEPENDENT MOLECULES 9

Thermodynamic equivalence of ensembles, Second law, Criteria for spontaneous change, Systems of distinguishable and indistinguishable particles, Boltzmann Statistics, Translational Partition Function.

UNITIII IDEAL MONOATOMIC AND DIATOMIC GAS 9

Ideal Monatomic Gas, Density of States, Thermodynamic Functions, Internal Degrees of Feedom, Homonuclear Diatomics, Molecular Partition Functions, Ideal Diatomic Gas, Vibrational, Rotational, Gas of Homonuclear Diatomics at Low Temperature, Quantum Statistics, Polyatomic Molecules

UNITIV CHEMICAL EQUILIBRIUM IN IDEAL MIXTURES 9

Chemical Equilibrium, General Relations, Statistical Derivation in a Special Case, Fluctuations in a Simple Chemical Equilibrium, Examples of Chemical Equilibriua.

UNIT V RATES OF CHEMICAL REACTIONS IN IDEAL MIXTURES 9

Potential Surfaces, Absolute Rate Theory, A Non-Chemical Application of the Eyering Theory

TOTAL 45

16BTCE8E05 **PLANT UTILITIES** **3 0 0 3 100**

COURSE OBJECTIVES:

1. Equipping the students with knowledge on the various process utilities and importance in chemical process plants
2. To gain knowledge about different process utilities used in the chemical process
3. To enable the students to understand the process plant utilities and optimization techniques to optimize various parameters in chemical industries
4. To study requirement of different utilities for the process, along with its generation and it's effective utilization
5. To learn the operating principles, construction and working of temperature, pressure and level measuring devices
6. To select the most suitable measuring device based on its performance characteristics for specific measuring devices.

COURSE OUTCOMES:

- Acquire the knowledge for selection of different utilities.
- Understand basic calculations involved in steam generation, psychometric operation and refrigeration.
- Describe the different equipment used to run the process plant with different utilities.
- State the principles involved during water treatment
- Know different fuels used in boilerscalculate the requirements of water and air and their applications as utilities
- calculate the steam requirement and its applications as utility.
- evaluate and apply the various risk assessment methods in industries

UNIT I STEAM, COMPRESSORS AND VACUUM PUMPS **9**

Steam generation and its application in chemical process plants, steam distribution including appropriate mechanical valves and instrumentation, steam utilization, design of efficient steam heating systems, steam nozzles. Compressed air, process pumps, compressors, vacuum pumps, pressurized air distribution systems. Types of compressors and vacuumpumps.

UNIT II REFRIGERATION SYSTEMS AND INSULATION **9**

Refrigeration system and their characteristics, load calculation and load calculation and humidification and de humidification equipments, drying and cooling tower, air blending, exhaust, ventilation, cryogenics, their characteristics and production of liquid N2 and O2Importance of insulation for meeting for the process equipment, insulation material and their effect on various materials of equipment piping, fitting and valves, insulation for high, intermediate, low and subzero temperatures including cryogenic insulation, determination of optimum insulation thickness.

UNIT III WATER **9**

Water Resources, process water, boiler feed water, storage and distribution of water, reuse and conservation of water.

UNIT IV PIPING **9**

Piping: Role & scope of piping, line diagram, Process flow diagram and piping and instrumentationdiagram.

UNIT V PINCH ANALYSIS **9**

Pinch Analysis: Problem representation, temperature enthalpy diagram, simple match matrix. Heat content diagram, Temperature interval diagram. Heat Exchanger Network Synthesis using Pinch technology

16BTCE8E06 INDUSTRIAL MANAGEMENT 3 0 0 3 100

COURSE OBJECTIVES:

1. To provide an opportunity to learn basic management concepts essential for business
2. explain how a business as well as leadership, organizing, strategic planning, and management control functions in an industrial organisation.
3. interpret an annual report from an industrial organisation, as well as be able to calculate and design the different parts of it at a basic level.
4. explain the structure of the industrial company's stream of payments.
5. construct, interpret and use cost calculations as part of the decision support for the industrial company's different situations.
6. To be able to explain how the different parts of the area fit together

COURSE OUTCOMES:

1. Understand the theories and principles of modern management and apply the concepts to the management of organizations in private and public sector
2. Understand how managers can effectively plan in today's dynamic environment, be familiar with the design of organization structure and describe how environmental uncertainty affects organization design.
3. Identify what strategies organizations might use to become more customer oriented and be more innovative. Identify the characteristics of effective teams and understand why teams have become so popular in organizations
4. Describe contemporary theories of motivation and discuss the challenges managers face in motivating unique group of workers
5. understand the impact of engineering solutions in a global, economic, environmental, and social context; A recognition of the need for, and an ability to engage in lifelong learning;
6. A knowledge of contemporary issues; and an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

UNIT I INTRODUCTION 9

Management - Definition – Functions – Evolution of Modern Management – Scientific Management Development of Management Thought. Approaches to the study of Management, Forms of Organization – Individual Ownership – Partnership – Joint Stock Companies – Co-operative Enterprises – Public Sector Undertakings, Corporate Frame Work – Share Holders – Board of Directors – Committees – Chief Executive –Trade Union

UNIT II FUNCTIONS OF MANAGEMENT 9

Planning – Nature and Purpose – Objectives – Strategies – Policies and Planning Premises – Decision Making – Organizing – Nature and Process – Premises – Departmentalization – Line and staff – Decentralization – Organizational culture, Staffing - selection and training – Placement – Performance appraisal – Career Strategy – Organizational Development. Leading – Managing human factor – Leadership – Communication, Controlling - Process of Controlling – Controlling techniques, productivity and operations management – Preventive control, IndustrialSafety.

UNIT III ORGANIZATIONAL BEHAVIOUR 9

Definition – Organization – Managerial Role and functions – Organizational approaches, Individual behaviour – causes – Environmental Effect – Behavior and Performance, Perception – Organizational Implications. Personality – Contributing factors - Dimension – Need Theories – Process Theories – Job Satisfaction, Learning and Behavior – Learning Curves, Work Design and approaches.

UNIT IV GROUP DYNAMICS 9

Group Behavior – Groups – Contributing factors – Group Norms, Communication – Process – Barriers to communication – Effective communication, leadership – formal and informal characteristics – Managerial Grid – Leadership styles – Group Decision Making – Leadership Role in Group Decision, Group Conflicts – Types – Causes – Conflict Resolution – Inter group relations and conflict, Organization centralization and decentralization – Formal and informal – Organizational Structures – Organizational Change and Development – Change Process – Resistance to Change – Culture and Ethics.

UNIT V MODERN CONCEPTS 9

Management by Objectives (MBO), Management by Exception (MBE), Strategic Management - Planning for Future direction – SWOT Analysis – Information technology in management – Decisions support system – Business Process Re-engineering (BPR) – Enterprises Resource Planning (ERP) – Supply Chain Management (SCM) – Activity Based Management(ABM).

16BTCE8E07 MODERN SEPARATION PROCESSES 3 0 0 3 100

COURSE OBJECTIVES:

1. To enable the students to learn the principle and technical concept of advanced separation processes.
2. Understand the basic principles of staged and continuous contact separation equipment involved in equilibrium staged operations such as distillation, absorption, liquid-liquid extraction, leaching, adsorption and other modern separation operations
3. Perform basic design calculations for staged and continuous contact equilibrium staged separation operations
4. Describe various types of equipment's and modern separation methods for high purity products widely used in separation operation
5. To be able to design distillation columns having multiple feed streams.
6. To be able to understand the operating principles behind the various types of modern separation methods and to be able to select appropriate method for a particular application.

COURSE OUTCOMES:

1. Ability to analyze and design pervaporation, chromatography and dialysis based separation processes
2. Describe basic principles of various equilibrium staged operations involving material and energy balances
3. Determine the number of equilibrium stages required for distillation and absorption units
4. Determine number of transfer units and height requirements required for extraction, leaching and adsorption units
5. Explain different column/equipment used for various separation applications
6. Recognize modern separation techniques applied in industries for high purity products

UNIT I BASICS OFSEPARATION PROCESS 9

Review of Conventional Processes, Recent advances in Separation Techniques based on size, surface properties, ionic properties and other special characteristics of substances, Process concept, Theory and Equipment used in cross flow Filtration, cross flow Electro Filtration, Surface based solid – liquid separations involving a secondliquid.

UNIT IIMEMBRANE SEPARATIONS 9

Types and choice of Membranes, Plate and Frame, tubular, spiral wound and hollow fiber Membrane Reactors and their relative merits, commercial, Pilot Plant and Laboratory Membrane permeators involving Dialysis, Reverse Osmosis, Nanofiltration, Ultra filtration and Micro filtration, Ceramic- Hybrid process and BiologicalMembranes.

UNIT III SEPARATIONBY ADSORPTION 9

Types and choice of Adsorbents, Adsorption Techniques, Dehumidification Techniques, Affinity Chromatography and Immuno Chromatography, Recent Trends in Adsorption.

UNIT IVINORGANICSEPARATIONS 9

Controlling factors, Applications, Types of Equipment employed for Electrophoresis, Dielectrophoresis, Ion Exchange Chromatography and Eletrodialysis, EDR, Bipolar Membranes.

UNIT VOTHER TECHNIQUES 9

Separation involving Lyophilisation, Pervaporation and Permeation Techniques for solids, liquids and gases, zone melting, Adductive Crystallization, other Separation Processes, Supercritical fluid Extraction, Oil spill Management, Industrial Effluent Treatment by Modern Techniques.

TOTAL : 45PERIODS

16BTCE8E08 PROCESS MODELING AND SIMULATION 3 0 0 3 100

COURSE OBJECTIVES:

1. To give an overview of various methods of process modeling, different computational techniques for simulation.
2. Apply the knowledge of advanced topics in Chemical Engineering to meet contemporary needs of industry and research.
3. Use modern software tools for design of processes and equipment.
4. Identify issues related to ethics, society, safety, energy and environment in the context of Chemical Engineering applications.
5. Pursue self-learning to remain abreast with latest developments for continuous professional growth.
6. Recognizing and rigorously formulating the physics/chemistry of a process as a mathematical model,

COURSE OUTCOMES:

1. Understanding of the principles of molecular mechanics applicable in molecular modeling
2. Understanding of various simulation techniques and their use for model solutions
3. Ability to use molecular modeling software
4. Acquaintance with modern analysis techniques and visualization packages
5. Capability of developing/improving simulation experiments
6. Design measures to take care of environment, health and safety issues pertaining to chemical industries, communicate effectively and demonstrate leadership skills

UNITI INTRODUCTION 7

Introduction to modeling and simulation, classification of mathematical models, conservation equations and auxiliary relations.

UNITII STEADY STATELUMPEDSYSTEMS 9

Degree of freedom analysis, single and network of process units, systems yielding linear and non-linear algebraic equations, flow sheeting – sequential modular and equation oriented approach, tearing, partitioning and precedence ordering, solution of linear and non-linear algebraic equations.

UNIT III UNSTEADY STATELUMPEDSYSTEMS 9

Analysis of liquid level tank, gravity flow tank, jacketed stirred tank heater, reactors, flash and distillation column, solution of ODE initial value problems, matrix differential equations, simulation of closed loop systems.

UNIT IV STEADY STATEDISTRIBUTEDSYSTEM 7

Analysis of compressible flow, heat exchanger, packed columns, plug flow reactor, solution of ODE boundary value problems.

UNIT V UNSTEADY STATE DISTRIBUTED SYSTEM & OTHER MODELLING

APPROACHES **13**

Analysis laminar flow in pipe, sedimentation, boundary layer flow, conduction, heat exchanger, heat transfer in packed bed, diffusion, packed bed adsorption, plug flow reactor, hierarchy in model development, classification and solution of partial differential equations. Empirical modeling, parameter estimation, population balance and stochasticmodeling.

COURSES OFFERED BY OTHER DEPARTMENTS

OPEN ELECTIVES OFFERED BY

DEPARTMENT OF SCIENCE AND HUMANITIES

16BTSHOE01 PROBABILITY ANDRANDOMPROCESS 3 0 0 3

COURSE OBJECTIVES:

1. To gain knowledge in measures of central tendency.
2. To provide necessary basic concepts in probability and random processes.
3. To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
4. To understand the basic concepts of random processes which are widely used in IT fields.
5. To understand the concept of correlation and spectral densities.
6. To acquire the knowledge on random process in engineering disciplines.

INTENDED COURSE OUTCOMES:

1. Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
2. The students will have an exposure of various distribution functions, correlation and spectral densities.
3. To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
4. To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
5. To apply the concept random processes in engineering disciplines.
6. To understand and apply the concept of correlation and spectral densities.

UNIT-I MEASURES OF CENTRAL TENDENCY ANDPROBABILITY (9)

Measures of central tendency – Mean, Median, Mode - Standard Deviation Probability - Random variable - Axioms of probability - Conditional probability-Total probability – Baye‟stheorem.

UNIT-II STANDARDDISTRIBUTIONS (9)

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev's inequality.

UNIT-III TWO DIMENSIONALRANDOMVARIABLES (9)

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT-IV CLASSIFICATION OFRANDOMPROCESS (9)

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT -VCORRELATION ANDSPECTRALDENSITIES (9)

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

16BTSHOE02 **FUZZYMATHEMATICS** **3 0 0 3**

COURSE OBJECTIVES:

1. To know the fundamentals of fuzzyAlgebra.
2. To know the basic definitions of fuzzytheory
3. To know the applications of fuzzyTechnology.
4. Be able to apply basic fuzzy inference and approximate reasoning
5. To know the applications of fuzzy Technology.
6. Be able to acquire the knowledge on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology

COURSE OUTCOMES:

1. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.
2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
3. To gain the methods of fuzzy logic.
4. To comprehend the concepts of fuzzy relations.
5. To analyse the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNITI FUZZYSETS (9)

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh‟s Extension Principle

UNITII OPERATIONS ONFUZZYSETS (9)

Operations on Fuzzy Sets Operations on [0,1] – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNITIII FUZZYRELATIONS (9)

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy RelationalEquations

UNITIV FUZZYMEASURES (9)

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNITV FUZZYINFERENCE (9)

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

16BTSHOE03 LINEARALGEBRA 3 0 0 3

COURSE OBJECTIVES:

1. To know the fundamentals of linear Algebra.
2. To study about the linear transformations
3. To introduce the concepts of inner product spaces
4. To study about the linear transformations
5. To introduce the concepts of inner product spaces
6. To give the knowledge on the importance of Linear Algebra.

COURSE OUTCOMES:

The student will be able to

1. Recognize the underlying theory of vector spaces over a field and inner productspaces over real or complexnumbers
2. Visualize linear transformations as matrix form
3. Articulate the importance of Linear Algebra and its applications in branchesof Mathematics
4. To visualize linear transformations as matrix form
5. To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
6. To articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNITI VECTORSPACES (9)

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNITII EIGEN VALUES ANDEIGEN VECTORS (9)

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNITIII SYSTEM OFLINEAREQUATIONS (9)

Direct methods, Gauss elimination method, Gauss Jordan method, Crout‟s method, iterative methods, Gauss-Jacobi method, Gauss–Seidel method, convergence criteria.

UNITIV LINEARTRANSFORMATIONS (9)

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNITV INNERPRODUCTSPACES (9)

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

16BTSHOE04 ENGINEERING ACOUSTICS3 0 0 3 COURSE

OBJECTIVES:

1. To provide mathematical basis for acoustics waves and the characteristic behavior of sound in pipes, resonators and filters.
2. To introduce the properties of hearing and speech
3. To introduce the features of architectural acoustics.
4. To identify the factors affecting the acoustics of building.
5. To impart the basic knowledge of transducers and receivers.
6. To divulge knowledge on the basics of pipe resonators and filters.

COURSE OUTCOMES:

1. The students will have the knowledge on acoustics waves , the characteristic behaviour of sound in pipes, resonators and filters and that knowledge will be used by them in different engineering and technology applications
2. Apply the concepts of radiation and reception of acoustic waves.
3. Explain the basic ideas of pipe resonators and filters.
4. Illustrate the basics of architectural acoustics.
5. Illustrate the transducers and receivers and its applications in various electronic devices.

UNITI INTRODUCTION (9)

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales.Reflection and Transmission:Transmission from one fluid to another normal and oblique incidence –method of images.

UNITII RADIATION AND RECEPTION OFACOUSTICWAVES (9)

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers.Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorptioncoefficient

UNITIII PIPES RESONATORSANDFILTERS (9)

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency –voice.

UNITIV ARCHITECTURALACOUSTICS (9)

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design ofportions.

UNITV TRANSDUCTION (9)

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers **Total: 45**

16BTSHOE05 SOLIDWASTEMANAGEMENT 3 0 0 3

COURSE OBJECTIVES:

1. To understand about the solidwaste
2. To study about the waste treatment
3. To gain knowledge on the disposal of waste and waste management.
4. To get the information on energy conservation.
5. To acquaint the students with the basics of energy generation from waste materials.
6. To get the information on energy conservation.

COURSE OUTCOMES:

1. The students will know solid waste and energy conservation. They will understand the methodologies to disposal of solid waste and its management.
2. Identify the concepts of treatment of solid wastes (S)
3. Identify the methods of wastes disposals. (S)
4. Examine the level of Hazardousness and its management. (S)
5. Examine the possible of the energy production using waste materials. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNITI SOLID WASTE (9)

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNITII WASTETREATMENT (9)

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNITIII WASTE DISPOSAL (9)

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classficaition, Types, Methods &Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfillRemediation

UNITIV HAZARDOUSWASTEMANAGEMENT (9)

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediaiton, risk assessment.

UNITV ENERGY GENERATIONFROMWASTE (9)

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids.Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

16BTSHOE06 GREENCHEMISTRY 3 0 0 3

COURSE OBJECTIVES:

1. To understand about the greenchemistry
2. To study the atom efficient process and synthesiselaborately.
3. To gain knowledge on the green technology and renewable energyresources.
4. To get the information oncatalysis
5. To acquaint the students with the basic information on catalysis.
6. To inculcate the chemical principles in the field of engineering and technology

COURSE OUTCOMES:

1. Students will know the chemistry and application of green technology for energy sources. They will understand the role of green catalyst in industries.
2. Examine the different atom efficient process and synthesis elaborately (S)
3. Apply the concepts combustion of green technology (S)
4. Identify and apply the concepts of renewable energy (S)
5. Apply the concepts of green catalysts in the synthesis (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES (9)

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternatesolutions.

UNIT II ATOMEFFICIENTPROCESSES (9)

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Streckersynthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY (9)

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air.Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLERESOURCES (9)

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS INGREEN CHEMISTRY (9)

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

16BTSHOE07 APPLIEDELECTROCHEMISTRY 3 0 0 3

COURSE OBJECTIVES:

1. To get the information on electrochemicalmaterial.
2. To study about the conductingpolymers
3. To understand about thefuel
4. To gain knowledge on the batteries and powersources.
5. To impart knowledge on basic principals of solar cells and its applications
6. To inculcate the chemical principles in the field of engineering and technology

COURSE OUTCOMES:

1. Students will understand about the fuel. They will get knowledge on the batteries and power sources.
2. Examine the properties of conducting polymers (S)
3. Apply the concepts of electrochemistry in storage devices. (S)
4. Identify the concepts of storage devices and its applications. (S)
5. Apply the suitable materials for the manufacturing of storage devices. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNITI METALFINISHING (9)

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNITII CONDUCTING POLYMERSANDELECTROCHEMICALS (9)

lectropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNITIII BATTERIES ANDPOWER SOURCES-I (9)

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNITIV BATTERIES ANDPOWER SOURCES-II (9)

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells,advantages.

UNITV ELECTROCHEMICAL MATERIALSCIENCE (9)

Solar cells- Preparation of CdS/Cu_2S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

16BTSHOE08 INDUSTRIALCHEMISTRY 3 0 0 3

COURSE OBJECTIVES:

1. To understand about thefuel
2. To study about the abrasives andlubricants.
3. To gain knowledge on inorganic chemicals and explosivematerials.
4. To get the information on agriculturechemicals.
5. To acquaint the students with the basics of **agriculture chemicals**.
6. To inculcate the chemical principles in the field of engineering and technology

COURSE OUTCOMES:

1. The student will acquire basic knowledge on cement. The student will understand the interaction of engineering materials and their utilization in industries.
2. Examine the uses of abrasives and refractories (S)
3. Identify the usage of the inorganic chemicals. (S)
4. Identify the concepts of explosives and smoke screens (S)
5. Identify the usage of the **agriculture** chemicals (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNITI CEMENT ANDLIME (9)

Manufacture of Portland cement – settling of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydrauliclime.

UNITII ABRASIVESANDREFRACTORIES (9)

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNITIIIINORGANICCHEMICALS (9)

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3, caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrialuses.

UNITIV EXPLOSIVES (9)

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gasmask.

UNITV AGRICULTURECHEMICALS (9)

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

16BTSHOE09 ENGLISHFORTECHNOCRATS 1 4 0 3

PURPOSE:

It provides techniques of writing and also trains the students to write without their influence of mother tongue. In addition to honing their skills as professional writers, students will develop technical vocabularies that will aid writing research articles and discussing articles produces by their peers.

COURSE OBJECTIVES:

1. Develop abilities to write technically and expressively,
2. Recognize writing as a constructive, meaning ful process,
3. Practise using reading strategies for effective writing.
4. Develop abilities to write technically and expressively.
5. Recognize writing as a constructive, meaningful process.
6. Practice using reading strategies for effective writing.

COURSE OUTCOMES:

Students undergoing this course are able to

1. Construct simple sentences, correct common grammatical errors in writtenEnglish.
2. Build confidence in English language by imbibing lexical and syntaxrules.
3. Enrich their reading ability for effectivewriting.
4. Elevate them to minimize word, sentence, and paragraph length without sacrificing clarity or substance
5. Familiarize with basic technical writing concepts and terms, such as audience analysis, jargon, format, visuals, and presentation.
6. Demonstrate the basic components of definitions, descriptions, process explanations, and other common forms of technical writing.

UNIT– I BASICS OFWRITING

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language –– Conciseness and Flow– Bias free and plain writing – Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer"s block – Prioritizing for effective writing– Avoiding plagiarism.

UNIT– 2 PARAGRAPHS ANDESSAYS

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT– 3 LETTERS, MEMOS AND EMAIL

Formal written correspondence – Types of messages – Business letters – Structure of letters – Languageinletters–Tenseinletters–Coverletters–Resumes–Curriculumvitae–Memos–Emails
– Email Etiquette – Effectiveness andpurpose.

UNIT– 4 THE ART OF CONDENSATION AND TECHNICALPROPOSALS

Steps to Effective précis writing – Guidelines – Technical Proposals – Types of Proposals – Characteristics – Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /Film Review – Travelogue – Dialogue Writing.

UNIT– 5 REPORTS AND RESEARCH ARTICLES

Discussion of newspaper articles -Objectives of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

OPEN ELECTIVES OFFERED BY DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

16BECSOE01 INTERNET PROGRAMMING 3 0 0 3 100

COURSE OBJECTIVES:

1. To introduce the Java programming language and explore its current strengths and Weaknesses
2. To study the way that object-oriented concepts are implemented in the Java programming language
3. To write working Java code to demonstrate the use of applets for client side programming
4. To study the way that exceptions are detected and handled in the Java programming language
5. To write working Java code that demonstrates multiple threads of execution
6. To understand about various Internet applications

COURSE OUTCOMES:

1. Know Java programming language and explore its current strengths and Weaknesses
2. Explain about object-oriented concepts
3. Learn Java code to demonstrate the use of applets for client side programming
4. To study the way that exceptions are detected and handled in the Java programming language
5. know Java code that demonstrates multiple threads of execution
6. use various Internet applications

UNIT I INTRODUCTION

9

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Sub netting and addressing- Classful and Classless Addressing, Sub netting

UNIT II HTML 9

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Color name, Color value. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL 9

Introduction, Variable, Condition, Loop, Array, implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets-Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV Client-Server programming 9

Client-Server programming in Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V INTERNET TELEPHON 9

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP-Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

TOTAL:45

TEXT BOOKS:

Paul Deitel, Harvey Deitel and Abby Deitel, “Internet and World Wide Web-How to Program”, 5th Edition, 2011.

Web Technology: A Developer's Perspective, N.P. Gopalan and J. Akilandeswari, PHI Learning, Delhi, 2013.

16BECSOE02 MULTIMEDIA AND ANIMATION 3003 100

COURSE OBJECTIVES:

□□□study the graphics techniques and algorithms
To study the multimedia concepts and various I/O technologies. □□□
To enable the students to develop their creativity □□□
To impart the fundamental concepts of Computer Animation and Multimedia.
To understand Techniques of Animation
To Learn about different 3D Animation

COURSE OUTCOMES:

After the course the student will be able to:

- Get Familiarised With Animation
- Types Of 3D Animation
- Know about motion caption
- Work With The Timeline And Tween-Based Animation
- Learn about 3D Animation
- Master the techniques of computer animation and multimedia

UNIT I Introduction 9

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II Creating Animation in Flash 9

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D Animation & its Concepts 9

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV Motion Caption 9

Formats – Methods – Usages – Expression – Motion Capture Software’s – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V Concept Development 9

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

TOTAL: 45

Text Books:
Computer Graphics, Multimedia and Animation-Malay K. Pakhira,PHI Learning PVT Ltd,2010

References:
Principles of Multimedia – Ranjan Parekh, 2007, TMH. (Unit I, Unit V)

16BECSOE03 PC HARDWARE AND TROUBLE SHOOTING 3 0 0 3 100

COURSE OBJECTIVES:

- Assemble/setup and upgrade personal computer systems
- Perform installation, configuration, and upgrading of microcomputer hardware and software.
- Install/connect associated peripherals.
- Diagnose and troubleshoot microcomputer systems hardware and software, peripheral equipment.
- Know Multitasking and Multiprogramming
- Familiarise Various Types of faults

COURSE OUTCOMES:

After the course student will be able to:

- Familiarise Special Peripherals.
- Know Computer Organization
- Know about Memory Space
- Familiarise Motherboard Logic
- Know Programmable LSI's
- Know about Data Recovery

UNIT I Introduction 9

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices 9

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC Hardware Overview 9

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV Installation and Preventive Maintenance 9

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting 9

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

16BECSOE04 JAVA PROGRAMMING 3 0 0 3 100

COURSE OBJECTIVES:

- Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Be aware of the important topics and principles of software development.
- Have the ability to write a computer program to solve specified problems.
- Be able to use the Java SDK environment to create, debug and run simple Java programs
- To understand Object oriented programming concepts

COURSE OUTCOMES:

After the course student will be able to:

- Familiar with programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java and work with 2D shapes
- Be familiar with Arrays – Strings - Packages
- Have the ability to write a computer program to solve specified problems.
- Work on Java SDK environment to create, debug and run simple Java programs
- To understand abstract classes

UNIT I INTRODUCTION TO JAVA

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES

Arrays – Strings - Packages – Java-Doc comments –- Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING

Exceptions – Syntax of exception handling code – Multiple catch statements – Using finally statements – Throwing our own exceptions – Using exceptions for debugging

UNIT V THREADS

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

TEXT BOOKS:

1.Cay S. Horstmann and Gary Cornell Core Java: Volume I–Fundamentals Sun Microsystems

Press 2008

LIST OF OPEN ELECTIVES OFFERED BY

ELECTRICAL AND ELECTRONICS ENGINEERING DEPARTMENT

16BEEEOE01 ELECTRIC HYBRID VEHICLES L T P C 3 0 0 3

COURSE OBJECTIVES:
To understand the basic concepts of electric hybrid vehicle.
To gain the knowledge about electric propulsion unit.
To understand and gain the knowledge about various energy storage devices.
To know the concept of electric hybrid vehicle
Understand the various energy storage schemes
Know about the various fuel efficiency schemes

COURSE OUTCOMES:

At the end of the course the student will be understand the concept of electric hybrid vehicle and itsenergy storage schemes.

1. Battery based energy storage and its analysis,
2. Familiarise Fuel Cell based energy storage and its analysis
3. Super Capacitor based energy storage and its analysis,
4. Understand Flywheel based energy storage and its analysis,
5. Know Hybridization of different energy storage devices.

UNIT I INTRODUCTION 9
History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies**.**

UNIT II HYBRID ELECTRIC DRIVE-TRAINS 9
Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT 9
Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE 9
Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices**.**

UNIT V ENERGY MANAGEMENT STRATEGIES 9
Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

TOTAL: 45

TEXT BOOK

16BEEEOE02 ENERGY MANAGEMENT AND ENERGY AUDITING 3 0 0 3 100

COURSE OBJECTIVES:
To gain the knowledge about energy management.

1. To understand the basic concepts in economic analysis in energy management.
2. To understand the basic principles of energy audit.
3. To gain the knowledge about the basic concept of types of Energy Audit
4. To gain and Evaluate the different energy efficient motors
5. Understand the concept of Energy conservation.
6. To study about the behaviour changes of PF requirement in motor currents

COURSE OUTCOMES:
At the end of this course, students will demonstrate the ability to

1. Understand the concept of Energy Management.
2. Analyze the different methods for economic analysis
3. Knowledge about the basic concept of Energy Audit and types.
4. Evaluate the different energy efficient motors
5. Understand the concept of Energy conservation.
6. Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT 9
Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS 9
Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT 9
Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS 9
Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-
Energy conservation: Importance-energy saving measures in DG set-fans and blower's pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS 9
Power factor - methods of improvement, location of capacitors, p.f with nonlinear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

16BEEEOE03 PROGRAMMABLE LOGIC CONTROLLER 3 0 0 3 100

Course Objectives

1. To understand the basic principles of PLC systems.
2. To gain the knowledge about data handling functions.
3. To gain the knowledge of storage techniques in PLC
4. To acquire the knowledge about how to handle the data and functions
5. To study about flow charts of ladder and spray process system
6. To understand the principles of PID.

COURSE OUTCOMES:

1. At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
2. To acquire the knowledge of storage techniques in PLC
3. Students know how to handle the data and functions
4. Students known about advanced controller in PLC applications
5. Students gather real time industrial application of PLC
6. Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION 9

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING 9

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS 9

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS 9

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES 9

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

16BEEEOE04 RENEWABLE ENERGY RESOURCES L T P C 3 0 0 3

Course Objectives

1. To gain the knowledge about environmental aspects of energy utilization.
2. To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
3. To study about solar energy collectors and its storages
4. To study about the inter connected system in wind power
5. To understand the basic principles fuel cell, Geo thermal power plants.
6. To gain the knowledge about hydro energy.

COURSE OUTCOMES:

1. At the end of this course, students will demonstrate the ability to
2. Analyze the Energy Scenario in india
3. Understand the concept of Solar Energy
4. Understand the concept of Wind Energy
5. Understand the concept of Hydro Energy
6. Analyze the different energy sources
7. Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION 9

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY 9

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY 9

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY 9

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES 9

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

OPEN ELECTIVES OFFERED BY

ELECTRONICS AND COMMUNICATION ENGINEERING TO OTHER DEPARTMENTS

16BEECOE01 REAL TIME EMBEDDED SYSTEMS **L T P C 100**
3 0 0 3

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on

COURSE OUTCOMES:

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT-I INTRODUCTION TO EMBEDDED SYSTEM 9

Introduction- Embedded systems description, definition, design considerations &requirements-Overview of Embedded SystemArchitecture (CISC and RISC)-Categories of Embedded Systems-embedded processor selection &tradeoffs- Embedded design life cycle -Product specifications-hardware / software partitioning- iterations and implementation- hardware software integration – product testing techniques–ARM7.

UNIT-II OPERATING SYSTEM OVERVIEW 9

Introduction–AdvantageandDisadvantageofUsingRTOS–Multitasking–Tasks-RealTimeKernels – Scheduler- Non-Preemptive Kernels – Preemptive Kernels – Reentrancy- ReentrantFunctions–Round Robin Scheduling- Task Priorities- Static Priorities– Mutual Exclusion–Deadlock– Inter task Communication–Message Mailboxes–Message Queues- Interrupts- TaskManagement–Memory Management-Time Management–Clock Ticks.

UNIT-III TASK MANAGEMENT 9

Introduction-µ C/OS-II Features-Goals ofµ C/OS-II-Hardware and Software Architecture–Kernel Structures: Tasks–Task States–Task Scheduling–Idle Task–Statistics Task–Interrupts Under µC/OS-II –Clock Tick-µ C/OS- II Initialization. Task Management: Creating Tasks–Task Stacks–StackChecking–Task’sPriority–SuspendingTask–ResumingTask.TimeManagement: Delaying aTask–Resuming a Delayed Task–System Time. Event Control Blocks-Placing a Task in the ECB Wait List–Removing a Task from an ECB wait List.

UNIT-IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING 9

Semaphore Management: Semaphore Management Overview– Signaling a Semaphore. MessageMailbox Management: Creating a Mailbox –Deleting Mailbox–Waiting for a Message box–Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue– Deleting a Message Queue–Waiting for a Message Queue–Sending Message to a Queue– Flushing a Queue.

UNIT-V MEMORY MANAGEMENT 9

Memory Management: Memory Control Blocks–Creating Partition-Obtaining a Memory Block–Returning a Memory Block. Getting Started withµ C/OS-II–Installingµ C/OS-II–Portingµ C/OS-II:Development Tools–Directories and Files– Testing a Port -IAR Workbench withµ C/OS-II-µ

C/OS- II Porting on a 8051CPU– Implementation of Multitasking- Implementation of Scheduling andRescheduling –Analyze the Multichannel ADC with help ofµ C/OS-II.

16BEECOE02 CONSUMER ELECTRONICS L T P C 100
3 0 0 3

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

COURSE OUTCOMES:

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES 9

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters – Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNITII TELEVISION STANDARDS AND SYSTEMS 9

Components of a TV system–interlacing–composite video signal.Colour TV– Luminance and Chrominance signal; Monochrome and Colour Picture Tubes- Color TV systems– NTSC, PAL, SECAM-Components of a Remote Control.

UNITIII OPTICAL RECORDING AND REPRODUCTION 9

Audio Disc– Processing of the Audio signal–readout from the Disc –Reconstruction of the audio signal–Video Disc–Video disc formats- recording systems–Playback Systems.

UNITIV TELECOMMUNICATION SYSTEMS 9

Telephone services-telephone networks–switching system principles–PAPX switching–Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network.Wireless Local Loop.VHF/UHF radio systems, Limited range Cordless Phones; cellular modems.

UNITV HOME APPLIANCES 9

Basic principle and block diagram of microwave oven; washing machine hardware and software; Components of air conditioning and refrigeration systems.

Total Hours: 45

16BEECOE03 NEURAL NETWORKS AND ITS APPLICATIONS L T P C 100
3 0 0 3

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

COURSE OUTCOMES:

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve

UNIT I INTRODUCTION TONEURAL NETWORKS 9

Introduction-biological neurons and their artificial models-learning, adaptation and neural network's learning rules-types of neural networks-single layer, multiple layer-feed forward, feedback networks

UNIT II LEARNING PROCESS 9

Error– correction learning– memory based learning- hebbian learning-competitive learning- Boltzmann learning-supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION 9

Single layer Perception-Adaptive filtering-unconstrained Optimization-Least-mean square algorithm-Leaning Curve-Annealing Technique-perception convergence Theorem-Relationship between perception and Baye’s Classifier-Back propagation algorithm

UNIT IV ATTRACT OR NEURAL NETWORK AND ART 9

Hopfield model-BAM model -BAM Stability-Adaptive BAM -Lyapunov function-effect of gain- Hopfield Design-Application to TSP problem-ART-layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP.

UNIT V SELF ORGANIZATION 9

Self-organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical Vector Quantization. Applications of self-organizing maps: The Neural Phonetic Type Writer Learning Ballistic Arm Movements.

Total Hours: 45

16BEECOE04 FUZZY LOGIC AND ITS APPLICATIONS L T P C 100
3 0 0 3

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy fiction and de fuzzy fiction procedures

COURSE OUTCOMES:

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNITI 9

Basics of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT II 9

Theory of Approximate Reasoning: Linguistic variables, Fuzzy proportions, Fuzzy if-then statements, inference rules, compositional rule of inference-fuzzy models

UNIT III 9

Fuzzy Knowledge Based Controllers (Fkbc): Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzy fiction and de fuzzy fiction procedures–Design of Fuzzy Logic Controller

UNIT IV 9

Adaptive Fuzzy Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V 9

Fuzzy based systems: Simple applications of FKBC-washing machines-traffic regulations-lift control-fuzzy in medical Applications-Introduction to ANFIS.

Total Hours: 45

OPEN ELECTIVES OFFERED BY DEPARTMENT OF AUTOMOBILE ENGINEERING

16BEAEOE01 AUTOMOBILE ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Identify and explain the types of steering system..

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles

UNIT-I ENGINE AND FUEL FEED SYSTEMS

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburetor working principle, requirements of an automotive carburetor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT –II TRANSMISSION SYSTEMS

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. COURSE OBJECTIVES: of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT -III SUSPENSION SYSTEM

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT-IV BRAKES

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT -V ELECTRICAL SYSTEM

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

16BEAEOE02 BASICS OF TWO AND THREE WHEELERS 3 0 0 3 100

COURSE OBJECTIVES

- The COURSE OBJECTIVES: of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburetor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

16BEAEOE03 AUTOMOBILE MAINTENANCE 3 0 0 3 100

COURSE OBJECTIVES:

- The COURSE OBJECTIVES: of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.
- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

3.	Service Manuals from Different Vehicle Manufacturers			

16BEAEOE04 INTRODUCTION TO MODERN VEHICLE TECHNOLOGY 3 0 0 3 100

COURSE OBJECTIVES

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications

UNIT I TRENDS IN POWER PLANTS

Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti-spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT VTELEMATICS

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

LIST OF OPEN ELECTIVES

OFFERED BY CIVIL ENGINEERING

16BECEOE01 HOUSING, PLAN AND MANAGEMENT 3 0 0 3 100

COURSE OBJECTIVES

- To examine the role and tasks of basic housing policies and building bye laws
- Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
- Analyze the Innovative construction methods and Materials
- Analyze city management strategies and strengthen the urban governance through a problem solving approach
- To know the Importance of basic housing policies and building bye laws
- To use Housing Programmes and Schemes

COURSE OUTCOMES:

- The students will be able to
- Know the Importance of basic housing policies and building bye laws
- Use Housing Programmes and Schemes
- Plan and Design of Housing projects
- Examine Innovative construction methods and Materials
- Know Housing finance and loan approval procedures
- Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING 9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES 9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighborhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organizations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS 9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL 9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

16BECEOE02 BUILDING SERVICES 3 0 0 3 100

COURSE OBJECTIVES

- Defining and identifying of eng. services systems in buildings.
- The role of eng. services systems in providing comfort and facilitating life of users of the building.
- The basic principles of asset management in a building & facilities maintenance environment
- Importance of Fire safety and its installation techniques
- To Know the principle of Refrigeration and application
- To Understand Electrical system and its selection criteria

COURSE OUTCOMES:

The students will be able to

- Machineries involved in building construction
- Understand Electrical system and its selection criteria
- Use the Principles of illumination & design
- Know the principle of Refrigeration and application
- Importance of Fire safety and its installation techniques
- Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES 9

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS 9

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN 9

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilization factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS 9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION 9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

16BECEOE03 MANAGEMENT OF IRRIGATION SYSTEMS 3 0 0 3 100

OBJECTIVES

- To enable the students for a successful career as water management professionals.
- To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
- To expose the students the need for an interdisciplinary approach in irrigation water management
- To providing a platform to work in an interdisciplinary team.
- To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
- To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

COURSE OUTCOMES:

At the end of this the students will be in a capacity to

- Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
- Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
- Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
- Gain insight on local and global perceptions and approaches to participatory water resource management
- Learn from successes and failures in the context of both rural and urban communities of water management.
- Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I. IRRIGATION SYSTEM REQUIREMENTS 9

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II. IRRIGATION SCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III. MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV. OPERATION 9

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNIT V. INVOLVEMENT OF STAKE HOLDERS 9

Farmer’s participation in System operation – Water user’s associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL HRS : 45

TEXT BOOKS

1. Dilip Kumar Majumdar, “Irrigation Water Management – Principles and Practice”, Prentice Hall of India Pvt. Ltd., New Delhi, 2000
2. Hand book on Irrigation Water Requirement, R.T. Gandhi, et. al., Water Management Division, Department of Agriculture, Ministry of Agriculture, New Delhi

REFERENCES

1. Hand Book on Irrigation System Operation Practices, Water Resources Management and Training Project, Technical report No. 33, CWC, New Delhi, 2000
2. Maloney, C. and Raju, K.V., “Managing Irrigation Together”, Practice and Policy in India, Stage Publication, New Delhi, India, 2000

16BECEOE04 ADVANCED CONSTRUCTION TECHNOLOGY 3 0 0 3 100

COURSE OBJECTIVES:

- To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
- To study different methods of construction to successfully achieve the structural design with recommended specifications.
- To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
- To study of construction equipment's, and temporary works required to facilitate the construction process
- To provide a coherent development to the students for the courses in sector of Advanced construction technology.
- To present the new technology of civil Engineering and concepts related Advanced construction technology.

COURSE OUTCOMES:

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT - I MODERN CONSTRUCTION METHODS 9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT - II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT - III MODERN CONSTRUCTION EQUIPEMENTS -I 9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting

UNIT - IV MODERN CONSTRUCTION EQUIPEMENTS -II 9

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES 9

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipment's

TOTAL HRS : 45

TEXT BOOKS

1.Peurifoyu , R. L., , Ledbette, W.B., Construction Planning , Equipment and Methods, Mc Graw Hill Co., 2000.

2. Antill J.M., PWD, Civil Engineering Construction, Mc Graw Hill Book Co., 2005

REFERENCE

1.Varma, M Construction Equipment and its Planning & Applications, Metropolitan Book Co., 2000

2.Nunnaly, S.W., Construction Methods and Management , Prentice – Hall, 2000

3.Ataev, S.S., Construction Technology, MIR , Pub. 2000ss

LIST OF OPEN ELECTIVES OFFERED BY MECHANICAL ENGINEERING

16BEMEOE01 COMPUTER AIDED DESIGN 3 0 0 3 100

COURSE OBJECTIVES:

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

COURSE OUTCOMES:

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS 9

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS 9

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING 9

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION 9

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT 9

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

16BEMEOE02 INDUSTRIAL SAFETY AND ENVIRONMENT 3 0 0 3 100

COURSE OBJECTIVES:

- To recognize and evaluate occupational safety and health hazards in the workplace.
- To determine appropriate hazard controls following the hierarchy of controls.
- To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
- To prevent or mitigate harm or damage to people, property, or the environment.

COURSE OUTCOMES:

- Recognize and evaluate occupational safety and health hazards in the workplace.
- Determine appropriate hazard controls following the hierarchy of controls.
- Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
- Prevent or mitigate harm or damage to people, property, or the environment

UNIT I INTRODUCTION TO LOGISTICS 9

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN 9

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS 9

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES 9

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM 9

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

16BEMEOE03 TRANSPORT PHENOMENA 3 0 0 3 100

COURSE OBJECTIVES:

- To generalized equations for mass, momentum and heat.
- To understand the concepts of Reynolds and Gauss theorems.
- To learn combined diffusive and convective transport.
- To apply Film- and penetration models for mass and heat transfer.
- To apply Stefan-Maxwells equations for multi-component diffusion.
- To Solve the given set of equations either analytically or numerically.

COURSE OUTCOMES:

- Generalized equations for mass, momentum and heat.
- Understand the concepts of Reynolds and Gauss theorems.
- Learn combined diffusive and convective transport.
- Apply Film- and penetration models for mass and heat transfer.
- Apply Stefan-Maxwells equations for multi-component diffusion.
- Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS 9

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS 9

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT 9

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT 9

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT 9

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

16BEMEOE04 INTRODUCTION TO BIOMECHANICS 3 0 0 3 100

COURSE OBJECTIVES:

- To describe the principles of the study of human movement.
- To describe the range of factors that influence the initiation, production and control of human movement.
- To identify the body's lever systems and their relationship to basic joint movement and classification.
- To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
- To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
- To relate the different body systems necessary for human movement to occur.

COURSE OUTCOMES:

- Describe the principles of the study of human movement.
- Describe the range of factors that influence the initiation, production and control of human movement.
- Identify the body's lever systems and their relationship to basic joint movement and classification.
- Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
- Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
- Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION 9

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS 9

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY 9

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION 9

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM 9

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control.

FACULTY OF ARCHITECTURE

B.ARCH

BACHELOR OF ARCHITECTURE

[5 YEAR FULL TIME UNDER GRADUATE DEGREE PROGRAM]

RECOGNISED BY THE COUNCIL OF ARCHITECTURE, NEW DELHI

REGULATIONS, CURRICULUM AND SYLLABUS

2016 – 2017 Batch (New Syllabus)

CHOICE BASED CREDIT SYSTEM

(CBCS)

FACULTY OF ARCHITECTURE

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be UniversityEstablished Under Section 3 of UGC Act 1956)

Pollachi Main Road, Eachanari Post, Coimbatore – 641 021. INDIA

B.ARCH SYLLABUS: 2016-2017 BATCH

SEMESTER 1

16ART101	ENVIRONMENTAL SCIENCE										SEMESTER-I	
Marks	**Internal**	**40**	**External**			**60**	**Total**		**100**	**Exam Hours**		**3**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	0			**Credits**		**2**

COURSE OBJECTIVE:

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the renewable and Non – renewable resources
- To gain knowledge about Biodiversity and Conservation
- To understand the primary concept of Social impact & Pollution

COURSE OUTCOME:

1. Student will be able to master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Student will master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Student will know to appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Student will able to relate the environmental studies to the city planning strategies and Architecture
5. Student will be able to understand about the biodiversity and the conservation techniques
6. Student will be able to know methods to mitigate pollution

UNIT I- THE MULTIDISCIPLINARY NATURE OF ENVIRONMENTAL STUDIES

Definition, Scope and importance; Need for public awareness. – Earth – renewable and non-renewable resources

UNIT II- RENEWABLE AND NON-RENWABLE RESOURCES

Natural resources and associated problems (a) Forest resources: Use and over-exploitation, deforestation, case studies.. (b) Water resources: Use and over-utilization of surface and ground water, dams-benefits and problems. (c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies. (d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture (e) Energy resources: case studies. (f) Land resources: Land as a resource, land degradation,

UNIT III -ECOSYSTEMS

Concept of ecosystem. Structure and function of an ecosystem. Procedures, consumers and decomposers. Energy flow in the ecosystem. Ecological succession. Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystem:

(a) Forest ecosystem (b) Grassland ecosystem (c) Desert ecosystem (d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

UNIT IV -BIODIVERSITY AND ITS CONSERVATION

. Introduction - Definition: Genetic, species and ecosystem diversity. Bio geographical classification of India. Value of biodiversity: Consumptive use, productive use, social, ethical, and aesthetic and option values. Biodiversity at global, National and local levels

UNIT V- ENVIRONMENTAL POLLUTION

Definition Causes, effects and control measures of: (a) Air pollution b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear pollution Soil waste Management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

REFERENCE:

2. Cunningham, W.P. Cooper, T.H. Gorhani, E & Hepworth, M.T. 2001, Environmental

Encyclopedia, Jaico Publ. House, Mumbai, 1196p.

16ART102	HISTORY OF ARCHITECTURE I						SEMESTER-I	
Marks	Internal	40	External	60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits	3

COURSE OBJECTIVE:

- To Gain the understanding of the Architecture from the prehistoric age
- To gain knowledge of the ancient civilization of the World
- To gain knowledge of the ancient civilization of Egypt
- To gain knowledgeon the Social fabric, Relevance design principles
- To gain knowledge of the construction materials and methods
- To gain knowledge on the different architectural styles across the world

COURSE OUTCOME:

1. An understanding about the spatial and stylistic qualities associated with architecture.
2. An understanding of the diversity of architecture in the world
3. An understanding to appreciate particular culture, symbolic, spatial and material qualities
4. An understanding about architecture and cities as givers of meaning and continuity.
5. An Understanding about the Greek Style through examples
6. An Understanding about the Egyptian, Mayan and Chinese architecture styles

UNIT-I

Introduction of Global History

Basic time line of History- Old stone age – middle stone age – new stone age- development of shelter- catalhuyuk,indus civilization- harrapa and mohenjadero-summeriancivilisation

UNIT-II

Introduction to Egypt,Greek Architecture

Egypt- evolution of pyramids- great pyramids- giza- Egyptian temples- Amon- karnac

Greek – orders in architecture- doric – ionic – Corinthian – acropolis- Athens- Parthenon- erecthion-agora- greek architectural features

UNIT-III

Introduction to Indian and south indian

Timeline - Dravidian style – Dravidian culture- rock cut productions of pallavas, shore temple- mahabalipuram- Dravidian order- Brahadeswara temple- Thanjavur- Evolution and form of gopurma – complexity – in temple plan- complexity in Rituals – meenakshiamman temple Maduarai- Chidambaram- Belur – Hampi – Halebedu- Bijapur- Padmanaban temple etc

UNIT-IV

South Indian History -Language and Culture

Language types- influences – Social – economic background studies- Arts and crafts – vernacular evolutions- pragmatic, iconic buildings

UNIT-V

Nativity Study – regional architecture

Coimbatore- Kumbakonam –karaikudi- chettinad style-Traditional settlements and the concept of buildings.

SUGGESTED READINGS:

1. Sir Banister Fletcher, A History of Architecture, University of London, The Antholone Press, 1986.
2. S.Lloyd and H.W.Muller, History of World Architecture - Series, Faber and Faber Ltd., London, 1986.
3. Francis D.K. Ching, A Global History of Architecture, John Willey & Sons Publishers, New Jersey,2007.
4. Provide Educational movies for each topic.

16ART103	MATHEMATICS IN ARCHITECTURE										SEMESTER-I	
Marks	**Internal**	**40**	**External**			**60**	**Total**	**100**			**Exam Hours**	**3**
Instruction Hours /week		**L**	3	**T**	0	**P/S**	0				**Credits**	**3**

COURSE OBJECTIVE :

- To develop analytical skills needed for problem solving a
- To develop creative thinking as well as an understanding of Geometry
- To develop the application of mathematical concepts in architecture.
- To develop the skill of Parmatric architecture
- To develop the Skill of programming by Mathemeatical Approach
- To develop an understanding of platonic solids through physical model making

COURSE OUTCOME:

1. Student will be trained on the basis of the topics of Mathematics necessary for effective understanding of architecture subjects.
2. Students will understand the advanced level applications by using coordinate geometry
3. Students will understand the Statistical charts and and variance for applications in architecture
4. Students will develop the skill and understating of Area & volume calculations for Applications in Architectural design
5. Students will understand the historical applications of mathematics and use of it in current context
6. Student would have an understanding of the basics of parametric design concept in architecture

UNIT-I

CO-ORDINATE GEOMETRY

Points, vectors and coordinate systems – Vector Algebra – Points vs Vectors – Rotation about an arbitrary axis – Parametric, Implicit and Explicit Equations – Lines – Parametric equations of lines – Implicit equation of lines – Distance from a point to a line – Conic sections – Parametric equation of conics.

UNIT-II

BASIC STATISTICS

Arithmetic Mean, Median, Mode, Standard Deviation and Variance – Graphical display of data in statistics through charts and graphs such as bar charts, histograms etc

UNIT-III

AREA AND VOLUME CALCULATIONS

Surface Area and Volume Calculations for simple 3D objects such as cube, cuboid, cylinder, cone, sphere, pyramid, prisms and their frustrums.

UNIT-IV

GEOMETRY IN ARCHITECTURE

Ratio and Systems of proportion – definition and derivation of golden ratio – Fibonacci series. Geometry of Muqarnas. – Making models for understanding the dimensions .

UNIT-V

PLATONIC SOLIDS

Geometry of Platonic Solids. (Concept and Application). Physical modeling of simple and complex geometric forms. - Making models for understanding the dimensions.

SUGGESTED READINGS:

1. T Veerarajan, Engineering Mathematics, Tata McGraw-Hill Publishing Company Ltd, NewDelhi, 2002.
2. B.S.Grewal, Engineering Mathematics, Khanna Publishers, Delhi 1998.
3. P.Kandaswamy, P.Thilakavathy and K.Gunavathy, Engineering Mathematics Vol I and II, S.Chandan Publishers, 1998.
4. Kappraff Jay, Connections: The Geometric bridge between art and science, McGraw Hill, USA,1991.
5. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson
6. Computer aided geometric design by Thomas W.Sederberg 2014

<table>
<tr><td>16ARP111</td><td colspan="10">ART, CRAFT AND MODEL MAKING</td><td colspan="2">SEMESTER-I</td></tr>
<tr><td>Marks</td><td>Internal</td><td>60</td><td colspan="4">External</td><td>90</td><td>Total</td><td>150</td><td colspan="2">Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>1</td><td>T</td><td>0</td><td>P/S</td><td>4</td><td colspan="4">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

- To introduce the vocabulary of art and the principles.
- To inform students about the various art forms through the ages within the cultural contexts.
- To develop presentation skills, visual expression and representation
- To Improve the imaginative thinking and creativity
- To develop the knowledge of Visualization by simple Two & Three dimensional exercises
- To develop the art skill by hands on working with various mediums and materials.

COURSE OUTCOME:

1. Student will understand the vocabulary of art and form principles
2. Student will understand to appreciate the art forms and analyse and apply the concept in architecture
3. Student will gain mastery in sketching, visualizing and expression through manual drawing, sensitized to culture, craft and context.
4. Student will gain Skill Development in Handling Materials and in Making Products and models.
5. Student will gain knowledge about various mediums of presentation
6. Student will gain deep understanding about the art Appreciation and essence of the Aesthetic value

UNIT-I to 5

Exploration in mixed media & collage to convey specific theme and meaning. Analytical Studies will be undertaken in two and three dimensions using various media.
Use of hand tools and materials: working with wood, metals, plaster, plastic, foam boards etc; techniques, safety & practice.

Suggestive exercises are:
Type 1: Making mount board models employing cubes cuboids, pyramid, cylinder and cones.
Type 2: Space frame models using match sticks straw, steel wires, bamboo splits.
Type 3: Building exterior – models – composition of forms
Type 4: Building interiors – Anthropometry – Space standards

Making Scaled models based on architectural concepts, anthropometric, proportions,Interiors etc
Making compositions of Design presentations using manual rendering techniques and computer aided techniques.

Suggested Presentation excercises :
Type 1 : Poster Design
Type 2 : Sketch of building , form exploration and concept sketches – manual presentation
Type 3 : Presentations using Design softwares

SUGGESTED READINGS:

1. Design Methods (Architecture) (Paperback), by John Chris Jones (Author).
2. Basics Design Ideas (Paperback) by Bert Bielefeld (Author), Sebastian El khouli (Author).
3. Design Drawing, Francis D. K. Ching.
4. The Nature of Design, Peg Faimon& John Weigand.
5. Foundations of Art and Design (Paperback) by Alan Pipes (Author)
6. John W.Mills- The Technique of Sculpture, B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London, 1966.
7. C.Lawrence Bunchy - Acrylic for Sculpture and Design, 450, West 33rd Street, New York, N.Y.10001, 1972.
8. The Elements of Graphic Design: Space, Unity, Page Architecture, and Type (Paperback) by Alexander W. White (Author)
9. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson
10. Model to design – Damdi, Damdi Publications
11. Architectural Models2 ,Damdi, Damdi Publications

<table>
<tr><td>16ARS121</td><td colspan="10">ARCHITECTURAL DESIGN I - BASIC DESIGN</td><td colspan="2">SEMESTER-I</td></tr>
<tr><td>Marks</td><td>Internal</td><td>160</td><td colspan="4">External</td><td>240</td><td>Total</td><td>400</td><td colspan="2">Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>2</td><td>T</td><td>0</td><td>P/S</td><td>10</td><td colspan="4">Credits</td><td>7</td></tr>
</table>

COURSE OBJECTIVE:

- To provide a comprehensive introduction to the discipline of Architectural Design Fundamentals
- To develop the skill in Visual Arts.
- To encourage creative thinking and design analysis by various Exercises
- To develop the dialogue & Communication visually & Verbally
- To develop the graphic thinking ability and provide a platform for graphical representation.
- To develop an understanding of the design process and develop aesthetic judgment.

COURSE OUTCOME:

1. Student will understand the qualities of different elements as well as their composite fusions.
2. Student will be able to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Student will develop these required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings
4. Student will be able to develop the confidence to communicate effectively by explaining their own design product
5. Student will develop the art of Design Communication through his expression
6. Student will understand with whole design process from the concept tot the final product.

UNIT-I DESIGN DEFINITION:

Design Thinking: What is Design? Changing Role of the Designer; Route map of the Design Process; Components of Design Problems; Measurement, Criteria & Judgment in Design; Types and Styles of Thinking – Creative thinking, Guiding Principles.

UNIT -2 BASIC ELEMENTS OF DESIGN

Introduction to Elements of design. -Properties, qualities, and characteristics of (i) line, (ii) direction, (iii) shape, (iv) size, (v) texture, (vi) space (vii) time and motion (viii) value and (vii) colour. Exercises involving the same .Focus on Composition and Character of the elements of design addressed visually and conceptually (Exploration in any 2- Dimensional media). Exploration in mixed media & collage to convey a specific theme and meaning.Analytical Studies to be undertaken in two and three dimensions using various materials and tools.

UNIT -3 PRINCIPLES OF DESIGN:

The principles of design relationships/ Composition – Unity & Harmony, Balance, Scale & Proportion, Contrast and Emphasis, and Rhythm. Exercises involving the same.The analysis of design elements - Exercises involving the same.-Focus on Composition and Character of Basic elements of design addressed visually, and conceptually (Exploration in any 2- Dimensional media). -Exploration in mixed media & collage to convey specific theme and meaning.-Analytical Studies will be undertaken in two and three dimensions using various media.

UNIT- 4 DESIGN EXCERCISES AND MODEL:

Design thought process – Sketching various process designs- Subjective – Objective – priciples of design – oriented design – design context – Shape grammer – Fluidity – Parametric – Biomimicry etc -evolution of design – model making

UNIT -5 INTRODUCTION TO ARCHITECTURAL DESIGN:

Lecture introduction into the discipline of architecture, highlighting fundamentals that contribute to the complex totality that constitute a work of architecture: Placing Architecture (Site, Orientation, Climate, City and Landscape); History & Precedent; Materials & Construction; Representation and Realization. -Focus on design fundamentals realized artistically and practically in works by selected architects. Study of basic interrelationships of material, construction, site and program.

SUGGESTED READINGS:

1. Design Methods (Architecture) (Paperback), by John Chris Jones (Author).
2. Basics Design Ideas (Paperback) by Bert Bielefeld (Author), Sebastian El khouli (Author).
3. Foundations of Art and Design (Paperback) by Alan Pipes (Author)
4. The Elements of Graphic Design: Space, Unity, Page Architecture, and Type (Paperback) by Alexander W. White
5. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson
6. Ching, F.D.K., "Design Drawing", Van Nostrand Reinhold, 1998
7. Neufert, P., "Architects" Data", 3rd Ed., Blackwell Science, 2000

Instruction Hours /week		**L**	2	**T**	0	**P/S**	5			**Credits**	**4**

COURSE OBJECTIVE:

- To provide an understanding of the building materials
- To develop the knowledge of construction detailing.
- To develop basic knowledge of the various components of a built structure.
- To develop the knowledge of the Material properties
- To develop the Knowledge of the techniques in material usages
- To develop an understanding of the design execution methods

COURSE OUTCOME:

1. Students will learn about the properties of various building materials
2. Students will understand the properties of stone, brick and its usage through drawing
3. Student will be able to recognize the apt usage of materials through proper research
4. Students will be able to understand and submit drawing plates comprising of technical plan, elevation and section along with sketches and details.
5. Student will be able to understand the technical details and construction details of the subject
6. Students will gain knowledge in cost and availability by their field Survey and Site visits

UNIT-I

SOIL AND STONE

Soils: Formation – grain size distribution – soil classification systems - earth -

Stone: Classification of rocks - Building stones - their uses –physical properties - brief study of tests for stone – deterioration - preservation of stone - various stone finishes - cutting and polishing of granites.

UNIT-II

TRADITIONAL & RURAL MATERIALS

Mud as a building material - Soil stabilization, soil blocks - Cast- in-situ walls - flooring - roofing -plastering.Bamboo, Casuarina, Coconut, palm, Hay, Coir, Jute – properties and uses.Types of foundations - walls - simple roof trusses floors for rural structuresLime – types - properties and uses – Manufacturing process – Mortar: functions – requirements - mixes. – Market study

UNIT-III

BRICKS AND CLAY PRODUCTS – MATERIALS

Bricks - brief study on manufacture of bricks – properties and uses - suitability - types of bricks - uses in buildings, structural tiles, ceramics, terracotta – properties and uses.- market study

UNIT-IV

BUILDING COMPONENTS

Functional requirements of a building and its components - Drawings of foundations, plinth, superstructure, roofing. Openings: Doors, Windows and Ventilators.- Market Study

UNIT-V

BUILDING MATERIALS

Introduction to basic building materials- Observation of work at site – mixture ratio – material standards – material sample collections form market – Market study – local materials – imported materials – assignments – Introduction to bill of quantities – small material volume- basic – calculations

SUGGESTED READINGS :

1. J.S.Spencke and D.J.Cook, Building Materials in Developing Countries, John Wiley and Sons, 1983.
2. Kumar, S.K., "Building Construction", 19th Ed., Standard Publishers Distributors, 2001
3. Allen, E. and Iano, J., "Fundamentals of Building Construction: Materials and Methods", Wiley, 2004
4. Mehta, M., Scarborough, W. and Armpriest, Diane, "Building Construction: Principles, Materials and Systems", Pearson Prentice Hall, 2008

16ARS123	ARCHITECTURAL GRAPHICS- I										SEMESTER-I	
Marks	**Internal**	**60**	**External**				**90**	**Total**	**150**	**Exam Hours**		**6**
Instruction Hours /week		**L**	1	**T**	0	**P/S**	5	**Credits**				**3**

COURSE OBJECTIVE:

- To make them understand the nature of geometrical forms in terms of drawing plane and solid projections.
- To make them understand the representation of 2 dimensional and 3 Dimensional forms
- To make them understand the plans, sections, isometric and axonometric drawings of forms
- To develop the skill of doing perspectives
- To develop the Skill of technical Architectural Representation
- To develop the Skill of creating measure drawings

COURSE OUTCOME:

1. Student will be able to understand the 2 dimensional & the 3dimensional perspective of the objects
2. Student will be able to construct the 3d views and perspective drawings of the buildings.
3. Student will be able to draw the perspective drawings with sciography
4. Student will be able to do Architectural Rendering
5. Student will be able to do architectural detailed drawing for a smaller scale project.
6. Student will be able to do read and Do a technical Architectural Drawing

UNIT-I

GEOMETRICAL DRAWING – PLANE GEOMETRY -REPRESENTATION

Introduction to fundamentals of drawing/ drafting – Construction of Lines, Planes, form – grade of pencils and usage- Understanding the scale with units and dimensions – Construction of plane, object – Hollow and solid geometry – Development of surfaces and multifaceted forms – Understanding the graphical representations of arrows, lettering techniques, composition etc – Lineweights,Line type etc

UNIT-II

GEOMETRICAL DRAWING – ORTHOGRAPHIC PROJECTION

Isometric, Axonometric, Oblique and multiview orthographic projections to scale of various forms- Simple and complex objects- straight, curvilinear etc – Sections, Elevations of solid geometry – hollow objects etc

UNIT-III

PERSPECTIVE -SIMPLE & COMPLEX OBJECTS – SCIENTIFIC METHOD AND SHORT CUT METHOD

Introduction to perspective projections – One point perspective, Two point perspective, Three point perspective, - - Cone of Vision –scientific method and short cut method

UNIT-IV

SCIOGRAPHY AND RENDERING

Introduction to Sciography – Plan sciography,elevation sciography, perspective sciography-Light source Shade and shadow of the object- Manual rendering techniques- color pencils- watercolor- poster color

UNIT-V

MEASURED DRAWING OF FURNITURE/ OBJECT

Introduction to Furniture drawings- drafting and detailing of simple and complex components of the furniture

SUGGESTED READINGS:

1. Robert S. Oliver,, The Complete Sketch, Van Nostrand Reinhold, New York, 1989.
2. Tokyo Musashino Academy of Art - Introduction to Pencil Drawing, Graphic - Shaw Publishing Co. Ltd., Japan, 1991.
3. Freehand Drawing for Architects and Interior Designers (Paperback) by Magali Delgado Yanes (Author), Ernest Redondo Dominguez (Author)
4. Alwyn Cranshaw, Learn to paint with Water colours, Acrylic colours, Boats and Harbours, Sketch, Still life, landscapes, William Collins Sons and Co. Ltd., London, 1981.
5. Francis D. K. Ching, Architectural Graphics, Van Nostrand Rein Hold Company, New York, 1964.
6. Bhatt, N.D. and Panchal, V.M., "Engineering Drawing – Plane and Solid Geometry", 48th Ed., Charotar Publishing House, 1996
7. Griffin, A.W. and Brunicardi, V.A., "Introduction to Architectural Presentation Graphics", Prentice Hall, 1998
8. Ciriello, M., "Architectural Design Graphics", McGraw-Hill, 2002
9. Carpo, M., "Perspective, Projections and Design: Technologies of Architectural Representation", Routledge, 2008

SEMESTER – 2

<table>
<tr><td>16ART201</td><td colspan="10">THEORY OF ARCHITECTURE</td><td colspan="2">SEMESTER-II</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="4">External</td><td>60</td><td>Total</td><td>100</td><td colspan="2">Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>3</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="4">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

- To impart knowledge about the various design philosophies
- To create an understanding of the evolution of various design processesin architecture
- To learn to apply the process of architectural design.
- To learn to use design as a problem-solving exercise
- To gain knowledge about various aspects in architectural design process
- To learn different styles of architecture

COURSE OUTCOME:

1. A thorough understanding on the architectural design process
2. An insight of the different tools used in the design process
3. An exposure to students on ideologies and philosophies of famous architects
4. Students will gain an understanding ofdifferent proportioning systems
5. Students will learn about the different aspects in site analysis
6. Students will learn representation methods of various site features

UNIT-I

Introduction to Design and Architecture

Definitions of Design, Architecture-context for architecture as satisfying human needs-functional, aesthetic and psychological – architecture as a discipline-introducing the various functional aspects of architecture: site, structure, skin, services, use, circulation etc. Introduction to the factors that lend meaning to architecture-architectural expression and symbolism-character and style-movements, philosophies, ideologies and theories-meaning and interpretation of architecture

UNIT- 2

Ordering Elements & Principals of Architecture

Point, line, plane, form, shape, motif, pattern, light, color, texture – understanding the elements with respect to architecture- Detailed study of the visual and emotional effects of geometric forms and their derivatives: sphere, cube, pyramid, cylinder and cone – Transformation of forms, Articulation of forms – mass-space/solid-void effects, articulation of edges, corners, surfaces -Proportion, scale, balance, rhythm, axis, symmetry, hierarchy, datum, unity, harmony, dominance with respect to architecture

UNIT- 3

Organisation of Form and Space

Spatial relationships: space within space, interlocking spaces, adjacent spaces, space linked by a common space -spatial organization: centralized, linear, radial, clustered, grid -form-space relationships-

UNIT- 4

Circulation and Organisation

Circulation as organizing element: building approach, building entrance, configuration of the path, path space relationship, form of circulation space

UNIT -5

Experiencing Architecture

Understanding architecture in totality in terms of the various aspects through first hand
Experience, analysis and interpretation using the case of a building, architectural style, work(s)
Of the contemporary architects

SUGGESTED READINGS :

1. Francis D.K.Ching, Architecture-Form, Space and Order, Van Nostrand Reinhold Company, New York, 1979.
2. Lorraine Farrelly. 2007 The Fundamental of Architecture. AVA Publishing SA 2007. Switzerland.
3. Ernest Burden - Elements of Architectural Design - A visual resource, Van Nostrand Reinhold, 1994.
4. V.S.Pramar, Design Fundamentals in Architecture, Somaiya Publications Pvt. Ltd., New Nelhi, 1973
5. Edward D. Mills – Planning:The Architects Hand Book -Bitterworth, London, 1985
6. G.Muthu Shoba Mohan 2008 Principles of Architecture Oxford & IBH publishing co. pvt. ltd. New Delhi.
7. Francis D.K. Ching 1995 A Visual Dictionary of Architecture. John Wiley & Sons, INC. New Delhi.
8. Paul Alan Johnson - The Theory of Architecture - Concepts and themes, Van Nostrand Co., New York, 1994.
9. Pierre Von Meiss, Elements of Architecture, Spon Press, New York, 2007.

