Kinetic Theory of Gases: Derivation of Maxwell's law of distribution of velocities and its experimental verification, Mean free path (Zeroth Order), Transport Phenomena: Viscosity, Conduction and Diffusion (for vertical case), Law of equipartition of energy (no derivation) and its applications to specific heat of gases; mono-atomic and diatomic gases.

UNIT - IV

Statistical Mechanics

Introduction – Liouville's theorem – Measurement of macro-properties of a thermodynamic system – Ensemble – Microcanonical and Canonical ensembles – Entropy of an ideal gas – microcanonical ensemble – Application of Gibbs canonical ensembles – Fluctuations in thermodynamic variables – Stirling's approximation or Stirling's formula – Relation between entropy and probability – Boltzman theorem.

UNIT – V

Statistical Mechanics: Phase space, Macrostate Thermodynamic probability, Maxwell-Boltzmann Quantum statistics, Fermi-Dirac distribution law, comparison of three statistics. and Microstate, Entropy and law, distribution of velocity, Bose-Einstein distribution law.

Suggested Books:

1. Thermal Physics, S. Garg, R. Bansal and C. Ghosh, 1993, Tata McGraw-Hill. A Treatise on Heat, Meghnad Saha, and B.N. Srivastava, 1969, Indian Press.
2. Heat and Thermodynamics, M.W.Zemasky and R. Dittman, 1981, McGraw Hill Thermodynamics, Kinetic theory & Statistical thermodynamics, F.W.Sears and G.L.Salinger. 1988, Narosa
3. University Physics, Ronald Lane Reese, 2003, Thomson Brooks/Cole.
4. Thermal Physics, A. Kumar and S.P. Taneja, 2014, R. chand Publications.
5. https://study.com/academy/lesson/introduction-to-thermal-physics.html.
6. https://farside.ph.utexas.edu/teaching/sm1/Thermal.pdf

SEMESTER – III **L T P C**

16PHU302 PHYSICS OF DEVICES AND COMMUNICATION **4 - - 4**

Course Objective

- To know about power semiconductor devices frequently used in industries.
- To have an idea about the principle and operation of circuits using semiconductor devices to control various operations.
- To acquaint with industrial and domestic applications of power semiconductor devices.
- To understand the concepts of electronic devices and their communication systems.
- To develop their knowledge on digital communication technology.
- To design the electronic circuits and their block diagrams with number of different electronic components.

Course outcomes

After successful completion of the course, the student is expected to

1. Understand the construction and working of different semiconductor devices.
2. Study about Basics electronics Technology
3. Develop explicit problem-solving strategies that emphasize qualitative analysis steps to describe and clarify the problem.
4. Develop knowledge on design trade-offs in various digital electronic families with a view towards reduced power consumption
5. Realize the importance of different electronic communication systems.
6. Design power electronic circuit for real time application like rectifier and convertor etc.

Unit 1

Devices: Characteristic and small signal equivalent circuits of UJT and JFET. Metal semiconductor Junction. Metal oxide semiconductor (MOS) device. Ideal MOS and Flat Band voltage. SiO2-Si based MOS. MOSFET– their frequency limits. Enhancement and Depletion Mode MOSFETS, CMOS. Charge coupled devices. Tunnel diode.

Unit II

Power supply and Filters: Block Diagram of a Power Supply, Qualitative idea of C and L Filters. IC Regulators, Line and load regulation, Short circuit protection. Active and Passive Filters, Low Pass, High Pass, Band Pass and band Reject Filters.
Multivibrators: Astable and Monostable Multivibrators using transistors.

Unit III

Phase Locked Loop(PLL): Basic Principles, Phase detector(XOR & edge triggered), Voltage Controlled Oscillator (Basics, varactor). Loop Filter– Function, Loop Filter Circuits, transient response, lock and capture. Basic idea of PLL IC (565 or 4046).

Processing of Devices: Basic process flow for IC fabrication, Electronic grade silicon. Crystal plane and orientation. Defects in the lattice. Oxide layer. Oxidation Technique for Si. Metallization technique. Positive and Negative Masks. Optical lithography. Electron lithography. Feature size control and wet anisotropic etching. Lift off Technique. Diffusion and implantation.

Unit IV

Digital Data Communication Standards:

Serial Communications: RS232, Handshaking, Implementation of RS232 on PC.

Universal Serial Bus (USB): USB standards, Types and elements of USB transfers. Devices (Basic idea of UART). Parallel Communications: General Purpose Interface Bus (GPIB), GPIB signals and lines, Handshaking and interface management, Implementation of a GPIB on a PC. Basic idea of sending data through a COM port.

Unit V

Introduction to CRO: Block Diagram of CRO. Applications of Oscilloscope: (1) Study of Waveform, (2) Measurement of Voltage, Current, Frequency and Phase Difference. Power Supply: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers Calculation of Ripple Factor and Rectification Efficiency, Basic idea about capacitor filter, Zener Diode and Voltage Regulation Timer IC: IC 555 Pin diagram and its application as Astable and Monostable Multivibrator.

Suggested Books:

1. Physics of Semiconductor Devices, S.M. Sze & K.K. Ng, 3rd Ed.2008, John Wiley & Sons
2. Electronic devices and integrated circuits, A.K. Singh, 2011, PHI Learning Pvt. Ltd.
3. Op-Amps & Linear Integrated Circuits, R.A.Gayakwad,4 Ed. 2000,PHI Learning Pvt. Ltd
4. Electronic Devices and Circuits, A. Mottershead, 1998, PHI Learning Pvt. Ltd.
5. Electronic Communication systems, G. Kennedy, 1999, Tata McGraw Hill.
6. Introduction to Measurements & Instrumentation, A.K. Ghosh, 3rd Ed., 2009, PHI Learning Pvt. Ltd.
7. Semiconductor Physics and Devices, D.A. Neamen, 2011, 4th Edition, McGraw Hill
8. PC based instrumentation; Concepts & Practice, N.Mathivanan, 2007, Prentice-Hall of India.

10. https://www.electrical4u.com/

	SEMESTER III	L T P C
16PHU303	ELECTROMAGNETIC THEORY	4 - - 4

Course Objective

The aim and objective of the course

- The aim of this course is to provide the students with the fundamental principles of electrical energy (electro- magnetism).
- It is very important to understand the propagation of waves in different media, its transmission and reception.
- To understand the relation between electric and magnetic fields.
- To gain the knowledge on electromagnetic wave propagations.
- To describe simple models for electromagnetic interaction with media
- To experience the wave propagation in different media.

Course Outcome

After successful completion of the course, the student is expected to

1. Calculate electric and magnetic fields from stationary and dynamic charge and current distributions.
2. Use electromagnetic wave theory and principles in a wide range of applications.
3. Solve such problems in simple geometries using separation of variables and the method of images.
4. Define and derive expressions for the energy both for the electrostatic and magnetostatic fields.
5. Gain confidence in their ability to apply mathematical methods to understand electromagnetic problems to real-life situations.
6. Solve simple electrostatic boundary problems.
7. Describe simple models for electromagnetic interaction with media
8. Choose adequate models and solution methods for specific problems.

UNIT I

Maxwell Equations: Review of Maxwell's equations. Displacement Current. Vector and Scalar Potentials. Gauge Transformations: Lorentz and Coulomb Gauge. Boundary Conditions at Interface between Different Media. Wave Equations. Plane Waves in Dielectric Media. Poynting Theorem and Poynting Vector. Electromagnetic (EM) Energy Density. Physical Concept of Electromagnetic Field Energy Density, Momentum Density and Angular Momentum Density.

UNIT II

EM Wave Propagation in Unbounded Media: Plane EM waves through vacuum and isotropic dielectric medium, transverse nature of plane EM waves, refractive index and dielectric constant, wave impedance. Propagation through conducting media, relaxation time, skin depth. Wave propagation through dilute plasma, electrical conductivity of ionized gases, plasma frequency, refractive index, skin depth, application to propagation through ionosphere.

UNIT III

EM Wave in Bounded Media: Boundary conditions at a plane interface between two media. Reflection & Refraction of plane waves at plane interface between two dielectric media-Laws of Reflection & Refraction. Fresnel's Formulae for perpendicular & parallel polarization cases, Brewster's law. Reflection & Transmission coefficients. Total internal reflection, evanescent waves. Metallic reflection (normal Incidence).

UNIT IV

Polarization of Electromagnetic Waves: Description of Linear, Circular and Elliptical Polarization. Propagation of E.M. Waves in Anisotropic Media. Symmetric Nature of Dielectric Tensor. Fresnel's Formula. Uniaxial and Biaxial Crystals. Light Propagation in Uniaxial Crystal. Double Refraction. Polarization by Double Refraction. Nicol Prism. Ordinary & extraordinary refractive indices. Production & detection of Plane, Circularly and Elliptically Polarized Light. Phase Retardation Plates: Quarter-Wave and Half-Wave Plates. Babinet Compensator and its Uses. Analysis of Polarized Light

UNIT V

Wave Guides: Planar optical wave guides. Planar dielectric wave guide. Condition of continuity at interface. Phase shift on total reflection. Eigenvalue equations. Phase and group velocity of guided waves. Field energy and Power transmission.

Optical Fibres:- Numerical Aperture. Step and Graded Indices (Definitions Only). Single and Multiple Mode Fibres (Concept and Definition Only).

Reference Books:

SEMESTER – III

16PHU304A RENEWABLE ENERGY AND ENERGY HARVESTING (SEC 1 A)

L	T	P	C
3	-	-	3

Course Objective

- To understand the various forms of conventional energy resources.
- To learn the present energy scenario and the need for energy conservation
- To explain the concept of various forms of renewable energy
- Give outline division aspects and utilization of renewable energy sources for both domestics and industrial application.
- To provide the awareness and need of renewable energy.
- To describe the uses, needs and applications of various renewable energy sources.

Course Outcome

After successful completion of the course, the student is expected to

1. Describe the environmental aspects of non-conventional energy resources. In Comparison with various conventional energy systems, their prospects and limitations.
2. Understand the concept of hydro energy resources and their classification.
3. Describe the use of solar energy and the various components used in the energy production with respect to applications like - heating, cooling, desalination, power generation, drying, cooking etc.
4. Appreciate the need of Wind Energy and the various components used in energy generation and know the classifications.
5. Understand the concept of Biomass energy resources and their classification, types of biogas Plants- applications.
6. Compare Solar, Wind and bio energy systems, their prospects, Advantages and limitations.

UNIT I

Fossil fuels and Alternate Sources of energy: Fossil fuels and nuclear energy, their limitation, need of renewable energy, non-conventional energy sources. An overview of developments in Offshore Wind Energy, Tidal Energy, Wave energy systems, solar energy, biomass, biochemical conversion, biogas generation,

UNIT II

Solar energy: Solar energy, its importance, storage of solar energy, solar pond, non convective solar pond, applications of solar pond and solar energy, solar water heater, flat plate collector, solar distillation, solar cooker, solar green houses, solar cell, absorption air conditioning. Need and characteristics of photovoltaic (PV) systems, PV models and equivalent circuits, and sun tracking systems.

UNIT III

Wind Energy harvesting: Fundamentals of Wind energy, Wind Turbines and different electrical machines in wind turbines, Power electronic interfaces, and grid interconnection topologies. Ocean Energy: Ocean Energy Potential against Wind and Solar, Wave Characteristics and Statistics, Wave Energy Devices.

Tide characteristics and Statistics, Tide Energy Technologies, Ocean Thermal Energy, Osmotic Power, Ocean Bio-mass.

UNIT - IV

Hydro Energy: Hydropower resources, hydropower technologies, environmental impact of hydro power sources. Piezoelectric Energy harvesting: Introduction, Physics and characteristics of piezoelectric effect, materials and mathematical description of piezoelectricity, Piezoelectric parameters and modeling piezoelectric generators, Piezoelectric energy harvesting applications, Human power.

UNIT - V

Electromagnetic Energy Harvesting: Linear generators, physics mathematical models, recent applications, Geothermal Energy: Geothermal Resources, Geothermal Technologies. Carbon captured technologies, cell, batteries, power consumption, Environmental issues and Renewable sources of energy, sustainability.

Suggested Books:

1. Non-conventional energy sources, B.H. Khan, McGraw Hill
2. Solar energy, Suhas P Sukhative, Tata McGraw - Hill Publishing Company Ltd.
3. Renewable Energy, Power for a sustainable future, Godfrey Boyle, 3rd Edn., 2012, Oxford University Press.
4. Renewable Energy, 3rd Edition,
5. Solar Energy: Resource Assesment Handbook, P Jayakumar, 2009
6. J.Balfour, M.Shaw and S. Jarosek, Photovoltaics, Lawrence J Goodrich (USA).
7. https://www.edfenergy.com/for-home/energywise/renewable-energy-sources
8. https://www.nrdc.org/stories/renewable-energy-clean-facts
9. https://www.nationalgeographic.com/environment/energy/reference/renewable-energy/

SEMESTER – III

16PHU304B	**PHYSICS WORKSHOP SKILL**	**L T P C**
	(SEC 1 B)	**3 - - 3**

Course Objectives:

The objective of this course is

- To enable the students to familiar and experience with various mechanical and electrical tools through hands-on mode.
- To extend their skill on workshop tools and their usages.
- To apply their knowledge on making new materials by using various operating machines.
- To develop their knowledge about household electrical appliances, electric shock, etc.
- To use their knowledge towards industries.
- To think and correlate the physics of engineering materials and their applications.

Course outcome

After successful completion of the course, the student is expected to

1. Acquire knowledge about various types of wiring systems, wiring tools, lighting & wiring accessories, wiring estimation & costing, etc.
2. To get familiarized with the welding process.
3. Understand the concept of machining, forming and welding process.
4. Develop knowledge on Operation of oscilloscope.
5. Acquire knowledge about household electrical appliances, electric shock, etc.
6. To get familiarized with the properties of different materials- metals and non metals

UNIT I

Introduction: Measuring units. conversion to SI and CGS. Familiarization with meter scale, Vernier calliper, Screw gauge and their utility. Measure the dimension of a solid block, volume of cylindrical beaker/glass, diameter of a thin wire, thickness of metal sheet, etc. Use of Sextant to measure height of buildings, mountains, etc.

UNIT II

Mechanical Skill: Concept of workshop practice. Overview of manufacturing methods: casting, foundry, machining, forming and welding. Types of welding joints and welding defects. Common materials used for manufacturing like steel, copper, iron, metal sheets, composites and alloy, wood.

UNIT III

Concept of machine processing, introduction to common machine tools like lathe, shaper, drilling, milling and surface machines. Cutting tools, lubricating oils. Cutting of a metal sheet using blade. Smoothening of cutting edge of sheet using file. Drilling of holes of different diameter in metal sheet and wooden block. Use of bench vice and tools for fitting. Make funnel using metal sheet.

UNIT IV

Electrical and Electronic Skill: Use of Multimeter. Soldering of electrical circuits having discrete components (R, L, C, diode) and ICs on PCB. Operation of oscilloscope. Making regulated power supply. Timer circuit, Electronic switch using transistor and relay.

UNIT V

Introduction to prime movers: Mechanism, gear system, wheel, Fixing of gears with motor axel. Lever mechanism, Lifting of heavy weight using lever. braking systems, pulleys, working principle of power generation systems. Demonstration of pulley experiment.

Suggested Books:

1. A text book in Electrical Technology - B L Theraja – S. Chand and Company.
2. Performance and design of AC machines – M.G. Say, ELBS Edn.
3. Mechanical workshop practice, K.C. John, 2010, PHI Learning Pvt. Ltd.
4. Workshop Processes, Practices and Materials, Bruce J Black 2005, 3rd Edn., Editor Newnes [ISBN: 0750660732]
5. New Engineering Technology, Lawrence Smyth/Liam Hennessy, The Educational Company of Ireland [ISBN: 0861674480]

SEMESTER – III

16PHU311	**THERMAL PHYSICS AND STATISTICAL MECHANICS (PRACTICAL)**	**L T P C**
		- - 4 2

Course Objectives

- The objective of this course is to learn how to apply thermodynamic principles in order to interpret thermodynamic systems and predict their behaviors.
- To determine Stefan's Constant.
- To determine the coefficient of thermal conductivity of Cu by Searle's Apparatus.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.
- To experience the practical difficulties to find the physical constant values.

Course Outcome

After successful completion of the course, the student is expected to

1. Understand the process of thermal conductivity, viscosity and diffusion in gases
2. Able to correlate theory and practicals.
3. Understand the basic thermal properties via experiments.
4. Verify the Newton's law.
5. Analyse the characteristics of Bipolar Junction Transistor
6. Understand the applications of thermal conductance materials.
7. Apply the laws of thermodynamics to real physical systems and processes.
8. Apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.

Any 8 Experiments

1. To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.
2. Measurement of Planck's constant using black body radiation.
3. To determine Stefan's Constant.
4. To determine the coefficient of thermal conductivity of Cu by Searle's Apparatus.
5. To determine the Coefficient of Thermal conductivity of Cu by Angstrom's Method.
6. To determine the coefficient of thermal conductivity of a bad conductor by Lee and Charlton's disc method.

7. To determine the temperature co-efficient of resistance by Platinum resistance thermometer.
8. To study the variation of thermo emf across two junctions of a thermocouple with temperature.
9. To record and analyze the cooling temperature of an hot object as a function of time using a thermocouple and suitable data acquisition system
10. To calibrate Resistance Temperature Device (RTD) using Null Method/Off-Balance Bridge

Suggested Books

1. Advanced Practical Physics for students, B.L. Flint & H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, KitabMahal, New Delhi.
4. A Laboratory Manual of Physics for Undergraduate Classes, D.P.Khandelwal, 1985, Vani Publication.

SEMESTER III

16PHU312	**PHYSICS OF DEVICES AND COMMUNICATION (PRACTICAL)**	**L T P C** **- - 4 2**

Course Objective

- To know about semiconductor devices frequently used in industries.
- To acquaint industrial and domestic applications of semiconductor devices.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To understand operation of diodes, transistors in order to design basic circuits.
- To design, fabricate and test the different electronic circuit.

Course Outcome

After successful completion of the course, the student is expected to

1. By the end of this subject, students should have acquired reasonable proficiency in the analysis and design of basic electronic circuits.
2. Apply the concepts of basic electronic devices to design various circuits.
3. Understand operation of diodes, transistors in order to design basic circuits.
4. Design small and large signal amplifier circuits for various practical applications.
5. The course as a whole outlines some ways of thinking about analog circuits that hopefully will help to develop intuition.
6. Design, fabricate and test small electronic circuit.

Any 8 Experiments

1. To design a power supply using bridge rectifier and study effect of C-filter.
2. To design the active Low pass and High pass filters of given specification.
3. To design the active filter (wide band pass and band reject) of given specification.
4. To study the output and transfer characteristics of a JFET.
5. To design a common source JFET Amplifier and study its frequency response.
6. To study the output characteristics of a MOSFET.
7. To study the characteristics of a UJT and design a simple Relaxation Oscillator.
9. To design an Amplitude Modulator using Transistor.
10. To design PWM, PPM, PAM and Pulse code modulation using ICs.
11. To design an Astable multivibrator of given specifications using transistor.
12. To study a PLL IC (Lock and capture range).
13. To study envelope detector for demodulation of AM signal.
14. Study of ASK and FSK modulator.
15. Glow an LED via USB port of PC.

16. Sense the input voltage at a pin of USB port and subsequently glow the LED onnected with another pin of USB port.

Suggested Books:

1. Physics of Semiconductor Devices, S.M. Sze & K.K. Ng, 3rd Ed.2008, John Wiley & Sons
2. Electronic devices and integrated circuits, A.K. Singh, 2011, PHI Learning Pvt. Ltd.
3. Op-Amps & Linear Integrated Circuits, R.A.Gayakwad,4 Ed. 2000,PHI Learning Pvt. Ltd
4. Electronic Devices and Circuits, A. Mottershead, 1998, PHI Learning Pvt. Ltd.
5. Electronic Communication systems, G. Kennedy, 1999, Tata McGraw Hill.
6. Introduction to Measurements & Instrumentation, A.K. Ghosh, 3rd Ed., 2009, PHI Learning Pvt. Ltd.
7. Semiconductor Physics and Devices, D.A. Neamen, 2011, 4th Edition, McGraw Hill
8. PC based instrumentation; Concepts & Practice, N.Mathivanan, 2007, Prentice-Hall of India.
9. https://www.electronics-tutorials.ws/
10. https://www.electrical4u.com/

	SEMESTER III	L T P C
16PHU313	ELECTROMAGNETIC THEORY (PRACTICAL)	- - 4 2

Course Objective

- The aim of this course is to provide the students by correlating the fundamental principles of electrical energy (electro- magnetism) practically.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To find the value of Boltzman constant.
- To calculate the wavelength and velocity of ultrasonic waves in a liquid by studying the diffraction through ultrasonic grating.
- To differentiate the experimental issues with theoretical aspects.

Course Outcome

After successful completion of the course, the student is expected to

1. Find electric and magnetic fields from stationary and dynamic charge and current distributions.
2. describe simple models for electromagnetic interaction with media
3. Choose adequate models and solution methods for specific problems.
4. Operate the polarimeter to find the polarization behavior of liquid and crystalline materials.
5. Calculate the wavelength and velocity of ultrasonic waves in a liquid by studying the diffraction through ultrasonic grating.
6. Verify the Faraday's law of electromagnetism.

Any 8 experiments

1. To verify the law of Malus for plane polarized light.
2. To determine the specific rotation of sugar solution using Polarimeter.
3. To analyze elliptically polarized Light by using a Babinet's compensator.
4. To study dependence of radiation on angle for a simple Dipole antenna.
5. To determine the wavelength and velocity of ultrasonic waves in a liquid (Kerosene Oil, Xylene, etc.) by studying the diffraction through ultrasonic grating.
6. To study the reflection, refraction of microwaves
7. To study Polarization and double slit interference in microwaves.
8. To determine the refractive index of liquid by total internal reflection using Wollaston's air-film.
9. To determine the refractive Index of (1) glass and (2) a liquid by total internal reflection using a Gaussian eyepiece.
10. To study the polarization of light by reflection and determine the polarizing angle for

air-glass interface.

11. To verify the Stefan`s law of radiation and to determine Stefan’s constant.
12. To determine the Boltzmann constant using V-I characteristics of PN junction diode.

Suggested Books

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, I. Prakash & Ramakrishna, 11th Ed., 2011, Kitab Mahal
4. Electromagnetic Field Theory for Engineers & Physicists, G. Lehner, 2010, Springer

SEMESTER – III

16PHU314A	**RENEWABLE ENERGY AND ENERGY HARVESTING (PRACTICAL) (SEC 1 A)**	**L T P C** **- - 3 1**

Course Objective

- To describe the challenges and problems associated with the use of various energy sources, including fossil fuels, with regard to future supply and the environment.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To obtain knowledge on renewable energy sources.
- To experience the needs of renewable energy sources.
- To develop the new concept of renewable energy sources.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate Training modules on Solar energy, wind energy, etc.
2. Convert units of energy-to quantify energy demands and make comparisons among energy uses, resources, and technologies.
3. Collect and organize information on renewable energy technologies as a basis for further analysis and evaluation.
4. Understand the needs of renewable energy sources.
5. Experience the calculation of wind velocity.
6. Study of box type solar cooker.

Any 5 Experiments

1. Fuel value of wood/charcoal.
2. Study of sensible heat storage using liquid.
3. Selective and Non-selective coatings – Determination of Selectivity ratio.
4. Thermal efficiency of liquid – flat plate collector.
5. Study of box type solar cooker.
6. Determination of instantaneous thermal efficiency of parabolic collector.
7. Efficiency and fill factor of solar cells.

Suggested Books:

1. Non conventional Energy sources, G. D. RAI (4th edition), Khanna Publishers, Delhi.
2. Solar Energy, S.P. Sukhatme (second edition), Tata Mc.Graw Hill Ltd, New Delhi.
3. Solar Energy Utilisation, G. D. RAI (5th edition), Khanna Publishers,Delhi.

SEMESTER – III

16PHU314B	PHYSICS WORKSHOP SKILL (PRACTICAL) (SEC 1 B)	L T P C
		- - 3 1

Course Objectives

- To understand concepts of various basic equipments and devices.
- To gain a knowledge and to understand fundamental physical concepts.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To develop the skill on operating the modern machines.
- To enhance their knowledge on foundry tools.

Course Outcomes

After successful completion of the course, the student is expected to

1. Develop skills in assessing the quality of one's own and others' work
2. Develop skills in observation, interpretation, reasoning, synthesis, generalizing, predicting, and questioning as a way to learn new knowledge.
3. Use the multimeters and other electronic kits.
4. Operate the oscilloscope and PCB.
5. Make different shape of materials using foundry tools.
6. Construct the circuit of regulated power supply. Timer circuit, Electronic switch using transistor and relay.

List of Experiments

1. Screw guage, Vernier Calipers, Spherometer, Least count, Zero error, Measurement of thickness of the scale, breadth of scale, radius of curvature of a concave and convex surface.
2. Cutting of a metal sheet using blade. Smoothening of cutting edge of sheet using file. Drilling of holes of different diameter in metal sheet and wooden block.
3. Use of bench vice and tools for fitting. Make funnel using metal sheet.
4. Use of Multimeter. Soldering of electrical circuits having discrete components (R, L, C, diode) and ICs on PCB.
5. Operation of oscilloscope. Making regulated power supply. Timer circuit, Electronic switch using transistor and relay.

Suggested Books:

1. A text book in Electrical Technology - B L Theraja – S. Chand and Company.
2. Performance and design of AC machines – M.G. Say, ELBS Edn.
3. Mechanical workshop practice, K.C. John, 2010, PHI Learning Pvt. Ltd.
4. Workshop Processes, Practices and Materials, Bruce J Black 2005, 3rd Edn., Editor Newnes [ISBN: 0750660732]
5. New Engineering Technology, Lawrence Smyth/Liam Hennessy, The Educational Company of Ireland [ISBN: 0861674480]

16PHU401	SEMESTER IV WAVES AND OPTICS	L T P C 4 - - 4

Course Objective

- This course builds the ideas of harmonic motion to cover in depth concept of waves in physics with particular emphasis on light waves as an example.
- The foundation of the course is Fourier theory, which will then be used to understand dispersion of waves, image formation in optics and diffraction and other aspects of Fourier optics.
- Understand how the principle of superposition is applied when two pulses meet
- Define three terms to describe periodic waves: speed, wavelength, and frequency
- Explain the characteristics of transverse and longitudinal waves.
- Identify the relationship between the speed, wavelength, and frequency of a wave.

Course Outcome

After successful completion of the course, the student is expected to

1. To develop an understanding of the principles of optics.
2. Understand linear, time-invariant systems.
3. Understand the role of the wave equation and appreciate the universal nature of wave motion in a range of physical systems
4. To build connections between mathematical development and conceptual understanding.
5. Understand dispersion in waves and model dispersion using Fourier theory.
6. Understand optical phenomena such as polarization, birefringence, interference and diffraction in terms of the wave model.

UNIT - I

Superposition of Two Collinear Harmonic oscillations: Simple harmonic motion (SHM). Linearity and Superposition Principle. (1) Oscillations having equal frequencies and (2) Oscillations having different frequencies (Beats). Superposition of Two Perpendicular Harmonic Oscillations: Graphical and Analytical Methods. Lissajous Figures (1:1 and 1:2) and their uses. Waves Motion- General: Transverse waves on a string. Travelling and standing waves on a string. Normal Modes of a string. Group velocity, Phase velocity. Plane waves. Spherical waves, Wave intensity.