<table>
<tr><td>16ART202</td><td colspan="8">HISTORY OF ARCHITECTURE – II</td><td colspan="2">SEMESTER-II</td></tr>

<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>3</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="2">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

- To Gain the understanding of the regional Architecture
- To understand the social Fabric, Relevance and Design Principles
- To understand various Construction materials and Methods used in different architectural styles
- To understand about the Indo Aryan Architecture
- To Gain knowledge in Buddhist Architecture
- To understand about evolution of Islamic &Mugal Architecture

COURSE OUTCOME:

1. Student will understand the various Architecture features and its outcome due to various social, political and economic upheavals, and its response to the cultural and context.
2. Student will understand about the spatial and stylistic qualities associated with Indo Aryan architecture.
3. Student will understand about the spatial and stylistic qualities associated with Buddhist architecture.
4. Student will understand about the spatial and stylistic qualities associated with Islamic architecture
5. Student will understand the Styles and Details of Mughal Architecture
6. Student will expertise in Spatial understanding of historical places by Sketching & reading

.

UNIT-I

BUDDHIST STYLE

Hinayana and Mahayana Buddhism - Interaction of Hellenic & Indian Ideas in Northern India - Architectural Production during Ashoka's rule - Ashokan Pillar, Saranath,Rock cut caves at Barabar, Sanchi Stupa.

Salient features of a Chaitya hall and Vihara, Rock cut architecture in the Western and Eastern ghats- Karli, Viharas at Nasik, Rani gumpha, Udaigiri. Takti Bahai, Gandhara.

UNIT-II

HINDU & INDO-ARYAN STYLES

Evolution of Hindu temple - Early shrines of the gupta and chalukyan periods -Tigawa temple, Ladh Khan and Durga temple, Aihold, Papanatha and Virupaksha temples, Pattadakal.

Indo-Aryan: Salient features of an Indo Aryan temple -Lingaraja Temple, Bhuvaneswar- Sun temple, Konarak. Kunds and Vavs – - Adalaj - Surya kund, Modhera.

UNIT-III

INTRODUCTION TO ISLAMIC ARCHITECTURE

History of Islam- Influences on Islamic Architecture - character of Islamic architecturewith examples. sources of Islamic Architecture in India and influences on them - Brief history development of architectural style during the rule of the slave, Khilji, Tuqlaq Sayyid and Lodhi Dynasties - important examples for each period.

UNIT-IV

PROVINCIAL STYLE AND ARCHITECTURE

Development of the provincial styles in different regions - Punjab, Jaunpur, Bengal, Gujarat, Malwa, the Deccan (Bijapur, Golconda, Bidar and Gulbarga) - important examples for each style.

UNIT-IV

MUGHAL ARCHITECTURE

Development of the Mughal style under the different rulers - Babur, Shershah, Humayun, Akbar, Jahangir, Shahjahan, Aurangazeb- important examples - development of the Mughal garden - important examples.

SUGGESTED READINGS :

1. Percy Brown, Indian Architecture (Buddhist and Hindu Period), Taraporevala and Sons, Bombay, 1983.
2. Satish Grover, The Architecture of India (Buddhist and Hindu Period), Vikas Publishing Housing Pvt. Ltd., New Delhi, 1981.
3. ChristoperTadgelli, The History of Architecture in India from the Dawn of civilization to the end of the Raj, Longmon Group U.K.Ltd., London, 1990.
4. Islamic Architecture, Form, Function and Meaning, Robert Hillenbrand, Edinburgh University Press, 1994.
5. Brown Percy, Indian Architecture (Islamic Period) Taraporevala and Sons, Bombay, 1983.
6. Satish Grover, The Architecture of India (Islamic) Vikas Publishing House Pvt. Ltd., New Delhi, 1981.
7. Christopher Tadgell- The History of Architecture in India - Penguin Books (India) Ltd., New Delhi 1990.
8. Francis D.K. Ching, A Global History of Architecture, John Willey & Sons Publishers, New Jersey,2007.

<table>
<tr><td>16ART203</td><td colspan="8">MECHANICS OF STRUCTURES - I</td><td colspan="2">SEMESTER-II</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="3">External</td><td>60</td><td>Total</td><td>100</td><td>Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>3</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="2">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:
- To gain understanding of basic structural form of any building
- To gain understanding of structural details of various materials and techniques
- To gain understanding about the theoretical aspects and the component aspects involved in a building
- To gain understanding about the forces and structural systems
- To gain understanding about the Structural sections
- To gain understanding about material properties

COURSE OUTCOME:
1. Student will understand the concepts of action of forces on a body and should be able to apply the equilibrium concepts.
2. Student will understand the basic geometric properties and the behavior of materials under effect of forces
3. Student will understand the various structural components of the building and its usage for strength of the structure.
4. Student will understand about the Reinforced structures structural system and ability
5. Student will understand about Steel Structures in Architectural Design
6. Student will be able to relate various building structural components

UNIT-I
INTRODUCTION TO STRUCTURES AND STRUCTURAL SYSTEMS
Overview of Structures - Concept of Structure in Architecture -Types of Structural Systems - Components of a Structure - Materials and their Structural Properties

UNIT-II
FORCES AND STRUCTURAL SYSTEMS
Types of force systems - Resultant of parallel forces - principle of moments - principle of equilibrium - simple problems

UNIT-III
ANALYSIS OF PLANE TRUSSES
Introduction to Determinate and Indeterminate plane trusses - Analysis of simply supported and cantilevered trusses by method of joints.

UNIT-IV
PROPERTIES OF SECTION
Centroid- Moment of Inertia - Section modules - Radius of gyration - Theorem of perpendicular axis - Theorem of parallel axis

UNIT-V
ELASTIC PROPERTIES OF SOLIDS
Stress strain diagram for mild steel, High tensile steel and concrete - Concept of axial and volumetric stresses and strains - Elastic constants - Relation between elastic constants - Application to problems.
Total: 45 hrs/ semester

SUGGESTED READINGS:

1. S.S.Bhavikatti, "Strength of Materials", VIKAS Publishing House Pvt. Ltd., Chennai,1997.
2. S.Ramamrotham, Strength of materials - Dhanpatrai& Sons, Delhi, 1990.
3. W.A.Nash, Strength of Materials - Schaums Series - Mcgraw Hill Book Company, 1989.
4. Building Structures--From Concepts to Design. Second Edition, by Malcolm Millais. Spon Press, London 2005
5. Buildings from Caves to Skyscrapers, Mario G Salvadori, Holiday House, 1985

16ARP211	COMPUTER APPLICATION -I									SEMESTER-II
Marks	**Internal**	**60**	**External**		**90**	**Total**	**150**		**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4		**Credits**	**2**

COURSE OBJECTIVE:

- To introduce computer operation principles and explore image editing through a graphical composition.
- To impart training in computer aided 2D drafting and 3D modelling through projects.
- To enable the use of computer applications to develop a design from the initial stages to the final outcome
- To enable the rendering of a building so as to create a photo realistic image.
- To develop the skill of Digital Applications in Architecture
- To develop the skill of programming in Architecture

COURSE OUTCOME:

1. Student will be able to express using digital tools in the realm of visual composition, drafting, 3D visualization and rendering
2. Student will be able to draw measured drawings using the software
3. Student will be able to detail the building components using the software
4. Student will be able to produce accurate drawings faster using the software
5. Student will be able to give a rendered image of the Architectural Design by software
6. Student will be able to conceptualize. visualize and Produce digital drawings at ease

UNIT-I
SIMPLE APPLICATIONS
Creating technical documents and reports, Cost estimates with simple calculations, Presentations with graphics. – Charts – tables- Statistics-estimations

UNIT-II
SKETCHING TOOLS
Introduction to Sketch up models – Simple Buildings – Material Application– Vray rendering

UNIT-III
COMPUTER AIDED DRAFTING
Introduction to 2D application – Plan ,section, elevation drawings,3D applications

UNIT-IV
IMAGE EDITING AND ANIMATION
Introduction to image editing- color enhancement

UNIT-V
ADVANCED PROGRAMMING
Simple Programming laguages.

SUGGESTED READINGS:

1. Sketchup – latest Version - Tutorials
2. AutoCAD architectural users guide - Autodesk Inc.,
3. AutoCAD 2016 User Manual, Autodesk
4. Adobe Photoshop-Tutorials
5. Corel Draw – tutorials
6. Adobe premier

16ARS221	ARCHITECTURAL DESIGN - II						SEMESTER-II	
Marks	Internal	160	External	240	Total	400	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	10	Credits	7

COURSE OBJECTIVE:

- Understanding a Simple Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach
5. Student will be able to research, Analyse and Deliver a Architectural Design .
6. Student will be able to Communicate effectively through the design ideas

UNIT-I

Design Process: Basics: Drawing skills, Conventions, Abstraction and Expression; Application: Analysis, Exploration, Discovery and Verification; Communication: Process, Individual Design, Team Design, and Public Design. Evolution from Program and Conditions to Concept & Design - Graphical Representation of the Process.

UNIT-II

The study of space standards and anthropometrics related to each problem. Anthropometry as related to physically handicapped and elderly persons is required to be studied. Different Techniques shall be used for presentation.

UNIT-III

Design Strategies and Methods. Designing in Context; Design & Function; Constituents of Design; Working with materials and Structures; Arriving at Ideas. Methods: Nature & Geometry as generators; Music and Mathematics as models; Accident and the unconscious as sources; Rationalist Approaches; Precedent; Responses to Site; Generative Processes. Traditional Methods, New Methods, The Three Stage Process – Divergence, Transformation, Convergence; Choosing Design Strategies.

UNIT-IV

Horizontal movement - single bay - passive energy type spaces. Design Exercises shall be simple functional units with universal access compliance such as : Toilet for a physically handicapped person. Hostel room, bed room, kitchen, Shop, Workshop, pavilions, snack bar;

UNIT-V

The problems involve simple space organization. Design Exercises shall be multiple spaces and understanding their inter-relationships, such as : Residence, petrol bunk, fire station, police station, Cottage for an elderly couple.

The basics of building anatomy from parapet to foundation and an overview of the different building materials shall be explained at the beginning of the design studio.

SUGGESTED READINGS:

1. Paul Laseau, Graphic Thinking for Architects.
2. E and O.E. Planning, Lliffe Books Ltd., London, 1973.
3. De. Chiara and Callender, Time-saver Standards for Building Types, McGraw Hill Co., New York, 1973.
4. Sid Del Mar Leach, Techniques of Interior Design Rendering and presentation, McGraw Hill Co., New York, 1973.
5. Mike K. Lin, Drawing and Designing with Confidence: A Step by Step Guide.
6. Rendow Yee, Architecutral Drawing: A visual Compedium of types and Methods.
7. Francis D Ching, Design Drawing.
8. Francis D Ching, Drawing a Creative Process.
9. Mike. W. Lin, Architectural Rendering Techniques: A Colour Reference.
10. Richard M. Mc Garry, Marker Magic: The Rendering Problem Solver for Designers.
11. Michael. E. Doyle, Color Drawing: Design drawing Skills & Techniques for Architects, Landscape Architects & Interior Designers.

16ARS222	BUILDING MATERIALS AND CONSTRUCTION- II										SEMESTER-II
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5			Credits	4

COURSE OBJECTIVE:

- To provide an understanding of the construction materials
- To provide an understanding of the construction methods through construction detailing
- To develop basic knowledge of the various components of a built structure
- Ability to understand by field study on all Topics
- Ability to understand materials like brick, clay and timber
- Ability to gain Knowledge about the techniques of Timber Construction

COURSE OUTCOME:

1. Student will gain Knowledge of properties and construction methods of brick, clay products and timber products.
2. Student will be able to detail structural and nonstructural components of simple buildings using the above materials.
3. Student will understand to integrate knowledge of properties and construction methods of basic building materials in the design of simple projects.
4. Student will understand about the Timber construction techniques for doors and windows.
5. Student will be able to gain advanced knowledge about Timber Roof Constructions.
6. Student will understand the building construction techniques of the timber staircases.

UNIT-I
BRICKS PRODUCTS - CONSTRUCTION
Structural members in brickwork – Brick piers, footings, Brick manufacture and process
Reinforced brick masonry - Arches - Lintels – Corbels - copings.

UNIT-II
CLAY PRODUCTS CONSTRUCTION
Hollow clay blocks - for walls - partitions - roofs
Roofing - Flat Roofs - Terrace roofs - Sloping roofs
.
UNIT-III
TIMBER CONSTRUCTION – DOOR, WINDOWS AND PANELLING
Fundamentals of timber- manufacture – uses – current developments – physical properties - Drawings of timber joinery for Windows, doors, ventilators, Timber partitions

UNIT-IV
TIMBER CONSTRUCTION – STAIRCASE
Timber staircase and design

UNIT-V
TIMBER CONSTRUCTION – TRUSS
Timber trusses - Lean to - close couple - Kingpost - Queen post - Trusses.

SUGGESTED READINGS:

1. Don A.Watson, Construction Materials and Processes, McGraw Hill Co., 1972.
2. W.B.Mckay, 'Building Construction', Vol.1, 2, 3 Longmans, U.K. 1981.
3. Alanwerth, Materials, The Mitchell Pub. Co. Ltd., London, 1986.
4. R.Chudleu, 'Building Construction Handbook', British Library Cataloguing in Publication Data, London, 1990.
5. S.C.Rangwala, Engineering Materials, CharotarPub.House, Anand, 1997.

16ARS223	ARCHITECTURAL GRAPHICS- II										SEMESTER-II	
Marks	**Internal**	**60**	**External**				**90**	**Total**	**150**	**Exam Hours**		**6**
Instruction Hours /week		**L**	1	**T**	0	**P/S**	5			**Credits**		**3**

OURSE OBJECTIVE:

- To involve students in a number of exercises that will help them develop the skill of representation in advanced drawing techniques
- To make them understand the measured drawing method
- To make them understand to document buildings of architectural interest
- To understand and Develop the skill of measured drawing of Sections & Elevations
- To understand and develop the set of Architectural working drawings
- To develop them in making the working drawings for the Site Execution

COURSE OUTCOME:

1. Student will be able to construct and draw detailed architectural working drawings
2. Student will understand the 3d views and perspective drawings of the buildings.
3. Student will understand the detailed specifications of a small construction drawing
4. Student will learn to Collect the building data and document accordingly
5. Student will develop the skill of making a Architectural Working Drawing
6. Student will develop the skill of reading a Interior working Drawing

UNIT-I

ARCHITECTURAL DRAWING & REPRESENTATION

Introduction to Architectural drawings – composition of various drawings- list of drawings –simple plans , sections , elevations – dimension – scale drawings- details – representations – arrows – stairs – material hatches etc

UNIT-II

ORTHOGRAPHIC PROJECTION – EXTERIOR AND INTERIOR SPACES

Isometric, Axonometric, Oblique and orthographic projections to scale of Exterior and interior spaces-multi level spaces in buildings –interior furniture etc. – shade and shadow

UNIT-III

BUILDING PERSPECTIVE-MANUAL & DIGITAL RENDERING

Perspective of large spaces and buildings – One point perspective, Two point perspective, Three point perspective – scientific method, short cut method -pencil ,pen rendering ,stippling-Shade and shadow- Sciography of plan ,elevation, isometric, axonometric views-rendering of the building silhouette by manual and digital techniques.

UNIT- 4

MEASURED DRAWING OF A BUILDING

Introduction to fundamentals of measured drawing, line value, lettering, drawing representation, methods and technique of measuring objects by measuring tape –photographs – aesthetic components and details

UNIT-V

DETAILED DOCUMENTATION OF A BUILDING

Documentation of a complete building of a special interest in terms of history, building Construction- architectural excellence or technology – examples like Post office, Police Station, Public School

SUGGESTED READINGS:

1. Francis Ching, Architectural Graphics, Van Nostrand and Reinhold Company, New York, 1975.
2. Edward J.Muller,Jemes G. Fauselt, Philip A. Graw Architecture Drawing and Light Construction Prentice hall Publishers Columbus. 1999.
3. Ernest Norling, Perspective drawing, Walter Fostor Art Books, California, 1986.
4. Bernard Alkins- 147, Architectural Rendering, Walter Foster Art Books, 1986.
5. Learn to paint with Water Colours, Acrylic colours, Boats and Harbours, Sketch, Still life, landscapes. Author: Alwyn Cranshaw, Publisher: William Collins Sons & Co. Ltd., London, 1981.
6. Architectural Rendering, A Technique of Contemporary Presentation, Author: Albert O. Halse, Publisher, Mc Graw Hill Book Company, New York, 1972.
7. Elisabetta Drudi, Figure Drawing for Fashion Design, The Pepin Press Singapore. 2001.
8. K.Venugopal, Engineering Drawing and Graphics + AutoCAD, New Age International Publishers, New Delhi,2007.
9. Kendra Schank Smith, Architects' Drawings, Architectural Press- An imprint Elservier Burlington 2006.

SEMESTER 3

16ART301	BUILDING SERVICES I								SEMESTER-III
Marks	Internal	40	External		60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits	3

COURSE OBJECTIVE:

- To get a Brief understanding about the list of Services involved in Building
- To understand the sequence and importance of the services in a Building during the planning
- To develop basic technical knowledge in water supply & Applications in Architecture
- To develop the technical knowledge in Electricl Supply & Applications in Architecture
- To develop sanitation, electrical, air conditioning, mechanical and firefighting systems.
- To develop basic technical knowledge in acoustics of a space

COURSE OUTCOME:

1. Student will understand about Building services and its integration in a building
2. Student will learn about water supply, sewage, drainage and waste systems in buildings.
3. Student will learn about the various electrical systems and applications in building
4. Student will understand about Heating, ventilation and air-conditioning systems in a building.
5. Student will learn about the Fire safety & Services in a building
6. Student will understand the importance of application of services in a building.

UNIT-I

WATER CHARACTERISTICS AND QUALITY

Surface and ground water sources - quality/quantity - nature of impurities

UNIT-II

FUNDAMENTALS OF SEWAGE TREATMENT AND SEWERAGE SYSTEMS

Environmental sanitation - Sanitation in buildings. Arrangement of sewerage systems in Housing, large factories, towns and cities - sewage pumping station - Rainwater harvesting and disposal

UNIT-III

ELECTRICAL SYSTEMS AND ILLUMINATION

A) Basics of electricity - Single/Three phase supply - Protective devices in electrical installations -Earthling for safety - Types of earthling- ISI specifications.

b) Principles of illumination: Modern theory of light - Synthesis of light - Additive and subtractive synthesis of color- Luminous flux - Candela - Solid angle illumination - Utilization factor - depreciation factor - MSCP - MHCP - Laws of illumination.

UNIT-IV

MECHANICAL SYSTEMS

a) Pumps – uses & types and their selection, installation and maintenance, Hot Water Boilers.

b) Basic refrigeration principles: Thermodynamics - Heat - Temperature, measurement transfer - Change of state - Sensible heat - Latent heat of fusion, evaporation, sublimation - Saturation temperature -Super-heatedvapor-sub cooled liquid - pressure temperature relationship for liquids – Refrigerants

UNIT-V

FUNDAMENTALS OF ACOUSTICS

Sound waves, frequency, intensity, wave length, measure of sound, decibel scale, speech and music frequencies.

Types of noises, transmission of noise, transmission loss, noise control and sound insulation and remedial measures, determination of density of a given building material, absorption co-efficient and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.

SUGGESTED READINGS :

1. William H.Severns and Julian R.Fellows, Airconditioning and Refrigeration, John Wiley and Sons, London, 1988.
2. Robert D.Finch, Introduction to Acoustics, Prentice Hall of India Private Limited, New Dehli, 2008.
3. MARK J. HAMMER MARK J. HAMMER, JR, Water and Wastewater Technology, PHI Learning Private Limited, New Delhi. 2009.
4. M.N.Rao, A.K.Datta, Waste Water Treatment, Oxford & IBH PUBLISHING CO. PVT. LTD,New Delhi,2007.
5. Section 11. Sanitary Appliances and Water Fittings. IS Code- SP: 21-1983.
6. Hand book on Water Supply and Drainage with Special emphasis on plumbing IS Code – SP : 35 – 1987.
7. Part of Section 1: Water Supply. IS CODE – SP : 7 – 1992.
8. IS Code of Basis Requirements for Water supply drainage and sanitation. IS Code – IS 1172: 1983.
9. Code of Practice for Water Supply in Buildings. IS Code – IS 2065: 1983.

16ART302	**HISTORY OF ARCHITECTURE – III**										**SEMESTER-III**	
Marks	**Internal**	**40**	**External**				**60**	**Total**	**100**	**Exam Hours**	**3**	
Instruction Hours /week		**L**	3	**T**	0	**P/S**	0			**Credits**	**3**	

COURSE OBJECTIVE:

- To Gain the understanding of the Architecture in the chronology 400B.C to 800 A.D
- To understand the social Fabric, Relevance, Design Principles & Construction materials and Methods.
- To understand about the Roman Architecture
- To Gain knowledge in Romanesque Architecture
- To understand about evolution of Gothic Architecture
- To Gain knowledge in Italian Renaissance

COURSE OUTCOME:

1. Student will understand the various Architecture features and its outcome due to various social, political and economic upheavals, and its response to the cultural and context.
2. Student will understand about the spatial and stylistic qualities associated with Roman architecture.
3. Student will understand about the spatial and stylistic qualities associated with Romanesque architecture.
4. Student will understand about the spatial and stylistic qualities associated with Italian Renaisance and Baroque architecture
5. Student will understand the Styles and Details of Gothic Architecture
6. Student will expertise in Spatial understanding of historical places by Sketching & reading

UNIT-I

ROMAN

Outline of architectural character: roman orders (Doric, ionic, Corinthian, Tuscan and composite)

Building Typology: Religious Buildings – Temple (Pantheon); Civic Buildings – Baths (Thermae of Caraculla), Theatres (Colloseum), Circus (Circus Maximus), Palace (Forum Romanum); Engineering works – Aqueducts, bridges

UNIT-II

ROMANESQUE

Factors influencing architecture - Building Systems - Use of arches, vaults, columns, piers, buttresses and roofs. Outline of architectural character of Italy, France and England - Examples: Pisa complex, Italy Abbay aux Hommes, Caen, Tower of London.

UNIT-III

GOTHIC

Outline of Gothic Architectural character - Examples: Notre Dame, Paris - Westminster Abbey, Hampton Court Palace, London, Doges Palace, Venice, Milan Cathedral.

UNIT-IV

ITALIAN RENAISSANCE

Renaissance – Introduction. Italian Renaissance - three phases – early Renaissance (Alberti - S. Andrea, Brunelleschi - Cathedral of Florence, Pazzi Chapel, Basilica San Lorenzo) , High Renaissance (Bramante - Santa Maria delle Grazie) , Late Renaissance (Michelangelo, Palladio -St. Peter'sBasilica, Villa Capra La Rotonda)

UNIT-V

NORTHERN RENAISSANCE AND BAROQUE

Northern Renaissance – Introduction; Characteristics of English Renaissance – Works of Sir Christopher Wren, Inigo Jones.

Baroque – Features and Elements of Baroque - St Paul's Cathedral, Palace of Versailles.,Winter Palace in Saint Petersburg.

SUGGESTED READINGS :

1. Sir Bannister Fletcher, A History of Architecture, University of London, The Antholone Press, 1986.
2. Robert Chitham, The Classical Orders of Architecture, Elsevier, London, 2005
3. Francis D.K. Ching, A Global History of Architecture, John Willey & Sons Publishers, New Jersey,2007.
4. S.Lloyd/H.W.Muller, History of World Architecture - Series, Faber Ltd., London, 1986.
5. Spiro Kostof, A History of Architecture - Settings and Rituals, Oxford University Press, London, 1985.
6. Pierre Pichard, TanjavurBrhadisvara, Ecole Francaise D' Extreme Orient, New Delhi, 1995

<table>
<tr><td>16ART303</td><td colspan="9">MECHANICS OF STRUCTURES- II</td><td colspan="2">SEMESTER-III</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="3">External</td><td>60</td><td>Total</td><td>100</td><td colspan="2">Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>3</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="3">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

- To gain understanding of structural concepts in architecture
- To gain understanding of structural details of various Forces and techniques
- To gain understanding about the theoretical aspects and the component aspects involved in a building
- To gain understanding about the R.C.C structural elements
- To gain understanding about the Indeterminate Structures
- To gain understanding about the forces acting on structural elemnts

COURSE OUTCOME:

1. Student will understand the concepts of action of forces like bending moment and shear force
2. Student will understand the basic geometric properties and the behavior of beams under effect of stress
3. Student will understand the various structural components of the building like columns
4. Student will understand about the Reinforced structures structural system and ability
5. Student will understand about Indeterminate Structures in Architectural Design
6. Student will be able to relate various building structural components and their behavior

UNIT-I

SHEAR FORCE AND BENDING MOMENT

Concept of shearing forces and Bending Moments - shear force and bending Moment diagrams for cantilever and simply supported beams subjected to point load, uniformly distributed loads and their combinations

UNIT-II

STRESSES IN BEAMS

Theory of simple bending - bending stresses in beams, shear stresses in beams - examples on simple sections. Stress distribution diagrams,Span – depth of beam - prestressed.

UNIT-III

DEFLECTION OF BEAMS

Slope and deflection at a section - Double Integration and Macaulay's method for simply supported and cantilever beams

UNIT-IV

THEORY OF COLUMNS

Short and long columns - Euler's method and its limitations - Derivations of Euler's formula (for different end conditions) - Rankine's formula for columns, examples, effect of eccentric loading

UNIT-V

INTRODUCTION TO INDETERMINATE STRUCTURES

Introduction – Determination of degree of statical indeterminacy for beams and frames – Concept of Analysis (No Problems)

Total 45 Hrs/Semester

SUGGESTED READINGS :

1. S.S.Bhavikatti, "Strength of Materials", VIKAS Publishing House Pvt. Ltd., Chennai,1997.
2. S.Ramamrotham, Strength of materials - Dhanpatrai& Sons, Delhi, 1990.
3. W.A.Nash, Strength of Materials - Schaums Series - Mcgraw Hill Book Company, 1989.
4. R.K.Bansal - Engineering Mechanics and Strength of Materials - Lakshmi Publications, Delhi, 1990.
5. R.K. Rajput - Strength of Materials , S. Chand & Company Ltd., New Delhi 1996.

16ARP311	COMPUTER APPLICATION- II										SEMESTER-III	
Marks	**Internal**	**60**	**External**				**90**	**Total**	**150**		**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	5				**Credits**	**2**

COURSE OBJECTIVE:

- To develop the advanced Digital knowledge and skills
- To develop the skills of three-dimensional rendering
- To develop the skill and knowledge of the Building information Modelling
- To develop the Skill related to building visualization,
- To develop the skill of multimedia presentations, brochures,
- To develop the skill of video presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will be able to understand the use of digital tools in the realm of visual composition,
2. Student will understand the drafting & Details through Software
3. Student will develop the skill of 3D visualization and rendering
4. Student will understand the concept of BIM- building information modelling through the specific software
5. Student will gain the Skill of Multimedia & video making presentations required for Architectural practice
6. Student will gain knowledge about the latest developments of digital applications in Architecture

UNIT I to UNIT V

INTRODUCTION TO BUILDING INFORMATION MODELLING

New Features , Editing and Working with Families in a Project, Concepts, creating a sharedFamily, Project and System settings. Suggested Software: REVIT, ARCHICAD

BASIC MODELLING AND DOCUMENTATION

Creating the Basic Model, Adding Doors and Windows, Floors and Floor Openings, Roof and Ceiling,Staircases. Suggested Software: REVIT, ARCHICAD.Creating drawings, Creating detail from Building Model, Scheduling, Annotating and Dimensioning, Viewing the Mode

RENDERING

Applying Materials and textures, creating a perspective vies, rendering an Exterior view, rendering an Interiorviews, Creating and Recording Walkthroughs, creating 3D cutaways with Section Boxes

Suggested Software: ArchiCAD, Revit,3ds max, lumion

SUGGESTED READINGS :

1. AutoCAD 2011 User Manual, Autodesk 2011.
2. Revit reference manual - Autodesk UNC, 2010.
3. ArchiCAD architectural users guide -Graphisoft Inc., 2010.

<table>
<tr><td>16ARS321</td><td colspan="10">ARCHITECTURAL DESIGN-III</td><td colspan="2">SEMESTER-III</td></tr>
<tr><td>Marks</td><td>Internal</td><td>160</td><td colspan="4">External</td><td>240</td><td>Total</td><td>400</td><td colspan="2">Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>2</td><td>T</td><td>0</td><td>P/S</td><td>10</td><td colspan="4">Credits</td><td>7</td></tr>
</table>

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach
5. Student will be able to research, Analyse and Deliver the Architectural Design.
6. Student will be able to Communicate effectively through the design ideas

.

TOPICS

Introduction to site – inventory and Analysis – Graphical representation - time space activity analysis.

Single level planning in small scale, small span, horizontal movement and simple vertical movement, data collection, case studies, analysis and presentation of studies – Data collection with respect to design and detailing for physically handicapped persons - Concepts and presentation of design with scaled models - Examples: Residential buildings, Institutional buildings: banks, nursery or primary schools, primary health center, school for children with learning disabilities, neighborhood market, etc.

Design Process to be approached stage wise through Architectural Programming

SUGGESTED READINGS :

1. De Chiara and Callender, Time Saver Standards Building Types, McGraw Hill Co., 2nd Edition, 1980.
2. Edward D.Mills, Planning - The Architects Handbook - 10th Edition, British Library Cataloguing in Publication Data, 1985.
3. Wakita Linde, The Professional practice of Architectural working, drawing John Wiley & Sons, 1984.
4. Andrew Alpern, Handbook of Speciality Elements in Architecture, McGraw Hill Book Co., 1982.
5. Julius Panero& Martin Zelnik, Human Dimension and Interior Space, Whitney Library of Design Publication, 1979.
6. Neufert Architect's Data, RudollHerg, Crosby Lockwood and Sons Ltd., 1970.

16ARS322	BUILDING MATERIALS AND CONSTRUCTION -III									SEMESTER-III	
Marks	**Internal**	**80**	**External**			**120**	**Total**	**200**	**Exam Hours**		**6**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	4		**Credits**		**4**

COURSE OBJECTIVE:

- To give an introduction to cement and concrete as materials for building construction.
- To help understand the principles, types, methods of construction
- To understand aboutapplications of concrete
- To understand about structural and non-structural building components
- To understand and enable design and detail using concrete in buildings
- To understand about concrete staircase.

COURSE OUTCOME:

1. Student will learn about the concrete as a versatile material in different contexts.
2. Student will understand the concepts of concrete as a building construction material.
3. Student will be able to design and detail specific components in concrete in Architectural Design
4. Student will understand about concrete Footing, column by doing detailed drawings
5. Student will understand about concrete Slab, beams by doing detailed drawings
6. Student will understand about concrete Plinth, lintel, Sill by doing detailed drawings

Student will understand about concrete Staircase by doing detailed drawings

UNIT-I

CONCRETE, ITS INGREDIENTS MANUFACTURE & PROPERTIES

Ingredients - suitability requirements for aggregates, grading of aggregates - role of water in concrete - reinforcement - admixtures - properties of concrete.

Manufacture of concrete and concreting - mix proportioning - batching, mixing, transporting, placing, compaction, curing formwork - quality control - outline of tests for concrete - joints in concrete - concrete finishes.

UNIT-II

SPECIAL CONCRETE AND CONCRETING METHODS

Lightweight, high density, fibre reinforced, polymer concrete - outline of manufacture properties and uses of the above - ready mixed concrete -guniting- cold weather and underwater concreting - current developments in concrete products and methods of concreting.

FOUNDATIONS

Pile foundation, different types of piles, precast and cast insitu with reinforcement details for different types of grids, details of pile capping, jointing of precast piles and columns – Raft foundation

UNIT-III

CONCRETE CONSTRUCTION

Introduction to framed structures.Concrete in foundations - types of footings - isolated, combined, continuous, strap.

Concrete floors, walls and partitions,roof.Concrete lintels, arches, sunshades -Concrete slabs - types - concrete beams and columns.

UNIT-IV

CONCRETE STAIRCASES

Factors involving staircase design - types of staircases like straightflight, doglegged, quarterturn, bifurcated, spiral helical, etc. - different support conditions like inclined slab, cranked slab, continuous, cantilever - foundations finishes for staircases - detailing out of handrails and balusters. Designing and detailing for physically handicapped.

UNIT-V

D.P.C- WEATHERING COURSE – WATER PROOFING

Introduction to DPC – Damp Proof Course – Water Proofing – Details and techniques – types

Exercises involving simple bill of Quantities

SUGGESTED READINGS :

1. M.S.Shetty, Concrete Technology, S.Chand& Co. Ltd., New Delhi, 1986.
2. Dr.B.C.Punmia, Building Construction, Laxmi Publications Pvt. Ltd., New Delhi, 1993.
3. Arthur Lyons, Materials for Architects and Builders - An introduction, Arnold, London, 1997.
4. W.B.Mckay, Building Construction, Longmans, UK, 1981.
5. Francis D.K.Ching, Building Construction Illustrated VNR, 1975.

16ARS323	CLIMATE RESPONSIVE ARCHITECTURE I										SEMESTER-III
Marks	**Internal**	**60**	**External**			**90**	**Total**	**150**	**Exam Hours**		**6**
Instruction Hours /week		**L**	1	**T**	0	**P/S**	5			**Credits**	**3**

COURSE OBJECTIVE:

- To study about climatic factors and its influence
- To understand about the of external and internal factors of Climate for a certain location
- To understand deeply about the Microclimatic influences in a building
- To understand about the Solar geometry and its impacts in a building
- To understand the Air movement & its principles and Applications for humanthermal comfort
- To understand about the Classification of climate and Design strategies recommendations for each climatic Zone

COURSE OUTCOME:

1. Student will understand the whole climatic scenario of the world
2. Student will learn about the Solar geometry, sun path its irradiation effects and control
3. Student will learn about heat transfer in buildings due to materials and design implications.
4. Student will understand about the Various ventilation principles and techniques for good ventilation
5. Student will understand hybrid design strategies and its design applications for different climatic zones
6. Student will develop the skill of doing a climatic design for any building with optimum recommendations.

UNIT-I

CLIMATE

Introduction of the earth formation,sun-Latitide , longitude, Altitude-Types of Climate -Factors that determine climate -Climate of a location- Climatic zones of the world,India – Components of Climate – Climate classifications for building designers in tropics – Climate characteristics. Human body heat balance – Human body heat loss – Effects of climatic factors on human body heat loss – Effective temperature – Human thermal comfort – Use of C.Mahony'stables,Psychrometric chart

UNIT-II

SOLAR GEOMETRY

Movement of sun – Locating the position of sun – Sun path diagram – Solictice-Overheated period–Solar shading–Shadow angles – Types of shading devices and materilas

UNIT-III

HEAT FLOW THROUGH BUILDING ENVELOPE CONCEPTS

The transfer of heat through solids – Definitions – Conductivity, Resistivity, Specific heat, Conductance, Resistance and Thermal capacity – Surface resistance and air cavities– Air to air transmittance (U value) – Time lag and decrement

UNIT-IV

IMPACT OF AIR MOVEMENT DUE TO NATURAL AND BUILT FORMS /VENTILATION

The wind – The effects of topography on wind patterns – Air currents around the building – Air movement through the buildings – The use of fans – Thermally induced air currents – Stack effect, Venturi effect – Use of court yard.

UNIT-V

DESIGN STRATEGIES AND RECOMMENDATIONS

Design strategies in warm humid climates, hot humid climates, hot and dry climates and cold climates – Climate responsive design exercises

SUGGESTED READINGS ::

1. O.H. Koenigsberger and others (1993), Manual of Tropical Housing and Building – Part I - Climate design, Orient Longman, Madras, India.
2. Bureau of Indian Standards IS 3792 (1987), Hand book on Functional requirements of buildings other than industrial buildings, (Part I – IV), Manakbhavan, 9, Bahadur Shah Zafar Marg, New Delhi – 110002 SUGGESTED READINGS :
3. Martin Evans (1980), Housing Climate and Comfort – Architectural Press, London
4. B. Givoni (1981), Man, Climate and Architecture, Architectural Sciences Series - Applied Science Publishers Ltd., London
5. B. Givoni (1994) Passive and Low Energy Cooling of building,VanNortrand Reinhold New York, USA..
6. Galloe, Salam and Sayigh A.M.M. (1998) "Architecture, Comfort and Energy", Elsivier Science Ltd. , Oxford, U.K.
7.Arvind Krishan " Climate responsive Architecture".
8. Sun,Wind and Light – Architectural design strategies – Mark Dekay, G.Z. Brown- Third and fourth edition

SEMESTER 4

16ART401	BUILDING SERVICES -II									SEMESTER-IV	
Marks	Internal	40	External			60	Total	100		Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0			Credits	3

COURSE OBJECTIVE:

- To inform about the principles and laws of Water distribution systems in buildings.
- To inform about the principles and laws of sewerage systems in buildings.
- To inform about the principles and laws of plumbing systems
- To inform about the electrical layout for residential Building
- To understand about compressors, evaporators and refrigerant control devices
- To Inform about the integration of service with the Architectural Design

COURSE OUTCOME:

1. Student will gain Knowledge of design of Water distribution systems in buildings
2. Student will learn and understand about the sewerage systems in buildings.
3. Student will learn and understand about the plumbing systems
4. Student will understand the electrical layout for residential Building
5. Student will gain basic knowledge about compressors, evaporators and refrigerant control devices
6. Student will understand the Applications of building Services in advanced level by detailed Drawings

UNIT-I

Water Distribution

Water supply systems – Domestic – Commercial – usages - Distribution systems in buildings - Types of pipes used - Laying, jointing, testing - prevention of water wastage and reuse of water - Internal water supply in buildings - Relevant byelaws and regulations.

UNIT- 2

SEWAGE AND SOLID WASTE MANAGEMENT

Arrangement of sewerage systems in buildings - sewage treatment plant- Solid waste Disposal: Collection, conveyance and disposal of town Solid waste

UNIT- 3

Plumbing Systems

Materials and construction details of sewers and connections – plumbing fixtures - testing for water tightness - plumbing system for building types. – Toilets kitchen etc., Relevant Plumbing Codes

UNIT- 4

Electrical Systems And Lighting Design

Study of electrical layout for residential Building - Types of wires, wiring systems and their choice - Main and distribution boards - Electrical load calculation – Details - Classification of lighting - Artificial light sources - spectral energy distribution - luminous efficiency - colour temperature - colour rendering – lighting fixtures.

UNIT- 5

Air-Conditioning System And Applications

Vapour compression cycle - compressors - evaporators - Refrigerant control devices - electric motors - Starters - Air handling units - Cooling towers.

Window type and packaged air-conditioners - chilled water plant - fan coil systems - water piping - cooling load - Airconditioning systems for different types of buildings - Protection against fire to be caused by A.C.ystems.

SUGGESTED READINGS :

1. Robert D.Finch, Introduction to Acoustics, Prentice Hall of India Private Limited, New Dehli, 2008.
2. MARK J. HAMMER MARK J. HAMMER, JR, Water and Wastewater Technology, PHI Learning Private Limited, New Delhi. 2009.
3. M.N.Rao, A.K.Datta, Waste Water Treatment, Oxford & IBH PUBLISHING CO. PVT. LTD,New Delhi,2007.
4. S.P.Arora,S.P.Bindra, Building Construction, dhanpat rai publication, New Delhi. 2009.
5. Section 11. Sanitary Appliances and Water Fittings. IS Code- SP: 21-1983.
6. Hand book on Water Supply and Drainage with Special emphasis on plumbing IS Code – SP : 35 – 1987.
7. Part of Section 1: Water Supply. IS CODE – SP : 7 – 1992.
8. IS Code of Basis Requirements for Water supply drainage and sanitation. IS Code – IS 1172: 1983.
9. Code of Practice for Water Supply in Buildings. IS Code – IS 2065: 1983.
10. William H.Severns and Julian R.Fellows, Airconditioning and Refrigeration, John Wiley and Sons, London, 1988.
11. D.J.Groomet- Noise, Building and People -Pergumon Press - 1977.

16ART402	CONTEMPORARY ARCHITECTURE I										SEMESTER-IV	
Marks	Internal	40	External				60	Total	100	Exam Hours		3
Instruction Hours /week		L	3	T	0	P/S	0	Credits				3

COURSE OBJECTIVE:

- To give exposure to the critiques of modern architecture.
- To understand about influence of new materials in modern architecture
- To study in detail the different postmodern directions in architecture
- To study about the influence of industrial revolution in Architecture
- To understand about the Modern era of Architecture
- To understand the evolution of Western Architecture

COURSE OUTCOME:

1. Student will understand the spread and varied later directions of modern architecture across the world.
2. Student will understand the architectural production from the 1960s as driven by large scale changes across the world.
3. Student will become familiar with contemporary forces and directions in architecture across the world.
4. Student will understand the basis of Architecture revolutuons and its changes in every decade
5. Student will understand the Ideologies of various Arhitects& their Works
6. Student will impart this Knowledge in his Arhitectural Design

UNIT-I

EVOLUTION OF MODERN ARCHITECTURE & INFLUENCE OF NEW MATERIALS

Reasons for the evolution of Modern Architecture, origins-Neo ClassicismIndustrial revolution and its impact – Emergence of new building typologies, New Materials and Technologies- steel, glass and concrete

UNIT- 2

REVIEWING INDUSTRIALISATION

Arts & Crafts movement in Europe and America; Art nouveau, and the works of Horta, Guimard, Gaudi and Macintosh; Organic Architecture -Early works of F.L.Wright. Chicago school; Art deco Architecture in Europe and America.

UNIT- 3

EVOLUTION OF MODERNISM, POST MODERNISM AND CRITIQUE

Viennese secession, Adolph Loos and debates on ornamentation ; Futurism, Expressionism works ofMendelssohn&Taut, Cubism, Constructivism, De stijl and their influence on Architecture. Bauhaus school &Walter gropius, Modernism and the International style, Brutalism, Writings of Venturi - Jane Jacobus - Aldo Rossi - Christopher Alexander.

UNIT- 4

CONTEMPORARY ARCHITECTS AND THEIR WORKS- PART1

Modernism-Ideas and works of Richard Meier (Smith House, Connecticut and Getty Centre, Brent Wood, LosAngeles), Charles Moore (Architect's Own House at Orinda and Piazza d'Italia, New Orleans), Bernard Tschumi (Kyoto Railway Station Project and Parc de la Villete, Paris), Frank Gehry (AeroSpace Museum, Santa Monica and Guggenheim Museum, Bilbao), Norman Foster (Hong Kong Shanghai Bank and Renault Distribution Centre, Swindon, England), tadaoando,….etc

UNIT-V

CONTEMPORARY ARCHITECTS AND THEIR WORKS- PART2

Zaha Hadid (The Peak Club, HongKong and IBA Housing Block 2, West Berlin), Daniel Leibskind(Jewish Museum, Berlin and World Trade Centre, New York), Rem Koolhas(Dance Theatre, The Hague and Netherlands Sports Museum), Santiago Calatrava(Lyon- Satolas Railway Station and Olympic Stadium at Athens), Renzo Piano(Pompidou Centre, Paris and Menil Museum, Houston) - Deconstructivist Theory – Parametric – Criticlal regionalism.

SUGGESTED READINGS :

1. Charles Jencks, The Language of Post-Modern Architecture, 1984.
2. D.Ghirardo, Architecture After Modernism, Thames and Hudson, London, 1990.
3. Kenneth Frampton, Modern Architecture: A Critical History, Thames and Hudson, London, 1994.
4. Miki Desai et.al, Architecture and Independence, Oxford University Press, New Delhi, 1998.
5. Peter Szalapaj, Contemporary Architecture ,Architectural Press- An imprint Elsevier, Burlington, 2008.
6. Catherine Slessor Contemporary Architecture Images Publishers Australia. 2002.
7. A Global History on Architecture – Francis D.K. Ching

<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>3</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="4">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

- To get introduced to basic structural members in timber and steel.
- To give knowledge to design different timber components in a building.
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of rivet joints
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of welded joints
- To enable the design of tension (beams) and compression (columns) steel members in a building under different conditions.
- To Understand the concept of Structural system of Steel & Timber

COURSE OUTCOME:

1. Student will understand about Various Timber sections
2. Student will understand about the design timber beams and columns by applying the code provisions.
3. Student will understand about the Steel Sections and its usage.
4. Student will be able to design steel joints for maximum efficiency and strength.
5. Student will be able to design tension and compression members for different conditions by applying the code provisions.
6. Student will be able to design different types of laterally unsupported & supported beams for different conditions.

UNIT-I

TIMBER – BEAMS

Grading of Timber – Permissible Stresses – Design of timber beams – Madras terrace roof.

UNIT-II

STEEL SECTIONS AND WELDED JOINTS

Properties of rolled steel sections, Types of welded joints – Advantages and disadvantages – Design of Fillet welds (Excluding eccentric connections).

UNIT-III

TENSION MEMBERS

Introduction – Net sectional area – permissible stresses. Design of Axially loaded Tension member

UNIT-IV

COMPRESSION MEMBERS

Introduction – various sections – built up section – Design of columns (excluding Lacing, Battening and other connections.)

UNIT-V

STEEL BEAMS

Allowable stresses, General specifications, Design of laterally supported beams.

SUGGESTED READINGS :

1. Ramachandra S., Design of Steel Structures, Standard Book House, Delhi, 1984.
2. A.S.Arya, Structural Design in Steel, Masonry and Timber, Nemchand and Bros, Roorkee, 1971.
3. National Building Code of India, 1983, Part VI, Structural Design.
4. Gurucharan Singh, Design of Steel Structures, Standard Publishers, New Delhi, 1982.
5. Negi "Design of steel Structures" - Tata Mcgraw Hill Book Company, New Delhi 1997.
6. Elias G.Abu-Saba Design of Steel Structures CBC Publishers New Delhi. 1997.
7. IS Code of practice for BIS 800:2007 IS, Code of practice for Timber design

16ARP411	SURVEYING&SITE PLANNING									SEMESTER-IV	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4			Credits	2

COURSE OBJECTIVE:

- To understand the principles of surveying, classification, types of surveys
- To understand the applications of surveying
- Know about techniques of surveying.
- Understand the concepts of levelling and its applications.
- Get exposed to total station surveying, GIS and GPS.
- To understand the site, its premises and various factors involved

COURSE OUTCOME:

1. Student will understand the various systems of Surveying
2. Student understand the concept of levelling and its applications on site for various types of buildings.
3. Student will understand about the larger survey context using the total station and GIS mapping
4. Student will understand about the Site Inventory and Site analysis
5. Student will learn aout Hill survey and method of Contouring
6. Student will learn about the item planning principles, methods and its applications in architectural design.

UNIT-I

SURVEYING

Definition, classification, principles of surveying, chain surveying and compass surveying.

UNIT-II

PLANE TABLE SURVEY

Plane table and accessories, methods of plane table survey, Radiation, Intersection, traversing and resection.

UNIT3

LEVELING.

Definition, classification, booking and reduction of levels.

Theodolite – study of instruments, definition of different terms, temporary adjustments, uses, measuring horizontal and vertical angles, method of repletion, extension lines.

UNIT-IV

CONTOURING

Characteristics of contours, direct and indirect methods of contouring, interpolation, uses of contours, setting out works such as centre lines of a building, grade for sewer. Earth work calculation , area and volume.

UNIT-V

TOTAL STATION & GIS

Introduction and Characteristics – Handling and setting up a Total Station – Angle and Distance Measurement – Traversing – Introduction to GIS – Concept of GIS Mapping

SUGGESTED READINGS :

</table>

COURSE OBJECTIVE:

- To create understanding of human built environment as a holistic, living entity from macro to micro scales, and shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- Understanding the Design Programme and the Components of the Design Problem&Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media&Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings
- To enable a comprehensive **study of rural settlement** and architecture in order to understand them as exemplar of collective design that evolved through various parameters.

COURSE OUTCOME:

1. Student will be able collect data, assimilate and integrate knowledge in a holistic manner.
2. Student will learn about the Sensitivity towards the nature and values of unselfconscious and collective design aswellas the interconnectedness of human society and environment
3. Student will learn about traditional techniques and concepts of Architecture.
4. Student will learn about the evolution and transformation of the rural settlements according to the time and cultural context.
5. Student will understand the essence of rural planning
6. Student will develop the skill of design process for the Rural settlements

.

CONTENT:

UNIT-I to 5:

RURAL PROJECT

Problems related to Rural Housing - Visits to selected village – based on Rural surveys on socio-economic, physical, housing and visual surveys, etc. to study existing conditions - analysis of survey data - preparation of report and presentation in a seminar - preparation of design brief solutions for housing and community facilities.

SUGGESTED READINGS :

1. De Chiara and Callender, Time Saver Standard for Building Types, McGraw Hill Co., 2nd Edition, 1980.
2. Edward D.Mills, Planning - The Architects Handbook - 10th Edition, British Library Cataloguing in Publication Data, 1985.
3. Wakita Linde, The Professional Practice of Architectural Working, Drawing John Wiley & Sons, 1984.
4. Andrew Alpern, Handbook of Speciality Elements in Architecture, McGraw Hill Book Co., 1982.
5. Julius Panero& Martin Zelnik, Human Dimension and Interior Space, Whitney Library of Design Publication, 1979.
6. Neufert Architect's Data, Rudolf Herg, Crosby Lockwood and Sons Ltd., 1970.

16ARS422	BUILDING MATERIALS AND CONSTRUCTION -IV										SEMESTER-IV	
Marks	**Internal**	**80**	**External**				**120**	**Total**	**200**		**Exam Hours**	**6**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	5				**Credits**	**4**

COURSE OBJECTIVE:

- To give an introduction to metals as material for building construction.
- To give knowledge about the principles, methods of construction and applications of metals for structural and non-structural building components.
- To provide familiarity with market forms of metals and finishes for them.
- To gain Knowledge about Steel floor & Steel Staircase
- To understand about Door, windows & partitions
- To provide familiarity with market forms of metals and finishes for them.

COURSE OUTCOME:

1. Knowledge of properties of ferrous and non ferrous metals as materials for buildings.
2. An understanding of possibilities of steel as an important building construction material.
3. Ability to design and detail structural and non structuralcomponents of simple buildingsusingmetals.
4. Ability to use metal innovatively in building projects.
5. Student will gain Knowledge about Steel Floors & Staircase
6. Student will understand about the details of Door, windows & Partitions by detailed Drawings.

UNIT-I

FERROUS METALS

Brief study on manufacture, properties and uses of cast iron, wrought iron, pig iron and steel - anticorrosive measures for steel - mechanical and heat treatment of steel - market forms of steel - structural steel, stainless steel, steel alloys - properties and uses - current developments.

UNIT-II

STEEL CONSTRUCTION

Structural steel sections - types of connections in steel - steel in foundations, columns and beams - different types of steel roof trusses including northlight truss - space frames - materials for roof covering. Steel staircases and handrails, balusters..

UNIT-III

STEEEL STAIRS, DOORS, WINDOWS

Steel doors and windows – safety doors, dock doors, cold storage doors, revolving doors - collapsible gates - rolling shutters. Steel in furniture and other interior uses

UNIT-IV

NON FERROUS METALS

Aluminum and Aluminum Alloys - brief study on manufacture, properties and uses -Aluminum products - extrusions, foils, castings, sheets, etc. - brief study of other non-ferrous metals like copper, bronze brass, tin and lead, properties and uses - current developments.

UNIT-V

CONSTRUCTION USING NON-FERROUS METALS

Aluminum doors - revolving, sliding, pivoted. Aluminum windows and ventilators - sliding, fixed, pivoted, top hung, bottom hung, louvered, fixed. Aluminum partitions, false ceiling, Aluminium roofing -northlight glazing bar. Use of other nonferrous metals like copper, bronze, brass, etc. in architectural construction.

SUGGESTED READINGS :

1. S.C.Rangwala, Engineering Materials, Charotar Publishing House, India, Recent Edition
2. B.C.Punmia, Building Construction, Laxmi Publications Pvt. Ltd., New Delhi, recent edition
3. Arthur Lyons - Materials for Architects and Builders - An Introduction - Arnold, London, 1997.
4. Harold B.Olin, Construction Principles Materials and Methods, The Institute of Financial Education, Chicago, 1980.
5. W.B.Mckay Building Construction, Longmans, U.K. 1981.
6. Building Construction Illustrated – Francis D.K. Ching
7. Barry – Buildin Construction

16ARS423	**CLIMATE** RESPONSIVE ARCHITECTURE II										SEMESTER-IV	
Marks	**Internal**	**60**	**External**				**90**	**Total**	**150**		**Exam Hours**	**6**
Instruction Hours /week		**L**	1	**T**	0	**P/S**	4				**Credits**	**3**

COURSE OBJECTIVE:

- To study about climatic factors and Passive design concepts
- To understand about the of external and internal factors of Climate for a certain location
- To understand deeply about the Microclimatic influences in a building
- To understand about the Solar geometry and its impacts in a building
- To understand the Air movement & its principles and Applications for humanthermal comfort
- To understand about the Classification of climate and Design strategies recommendations for each climatic Zone

COURSE OUTCOME:

1. Student will understand the whole climatic scenario of the world
2. Student will learn about the Solar geometry, sun path its irradiation effects and control
3. Student will learn about heat transfer in buildings due to materials and design implications.
4. Student will understand about the Various ventilation principles and techniques for good ventilation
5. Student will understand hybrid design strategies and its design applications for different climatic zones
6. Student will develop the skill of doing a climatic design for any building with optimum recommendations.

UNIT-I

INTRODUCTION TO PASSIVE DESIGN AND MICROCLIMATE

Over view of the different Passive design Techniques & Climate responsive design features adopted in the traditional / vernacular architecture of various places in different climate zones – Control of Micro-climate around the building by settlement pattern, built form – open space relationship & façade articulation & appropriate use of building materials in historic buildings

Unit -2

Microclimate

Land form & orientation – Vegetation & Pattern – Water Bodies – Open Space & Built form - Plan form & Elements – Roof form – Fenestration pattern & Configuration

UNIT-III

SOLAR ENERGY & BUILDING

Solar geometry and built form – Various techniques of shading to reduce heat gain in tropical climate –
Various methods of maximizing exposure to solar radiation in cold & temperature climate. Heating & cooling loads – Energy estimates - Energy conservation – Efficient day lighting – Solar Water heatingsystem. Exercises on heating and cooling load calculations in buildings.

UNIT-IV

PASSIVE DESIGN STARTEGIES

Heating: General principles – Direct gain systems - Glazed walls, Bay windows, Attached sun spaces etc. Indirect gain systems – Trombe wall, Water wall, Solar Chimney, Transwall, Roof pond, Roof radiation trap, Solarium etc - Isolated gain systems – Natural convective loop etc. Cooling: General principles – Evaporative cooling, Nocturnal radiation cooling, Passive Dessicant cooling, induced ventilation, earth sheltering, Berming, Wind Towers, earth – Air tunnels, Curved Roofs & Air Vents, Insulation, Vary Thermal wall etc.

UNIT-V

INTRODUCTION TO SUSTAINABILITY IN ARCHITECTURE

Sustainability – Design Methods – Resource Optimization – Biomimetics – Green Architecture - Green Building Rating Systems – Case studies of selected sustainable buildings.– Building envelope & finishes. Choosing between Active-Passive-Hybrid Design Systems-Social / economy/ Environment

SUGGESTED READINGS :

1. MiliMajunder, Teri – Energy – Efficient Bldg in India – Thomson Press , New Delhi – 2001
2. Arvind Krishnan & Others – Climate Responsive Architecture, Tata Mcgraw –Hill New Delhi 2001.
3. Ralph M .Lebens – Passive Solar Architecture in Europe – 2, Architecture Press, London 1983.
4. Charles. J. Kibert, 'Sustainable Construction' John Wiley and sons Inc, USA.
5. N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi.
6. Manual of tropical housing- O.H. Koinesberger
7. Sun wind and light- Mark Dekay , G. Z. Brown
8. Man Climate and architecture –Baruch Givoni
9. Design with climate -

SEMESTER 5

16ART501	**CONTEMPORARY ARCHITECTURE-II**							**SEMESTER-V**
Marks	**Internal**	**40**	**External**	**60**	**Total**	**100**	**Exam Hours**	**3**
Instruction Hours /week	**L**	3	**T**	0	**P/S**	0	**Credits**	**3**

COURSE OBJECTIVE:

- To provide the student an in-depth knowledge of modern design philosophies in the evolution of innovative architectural forms and designs in the Indian context.
- To give an outline of architectural approaches across the world from late 20th century.
- To study in detail the different post-modern directions in architecture. +
- To provide information about the Alternate Practice
- To understand about the evolution of Architectural design of pre – independence
- To understand the Recent trends in Architecture

COURSE OUTCOME:

1. Student will learn about the spread and varied later directions of modern architecture across the world.
2. Student will become familiar with contemporary forces and directions in architecture across the world and in India
3. Student will understand about the post-independence architecture in India contemporaneous with the rest of the world, along with its own particular influences.
4. Student will understand abou the Post- independence revolution of design in India
5. Student will know about the Alternate practices
6. Student will gain knowledge in recent trends of Architecture & Design

UNIT-I

ALTERNATIVE PRACTICE

Ideas and Works of Fathy - Baker - Ando -Soleri – Bawa – Buckminister fuller
Architects of Auroville .

UNIT-II

PRE – INDEPENDENT ARCHITECTURE IN INDIA

Monumental buildings of Early colonial period – Examples – St.Pauls Cathedral, Calcatta& Bombay Townhall –Architectural character of Indo-Saracenic and Classical revival –University of Madras Senate House & Victoria Memorial hall, Calcatta – Later Colonial period – Contribution of Edwin Lutyens & Herbert Baker to the lay-out and Architecture of New Delhi – Rashtrapathi Bhavan & Parliament House.

UNIT-III

POST-INDEPENDENT ARCHITECTURE IN INDIA

Post-Independence Architecture in India – Works of Corbusier in Chandigarh and Ahmedabad (Legislative Assembly Complex including High Court, Legislative assembly and Secretariat, Chandigarh and Mill Owners' Building, Ahmadabad) Louis Kahn's contributions – the IIM, Ahmedabad, Koenigsberger and the Bhubaneswar experiment.

UNIT-IV

CONTEMPORARY INDIAN ARCHITECTS AND THEIR WORKS

Ideas and works of BV Doshi (Institute of Indology Ahmedabad, IIM-Bangalore and Gufa, Ahmedabad), Charles Correa (RamaKrishna House, Ahmedabad, KanchenJunga Apartments, Mumbai and MRF Headquarters, Chennai), Raj Rewal (Pragati Maidan, New Delhi and Asian Games Village, New Delhi), Achyut Kanvinde(IIT, Kanpur and Nehru Science Centre, Mumbai), Uttam Jain(Lecture Theatres, Jodhpur and Engineering College, Kota), Lauire Baker(Centre for Development Studies, Thiruvananthapuram and St. John Cathedral at Tiruvalla) and Anant Raje(IIFM, Bhopal and Management Development Centre, IIM-Ahmedabad)

UNIT-V

RECENT TRENDS IN INDIAN ARCHITECTURE

Recent developments in architecture of India – works of Selected architects – Current architecture practice.
Sanjay Mohe, Christopher benninger, Hafeez contractor, Chitra viswanath,

SUGGESTED READINGS :

1. Morgan, Ann Lee & Taylor Colin, 1987, Contemporary Architecture, 2nd Edition, St.James Press
2. Sarabjit Bahga. S, Modern Architecture in India,
3. Ar.Pramod Beri, 2009, Form follows feeling, Anjali Prakashan, New Delhi

16ART502	DESIGN OF STRUCTURES-II										SEMESTER-V
Marks	**Internal**	**40**	**External**				**60**	**Total**	**100**	**Exam Hours**	**3**
Instruction Hours /week		**L**	3	**T**	0	**P/S**	0			**Credits**	**3**

COURSE OBJECTIVE:

- To introduce the material properties of reinforced cement concrete
- To enable students to carry out limit state method of design of flat slabs, beams, columns and foundation using BIS codes and hand books.
- To introduce the concepts in limit state design
- To enable use of limit state design for the analysis and design of columns.
- To enable the learning of design of structural elements like footings, retaining walls and masonry walls.
- To enable use of limit state design for design of staircases

COURSE OUTCOME:

1. Students will get introduced to the material properties of steel and concrete
2. An understanding of the different concepts in designing footings and columns and masonry walls using LSD methods.
3. An understanding of theconcepts in limit state design
4. An understanding of how to use of limit state design for the analysis and design of columns
5. An understanding ofdesign of structural elements like footings, retaining walls and masonry walls
6. An understanding of how to use limit state design for design of staircases

UNIT-I

UNIT-I

PROPERTIES OF STEEL AND CONCRETE

Structural properties of concrete - Grades and Strength of Concrete - durability - code provisions and design requirements of steel and concrete.

UNIT-II

LIMIT STATE DESIGN - INTRODUCTION

Various limit stages - characteristic load and characteristic strength of materials - partial safety factor - stress-strain relationship of steel and concrete - safety and serviceability requirements.

UNIT-III

LIMIT STATE DESIGN OF BEAMS & SLABS

Analysis and Design of rectangular sections for bending - singly and doubly reinforced. Design of one way and two way slabs using IS Code co-efficients for various edge conditions.

UNIT-IV

LIMIT STATE DESIGN OF COLUMNS

Types of columns – Analysis and Design of Short Columns for Axial, Uniaxial and biaxial bending – Use of Design aids.

UNIT-V

LIMIT STATE DESIGN OF STAIRCASE

Types of staircases - Design of doglegged staircase.

SUGGESTED READINGS :

1. P.Dayaratnam, Design of Reinforced Concrete Structures, Oxford and IBH Publishing Co., 1983.
2. N.C.Sinha and S.K.Roy, Fundamentals of Reinforced Concrete, S.Chand& Co., New Delhi, 1983.
3. S.N. Sinha,' Reinforced Concrete Design ' Tata McGraw Hill, New Delhi 1998.
4. Dr.B.C.Punmiya, Reinforced Concrete Structures, Standard Laxmi publication , Delhi, 1994.
5. Chu-Kia Wang, Charles G.Salmon, Reinforced Concrete Design, Addison Wesley Educational Publishers, New Delhi,1998.
6. SS Mahadevan , Reinforced Concrete Design, The Science & Technology Book Publishers, Chennai. 2007.

S.Unnikrishna Pillai, Devdas Menon, Reinforced Concrete Design, Tata McGraw-Hill Publishing Company Ltd, New Delhi. 2008.

16ARS521	ARCHITECTURAL DESIGN -V										SEMESTER-V	
Marks	**Internal**	**160**	**External**				**240**	**Total**	**400**	**Exam Hours**		**6**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	10			**Credits**		**7**

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Mixed-use Architectural Design.
6. Student will be able to Communicate effectively through the design ideas

TOPICS

Small complexes - multi planning circulation analysis - massing problems involving building technology - Design and detailing for movement of physically handicapped and elderly persons within and around buildings. examples, shopping centre (Commercial) , apartments (residential)Nursing home (institutional) home for aged. Construction and manipulation of three dimensional building data bases, Rendering 3D images. Presentation techniques, preparing scaled models using different materials.

Design Process to be approached stage wise through Architectural Programming. Site Planning fundamentals as relevant to small projects to be introduced in the design.

SUGGESTED READINGS :

1. Edward D.Mills, Planning, 4 volumes, Newnes, Butterworths, London, 1976.
2. E and O.E. Planning. Lliffee Books Ltd., London, 1973.
3. National Building Code IST
4. De Chiara Callender, Time Saver Standard for Building Types, McGraw Hills Co., 1973.

16ARS522	**BUILDING MATERIALS AND CONSTRUCTION -V**							**SEMESTER-V**
Marks	**Internal**	**80**	**External**	**120**	**Total**	**200**	**Exam Hours**	**6**
Instruction Hours /week	**L**	2	**T**	0	**P/S**	5	**Credits**	**4**

COURSE OBJECTIVE:

- To give an introduction to glass as a material in architectural construction
- To give an introduction about plastic
- To give an introduction about composite materials
- To understand about the design of timber furniture's, paneling, partition etc.
- To give an introduction to cladding, flooring and painting in building construction.
- To provide familiarity with advanced building construction techniques (shell structures) and materials as well as design with them.

COURSE OUTCOME:

1. Student will learn about the Composition, manufacturing method, treatment, properties and uses of glass
2. Student will learn about Plastic building products
3. Student will learn about Timber floors , build in furnitures , interior details
4. Student will gain Knowledge of glass, plastics, paints and finishes in building construction.
5. Student will become familiar with Secondary Building products – windows, doors, sky light domes
6. Student will gain knowledge about Smart Materials: Characteristics, classification, properties, energy behaviour, intelligent environments.

UNIT I

GLASS

Composition of glass - brief study on manufacture, treatment, properties and uses of glass - special types of glass, sheet glass, plate glass, safety glass, tint coated glass - Glass blocks - properties and applications in the building industry - current developments

UNIT II

PLASTICS, COMPOSITE MATERIALS

Primary Plastic building products – walls, partitions and roofs – design and construction details

Secondary Building products – windows, doors, sky light domes – handrail - design and construction details

UNIT III

TIMBER, ALLIED PRODUCTS

Timber floors , build in furnitures , interior details- wall paneling,false ceiling –partition

UNIT IV

CLADDING,FALSE CEILING, FLOORING AND PAINTING

Stone, ACP, wood, Glass, curtain wall, Structural glazing,(reflected ceiling plan), Flooring and painting

UNIT V

INTRODUCTION TO CURRENT DEVELOPMENTS IN BUILDING INDUSTRY

Smart Materials: Characteristics, classification, properties, energy behaviour, intelligent environments.
Recycled and ecological materials and energy saving materials: card board, earthsheltered structures, recycled plastics, recycled tyres, paper-crete
Exercises of the above through case studies and drawings

SUGGESTED READINGS :

1. S.C.Rangwala, Engineering Materials, Charotar Publishing House, India, 1997.

2. B.C.Punmia, Building Construction, Laxmi Publications Pvt. Ltd., New Delhi, 1993.

3. Arthur Lyons - Materials for Architects and Builders - An Introduction - Arnold, London, 1997.

4 Harold B.Olin, Construction Principles Materials and Methods, The Institute of Financial Education, Chicago, 1980.

5. W.B.Mckay Building Construction, Longmans, U.K. 1981.

16ARS523	BUILDING SERVICES -III									SEMESTER-V	
Marks	**Internal**	**80**	**External**			**120**	**Total**	**200**		**Exam Hours**	**6**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	5			**Credits**	**4**

COURSE OBJECTIVE:

- To inform about the principles and laws of Water distribution systems in buildings.
- To inform about the principles and laws of sewerage systems in buildings.
- To inform about the principles and laws of plumbing systems
- To inform about the electrical layout for residential Building
- To understand about compressors, evaporators and refrigerant control devices
- To Inform about the integration of service with the Architectural Design

COURSE OUTCOME:

1. Student will gain Knowledge of design of Water distribution systems in buildings
2. Student will learn and understand about the sewerage systems in buildings.
3. Student will learn and understand about the plumbing systems
4. Student will understand the electrical layout for residential Building
5. Student will gain basic knowledge about compressors, evaporators and refrigerant control devices
6. Student will understand the Applications of building Services in advanced level by detailed Drawings

UNIT-I To 5

-Water Distribution – external layout – internal layout

- Sewage and drainage – external layout – internal layout

- Electrical systems- external layout and internal layout

- HVAC systems- external and Internal Layout

- Firefighting and BMS – External Layout and Internal Layout

Integrated service drawing such as site service layout, reflected ceiling plan, ceiling profiles etc. containing all above services may be prepared as part of architectural design project.

SUGGESTED READINGS :

1. William H.Severns and Julian R.Fellows, Airconditioning and Refrigeration, John Wiley and Sons, London, 1988.
2. Robert D.Finch, Introduction to Acoustics, Prentice Hall of India Private Limited, New Dehli, 2008.
3. MARK J. HAMMER MARK J. HAMMER, JR, Water and Wastewater Technology, PHI Learning Private Limited, New Delhi. 2009.
4. M.N.Rao, A.K.Datta, Waste Water Treatment, Oxford & IBH PUBLISHING CO. PVT. LTD,New Delhi,2007.
5. Section 11. Sanitary Appliances and Water Fittings. IS Code- SP: 21-1983.
6. Hand book on Water Supply and Drainage with Special emphasis on plumbing IS Code – SP: 35 – 1987.
7. Part of Section 1: Water Supply. IS CODE – SP: 7 – 1992?
8. IS Code of Basis Requirements for Water supply drainage and sanitation. IS Code – IS 1172: 1983.
9. Code of Practice for Water Supply in Buildings. IS Code – IS 2065: 1983.
10. S.P Arora ,S.P.Bindra – bulding construction , dhanpat rai publication , newdelhi 2009

16ARES531A	PHYSICAL PLANNING									SEMESTER-V	
Marks	Internal	40	External			60	Total	100	Exam Hours		6
Instruction Hours /week		L	0	T	0	P/S	4		Credits		2

COURSE OBJECTIVE:
- To introduce the vocabulary, elements and classification of human settlements.
- To learn about the planning theories
- To give exposure to planning concepts at different scales of settlements.
- To understand about the planning aspects by means of Survey
- To gain understanding about the land use planning
- To give an understanding of planning addressing current issues.

COURSE OUTCOME:
1. Student will understand morphology of settlements and their generating forces and characteristics.
2. Student will understand the role of planning processes in making positive changes to settlements.
3. Student will gain knowledge and awareness of planning interventions with respect to the current world.
4. Student will gain understanding about the city evolution process due to planning
5. Student will gain Knowledge about existing settlements by Survey studies
6. Student will gain vast knowledge about Landsue patterns and planning theories

UNIT-I
HUMAN SETTLEMENTS AND PLANNING THEORIES
Origins, evolution and growth of settlements. Relation between urban and rural settlements
Urbanisation, Industrialisation and urban growth, definitions and inter relationship. Trends in urbanization in India since Independence. Growth of metropolitan cities and their management.

UNIT-II
PLANNING THEORIES
Enunciated by Ebenezer Howard, Patrick Geddes, Soria Y Mata, Doxiadis, Le-Corbusier, Clarence Stein, Clarence Arthur perry, Hilberseimer.

UNIT-III
EVOLUTION OF CITY
Evolution of city and Components of a city - Central business district of a city, Special economic zone, coastal regulatory zone, fringe area.

UNIT-IV
LANDUSE PLANNING
Land use classification for cities, analysis of land uses in Indian cities. Demography pattern, social & physical infrastructure, environmental and pollution, traffic and road network.

UNIT-V
PLANNING TECHNIQUES
Study and analysis of existing settlements, methodology of conducting diagnostic surveys and studies, land use survey, socio economic survey, traffic surveys and presentation of data

SUGGESTED READINGS :

1. Gallion and Eisner, The Urban Pattern: City Planning and Design, Van Nostrand, 5th Edition, 1986
2. Chapin,UrbanLanduse Planning, University of Illinois Press, Chicago, 1995.

16ARES531B	**STRUCTURES & ARCHITECTURE**							**SEMESTER-V**
Marks	**Internal**	**40**	**External**	**60**	**Total**	**100**	**Exam Hours**	**6**
Instruction Hours /week	**L**	0	**T**	0	**P/S**	4	**Credits**	**2**

COURSE OBJECTIVE:

- To learn about the structural design of the pre industrial era
- To learn about the historic evolution of structural design
- To learn about the structural design of the postindustrial era
- To learn about the large span structures of the contemporary period
- To learn about the prototype structures
- To learn the advanced level structures in airport, railway station

COURSE OUTCOME:

1. An understanding of the Structural design of the Pre industrial period
2. An understanding of evolution of various structures and design changes
3. An understanding of the post-industrial structural design
4. An understanding of the structural design through case studies
5. An understanding of the large-scale structural design
6. An understanding ofthe advanced level structures in Airport, railway station

UNIT-I

HISTORY OF STRUCTURAL DESIGN IN THE PRE INDUSTRIAL ERA

Development of monolithic and rock cut structures- trabeated construction-arcuate constructionvaults And flying buttresses- tents and master structures and bridges through ancient and medieval history.

UNIT-II

HISTORY OF STRUCTURAL DESIGN IN THE POST INDUSTRIAL PERIOD

Post Industrial modular construction of large span and suspension structures in steel and concrete-projects of Pier Nuigi Nervi, Maillart, Candella, Buckminster Fuller and Eero Saarinen.

UNIT-III

CONTEMPORARY STRUCTURAL EXPRESSION THROUGH CASE STUDY

The select case studies could include KCR Terminal at Hung Hom, Hong Kong, B3 Offices in Stockley Park , Sainsbury Centre for Visual Art, Renault Centre and Swindon UK by Normal Foster and Standsted Airport Terminal, London, UK by Fosters/Arup British Pavilion EXPO 1992, Seville, Spain and Waterloo International Terminal by Nicholas Grimshaw

UNIT-IV

CONTEMPORARY STRUCTURAL EXPRESSION THROUGH CASE STUDY – II

The select case studies could include Inmos Microchip Factory, Centre Commercial St. Herbtain, PA Technology, Princeton and Fleetguard, Quimper UK by Richard Rogers Athens Olympic Stadium and Village, Bridges and Public Bus Stop in St. Gallen , Railway Station, Lyon, France and Stadelhofen Railway station, Zurich Schweiz by Santiago Calatrava Kansai International Airport, UNESCO Workshop, the Jean-Marie Tjibaou Cultural Center, Menil Museum, Thomson Optronics Factory, IBM Traveling Exhibition Pavilion, Columbus International Exposition, Genoa Italy and Lowara Officers, Montecchio Maggiore Italia by Reno Piano Building Workshop

UNIT 5

SEMINAR

Seminar to present a study of architectural form and structural expression through select cases which will aid understanding of structural philosophy and analysis, building envelope and services and construction sequence.

SUGGESTED READINGS :

1. “Paper Arch” and Japan Pavilion at Expo 2000 in Hannover by Shigeru Ban
2. Greene King Draught Beer Dept and Schlumberger Cambridge Research Centre, UK by Michael Hopkins
3. Design Center, Linz, Austria and Two Family House in Pullach Thomas Herzog
4. King Abdul Aziz International Airport, Haj Terminal by SOM
5. Pavilion of the Future, Expo 92, Seville by Martorell, Bohigas& Mackay (MBM)
6. Daring Harbour Expo Center, Sydney Australia by P. COX
7. Olympic Archery Building by EnricMiralle& Carme Pinos
8. Eagle Rock House by Ian Ritchie
9. Le Grande Arche de La Defense by J O Spreckelsen

16ARES531C	SUSTAINABLE ARCHITECTURE							SEMESTER-V
Marks	Internal	40	External	60	Total	100	Exam Hours	6
Instruction Hours /week	L	0	T	0	P/S	4	Credits	2

COURSE OBJECTIVE:

- To understand the concept of sustainability
- To understand the impacts of environment today and to follow the steps to sustainability
- To work towards sustainable development and to understand low impact construction practices,
- To understand the life cycle costs and alternative energy resources.
- To familiarize the students with the various rating systems for building practices with case studies.
- Through case studies to understand the concept of sustainable communities and the economic and social dimensions.

COURSE OUTCOME:

1. Student will understand about climate change and the need for the sustainable buildings
2. Student will understand the energy-based concepts and resource optimisation
3. Student will understand about the environmental impacts of today and Follow the Susainable approach
4. Student will gain ability to design energy efficient buildings
5. Student will understand the green concepts and apply them in every aspect and approach towards sustainable architecture
6. Student will understand about the building simulation for energy analysis and for various design solutions

UNIT-I

Concept of Sustainability – Carrying capacity, sustainable development – Bruntland report – Ethics and Visions of sustainability.

UNIT-II

Eco system and food chain, natural cycles – Ecological foot print – Climate change and Sustainability.

UNIT-III

Selection of materials Eco building materials and construction – Biomimicry, Low impact construction, and recyclable products and embodied energy. Life cycle analysis. Energy sources – Renewable and non-renewable energy.

UNIT-IV

Green building design – Rating system –LEED, GRIHA,etc., with case Studies.

UNIT-V

Urban ecology, social and economic dimensions of sustainability, urban heat Island effects, sustainable communities – Case studies.

SUGGESTED READINGS:

1. Sustainable Architecture and Urbanism: Concepts, Technologies and examples by Gauzin- Muller(D) – Birkhauser 2002.
2. Eco-Tech : Sustainable Architecture and High Technology by Slessor© - Thames and Hudson 1997.
3. Ecodesign : A manual for Ecological Design by Yeang(K) – Wiley Academy 2006.
4. Sustainable Architecture : Low tech houses by Mostaedi (A) – CarlesBroto 2002.
5. HOK guide book to sustainable design by Mendler (S) & Odell (W) – John willey and sons 2000.
6. Environmental brief : Path ways for green design by Hyder(R) – Taylor and Francis 2007.
7. Green Architecture: Design for a sustainable future by Brenda and Vale (R) – Thames and Hudson 1996.
8. Sun , Wind and light – Arch design strategies – Mark Dekay and G.Z.Brown
9. Heating, Cooling ,Lighting – Norbert Lechner
10. Man,Climate and Architecture- Baruch Givoni.
11. Arvind Krishnan & Others – Climate Responsive Architecture, Tata Mcgraw –Hill New Delhi 2001.
12. How Buildings Work- Natural order of Architecture – Edward Allen
13. Charles. J. Kibert, 'Sustainable Construction' John Wiley and sons Inc, USA.
14. N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi.
15. O.H. Koenigsberger and others (1993), Manual of Tropical Housing and Building –Part I - Climate design, Orient Longman, Madras, India.

16ARES531D	**ACOUSTICS**							**SEMESTER-V**
Marks	**Internal**	**40**	**External**	**60**	**Total**	**100**	**Exam Hours**	**6**
Instruction Hours /week	**L**	0	**T**	0	**P/S**	4	**Credits**	**2**

COURSE OBJECTIVE:

- To understand the science behind acoustical design
- To expose students to understand noise control, sound transmission
- To familiarize the students with various building and interior elements for Acoustics
- To familiarize the students with the basic principles of acoustic design
- To familiarize the student with the applications of Acoustical materials
- To familiarize the students with construction methods used in insulation

COURSE OUTCOME:

1. Student will understand the theoretical concepts of acoustics
2. Student will understand the theoretical ideas and concepts sound transmission and absorption
3. Student will be able to understand the basics of noise reduction and design applications of noise control
4. Student will be able to understand the construction methods for noise control
5. Student will understand about basic principles in designing open air theatres, cinemas, broadcasting studios, concert halls, class rooms, lecture halls, schools, residences
6. Student will understand about efficient insulation of fittings and gadjets, machine mounting and insulation of machinery

UNIT-I

FUNDAMENTALS

Sound waves, frequency, intensity, wave length, measure of sound, decibel scale, speech and music frequencies, human ear characteristics - Tone structure.

UNIT-II

SOUND TRANSMISSION AND ABSORPTION

Outdoor noise levels, acceptable indoor noise levels, sonometer, determinate of density of a given building material, absorption co-efficient and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.

UNIT-III

NOISE CONTROL AND SOUND ABSORPTION

Types of noises, transmission of noise, transmission loss, noise control and sound insulation, remedial measures and legislation.

UNIT-IV

CONSTRUCTIONAL MEASURES

Walls/partitions, floors/ceilings, widow/doors, insulating fittings and gadjets, machine mounting and insulation of machinery.

UNIT-V

ACOUSTICS AND BUILDING DESIGN

Site selection, shape, volume, treatment for interior surfaces, basic principles in designing open air theatres, cinemas, broadcasting studios, concert halls, class rooms, lecture halls, schools, residences. Call Centers, Office building and sound reinforcement systems for building types.

SUGGESTED READINGS :

1. Dr.V.Narasimhan - An Introduction to Building Physics - Kabeer Printing Works, Chennai-5 - 1974.
2. D.J.Groomet - Noise, Building and People - Pergumon Press - 1977.
3. Thomas D.Northwood - Architectural Acoustics - Dowden, Hutchinson and Ross Inc. – 1977.
4. B.J.Smith, R.J.Peters, Stephanie Owen - Acoustics and Noise Control - Longman Group Ltd., - New York, USA 1982.
5. David Eagan concepts in Architectural Acoustics.
6. Harold Burris – Meyer and Lewis Good friend, Acoustics for Architects – Reinhold

<table>
<tr><td>16ARES531E</td><td colspan="10">ENVIRONMENTAL PLANNING</td><td colspan="2">SEMESTER-V</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="3">External</td><td>60</td><td>Total</td><td>100</td><td colspan="2">Exam Hours</td><td colspan="2">6</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>0</td><td>T</td><td>0</td><td>P/S</td><td>4</td><td colspan="3">Credits</td><td colspan="2">2</td></tr>
</table>

COURSE OBJECTIVE:

- To understand the impact of man's activities on the environment
- To gain knowledge about the ecology of the whole world
- To gain knowledge about the Environmental impacts
- To understand about the Assessment methods of Environment
- To understand about the Renewable & Non – renewable sources
- To gain knowledge about the Environmental laws

COURSE OUTCOME:

1. Student will understand about the ecosystem and approach towards sustainability
2. Student will gain knowledge about the environmental impacts
3. Student will gain knowledge in
4. Student will be able to understand the current environmental conditions and to work towards a sustainable approach
5. Student will know to integrate the global environmental situation with the policy level decisions
6. Student will become capable of envisioning for the future environmental benefits.

UNIT-I to 5

Man – biosphere – ecosystems – resource identification and its implications for development – soil water,land,plants,animals, renewable energy and non-renewableenergy. preparation and analysis or resource inventories

Environmental Impact Assessment – methodologies and techniques

Environment legislation – significance of law – relationship to development – evolution of planning legislation – National environmental policy

SUGGESTED READINGS :

1.Richard p. Dober – Environmental design – VNR company – Newyork 1969

2.Albert J. Rutledge – Anatomy of a Park – Mc Graw hill book co., USA 1971

3.Harvey m. Rubenstein – A Guide to site and environmental planning , vol 3 – John wiley and sons , Newyork, 1987

16ARE531F	VERNACULAR ARCHITECTURE									SEMESTER-V	
Marks	**Internal**	**40**	**External**				**60**	**Total**	**100**	**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4			**Credits**	**2**

COURSE OBJECTIVE:

- To introduce the study of vernacular architecture as a process and not a product.
- To provide an overview of the various approaches and concepts to the study of vernacular architecture.
- To study the various vernacular architecture forms in the different regions of the country.
- To gain Knowledge about the methods & techniques of Vernacular Architecture
- To gain understanding about the climatic considerations & Design aspects of vernacular Architecture
- To gain understanding about socio- economic aspects of the vernacular & Traditional Architecture

COURSE OUTCOME:

1. Student will understand the Indian vernacular architecture as a process and to also provide an overview of various approaches and concepts towards its study.
2. Student will gain Knowledge of vernacular architectural forms in different regions.
3. Student will gain understanding of the impact of colonial rule on vernacular architecture in India
4. Student will understand about the climatic consideration & Design aspects
5. Student will understand the socio-economic aspects existed in thevarious regions through the study of vernacular Architecture
6. Student will gain knowledge in the vernacular methods of construction and ways to incorporate in this modern architecture.

UNIT-I

INTRODUCTION

Definition and classification of Vernacular architecture – Vernacular architecture as a process – Survey and study of vernacular architecture: methodology- Cultural and contextual responsiveness of vernacular architecture: an overview

UNIT-II

APPROACHES AND CONCEPTS

Different approaches and concepts to the study of vernacular architecture: an over view – Aesthetic, Architectural and anthropological studies in detail

UNIT-III

VERNACULAR ARCHITECTURE OF THE WESTERN NORTHERN REGION OF INDIA

Forms spatial planning, cultural aspects, symbolism, colour, art, materials of construction and construction technique of the vernacular architecture of the following: - Deserts of Kutch and Rajasthan; Havelis of Rajasthan

- Rural and urban Gujarat; wooden mansions (havelis); Havelis of the Bohra Muslims - Geographical regions of Kashmir; house boats

UNIT-IV

VERNACULAR ARCHITECTURE OF SOUTH INDIA

Forms, spatial planning, cultural aspects, symbolism, art, colour, materials of construction and construction technique, proportioning systems, religious beliefs and practices in the vernacular architecture of the following -Kerala: Houses of the Nair &Namboothri community; Koothambalam, Padmanabhapuram palace.

- Tamil Nadu: Houses and palaces of the Chettinad region; Agraharams.

UNIT-V

WESTERN INFLUENCES ON VENRACULAR ARCHITECTURE OF INDIA

Colonial influences on the Tradition Goan house

Evolution of the Bungalow from the traditional bangla, Victoria Villas – Planning principles and materials and methods of construction. Settlement pattern and house typologies in Pondicherry and Cochin.

SUGGESTED READINGS :

1. Paul Oliver, Encyclopedia of Vernacular Architecture of the World, Cambridge University Press, 1997.
2. Amos Rapoport, House, Form & Culture, Prentice Hall Inc. 1969.
3. R W Brunskill: Handbook on Vernacular Architecture

6. G.H.R. Tillotsum – The tradition of Indian Architecture Continuity, Controversy – Change since 1850, Oxford University Press, Delhi, 1989.
7. Carmen Kagal, VISTARA – The Architecture of India, Pub: The Festival of India, 1986.
8. S. Muthiah and others: The Chettiar Heritage; Chettiar Heritage 2000

SEMESTER 6

<table>
<tr><td>16ART601</td><td colspan="9">PROJECT MANAGEMENT</td><td>SEMESTER-VI</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="3">External</td><td>60</td><td>Total</td><td>100</td><td>Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>3</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td></td><td>Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

- To introduce different Project management techniques
- To learn about project control, updating & Monitoring
- To Know about network concepts, network elements and inter - relationships
- To know about PERT network
- To understand about the project Costing
- To enable understanding of management systems for accomplishing the task efficiently in terms of quality, time and cost.

COURSE OUTCOME:

1. Student will understand a project from concept to commissioning,
2. Student will understand the feasibility study & facility programme, design, construction to commissioning.
3. Student will be able to apply project management techniques in achieving objectives of a project like client needs, quality, time & cost.
4. Student will understand about the Project Costing
5. Student will understand about the various software of project management.
6. Student will gain understanding of principles of management, construction scheduling, scope definition and team roles

UNIT-I

INTRODUCTION TO PROJECT MANAGEMENT

Introduction to project Management concepts - background of management, purpose, goal and objectives, characteristics of projects and different aspects of management.

Traditional management system, Gantt's approach load chart, progress chart, bar chart merits and limitation. Schedule time, estimates units

UNIT-II

PROJECT PROGRAMMING

Project programming, resources balancing, phasing of activities, programs, scheduling, project control, reviewing, updating and monitoring. Exposure to relevant software such as MS Project, Primavera, Introduction to modern management, concepts, uni-dimensional management techniques - Introduction to PERT and CPM introduction to network concepts, network elements and inter-relationships.

UNIT-III

NETWORK TECHNIQUES

Network techniques, network logic - interrelationships, activity information, data sheets, development of network. CPM for management, CPM network analysis, identification of critical path float computation result sheets.

UNIT-IV

PERT NETWORK

PERT Network, introduction to the theory of probability and statistics, probabilistic time estimation for the activities of PERT network

UNIT-V

PROJECT COST

Introduction to two dimensional network analysis, activity cost information. Cost time relationship, crashed estimates for the activities, compression potential, cost slope, utility, data sheet, project direct cost and indirect cost. Crashed programmes, network compression least cost solution least time solution, optimum time solution. Network techniques, PERT/CPM, generating alternative strategies using computers

SUGGESTED READINGS :

1. Project management for design professionals By William Ramroth
2. Jerome D. Wiest and Ferdinand K. Levy, A Management Guide to PERT/CPM, Prentice Hall of Indian Pub.Ltd. New Delhi, 1982.

16ART602	HOUSING									SEMESTER-VI	
Marks	Internal	40	External			60	Total	100		Exam Hours	3
Instruction Hours /week		L	3	T	0	P	0			Credits	3

COURSE OBJECTIVE:

- Understanding of the various issues involved in urban housing
- Understand the various issues of Rural housing
- Understand about the planning and design solutions for low income groups.
- Understanding about the housing Policies & Agencies involved
- Understanding about the housing design aspects in a Larger scale
- Understanding about the Socio-economic Aspects

COURSE OUTCOME:

1. Student will learn the various schemes and policies in Housing in India
2. Student will understand the importance of socio-economic aspects of the People and need for Housing
3. Student will learn about housing standards
4. Student will learn about the Housing design Process
5. Student will learn about government housing, orivate& cooperative housing
6. Student will be able to arrive at design ideas for large scale Housing Projects

UNIT-I

INTRODUCTION

Review of housing typology, Housing demand and supply – Calculation of future need.
Housing resources and options available in housing

UNIT-II

HOUSING AGENCIES AND POLICIES

Housing Agencies and their contributions to housing development – HUDCO, State Housing Boards, Housing Co-operatives and Banks. Housing Policies in India and other countries.

UNIT-III

SOCIO ECONOMIC ASPECTS

Social factors influencing Housing Design, affordability, economic factors and housing concepts – Slum upgrading and sites and services schemes.

UNIT-IV

HOUSING STANDARDS

Different types of Housing standards – Methodology of formulating standards – Relevance of standards in Housing Development.

UNIT-V

HOUSING DESIGN PROCESS

Different stages in project development – Layout design including utilities and common facilities – Housing design as a result of environmental aspects, development of technology and community interests.Case studies of Public Sector housing, Government housing, Private and Co-operative housing – their Advantages and disadvantages.

SUGGESTED READINGS :

1. Babur Mumtaz and Patweikly, Urban Housing Strategies, Pitman Publishing, London, 1976.
2. GeofreyK.Payne, Low Income Housing in the Development World, John Wiley and Sons, Chichester, 1984.
3. John F.C.Turner, Housing by people, Marison Boyars, London, 1976.
4. Martin Evans, Housing, Climate and Ocmfort, Architectural Press, London, 1980.
5. Forbes Davidson and Geoff Payne, Urban Projects Manual, Liverpool University Press, Liverpool, 1983.

16ARP611	COMPUTER APPLICATION-III										SEMESTER-VI	
Marks	Internal	80	External				120	Total	200		Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4				Credits	3

COURSE OBJECTIVE:

- To develop the advanced Digital knowledge and skills
- To develop the skills of two-dimensional rendering
- To develop the skill and knowledge of the Building information Modelling
- To develop the Skill related to building visualization,
- To develop the skill of multimedia presentations, brochures,
- To develop the skill of video presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will be able to understand the use of digital tools in the realm of visual composition,
2. Student will understand the drafting & Details through Software
3. Student will develop the skill of 3D visualization and rendering
4. Student will understand the concept of BIM- building information modelling through the specific software
5. Student will gain the Skill of Multimedia & video making presentations required for Architectural practice
6. Student will gain knowledge about the latest developments of digital applications in Architecture

CONTENT
UNIT I TO UNIT V

1. Advanced techniques in rendering with differential lighting for realistic rendering

2. Animations and Walkthroughs

3. Simulating gravity, wind and other effects in the scene, distributed rendering

4. Application of videography in architecture

5.Basics of developing and hosting websites

Recommended Software: 3ds Max, rhino, lumion, vector works, BIM, Ecotect, v-ray rendering techniques

SUGGESTED READINGS :

1. Rendering Techniques for mixed reality, Thomas Girlinger, Daniel Dauch, Andre Stork, Springer, Berlin, October 2009
2. 3D Computer Animated Walk Throughs, Clark Cory, Scott Meador, William Rosi, McGraw Hill 2009.
3. The Animation Book: A complete guide to animation and film making, Kit Laybourne, Three Rivers Press, December 1998
4. Creating a website, Matthew McDonald, Pogue Press, January 2009

16ARS621	ARCHITECTURAL DESIGN -VI									SEMESTER-VI	
Marks	**Internal**	**160**	**External**			**240**	**Total**	**400**		**Exam Hours**	**6**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	10			**Credits**	**7**

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Mixed-use Architectural Design.
6. Student will be able to Communicate effectively through the design ideas

CONTENT

UNIT I to UNIT V

Small complexes - multi planning circulation analysis - massing problems involving building technology - Design and detailing for movement of physically handicapped and elderly persons within and around buildings. examples, shopping Centre (Commercial), Apartments (residential)Nursing home (institutional) home for aged. Construction and manipulation of three-dimensional building data bases, Rendering 3D images. Presentation techniques, preparing scaled models using different materials.

Design Process to be approached stage wise through Architectural Programming. Site Planning fundamentals as relevant to mid-scale projects to be introduced in the design.
Building services to be applied in Architectural design.

SUGGESTED READINGS:

1. Joseph De Chiara, Michael J Crosbie, 'Time Saver Standards for Building Types', McGraw Hill Professional, 2001.
2. Ernst Neuferts Architects Data', Blackwell ,2002.
3. Stephen A. Kliment, Editor 'Building Type Basics' Series, Wiley.
4. Wolfgang Preiser, Korydon H. Smith, 'Universal Design Handbook', 2nd Edition, McGraw-Hill, 2010.
5. Rem Koolhaas et al, 'Project on the City II: The Harvard Guide to Shopping', Taschen, 2001.
6. Peter Coleman, 'Shopping Environments: Evolution, Planning and Design', Routledge, 2006.

8. Jos Boys, 'Disability, Space, Architecture: A Reader', Routledge, 2017.
9. Emily Talen, 'Design for Diversity', Routledge, 2012.
10. luis Alexandre Casanovas Blanco (Ed), 'After Belonging: Objects, Spaces, and Territories of the Ways We Stay in Transit', Lars Muller Publishers, 2016.
11. Manuel Gausa, 'Housing: New Alternatives, New Systems', Birkhäuser Basel 1999
12. Mark Hutter, 'Experiencing Cities (The Metropolis and Modern Life)', Routledge, 2015.

16ARS622	ARCHITECTURAL DETAILING AND WORKING DRAWING										SEMESTER-VI	
Marks	**Internal**	**80**	**External**				**120**	**Total**	**200**		**Exam Hours**	**6**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	4				**Credits**	**4**

COURSE OBJECTIVE:

- To enable students to appreciate the challenges in detailing for both the newly designed buildings as well as while carrying out additions and alterations to existing buildings.
- To enable students to understand the various Fittings, Furniture & Equipment (FFE) that are needed in buildings and their installation methods.
- To create architectural drawings for construction
- To understand the structural & services drawings
- To refer & integrate all the architectural and supporting working drawings
- To design, incorporate and detail architectural and interior components of the architectural design project

COURSE OUTCOME:

1. Student will gain understanding of all the aspects that go into the making of a building through study of drawings related to construction.
2. Student will gain the ability to resolve spatial concerns with technical aspects and services of a building.
3. Student will understand to design and detail components within a building.
4. Student will gain knowledge in interior detailing and planning
5. Student will gain knowledge in Interior furniture, fixtures as per the functionality
6. Student will gain understanding in the installation methods of cladding, integrated services by means of detailed drawings etc

UNIT-I

DETAILING OF RESIDENTIAL BUILDING

a) Detailing of a residence –Working Drawing,Door Window schedule, Floor, Wall, Roof Detailing.

UNIT-II

DETAILING OF WALLS, ROOF, FLOORING FOR COMMERCIAL BUILDINGS

a) Detailing of shop-fronts, office spaces for commercial buildings including detailing of crucial elements such as entrance porches, main doors, staircases, show-windows, enclosed and air-conditioned atrium spaces.

b) Detailing of façade and selected spaces for apartment buildings, hotels and hostels.

Exercises of the above through case studies and drawings.

UNIT-III

DETAILING OF BUILT-IN FURNITURE AND FITTINGS

Detailing of built-in elements like kitchen counters, cupboards, cabinets, toilets, toilet fitting, Structural Glazing, Staircase, Flooring. Exercises of the above through case studies and drawings.

UNIT-IV

DETAILING OF EXTERIOR AND INTERIOR ARCHITECTURAL ELEMENTS

Detailing of architectural elements like indoor fountains, water walls, transparent floors, street furniture, hard and soft landscape, swimming pools, water bodies and courtyard spaces. Detailing of interior architectural elements in existing buildings (e.g. Staircase in bookshops, restaurants, playpen in restaurants, reception areas in hotel lobbies etc.) Exercises of the above through case studies and drawings.

UNIT-V

DETAILING OF EXTERIOR AND INTERIOR

Detailing of building services – Toilet Water & Plumbing Details – Air conditioning details – Fire suppression & alarm – Electrical Layouts – Lift &Escalators etc.

SUGGESTED READINGS :

1. De Chiara and Callendar, Time Saver Standard Building Types, McGraw Hill Co,1980.
2. Richardson Die truck, Big Idea and Small Building, Thames and Hudson, 2002
3. Edward D Mills, Planning – The Architecture Handbook, British Library Cataloguing in Publication Data, 1985
4. Susan Dawson, Architect's Working Details(Volume 1-10), 2004
5. Swimming Pools, Lane Book Company, Menlo Park, California
6. Nelson L Burbank, House Carpentry Simplified, Simmons-Board- Man
7. Publishing Corporation, New York,
8. Landscape Construction
9. Grant W. Reid, Landscape Graphics, Whitney Library of Design, 1987

16ARES631A	**LANDSCAPE ARCHITECTURE**										**SEMESTER-VI**
Marks	**Internal**	**40**	**External**				**60**	**Total**	**100**	**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4			**Credits**	**2**

COURSE OBJECTIVE:

- To introduce the various aspects of outdoor design and site planning
- To teach them to enhance & improve the quality of built environment, functionally and aesthetically.
- To stress on the role of landscape design in sustainability, to provide an overview of ecological balance and impacts of human activities and the need for environmental protection and landscape conservation.
- To study the historical method of garden Design
- To understand the significance of urban landscape.
- To provide familiarity with the various elements of landscape architecture and the principle of landscape design.

COURSE OUTCOME:

1. Student will understand the role of landscape design with respect to macro scale of sustainability and ecology
2. Student will understand the micro scale of shaping of outdoor environments.
3. Student will gain Knowledge about the elements of landscape design and their scope.
4. Student will know about the Sensitivity towards evolution of different garden and landscape design across time and context.
5. Student will understand the historical method of landscape design
6. Student will understand the urban scale landscape design.
7. Student will be able to do landscape design with respect to site planning and different functional typologies of spaces

UNIT-I

INTRODUCTION

Introduction to landscape architecture; role of landscape design in architecture; Introduction to site planning, site analysis & landscape design. Site selection criteria for landscape projects.

UNIT-II

ELEMENTS IN LANDSCAPE DESIGN

Hard and soft landscape elements, Plant materials, classification, characteristics, use and application in landscape design; Water and Landform.

UNIT-III

GARDEN DESIGN IN HISTORY

Landscape and garden design in history - French, English, Japanese, Renaissance and Moghul . Study of notable examples.

UNIT-IV

URBAN LANDSCAPE

Significance of landscape in urban areas; road landscaping; waterfront development, landscaping of residential areas , Industrial landscaping .

UNIT-V

LANDSCAPE DESIGN

Basic principles of planting design; Spatial development in landscape design; Detailed landscape design of any small project including paving and street furniture design

SUGGESTED READINGS :

1. Michael Laurie , An Introduction to Landscape Architecture, Elsevier, 1986.
2. Geoffrey And Susan Jellicoe, The Landscape of Man, Thames And Hudson, 1987.

16ARES631B	PRODUCT DESIGN									SEMESTER-VI	
Marks	**Internal**	**40**	**External**			**60**	**Total**	**100**	**Exam Hours**		**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4		**Credits**		**2**

COURSE OBJECTIVE:

- To gain Knowledge about the various styles of furniture
- To gain knowledge about the manufacturing of various materials/ product
- To learn about visual codes & Symbols
- To understand the importance of Artefacts, murals and Artwork
- To learn about various products for the Physically challenged
- Understanding the methods and techniques involved in furniture and product design.

COURSE OUTCOME:

1. Student will gain knowledge about the various furniture and products
2. Student will understand the needs of the industry demand and product value
3. Student will gain knowledge in Composite materials and Products
4. Student will gain knowledge about Packaging design
5. Student will gain knowledge about the House hold items / products
6. Student will be able to do a Product design for the client

UNIT-I

INTRODUCTION

An brief introduction to Product Designing – Various elements – History of Product Design – Definition of Product Design, understanding of Product Design - Purpose of Product Design – Role of Product Designers.

UNIT-II

HUMAN FACTORS

Definition of human factors, Application of human factors data. Human activities, their nature and effects. Man-machine system and physical environment. Human performance and system reliability.Information input and processing. Human control systems. Applied anthropometry – Human response toclimate.

UNIT-III

ASPECTS OF PRODUCT DESIGN

Visual, Auditory, Tactual, Olfactory human mechanisms, Physical space and arrangement. Visual display, process of seeing, visual discrimination, quantitative and qualitative visual display, Alphanumeric and related displays , Visual codes and symbols.

UNIT-IV

PRODUCT DESIGN

Form, Colour, Symbols, User specific criteria, Material, Technology and recyclability, Packaging. Multiple Utility oriented approach to Product Design.

UNIT-V

DESIGN EXERCISES

Design of Household elements, tools and devices – Spoon/Cutlery.Design of furniture – Chairs/Computer table, Kitchen racks, Cabinets etc.Design of Industrial Product – Watch Dial, Gear Wheels, Automobile Headlights etc. Element design for the physically and mentally different people.

SUGGESTED READINGS :

1. Time Saver Standards for Interior Design
2. Andrew Alpern, Handbook of Speciality Elements in Architecture, McGrawhill Co., USA, 1982.
3. Francis D.K.Ching, Interior Design Illustrated, VNR Publications, New York, 1987.
4. An invitation to Design, Helen Marie Evans.

16ARP631C	INTERIOR DESIGN									SEMESTER-VI
Marks	**Internal**	**40**	**External**			**60**	**Total**	**100**	**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4		**Credits**	**2**

COURSE OBJECTIVE:

- To provide familiarity with the characteristics of interior spaces
- To gain knowledge in all type's furniture across history.
- To introduce the profession of interior design and bring out its role.
- To inform about the various components of interior space and give an understanding of the design aspects involved in each
- To provide knowledge in Interior services
- To provide knowledge in interior specification & costing

COURSE OUTCOME:

1. Student will gain knowledge and understanding in Interior design
2. Student will understand the various elements in Interior Design
3. Student will gain knowledge in terms of Interior design lighting and accessories
4. Student will gain an overall exposure to the ways in which interior spaces can be enriched through the design of specific interior components.
5. Student will be able to do specification for an Interior Design layout
6. Student will be able to design a Interior project wih all working drawings

.

UNIT-I

INTRODUCTION TO INTERIOR DESIGN

Definition of interior design - design of interior spaces as related to typologies and functions, themes and concepts - Study of the history of interior design through the ages relating to historical context, design movements and ideas etc.

UNIT-II

ELEMENTS OF INTERIOR DESIGN

Introduction to various elements in interiors like floors, ceilings, walls, staircases, openings, interior service elements, incidental elements etc. and various methods of their treatment involving use of materials and methods of construction in order to obtain certain specific functional, aesthetic and psychological effects - design projects.

UNIT-III

INTERIOR DESIGN SERVICES - LIGHTING, ACCESSORIES, LANDSCAPE

Study of interior lighting - different types of lighting, their effects, types of lighting fixtures. Other elements of interiors like accessories used for enhancement of interiors - paintings, objects de art,Interior landscaping - elements like rocks, plants, water, flowers, fountains, paving, artefacts, etc. their physical properties, effects on spaces and design values.

UNIT-IV

FURNITURE DESIGN

Study of relationship of furniture to spaces and human movements furniture design as related to human comfort, function, materials and methods of construction, changing trends and lifestyles, innovations and design ideas - study on furniture for specific types of interiors like office furniture, children's furniture, residential furnitures, display systems, etc. - projects on furniture design.

UNIT-V

CASE STUDIES AND PROJECT

Study of Contemporary design in India and abroad with reference to interior design and decoration. Study of projects related to Residential Interiors, Commercial Interiors, Hospital Interiors etc. as regards to design scheme, functionalism, aesthetics, services integration, interior materials and details. Small scale interior projects such as Interior of an Office, Restaurant, Kids bedroom etc.

SUGGESTED READINGS :

1. Francis D.K.Ching, Interior Design Illustrated, V.N.R. Pub. NY 1987.
2. An Invitation to design, Helen Marie Evans.
3. Steport- De - Van Kness, Logan and Szebely, Introduction to Interior Design Macmillan Publishing Co., NY 1980.
4. Inca/Interior Design Register, Inca Publications, Chennai 1989.
5. Kathryn B.Hiesinger and George H.Marcus, Landmarks of twentieth Century Design; Abbey Ville Press, 1993.
6. SyanneSlesin and Stafford Ceiff- Indian Style, Clarkson N.Potter, Newyork, 1990.
7. The Impulse to adorn - Studies in traditional Indian Architecture. - Editor Dr.Saranya Doshi, Marg Publications, 1982.

16ARE631D	ARCHITECTURAL CONSERVATION											SEMESTER-VI	
Marks	**Internal**	**40**	**External**				**60**	**Total**	**100**			**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4					**Credits**	**2**

COURSE OBJECTIVE:

- To introduce the various issues and practices of Conservation
- To familiarize the students with the status of conservation in India
- To teach them about the various agencies involved in the field of conservation worldwide and their policies.
- To outline the status of conservation practice in the country
- To Know about the various guidelines for the preservation, conservation and restoration of buildings.
- To inform the students about the character and issues in our heritage towns through case studies.

COURSE OUTCOME:

1. Student will understand the importance of heritage, issues and practices of conservation through case studies.
2. Student will become familiar with historic materials and their properties, different technologies for investigating masonry, foundation and also traditional and modern repair methods
3. Student will gain knowledge about the government agencies involved in Conservation
4. Student will understand the methods of urban Conservation.
5. Student will gain knowledge about various methods of Conservation techniques and Design
6. Student will gain knowledge about various policies involved in Conservation and practice in India

.

UNIT-I

INTRODUCTION TO CONSERVATION

e conservation- Need, Debate and purpose.
Defining Conservation, Preservation and Adaptive reuse. Distinction between Architectural and Urban Conservation. International agencies like ICCROM , UNESCO and their role in Conservation

UNIT-II

CONSERVATION IN INDIA

Museum conservation – monument conservation and the role of Archeological Survey of India – role of INTACH – Central and state government policies and legislations – inventories and
projects- select case studies of sites such as Hampi, Golconda, Mahabalipuram -craft Issues of conservation

UNIT-III

CONSERVATION PRACTICE

Listing of monuments- documentation of historic structures- assessing architectural character – historic structure report- guidelines for preservation, rehabilitation and adaptive re-use of historic structures- Case studies of Palaces in Rajasthan, Chettinad and Swamimalai dwellings, seismic retrofit and disabled access/ services additions to historic buildings-heritage site management

UNIT-IV

URBAN CONSERVATION

Over view of urban history of India and Tamil Nadu- understanding the character and issues of historic cities – select case studies of towns like Srirangaram, Kumbakonam and Kanchipuram -
historic districts and heritage precincts.

UNIT-V

CONSERVATION PLANNING

Conservation as a planning tool.- financial incentives and planning tools such as Transferable Development Right(TDR)-urban conservation and heritage tourism-case studies of sites like for Cochin, Pondichery French town.- conservation project management

SUGGESTED READINGS :

1. Donald Appleyard, The Conservation of European Cities, M.I.T. Press, Massachusetts
2. James M. Fitch, Historic Preservation: Curatorial Management of the Built World by University Press of Virginia; Reprint edition (April 1, 1990)
3. A Richer Heritage: Historic Preservation in the Twenty-First Century by Robert E. Stipe
4. Conservation Manual , Bernard Fielden; INTACH Publication
5. B.K. Singh, State and Culture, Oxford, New Delhi
6. A.G. K. Memon ed. Conservation of Immovable Sites, INTACH Publication, N.Delhi.
7. Seminar Issue on Urban Conservation.

16ARES631E	ARCHITECTURAL JOURNALISM										SEMESTER-VI	
Marks	**Internal**	**40**	**External**				**60**	**Total**	**100**		**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4				**Credits**	**2**

COURSE OBJECTIVE:
- To introduce general skills necessary for the practice of professional journalism.
- To introduce the fundamentals of writing, explain different strategies and their criticism.
- To give good exposure to architectural journalism.
- To make them understand the importance of writing articles
- To introduce photojournalism, bring out importance/ contributions of photography
- To gain knowledge in modern photography techniques.

COURSE OUTCOME:
1. Student will gain the ability to critically think and analyse about the effects of architecture on society as well as the tools to enable recording of the same
2. Student will be able to express by means of effective communication, writing and video documentation
3. Student will learn about the composition of content in Architecture Journals
4. Student will learn about Photography and Photo Journalism
5. Student will be able to document, analyse and critic the work by means of interview and data collection
6. Student will develop the proficiency in Field program, interviews and Architectural Document witting

UNIT-I
PHOTOGRAPHY & TECHNIQUES
Concept of color; concepts of lighting, distance, visual angle, frames; media; Types of camera, properties and priorities; Exposure, Aperture, Speed; Photographic films. Techniques of photography relevant to architecture.

UNIT-II
JOURNALISM
Analysis of recent historical and contemporary examples of written and journalistic criticism of architecture, including selected writings by Indian and overseas critics; discursive techniques, analysis of major critical themes, thematic categories in architectural writing over the past three centuries.

UNIT-III
ANALYSIS OF WORKS
Works of Indian and international writers and critics will be presented and discussed. Seminars on Indian architectural writers, journalists and critics

UNIT-IV
FIELD PROGRAM
Exercise on integrating photography in architectural journalism.

UNIT-V
DOCUMENTING AND REPORTING
Preparation of documentaries and reports in any media such as Video, Still images, Reports, presentations etc., and present as a Seminar.

SUGGESTED READINGS :

1. Dave Sounders, Professional Advertising Photography, Merchurst, London 1988
2. Roger Hicks, Practical photography, Cassell, London 1996
3. Julian Calder and john Garrett, The 35mm Photographer's Handbook, Pan Books, London 1999
4. Julie Adair King, Digital Photography for Dummies, COMDEX, New Delhi 1998

<table>
<tr><td>16ARES631F</td><td colspan="8">ADVANCED STRUCTURES</td><td colspan="2">SEMESTER-VI</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="3">External</td><td>60</td><td>Total</td><td>100</td><td>Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>0</td><td>T</td><td>0</td><td>P/S</td><td>4</td><td colspan="2">Credits</td><td>2</td></tr>
</table>

COURSE OBJECTIVE:

- To get introduced to basic structural members in masonry & steel
- To give knowledge to design different slab & column components in a building.
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of rivet and welded joints in steel.
- To enable the design of tension (beams) and compression (columns) steel members in a building under different conditions.
- To gain understanding in pre stressed concrete
- To Understand the concept of Structural system of Steel sections

COURSE OUTCOME:

1. Student will understand about various masonry sections
2. Student will understand about the design of circular columns by applying the code provisions.
3. Student will understand about the Flat slabs and its usage.
4. Student will be able to design steel joints for maximum efficiency and strength.
5. Student will be able to design tension and compression members for different conditions by applying the
6. code provisions.
7. Student will be able to design different types of laterally unsupported & supported beams for different conditions.

UNIT-I

MASONRY

Analysis and Design of masonry walls – use of Nomograms - code requirements

UNIT-II

CIRCULAR SLABS

Design of RCC Circular slabs - simply supported and fixed slabs with uniformly distributed loads .

UNIT-III

FLAT SLABS

Design principles for flat slabs- coffer slabs - code provisions.

UNIT-IV

DESIGN OF FOOTINGS

Types of footings – Design of wall footings – Design of Axially loaded rectangular footing (Pad and sloped footing). Design of Combined Rectangular footings.

UNIT-V

PRESTRESSED CONCRETE

Principle of pre-stressing, methods of pre-stressing, advantages and disadvantages - applications to simple problems.

SUGGESTED READINGS :

1. P. Dayarathnam, 'Design of Reinforced Concrete Structures' second edition, Oxford and IBH publishing Co., New Delhi 1984.

2. Ashok K. Jain, Reinforced Concrete Limit State Design Nemchand and Bros., Roorkee, 1983.

3. N.L. Shinha and S.K. Roy, Fundamental of Reinforced Confrete, S.Chand and Company, New Delhi, 1983.

16ARES631G	DISASTER MANAGEMENT									SEMESTER-VI	
Marks	Internal	40	External			60	Total	100	Exam Hours		6
Instruction Hours /week		L	0	T	0	P/S	4		Credits		2

COURSE OBJECTIVE:

- To create awareness about natural disasters-factors
- To be aware of the disaster cause them-and to foster knowledge about strategies
- To learn about the methods of disaster prevention and management-
- To understand the fragile Eco-systems and factors that cause global climatic changes.
- Overview of major natural disasters-design & planning solutions for disaster mitigation-organizational
- To understand about the Disaster management aspects.

COURSE OUTCOME:

1. Student will be able to understand the cause and effects of natural disasters
2. Student will understand about climate change & disaster influences due to natural calamities
3. Student will learn to understand the prevention and design resistant structures
4. Student will understand the strategies to be implemented for disaster Mitigation.
5. Student will leran about Disaster management & recovery
6. Student will gain knowledge in design and Planning solutions of disaster proof structures

UNIT-I

INTRODUCTION TO NATURAL HAZARDS

Understanding the effects of natural calamities such as floods, tropical cyclones, earthquakes, landslides, heat waves , droughts &Tsunami.Climate changes, global sea rise, coastal erosion, environmental degradation, large dams & earth tremors, roads buildings & landslides, urbanization & desertification, cyclone effects on coastal towns.

UNIT-II

CASE STUDIES OF NATURAL DISASTERS IN INDIA

Earthquakes at Bhuj, Lattur, etc., Cyclones in coastal Andhra pradesh& Orissa, Landslides in Nilgiris, Himachal etc, Floods in Bangladesh, and Droughts in Rajasthan & Tsunami in Tamil Nadu.

UNIT-III

STRATEGIES FOR DISASTER PREVENTION & MITIGATION

Pre disaster, emergency, transition, and recovery. Disaster management plan, Natural crisis management committee [NCMC], State crisis management group [SCMG].

UNIT-4& 5

DESIGN & PLANNING SOLUTIONS

Design guidelines for disaster proof construction at appropriate situations.-Engineering, architectural, landscape & planning solutions for different types of calamities.- Norms, standards and practice procedures for shelter & settlement. Seismic repairs & retrofitting of damaged and undamaged buildings.

SUGGESTED READINGS :

1. Earthquake Resistant Design for Built Environment. Compiled notes by Department of Architecture and Planning, IIT-Roorkee.December 2003.
2. Das P.K, A.R.Ramanathan, An Introduction to Seismic Safety in Architecture, 2007
3. Paul D.K. Singh, Yogendra, Short Term Training Course on Earthquake Resistant Design of Buildings, ADPC, IIT Roorkhe& DMMC, Dehradun, 2002
4. S.Rajagopal - *Problems of housing in cyclone prone areas* - SERC, Vol.2, Chennai, 1980 5.Office of the UN Disaster Relief Co-ordinator - *Disaster prevention and mitigation*, Vol 12, Social and Sociological aspects - UNO, NY, 1986
5.F.C.Cony et.al - *Issue and problems in the prevention of disaster and housing* - A review of experiences from recent disasters - Appropriate reconstruction and training information centre, 1978
6.S.Ramani, *Disaster management - Advanced course on modern trends in housing* - SERC, Vol 2, Chennai, 198

SEMESTER 7

16ARP711	PRACTICAL TRAINING -I										SEMESTER-VII	
Marks	Internal	400	External			600	Total	1000			Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	0				Credits	14

COURSE OBJECTIVE:

- To introduce the challenges of architectural practice.
- To enable overall understanding of different stages in real life architectural projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific architectural practice
- To work from initiation of project, development of concepts into schematic drawings, approval process, presentations and release of working drawings
- To get involvement in office discussions and client meetings, integrating structural and service concerns, estimation and tendering processes, site supervision and coordination in the construction process
- To coordinate with the various levels of workman/contractors etc for execution of the Project

COURSE OUTCOME:

1. Student will get and overall idea of the nuances of architectural practice.
2. Student will understand about the total process that takes place in an Architectural firm
3. Student will understand the Specifications of a project, time involved and the execution process
4. Student will gain knowledge in architectural working drawings
5. Student will gain experience of client meetings & site Execution
6. Student will gain the maturity of Architectural design, and the experience gained from internship will be helpful in the thesis project

TOPICS

The choice of the place of training shall be Architectural Firms, Organizations, Development Authorities, etc. which are headed by eminent architects. The choice of the office shall be approved by the Training Committee of the Faculty of Architecture. The practical training, primarily involves learning in the office and on the site. The progress of training shall be assessed periodically by reports from the employers of trainees and by the Training Committee of the Faculty of Architecture.

The evaluation of the practical training will be based on the following features.

- Client meeting and interaction
- Site visits, verification and measurements
- Concept and scheme development
- Construction documents / drawings
- Training portfolio

SEMESTER 8

16ARP811	PRACTICAL TRAINING -II										SEMESTER-VIII	
Marks	**Internal**	**400**	**External**			**600**	**Total**	**1000**	**Exam Hours**			**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	0				**Credits**	**14**

COURSE OBJECTIVE:

- To introduce the challenges of architectural practice.
- To enable overall understanding of different stages in real life architectural projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific architectural practice
- To work from initiation of project, development of concepts into schematic drawings, approval process, presentations and release of working drawings
- To get involvement in office discussions and client meetings, integrating structural and service concerns, estimation and tendering processes, site supervision and coordination in the construction process
- To coordinate with the various levels of workman/contractors etc for execution of the Project

COURSE OUTCOME:

1. Student will get and overall idea of the nuances of architectural practice.
2. Student will understand about the total process that takes place in an Architectural firm
3. Student will understand the Specifications of a project, time involved and the execution process
4. Student will gain knowledge in architectural working drawings
5. Student will gain experience of client meetings & site Execution
6. Student will gain the maturity of Architectural design, and the experience gained from internship will be helpful in the thesis project

TOPICS

The choice of the place of training shall be Architectural Firms, Organizations, Development Authorities, etc. which are headed by eminent architects. The choice of the office shall be approved by the Training Committee of the Faculty of Architecture. The practical training, primarily involves learning in the office and on the site. The progress of training shall be assessed periodically by reports from the employers of trainees and by the Training Committee of the Faculty of Architecture.

The evaluation of the practical training will be based on the following features.

- Client meeting and interaction
- Site visits, verification and measurements
- Concept and scheme development
- Construction documents / drawings
- Training portfolio

<table>
<tr><td>16ARP821</td><td colspan="10">DISSERTATION</td><td colspan="2">SEMESTER-VIII</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="3">External</td><td>60</td><td>Total</td><td>100</td><td colspan="2">Exam Hours</td><td colspan="2">6</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>0</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="3">Credits</td><td colspan="2">2</td></tr>
</table>

COURSE OBJECTIVE:

- To inculcate the spirit of research in architecture.
- To enable the acquisition of in-depth knowledge in a specific aspect/ issue in the discipline of architecture
- To develop perspectives on the same through reading, study, analysis and thought.
- To develop the skill of experimentation by their own course of study
- To facilitate the development of a coherent line of thinking and express it through clear writing.
- To serve as prelude to Thesis.

COURSE OUTCOME:

1. Student will learn to research on a specific interested topic and collect appropriate data
2. Student will develop the skill of analytical approach towards the related topic
3. Student will be able to develop a coherent line of thought based on point of view,
4. Student will be able to do observation, analysis and study
5. Student will be able to prepare a dissertation report which is based on accepted norms of technical writing.
6. Student will become prepared for the larger thesis project.

Unit I to Unit V

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas.

Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS:

1.Knight, A. and Ruddock,L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2.Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
3.Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.
4.All relevant Local, National and International Codes related to the Dissertation topic.
5. All relevant Books and Publications related to the Dissertation topic.

SEMESTER 9

16ART901	**PROFESSIONAL PRACTICE**						**SEMESTER-IX**	
Marks	**Internal**	**40**	**External**	**60**	**Total**	**100**	**Exam Hours**	**3**
Instruction Hours /week	**L**	3	**T**	0	**P/S**	0	**Credits**	**3**

COURSE OBJECTIVE:

- To give an introduction to easements and its types
- To know about the role of tenders and the processes involved within
- To give familiarity with a contract and the conditions therein
- To give exposure to the Arbitration in disputes
- To inform about legal aspects like Environmental acts and laws
- To know about the consumer protection act and their relevant provisions

COURSE OUTCOME:

1. Student will gain knowledge of the easements and its types
2. Student will become familiar with the tenders and the processes involved within
3. Student will gain knowledge about a contract and the conditions therein
4. Student will understand the Arbitration in disputes
5. Student will understand about the legal aspects like Environmental acts and laws
6. Student will understand about the consumer protection act and their relevant provisions

UNIT-I

ARCHITECT AND PROFESSION

Role of architect in society - relationship with client and contractor - code of conduct – management of an architect's office - elementary accountancy

UNIT-II

ARCHITECT'S SERVICES AND SCALE OF FEES

Conditions of engagement of an architect - normal additional, special and partial services – scale of fees for various services - claiming of fees

UNIT-III

ARCHITECTURAL COMPETITIONS

Open and closed competitions - appointment of assessors - duties of assessors - instructions to participants - rejection of entries - award of premium - guidelines prescribed by COA AND IIA for promotion and conduct of competitions

UNIT-IV

TENDER & CONTRACT

Calling for tenders - tender documents - open and closed tenders - item rate, lumpsum, labor and demolition tender - conditions of tender - submission of tender - scrutiny and recommendations

Conditions of contract - Form of contract articles of agreement - Contractor's bill certification

UNIT-V

ARBITRATION & EASEMENTS

Arbitration in disputes - arbitration agreement - sole arbitration - umpire - excepted matters - award .

Definition - types of easement – acquisition extinction and protection of easements

SUGGESTED READINGS :

1. J.J. Scott, Architect's Practice, Butterworth, London 1985
2. Publications of COA IIA Hand book on Professional Practice, The Architects publishing Corporation of India, Bombay 1987
3. Derek Sharp, The Business of Architectural Practice William Collins Sons & Co. Ltd, 8 Erafton St., London W1 1986
4. RoshanNamavathi, Professional Practice, Lakhsmi Book Depot, Mumbai 1984
5. Publication of IIA
6. Environmental Laws of India - by Kishore Vanguri, C.P.R. Environmental Education Centre, Chennai
7. The Tamil Nadu Hill Areas Special Building Rules - 19
8. Heritage Act
9. Consumer Protection Act
10. Indian Easements Act

16ART902	**URBAN DESIGN**						**SEMESTER-IX**	
Marks	**Internal**	**40**	**External**	**60**	**Total**	**100**	**Exam Hours**	**3**
Instruction Hours /week	**L**	3	**T**	0	**P/S**	0	**Credits**	**3**

COURSE OBJECTIVE:

- To provide knowledge of design of urban spaces including renewal and development.
- To provide knowledge ofpublic spaces
- To provide knowledge oforganizing and articulation of spaces for residential, commercial, industrial and recreational areas
- To provide knowledge of Causes and consequences of urban blight and obsolescence
- To provide knowledge of methods of conducting surveys and analysis
- To provide knowledge of programs for urban redevelopment

COURSE OUTCOME:

- Ability to gain knowledge in urban space planning
- Ability to handle large scale urban renewal projects
- Understanding of organizing and articulation of spaces for residential, commercial, industrial and recreational areas
- Ability to analyse the Causes and consequences of urban blight and obsolescence
- Ability to conduct surveys and analysis
- Understanding of programs for urban redevelopment

UNIT-I

INTRODUCTION

Relationship between Architecture, Urban Design and Town Planning - Perception of city form and pattern – Townscape elements

UNIT-II

ROLE OF PUBLIC SPACE IN URBAN AREAS

Introduction to public spaces. Evolution of public spaces. Comparative analysis of public spaces, their organization and articulation.

UNIT-III

ORGANIZATION OF SPACE

Understanding, organizing and articulation of spaces for residential, commercial, industrial and recreational areas.

UNIT-IV

URBAN RENEWAL

Causes and consequences of urban blight and obsolescence – slums and shanties – methods of conducting surveys, analysis and presentation of data, prevention of formation of slumsand squatter settlements. Environmental and management issues.

UNIT-V

URBAN REDEVELOPMENT

Objectives, surveys programs of urban redevelopment and public involvement and participation.

SUGGESTED READINGS :

1. Gordon Cullen - The concise TOWNSCAPE - The Architectural Press - 1978
2. Lawrence Halprin- CITIES - Reinhold Publishing Corporation N.Y. 1964.
3. Gosling and Maitland - URBAN DESIGN -St.Martin's Press, 1984.
4. Jonathan Barnett - An Introduction to Urban Design - Harper & Row, Publishers, N.Y.,1982

16ARS921	ARCHITECTURAL DESIGN - VII										SEMESTER-IX	
Marks	**Internal**	**200**	**External**				**400**	**Total**	**1000**		**Exam Hours**	**6**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	12				**Credits**	**8**

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing complex building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Urban Design proposal
6. Student will be able to Communicate effectively through the design ideas.

TOPICS

Design of advanced and complex problems - comprising group multi storeyed structures and infrastructure - with regard to climatic conditions, orientation, services, circulation problems relating to large developments Design and detailing for movement and use by handicapped persons within and around building and campuses to be addressed – examples: campus design, urban centers, Housing for Senior citizens- Urban and regional planning

SUGGESTED READINGS :

1. Edward D Mills, planning, 4 volumes, newness Butterworths, London 1976
2. E and OE Planning London, Books Ltd 1973
3. National Building Code IS
4. De Chira a
5. d Callendar- Time saver standards for Building Types - Mc Graw Hill Co., 1973.

16ARS922	ESTMATION AND COSTING											SEMESTER-IX	
Marks	**Internal**	**80**	**External**				**120**	**Total**	**200**	**Exam Hours**			**6**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	4			**Credits**			**4**

COURSE OBJECTIVE:

- To provide the student adequate knowledge to write the specifications for a given item of work
- To gain knowledge in specification
- To gain Knowledge in Estimation of Civil Work
- To gain knowledge in estimation of Carpentry work
- To gain Knowledge in the estimation of Plumbing work
- To understand to work out the unit cost of individual items based on their specifications and arrive at the overall cost of the project.

COURSE OUTCOME:

1. Student will be able to understand and write specification for the given item of work
2. Student will gain knowledge & Understanding of Estimation of civil work
3. Student will gain knowledge about estimation of Carpentry work
4. Student will gain knowledge about estimation of plumbing work
5. Student will be able to do calculate the quantities on site with Field measurement book
6. Student will learn about various calculation of bill of quantities for Interiors

UNIT-I

SPECIFICATION

Necessity of specification, importance of specification, - How to write specification, - Types of Specification, -Principles of Specification writing, - Important aspects of the design of specification – sources of information – Classification of Specification.

UNIT-II

SPECIFICATION WRITING

Brief Specification for 1st class, 2nd class , 3rd class building. Detailed specification for earthwork excavation, plain cement concrete, Reinforced concrete, first class and second class brickwork, Damp proof course, ceramic tiles/marble flooring and dadoing, woodwork for doors, windows frames and shutters, cement plastering, painting & weathering course in terrace.

UNIT-III

ESTIMATION

Types & purpose, Approximate estimate of buildings – Bill of quality, - Requirement for preparing estimation, factors to be considered, - principles of measurement and billing, contingencies, Elementary billing and measurement of basic materials like brick, wood, concrete and unit of measurement for various items of work – abstract of an estimate.

UNIT-IV

DETAILED ESTIMATE

Deriving detailed quantity estimates for various items of work of a building. Like earthwork excavation, brick work, plain cement concrete, Reinforced cement concrete works, wood work, iron works, plastering, painting, flooring, weathering course for a single storied building using cerntre line method and long and short wall method.

UNIT-V

COST ESTIMATING & COST BUDGETTING

Function of Cost planner – liason with consultant, operation cost Exercise in variation, Cost adjustment and Cost analysis. Role of various financial agencies for building & land development. Economic feasibility reports – valuation, depreciation and its implications.