UNIT - II

Sound: Sound waves, production and properties. Intensity and loudness of sound. Decibels. Intensity levels. musical notes. musical scale. Acoustics of buildings (General idea). Wave Optics: Electromagnetic nature of light. Definition and Properties of wave front. Huygens Principle.

UNIT – III

Interference: Interference: Division of amplitude and division of wavefront. Young's Double

Slit experiment. Lloyd's Mirror & Fresnel's Biprism.Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger Fringes); Fringes of equal thickness (Fizeau Fringes). Newton's Rings: measurement of wavelength and refractive index. Michelson's Interferometer: Construction and working. Idea of form of fringes (no theory needed), Determination of wavelength, Wavelength difference, Refractive index, and Visibility of fringes.

UNIT – IV

Diffraction: Fraunhofer diffraction: Single slit; Double Slit. Multiple slits & Diffraction grating. Fresnel Diffraction: Half-period zones. Zone plate. Fresnel Diffraction pattern of a straight edge, a slit and a wire using half-period zone analysis.

.

UNIT-V

Polarization: Transverse nature of light waves. Plane polarized light – production and analysis. Circular and elliptical polarization. Hygiene's explanation of double refraction, positive and negative uniaxial crystals, quarter and half wave plates, types of polarized light, production and analysis of plane, circularly and elliptically polarized light, optical activity.

Suggested Books:

1. Fundamentals of Optics, F.A Jenkins and H.E White, 1976, McGraw-Hill Principles of Optics, B.K. Mathur, 1995, Gopal Printing
2. Fundamentals of Optics, A. Kumar, H.R. Gulati and D.R. Khanna, 2011, R. Chand Publications
3. University Physics. F.W. Sears, M.W. Zemansky and H.D. Young. 13/e, 1986. Addison-Wesley.
4. Pedrotti, Frank L.; Pedrotti, Leno S.; Pedrotti, Leno Matthew, Introduction to optics, 3.ed.: Harlow, Essex: Pearson, 2014.
5. Young, Hugh D.; Freedman, Roger A.; Ford, A. Lewis; Sears, Francis Weston 13th ed., international edition: San Francisco: Pearson Addison Wesley, cop. 2012.

SEMESTER – IV | L T P C

16PHU402	NUCLEAR AND PARTICLE PHYSICS	4 - - 4

Course Objective

- This is a basic course in Physics which deals with the phenomena taking place in the nuclear domain. Students will be given an insight into the dimensions of a nucleus.
- The aim is to tell them about the stability of nucleus and various other properties.
- The students will learn about various types of radiations and their interaction with matter.
- Students will learn the methods to find the mass and charge of any nucleus by using some instruments.
- To gain knowledge in the content areas of nuclear and particle physics.
- Students will learn the concept of nuclear reactions.

Course Outcomes

After successful completion of the course, the student is expected to

1. Determine the charge, mass of any nucleus by using various spectrographs.
2. They are able to understand the size of nucleus and all its properties.
3. Develop and communicate analytical skills in subatomic physics.
4. This course has led the students to understand interaction of various types of radiation with matter which they observe in their daily life. It's easy for them now to relate the theory to practical.
5. Acquire knowledge in the content areas of nuclear and particle physics, focusing on concepts that are commonly used in this area.
6. Students now know various methods of accelerating various types of particles to perform scattering experiments.

UNIT I

General Properties of Nuclei: Constituents of nucleus and their Intrinsic properties, quantitative facts about size, mass, charge density (matter energy), binding energy, average binding energy and its variation with mass number, main features of binding energy versus mass number curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excites states.

UNIT II

Nuclear Models: Liquid drop model approach, semi empirical mass formula and significance of various terms, condition of nuclear stability. Two nucleon separation energies, Fermi gas model (degenerate fermion gas, nuclear symmetry potential in Fermi gas), evidence for nuclear shell structure, nuclear magic numbers, basic assumption of shell model, concept of mean field, residual interaction, concept of nuclear force.

UNIT III

Nuclear Reactions: Nuclear fission - Energy released in fission - Bohr and Wheeler's theory of nuclear fission - Chain reaction - Multiplication factor - Natural uranium and chain reaction - Design of nuclear reactor - Breeder reactor - Nuclear fusion - Source of stellar energy - Thermonuclear reactions - Transuranic elements.

Ionization chamber – Geiger-Muller counter – Proportional counter – Wilson's cloud chamber – Bubble chamber – Their principles and working.

UNIT IV

Nuclear Reactions: Conservation Laws, kinematics of reactions, Q-value, reaction rate, reaction cross section, Concept of compound and direct reaction, resonance reaction, Coulomb scattering (Rutherford scattering).

UNIT V

Particle physics: Particle interactions; basic features, types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, parity, baryon number, Lepton number, Isospin, Strangeness and charm, concept of quark model.

Suggested Books:

1. Introductory nuclear Physics by Kenneth S.Krane (Wiley India Pvt. Ltd., 2008). Concepts of nuclear physics by Bernard L.Cohen.(Tata Mcgraw Hill, 1998).
2. Introduction to the physics of nuclei & particles, R.A.Dunlap. (Thomson Asia, 2004)
3. Introduction to Elementary Particles, D. Griffith, John Wiley & Sons
4. Radiation detection and measurement, G.F. Knoll (John Wiley & Sons, 2000)
5. Nuclear and Particle Physics, Axel Maas, Lecture in SS 2016 at the KFU Graz.
6. Nuclear and Particle Physics, B. R. Martin, Online ISBN:9780470035474, 2006 John Wiley & Sons, Ltd.
7. https://www.springer.com/gp/physics/particle-nuclear-physics
8. https://iopscience.iop.org/book/978-0-7503-1140-3
9. https://www.wiley.com/en-us/Nuclear+and+Particle+Physics%3A+An+Introduction-p-9780470035474.

SEMESTER IV — L T P C

16PHU403 **DIGITAL SIGNAL PROCESSING** 4 - - 4

Course Objective

- Digital signal processing has lot of applications in different fields of life.
- This paper is to give knowledge to students about the theory of signal processing and the different methods involved in it.
- Apply the principles of discrete-time signal analysis to perform various signal operations
- Apply the principles of z-transforms to finite difference equations.
- Apply the principles of Fourier transform analysis to describe the frequency characteristics of discrete-time signals and systems
- To understand the digital filters and their classifications based on the response, design and algorithm.

Course Outcome

After successful completion of the course, the student is expected to

1. Fundamental classification of signals and systems based on the parameters which define them.
2. Concept of Discrete-Time Fourier Transform and Z-transform on signals and its properties.
3. Concept of Discrete Fourier Transform, different convolution techniques, filters and their classifications.
4. Fluency in using Fast Fourier Transform.
5. Understanding of Digital Filters and their classifications based on the response, design and algorithm.
6. Signal generation, realization of systems and finding their transfer function, characterization using pole-zero plots and designing digital filters using Scilab simulations.

Unit I

Discrete-Time Signals and Systems: Classification of Signals, Transformations of the Independent Variable, Periodic and Aperiodic Signals, Energy and Power Signals, Even and Odd Signals, Discrete-Time Systems, System Properties. Impulse Response, Convolution Sum; Graphical Method; Analytical Method, Properties of Convolution; Commutative; Associative; Distributive; Shift; Sum Property System Response to Periodic Inputs, Relationship Between LTI System Properties and the Impulse Response; Causality; Stability; Invertibility, Unit Step Response.

Unit II

Discrete-Time Fourier Transform: Fourier Transform Representation of Aperiodic Discrete-Time Signals, Periodicity of DTFT, Properties; Linearity; Time Shifting; Frequency Shifting; Differencing in Time Domain; Differentiation in Frequency Domain; Convolution Property.

Unit III

The *z*-Transform: Bilateral (Two-Sided) *z*-Transform, Inverse *z*-Transform, Relationship Between *z*-Transform and Discrete-Time Fourier Transform, *z*-plane, Region-of-Convergence; Properties of ROC, Properties; Time Reversal; Differentiation in the *z*-Domain; Power Series Expansion Method (or Long Division Method); Analysis and Characterization of LTI Systems; Transfer Function and Difference-Equation System. Solving Difference Equations.

Unit IV

Filter Concepts: Phase Delay and Group delay, Zero-Phase Filter, Linear-Phase Filter, Simple FIR Digital Filters, Simple IIR Digital Filters, All pass Filters, Averaging Filters, Notch Filters.

Discrete Fourier Transform: Frequency Domain Sampling (Sampling of DTFT), The Discrete Fourier Transform (DFT) and its Inverse, DFT as a Linear transformation, Properties; Periodicity; Linearity; Circular Time Shifting; Circular Frequency Shifting.

Unit V

Fast Fourier Transform: Direct Computation of the DFT, Symmetry and Periodicity, Properties of the Twiddle factor (*WN*), Radix-2 FFT Algorithms; Decimation-In-Time (DIT) FFT Algorithm; Decimation-In-Frequency (DIF) FFT Algorithm, Inverse DFT Using FFT Algorithms.

Realization of Digital Filters: Non Recursive and Recursive Structures, Canonic and Non Canonic Structures, Equivalent Structures (Transposed Structure), FIR Filter structures; Direct-Form; Cascade-Form; Basic structures for IIR systems; Direct-Form I.

Suggested Books:

1. Digital Signal Processing, Tarun Kumar Rawat, 2015, Oxford University Press, India
2. Digital Signal Processing, S. K. Mitra, McGraw Hill, India.
3. Modern Digital and Analog Communication Systems, B.P. Lathi, 1998, 3rd Edn. Oxford University Press.
4. Fundamentals of Digital Signal processing using MATLAB, R.J. Schilling and S.L. Harris, 2005, Cengage Learning.
5. Fundamentals of signals and systems, P.D. Cha and J.I. Molinder, 2007, Cambridge University Press.
6. Proakis, John G. Digital signal processing: principles algorithms and applications. Pearson Education India.
7. Hayes, Monson H. Digital signal processing Tata McGraw-Hill edition 2004
8. Digital Signal Processing Principles Algorithm & Applications, J.G. Proakis and D.G. Manolakis, 2007, 4th Edn., Prentice Hall.
9. Digital Signal Processing: Principles, Algorithms, and Applications by J. G. Proakis and D. G. Manolakis.
10. https://www.sciencedirect.com/book/9780750689762/digital-signal-processing.

SEMESTER IV

16PHU404A	**BASIC INSTRUMENTATION SKILL**	**L T P C**
	(SEC 2 A)	**3 - - 3**

Course Objectives

- This course is to get exposure with various aspects of instruments and their usage through hands-on mode.
- To impart physical measurement skills.
- To make the students understand coherence between theoretical and practical measurement.
- Identify the signals and systems.
- To use the techniques, skills and modern technical tools necessary for technical or engineering practice.
- The primary objective of this course is to provide a thorough understanding and working knowledge of design, implementation and analysis of instruments.

Course Outcome

After successful completion of the course, the student is expected to

1. Develop skills to impart practical knowledge in real time solutions.
2. Understand principle, concept, working and application of new technology and comparison of results with theoretical calculations.
3. Understand the terminology used in various instruments.
4. Gain knowledge of new concept in the solution of practical oriented problems and to understand more deep knowledge about the solution to theoretical problems.
5. Connect concepts with the instruments to enhance understanding.
6. Understand measurement technology, usage of new instruments and real time applications in engineering studies.

UNIT I

Basic of Measurement: Instruments accuracy, precision, sensitivity, resolution range etc. Errors in measurements and loading effects. **Multimeter:** Principles of measurement of dc voltage and dc current, ac voltage, ac current and resistance. Specifications of a multimeter and their significance.

UNIT II

Electronic Voltmeter: Advantage over conventional multimeter for voltage measurement with respect to input impedance and sensitivity. Principles of voltage, measurement (block diagram only). Specifications of an electronic Voltmeter/ Multimeter and their significance. **AC millivoltmeter:** Type of AC millivoltmeters: Amplifier- rectifier, and rectifier- amplifier. Block diagram ac millivoltmeter, specifications and their significance.

UNIT III

Cathode Ray Oscilloscope: Block diagram of basic CRO. Construction of CRT, Electron gun, electrostatic focusing and acceleration (Explanation only), brief discussion on screen phosphor, visual persistence & chemical composition. Time base operation, synchronization. Front panel controls. Specifications of a CRO and their significance.

UNIT IV

Use of CRO for the measurement of voltage (dc and ac frequency, time period. Special features of dual trace, introduction to digital oscilloscope, probes. Digital storage Oscilloscope: Block diagram and principle of working.

Signal Generators and Analysis Instruments: Block diagram, explanation and specifications of low frequency signal generators. pulse generator, and function generator. Brief idea for testing, specifications. Distortion factor meter, wave analysis.

UNIT V

Impedance Bridges & Q-Meters: Block diagram of bridge. working principles of basic (balancing type) RLC bridge. Specifications of RLC bridge. Block diagram & working principles of a Q- Meter. Digital LCR bridges.

Digital Instruments: Principle and working of digital meters. Comparison of analog & digital instruments. Characteristics of a digital meter. Working principles of digital voltmeter.

Digital Multimeter: Block diagram and working of a digital multimeter. Working principle of time interval, frequency and period measurement using universal counter/ frequency counter, time- base stability, accuracy and resolution.

SUGGESTED BOOKS

1. A text book in Electrical Technology - B L Theraja - S Chand and Co.
2. Performance and design of AC machines - M G Say ELBS Edn.
3. Digital Circuits and systems, Venugopal, 2011, Tata McGraw Hill.
4. Logic circuit design, Shimon P. Vingron, 2012, Springer.
5. Digital Electronics, Subrata Ghoshal, 2012, Cengage Learning.
6. Electronic Devices and circuits, S. Salivahanan & N. S.Kumar, 3rd Ed., 2012, Tata Mc-Graw Hill
7. Electronic circuits: Handbook of design and applications, U.Tietze, Ch.Schenk, 2008, Springer
8. Electronic Devices, 7/e Thomas L. Floyd, 2008, Pearson India

	SEMESTER IV	**L T P C**
16PHU404B	**RADIATION SAFETY**	**3 - - 3**

Course Objective

- To identify the parts of the x-ray machine and explain their purpose and function.
- Explain how x-rays are produced and how they travel.
- Compare the effects that x-radiation has on a variety of biological and non-biological materials.
- Describe the spectrum of electromagnetic radiation.
- The goal is for the students to develop a basic knowledge of the methods employed in veterinary hospitals and clinics to protect employees and the veterinarians themselves against radiation exposure.
- Discuss the difference between a rotating anode and a fixed anode.
- Discuss which types of machines today have fixed and which have rotating anodes.

Course Outcomes

After successful completion of the course, the student is expected to

1. List and describe the function the parts of the x-ray machine
2. Describe the spectrum of electromagnetic radiation.
3. Understand the terminology used in radiation safty.
4. Gain knowledge of new concept in the field of radiation.
5. They are able to understand the Interaction of Radiation with matter.
6. Discuss the advantages to the utilization of a rotating anode.
7. Impact knowledge on different radiation detector.

UNIT I

Basics of Atomic and Nuclear Physics: Basic concept of atomic structure; X rays characteristic and production; concept of bremsstrahlung and auger electron, The composition of nucleus and its properties, mass number, isotopes of element, spin, binding energy, stable and unstable isotopes, law of radioactive decay, Mean life and half life, basic concept of alpha, beta and gamma decay, concept of cross section and kinematics of nuclear reactions, types of nuclear reaction, Fusion, fission.

UNIT II

Interaction of Radiation with matter: Types of Radiation: Alpha, Beta, Gamma and Neutron and their sources, sealed and unsealed sources, **Interaction of Photons** - Photo-electric effect, Compton Scattering, Pair Production, Linear and Mass Attenuation Coefficients, **Interaction of Charged Particles:** Heavy charged particles - Beth-Bloch Formula, Scaling laws, Mass Stopping Power, Range, Straggling, Channeling and Cherenkov radiation. Beta Particles- Collision and Radiation loss (Bremsstrahlung), **Interaction of Neutrons**- Collision, slowing down and Moderation.

UNIT III

Radiation detection and monitoring devices: Radiation Quantities and Units: Basic idea of different units of activity, KERMA, exposure, absorbed dose, equivalent dose, effective dose, collective equivalent dose, Annual Limit of Intake (ALI) and derived Air Concentration (DAC).

UNIT IV

Radiation detection: Basic concept and working principle of *gas detectors* (Ionization Chambers, Proportional Counter, Multi-Wire Proportional Counters (MWPC) and Gieger Muller Counter), Scintillation Detectors **(**Inorganic and Organic Scintillators), Solid States Detectors and Neutron Detectors, Thermo luminescent Dosimetry.

UNIT V

Radiation safety management: *Biological effects of ionizing radiation*, Operational limits and basics of radiation hazards evaluation and control: radiation protection standards, International Commission on Radiological Protection (ICRP) principles, justification, optimization, limitation, introduction of safety and risk management of radiation. Nuclear waste and disposal management. Brief idea about Accelerator driven Sub-critical system (ADS) for waste management.

Suggested Books:

1. W.E. Burcham and M. Jobes – Nuclear and Particle Physics – Longman (1995)
2. G.F.Knoll, Radiation detection and measurements
3. Thermoluninescense Dosimetry, Mcknlay, A.F., Bristol, Adam Hilger (Medical Physics Handbook 5)
4. W.J. Meredith and J.B. Massey, "Fundamental Physics of Radiology". John Wright and Sons, UK, 1989.
5. J.R. Greening, "Fundamentals of Radiation Dosimetry", Medical Physics Hand Book Series, No.6, Adam Hilger Ltd., Bristol 1981.
6. Practical Applications of Radioactivity and Nuclear Radiations, G.C. Lowental and P.L. Airey, Cambridge University Press, U.K., 2001
7. Martin and S.A. Harbisor, An Introduction to Radiation Protection, John Willey & Sons, Inc. New York, 1981.
8. NCRP, ICRP, ICRU, IAEA, AERB Publications.
9. W.R. Hendee, "Medical Radiation Physics", Year Book – Medical Publishers Inc. London, 1981.

	SEMESTER – IV	**L T P C**
16PHU411	**WAVES AND OPTICS (PRACTICAL)**	**- - 4 2**

Course Objective

- Understand and working of polarimeter.
- Understand the resolving power of different optical instruments.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- Students will be observe the readings practically.
- Students will experience the phenomena of reflection, refraction, etc.,

Course Outcomes

After successful completion of the course, the student is expected to

1. Gain knowledge on various theories of light.
2. Acquire skills to identify and apply formulas of optics and wave physics.
3. Understand the properties of light like reflection, refraction, interference, and diffraction etc.,
4. Understand the applications of diffraction and polarization.
5. Determine the different optical properties by using various apparatus.
6. Know the importance of optical materials in the industrials.

Any 8 Experiments

1. To investigate the motion of coupled oscillators
2. To determine the Frequency of an Electrically Maintained Tuning Fork by Melde's Experiment and to verify λ^2 – T Law.
3. To study Lissajous Figures
4. Familiarization with Schuster`s focussing; determination of angle of prism.
5. To determine the Refractive Index of the Material of given Prism using Na Light.
6. To determine Dispersive Power of the Material of a given Prism using Hg Light
7. To determine the value of Cauchy Constants of a material of a prism.
8. To determine the Resolving Power of a Prism.
9. To determine wavelength of sodium light using Fresnel Biprism.
10. To determine wavelength of sodium light using Newton's Rings.
11. To determine the wavelength of Laser light using Diffraction grating.
12. To determine wavelength of (1) Sodium and (2) Mercury light using plane diffraction Grating
13. To determine the Resolving Power of a Plane Diffraction Grating.

Suggested Books

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

SEMESTER IV

16PHU412 **NUCLEAR AND PARTICLE PHYSICS (PRACTICAL)** L T P C

\- - 4 2

Course Objectives

- To understand the operation of G.M. counter.
- To study the general properties of nucleus
- To study the nuclear forces and nuclear reactions.
- To analyse the B-H curve and their concepts practically.
- To introduce the concept of elementary particles practically.
- To apply the theoretical knowledge into the experiments and find the solutions.

Course Outcomes

After successful completion of the course, the student is expected to

1. Acquire basic knowledge about nuclear and particle physics
2. Develop the nuclear reactions and neutron physics.
3. Know the calculations of e/m and their applications.
4. Understand the operation of G.M. counter
5. Verify the B-H curve of radiative materials.
6. Understand the difference between Magnetron and Thomson methods.

Any 4 Experiments

1. Young's Modulus – Elliptical Fringes (Cornu's method).
2. Viscosity of liquid – Mayer's oscillating disc method.
3. Michelson Interferometer – Determination of λ and dλ.
4. 'e/m' by Thomson's method and Magnetron method.
5. Young's Modulus – Hyperbolic Fringes (Cornu's method).
6. 'e' by Millikan's method.
7. Young's Double slit – Determination of Wavelength of monochromatic source.
8. G.M.Counter-Absorption co-efficient and inverse square law.

Suggested Books

1. Radiation detection and measurement, G.F. Knoll (John Wiley & Sons, 2000)
2. Nuclear and Particle Physics, Axel Maas, Lecture in SS 2016 at the KFU Graz.
3. Nuclear and Particle Physics, B. R. Martin, Online ISBN:9780470035474, 2006 John Wiley & Sons, Ltd.

SEMESTER IV

16PHU413 **DIGITAL SIGNAL PROCESSING (PRACTICAL)** L T P C

- - 4 2

Course Objectives

- Digital signal processing has lot of applications in different fields of life.
- This objective of this paper is to give knowledge to students about the practical knowledge of signal processing and the different methods involved in it.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- Students will learn writing program and perform the analysis using scilab software.
- Write the computer programme and verify the results by manipulation of data.

Course Outcome

After successful completion of the course, the student is expected to

1. Fluency in writing program and perform the analysis using scilab software.
2. Verify the data using scilab programs.
3. Concept of Discrete-Time Fourier Transform and Z-transform on signals and its properties.
4. Concept of Discrete Fourier Transform, different convolution techniques, filters and their classifications.
5. Apply the knowledge on Fourier Transform and verify the results by manipulation of data.
6. Understanding of Digital Filters and their classifications based on the response, design and algorithm.
7. Signal generation, realization of systems and finding their transfer function, characterization using pole-zero plots and designing digital filters using Scilab simulations.
8. Write the program and algorithm of Scilab.

Any 8 Experiments

Scilab based simulations experiments based problems like

1. Write a program to generate and plot the following sequences: (a) Unit sample sequence $\delta(n)$, (b) unit step sequence $u(n)$, (c) ramp sequence $r(n)$, (d) real valued exponential sequence $x(n) = (0.8)^n u(n)$ for $0 \leq n \leq 50$.

2. Write a program to compute the convolution sum of a rectangle signal (or gate function) with itself for N = 5

$$x(n) = rect\left(\frac{n}{2N}\right) = \Pi\left(\frac{n}{2N}\right) = \begin{cases} 1 & -N \leq n \leq N \\ 0 & otherwise \end{cases}$$

3. An LTI system is specified by the difference equation
$$y(n) = 0.8y(n-1) + x(n)$$
(a) Determine $H(e^{jw})$
(b) Calculate and plot the steady state response $y_{ss}(n)$ to
$$x(n) = \cos(0.5\pi n)u(n)$$

4. Given a casual system
$$y(n) = 0.9y(n-1) + x(n)$$
(a) Find $H(z)$ and sketch its pole-zero plot
(b) Plot the frequency response $|H(e^{jw})|$ and $\angle H(e^{jw})$

5. Design a digital filter to eliminate the lower frequency sinusoid of $x(t) = \sin 7t + \sin 200t$. The sampling frequency is $f_s = 500\, Hz$. Plot its pole zero diagram, magnitude response, input and output of the filter.

6. Let $x(n)$ be a 4-point sequence:
$$x(n) = \underset{\uparrow}{\{1,1,1,1\}} = \begin{cases} 1 & 0 \le n \le 3 \\ 0 & otherwise \end{cases}$$
Compute the DTFT $X(e^{jw})$ and plot its magnitude
(a) Compute and plot the 4 point DFT of $x(n)$
(b) Compute and plot the 8 point DFT of $x(n)$ (by appending 4 zeros)
(c) Compute and plot the 16 point DFT of $x(n)$ (by appending 12 zeros)

7. Let $x(n)$ and $h(n)$ be the two 4-point sequences,
$$x(n) = \underset{\uparrow}{\{1,2,2,1\}}$$
$$h(n) = \underset{\uparrow}{\{1,-1,-1,1\}}$$
Write a program to compute their linear convolution using circular convolution.

8. Using a rectangular window, design a FIR low-pass filter with a pass-band gain of unity, cut off frequency of 1000 Hz and working at a sampling frequency of 5 KHz. Take the length of the impulse response as 17.

9. Design an FIR filter to meet the following specifications:
passband edge $F_p = 2\, KHz$
stopband edge $F_s = 5\, KHz$
Passband attenuation $A_p = 2\, dB$
Stopband attenuation $A_s = 42\, dB$
Sampling frequency $F_s = 20\, KHz$

10. The frequency response of a linear phase digital differentiator is given by
$$H_d(e^{jw}) = jwe^{-j\tau w} \qquad |w| \le \pi$$
Using a Hamming window of length M = 21, design a digital FIR differentiator. Plot the amplitude response.

Suggested Books:

1. Digital Signal Processing, Tarun Kumar Rawat, Oxford University Press, India.
2. A Guide to MATLAB, B.R. Hunt, R.L. Lipsman, J.M. Rosenberg, 2014, 3rd Edn., Cambridge University Press.

3. Fundamentals of Digital Signal Processing using MATLAB, R.J.Schilling and S.L. Harris, 2005, Cengage Learning.
4. Digital Signal Processing, S.K. Mitra, McGraw Hill, India.
5. Fundamentals of signals and systems, P.D. Cha and J.I. Molinder, 2007, Cambridge Unversity Press.
6. Simulation of ODE/PDE models with MATLAB, OCTAVE and SCILAB: Scientific and Engineering Applications: A. Vande Wonwer, P. Saucez, C.V. Fernanderz. 2014 Springer ISBN: 978-3319067896.
7. Scilab by example: M. Affouf, 2012, ISBN: 978-1479203444.
8. Scilab Image Processing: L.M. Surhone, 2010, Betascript Pub., ISBN: 978-6133459274

SEMESTER IV

16PHU414A BASIC INSTRUMENTATION SKILL (PRACTICAL) (SEC 2 A)

L	T	P	C
-	-	3	1

Course Objectives:

- To familiarize the students with working, design and analysis of basic amplifier circuits.
- To design and analyze wave shaping circuits, rectifiers and power supply circuits
- Introduce the basic concept of qualitative and quantitative analysis of an instruments.
- Study the concept of separation science and its applications.
- To demonstrate their knowledge in designing the control loops for these processes.
- To apply the theoretical knowledge into the experiments and find the solutions.

Course Outcomes:

After successful completion of the course, the student is expected to

1. Handle any kind of process by framing it in block diagram, mathematical model and different process variables.
2. Use modern engineering tools and techniques in the practice of electronic devices.
3. Know all the industrial processes and demonstrate their knowledge in designing the control loops for these processes.
4. Understand the working of various types of amplifiers, oscillators, wave shaping and power supply circuits
5. Design and Analyze the various types of amplifiers, oscillators, wave shaping and power supply circuits for any practical situation.
6. Discuss the terms, principle, instrumentation, operation and applications of instruments.