SUGGESTED READINGS :

1. Dutta, Estimating and Costing, S.Dutta and Co., Lucknow
2. S.C.Rangwala, Elements of Estimating and Costing, Charoter Publishing House, India.
3. W.H.King and D.M.R.Esson, Specification and Quantities for Civil Engineers, The English University Press Ltd.
4. T.N.Building Practice, Vol.1, Civil, Govt. Publication.P.W.D. Standard specifications, Govt. Publication

<table>
<tr><td>16ARES931A</td><td colspan="10">DEVELOPMENTAL RULES AND REGULATIONS</td><td colspan="2">SEMESTER-IX</td></tr>
<tr><td>Marks</td><td>Internal</td><td>60</td><td colspan="4">External</td><td>90</td><td>Total</td><td>150</td><td colspan="2">Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>1</td><td>T</td><td>0</td><td>P/S</td><td>4</td><td colspan="4">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:
- To develop understanding of the duties and liabilities of an architect
- To gain knowledge of bye-laws that relate to the building
- To understand about the environment in the Indian context.
- To Understand about legislation of corporation areas
- To understand about the Legislation of panchayat
- To understand about legislation of Industries

COURSE OUTCOME:
1. Student will be able to read and understand government related documents and incorporate it in practice
2. Student will be able to understand the building regulations and follow accordingly
3. Student will understand about the legislation of corporation ares
4. Student will understand about the legislation of panchayat
5. Studen will understand about the legislation of Industries
6. Student will be able to design buildings as per the recent norms and standards

UNIT-I

LEGISLATION - CORPORATION AREAS

Chennai Corporation Building Rules 1972, Development control Rules for Chennai Metropolitan Area 1990

UNIT-II

LEGISLATION - PANCHAYATS

The Panchayat Building Rules 1942

UNIT-III

LEGISLATION - INDUSTRIES AND FACTORIES

The Tamil Nadu Factory Rules 1950

UNIT-IV

EMERGING AREAS OF IMPORTANCE

Role of urban Arts Commissions - need for special rules on architectural control and development

UNIT-V

SPECIAL LEGISLATION

Environmental Acts and Laws - Special Rules governing Hill Area Development - coastal area development and management - Heritage Act of India - Consumer protection act and their relevant provisions

SUGGESTED READINGS :

1. Publications of COA, IIA Hand book on Professional Practice, The Architects publishing Corporation of India, Bombay 1987
2. D.C. Rules for Chennai Metropolitan Area 1990
3. T.N.D.M. Building Rules, 1972
4. T.N.P. Building Rules 1942
5. Chennai City Corporation Building Rules 1972
6. Environmental Laws of India - by Kishore Vanguri, C.P.R. Environmental Education Centre, Chennai
7. The Tamil Nadu Hill Areas Special Building Rules - 19
8. Heritage Act
9. Consumer Protection Act
10. Indian Easements Act

16ARES931B	CONSTRUCTION TECHNOLOGY									SEMESTER-IX	
Marks	Internal	60	External			90	Total	150	Exam Hours		6
Instruction Hours /week		L	1	T	0	P/S	4			Credits	3

COURSE OBJECTIVE:

- To study the advancements in construction with concrete for large span structures.
- To familiarize the students with the various classifications in buildings
- To familiarize the students with the manufacture, storage and transportation of concrete.
- To inform the various equipment used in the construction industry
- To learn about the criteria for choice of equipment.
- To familiarize the students with an overview of construction management, planning and scheduling

COURSE OUTCOME:

1. Ability to understand the practice of construction technology
2. Ability to understand the construction systems for high rise buildings
3. Ability to understand the process of manufacture, storage and transportation of concrete
4. Ability to understand thevarious equipment used in the construction industry
5. Ability to understand thecriteria for choice of equipment
6. Students will gain an overview of construction management, planning and scheduling

UNIT-I

GENERAL BUILDING REQUIREMENTS

Classification of buildings - Sites and Services - Requirements of parts of buildings.

UNIT-II

CONSTRUCTION SYSTEMS

Planning - Cast in situ construction (ready mixed pumped etc.) Reinforced concrete and prestressed concrete constructions precast concrete and pre- fabrication system - Modular coordination – Structural schemes.

UNIT-III

CONSTRUCTION PRACTICE

Manufacture, storage, transportation and erection of precast component forms, moulds and scaffoldings in construction - safety in erection and dismantling of constructions.

UNIT-IV

CONSTRUCTION EQUIPMENT

Uses of the following: Tractors, bulldozers, shovels draglings, cableways and belt conveyors, batching plants - Transit mixers and agitator trucks used for ready mix concrete pumps Gunitingequipments - Air compressors - welding equipment - cranes and other lifting devices Choice of construction equipment for different types of works.

UNIT-V

CONSTRUCTION MANAGEMENT

Overview of construction management topics including estimating, cost control, quality control, safety, productivity, value engineering, claims, and legal issues - planning and scheduling

SUGGESTED READINGS :

1. R. Chudley, Construction Technology, Longman Group Limited, England, 1985
2. R. Barry, The Construction of Buildings, The English Language Book Society and Crosby Lockwood, Staples, London, 1976
1. National Building Code of India, 1983
2. Frank R. Dagostino, Materials of Construction – Details given Reston Publishing
Company, nc.Virginia, 1976.
3.M. Mohsin, Project Planning and Control, Vikas Publishers, New Delhi, 1983

16ARES931C	**INTEGRATED BUILDING MANAGEMENT SYSTEM**									**SEMESTER-IX**	
Marks	**Internal**	**60**	**External**			**90**	**Total**	**150**		**Exam Hours**	**6**
Instruction Hours /week		**L**	1	**T**	0	**P/S**	4			**Credits**	**3**

COURSE OBJECTIVE:

- To impart advanced technical and practical knowledge in building services& Safety
- To gain knowledge of special services through preparation of service drawing and details.
- To understand about the fire alarm systems
- To gain understanding about the fire alarm system technologies for various buildings
- To gain knowledge about the Fire suppression systems
- To gain knowledge about Automation systems

COURSE OUTCOME:

1. Student will be able to understand the building services & Safety
2. Student will develop the skill of fire alarm service drawings
3. Student will understand about Safety standards for special buildings
4. Student will gain knowledge about Fire safety service standards for all types of buildings
5. Student will gain knowledge in Building management systems
6. Student will gain Knowledge about the integration of IBMS for Multi storied structures

UNIT-I

SAFETY REQUIREMENTS

Minimum safety requirements for a building, particularly for a high rise building as per the National Building Code.

UNIT-II

FIRE ALARM SYSTEMS

Objectives of a Fire Alarm System, Essential components of a Fire Alarm System, Technology of detection, Type of Statutory Standards followed in direction, Explaination on the essential clauses, various types of technologies employed in the Fire Alarm System, basic knowledge on how a Fire Alarm System is designed and installed

UNIT-III

FIRE SUPPRESSION SYSTEMS:

Objectives of a Fire Suppression System, Explanation on fire triangle,Essential components of a Fire Suppression System, different types of Fire Suppression Systems, Type of Statutory Standards followed in Suppression, Explanation on the essential clauses and basic knowledge on how a Fire Suppression System is designed and installed.

UNIT-IV

SECURITY SYSTEMS

Introduction to different types of Security Systems and why they are required. Introduction to Access Control, CCTV, Intruder Alarm and Perimeter protection Systems, Essential components of each system, various types of technologies employed in these Systems, basic knowledge on how they are designed and installed.

UNIT-V

AUTOMATION SYSTEMS

The objectives of the Building Automation system (BAS), the list of utility, safety and security systems that are generally monitored and controlled through IBMS, the various components of IBMS, types of integration with the utility, safety and security systems and the basic knowledge on how they are designed and installed.

SUGGESTED READINGS :

1. Building Automation Systems – A Practical Guide to selection and implementation – Author : Maurice Eyke
2. National Building Code of India 1983 (SP 7:1983 Part IV) – Published by Bureau of Indian Standards
3. IS 2189 – Selection, Installation and Maintenance of Automatic fire Detection and Alarm System – Code of Practice (3rd Revision) – Published by Bureau of Indian Standards.

SUGGESTED READINGS :

1. The Principles and Practice of Closed Circuit Television – Author: Mike Constant and Peter Turnbull
2. Rules of Automatic Sprinkler Installation – 2nd Edition – Published by Tariff Advisory Committee.
3. Fire Suppression Detection System – Author : John L. Bryan
4. Design and Application of Security/Fire Alarm system – Author: John E. Traister.
5. CCTV Surveillance – Author: Herman Kruegle
6. Security Systems and Intruder Alarm Systems – Author: Vivian Capel

16ARES931D	EARTH QUAKE RESISTANCE ARCHITECTURE										SEMESTER-IX	
Marks	**Internal**	**60**	**External**				**90**	**Total**	**150**	**Exam Hours**	**6**	
Instruction Hours /week		**L**	1	**T**	0	**P/S**	4			**Credits**	**3**	

COURSE OBJECTIVE:

- To understand the fundamentals of Earthquake and the basic terminology
- To familiarize the students with design codes and building configuration
- To understand the site planning and performance of ground & Buildings
- To understand the seismic design codes & configurations
- To understand the impacts in urban level due to earth quake and solution for mitigation
- To understand the various types of construction details to be adopted in a seismic prone area.

COURSE OUTCOME:

1. Student will be able to understand the formation and causes of earthquakes
2. Student will gain understanding of the factors to be considered in the design of buildings
3. Student will understand the services to resist earthquakes.
4. Student will become familiar with the Seismic Design Codes & configurations
5. Student will understand about designing earth quake resistant structures
6. Student will learn about urban level planning strategies for earth quake resistance

UNIT-I

Fundamentals of earthquakes
a) Earths structure, seismic waves, plate tectonics theory, origin of continents, seismic zones in India.
b) Predictability, intensity and measurement of earthquake
c) Basic terms- fault line, focus, epicentre, focal depth etc.

UNIT-II

Site planning, performance of ground and buildings
a) Historical experience, site selection and development
b) Earthquake effects on ground, soil rupture, liquefaction, landslides.
c) Behaviour of various types of building structures, equipments, lifelines, collapse patterns
d) Behaviour of non-structural elements like services, fixtures in earthquake-prone zones

UNIT-III

I. Seismic design codes and building configuration
a) Seismic design code provisions – Introduction to Indian codes
b) Building configuration- scale of building, size and horizontal and vertical plane, building proportions, symmetry of building- torsion, re-entrant corners, irregularities in buildingslike short stories, short columns etc.

UNIT-IV

II. Various types of construction details
a) Seismic design and detailing of non-engineered construction- masonry structures, wood structures, earthen structures.
b) Seismic design and detailing of RC and steel buildings
c) Design of non-structural elements- Architectural elements, water supply, drainage, electrical and mechanical components

UNIT-V

III. Urban planning and design
a) Vulnerability of existing buildings, facilities planning, fires after earthquake, socioeconomic impact after earthquakes.
b) Architectural design assignment- Institutional masonry building with horizontal spread and height restriction, multi-storeyed RC framed apartment or commercial building .

SUGGESTED READINGS :

1. Guidelines for earthquake resistant non-engineered construction, National Information centre of earthquake engineering (NICEE, IIT Kanpur, India)
2. C.V.R Murthy, Andrew Charlson. “Earthquake design concepts”, NICEE, IIT Kanpur India.
3. Ian Davis (1987) Safe shelter within unsafe cities” Disaster vulnerability and rapid urbanisation, Open House International, UK
4. Socio-economic developmental record- Vol.12, No.1, Jan-Feb 2005
5. Learning from Practice- A review of Architectural design and construction experience after recent earthquakes- Joint USA-Italy workshop, Oct.18-23, 1992, Orvieto, Italy.

16ARES931E	**DIGITAL ARCHITECTURE**							**SEMESTER-IX**
Marks	**Internal**	**60**	**External**	**90**	**Total**	**150**	**Exam Hours**	**6**
Instruction Hours /week	**L**	1	**T**	0	**P/S**	4	**Credits**	**3**

COURSE OBJECTIVE:

- To develop the advanced knowledge and skills in Digital application
- To develop knowledge in building visualization
- To develop knowledge in digital rendering
- To develop knowledge in walk through Animations
- To get familiarized & create simple multimedia presentations & brochures
- To learn about the videos & Presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will learn about the Latest digital applications used in the architectural practice
2. Student will gain knowledge about parametric applications in design
3. Student will learn about the building visualization & Simulation
4. Student will learn about Advanced rendering techniques
5. Student will learn about animation and visualization techniques used in the architecture industry
6. Student will learn about the video presentations and realistic animations of buildings

TOPICS

1. Advanced techniques in rendering with differential lighting for realistic rendering

2. Advanced techniques in building information modeling

3. Animations and Walkthroughs

4. Simulating gravity, wind and other effects in the scene, distributed rendering

5. Performance Analysis on Building Model using softwares.

Recommended Software:Auto desk Revit, 3ds Max, rhino, lumion, vector works, BIM, Ecotect, v-ray rendering techniques

SUGGESTED READINGS :

1. Rendering Techniques for mixed reality, Thomas Girlinger, Daniel Dauch, Andre Stork, Springer, Berlin, October 2009
2. 3D Computer Animated Walk Throughs, Clark Cory, Scott Meador, William Rosi, McGraw Hill 2009.
3. The Animation Book: A complete guide to animation and film making, Kit Laybourne, Three Rivers Press, December 1998
4. Creating a website, Matthew McDonald, Pogue Press, January 2009s

16ARES931F	ADVANCED CONCRETE TECHNOLOGY										SEMESTER-IX
Marks	Internal	60	External			90	Total	150		Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4			Credits	3

COURSE OBJECTIVE:

- To learn about the classification and specifications in concrete
- To learn about the Chemical composition and Testing of concrete
- To learn about the properties and durability of concrete
- To learn about the Principles and Methods of concrete mix design
- To learn about the Statistical quality control- sampling and acceptance criteria
- To learn the advanced level concrete technological applications.

COURSE OUTCOME:

1. An understanding of the classification and specifications in concrete
2. An understanding of special types of concrete and concreting methods
3. An understanding of the Chemical composition and Testing of concrete
4. An understanding of properties and durability of concrete
5. An understanding ofStatistical quality control- sampling and acceptance criteria
6. An understanding ofthe advanced level concrete technological applications

UNIT-I

CONCRETE MAKING MATERIALS

Aggregates classification, IS Specifications, Properties, Grading, Methods of combining aggregates, specified gradings, Testing of aggregates. Cement, Grade of cement, Chemical composition, Testing of concrete, Hydration of cement, Structure of hydrated cement, special cements. Water Chemical admixtures, Mineral admixture.

UNIT-II

CONCRETE

Properties of fresh concrete, Hardened concrete, Strength, Elastic properties, Creep and shrinkage, Variability of concrete strength, durability of concrete.

UNIT-III

MIX DESIGN

Principles of concrete mix design, Methods of concrete mix design, Testing of Concrete. Statistical quality control- sampling and acceptance criteria.

UNIT-IV

SPECIAL CONCRETE

Light weight concrete, Fly ash concrete, Fibre reinforced concrete, Sulphur impregnated concrete, Polymer Concrete, Super plasticisedconcrete,Hyper plasticized concrete, Epoxy resins and screeds for rehabilitation - properties and applications - high performance concrete. High performance fiber reinforced concrete, self-compacting-concrete.

UNIT-V

CONCRETING METHODS

Process of manufacturing of concrete, methods of transportation, placing and curing. Extreme weather concreting, special concreting methods. Vacuum dewatering - underwater concrete, special form work.

SUGGESTED READINGS :

1. Neville, A.M., Properties of Concrete, Prentice Hall, 1995, London.
2. Shetty M.S., Concrete Technology, S.Chand and Company Ltd. Delhi, 2003.
3. A.R.Santhakumar ;"Concrete Technology",Oxford University Press,2007.
4. Rudhani G. Light Weight Concrete Academic Kiado,Publishing Home of Hungarian Academy of Sciences, 1963

16ARES931G	REAL ESTATE MANAGEMENT									SEMESTER-IX	
Marks	**Internal**	**60**	**External**				**90**	**Total**	**150**	**Exam Hours**	**6**
Instruction Hours /week		**L**	1	**T**	0	**P/S**	4			**Credits**	**3**

COURSE OBJECTIVE:

- To give an overview of real estate development
- To understand about the market potential in the current scenario
- Stimulating an awareness of the issues involved in international real estate
- To learn about urban level policy & Decisions
- To learn about various differences in Real Estate market conditions all over the world
- To gain knowledge about the leverage that the real estate could provide in the overall development

COURSE OUTCOME:

1. Student will gain knowledge in the concepts of Real estate development
2. Student will understand about Property development
3. Student will learn about urban level policies in Real estate management
4. Student will learn about the corporate Real estate management
5. Student will gain knowledge in Project financing and development
6. Student will understand the Current scenario through case studies

UNIT-I

REAL ESTATE DEVELOPMENT

Fundamentals of real estate development – concepts – techniques – recognizing institutional elements – issues encountered in various phases of development like the site evaluation and land procurement – lease hold and free hold property – development team assembly –market potential – demand estimation study – development scheme –constructionand project management – Project marketing

UNIT-II

DEVLOPMENT ANF PROJECT FINANCING

Project feasibility – options – development financing – asset disposal and redevelopment options – analysis of development sites and case studies – integrated case study on specific development project – reviewing and analysis – problems and strategic issues

UNIT-III

URBAN POLICY AND REAL ESTATE MARKET

Impact of government regulations and public policies on real estate markets – urban land rate and location theories – Land us e structures – community and neighborhood dynamics – degeneration and renewal in urban dynamics – private public participation-government policies – public and private housing and fiscal policy – Property taxation – local government finance

UNIT-IV

CORPORATE REAL ESTAT EMANAGEMENT

Strategic plans to align real estate needs with corporate business plans – performance measurement techniques – identify assets acquisition or disposal – methods for enhancing values through alternative – efficientsource utilization or improving user satisfaction

SEMESTER 10

16ARS1021	ARCHITECTURAL THESIS									SEMESTER-X	
Marks	Internal	400	External			600	Total	1000		Exam Hours	6
Instruction Hours /week		L	4	T	0	P/S	27			Credits	18

COURSE OBJECTIVE:

- To ensure consolidation and application of the knowledge gained in preceding years of the programme
- To develop the skill of Design in the context of a project of the student's choice.
- To enable addressing of specific projects through key, identified issues inherent in the project
- To enable development of thought processes in specific areas/aspects into a project.
- To facilitate development of ability to complete and handle projects independently
- To develop the career of Architecture by exhibiting the skill in thesis

COURSE OUTCOME:

1. Student will gain an overall understanding of an Architectural project
2. Student will be able to research, Analyse, synthesise and present his ideas
3. Student will apply his skills developed in the previous years in this Project
4. Student will gain the ability to handle major architectural project of a larger scale
5. Student will be able to design with all Socio, economic and Environmental aspects.
6. Student will become an expertise in his domain of architectural design

UNITS I to UNIT V

The main areas of study and analysis shall be Architecture, Urban design, Urban renewal and Human settlements, Environmental Design, Conservation, Landscape Design, Housing etc.. However, the specific thrust should be architectural design of built environment.

Research Methods as applicable to architectural studies is to be taught as part of Thesis.

METHOD OF SUBMISSION

The Thesis Project shall be submitted in the form of drawings, project report, physical/ digital models, presentations and walkthroughs.

SUGGESTED READINGS :

1. E and OE Planning London Books Ltd 1973
2. National Building Code ISI
3. De Chiasa and Callendar- Time saver standards for Building Types - Mc Graw Hill Co., 1973.
4. Edward D Mills, planning, 4 volumes, newness Butterworths, London 1976

16ARES1031A		INDUSTRIAL ARCHITECTURE								SEMESTER-X	
Marks	Internal	80	External			120	Total	200	Exam Hours		6
Instruction Hours /week		L	0	T	0	P/S	4			Credits	2

COURSE OBJECTIVE:
- To introduce about Industrial design building and architecture
- To understand about the types of industrial space
- To understand about precast building types & practice
- To gain knowledge in on site & off-site prefabrication systems
- To gain deep understanding about the Modular - technologies
- To understand about the overall structural system of Industrial buildings

COURSE OUTCOME:
- Student will understand the application of Industrial buildings
- Student will gain understanding about the pre fabrication systems
- Student will gain Knowledge in Industrial construction
- Student will understand about the modular components & coordination of Industrial Buildings
- Student will understand about the overall structural system of Industrial buildings
- Student will be able to design large scale Industrial buildings

UNIT-I
INTRODUCTION
Five year plans and thrust in housing – Issues in Urban Housing – use of modern building materials – application of modern technology – meaning of industrial building system.
UNIT-II
APPLICATION OF INDUSTRIAL BUILDING SYSTEM
Feasibility of using industrial building system in Residential and Non-Residential buildings – manufacturing of building components – Technology requirements for industrial building system – use of Industrial building system as an option for disaster mitigation.
UNIT-III
MODULAR CO-ORDINATION AND INDUSTRIALISED SYSYEM
Concept and definition of Modular dimensional discipline – Advantages and Limitations of modular principle – Components of residential buildings – precast elements.
UNIT-IV
PRE-FABRICATION SYSTEM
Objective and necessity – Off site on site prefabrication elements and construction joints – architectural and technical limitations.
UNIT-V
PROCEDURES AND ORGANISATION
Equipments used – manufacturing processes – transportation of components – assembly and finishing – Structural, social and economic issues related to industrial building system.
SUGGESTED READINGS :
1. Industrial Building and Modular Design HenrikMissen – C & CK, UK 1972.
2. Albert G.H.Dietz, Laurence Secotter – “Industrialized Building Systems for Housing” – MIT, special summer session, 1970 USA.
3. “Industrialized Building Construction” – Proceedings of National Seminar, Nov-17-18, 2000, Indian Concrete Institute, Mumbai.
4. “Innovative Construction Materials” – Proceedings of Seminar, Jan 20-21,2001, Veermata Jeejabai Technical Institute, Mumbai.

<table>
<tr><td>16ARES1031B</td><td colspan="10">GREEN BUILDING</td><td colspan="2">SEMESTER-X</td></tr>
<tr><td>Marks</td><td>Internal</td><td>80</td><td colspan="4">External</td><td>120</td><td>Total</td><td>200</td><td colspan="2">Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>0</td><td>T</td><td>0</td><td>P/S</td><td>4</td><td colspan="4">Credits</td><td>2</td></tr>
</table>

COURSE OBJECTIVE:

- To develop and acquire knowledge about environment and ecosystems
- To understand about Energy usage &energy efficient technologies
- To learn about the use of natural materials and water conservation technique.
- To Understand about Water Efficiency & regeneration
- To understand about the Rating of current buildings
- To understand the Bio degradability materials & recycling

COURSE OUTCOME:

1. Student will understand the basic concept of sustainability in Architecture
2. Student will gain knowledge in passive and Hybrid design strategies for designing a green building
3. Student will understand the energy usage of various types of buildings
4. Student will learn about energy efficiency and ways to minimize the energy.
5. Student will learn about the environmental impacts and assessment
6. Student will gain knowledge about the green rating systems and codes in India

UNIT - I

SUSTAINABILTY AND GREEN BUILDING

Understanding of food and energy cycle – Principals of sustainability – Naturalecosystem – Elements of green development – Introduction to green architecture – green building design – benefits – rating systems – LEED, GRIHA, BREAM, ECBC

UNIT II

SUSTAINABLE STRATEGIES AND DEVELOPMENT

Sustainable design concepts – strategies – Design principles – Active and passive techniques – land use patterns – site development – site selection – adaptive reuse – existing buildings up gradation

UNIT III

ENERGY – USAGE AND REGENERATION

Water – consumption – domestic usage – efficiency in usage – low flow plumbing fixtures – water appliances – rain water harvesting – reuse of gray water –energy efficiency – optimizing building envelopes configuration – renewable power- Towards net zero energy building - use of photovoltaic- automation for efficient usage – smart buildings

UNIT IV

BIO DEGRADABLE MATERIALS AND RECYCLING

Concept of embodied energy – performance and life cycles – building materials – selection of sustainable materials – recycling waste – collection and disposal – appropriate technologies – use in landscape.

UNIT V

ENVIRONMENTAL IMPACT ASSESMENT.

Envirnmental Impact Assesment – Internal frame works & Assessment Tools.

SUGGESTED READINGS :

1.Anna ray – Jone – Sustainable architecture in japan – The green buildings of Nikken seiki, Wiley – acdemy 2000
2.Architecture and th e environment – bio climatic building design – David Lloyd (Laurence king publishers, London 1998)
3.Sustainable Architecture low tech houses – Charles Broto& Arian Mostedi Pub : joseph Ma Minguet 2002.
4.Energy effiecient buildings in India – Millimajundar. TER publication and ministry of non conventional energy sources,2001
5.Ecology of the sky – Ivor Richards , The Image publishing groups ,2009

16ARES1031C	RESEARCH METHODS									SEMESTER-X	
Marks	**Internal**	**80**	**External**			**120**	**Total**	**200**	**Exam Hours**		**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4			**Credits**	**2**

COURSE OBJECTIVE:

- To learn the importance of and undertake research and field studies
- To understand the research applications in architectural design.
- To understand the different methods and the techniques as relevant to the design profession
- To understand the experimental research methods
- To apply research in evaluation and appraisal of architectural design projects.
- To understand about different survey methods

COURSE OUTCOME:

1. Student will understand the research methodology and research methods
2. Student will understand the various analytical methods
3. Student will understand the experimental methods of Research
4. Student will learn about the survey methods and documentation
5. Student will know to collect relevant data, compile and document
6. Student will be able to critically analyse the data and present it as a document

UNIT-I

Importance. Purpose and scope of research and field studies. Application in architecture in terms of design , technology, environment, economic and behavioral areas.

UNIT-II

Sequence and methods of research, Identification of problem, Hypothesis formulation objectives and methodology.

UNIT-III

Understanding and applying qualitative analytical interpretative correlation, quasi experimental, experimental, simulation and modeling techniques in Architectural design.

UNIT-IV

Pilot studies field surveys and collection of samples – physical, Architectural, Environmental organizational, preparation and Analysis of Data sheets and Questionnaires.

UNIT-V

Preparation and analysis of data sheets and questionnaires. Arriving at conclusions from the research at fiels studies. Report writing and publications.

SUGGESTED READINGS :

1.Knight. A and Ruddock L., “Advanced Research Methods in build Environment”, John Wiley & Sons 2008.
2.Groat L, and Wang D, “Architectural Research Methods”. John Wiley & Sons, 2002.
3.Gibbs J P “ Urban Research Methods”, (rev.ed) Von Nostrand 1988.
4.Kothari C R, Research Methodology – Methods and Techniques”, New Age Interntional 2004.
5.Khanzode V V, “ Research Methodology – Techniques and Trends”, APH Publishing, 1995.

16ARES1031D	**MEDICAL ARCHITECTURE**									**SEMESTER-X**
Marks	**Internal**	**80**	**External**			**120**	**Total**	**200**	**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4		**Credits**	**2**

COURSE OBJECTIVE:

- To learn about the introduction of the health industry and relation to architecture
- To learn about the level of circulation in Hospital buildings
- To learn about the level of services in hospital buildings
- To learn about the planning aspects of the Hospital Architecture
- To learn about thequality control and delivery
- To learn the advanced level Hospital management

COURSE OUTCOME:

1. An understanding of the health industry & relation to Architecture
2. An understanding of special types of circulation in hospital buildings
3. An understanding of the major & minor services in hospital buildings
4. An understanding of planning aspects of hospital buildings
5. An understanding of quality control & delivery of Hospital architecture
6. An understanding ofthe advanced level of Hospital management

.

UNIT-I

Introduction to health care industry, demand of the health care industry.

UNIT-II

Health care Industry - United Nations International Standard Industrial Classification (ISIC) - Hospital activities, Medical and dental practice activities and other human health activities.

UNIT-III

Health care Industry – Global Industry Classification Standard and the Industry Classification - Health care equipment & services and Pharmaceuticals, biotechnology & related life sciences.

UNIT-IV

Health care Industry – Delivery System – Primary, Secondary, Tertiary and Quaternary, Community Health

UNIT-V

Modern concepts in planning, designing, equipping and commissioning of all such built environments which are associated with the health care industry. Future aspects of planning heath care facilities and service

SUGGESTED READINGS :

1.Kunders .G.D, Hospitals – Facilities planning and Management, Tata Mcgraw Hill Publication, 2008
2.Joseph DeChiara, Julius Panero. Time-Saver Standards for Interior Design and Space Planning, McGraw-Hill Education, 2001
3.Peter Stone, British hospital and health-care buildings: designs and appraisals, Architectural Press, 1980
4.Joint Commission International Accreditation Standards for Hospitals, 2002
5.Carles Broto, New Health Care Facilities, Links International, 2009

16ARES1031E	EXHIBITION										SEMESTER-X	
Marks	**Internal**	**80**	**External**				**120**	**Total**	**200**		**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4				**Credits**	**2**

COURSE OBJECTIVE:
- To learn about the introduction of the Exhibition design
- To learn about the introduction of the retail architecture
- To learn about the level of services in Exhibition & retail architecture
- To learn about the planning aspects of the Exhibition design
- To learn about the Marketing theories & retail branding
- To learn the advanced levelof exhibition structures

COURSE OUTCOME:
1. An understanding of the Exhibition design
2. An understanding of the retail Architecture
3. An understanding of the major services in exhibition design
4. An understanding of planning aspects of the Exhibition Design
5. An understanding of the marketing theories & retail branding techniques
6. An understanding ofthe advanced level of Exhibition Structures

UNIT-I

Introduction **Discussion: The terms 'exhibition' and 'retail' and 'Space & Form- Space Layout'**

UNIT-II

Elements of environmental design: from flat graphics to 3D

UNIT-III

Ergonomics& Accessibility

UNIT-IV

Exhibition Design: Form, Feel & Function, Introduction to aesthetic, form and functional aspects of basic exhibition design , Identification of critical issues through research , Execution of the design processes

Application of visualization skills

UNIT-V

Introduction to marketing theory / retail branding Marketing theory. Display of case studies.

SUGGESTED READINGS :

1. Pam Locker, BASICS INTERIOR DESIGN 02 – EXHIBITION DESIGN, Published by AVA Publishing.
2. Lynne Mesher, BASICS INTERIOR DESIGN 01 – RETAIL DESIGN, Published by AVA Publishing.

16ARES1031F	PROGRESSIVE ARCHITECTURE										SEMESTER X	
Marks	**Internal**	**80**	**External**				**120**	**Total**	**200**		**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4				**Credits**	**2**

COURSE OBJECTIVE:

- To understand and acquire knowledge in advanced architectural concepts and ideologies.
- To gain Knowledge about the future concepts of eminent architects
- To understand about the material usage in the current trend of architecture
- To gain knowledge about the Concept of biomimicry
- To understand about the adaptive reuse
- To gain understanding about energy integration and zero energy developments

COURSE OUTCOME:

1. Student will be able to understand and evolve futuristic design ideas and concepts
2. Student will be able to integrate various aspects of design thinking of future
3. Student will understand about the parametric design concepts and applications
4. Student will understand about the concept of Biomimicry
5. Student will gain knowledge about the Adaptive reuse
6. Student will gain knowledge about energy integration and zero energy development.

Futuristic Vision

Future concepts as envisioned by Antonio Saint Elia, Frank Lloyd Wright, Corbusier.

UNIT-II

Futuristic Trends

Future trends being evolved by Marcos Novak, Neil Denari, Greg Lynn, Toyo Ito and others.

UNIT-III

Architectural Concepts and Ideas

Evolution of contemporary architectural concepts such as biomimcry, adaptive reuse, low cost development and urban regeneration.

UNIT-IV

Materials, Technology and Systems

Futuristic building materials, building tectonics and systems of the future.

UNIT-V

Energy Integration

"Zero energy" and "Energy +" buildings with emphasis on an integrated approach.

SUGGESTED READINGS :

1. Bell, J., "21st Century House", Laurence King Publishing, 2006
2. Jodidio, P., "Building a New Milleneum", Vol.1 Taschen, 2003
3. Jodidio, P., "Architecture Now", Vol. 2, Taschen, 2004

16ARES1031G	HGH RISE BUILDINGS									SEMESTER-X	
Marks	**Internal**	**80**	**External**			**120**	**Total**	**200**		**Exam Hours**	**6**
Instruction Hours /week		**L**	0	**T**	0	**P/S**	4			**Credits**	**2**

COURSE OBJECTIVE:

- To understand the various types of multistoried buildings
- To understand the structural systems of High -rise buildings
- To understand deeply about the building service systems of high- rise buildings
- To deeply understand about the Structural Systems in High Rise Buildings
- To understand about the Safety Systems in high Rise buildings
- To understand about the Bye – laws & codes of design of high -rise buildings

COURSE OUTCOME:

1. Student will learn about the Design and planning aspects of High-rise structures
2. Student will gain knowledge about the National building Codes of high-rise structures
3. Student will understand about the various development control regulations all over India
4. Student will gain knowledge about the Structural aspects of High-Rise buildings
5. Student will gain knowledge about various technical services involved in High rise buildings
6. Student will gain knowledge about functionality of the high-rise structures

UNIT-I

Introduction to High rise structures

Urban environment and physical planning considerations – architectural design considerations – space planning – palnning building services – advanced service systems – antomation – Bye laws and codes applicable – for every structure and service section

UNIT-II

Tall building types and floor systems

Classification of tall buildings – types – shear frames ,interacting systems – Tubular systems.

Composite steel floor systems , pre stressed and post tensioned concrete floor systems – examples

UNIT-III

Lateral load resisting systems

Braced frames – moment resisting frame systems – core and out trigger systems – benefits and drawbacks – tubular system – Hybrid systems – examples

UNIT-IV

Services for Tall buildings

Express evators- Sky lobbies – service floor etc – Water supply system- skip stage plumbing – energy conservation methods – location and sizing of water tanks – wet risers, sumps , smoke detectors , alarms ,sprinkler systwms – fire escpae stairs – fire resistant doors – Fire resistant materials – fire fightingequipments.

SUGGESTED READINGS : :

1.Bennetts , Ian etal – tall building structural systems

2.Proceedings of the council for tall buildings – Vol 1 to 10

3.NBC

SEMESTER - I

16IDT101	COMMUNICATIVE ENGLISH							SEMESTER-I
Marks	Internal	40	External	60	Total	100	Exam Hours	3
Instruction Hours/Week	L	2	T	0	P/S	0	Credits	2

UNIT-1: LANGUAGE FOCUS

Technical vocabulary – formal phrases and idioms – homophones, homonyms, often mis-spelt words – conjunctions – formation of new words – irregular verbs – plurals, gender sounds, words ending with phobia, logy etc. Grammar: Finite and infinite verbs – transformation of sentences – simple, complex and compound – phrases and clauses – question forms – question tags – expression of cause and effect, purpose and function.

UNIT-2: READING & LISTENING

Extensive and Intensive reading – active and passive reading – eye reading and visual perception – reading for a purpose – speed reading – reading with expression – story telling – critical and analytical reading – Listening to debates and discussions for making suitable responses.

UNIT-3: WRITING & SPEAKING

Cohesion and coherence in sentences and paragraphs – business letters of different kinds – report writing – writing strategies – writing comments, procedures, inferences, instructions and recommendations – writing articles.

Applied English Communication – Welcome address, vote of thanks, compeering, debates, role plays, demonstration of advertisements – group discussions – mock interviews and dialogues – checklist of making oral presentations – vocal communication techniques – voice, quality, volume, pitch, rate of delivery.

UNIT-4: HARD AND SOFT SKILLS

Personal attributes – verbal and non verbal communication – interpersonal abilities/ skills – empathy, leadership, good manners and sociability – problem solving – reasoning and flexibility – intrapersonal abilities – self communication – self control and self esteem.

UNIT-5: SOCIAL SKILLS

Facilitating interactions, understanding social roles – making a team – leading a team – dealing with different kinds of people and situations – emotional quotient and intelligent quotient – personality development – communication and body language, social etiquette –goal setting – determination, discipline and direction.

<tr><td>16IDT102</td><td colspan="8">HISTORY OF INTERIORS</td><td colspan="3">SEMESTER-I</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="4">External</td><td>60</td><td>Total</td><td>100</td><td>Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>2</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="3">Credits</td><td>2</td></tr>
</table>

COURSE OBJECTIVE:

- To help the student understand the designs from Prehistoric Period to the Middle Ages.
- To know more on the Modern Movements in Interior design from the beginnings of 20^{th}century.
- To allow students to learn from the rich heritage the elements of aesthetic design.
- To understand the construction techniques of the ancient times.
- To understand the skilled labor and the presence of the same in the olden days.
- To understand the same scene in the contemporary era and its challenges to execute the same finesse.

COURSE OUTCOME:

1. An understanding about the spatial and stylistic qualities associated with architecture.
2. An Understanding of architecture as an outcome of various social, political and economic upheavals, and as a response to the cultural and context.
3. The individual will be exposed to the present to the ancient day's comparison in techniques..
4. To use the techniques of the ancient times and to overcome the challenges faced by the same.
5. To respect the wide heritage that can be offered with respect to the various Architecture eras.
6. An understanding of the influences of lifestyle and culture of the respective times.

<u>Unit I</u>

Origin and scope of Interior Design - Evolution of Interior Design as an independent profession

<u>Unit II</u>

Origin and scope of Interior Design - Evolution of Interior Design as an independent profession through the ages - Definition of Interior Design - Overview of Interior Design in India

<u>Unit III</u>

Ancient Egyptian Period - Roman and Greek Styles - Medieval Period - Gothic and Renaissance

<u>Unit IV</u>

Baroque - European Rococo - Neo-Classicism - Art Deco Style - Art Nouveau - Minimalist - Industrial Bauhaus

<u>Unit V</u>

Traditional Styles - Islamic Period in India - Oriental Period - Vernacular Indian Styles

16IDP111	COMPUTER APPLICATIONS I										SEMESTER-I	
Marks	Internal	60	External				90	Total	150	Exam Hours		3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits				3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of softwares.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to to BIM

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.

Unit I

Definition and basics of internet, Electronic mail, File Transfer protocol, The World wide Web, WWW Browsers, Uses of Internet and Blogging

Unit II

Use in creating technical documents and reports, Cost Estimates, Paper Presentations and Assignments. Suggested Software – MS Office, Open Office

Unit III

A complete hands-on drawing ,sketching and two dimensional art course with exercises related to Basic Design and Visual Arts. Suggested Software – Photoshop, Illustrator.

Unit IV

Exercises in photographic image enhancement and Artistic Applications. Suggested Software – Photoshop, Illustrator.

Unit V

Command windows – toolbars and menus – tool palettes. Create and modify objects: 2d commands to draw, edit and modify. Suggested Software - AutoCAD

16IDP112	ART AND CRAFT I						SEMESTER-I	
Marks	**Internal**	**40**	**External**	**60**	**Total**	**100**	**Exam Hours**	**3**
Instruction Hours/Week	**L**	**1**	**T**	**0**	**P/S**	**4**	**Credits**	**3**

COURSE OBJECTIVE:

- To encourage a critical orientation to design thinking and action.
- To understand the word critical meaning that everything must be open to enquiry and alternative view point.
- By design thinking and action it means that the process if observation and study of natural and manmade objects and systems,
- Ideation, free exploration , and development of personal skills and attitudes.
- To bring a creative interactive movement of students that will mould the respective skill.
- Skill based learning with adept technology support for the same.

COURSE OUTCOME:

1. The students are exposed to various mediums, techniques and tools.
2. The students gain mastery in sketching, visualizing and expression through manual drawing.
3. Sensitized to culture, craft and context.
4. Skill Development in Handling Materials and in Making Products
5. To be updated to the art world and to hone a skill that precedes the student in an overall development.
6. To imbibe qualities of confidence and orator ship

Unit I to V

Exploration in mixed media & collage to convey specific theme and meaning. Analytical Studies will be undertaken in two and three dimensions using various media.

Use of hand tools and materials: working with wood, metals, plaster, plastic, foam boards etc; techniques, safety & practice. Suggestive exercises are:

Type 1: Making mount board mobiles employing cubes cuboids, pyramid, cylinder and cones.

Type 2: Space frame models using match sticks straw, steel wires, bamboo splits.

Type 3: Texture applicability to murals and interior decoration.

Making craft objects and sculpture using different materials such as clay, metal, etc.

9. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson

16IDS121	INTERIOR DESIGN I									SEMESTER-I	
Marks	Internal	160	External			240	Total	400	Exam Hours		6
Instruction Hours/Week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosures and various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand the design proximity and relation of spaces.
- To understand the translation of the drawing from board to reality and unification of the spaces.
- To understand the basic concepts for the size of the project.
- Develop an eye for design thinking that will encourage students to explore their creative capacities.

COURSE OUTCOME:

1. An understanding of the qualities of different elements as well as their composite fusions.
2. An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
4. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
5. To be able to describe an understanding that is both in representation and verbally present the same.
6. To update and to introduce various other methodologies to enhance the skill set.

<u>Unit I to V</u>

Design Thinking: What is Design? Changing Role of the Designer; Route map of the Design Process; Components of Design Problems; Measurement, Criteria & Judgment in Design; Types and Styles of Thinking – Creative thinking, Guiding Principles.

Introduction to Elements of design.

Properties, qualities, and characteristics of (i) line, (ii) direction, (iii) shape, (iv) size, (v) texture, (vi) space (vii) time and motion (viii) value and (vii) colour. Exercises involving the same

Exploration in mixed media & collage to convey a specific theme and meaning.

Analytical Studies to be undertaken in two and three dimensions using various materials and tools.

The principles of design relationships/ Composition – Unity & Harmony, Balance, Scale & Proportion, Contrast and Emphasis, and Rhythm. Exercises involving the same.

Lecture introduction into the discipline of interior design and the transformation from basic design to interior design - Placing Interiors (Building, Site, Orientation, Climate, City and Landscape); History & Precedent; Materials & Construction; Representation and Realization.

16IDS122	INTERIOR MATERIALS AND CONSTRUCTION I									SEMESTER-I
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours/Week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- Understanding the basic components of the buildings that envelope a small buildings
- Understanding the different types in each element and different treatments for the same.
- Understanding function of each component of a building like foundation, walls, beams, column, and roofs.
- Understanding simple roof & floor finishes.
- To understand the primary basics of the loading in a structure and the distribution of the load
- To understand the composition and properties of the materials.

COURSE OUTCOME:

1. Students learn Interior construction details using naturally occurring building materials.
2. Student are taught to judge the structure before making any structural changes required in renovation.
3. Working format with for materials such as stone, bamboo, mud and lime through drawing as well as doing a literature or live case study.
4. Students are to submit drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.
5. Students will be honing the skills of technical drawings and their representations.
6. Students will be able to use this material knowledge during construction and can find best materials suited for apt activities.

Unit I

Overview of all building materials – Application of Materials in Construction – Traditional Materials – Modern Materials – Recent Developments in the Building Material Industry – Sample collection of building materials/brochures

Unit II

Stone: Classification of rocks - Building stones - their uses –physical properties - brief study of tests for stone – deterioration - preservation of stone - various stone finishes - cutting and polishing of granites.

Unit III

Mud as a building material - Soil stabilization, soil blocks - Cast- in-situ walls - flooring - roofing - plastering.

Bamboo, Casuarina, Coconut, palm, Hay, Coir, Jute – properties and uses.

Types of foundations - walls - simple roof trusses floors for rural structures

Lime – types - properties and uses – Manufacturing process – Mortar: functions – requirements - mixes.

Unit IV

Bricks - brief study on manufacture of bricks – properties and uses - suitability - types of bricks - uses in buildings, structural tiles, ceramics, terracotta – properties and uses.

Unit V

Functional requirements of a building and its components - Drawings of foundations, plinth, superstructure, roofing. Openings: Doors, Windows and Ventilators.

7. Rural Construction - NBO, New Delhi

16IDS123	**INTERIOR GRAPHICS I**							**SEMESTER-I**
Marks	**Internal**	**60**	**External**	**90**	**Total**	**150**	**Exam Hours**	**6**
Instruction Hours/Week	**L**	**1**	**T**	**0**	**P/S**	**5**	**Credits**	**3**

COURSE OBJECTIVE:

- To help students to learn &understand the techniques of various methods of drawing
- To make them understand the use of colors & their effects in drawings.
- To understand various geometrical shapes.
- To be able to scale geometry and understand the sizes.
- To understand sciography and its representation.
- To be able to improve different lettering.

COURSE OUTCOME:

1. Ability to construct the 3d views and perspective drawings of the Interiors
2. Understanding of advanced documentation and measured drawing techniques.
3. Ability to express design in all dimensions
4. Ability to improve drawing skills.
5. To be able to understand the various measurements of the drawings.
6. To be able to express and exhibit drawings to the best understanding for professional practice.

Unit I

Freehand drawing: Study of form and proportion - study of light and shade - Drawing of simple and natural elements

Unit II

Freehand drawing: Parts of building environment - exterior and interior views- landscape

Unit III

Measured Drawing: Simple objects to scale such as furniture, entrances, building elements and details of interior components

Unit IV

Orthographic Projection: Scales - construction of planes, curves, circles, tangents, regular polygons - projection of points, lines and planes

Unit V

Orthographic Projection: Projection of Solids, Frustums - Section of Solids - Interpenetration of solids and true shape of sections

16IDT201	CONTEMPORARY INTERIORS							SEMESTER-II
Marks	Internal	40	External	60	Total	100	Exam Hours	3
Instruction Hours/Week	L	3	T	0	P/S	0	Credits	3

COURSE OBJECTIVE:

- To help the student understand the designs from the industrial age to the present information age.
- To know more on the Modern Movements in Interior design from the beginnings of 20^{th}century.
- To help students acquire knowledge of the current happenings and the classification of the importanceof a particular information.
- To be undertsnad and execute various styleslike modernism, post modernism, contemporary, etc,
- To be able to understand the concepts of minimalism, and international design style.
- To be able to design a particular style of the interiors based on these understandings.

COURSE OUTCOME:

1. An awareness of the spread and varied later directions of modern interiors across the world.
2. An understanding of interior production from the 2060s as driven by large scale changes across the world.
3. Familiarity with contemporary forces and directions in interiors across the world.
4. To be fore thought and to be able to design for the future with an understanding of the recent history.
5. To be able to appreciate and be a critic to all works of famous architects under each movement.
6. To understand different regions and its interior design style to be able to regain global cultures understanding.

Unit I EVOLUTION OF MODERN INTERIORS

Reasons for the evolution of Modern Interiors, origins-Neo Classicism. Industrial revolution and its impact – Emergence of new building typologies, New Materials and Technologies- steel, glass and concrete.

Unit II REVIEWING INDUSTRIALISATION

Arts & Crafts movement in Europe and America; Art nouveau, and the works of Horta, Guimard, Gaudi and Macintosh; Organic Architecture -Early works of F.L.Wright. Chicago school; Art deco.

Unit III EVOLUTION OF MODERNISM, POST MODERNISM AND CRITIQUE

Viennese secession, Adolph Loos and debates on ornamentation; Futurism, Expressionism works of Mendelssohn &Taut, Cubism, Constructivism, De stijl and their influence on Architecture. Bauhaus school & Walter gropius, Modernism and the International style, Brutalism, Deconstructivist.

Unit IV WESTERN INTERIOR ARCHITECTURE

Ideas and works of Richard Meier (Smith House, Connecticut and Getty Centre, Brent Wood, LosAngeles), Charles Moore (Architect's Own House at Orinda and Piazza d'Italia, New Orleans), Bernard Tschumi (Kyoto Railway Station Project and Parc de la Villete, Paris), Frank Gehry (AeroSpace Museum, Santa Monica and Guggenheim Museum, Bilbao), Norman Foster (Hong Kong Shanghai Bank and Renault Distribution Centre, Swindon, England).

Unit V WESTERN INTERIOR ARCHITECTURE

Zaha Hadid (The Peak Club, HongKong and IBA Housing Block 2, West Berlin), Daniel Leibskind(Jewish Museum, Berlin and World Trade Centre, New York), Rem Koolhas(Dance Theatre, The Hague and Netherlands Sports Museum), Santiago Calatrava (Lyon- Satolas Railway Station and Olympic Stadium at Athens), Renzo Piano (Pompidou Centre, Paris).

<table>
<tr><td>16IDT202</td><td colspan="8">HUMAN VALUES</td><td colspan="3">SEMESTER-II</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="4">External</td><td>60</td><td>Total</td><td>100</td><td>Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>2</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="3">Credits</td><td>2</td></tr>
</table>

Unit I HUMAN VALUES

Self discipline, Concern for others, Empathy, Kindness, Valuing time, Self Esteem, Dignity, Caring and Sharing, Honesty, Cooperation and Commitment, Responsible citizenship,.

Unit II CHARACTER BUILDING

Self-awareness, Self-confidence, Courage, Team work, Adjustments, Accepting differences, Conflict resolution, Assertiveness, Critical thinking, Decision making, Emotional coping skills.

Unit III DILEMMA OF THE YOUTH

Peer pressure, Mobile Usage, Influence of media, Alcoholism, Smoking & Substance abuse, Road accidents, Suicidal tendency.

Unit IV HEALTH AND WELLNESS

Personal hygiene, Fitness and health: Components and benefits of fitness, Importance of yoga and meditation, Balanced nutritional diet.

Sex education: Infatuation, Healthy life style choices, Sexually Transmitted Diseases, HIV/AIDS awareness.

Unit V PSYCHO – SOCIAL INTERVENTION

Psychotherapy: Supportive therapy, re-educative and re-constructive

References:

1. Standard study material / as prescribed by the concerned course teacher

16IDP211	COMPUTER APPLICATIONS II						SEMESTER-II	
Marks	Internal	60	External	90	Total	150	Exam Hours	3
Instruction Hours/Week	L	1	T	0	P/S	4	Credits	3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of softwares.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to to BIM

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.

Unit I

Command programming – modifying commands, selection sets, Zoom, accurate inputs.

Introduction to Layers, Texts and Scale. Suggested Software - AutoCAD

Unit II

Command programming - transparent overlays, hatching utilities, assigned color and line types.

Unit III

Use of multiline, style, block, symbols and libraries.

Unit IV

Advance exercise in 2D drafting of various complex building drawings, incorporating Linetypes and Linetypes Styles.

Unit V

XREFS, Tables, Modifying and creating Dimensions and customizing AutoCAD; Understanding concepts of Vport, concept of object linking, and editing session.

Suggested Software - AutoCAD

COURSE OBJECTIVE:

- To encourage a critical orientation to design thinking and action.
- To understand the word critical meaning that everything must be open to enquiry and alternative view point.
- By design thinking and action it means that the process if observation and study of natural and manmade objects and systems,
- Ideation, free exploration , and development of personal skills and attitudes.
- To bring a creative interactive movement of students that will mould the respective skill.
- Skill based learning with adept technology support for the same.

COURSE OUTCOME:

1. The students are exposed to various mediums, techniques and tools.
2. The students gain mastery in sketching, visualizing and expression through manual drawing.
3. Sensitized to culture, craft and context.
4. Skill Development in Handling Materials and in Making Products
5. To be updated to the art world and to hone a skill that precedes the student in an overall development.
6. To imbibe qualities of confidence and orator ship.

<u>Unit I to V</u>

Exploration in digital and physical media to convey specific theme and meaning. Analytical Studies of the built forms will be undertaken in three dimensions using various media.

Use of digital and hand tools and materials: working with wood, metals, plaster, plastic, foam boards etc; techniques, safety & practice. Suggestive exercises are:

Type 1: Making complex 3D models

Type 2: Applying advanced rendering techniques to the 3D models.

Type 3: Rendering techniques

16IDS221	INTERIOR DESIGN II										SEMESTER-II	
Marks	Internal	160	External				240	Total	400		Exam Hours	6
Instruction Hours/Week		L	2	T	0	P/S	10	Credits				7

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosures and various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand the design proximity and relation of spaces.
- To understand the basic concepts for the size of the project.
- To develop understanding of the scale, function and options existing when• designing small-scale spaces in residences such as toilets, kitchens, living, bedrooms etc.
- Development of ideas with regard to false ceiling, wall paneling, flooring,• floor coverings, curtains, windows, doors and other elements of residential interiors.

COURSE OUTCOME:

1. An understanding of the qualities of different elements as well as their composite fusions.
2. An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
4. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
5. To be able to describe an understanding that is both in representation and verbally present the same.
6. To update and to introduce various other methodologies to enhance the skill set.
7. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
8. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

Unit I to V

Design Process: Evolution from Program and Conditions to Concept & Design - Graphical Representation of the Process. Design Strategies and Methods. Designing in Context; Design & Function; Constituents of Design; Working with materials and Structures; Arriving at Ideas.

Horizontal movement - single bay - passive energy type spaces. Design Exercises shall be simple functional units with universal access compliance such as: Toilet for a physically handicapped person. Hostel room, bed room, kitchen, Shop, Workshop, pavilions, snack bar.

Design problems involving simple space organization. Design Exercises shall be multiple spaces and understanding their inter-relationships, such as: Residence, petrol bunk, fire station, police station, Cottage for an elderly couple

The study of space standards and anthropometrics related to each problem. Anthropometry as related to physically handicapped and elderly persons is required to be studied. Different Techniques shall be used for presentation.

Marks	**Internal**	**80**	**External**	**120**	**Total**	**200**	**Exam Hours**	**6**
Instruction Hours/Week	**L**	**1**	**T**	**0**	**P/S**	**6**	**Credits**	**4**

COURSE OBJECTIVE:

- Understanding the basic components of the buildings that envelope a small buildings
- Understanding the different types in each element and different treatments for the same.
- Understanding function of each component of a building like foundation, walls, beams, column, and roofs.
- Understanding simple roof & floor finishes.
- To understand the primary basics of the loading in a structure and the distribution of the load
- To understand the composition and properties of the materials.

COURSE OUTCOME:

1. Students learn Interior construction details using naturally occurring building materials.
2. Student are taught to judge the structure before making any structural changes required in renovation.
3. Working format with for materials such as stone, bamboo, mud and lime through drawing as well as doing a literature or live case study.
4. Students are to submit drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.
5. Students will be honing the skills of technical drawings and their representations.
6. Students will be able to use this material knowledge during construction and can find best materials suited for apt activitie

Unit I BRICKS AND CLAY PRODUCTS - CONSTRUCTION

Structural members in brickwork – Brick piers, footings, load bearing walls.

Reinforced brick masonry - Arches - Lintels – Corbels - copings.

Unit II BRICKS AND CLAY PRODUCTS - CONSTRUCTION

Hollow clay blocks - for walls - partitions - roofs.

Roofing - Flat Roofs - Terrace roofs - Sloping roofs.

Unit III TIMBER AND ALLIED PRODUCTS

Softwood and hardwood - Secondary timber - Physical properties and uses - Defects, Conversion, Seasoning, decay and preservation of timber - Fire retardent treatment, anti-termite treatment.

Industrial timbers - plywood, block board, particle board, fiber boards.

Manufacture and uses - current developments.

Unit IV TIMBER CONSTRUCTION – DOOR, WINDOWS AND PANELLING

Drawings of timber joinery for Windows, doors, ventilators. Timber partitions, paneling, false ceiling, fixed partitions, sliding, folding, top hung bottom rested false ceiling - wall paneling.

Unit V TIMBER CONSTRUCTION – STAIRCASE AND TRUSSES

Timber staircases - Designed staircase - timber trusses - Lean to - close couple - Kingpost - Queen post - Trusses. Timber floors - timber built-in furniture.

16IDS223	**INTERIOR GRAPHICS II**						**SEMESTER-II**	
Marks	**Internal**	**60**	**External**	**90**	**Total**	**150**	**Exam Hours**	**6**
Instruction Hours/Week	**L**	**1**	**T**	**0**	**P/S**	**4**	**Credits**	**3**

COURSE OBJECTIVE:

- To help students to learn &understand the techniques of various methods of drawing
- To make them understand the use of colors & their effects in drawings.
- To understand various geometrical shapes.
- To be able to scale geometry and understand the sizes.
- To understand sciography and its representation.
- To be able to improve different lettering.

COURSE OUTCOME:

1. Ability to construct the 3d views and perspective drawings of the Interiors
2. Understanding of advanced documentation and measured drawing techniques.
3. Ability to express design in all dimensions
4. Ability to improve drawing skills.
5. To be able to understand the various measurements of the drawings.
6. To be able to express and exhibit drawings to the best understanding for professional practice

Unit I MEASURED DRAWING

Measured drawing of simple objects (like furniture, entrance gates, etc.) and building components (like columns, cornice, door, window, etc.). Detailed measured drawing/documentation of simple monument or building.

Unit II PERSPECTIVE

Perspective projection concepts, Types of Perspective views, Picture plane, vanishing points , station point, horizon , cone of vision, line of vision ,etc. Perspective Projection of simple & complex geometrical forms. Two point perspective of simple objects, outdoor and indoor view of a building, etc. One point and three point perspective of interiors, Human Figures, Landscape elements and Vehicles in Perspective

Unit III SCIOGRAPHY

Principles of shades and shadows - Shadows of basic shapes and solids; Shadows of architectural elements, etc; Shadows of circular solids; Shadows of buildings, etc.

Unit IV RENDERING TECHNIQUES

Colour Pencils Rendering, Water Colour Rendering, Pen & Ink Rendering, Marker Rendering Techniques, Using Digital & Mixed Media Rendering Techniques, Free hand drawings

Unit V GRAPHICAL PRESENTATION

Visual representation of the design scheme – interior and exterior perspective views – shades and shadows – use of various rendering techniques.

SEMESTER-3

<table>
<tr><td>16IDT301</td><td colspan="7">HISTORY OF INTERIOR DESIGN</td><td colspan="3">SEMESTER-III</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="4">External</td><td>60</td><td>Total</td><td>100</td><td>Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>3</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="3">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

- To help the student understand the designs from Prehistoric Period to the Middle Ages.
- To know more on the Modern Movements in Interior design from the beginnings of 20^{th}century.
- To allow students to learn from the rich heritage the elements of aesthetic design.
- To understand the construction techniques of the ancient times.
- To understand the skilled labor and the presence of the same in the olden days.
- To understand the same scene in the contemporary era and its challenges to execute the same finesse.

COURSE OUTCOME:

1. An understanding about the spatial and stylistic qualities associated with architecture.
2. An Understanding of architecture as an outcome of various social, political and economic upheavals, and as a response to the cultural and context.
3. The individual will be exposed to the present to the ancient day's comparison in techniques..
4. To use the techniques of the ancient times and to overcome the challenges faced by the same.
5. To respect the wide heritage that can be offered with respect to the various Architecture eras.
6. An understanding of the influences of lifestyle and culture of the respective times.

Unit – I:

Elements of style and determinants of Interior environments in Egypt, Mesopotamia, Babylonia, Chinese, Japan, Greece, Rome and Europe in Early Christian, Romanesque, Gothic, Byzantine, Renaissance, Baroque and Rococo periods.

Unit – II:

An overview of Victorian, Elizabethan, art Nouveau arts and crafts, Cubism, surrealism, Romanticism etc. Forces of industrialization in Europe, changes in social structure, production systems, changes in technology and its impact on the life styles, arts and crafts and interior environments.

Unit – III:

Elements of style, interior environment, furniture etc in Jammu and Kashmir, Southern India, Gujarat, Rajasthan, Himachal Pradesh , states of North eastern India, Maharastra, Uttar Pradesh, Orissa etc.

Unit – IV:

History of modern movement in interior Design and architecture – developments of modern movements – various fields of design affecting interior ambiences directly – international modernism, regionalism and concerns with vernacular etc.

Unit – V:

Designers and their works with respect to interior architecture and interior elements of design. Contemporary expressions of styles and art forms.

<table>
<tr><td>16IDT302</td><td colspan="8">SPACE PLANNING</td><td colspan="2">SEMESTER-III</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="3">External</td><td>60</td><td>Total</td><td>100</td><td>Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>2</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="2">Credits</td><td>2</td></tr>
</table>

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosure, various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand design with relation to a human being with respect to size, shape, and color.
- To understand a human bodies and its various movements and to accommodate the same into design standards.
- To understand spatial parameters with respect to the function and implications inflicted regarding the same.
- To introduce a self to design methodology..

COURSE OUTCOME:

1. The students understand the relationship of human being with its environment and implement the study into design.
2. The students are taught to be able to design spaces based on patterns of circulation, proximity and levels of privacy zones.
3. The students understand the different postures and positions with dimensions of the human body and will be able to recognize activities and relate the need of human measurements in the design principles.
4. To bring a relation with design principles and the human being using the design principle.
5. To be able to create a project in direct relation to this subject and hence be able to apply theoretical knowledge into practical construction
6. To introduce the student to visual analyses and hence be practically well equipped.

<u>Unit –I</u>

Basic anthropometrics – average measurements of human body in different postures – its proportion and graphic representation, application in the design of simple household and furniture.

UNIT-II

Role of mannequins in defining spatial parameter of design. Basic human functions and their implications for spatial planning. Minimum and optimum areas for various functions. Preparing user profile, bubble and circulation diagrams.

<u>Unit –III</u>

Introduction to design methodology. Detailed study of spaces such as living, dining, bedrooms, kitchen, toilet etc. including the furniture layout, circulation, clearances, lighting and ventilation, etc. Case study of existing house and analysis of the spaces.

<u>Unit – IV</u>

Visual analysis of designed spaces noted for comfort and spatial quality; analysis of solid and void relations, positive and negative spaces.

UNIT-V

Integration of spaces and function in the design of bus shelter, milk booth, watchman's cabin, traffic police kiosk, flower stall, ATM center, etc.

Note: In the end exam, which is a viva-voce, the students have to present the entire semester's work for assessment.

16IDT303	FUNDAMENTALS OF STRUCTURES									SEMESTER-III	
Marks	**Internal**	**40**	**External**				**60**	**Total**	**100**	**Exam Hours**	**3**
Instruction Hours/Week		**L**	**3**	**T**	**0**	**P/S**	**0**	**Credits**			**3**

COURSE OBJECTIVE:

- To get introduced to basic structural members in timber and steel.
- To give knowledge to design different timber components in a building.
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of rivet joints
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of welded joints
- To enable the design of tension (beams) and compression (columns) steel members in a building under different conditions.
- To Understand the concept of Structural system of Steel & Timber

COURSE OUTCOME:

1. Student will understand about Various Timber sections
2. Student will understand about the design timber beams and columns by applying the code provisions.
3. Student will understand about the Steel Sections and its usage.
4. Student will be able to design steel joints for maximum efficiency and strength.
5. Student will be able to design tension and compression members for different conditions by applying the
   code provisions.
6. Student will be able to design different types of laterally unsupported & supported beams for different conditions.

Unit – I:

Introduction to built elements – study of built elements in the interiors with respect to materials used. Basic construction methods and general specifications. General types and classification of different types of buildings: overview of different functional, structural and architectural elements.

Unit – II:

Introduction to basic structural systems, elements of structure, their functions and behavior, beams, slabs, columns, walls, foundations, bearing wall systems, trusses, rigid frames, linear and curved elements, : simply supported, cantilever and overhanging beams for various loads, : effect of simple geometric forms in the overall structural behavior.

Unit – III:

Primary and secondary forces acting on the structures – gravitational force, live load, wind, temperature variation, distribution of loads through the elements of the structural system.

Unit – IV:

Primary and secondary forces acting on the structures – gravitational force, live load, wind, temperature variation, distribution of loads through the elements of the structural system.

Unit – V:
Characteristic requirements of structural design – stress and strains, strength, stiffness and stability. Discussion on factors affecting them and the ways of satisfying these requirements. Study of behavior of structures through models and testing them for given loads.

Unit – VI:
Structural properties of basic materials like masonry, timber, concrete and steel etc. Light weight space structure, small and large scale surface structure, integrated display system and structural elements.

Unit – VII:
Structural systems and their layout for a small building. Structural systems for elements of interior spaces – false ceilings etc. Structural system for urban interior spaces – malls, fair grounds, exhibition spaces, etc.

16IDP311	FURNITURE DESIGN										SEMESTER-III
Marks	**Internal**	**40**	**External**				**60**	**Total**	**100**	**Exam Hours**	**3**
Instruction Hours/Week		**L**	**0**	**T**	**0**	**P/S**	**6**	**Credits**			**3**

COURSE OBJECTIVE:

- To help the student understand day lighting and technology of artificial lighting.
- To equip the student to understand and successfully apply lighting techniques with color effects.
- To understand the various types of furniture's from history to the current date.
- To produce designs that will suit the function, location and the ergonomics.
- To understand different types of lighting ad to use apt luminaries and fixture.
- To make different styles of furniture both in modular and in customized.

COURSE OUTCOME:

1. Awareness of the role of light and color in design with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.
2. Knowledge about the elements of light and color
3. Sensitivity towards evolution of different color combination and realization of color in different lighting.
4. To have to ability to understand the furniture in plans sections and elevation and to have ergonomic detail compliance in every format
5. To be able to make electrical drawings with apt representation and accommodating different types of lighting details.

To introduce the idea of detailing in a micro concept of furniture design and to be able to produce products suitable for comfort, function and aesthetics

<u>Unit – I</u>

Furniture categories, exploration of the idea of furniture, role of furniture in interior design, Design approaches in furniture design.

Assignment: Measured drawing of a piece of furniture – plan, elevation and drawings on full scale

<u>Unit – II</u>

Brief overview of the evolution of furniture from Ancient to present: Various stylistic transformations. Furniture designers and movements. Analysis of furniture in terms of human values, social conditions, technology and design criteria.

<u>Unit - III</u>

Functional and formal issues in design: study and evaluation of popular dictums such as "Form follows function", Form and function are one", "God is in Details" etc.

Evaluation of visual design: study of Gestalt theory of design – law of enclosure, law of proximity, law of continuity etc.

Human factors, engineering and ergonomic considerations: principles of universal design and their application in furniture design.

Unit – IV
An introduction of various manufacturing processes most frequently adopted in furniture design such as Injection Molding, investment casting, sheet metal work, die casting, blow- molding, vacuum - forming etc.

Unit – V
Seating Design: Different types of seating with a focus on the following –

- Functionality
- Aesthetics
- Style
- Human factors and ergonomics

The other component to be considered is the cost of the designed furniture piece.
Assignment: Design with wood, metal and combination of materials. Drawings, details and prototype making. Market survey of available products and economics of products.

Unit – VI
Storage systems: Functional analysis of storage systems and thereby deriving types of cabinets needed for interior spaces – kitchen cabinets, wardrobes closets, book cases, show cases , display systems etc.

Assignment: Exercise to design kitchen cabinets for a given kitchen.
Unit –VII
Modular approach to furniture design – various materials, combination of materials and its application – design parameters, ergonomics etc. Drawings and prototype. Survey of several modular systems available for different functions in the market. Exploration of wood, metal, glass, plastics, FRP as materials for system design. Cost criteria of furniture design.
Assignments : Typology of furniture with respect to the different states in India.
Design for middle and lower middle income groups- elements of living units, education institutes, health facilities, street elements etc.

<table>
<tr><td>16IDP312</td><td colspan="7">WORKSHOP (WOOD, CANE & BAMBOO)</td><td colspan="4">SEMESTER-III</td></tr>
<tr><td>Marks</td><td>Internal</td><td>60</td><td colspan="4">External</td><td>90</td><td>Total</td><td>150</td><td>Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>0</td><td>T</td><td>0</td><td>P/S</td><td>6</td><td colspan="3">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc.to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design.
- To understand and acquire knowledge in interior workshops for hands on experience in build and construct design processes.

COURSE OUTCOME:

1. Understanding the scale of drawing to life size
2. To use tools related to wood glass and alternative substitution to wood.
3. To understand properties and usage of materials henceforth.
4. To understand modular furniture through engineered wood.
5. To understand the various capacities of hardware for the various materials.
6. To understand wood joints and its usage in various circumstances.
7. To develop a keen eye for compositions through workshops.
8. To use all materials in coordination with other materials and create an understanding of multi material compositions.

Unit – I:

Types of wood –natural and artificial and its properties
Working with wood and wood products to understand material parameters. Wooden joinery and its strength. Wood polishes and other finishes – color and surface quality.

Unit – II:

Making of elements of various scales in the built form such as interior space making elements, furniture forms, various products, Art & Artifacts by using wood.

Unit – III:

Introduction to cane, bamboo, working with bamboo/cane and their products to understand material parameters. Bamboo and cane joinery and its strength. Polishes and other finishes

Unit – IV:

Understanding the material and tools by making objects which allow students to explore the forms, surfaces, textures and patterns. Explore different joinery, support conditions, and woven surfaces.

16IDS321	INTERIOR DESIGN IV						SEMESTER-III	
Marks	**Internal**	**160**	**External**	**240**	**Total**	**400**	**Exam Hours**	**6**
Instruction Hours/Week	**L**	**2**	**T**	**0**	**P/S**	**10**	**Credits**	**7**

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosures and various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand the design proximity and relation of spaces.
- To understand the basic concepts for the size of the project.
- To develop understanding of the scale, function and options existing when• designing small-scale spaces in residences such as toilets, kitchens, living, bedrooms etc.
- Development of ideas with regard to false ceiling, wall paneling, flooring,• floor coverings, curtains, windows, doors and other elements of residential interiors.

COURSE OUTCOME:

1. An understanding of the qualities of different elements as well as their composite fusions.
2. An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
4. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
5. To be able to describe an understanding that is both in representation and verbally present the same.
6. To update and to introduce various other methodologies to enhance the skill set.
7. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
8. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

The primary focus should be on –

Anthropometry

Design methodology

Conceptual exploration and representation.

Creativity

Scale/proportion

Documenting space

Graphic design (page layout and composition)

Concepts sketching

Application of design principles and elements

Portfolio development

The list of suggested topics to be covered as design problems:
Single room residence, Doctor"s clinic, kindergarten school, Architect"s studio, Small cafeteria, Bank extension counter, Departmental store, local police station, local post office, products used by architects in the studio, products for children in kindergarten etc.

Note: At least two major exercises and two minor design/time problems should be given.

In the end exam, which is a viva-voce the students have to present the entire semester work for assessment.

16IDS322	ADVANCED MATERIALS AND APPLICATIONS										SEMESTER-III	
Marks	**Internal**	**80**	**External**				**120**	**Total**	**200**		**Exam Hours**	**6**
Instruction Hours/Week		**L**	**1**	**T**	**0**	**P/S**	**6**	**Credits**				**4**

COURSE OBJECTIVE:

- Understanding the basic components of the buildings that envelope a small buildings
- Understanding the different types in each element and different treatments for the same.
- Understanding function of each component of a building like foundation, walls, beams, column, and roofs.
- Understanding simple roof & floor finishes.
- To understand the primary basics of the loading in a structure and the distribution of the load
- To understand the composition and properties of the materials.
- To understand the various components of interior space as doors, windows, staircases.

COURSE OUTCOME:

1. Students learn Interior construction details using naturally occurring building materials.
2. Student are taught to judge the structure before making any structural changes required in renovation.
3. Working format with for materials such as stone, bamboo, mud and lime through drawing as well as doing a literature or live case study.
4. Students are to submit drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.
5. Students will be honing the skills of technical drawings and their representations.
6. Students will be able to use this material knowledge during construction and can find best materials suited for apt activities.
7. To inculcate in students and understanding of ideas in 3d and physical models

<u>Unit – I</u>

Roofing and Flooring – Roofing tiles and asbestos cement products, sheets and fiber boards – properties, uses and application. Various natural as well as artificial flooring materials like vitrified tiles, ceramic tiles, Shahabad stones, Mosaic, Rubber, Linoleum, PVC and PVA flooring. Properties, other uses and applications in the interiors.

<u>Unit -II</u>

Metals – Steel, iron, aluminum, bronze, brass, copper – alloys, characteristics, form and uses, properties, definition of terms, methods of working with metals, fixing and joinery in metals, finishing and treatment to metals. Application of metals to built form and interiors - special doors and windows, ventilators – sliding, sliding and folding, revolving, pivoted, rolling, collapsible, dormer, skylights, clerestory etc.

<u>Unit –III</u>

Fabrics and other furnishing materials – fibers, textiles, fabric treatments, carpets, durries, tapestries, Drapery, upholstery, wall coverings, etc. –properties, uses and application in the interiors.

<u>Unit – IV</u>

Miscellaneous materials such as cork, leather, paper, Rexene etc. – their properties, uses and applications in the interiors. A brief overview of Green materials.

SEMESTER-4

<table>
<tr><td>16IDT401</td><td colspan="10">ENVIRONMENTAL CONTROL - I</td><td colspan="2">SEMESTER-IV</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="4">External</td><td>60</td><td>Total</td><td>100</td><td colspan="2">Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>3</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="4">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To be introduced to a sustainable approach in the dwelling formats.
- To create an ardent respect for the depleting resources of the world.
- To understand the biodiversity and the impact of introducing building environments in the various bio diverse surroundings.

COURSE OUTCOME:

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. To apply sustainable approach that could be environmental friendly to reduce the carbon footprint.
5. To understand the changes in the ecosystems due to the intervention of the human race.
6. To understand and help in the global green revolution that is initiated to produce green environments for the future to come

Unit – I

Need to study acoustics, methods used for good acoustics. Basic theory: Generation, propagation, transmission, reception of sound: Frequency, wave length and velocity of sound, sound intensity, inverse square law, Decibel scale.

Unit –II

Human ear, Loudness perception, subjective effects, characteristics of sound in speech and music. Speech privacy and annoyance, background noise. Communication in open plans, electronic sound systems, loud speaker‟s layout.

Unit – III

Room acoustics: Behavior of sound in enclosed spaces. Ray-diagrams, sound paths, effect of geometry and shapes, sound absorption, sound absorption coefficients, Sabine‟s formula, reverberation and resonant panels.

Unit – IV

Acoustic Design process and different types of buildings – auditoriums, concert halls, cinema halls, seminar rooms, lecture halls, classroom and open offices.

Unit – V

Noise reduction, sound isolation, transmission loss. TL for walls, sound leaks in doors, noise reduction between rooms, construction details for noise reduction. Noise reduction and built form. Noise reduction from mechanical equipment. Rubber mounts, vibration isolation guidelines, characteristics of duct system, noise in AC ducts, vibration isolation of pumps and generators.

Unit- VI

Introduction – Lighting and vision, basic units, photometry and measurement. Effects of good lighting, considerations for good lighting, brightness, glare, contrast and diffusion. Economic issues of lighting.

Unit VII

Quality and quantity of different sources of light – daylight, incandescent, fluorescent, halogen, electric gas discharge high discharge, neon, cold cathode, mercury, sodium vapor etc. lighting levels, visual field. Survey of lamps available in the market with cost and technical specifications.

Unit VIII

Day light – advantages, admitting daylight, controlling daylight – multiple glazing, orientation, window treatments, potentials of day lighting as an energy resource.
Artificial lighting - color characteristics of artificial lighting, integration of day lighting with artificial lighting, lighting controls, intelligent building systems for lighting, switches, dimmers.

Unit IX

Planning lighting – general aims, lighting needs, calculation of lighting levels, intensity levels, energy and installation costs and other factors, selection of fixtures, location and placing of fixtures.

Unit X

Lamps and lighting fixtures – Floor, table and desk, wall mounted, ceiling units, built in lighting, miscellaneous types, decorative lighting, spot lighting, task lighting, underwater lighting etc.

Note: Detailed acoustic design and lighting should be done for any one type of building.

16IDP411	ADVANCED COMPUTER APPLICATIONS							SEMESTER-IV
Marks	Internal	60	External	90	Total	150	Exam Hours	3
Instruction Hours/Week	L	1	T	0	P/S	4	Credits	3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of softwares.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to to BIM
- To help the student understand the technology of computer and its terminology.
- To enable the student to understand the applications of the software and graphic system.

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.
7. Ability to express using digital tools in the realm of visual composition, drafting, 3D visualization and rendering

Unit – I

Starting AutoCAD: Introduction to the menu, starting drawings from scratch. Creating and using templates- starting drawings with setup wizards. Saving and closing a file.

Unit – II

Using co-ordinate systems – The UCS. Working with Cartesian and polar coordinate systems. Using displays with shortcuts.

Unit – III

Setting up the drawing environment – setting the paper size, setting units, grid limits, drawing limits, snap controls. Use of paper space and model space.

Unit – IV

Basic commands dealing with drawing properties: Layer control, change properties, line weight control, etc.

Unit – V

Inquiry methods: Using data base information for objects, calculating distance, angle, areas etc.

Unit – VI

Dimensioning commands and blocks: Dimensioning the objects in linear, angular fashions along with quick time dimensioning etc. Creating and working with blocks, creating symbols, use of blocks in creating a layout, of a residential area- one exercise to be done as lab assignment.

Unit – VII
Orientation towards 3D : 2D to 3D conversion, perspective view, walk through the layout.

Unit – VIII

3D-Max : Understanding 3D, theory behind 3D modeling. Preparing for construction of 3D models. Construction of 3D surface models- extrusion, wire frame, creation of a shell, elaborate surfaces.

Unit –IX
Solid modeling : concepts behind solid modeling, composite solids creation and modification, solids display and inquiry.

Unit – X
Rendering and presentation. Printing and plotting.

16IDP412	LIFESTYLE ACCESSORIES DESIGN									SEMESTER-IV	
Marks	**Internal**	**60**	**External**				**90**	**Total**	**150**	**Exam Hours**	**3**
Instruction Hours/Week		**L**	**1**	**T**	**0**	**P/S**	**4**	**Credits**			**3**

COURSE OBJECTIVE:

- To introduce students to all accessories that could be used in each and every space in design.
- To make students understand the need for aesthetics in design
- To use all above said materials in the most creative fashion that they could use.
- To help the student understand day lighting and technology of artificial lighting.
- To equip the student to understand and successfully apply lighting techniques with color effects.
- To be able to experiment new materials and to understand the properties of the materials.

COURSE OUTCOME:

1. Ability to decide the other factors of design which has no limitations and understand the importance of appropriate accessories to fill in the space as per design requirements.
2. Understanding the luxury element in interior design which leads to a picture perfect assimilation of items in design principles.
3. To understand the development and technology of the product and the procedure of manufacturing.
4. To be able to approach the design with the utmost importance to the function and the aesthetics to be incorporated.
5. To be able to physically make a product that faces all challenges laid for the execution and design of the same.
6. To be able to assess the working of the project and to be able to redesign with the errors o be minimized as much as possible.

Unit –I

Insight of various products and lifestyle accessories in the interiors. Role of accessories in interiors. Integration of accessories in interior design. Design approaches in product and lifestyle accessories design with a focus on functionality, ergonomics, aesthetics, multiple usages etc.

Unit – II

Stylistic development of decorative accessories from the past to present with insight into technological advances and the influences of social, economic and political factors on their design. Brief study of period room settings with the context of decorative accessories complementing the architecture and interior design.

Unit – III

Study of materials and processes adopted in accessories design. Basic understanding of construction principles, anthropometrics, principles of sizes and proportions, modeling, rapid prototyping, color, texture etc. with broad orientation to socio-cultural and historical context of the sector. Orientation to Indian as well as global context of interiors, trends and market.

Unit – IV

Design approach with limited constraints inherent in accessory products. Evolving the strategy of design with integration of technical complexities and lifestyle influences. Development of the design of products and accessories to specific interiors and prevailing trends. Broad based approach towards innovative design and application to multi products and multi materials in manufacturing interior products and lifestyle accessories.

Unit – V

A detailed study involving all the design aspects of any of the following lifestyle accessories: luminaire design, glassware, lighting, textiles, mirrors, clocks, wall coverings etc.

16IDP413	ESTIMATION AND COSTING							SEMESTER-IV
Marks	Internal	40	External	60	Total	100	Exam Hours	3
Instruction Hours/Week	L 0	T 0	P/S	6	Credits			3

COURSE OBJECTIVE:

- To equip the students to prepare the Estimate in order to fore see the cost of the work
- To implement an interior design project & also to monitor / control project cost.
- To be able to make specification of the materials used and hence regulate the cost to keep it in the budget specified by the client.
- To understand various finishes and its rates to be executed as per the budget and the designers choice.
- To be able to provide a rough estimate and a detailed estimate as in need of the project.
- To be able to learn to control the cost and time with respect to the project.

COURSE OUTCOME:

1. Ability to understand and write specification for the construction projects
2. Ability to do estimate of building interiors with various quantities
3. To be update about the latest materials available in the market ad to be able to substitute materials to attain cost goals.
4. To understand the various methods of estimation that can be made and to be able to use the same during the execution of the project.
5. To have the knowledge of the budget limits of the client and hence will be able to make suitable suggestions to the client.
6. To be able to alter the specification and to adjust the final cost though the changes

1. INTRODUCTION TO ESTIMATION

Types and purpose, approximate estimate, detail estimate of building, Bill of quantity format.

Quantity survey - Principle of measurement and billing, elementary billing and measurement of basic materials like brickwood, concrete, etc. Advance billing and measurement of structural and service item of work.

2. COST ESTIMATING

Function of cost planner, liaisons with consultant construction planning technique for efficienjt cost control or cost budgeting of a project.

Exercise in variation, cost adjustment and cost analysis norms and standard for building project. Relationship between specification with B.O.Q. on grounds of cost economics.

3. COST BUDGETTING

The business environment and its structure in practice details and information on taxation, depreciation, operation cost, economics of building plant and material handling.

4. FINANCE AND BUDGETTING

Financial control and management for building construction and maintenance investment - role of various financial agencies for building and land development. Financing of projects, economic feasibility report, valuation depreciation and its implication, and assessment of completed project.

5. SPECIFICATION

Detailed Specifications for all Civil & Architectural works for a Typical two-storeyed Residential Building

<tr><td>Marks</td><td>Internal</td><td>160</td><td colspan="4">External</td><td>240</td><td>Total</td><td>400</td><td>Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>2</td><td>T</td><td>0</td><td>P/S</td><td>10</td><td colspan="3">Credits</td><td>7</td></tr>
</table>

COURSE OBJECTIVE:S

COURSE OUTCOME:

1. Ability to collect, assimilate and integrate knowledge in a holistic manner.
2. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
3. Ability to observe and analyze changes in the above.
4. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
5. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
6. To be able to describe an understanding that is both in representation and verbally present the same.
7. To update and to introduce various other methodologies to enhance the skill set.
8. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
9. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

The primary focus should be on –

- space planning process (block diagram, concept statement)
- Furniture
- Historic style
- Structural integration
- Material selection
- Color
- Rendering
- Design Process/methodology
- Creativity /originality
- Documenting space (sketch and photo documentation)
- Anthropometry and ergonomics
- Graphic design (page layout and composition)
- Concepts sketching
- Application of design principles and elements
- Portfolio development

The list of suggested topics to be covered as design problems:

- Thematic space making with Art and craft forms of our own culture in India – East, West, North, Central and so on.
- Design of living units of various geographical locations and culture by involving historical periods, styles and use of craft in its inherent quality and form – craft and living environment.
- Applications of art / craft at public level spaces- lounge (hotel), restaurant of specific ethnic characteristics.
- Response to today‟s situation of urban society – For a given building create contemporary homes of modern society – needs, realities, value system etc.

Note: At least two major exercises and two minor design/time problems should be given.
In the end exam, which is a viva-voce the students have to present the entire semester work for assessment.

<table>
<tr><td>16IDP422</td><td colspan="6">INTEGRATED PROJECT WORK - I</td><td colspan="4">SEMESTER-IV</td></tr>
<tr><td>Marks</td><td>Internal</td><td>60</td><td colspan="3">External</td><td>90</td><td>Total</td><td>150</td><td>Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>0</td><td>T</td><td>0</td><td>P/S</td><td>6</td><td colspan="2">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

-
- The student has to exhibit the capacities of an interior design in full ideology and should be ready for the professional challenges in future.
- The project understanding in totality will be expected from each student.
- It will help understand the importance of each subject in the previous years and its applications

henceforth

- To understand the environmental impact assessment and to analyze the feasibility of the project in any given site.
- To check the feasibility of the project in the services.

COURSE OUTCOME:

1. Ability to integrate all the knowledge acquired so far and to exhibit the same through drawings and renderings.
2. Ability to integrate all aspects of the project to give a final report.
3. To be ready for large scale projects before the thesis.
4. To conduct research and to present the research with analysis of the feasibility of the project.
5. To understand the socio economic implication of the project in the given location.
6. To check the technical feasibility of eth project with parameters such as soil, water and other natural elements.
7. To assess the building for seismic zone and hence design according to the reading and understanding.

The student has to submit a project feasibility report on the project done in the design studio by integrating the knowledge and skills acquired from all the subjects studied till date.
The report may consist of the following –

- Environmental impact assessment of the project following the standards and specifications
- Socio-economic appraisal of the project and the design considering factors such as behavioral aspects, security considerations, costs for different user groups, aesthetic preferences etc.
- Technical feasibility – through execution and detailing of different spaces and elements of design, checking the feasibility of layout for service systems and specifications
- Costing of the project – bill of quantities, schedule of rates, specifications etc. economic viability and financial viability
- Space planning aspects/ issues – user activity spaces, access to physically challenged, fire safety, other services, green rating etc.

Note : The report has to presented for internal assessment

16IDES431A	ELECTIVE – I WORKSHOP (METAL)									SEMESTER-IV
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc.to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design. To understand the basic methods of furniture making with focus on hands on methods regarding workshop practices in metal
- To understand the joineries and also understand the properties in these materials. This will help them add new elements into their design which could be their own personal ideas.

COURSE OUTCOME:

1. Ability to understand and construct furniture to live size
2. understanding the scale of drawing to life size
3. To use tools related to wood glass and alternative substitution to wood.
4. To understand properties and usage of materials henceforth.
5. To understand modular furniture through engineered wood.
6. To understand the various capacities of hardware for the various materials.
7. To understand wood joints and its usage in various circumstances.
8. Ability to understand and construct furniture to live size understanding the scale of drawing to life size
9. To use tools related to metal and alternative substitution to metal and combination of wood, glass and metal.

Unit –I TO 5

Types of metals, properties of metals, definitions of terms with reference to properties and uses of metals, various methods of working with metals, fixing and joinery in metals, finishing and treatment of metals., finishes on metals. Standard specifications.

Metals in built form activity – horizontal, vertical and inclined surfaces – in interior environment elements- products and furniture forms- doors, windows, jalies, railing, stair etc. Metals and other materials – form and joinery.

Note: Learning should be by feel and working with metals to explore design.

16IDES431B	ELECTIVE – I WORKSHOP (WEAVING)	SEMESTER-IV

Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc.to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design. To understand the basic methods of furniture making with focus on hands on methods regarding workshop practices in metal
- To understand the joineries and also understand the properties in these materials. This will help them add new elements into their design which could be their own personal ideas.

COURSE OUTCOME:

10. Ability to understand and construct furniture to live size
11. understanding the scale of drawing to life size
12. To use tools related to wood glass and alternative substitution to wood.
13. To understand properties and usage of materials henceforth.
14. To understand modular furniture through engineered wood.
15. To understand the various capacities of hardware for the various materials.
16. To understand wood joints and its usage in various circumstances.
17. Ability to understand and construct furniture to live size understanding the scale of drawing to life size
18. To use tools related to metal and alternative substitution to metal and combination of wood, glass and metal.

<u>Unit –I To 5</u>

Introduction to fibers and yarns, table loom and floor loom, preparing warp, setting up loom for weaving. Basic weaves and their variations.

Variation weaves and design quality, weaves as light controlling device, weaves and its quality for upholstery, curtains and floor coverings.

Rugs and durries – motifs design, patterns and color variations.

Note: Extensive market survey of available fabrics for interior spaces – product specifications and manufacturers

SEMESTER-5

16IDT501	ENVIRONMENTAL CONTROL - II	SEMESTER-V

Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours/Week		L	3	T	0	P/S	0	Credits		3

COURSE OBJECTIVE:

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To be introduced to a sustainable approach in the dwelling formats.
- To create an ardent respect for the depleting resources of the world.
- To understand the biodiversity and the impact of introducing building environments in the various bio diverse surroundings.

COURSE OUTCOME:

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. To apply sustainable approach that could be environmental friendly to reduce the carbon footprint.
5. To understand the changes in the ecosystems due to the intervention of the human race.
6. To understand and help in the global green revolution that is initiated to produce green environments for the future to come

Unit – I

Introduction – Climate and built form interaction. Global climatic factors, elements of climate, impact and issues of climatic balance in traditional and contemporary built environments, issues of ecological balance, implications of climatic forces in nature of spaces and forms. Patterns of organization and elements of built form at individual building.

Unit – II

Thermal comfort and heat flow: Thermal comfort factors, physiological aspects. Body heat balance. Building climatological site analysis, application of comfort diagrams.

Unit-III

Introduction to basic thermal units, theory of heat flow, heat transmission, thermal properties of materials, human heat balance. Physiological comfort, outdoors and indoors, heat flow within buildings, steady state conditions and periodic flow, thermal performance of building elements.

Unit –IV

Sun and Design process – Solar charts, sun angles and shadow angles, orientation for sun, sun control, design of shading devices, radiation, glare.

Unit-V
Solar energy and its technical applications. Climate and material choices, color and texture choices for interior spaces.

16IDT502	PROJECT MANAGEMENT											SEMESTER-V	
Marks	**Internal**	**40**	**External**				**60**	**Total**	**100**			**Exam Hours**	**3**
Instruction Hours/Week		**L**	**3**	**T**	**0**	**P/S**	**0**	**Credits**					**3**

COURSE OBJECTIVE:

- To introduce different management techniques suitable for planning and construction projects.
- To enable understanding of management systems for accomplishing the task efficiently in terms of quality, time and cost.
- To understand the elements of network and be able to take the project completion analysis.
- To understand various methods for the analysis and hence arrive at the management procedures.
- To handle and calculate risk in delays and hence suggesting corrections to beat time lag in projects.
- To update project in the process and be able to control manpower management.

COURSE OUTCOME:

1. Ability to understand a project from concept to commissioning, feasibility study & facility programme, design, construction to commissioning.
2. Ability to apply project management techniques in achieving objectives of a project like client needs, quality, time & cost.
3. An understanding of principles of management, construction scheduling, scope definition and team roles
4. To differentiate the management into time, labor, ad materials mainly apart from other contingencies.
5. To allocate various job works to different vendors and vendor management
6. To enable the smooth functioning of the project and to move towards completion in time.

1. INTRODUCTION TO PROJECT MANAGEMENT

Introduction to project Management concepts - background of management, purpose, goal and objectives, characteristics of projects and different aspects of management.

Traditional management system, Gantt's approach load chart, progress chart, bar chart merits and limitation. Schedule time, estimates units

2. PROJECT PROGRAMMING

Project programming, resources balancing, phasing of activities, programs, scheduling, project control, reviewing, updating and monitoring. Exposure to relevant software such as MS Project, Primavera, Introduction to modern management, concepts, uni-dimensional management techniques - Introduction to PERT and CPM introduction to network concepts, network elements and inter-relationships.

3. NETWORK TECHNIQUES

Network techniques, network logic - interrelationships, activity information, data sheets, development of network. CPM for management, CPM network analysis, identification of critical path float computation result sheets.

4. PERT NETWORK

PERT Network, introduction to the theory of probability and statistics, probabilistic time estimation for the activities of PERT network

5. PROJECT COST

Introduction to two dimensional network analysis, activity cost information. Cost time relationship, crashed estimates for the activities, compression potential, cost slope, utility, data sheet, project direct cost and indirect cost. Crashed programmes, network compression least cost solution least time solution, optimum time solution. Network techniques, PERT/CPM, generating alternative strategies using computers

- **COURSE OBJECTIVE:**S
  - To create understanding of human built environment as a holistic, living entity from macro to micro scales,
  - shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- To enable a comprehensive study of rural settlement and Interior design in order to understand them as exemplar of collective design that evolved through various parameters.
- To observe changes in the above, analyze their nature and causes for them

COURSE OUTCOME:

1. Ability to collect, assimilate and integrate knowledge in a holistic manner.
2. Sensitivity towards the nature and values of unselfconscious and collective design aswellas the interconnectedness of human society and environment
3. Ability to observe and analyze changes in the above.
4. Ability to project future transformations and give possible/ appropriate ways to address issues, if any
5. Ability to collect, assimilate and integrate knowledge in a holistic manner.
6. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
7. Ability to observe and analyze changes in the above.
8. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
9. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
10. To be able to describe an understanding that is both in representation and verbally present the same.
11. To update and to introduce various other methodologies to enhance the skill set.
12. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
13. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

The primary focus should be on –

- Introduction to building codes
- Way finding, Signage and graphics
- Universal Design
- Accessible design
- Design Disabled
- Materials, furniture and finish selections
- Introduction to construction detailing

- Ergonomics and Human Factors
- Digital representation (3 D modeling)
- Space planning process
- Color
- Interior environmental control issues
- Rendering

The list of suggested topics to be covered as design problems:

- Institutional spaces in urban, semi-urban and rural contexts with an aim to explore and understand transformation and adaptive re-use.
- Historic and abandoned sites provide scope for rejuvenation through multi dimensional programs covering functions like museums, cultural and resource centers, libraries, convention centers, exhibitions etc. that also aim in making a social contribution.
- Recreational spaces such as auditoriums, halls, cinema houses, stage design etc. Knowledge of audio visual communication, color and light interaction, sound control system, design of interior elements, products and furniture forms.

Design issues in addition to the primary focus for the above are statement of institution character through interior environment responses to site and context, integration of interior architectural elements to other interior elements, dialogue between the existing and the newly added insert, interpretation of institutional activities and their spatial correlation.

Note: At least two major exercises and two minor design/time problems should be given.
In the end exam, which is a viva-voce the students have to present the entire semester work for assessment.

16IDS522	INTEGRATED PROJECT WORK - II									SEMESTER-V	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours/Week		L	0	T	0	P/S	6	Credits			3

COURSE OBJECTIVE:

-
- The student has to exhibit the capacities of an interior design in full ideology and should be ready for the professional challenges in future.
- The project understanding in totality will be expected from each student.
- It will help understand the importance of each subject in the previous years and its applications henceforth
- To understand the environmental impact assessment and to analyze the feasibility of the project in any given site.
- To check the feasibility of the project in the services.

COURSE OUTCOME:

1. Ability to integrate all the knowledge acquired so far and to exhibit the same through drawings and renderings.
2. Ability to integrate all aspects of the project to give a final report.
3. To be ready for large scale projects before the thesis.
4. To conduct research and to present the research with analysis of the feasibility of the project.
5. To understand the socio economic implication of the project in the given location.
6. To check the technical feasibility of eth project with parameters such as soil, water and other natural elements.

To assess the building for seismic zone and hence design according to the reading and understanding
The student has to submit a project feasibility report on the project done in the design studio by integrating the knowledge and skills acquired from all the subjects studied till date.
The report may consist of the following –

- Environmental impact assessment of the project following the standards and specifications
- Socio-economic appraisal of the project and the design considering factors such as behavioral aspects, security considerations, costs for different user groups, aesthetic preferences etc.
- Technical feasibility – through execution and detailing of different spaces and elements of design, checking the feasibility of layout for service systems and specifications
- Costing of the project – bill of quantities, schedule of rates, specifications etc. economic viability and financial viability
- Space planning aspects/ issues – user activity spaces, access to physically challenged, fire safety, other services, green rating etc.

Note: The report has to be presented for internal assessment

<table>
<tr><td colspan="2">16IDS523</td><td colspan="10">WORKING DRAWINGS AND DETAILS</td><td colspan="2">SEMESTER-V</td></tr>
<tr><td>Marks</td><td>Internal</td><td>80</td><td colspan="4">External</td><td>120</td><td>Total</td><td>200</td><td colspan="2">Exam Hours</td><td colspan="2">6</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>1</td><td>T</td><td>0</td><td>P/S</td><td>6</td><td colspan="4">Credits</td><td colspan="2">4</td></tr>
</table>

COURSE OBJECTIVE:

- Reading of working drawing, their co-relation and cross-referencing in various technical projections.
- To produce detailed measured drawings in plans, elevations, sections, detailing etc.
- To understand the various parameters involved in the detail drawing and to be able to produce the same.
- To incorporate all service drawings with respect to fire and safety, water supply and plumbing, electrical, acoustics and any such that will be accounted for.
- To be able to detail out each part into sub parts and to be able to provide construction execution details of the same.
- To be able to produce circulation patterns in the plan and to able to detail out the standards that are used in the design.

COURSE OUTCOME:

1. An understanding of all the aspects that go into the making of interiors through study of drawings related to construction.
2. Ability to resolve spatial concerns with technical aspects of a the interiors
3. Ability to design and detail components within a building interiors.
4. Ability to understand the structural components of the buildings and to be able to make changes only if necessary and hence impact studies to be carried out.
5. To understand designs in all parameters such as plans sections elevations and detailed drawings.
6. Joinery details to be detailed and produced as fit for construction.

<u>Unit – I</u>
Preparation of working drawings – Suitable scales of drawings, methods of giving dimensions and standards on plans, sections, elevations, details etc.

<u>Unit – II</u>
Preparation of plans – Architectural plans, furniture layout floor plans with clearances, different level floor plans, detailed floor plans of each room.

<u>Unit – III</u>
Elevations and Sections – Detailed sectional elevations of all the walls in the interior with al the required dimensions and specifications.

<u>Unit - IV</u>
Details of all services – layouts for flooring, ceiling, electrical, plumbing, lighting, fire fighting etc., toilet details, kitchen details, staircase details, furniture details, Interior finishing details, material, color and texture details,
Fixture and fixing and joinery details.

Unit – V

Specifications writing: Writing detailed clause by clause specifications for materials pre and post execution, tests, mode of measurements, manufacturers details and specifications etc.

Unit – VI

Manufacturer's specifications – Database of manufacturers specifications for the following materials based on surveys –
Glass, plywood and laminates, hardware, electrical, wiring, accessories, plumbing fitting and fixtures, flooring, cladding etc.,

Note : Students shall prepare at least two working drawing sets, one for a small residence and one for a large building.

<tr><td>Marks</td><td>Internal</td><td>60</td><td colspan="4">External</td><td>90</td><td>Total</td><td>150</td><td colspan="2">Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>1</td><td>T</td><td>0</td><td>P/S</td><td>4</td><td colspan="4">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVE:

- To understand the need and application so fair conditioning, acoustics, electrification and mechanical services in buildings with exposure to various systems, methods and fixtures.
- To understand human comfort and to be able to produce environments for human comfort.
- To be able to understand various seasons and climatic zones in the world.
- To be able to produce sustainable interiors to ensure the conservation of natural resources.
- To be able to use natural sources of energy in design and to produce the effects desired both climatically and aesthetically.
- To understand the solar energy and its various uses.

COURSE OUTCOME:

1. An understanding of heat balance in human beings.
2. An understanding of the effect of sun and wind in the inside of buildings.
3. An understanding of material effects inside the buildings.
4. Ability to design buildings with interiors with respect to climate.
5. To be able to modify small building elements to improve the condition of a particular climate.
6. To appreciate various methods suited for natural heating and cooling in building systems

<u>Unit - I</u>

General idea of sources of water supply. Standards for quality of water. Domestic water systems, suction and storage tanks and their capacity. Pipes and their sizes and jointing. Consumption of water. Down take supply to various fittings. Types of fittings like taps, ball valves, hot water supply systems, bathtubs, showers, jets, cocks, valves etc. Faucets for kitchens, bathrooms and toilets. Check valves, foot valves, sump pump check valves etc.

<u>Unit – II</u>

Basic principles of sanitations and disposal of waste materials from buildings. Connection to outdoor drainage system, size requirements calculations, types of pipes available in the market. Water carriage systems, standard sanitary fittings, traps, pipes and their jointing. Flushing systems. Bathroom interior layouts, extensive market survey of products available, economies of products available, fixing of the products with other finishing materials.

<u>Unit – III</u>

Refuse, different forms of refuse garbage, house refuse – its collection, storage and transport, refuse chutes etc.

<u>Unit – IV</u>

Building wiring system. Service wires, metering distribution boards, circuits, MCB cutouts. Conductors, wiring methods, switch boards, electrical devices in the buildings, light and power circuits. Indian electricity rules, relevant provisions of NBC. Preparation of electrical layout scheme for a interior using standard electrical symbols.

<u>Unit – V</u>

Air conditioning, Mechanical ventilation – mechanical inlet and extraction systems. Functions of air conditioning. Principles of AC, capacity of AC, calculation of AC loads. Types of AC systems –

window AC, split, ductable, central AC and their details. Air distribution systems – ducts, air inlets. Noise control of AC.

Unit - VI

Fire – causes and spread of fire. Design considerations for fire safety, Devices for firefighting – portable, built in wet riser system, sprinkler system, fire hydrant. Class of fire and occupancy, study of fire regulations as per NBC. Services for multi storied buildings – lifts, escalators etc. – definition, location and arrangement.

Unit – VII

Vertical transportation systems – Introduction – lifts, escalators, definition, location, arrangement, structure, drives, traffic analysis, supervisory control, remote monitoring.

Unit – VIII

Security and safety systems – introduction, designing a security system – burglar alarm, CCTV, central alarm systems, intrusion sensors and space sensors. Other services – cable TV, PABX, computer labs – access flooring, server rooms.

Unit – IX

Intelligent buildings – introduction, definition, cost analysis, building environment, architecture and people, Information technology, communications & artificial intelligence in intelligent buildings. Design in computer age, engineering intelligence through nature.

Unit – X

Building automation and energy management – Introduction, History of development of BAS, typical BAS, criteria for choosing the right BAS, open system architecture.

16IDES531A	ELECTIVE –II SIGNAGE AND GRAPHICS								SEMESTER-V
Marks	Internal	40	External			60	Total	100	Exam Hours	6
Instruction Hours/Week		L	0	T	0	P/S	4	Credits	2

COURSE OBJECTIVE:

- Knowledge about the various styles of signage manufactured in various materials is vital to an designer.
- Understanding the methods and techniques involved in signage and graphics.
- Understanding the signage location and using apt design and material is important.
- To understand the visibility factor and the importance of the signage.
- To be able to differentiate the various types of signage and to se it aptly in strategic locations.
- As a designer it is important to come up with unique and legible ideas for signage.

COURSE OUTCOME:

1. Ability to design products in signage using graphics.
2. Ability to understand the needs of the industry and give better products in design
3. Ability to experiment with different materials
4. Ability to provide proper lighting for the signage to be legible.
5. Ability to produce signage for large spaces and to be unique in design
6. To be able to understand the hardware system and to be integrated to the project in total

Unit – I

Introduction – environmental graphic Design, wayfinding, Need, importance etc.

Unit – II

Information content system – kinds of sign information, hierarchy of content, developing the sign information content, Navigation – message hierarchy and proximity, Other factors affecting sign information content, pictorial information content, signage master plans.

Unit – III

The Graphic system - Typography overview, choosing a typeface, typographic treatment, typographic considerations in signage for nonsighted and low sighted people, symbols and arrows, other graphic elements, color, layout, overview of signage graphic process.

Unit – IV

The hardware system – shape, connotations of form, sign mounting considerations, sign size considerations, sign lighting overview, sign materials overview, basic sign materials, electronic message displays, stock sign hardware systems, sign materials and codes, overview of coatings and finishes applied to signs.

Unit – V

Signage Design – Eyelevel, light, Fonts, typographical systems and type area, pictograms, arrows, color – contrast, language, systems, tones, Coding, privacy and protection, Room identification.

Unit – VI

Signage Planning – contract, obtaining information, preliminary design, design, construction, work plan and prototypes, tenders, specifications, on-site management, completion.

16IDES531B	ELECTIVE –II PRODUCT DESIGN									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours/Week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- Knowledge about the various styles of furniture manufactured in various materials is vital to a Designer.
- Understanding the methods and techniques involved in furniture and product design.
- To understand the importance of a digital product and then to create a digital product.
- The process involved in the design of a product to be understaood.
- To undertand the detilaing of the furniture and its feasibility for production
- To understand mass production techniques and the production line formation of the same.

COURSE OUTCOME:

1. Ability to design products
2. Ability to understand the needs of the industry and give better product design.
3. To understand the need and to be able to justify the product to be designed.
4. To follow design procedure and to understand the process to make a product.
5. To understand various materials and to execute the best possible material for a particular design.
6. To create a digital product and to be able to display the product details of the same

1. INTRODUCTION

An brief introduction to Product Designing – Various elements – History of Product Design – Definition of Product Design, understanding of Product Design - Purpose of Product Design – Role of Product Designers.

2. HUMAN FACTORS

Definition of human factors, Application of human factors data. Human activities, their nature and effects. Man-machine system and physical environment. Human performance and system reliability.

Information input and processing. Human control systems. Applied anthropometry – Human response to climate.

3. ASPECTS OF PRODUCT DESIGN

Visual, Auditory, Tactual, Olfactory human mechanisms, Physical space and arrangement. Visual display, process of seeing, visual discrimination, quantitative and qualitative visual display, Alphanumeric and related displays , Visual codes and symbols.

4. PRODUCT DESIGN

Form, Colour, Symbols, User specific criteria, Material, Technology and recyclability, Packaging. Multiple Utility oriented approach to Product Design.

5. DESIGN EXERCISES

Design of Household elements, tools and devices – Spoon/Cutlery.
Design of furniture – Chairs/Computer table, Kitchen racks, Cabinets etc.
Design of Industrial Product – Watch Dial, Gear Wheels, Automobile Headlights etc.
Element design for the physically and mentally different people.

16IDES531C	ELECTIVE –II SET DESIGN										SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours		6
Instruction Hours/Week		L	0	T	0	P/S	4	Credits				2

COURSE OBJECTIVE:

- Knowledge about the various styles of sets manufactured in various materials is vital to an designer for a foray into the film industry.
- Understanding the methods and techniques involved in set designs.
- To understand the defiance of temporary structures.
- To acquire knowledge of materials and construction techniques used in temporary structures.
- To understand the area and field specific for the film industry.
- To be able to design and imagine various backgrounds for the set design

COURSE OUTCOME:

1. Ability to design products and sets suitable to situations in concern
2. Ability to understand the needs of the industry and give better product in design
3. The student will be able to enter into the film industry in the foray of Design
4. The student will acquire knowledge various temporary structural methods.
5. To understand to set up stage and platforms for future
6. To understand history and security in the film industry and to be able to use the techniques already introduced
7. To understand theater sit up and the rolling screen design.

UNIT-1 FILM AND SOCIETY

Examination of the twentieth-century culture and society through film. Critical analysis of cultural and social conflicts are portrayed and worked out in popular films, and examination of how motion pictures create a window into modern society. Film as cultural texts to better understand history and culture manifestations.

UNIT-2 HISTORY AND THEATER FILM SET DESIGN

Investigation the production methods, dramatic theory and conventions, and scene design of various performance media since the popularization of the motion picture, and how it has influenced all entertainment design in the 20th and 21st centuries.

UNIT-3 GRAPHIC DESIGN AND TYPOGRAPHY FOR EXHIBIT DESIGN

Principles of layout for creating effective visual signage and explore the unique problems, technique, theory, and approaches of signage in film, theatre, and other forms of mediated exhibition. Introduction to the design applications for building signage.

UNIT-4 SET DESIGN AND CONCEPT WRAP

Introduction to the basic concepts, through theory and practice, of scene design in theatre, film, and other fine arts and entertainment media. Students will learn how to analyze scripts for proper scenery, how to conceptualize designs that will translate into actual sets, and develop visual thinking within the creative process.

UNIT-5 STAGE DESIGN

Stage design process from inception to performance, script analysis, visual arts analysis, research skills, and the application of principles and elements of design. Understanding stage setting through language, color, and architectural analysis.

SEMESTER-6

<table>
<tr><td>16IDT601</td><td colspan="10">PROFESSIONAL PRACTICE</td><td colspan="2">SEMESTER-VI</td></tr>
<tr><td>Marks</td><td>Internal</td><td>40</td><td colspan="4">External</td><td>60</td><td>Total</td><td>100</td><td colspan="2">Exam Hours</td><td>3</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>3</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="4">Credits</td><td>3</td></tr>
</table>

COURSE OBJECTIVES:

- To develop understanding of the duties and liabilities of an Interior designer
- To obtain knowledge of bye-laws that relate to the building & the environment in the Indian context.
- To learn and understand the Professional ethics and practice.
- To understand the code of conduct for interior Designers.
- To understand and undertake duties of an interior designer.
- To enable students to be ready for the professional world as practicing interior designers.

COURSE OUTCOME:

1. Ability to understand the professional standards
2. Ability to understand the tender documents and contract
3. Ability to understand and abide the duties of an interior designer.
4. Ability to understand and execute the code of conduct for an interior designer.
5. Ability to tender for Government projects and be able to estimate the cost of the same.

Ability to conduct various valuation for interior projects

Unit – I

Role of Interior Designer in society: Interior Design Profession as compared to other professions. Difference between profession and business. IIID and other organizations related to interior design profession.

Interior Designers approach to works, ways of getting works: types of works, works partly executed by other Interior Designers. : various precautions to be taken before taking up the work, conditions of engagement between interior Designer and client: commencement of work.

Unit – II

Issues of professional practice: Professional behavior, Ethics, Types of clients, Contracts, Tenders, Arbitration etc. as defined in terms of Interior Design field and current day context. Career opportunities, styles of interior design practice, relationship between client and professional, type of fees, process of fees negotiations, billing methods, tax liabilities, contracts – types of contracts – item rate, labour, lumpsum, cost plus percentage etc.

Unit – III

Interior Designer‟s duties : drawings to be prepared : Interior Designer‟s relation with other parties connected with works such as client, contractor, sub contractors, consultants and authorities.

UNIT IV

IIID Code of professional conduct: scale of charges: units and mode of measurements, clerk of work and his duties, inspection of work, certificate of payment to contractor, bill of quantities, schedule of rates, tenders, public, limited and negotiated tender documents and allied formalities.

Preliminary knowledge of Consumer protection Act and other related acts on Interior Designers.

Unit – V

Types of offices for interior design practice: staff structure, filing of records, correspondence and drawings, maintenance of accounts, presentations in meetings, recording minutes of meeting.
Note : a report to be prepared by each student after visiting an interior designer"s office.
Knowledge of role of consultants and coordination between different consultants on a big project.

16IDT602	INTERIOR LANDSCAPE										SEMESTER-VI	
Marks	Internal	40	External				60	Total	100	Exam Hours		3
Instruction Hours/Week		L	3	T	0	P/S	0	Credits				3

COURSE OBJECTIVE:

- To develop an understanding about the design of interior landscape
- To give special emphasis on the choice and care of plant materials used in the interior spaces.
- To study about the various landscaping elements and their application in interior spaces.
- To develop and understanding between outdoor and indoor landscape areas.]
- To have apt knowledge of the regional or vernacular plantation to use in particular regions and climates.
- To understand the various features using natural and manmade elements in landscape detailing.

COURSE OUTCOME:

1. Awareness of the role of landscape design with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.
2. Knowledge about the elements of landscape design and their scope.
3. Sensitivity towards evolution of different garden and landscape design across time and context.
4. An understanding of landscape design with respect to site planning and different functional typologies of spaces
5. To use landscape according to the region, climate location and other detail.
6. To understand and provide physical requirements for plants to keep it in the living condition and maintenance of the same.

<u>Unit – I</u>

Introduction to landscape architecture. And role of landscaping design in the built environment. Types of natural elements – stones, rocks, pebbles, water forms, plants and vegetation. Elements of interior landscape.

<u>Unit – II</u>

Introduction to study of plants in relation to landscape design and interiors. Types of indoor plants, plant characteristics: i.e., biology, soil, moisture, light nutrient, atmospheric conditions, growing medium, pests & diseases. Botanical nomenclature, anatomy and physiology of plant growth. Indoor plants in Indian context. Market survey and costs.

<u>Unit – III</u>

Design with plants – Basic principles of designs. The physical attribute of plants and relation to design. Appearance, functional and visual effects of plants in landscape design and built environment. Selection and management of plant material in relation to the built environment. Design concepts related to use of sculpture , lightings, garden furniture , architectural feature and grouping them into meaningful composition s for visual and functional effects.

<u>Unit – IV</u>

Landscaping design parameters for various types of built forms- indoor and outdoor linkage to spaces. Landscaping of courtyards- residential and commercial forms. Indoor plants and their visual characteristics- color, texture, foliage.

Unit-V

Science of maintaining and growing greenery. Flowers- its colors, texture and its visual perception in various indoor spaces and science of flower arrangement. Automatic irrigation costing and installation of micro irrigation systems.

16IDP611	PSYCHOLOGY OF SPACE AND BEHAVIORAL SCIENCE									SEMESTER-VI
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To Explain the role Wilhelm Wundt played in the development of psychology.
- To Understand the lack of ethnic and gender diversity in early psychology.
- To Explain the steps in the scientific method
- To Explore how the left and right hemisphere influence brain functioning.
- To Explain the difference between a psychiatrist and psychologist.
- To Examine the legal and ethical issues posed in the treatment of psychological disorders.

COURSE OUTCOME

1. Demonstrate an understanding of psychological theory regarding the relationship between physiology, cognition, and emotion.
2. Identify the lobes of the cortex and their major functions.
3. Differentiate between several measures of brain activity used in biopsychological research.
4. Identify the underlying causes of neurological and mental disorders.
5. Describe the action potential.
6. Describe how communication takes place between neurons.

Unit – I

Perception of space through understanding associative aspects relating to space. Understanding cognitive theories and Gestalt principles of psychology related in the field of space making to develop an understanding of place making.

Unit – II

Relationship of spatial elements like floor, column, wall, window, door, stair, roof, light, color, textures to the psychology and perception of space.

Unit – III

Kinesthetic – Understanding perception while in movement and space organization around such a phenomena.

Unit – IV

Analysis of human mind and his/her image of the world - social behavior patterns, traditional thinking and behavior and reflection of social world into physical environment.

Unit – V

Human being and his behavior in various public and private areas – change of patterns in various cultures. Human behavior in a group. Activities and its relationship with grouping of people
Assignment : Space planning for public areas- restaurant, café, theatre lounge, waiting rooms, hotel foyer etc based on analysis of human behavior and perception of space.

<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>1</td><td>T</td><td>0</td><td>P/S</td><td>6</td><td colspan="4">Credits</td><td>4</td></tr>
</table>

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc.to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design.
- To understand and acquire knowledge in interior workshops for hands on experience in build and construct design processes.

COURSE OUTCOME:

1. Understanding the scale of drawing to life size
2. To use tools related to wood glass and alternative substitution to wood.
3. To understand properties and usage of materials henceforth.
4. To understand modular furniture through engineered wood.
5. To understand the various capacities of hardware for the various materials.
6. To understand wood joints and its usage in various circumstances.
7. To develop a keen eye for compositions through workshops.
8. To use all materials in coordination with other materials and create an understanding of multi material compositions.

Unit – I

Development of textile design in different cultures from primitive art to contemporary designs. Criteria of design of the elements and principles of textile design. Analysis of a motif, developing repeat as a basic unit of design in textile printing.

Unit – II

Block printing – developing block, understanding the material used, colors, types and their mixing process, various color printing.

Unit – III

Screen printing – design evolution for wall hangings, preparing screen and understanding the technique, printing on paper and printing on fabric.

16IDP613	SEMINAR										SEMESTER-VI
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week		L	0	T	0	P/S	4	Credits			2

Some of the possible topics are –

- History of Interior design
- Theory of Interior space
- Interior Design language of various cultures
- Art and craft form and its relevance in interior spaces.
- Mass production of various interior elements
- Material techniques search to evolve alternatives
- Graphics and space transformation
- Color and light interaction to change space
- Eco friendly furniture
- User participation in Design
- Relation of an interior designer with other consultants.

Note: Each student is required to select one of the above topics and present a written paper and a seminar. This should be based on literature reviews, case studies, interviews, market surveys, if applicable.

16IDS621	**INTERIOR DESIGN VI**							**SEMESTER-VI**
Marks	**Internal**	**160**	**External**	**240**	**Total**	**400**	**Exam Hours**	**6**
Instruction Hours/Week	**L**	**2**	**T**	**0**	**P/S**	**10**	**Credits**	**7**

- **COURSE OBJECTIVE:**To create understanding of human built environment as a holistic, living entity from macro to micro scales,
- shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- To enable a comprehensive study of rural settlement and Interior design in order to understand them as exemplar of collective design that evolved through various parameters.
- To observe changes in the above, analyze their nature and causes for them
- Understanding a Design Programme and the Components of the Design Problem.
- To introduce buildings as consumers of resources for human needs and to enable responsible, creative addressing of this fact through design choices.
- To enable an understanding of interior design as integrating diverse functional concerns in a building through analysis and innovation.

COURSE OUTCOME:

1. Ability to collect, assimilate and integrate knowledge in a holistic manner.
2. Sensitivity towards the nature and values of unselfconscious and collective design aswellas the interconnectedness of human society and environment
3. Ability to observe and analyze changes in the above.
4. Ability to project future transformations and give possible/ appropriate ways to address issues, if any
5. Ability to collect, assimilate and integrate knowledge in a holistic manner.
6. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment.
7. Understanding a Design Programme and the Components of the Design Problem.
8. To introduce buildings as consumers of resources for human needs and to enable responsible, creative addressing of this fact through design choices.
9. To enable an understanding of interior design as integrating diverse functional concerns in a building through analysis and innovation.
10. Ability to critically understand and address issue of resources.
11. Ability to balance diverse aspects/concerns of buildings by making informed choices and innovative design in the context of buildings with intense or complex programmes.
12. Ability to apply knowledge intensively in realms such as sustainable built environment, services

The primary focus should be on –

- Interior Construction Detailing
- Way finding/signage and graphic identification
- Decorative Accessories
- Building Codes.
- Rendering (hand and computer generated).
- Custom designed furniture and cabinetry

- Specification Writing
- Cost estimating
- Selection of sustainable/green materials

The list of suggested topics to be covered as design problems:

- Hospitality Design, Retail Design, Healthcare Design and Office systems
- Urban Interiors – Shopping malls, streets, Town squares, Fair grounds
- Interior Ports – air ports, Bus stops, Railway stations, boats/ports
- Exhibition displays – urban level and National level.
- Mobile units – buses, cars, railway coaches etc.

Note: One major design in detail and two minor design/time problems should be given.

16IDS622	INTEGRATED PROJECT WORK - III						SEMESTER-VI	
Marks	Internal	60	External	90	Total	150	Exam Hours	6
Instruction Hours/Week	L	0	T	0	P/S	6	Credits	3

COURSE OBJECTIVE:

-
- The student has to exhibit the capacities of an interior design in full ideology and should be ready for the professional challenges in future.
- The project understanding in totality will be expected from each student.
- It will help understand the importance of each subject in the previous years and its applications henceforth
- To understand the environmental impact assessment and to analyze the feasibility of the project in any given site.
- To check the feasibility of the project in the services.

COURSE OUTCOME:

1. Ability to integrate all the knowledge acquired so far and to exhibit the same through drawings and renderings.
2. Ability to integrate all aspects of the project to give a final report.
3. To be ready for large scale projects before the thesis.
4. To conduct research and to present the research with analysis of the feasibility of the project.
5. To understand the socio economic implication of the project in the given location.
6. To check the technical feasibility of eth project with parameters such as soil, water and other natural elements.
7. To assess the building for seismic zone and hence design according to the reading and understanding.

The student has to submit a project feasibility report on the project done in the design studio by integrating the knowledge and skills acquired from all the subjects studied till date.

The report may consist of the following -

- Environmental impact assessment of the project following the standards and specifications
- Socio-economic appraisal of the project and the design considering factors such as behavioral aspects, security considerations, costs for different user groups, aesthetic preferences etc.
- Technical feasibility – through execution and detailing of different spaces and elements of design, checking the feasibility of layout for service systems and specifications
- Costing of the project – bill of quantities, schedule of rates, specifications etc. economic viability and financial viability
- Space planning aspects/ issues – user activity spaces, access to physically challenged, fire safety, other services, green rating etc.

Note : The report has to presented for internal assessment

SEMESTER-7

<table>
<tr><td>16IDP711</td><td colspan="8">PRACTICAL TRAINING</td><td colspan="3">SEMESTER-VII</td></tr>
<tr><td>Marks</td><td>Internal</td><td>400</td><td colspan="4">External</td><td>600</td><td>Total</td><td>1000</td><td>Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>0</td><td>T</td><td>0</td><td>P/S</td><td>0</td><td colspan="3">Credits</td><td>15</td></tr>
</table>

COURSE OBJECTIVE:

- To introduce the challenges of interior design practice.
- To enable overall understanding of different stages in real life interior design projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific interior design practice –
- initiation of project,
- development of concepts into schematic drawings,
- approval process,
- presentations and working drawings,
- involvement in office discussions and client meetings,
- integrating structural and service concerns,
- estimation and tendering processes,
- site supervision and coordination in the construction process

COURSE OUTCOME:

1. An overall idea of the nuances of interior design practice.
2. An understanding about the total process that goes into the making of an interior in a building.
3. Maturity in using the experience gained from internship in the thesis project.
4. To have the ability to handle clients and translate the design requirements in to design projects.
5. To be able to experience hands on experience in the site during site visits and gain practical knowledge.
6. To be able to do professional detailing and to be able to produce drawings that are good for construction.

Every student must work in an interior designer's office as a full time trainee for a period of 20 calendar weeks (excluding viva – voce) from the date of commencement of training. The chief Interior Designer in the firm should have a minimum of 5 years of practical/ professional experience after his /her graduation.

The student should involve herself /himself in various aspects of work in an office like working drawings, presentation drawings, quantity estimation, site supervision etc. Students should understand professional practice methods of various interior designers, design process from client contacts to production documents, tender documents, production drawings for various works, site supervision etc. for various works. They should also know the Coordination of various agencies – client, members of design team, consultants, contractors, craftsmen and construction supervisors.

Detailed instructions regarding the training, the frequency of reporting to the department etc will be issued at the end of Seventh semester, which the student must strictly follow.

After completion of training, every student will have to submit a detailed report with a set of drawings on at least two projects in which he / she has worked during the twenty calendar weeks of the practical training period. This report will be evaluated at viva – voce by a jury consisting of one external, one internal and head of the department or his nominee. After submission of the report the department at its convenience will arrange for the conduct of the viva – voce examination.

<table>
<tr><td>16IDS721</td><td colspan="9">FIELD STUDY & DOCUMENTATION</td><td colspan="2">SEMESTER-VII</td></tr>
<tr><td>Marks</td><td>Internal</td><td>200</td><td colspan="4">External</td><td>0</td><td>Total</td><td>200</td><td>Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours/Week</td><td>L</td><td>0</td><td>T</td><td>0</td><td>P/S</td><td>6</td><td colspan="3">Credits</td><td>3</td></tr>
</table>

The choice of the building shall be Contemporary, Heritage, Vernacular or even a settlement/small area in the city of training. This field study and documentation shall be submitted in the form of an architectural report with sketches, pictures and drawings and presented in the form of videos, presentation, slideshow etc covering the following aspects:

- History and Cultural Impact
- Style and Function
- Form and Spatial Studies
- Key Elements and Features
- Materials and Technology

SEMESTER-8

16IDS821	**DESIGN THESIS**									**SEMESTER-VIII**	
Marks	**Internal**	**400**	**External**				**600**	**Total**	**1000**	**Exam Hours**	**6**
Instruction Hours/Week		**L**	**2**	**T**	**0**	**P/S**	**28**	**Credits**			**16**

COURSE OBJECTIVE:

- To ensure consolidation and application of the knowledge gained in preceding years of the programme in the context of a design project of the student's choice.
- To enable addressing of specific projects through key, identified issues inherent in the project or to enable development of thought processes in specific areas/aspects into a project.
- To facilitate development of ability to complete and handle projects independently as a precursor to professional life.
- To encompass the capacities to handle large scale projects and to be able to choose the scale of the project based on the knowledge acquired.
- To be given a chance to research the area that is of the students choice and to analyze the data and to be able to produce sensible design parameters based on the analysis.
- To be introduced to the professional practice nuances with respect to the design field.

COURSE OUTCOME:

1. Skill, knowledge and expertise in the domain of interior design.
2. Ability to handle a major interior design project independently through all stages
3. To be able to scale project size based on the parameters asserted by the futuristic clients.
4. To be able to design in relationship to the surroundings and also have a pragmatic and vernacular approach to the design chosen.
5. To be able to handle complex design problems
6. To introduce them into the professional world of design and detailing

Each student is expected to prepare a design thesis based on the preliminary work undertaken in the Interior design studio under an approved guide.
Thesis should reflect the knowledge gained from all the courses undertaken by the student in all the previous semesters.

The particulars of the schedule, content, presentation, format etc is to be decided by the department from time to time and shall be strictly followed.

At the end of the semester each student is expected to submit all original drawings prepared as per the department specifications. Three copies of the report in the specified format should be submitted to the department after the approval of the respective guides.

The department shall schedule the viva voce at its convenience only after the receipt of the thesis by the student. The performance sheet submitted by the guide and thesis committee should be the basis for allowing the student to appear for the final viva voce.

The end exam is to be conducted by a jury comprising of an external examiner. One internal examiner and head of the department or his nominee.

16IDS822	**REVITALIZATION OF ARTS & CRAFTS**						**SEMESTER-VIII**	
Marks	**Internal**	**80**	**External**	**120**	**Total**	**200**	**Exam Hours**	**6**
Instruction Hours/Week	**L**	**1**	**T**	**0**	**P/S**	**6**	**Credits**	**4**

Identification of private and public craft activity around the nation – various crafts and its perception in the society - design issues in transforming old craft forms into modern context by keeping its original spirits.

Assignment: Select one of the art/ craft form with the consultation of the faculty. Visit to the craft pockets. Document people, life , culture and craft and understand the materials, tools, technology, processes and forms. Suggest suitable changes in technology to improve the products so as to make it acceptable in today's context.

Note: The work will be periodically reviewed. The study has to be presented in the form of a report with illustrations and as a seminar for final assessment, along with the final product.

DETAILED SYLLABUS

M.ARCH (ADVANCE DESIGN)

2016-2017 BATCH

16MARS111	RESEARCH AND FIELD STUDIES -1						SEMESTER-I	
Marks	Internal	40	External	60	Total	100	Exam Hours	6
Instruction Hours /week	L	1	T	0	P/S	2	Credits	2

COURSE OBJECTIVE:

- To learn the importance of research & field Studies
- To understand the Research application in architectural design.
- To understand the different methods and techniques as relevant to the design profession
- To apply the research concepts in evaluation and appraisal of architectural design projects.
- To Analyse the Various methodologies of Field Survey
- To Develop the skill of preparation of report and Documentation

COURSE OUTCOME:

1. Student will understand the methods of research
2. Student will be able to develop the Skill of field study and experimentation
3. Student will understand the research application in the field of Architectural Design
4. Student will understand about the collection of data and Analyse the data
5. Student will develop the skill of documentation of various Survey and Research
6. Student will be able to prepare documents, report writing and publish in journals

UNIT-I INTRODUCTION TO RESEARCH

Importance, Purpose and Scope of Research and Field Studies. Application in architecture in terms of design, technology, environment, economic and behavioral areas.

UNIT-II RESEACRH OBJECTIVES AND METHODOLOGY

Sequence and Methods of Research. Identification of the Problem, Hypothesis Formulation, Objectives and Methodology.

UNIT-III APPLICATION OF RESEARCH

Understanding and Applying Qualitative, Analytical, Interpretative, Correlational, Quasi- Experimental, Experimental, Simulation and Modelling techniques in Architectural Design.

UNIT-IV FIELD STUDIES

Pilot Studies, Field Surveys and Collection of Samples - Physical, Architectural, Environmental, Organizational. Preparation and Analysis of Data Sheets and Questionnaires.

UNIT-V ANALYSIS, PREPARATION AND DOCUMENTATION

Preparation and Analysis of Data Sheets and Questionnaires. Arriving at conclusions from the Research at Field Studies. Report Writing and Publications.

SUGGESTED READINGS:

1.Knight, A. and Ruddock., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2.Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
3.Gibbs, J.P., " Urban Research Methods", (rev) Von Nostrand. 1988.
4 Kothari, C. R., and Gaurav Garg. *Research Methodology: Methods and Techniques*. New Delhi: New Age International (P) Limited, Publishers,

<table>
<tr><td>16MARS112</td><td colspan="8">DESIGN SYSTEMS</td><td colspan="2">SEMESTER-I</td></tr>
<tr><td>Marks</td><td>Internal</td><td>80</td><td colspan="3">External</td><td>120</td><td>Total</td><td>200</td><td>Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>2</td><td>T</td><td>0</td><td>P/S</td><td>4</td><td colspan="2">Credits</td><td>4</td></tr>
</table>

COURSE OBJECTIVE:

- To understand various design systems
- To Understand the different civilizations in different parts of the world through study of their source,
- To Understand the origin, context, grammar, intent and application in architectural design.
- To Understand the Contemporary design process and relevant case studies
- To Understand & develop the skill of Design thinking as per the Current change in Architectural Style
- To understand the Concept of design Systems by various literature/case studies.

COURSE OUTCOME:

1. Student will be able to understand the various design systems in the Architecture era
2. Student will be able to understand the vernacular architecture and its importance
3. Student will Understand the contemporary design process
4. Student will develop the skill of Design thinking as per the Current situation
5. Student will develop the skill of presentation of his ides by Seminar and presentation
6. Student will be able to envision the futuristic architecture

UNIT-I HISTORIC DESIGN SYSTEMS

Pragmatic, Iconic, Analogic and Canonic systems. Relationship between mathematics and architecture and hierarchies of geometry in design. Design systems through the middle ages to the renaissance period.

UNIT-II VERNACULAR DESIGN SYSTEMS

Vernacular architecture of the world and relevance of the climate in which they have evolved. Enduring nature of the vernacular in contemporary times, De-coding vernacular narratives regarding the cultures they represent.

UNIT-III CONTEMPORARY DESIGN SYSTEMS

Evolution of design systems since the modern period following industrial revolution to the advent of the digital age and representation of design.

UNIT-IV FUTURISTIC DESIGN SYSTEMS

Evolution of futuristic ideas since the 1960s in the field of design. Emerging areas of programming, expert systems and 3-D printing in design. New materials, technologies and bio mimicry- oriented design evolutions of future.

UNIT – V SEMINAR

Seminar on all the design systems -vernacular architecture – futuristic ideas and discussions

SUGGESTED READINGS:

1. Paul Oliver, Encyclopedia of Vernacular Architecture of the World, Cambridge University Press, 1997
2. Bernard Rudofsky, 'Architecture without Architects', MoMA, 1964.
3.Geoffrey Broadbent - Design in Architecture - Architecture and the human sciences - John Wiley & Sons, New York, 1981
4.Francis D.K. Ching et al; A global history of Architecture; John Wiley's sons, 2nd edition 2010
5.Weber.W & Yannas.S, 'Lessons from Vernacular Architecture', Routledge, 2014.
6. Vernacular Architecture – contemporary traditions – Aishwarya Tipnis – TERI

16MARS113	**EXHIBITION AND SEMINAR -1**						**SEMESTER-I**	
Marks	**Internal**	**100**	**External**	**-**	**Total**	**100**	**Exam Hours**	**6**
Instruction Hours /week	**L**	0	**T**	0	**P/S**	3	**Credits**	**2**

COURSE OBJECTIVE:

- To comprehend the importance of Seminars
- To understand the methods of Exhibition
- To Understand the method of presentations in International Seminars
- To Understand the method of presentations in National Seminars
- To Undertake responsibilities to conduct a conference & Seminar
- To refer reputed journals/magazines and gain the skill & Importance of good presentation methods.

COURSE OUTCOME:

1. Student will be able to know the method of Seminar events
2. Student will understand the methods of Presentation in International Seminar
3. Student will understand the methods of Presentation in National Seminar
4. Student will be able to prepare and publish journal Articles
5. Student will be able to develop the skill of writing & Presentation in Seminars
6. Student will develop the Skill of Report Writing & Presentation in Exhibitions

UNIT-I to UNIT V
CONTENT

Organizing and participating in Technical Seminars, Exhibitions, Workshops, Conferences related to architecture and allied fields. Publishing papers and articles in reputed magazines and journals. Preparing, editing and publishing reports, dossiers, documents, magazines and portfolios of master's course work.

SUGGESTED READINGS:

1. Knight, A. and Ruddock,L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods" second edition, John Wiley & Sons. 2013.
3. Gibbs, J. P., "Urban Research Methods", (rev.ed.) Von Nostrand. 1988.