The test of lab skills will be of the following test items:

1. Use of an oscilloscope.
2. CRO as a versatile measuring device.
3. Circuit tracing of Laboratory electronic equipment,
4. Use of Digital multimeter/VTVM for measuring voltages
5. Circuit tracing of Laboratory electronic equipment,
6. Winding a coil / transformer.
7. Study the layout of receiver circuit.
8. Trouble shooting a circuit
9. Balancing of bridges

Laboratory Exercises:

1. To observe the loading effect of a multimeter while measuring voltage across a low resistance and high resistance.
2. To observe the limitations of a multimeter for measuring high frequency voltage and currents.
3. To measure Q of a coil and its dependence on frequency, using a Q- meter.
4. Measurement of voltage, frequency, time period and phase angle using CRO.
5. Measurement of time period, frequency, average period using universal counter/ frequency counter.
6. Measurement of rise, fall and delay times using a CRO.
7. Measurement of distortion of a RF signal generator using distortion factor meter.
8. Measurement of R, L and C using a LCR bridge/ universal bridge.

Open Ended Experiments

1. Using a Dual Trace Oscilloscope
2. Converting the range of a given measuring instrument (voltmeter, ammeter)

Suggested Books:

1. A text book in Electrical Technology - B L Theraja - S Chand and Co.
2. Performance and design of AC machines - M G Say ELBS Edn.
3. Digital Circuits and systems, Venugopal, 2011, Tata McGraw Hill.
4. Logic circuit design, Shimon P. Vingron, 2012, Springer.
5. Digital Electronics, Subrata Ghoshal, 2012, Cengage Learning.
6. Electronic Devices and circuits, S. Salivahanan & N. S.Kumar, 3rd Ed., 2012, Tata Mc-Graw Hill
7. Electronic circuits: Handbook of design and applications, U.Tietze, Ch.Schenk, 2008, Springer Electronic Devices, 7/e Thomas L. Floyd, 2008, Pearson India

SEMESTER IV — L T P C

16PHU414B **RADIATION SAFETY (PRACTICAL)** - - 3 1

Course Objectives:

- Student will get idea about the basic radiation principle.
- To know the nuclear interactions with matter and detection.
- To identify the Biological effects of radiation and measurement.
- To give the demonstration of Gamma spectrum of Gas Light mantle
- To know the Shielding of nuclear radiation.
- To know the importance of background radiation levels using Radiation meter.

Course Outcomes:

After successful completion of the course, the student is expected to

1. Understood the concepts of nuclear radiation.
2. Know the interaction of nuclear radiation with matter.
3. Detect the nuclear radiation.
4. Be familiar with dosimeters and measurements.
5. Know the importance of background radiation levels using Radiation meter.
6. Identify the α particles using reference source & determining its half-life using spark counter.

Any 4 Experiments

1. Study the background radiation levels using Radiation meter
2. Characteristics of Geiger Muller (GM) Counter**:** Study of characteristics of GM tube and determination of operating voltage and plateau length using background radiation as source (without commercial source).
3. Study of counting statistics using background radiation using GM counter.
4. Study of radiation in various materials (e.g. KSO4 etc.). Investigation of possible radiation in different routine materials by operating GM at operating voltage.
5. Study of absorption of beta particles in Aluminum using GM counter.
6. Detection of α particles using reference source & determining its half-life using spark counter.
7. Gamma spectrum of Gas Light mantle (Source of Thorium)

Suggested Books:

1. W.E. Burcham and M. Jobes – Nuclear and Particle Physics – Longman (1995)
2. G.F.Knoll, Radiation detection and measurements
3. Thermoluninescense Dosimetry, Mcknlay, A.F., Bristol, Adam Hilger (Medical

Physics Handbook 5)

4. W.J. Meredith and J.B. Massey, "Fundamental Physics of Radiology". John Wright and Sons, UK, 1989.
5. J.R. Greening, "Fundamentals of Radiation Dosimetry", Medical Physics Hand Book Series, No.6, Adam Hilger Ltd., Bristol 1981.
6. Practical Applications of Radioactivity and Nuclear Radiations, G.C. Lowental and P.L. Airey, Cambridge University Press, U.K., 2001
7. Martin and S.A. Harbisor, An Introduction to Radiation Protection, John Willey & Sons, Inc. New York, 1981.
8. NCRP, ICRP, ICRU, IAEA, AERB Publications.
9. W.R. Hendee, "Medical Radiation Physics", Year Book – Medical Publishers Inc. London, 1981

SEMESTER V

16PHU501A **COMPUTATIONAL PHYSICS** **L T P C**

(SEC 3 A) **3 - - 3**

Course Objective

- The aim of this course is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics.
- Students should be able to tackle with problems in the physical science using computer and different software.
- Identify and describe the characteristics of various numerical methods.
- Independently program computers using leading-edge tools,
- Formulate and computationally solve a selection of problems in physics,
- Use the tools, methodologies, language and conventions of physics to test and communicate ideas and explanations.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate basic knowledge of numerical methods.
2. Demonstrate basic programming skills.
3. Demonstrate an understanding of the applicability of numerical methods for modeling physical systems and its advantages and disadvantages.
4. Demonstrate the ability to estimate the errors in the use of numerical methods.
5. Demonstrate skills to write and develop simple programs in FORTRAN.
6. Understand the Importance of graphical analysis and its limitations.

UNIT I

Introduction: Importance of computers in Physics, paradigm for solving physics problems for solution**.** Usage of linux as an Editor. **Algorithms and Flowcharts:** Algorithm: Definition, properties and development. Flowchart: Concept of flowchart, symbols, guidelines, types. Examples: Cartesian to Spherical Polar Coordinates, Roots of Quadratic Equation, Sum of two matrices, Sum and Product of a finite series, calculation of sin(x) as a series, algorithm for plotting (1) lissajous figures and (2) trajectory of a projectile thrown at an angle with the horizontal.

UNIT II

Scientific Programming: Some fundamental Linux Commands (Internal and External commands). Development of FORTRAN, Basic elements of FORTRAN: Character Set, Constants and their types, Variables and their types, Keywords, Variable Declaration and concept of instruction and program. Operators: Arithmetic, Relational, Logical and Assignment Operators. Expressions: Arithmetic, Relational, Logical, Character and Assignment Expressions. Fortran Statements: I/O Statements (unformatted/formatted), Executable and Non-Executable Statements, Layout of Fortran Program, Format of writing Program and concept of coding, Initialization and Replacement Logic. Examples from physics problems.

UNIT III

Control Statements: Types of Logic (Sequential, Selection, Repetition), Branching Statements (Logical **IF**, Arithmetic IF, Block IF, Nested Block IF, SELECT CASE and ELSE IF Ladder statements), Looping Statements (DO-CONTINUE, DO-ENDDO, DO-WHILE, Implied and Nested DO Loops), Jumping Statements (Unconditional GOTO, Computed GOTO, Assigned GOTO) Subscripted Variables (Arrays: Types of Arrays, DIMENSION Statement, Reading and Writing Arrays), Functions and Subroutines (Arithmetic Statement Function, Function Subprogram and Subroutine), RETURN, CALL, COMMON and EQUIVALENCE Statements), Structure, Disk I/O Statements, open a file, writing in a file, reading from a file. Examples from physics problems.

UNIT IV

Scientific word processing: Introduction to LaTeX: TeX/LaTeX word processor, preparing a basic LaTeX file, Document classes, Preparing an input file for LaTeX, Compiling LaTeX File, LaTeX tags for creating different environments, Defining LaTeX commands and environments, Changing the type style, Symbols from other languages. **Equation representation:** Formulae and equations, Figures and other floating bodies, Lining in columns- Tabbing and tabular environment, Generating table of contents, bibliography and citation, Making an index and glossary, List making environments, Fonts, Picture environment and colors, errors.

UNIT V

Visualization: Introduction to graphical analysis and its limitations. Introduction to Gnuplot. importance of visualization of computational and computational data, basic Gnuplot commands: simple plots, plotting data from a file, saving and exporting, multiple data sets per file, physics with Gnuplot (equations, building functions, user defined variables and functions), Understanding data with Gnuplot

Suggested Books:

1. Introduction to Numerical Analysis, S.S. Sastry, 5th Edn., 2012, PHI Learning Pvt. Ltd.
2. Computer Programming in Fortran 77". V. Rajaraman (Publisher: PHI).
3. LaTeX–A Document Preparation System", Leslie Lamport (Second Edition, Addison-Wesley, 1994).
4. Gnuplot in action: understanding data with graphs, Philip K Janert, (Manning 2010)
5. Schaum's Outline of Theory and Problems of Programming with Fortran, S Lipsdutz and A Poe, 1986Mc-Graw Hill Book Co.
6. Computational Physics: An Introduction, R. C. Verma, et al. New Age International Publishers, New Delhi(1999)
7. A first course in Numerical Methods, U.M. Ascher and C. Greif, 2012, PHI Learning
8. Elementary Numerical Analysis, K.E. Atkinson, 3rd Edn., 2007, Wiley India Edition.
9. https://onlinecourses.nptel.ac.in/noc20_ph20/preview
10. https://iopscience.iop.org/book/978-1-6817-4896-2

SEMESTER V

16PHU501B	**WEATHER FORECASTING**	**L T P C**
	(SEC 3 B)	**3 - - 3**

Course Objective:

- The aim of this course is not just to impart theoretical knowledge to the students but to enable them to develop an awareness
- To understand the causes and effects of different weather phenomenon and basic forecasting techniques.
- To know the role of air, water, and wind in weather systems.
- Assess variability and change within this expanded, extended and quality assured network.
- To explain what causes different types of weather.
- To understand the concept of Ecosystems and climate interactions

Course Outcome

After successful completion of the course, the student is expected to

1. Understand the various components that go into forecasting the weather
2. Produce rudimentary weather forecasts based on weather maps
3. Gain knowledge on Ecosystems and climate interactions
4. Know the effects of climate change on life cycles
5. Understand the concept of Biodiversity, Weather vs climate
6. Acquire knowledge on greenhouse effect, Treaty rights
7. Understand the traditional ecological knowledge and climate change and related issues.

UNIT I

Introduction to atmosphere: Elementary idea of atmosphere: physical structure and composition; compositional layering of the atmosphere; variation of pressure and temperature with height; air temperature; requirements to measure air temperature; temperature sensors: types; atmospheric pressure: its measurement; cyclones and anticyclones: its characteristics.

UNIT II

Measuring the weather: Wind; forces acting to produce wind; wind speed direction: units, its direction; measuring wind speed and direction; humidity, clouds and rainfall, radiation: absorption, emission and scattering in atmosphere; radiation laws.

UNIT III

Weather systems: Global wind systems; air masses and fronts: classifications; jet streams; local thunderstorms; tropical cyclones: classification; tornadoes; hurricanes.

UNIT IV

Climate and Climate Change: Climate: its classification; causes of climate change; global warming and its outcomes; air pollution; aerosols, ozone depletion, acid rain, environmental issues related to climate.

UNIT V

Basics of weather forecasting: Weather forecasting: analysis and its historical background; need of measuring weather; types of weather forecasting; weather forecasting methods; criteria of choosing weather station; basics of choosing site and exposure; satellites observations in weather forecasting; weather maps; uncertainty and predictability; probability forecasts.

Suggested Books:

1. Aviation Meteorology, I.C. Joshi, 3rd edition 2014, Himalayan Books
2. The weather Observers Hand book, Stephen Burt, 2012, Cambridge University Press.
3. Meteorology, S.R. Ghadekar, 2001, Agromet Publishers, Nagpur.
4. Text Book of Agrometeorology, S.R. Ghadekar, 2005, Agromet Publishers, Nagpur.
5. https://www.sciencedirect.com/science/article/abs/pii/S0065268708603118
6. https://cimss.ssec.wisc.edu/satmet/modules/7_weather_forecast/wf-1.html
7. https://www.outdoorproject.com/articles/weather-forecasting-101-how-predict-weather-go

SEMESTER V

16PHU502A	ELEMENTS OF MODERN PHYSICS	L T P C 4 - - 2

Course Objective

- To identify the circumstances, in Modern Physics. Enumerate and understand the postulate of relativity.
- To learn about the speed of light as a natural limit to speed.
- To understand the work of Planck, Bohr, Heisenberg, uncertainty principle and the other features of Quantum Mechanics.
- Acquaintance with basic fields of modern physics
- Ability of searching solutions of physical problems in scientific and technical literature.
- Understanding of physical processes and technology

Course Outcome

After successful completion of the course, the student is expected to

1. Recall and apply knowledge in the areas of optics and waves, special relativity and quantum physics (developing the knowledge capability dimension);
2. Conduct relevant experiments, analyse data and report results in written form (developing the technical capability and communication dimensions).
3. Analyse the plank's constant using different experimental technique.
4. Find the wavelength of any laser sources.
5. Differentiate the interference and diffraction properties by the experiments.
6. Understand the theory and practical knowledge of light and other properties.

Unit I

Planck's quantum, Planck's constant and light as a collection of photons; Blackbody Radiation: Quantum theory of Light; Photo-electric effect and Compton scattering. DeBroglie wavelength and matter waves; Davisson-Germer experiment. Wave descriptionof particles by wave packets. Group and Phase velocities and relation between them.Two-Slit experiment with electrons. Probability. Wave amplitude and wave functions.

Unit II

Position measurement- gamma ray microscope thought experiment; Wave-particle duality, Heisenberg uncertainty principle (Uncertainty relations involving Canonical pair of variables): Derivation from Wave Packets impossibility of a particle following a trajectory; Estimating minimum energy of a confined particle using uncertainty principle; Energy-time uncertainty principle- application to virtual particles and range of an interaction.

Unit III

Two slit interference experiment with photons, atoms and particles; linear superposition principle as a consequence; Matter waves and wave amplitude; Schrodinger equation for non-relativistic particles; Momentum and Energy operators; stationary states; physical interpretation of a wave function, probabilities and normalization; Probability and probability current densities in one dimension.

Unit IV

One dimensional infinitely rigid box- energy eigenvalues and eigenfunctions, normalization; Quantum dot as example; Quantum mechanical scattering and tunneling in one dimension-across a step potential & rectangular potential barrier. Size and structure of atomic nucleus and its relation with atomic weight; Impossibility of an electron being in the nucleus as a consequence of the uncertainty principle. Nature of nuclear force, NZ graph, Liquid Drop model: semi-empirical mass formula and binding energy, Nuclear Shell Model and magic numbers.

Unit V

Radioactivity: stability of the nucleus; Law of radioactive decay; Mean life and half-life; Alpha decay; Beta decay- energy released, spectrum and Pauli's prediction of neutrino; Gamma ray emission, energy-momentum conservation: electron-positron pair creation by gamma photons in the vicinity of a nucleus.

Suggested Books:

1. Concepts of Modern Physics, Arthur Beiser, 2002, McGraw-Hill.
2. Introduction to Modern Physics, Rich Meyer, Kennard, Coop, 2002, Tata McGraw Hill
3. Introduction to Quantum Mechanics, David J. Griffith, 2005, Pearson Education.
4. Physics for scientists and Engineers with Modern Physics, Jewett and Serway, 2010, Cengage Learning.
5. Modern Physics, G.Kaur and G.R. Pickrell, 2014, McGraw Hill
6. Quantum Mechanics: Theory & Applications, A.K.Ghatak & S.Lokanathan, 2004, Macmillan
7. Modern Physics, J.R. Taylor, C.D. Zafiratos, M.A. Dubson, 2004, PHI Learning.
8. Theory and Problems of Modern Physics, Schaum`s outline, R. Gautreau and W. Savin, 2nd Edn, Tata McGraw-Hill Publishing Co. Ltd.
9. Quantum Physics, Berkeley Physics, Vol.4. E.H.Wichman, 1971, Tata McGraw-Hill Co.
10. Basic ideas and concepts in Nuclear Physics, K.Heyde, 3rd Edn., Institute of Physics Pub. Six Ideas that Shaped Physics: Particle Behave like Waves, T.A.Moore, 2003, McGraw Hill.
11. https://www.arsdcollege.ac.in/wp-content/uploads/2020/04/Presentation_1-11_compressed.pdf
12. http://web.sbu.edu/physics/courses/physics-203p.pdf

	SEMESTER V	**L T P C**
16PHU502B	**MEDICAL PHYSICS**	**4 - - 2**

Course Objective

- The objective of the course is to educate and to train students to a competency level sufficient to practice radiation oncology physics independently.
- This prepares the students for clinical practices in radiation therapy (RT) physics through a structured clinical trainings and didactic courses.
- To know the energetic charged particle interactions and transport in matter.
- The program is supervised and mentored by highly qualified clinical practitioners.
- This paper is aimed at giving idea to the students regarding the nature of human body and usage of different radiations for the treatment of body.
- To active participation in clinical research, teaching, and training.

Course Outcomes

After successful completion of the course, the student is expected to

1. Different areas of research in Medical Physics
2. Understand and apply key concepts specific to energy deposition for both ionizing photon interactions and transport in matter
3. Know the energetic charged particle interactions and transport in matter.
4. Understanding the working of a manual optical eye-testing machine
5. Familiarization with the Use of a Vascular Doppler.
6. Realize the real time examples of medical instruments.

UNIT – I

PHYSICS OF THE BODY-I

Basic Anatomical Terminology: Standard Anatomical Position, Planes. Familiarity with terms like- Superior, Inferior, Anterior, Posterior, Medial, Lateral, Proximal and Distal. **Mechanics of the body:** Skeleton, forces, and body stability. Muscles and dynamics of body movement. Physics of Locomotors Systems: joints and movements, Stability and Equilibrium.

Energy household of the body: Energy balance in the body, Energy consumption of the body, Heat losses of the body, Thermal Regulation.

Pressure system of body: Physics of breathing, Physics of cardiovascular system.

UNIT – II

PHYSICS OF THE BODY-II

Acoustics of the body: Nature and characteristics of sound, Production of speech, Physics of the ear, Diagnostics with sound and ultrasound.

Optical system of the body: Physics of the eye.

Electrical system of the body: Physics of the nervous system, Electrical signals and information transfer.

UNIT - III

PHYSICS OF DIAGNOSTIC AND THERAPEUTIC SYSTEMS-I

X-RAYS: Electromagnetic spectrum, production of x-rays, x-ray spectra, Brehmsstrahlung, Characteristic x-ray. **X-ray tubes & types** : Coolidge tube, x-ray tube design, tube cooling stationary mode, Rotating anode x-ray tube, Tube rating, quality and intensity of x-ray. X-ray generator circuits, half wave and full wave rectification, filament circuit, kilo voltage circuit. Single and three phase electric supply. Power ratings. Types of X-Ray Generator, high frequency generator, exposure timers and switches, HT cables.

UNIT - IV

RADIATION PHYSICS: Radiation units exposure, absorbed dose, units: rad, gray, relative biological effectiveness, effective dose- Rem & Sievert, inverse square law. Interaction of radiation with matter Compton & photoelectric effect, linear attenuation coefficient. **Radiation Detectors**: ionization (Thimble chamber, condenser chamber), chamber. Geiger Muller counter, Scintillation counters and Solid State detectors, TFT.

UNIT - V

MEDICAL IMAGING PHYSICS: Evolution of Medical Imaging, X-ray diagnostics and imaging, Physics of nuclear magnetic resonance (NMR), NMR imaging, MRI Radiological imaging, Ultrasound imaging, Physics of Doppler with applications and modes, Vascular Doppler. Radiography: Filters, grids, cassette, X-ray film, film processing, fluoroscopy. **Computed tomography scanner-** principle and function, display, generations, mammography. Thyroid uptake system and Gamma camera (Only Principle, function and display)

Suggested Books:

1. Medical Physics, J.R. Cameron and J.G.Skofronick, Wiley (1978)
2. Basic Radiological Physics Dr. K. Thayalan - Jayapee Brothers Medical Publishing Pvt. Ltd. New Delhi (2003)
3. Christensen’s Physics of Diagnostic Radiology: Curry, Dowdey and Murry Lippincot Williams and Wilkins (1990)
4. Physics of the human body, Irving P. Herman, Springer (2007).
5. Physics of Radiation Therapy : F M Khan - Williams and Wilkins, 3rd edition (2003)
6. The essential physics of Medical Imaging: Bushberg, Seibert, Leidholdt and Boone Lippincot Williams and Wilkins, Second Edition (2002)
7. Handbook of Physics in Diagnostic Imaging: R.S.Livingstone: B.I. Publication Pvt Ltd.
8. The Physics of Radiology-H E Johns and Cunningham.
9. https://sites.google.com/a/northgeorgia.edu/ngcsu-physics-note-sharing/home/medical

11. http://www.sprawls.org/ppmi2/

SEMESTER V **L T P C**

16PHU503A DIGITAL, ANALOG CIRCUITS AND INSTRUMENTATION 4 - - 4

Course Objectives

- The objective of this paper is to give information about different analog electronic circuits and their applications.
- To understand operation of semiconductor devices.
- To understand DC analysis and AC models of semiconductor devices.
- To acquire knowledge about how a semiconductor diode rectifies an input ac signal.
- To apply concepts for the design of Regulators and Amplifiers.
- To implement mini projects based on concept of electronics circuit concepts.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Apply concepts for the design of Regulators and Amplifiers.
2. Acquire knowledge about how a semiconductor diode rectifies an input ac signal
3. Verify the theoretical concepts through laboratory and simulation experiments.
4. Know about the Field Effect Transistors, their principles and applications
5. Learn how to construct a transistor amplifier and how its gain varies with frequency
6. Implement mini projects based on concept of electronics circuit concepts.

UNIT-I: Digital Circuits

Difference between Analog and Digital Circuits. Binary Numbers. Decimal to Binary and Binary to Decimal Conversion, AND, OR and NOT Gates (Realization using Diodes and Transistor). NAND and NOR Gates as Universal Gates. XOR and XNOR Gates.

De Morgan's Theorems. Boolean Laws. Simplification of Logic Circuit using Boolean Algebra. Fundamental Products. Minterms and Maxterms. Conversion of a Truth Table into an Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map.

Binary Addition. Binary Subtraction using 2's Complement Method). Half Adders and Full Adders and Subtractors, 4-bit binary Adder-Subtractor.

UNIT – II: Semiconductor Devices and Amplifiers:

Semiconductor Diodes: P and N type semiconductors. Barrier Formation in PN Junction Diode. Qualitative Idea of Current Flow Mechanism in Forward and Reverse Biased Diode. PN junction and its characteristics. Static and Dynamic Resistance. Principle and structure of (1) LEDs, (2) Photodiode, (3) Solar Cell. Bipolar Junction transistors: n-p-n and p-n-p Transistors.

UNIT III

Characteristics of CB, CE and CC Configurations. Active, Cutoff & Saturation regions Current gains α and β. Relations between α and β. Load Line analysis of Transistors. DC Load line & Q-point. Voltage Divider Bias Circuit for CE Amplifier. h-parameter Equivalent Circuit. Analysis of single-stage CE amplifier using hybrid Model. Input & output Impedance. Current, Voltage and Power gains. Class A, B & C Amplifiers

UNIT-IV Operational Amplifiers (Black Box approach):
Characteristics of an Ideal and Practical Op-Amp (IC 741), Open-loop and closed-loop Gain. CMRR, concept of Virtual ground. Applications of Op-Amps: Inverting and non-inverting Amplifiers, Adder, Subtractor, Differentiator, Integrator, Zero crossing detector.
Sinusoidal Oscillators: Barkhausen's Criterion for Self-sustained Oscillations. Determination of Frequency of RC Oscillator

UNIT-V: Instrumentations: Introduction to CRO: Block Diagram of CRO. Applications of CRO: (1) Study of Waveform, (2) Measurement of Voltage, Current, Frequency, and Phase Difference. Power Supply: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers Calculation of Ripple Factor and Rectification Efficiency, Basic idea about capacitor filter, Zener Diode and Voltage Regulation. Timer IC: IC 555 Pin diagram and its application as Astable and Monostable Multivibrator.

Suggested Books:

1. Integrated Electronics, J. Millman and C.C. Halkias, 1991, Tata Mc-Graw Hill.
2. Electronic devices & circuits, S. Salivahanan & N.S. Kumar, 2012, Tata Mc-Graw Hill
3. Microelectronic Circuits, M.H. Rashid, 2nd Edn., 2011, Cengage Learning.
4. Modern Electronic Instrumentation and Measurement Tech., Helfrick and Cooper, 1990, PHI Learning
5. Digital Principles and Applications, A.P. Malvino, D.P. Leach and Saha, 7th Ed., 2011, Tata McGraw Hill
6. Microelectronic circuits, A.S. Sedra, K.C. Smith, A.N. Chandorkar, 2014, 6th Edn., Oxford University Press.
7. Fundamentals of Digital Circuits, A. Anand Kumar, 2nd Edition, 2009, PHI Learning Pvt. Ltd.
8. OP-AMP & Linear Digital Circuits, R.A. Gayakwad, 2000, PHI Learning Pvt. Ltd.

SEMESTER V

16PHU503B	EMBEDDED SYSTEM	L T P C
	INTRODUCTION TO MICROCONTROLLER	4 - - 4

Course Objective

- This paper gives introduction to microcontroller and embedded systems.
- To learn the architecture of embedded systems, their classification and application.
- To learn about the microprocessors and the organization of microprocessor based systems.
- To acquire knowledge of microcontrollers and their role in 1/0 port programming and their interface with peripherals.
- To know the Input/output operations and manipulation for arithmetic and logical operations.
- To know the basics of embedded system development and product development with a brief introduction to Arduino.

Course Outcome

After successful completion of the course, the student is expected to

1. Embedded systems including its generic architecture, design and classifications, Embedded processors and microcontrollers.
2. Organization of intel microprocessor 8085, its architecture, pin diagram, timing diagram, instruction set and programming in assembly language.
3. Organization of Intel 8051 microcontroller, its architecture, instruction set, programming and its memory organization, timing diagram.
4. Programming with and without interrupt service request.
5. Interfacing parallel and serial ADC and DAC.
6. Design, fabricate, test and run the programs.

UNIT I

Embedded system introduction: Introduction to embedded systems and general purpose computer systems, architecture of embedded system, classifications, applications and purpose of embedded systems, challenges & design issues in embedded systems, operational and non-operational quality attributes of embedded systems, elemental description of embedded processors and microcontrollers.

UNIT II

Review of microprocessors: Organization of Microprocessor based system, 8085μp pin diagram and architecture, concept of data bus and address bus, 8085 programming model, instruction classification, subroutines, stacks and its implementation, delay subroutines, hardware and software interrupts.

UNIT III

8051 microcontroller: Introduction and block diagram of 8051 microcontroller, architecture of 8051, overview of 8051 family, 8051 assembly language programming, Program Counter and ROM memory map, Data types and directives, Flag bits and Program Status Word (PSW) register, Jump, loop and call instructions.

UNIT IV

8051 I/O port programming: Introduction of I/O port programming, pin out diagram of 8051 microcontroller, I/O port pins description & their functions, I/O port programming in 8051 (using assembly language), I/O programming: Bit manipulation.

Programming: 8051 addressing modes and accessing memory using various addressing modes, assembly language instructions using each addressing mode, arithmetic and logic instructions, 8051 programming in C: for time delay & I/O operations and manipulation, for arithmetic and logic operations, for ASCII and BCD conversions.