</table>

COURSE OBJECTIVE:

- To learn the importance of and undertake the design process at advanced level t
- To learn the design aspects and considerations in large scale projects
- To understand the Urban Reformation and Renewal systems through Design
- To Categorize the Physiological and Psychological aspects in advanced level of Design
- To understand the various design systems, guidelines and considerations as undertaken in the research and field studies and apply them in architectural design.
- To understand the future need for the city & design accordingly

COURSE OUTCOME:

1. Student will be able to design complex structures with advanced level planning principles
2. Student will be able to understand the Urban Renewal and urban level design
3. Student will be able to Design large scale projects
4. Student will understand the Physiological and Psychological aspects in advanced level of Design
5. Student will be able to give a wholesome product of design in all aspects
6. Student can give futuristic proposals for the urban Architecture.

UNIT-I to UNIT - V

CONTENT:
Design of advanced and complex built environments having strong linkages with the urban scale and focusing on architectural, spatial, landscape, environmental, structure, services and technology features.
Examples: Campus Design, Urban Centers, Mixed Use Development etc.

SUGGESTED READINGS:

COURSE OBJECTIVE:

- To learn the importance of Research & Field Studies in advanced level
- To understand the Research application in architectural design.
- To understand the different methods and techniques as relevant to the design profession
- To apply the research concepts in evaluation and appraisal of architectural design projects.
- To Analyse the Various methodologies of Field Survey in focus area such as Sustainability, housing etc
- To Develop the skill of preparation of report and Documentation in the focus area

COURSE OUTCOME:

1. Student will understand the methods of research
2. Student will be able to develop the Skill of field study and experimentation
3. Student will understand the research application in the field of Architectural Design
4. Student will understand about the collection of data and Analyse the data
5. Student will develop the skill of documentation of various Survey and Research
6. Student will be able to prepare documents, report writing and publish in journals

UNIT-I RESEARCH METHODS – PART -1

Importance, Purpose and Scope of Research methodology & field studies specific to the focus area. Understanding and Applying Qualitative, Analytical, Interpretative research in Architectural Design

UNIT-II RESEARCH METHODS – PART -2

Importance, Purpose and Scope of Research methodology & Filed studies specific to the focus area. Understanding and Applying
Quasi- Experimental, Experimental, Simulation and Modelling techniques in the focus area of Architectural Design.

UNIT-III FIELD STUDIES AND EXPERIMENT

Focus area and specialization specific Pilot Studies, Field Surveys and Collection of Samples - Physical, Architectural, Environmental, and Organizational

UNIT-IV FIELD STUDY ANLAYSIS

Preparation and Analysis of Data Sheets and Questionnaires. Preparation and Analysis of Data Sheets and Questionnaires. Arriving at conclusions from the Research at Field Studies.

UNIT-V PROJECT REPORT

Arriving at conclusions from the Research at Field Studies. Report Writing and Publications.

SUGGESTED READINGS:

1.Knight, A. and Ruddock,L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.

COURSE OBJECTIVE:

- To Learn and show advanced understanding and application of the knowledge of Architectural design
- To Understand the Sustainability & housing in general or to any specific focus area through the culmination in a dissertation.
- To develop the skill of Unique research-based application through various Literature study
- To develop knowledge by own experimentation as per the chosen topic
- To do an in- depth study and analysis for a chosen topic of interest
- To present a Wholesome Technical Study report based on Experimentation and Research

COURSE OUTCOME:

1. Student will be able to identify the thrust area of research
2. Student will understand and develop his own dissertation topic with research -oriented study
3. Student will know the basis of experimentation, methods and applications
4. Student will understand the core ideas of Application design through the experimental research
5. Student will be able to analyse and synthesize a defined context with in-depth study and scientific approach
6. Student will be able to provide innovative and practical solutions for the future architecture.

UNIT-I to UNIT - V

CONTENT:

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas.

Related Research, Literature and Field Studies. Submission of the above in report form.

- To develop knowledge by own experimentation as per the chosen topic
- To do an in- depth study and analysis for a chosen topic of interest
- To present a Design report based on previous Experimentation and Research

COURSE OUTCOME:

1. Student will be able to identify the thrust area of research
2. Student will understand and develop his own dissertation topic with research -oriented study
3. Student will know the basis of experimentation, methods and applications
4. Student will understand the core ideas of Application design through the experimental research
5. Student will be able to analyse and synthesize a defined context with in-depth study and scientific approach
6. Student will be able to provide innovative and practical solutions for the future architecture by Design

UNIT-I to UNIT - V

CONTENT:

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas.

Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS:

1. Knight, A. and Ruddock,L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
3. Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.

6. John W Creswell, 'Research Design: Qualitative, Quantitative and Mixed Methods Approaches', Sage Publications, 2002

LIST OF ELECTIVES		
FOCUS AREA: SUSTAINABLE ARCHITECTURE		
Elective 1	Introduction to Sustainable Architecture	16MARESS1
Elective2	Building Performance Analysis	16MARESS2
Elective 3	Sustainable Design Strategies	16MARESS3
Elective 4	Sustainable Building Systems	16MARESS4
Elective 5	Sustainable Trends and Theories	16MARESS5
FOCUS AREA: HOUSING DESIGN		
Elective 1	Introduction to Housing Design	16MARESH1
Elective2	Housing Policies and Schemes	16MARESH2
Elective 3	Sustainable Housing	16MARESH3
Elective 4	Community Participation in Housing	16MARESH4
Elective 5	Special Types of Housing	16MARESH5
FOCUS AREA: LANDSCAPE DESIGN		
Elective 1	Introduction to Landscape Design	16MARESL1
Elective2	Plants and Application	16MARESL2
Elective 3	Site Engineering	16MARESL3
Elective 4	Planting Design	16MARESL4
Elective 5	Advanced Landscape Theories	16MARESL5
FOCUS AREA: MEDICAL ARCHITECTURE		
Elective 1	Introduction to Medical Architecture	16MARESM1
Elective2	Medical Systems and Typologies	16MARESM2
Elective 3	Hospital Standards	16MARESM3
Elective 4	Management of Healthcare Facilities	16MARESM4
Elective 5	Special Types of Healthcare	16MARESM5
FOCUS AREA: STRUCTURES IN ARCHITECTURE		
Elective 1	Advanced Concrete Technology	16MARESA1
Elective2	Advanced Structural Analysis I	16MARESA2
Elective 3	Advanced Structural Analysis II	16MARESA3
Elective 4	Design of Concrete Structures	16MARESA4
Elective 5	Steel Structures	16MARESA5
FOCUS AREA: RETAIL AND EXHIBITION DESIGN		
Elective 1	Introduction to Retail and Exhibition Design	16MARESR1
Elective2	Visual Merchandising	16MARESR2
Elective 3	Animation for Design	16MARESR3
Elective 4	Exhibition Construction and Detailing	16MARESR4
Elective 5	Interactive Experience Design	16MARESR5

16MARESS1	INTRODUCTION TO SUSTAINABLE ARCHITECTURE									SEMESTER-I	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4			Credits	4

COURSE OBJECTIVE:

- To orient towards the United nations Sustainable Development goals
- To Understand the environmental impact of building as well as to safeguard the environment
- To Understand the Sustainable Design principles in Architecture
- To Understand the Climatic impacts due to urbanization and ways for mitigation.
- To Understand & work for the health & well- being of the building and its occupants.
- To Understand the broad guideline of various green Building Systems

COURSE OUTCOME:

1. Student will understand the fundamentals of sustainable concepts and applications
2. Student will understand the Site planning principles and its applications
3. Student will understand the climate and its impacts in indoor thermal comfort
4. Student will understand the energy usage ratio and the effective steps of conservation and utilization of energy.
5. Student will understand the Green building Rating Systems in a Broader context
6. Student will understand the Effective methods to propose green buildings through Case Studies

UNIT-I INTRODUCTION TO SUSTAINABILITY

Sustainable Design Concepts and Strategies - Energy and Environment in Architecture, Green building systems, Energy efficiency. Relevant Literature/Case studies.

UNIT-II SUSTAINABLE DESIGN PRINCIPLES

Sustainable Design Principles - Site planning, Resources, Built form, Climate responsiveness, Energy usage, Occupant behaviour and comfort. Relevant Literature/Case studies.

UNIT-III CLIMATE AND BULT ENVIRONMENT

Climate and Built Form - Overview of Passive techniques for Day lighting, Ventilation, Solar Control and Thermal Comfort. Modelling methods and simulation for assessing building performance. Relevant Literature/Case studies.

UNIT-IV ENERGY AND ITS IMPACTS

Zero Energy and Zero Waste - Methods to achieve zero energy and zero waste in buildings, life cycle assessments and energy audits, renewable energy technologies, integrated energy design. Relevant Literature/Case studies and codes such as ECBC.

UNIT-V GREEN BUILDING SYSTEMS

Green buildings systems - GRIHA, LEED, BREEAM, GREEN STAR. Comparative Studies and analysis, relevance to India.

SUGGESTED READINGS:

1.Mili Majunder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
2.Arvind Krishnan & Others - Climate Responsive Architecture, Tata Mcgraw -Hill New Delhi. 2001.
3.Ralph M. Lebens - Passive Solar Architecture in Europe - 2, Architecture Press, London. 1983.
4.Charles. J. Kibert, 'Sustainable Construction' John Wiley and sons Inc, USA. 2004.
5.N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi. 2006
6.GRIHA manuals, TERI press
7.Norbert Lechner, "Heating, Cooling, Lighting", John wiley and sons
8. Mark Dekay and G.Z. Brown, "Sun, Wind and Light- Architectural Design Strategies",,John Wiley and Sons
9. Szokolay, Koenigsberger," Manual of Tropical Housing and building" 2014

16MARESS2	BUILDING PERFORMANCE ANALYSIS										SEMESTER-II	
Marks	Internal	80	External				120	Total	200		Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4				Credits	4

COURSE OBJECTIVE:

- To Understand the principles of Sustainable building through Simulation process
- To learn the simulation techniques with digital applications, and to get quantifiable results by usage of various building simulation analysis software.
- To Understand the Effective methods of Daylighting through Simulation
- To Understand the Effective methods of Reduction of Solar Radiation through Simulation
- To Understand the effects of Indoor thermal comfort through Simulation.
- To Understand the Energy performance Index of a Building

COURSE OUTCOME:

1. Student will understand the effects of indoor comfort through software simulation and analysis
2. Student will be able to achieve a quantitative result of thermal analysis by software simulations
3. Student will be able to effectively use the modelling tools and techniques
4. Student will be able to design a building with good thermal comfort with optimum design solutions
5. Student will be able to give quantitative results of Daylighting and Ventilation of a building
6. Student will be able to give an energy performance index of a building.

UNIT-I BUILDING PERFORMANCE-DATA FILES

Building Performance Analysis - Design Optimization and Visualization using Building Information Modelling. - use of Epw file – TMY data extraction – IMD files

UNIT-II DAYLIGHTING, IRRADIATION AND WIND ANALYSIS

Building Performance Analysis - Daylighting, Shading and Ventilation.

UNIT-III ENERGY ANALYSIS

Building Performance Analysis - Whole building energy analysis.

UNIT-IV MODELLING TOOLS

Building Performance Analysis - Modelling Tools and Techniques.

UNIT-V SIMULATION TOOLS

Building Performance Analysis - Simulation Tools and Techniques.

Suggested software: CLIMATE CONSULTANT, HEED, SBEED, OPAQUE, ECOTECT, SKETCHUP – OPEN STUDIO, OPTIVENT, ENERGY PLUS, DAYSIM -RADIANCE, COOLVENT, RHINO-GRASSHOPPER-LADY BUG, DIVA, DRAGONFLY, SEFAIRA, IES-VE,VELUX and recent software.

SUGGESTED READINGS:

1. Autodesk Manuals for BIM tools such as CAD, REVIT, ECOTECT
2. Rhino tutorials
3. Sefaira tutorials
4. Climate consultant Tutorials
5. IES tutorials
6. Computational fluid Dynamics – Tutorials
7. Open Studio – Tutorials

16MARESS3	SUSTAINABLE DESIGN STRATEGIES									SEMESTER-II	
Marks	**Internal**	**80**	**External**			**120**	**Total**	**200**		**Exam Hours**	**6**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	4			**Credits**	**4**

COURSE OBJECTIVE:

- To understand the sustainable strategies and its principles in the design.
- To focus on passive means, reduction of active methods in building Function
- To gain a broad understanding of hybrid strategies and Mixed mode building
- To Understand in depth the green building Rating Systems all over India & Abroad
- To Understand the Design Aspects of Daylighting techniques for large scale projects
- To Understand the Design Aspects of heating & Ventilation techniques for large scale projects

COURSE OUTCOME:

1. Student will be able to apply the Sustainable design strategies in architecture, Design and environment
2. Student will be able to give design solutions of Thermal comfort for various climatic locations
3. Student will understand the application of Passive, Active and Hybrid Deign strategies.
4. Student will become expertise in terms of green building aspects and applications.
5. Student will understand the in – depth Analysis of Daylighting
6. Student will understand the In- depth analysis of Ventilation technique.

UNIT-I DAYLIGHTING AND VENTILATION STRATEGIES

Sustainable Strategies - Day lighting -WWR – Daylight Factor, Daylight levels – ERC, SC, IRC, Visible light Transmittance – Code compliance – Indian Standards – Lighting Standards. Ventilation – Fenestrations- Methods and calculations – Orientation strategies- Wing walls – Permeable buildings – Stack- Chimney – Cross ventilation etc

UNIT-II SOLAR CONTROL AND SHADING STRATEGIES

Sustainable Strategies - Solar Control -Sun Path – Shading concepts – radiation control – Heat balance – thermal properties of materials- Heat Dissipation – Albedo effect etc. Thermal Comfort – ASHRAE standards, Adaptive comfort model, Operative temperature, Tropical Summer Index, Comfort indices – Shading methods for Indoor thermal Comfort etc

UNIT-III STRATEGIES ASSESMENT BY SIMULATION

Sustainable Strategies - Modelling methods and simulation for assessing building performance – Simulation software – Daylight, Irradiation, Mean radiant temperature calculations etc

UNIT-IV GREEN BUILDING SYSTEM AND RATING- APPLICATIONS

Sustainable Strategies - Green buildings systems such as GRIHA, LEED, ECBC, BREEAM, and GREEN STAR. - Rating systems and applications in Residential, Commercial and Industrial buildings etc

UNIT-V CASE STUDY AND COMPARITIVE STUDIES

Sustainable Strategies - Comparative Studies of the different Case studies of buildings with rating systems and their analysis with relevance to India.

SUGGESTED READINGS:

1. GRIHA, LEED, BREEAM and GREEN STAR manuals.
2. Mark dekay and G. Z. Brown, “Sun Wind and light – Architectural Design Strategies “, John wiley and sons, New York.2013
3. Norbert Lechner, ‘Heating, cooling and Lighting ‘,2011
4. Edward Allen, “How Buildings Work-The Natural Order of Architecture”, Oxford University Press
5. Mili Majunder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
6. Arvind Krishnan & Others - Climate Responsive Architecture, Tata Mcgraw -Hill New Delhi. 2001.

Ralph M. Lebens - Passive Solar Architecture in Europe - 2, Architecture Press, London. 1983.

COURSE OBJECTIVE:

- To Understand the low Energy Building Concepts with case studies
- To Understand the Indoor Environmental Quality aspects through survey & Case studies
- To Gain understanding & knowledge about the green Materials
- To learn & provide a comfortable, healthy, and productive environment and landscape with minimal energy and better environmental impact.
- To Gain Understanding about the Smart technologies for the Energy management
- To Gain Understanding & Knowledge about the Energy & Cost Audit

COURSE OUTCOME:

1. Student will be able to gain knowledge and application of low energy building design
2. Student will understand the thermal quality standards and its importance in various countries
3. Student will understand the use of green materials and products for a sustainable future.
4. Student will be able to calculate the energy consumption features and the cost audits.
5. Student will be able to understand the integrated building management systems for a controlled environment.
6. Student will be able to understand the energy and cost audits

UNIT-I LOW ENERGY BUILDING

Sustainable Building - Low energy building design and operation. -types of energy – consumption-renewable/ non-renewable-Hybrid design strategies-

UNIT-II INDOOR ENVIRONMENTAL QUALITY

Indoor Environment - Quality and Standards, Indoor Air Quality-indoor thermal comfort- levels – activity analysis- carbon emissions etc

UNIT-III GREEN MATERIALS

Building Systems - Green Materials and green Products- Manufacture- reuse- reduce-recycled materilas

UNIT-IV SMART TECHNOLOGIES

Building Systems – Smart Materials and systems- Integrated buildings- Energy saving – Automations

UNIT-V ENERGY AND COST AUDITS

Building Services - Energy and Cost audits.

SUGGESTED READINGS:

1. Mili Majunder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
2. Charles. J. Kibert, 'Sustainable Construction' John Wiley and sons Inc, USA. 2004.

N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi. 2006

</table>

COURSE OBJECTIVE:

- To Understand the various Sustainable Policies & mechanisms
- To Gain in-depth knowledge about vernacular & traditional practices
- To Gain knowledge about biomimicry and applications in building design
- To Gain Knowledge about Adaptive reuse & Urban regeneration
- To Understand about Resource Optimisation – Water Efficiency- Operational procedure
- To familiarize with the historic, contemporary and futuristic tends of sustainable building.

COURSE OUTCOME:

1. Student will be able to understand the policy level mechanisms and design process and product accordingly.
2. Student will understand the vernacular / traditional building types and its applications to the modern context by its systems and materials.
3. Student will understand to use the site in an optimum manner and know about the operational and maintenance practices.
4. Student will gain knowledge about biomimicry and its importance in sustainable design
5. Student will gain knowledge about futuristic design systems and new material applications.
6. Student will Understand about the Adaptive Reuse & urban Generation

UNIT-I POLICY AND REGULATORY MECHANISMS
Sustainable Design: Policies and regulatory mechanisms, Design practices
UNIT-II VERNACULAR AND TRADITIONAL PRACTICES
Sustainable Trends: Vernacular ways of sustainable building, Preservation of the regional and cultural identity, documentation and continuity of vernacular/traditional ways of building and detailing
UNIT-III RESOURSE OPTIMISATION
Sustainable Trends: Contemporary ideas and trends, Optimization Of site potential, Minimization of energy consumption, Protection and conservation of water resources, Use of environmentally friendly materials and products, Provision of a healthy and convenient indoor climate, Optimization of operational and maintenance practices
UNIT-IV DIGITAL APPLICATIONS AND FUTURISTC APPROACH
Sustainable Trends: Futuristic thoughts and approaches, New materials and technologies, Application of digital technologies
UNIT-V ADAPTIVE REUSE AND URBAN REGENERATION
Sustainable Theories: Biomimicry, Adaptive Reuse, Urban regeneration

SUGGESTED READINGS:

1. Eco-Tech: Sustainable Architecture and High Technology by Slessor© - Thames and Hudson 1997
2. Sustainable Architecture: Low tech houses by Mostaedi (A) – Carles Broto 2002
3. Eco-design: A manual for Ecological Design by Yeang(K) – Wiley Academy 2006
4. O.H. Koenigsberger and others (2014), Manual of Tropical Housing and Building –Part I - Climate design, Orient Longman, Madras, India,
5. “Sun wind and light”- Mark Dekay, G. Z. Brown, Feb 2014

16MARESH1	INTRODUCTION TO HOUSING DESIGN										SEMESTER-I	
Marks	Internal	80	External				120	Total	200		Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4				Credits	4

COURSE OBJECTIVE:

- To Gain Knowledge about the Housing Typologies all over the world
- To Understand the principles of Community living & Neighbourhood
- To Understand the social, economic, environmental, and psychological implications of housing process and products.
- The goal is to familiarize with housing as a process and a product in the context of the individual, the family, and the community.
- To introduce various stakeholders involved in the housing scenario.
- To Understand about the Housing Finance

COURSE OUTCOME:

1. Student will be able to gain knowledge about housing typologies
2. Student will understand about the theories and concepts of community and Neighbourhood
3. Student will understand about the emerging trends in housing
4. Student will understand about the housing finance schemes and management
5. Student will understand the relation of housing and real estate management in the global and local scenario.
6. Student will Understand the Basis of Housing Demand all over the world

UNIT-I HOUSING TYPOLGY

Housing typologies - Identification of stakeholders, roles responsibilities of various stakeholders, classification of various typologies.

UNIT-II COMMUNITY AND NEIGHBOURHOOD

Community and neighborhood - Theories and concepts, Understanding the scale of housing.

UNIT-III CONTEMPORARY HOUSING

Architectural styles and preferences - Trends in contemporary housing types, greater role for the architect in housing.

UNIT-IV HOUSING FINANCE

Housing finance - Economic consideration and feasibility studies. Various housing financial institutions

UNIT-V HOUSING AND REAL ESTATE

Housing markets - Real estate scenario, Land availability & Acquisition, suburban and rural trends.

SUGGESTED READINGS:

1. Merrill, J.L. (Ed.). Introduction to Housing. Upper Saddle River, NJ:Pearson Prentice Hall. 2006
2. Joseph DeChiara, Julius Panero. Time-Saver Standards for Interior Design and Space Planning, McGraw-Hill Education, 2001
3. Robert E. Stevens, Philip K. Sherwood. How to prepare a feasibility study Prentice-Hall, 1982
4. Susan S. Fainstein, Scott Campbell, Readings in Planning Theory, Wiley, 2011
5. Doris Kohn, J. D. von Pischke, "Housing Finance in Emerging Markets: Connecting Low-Income Groups to Markets"Springer

16MARESH2	**HOUSING POLICIES AND SCHEMES**						**SEMESTER-II**	
Marks	**Internal**	**80**	**External**	**120**	**Total**	**200**	**Exam Hours**	**6**
Instruction Hours /week	**L**	2	**T**	0	**P/S**	4	**Credits**	**4**

COURSE OBJECTIVE:

- To learn about the housing schemes and policies
- To learn about the Urban housing scenario
- To learn about the Rural housing scenario
- To explore about the stakeholders in the housing
- To gain knowledge about the Central government schemes
- To gain Knowledge about the State Government Schemes

COURSE OUTCOME:

1. Student will learn and gain knowledge the housing schemes and policies
2. Student will gain knowledge about the urban housing scenario
3. Student will gain knowledge about the rural housing scenario
4. Student will gain knowledge about the stakeholders in the housing
5. Student will gain knowledge about the systematic approach for the future housing demand.
6. Student will gain knowledge about the Schemes of Central & State government

UNIT-I HOUSING POLICY IN INDIA

Housing Policy in the India - Government policies on housing, Government Agencies in housing sector, Classification of housing Stock

.

UNIT-II CENTRAL GOVERNMENT SCHEMES

Central Government Schemes - Identification and review of schemes with housing component.

UNIT-III STATE GOVERNMENT SCHEMES

State government Schemes - Identification and review of schemes with housing component.

UNIT-IV URBAN HOUSING

Urban housing Scenario - Housing scenario, Housing typology, Housing Stock & shortage, Demand and supply, emerging trends.

UNIT-V RURAL HOUSING

Rural Housing Scenario - Housing scenario, Housing typology, Housing Stock & shortage, Demand and supply, emerging trends.

SUGGESTED READINGS:

1.National Urban Housing and habitat policy, 2007
2.http://www.tnhb.gov.in/dept.aspx
3.http://mhupa.gov.in/policies/
4.http://nhb.org.in/Urban_Housing/HousingjDolicies.php

<table>
<tr><td>16MARESH3</td><td colspan="7">SUSTAINABLE HOUSING</td><td colspan="3">SEMESTER-II</td></tr>
<tr><td>Marks</td><td>Internal</td><td>80</td><td colspan="3">External</td><td>120</td><td>Total</td><td>200</td><td>Exam Hours</td><td>6</td></tr>
<tr><td colspan="2">Instruction Hours /week</td><td>L</td><td>2</td><td>T</td><td>0</td><td>P/S</td><td>4</td><td colspan="2">Credits</td><td>4</td></tr>
</table>

COURSE OBJECTIVE:

- To Understand about the Site Analysis
- To gain Knowledge about Affordable housing
- To gain Knowledge about Resource Mapping
- To gain Knowledge about advanced level of Building services for housing
- To learn and understand the current interventions in housing sector and propose a sustainable approach towards the housing.
- To learn about High Performance Housing

COURSE OUTCOME:

1. Student will be able to understand the sustainable site planning with site inventory and analysis
2. Student will understand about Affordable housing techniques
3. Student will learn about cost effective techniques in housing.
4. Student will be able to understand the resource mapping
5. Student will be able to understand the advance level building services
6. Student will be able to understand & design high performance houses

UNIT-I SITE ANALYSIS

How Site and climate related issues affect the design parameters and decisions. -Site Inventory and Analysis- Location, Access- Circulation, Traffic, Climate, Sensory – Analysis

UNIT-II AFFORDABLE HOUSING

Exploring the social and economic choices, options and decision of housing, various technologies available.

UNIT-III RESOURCE MAPPING

Identifying the resources (construct techniques & technology, Manpower & Material) predominant in that area. Understanding the Availability and Cost implication of the resources.

UNIT-IV BUILDING SERVICES

An in depth understanding of building system, how houses work as a system.

UNIT- V HIGH PERFORMANCE HOUSING

Exploring the science and technology required to build high performance houses.

SUGGESTED READINGS:

1.Thomas Russ, Site Planning and Design Handbook, Second Edition, McGraw-Hill Education, 2009

2.Joseph De Chiara, Julius Panero Time-Saver Standards for Interior Design and Space Planning, McGraw-Hill Education, 2001.

3.Clayton Bennett Greening Your Home: Sustainable options for every system in your house McGraw-Hill Professional 2008

4.Global Green USA, "Blueprint for Greening Affordable Housing" Island Press. 2007

5.Jessica Kellner Housing Reclaimed: Sustainable Homes for Next to Nothing New Society Publishers 2011

16MARESH4	COMMUNITY PARTICIPATION IN HOUSING									SEMESTER-III	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4			Credits	4

COURSE OBJECTIVE:

- To gain knowledge about the Community participation in Housing
- To gain deep understanding about the Planning Aspects in Housing
- To gain knowledge about the planning process
- To Learn and determine the involvement end users in various stage of housing process across.
- To learn about the community participation for various typologies
- To learn about various best practices in community Housing Through Case studies

COURSE OUTCOME:

1. Student will be able to develop a model for both the end user and the service provider
2. Student will be able to involve in planning in design stages
3. Student will be able to understand the intricacies of Community participation in Housing
4. Student will be able to give design solution for the future community housing
5. Student will gain Knowledge about the best practices in Community housing

UNIT-I COMMUNITY PARTICIPATION PLANNING

Awareness and importance of Community participation, Planning and design stages - Zoning studies, spatial analysis, customs & cultural practices and user -based studies

UNIT-II PLANNING ASPECTS

People-based planning - Identifying & incorporating Aspiration, Needs & Affordability, incorporating special needs of the elderly and children, concept of better living. Degrees of customizations

UNIT-III PLANNING PROCESS

Familiarization with development and planning process of various agencies (Public, Private (Multifamily), Private (single family), Co-operative, NGO), view on community participation, organizational structure, Project and product brief, Identification of beneficiaries.

UNIT-IV COMMUNITY PARTICIPATION MODELS AND CASE STUDIES

Existing models of community participation across various typologies, best practices, Case studies.

UNIT-V TYPOLOGY

Developing models for community participation for various typologies and stages.

SUGGESTED READINGS:

1.Sylvia J.T. Jansen, Henny C.C.H. Coolen and Roland W. Goetgeluk, "The Measurement and Analysis of Housing Preference and Choice" Springer 2011

2.Andrew Beer, Debbie Faulkner, Chris Paris, Terry Clower - Housing transitions through the life course: Aspirations, needs and policy 2011

3.Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.

4.Merrill, J.L. (Ed.). Introduction to Housing. Upper Saddle River, NJ:Pearson Prentice Hall. 2006

5.Juilenne Hanson, Decoding Homes and Houses Cambridge University Press 2003

16MARESH5	**SPECIAL TYPES OF HOUSING**									**SEMESTER-III**	
Marks	**Internal**	**80**	**External**			**120**	**Total**	**200**		**Exam Hours**	**6**
Instruction Hours /week		**L**	2	**T**	0	**P/S**	4			**Credits**	**4**

COURSE OBJECTIVE:

- To gain Knowledge about the Vernacular housing in Chettinad Region
- To Gain knowledge about the Vernacular housing in Hill region
- To understand the Various techniques involved in the vernacular construction
- To understand about Disaster prone areas an methodologies for housing in those regions
- To learn about the influences of social, economic and environmental factors in housing
- Exploring housing typologies which tends to lean more on a aspect more than the rest.

COURSE OUTCOME:

1. Student will learn and understand the Vernacular Architecture of various regions of world
2. Student will learn and understand the Vernacular Architecture of various regions of India
3. Student will learn and understand the Vernacular Architecture of various regions of Tamilnadu
4. Student will learn about design aspects and historical methods of construction which can be adopted for a particular context
5. Student will learn and understand the types of housing in disaster prone areas
6. Student will be able to Propose the housing trend for the Future.

UNIT-I VERNACULAR- CHETTINAD REGION

Vernacular Architecture - Typology 1 - Chettinad region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-II VERNACULAR-HILL REGION

Vernacular Architecture - Typology 2 - Hill region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-III VERNACULAR – DESERT REGION

Vernacular Architecture - Typology 3 - Desert region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-IV HOUSING – DISASTER PRONE AREAS

Housing in Disaster prone areas - Classification of Disaster, Disaster Management Cycle, Housing interventions.

UNIT-V HOUSING – FUTURE CONCEPTS

Future concepts - Development trends, Product categories, material trends, People preferences

SUGGESTED READINGS:

1. Richard Hyde, Bioclimatic Housing: Innovative Designs for Warmer Climates, Earthscan
2. Willie Webber, Simos Yannas (ed.) Lessons from vernacular Architecture, Earthscan
3. Ilay Cooper, Traditional Buildings of India, Thames and Hudson, 1998
4. Monisha Bharadwaj, India Style, Bay Soma Publishing -2003

FACULTY OF PHARMACY

16PYU101 **SEMESTER-I**

ANATOMY & PHYSIOLOGY-I **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- It also helps in understanding homeostatic imbalances of various systems of the body.
- Since a medicament, which is produced by the pharmacist, is used in various disease conditions to correct the abnormal functioning of the body systems.
- The basic knowledge of this subject is must for a student to understand how drugs act on various systems/organs in correcting the disease state of organs/systems.
- Thus it becomes a prerequisite subject for the pharmacy course.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the gross morphology, structure and functions of various organs of the human body.
2. Understand the various homeostatic mechanisms and their imbalances.
3. Identify the various tissues and organs of different systems of the human body.
4. Perform the haematological tests like blood cell counts, hemoglobin estimation, bleeding/clotting time, etc and also record blood pressure, ECG, heart rate, pulse and respiratory volume.
5. Appreciate coordinated working pattern of different organs of each system.
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of the human body.

Course Content

UNIT I

Definition - scope of anatomy and physiology, description of body and basic Terminologies - General anatomy and physiology –**Cell** - cell junctions - transport mechanisms – homeostasis - ion channels - cell communication and signaling pathways – Definition - classification of tissues - their location - characteristics and Functions - **Human skeleton**–Structure – composition - classification and function of bones - Identification and few - salient features of important bones of axial and appendicular skeleton - Classification of joints, types of movements.

UNIT II

Body fluids and blood - Body fluids - composition and functions of blood – haemopoiesis - mechanism of coagulation -bleeding and clotting disorders - blood grouping and its significance - blood transfusion - lymphatic system and reticuloendothelial system - Definitions of Anemia – Hemophilia - leukemia and lymphoma.

UNIT III

Cardio Vascular system - Anatomy and physiology of heart - blood circulation - cardiac output - cardiac cycle - heart rate - blood pressure – electrocardiogram - heart sounds - Definitions of hypertension –hypotension – atherosclerosis – arteriosclerosis – angina - myocardial infarction - congestive heart failure - cardiac arrhythmia.

UNIT IV

Digestive system - Gross anatomy of G.I. Tract and its physiology with special reference to liver - pancreas and stomach – digestion – absorption - movements of intestine - Definitions of peptic ulcer - colorectal cancer - hepatitis.

UNIT V

Respiratory system - Anatomy of respiratory tract - mechanism of respiration - regulation of respiration lung volumes and capacities - transport of oxygen and carbondioxide - artificial respiration - resuscitation methods - Definitions of hypoxia – asphysia - bronchial asthma - COPD.

16PYU111 **SEMESTER-I**

ANATOMY & PHYSIOLOGY LABORATORY – I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- It also helps in understanding homeostatic imbalances of various systems of the body.
- Since a medicament, which is produced by the pharmacist, is used in various disease conditions to correct the abnormal functioning of the body systems
- The basic knowledge of this subject is must for a student to understand how drugs act on various systems/organs in correcting the disease state of organs/systems.
- Thus it becomes a prerequisite subject for the pharmacy course.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the gross morphology, structure and functions of various organs of the human body.
2. Understand the various homeostatic mechanisms and their imbalances
3. Identify the various tissues and organs of different systems of the human body.
4. Perform the hematological tests like blood cell counts, hemoglobin estimation, bleeding/clotting time, etc and also record blood pressure, ECG, heart rate, pulse and respiratory volume.
5. Appreciate coordinated working pattern of different organs of each system
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of the human body.

Course content:

1. Guidelines in laboratory discipline.
2. Introduction to microscope.
3. The study of common objects.
4. Microscopic study of different tissues.
5. Identification of bones.
6. Hemoctometry.
7. Estimation of Bleeding time.
8. Estimation of Clotting Time.
9. Determination of RBC.
10. Determination of WBC.

11. Determination of haemoglobin content (2 Experiments).

16PYU102 **SEMESTER-I**

PHARMACEUTICAL INORGANIC CHEMISTRY –I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- Study about various role of inorganic compounds which having medicinal use.
- This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs.
- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- This subject deals with general methods of preparation and reactions of some organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals.
2. Understand the medicinal and pharmaceutical importance of the inorganic compounds.
3. Write the molecular formula and balance chemical equations and understand the development of periodic table.
4. Understand the importance of quality control.
5. Discuss the nuclear reactions and radioactivity.
6. Elaborate the importance of topical agents.

Course Content:

UNIT – I
Learning symbols and valency of elements. Writing molecular formula- balancing the equation Pharmacopoeia and monograph - Development of periodic table of the modern concept of atomic structure and its importance.

UNIT – II
Importance of quality control- sources and types of impurities in pharmaceutical substances - Test for purity – Swelling power in bentonite- acid is replacing capacity of antacid- presence of iodates and ferric ion. Limit test – Definition- importance- general procedure for limit test for chloride – sulphate- iron- arsenic- heavy metals and lead - Modified limit test for chloride and sulphate in

potassium permanganate- sodium bicarbonate and sodium salicylate - Modified limit test for chlorinated compounds in sodium benzoate.

UNIT – III

Nuclear reactions- radioactivity- nomenclature- units- detection and measurement of radioactivity- clinical applications and dosage- hazards- precautions and storage- biological effects of radiation. Radio pharmaceutical preparations and standards of radioactive material such as $_{131}$Iodine, $_{58}$Cobalt. Radio opaque contrast medium-barium sulfates.

Method of preparation- assay- identification test-test for purity- storage conditions- official preparations and uses of inorganic compounds in the following categories:

UNIT – IV

Gastrointestinal agents and related compounds - Acidifiers - Dilute hydrochloric acid-Sodium phosphate- Ammonium chloride. Antacids - Classification- qualities of ideal antacid- side effects- advantages- combination therapy-acid neutralizing capacity-sodium bicarbonate-potassium citrate- aluminium hydroxide gel- dried aluminium hydroxide gel-aluminium phosphate- magnesium hydroxide-light and heavy magnesium trisilicate -light and heavy magnesium carbonate- calcium carbonate- magaldrate and bismuth carbonate. Adsorbents and protectives - Light kaolin- heavy kaolin and bismuth sub-carbonate. Saline cathartics – Magnesium hydroxide-magnesium sulphate- magnesium carbonate and Sodium phosphate.

UNIT – V

Topical Agents -Protective – Talc-zinc oxide – calamine-zinc stearate-titanium dioxide – kaolin- silicon polymers and Dimethicone - Astringents - Alum- zinc sulfate and zinc chloride. Antimicrobials – Hydrogen peroxide - potassium permanganate - chlorinated lime-iodine- boric acid- silver nitrate- sodium stilbo gluconate- povidone-iodine- selenium sulfide and zinc undecenoate.

PHARMACEUTICAL INORGANIC CHEMISTRY LABORATORY–I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- Study about various role of inorganic compounds which having medicinal use.
- This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs.
- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- This subject deals with general methods of preparation and reactions of some organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals.
2. Understand the medicinal and pharmaceutical importance of the inorganic compounds.
3. Write the molecular formula and balance chemical equations and understand the development of periodic table.
4. Understand the importance of quality control.
5. Discuss the nuclear reactions and radioactivity.
6. Elaborate the importance of topical agents.

Course Content:

1. Limit test for Chloride.
2. Limit test for Sulphate.
3. Modified limit test for chloride in $KMnO_4$.
4. Modified limit test for Sulphate in $KMnO_4$.
5. Preparation of Barium sulphate.
6. Preparation of Magnesium sulphate.
7. Preparation of Boric acid.
8. Test for adsorption power in heavy kaolin.
9. Systematic qualitative analysis for unknown inorganic mixture (Four experiments).

16PYU103 **SEMESTER-I**

PHARMACEUTICAL ORGANIC CHEMISTRY –I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry.
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will Explain molecular orbital theory.

1. Understand the strain theories.
2. Describe effect of substituents on the reaction.
3. Elaborate the different mechanisms of reaction.
4. Account for the structure, stability, orientation, reaction and its mechanism of Benzene.
5. Explain different Reaction Intermediates & their application in reaction mechanism.
6. How to name the organic compounds?
7. Explain different reaction involve in the formation of aromatic compounds.

Course Content:

UNIT I

Classification /Nomenclature/ Isomerism: Classification of organic Compounds - Common and IUPAC systems of Nomenclature of organic compounds - Structural Isomerism in organic compounds.

UNIT II

Alkanes -General preparation and reactions including sp3 hybridization of alkanes and halogenation of alkanes -**Cyclo alkanes -**General preparation and reactions including its Stability – Baeyer's strain theory and its limitation and Sachse Mohr's theory (Theory of strainless rings).

UNIT III

Alkenes -General preparation and reactions including Stabilities of alkenes - sp2 hybridization - Saytzeff's rule - Markownikoff's rule - Anti Markownikoff's rule – Ozonolysis - electrophilic addition reactions of alkenes -**Conjugated dienes -** General preparation and reactions including

Diel's-Alder - electrophilic addition - freeradical addition reactions of conjugated dienes and allylic rearrangement - Stability of conjugated dienes.

UNIT IV

Alkyl halides - General preparation and reactions including**S_N^1**and **S_N^2** reactions-kinetics, order of reactivity of alkyl halides - stereochemistry and rearrangement of carbocations -**S_N^1** versus **S_N^2** reactions.**E_1** and **E_2** reactions – kinetics - order of reactivity of alkyl halides - stereochemistry and rearrangement of carbocations - Nucleophilic substitution versus elimination reactions – **Alcohols -** General preparation and reactions including various test to distinguish primary secondary and tertiary alcohols.

UNIT V

Carbonyl compounds (Aldehydes and ketones) -Electromeric effect - aldol condensation - crossed aldol condensation - cannizaro reaction - crossed cannizaro reaction - benzoin condensation - perkin condensation - Knoevenagel reaction - reformatsky reaction -**Carboxylic acids -**Acidity of carboxylic acids - effect of substituents on acidity - inductive effect

PHARMACEUTICAL ORGANIC CHEMISTRY LABORATORY–I 3H 3C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain molecular orbital theory.
2. Understand the strain theories.
3. Describe effect of substituents on the reaction.
4. Elaborate the different mechanisms of reaction.
5. Account for the structure, stability, orientation, reaction and its mechanism of Benzene.
6. Explain different Reaction Intermediates & their application in reaction mechanism.
7. How to name the organic compounds.
8. Explain different reaction involve in the formation of aromatic compounds.

Course Content:

1. Preparation of Salicyclic acid
2. Preparation of Benzamide
3. Preparation of Iodoform
4. Preparation of Phenyl Benzoate
5. Preparation of Dibenzilidine acetone
6. Assay of organic compounds involving acidimetry, alkalimetry (at least 02).
7. Melting point of any synthesized compound
8. Stereo models
9. Systematic qualitative analysis of organic compounds including preparation of derivative (not less than 4 compounds with different functional groups).

16PYU104 **SEMESTER-I**

BIOCHEMISTRY– I **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Biochemistry deals with complete understanding of the molecular levels of the chemical process associated with living cells.
- The scope of the subject is providing biochemical facts and the principles
- To understand metabolism of nutrient molecules in physiological and pathological conditions.
- It is also emphasizing on genetic organization of mammalian genome and hetero & autocatalytic functions of DNA.
- Will be able to know bioenergetics and energy rich compounds.
- To know the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Explain the types and importance of biomolecules.
2. Explain the bioenergetics and energy rich compounds.
3. Understand the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.
4. Understand the metabolism of nutrient molecules in physiological and pathological conditions.
5. Understand the genetic organization of mammalian genome, functions of DNA and RNA in protein synthesis.
6. Understand the principles of organ functions tests and their clinical significances.

Course Content:

UNIT I
Introduction to biochemistry–Types of aminoacids and their structures - Cell organelles and its biochemical functions - Transport process across the cell membranes –Types of solutions.

UNIT II
Bioenergetics - Concept of free energy - determination of free energy from equilibrium constant - Redox potential - **Energy rich compounds** – Definition - classification and Production and biological significance of ATP and cyclic AMP.

UNIT III
Enzymes - Definition – Nomenclature - IUB classification - Properties of enzymes - Factor affecting enzyme activity - Enzyme kinetics (Michaelis plot, Line Weaver Burke plot) - Enzyme inhibitors

with examples - Mechanism of enzyme action and theories of enzyme action eg. Allosteric enzymes - Enzyme induction and repression - Isoenzymes and their diagnostic applications - Therapeutic and diagnostic applications of enzymes - Coenzymes – Structure and biochemical role.

UNIT IV

Biological oxidation - Enzymes and co-enzymes involved in Biological oxidation - Electron transport chain (its mechanism and role) - Oxidative phosphorylation (its mechanism) and substrate level phosphorylation - Inhibitors ETC and Uncouplers or inhibition of oxidative phosphorylation.

UNIT V

Carbohydrate metabolism – Definition – classification - chemistry and biological role of carbohydrates - Glycolysis – energetics and significance - Citric acid cycle – energetic - amphibolic nature - anaplerosis and significance - HMP shunt and its significance - Glycogen metabolism (Glycogenolysis and glycogenesis) and its regulation - Gluconeogenesis and its significance - Various shuttle systems and its significance - glycerol – phosphate & malate – aspertate - Uronic acid pathway and its significance - Hormonal regulation of carbohydrate metabolism - Disorders of Carbohydrate metabolism - Diabetes mellitus - glycogen storage.

- To know the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain the types and importance of biomolecules.
2. Explain the bioenergetics and energy rich compounds.
3. Understand the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.
4. Understand the metabolism of nutrient molecules in physiological and pathological conditions.
5. Understand the genetic organization of mammalian genome, functions of DNA and RNA in protein synthesis.
6. Understand the principles of organ functions tests and their clinical significances.

Course Content:

1. Qualitative analysis of carbohydrates.
2. Qualitative analysis of Proteins.
3. Determination of Serum Glutamate Oxoloacetate Transaminase.
4. Determination of Serum Glutamate Pyrvuate Transaminase.
5. Determination of blood and urine sugar to asses metabolic function.
6. Determination of serum calcium.
7. Qualitative analysis of urine for normal constituents.
8. Qualitative analysis of urine for abnormal constituents.
9. Determination of serum total proteins.
10. Determination of blood creatine.
11. Determination of urine creatinine.

12. Determination of blood urea.

BIOSTATISTICS & COMPUTER APPLICATIONS-I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the computer basics.
- To learn the statistical method of analysis that can apply in the development and use of therapeutic drug.
- This subject deals with the introduction Database, Database Management system.
- This subject deals with the Computer application in clinical studies and use of databases.
- To switch the introduction Database, Database Management system, Computer application in clinical studies and use of data bases.
- To organize, summarize, and display quantitative data.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Able to organize, summarize, and display quantitative data.
2. Comfortable with statistical methods for calculating summary estimates, measures of variability, and confidence intervals
3. Know the various types of application of computers in pharmacy.
4. Know the various types of data bases.
5. Know the various applications of data bases in pharmacy.
6. Swith the introduction Database, Database Management system, Computer application in clinical studies and use of data bases.

Course Content:

UNIT – I

Application of biostatics in medicine and pharmacy - collection of data - classification and tabulation of statistical data- diagrammatic and graphical representation - measure of central tendancy - Mean – Median- mode – geometric Mean.

UNIT – II

Purpose of sampling- methods of sampling- test significance-Null hypothesis and alternative hypothesis- standard errors-one tailed test and two tailed test-T test.

UNIT – III

Correlation analysis- application of correlation analysis- types of correlation-Scatter diagram- karl pearson's correlation coefficient- spearman's rank correlation coefficient.

UNIT – IV

Computer application - Basic computer components of organization- classification of computers- binary number system conversion- types of memory device - network topology - types of computer networks- internet search engine- computer input and output device – multimedia- MS office package- advantages and application.

UNIT – V

Types of computer software and application - types of operating systems - statistical software tools- DBMS and RDDMS- data abstraction- E- R diagram concept- Client server process- network layers- HTML web pages.

HUMAN ANATOMY & PHYSIOLOGY II **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- It also helps in understanding homeostatic imbalances of various systems of the body.
- Since a medicament, which is produced by the pharmacist, is used in various disease conditions to correct the abnormal functioning of the body systems
- The basic knowledge of this subject is must for a student to understand how drugs act on various systems/organs in correcting the disease state of organs/systems.
- Thus it becomes a prerequisite subject for the pharmacy course.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the gross morphology, structure and functions of various organs of the human body.
2. Understand the various homeostatic mechanisms and their imbalances
3. Identify the various tissues and organs of different systems of the human body.
4. Perform the haematological tests like blood cell counts, hemoglobin estimation, bleeding/clotting time, etc and also record blood pressure, ECG, heart rate, pulse and respiratory volume.
5. Appreciate coordinated working pattern of different organs of each system
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of the human body.

Course Content:

UNIT I

Urinary system - Structure and functions of kidney and urinary tract- physiology of urine formation- micturition reflex and acid base balance - Definitions of renal calculi- urinary tract infection- nephrotic syndrome- renal failure- nephritis.

UNIT II

Reproductive system - Structure and function of male and female reproductive system- sex hormones- physiology and menstruation- coitus- fertilization- spermatogenesis- oogenesis-pregnancy and parturition.

UNIT III

Endocrinology–Introduction- chemistry and action of hormones- basic anatomy and physiology of pituitary – thyroid – parathyroid- adrenal and pancreas - local hormones - Definitions of disorders of these glands.

UNIT IV

Nervous system - Definition and classification nervous system - Neurons and properties of nerve fibers- neuroglia - Synapses- neurotransmitters its receptors and neurohumoral transmission - Meninges- ventricles of the brain and CSF - Anatomy and functions of cerebrum- cerebellum- brain stem (pons- medulla and mid brain)- hypothalamus- thalamus- basal ganglia - Spinal cord- structure and reflexes - Cranial nerves- names and their functions - Definitions of stroke- Alzheimer’s disease- brain tumor- epilepsy- Parkinson’s disease- psychosis- anxiety- depression - Autonomic nervous system-Anatomy and functions of sympathetic and parasympathetic nervous system.

UNIT V

Sense organs - Introduction to special senses - Anatomy and physiology of eye - ear- skin- nose and tongue - Disorders related to sense organs - Definitions of cataract – glaucoma- sight disorder – deafness- Otitis media- vertigo.

5. Appreciate coordinated working pattern of different organs of each system
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of the human body.

Course content

1. Identification of Blood Groups.
2. Recording of human body temperature and Body Mass Index (BMI) (2 experiments).
3. Recording of systematic arterial blood pressure.
4. Recording of human heart rate and pulse rate.
5. Recording of human pulse rate.
6. Study of nervous- digestive- respiratory- cardiovascular- urinary- reproductive systems.
7. Study of special senses with the help of models- charts and specimens.
8. Health education (2 experiments)

16PYU202 **SEMESTER-II**

PHARMACEUTICAL INORGANIC CHEMISTRY –II 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- Study about various role of inorganic compounds which having medicinal use.
- This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs.
- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- This subject deals with general methods of preparation and reactions of some organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals
2. Understand the medicinal and pharmaceutical importance of the inorganic compounds
3. Write the molecular formula and balance chemical equations and understand the development of periodic table.
4. Understand the importance of quality control.
5. Discuss the nuclear reactions and radioactivity.
6. Elaborate the importance of topical agents.

Course Content

UNIT-I

Anti-caries Agents - Role of fluorides as anti-caries agents-sodium fluoride –**Dentifrices**-Calcium carbonate - dibasic calcium phosphate-strontium chloride- zincs chloride -**Medicinal Gases –** Oxygen- carbon dioxide – helium- nitrogen and nitrous oxide.

UNIT -II

Major Intra and extra cellular electrolytes- Physiological role of chloride – phosphate – bicarbonate –sodium– potassium-calcium and magnesium-Electrolytes used for replacement therapy - Sodium chloride-potassium chloride-calcium chloride- calcium gluconate- calcium lactate-di basic calcium phosphate- tri basic calcium phosphate -Physiological acid-base balance and its importance – Electrolytes used in the acid –base therapy –Sodium acetate-potassium acetate-sodium bicarbonate-potassium bicarbonate-sodium citrate-sodium lactate-ammonium chloride – Electrolyte combination therapy- compound sodium chloride solution- sodium chloride injection and oral rehydration salt.

UNIT – III

Essential and Trace ions – Definition - physiological role of iron - copper – zinc – chromium– manganese – molybdenum – selenium-sulphur and iodine – Ferrous fumarate- ferrous gluconate- ferrous sulphate- iron and ammonium citrate -**Official formulation** –Iron dextran injection- strong iodine solution.

UNIT – IV

Pharmaceutical Aids- Sodium bisulphate- sodium metabisulphite –sulphur dioxide –bentonite- magnesium stearate – zinc stearate- aluminium sulphate- sodium carboxymethyl cellulose-sodium formaldehyde sulphoxylate- purified water- water for injection and sterile water for injection.

UNIT – V

Miscellaneous- Sclerosing agents- Hypertonic saline- sodium tetra decyl sulphate– Expectorants – Potassium citrate and potassium iodide – Sedative – Potassium bromide –Antidotes –Sodium nitrite- sodium thiosulphate and charcoal - Respiratory stimulant - Ammonium carbonate.

PHARMACEUTICAL INORGANIC CHEMISTRY LABORATORY–II 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- Study about various role of inorganic compounds which having medicinal use.
- This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs.
- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- This subject deals with general methods of preparation and reactions of some organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Know the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals
2. Understand the medicinal and pharmaceutical importance of the inorganic compounds
3. Write the molecular formula and balance chemical equations and understand the development of periodic table.
4. Understand the importance of quality control.
5. Discuss the nuclear reactions and radioactivity.
6. Elaborate the importance of topical agents.

Course Content:

1. Limit test for Iron.
2. Limit test for Arsenic.
3. Modified limit test for chloride in $NaHCO_3$.
4. Modified limit test for Sulphate in $NaHCO_3$.
5. Preparation of Calcium Carbonate.
6. Preparation of Zinc Oxide.
7. Test for swelling power of Bentonite.
8. Test for Presence of iodate in potassium iodide.
9. Systematic qualitative salt analysis (4 mixture of compounds).

16PYU203 **SEMESTER-II**

PHARMACEUTICAL ORGANIC CHEMISTRY –II **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry.
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will Explain molecular orbital theory.

1. Understand the strain theories.
2. Describe effect of substituents on the reaction.
3. Elaborate the different mechanisms of reaction.
4. Account for the structure, stability, orientation, reaction and its mechanism of Benzene.
5. Explain different Reaction Intermediates & their application in reaction mechanism.
6. How to name the organic compounds?
7. Explain different reaction involve in the formation of aromatic compounds.

Course Content:

UNIT I

Benzene -Derivation of structure of benzene. Orbital picture- resonance in benzene- aromatic characters- Huckel's rule.Preaparation and Reactions of benzene – nitration- sulphonation- halogenation- reactivity- friedel crafts alkylation- friedel crafts acylation. Effect of substituents on reactivity and orientation of mono substituted benzene compounds towards electrophilic substitution reactions.

UNIT II

Aryl halides -Nomenclature- General methods of preparation- General reactions of – Aryl halides- Nucleophilic aromatic substitution reactions (Bimolecular nucleophilic substitution and Benzyne- mechanisms)- effect of substituents on reactivity towards nucleophilic aromatic substitution reactions.

UNIT III

Phenols -Nomenclature- General methods of preparation- General reactions- Acidity of -phenols- effect of substituents on acidity – **Amines -**Nomenclature- General methods of preparation- General reactions- Basicity of - aromatic amines- effect of substituents on basicity- comparison with aliphatic saturated amines- synthetic uses of diazonium salts.

UNIT IV

Types of reaction and factors influencing the reaction including Inductive effect- electromeric effect- mesomeric effect- Resonance effect- resonance- tautomerism- hyper conjugation- Types of bond fission- electrophiles and nucleophiles.

UNIT V

Reactive intermediates - Carbocations- carbanions- carbenes- free radicals – generation- relative stability- fate and applications.

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain molecular orbital theory.
2. Understand the strain theories.
3. Describe effect of substituents on the reaction.
4. Elaborate the different mechanisms of reaction.
5. Account for the structure, stability, orientation, reaction and its mechanism of Benzene.
6. Explain different Reaction Intermediates & their application in reaction mechanism.
7. How to name the organic compounds.
8. Explain different reaction involve in the formation of aromatic compounds.

Course Content:

1. Determination of melting point and boiling point of organic compounds including mixed melting point technology (3 compounds)
2. Preparation of organic compounds (5 compounds)
3. Systematic Qualitative Salt analysis (4 compounds)

16PYU204 **SEMESTER-II**

BIOCHEMISTRY– II **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Biochemistry deals with complete understanding of the molecular levels of the chemical process associated with living cells.
- The scope of the subject is providing biochemical facts and the principles
- To understand metabolism of nutrient molecules in physiological and pathological conditions.
- It is also emphasizing on genetic organization of mammalian genome and hetero & autocatalytic functions of DNA.
- Will be able to know bioenergetics and energy rich compounds.
- To know the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Explain the types and importance of biomolecules.
2. Explain the bioenergetics and energy rich compounds.
3. Understand the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.
4. Understand the metabolism of nutrient molecules in physiological and pathological conditions.
5. Understand the genetic organization of mammalian genome, functions of DNA and RNA in protein synthesis.
6. Understand the principles of organ functions tests and their clinical significances.

Course Content:

UNIT I
Lipid metabolism – Definition – classification - chemistry and biological role of lipids - β-Oxidation of saturated (Palmitic acid) and unsaturated fatty acids (linolinic acid) - Ketone bodies metabolism (Ketogenesis and ketolysis) ketosis and ketoacidosis d - *De novo* -Biosynthesis of fatty acids (Palmitic acid) - Metabolism of cholesterol (Biosynthesis and degradation) - Biosynthesis and significance of Phospholipids - Disorders of lipid metabolism – Hypercholesterolemia - atherosclerosis and fatty liver.

UNIT II
Amino acid metabolism – Definition - classification and biological role of amino acids - General reactions of amino acid metabolism - Transamination - deamination & decarboxylation - Urea cycle and its metabolic disorders - Metabolism of sulfur containing amino acids their metabolic

disorders - Catabolism of tyrosine – tryptophan - phenylalanine and their metabolic disorders - Synthesis and significance of biological substances – creatine – histamine - 5-hydroxy- Tryptophan (5-HT) – dopamine – noradrenaline – adrenaline - Metabolism of Heme and its disorders Porphyriaas - hyperbilirubinemia and jaundice.

UNIT III

Nucleic acid metabolism – Definition - chemistry and biological role of nucleosides - nucleotides - Biosynthesis of purine and pyrimidine nucleotides - Catabolism of purine and pyrimidine nucleotides -Disorders of nucleotide metabolism - Gout disease.

UNIT IV

Replication and Protein synthesis - Organization of mammalian genome **-** Structure of DNA and significance as genetic material – RNA – structure - types and significance in protein synthesis **-** DNA replication - types and details on semi conservative model **-** Mutation and consequences of mutation **-** DNA Damage and repair mechanism **-**Transcription or RNA synthesis - Genetic code **-** Translation or Protein synthesis and its regulation and inhibition.

UNIT V

Clinical biochemistry - Role of the kidney - routine performed Laboratory tests - serum creatinine-creatinine clearance - serum urea and serum uric acid - Liver functions – Metabolic – synthetic - excretion & detoxification - Tests to evaluate theliver function **-** Composition and significance of lipoproteins - Lipid profile tests.

- To know the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain the types and importance of bio molecules.
2. Explain the bioenergetics and energy rich compounds.
3. Understand the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.
4. Understand the metabolism of nutrient molecules in physiological and pathological conditions.
5. Understand the genetic organization of mammalian genome, functions of DNA and RNA in protein synthesis.
6. Understand the principles of organ functions tests and their clinical significances.

Course Content:

1. Determination of serum cholesterol(2 experiments).
2. Determination of serum triglycerides(2 experiments).
3. Determination of Salivary amylase activity(2 experiments).
4. Study the effect of pH on salivary amylase activity. (2 experiments).
5. Study the effect of Temperature on Salivary amylase activity.
6. Study the effect of substrate concentration on salivary amylase activity.

BIOSTATISTICS & COMPUTER APPLICATIONS-II 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the computer basics.
- To learn the statistical method of analysis that can apply in the development and use of therapeutic drug.
- This subject deals with the introduction Database, Database Management system.
- This subject deals with the Computer application in clinical studies and use of databases.
- To switch the introduction Database, Database Management system, Computer application in clinical studies and use of data bases.
- To organize, summarize, and display quantitative data.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Able to organize, summarize, and display quantitative data.
2. Comfortable with statistical methods for calculating summary estimates, measures of variability, and confidence intervals
3. Know the various types of application of computers in pharmacy.
4. Know the various types of data bases.
5. Know the various applications of data bases in pharmacy.
6. Swith the introduction Database, Database Management system, Computer application in clinical studies and use of data bases.

Course Content:

UNIT – I

Bio-statistics – Dispersion -Theory of sampling - Statistical inference.

UNIT – II

Regression and correlation - Probabilities.

UNIT – III

Computer Packages- MS Office - MS Word-MS ExcelMSPowerPointAdvantages and use.

UNIT – IV

Introduction to Computer Networks –Definition – LAN – WAN – Advantages – Internet-Worldwide Web.

UNIT – V

Computer Graphics - Definition-displaydevices-graphicalinputandoutputdevices-multimedia–definition and application.

16PYU301 **SEMESTER-III**

PHYSICAL PHARMACEUTICS-I **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Physical pharmaceutics is a fundamental course that leads to proper understanding of subsequent courses in Pharmaceutics.
- It integrates knowledge of mathematics, physics and chemistry and applies them to the pharmaceutical dosage form development.
- It focuses on the theories behind the phenomena needed for dosage form design.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions, etc.
- The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations.
- Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Exploit the historical background of pharmacy industry.
2. Recognize about various Pharmacopoeias like IP, BP,USP
3. Acquire the basics of physical pharmaceutics.
4. Interpret about diffusion, dissolution and particle properties.
5. Demonstrate the applications of micromeritics in pharmaceutical industy.
6. Enable the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions.

Course Content:

UNIT-I
Historical back ground and development of profession of pharmacy industry and organization - Pharmacy as a career – Pharmacopoeias - Introduction to IP – BP - USP and extra pharmacopoeia - Salient features of Indian Pharmacopoeia.

UNIT-II
Diffusion – definition –Fick's law - steady state diffusion – principles of diffusion involved in biological systems - **Dissolution** – definition – rate of dissolution – theories of dissolution - factors

affecting rate of dissolution - Noyes Whitney equation.

UNIT-III

Colloids– definition – types of colloids – preparation of colloids – purification - dialysis – electrodialysis – ultrafiltration – stabilization of colloids – solubilization – optical properties – electrical properties –kinetic properties.

UNIT-IV

Coarse dispersion– definition - **Suspension** – definition – preparation – settling of suspension – physical stability – evaluation of suspension - **Emulsion** – definition – types of emulsion – theories involved –instabilities of emulsion – microemulsion – multiple emulsions.

UNIT-V

Micromeritics– definition – particle shape and size distribution – methods of determining particle size – microscopic method –sieve method – sedimentation technique – particle volume measurement – coulter counter method - shape - surface area and derived properties of powders.

PHYSICAL PHARMACEUTICS LABORATORY- I **3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Physical pharmaceutics is a fundamental course that leads to proper understanding of subsequent courses in Pharmaceutics.
- It integrates knowledge of mathematics, physics and chemistry and applies them to the pharmaceutical dosage form development.
- It focuses on the theories behind the phenomena needed for dosage form design.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions, etc.
- The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations.
- Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Understand the physicochemical parameters of a drug
2. Identify methods to enhance solubility of a new drug moiety
3. Discover the importance of stability in pharmaceutical preparations
4. Demonstrate the powder properties and effect of Glidants in powder flow
5. Interpret about diffusion, dissolution and particle properties.
6. Demonstrate the applications of micromeritics in pharmaceutical industry
7. Enable the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions

Course content:

1. Determination of particle size and particle size distribution using microscope.
2. Determination of particle size distribution using sieve method.
3. Determination of powder properties,
   a) Density
   b) Porosity
4. Determination of powder properties,
   a) Compressibility
   b) Angle of repose
5. Determination of effect of glidants or lubricants on angle of repose.

6. Preparation of emulsion.
7. Determination of globule size of emulsions.
8. Preparation of various types of suspensions.
9. Determination of suspension sedimentation parameters.
10. Experiment on preparation of colloids.

PHARMACETICAL ANALYSIS AND PHYSICAL CHEMISTRY-I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Titrimetric analysis deals with complete understanding of the various titration methods.
- The scope of the present course is to know the quality, quantity and purity of pharmaceutical products and chemicals.
- Know and understand the various apparatus used in pharmaceutical analysis and their calibrations.
- Know the quality control and their importance.
- Know the apparatus used in analysis.
- Know the calibration of volumetric apparatus.

Course Outcomes:

On successful completion of the course the student will

1. To know the quality control and their importance.
2. To know the apparatus used in analysis.
3. To know the calibration of volumetric apparatus.
4. To know the different types of titrations like neutralization, non- aqueous, complexometric, gravimetric, precipitation and reduction oxidation titrations.
5. To know the concept of titrations.
6. To know indicators used in various titration methods.

Course Content:

UNIT- I

Introduction - Importance of quality control - computation of analytical results - significant figure - concept of error – precision – accuracy - standard deviation - normal distribution curve - calibration of volumetric apparatus - titration - concepts and different types of titration.

UNIT- II

Acid-base titrations - Acid-base concepts, Henderson–Hasselbalch equation, theory of indicators, neutralization curves - **Non aqueous titration -** Introduction- Solvents for Non- Aqueous Titrations- Indicators for Non- Aqueous Titrations-Titrations of Weak Base.

UNIT- III

Precipitation titrations - Principles of precipitation titrations- factors affecting solubility of precipitate- Argentimetric titration including, Mohr's method, Volhard's method, Fajan's method and Gay Lussac method - **Complexometric titration -** principle of complexometric titration- types of titrations-endpoint determination-masking and demasking agents.

UNIT- IV

Solutions - Definition and types of solutions- Ideal and real solutions- colligative properties- partition coefficient- Debye- Huckel theory - **Thermodynamics -** Terminology of thermodynamics- **First law of thermodynamics**- internal energy- enthalpy of a system- relation between ΔH and ΔE- molar heat capacity- Joule – Thomson effect- Adiabatic expansion of an ideal gas and Zeroth law of thermodynamics.

UNIT-V

Second law of thermodynamics -Need for second law- spontaneous processes- concept ofentropy- statement of second law of thermodynamics and Carnot cycle - **Change in entropy for isothermal changes-** Entropy of vaporization- Trouton's rule- hydrogen bonding- need for Gibb's free energy and definition of free energy- predicting spontaneity of reaction- equilibrium constant and Vant-hoff equation - **Third law of thermodynamics:** Definition- Zero entropy.

PHARMACETICAL ANALYSIS AND PHYSICAL CHEMISTRY LABORATORY- I **3H** **2C**

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Titrimetric analysis deals with complete understanding of the various titration methods.
- The scope of the present course is to know the quality, quantity and purity of pharmaceutical products and chemicals.
- Know and understand the various apparatus used in pharmaceutical analysis and their calibrations.
- Know the quality control and their importance.
- Know the apparatus used in analysis.
- Know the calibration of volumetric apparatus.

Course Outcomes:

On successful completion of the course the student will

1. To know the quality control and their importance.
2. To know the apparatus used in analysis.
3. To know the calibration of volumetric apparatus.
4. To know the different types of titrations like neutralization, non- aqueous, complexometric, gravimetric, precipitation and reduction oxidation titrations.
5. To know the concept of titrations.
6. To know indicators used in various titration methods.

Course Content:

1. Standardization of analytical weights and calibrating of volumetric apparatus.
2. Assay of citric acid by alkalimetry.
3. Assay of ammonium chloride by alkalimetry.
4. Assay of sodium hydroxide by acidimetry.
5. Assay of calcium gluconate by complexometry.
6. Assay of magnesium sulphate by complexometry.
7. Assay of silver nitrate by precipitation titration.
8. The liquid state physical properties – surface tension- parachor.
9. The liquid state physical properties viscosity- rheochor.
10. The liquid state physical properties refractive index.
11. The liquid state physical properties -optical rotation and chemical constitution.

12. Assay of silver nitrate by precipitation titration.

ADVANCED PHARMACEUTICAL ORGANIC CHEMISTRY-I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The subject deals with structure, stability and reactivity of organic compounds. It emphasizes on mechanisms and orientation of reactions.
- The syllabus includes physical properties of organic compounds and named reactions. This course also deals with stereo chemical aspects of organic compounds and stereo chemical reactions.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes:

On successful completion of the course the student will

1. Write the structure, name, type of isomerism of the organic compound.
2. Write the reaction, name the reaction and understand orientation of reactions.
3. Understand the stereo chemical aspects of organic compounds and reactions
4. Account for the stability/reactivity/orientation
5. Emphasize the synthesis, reactions and uses of Heterocyclic compounds
6. Know aspects of organic compounds and reactions.

Course Content:

UNIT I

Polynuclear hydrocarbons –Synthesis - reactions and medicinal uses of following derivatives Naphthalene – Phenanthrene - Anthracene - Diphenylmethane and Triphenylmethane.

UNIT II

Reactions of synthetic importance: Catalytic hydrogenation - metal hydride reduction - Clemmensen reduction – Meerwein Pondorff Verley reduction - Birch reduction - Wolff kishner reduction.

UNIT III

Study of name reaction with its mechanism: Beckmanns rearrangement, Claisen-Schmidt Condensation- Oppenauer-oxidation- Dakin reaction- cannizaro reaction- crossed cannizaro reaction- Aldol condensation.

UNIT IV

Detailed Study of Heterocyclic Compounds Including Its Synthesis and Medicinal Uses - Classification and nomenclature of Heterocyclic compounds- Pyrrole- Furan- Thiophene - Relative aromaticity, reactivity, Basicity of pyrrole- Pyrazole- Imidazole- Oxazole- Thiazole.

UNIT V

Detailed Study of Heterocyclic Compounds Including Its Synthesis and Medicinal Uses - Pyridine and its basicity- Quinoline- Isoquinoline- Acridine- Indole- phenothiazine- azepines and Diazepines- Pyrimidine- Purine.

ADVANCED PHARMACEUTICAL ORGANIC CHEMISTRY LABORATORY- I **3H** **2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Quantitatively analyze the organic compounds
2. Determine the qualitative parameters of oil.
3. Prepare homocyclic compounds using basic reactions.
4. Write the structure, name, type of isomerism of the organic compound.
5. Write the reaction, name the reaction and understand orientation of reactions.
6. Understand the stereo chemical aspects of organic compounds and reactions

Course Content:

I. Quantitative determination of following classes of organic compound

1. Alcohol by acetylation method.
2. Carbonyl compound by hydroxyl amine hydro chloride method.
3. Carboxylic acid by acid base method.
4. Ester by hydrolysis method.

II. Determination of following oil values

1. Acid value.
2. Saponification value.

III. Preparation of homocyclic compounds.

1. Benzanilide/Phenyl benzoate/Acetanilide from Aniline/ Phenol /Aniline by acylation reaction. (any two)

   5- Nitro salicylic acid/Meta di nitro benzene from Salicylic acid / Nitro benzene by nitration reaction. (any two)

IV. Preparation of heterocyclic compounds.

1. Benzimidazole from ortho phenylene diamine.
2. 2,3–diphenyl quinoxaline from benzil

PHARMACY PRACTICE AND PATHOPHYSIOLOGY-I 3H 3C

Instruction hours/ week: L: 3 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart basic knowledge and skills that are required for the practice of pharmacy in both hospital and community settings.
- To develop practical clinical skills that will enable the student to enhance the quality of life of patients and advance pharmaceutical care in the community setting.
- To understand prescription handling, dispensing of dosage forms and calculation of dosage forms.
- Pathophysiology is the study of causes of diseases and reactions of the body tosuch disease producing causes.
- This course is designed to impart a thorough knowledge of the relevant aspects of pathology of various conditions with reference to its pharmacological applications, and understanding of basic pathophysiological mechanisms.
- Hence it will not only help to study the syllabus of pathology, but also to get baseline knowledge required to practice medicine safely, confidently, rationally and effectively.

Course Outcomes:

On successful completion of the course the student will

1. Understand the various drug distribution system- BMI & BP
2. Handle the prescriptions.
3. Manage community pharmacies.
4. Understand the elements of pharmaceutical care and provide comprehensive patient care services
5. Understand the concept and practice of the quality use of medicines.
6. Summarize the therapeutic approach for management of various diseases including reference to the latest available evidence.

Course Content:

UNIT I

Prescription -Parts of prescription- handling of prescription- source of errors in prescription- care required in dispensing procedures including labeling of dispensed products.

UNIT II

Pharmaceutical calculations -Latin terms used in prescription – posology- factors determining doses of drug- calculation of doses for infants- adults and elderly patients - enlarging and reducing recipes- percentage solutions –allegation - alcohol dilution- proof spirit- isotonic solutions.

UNIT III

Dosage form -introduction - classifications of dosage forms - **Principles involved and procedures adopted in dispensing -**Typical prescription like mixtures – emulsions – powders – pastilles – lozenges – pills – lotions – liniments – inhalations – mouthwashes – gargles – douches – paints- sprays and tablet triturates.

UNIT IV

Basic principles of cell injury and adaptation -Causes of cellular injury- Pathogenesis and morphology of cell injury - Intercellular alterations in lipids- proteins and carbohydrates- cellular adaptation- atrophy and hypertrophy.

UNIT V

Basic mechanism involved in the process of inflammation and repair - alteration in vascular permeability and blood flow- migration of WBC's- acute and chronic inflammation and mediators of inflammation - Brief outline of the process of repair.

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart basic knowledge and skills that are required for the practice of pharmacy in both hospital and community settings.
- To develop practical clinical skills that will enable the student to enhance the quality of life of patients and advance pharmaceutical care in the community setting.
- To understand prescription handling, dispensing of dosage forms and calculation of dosage forms.
- Pathophysiology is the study of causes of diseases and reactions of the body tosuch disease producing causes.
- This course is designed to impart a thorough knowledge of the relevant aspects of pathology of various conditions with reference to its pharmacological applications, and understanding of basic pathophysiological mechanisms.
- Hence it will not only help to study the syllabus of pathology, but also to get baseline knowledge required to practice medicine safely, confidently, rationally and effectively.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Understand the various drug distribution system- BMI & BP
2. Handle the prescriptions.
3. Manage community pharmacies.
4. Understand the elements of pharmaceutical care and provide comprehensive patient care services
5. Understand the concept and practice of the quality use of medicines.
6. Summarize the therapeutic approach for management of various diseases including reference to the latest available evidence.

Course Content:

I. Dispensing of prescription falling under the following categories:

1. Preparation of strong ammonium acetate solution.
2. Preparation of diuretic mixtures.
3. Preparation of sodium bicarbonate.
4. Preparation of paracetamol elixir.
5. Preparation of ferric ammonium citrate emulsion

6. Preparation of castor oil emulsion.
7. Preparation of aspirin powder.
8. Preparation of electrolyte powder.
9. Preparation of crystal violet paint
10. Preparation of Mandl's paint.

II. Dispensing procedures involving pharmaceutical calculation, dosage calculation for paediatric.

PHARMACEUTICAL TECHNOLOGY-I **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart a fundamental knowledge on the art and science of various machines and their handling in pharmaceutical industry.
- This course focuses on various topics like unit operations, material handling, pharma plant construction, corrosion, industrial pollution etc.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of pharmaceutical equipments.
- To carry out various test to prevent environmental pollution.
- To appreciate and comprehend significance of plant lay out design for optimum use of resources.
- To appreciate the various preventive methods used for corrosion control in Pharmaceutical industries.

Course Outcomes (CO's):

On successful completion of the course the student will

1. To know various unit operations used in Pharmaceutical Industries.
2. To understand the material handling techniques.
3. To perform various processes involved in pharmaceutical manufacturing process.
4. To carry out various tests to prevent environmental pollution.
5. To appreciate and comprehend significance of plant lay out design for optimum use of resources.
6. To appreciate the various preventive methods used for corrosion control in Pharmaceutical Industries.

Course Content:

UNIT I

Materials of Pharmaceutical Plant Construction - General study of composition – corrosion – resistance - properties and applications of the materials of construction with special reference to stainless steel and glass.

UNIT II

Industrial Hazards and Safety Precautions –Mechanical – Chemical – Electrical - Fire and Dust hazards - Industrial dermatitis - Accident records - **Fluid Flow -**Types of flow - Reynold's number – Viscosity - Concepts of boundary layer - Basic equation of fluid flow – Valves – Pumps - Flow meters -

Manometers and Measurement of flow and pressure.

UNIT III

Filtration and Centrifugation -Theory of filtration - filter aids - filter media - industrial filters including filter press - rotary press - rotary filter - edge filter - Factors affecting filtration - mathematical problems on filtration – optimum- cleaning cycle in batch filters - Principles of centrifugation - industrial centrifugal filters & centrifugal sedimenters.

UNIT IV

Crystallization - Characters of crystals like purity - size - shape - geometry - habit, forms, size and factors affecting them - Solubility curves and calculation of yields - Material and heat balances around Swenson Walker crystalliser - Super saturation theory - its limitations - nucleation mechanism and crystal growth - Study of various types of crystallisers - Caking of crystals and its prevention and numerical problems on yields.

UNIT V

Dehumidification and Humidity Control -Basic concepts – definition - wet bulb and adiabatic saturation temperatures - psychometric chart and measurement of humidity - application of humidity measurement in pharmacy -Equipments for dehumidification operations.

SOCIAL PHARMACY AND BEHAVIORAL SCIENCE 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Social Pharmacy and Behavioural Science course will prepare the young pharmacy student to fit into the social role as Pharmacist.
- Interaction of pharmacist with doctors- nurses- dentists- physiotherapists and other health workers is to develop team spirit in pharmacist.
- Rational drug use and essential drugs concepts can be realized with meaningful interaction of pharmacists with other health care providers.
- At the end of this course the student will get the soft skills set to work cohesively with the team as a team player and will add value to the pharmaceutical business.
- This course is designed to impart basic knowledge and skills that are required for the practice of pharmacy in both hospital and community settings.
- To develop practical clinical skills that will enable the student to enhance the quality of life of patients and advance pharmaceutical care in the community setting.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the behavioural needs for a Pharmacist to function effectively in the areas of
2. pharmaceutical Operation
3. Communicate effectively (Verbal and Non Verbal)
4. Effectively Manage the team as a team player
5. Manage the time effectively
6. Develop Leadership Qualities and Essentials

Course Content:

UNIT I

Social Pharmacy and Behavioral Science– Introduction to behavioural science- The Concept of social pharmacy – Theory and applications of social pharmacy and behavioural science.

UNIT II

Pharmacy Profession - Introduction to profession of Pharmacy - Pattern of entry and employment in pharmacy - Employment position and job responsibilities of a pharmacist - Role of pharmacist in health care - Pharmacy ethics.

UNIT III

Professionalization of community pharmacy- Introduction – professional status of community pharmacy **-** Patients medication records and pharmacist's extended role **-** Health screening services in community pharmacy.

UNIT IV

Role of hospital pharmacist in a hospital – Introduction – Manufacturing – purchasing- inventory management- distribution and promoting the rational view of medicine **-** Definition and concept of clinical pharmacy.

UNIT V

Time Management - Value of Time **-** How to Track the action items **-** Goal setting **-** Using SMART Objective concept **-** Goals- Tasks- Sub Tasks **-** Resource Management **-** Mile Stone- Mapping and Gantt chart application.

COMMUNICATION SKILLS **1H** **1C**

Instruction hours/ week: L: 1 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This course will prepare the young pharmacy student to interact effectively withdoctors, nurses, dentists, physiotherapists and other health workers.
- At the end of this course the student will get the soft skills set to work cohesively with the team as a team player and will add value to the pharmaceutical business.
- Students will develop interview skills
- Understand Leadership qualities and essentials
- They Develop presentation and group discussion skills

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the behavioral needs for a Pharmacist to function effectively in the areas of pharmaceutical operation
2. Communicate effectively (Verbal and Non-Verbal)
3. Effectively manage the team as a team player
4. Develop interview skills
5. Develop Leadership qualities and essentials
6. Develop presentation and group discussion skills

Course Content:

Unit I

Communication Skills – Introduction-Definition - The Importance of Communication - The Communication Process – Source – Message – Encoding – Channel – Decoding – Receiver – Feedback – Context - **Barriers to communication -** Physiological Barriers - Physical Barriers - Cultural Barriers - Language Barriers - Gender Barriers - Interpersonal Barriers - Psychological Barriers - Emotional barriers.

Unit II

Elements of Communication – Introduction - Face to Face Communication - Tone of Voice - Body Language (Non-verbal communication) - Verbal Communication - Physical Communication - **Communication Styles –** Introduction - The Communication Styles Matrix with example for each - Direct Communication Style - Spirited Communication Style - Systematic.

UNIT – III

Basic Listening Skills - Introduction – Self – Awareness - Active Listening - Becoming an Active Listener - Listening in Difficult Situations - **Effective Written Communication –** Introduction -

When and When Not to Use Written Communication - Complexity of the Topic - Amount of Discussion – Required - Shades of Meaning - Formal Communication.

UNIT – IV

Interview Skills - Purpose of an interview - Do's and Dont's of an interview - **Giving Presentations -** Dealing with Fears - Planning your Presentation - Structuring Your Presentation - Delivering Your Presentation - Techniques of Delivery.

UNIT – V

Group Discussion – Introduction - Communication skills in group discussion - Do's and Dont's of group discussion - knowledge development in group discussion.

PHYSICAL PHARMACEUTICS - II **3H 3C**

Instruction hours/ week: L: 3 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Physical pharmaceutics is a fundamental course that leads to proper understanding of subsequent courses in Pharmaceutics.
- It integrates knowledge of mathematics, physics and chemistry and applies them to the pharmaceutical dosage form development.
- It focuses on the theories behind the phenomena needed for dosage form design.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions, etc.
- The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations.
- Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the physicochemical parameters of a drug
2. Identify methods to enhance solubility of a new drug moeity
3. Discover the importance of stability in pharmaceutical preparations
4. Demonstrate the powder properties and effect of Glidants in powder flow
5. Interpret about diffusion, dissolution and particle properties.
6. Demonstrate the applications of micromeritics in pharmaceutical industy
7. Enable the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions

Course Content:

UNIT-I

Kinetics – definition – rate and order of reaction – zero order reactions – first order reactions – second order reactions – determination of orders – factors influencing rate of reaction – decomposition and stabilization study of medicinal agents – accelerated stability studies.

UNIT-II

Interfacial phenomenon – definition – measurement of surface and interfacial tension - surface active agent – hydrophilic lipophilic balance – spreading coefficient – theory of micelle formation – factors influencing critical micelle concentration – electrical properties at interface.

UNIT-III

Rheology – definition – Newtonian and non Newtonian system - flow characteristics – thixotropy – determination of rheological properties – capillary viscometer – falling and rising body apparatus – rotational viscometers – application of rheology in pharmacy.

UNIT-IV

pH, buffer and isotonic solutions - definition – buffer action - pH determination – applications – buffer equation – buffer capacity – factors affecting buffer capacity – buffers in pharmaceutical - biological systems and buffered isotonic solutions.

UNIT-V

Complexation – definition – types of complexes – metal complexes – inorganic complexes – chelates – olefin complexes – aromatic complexes – organic molecular complexes - inclusion complexes – methods of analysis of complexes - Protein binding – definition – binding equilibria.

- Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Understand the physicochemical parameters of a drug.
2. Identify methods to enhance solubility of a new drug moiety.
3. Discover the importance of stability in pharmaceutical preparations.
4. Demonstrate the powder properties and effect of Glidants in powder flow.
5. Interpret about diffusion, dissolution and particle properties.
6. Demonstrate the applications of micromeritics in pharmaceutical industry.
7. Enable the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions.

Course content:

1. Determination of half life of pseudo first order reaction.
2. Determination of rate constant and order of reaction.
3. Determination of surface tension.
4. Determination of CMC of surfactant.
5. Determination of HLB value
6. Study of rheological properties of various systems using viscometer.
7. Preparation of pharmaceutical buffers.

8. Determination of buffer capacity.
9. Determination of partition coefficient of benzoic acid in benzene and distilled water.
10. Accelerated stability studies.

External Semester Exam: 3 Hours

Course Objectives:

- Titrimetric analysis deals with complete understanding of the various titration methods.
- The scope of the present course is to know the quality, quantity and purity of pharmaceutical products and chemicals.
- Know and understand the various apparatus used in pharmaceutical analysis and their calibrations.
- Know the quality control and their importance.
- Know the apparatus used in analysis.
- Know the calibration of volumetric apparatus.

Course Outcomes:

On successful completion of the course the student will

1. To know the quality control and their importance.
2. To know the apparatus used in analysis.
3. To know the calibration of volumetric apparatus.
4. To know the different types of titrations like neutralization, non- aqueous, complexometric, gravimetric, precipitation and reduction oxidation titrations.
5. To know the concept of titrations.
6. To know indicators used in various titration methods.

Course Content:

UNIT- I

Oxidation Reduction titrations - concept of oxidation reduction titrations - redox reactions-theory of redox titrations-Oxidation reduction curves- Iodometry and Iodimetry- Titrations involving cerric ammonium sulphate and potassium permanganate - **Diazotization titration-** principle-application.

UNIT-II

Gravimetric analysis - Basic concepts - precipitation techniques - various steps involved in gravimetric analysis - **Miscellaneous methods of analysis** - Kjeldahl methods - oxygen flask combustion method**-gasometry-** assay of oxygen, carbon dioxide, nitrous oxide.

UNIT – III

Adsorption: Definition- chemisorption- state of adsorbed molecule- factors influencing adsorption- types of adsorption isotherms- Freundlich- Langmuir's and Gibb's adsorption isotherms - **Catalyst -** Definition- characteristics- types- homogeneous & heterogeneous- theory and mechanism of catalysis- phase transfer catalysts- enzyme catalysts (biocatalysts)- mechanism of catalysis- pharmaceutical applications.

UNIT – IV

Thermochemistry: Enthalpy of combustion- neutralization- solution- formation- precipitation- Hess's law of constant heat of summation- Lavoiser – Laplace law- bond energies and its application in calorimetry- e.g. Bomb calorimeter.

UNIT – V

Polarimetry and Refractometry - Polarimetry- Principle- Polarized light- rotation of the plane of polarized light- Instrumentation and Applications - Refractometry- Refractometer – theory- refractive index- construction- principle of operation of refractometers and applications .

PHARMACETICAL ANALYSIS AND PHYSICAL CHEMISTRY LABORATORY- II **3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Titrimetric analysis deals with complete understanding of the various titration methods.
- The scope of the present course is to know the quality, quantity and purity of pharmaceutical products and chemicals.
- Know and understand the various apparatus used in pharmaceutical analysis and their calibrations.
- Know the quality control and their importance.
- Know the apparatus used in analysis.
- Know the calibration of volumetric apparatus.

Course Outcomes:

On successful completion of the course the student will

1. To know the quality control and their importance.
2. To know the apparatus used in analysis.
3. To know the calibration of volumetric apparatus.
4. To know the different types of titrations like neutralization, non- aqueous, complexometric, gravimetric, precipitation and reduction oxidation titrations.
5. To know the concept of titrations.
6. To know indicators used in various titration methods.

Course Content:

1. Preparation and standardization of volumetric solutions and assay of official compounds Permanganometry
2. Assay of copper sulphate by iodometry
3. Assay of hydrogen peroxide by permanganometry
4. Assay of potassium iodide by potassium iodate titration
5. Assay of ferrous sulphate by ceriometry.
6. Determination of acidity constant.
7. Determination of equilibrium constant of a chemical reaction.
8. Determination of order of reaction.
9. Adsorption isotherm study.
10. Determination of heat of neutralization.

11. Preparation of any one buffer solution and verification of its pH.

16PYU403 **SEMESTER-IV**

ADVANCED PHARMACEUTICAL ORGANIC CHEMISTRY-II **3H** **3C**

Instruction hours/ week: L: 3 T: 1 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Study the isomerism of the organic compound
2. Understand the stereo chemical aspects of organic compounds and reactions
3. To study the three dimensional structural formulae of certain compounds.
4. Account for the stability/reactivity/orientation
5. Emphasize the synthesis, reactions and uses of Heterocyclic compounds
6. Know aspects of organic compounds and reactions.

Course Content:

UNIT I

Study about stereochemistry - Optical isomerism - Optical activity – enantiomerism – diastereoisomerism - meso compounds - Elements of symmetry – chiral – achiral- molecules - DL system of nomenclature of optical isomers - sequence rules - RS system of nomenclature of optical isomers.

UNIT II

Optical isomerism - Reactions of chiral molecules - Racemic modification - resolution of racemic mixture -Asymmetric synthesis – partial – absolute.

UNIT III

Geometrical isomerism - Nomenclature of geometrical isomers (Cis Trans- EZ- Syn Anti system)- Methods of determination of configuration of geometrical isomers- Conformational isomerism in alkanes Cyclopentane - Cyclohexane.

UNIT IV

Stereo isomerism in biphenyl compounds (Atropisomerism) - conditions for optical activity - Stereospecific and stereoselective reactions.

UNIT V

Fats and Oils - Fatty acids – Reactions – Hydrolysis – hydrogenation - saponification and rancidity- of oils - drying oils - **Analytical constants** – Acid value - saponification value - ester value - iodine value - acetyl value - Reichert Meissl (RM) value –significance and principle involved in the determination.

1. Study the isomerism of the organic compound
2. Understand the stereo chemical aspects of organic compounds and reactions
3. To study the three dimensional structural formulae of certain compounds.
4. Account for the stability/reactivity/orientation
5. Emphasize the synthesis, reactions and uses of Heterocyclic compounds
6. Know aspects of organic compounds and reactions.

Course Content:

I. Quantitative determination of following classes of organic compounds (2 compounds)

II .Determination of following oil values (2 compounds)

III. Preparation of homocyclic compounds.(2 compounds)

IV. Preparation of heterocyclic compounds. (4 compounds)

V. Partition coefficient. (2 compounds)

PHARMACY PRACTICE AND PATHOPHYSIOLOGY-II 3H 3C

Instruction hours/ week: L: 3 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart basic knowledge and skills that are required for the practice of pharmacy in both hospital and community settings.
- To develop practical clinical skills that will enable the student to enhance the quality of life of patients and advance pharmaceutical care in the community setting.
- To understand prescription handling, dispensing of dosage forms and calculation of dosage forms.
- Pathophysiology is the study of causes of diseases and reactions of the body tosuch disease producing causes.
- This course is designed to impart a thorough knowledge of the relevant aspects of pathology of various conditions with reference to its pharmacological applications, and understanding of basic pathophysiological mechanisms.
- Hence it will not only help to study the syllabus of pathology, but also to get baseline knowledge required to practice medicine safely, confidently, rationally and effectively.

Course Outcomes:

On successful completion of the course the student will

1. Understand the various drug distribution system- BMI & BP
2. Handle the prescriptions.
3. Manage community pharmacies.
4. Understand the elements of pharmaceutical care and provide comprehensive patient care services
5. Understand the concept and practice of the quality use of medicines.
6. Summarize the therapeutic approach for management of various diseases including reference to the latest available evidence.

Course Content:

Unit I

Incompatibilities -Physical- chemical and therapeutic incompatibilities – definition- reasons and correction of incompatibilities- role of pharmacist in overcoming such incompatibilities in prescription. Incompatibility of alkaloidal salts- barbiturates- salicylates- iodides salts- gas production (chemical types)- etc.

Unit II

Community pharmacy - Organization and structure of retail and wholesale drug store- types and design of drug store- legal requirements for establishment and maintenance of a drug store- dispensing of proprietary products- maintenance of records of retail and whole sale- rational drug therapy- OTC medication- code of ethics- health screening services- role of pharmacist in community health care and education.

Unit III

Surgical supplies -An account of surgical dressing like primary wound dressing- absorbents- bandage- adhesive tapes- protectives- sutures and suture materials (method of preparation are to be avoided).

Unit IV

Pathophysiology of common diseases - Rheumatoid arthritis- gout- epilepsy- hypertension- angina- Congestive Heart Failure (CHF)- atherosclerosis- myocardial infarction- diabetes- hepatitis- Parkinson's disease- thyroid diseases.

Unit V

Pathophysiology of common diseases -Osteoporosis- syphilis & gonorrhea- peptic ulcer- asthma- ulcerative colitis- acute and chronic renal failure- tuberculosis- urinary tract infections. Wherever applicable the molecular basis should be discussed.

2. Handle the prescriptions.
3. Manage community pharmacies.
4. Understand the elements of pharmaceutical care and provide comprehensive patient care services
5. Understand the concept and practice of the quality use of medicines.
6. Summarize the therapeutic approach for management of various diseases including reference to the latest available evidence.

Course Content:

Dispensing of prescription falling under the following categories:

III. Preparation of calamine lotion.
IV. Preparation of salicylic acid lotion.
V. Preparation of white liniment.
VI. Preparation of camphor liniment.
VII. Preparation of compound sodium chloride mouth wash.
VIII. Preparation of zinc sulphate and zinc chloride mouth wash.

IX. Preparation of potassium permanganate gargle.
X. Preparation of phenol glycerine gargle.
XI. Incompatibilities in sodium salicylate mixture.
XII. Incompatibilities in quinine sulphate mixture.

PHARMACEUTICAL TECHNOLOGY-II **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart a fundamental knowledge on the art and science of various machines and their handling in pharmaceutical industry.
- This course focuses on various topics like unit operations, material handling, pharma plant construction, corrosion, industrial pollution etc.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of pharmaceutical equipments.
- To carry out various test to prevent environmental pollution.
- To appreciate and comprehend significance of plant lay out design for optimum use of resources.
- To appreciate the various preventive methods used for corrosion control in Pharmaceutical industries.

Course Outcomes (CO's):

On successful completion of the course the student will

1. To know various unit operations used in Pharmaceutical Industries.
2. To understand the material handling techniques.
3. To perform various processes involved in pharmaceutical manufacturing process.
4. To carry out various tests to prevent environmental pollution.
5. To appreciate and comprehend significance of plant lay out design for optimum use of resources.
6. To appreciate the various preventive methods used for corrosion control in Pharmaceutical Industries.

Course Content:

UNIT I

Evaporation - basic concepts of phase equilibria – factors affecting evaporation – evaporators – film evaporators – single effect and multiple effect evaporators - **Heat transfer -** source of heat – mechanism of heat flow – steam as heating source.

UNIT II

Distillation - Raoult's law - phase diagrams - volatility - simple steam flash distillation - principles of rectification - method for calculation of number of theoretical plates - Azeotropic and extractive distillation.

UNIT III

Drying - Moisture content - mechanism of drying - rate of drying - time of drying - calculations - classification - types of dryers - dryers used in pharmaceutical industries - special drying methods - mathematical problems on drying.

UNIT IV

Size reduction and Size separation - Definition - objective of size reduction - factors affecting size reduction - laws governing energy and power requirement of mills - including ball mill - hammer mill - fluid energy mill.

UNIT V

Mixing - definition - solid-solid mixing – mixing process steps – classification of equipments for solid mixing - solid-liquid mixing - mechanism of liquid mixing – mixing vessels or tanks - liquid-liquid mixing – equipments used in mixing.

PHARMACEUTICAL JURISPRUDENCE **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The subject deals with several important legislations related to the profession of pharmacy in India. The Drugs and Cosmetics Act- along with its amendments is the core of this course.
- Other acts- which are covered- include the Pharmacy Act- dangerous drugs- medicinal and toilet preparation Act etc.
- Besides this the new drug policy- professional ethics- DPCO- patent and design Act will be discussed.
- To know and understand various Indian pharmaceutical acts and laws.
- To know about the process of drug discovery and developments.
- To know the regulatory authorities and agencies governing the manufacture and sale of Pharmaceuticals.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know and understand the Pharmaceutical legislations and their implications in the development and marketing.
2. Understand and follow the code of ethics during the pharmaceutical practice.
3. Know and understand various Indian pharmaceutical acts and laws.
4. Know about the process of drug discovery and developments.
5. Know the regulatory authorities and agencies governing the manufacture and sale of Pharmaceuticals.
6. Know the regulatory approval process and their registration in Indian and international markets.

Course Content:

FORENSIC PHARMACY

UNIT-I

Definition and scope of Forensic Pharmacy- Pharmacist's role in drug treatment- drug usage and pharmacist as a member of health care team. Pharmaceutical legislation in India: Historical development of Pharmaceutical education in India and its present status- Professional ethics in Pharmacy practice- legal and ethical responsibilities of Pharmacists.

UNIT-II

A detailed study and the understanding of the various act and rules (as last amended) governing the Pharmaceutical Profession in India - Pharmacy Act 1948. - Drugs and Cosmetics Act 1940 and Rules

1945- Narcotics and Psychotropic Substances Act - **Medicinal and Toilet Preparations (Excise duties) Act and Rules.** -Essential Commodities Act-Drugs (Price Control) order 1995-Pharmaceutical policy 2002.

UNIT-III

Medical Termination of Pregnancy Act - Prevention of Cruelty of Animal Act 1960 including study of CPCSEA guidelines - INSA and ICMR guidelines - **Indian Patent Act** with special reference to pharmaceutical products.

UNIT-IV

Drugs (Price Control) order 1995- Pharmaceutical policy 2002. -Medical Termination of Pregnancy Act.

UNIT V

Prevention of Cruelty of Animal Act 1960 including study of CPCSEA guidelines - INSA and ICMR guidelines -Indian Patent Act with special reference to pharmaceutical products -Drugs and Magic Remedies (Objectionable Advertisement) Act 1955.

ENVIRONMENTAL SCIENCES **1H** **1C**

Instruction hours/ week: L: 1 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Environmental Sciences is the scientific study of the environmental system and the status of its inherent or induced changes on organisms.
- It includes not only the study of physical and biological characters of the environment but also the social and cultural factors and the impact of man on environment.
- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Create the awareness about environmental problems among learners.
2. Impart basic knowledge about the environment and its allied problems.
3. Develop an attitude of concern for the environment.
4. Motivate learner to participate in environment protection and environment improvement.
5. Acquire skills to help the concerned individuals in identifying and solving environmental problems.
6. Strive to attain harmony with Nature.

Course Content:

Unit-I

The Multidisciplinary nature of environmental studies - Natural Resources - Renewable and non-renewable resources - Natural resources and associated problems **-** Forest resources - Water resources - Mineral resource - Food resources - Energy resources - Land resources - Role of an individual in conservation of natural resources.

Unit-II

Ecosystems - Concept of an ecosystem – Introduction – types - characteristic features - structure and function of the ecosystems - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems (ponds – streams – lakes – rivers – oceans -estuaries).

Unit- III

Environmental Pollution - Air pollution - Water pollution - Soil pollution.

PHARMACOGNOSYAND PHYTOCHEMISTRY – I **3H** **3C**

Instruction hours/ week: L: 3 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The department is to acquaint the students with the basic knowledge of the natural products.
- Students engaged in pharmacy and in other health professionals should know the role of natural products in discovery of drugs and their use and application in eradicating ailments.
- The students are given sufficient knowledge to be able to describe the modern methods of extraction and purification of crude drugs.
- To learn and understand the techniques involved in the herbal drug-cosmetic preparation and their Standardization.
- The subject involves the fundamentals of Pharmacognosy like scope, classification ofcrude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- To know the techniques in the cultivation and production of crude drugs.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Explain the basic principles of extraction and various modern extraction techniques.
2. Understand the biogenesis of secondary metabolites.
3. Elaborate the plant based industries and institutions involved in work on medicinal and aromatic plants in India.
4. Demonstrate the Industrial production and estimation of Phytoconstituents.
5. Perform the Herbal formulation and standardization.
6. Explain the Nutraceuticals.

Course Content:
UNIT – I
Definition – History-Present status-Future scope-Development of Pharmacognosy - Alphabetical-Biological – Chemical – Pharmacological – Taxonomical- Chemotaxonomical and Serotaxonomical classification n of crude drugs.

UNIT – II
General principles of cultivation & collection of vegetable drugs of commercial Significance from wild & cultivated source-Advantage and disadvantages of cultivation- Soil and soil fertility-

Factors influencing cultivation of medicinal plants – Processing – storage- and preservation of crude drugs- Study of natural pesticides.

UNIT – III

Different methods of adulteration of crude drugs & their detection by evaluation methods – Introduction – morphological – Microscopical – physical – chemical- biological and spectral analysis of herbal drugs.

UNIT – IV

Detailed study of crude drugs with emphasis on source – cultivation – collection – preparation – storage- diagnostic characters (Macroscopic & Microscopic techniques applied) – constituents- chemical tests – substitutes- adulterants & uses of – **Carbohydrates** and their derived products - Agar- Gum Acacia- Gum tragacanth – Honey – Isapgol – pectin – Starch – Tannins – Gambier- Black Catechu – Gall – Myrobalan- Pale catechu and Tannic acid – **Lipids-**Castor oil- Shark liver oil- Wool fat – Beeswax- Neem oil- Cod liver oil and Bran oil – Proteins – Gelatin- Spirullina and soya.

UNIT – V

Detailed study of crude drugs with emphasis on source- cultivation- collection- preparation- storage- diagnostic characters (Macroscopic & Microscopic techniques applied)- constituents- chemical tests- substitutes- adulterants & uses of - **Volatile oils**-Mentha- Coriander-Cinnamon- Cassia- Caraway- Dill- Clove- Fennel- Nutmeg- Cardamom- Lemon grass oil- Eucalyptus- Sandalwood- Palmarosa and Citronellal-**Saponins-**Liquorice-Ginseng-Dioscorea. **Cardio active sterols -**Digitalis- Squill and Strophanthus- **Steroidal-**Kurchi- Solasodine. **Alkaloidal amines-** Ephedra and Colchicum- **Glycoalkaloids-**Solanum species.

PHARMACOGNOSY AND PHYTOCHEMISTRY LABORATORY – I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The department is to acquaint the students with the basic knowledge of the natural products.
- Students engaged in pharmacy and in other health professionals should know the role of natural products in discovery of drugs and their use and application in eradicating ailments.
- The students are given sufficient knowledge to be able to describe the modern methods of extraction and purification of crude drugs.
- To learn and understand the techniques involved in the herbal drug-cosmetic preparation and their Standardization.
- The subject involves the fundamentals of Pharmacognosy like scope, classification ofcrude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- To know the techniques in the cultivation and production of crude drugs.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Describe the isolation of the Phytoconstituents.
2. Prepare the hair care preparation.
3. Prepare the skin care the preparation.
4. Demonstrate the Amino acid by ascending chromatography.
5. Perform the Thin layer chromatography of Curcumin.
6. Understand the isolation and formulation procedure.

Course content:

1. Identification of crude drugs listed in theory (entire condition) by Morphological characters.
2. Microscopical studies of some selected drugs:
    - Cinnamon & Clove
    - Ephedra & Liquorice
    - Fennel & Coriander.
3. Microscopical studies of some selected powdered drugs of single component or mixture of two components:
    - Cinnamon & Clove
    - Ephedra & Liquorice
    - Fennel & Coriander.

4. Identification of unorganized drugs by Morphological characters and chemical tests.
    - Agar- Gum Acacia
    - Gum tragacanth- Honey
    - Castor oil- Shark liver oil
    - Wool fat- Beeswax
    - Neem oil- Tannic acid

16PYU502 **SEMESTER-V**

MEDICINAL CHEMISTRY- I **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:
On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Write the chemical synthesis of some drugs.

Course Content

UNIT I
Introduction to Medicinal Chemistry - History and development of medicinal chemistry- Physicochemical properties in relation to biological action- Ionization, Solubility, Partition Coefficient, hydrogen bonding, protein binding, chelation, Bioisosterism, optical and geometrical isomerism-**Drug metabolism-**General pathways of drug metabolism (different types of reaction in phase-I and phase-II with examples). Factors affecting drug metabolism including stereochemical aspects.

Study of classification, mechanism of action (biochemical and molecular basis), structure activity relationship including stereo chemical aspects, physiochemical properties and synthesis of selected drugs (only drugs marked with asterisk) on the following categories of drugs.

UNIT II

Drugs acting on Autonomic Nervous System - Adrenergic Neurotransmitters - Biosynthesis and catabolism of catecholamine-Adrenergic receptors system (Alpha & Beta) and their distribution**-Sympathomimetic agents-SAR of Sympathomimetic agents-Direct acting**-Nor-epinephrine-Epinephrine- Phenylephrine*- Dopamine- Methyldopa- Clonidine*- Dobutamine- Isoproterenol-Terbutaline- Salmeterol- Salbutamol*- Bitolterol- Albuterol- Ritodrine- Naphazoline-Tetrahydrozoline- Oxymetazoline and Xylometazoline**-Indirect acting agents**: Hydroxyamphetamine- Pseudoephedrine- Propylhexedrine

UNIT III

Drugs acting on Autonomic Nervous System - Adrenergic Antagonists - Alpha adrenergic blockers-Tolazoline*- Phentolamine*- Phenoxybenzamine- Prazosin- Tetrazosin- Doxazosin-Ergotamine- Methysergide-**Beta adrenergic blockers**: SAR of beta blockers- Propranolol*-Dichloroisoproterenol- Practolol- Metibranolol- Acebutolol- Atenolol- Betazolol- Bisoprolol-Esmolol- Metoprolol- Labetolol and Carvedilol-**Cholinergic neurotransmitters-**Biosynthesis and catabolism of acetylcholine-Cholinergic receptors system (muscaranic & nicotinic) and their distribution-**Parasympathomimetic agents-SAR of Parasympathomimetic agents**-**Direct acting agents:** Acetylcholine- Carbachol*- Bethanechol- Methacholine- Pilocarpine-**Indirect acting/Cholinesterase inhibitors (Reversible & Irreversible):** Physostigmine- Neostigmine-Pyridostigmine*- Edrophonium chloride- Tacrine hydrochloride- Ambenonium chloride-Isofluorphate- Echothiophate iodide- Parathione- Malathion-**Cholinesterase reactivators -** Pralidoxime chloride

UNIT IV

Drugs acting on Autonomic Nervous System - Cholinergic Blocking agentsn - SAR of cholinolytic agents-Solanaceous alkaloids and analogues- Atropine sulphate- Hyoscyamine sulphate- Scopolamine hydrogenbromide- Homatropine hydrogenbromide*- Ipratropium bromide*.**Synthetic cholinergic blocking agents:** Tropicamide- Cyclopentolate hydrochloride-Clidinium bromide- Dicyclomine hydrochloride*- Glycopyrrolate- Methantheline bromide-Propantheline bromide- Benztropine mesylate- Orphenadrine citrate- Biperidine hydrochloride-Procyclidine hydrochloride*- Tridihexethyl chloride- Isopropamide iodide- and Ethopropazine hydrochloride-**Ganglionic blocking agents-**Trimethaphan camsylate- mecamylamine-**Neuromuscular blocking agents**: Metocurine Iodide- pancuronium bromide

UNIT V

Drugs acting on Autonomic Nervous System - Local Anesthetics - SAR of Local anaesthetics**-Benzoic Acid derivatives**-Cocaine- Hexylcaine- Meprylcaine- Cyclomethycaine- Piperocaine**-Amino Benzoic acid derivatives** Benzocaine*- Butamben- Procaine*- Butacaine- Propoxycaine-Tetracaine- Benoxinate-**Lidocain/Anilide derivatives**- Lignocaine*- Mepivacaine- Prilocaine-Etidocaine- **Miscellaneous**- Phenacaine- Diperodon- Dibucaine* and Dyclonine

MEDICINAL CHEMISTRY LABORATORY– I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Write the chemical synthesis of some drugs.

Course Content:

I. Preparation of medicinally important compounds or intermediates required for synthesis of drugs (5 compounds)

II. Monograph analysis of selected drugs from course content. (2 compounds)

III. Assay of Selected drugs from course content prescribed as per I.P or B.P. (5 compounds)

PHARMACEUTICAL DOSAGE FORMS & COSMETIC TECHNOLOGY -I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to provide detail knowledge about chemistry of medicinal compounds from natural origin and general methods of structural elucidation of such compounds.
- It also emphasizes on isolation, purification and characterization of medicinal compounds from natural origin.
- This gives a knowledge of preformulation studies and stability studies
- Different machinery used for various steps in manufacture of various dosage forms. Formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.
- To know the various pharmaceutical dosage forms and their manufacturing techniques.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid- liquid and semisolid dosage forms.
4. Know the evaluation test of solid, liquid and semisolid dosage form.
5. Know the modern extraction techniques- characterization and identification of the herbal drugs.
6. Know the different types of natural compounds and their chemistry and medicinal importance

Course Content:

UNIT I

Liquid Dosage forms –Introduction- types of additives used in formulations – vehicles – stabilizers – preservatives- suspending agents- emulsifying agents – solubiliser – colours – flavours – manufacturing- packaging and evaluation of clear liquids- suspensions and emulsions official in pharmacopoeia.

UNIT II

Semisolid Dosage Forms –Definition – types- mechanisms of drug penetration- factors influencing penetration- semisolid bases and their selection - General formulation of semisolids- clear gels- manufacturing procedure- evaluation and packaging.

UNIT III

Pharmaceutical Aerosols – Definition – propellants- general formulation – manufacturing- packaging methods- pharmaceutical applications and evaluation.

UNIT IV

Packaging of pharmaceutical products -Types and tests assuring quality of glass - Types of plastics used – permeation – leaching – sorption- chemical reactions- biological tests- modification of plastics by drugs - Different types of closures and closure liners - film wrapper - blister packs- bubble packs - shrink handling - foil / plastic pouches- bottle seals- tape seals- breakable seals and sealed tubes - quality control of packaging material and filling equipment.

UNIT V

Suppositories –definition -Ideal requirements – advantages - disadvantages – bases- manufacturing procedure- packaging and evaluation.

PHARMACEUTICAL DOSAGE FORMS & COSMETIC TECHNOLOGY LABORATORY-I
3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to provide detail knowledge about chemistry of medicinal compounds from natural origin and general methods of structural elucidation of such compounds.
- It also emphasizes on isolation, purification and characterization of medicinal compounds from natural origin.
- This gives a knowledge of preformulation studies and stability studies
- Different machinery used for various steps in manufacture of various dosage forms. Formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.
- To know the various pharmaceutical dosage forms and their manufacturing techniques.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid- liquid and semisolid dosage forms.
4. Know the evaluation test of solid, liquid and semisolid dosage form.
5. Know the modern extraction techniques- characterization and identification of the herbal drugs.
6. Know the different types of natural compounds and their chemistry and medicinal importance

Course Content:

I. Preparation- evaluation and packaging of:

1. Simple Syrups IP.
2. Cough syrup.
3. Antipyretic syrup.
4. Simple ointment IP
5. Sulphur ointment IP
6. Emulsifying ointment

II. Formulation of various types of cosmetics for

7. Cold cream
8. Face powder
9. Shampoo.
10. Hair oil.

PHARMACOLOGY - I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain the pharmacological actions of different categories of drugs on various systems of the body.
2. Explain the mechanism of drug action at organ system/subcellular/macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:

UNIT I

General Pharmacology - Introduction to Pharmacology- Definition and various branches of pharmacology – **Pharmacodynamics**-Principles and mechanisms of drug action -Classification of receptors-Signa ltransduction mechanisms of ligand gated ion channels-G Protein–coupled receptors-

Kinase linked receptors and receptors that regulate transcription factors –Drug receptors interactions-combined effects of drugs and factors modifying drug action.

UNIT II

Pharmacokinetics- Detail study of various factors influencing drug absorption- distribution-metabolism and excretion - **Pharmacogenetics**-Adverse drug reactions – Discovery and development of new drugs-Preclinical and clinical studies.

UNIT III

Pharmacology of Peripheral Nervous System – Organization and function of ANS-Neurohumoral transmission – Parasympathomimetics –Parasympatholytics-Sympathomimetics and Sympatholytics.

UNIT IV

Pharmacology of Peripheral Nervous System-Neuromuscular blocking agents and skeletal muscle relaxants (peripheral)-Local anesthetic agents-Drugs used in Myasthenia Gravis.

UNIT V

Drugs acting on Urinary System-Diuretics and anti-diuretics.

PHARMACOLOGY LABORATORY – I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain the pharmacological actions of different categories of drugs on various systems of the body.
2. Explain the mechanism of drug action at organ system/subcellular/macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:

1. Commonly used Apparatus/instruments in experimental pharmacology.
2. Commonly used laboratory animals and their handling.
3. Maintenance of laboratory animals- regulations of animal use and Ethical requirements according to CPCSEA.
4. Some common laboratory techniques : Blood withdrawal –plasma and serum separation-

5. Anesthetics used for animal studies-procedures for rendering animal unconscious and chemical euthanasia.
6. Study of different routes of drugs administration in mice/rats.
7. To study the effect of hepatic microsomal enzyme inhibitors and inducers on the Phenobarbitone sleeping time in mice.
8. Experiments on Central nervous system : Recording of spontaneous motor activity- stereotype a c t i vity -anti-catatonic activity-analgesic activity-anti convulsant
9. Local anesthetic activity of drugs by suitable animal model.
10. Effect of autonomic drugs on rabbit's eye.
11. Diuretic activity of drugs in rats.

PHARMACEUTICAL MICROBIOLOGY 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This paper has been designed to provide the advanced knowledge to the Pharmacy students in valuable areas of advanced Biotechnology.
- To play a crucial role in determining its future use and applications in medicine- drug discovery and in pharmaceutical industry**.**
- It also emphasize the study of microbiological and biotechnological processes.
- To know modern technology aspects to useful products and to correct the alternative ways to prevent the occurrence and the treatment of disease related to microorganisms and techniques.
- To understand methods of identification- cultivation and preservation of various microorganisms.
- To understand Genetic engineering applications in relation to production of pharmaceuticals.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the importance of immunological reactions and preparations of immunological products.
2. Do sterilization of various equipments/products and bacterial sensitivity testing against antibiotics and disinfectants.
3. Know the anatomy, identification, growth factors and sterilization of microorganisms;
4. Know the mode of transmission of disease causing microorganism, symptoms of disease, and treatment aspect;
5. Do estimation of RNA and DNA and there by identifying the source;
6. Do cultivation and identification of the microorganisms in the laboratory;
7. Understand methods of identification- cultivation and preservation of various microorganisms
8. Understand Genetic engineering applications in relation to production of pharmaceuticals

Course Content:

UNIT I

Introduction to Microbiology- Scope of Microbiology- Microbes of Medicinal interest- study of mode of Transmission & treatment of Microbial diseases like Cholera – Typhoid – Tuberculosis – Diphtheria – Tetanus- Syphilis & AIDS –Classification- Morphology and fine structure Bacteria –

Fungi- Viruses -Methods of isolation and identification of bacteria - staining techniques and bio chemical reactions - Total & viable counting techniques of bacteria - Growth and cultivation- Their Nutritional requirements -Media-differential enriched selective - Maintenance of lab culture.

UNIT II

Total & viable counting techniques of bacteria - Growth and cultivation- Their Nutritional requirements - Media-differential- enriched- selective. Maintenance of lab culture.

UNIT III

Detail study of different methods of sterilization including their merits and Demerits-Detailed study of sterility testing of different pharmaceutical preparations – Disinfectant - study of disinfectant. Factors affecting their action and evaluation of bactericidal & Bacteriostatic -Principles and methods of different microbiological assays including sensitivity testing with references to ciprofloxacin-streptomycin & vitamin B -12.

UNIT IV

Genetic organization of Eukaryotes and Prokaryotes - Microbial genetics including transformation – transduction – conjugation- plasmids and transposons - Introduction to Microbial biotransformation- Biotransformation of steroids and production of single cell protein.

UNIT V

Introduction to Microbial biotransformation- Biotransformation of steroids and production of single cell protein - Microbiological assay of antibiotics and vitamins.

PHARMACEUTICAL MICROBIOLOGY LABORATORY 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This paper has been designed to provide the advanced knowledge to the Pharmacy students in valuable areas of advanced Biotechnology.
- To play a crucial role in determining its future use and applications in medicine- drug discovery and in pharmaceutical industry**.**
- It also emphasize the study of microbiological and biotechnological processes.
- To know modern technology aspects to useful products and to correct the alternative ways to prevent the occurrence and the treatment of disease related to microorganisms and techniques.
- To understand methods of identification- cultivation and preservation of various microorganisms.
- To understand Genetic engineering applications in relation to production of pharmaceuticals.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the importance of immunological reactions and preparations of immunological products.
2. Do sterilization of various equipments/products and bacterial sensitivity testing against antibiotics and disinfectants.
3. Know the anatomy, identification, growth factors and sterilization of microorganisms;
4. Know the mode of transmission of disease causing microorganism, symptoms of disease, and treatment aspect;
5. Do estimation of RNA and DNA and there by identifying the source;
6. Do cultivation and identification of the microorganisms in the laboratory;
7. Do identification of diseases by performing the diagnostic tests; and
8. Appreciate the behavior of motility and behavioral characteristics of microorganisms.

Course Content:

Microbiology

1. Study of apparatus used in experimental microbiology.
2. Sterilization techniques – Glasswares- media- Room.
3. Preparation and sterilization of Media.
4. Isolation techniques– Streak plate- Pour plate
5. Staining techniques- Simple staining Gram's staining- Acid fast staining-
6. Spore staining- flagella staining - Capsule staining.

7. Total and viable count of Microorganisms.
8. Motility of the microorganism by Hanging drop method.
9. Sterility testing for Pharmaceutical products.
10. Microbiological assay of antibiotics.

HOSPITAL AND CLINICAL PHARMACY - I **3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart basic knowledge and skills that are required for the practice of pharmacy in both hospital and community settings.
- Conduct sufficiently thorough and accurate patient assessments
- Explain and properly dispense commonly used medications, formulations, and drug products.
- Identify and assess drug related problems relative to specific patient cases.
- The Knowledge and Know-how of marketing management groom the people for taking a challenging role in Sales and Product management.
- The purpose of this course is to introduce to students a number of health issues and their challenges.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the various drug distribution system
2. Handle the prescriptions and manage community pharmacies
3. Understand the elements of pharmaceutical care and provide comprehensive patient care services
4. Understand the concept and practice of the quality use of medicines
5. Summarize the therapeutic approach for management of various diseases including Reference to the latest available evidence.
6. Evaluate alternative ways of solving problems related to health and pharmaceutical issues.

Course Content:

UNIT-I

Organisation and structure -Organisation of a hospital- hospital pharmacy- Responsibilities of a hospital pharmacist- Pharmacy and Therapeutic committee- Budget preparation and Implementation.

UNIT-II

Hospital formulary – Contents- drug profile- preparation and revision of hospital formulary.

UNIT-III

Purchase-Distribution and inventory control of drugs in hospitals - Purchasing Procedures - Dispensing of drugs to outpatients and inpatients - Types of distribution of drugs and charging policies in Hospital- Dispensing of Controlled drugs.

UNIT-IV

Central sterile supply unit and their management -Types of materials for sterilization- packing of materials prior to sterilization- sterilization equipments and supply of sterile materials.

UNIT-V

Drug information services-Drug information centre- sources of information on drugs- disease treatment schedules- procurement of information- computerized services (e-g- MEDLINE)- retrieval of information.

PHARMACOGNOSYAND PHYTOCHEMISTRY – II **3H 3C**

Instruction hours/ week: L: 3 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The department is to acquaint the students with the basic knowledge of the natural products.
- Students engaged in pharmacy and in other health professionals should know the role of natural products in discovery of drugs and their use and application in eradicating ailments.
- The students are given sufficient knowledge to be able to describe the modern methods of extraction and purification of crude drugs.
- To learn and understand the cultivation of crude drugs
- To learn and understand the Production of crude drugs and their usefulness.
- To learn and understand traditional uses of plants, medicines derived from plants, animals, various types of organisms (bacteria, fungi ect.) and recently marine organisms

Course Outcomes (CO's):
On successful completion of the course the student will

1. Know the advances in the cultivation, production adulterants of drugs
2. Know the macroscopical study of crude drugs
3. Know the microscopical study of crude drugs
4. Know the constituents and chemical tests for crude drugs
5. Know the medicinal uses of individual drugs
6. Explain the Nutraceuticals.

Course Content:

UNIT – I
Detailed study of crude drugs with emphasis on source- cultivation- collection- preparation- storage- diagnostic characters (Macroscopic & Microscopic techniques applicable) - constituents- chemical tests- substitutes- adulterants & uses of- Anthraquinone cathartics: Aloes- Senna- Rhubarb and Cascara. **Pyridine and Piperidine alkaloids**: Areca and Lobelia.**Tropane alkaloids**: Belladona- Hyoscyamus- Datura- Cocoa. **Quinoline and Isoquinoline alkaloids:** Cinchona- Ipecac and Opium

UNIT – II
Purines : Tea-Coffee. **Resins**: Colophony- Cannabis- Capsicum- Balsam of Tolu- Benzoin-Balsam of Peru- Asafoetida- Turmeric and Ginger. **Others**: Gentian- Saffron- Ashwagandha

UNIT – III

Tumor inhibitors- Taxol- Vinca and Podophyllum, **Indole alkaloids**: Ergot- Rauwolfia- Nuxvomica- Physostigmine. **Imidazole**: Pilocarpus

UNIT – IV

Anti- hepatotoxic and oral hypoglycemic agents Phyllanthusniruri- Eclipta Alba- Gymnema sylvestre. **Quinazolidine alkaloids**: Adathoda, **Terpenes**: Neem- Artemesia

UNIT – V

Plant fibers used as surgical dressing- Cotton- Silk- Wool- Nylon- Rayon- Alginate dressing- Gelatin Sponge- Oxidized cellulose. Sutures and ligatures. **Pharmaceutical aid -** Talc- Kaolin- Bentonite and Natural colours.

PHARMACOGNOSY AND PHYTOCHEMISTRY LABORATORY – II 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The department is to acquaint the students with the basic knowledge of the natural products.
- Students engaged in pharmacy and in other health professionals should know the role of natural products in discovery of drugs and their use and application in eradicating ailments.
- The students are given sufficient knowledge to be able to describe the modern methods of extraction and purification of crude drugs.
- To learn and understand the cultivation of crude drugs
- To learn and understand the Production of crude drugs and their usefulness.
- To learn and understand traditional uses of plants, medicines derived from plants, animals, various types of organisms (bacteria, fungi ect.) and recently marine organisms

Course Outcomes (CO's):
On successful completion of the course the student will

1. Know the advances in the cultivation, production adulterants of drugs
2. Know the macroscopical study of crude drugs
3. Know the microscopical study of crude drugs
4. Know the constituents and chemical tests for crude drugs
5. Know the medicinal uses of individual drugs
6. Explain the Nutraceuticals.

Course content:

1. Identification of crude drugs listed in theory (entire condition) by Morphological characters.
2. Microscopical and Powder studies:
   - Senna
   - Rauwolfia
   - Cinchona
   - Datura
   - Vinca
   - Ginger
   - Nuxvomica
   - Neem
3. To do simple chemical tests to identify the pharmaceutically important phytoconstituents.

16PYU602 **SEMESTER-VI**

MEDICINAL CHEMISTRY- I **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Write the chemical synthesis of some drugs.

Course Content

Study of classification- mechanism of action (biochemical and molecular basis)- structure activity relationship including stereo chemical aspects- physiochemical properties and synthesis of selected drugs (only drugs marked with asterisk) on the following categories of drugs.

UNIT I

Drugs acting on Central Nervous Sysytem - General anesthetics - Inhalation anesthetics- Halothane*- Methoxyflurane*- Enflurane- Sevoflurane- Isoflurane- Desflurane-**Ultra short acting barbitutrates**: Methohexital sodium*- Thiamylal sodium*- Thiopental sodium-**Dissociative anesthetics**: Ketamine hydrochloride*-**Sedatives and Hypnotics-Benzodiazepines:** SAR of Benzodiazepines- Chlordiazepoxide*- Diazepam*- Oxazepam- Chlorazepate Dipotassium- Lorazepam- Alprazolam- Zolpidem-**Barbiturtes-**SAR of barbiturates- Barbital*- Phenobarbital- Mephobarbital-Amobarbital- Butabarbital- Pentobarbital- Secobarbital-**Miscelleneous-**Amides & imides : Glutethmide-Alcohol & their carbamate derivatives- Meprobomate- Ethchlorvynol- Aldehyde & their derivatives- Triclofos sodium*- Paraldehyde.

UNIT II

Drugs acting on Central Nervous Syytem - Skeletal Muscle relaxants -Methocarbamol- Chlorphenesin **- Antipsychotics- Phenothiazeines -** SAR of Phenothiazeines - Promazine hydrochloride- Chlorpromazine hydrochloride*- Triflupromazine- Thioridazine hydrochloride- Piperacetazine hydrochloride- Mesoridazine hydrochloride- Prochlorperazine maleate*- Trifluoperazine hydrochloride**- Chlorprothixene**- Thiothixene- Loxapine succinate- Clozapine**- Fluro buterophenones-** Haloperidol- Droperidol- Risperidone**-Beta amino ketones-** MolindoneHcl**- Benzamides**- Sulpieride

UNIT III

Drugs acting on Central Nervous System -Anticonvulsants- SAR of Anticonvulsants**-** mechanism of anticonvulsant action-**Hydentoins-** Phenytoin*- Mephenytoin- Ethotoin-**Oxazolidine diones-** Trimethadione*- Paramethadione-**Succinimides-** Phensuximide- Methsuximide- Ethosuximide*- **Urea and monoacylureas**- Phenacemide- Carbamazepine*-**Benzodiazepines**- Clonazepam **Miscellaneous-**Primidone- Valproic acid* - Gabapentin- Felbamate

CNS stimulants - Analeptics- Nikethamide*- Doxapram hydrochloride- Pentylenetetrazole- Caffeine- Theophylline- Theobromine-**Psycomotor stimulants-** Amphetamine- Dextroamphetamine sulphate*- Methamphetamine- Chorphentermine- Chlortermine- Phendimetrazine- Methylphenidate- Pemoline-**MAO inhibitors-** Phenelzine sulphate- Isocarboxazid- Tranylcypromine- Pargyline hydrochloride-**Tricyclic anti-depressants -** Amitriptyline hydrochloride*- Nortryptyline- Imipramine hydrochloride*- Desipramine hydrochloride- Trimipramine maleate- Doxepin hydrochloride- Amoxapine- Fluoxetine.

UNIT IV

Drugs acting on Cardiovascular System - Anti-anginal - **Vasodilators:** Amyl nitrite- Nitroglycerin*- Pentaerythritol tetranitrate- Isosorbide dinitrite*- Dipyridamole-**Calcium channel blockers:** Verapamil- Bepridil hydrochloride- Diltiazem hydrochloride- Nifedipine- Amlodipine- Felodipine- Nicardipine- Nimodipone-**Cardiotonics:** Digoxin- Digitoxin- Deslanoside -**Anti-arrythmic Drugs**- Quinidine sulphate- Procainamide hydrochloride- Disopyramide phosphate*- Phenytoin sodium- Lidocaine hydrochloride- Tocainide hydrochloride Mexiletine hydrochloride- Lorcainide hydrochloride- amiodarone and Sotalol-**Anti-hypertensive Agents**- timolol- Captopril- Lisinopril- Enalapril- Benazepril hydrochloride- Quinapril hydrochloride- Methyldopate hydrochloride-* Clonidine hydrochloride- Guanethidine monosulphate*- Guanabenz acetate- Sodium nitroprusside- Diazoxide- Minoxidil- Reserpine- Hydralazine hydrochloride

UNIT V

Diuretics - Carbonic anhydrase inhibitors- Acetazolamide*- Methazolamide- Dichlorphenamide. **Thiazides-** Chlorthiazide*- Hydrochlorothiazide*- Hydroflumethiazide- Cyclothiazide -**Loop diuretics-** Furosemide*- Bumetanide- Ethacrynic acid- **Potassium sparing Diuretics** Spironolactone- Triamterene- Amiloride*- **Miscelleneous-** Mannitol- and Theophylline-**Anti-hyperlipidemic agents**- Clofibrate- lovastatin- cholesteramine and cholestipol **Coagulant & Anticoagulants-** menodione- acetomenadione- Warferin*- phenindione **Oral hypoglycemic agents-** tolbutamide- metformin- glipizide- pioglitazone- acarabose-**Thyroid & Antithyroid-** L-Thyroxine-

L-Thyronine- Propylthiouracil- Methimazole-**Drugs acting on GIT-** Antacids- antiulcers- laxatives and anti-diarrhoeal agents- emetics & antiemetics

MEDICINAL CHEMISTRY LABORATORY– II 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Write the chemical synthesis of some drugs.

Course Content:

I. Preparation of medicinally important compounds or intermediates required for synthesis of drugs (5 compounds)

II. Monograph analysis of selected drugs from course content(2 compounds)

III. Assay of Selected drugs from course content prescribed as per I-P or B-P (2 compounds)

PHARMACEUTICAL DOSAGE FORMS & COSMETIC TECHNOLOGY -II 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to provide detail knowledge about chemistry of medicinal compounds from natural origin and general methods of structural elucidation of such compounds.
- It also emphasizes on isolation, purification and characterization of medicinal compounds from natural origin.
- This gives a knowledge of preformulation studies and stability studies
- Course enables the student to understand and appreciate the influence of pharmaceutical cosmetics and various pharmaceutical dosage forms on the performance of the drug product.
- To understand the formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This also gives knowledge about packing of various dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid- liquid and semisolid dosage forms.
4. Know the evaluation test of solid, liquid and semisolid dosage form.
5. Know the modern extraction techniques- characterization and identification of the herbal drugs.
6. Know the different types of natural compounds and their chemistry and medicinal importance.

Course Content:

UNIT I

Blood Products and Plasma Substitutes –Collection- processing and storage of whole human blood- concentrated human RBCs- dried human plasma- human fibrinogen- human thrombin- human normal immunoglobulin- human fibrin foam- plasma substitutes- ideal requirements of PVP - dextran- Control of blood products as per IP.

UNIT II

Sterile pharmaceutical products - Formulation – requirements- factors & related aspects- evaluation of injectable solutions- suspensions and sterile powders- containers and closures - Total parenteral nutrition (TPN) & IV additives.

UNIT III

Sterile pharmaceutical products - Production facilities and process control – layout- air control-design of aseptic area- LAF and maintenance - Ophthalmic preparations – Requirements – formulation- methods of preparation- containers and evaluation.

UNIT IV

Cosmeticology and cosmetic preparation -Fundamentals of cosmetic science - Structure and functions of skin and hair – Formulation – Evaluation- packaging of cosmetics for skin – hair-dentifrices and manicure preparations- nail polish – lipsticks- eye lashes- baby care products.

UNIT V

Good Manufacturing Practice (GMP) -Human behaviour – infestation- condition of equipments and utensils- condition of raw materials- the plant- waste disposal and storage conditions - **Quality Assurance (QA)** -Salient features of ISO 9000- Total quality management and productivity – process- product and equipment validation.

PHARMACEUTICAL DOSAGE FORMS & COSMETIC TECHNOLOGY LABORATORY-II 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to provide detail knowledge about chemistry of medicinal compounds from natural origin and general methods of structural elucidation of such compounds.
- It also emphasizes on isolation, purification and characterization of medicinal compounds from natural origin.
- This gives a knowledge of preformulation studies and stability studies
- Course enables the student to understand and appreciate the influence of pharmaceutical cosmetics and various pharmaceutical dosage forms on the performance of the drug product.
- To understand the formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This also gives knowledge about packing of various dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid- liquid and semisolid dosage forms.
4. Know the evaluation test of solid, liquid and semisolid dosage form.
5. Know the modern extraction techniques- characterization and identification of the herbal drugs.
6. Know the different types of natural compounds and their chemistry and medicinal importance.

Course Content:

I. Preparation- evaluation and packaging of:

1. Cocoa butter suppositories
2. Boric acid suppositories.
3. Glycerol gelatine suppositories.
4. Emulsifying ointment
5. Vanishing cream.
6. Zinc cream
7. Salicylic acid paste.
8. Sodium alginate jelly

9. Lipstick
10. Baby care products.

II. Packaging materials: Evaluation of materials used in pharmaceutical packaging.

PHARMACOLOGY - II 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain the pharmacological actions of different categories of drugs on various systems of the body.
2. Explain the mechanism of drug action at organ system/subcellular/macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:

UNIT I

Pharmacology of Central Nervous System – Neurohumoral transmission in the CNS with special emphasis on pharmacology of various neurotransmitters like histamine-serotonin –dopamine – gaba –glutamate and glycine – **general anesthetics –** alcohol and disulfiram – sedatives –hypnotics and centrally acting muscle relaxants.

UNIT II

Pharmacology of Central Nervous System - Psychopharmacological agents – Antipsychotics – antidepressants – anti anxiety agents -anti-manics and hallucinogens - Anti-epileptic drugs – Drugs used in Parkinsonism and Alzheimer's disease- Narcotic analgesics and antagonists – CNS stimulants and Nootropics – Drug addiction –drug abuse –tolerance and dependence.