UNIT V

Timer and counter Programming: Programming 8051 times, counter programming.

Serial port programming with and without interrupt: Introduction to 8051 interrupts, programming timer interrupts, programming external hardware interrupts and serial communication interrupt, interrupt priority in the 8051. **(6 Lectures)**

Interfacing 8051 microcontroller to peripherals: Parallel and serial ADC, DAC interfacing, LCD interfacing.

Programming Embedded Systems: Structure of embedded program, infinite loop, compiling, linking and locating, downloading and debugging. **(3 Lectures)**

Suggested Books:

1. Embedded Systems: Architecture, Programming & Design, R.Kamal, 2008,Tata McGraw Hill
2. The 8051 Microcontroller and Embedded Systems Using Assembly and C, M.A. Mazidi, J.G. Mazidi, and R.D. McKinlay, 2nd Ed., 2007, Pearson Education India.
3. Embedded microcomputor system: Real time interfacing, J.W.Valvano, 2000, Brooks/Cole
4. Microcontrollers in practice, I. Susnea and M. Mitescu, 2005, Springer.
5. Embedded Systems: Design & applications, S.F. Barrett, 2008, Pearson Education India
6. Embedded Microcomputer systems: Real time interfacing, J.W. Valvano 2011, Cengage Learning.

	SEMESTER V	**L T P C**
16PHU504A	**CLASSICAL MECHANICS**	**4 - - 4**

Course Objective

- The emphasis of the course is on applications in solving problems of interest to physicists.
- Students are to be examined on the basis of problems, seen and unseen.
- To demonstrate knowledge and understanding of the following fundamental concepts in the dynamics of system of particles, motion of rigid body, Lagrangian and Hamiltonian formulation of mechanics.
- To represent the equations of motion for complicated mechanical systems using the Lagrangian and Hamiltonian formulation of classical mechanics.
- To develop math skills as applied to physics.
- They will use critical thinking skills to formulate and solve quantitative problems in applied physics.

Course Outcome

After successful completion of the course, the student is expected to

1. Define and understand basic mechanical concepts related to discrete and continuous mechanical systems,
2. Describe and understand the vibrations of discrete and continuous mechanical systems,
3. Describe and understand planar and spatial motion of a rigid body,
4. Describe and understand the motion of a mechanical system using Lagrange-Hamilton formalism.
5. Solve the Newton equations for simple configurations using various methods.
6. Use critical thinking skills to formulate and solve quantitative problems in applied physics.

UNIT I

Classical Mechanics of Point Particles: Review of Newtonian Mechanics; Application to the motion of a charge particle in external electric and magnetic fields- motion in uniform electric field, magnetic field- gyroradius and gyrofrequency, motion in crossed electric and magnetic fields. Generalized coordinates and velocities, Hamilton's principle, Lagrangian and the Euler-Lagrange equations, one-dimensional examples of the Euler-Lagrange equations- one-dimensional Simple Harmonic Oscillations and falling body in uniform gravity; applications to simple systems such as coupled oscillators Canonical momenta & Hamiltonian. Hamilton's equations of motion.

UNIT II

Applications: Hamiltonian for a harmonic oscillator, solution of Hamilton's equation for Simple Harmonic Oscillations; particle in a central force field- conservation of angular momentum and energy.

UNIT III

Small Amplitude Oscillations: Minima of potential energy and points of stable equilibrium, expansion of the potential energy around a minimum, small amplitude oscillations about the minimum, normal modes of oscillations example of N identical masses connected in a linear fashion to (N -1) - identical springs.

UNIT IV

Special Theory of Relativity: Postulates of Special Theory of Relativity. Lorentz Transformations. Minkowski space. The invariant interval, light cone and world lines. Space-time diagrams. Time -dilation, length contraction and twin paradox. Four-vectors: space-like, time-like and light-like. Four-velocity and acceleration. Metric and alternating tensors. Four-momentum and energy-momentum relation. Doppler effect from a four-vector perspective. Concept of four-force. Conservation of four-momentum. Relativistic kinematics. Application to two-body decay of an unstable particle.

UNIT V

Fluid Dynamics: Density □ and pressure P in a fluid, an element of fluid and its velocity, continuity equation and mass conservation, stream-lined motion, laminar flow, Poiseuille's equation for flow of a liquid through a pipe, Navier-Stokes equation, qualitative description of turbulence, Reynolds number.

Suggested Books:

1. Classical Mechanics, H.Goldstein, C.P. Poole, J.L. Safko, 3rd Edn. 2002,Pearson Education.
2. Mechanics, L. D. Landau and E. M. Lifshitz, 1976, Pergamon.
3. Classical Electrodynamics, J.D. Jackson, 3rd Edn., 1998, Wiley.
4. The Classical Theory of Fields, L.D Landau, E.M Lifshitz, 4th Edn., 2003, Elsevier.
5. Introduction to Electrodynamics, D.J. Griffiths, 2012, Pearson Education.
6. Classical Mechanics, P.S. Joag, N.C. Rana, 1st Edn., McGraw Hall.
7. Classical Mechanics, R. Douglas Gregory, 2015, Cambridge University Press.
8. Classical Mechanics: An introduction, Dieter Strauch, 2009, Springer.
9. Solved Problems in classical Mechanics, O.L. Delange and J. Pierrus, 2010, Oxford Press

SEMESTER V **L T P C**

16PU504B ADVANCED MATHEMATICAL PHYSICS 4 - - 4

Course Objective

- The emphasis of the course is on applications in solving problems of interest to physicists. Students are to be examined on the basis of problems, seen and unseen.
- To apply calculus of variations to diverse problems in physics including isoperimetric problems.
- To find solutions to integral equations using different methods.
- To know the method of contour integration to evaluate definite integrals of varying complexity.
- To familiar with the method of Green's function to solve linear differential equations with inhomogeneous term.
- To understand the concept of linear vector space.

Course Outcome

After successful completion of the course, the student is expected to

1. Know the method of contour integration to evaluate definite integrals of varying complexity.
2. Have gained ability to apply group theory to physics problems, which is a pre-requisite for deeper understanding of crystallography, particle physics, quantum mechanics and energy bands in solids.
3. Apply calculus of variations to diverse problems in physics including isoperimetric problems.
4. Know another interesting aspect is the use of Lagrange multipliers in solving physics problems.
5. Become familiar with the method of Green's function to solve linear differential equations with inhomogeneous term.
6. Find solutions to integral equations using different methods.

UNIT I

Linear Vector Spaces: Abstract Systems. Binary Operations and Relations. Introduction to Groups and Fields. Vector Spaces and Subspaces. Linear Independence and Dependence of Vectors. Basis and Dimensions of a Vector Space. Change of basis. Homomorphism and Isomorphism of Vector Spaces. Linear Transformations. Algebra of Linear Transformations. Non-singular Transformations. Representation of Linear Transformations by Matrices.

UNIT II

Matrices: Addition and Multiplication of Matrices. Null Matrices. Diagonal, Scalar and Unit Matrices. Upper-Triangular and Lower-Triangular Matrices. Transpose of a Matrix. Symmetric and Skew-Symmetric Matrices. Conjugate of a Matrix. Hermitian and Skew-Hermitian Matrices. Singular and Non-Singular matrices. Orthogonal and Unitary Matrices. Trace of a Matrix. Inner Product. Eigen-values and Eigenvectors. Cayley-Hamiliton

Theorem. Diagonalization of Matrices. Solutions of Coupled Linear Ordinary Differential Equations. Functions of a Matrix.

UNIT III

Cartesian Tensors: Transformation of Co-ordinates. Einstein's Summation Convention. Relation between Direction Cosines. Tensors. Algebra of Tensors. Sum, Difference and Product of Two Tensors. Contraction. Quotient Law of Tensors. Symmetric and Anti-symmetric Tensors. Invariant Tensors : Kronecker and Alternating Tensors. Association of Antisymmetric Tensor of Order Two and Vectors.

UNIT IV

Vector Algebra and Calculus using Cartesian Tensors : Scalar and Vector Products, Scalar and Vector Triple Products. Differentiation. Gradient, Divergence and Curl of Tensor Fields. Vector Identities. Tensorial Formulation of Analytical Solid Geometry : Equation of a Line. Angle Between Lines. Projection of a Line on another Line. Condition for Two Lines to be Coplanar. Foot of the Perpendicular from a Point on a Line. Rotation Tensor (No Derivation). Isotropic Tensors. Tensorial Character of Physical Quantities. Moment of Inertia Tensor. Stress and Strain Tensors : Symmetric Nature. Elasticity Tensor. Generalized Hooke's Law.

UNIT V

General Tensors: Transformation of Co-ordinates. Minkowski Space. Contravariant & Covariant Vectors. Contravariant, Covariant and Mixed Tensors. Kronecker Delta and Permutation Tensors. Algebra of Tensors. Sum, Difference & Product of Two Tensors. Contraction. Quotient Law of Tensors. Symmetric and Anti-symmetric Tensors. Metric Tensor.

Suggested Books:

1. Mathematical Tools for Physics, James Nearing, 2010, Dover Publications
2. Mathematical Methods for Physicists, G.B. Arfken, H.J. Weber, and F.E. Harris, 1970, Elsevier.
3. Modern Mathematical Methods for Physicists and Engineers, C.D. Cantrell, 2011, Cambridge University Press
4. Introduction to Matrices and Linear Transformations, D.T. Finkbeiner, 1978, Dover Pub.
5. Linear Algebra, W. Cheney, E.W.Cheney & D.R.Kincaid, 2012, Jones & Bartlett Learning
6. Mathematics for Physicists, Susan M. Lea, 2004, Thomson Brooks/Cole
7. Mathematical Methods for Physicis & Engineers, K.F.Riley, M.P.Hobson, S.J.Bence, 3rd Ed., 2006, Cambridge University Press.

SEMESTER V

16PHU511A COMPUTATIONAL PHYSICS (PRACTICAL) (SEC 3 A)

L T P C
- - 3 1

Course Objective

- The aim of this course is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics.
- Both experimental and theoretical physics are incomplete without the option to compute whenever it is necessary.
- The goal of computational physics is not to replace theory or experiment, but to enhance our understanding of physical processes.
- The aim of this course is to lay the grounds for the development of the computational skills.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To understand the applicability of numerical methods for modeling physical systems and its advantages and disadvantages.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate basic knowledge of numerical methods.
2. Demonstrate basic programming skills.
3. Demonstrate an understanding of the applicability of numerical methods for modeling physical systems and its advantages and disadvantages.
4. Solve the problems by computing.
5. Understand the differences of theory, computing and experiments.
6. Solve the complex equations using different software packages.

Head on Exercises

1. To compile a frequency distribution and evaluate mean, standard deviation etc.
2. To evaluate sum of finite series and the area under a curve.
3. To find the product of two matrices
4. To find a set of prime numbers and Fibonacci series.
5. To write program to open a file and generate data for plotting using Gnuplot.
6. Plotting trajectory of a projectile projected horizontally.
7. Plotting trajectory of a projectile projected making an angle with the horizontally.
8. Creating an input Gnuplot file for plotting a data and saving the output for seeing on the screen. Saving it as an eps file and as a pdf file.
9. To find the roots of a quadratic equation.
10. Motion of a projectile using simulation and plot the output for visualization.
11. Numerical solution of equation of motion of simple harmonic oscillator and plot the outputs for visualization.
12. Motion of particle in a central force field and plot the output for visualization.

Suggested Books:

1. Introduction to Numerical Analysis, S.S. Sastry, 5th Edn., 2012, PHI Learning Pvt. Ltd.
2. Computer Programming in Fortran 77”. V. Rajaraman (Publisher: PHI).
3. LaTeX–A Document Preparation System”, Leslie Lamport (Second Edition, Addison-Wesley, 1994).
4. Gnuplot in action: understanding data with graphs, Philip K Janert, (Manning 2010)
5. Schaum’s Outline of Theory and Problems of Programming with Fortran, S Lipsdutz and A Poe, 1986Mc-Graw Hill Book Co.
6. Computational Physics: An Introduction, R. C. Verma, et al. New Age International Publishers, New Delhi(1999)
7. A first course in Numerical Methods, U.M. Ascher and C. Greif, 2012, PHI Learning
8. Elementary Numerical Analysis, K.E. Atkinson, 3rd Edn., 2007 , Wiley India Edition.

SEMESTER V

16PHU511B	**WEATHER FORECASTING (PRACTICAL)**	**L T P C**
	(SEC 3 B)	**3 - - 3**

Course Objective:

- The aim of this course is not just to impart theoretical knowledge to the students but to enable them to develop an awareness
- To understand the causes and effects of different weather phenomenon and basic forecasting techniques.
- To know the role of air, water, and wind in weather systems.
- Assess variability and change within this expanded, extended and quality assured network.
- To explain what causes different types of weather.
- To understand the concept of Ecosystems and climate interactions

Course Outcome

After successful completion of the course, the student is expected to

1. Know the idea on Ecosystems and climate interactions
2. Know the Effects of climate change on life cycles
3. Know the Biodiversity, Weather vs climate
4. Understand the greenhouse effect, Treaty rights
5. Understand traditional ecological knowledge.
6. Understand the importance of weather changes.

Demonstration and Experiments:

1. Study of synoptic charts & weather reports, working principle of weather station.
2. Processing and analysis of weather data:
3. To calculate the sunniest time of the year.
4. To study the variation of rainfall amount and intensity by wind direction.
5. To observe the sunniest/driest day of the week.
6. To examine the maximum and minimum temperature throughout the year.
7. To evaluate the relative humidity of the day.
8. To examine the rainfall amount month wise.
9. Exercises in chart reading: Plotting of constant pressure charts, surfaces charts, upper wind charts and its analysis.
10. Formats and elements in different types of weather forecasts/ warning (both aviation and non aviation)

Suggested books

1. Text Book of Agrometeorology, S.R. Ghadekar, 2005, Agromet Publishers, Nagpur.
2. https://www.sciencedirect.com/science/article/abs/pii/S0065268708603118
3. https://cimss.ssec.wisc.edu/satmet/modules/7_weather_forecast/wf-1.html
4. https://www.outdoorproject.com/articles/weather-forecasting-101-how-predict-weather-go
5. https://www.weatheronline.in/.
6. https://www.weatheronline.in/weather/maps/city?WMO=43321&CONT=inin&LAND=II&ART=PRE&LEVEL=162&MOD=tab
7. https://www.worldweatheronline.com/hwd/

SEMESTER – V

16PHU512A ELEMENTS OF MODERN PHYSICS (PRACTICAL) L T P C

- - 4 2

Course Objective

- To identify the circumstances, in Modern Physics. Enumerate and understand the postulate of relativity.
- To learn about the speed of light as a natural limit to speed.
- To understand the work of Planck, Bohr, Heisenberg, uncertainty principle and the other features of Quantum Mechanics.
- Acquaintance with basic fields of modern physics
- Ability of searching solutions of physical problems in scientific and technical literature.
- Understanding of physical processes and technology

Course Outcome

After successful completion of the course, the student is expected to

1. Recall and apply knowledge in the areas of optics and waves, special relativity and quantum physics (developing the knowledge capability dimension);
2. Conduct relevant experiments, analyse data and report results in written form (developing the technical capability and communication dimensions).
3. Analyse the plank's constant using different experimental technique.
4. Find the wavelength of any laser sources.
5. Differentiate the interference and diffraction properties by the experiments.
6. Understand the theory and practical knowledge of light and other properties.

Any 8 Experiments

1. Measurement of Planck's constant using black body radiation and photo-detector
2. Photo-electric effect: photo current versus intensity and wavelength of light; maximum energy of photo-electrons versus frequency of light
3. To determine work function of material of filament of directly heated vacuum diode.
4. To determine the Planck's constant using LEDs of at least 4 different colours.
5. To determine the wavelength of H-alpha emission line of Hydrogen atom.
6. To determine the ionization potential of mercury.
7. To determine the absorption lines in the rotational spectrum of Iodine vapour.
8. To determine the value of e/m by (a) Magnetic focusing or (b) Bar magnet.
9. To setup the Millikan oil drop apparatus and determine the charge of an electron.
10. To show the tunneling effect in tunnel diode using I-V characteristics.

11. To determine the wavelength of laser source using diffraction of single slit.
12. To determine the wavelength of laser source using diffraction of double slits.
13. To determine (1) wavelength and (2) angular spread of He-Ne laser using plane diffraction grating

Suggested Books:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, I.Prakash & Ramakrishna, 11th Edn, 2011,Kitab Mahal.

SEMESTER V

16PHU512B	**MEDICAL PHYSICS (PRACTICAL)**	**L T P C**
		- - 4 2

Course Objective

- The objective of the course is to educate and to train students to a competency level sufficient to practice radiation oncology physics independently.
- This prepares the students for clinical practices in radiation therapy (RT) physics through a structured clinical trainings and didactic courses.
- To know the energetic charged particle interactions and transport in matter.
- The program is supervised and mentored by highly qualified clinical practitioners.
- This paper is aimed at giving idea to the students regarding the nature of human body and usage of different radiations for the treatment of body.
- To active participation in clinical research, teaching, and training.

Course Outcomes

After successful completion of the course, the student is expected to

1. Different areas of research in Medical Physics.
2. Understand and apply key concepts specific to energy deposition for both ionizing photon interactions and transport in matter.
3. Know the energetic charged particle interactions and transport in matter.
4. Understanding the working of a manual optical eye-testing machine.
5. Familiarization with the Use of a Vascular Doppler.
6. Realize the real time examples of medical instruments.

Any 8 experiments

1. Understanding the working of a manual Hg Blood Pressure monitor and measure the Blood Pressure.
2. Understanding the working of a manual optical eye-testing machine and to learn eye-testing procedure.
3. Correction of Myopia (short sightedness) using a combination of lenses on an optical bench/breadboard.
4. Correction of Hypermetropia/Hyperopia (long sightedness) using a combination of lenses on an optical bench/breadboard.
5. To learn working of Thermoluminescent dosimeter (TLD) badges and measure the background radiation.
6. Familiarization with Geiger-Muller (GM) Counter and to measure background radiation.

7. Familiarization with Radiation meter and to measure background radiation.
8. Familiarization with the Use of a Vascular Doppler.

Suggested Books:

1. Basic Radiological Physics, Dr. K. Thayalan - Jayapee Brothers Medical Publishing Pvt. Ltd. New Delhi (2003)
2. Christensen's Physics of Diagnostic Radiology: Curry, Dowdey and Murry - Lippincot Williams and Wilkins (1990)
3. Physics of Radiation Therapy: F M Khan - Williams and Wilkins, 3rd edition (2003)
4. The essential physics of Medical Imaging: Bushberg, Seibert, Leidholdt and Boone Lippincot Williams and Wilkins, Second Edition (2002)
5. Handbook of Physics in Diagnostic Imaging: Roshan S. Livingstone: B. I. Publications Pvt Ltd.
6. The Physics of Radiology-H E Johns and Cunningham.

SEMESTER V

16PHU513A DIGITAL, ANALOG CIRCUITS AND INSTRUMENTATION (PRACTICAL) L T P C
- - 4 2

Course Objectives

- The objective of this paper is to give information about different analog electronic circuits and their applications.
- To understand operation of semiconductor devices.
- To understand DC analysis and AC models of semiconductor devices.
- To acquire knowledge about how a semiconductor diode rectifies an input ac signal.
- To apply concepts for the design of Regulators and Amplifiers.
- To implement mini projects based on concept of electronics circuit concepts.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand the basics of diode
2. Analyse the characteristics of Bipolar Junction Transistor
3. Perform the procedures for the working of RC-coupled transistor
4. Analyse the relationship between V-I & power curves
5. Understand the applications of Op-amp
6. Develop the ability to analyze and design analog electronic circuits using discrete components.
7. Acquire a basic knowledge in solid state electronics including diodes, MOSFET, BJT, and operational amplifier.

Any 8 Experiments

1. To measure (a) Voltage, and (b) Frequency of a periodic waveform using CRO
2. To verify and design AND, OR, NOT and XOR gates using NAND gates.
3. To minimize a given logic circuit.
4. Half adder, Full adder and 4-bit Binary Adder.
5. Adder-Subtractor using Full Adder I.C.
6. To design an astable multivibrator of given specifications using 555 Timer.
7. To design a monostable multivibrator of given specifications using 555 Timer.
8. To study IV characteristics of PN diode, Zener and Light emitting diode
9. To study the characteristics of a Transistor in CE configuration.
10. To design a CE amplifier of given gain (mid-gain) using voltage divider bias.
11. To design an inverting amplifier of given gain using Op-amp 741 and study its frequency response.

12. To design a non-inverting amplifier of given gain using Op-amp 741 and study its Frequency Response.
13. To study Differential Amplifier of given I/O specification using Op-amp.
14. To investigate a differentiator made using op-amp.
15. To design a Wien Bridge Oscillator using an op-amp.

Suggested Books:

1. Basic Electronics: A text lab manual, P.B. Zbar, A.P. Malvino, M.A. Miller, 1994, Mc-Graw Hill.
2. Electronics: Fundamentals and Applications, J.D. Ryder, 2004, Prentice Hall.
3. OP-Amps & Linear Integrated Circuit, R.A. Gayakwad, 4^{th} Edn, 2000, Prentice Hall.
4. Electronic Principle, Albert Malvino, 2008, Tata Mc-Graw Hill.

SEMESTER V

16PHU513B EMBEDDED SYSTEM L T P C

INTRODUCTION TO MICROCONTROLLER (PRACTICAL) - - 4 2

Course Objective

- This paper gives introduction to microcontroller and embedded systems.
- To learn the architecture of embedded systems, their classification and application.
- To learn about the microprocessors and the organization of microprocessor based systems.
- To acquire knowledge of microcontrollers and their role in 1/0 port programming and their interface with peripherals.
- To know the Input/output operations and manipulation for arithmetic and logical operations.
- To know the basics of embedded system development and product development with a brief introduction to Arduino.

Course Outcome

After successful completion of the course, the student is expected to

1. Embedded systems including its generic architecture, design and classifications, Embedded processors and microcontrollers.
2. Organization of intel microprocessor 8085, its architecture, pin diagram, timing diagram, instruction set and programming in assembly language.
3. Organization of Intel 8051 microcontroller, its architecture, instruction set, programming and its memory organization, timing diagram.
4. Programming with and without interrupt service request.
5. Interfacing parallel and serial ADC and DAC.
6. Student shall be able to design, fabricate, test and run the programs.

ANY 8 EXPERIMENTS

1. To find that the given numbers is prime or not.
2. To find the factorial of a number.
3. Write a program to make the two numbers equal by increasing the smallest number and decreasing the largest number.
4. Use one of the four ports of 8051 for O/P interfaced to eight LED's. Simulate binary counter (8 bit) on LED's .
5. Program to glow the first four LEDs then next four using TIMER application.
6. Program to rotate the contents of the accumulator first right and then left.
7. Program to run a countdown from 9-0 in the seven segment LED display.
8. To interface seven segment LED display with 8051 microcontroller and display

‘HELP’ in the seven segment LED display.

9. To toggle ‘1234’ as ‘1324’ in the seven segment LED display.
10. Interface stepper motor with 8051 and write a program to move the motor through a given angle in clock wise or counter clockwise direction.
11. Application of embedded systems: Temperature measurement, some information on LCD display, interfacing a keyboard.

Arduino based programs and experiments:

1. Make a LED flash at different time intervals.
2. To vary the intensity of LED connected to Arduino
3. To control speed of a stepper motor using a potential meter connected to Arduino
4. To display “PHYSICS” on LCD/CRO.

Suggested Books:

1. Embedded Systems: Architecture, Programming& Design, R.Kamal,]2008,Tata McGraw Hill
2. The 8051 Microcontroller and Embedded Systems Using Assembly and C, M.A. Mazidi, J.G. Mazidi, and R.D. McKinlay, 2nd Ed., 2007, Pearson Education India.
3. Embedded Microcomputor System: Real Time Interfacing, J.W.Valvano, 2000, Brooks/Cole
4. Embedded System, B.K. Rao, 2011, PHI Learning Pvt. Ltd.
5. Embedded Microcomputer systems: Real time interfacing, J.W. Valvano 2011, Cengage Learning

SEMESTER V

16PHU514A **CLASSICAL MECHANICS (PRACTICAL)** L T P C

\- - 4 2

Course Objective

- The aim of this course is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in classical mechanics.
- The emphasis of the course is on applications in solving problems of interest to physicists.
- Students are to be examined on the basis of problems, seen and unseen.
- To demonstrate knowledge and understanding of the following fundamental concepts in the dynamics of system of particles, motion of rigid body, Lagrangian and Hamiltonian formulation of mechanics.
- To represent the equations of motion for complicated mechanical systems using the Lagrangian and Hamiltonian formulation of classical mechanics.
- To develop math skills as applied to physics.
- They will use critical thinking skills to formulate and solve quantitative problems in applied physics.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate basic knowledge to solve the problems on motion.
2. Understand the basic concept of trajectories using programming skills.
3. Verify the principles and equations using modeling and analyse its advantages and disadvantages.
4. Solve the problems equations through softwares.
5. Understand the differences of theory, computing skill and experiments.
6. Study the different phenomena of physical variables.

Any 8 experiments

1. To determine the coupling coefficient of coupled pendulums.
2. To determine the coupling coefficient of coupled oscillators.
3. To determine the coupling and damping coefficient of damped coupled oscillator.
4. To study population models e.g. exponential growth and decay, logistic growth, species competition, predator-prey dynamics, simple genetic circuits.
5. To study rate equations for chemical reactions e.g. auto catalysis, bistability.
6. To study examples from game theory.
7. Computational visualization of trajectories in the Sinai Billiard.
8. Computational visualization of trajectories Electron motion in mesoscopic conductors

as a chaotic billiard problem.

9. Computational visualization of fractal formations of Deterministic fractal.
10. Computational visualization of fractal formations of self-similar fractal.
11. Computational visualization of fractal formations of Fractals in nature – trees, coastlines, earthquakes.
12. Computational Flow visualization - streamlines, pathlines, Streaklines.

Suggested Books:

1. Nonlinear Dynamics and Chaos, Steven H. Strogatz, Levant Books, Kolkata, 2007
2. Understanding Nonlinear Dynamics, Daniel Kaplan and Leon Glass, Springer.
3. An Introduction to Fluid Dynamics, G.K.Batchelor, Cambridge Univ. Press, 2002
4. Fluid Mechanics, 2nd Edn, L.D.Landau & E.M. Lifshitz, Pergamon Press, Oxford, 1987
5. Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications: A. Vande Wouwer, P. Saucez, C. V. Fernández. 2014 Springer ISBN: 978-3319067896
6. Scilab by example: M. Affouf, 2012, ISBN: 978-1479203444
7. Scilab Image Processing: L.M.Surhone. 2010, Betascript Pub., ISBN: 978-6133459274

SEMESTER V

16PU514B ADVANCED MATHEMATICAL PHYSICS (PRACTICAL) L T P C
- - 4 2

Course Objective

- The emphasis of the course is on applications in solving problems of interest to physicists. Students are to be examined on the basis of problems, seen and unseen.
- To apply calculus of variations to diverse problems in physics including isoperimetric problems.
- To find solutions to integral equations using different methods.
- To know the method of contour integration to evaluate definite integrals of varying complexity.
- To familiar with the method of Green's function to solve linear differential equations with inhomogeneous term.
- To understand the concept of linear vector space.

Course Outcome

After successful completion of the course, the student is expected to

1. Understand variation principle and apply it to calculate the physical variables.
2. Acquire basic concept of Hamiltonian, Hamilton's principle and Hamiltonian equation of motion, Poisson and Lagrange brackets.
3. Learn elementary group theory, i.e., definition and properties of groups, subgroups, Homomorphism, isomorphism, normal and conjugate groups, representation of groups, Reducible and Irreducible groups.
4. Learn the theory of probability, Random variables and probability distributions, Expectation values and variance. Various examples of probability distributions used in physics.
5. Gain the knowledge on Cartesian Tensors and its applications .
6. Understand the concept of Matrices and their problems associated with physical concepts.

Scilab/ C^{++} based simulations experiments based on Mathematical Physics problems like

1. Linear algebra:
2. Multiplication of two 3 x 3 matrices.
3. Eigenvalue and eigenvectors of

8. 9. 3 11. 12
7. 20. 2 21. 1
28 19 29. 4 31. 22 3

4. Orthogonal polynomials as eigenfunctions of Hermitian differential operators.
5. Determination of the principal axes of moment of inertia through diagonalization.
6. Vector space of wave functions in Quantum Mechanics: Position and momentum differential operators and their commutator, wave functions for stationary states as

eigenfunctions of Hermitian differential operator.
7. Lagrangian formulation in Classical Mechanics with constraints.
8.Study of geodesics in Euclidean and other spaces (surface of a sphere, etc).
9.Estimation of ground state energy and wave function of a quantum system.

Suggested Books:

1. Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications: A. Vande Wouwer, P. Saucez, C. V. Fernández. 2014 Springer ISBN: 978-3319067896
2. Scilab by example: M. Affouf, 2012, ISBN: 978-1479203444
3. Scilab Image Processing: L.M.Surhone. 2010, Betascript Pub., ISBN: 978-6133459274

SEMESTER VI — L T P C

16PHU601A **ELECTRICAL CIRCUITS AND NETWORK SKILLS** — 3 - - 3

Course Objectives

- The aim of this course is to enable the students to design and trouble shoots the electrical circuits, networks and appliances through hands-on mode.
- To use Circuit Theory as a carrier of the fundamentals of Linear System and Continuous Signal Analysis so that the students are well-prepared to take up a detailed study of higher level subjects
- To apply their knowledge to analog and digital electronics, pulse electronics, analog and digital communication systems, digital signal processing, control systems, and power electronics at a later stage.
- To make the students understand coherence between theoretical and practical measurement.
- To use the techniques, skills and modern technical tools necessary for technical or engineering practice.
- The primary objective of this course is to provide a thorough understanding and working knowledge of design, implementation and analysis of instruments.

Course Outcome

After successful completion of the course, the student is expected to

1. Electromagnetic spectra and different frequency bands.
2. Understand various types of DC and AC circuits and making electrical
3. Drawings with symbols for various systems.
4. Understand and operate generators, transformers and electric motors.
5. Develop knowledge of solid state devices and their uses.
6. Do electrical wiring with assured electrical protection devices.

UNIT I

Basic Electricity Principles: Voltage, Current, Resistance, and Power. Ohm's law. Series, parallel, and series-parallel combinations. AC Electricity and DC Electricity. Familiarization with multimeter, voltmeter and ammeter.

UNIT II

Understanding Electrical Circuits: Main electric circuit elements and their combination. Rules to analyze DC sourced electrical circuits. Current and voltage drop across the DC circuit elements. Single-phase and three-phase alternating current sources. Rules to analyze AC sourced electrical circuits. Real, imaginary and complex power components of AC source. Power factor. Saving energy and money.

UNIT III

Electrical Drawing and Symbols: Drawing symbols. Blueprints. Reading Schematics. Ladder diagrams. Electrical Schematics. Power circuits. Control circuits. Reading of circuit schematics. Tracking the connections of elements and identify current flow and voltage drop.

UNIT IV

Generators and Transformers: DC Power sources. AC/DC generators. Inductance, capacitance, and impedance. Operation of transformers.

Electric Motors: Single-phase, three-phase & DC motors. Basic design. Interfacing DC or AC sources to control heaters & motors. Speed & power of ac motor.

UNIT V

Solid-State Devices: Resistors, inductors and capacitors. Diode and rectifiers. Components in Series or in shunt. Response of inductors and capacitors with DC or AC Sources.

ElectricalProtection: Relays. Fuses and disconnect switches. Circuit breakers. Overload devices. Ground-fault protection. Grounding and isolating. Phase reversal. Surge protection. Interfacing DC or AC sources to control elements (relay protection device)

Suggested Books:

1. A text book in Electrical Technology - B L Theraja - S Chand & Co.
2. A text book of Electrical Technology - A K Theraja
3. Performance and design of AC machines - M G Say ELBS Edn.
4. William H. Hayt, Jr. And Jack E. Kemmerly, Engineering Circuit Analysis, New York: McGraw-Hill, 1962
5. M. E. Van Valkenburg, Network Analysis, PHI, 1974
6. K V V Murthy, M S Kamath, Basic Circuit Analysis, Tata McGraw-Hill Publishing Company, 1989
7. Charles A. Desoer, Ernest S. Kuh, Basic Circuit Theory, New York: McGrawHill 1962
8. Ernst A. Guillemin, Introductory Circuit Theory, New York: Wiley, 1953
9. Ernst A. Guillemin, The Mathematics of Circuit Analysis, New York: Wiley,1949
10. N. Balbanian, T. A. Bickart, Electric Network Theory, New York: Wiley, 1969
11. https://library.automationdirect.com/basic-electrical-theory/

	SEMESTER VI	**L T P C**
16PHU601B	**APPLIED OPTICS**	**3 - - 3**

Course Objectives

- Study of non-linear optical properties of materials is very important as many of such materials are used in different instruments etc.
- This paper gives basic knowledge about different nonlinear optical properties and their theoretical aspects.
- To be able to apply the fundamental concepts of optics in lasers, optical fiber communications and optoelectronics.
- Apply the concept of optical fiber, its construction and importance in communication physics.
- To analyze different laser systems and its applications in various fields.
- To identify few different applications of optics i.e. Laser, Fiber Optics, Optoelectronics and Non Linear Optics.
- To understand the basic lasing mechanism, types of Lasers, characteristics of Laser Light, types of Lasers,

Course Outcome

After successful completion of the course, the student is expected to

1. Familiar with optical phenomena and technology.
2. Qualitative understanding of basic lasing mechanism, types of Lasers, characteristics of Laser Light, types of Lasers,
3. Know the applications in developing LED, Holography.
4. The idea of propagation of electromagnetic wave in a nonlinear media – Fibre optics as an example will enable the student to practice thinking in a logical process, which is essential in science.
5. Experiments in this course will allow the students to discuss in peer groups to develop their cooperative skills and reinforce their understanding of concepts.
6. Identify few different applications of optics i.e. Laser, Fiber Optics, Optoelectronics and Non Linear Optics.
7. Classify the concepts of opto-isolaters and opto-couplers.
8. Interpret the concepts of Non Linear Optics (NLO) and will able to distinguish the different harmonic generation NLO materials.
9. Understand the concept of polarizability and dielectric tensor.

UNIT I

Review of the concepts of polarizability and dielectric tensor of a medium. Frequency dependence of the dielectric tensor – wave vector dependence of the dielectric tensor – electromagnetic waves in an isotropic dielectrics.

UNIT II

Introduction to non linear optics- Nonlinear dielectric response of matter – frequency variation of the nonlinear susceptibilities – properties of non linear susceptibilities- time domain descrption of optical non- linear susceptibilities- wave vector dependence of the nonlinear susceptibilities.

UNIT III

Second harmonic generation – perturbation theory – phase matching evolution of SHW under phase matching conditions. Four wave mixing spectroscopy – optical phase conjugation – nonlinear materials.

UNIT IV

Scattering of light – Raman scattering – Quantum theory of Raman scattering – Brillouin scattering. Interaction of atoms with nearly resonant fields – wave function under near resonant conditions. Bloch equations – self induced transparency.

UNIT V

Fibre optics – normal modes of optical fibres – nonlinear Schrodinger equations – linear theory. Basic concepts of solutions and non-linear periodic structures. Effect of fibre loss – effect of waveguide property of a fibre – conditions of generation of a solutions in optical fibres.

Suggested Books:

1. D.L. Mills,1st edition 1998 Basic Concepts of Nonlinear Optics ,Springer
   Reference Books:
2. F. Zernike and J.E. Midwinter, Applied Nonlinear Optics , revised edition 2006, Dover books

	SEMESTER VI	**L T P C**
16PHU602A	**QUANTUM MECHANICS**	**4 - - 4**

Course Objectives

- This paper explains the shortcomings of quantum mechanics in explaining different subatomic physics and the evolution of quantum mechanics.
- This course is part one of a two semester course focused on a rigorous exposition to the principles of Quantum mechanics.
- The Dirac bra-ket formalism will be introduced and used throughout to present the principles of Quantum Mechanics in a general context.
- We will discuss analytic solutions to the Schriodinger equation for a variety of potentials in one, two and three dimensions.
- The role of symmetries as the underlying principle of Quantum Mechanics will be emphasized throughout the course.
- The use of symmetry principles and operators methods will be discussed.

Course Outcome

After successful completion of the course, the student is expected to

1. Understand the interpretation of wave function of quantum particle.
2. Know the quantum phenomena are exposed to the student.
3. Understanding the behavior of quantum particle encountering a i) barrier, ii) Potential.
4. Gets exposed to solving non-relativistic hydrogen atom, for its spectrum and eigenfunctions.
5. Study of influence of electric and magnetic fields on atoms will help in understanding Stark effect and Zeeman Effect respectively.
6. Understand the difference between classical and quantum concept.
7. Use the superposition principle to predict experimental outcomes for measurement of observables on simple quantum systems.
8. Apply the uncertainty principle and heuristic arguments to obtain rough descriptions of quantum systems.
9. Describe generally the physical implications, such as possible bound states and un-bound states for any given hamiltonian.

UNIT I

Time dependent Schrodinger equation: Time dependent Schrodinger equation and dynamical evolution of a quantum state; Properties of Wave Function. Interpretation of Wave Function Probability and probability current densities in three dimensions; Conditions for Physical Acceptability of Wave Functions. Normalization. Linearity and Superposition Principles. Eigenvalues and Eigenfunctions. Position, momentum & Energy operators; commutator of position and momentum operators; Expectation values of position & momentum. Wave Function of a Free Particle.

UNIT II

Time independent Schrodinger equation-Hamiltonian, stationary states and energy eigenvalues; expansion of an arbitrary wavefunction as a linear combination of energy eigenfunctions; General solution of the time dependent Schrodinger equation in terms of linear combinations of stationary states; Application to the spread of Gaussian wavepacket for a free particle in one dimension; wave packets, Fourier transforms and momentum space wavefunction; Position-momentum uncertainty principle.

UNIT III

General discussion of bound states in an arbitrary potential- continuity of wave function, boundary condition and emergence of discrete energy levels; application to one-dimensional problem- square well potential; Quantum mechanics of simple harmonic oscillator-energy levels and energy eigenfunctions using Frobenius method.

UNIT IV

Quantum theory of hydrogen-like atoms: time independent Schrodinger equation in spherical polar coordinates; separation of variables for the second order partial differential equation; angular momentum operator and quantum numbers; Radial wavefunctions from Frobenius method; Orbital angular momentum quantum numbers l and m; s, p, d,.. shells (idea only)

UNIT V

Atoms in Electric and Magnetic Fields:- Electron Angular Momentum. Space Quantization. Electron Spin and Spin Angular Momentum. Larmor's Theorem. Spin Magnetic Moment. Stern-Gerlach Experiment. Normal Zeeman Effect: Electron Magnetic Moment and Magnetic Energy. Many electron atoms: Pauli's Exclusion Principle. Symmetric and Antisymmetric Wave Functions. Spin orbit coupling. Spectral Notations for Atomic States. Total Angular Momentum. Spin-orbit coupling in atoms-L-S and J-J couplings.

Suggested Books:

1. A Text book of Quantum Mechanics, P.M. Mathews and K. Venkatesan, 2nd Ed., 2010, McGraw Hill
2. Quantum Mechanics, Robert Eisberg and Robert Resnick, 2ndEdn.,2002, Wiley. Quantum Mechanics, Leonard I. Schiff, 3rdEdn. 2010, Tata McGraw Hill.
3. Quantum Mechanics, G. Aruldhas, 2ndEdn. 2002, PHI Learning of India.
4. Quantum Mechanics, Bruce Cameron Reed, 2008, Jones and Bartlett Learning
5. Introduction to Quantum Mechanics, D.J. Griffith, 2nd Ed. 2005, Pearson Education

	SEMESTER VI	**L T P C**
16PHU602B	**ATMOSPHERIC PHYSICS**	**4 - - 4**

Course Objective

- The objective of this course is to give knowledge to students about the different activities in the atmosphere and different methods of monitoring the atmosphere.
- Students can demonstrate the ability to apply principles of cloud microphysics and atmospheric chemistry to the solution of atmospheric problems.
- The Atmospheric Physics and Weather Group carries out weather and climate research, studying processes and phenomena related to moist thermodynamics and the hydrologic cycle in the atmosphere
- To demonstrate knowledge of basic atmospheric chemistry and its role in atmospheric phenomena.
- To determine if the atmosphere is stable or unstable from a vertical temperature profile
- To understand atmospheric general circulation and the basic principles of physical and applied climatology and climate change.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate knowledge of cloud properties.
2. Demonstrate knowledge of the thermodynamic drivers of cloud development and evolution.
3. Demonstrate knowledge of basic atmospheric chemistry and its role in atmospheric phenomena.
4. Determine if the atmosphere is stable or unstable from a vertical temperature profile
5. Understand atmospheric general circulation and the basic principles of physical and applied climatology and climate change.
6. Explain the composition and structure of the atmosphere.

UNIT I

General features of Earth's atmosphere: Thermal structure of the Earth's Atmosphere, Ionosphere, Composition of atmosphere, Hydrostatic equation, Potential temperature, Atmospheric Thermodynamics, Greenhouse effect and effective temperature of Earth, Local winds, monsoons, fogs, clouds, precipitation, Atmospheric boundary layer, Sea breeze and land breeze. Instruments for meteorological observations, including RS/RW, meteorological processes and different systems, fronts, Cyclones and anticyclones, thunderstorms.

UNIT II

Atmospheric Dynamics: Scale analysis, Fundamental forces, Basic conservation laws, The Vectorial form of the momentum equation in rotating coordinate system, scale analysis of equation of motion, Applications of the basic equations, Circulations and vorticity, Atmospheric oscillations, Quasi biennial oscillation, annual and semi-annual oscillations, Mesoscale circulations, The general circulations, Tropical dynamics.

UNIT III

Atmospheric Waves: Surface water waves, wave dispersion, acoustic waves, buoyancy waves, propagation of atmospheric gravity waves (AGWs) in a nonhomogeneous medium, Lamb wave, Rossby waves and its propagation in three dimensions and in sheared flow, wave absorption, non-linear consideration

UNIT IV

Atmospheric Radar and Lidar: Radar equation and return signal, Signal processing and detection, Various type of atmospheric radars, Application of radars to study atmospheric phenomena, Lidar and its applications, Application of Lidar to study atmospheric phenomenon. Data analysis tools and techniques.

UNIT V

Atmospheric Aerosols: Spectral distribution of the solar radiation, Classification and properties of aerosols, Production and removal mechanisms, Concentrations and size distribution, Radiative and health effects, Observational techniques for aerosols, Absorption and scattering of solar radiation, Rayleigh scattering and Mie scattering, Bouguert-Lambert law, Principles of radiometry, Optical phenomena in atmosphere, Aerosol studies using Lidars.

Suggested Books:

1. Fundamental of Atmospheric Physics – Murry L Salby; Academic Press, Vol 61, 1996
2. The Physics of Atmosphere – John T. Houghton; Cambridge University press, 3rd edn. 2002.
3. An Introduction to dynamic meteorology – James R Holton; Academic Press, 2004
4. Radar for meteorological and atmospheric observations – S Fukao and K

SEMESTER VI — L T P C

16PHU603A **NANO MATERIALS AND APPLICATIONS** 4 - - 4

Course Objective:

- This course covers the different classes of nanomaterials that have been developed in recent years in light of various technological applications.
- In order to understand the behavior of these nanomaterials, quantum phenomena and the limitations of basic physical laws that are important at the nanometer length scale are introduced and developed.
- In particular, properties that exhibit size effects (including electronic, magnetic, photonic, and mechanical) at the nanometer length scale will be presented so that nanomaterials becoming increasing relevant to modern technologies can be better understood.
- The course will cover recent breakthroughs and assess the impact of this burgeoning field.
- Specific nanofabrication topics include epitaxy, beam lithographies, self- assembly, biocatalytic synthesis, atom optics, and scanning probe lithography.
- The course consists of topics in fundamental nanoscale science, plus an overview of areas in nanotechnology.

Course Outcome

After successful completion of the course, the student is expected to

1. Explain the fundamental principles of nanotechnology and their application to biomedical engineering.
2. Apply engineering and physics concepts to the nano-scale and non-continuum domain.
3. Identify and compare state-of-the-art nanofabrication methods
4. perform a critical analysis of the research literature.
5. Design processing conditions to engineer functional nanomaterials.
6. Evaluate current constraints, such as regulatory, ethical, political, social and economical, encountered when solving problems in living systems.

UNIT - I

NANOSCALE SYSTEMS: Length scales in physics, Nanostructures: 1D, 2D and 3D nanostructures (nanodots, thin films, nanowires, nanorods), Band structure and density of states of materials at nanoscale, Size Effects in nano systems, Quantum confinement: Applications of Schrodinger equation- Infinite potential well, potential step, potential box, quantum confinement of carriers in 3D, 2D, 1Dnanostructures and its consequences.

UNIT - II

SYNTHESIS OF NANOSTRUCTURE MATERIALS: Top down and Bottom up approach, Photolithography. Ball milling. Gas phase condensation. Vacuum deposition. Physical vapor deposition (PVD): Thermal evaporation, E-beam evaporation, Pulsed Laser deposition.

Chemical vapor deposition (CVD).Sol-Gel. Electro deposition. Spray pyrolysis. Hydrothermal synthesis. Preparation through colloidal methods. MBE growth of quantum dots.

UNIT - III
CHARACTERIZATION: X-Ray Diffraction. Optical Microscopy. Scanning Electron Microscopy. Transmission Electron Microscopy. Atomic Force Microscopy.Scanning Tunneling Microscopy. Fourier Transform Infrared spectroscopy, UV-visible spectroscopy

UNIT – IV
OPTICAL PROPERTIES: Coulomb interaction in nanostructures. Concept of dielectric constant for nanostructures and charging of nanostructure. Quasi-particles and excitons. Excitons in direct and indirect band gap semiconductor nanocrystals. Quantitative treatment of quasi-particles and excitons, charging effects. Radiative processes: General formalization-absorption, emission and luminescence. Optical properties of heterostrctures and nanostructures.

UNIT - V ELECTRON TRANSPORT: Carrier transport in nanostrcutures. Coulomb blockade effect, thermionic emission, tunneling and hoping conductivity. Defects and impurities: Deep level and surface defects.
APPLICATIONS: Applications of nanoparticles, quantum dots, nanowires and thin films for photonic devices (LED, solar cells). Single electron transfer devices (no derivation). CNT based transistors. Nanomaterial Devices: Quantum dots heterostructure lasers, optical switching and optical data storage. Magnetic quantum well; magnetic dots -magnetic data storage. Micro Electromechanical Systems (MEMS), Nano Electromechanical Systems (NEMS).

Suggested Books:

1. C.P.Poole, Jr. Frank J.Owens, Introduction to Nanotechnology (Wiley India Pvt. Ltd.). S.K. Kulkarni,
2. Nanotechnology: Principles & Practices (Capital Publishing Company) K.K. Chattopadhyay and A. N. Banerjee,
3. Introduction to Nanoscience and Technology (PHI Learning Private Limited).
4. Introduction to Nanoelectronics, V.V. Mitin, V.A. Kochelap and M.A. Stroscio, 2011, Cambridge University Press.
5. Richard Booker, Earl Boysen, Nanotechnology (John Wiley and Sons).

	SEMESTER VI	**L T P C**
16PHU603B	**BIOLOGICAL PHYSICS**	**4 - - 4**

Course Objectives:

- The course aims to provide students with a foundation in the basic concepts of Biophysics.
- Biophysics is an interdisciplinary science that employs and develops theories and methods of the physical sciences for the investigation of biological systems.
- Topics will include canonical and non-canonical structures of nucleic acids, structure of proteins, enzymes etc.
- Fundamental concepts that underlie biomolecular interactions will be discussed and biophysical methods that are employed for the structural analysis of these systems will be introduced at an elementary level.
- To Understand the concept of life of molecules.
- The physical quantities such as temperature, energy, enthalpy, entropy, and free energy will be employed to understand why a biological system choses particular state at conditions under study.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate knowledge of the fundamental concepts in physics and chemistry that underlie biological processes.
2. Define the structural characteristics of nucleic acids and proteins
3. Examine parameters that variously determine their stability and function(s).
4. Describe the principles that govern biomolecular interactions
5. Appreciate how established methods of research and enquiry are employed to analyze the different aspects of these interactions.
6. Understand the concept of life of molecules.

UNIT I Overview

The boundary, interior and exterior environment of living cells. Processes: exchange of matter and energy with environment, metabolism, maintenance, reproduction, evolution. Self-replication as a distinct property of biological systems. Time scales and spatial scales. Universality of microscopic processes and diversity of macroscopic form. Types of cells. Multicellularity. Allometric scaling laws.

UNIT II Molecules of life

Metabolites, proteins and nucleic acids. Their sizes, types and roles in structures and processes. Transport, energy storage, membrane formation, catalysis, replication, transcription, translation, signaling. Typical populations of molecules of various types present in cells, their rates of production and turnover. Energy required to make a bacterial cell. Simplified mathematical models of transcription and translation, small genetic circuits and signaling pathways. Random walks and applications to biology. Mathematical models to be studied analytically and computationally.

UNIT III The Complexity of life

At the level of a multicellular organism: Numbers and types of cells in multicellular organisms. Cell types as distinct attractors of a dynamical system. Stem cells and cellular differentiation. Pattern formation and development. Brain structure: neurons and neural networks. Brain as an information processing system. Associative memory models. Memories as attractors of the neural network dynamics.

UNIT V

At the level of an ecosystem and the biosphere: Foodwebs. Feedback cycles and self-sustaining ecosystems.

Evolution: The mechanism of evolution: variation at the molecular level, selection at the level of the organism. Models of evolution. The concept of genotype-phenotype map. Examples.

Suggested Books:

1. Physics in Molecular Biology; Kim Sneppen & Giovanni Zocchi (CUP 2005)
2. Biological Physics: Energy, Information, Life; Philip Nelson (W H Freeman & Co, NY, 2004)
3. Physical Biology of the Cell (2nd Edition), Rob Phillips et al (Garland Science, Taylor & Francis Group, London & NY, 2013)
4. An Introduction to Systems Biology; Uri Alon (Chapman and Hall/CRC, Special Indian Edition, 2013)
5. Evolution; M. Ridley (Blackwell Publishers, 2009, 3rd edition)

SEMESTER VI

16PHU611A ELECTRICAL CIRCUITS AND NETWORK SKILLS (PRACTICAL) **L T P C**
- - 3 1

Course Objectives

- This course provides in-depth knowledge of switching theory and the design techniques of digital circuits, which is the basis for design of any digital circuit.
- The aim of this course is to enable the students to design and trouble shoots the electrical circuits, networks and appliances through hands-on mode.
- To use Circuit Theory as a carrier of the fundamentals of Linear System and Continuous Signal Analysis so that the students are well-prepared to take up a detailed study of higher level subjects
- To apply their knowledge to analog and digital electronics, pulse electronics, analog and digital communication systems, digital signal processing, control systems, and power electronics at a later stage.
- To make the students understand coherence between theoretical and practical measurement.
- To use the techniques, skills and modern technical tools necessary for technical or engineering practice.
- The primary objective of this course is to provide a thorough understanding and working knowledge of design, implementation and analysis of instruments.

Course Outcome

After successful completion of the course, the student is expected to

1. Understand and operate generators, transformers and electric motors.
2. Develop knowledge of solid state devices and their uses.
3. Do electrical wiring with assured electrical protection devices.
4. Acquire knowledge about the single phase and three base electrical circuits
5. Awareness of general structure of power systems
6. Become familiar with the curricular structure of Electrical circuits.
7. Study balance and unbalanced 3-φ circuits
8. Apply fourier analysis to electrical circuits
9. Learn basics for the design of digital circuits and fundamental concepts used in the design of digital systems.

Electrical Wiring:

1. Different types of conductors and cables.
2. Basics of wiring-Star and delta connection.
3. Voltage drop and losses across cables and conductors.
4. Instruments to measure current, voltage, power in DC and AC circuits.

5. Insulation. Solid and stranded cable. Conduit.
6. Cable trays.
7. Splices: wirenuts, crimps, terminal blocks, split bolts, and solder. Preparation of extension board.

Suggested Boos

1. A text book in Electrical Technology - B L Theraja - S Chand & Co.
2. A text book of Electrical Technology - A K Theraja
3. Performance and design of AC machines - M G Say ELBS Edn.

SEMESTER VI

16PHU611B	APPLIED OPTICS (PRACTICAL)	L T P C
		- - 3 1

Course Objective

- This course develops an understanding of the basic elements of Optics and Photonics.
- Students will get knowledge on light models and properties (geometrical, electromagnetic, polarization and basic-quantum), propagation of light (rays), classical interaction of light with matter (reflection, refraction, absorption, scattering, chromatic dispersion), classical interaction of light with light (interferences, diffraction).
- To calculate the properties of various lasers and the propagation of laser beams
- To calculate properties of and design modern optical fibres and photonic crystals.
- To understand the fundamentals and the basic tools which explain these phenomena.
- To use the basic techniques involved in the geometrical theory of imaging systems.

Course Outcome

After successful completion of the course, the student is expected to

1. Know basic optical phenomena involved in the generation of color of objects from a physical point of view.
2. Understand the fundamentals and the basic tools which explain these phenomena.
3. Use the basic techniques involved in the geometrical theory of imaging systems.
4. Know the clear idea of the influence of aberrations and diffraction in the quality of images.
5. Calculate the properties of various lasers and the propagation of laser beams
6. Calculate properties of and design modern optical fibres and photonic crystals.

Any 6 Experiments

1. Determination of the grating radial spacing of the Compact Disc (CD) by reflection using He-Ne or solid state laser.
2. To find the width of the wire or width of the slit using diffraction pattern obtained by a He-Ne or solid state laser.
3. To find the polarization angle of laser light using polarizer and analyzer
4. V-I characteristics of LED
5. Thermal expansion of quartz using laser
6. Study the characteristics of solid state laser
7. Study the characteristics of LDR
8. Photovoltaic Cell
9. Characteristics of IR sensor

Suggested Books

1. F. Zernike and J.E. Midwinter, Applied Nonlinear Optics , revised edition 2006, Dover books

	SEMESTER VI	**L T P C**
16PHU612A	**QUANTUM MECHANICS (PRACTICAL)**	**- - 4 2**

Course Objectives

- This paper explains the shortcomings of quantum mechanics in explaining different subatomic physics and the evolution of quantum mechanics.
- This paper explains the shortcomings of quantum mechanics in explaining different subatomic physics and the evolution of quantum mechanics.
- This course is part one of a two semester course focused on a rigorous exposition to the principles of Quantum mechanics.
- We will discuss analytic solutions to the Schriodinger equation for a variety of potentials in one, two and three dimensions.
- To understand the behavior of quantum particle encountering a i) barrier, ii) Potential using scilab.
- To Understand the interpretation of wave function of quantum particle using computer languages.
- To gets exposed to solving non-relativistic hydrogen atom, for its spectrum and eigenfunctions.
- The use of symmetry principles and operators methods will be discussed.