UNIT III

Pharmacology of Cardiovascular System - Introduction to hemodynamic and Electrophysiology of heart - **Anti-hypertensive drugs - Anti- anginal drugs -A n t i -arrhythmic drugs.**

UNIT IV

Drugs acting of Cardiovascular System – Drugs used in congestive heart failure - **Anti-hyperlipidemic drugs** – Haematinics –anticoagulants and haemostatic agents – Fibrinolytics and antiplatelet drugs – Blood and plasma volume expanders**.**

UNIT V

Drugs acting on Respiratory System - anti-asthmatic drugs - Anti-tussives and expectorants – Respiratory stimulants – Mucolytics and nasal decongestants.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain the pharmacological actions of different categories of drugs on various systems of the body.
2. Explain the mechanism of drug action at organ system/subcellular/macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Handle the animals and conduct the experiments to observe the effect of drugs from
5. different therapeutic classes and to interpret the results using suitable statistical analysis.
6. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
7. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:

1. Commonly used Apparatus/instruments in experimental pharmacology.
2. Commonly used laboratory animals and their handling.
3. Maintenance of laboratory animals- regulations of animal use and Ethical requirements according to CPCSEA.
4. Some common laboratory techniques : Blood withdrawal –plasma and serum separation-

5. Anesthetics used for animal studies-procedures for rendering animal unconscious and chemical euthanasia.
6. Study of different routes of drugs administration in mice/rats.
7. To study the effect of hepatic microsomal enzyme inhibitors and inducers on the Phenobarbitone sleeping time in mice.
8. Experiments on Central nervous system : Recording of spontaneous motor activity- stereotype activity -anti-catatonic activity-analgesic activity-anti convulsant
9. Local anesthetic activity of drugs by suitable animal model.
10. Effect of autonomic drugs on rabbit's eye.
11. Diuretic activity of drugs in rats.

PHARMACEUTICAL BIOTECHNOLOGY 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This paper has been designed to provide the advanced knowledge to the Pharmacy students in valuable areas of advanced Biotechnology.
- To play a crucial role in determining its future use and applications in medicine- drug discovery and in pharmaceutical industry**.**
- It also emphasize the study of microbiological and biotechnological processes.
- To know modern technology aspects to useful products and to correct the alternative ways to prevent the occurrence and the treatment of disease related to microorganisms and techniques.
- To understand methods of identification- cultivation and preservation of various microorganisms.
- To understand Genetic engineering applications in relation to production of pharmaceuticals.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the importance of immunological reactions and preparations of immunological products.
2. Do sterilization of various equipments/products and bacterial sensitivity testing against antibiotics and disinfectants.
3. Know the anatomy, identification, growth factors and sterilization of microorganisms;
4. Know the mode of transmission of disease causing microorganism, symptoms of disease, and treatment aspect;
5. Understand methods of identification- cultivation and preservation of various microorganisms
6. Understand Genetic engineering applications in relation to production of pharmaceuticals
7. Know the importance of immunological reactions and preparations of immunological products.
8. Do sterilization of various equipments/products and bacterial sensitivity testing against antibiotics and disinfectants.

Course Content:

UNIT I

Bio process technology- Introduction to fermentation technology- study- design and operation of Fermenter - Bioprocess of the following metabolites: Alcohol- Citric acid- Penicillin- Griseofulvin- Vitamin B12- and Glutamic acid.

UNIT II

Enzyme biotechnology - Introduction- classification and uses - Techniques of immobilization - Application- biosensors and their application - Production of amylase- Catalase- peroxidase- lipase- Protease Streptokinase penicillinase.

UNIT III

Immunology and Immune Biotechnology -Introduction- types of Immunity- antigen and haptens- antigen- antibody reactions- complementary systems- structure and function of MHC- antigen recognition and presentation- hypersensitivity- Hypersensitivity response-immuno stimulation and suppression and Auto immune disorders –Immunization: Definition- types- preparation- standardization and application of official vaccines- containerization- storage conditions and stability of official vaccines -Hybridoma technology

UNIT IV

Introduction- Techniques of production and purification of monoclonal antibodies. Application of monoclonal antibodies -Immuno blotting techniques such ELISA- Western Blot- Southern Blot.
Animal Biotechnology : Introduction to animal tissue culture- characters- general procedure for the maintenance of cell culture- Nutritional requirements- Primary and established cell culture and application of animal tissue culture - **Molecular Biology and Engineering -** Study of cloning vectors- restricted endonucleases and DNA ligase - Application of r DNA technology and genetic engineering in the products: a) Interferon b) Vaccines- hepatitis- B c) Hormones- Insulin.

UNIT V

Access to Molecular Biology Data Bases: Nucleic Acid Sequences- Genomes- Protein Sequence and Structures- Entrez- Sequence Retrieval System (SRS)- Protein Identification Resource (PIR) - Sequence Alignment- Software's (BLAST- FASTA- CLUSTAL-W)- Construction of Phylogenetic Tree - Protein Structure Prediction- Applications of Bioinformatics

1. Know the importance of immunological reactions and preparations of immunological products.
2. Do sterilization of various equipments/products and bacterial sensitivity testing against antibiotics and disinfectants.
3. Know the anatomy, identification, growth factors and sterilization of microorganisms;
4. Know the mode of transmission of disease causing microorganism, symptoms of disease, and treatment aspect;
5. Do estimation of RNA and DNA and there by identifying the source;
6. Do cultivation and identification of the microorganisms in the laboratory;
7. Do identification of diseases by performing the diagnostic tests; and
8. Appreciate the behavior of motility and behavioral characteristics of microorganisms.

Course Content:

Microbiology

1. Production of alcohol and wine by fermentation process.
2. Immobilization techniques – Whole cells- Enzymes
3. Solid media inoculation – streak plate, pour plate.
4. Motility study by hanging drop method(2 experiments)
5. Staining preparation – negative staining(2 experiments).
6. Microbiological assay – well plate method.

7. Biochemical test
8. Determination of minimum inhibitory concentration.

HOSPITAL AND CLINICAL PHARMACY - II **3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart basic knowledge and skills that are required for the practice of pharmacy in both hospital and community settings.
- Conduct sufficiently thorough and accurate patient assessments
- Explain and properly dispense commonly used medications, formulations, and drug products.
- Identify and assess drug related problems relative to specific patient cases.
- The Knowledge and Know-how of marketing management groom the people for taking a challenging role in Sales and Product management.
- The purpose of this course is to introduce to students a number of health issues and their challenges.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the various drug distribution system
2. Handle the prescriptions and manage community pharmacies
3. Understand the elements of pharmaceutical care and provide comprehensive patient care services
4. Understand the concept and practice of the quality use of medicines
5. Summarize the therapeutic approach for management of various diseases including reference to the latest available evidence.
6. Evaluate alternative ways of solving problems related to health and pharmaceutical issues.

Course Content:

UNIT-I

Nuclear Pharmacy -Introduction to Radiopharmaceuticals - radioactive half-life - units of radioactivity -Production of radiopharmaceuticals - methods of isotopic tagging - preparation of radioisotopes in laboratory using radiation dosimetry and radioisotope generators - Permissible radiation dose level - radiation hazards - their prevention and specifications for radioactive laboratory.

UNIT-II

Adverse drug reactions – Classification - excessive pharmacological effects - secondary pharmacological effects – idiosyncrasy - allergic drug reactions -genetically determined toxicity - toxicity following sudden drug withdrawal - Methods of detecting adverse drug effects - spontaneous case reports - record linkage studies - Cohort studies & case control studies.

UNIT-III

Drug interactions - Types - Pharmacokinetic and Pharmacodynamic drug interactions with suitable examples - Common Drug –Drug and Drug –Food interactions.

UNIT-IV

Concept of medication history interviews - patient medication profile - patient medication counseling - Barriers and steps in counselling - types of medication error and patient compliance.

UNIT-V

Therapeutic Drug Monitoring –Introduction – indications - dosage individualization - Pharmacist's intervention - TDM of specific drugs – Digoxin – Theophyllin - Gentamycin & Phenytoin.

FORMULATIVE PHARMACY AND BIOPHARMACEUTICS -I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.
- This gives a knowledge of preformulation studies and stability studies
- Different machinery used for various steps in manufacture of various dosage forms. Formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.
- To know the various pharmaceutical dosage forms and their manufacturing techniques.
- To know various considerations in development of pharmaceutical dosage forms.

Course Outcomes (CO's):
Upon completion of this course the student will:

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid and novel drug delivery system .
4. Know evaluation of pharmaceutical dosage forms.
5. To understand the criteria for selection of drugs and polymers for the development of Novel drug delivery systems, their formulation and evaluation
6. Formulate solid, liquid and semisolid dosage forms and evaluate them for their quality

Course Content:

UNIT-I
Preformulation studies - Study of physical properties of drugs like physical form- particle size shape – density – wetting- dielectric constant – solubility – dissolution- organoleptic property and their effect on formulation- stability and bioavailability.

UNIT-II
Stability studies - Study of chemical properties of drugs like hydrolysis – oxidation – reduction – racemisation – polymerization- their influence on formulation and stability of products - Stabilization and stability testing protocol for various pharmaceutical products.

UNIT-III

Capsules - Advantages - disadvantages of capsule dosage form- material for production of hard gelatin capsules- size of capsules and method of capsule filling - Soft gelatin capsule- capsule shell and capsule content- importance of base absorption – manufacturing - quality control- stability testing and storage of capsule dosage forms.

UNIT-IV

Micro-encapsulation - Types of microcapsules- importance of micro encapsulation in pharmacy- micro encapsulation by Co-acervation phase separation- multi-orifice centrifugation- spray drying- spray congealing – polymerisation- air suspension technique- pan coating and other techniques - Evaluation of microcapsules.

UNIT-V

Tablets - Classification of different types of tablets- tablet excipients- granulation technology on large scale by various techniques- different types of tablet compression machinery and equipment employed- processing problems of tablets and evaluation of tablets.

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.
- This gives a knowledge of preformulation studies and stability studies
- Different machinery used for various steps in manufacture of various dosage forms. Formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.
- To know the various pharmaceutical dosage forms and their manufacturing techniques.
- To know various considerations in development of pharmaceutical dosage forms.

Course Outcomes (CO's):
Upon completion of this course the student will:

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid and novel drug delivery system.
4. Know evaluation of pharmaceutical dosage forms.
5. To understand the criteria for selection of drugs and polymers for the development of
6. Novel drug delivery systems, their formulation and evaluation
7. Formulate solid, liquid and semisolid dosage forms and evaluate them for their quality

Course content:

Preformulation studies

1. Determination of flowability of powder by assessing compressibility index
2. Determination of flow property by assessing angle of repose.
3. Determination of effect of glidants
4. Determination of effect of different concentration of glidants.
5. Evaluation of liquid dosage forms.
6. Evaluation of semi solid dosage form.
7. Preparation of sodium bicarbonate tablets.
8. Preparation of Phenobarbitone tablets.

9. Preparation of aspirin effervescent tablets.
10. Preparation of ferrous sulphate tablets.

ADVANCED PHARMACOGNOSY-I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The department is to acquaint the students with the basic knowledge of the natural products.
- Students engaged in pharmacy and in other health professionals should know the role of natural products in discovery of drugs.
- The students are given sufficient knowledge to be able to describe morphology and histology of different plant organs.
- To identify drugs in the whole state and in powdered condition with suitable examples of medicinal plants.
- To learn and understand the techniques involved in the herbal drug-cosmetic preparation and their Standardization.
- To learn their use and application in eradicating ailments.

Course Outcomes (CO's):

Upon completion of this course the student will:

1. Explain the basic principles of extraction and various modern extraction techniques.
2. Understand the biogenesis of secondary metabolites.
3. Elaborate the plant basedindustries and institutions involved in work on medicinal and aromatic plants in India.
4. Demonstrate the Industrial production and estimation of Phytoconstituents.
5. Perform the Herbal formulation and standardization.
6. Explain the Nutraceuticals.

Course Content:

UNIT I

Modern methods of extraction-application of latest techniques like Spectroscopy, types and applications– various types and applications of chromatography, and electrophoresis in the isolation-purification and identification of crude drugs.

UNIT II

Introduction to plant biochemistry with special reference to basic metabolic pathways - Introduction to biogenesis of secondary metabolites like Atropine–Ergotamine-Morphine and Steroidal glycosides-Study of utilization of radioactive isotopes in the investigation of Biogenetic studies.

UNIT III

A brief account of plant based industries and institutions involved in work on medicinal and aromatic plants in India - introduction – classification of medicinal plant based industry – production and utilization of medicinal plants and their products in India –manufacturers of herbal formulations manufacturers of standardized herbal extracts, phytoconstituents and essential oils – list of government institution involved in the development of plant based industrial technology.

UNIT IV

Industrial production and estimation of the following phytoconstituents –production –estimations–uses of Forskolin –Sennoside– Artemisinin – Diosgenin-Tropanealkaloids –Curcumin –Rutin – Phyllanthin –Asiaticoside-Andrographolides and Gymnemic acid.

UNIT V

Herbal formulation development and standardization – Preparation-stability testing of Herbal extracts and formulations-Role of Herbs in Cosmetics – Hair care preparation–Henna–Amla-Hibiscus – Skin Care preparation- Aloe vera–Turmeric-Sandalwood – Nutraceuticals.

- To learn and understand the techniques involved in the herbal drug-cosmetic preparation and their Standardization.
- To learn their use and application in eradicating ailments.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Describe the isolation of the Phytoconstituents.
2. Prepare the hair care preparation.
3. Prepare the skin care the preparation.
4. Demonstrate the Amino acid by ascending chromatography.
5. Perform the Thin layer chromatography of Curcumin.
6. Understand the isolation and formulation procedure.

Course Content:

1. Caffeine – from tea dust
2. Quinine – from Cinchona bark
3. Citric acid – from Lemon.
4. Casein – from Milk.
5. Starch – from Potato
6. Pectin – from Orange peel
7. Curcumin from turmeric
8. Hair care preparation
   I. Amla
   II. Hibiscus
9. Skin Care preparation
   I. Aloe vera
10. Determination of Aminoacid by Ascending chromatography
11. Thin layer chromatography of curcumin

MEDICINAL CHEMISTRY- III **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Understand the importance of drug design and understand the different modern techniques of drug design.
6. Know the metabolism- adverse effect and therapeutic value of drugs.

Course Content:

UNIT I

Introduction to Drug Design - Principles of Drug Design-Various approaches used in drug design**-** Physicochemical parameters used in quantitative structure activity relationship (QSAR) such as partition coefficient- Hammets electronic parameter- Tafts steric parameter and Hansch analysis. Pharmacophore and docking technique**s-Prodrugs-** Basic concepts and application of prodrugs design-**Combinatorial Chemistry-** Concept and applications of combinatorial chemistry: solid phase and solution phase synthesis

UNIT II

Anti-infective agents - Local anti-infective agents - Ethyl alcohol- Isopropyl alcohol- Formaldehyde- Sodium glutaraldehyde solution- Liquified phenol- Hexachlorophene*- Eugenol-

Hexyl resorcinol- Anthralin- Hydrousbenzoylperoxide- Halazone*- Benzalkonium chloride*- Methylbenzethorium chloride*- Cetylpyridinium chloride- Chlorhexidinegluconate*- Gentianviolet- Methylene blue- Thiomersal- Methyl paraben and Sodium benzoate**- Antifungal agents - Antifungal antibiotics-** Amphotericin-B- Nystatin- Natamycin and Griseofulvin-**Synthetic Antifungal agents-** Clotrimazole- Econazole nitrate- Butoconazole- Oxiconazole nitrate- Tioconozole- Miconazole*- Ketoconazole- Terconazole- Itraconazole- Fluconazole- Naftifine hydrochloride- Tolnaftate*- Cyclopiroxolamine.

UNIT III

Anti-infective agents - Urinary tract anti-infective agents - Quinolones: SAR of quinolones- Nalidixic Acid*- Cinoxacin- Norfloxacin- Enoxacin Ciprofloxacin- Ofloxacin- Lomefloxacin- Sparfloxacin-**Miscellaneous-**Furazolidine- Nitrofurantoin* and Methanamine-**Anti-tubercular Agents**-**Synthetic anti tubercular agents-**INH*- Ethionamide- ethambutol- Pyrazinamide- Para amino salicylic acid*-**Anti tubercular antibiotics-** Rifampicin- Rifabutin- Cycloserine* and sterile Capreomycin sulphate-**Anti-protozoal Agents-** Metronidazole*- Diloxanide*- Iodoquinol- Pentamidine Isethionate- Atovaquone- Eflornithine-**Anthelmintics-** Piperazine salts*- Diethylcarbamazine citrate*- Thiabendazole*- Mebendazole*- Albendazole- Niclosamide- Oxamniquine- Praziquantal and Ivermectin-**Anti-scabious and Anti-pedicular Agents-**Benzyl Benzoate*- Lindane* (Gamaxene)- Crotamiton* and Permethrin.

UNIT IV

Anti-infective agents - Antimalarials - Etiology of malaria- SAR-**Quinolines-** Quinine sulphate- Chloroquine phosphate*- Hydroxy chloroquine sulphate- Amodiaquine hydrochloride*- Primaquine phosphate- Quinacrine hydrochloride- Mefloquine-**Biguanides and dihydro triazines-** Cycloguanil pamoate- Proguanil-**Miscellaneous-**Pyrimethamine- Trimethoprim and Sulfadoxine

UNIT V

Antibiotics - Historical background- Nomenclature- stereochemistry- Structure activity relationship chemical degradation classification and important products of the following classes-**β Lactam antibiotics-**Penicillin- Cepholosporins- β- Lactamase inhibitors- Monobactams **Aminoglycosides-** Streptomycin- Neomycin-**Tetracyclines-**Tetracycline- Chlortetracycline- Menocycline- Doxycycline-**Macrolide-**Erythromycin and Azithromycin – **Miscellaneous-**Chloramphenicol*- Clindamycin

MEDICINAL CHEMISTRY LABORATORY– III **3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Emphasizes on chemical synthesis of important drugs under each class.

Course Content:

I. Preparation of medicinally important compounds or intermediates required for synthesis of drugs (4 compounds)

II. Monograph analysis of selected drugs from course content. (4 compounds)

III. Assay of Selected drugs from course content prescribed as per I.P or B.P. (4 compounds)

PHARMACOLOGY - III **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes:

On successful completion of the course the student will

1. Describe the Pharmacology of various endocrine Hormones.
2. Explain the Insulin, Oral Hypoglycemic agents, Sex hormones, and oral contraceptives.
3. Enlight the Pharmacology of Drugs acting on the Gastrointestinal Tract.
4. Brief the principles, methods of Bioassay and the bioassay of insulin, oxytocin, vasopressin, ACTH, histamine and 5-HT.
5. Explain the Immunopharmacology, Immunostimulants and Immunosuppressants.
6. Define the drugs acting on the uterus.

Course Content:

UNIT I

Pharmacology of Endocrine System - Basic concepts in endocrine pharmacology - Hypothalamic and pituitary hormones - Thyroid hormones and anti thyroid drugs – Parathormone - Calcitonin and Vitamin-D.

UNIT II

Insulin - Oral Hypoglycemic agents and glucagon - ACTH and corticosteroids - Androgens and Anabolic steroids – Estrogens - progesterone and oral contraceptives - **Drugs acting on the uterus.**

UNIT III

Pharmacology of Drugs acting on the Gastrointestinal Tract – Antacids - anti-secretary and anti ulcer drugs - Laxatives and anti-diarrheal drugs - Appetite stimulants and suppressants - Digestants and carminatives -Emetics and anti-emetics.

UNIT IV

Bioassay - Principles and methods of bioassay - Bioassay of insulin - oxytocin-vasopressin - ACTH- histamine and 5-HT.

UNIT V

Immunopharmacology - Immunostimulants and immunosuppresants.

- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes:

On successful completion of the course the student will

1. Explain about in-vitro pharmacology and prepare the Physiological salt solutions.
2. Estimate the bioavailability parameters viz AUC, Tmax ,Kel from blood sample.
3. Demonstrate the CRC of acetylcholine by using suitable muscle preparations.
4. Estimate the bioavailability parameters viz AUC, Tmax ,Kel from urine sample.
5. Record the CRC of Nor adrenaline on rat anococcygeus muscle.
6. Record the CRC of 5HT on rat fundus preparation.

Course Content:

1. Introduction to *in-vitro* pharmacology and physiological salt solutions.
2. Record CRC of acetylcholine by using suitable muscle preparations.
3. Record the CRC of 5HT on rat fundus preparation.
4. Record CRC of Nor adrenaline on rat anococcygeus muscle
5. Estimation of bioavailability parameters viz AUC from blood sample.
6. Estimation of bioavailability parameters viz T_{max} from blood sample.
7. Estimation of bioavailability parameters viz K_{el} from blood sample.
8. Estimation of bioavailability parameters viz AUC from urine sample.
9. Estimation of bioavailability parameters viz T_{max} from urine sample.

10. Estimation of bioavailability parameters viz K_{el} from urine sample.

MODERN METHODS OF PHARMACEUTICAL ANALYSIS – I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart a fundamental knowledge on the testing of drugs by various instrumental methods of analysis.
- This focuses on various modern instruments that are used for testing the purity of drugs in various dosage forms.
- course also gives knowledge about modern instruments that are used for drug testing like NMR- IR- Mass- HPLC- HPTLC etc.
- This course deals with the fundamentals of analytical chemistry and principles of electro chemical analysis of drugs.
- To know the principle and applications of instrumentation
- To understand the components and working of various analytical instruments.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Know the principle and applications of instrumentation
2. Understand the components and working of various analytical instruments.
3. Understand the different modern techniques of drug analysis.
4. Appreciate the advantages of instrumental methods of drug analysis.
5. Understand the principles of volumetric and electro chemical analysis.
6. Carry out various volumetric and electro chemical titrations.
7. Develop analytical skills.

Course Content:

UNIT I
UV/Visible spectroscopy - Theory of atomic and molecular spectra - Electronic transitions - Beer and Lambert's law - Derivation and deviations - Applications of Beer law to single and multi component systems – Chromophores – Auxochromes - Spectral shifts - Solvent effect on absorption spectra - Instrumentation - Sources of radiation - wavelength selectors - sample cells – Detectors - Barrier layer cell - Photo tube - Photomultiplier tube - Silicon Photodiode -Applications - Spectrophotometric titrations - Measurement of equilibrium constant and rate constant - **Fluorimetry** – Theory - Concepts of singlet - doublet and triplet electronic states - internal and external conversions - factors affecting fluorescence – quenching - Instrumentation and applications.

UNIT II
IR spectroscopy – Introduction - Fundamental modes of vibrations in poly atomic molecules - Sample handling - Instrumentation - Sources of radiation - wavelength selectors - sample cells - Detectors –

Golay cell - Bolometer – Thermocouple – Thermister - Pyrroelectric detector - Structure – frequency correlation with examples.

UNIT III

Atomic absorption spectroscopy – Introduction - Theory - instrumentation- and applications - **Flame emission spectroscopy** – Introduction – Theory – Instrumentation -Interferences and applications - **Nephelometry and Turbidimetry** – Theory - Instrumentation and applications.

UNIT IV

NMR Spectroscopy - Principles- Instrumentation and applications.

UNIT V

Mass Spectroscopy - Principles- Fragmentation- Instrumentation- applications - Introduction to MALDI and ICPMS.

MODERN METHODS OF PHARMACEUTICAL ANALYSIS LABORATORY – I **3H 3C**

Instruction hours/ week: L: 0 T: 3 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart a fundamental knowledge on the testing of drugs by various instrumental methods of analysis.
- This focuses on various modern instruments that are used for testing the purity of drugs in various dosage forms.
- course also gives knowledge about modern instruments that are used for drug testing like NMR- IR- Mass- HPLC- HPTLC etc.
- This course deals with the fundamentals of analytical chemistry and principles of electro chemical analysis of drugs.
- To know the principle and applications of instrumentation
- To understand the components and working of various analytical instruments.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the principle and applications of instrumentation
2. Understand the components and working of various analytical instruments.
3. Understand the different modern techniques of drug analysis.
4. Appreciate the advantages of instrumental methods of drug analysis.
5. Understand the principles of volumetric and electro chemical analysis.
6. Carry out various volumetric and electro chemical titrations.
7. Develop analytical skills.

Course Content:

1 Chromatographic analysis of some pharmaceutical products-(3 experiments).

2 Exercises involving
- Colorimetry - (3 experiments).
- Spectrophotometry - (2 experiments).
- Flamephotometry – (2 Experiments)

3 Infra Red spectra peak identification for different functional groups (2 experiments).

PHARMACEUTICAL MARKETING **3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The pharmaceutical industry not only needs highly qualified researchers, chemist, technical people but also requires skilled managers who can take the industry forward by managing and taking the complex decisions which are imperative for the growth of the industry.
- Sales & Marketing which grooms the people for taking a challenging role in Sales and Product management.
- The career in product management starts from having hands on experience in sales and marketing only.
- The course curriculum incorporates various assignments, quizzes, and presentations.
- It is mandatory for students to take up any related internship while pursuing the course.
- The course aims at producing skilled professionals for managerial and related positions in the Pharmaceutical industry.

Course Outcomes (CO's):

On successful completion of the course the student will

1. The course aim is to provide an understanding of marketing concepts and techniques and the application of the same in the pharmaceutical industry.
2. Know the product decision and product management in pharmaceutical industry.
3. Know the Pharmaceutical marketing channels and Designing channel.
4. The course touches various aspects of the Pharmaceutical industry like analysis, research, sales, consultation, administration and distribution. It incorporates various managerial and research skills and business strategies.
5. The areas of study within the course include research, communication, management, accounting, finance, pharmaceutical science, and several other aspects of the Pharmaceutical business.
6. The course deals with the theoretical as well as with the practical aspect of the subject. Apart from the theory papers, It is also supported by various assignments, presentations, quizzes and internships.

Course Content:

UNIT I

Marketing - Definition - general concepts - and scope of marketing - Distinction between marketing & selling - Marketing environment - Industry and competitive analysis - Analyzing consumer buying behavior; industrial buying behaviour - **Pharmaceutical market -**Quantitative and qualitative aspects; size and composition of the market - demographic descriptions and socio-psychological characteristics of the consumer - market segmentation&targeting - Consumer profile - Motivation and prescribing habits of the physician – patients choice of physician and retail pharmacist - Analyzing the Market - Role of market research.

UNIT II

Product decision – Meaning – Classification - product line and product mix decisions - product life cycle - product portfolio analysis - product positioning - new product decisions - Product branding - packaging and labelling decisions - Product management in pharmaceutical industry.

UNIT III

Promotion - Meaning and methods -determinants of promotional mix - promotional budget - An overview of personal selling – advertising - direct mail – journals – sampling – retailing - medical exhibition - public relations - online promotional techniques for OTC Products.

UNIT IV

Pharmaceutical marketing channels - Designing channel - channel members - selecting the appropriate channel - conflict in channels - physical distribution management - Strategic importance - tasks in physical distribution management - **Professional sales representative (PSR) -** Duties of PSR - purpose of detailing - selection and training – supervising - norms for customer calls – motivating – evaluating - compensation and future prospects of the PSR.

UNIT V

Pricing – Meaning – importance – objectives - determinants of price - pricing methods and strategies -issues in price management in pharmaceutical industry - An overview of DPCO (Drug Price Control Order)and NPPA (National Pharmaceutical Pricing Authority) - **Emerging concepts in marketing -** Vertical & Horizontal Marketing -Rural Marketing – Consumerism - Industrial Marketing - Global Marketing.

16PYU7E02 **SEMESTER-VII**

PHARMACEUTICAL REGULATORY SCIENCE **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart the fundamental knowledge on the regulatory requirements for approval of new drugs, drug products in regulated countries like US, EU, Japan, Australia and Canada.
- It prepares the students to learn in detail on the regulatory requirements, documentation requirements, and registration procedures for marketing the drug products in regulated countries.
- Explain the process of drug discovery, development and generic product development.
- Describe the regulatory approval process and registration procedures for API and drug products in various countries.
- Learn the basic understanding of regulations of India with other global regulated markets
- Understand the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know about the process of drug discovery and development
2. Know the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals
3. Know the regulatory approval process and their registration in Indian and international marketsExplain basic understanding of developing clinical trial protocols
4. Understand the concept of pharmacovigilance and its significance
5. Learn the basic understanding the importance of Orange book, Federal Register, Code of Federal Regulatory, and Purple book
6. Explain the Registration of Indian drug product in overseas market.

Course Content:

UNIT I

New Drug Discovery and development - Stages of drug discovery - Drug development process - pre-clinical studies - non-clinical activities - clinical studies -Innovator and generics - Concept of generics- Generic drug product development.

UNIT II

Regulatory Approval Process - Approval processes and timelines involved in Investigational New Drug (IND) - New Drug Application (NDA) - Abbreviated New Drug Application (ANDA) in US - Changes to an approved NDA / ANDA -**Regulatory authorities and agencies -** Overview of regulatory authorities of

United States - European Union - Australia – Japan - Canada (Organization structure and types of applications).

UNIT III

Registration of Indian drug product in overseas market - Procedure for export of pharmaceutical products - Technical documentation - Drug Master Files (DMF) -Common Technical Document (CTD) - electronic Common Technical Document (eCTD) - ASEAN Common Technical Document (ACTD)d research.

UNIT IV

Clinical trials - Developing clinical trial protocols - Institutional Review Board / Independent Ethics committee - formation and working procedures - Informed consent process and procedures - GCP obligations of Investigators - sponsors & Monitors - Managing and Monitoring clinical trials - Pharmacovigilance - safety monitoring in clinical trials.

UNIT V

Regulatory Concepts - Basic terminologies – guidance – guidelines – regulations - laws and acts - Orange book - Federal Register - Code of Federal Regulatory - Purple book.

PHARMACOVIGILANCE **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This paper will provide an opportunity for the student to learn about development of pharmacovigilance as a science, basic terminologies used in pharmacovigilance, global scenario of Pharmacovigilance, train students on establishing pharmacovigilance programme in an organization, various methods that can be used to generate safety data and signal detection.
- This paper also develops the skills of classifying drugs, diseases and adverse drug reactions.
- Explain the regulatory requirements for conducting clinical trials.
- Describe in detail about various types of clinical trial designs.
- Explain the responsibilities of key players involved in clinical trials.
- Describe the documentational requirements for Clinical trials.

Course Outcomes (CO's):
On successful completion of the course the student will

1. History and development of pharmacovigilance
2. National and international scenario of pharmacovigilance
3. Dictionaries, coding and terminologies used in pharmacovigilance
4. Detection of new adverse drug reactions and their assessment
5. Drug safety evaluation in paediatrics, geriatrics, pregnancy and lactation
6. ICH guidelines for ICSR, PSUR, expedited reporting, pharmacovigilance planning
7. CIOMS requirements for ADR reporting
8. Writing case narratives of adverse events and their quality.

Course Content:

UNIT I

Introduction to Pharmacovigilance - History and development of Pharmacovigilance - Importance of safety monitoring of Medicine - WHO international drug monitoring programme - Pharmacovigilance in India - **Introduction to adverse drug reactions** - Definitions and classification of ADRs - Detection and reporting - Methods in Causality assessment - Severity and seriousness assessment - Predictability and preventability assessment - Management of adverse drug reactions - **Basic terminologies used in pharmacovigilance** - Terminologies of adverse medication related events - Regulatory terminologies.

UNIT II

Drug and disease classification – Anatomical - therapeutic and chemical classification of drugs - International classification of diseases - Daily defined doses - International Non proprietary Names for drugs - **Drug dictionaries and coding in pharmacovigilance** - WHO adverse reaction terminologie - MedDRA and Standardised MedDRA queries - WHO drug dictionary - Eudravigilance medicinal product dictionary - **Information resources in pharmacovigilance -** Basic drug information resources - Specialised resources for ADRs - **Establishing pharmacovigilance programme -** Establishing in a hospital - Establishment & operation of drug safety department in industry - Contract Research Organisations (CROs) - Establishing a national programme

UNIT III

Vaccine safety surveillance - Vaccine Pharmacovigilance - Vaccination failure - Adverse events following immunization - **Pharmacovigilance methods** - Passive surveillance – Spontaneous reports and case series - Stimulated reporting - Active surveillance – Sentinel sites - drug event monitoring and registries - Comparative observational studies – Cross sectional study - case control study and cohort study -Targeted clinical investigations - **Communication in pharmacovigilance -** Effective communication in Pharmacovigilance - Communication in Drug Safety Crisis management - Communicating with Regulatory Agencies - Business Partners - Healthcare facilities & Media.

UNIT IV

Statistical methods for evaluating medication safety data - **Safety data generation -** Pre clinical phase - Clinical phase - Post approval phase - **ICH Guidelines for Pharmacovigilance** - Organization and objectives of ICH - Expedited reporting - Individual case safety reports - Periodic safety update reports - Post approval expedited reporting - Pharmacovigilance planning - Good clinical practice in pharmacovigilance studies.

UNIT V

Pharmacogenomics of adverse drug reactions - Drug safety evaluation in specialpopulation PaediatricsPregnancy and lactation – Geriatrics – **CIOMS -** CIOMS Working Groups **-** CIOMS For - **CDSCO (India) and Pharmacovigilance -** D&C Act and Schedule Y **-** Differences in Indian and global pharmacovigilance requirements

QUALITY CONTROL AND STANDARDIZATION OF HERBALS

3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the medicinal plants material and dosage forms.
- To understand the WHO guigelines for quality control of herbal drugs.
- To understand WHO Guidelines on good manufacturing Practices.
- To know the Quality assurance in herbal drug industry of GMP
- To know the evaluation techniques for the herbal drugs.
- To know the Stability testing of herbal medicines

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the Quality assurance in herbal drug industry of GMP.
2. Know the evaluation techniques for the herbal drugs.
3. Know the Stability testing of herbal medicines
4. Explain basic tests for drugs to obtain dosage form for pharmaceutical substances and medicinal plants.
5. Explain methods for evaluation of pharmaceutical substances, medicinal plants and commercial crude drugs along with WHO guidelines for quality control for herbal drugs,
6. Describe guidelines for cGMP, GAP, GMP and GLP for quality assurance of herbal drugs in industry.

Course Content:

UNIT I

Basic tests for drugs – Pharmaceutical substances, Medicinal plants materials and dosage forms - WHO guidelines for quality control of herbal drugs - Evaluation of commercial crude drugs intended for use

UNIT II

Quality assurance in herbal drug industry of GMP – GAP - GMP and GLP in traditional system of medicine - WHO Guidelines on good manufacturing Practices (GMP) for Herbal Medicines - WHO Guidelines on GACP for Medicinal Plants.

UNIT III

EU and ICH guidelines for quality control of herbal drugs - Research Guidelines for Evaluating the Safety and Efficacy of Herbal Medicines

UNIT IV

Stability testing of herbal medicines - Application of various chromatographic techniques in standardization of herbal products - Preparation of documents for new drug application and export registration - GMP requirements and Drugs & Cosmetics Act provisions.

UNIT V

Regulatory requirements for herbal medicines - WHO guidelines on safety monitoring of herbal medicines in pharmacovigilance systems - Comparison of various Herbal Pharmacopoeias - Role of chemical and biological markers in standardization of herbal products.

CELL AND MOLECULAR BIOLOGY **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Perceive over all mechanism of cell growth and cell cycle and division.
- To understand the biochemical pathways associated with the cellular organelles.
- To understand the cell signaling mechanisms.
- Understand the sequential events that occur during mitosis and meiosis.
- Introduce the concepts of stem cell and cell culturing techniques.
- Sensitized on cancer types, oncogenes and tumor suppressor genes.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the importance, evolution and diversity of cells.
2. Learns to visualize the cells by employing different types of microscopes.
3. Able to describe the organization, structure and functions of cell organelles.
4. Understand the biochemical pathways associated with the cellular organelles.
5. Rationalize different transport mechanisms occurring in the cell.
6. Understand the cell signaling mechanisms.

Course Content:

UNIT-I

Introduction to Drug Discovery and Development - Stages of drug discovery and development

Lead discovery and Analog Based Drug Design - Rational approaches to lead discovery based on traditional medicine - Random screening - Non-random screening - serendipitous drug discovery - lead discovery based on drug metabolism, lead discovery based on clinical observation - **Analog Based Drug Design** – Bioisosterism – Classification - Bioisosteric replacement - Any three case studies.

UNIT-II

Quantitative Structure Activity Relationship (QSAR) - SAR versus QSAR, History and development of QSAR - Types of physicochemical parameters, experimental and theoretical approaches for the determination of physicochemical parameters such as Partition coefficient- Hammets substituent constant and Tafts steric constant - Hansch analysis - Free Wilson analysis - 3D-QSAR approaches like COMFA and COMSIA.

UNIT-III

Molecular Modeling and virtual screening techniques - Virtual Screening techniques -Drug likeness screening - Concept of pharmacophore mapping and pharmacophore based Screening - **Molecular docking** -Rigid docking -flexible docking - manual docking - Docking based screening -*De novo* drug design.

UNIT-IV

Informatics & Methods in drug design - Introduction to Bioinformatics, chemoinformatics - ADME databases – chemical - biochemical and pharmaceutical databases.

UNIT-V

Molecular Modelin - Introduction to molecular mechanics and quantum mechanics –Energy Minimization methods and Conformational Analysis - global conformational minima determination.

FORMULATIVE PHARMACY AND BIOPHARMACEUTICS –II 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.
- This gives a knowledge of preformulation studies and stability studies
- Different machinery used for various steps in manufacture of various dosage forms. Formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.
- To know the various pharmaceutical dosage forms and their manufacturing techniques.
- To know various considerations in development of pharmaceutical dosage forms.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid and novel drug delivery system .
4. Know evaluation of pharmaceutical dosage forms.
5. To understand the criteria for selection of drugs and polymers for the development of
6. Novel drug delivery systems, their formulation and evaluation
7. Formulate solid, liquid and semisolid dosage forms and evaluate them for their quality

Course Content:

UNIT- I
Prolonged action pharmaceuticals - benefits – limitations – oral products terminology – types and construction of products – evaluation – applications in pharmaceutical field.

UNIT-II
Novel Drug delivery systems – definition **-** advantages - disadvantages -Transdermal delivery systems - Osmotic drug delivery systems – Liposomes –microsomes – Nanoparticles – applications in pharmaceutical field .

UNIT-III

Bio-pharmaceutics- Rate of drug absorption after administration- drug concentration in blood- biological factors in drug absorption- physico-chemical factors- dosage form consideration for gastrointestinal absorption- drug distribution- site seeking and drug elimination.

UNIT-IV

Pharmacokinetics -Compartment models- a brief study of parameters like biological half life- apparent volumes of distribution- renal clearance- total body clearance- absorption- elimination rate constants and significance of the data.

UNIT-V

Bioavailability and bio-equivalency testing - Definitions - dosage forms - dissolution rate and bio-equivalency testing – biopharmaceutical classification system.

External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.
- This gives a knowledge of preformulation studies and stability studies
- Different machinery used for various steps in manufacture of various dosage forms. Formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.
- To know the various pharmaceutical dosage forms and their manufacturing techniques.
- To know various considerations in development of pharmaceutical dosage forms.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid and novel drug delivery system.
4. Know evaluation of pharmaceutical dosage forms.
5. To understand the criteria for selection of drugs and polymers for the development of
6. Novel drug delivery systems, their formulation and evaluation
7. Formulate solid, liquid and semisolid dosage forms and evaluate them for their quality

Course content:

1. Formulation and filling of hard gelatin capsules.
2. Evaluation test for capsules.

3. Manufacture of parenteral
4. Preparation of microsomes.
5. Determination of pseudo first order kinetics and half life.
6. Determination of second order kinetics.
7. Improvement of dissolution characteristics of slightly soluble drugs.
8. Calculation ka, ke, t ½ , Cmax.
9. Calculation of bioavailability from urinary excretion data for drugs.
10. Calculation of AUC and bioequivalence from the given data for drugs.

ADVANCED PHARMACOGNOSY-II **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The department is to acquaint the students with the basic knowledge of the natural products.
- Students engaged in pharmacy and in other health professionals should know the role of natural products in discovery of drugs.
- The students are given sufficient knowledge to be able to describe morphology and histology of different plant organs.
- To identify drugs in the whole state and in powdered condition with suitable examples of medicinal plants.
- To learn and understand the techniques involved in the herbal drug-cosmetic preparation and their Standardization.
- To learn their use and application in eradicating ailments.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Explain the basic principles of extraction and various modern extraction techniques.
2. Understand the biogenesis of secondary metabolites.
3. Elaborate the plant basedindustries and institutions involved in work on medicinal and aromatic plants in India.
4. Demonstrate the Industrial production and estimation of Phytoconstituents.
5. Perform the Herbal formulation and standardization.
6. Explain the Nutraceuticals.

Course Content:

UNIT I
WHO Guidelines for the assessment of Herbal Medicine and Cosmetics – introduction – standardization involving ash and extractives values – foreign matter – volatile matter – moisture content determination – evaluation – classification of evaluation methods of herbal medicine and cosmetics.

UNIT II

Basic principles involved in the alternative system of medicine viz – Ayurveda –Siddha – Unani and Homeopathy - Preparation and standardization of Ayurvedic formulations – Aristas –Asawas –Ghutika – Churna –Leha and Bhasma.

UNIT III

Plant Toxins and adverse drug reactions – Natural allergens –Hallucinogens- Teratogens - Industrial production and pharmaceutical application of phytoconstituents such as – Sennosides - Cardiac glycosides - Vinca alkaloids - Quinoline alkaloids – Menthol - Citric acid – Podophyllotoxin – Diosgenin - Solasodine, and Tropane alkaloids.

UNIT IV

Plant tissue culture - Historical development- nutritional requirements - growth and their maintenance –applications of plant tissue culture and types of cultures related to cell suspension culture –callus culture –hairy root culture and protoplast culture.

UNIT V

Enzyme Biotechnology - Introduction- general methods of isolation - purification and application of immobilized enzymes – Biological sources –methods of preparation –chemical nature and uses of - Papain-Pepsin-Trypsin-Pancreatin–Asparaginase -urokinase – Herbal-Drug interaction-Edible Vaccine.

ADVANCED PHARMACOGNOSY LABORATORY – II 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The department is to acquaint the students with the basic knowledge of the natural products.
- Students engaged in pharmacy and in other health professionals should know the role of natural products in discovery of drugs.
- The students are given sufficient knowledge to be able to describe morphology and histology of different plant organs.
- To identify drugs in the whole state and in powdered condition with suitable examples of medicinal plants.
- To learn and understand the techniques involved in the herbal drug-cosmetic preparation and their Standardization.
- To learn their use and application in eradicating ailments.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Prepare and standardize the Herbal medicine.
2. Prepare and standardize the Herbal cosmetics.
3. Perform the Ayurvedic formulation leghya
4. Demonstrate the plant tissue culture
5. Extract the volatile oils from natural sources.
6. Isolate the plant enzymes.

Course Content:

1. Preparation and standardization of Herbal medicine
   - Turmeric
   - Garlic
2. Preparation and standardization of Herbal cosmetics
   - Shampoos
   - Creams
   - Lipsticks
3. Preparation and standardization of Ayurvedic formulation leghya
4. Demonstration experiment on plant tissue culture
5. Extraction of volatile oils

- Menthol oil
- Coriander oil
- Fennel oil

6. Isolation of a plant enzyme
    - Papain
    - Pepsin

MEDICINAL CHEMISTRY- IV **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Understand the importance of drug design and understand the different modern techniques of drug design.
6. Know the metabolism- adverse effect and therapeutic value of drugs.

Course Content:

UNIT I

Non Steroidal Anti-inflammatory Drugs & antigout - Anti-inflammatory agents: Sodium salicylate- Aspirin- Salsalate*- Mefenamic acid Meclofenamate sodium- Indomethacin*- Sulindac- Tolmetin sodium- Zomepriac sodium- Diclofenac sodium- Ketorolac- Ibuprofen*- Naproxen*- Piroxicam Phenacetin-Acetaminophen- Antipyrine- Aminopyrine- Phenylbutazone* and Oxyphenbutazone. **Antiviral agents-**Types of virus- stages of viral infection- targets for prevention of viral infections.Amantadine hydrochloride- Rimantadine hydrochloride- Idoxuridine trifluoride- Acyclovir*- Gancyclovir- Zidovudine- Didanosine- Zalcitabine- Lamivudine- Ribavirin- Saquinavir- Indinavir and Ritonavir.

UNIT II

Anti-neoplastic agents: - Alkylating agents- Meclorethamine*- Cyclophosphamide- Melphalan- Chlorambucil- Busulfan- Thiotepa-**Antimetabolites-** Mercaptopurine*- Thioguanine- Fluorouracil- Floxuridine- Cytarabine- Methotrexate*- Azathioprine-**Antibiotics-** Dactinomycin- Daunorubicin- hydrochloride- Doxorubicin hydrochloride- Bleomycin-**Plant products** Etoposide- Vinblastin sulphate- Vincristin sulphate-**Miscellaneous-** Cisplatin and Mitotane.

UNIT III

Sulphonamides and Sulphones - Historical development- chemistry- classification and SAR of Sulfonamides-Sulphamethizole- Sulfisoxazole- Sulphamethizine- Sulfacetamide Sodium*- Sulphapyridine-Sulfamethoxaole*- Sulphadiazine- Mixed Sulfonamides- Mefenide Acetate- Silver Sulfadiazine- Sulfasalazine-**Folate reductase inhibitors-**Trimethoprim*- Cotrimoxazole.- **Sulfones:** Dapsone*-**Sex hormones-Androgens- t**estosterone-**Estrogens-** Esterodiol- Estrone- Estriol- Diethyl Stilbestrol-**Progesterone and Oral contraceptives.**

UNIT IV

Antihistaminic agents - Histamine- receptors and their distribution in the human body-**H1 – antagonists-Amino alkyl ethers-**Diphenhydramine*- Dimenhydrinate- Doxylamine- **Ethylene diamines-**Tripelennamine- Thonzylamine-**Piperazine derivatives-**Meclizine- Buclizine- Chlorcyclizine- Cetirizine-**Propylamine derivatives:** Chlorpheniramine*- Pheniramine- **Tricyclic derivatives-** Promethazine*- Trimeprazine- Phenidamine- Cyproheptadine- Azatidine- **Second generation non sedating-** Astemizole- Loratadine- Cetirizine- Acrivastine-**H2- antagonists-** Development of selective H2 antagonists - Cimetidine*- Famotidine- Ranitidine- **Gastric Proton pump inhibitors-**Omeprazole and Lansoprazole**.**

UNIT V

Prostaglandins and other eicosanoids - History and discovery; eicosanoid biosynthesis; drug action mediated by eicosanoids; design of eicosanoid drugs; eicosanoids approved for human clinical use-**Narcotic analgesic- Morphine and related drugs-** SAR of Morphine analogues- Morphine sulphate- Codeine phosphate- Hydromorphone hydrochloride- Meperidine hydrochloride*- Alphaprodine-hydrochloride- Anilerdine hydrochloride- Diphenoxylate hydrochloride- Loperamide hydrochloride- Fentanyl citrate*- Methadone hydrochloride*- Propoxyphene hydrochloride- Pentazocine- Levorphanol tartarate- **Narcotic antagonists-** Nalorphine hydrochloride- Levallorphan tartarate and Naloxone hydrochloride-**Anti-tussives-** Noscapine- Dextromethorphan hydrobromide and Benzonatate- Carbetapentane.

MEDICINAL CHEMISTRY LABORATORY– IV **3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Perform assay of medicinal compounds.

Course Content:

I. Assay of medicinal compounds (5 compounds).

II. Monograph analysis of selected drugs from course content. (2 compounds).

III. Preparation of medicinally important compounds or intermediates required for synthesis of drugs. (5 compounds).

PHARMACOLOGY - IV **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is intended to impart the fundamental knowledge on various aspects (classification- mechanism of action- therapeutic effects- clinical uses- side effects and contraindications) of drugs used in systemic diseases as well as infectious diseases.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- In addition- emphasizes on the basic concepts of bioassays and principles of toxicology.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes:

On successful completion of the course the student will

1. Understand the mechanism of drug action and its relevance in the treatment of different diseases.
2. Comprehend the principles of toxicology and treatment of various poisonings.
3. Locate and isolate different organs/tissues from the laboratory animals used in pharmacological experiments.
4. Demonstrate the various receptor actions using isolated tissue preparation.
5. Appreciate correlation of pharmacology with related medical sciences.
6. Enlight the Pharmacology of Drugs acting on the Gastrointestinal Tract.

Course Content:

UNIT I

Chemotherapy - General Principles of Chemotherapy - Sulfonamides and co-trimoxazole – Antibiotics – Penicillins - Cephalosporins – Chloramphenicol – Erythromycin - Quinolones and Fluoroquinolins - tetracycline and aminoglycosides.

UNIT II

Chemotherapy of tuberculosis – leprosy - fungal diseases - viral diseases-antiprotozoal drugs – anthelminitics - urinary tract infections and sexuallytransmitted diseases.

UNIT III

Histamine - 5-HT and their antagonists – Prostaglandins - Thromboxanes and Leukotrienes – Pentagastrin – Cholecystokinin – Angiotensin - Bradykinin and Substance P-Analgesic - anti-pyretic - anti-inflammatory and anti-gout drugs.

UNIT IV

Definition of poison - general principles of treatment of poisoning - Heavy metals and heavy metal antagonists - Definition for acute - sub acute and chronic toxicity – genotoxicity – **Carcinogenicity** - teratogenicity and mutagenicity studies.

UNIT V

Chronopharmacology - Definition of rhythm and cycles - Biological clock andtheir significance leading to chronotherapy.

PHARMACOLOGY –IV LABORATORY **3H** **2C**

Instruction hours/ week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes:

On successful completion of the course the student will

1. Explain about in-vitro pharmacology and prepare the Physiological salt solutions.
2. Estimate the bioavailabilityparameters viz AUC,Tmax ,Kelfrom blood sample.
3. Demonstratethe CRC of acetylcholineby using suitable muscle preparations.
4. Estimate the bioavailabilityparameters viz AUC,Tmax ,Kelfrom urine sample.
5. Record the CRC of Nor adrenalineon rat anococcygeus muscle.
6. Record the CRC of 5HT on rat fundus preparation.

Course Content:

1. Record the agonistic and antagonistic response by using suitable muscle preparation (2 experiments).

2. Estimate the strength of the test sample of agonist/ drug (e.g. Acetylcholine- Histamine- 5HT- Oxytocin etc) using a suitable isolated muscle preparation employing matching bioassay- interpolation (2 experiments).
3. Bioassay- three point bioassay and four point bioassay (2 experiments).
4. Alternate methods for animal experimentation for both efficacy and toxicity studies (2 experiments).
5. Estimation of serum biochemical parameters by using semi- auto analyzer (2 experiments).

MODERN METHODS OF PHARMACEUTICAL ANALYSIS – II 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart a fundamental knowledge on the testing of drugs by various instrumental methods of analysis.
- This focuses on various modern instruments that are used for testing the purity of drugs in various dosage forms.
- course also gives knowledge about modern instruments that are used for drug testing like NMR- IR- Mass- HPLC- HPTLC etc.
- This course deals with the fundamentals of analytical chemistry and principles of electro chemical analysis of drugs.
- To know the principle and applications of instrumentation
- To understand the components and working of various analytical instruments.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the principle and applications of instrumentation.
2. Understand the components and working of various analytical instruments.
3. Understand the different modern techniques of drug analysis.
4. Appreciate the advantages of instrumental methods of drug analysis.
5. Understand the principles of volumetric and electro chemical analysis.
6. Carry out various volumetric and electro chemical titrations.
7. Develop analytical skills.

Course Content:

UNIT I

X- Ray diffraction studies – Introduction - diffraction methods and applications - **Electro chemical methods of analysis - Condutometry** – Introduction - Conductivity cell - Conductometric titrations –applications **-Potentiometry** – Electrochemical cell - construction and working of referenceand indicator electrodes - methods to determine end point of titration.

UNIT II

Thermal Methods of Analysis – Theory - Instrumentation and applications of Differential Scanning Calorimetry (DSC).

UNIT III

Chromatography-Adsorption and partition column chromatography – Methodology – advantages - disadvantages and applications **- Thin layer chromatography -** Introduction – Principle – Methodology - Stahl's triangle - Rf values – advantages - disadvantages and applications - **High Performance Thin Layer Chromatography (HPTLC) –** Introduction – instrumentation – advantages – application - **Paper chromatography** – Introduction – Principle – Methodology - developmentaltechniques – advantages – disadvantages – applications - **Ion exchange chromatography** – Introduction – Definition – classification - ion exchange resins – properties - mechanism of ion exchange process - Factors affecting ion exchange – methodology - applications.

UNIT IV

High Performance Liquid Chromatography (HPLC) – Introduction – theory – instrumentation - advantages and applications - Introduction to UPLC and supercritical fluid chromatography **- Gas Chromatography –** Introduction – theory – instrumentation – derivatization - temperature programming – advantages - disadvantages and applications - **Electrophoresis -** Principle of separation – classification - equipment for movingboundary electrophoresis – gel - paper electrophoresis and applications - **Gel Filtration Chromatography** – Introduction – technique - factors affecting - Applications.

UNIT V

Quality assurance- Calibration and validation of following Instruments - UV-Visible spectrophotometer - pH meter - HPLC- Electronic balance - Conductivity meter - IR spectrophotometer – Fluorimeter - Flame Photometer **- Introduction to analytical method development.**

MODERN METHODS OF PHARMACEUTICAL ANALYSIS LABORATORY – II **3H 3C**

Instruction hours/ week: L: 0 T: 3 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart a fundamental knowledge on the testing of drugs by various instrumental methods of analysis.
- This focuses on various modern instruments that are used for testing the purity of drugs in various dosage forms.
- course also gives knowledge about modern instruments that are used for drug testing like NMR- IR- Mass- HPLC- HPTLC etc.
- This course deals with the fundamentals of analytical chemistry and principles of electro chemical analysis of drugs.
- To know the principle and applications of instrumentation
- To understand the components and working of various analytical instruments.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Know the principle and applications of instrumentation
2. Understand the components and working of various analytical instruments.
3. Understand the different modern techniques of drug analysis.
4. Appreciate the advantages of instrumental methods of drug analysis.
5. Understand the principles of volumetric and electro chemical analysis.
6. Carry out various volumetric and electro chemical titrations.
7. Develop analytical skills.

Course Content:

1 Chromatographic analysis of some pharmaceutical products (2 experiments).
2 Exercises involving
   - fluorimetry(2 experiments)

- conductometry(2 experiments)
- potentiometry(2 experiments)
- polarography
- amperometric titrations

3 Infra Red spectra peak identification for different functional groups.

PROJECT WORK & VIVA VOICE **5H** **3C**

Instruction hours/ week : L: 0 T:0 P: 5 Marks: Internal: 120 External: 180 Total : 300

Course Objectives:

- To work in team and undertake a project in the area of Pharmacy.
- To apply concepts of pharmaceutical sciences for executing the project.
- To apply appropriate research methodology while formulating a project.
- To define specifications, synthesize, analyse, develop and evaluate a project.
- To present, exhibit and document the project work.
- To develop a project report.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Work in team and undertake a project in the area of Pharmacy.
2. Apply concepts of pharmaceutical sciences for executing the project.
3. Apply appropriate research methodology while formulating a project.
4. Define specifications, synthesize, analyse, develop and evaluate a project.
5. Present, exhibit and document the project work .
6. Develop a project report.

All the students shall undertake a project under the supervision of a teacher and submit a report. The area of the project shall directly relate any one of the elective subject opted by the student in semester VIII. The project shall be carried out in group not exceeding 5 in number. The project report shall be submitted in triplicate (typed & bound copy not less than 25 pages). The internal and external examiner appointed by the University shall evaluate the project at the time of the Practical examinations of other semester(s). Students shall be evaluated in groups for four hours (i.e., about half an hour for a group of five students).

16PYU8OE01 **SEMESTER-VIII**

MOLECULAR MODELLING **3H** **3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- To learn various force fields, simulation methods in molecular modeling.
- To have better understanding on molecular docking and ligand based drug design methods.
- To recognize the benefits of simulation model studies.
- To have knowledge of quantum mechanics and molecular mechanics & dynamics.
- To understand the docking and ligand based drug design methods.
- To understand and be conversant with the basic principles of molecular modeling.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Learn various force fields, simulation methods in molecular modeling.
2. Have better understanding on molecular docking and ligand based drug design methods.
3. Recognize the benefits of simulation model studies.
4. Have knowledge of quantum mechanics and molecular mechanics & dynamics.
5. Understand the docking and ligand based drug design methods.
6. Understand and be conversant with the basic principles of molecular modeling.

Course Content:

UNIT-I
MOLECULAR MODELLING - Introduction to concept of molecular modeling - molecular structure and internal energy - applications of molecular graphics - coordinate system - potential energy surfaces - discussion of local and global energy minima.

UNIT-II
QUANTUM MECHANICS - Introduction to the computational quantum mechanics - one electron atom -ply electronic atoms and molecules - Hartree Fock equations - calculating molecular properties using abs initio and semi empirical methods.

UNIT-III

MOLECULAR MECHANICS - Molecular mechanics - general features of molecular mechanics force field, bond stretching - angle bending - torsional terms - non – bonded interactions - force field parameterization and transferability - energy minimization - derivative and non – derivative methods - applications of energy minimization.

UNIT-IV

MOLECULAR DYNAMCS - Molecular dynamics simulation methods - molecular dynamics using simple models - molecular dynamics with continuous potential - setting up and running a molecular dynamic simulation - constraint dynamics - Monte Carlo simulation - Monte Carlo simulation of molecules.

UNIT-V

MODELLING AND DRUG DESIGN - Macromolecular modeling, design of ligands for known macro molecular target sites - Drug- receptor interaction - classical SAR /QSAR studies and their implications to the 3 D modeler - 2-D and 3-D database searching - pharmacophore identification and novel drug design - molecular docking - Structure-based drug design for all classes of targets.

MOLECULAR BIOLOGY **3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To have strong understanding of classical genetics,
- To understand the structure of nucleic acids, transcription, translation and gene regulation.
- To understand the types of RNA, gene coding, mutation and repair of DNA.
- To understand the structure of DNA and differentiate the process of replication in prokaryotes and eukaryotes.
- To understand the structure of nucleic acids and DNA replication.
- To understand about transcription in prokaryotes and eukaryotes.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Have strong understanding of classical genetics,
2. Understand the structure of nucleic acids, transcription, translation and gene regulation.
3. Understand the types of RNA, gene coding, mutation and repair of DNA.
4. Understand the structure of DNA and differentiate the process of replication in prokaryotes and eukaryotes.
5. Understand the structure of nucleic acids and DNA replication.
6. Understand about transcription in prokaryotes and eukaryotes.

Course Content:

UNIT-I

CLASSICAL GENETICS - Mendelian genetics - linkage - crossing over - classical experiments – Hershey and Chase - Avery McLeod& McCart - Bacterial conjugation - transduction and transformation - Conformation of DNA and RNA.

UNIT- II

STRUCTURE OF NUCLEIC ACIDS AND DNA REPLICATION - Types of RNA - Replication in prokaryotes - D-loop and rolling circle mode of replication - replication of linear viral DNA. Organization of eukaryotic chromosome – cot value, replication of telomeres in eukaryotes.

UNIT-III

TRANSCRIPTION - In prokaryotes and eukaryotes - features of promoters and enhancers - transcription factors - nuclear RNA splicing - regulation of transcription - prokaryote and eukaryote

UNIT-IV

TRANSLATION - Elucidation of genetic code - basic machinery of translation and its mechanism- Post translational modifications - codon usage - suppressor mutation - regulation of translation - prokaryote and eukaryote.

UNIT-V

REGULATION OF GENE EXPRESSION - Lac and trp operon - phage life cycle - mutation and repair of DNA - regulation of gene expression in eukaryotes .

BIOINFORMATICS 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis.
- To describe the history, scope and importance of Bioinformatics and role of internet in Bioinformatics.
- To gain knowledge about various Biological databases that provide information about nucleic acids and protein.
- To understand the structural organisation, structural properties and various techniques employed in the structure determination of Biological macromolecules – DNA, Protein and Carbohydrates
- To get exposed to computational methods, tools and algorithms employed for Biological Data Interpretation
- To gain knowledge on various techniques, algorithms and tools employed in DNA sequencing, assembly and its applications in Next Generation Sequencing.

Course Outcomes (CO's):

On successful completion of the course the student will.

1. Introduction to the basics of sequence alignment and analysis.
2. Overview about biological macromolecular structures and structure prediction methods.
3. To get exposure with the use of database tools.
4. To understand in depth about protein structure prediction.
5. To understand the alignment types like local alignment global alignment.
6. Explain about different types of protein and other organism specific databases.

Course Content:

UNIT-I

INTRODUCTION TO BIOLOGICAL DATABASES – Introduction - types - Biological databases - Information Retrieval from Biological Databases - for example Nucleic acid databases – Genbank - Protein Databases – Swissprot - Sequence Formats - Sequence storage - Sequence submission to sequence Database.

UNIT-II

ANALYZING DNA, RNA AND PROTEIN SEQUENCES IN DATABASES - Database technology – Genbank - organisms in Genbank - genomic DNA databases - cDNA databases corresponding to expressed genes - Introduction to phylogenetics- distance based trees – UPGMA - neighbour joining trees - Expressed sequence tags - Sequence tagged sites - Genome survey sequences - High throughput genomic sequence.

UNIT-III

PAIRWISE SEQUENCE ALIGNMENT -Alignment Types - Local alignment - Global alignment - scoring matrices- PAM – BLOSUM – Gaps -Dot Plots - Dynamic programming Approach - Needleman and Wunsch Algorithm - Smith andwaterman Algorithm - Heuristic Approach – BLAST – FASTA.

UNIT-IV

MULTIPLE SEQUENCE ALIGNMENT - Exhaustive Algorithm**-** Divide and Conquer alignment **-** Heuristic Algorithm - Progressive Alignment- ClustalW – Tcoffee - Iterative Alignment – PRRN - Block based method- Match-Box - DIALIGN2.

UNIT-V

INTRODUCTION TO PROTEIN STRUCTURE PREDICTION - Secondary structure prediction for Globular and Trans-membrane proteins - 3D Protein structure file **-** format – PDB – mmCIF – MMDB - Methods of Tertiary structure prediction - Threading and fold **-** recognition methods - Homology modeling - Fold recognition databases.

BIOPROCESS ENGINEERING **3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours

Course Objectives:

- To help the students to familiarize with various reactors used in bioprocess engineering
- To learn analysis of STR and other configurations.
- To understand WHO Guidelines on good manufacturing Practices.
- To learn about the scale up of bioreactors.
- To get clear understanding of the fermentation processes.
- To get exposure for the commercial production of bioproducts.

Course Outcomes (CO's):
On successful completion of the course the student will

1. Help the students to familiarize with various reactors used in bioprocess engineering
2. Learn analysis of STR and other configurations.
3. Understand WHO Guidelines on good manufacturing Practices.
4. Learn about the scale up of bioreactors.
5. Get clear understanding of the fermentation processes.
6. Get exposure for the commercial production of bioproducts.

Course Content:

UNIT-I
ANALYSIS OF STR - Stirred tank reactor - non-ideality - RTD and stability analysis - tanks inseries and dispersion models – application to design of continuous sterilizer.

UNIT-II
ANALYSIS OF OTHER CONFIGURATIONS - Analysis of other configurations - Packed bed reactor -airlift reactor - fluidized bed reactor bubble column reactors – non- ideality - RTD and stability analysis.

UNIT-III

BIOREACTOR SCALE – UP - Regime analysis of bioreactor processes, oxygen mass transfer in bioreactors - microbial oxygen demands - methods for the determination of mass transfer coefficients - mass transfer correlations - Scale up criteria for bioreactors based on oxygen transfer - power consumption and impeller tip speed.

UNIT-IV

MODELLING AND SIMULATION OF BIOPROCESSES - Study of structured models for analysis of various - bioprocess – compartmental models - models of cellular energetic and metabolism - single cell models - plasmid replication and plasmid stability model - Dynamic simulation of batch - fed batch - steady and transient culture metabolism.

UNIT-V

BIOREACTOR CONSIDERATION IN ENZYME SYSTEMS - Analysis of film and pore diffusion effects on kinetics of immobilized enzyme reactions - formulation of dimensionless groups and calculation of effectiveness factors - Design of immobilized enzyme reactors – packed bed - fluidized bed and membrane reactors.

16PYU8OE05 **SEMESTER-VIII**

COMPUTER AIDED DESIGN **3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the computer basics
- To provide an overview of how computers are being used in mechanical component design
- To learn the statistical method of analysis that can apply in the development and use of therapeutic drug.
- Explain the methodology involved in Design and discovery of lead molecules
- Identify the Objectives: of QSAR , molecular modeling and virtual screening methods
- Discuss the concepts of QSAR and docking

Course Outcomes (CO's):

On successful completion of the course the student will

1. Able to organize, summarize, and display quantitative data.
2. Comfortable with statistical methods for calculating summary estimates, measures of variability, and confidence intervals.
3. Know about parametric design and object representation and geometric modeling.
4. Apply the strategies of drug design to develop new molecules with therapeutic activity
5. Design new drugs using informatics and databases
6. Understand significance and concept of advanced instrumentation

Course Content:

UNIT I

OVERVIEW OF CAD SYSTEMS

Conventional and computer aided design processes-advantages and disadvantages - Subsystems of CAD-CAD hardware and software - analytical and graphics packages - CAD workstations - Networking of CAD systems.

UNIT II

INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS

Generative - cognitive and image processing graphics - Static and dynamic data graphics - Transport of graphics data - Graphic standards - Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts - Graphical input technique - Geometric transpformations -Visual Realism - Computer animation - customizing graphics software.

UNIT III

Geometric Modeling

Wireframe – surface - NURBS and solid modeling- applications and advantages - Creating primitive solids - sweeping solids - boolean operations - Extracting entities from a solid - Filleting of edges of solids - Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV

PARAMETRIC DESIGN AND OBJECT REPRESENTATION

Types of co-ordinate systems - Parametric design - definition and advantages - Parametric representation of analytic and synthetic curves - Parametric representation of surfaces and solids - manipulations.

UNIT V

PRODUCT DESIGN AND DEVELOPMENT

Automated 2D drafting - basics, mechanical assembly - bill of materials generation - Mass property calculations.

TEXT BOOKS

S.No	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Vera B Anand	Computer Graphics and Geometric Modeling for Engineers	John Wiley & Sons, New York	2000
2	Radhakrishnan P and Subramanyan S	CAD/CAM/CIM	New Age International Pvt. Ltd	2004