Course Outcome

After successful completion of the course, the student is expected to

1. The experiments using Sci-lab will enable the student to appreciate nuances involved in the theory.
2. This basic course will form a firm basis to understand quantum many body problems.
3. In the laboratory course, with the exposure in computational programming in the computer lab, the student will be in a position to solve Schrodinger equation for ground state energy and wave functions of various simple quantum mechanical onedimensional and three dimensional potentials.
4. Understanding the behavior of quantum particle encountering a i) barrier, ii) Potential using scilab.
5. Understand the interpretation of wave function of quantum particle using computer languages.
6. Gets exposed to solving non-relativistic hydrogen atom, for its spectrum and eigenfunctions.

Use C/C^{++}/Scilab for solving the following problems based on Quantum Mechanics like

1. Solve the s-wave Schrodinger equation for the ground state and the first excited state of the hydrogen atom: corresponding wavefunctions. Note that the ground state energy of hydrogen atom is -13.6 eV. Take e = 3.795 (eVÅ)$^{1/2}$, ħc = 1973 (eVÅ)

and m = 0.511×10^6 eV/c^2.

2. Solve the s-wave radial Schrodinger equation for an atom: where m is the reduced mass of the system (which can be chosen to be the mass of an electron), for the screened coulomb potential.
3. Find the energy (in eV) of the ground state of the atom to an accuracy of three significant digits. Also, plot the corresponding wavefunction. Take e = 3.795 $(eVÅ)^{1/2}$, m = 0.511×10^6 eV/c^2 , and a = 3 Å, 5 Å, 7 Å. In these units ħc = 1973 (eVÅ). The ground state energy is expected to be above -12 eV in all three cases.
4. Solve the s-wave radial Schrodinger equation for a particle of mass m: significant digits. Also, plot the corresponding wave function. Choose m = 940 MeV/c^2, k = 100 MeV fm^{-2}, b = 0, 10, 30 MeV fm^{-3} In these units, cħ = 197.3 MeV fm. The ground state energy I expected to lie between 90 and 110 MeV for all three cases.
5. Solve the s-wave radial Schrodinger equation for the vibrations of hydrogen molecule: Find the lowest vibrational energy (in MeV) of the molecule to an accuracy of three significant digits. Also plot the corresponding wave function. Take: m = 940×10^6 eV/C^2, D = 0.755501 eV, α = 1.44, r_o = 0.131349 Å
6. Study of Electron spin resonance- determine magnetic field as a function of the resonance frequency
7. Study of Zeeman effect: with external magnetic field; Hyperfine splitting

Suggested Books:

1. Schaum's Outline of Programming with C++. J.Hubbard, 2000, McGraw- Hill Pub. Numerical Recipes in C:The Art of Scientific Computing, W.H. Press et.al., 3rd Edn., 2007, Cambridge University Press.
2. A Guide to MATLAB, B.R. Hunt, R.L. Lipsman, J.M. Rosenberg, 2014, 3rd Edn., Cambridge University Press
3. Elementary Numerical Analysis, K.E. Atkinson, 3 r d E d . 2 0 0 7 , Wiley India Edition
4. Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific
5. Engineering Applications: A.V. Wouwer, P. Saucez, C.V. Fernández.2014 Springer Quantum Mechanics, Leonard I. Schiff, 3rd Edn. 2010, Tata McGraw Hill.

	SEMESTER VI	L T P C
16PHU612B	ATMOSPHERIC PHYSICS (PRACTICAL)	- - 4 2

Course Objective

- The objective of this course is to give knowledge to students about the different activities in the atmosphere and different methods of monitoring the atmosphere.
- Students can demonstrate the ability to apply principles of cloud microphysics and atmospheric chemistry to the solution of atmospheric problems.
- The Atmospheric Physics and Weather Group carries out weather and climate research, studying processes and phenomena related to moist thermodynamics and the hydrologic cycle in the atmosphere
- To demonstrate knowledge of basic atmospheric chemistry and its role in atmospheric phenomena.
- To determine if the atmosphere is stable or unstable from a vertical temperature profile
- To understand atmospheric general circulation and the basic principles of physical and applied climatology and climate change.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate proficiency in using computer based weather visualization packages.
2. Demonstrate the ability to communicate weather information in written and oral form.
3. Understand the Earth-Sun relationships and their application to the concepts of radiative energy transfer and energy budgets.
4. Understand the underlying physical principles and measurement of meteorological variables
5. Understand the operating principles and performance characteristics of instruments used to make those measurements.
6. Use and interpret weather charts, maps, and diagrams.
7. Diagnose and forecast synoptic and mesoscale weather phenomena.

Scilab/C++ based simulations experiments based on Atmospheric Physics problems like

1. Numerical Simulation for atmospheric waves using dispersion relations
   Atmospheric gravity waves (AGW)
   Kelvin waves
   Rossby waves, and mountain waves
2. Offline and online processing of radar data
   VHF radar,
   X-band radar, and
   UHF radar

3. Offline and online processing of LIDAR data
4. Radiosonde data and its interpretation in terms of atmospheric parameters using vertical profiles in different regions of the globe.
5. Handling of satellite data and plotting of atmospheric parameters using radio occultation technique
6. Time series analysis of temperature using long term data over metropolitan cities in India – an approach to understand the climate change

Suggested Books:

1. Fundamental of Atmospheric Physics – Murry L Salby; Academic Press, Vol 61, 1996
2. The Physics of Atmosphere – J.T. Houghton; Cambridge Univ. Press; 3rd edn. 2002.
3. An Introduction to dynamic meteorology – James R Holton; Academic Press, 2004
4. Radar for meteorological and atmospheric observations – S Fukao and K Hamazu, Springer Japan, 2014.

SEMESTER VI

		L T P C
16PHU613A	NANO MATERIALS AND APPLICATIONS (PRACTICAL)	- - 4 2

Course Objective

- To provide knowledge of the Nanoscience and related fields.
- To make the students acquire an understanding the Nanoscience and Applications
- To help them understand in broad outline of Nanoscience and Nanotechnology.
- The course will cover recent breakthroughs and assess the impact of this burgeoning field.
- Specific nanofabrication topics include epitaxy, beam lithographies, self- assembly, biocatalytic synthesis, atom optics, and scanning probe lithography.
- The course consists of topics in fundamental nanoscale science, plus an overview of areas in nanotechnology.

Course Outcome

After successful completion of the course, the student is expected to

1. Understand the methods synthesis of nanomaterials
2. Understand their application and the impact of nanomaterials on environment
3. Apply their learned knowledge to develop Nanomaterials.
4. Bring new materials to the socity.
5. Gain knowledge on different spectroscopic techniques.
6. Apply their learned knowledge to develop the new devices.

Any 8 experiments

1. Synthesis of metal nanoparticles by chemical route.
2. Synthesis of semiconductor nanoparticles.
3. Surface Plasmon study of metal nanoparticles by UV-Visible spectrophotometer.
4. XRD pattern of nanomaterials and estimation of particle size.
5. To study the effect of size on color of nanomaterials.
6. To prepare composite of CNTs with other materials.
7. Growth of quantum dots by thermal evaporation.
8. Prepare a disc of ceramic of a compound using ball milling, pressing and sintering, and study its XRD.
9. Fabricate a thin film of nanoparticles by spin coating (or chemical route) and study transmittance spectra in UV-Visible region.
10. Prepare a thin film capacitor and measure capacitance as a function of temperature or frequency.
11. Fabricate a PN diode by diffusing Al over the surface of N-type Si and study its V-I characteristic.

Suggested Books:

1. C.P.Poole, Jr. Frank J.Owens, Introduction to Nanotechnology (Wiley India Pvt. Ltd.). S.K. Kulkarni,
2. Nanotechnology: Principles & Practices (Capital Publishing Company). K.K. Chattopadhyay and A.N. Banerjee,
3. Introduction to Nanoscience & Technology (PHI Learning Private Limited).
4. Richard Booker, Earl Boysen, Nanotechnology (John Wiley and Sons).

	SEMESTER VI	**L T P C**
16PHU613B	**BIOLOGICAL PHYSICS (PRACTICAL)**	**- - 4 2**

Course Objective

- To provide knowledge of the Nanoscience and related fields.
- To make the students acquire an understanding the Nanoscience and Applications
- To help them understand in broad outline of Nanoscience and Nanotechnology.
- Fundamental concepts that underlie biomolecular interactions will be discussed and biophysical methods that are employed for the structural analysis of these systems will be introduced at an elementary level.
- To Understand the concept of life of molecules.
- The physical quantities such as temperature, energy, enthalpy, entropy, and free energy will be employed to understand why a biological system choses particular state at conditions under study.

Course Outcome

After successful completion of the course, the student is expected to

1. Understand the methods synthesis of nanomaterials
2. Understand their application and the impact of nanomaterials on environment
3. Apply their learned knowledge to develop Nanomaterials.
4. Bring new materials to the socity.
5. Gain knowledge on different spectroscopic techniques.
6. Apply their learned knowledge to develop the new devices.

Any 8 Experiments

1. Measurement of the skin temperature by thermistor
2. Estimation of relative humidity
3. Continual spectrum of visible light
4. Measurement of concentration in coloured solution
5. Maesurement of human hair thickness by microscope
6. Blood pressure measurement
7. Estimation of audibility threshold by audiometer
8. Recording and analysis of ECG signals
9. Verification of Beers and Lambert's Law
10. Absorption spectrum of Blood/Chlorophyll.
11. PH Value of Ammino acids.
12. Study of DNA melting
13. Bimolecular model building using standard kits.

Suggested Books:

1. Introduction to Biophysics - by P. Narayanan.New Age P.
2. Medical Instrumentation - by Khandpur, TMH
3. Laboratory Manuals of Biophysics Instruments - by P.B. Vidyasagar
4. Biophysics -by VatsalaPiramal, Dominant Publisher and Distributors, New Delhi-110002
5. Textbook of Biophysics - by R.N. Roy 6. Photosynthesis - by Hall and Rao.

	SEMESTER VI	**L T P C**
16PHU691	**PROJECT**	**- - 8 6**

Course Objectives

- The aim of the B.Sc. project work is to expose the students to preliminaries and methodology of research in Theoretical Physics and Experimental Physics.
- Students get the opportunity to participate in some ongoing research activity and development of a laboratory experiment.
- To explain the physics problem and its solution in both words and appropriately specific equations to both experts and non-experts.
- To understand the objective of a physics laboratory experiment, properly carry out the experiments, and appropriately record and analyze the results.
- To use computers in data acquisition and processing and how to use available software as a tool in data analysis.
- To think creatively about scientific problems and their solutions.
- To design experiments, and to constructively question results they are presented with, whether these results are in a newspaper, in a classroom, or elsewhere.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Complete an independent research project, resulting in research outputs in terms of publications in journals and conference proceedings.
2. To apply his/her knowledge and skills to carry out advanced tasks and projects.
3. Apply their knowledge to develop the instruments.
4. Verify the basic principles and laws experimentally as a project.
5. Demonstrate knowledge of contemporary issues in their chosen field of research.
6. Demonstrate an ability to present and defend their research work.
7. Successfully pursue career objectives in graduate school or professional schools, in a scientific career in government or industry, in a teaching career, or in a related career.
8. Think creatively about scientific problems and their solutions.
9. Design experiments, and to constructively question results they are presented with, whether these results are in a newspaper, in a classroom, or elsewhere.
10. Explain the physics problem and its solution in both words and appropriately specific equations to both experts and non-experts.
11. Understand the objective of a physics laboratory experiment, properly carry out the experiments, and appropriately record and analyze the results.
12. Use computers in data acquisition and processing and how to use available software as a tool in data analysis.

M.Sc. PHYSICS

CHOICE BASED CREDIT SYSTEM (CBCS)

Syllabus

2016 – 2017

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)

(Established Under Section 3 of UGC Act 1956)

Eachanari Post, Coimbatore – 641 021

SEMESTER – I | L T P C

16PHP101 **CONDENSED MATTER PHYSICS** 4 - - 4

Course Objectives

- This course provide the study of properties of materials is very important at all times, to choose the correct material for the correct use.
- With the development of nanotechnology, it is important to give an idea about the preparation methods and characterization of different materials.
- This paper is intended to give the students an idea about importance of crystals and their properties.
- This course will teach you the fundamental physics behind different materials we commonly see in the world around us.
- The course will demonstrate the link between microscopic structure and bulk properties in a variety of systems in hard and soft condensed matter
- To study some of the basic properties of the condensed phase of matter especially solids.

Course Outcomes (COs)

After completing the course the students will have the ability to:

1. Differentiate between different Lattice types and explain the concepts of reciprocal lattice and crystal diffraction.
2. Predict electrical and thermal properties of solids and explain their origin.
3. Explain the concept of energy bands and effect of the same on electrical properties.
4. Describe the dielectric properties of insulators.
5. Explain various types of magnetic phenomenon, physics behind them, their properties and applications.
6. Explain superconductivity, its properties, important parameters related to possible applications.
7. Students will learn the importance of different materials in a variety of applications

UNIT – I

Inter planar spacing: Inter planar spacing for SC, FCC, BCC lattices - diamond cubic structure - NaCl structure - The reciprocal lattice and their properties - Bragg condition in terms of reciprocal lattice - Rotatory crystal method of X ray diffraction -Neutron diffraction – experiment.

Lattice: Vibrations of one dimensional diatomic linear lattice-acoustic and optical branches - Semi conductors and their properties - Hall effect - Dielectrics - Lorentz field in dielectrics -The Clausius –Mossoti equation - Ferro electric crystals - Ferro electric domains.

UNIT - II

Crystal defects: Classification of defects - Points defect - The Schottky defect - The Frenkel defect -colour centers - F center - other colour centers - Production of colour centers by X rays or practice irradiation – Defect and energy state.

Dislocations - Slip and plastic deformation - Shear strength of single crystals - Edge dislocation - Screw dislocation - Stress field around an edge dislocation.

Ultrasonics: Non destructive testing and applications.

UNIT - III `

Heat capacity of the electron gas: Experimental electrical resistivity of metals – Free electron theory of metals – Debye's equation - superconductivity - Electron phonon interaction - Cooper pairs – BCS theory - Energy gap and its temperature dependence - London equation – Josephson effect and its applications.

Langevin theory of Para magnetism: Quantum theory of Para Magnetism - Curie law- Ferro Magnetism - Weiss molecular field theory - Domain theory - Anti Ferro magnetism -Neel theory - Ferri Magnetism – Ferrites – spin – waves - Experimental techniques to study the magnetic properties.

UNIT - IV

NANOSCIENCE

Structure: Size dependence of properties – Crystal Structures – Face centrednano particles – Particle size determination – Surface structure - Metal nano particles - Magic numbers – Theoretical model of nano particles – Geometric structure – Reactivity – Fluctuations – Magnetic clusters – Bulk to nano transitions Semi conducting nano particles – optical properties – photo fragmentation – Coulombic explosion.

Polymers: Forming and Characterizing polymers – Polymerisation – Sizes of polymers – Nano crystals – Condensed ring types – Poly diacetylene types – Polymers – Conductive polymers – Supra molecular structures – Transition-metal mediated types – Dendritic molecules – Supra molecular dendrimers – Micellers

UNIT - V

Instrumentation: Working principle, and applications of scanning electron microscope - transmission electron microscope - scanning tunneling microscope - atomic force microscope, and surface plasmon resonance – theories and principles of soft lithography, self assembled monolayers and multilayers

SUGGESTED BOOKS

1. Kittel. C. 2005, Introduction to Solid State Physics, 8th Edition, Willey Eastern Ltd., New Delhi.
2. Saxena.B.S., R.C.Gupta and P.N.Saxena, 2012, Fundamentals of Solid State Physics, 15th edition, PragatiPrakashan, Meeru.
3. Charles P. Poole Jr., Frank J.Owens, 2003, Introduction to Nano-technology, 1st edition, Wiley India, New Delhi

SEMESTER I

		L T P C
16PHP102	**ELECTRONIC DEVICES AND CIRCUITS**	**4 - - 4**

Course Objectives

- This paper contains details of basic electronic components, their characteristics and applications in the construction of different electronic instruments.
- Other than ordinary transistors and diodes special devices are also explained.
- To give an idea about the basics of electronics and electronic devices, this is very important for knowing the basics of any modern instrument.
- To study basic electronic componenets
- To observe characteristics of electronic devices
- To understand the high frequency application of diodes.

.

Course Outcomes (COs)

After completing the course the students will /can

1. Able to build, design and analyze analog to digital converter.
2. Able to design digital and analog systems.
3. Ability to understand the basic operation and working of different diodes like FET, MOSFET, CMOS, etc.
4. Ability to analyze PN junctions in semiconductor devices under various conditions.
5. Ability to design and analyze simple rectifiers and voltage regulators using diodes.
6. To understand the high frequency application of diodes.

UNIT I

Electronic Devices and Applications - Transistor Biasing and Stabilization with design problems, h-parameters and their applications in transistor circuit analysis for CE, CB and CC configurations; FET and MOSFETs: Characteristics and Biasing, Design of biasing circuits, Design and analysis of amplifiers, Numerical problems.

UNIT ll

Frequency response of amplifiers General concepts; bode plot; low frequency response: BJT and FET amplifiers; miller effect capacitance; high frequency response of BIT amplifiers; hybrid pie model: short circuit current gain, cut off frequency, and current gain with resistive load; high frequency response of FET amplifiers; frequency response of multistage amplifiers; square wave testing, Numerical problems.

UNIT III

Analysis of compound configurations Cascade connection; Cascade connection; Darlington connection; Bootstrapping principle; Bootstrapped Emitter Follower; Bootstrapped Darlington Emitter Follower; Feedback pair; . CMOS circuits; Current source circuits; Current mirror circuits; Differential amplifier circuits; Numerical problems.

UNIT IV

Power amplifiers Introduction, Series-fed Class A amplifier, Transformer coupled class A amplifier, Class B amplifier operation, Class B amplifier distortion, Power transistor heat sinking, Class C and Class D amplifiers, Numerical problems.

UNIT V

Network theory, mesh and node analysis Kirchhoff's voltage and current law, Network Theorems- Thevein's theorem, Norton's theorem, Superposition Theorem, Maximum power transfer theorem, Problems based on network theorems

SUGGESTED BOOKS

SEMESTER I

		L T P C
16PHP103	**THERMODYNAMICS AND STATISTICAL MECHANICS**	**4 - - 4**

Course Objectives

- Thermodynamics is an important branch of physics, which helps us to understand the different phenomena in the evolution of the universe.
- To introduce the students to the concepts of statistical Thermodynamics. The statistical treatment permits to define the concepts of temperature, heat and entropy strictly from first principles without making use of empirical or axiomatic approach
- This paper gives a basic idea about the laws of thermodynamics and statistical processes.
- To Consolidate the understanding of the laws of thermodynamics and a systematic definition of thermodynamic potentials as the general formalism of thermodynamics.
- To know the foundations of equilibrium statistical physics as the microscopic theory of matter and fields.
- To apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems

Course Outcomes (COs)

After completing the course the students will /can able to

1. Identify and describe the statistical nature of concepts and laws in thermodynamics, in particular: entropy, temperature, chemical potential, Free energies, partition functions.
2. To apply the knowledge of mathematics, science and engineering fundamentals to model the energy conversion phenomenon.
3. To identify and formulate power production based on the fundamentals laws of thermal engineering.
4. To instill upon to envisage appropriate experiments related to heat engines.
5. To investigate the effectiveness of energy conversion process in mechanical power generation for the benefit of mankind
6. Use the statistical physics methods, such as Boltzmann distribution, Fermi-Dirac and Bose-Einstein distributions to solve problems in physical systems.

UNIT I

Laws of Thermodynamics: Some consequences of the laws of thermodynamics − Entropy − Calculation of entropy changes in reversible processes. The principle of increase of entropy − Thermodynamic potentials − Ehthalpy, Helmholtz and the Gibbs functions − Phase transitions − The Clausius-Clayperon equation − Van der Waals equation of state.

UNIT II

Kinetic Theory: Distribution function and its evolution − Boltzmann transport equation and its validity − Boltzmann's H-theorem − Maxwell-Boltzmann distribution − Transport phenomena − Mean free path- Conservation laws − Hydrodynamics (No derivation).

UNIT III

Classical Statistical Mechanics: Maxwell Boltzmann distribution law: Evaluation of constants - Maxwell's law of distribution of velocities - Most probable speed, Average speed, Root mean square speed - Principle of equipartition of energy - Partition function - Condition for applicability of M.B statistics - Non degenerate and degenerate systems - Maxwell velocity distribution in a given direction - Total internal energy of an ideal gas - Molar heat capacity of a gas at constant volume – Entropy - Helmholtz free energy - Pressure and equation of state of an ideal gas - Limitation of M.B method.

UNIT IV

Quantum Statistical Mechanics: B.E energy distribution for energies in the range E to E + dE – Condition for B.E distribution to approach classical M.B distribution - Bose temperature - Bose Einstein condensation - Planck's law from B.E law - Fermi Dirac distribution law (no derivation) - FD law for the energies in the range E to E+dE – Fermi energy - Effect of temperature - Energy distribution curve - Free electron in a metal - Fermi temperature and Thermionic emission - Richardson Dushmann Equation - Comparison of MB,BE and FD statistics.

UNIT V

Applications of Quantum Statistical Mechanics: Ideal Bose gas : Photons − Black body and Planck radiation − Photons − Specific heat of solids − Liquid Helium.
Ideal Fermi gas : Properties − Degeneracy − Electron gas − Pauli paramagnetism
Ferromagnetism :Ising and Heisenberg models.

SUGGESTED BOOKS

1. Reif F., 2008, Fundamentals of Statistical and Thermal Physics, (Reprint), McGraw Hill International Edition, Singapore.
2. Gupta and Kumar, reprint, 2014, Elements of Statistical Mechanics, PragatiPrakashan, Meerut.
3. Huang K., 2nd edition, 2014, Statistical Mechanics, Wiley Eastern Limited, New Delhi
4. Agarwal B.K. and M. Eisner, 3rd edition, 2013, Statistical Mechanics, New age international Limited, New Delhi.

7. Singh. K. and S.P. Singh reprint 2016, Elements of Statistical Mechanics, S. Chand & Company Ltd., New Delhi.
8. https://nptel.ac.in/courses/115103113/

SEMESTER – I

L T P C

16PHP104 MATHEMATICAL PHYSICS 4 - - 4

Course Objectives

- It is necessary for a physics student to be familiar with different methods in mathematics.
- Give a basic idea about different methods of mathematics, used in Physics.
- The purpose of the course is to introduce students to methods of mathematical physics
- To develop required mathematical skills to solve problems in quantum mechanics, electrodynamics and other fields of theoretical physics.
- This course provides the basic concepts in higher level mathematics application to physics
- To impart knowledge about various mathematical tools employed to study physics problems.

Course Outcomes (COs)

After completing the course the students will / can able to

1. Students will be able to apply integral transform (Fourier and Laplace) to solve mathematical problems of interest in physics, use Fourier transforms as an aid for analyzing experimental data.
2. Manipulating vectors as “atomic” entities without recourse to underlying coordinates
3. Ability to link this idea to descriptions various physical phenomena
4. Intuition of the physical meaning of the various vector calculus operators (div, grad, curl)
5. Students can formulate and express a physical law in terms of tensors, and simplify it by use of coordinate transforms (example: principal axes of inertia).
6. Students will be able to solve some simple classical variation problems.

.

UNIT - I

Definition of vector space – Linear dependence – Linear independence – Basis – Dimension of a vector space – Representation of Vectors and linear operators with respect to basis – Schmidt orthogonalization process – Inner product.

Tensors : Transformation of coordinates – Summation convention – Contravariant Tensor – Covariant Tensor – Mixed Tensor – Rank of a Tensor – Kronecker delta symbol – symmetric and antisymmetric tensors – Invariant tensors.

UNIT - II

Functions of a complex variable – single and multivalued functions – Cauchy-Riemann differential equation – analytical – line integrals of complex function – Cauchy's integral theorem and integral formula – derivatives of an analytic function – Liouville's theorem - Taylor's series – Laurent's series - Residues and their evaluation - Cauchy's residue theorem – application to the evaluation of definite integrals.

UNIT - III

Fourier Transform – Properties of Fourier transform – Fourier transform of derivatives – Fourier sine and cosine transforms of derivatives – Fourier transform of functions of two or three variables – Finite Fourier transforms – Simple Applications of FT

Laplace transform – Properties of Laplace transforms – Laplace Transform of derivative of a function – Laplace transform of integral – Laplace transform of periodic functions - Inverse Laplace Transform – Fourier Mellin Theorem - Properties of inverse Laplace Transform – Convolution theorem – Evaluation of Laplace Transform using Convolution theorem.

UNIT - IV

Fourier series – Dirichlet's theorem – change of interval – complex form – Fourier series in the interval (0, T) – Uses of Fourier series - Legendre's polynomials and functions – Differential equations and solutions – Rodrigues formula – Orthogonality – relation between Legendre polynomial and their derivatives – recurrence relations – Lagurae Polynomials – recurrence relations

UNIT - V

Bessel's functions – differential equation and solution – generating functions – recurrence relations – Bessel function of second order – Spherical Bessel function -

Hermite differential equation and Hermite polynomials – Generating function of Hermite polynomials – Recurrence formulae for Hermite polynomials – Rodrigue's formula for Hermite Polynomials – Orthogonality of Hermite Polynomials – Dirac's Delta Function.

SUGGESTED BOOK

1. Satya Prakash.,2002. Mathematical Physics , 4th edition, S.Chand& Co, New Delhi.
2. Gupta.B.D., 2002, .Mathematical Physics, 2nd edition, Vikas publishing company, New Delhi.
3. Singaravelu.V., 2008. Numerical methods, 2nd edition, Meenakshi publications, Sirkali.
4. Rajput.B.S., 2003. Mathematical Physics, 16th edition, PragatiPrakashan, Meerut.
5. Gupta. P.P., Yadav., and Malik.,2012. Mathematical Physics, KedarNath& Ram Nath, Meerut.

6. Venkataraman.M.K., 2003. Numerical methods in Science & Engineering, 5th edition, The National Publishing Company, Chennai.
7. Butkov, 2007, Mathematical Physics, Addison Wesley, New York
8. A.W. Joshi, 2008, Tensors and Matrices, reprint, Wiley Interscience, New York.

10. https://nptel.ac.in/courses/115105097/

SEMESTER – I

		L T P C
16PHP105A	**MATERIAL SCIENCE**	**4 - - 4**

Course Objectives

- To Study materials is always important, for any application, satellites.
- To introduce various methods available for characterization of materials specifically addresses that and educators must have working familiarity.
- To provide an introduction to materials characterization and
- To discuss different types of characterization techniques
- To introduce the students to the principles of optical diffraction and various spectroscopic techniques Introduction
- To understand the materials characterization and available

Course Outcomes (COs)

After completing the course the students will/can able to

1. The students are exposed with X-ray, thermal, microscopic, and electrical methods of characterization.
2. Understand and describe the fundamental principles behind the methods of characterization which are included in the curriculum
3. Analyze, interpret and present observations from the different methods.
4. Evaluate the uncertainty of observations and results from the different methods.
5. A thorough understanding of the history of materials science with basic understanding of metals, binary alloys, magnetic materials, dielectric materials and polymers
6. Concept of phase, phase diagram, phase boundaries, Invariant points and reactions leading to the understanding of the material synthesis and dependence of properties on thermodynamic parameters
7. Understanding nucleation, growth and phase transformation kinetics

UNIT - I

Nature of thin films: Deposition technology – Distribution of deposits – Resistance heating – Thermal evaporation – Flash evaporation.

Electron beam method – Cathodic sputtering – Glow discharge sputtering – Low pressure sputtering – Reactive sputtering – R. F. sputtering – Chemical and Physics vapour deposition – Chemical deposition.

Thickness Measurement Methods: Mass methods – Optical method – Photometric – Ellipsometry – Interferometry – Other methods – Substrate cleaning.

UNIT- II

Electron Diffraction Technique: Electron diffraction technique – High energy electron diffraction – Low energy electron diffraction – Electron microscopy – Scanning electron microscopy – X-ray photoelectron spectroscopy – Mass spectroscopy – Thermodynamics of nucleation – Nucleation theories – Film growth – Incorporation of defects, impurities etc. in film – Deposition parameters and grain size.

UNIT – III

Single Crystals: Significance of single crystals – Crystal growth techniques – The chemical physics of crystal growth – crystal growth phenomena – Nucleation – Gibbs Thomson equation – for vapour – for solution – Spherical nucleus – Heterogeneous nucleation – Cap shaped nucleus – Disc shaped nucleus –Characterisation techniques – XRD spectra and Analysis.

UNIT IV

Singular and rough faces: Models on surface roughness – The Kossel, Stranski, Volmer (KSV) theory – The Burton, Cabrera and Frank (BCF) theory – BCF theory of solution growth – Periodic Bond chain theory – the Muller – Krumbhaar Model.

The Bridgman and related techniques – Crystal pulling techniques – Convection in melts – Modeling and simulation of bulk crystal growth considering melt dynamics – Melt growth of oxide crystals for saw, piezo electric and non linear optical applications – Liquid encapsulated and Czochralski technique – Zone melting technique – Skull melting process – Heat exchanger method.

UNIT V

Nanotechnology: An introduction – Nanodevices – Carbon nanotubes – Types of Carbon Nanotubes: Single walled, Multiwalled, Torus – Properties: Hardness – Strength – Electrical – Thermal – Optical – Synthesis – Arc discharge – Laser Ablation.

SUGGESTED BOOK

1. Goswami. A., , 1st edition 2014, Thin film fundamentals, New Age International Pvt Ltd, New Delhi.
2. Meissel. L.T and R. Glang., 2006, Hand book of thin film technology, Tata McGraw Hill, New Delhi.
3. ShaliniSuri, , 1st edition 2006, Nano Technology: Basic Science to Emerging Technology, Aph Publishing Corporation.
4. Brice. J.C., , 1st edition, 2003, Crystal growth processes, John Wiley and Sons, New York.
5. https://nptel.ac.in/courses/115103030/
6. https://nptel.ac.in/courses/113106034/

SEMESTER – I **L T P C**

16PHP105B ASTRONOMY AND ASTROPHHYSICS 4 - - 4

Course Objectives

- Astronomy and Astrophysics is a very fundamental subject in Physics.
- Includes study of the solar system, evolution of stars, different physical processes going on stellar bodies, life cycle of stars etc.
- Is to apply basic physical principles from a broad range of topics in physics to astronomical situations
- Be able to formulate scientific problems in mathematical terms and apply analytical and numerical methods towards its solution
- Develop skills to design observing projects with research telescopes and projects drawing upon data in the literature and in archives
- Establish competence in focused areas of astrophysical theory and experiment
- Generate fluency in the scientific enterprise and awareness of possible career paths available to the undergraduate astronomy and astrophysics major

Course Outcomes (COs)

After completing the course the students will/can able to:

1. Plan and engage in an independent and sustained critical investigation of a chosen research topic to generate new knowledge in an area of astronomy and astrophysics.
2. Systematically evaluate the relevant theory and concepts in astronomy and astrophysics,
3. Relate the theory to appropriate methodologies and evidence and draw appropriate conclusions.
4. Demonstrate capacity for astronomy and astrophysics reasoning through analyzing, proving and explaining concepts from the chosen research area.
5. Identify important constellations – orient in space.
6. Describe the planets of the solar system and their properties.

UNIT - I

Astrophysics:

Introduction - Astrophysics and Astronomy - Celestial coordinate systems (Sun-Earth system, Galactic Coordinate system)

UNIT - II

Stellar Structure and Evolution:

Star formation - Stellar Magnitudes - Classification of stars - H-D classification - Saha Equation of ionization - Hertzsprung-Russel (H-R) diagram - Gravitational energy - Virial theorem - Equations of stellar structure and evolution - Pre-main sequence evolution - Jeans criteria for star formation - fragmentation and adiabatic contraction - Evolution on the main sequence - Post main sequence evolution

UNIT - III

Nuclear Astrophysics:

Thermonuclear reactions in stars - pp chains and CNO cycle - Solar Neutrino problem - subsequent thermonuclear reactions - Helium burning and onwards - nucleosynthesis beyond iron - r- and s-processes

Stellar Objects & Stellar Explosions:

Qualitative discussions on: Galaxies – Nabulae – Quasars - Brown dwarfs - Red Giant Stars – Nova - Supernova.

UNIT - IV

Gravitational Collapse and relativistic Astrophysics:

Newtonian theory of stellar equilibrium - White Dwarfs - Electron degeneracy and equation of States - Chandrasekhar Limit - Mass-Radius relation of WD - Neutron Stars - Spherically symmetric distribution of perfect fluid in equilibrium - Tolman-Oppenheimer-Volkoff (TOF) equation – Mass - Radius relations of NS – Pulsars - Magnetars - Gamma ray bursts - Black holes - Collapse to a black hole (Oppenheimer and Snyder) - event horizon - singularity.

UNIT - V

Accretion disks:

Formation of Accretion Disks - Differentially rotation systems in Astrophysics - Disk dynamics - Steady Disks - Disk formation in close binary systems through mass transfer - Accretion onto compact objects.

SUGGESTED BOOKS

1. V.B.Bhatia, , 1st edition, 2001; Textbook of astronomy and astrophysics with elements of cosmology,Alpha science international.
2. K. D. Abhyankar, , 1st edition Astrophysics – Stars and Galaxies,University Press, 2001.

SEMESTER – I

		L T P C
16PHP105C	**CRYSTAL GROWTH TECHNIQUES**	**4 - - 4**

Course Objectives

- To strengthen the students with crystallographic and crystal growth techniques
- To provide the general characteristics of crystals, methods of preparation etc.
- Various thin films deposition techniques and thin film characterization techniques are also covered in the course.
- To give an idea about historical importance of crystals, methods of preparation and characterization of crystals etc.
- To explore the knowledge in fundamentals of materials syntheses, crystal growth techniques, zone refining, properties etc.,
- To provide the basic knowledge on crystal structure.

Course Outcomes (COs)

After completing the course the students will / can able to

1. The student will learn about the crystal growth mechanisms and techniques.
2. Various thin films deposition techniques and thin film characterization techniques are also covered in the course.
3. Gain the knowledge about phonons and its importance in thermal physics
4. Acquire the theoretical concept behind electrical and thermal properties of metals
5. Understand the fundamental theories to describe the energy bands in metals
6. Gain the knowledge about Semiconductor Crystals and their properties

UNIT- I

Crystal Growth phenomena

The historical development of crystal growth – significance of single crystals - crystal growth techniques - the chemical physics of crystal growth - Theories of nucleation - Gibb's Thompson equation for vapour, melt and solution- energy of formation of spherical nucleus- heterogeneous nucleation - kinetics of crystal growth, singular and rough faces, KSV theory, BCF theory - periodic bond chain theory- The Muller- Krumbhaar model.

UNIT- II

Crystal Growth from Melt and Solution Growth

Growth from the melt - the Bridgmann technique – crystal pulling - Czochralski method-experimental set up - controlling parameters advantages and disadvantages.- convection in melts – liquid solid interface shape - crystal growth by zone melting - Verneuil flame fusion technique.

UNIT - III

Low temperature crystal growth

Low temperature solution growth - methods of crystallization - slow cooling - solvent evaporation, temperature gradient methods - crystal growth system - growth of KDP, ADP and KTP crystals - high temperature solution growth - gel growth.

UNIT - IV

Vapour Growth and Epitaxial Growth

Physical vapour deposition - chemical vapour transport – definition - fundamentals, criteria for transport, Specifications, STP, LTVTP & OTP - advantages and limitations of the technique, hydrothermal growth – design aspect of autoclave – growth of quartz, sapphire and garnet.

Advantages of epitaxial growth - epitaxial techniques - liquid phase epitaxy - vapour phase epitaxy - molecular beam epitaxy - chemical beam epitaxy and atomic layer epitaxy

UNIT - V

Materials for Semiconductor Devices

Semiconductor optoelectronic properties - band structure - absorption and recombination, semiconductor alloys - group III-V materials selection - binary compounds, ternary alloys - lattice mismatch - lattice mismatched ternary alloy structures - compositional grading, heteroepitaxial ternary alloy structure - Quaternary alloys - Semiconductor Devices - Laser diodes, light emitting diodes (LED) – photocathodes - microwave Field-Effect Transistors (FET).

SUGGESTED BOOKS:

1. R.A. Laudise, 2006, illustrated edition, The Growth of Single Crystal, Prentice Hall, NJ.
2. A.W. Vere,2012 edition, Crystal Growth: Principles and Progres, Springer press.
3. P.S. Raghavan and P.Ramasamy, 2000 Hard cover edition. Crystal Growth Processes and methods, KRU Publications.
4. F.C. Auluck, A Short course in Solid State Physics, Vol. I, Thomson Press India Ltd.
5. B.R. Pamplin, 2nd edition Crystal Growth, Pergamon, (2012)
6. Heinz K Henish, , 1st edition 2005, Crystal Growth in Gel, Dover Publication
7. https://nptel.ac.in/content/storage2/nptel_data3/html/mhrd/ict/text/113105025/lec12.pdf
8. http://mgcl.iitr.ac.in/49200-nptel-video-lecture-topics.pdf

SEMESTER – I

16PHP111	GENERAL PHYSICS PRACTICALS - I	L T P C - - 4 2

Course Objective

- To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
- To learn the usage of optical systems for various measurements.
- Apply the analytical techniques and graphical analysis to the experimental data.
- To develop intellectual communication skills and discuss the basic principles of scientific concepts in a group.
- To enable the students to understand the basic concepts of mechanics
- In order to get real time experience on experiment, which measures the physical properties.

Course Outcomes (COs)

After completing the course the students will/cab able to

1. The course is designed to train the students so that they can efficiently handle various instruments.
2. Students will verify laws studied in the different theory course.
3. Students will measure different properties of materials.
4. Capable to classify the materials with the properties
5. Will overcome the fear of experimental skill
6. Capable to built his own equipments for measuring the properties of materials

ANY TEN EXPERIMENTS

1. Young's Modulus – Elliptical Fringes (Cornu's method).
2. Viscosity of liquid – Mayer's oscillating disc method.
3. Michelson Interferometer – Determination of λ and $d\lambda$.
4. 'e/m' by Thomson's method and Magnetron method.
5. Young's Modulus – Hyperbolic Fringes (Cornu's method).
6. Fresnel's biprism - Determination of Wavelength of monochromatic source.
7. Determination of Plank's constant using Photo cell.
8. Forbe's method – Thermal conductivity.
9. 'e' by Millikan's method.

10. Ferguson’s method - Specific heat of a liquid.
11. Faraday effect – Determination of Verdet constant using He-Ne laser.
12. Young’s Double slit – Determination of Wavelength of monochromatic source.

SUGGESTED BOOKS:

1. Ouseph C.C., U.J. Rao and V. Vijayendran 2007, Practical Physics and Electronics, S.Viswanathan (Printers & Publishers) Pvt. Ltd., Chennai
2. Singh S.P., 2003, Advanced Practical Physics – 1, 13th Edition, PragathiPrakashan, Meerut
3. Singh S.P., 2000, Advanced Practical Physics – 2, 12th Edition, PragathiPrakashan, Meerut
4. Gupta S.L. and V.Kumar, 2002, Practical Physics, 25th Edition, PragathiPrakashan, Meerut
5. https://nptel.ac.in/courses/115105110/

SEMESTER – I

16PHP112	ELECTRONICS PRACTICALS – I	L T P C - - 4 2

Course Objective

- To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
- To learn the usage of optical systems for various measurements.
- Apply the analytical techniques and graphical analysis to the experimental data.
- To develop intellectual communication skills and discuss the basic principles of scientific concepts in a group.

Course Outcomes (COs)

1. The course is designed to train the students so that they can efficiently handle various
2. instruments.
3. Students will verify laws studied in the different theory course.
4. Students will measure different properties of materials.
5. Gain the knowledge in quantization of electromagnetic fields.
6. Analyze the characteristics of oscillators and wave shaping circuits
7. Understand the basic concepts of amplifiers and operational amplifier

ANY TEN EXPERIMENTS

1. Study of characteristics of junction diode, Zener diode and transistor. Fixing the Q-point of a transistor.
2. Construction of Half-wave, Full-wave and Bridge Rectifiers and Regulated power supplies.
3. Construction and comparative study of CE, CB and CC amplifiers, using discrete components.
4. Hartley and Colpit's oscillators using discrete components.
5. Wave form generators (Square wave and Triangular wave) – Op amp.
6. Phase shift oscillator and Wein's bridge oscillator – Op amp.
7. Parameters of Op amp, Active filters – Op amp.
8. Astable, monostable and bistable multi-vibrators, using discrete components.
9. Analog computer setup – Solving simultaneous equations.
10. UJT characteristics and relaxation oscillator.

11. CRO – Differentiating, Integrating, clipping and clamping circuits.
12. FET characteristics and Source follower
13. Virtual Lab (IC 741, IC 555)

SUGGESTED BOOKS:

1. Ouseph C.C., U.J. Rao and V. Vijayendran 2007, Practical Physics and Electronics, S.Viswanathan (Printers & Publishers) Pvt. Ltd., Chennai
2. Singh S.P., 2003, Advanced Practical Physics – 1, 13th Edition, PragathiPrakashan, Meerut
3. Singh S.P., 2000, Advanced Practical Physics – 2, 12th Edition, PragathiPrakashan, Meerut

SEMESTER – II

		L T P C
16PHP201	**CLASSICAL MECHANICS AND RELATIVITY**	**4 - - 4**

Course objectives

- Study of Classical Mechanics gives an idea about how classical physics deal with matter and energy.
- It cannot explain many observed phenomena in the case of microparticles and relativistic velocities, it is still valid in the case of macro objects at non-relativistic velocities.
- To give an insight into the classical methods of physics.
- To understand the basic principles of classical mechanics.
- This course will demonstrate the ability to apply basic methods of classical mechanics towards solutions of variousproblems, including the problems of 1) complicated oscillatory systems, 2) the motion of rigid bodies, 3) mechanics of continuous media.
- Is to demonstrate the equations of motion for complicated nonlinear mechanical systems and their solutions.

Course Outcomes (Cos)

After completing the course the students will/can able to

1. Students can understand the classical laws of motion.
2. Competency in using the essential mathematical skills needed for describing mechanics and special relativity
3. Understanding of significance of conservation of various physical quantities to discuss the motion of dynamical system.
4. Understanding of constraints and their significance to solve the equations of motion of the dynamical system.
5. Understanding of necessity of Lagrangian and Hamiltonian formulations for simplified treatments of many complex problems in classical mechanics.
6. They can develop problem solving skills.

UNIT - I

Conservation laws: Mechanics of a system of particles – Conservation laws: linear momentum, angular momentum, energy – Constraints, Degrees of freedom – Generalised co-ordinates – Generalized notations – Brachistocrone problems – Atwood's machine.

Hamilton's variational principle – Lagrange's equation of motion from Hamilton's principle, D'Alembert's principle – Applications of Lagrange's equation of motion – Linear harmonic oscillator – Simple pendulum – particle moving under a central force – particle moving on the surface of earth, cylinder rolling on inclined plane, electric circuit – Superiority of Langrange's approach over Newtonian's approach.

UNIT – II

Phase space: Hamiltonian – Hamilton's canonical equations of motion – Physical significance of H – Advantage of Hamiltonian approach – Hamilton's canonical equation of motion in different coordinate systems – Hamilton-Jacobi method – Kepler's problem solution by Hamilton-Jacobi method – Action and angle variables – Solution of Harmonic oscillator by action angle variable method – canonical or contact transformation – Condition for a transformation to be canonical.

Poisson brackets – Invariance of Poisson brackets with respect to canonical transformation – Equations of motion in Poisson bracket form – Lagrange's bracket – Relation between Lagrange and Poisson brackets

UNIT – III

General features of central force motion – General features of orbits – Centre of mass and laboratory coordinates – Virial theorem – Stable and unstable equilibrium – Properties of T, V and ω for small oscillations – Normal coordinates and normal frequencies of vibrations – Parallel pendula – Double, Triple pendula – Linear triatomic molecule.

Generalized coordinates for rigid body motion – Euler's angles – Angular velocity, momentum of rigid body – moment and products of inertia – Principal axis transformation – rotational kinetic energy of a rigid body – Moment of inertia of a rigid body – motion of a symmetric top under action of gravity.

UNIT - IV

Special Theory of Relativity: Introduction – Galilean transformation and invariance of Newton's laws of motion – Non variance of Maxwell's equations – Michelson Morley experiment and explanation of the null result.

Concept of inertial frame – Postulates of special theory – simultaneity – Lorentz transformation along one of the axes – length contraction – time dilatation and velocity addition theorem – Fizeau's experiment – Four vectors – Relativistic dynamics – Variation of mass with velocity – Energy momentum relationship.

UNIT - V

General theory of Relativity: Introduction – Limitation of special theory of relativity and need for a relativity theory in non-inertial frames of reference. Concept of gravitational and inertial mass and the basic postulate of GTR, gravitation & acceleration and their relation to non-inertial frames of reference – principle of equivalence of principle of general co-variance – Minkowski space and Lorentz transformation.

SUGGESTED BOOKS:

1. Goldstein.H.A. 2000, Classical Mechanics, 2nd Edition, Wesley Publishing Company, London.

2. Gupta. S. L., V.Kumar and H.V.Sharma, 2008, Classical Mechanics, 19th Edition, PragatiPrakashan, Meerut.
3. BanerjiSriranjan and Asit Banerjee, 2nd Edition 2013, The Special Theory of Relativity, Printice-Hall of India, New Delhi
4. Aruldhas G.,1st edition, 2008, Classical Mechanics, Printice Hall of India, New Delhi
5. Sardesai D.L., 1st edition, 2004, A Primer of Special Relativity, New Age International Publishers, New Delhi
6. Hartle B. James, 1st edition ,2009, Gravity, An Introduction to Einstein's General Relativity, Dorling Kindersley (India) Pvt. Ltd., Delhi.
7. https://nptel.ac.in/courses/115105098/
8. https://nptel.ac.in/courses/115106059/

SEMESTER – II

		L T P C
16PHP202	**QUANTUM MECHANICS - I**	**4 - - 4**

Course Objectives

- This course is aimed to introduce basic concepts and ideas on Quantum Mechanics
- To acquire working knowledge of the Quantum Mechanics postulate on the physical systems.
- To impart knowledge of advanced quantum mechanics for solving relevant physical problems
- It has revolutionized the whole science, important for any physics student to know the basics of quantum mechanics.
- Explain Quantum Mechanics to understand wave particle dualism. Necessity of quantum mechanics to explore the behavior of sub atomic particles. Evaluate the Eigen values and Eigen functions of a particle
- This paper gives an idea about the development of quantum mechanics.

Course Outcomes (COs)

1. After the completion of course, students should be able to understand and grasp the basic concepts of quantum mechanics including the solution of wave equation, interpretation of dynamical variables and applying wave mechanics to various situations in terms of boundary value problems so as to understand the quantum well, barriers and particle motion in different types of force field (potentials).
2. Applying special functions as the solutions of differential equation as the wave function/state functions and understanding the physical situations where these can be applied.
3. Calculating states of electrons in hydrogen atom and harmonic oscillators and the interpretation of quantum states.
4. Applying the stationary perturbation problems to various problems including particle states splitting in electric and magnetic field.
5. interpret the wave function and apply operators to it, to obtain information about a particle's physical properties such as position, momentum and energy
6. Be able to solve the Schroedinger equation to obtain wave functions for some basic, physically important types of potential in one dimension, and estimate the shape of the wavefunction based on the shape of the potential
7. Be able to understand the role of uncertainty in quantum physics, and use the commutation relations of operators to determine whether or not two physical properties can be simultaneously measured

UNIT - I

Quantum Theory: Introduction – Limitation of classical physics – Origin of quantum theory – Planck's quantum hypothesis – Einstein's theory of Photoelectric effect –Bohr model of hydrogen atom – Inadequacy of quantum theory.

Wave Mechanics Matter waves – Uncertainty principle –Wave packet – Group and phase velocity – Time-dependent and Time-independent Schrodinger equations for a free particle and particle in a potential – Linear vector space – Hilbert's space – Orthogonal and orthonormal functions – Linear operator – Eigen functions and Eigen values – Hermitian operator – Dirac's notation – Equations of motion – Schrodinger, Heisenberg and Interaction representation.

UNIT - II

One dimensional potential well: Square-well potential with rigid walls – Square-well potential with finite walls – Square-well potential barrier – Alpha emission – Bloch waves in a periodic potential – Linear harmonic oscillator (Schrodinger method and operator method) – Free particle.

UNIT - III

Three dimensional potential Well: Particle moving in a spherically symmetric potential – System of two interacting particles – Rigid rotator – Hydrogen atom – Hydrogenic orbitals – The free particle – Three-dimensional square-well potential - Deutron

Matrix mechanics: Matrix representation of wave function – Matrix representation of operator – Properties of matrix elements – Schroedinger equation in matrix form – Eigen value problem – Unitary Transformations – Linear harmonic oscillator, Matrix method

UNIT - IV

Time-independent Perturbation theory: Basic concepts – Non-degenerate energy levels – First and Second order corrections for energy and wave functions – Ground state of Helium atom – Effect of electric field on the ground state of hydrogen atom (Stark effect) – Degenerate energy levels – Effect of electric field on the n=2 state of hydrogen atom

UNIT - V

Variational method&WKB Approximation: Variational principle – Variation method for excited states – Application of variation method to ground state of helium – The WKB method

Time dependent perturbation theory: Introduction – First-order perturbation – Harmonic perturbation – Transition to continuum states (Fermi's Golden rule) – Absorption and emission of radiation – Transition probability – Selection rules

SUGGESTED BOOKS:

1. Aruldhas. G, 2009, Quantum Mechanics, 2nd Edition, Prentice-Hall of India, New Delhi.
2. Schiff Leonard, 2000, Quantum Mechanics, 3rd Edition, McGraw Hill International, Auckland

3. Gupta, Kumar and Sharma, 2002 – 2003, Quantum Mechanics, 22^{nd} Edition, Jai PrakashNath& Co, Meerut.
4. SatyaPrakash, New Edition, 2003, Quantum Mechanics, KedarNath& Ram Nath& Co, Meerut.
5. Engen Merzbacher, 2013, Quantum Mechanics, 3^{rd} Edition, Wiley, Weinheim
6. Mathews. P.M. and K. Venkatesan, 2^{nd} Edition, 2013, Textbooks of Quantum Mechanics, McGraw Hill International, Weinheim.
7. Chatwal R.G. and Sk. Anand, 4^{th} edition, 2004, Quantum Mechanics, Himalaya Publishing House, New Delhi
8. Thangappan. V. K., 2^{nd} Edition,2013, Quantum Mechanics, Tata McGraw Hill, New Delhi
9. https://nptel.ac.in/courses/115101107/
10. https://nptel.ac.in/courses/122106034/

SEMESTER – II

		L T P C
16PHP203	**NUCLEAR PHYSICS**	**4 - - 4**

Course Objectives

- Nuclear physics is one of the fundamental subjects of physics. It is important to know about the physics of nuclei and the different energies involved in the nuclear processes.
- Nuclear energy is one of the major sources of energy, which, with proper careful usage, can solve the energy crisis to a large extent.
- To impart knowledge about basic nuclear physics properties and nuclear models for understanding of related reaction dynamics
- To introduce students the fundamental concepts of nuclear and sub-nuclear physics
- This paper is intended to give an insight into the different nuclear processes and the fundamental particles, which are the real building blocks of the universe.
- To introduce students to the fundamental concepts of nuclear and sub-nuclear physics

Course Outcomes (COs)

After completion of the course the students will /can

1. Students who have completed this course should Understand the relation between the standard model and QCD
2. Understand the importance of models in describing the properties of nuclei and nuclear collisions
3. Be able to make quantitative estimates of phenomena involving nuclei.
4. Students understand the basic principle, type of accelerators, working and operation of Accelerators.
5. Students learn the basic of ion sources, beam transport and application of accelerator in different branches of science.
6. Training given to students and researchers of the Universities to handle such complicated machine.

UNIT - I

Nuclear mass and charge: Distribution of nuclear charge - Nuclear mass and binding energy of a nucleus – semi-empirical mass formula – Nature of nuclear force – form of nucleon-nucleon potential – charge independence and charge symmetry of nuclear forces - Bound states of two nucleons-Ground state of Deuterium - Wave mechanics of ground state of Deuterium-Spin states – Pauli's exclusion principle -Tensor force - Exchange force - Low energy Nucleon - Nucleon scattering

UNIT - II

Radioactivity:

Alpha decay: Properties of α particles - Velocity and energy of α particles - Gamow's theory of α particles- Geiger - Nuttall law- α ray energies and fine structure of α rays - α disintegration energy-Low range α particles

Beta decay: Properties of β particles - General features of β ray spectrum – Pauli's hypothesis - Fermi's theory of β particles - Forms of interaction and selection rules - Fermi's and Gamow teller transition

Gamma decay: The absorption of γ rays by matter - Interaction of γ rays with matter - Measurement of γ ray energies - Dumont bent crystal spectrometer method-internal conversion – Applications.

UNIT -III

Nuclear models: Liquid drop model - Bhor Wheeler theory of fission - Condition for spontaneous fission - Activation energy-Seaborg's expression - Shell model: Explanation for magic numbers - Prediction of shell model -Prediction of spin and parity - Nuclear statistics - Magnetic moment of nuclei - Schmidt lines-Nuclear isomerism - Collective model: Explanation of Quadrupole moments - Prediction of sign of electric quadrupole moments. Optical model: Nilsson model - Elementary ideas

UNIT - IV

Nuclear reactions: Nuclear fission and fusion - Kinds of reaction and conservation laws - energetics of nuclear reaction – Applications of Nuclear Energy – Nuclear Reactors - Isospin - Reaction cross section-Continuum theory of nuclear reaction - Resonance - Briet Wigner Dispersion formula - Stages of nuclear reaction - Statistical theory of nuclear reaction - Evaporation probability and cross section – Kinematics of stopping and pickup reaction - Surface reaction

UNIT -V

High energy physics : Types of interaction in nature-typical strengths and time-scales, conservation laws, charge-conjugation, Parity and Time reversal, CPT theorem, GellMann-Nishijima formula, intrinsic parity of pions, resonances, symmetry classification of elementary particles, quark hypothesis, charm, beauty and truth, gluons, quarkconfinement, asymptotic freedom.

SUGGESTED BOOKS:

1. Pandya. M.L. and R. P. S. Yadav, 2004, Elements of Nuclear Physics, 1st edition KedarNath Ram Nath, Meerut.
2. Dayal. D.C., 4th edition 2011, Nuclear Physics, Himalaya Publishing House, New Delhi.

3. Kenneth S.Karne, , 1st edition, 2008, Introducing Nuclear Physics, John Wiley and Sons, New York.
4. Sharma. D.C 2004, Nuclear Physics, - K. Nath& Co, Meerut.
5. Bernard L. Cohen, , 1st edition, 2011, Concept of Nuclear Physics, Tata McGraw Hill, New Delhi.
6. Devanathan V.,2ndedition, 2008, Nuclear Physics, Narosa Book Distributers Pvt. Ltd., New Delhi.
7. Kaplan Irving, 2002, Nuclear Physics, 2nd Edition, Narosa Book Distributers Pvt. Ltd., New Delhi.
8. https://nptel.ac.in/courses/115103101/
9. https://nptel.ac.in/courses/115104043/

SEMESTER II

		L T P C
16PHP204	**SPECTROSCOPY**	**4 - - 4**

Course Objectives

- This paper gives an insight into the theoretical and practical aspects of spectroscopy. it is used as a tool for non-destructive testing of samples. It is important to know the physical aspects of spectroscopy.
- The major objectives of this course are to integrate theory and practice and to bring together different branches of both Academic studies and Industrial Research through the presentation of critical aspects of modern Spectroscopy.
- The course will provide a valuable theoretical introduction and an overview of modern topics in spectroscopy, which are of current interest and importance in Semiconductor Industry and Biomedicine.
- To give an understanding of wide range of techniques including optical Nearfield spectroscopy, X-ray, Raman, and FTIR spectroscopy.
- To introduce optical spectroscopy methods that are widely used in physics, chemistry and biological sciences
- To teach the basic aspects of nuclear magnetic resonance (NMR) spectroscopy.

Course Outcomes

After successfully completed course, student will be able to

1. Student shows interest in the phenomenon of the interaction of light with matter in terms of the relationship with the molecular structure
2. Understand quantum chemical principles
3. Student will know the basic physical chemistry law that govern molecular spectroscopy
4. Student will know basic information on molecular methods (IR, Raman, UV-VIS, NMR, EPR)
5. Student will be able to select molecular spectroscopy methods suitable for solving given scientific problem
6. Student will be able to analyze results of measurements using molecular spectroscopy

.

UNIT- I

Atomic spectra: Hydrogen spectra – Angular momentum – Larmor precession – Spin-orbit interactions - Spectra of alkali metals – Energy level and spectral transitions of Helium - Normal Zeeman effect – Anomalous Zeeman effect – Paschen back effect – Inference of nuclear spin - Hyperfine structure of spectral lines – Stark effect – Characteristic X-ray spectra

Microwave spectra: Classification of molecules – Interaction of radiation with rotating molecule – Rotational spectra of rigid diatomic molecule – Isotopic effect – Non-rigid rotator – Linear, symmetric and asymmetric top molecules – Quadrapole hyperfine interaction – Microwave spectrometer

UNIT- II

I.R spectroscopy: Practical aspects – Theory of I.R rotation vibration spectra of gaseous diatomic molecules – applications of I.R spectroscopy – Basic principles of F.T.I.R spectroscopy

Raman spectroscopy: Classical and Quantum theory of Raman effect - Rotation vibration Raman spectra of diatomic and polyatomic molecules – Applications - Laser Raman spectroscopy - Surface Enhanced Raman Scattering.

UNIT -III

Electronic spectra: Electronic excitation of diatomic species - Vibrational analysis of diatomic molecules - Deslandre's table - Intensity distribution Frank Condon principle - Rotational structure of electronic bands - Resonance and Normal Fluorescence – Intensities of transitions - Phosphorescence population of triplet state and intensity- Experimental methods - Applications of Fluorescence and phosphorescence.

UNIT- IV

NMR Spectroscopy: Quantum mechanical and Classical description - The Bloch equation - Relaxation process - the experimental technique - Principle and working of high resolution NMR Spectrometer - Chemical shift – Applications of NMR

NQR Spectroscopy: Fundamental requirements - General principle - Experimental detection of NQR frequencies – Interpretation and chemical explanation of NQR spectroscopy – Applications of NQR

UNIT - V

ESR Spectroscopy: Basic principles of ESR - Experiments – ESR spectrometer reflection cavity and microwave bridge – ESR spectrum hyperfine structure - Study of free radicals – Applications of ESR

MOSSBAUER Spectroscopy: The Mossbauer effect- the recoilless emission and absorption of - Mossbauer spectrum – Experimental methods- Hyperfine interaction - Chemical Isomer Shift – Magnetic hyperfine and electric quadrupole interaction.

SUGGESTED BOOKS:

1. Aruldhas. G., 2008, Molecular Structure and Spectroscopy, 2nd Edition, Prentice Hall of India, New Delhi
2. Straughan.B.P. and S. Walker, 2000, Spectroscopy: Volume 1, Chapman and Hall Ltd, London. (for Unit I)
3. Straughan.B.P. and S. Walker, 2012, Spectroscopy: Volumes 2 & 3, Chapman and Hall Ltd, London.

4. CollenN.Banwell, 4th edition 2007, Fundamentals of Molecular Spectroscopy, Tata McGraw Hill, New Delhi.
5. Chatwall and Anand, 2004, Atomic and Molecular Spectroscopy, 5th Edition, Himalaya Publishing House, New Delhi.
6. https://nptel.ac.in/courses/104101099/
7. https://nptel.ac.in/courses/104102113/

SEMESTER – II

16PHP205A	DIGITAL SIGNAL PROCESSING	L T P C 4 - - 4

Course Objectives

- Digital processing of signals has an extensive range of applications, from the military to the medical, from entertainment to mass production.
- The primary objective of this course is to provide a thorough understanding and working knowledge of design, implementation and analysis DSP systems.
- This course provides areas of application the advent of these specially designed DSP devices has started a revolution in engineering which will pervade most areas of modern life.
- To make students familiar with the most important methods in DSP, including digital filter design, transform-domain processing and importance of Signal Processors.
- To make students aware about the meaning and implications of the properties of systems and signals.
- To give idea about different classifications of signals, different methods of recording and processing.

.

Course Outcomes (COs)

After completing the course the students will/can able to

1. Determine the spectral coefficients and the Fourier series components of discrete-time signals.
2. Determine the frequency response and the z-transform of discrete-time systems.
3. Determine the discrete Fourier transform of discrete-time signals.
4. Calculate the outputs of discrete-time systems in response to inputs.
5. Understand the characteristics field effect transistors
6. Analyze the characteristics of oscillators and wave shaping circuits

UNIT - I

Introduction:

Signals and systems - Classification of signals - Concept of frequency in continuous time and discrete– time signals. Theory of A/D and D/A conversion - Sampling of analog signals -sampling theorem - Quantization of continuous amplitude signals - Quantization of sinusoidal signal - Coding of quantized – samples - Digital to analog conversion

UNIT - II

Discrete- time signals and systems:

Discrete - time linear time-invariant systems-Techniques of analysis of linear systems - Resolution of a discrete time signal into impulses - Response of LTI systems to arbitrary inputs :Convolution sum - Properties of convolution and the interconnection of LTI systems - Casual LTI systems Stability of LTI systems - Systems with finite duration and infinite duration impulse – response

UNIT - III

The Z-transform:

The Direct Z-Transform - The Inverse Z-Transform - Properties of Z-transform - Rational Z-transforms - Poles and zeros - Inversion of Z-transforms. The inverse Z-Transform by contour integration - Power series expansion - Partial fraction expansion – Decomposition of rational Z-transform – Analysis of linear time invariant systems in the Z-domain – one sided Z-Transform.

UNIT - IV

Frequency Analysis of Signals and Systems:

Frequency analysis of continuous - time signals. The Fourier Series for continuous Time Periodic Signals - Power Density Spectrum of Periodic Signals - The Fourier Transform of Continuous - Time Aperiodic Signals - Energy Density Spectrum of Aperiodic Signals - Frequency analysis of discrete time signals – The Fourier Series for discrete time Periodic Signals - Power Density Spectrum of Periodic Signals – Fourier transform for discrete time Aperiodic signal - Convergence of the Fourier Transform - Energy Density Spectrum of Aperiodic signals - Relationship of the Fourier Transform to the Z Transform.

UNIT - V

Discrete Fourier Transform:

Frequency domain sampling and reconstruction of discrete time signals – The Discrete Fourier transform – DFT as a linear transformation - Relationship of the DFT to the other transforms. Properties of DFT - Multiplication of two DFTs and Circular convolution - Linear filtering methods based on DFT - Frequency analysis of signals using the DFT – Discrete cosine transform - Computation of the Discrete Fourier Transform

SUGGESTED BOOKS:

1. Oppenheim & Schafer, , 1st edition, Digital Signal Processing, Prentice Hall India –1999
2. Paulo S.R. Piniz, Eduardo A.B. De Silva and Sergio Netto,2nd+ edition, 2010, Digital Signal Processing, Cambridge University Press
3. Rabiner& Gold, , 1st edition ,Theory and Applications of Digital Signal Processing, Prentice Hall India -2011.
4. Fundamentals of signals and systems, P.D. Cha and J.I. Molinder, 2007, Cambridge
5. University Press, Digital Signal Processing Principles Algorithm & Applications, J.G.

6. Proakis and D.G. Manolakis, 2007, 4th Edn., Prentice Hall.
7. Fundamentals of Digital Signal processing using MATLAB, R.J. Schilling and S.L.
8. Harris, 2011, Cengage Learning, Digital Signal Processing , J.G. Proakis and D.G. Manolakis, 2013., Prentice.

SEMESTER – II

		L T P C
16PHP205B	**COMPUTATIONAL PHYSICS**	**4 - - 4**

Course Objectives

- Computational physics may be broadly defined as 'the science of using computers to assist in the solution of physical problems, and to further physics research.
- To equip the students of M.Sc. Physics with knowledge of programming in C, roots of equation, interpolation, curve fitting, numerical differentiation, numerical integration, solution of ordinary differential equations
- To introduce students to computational methods for simulating physical systems and solving problems arising in physics and astronomy, as well as in other related fields
- Computers now play a role in almost every branch of physics like large scale quantum mechanical calculations in nuclear, atomic, molecular and condensed matter physics, large scale calculations in such fields as hydrodynamics, astrophysics, plasma physics, meteorology and geophysics etc.
- The huge increase in the power of computers in recent years has made an impact on the role of computational physics.
- This paper gives idea about different types of computations involved in Physics, like curve fitting, interpolation, extrapolation, numerical calculations etc.

Course Outcomes (COs)

At the end of the course students should be able to:

1. The students programming tactics, numerical methods and their implementation like applying to problem in physics, including modeling of classical physics to quantum system as well as data analysis (Linear and non linear) will be improved.
2. Use analysis techniques for propagating error, representing data graphically. Create, solve and interpret basic mathematical tool.
3. independently program computers using leading-edge tools,
4. formulate and computationally solve a selection of problems in physics,
5. Use the tools, methodologies, language and conventions of physics to test and communicate ideas and explanations.
6. Identify and describe the characteristics of various numerical methods.

UNIT - I

Curve Fitting

The least squares method for fitting a straight line, parabola, power and exponential curves with the help of principle of least square fit.

UNIT - II

Interpolation

Introduction to finite difference operators - Newton's forward and backward difference interpolation formulae - Lagrange's interpolation formula - Newton's divided difference formula with error term - interpolation in two dimensions - Cubic spline interpolation end conditions. Statistical tests - Ψ^2- test and T-test.

UNIT - III

Numerical Differentiation and Integration

Numerical differentiation - errors in numerical differentiation - cubic spline method - finding maxima and minima of a tabulated function - Integration of a function with Trapezoidal Rule - Simpson's 1/3 and 3/8 Rule and error 55 associated with each - Romberg's integration - Gaussian integration method - Monte Carlo evaluation of integrals - numerical double integration

Unit IV

Numerical Solution of Ordinary Differential Equations

Euler method - modified Euler method and Runge - Kutta 4^{th} order methods - adaptive step size R-K method - predictor - corrector methods - Milne's method - Adam-Mouton method.

Numerical Solution of System of Equations

Gauss-Jordan elimination Method - Gauss-Seidel iteration method – Gauss elimination method and Gauss-Jordan method to find inverse of a matrix - Power method and Jacobi's method to solve eigenvalue problems.

Unit V

Numerical solutions of partial differential equations

Elementary ideas and basic concepts in finite difference method – Schmidt Method - Crank - Nicholson method - Weighted average implicit method - Concept of stability.

SUGGESTED BOOKS:

1. G. ShankerRao, K. Keshava Reddy, Mathematical Methods, I.K. , 1st edition 2009, International Publishing House, Pvt. Ltd.
2. S.S. Sastry,5th edition 2013, Introductory Methods of Numerical Analysis, PHI Pvt. Ltd.
3. Tao Pang, , 1st edition , 2006.An Introduction to Computational Physics, Cambridge University Press
4. https://nptel.ac.in/courses/115106118/
5. https://nptel.ac.in/courses/115104095/

SEMESTER – II

		L T P C
16PHP205C	**THIN FILM PHYSICS**	**4 - - 4**

Course Objectives

- The objectives of this course are:
- Introduce physical concepts and mathematical tools used to describe surfaces, interfaces and thin films.
- To develop an intuition for surface and thin film physical principles through plotting of functions using Maple
- To relate the mathematical results to practical applications and experiments in thin film techniques.
- Develop an appreciation of the mathematical basis for experimental techniques for deposition and analysis of thin films
- Understand physical phenomena that can be exploited for the deposition of thin films
- To demonstrate knowledge of different thin film deposition strategies

Course Outcomes (COs)

At the end of the course, the students will /can be able to

1. discuss the differences and similarities between different vacuum based deposition techniques,
2. evaluate and use models for nucleating and growth of thin films,
3. asses the relation between deposition technique, film structure, and film properties, discuss typical thin film applications,
4. Motivate selection of deposition techniques for various applications.
5. the basic concepts about the thin film technology
6. The importance of use of thin films in application and research.

UNIT - I: Preparation of Thin Films

Spray pyrolytic process – characteristic feature of the spray pyrolytic process – ion plating – Vacuum evaporation – Evaporation theory – The construction and use of vapour sources – sputtering Methods of sputtering – Reactive sputtering – RF sputtering - DC planar magnetron sputtering.

UNIT - II: Thickness measurement and Nucleation and Growth in Thin Film

Thickness measurement: electrical methods – optical interference methods – multiple beam interferometry – Fizeau – FECO methods – Quartz crystal thickness monitor.

Theories of thin film nucleation – Four stages of film growth incorporation of defects during growth.

UNIT - III: Electrical properties of metallic thin films

Sources of resistivity in metallic conductors – sheet resistance - Temperature coefficient of resistance (TCR) – influence of thickness on resistivity – Hall effect and magneto resistance – Annealing – Agglomeration and oxidation.

UNIT - IV: Transport properties of semiconducting and insulating Films

Semiconducting films; Theoretical considerations - Experimental results – Photoconduction – Field effect thin films – transistors, Insulation films Dielectric properties – dielectric losses – Ohmic contracts – Metal – Insulator and Metal – metal contacts – DC and AC conduction mechanism .

UNIT - V: Optical properties of thin films and thin films solar cells

Thin films optics –Theory – Optical constants of thin films – Experimental techniques – Multilayer optical system – interference filers – Antireflection coating, thin films solar cells: Role, Progress, and production of thin solar cells – Photovoltaic parameter, thin film silicon (Poly crystalline) solar cells : current status of bulk silicon solar cells – Fabrication technology – Photo voltaic performance: Emerging solar cells: GaAs and $CulnSe_2$.

SUGGESTED BOOKS:

1. Meissel. L.T and R. Glang., 2000, Hand book of thin film technology, Tata McGraw Hill, New Delhi.
2. Anderson, J.C.2011Ist edition The use of thin films in physical investigation, Academic press
3. Berry,Hall and Harris.2003,illustrated edition Thin films technology,VanNostrand Reinhold publishing
4. Chopra, K.L. Ist edition 2004, Thin film Phenomena, McGraw hill
5. Chopra, K.L. and Das, S.R Ist edition2013 Thin films solar cells.springer
6. George Hass and others (Ed). Physics of thin films, vol. 12.Academic press 2001
7. Holland, L Ist edition 2004, Vacuum deposition of thin films.Weily Publication
8. https://nptel.ac.in/content/storage2/courses/112108092/module2/lec08.pdf
9. https://nptel.ac.in/content/storage2/nptel_data3/html/mhrd/ict/text/113104075/lec41.pdf

SEMESTER – II

L T P C

16PHP211 GENERAL PHYSICS PRACTICALS – II - - 4 2

Course Objectives

- To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
- To learn the usage of optical systems for various measurements.
- Apply the analytical techniques and graphical analysis to the experimental data.
- To develop intellectual communication skills and discuss the basic principles of scientific concepts in a group.
- To emphasize the importance of measurement, which, is central topic to physics.
- To empower the student to acquire engineering skills and practical knowledge, which help the student in their everyday life.

.

Course Outcomes (COs)

- The course is designed to train the students so that they can efficiently handle various instruments.
- Students will verify laws studied in the different theory course.
- Students will measure different properties of materials.
- Capable to classify the materials with the properties
- Will overcome the fear of experimental skill
- Capable to built his own equipments for measuring the properties of materials

ANY TEN EXPERIMENTS

1. Fabry – Perot interferometer – Determination of wavelength.
2. Arc spectra – Copper and Iron
3. Determination of V-I characteristics of a solar cell.
4. Susceptibility – Quinke's method
5. Susceptibility – Gouy method
6. Hall Effect
7. Measurement of resistivity and conductivity of dielectric using Four-probe apparatus.
8. Compressibility of a liquid – Ultrasonic Interferometer, and verify with Ultrasonic Diffractometer

9. Determination of Stefan's constant.
10. Laser Diffraction at sharp edge – Determination of wavelength.
11. Series LCR circuit: (i) Determination of the resonance frequency using variable frequency source, (ii) To study the resonance of LCR using AC mains.
12. Kelvin's double bridge – To measure low resistance.

SUGGESTED BOOKS:

1. Ouseph C.C., U.J. Rao and V. Vijayendran 2007, Practical Physics and Electronics, S.Viswanathan (Printers & Publishers) Pvt. Ltd., Chennai
2. Singh S.P., 2003, Advanced Practical Physics – 1, 13th Edition, PragathiPrakashan, Meerut
3. Singh S.P., 2000, Advanced Practical Physics – 2, 12th Edition, PragathiPrakashan, Meerut
4. Gupta S.L. and V.Kumar, 2002, Practical Physics, 25th Edition, PragathiPrakashan, Meerut
5. https://nptel.ac.in/courses/115/105/115105110/

SEMESTER – II

		L T P C
16PHP212	**ELECTRONICS PRACTICALS – II**	**- - 4 2**

Course Objectives

- The course is designed to train the students so that they can efficiently handle various Instruments
- To understand the Biasing network for BJT and FET, transient analysis and frequency response of BJT and FET in single stage and multistage amplifier
- To understand the frequency response feedback amplifier using BJT and FET and Tuned amplifier
- To understand the operation of Oscillators and waveform generators
- To learn the usage of digital electronics measurements.
- To develop intellectual communication skills and discuss the basic principles of Scientific concepts in a digital electronics

Course Outcomes (COs)

After completing the course the students will/can able to

1. The course is designed to train the students so that they can efficiently handle various instruments.
2. Students will verify laws studied in the different theory course.
3. Students will measure different properties of materials.
4. Gain the knowledge in quantization of electromagnetic fields.
5. Analyze the characteristics of oscillators and wave shaping circuits
6. Understand the basic concepts of amplifiers and operational amplifiers

ANY TEN EXPERIMENTS

1. Characteristics and an application of SCR
2. Study of various types of flip-flops (R-S, J-K, Master Slave J-K)
3. Shift register – Digital IC's
4. Schmidt trigger
5. Op-amp – Simultaneous Addition and Subtraction
6. Op-amp – V to I, I to V converter
7. V-I characteristics of a schotkky diode
8. V-I characteristics of photoconductive diode.

9. Op-amp Log and Antilog amplifier.
10. Op-amp –Analog computation second order differential equation
11. Op-amp comparator – Zero crossing detector, Window detector, time marker
12. 555 Timer application – monostable, linear, Astablemultivibrators.
13. Virtual Lab (Flip flop, Logic gates)

SUGGESTED BOOKS:

1. Ouseph C.C., U.J. Rao and V. Vijayendran 2007, Practical Physics and Electronics, S.Viswanathan (Printers & Publishers) Pvt. Ltd., Chennai
2. Singh S.P., 2003, Advanced Practical Physics – 1, 13th Edition, PragathiPrakashan, Meerut
3. Singh S.P., 2000, Advanced Practical Physics – 2, 12th Edition, PragathiPrakashan, Meerut
4. Gupta S.L. and V.Kumar, 2002, Practical Physics, 25th Edition, PragathiPrakashan, Meerut
5. https://nptel.ac.in/courses/122/106/122106025/

SEMESTER III

L T P C

16PHP301 QUANTUM MECHANICS – II 4 - - 4

Course Objectives

- The aim of this course is to make the students to understand the concepts of quantum physics and their applications in microscopic systems
- This course develops concepts in quantum mechanics such that the behaviour of the physical universe can be understood from a fundamental point of view.
- To acquire working knowledge of the Quantum Mechanics postulate on the physical systems
- This is a continuation of Quantum Mechanics – I. More detailed study of problems like scattering problem, relativistic quantum mechanics, quantum electrodynamics etc, are added in this paper to enrich the theoritical knowledge.
- To make the students capable of analyzing theoretical problems like interaction of particles, scattering of particles etc.
- To impart knowledge of advanced quantum mechanics for solving relevant physical problems

Course Outcomes (COs)

After completing the course the students will/can able to

1. Students will get the knowledge of non-relativistic and relativistic quantum mechanics including time-dependent perturbation theory, scattering theory, relativistic wave equations, and second quantization.
2. Students will be able to understand concepts and to perform calculations of scattering of particles.
3. Students will be able to understand and evaluate modern research utilizing quantum theory in condensed matter, nuclear and particle physics.
4. Acquire the basic knowledge on eigen values and eigen functions
5. Apply the Schrodinger wave equation to get eigen values of bound systems
6. Understand the matrix formulation in quantum mechanics
7. Acquire the basic knowledge on angular momentum of quantum mechanical systems

UNIT - I

Angular momentum: Angular momentum operators – Angular momentum commutation relations – Eigen values and Eigen functions of L^2 and L_z– General angular momentum – Eigen values of J^2 and J_z – Ladder operators (J_+ and J_-) – Angular momentum matrices – Matrices for J^2, J_z, J_+, J_-, J_x and J_y – Spin angular momentum – Spin ½ systems – Spin vectors for spin ½ systems – Addition of angular momentum – Clebsh-Gordan coefficients.

UNIT -II

Scattering: Scattering cross-section – Scattering amplitude – Partial waves – Scattering by a central potential: partial wave analysis – Significant number of partial waves – Scattering by an attractive square-well potential – Briet-Wigner formula – Scattering length – Expression for phase shift – Integral equation – The Born approximation – Scattering by screened coulomb potential – Validity of Born approximation - Laboratory and center of mass co-ordinate systems.

UNIT - III

Many Electron Problem: Indistinguishable particles, Pauli principle – Inclusion of spin – Spin functions for two electrons – Spin functions for three electrons – The Helium atom – Central field approximation – Thomas-Fermi model of the atom – Hartree equation – Hartree-Fock equation – Molecular orbital theory: Hydrogen molecule ion H_2^+- Valence bond theory – Heitler-London theory of hydrogen molecule.

UNIT - IV

Relativistic quantum mechanics: Klein-Gordan equation – Interpretation of the Klein-Gordan equation – Particle in a coulomb field – Dirac's equation for a free particle – Dirac matrices – Covariant form of Dirac equation – Probability density – Negative energy states – Spin of the Dirac particle – Magnetic moment of the electron – Spin-orbit interaction – Radial equation for an electron in a central potential – Hydrogen atom – Lamb shift.

UNIT - V

Field theory: Introduction – Classical approach to field theory – Relativistic Lagrangian and Hamiltonian of a charged particle in an electromagnetic field – Field: Lagrangian and Hamiltonian formulations – Quantum equation for the field – Second quantisation – Quantisation of non-relativistic Schroedinger equation – Creation, annihilation and number operators.

SUGGESTED BOOKS:

1. Aruldhas. G, 2008, Quantum Mechanics, 2nd Edition, Prentice-Hall of India, NewDelhi.
2. Gupta, Kumar and Sharma, 2002, Quantum Mechanics, 22nd Edition, Jai PrakashNath& Co, Meerut.
3. SatyaPrakash, 2003, Quantum Mechanics, New Edition KedarNath& Ram Nath& Co, Meerut.
4. Leonard Schiff, 2006, Quantum Mechanics, 3rd Edition, McGraw Hill International, Auckland.
5. Engen Merzbacher, 2014, Quantum Mechanics, 3rd Edition, Wiley, Weinheim.
6. Mathews. P.M. and K. Venkatesan, 2nd edition 2013, Textbook of Quantum Mechanics, McGraw Hill International, Weinheim.
7. Chatwal R.G. and Sk. Anand, 4theditin 2004, Quantum Mechanics, Himalaya Publishing House, New Delhi
8. Thangappan. V. K., 2nd edition 2007, Quantum Mechanics, Tata McGraw Hill, New Delhi
9. https://nptel.ac.in/courses/115102023/
10. https://nptel.ac.in/courses/122/106/122106034/
11. https://nptel.ac.in/courses/115/101/115101107/

SEMESTER III

		L T P C
16PHP302	**LASER AND ITS APPLICATIONS**	**4 - - 4**

Course Objectives

- Laser is a versatile tool with applications in almost all fields from medical to astronomy, communications, welding, cutting etc.
- This paper explains the characteristics of lasers, different types of lasers and their construction to apply for industircal use. Applications of lasers in different fields are also explained.
- To give exposure to students about the characteristics of different lasers, their fabrication techniques, applications etc.
- To make the student understand the principles of Lasers
- To enable the student to explore the field of Nonlinear optics
- To be able to apply the fundamental concepts of optics in lasers, optical fiber communications and optoelectronics

Course Outcomes (COs)

After completing the course the students can understand/able to

1. Acquire fundamentals and principles of Laser action : Understand the basic concepts of different types of lasers
2. Built own laser system with the available components
3. The effects of homogeneous and inhomogeneous line broadening, and the conditions for laser amplification.
4. Operate and basic properties of the most common laser types, He-Ne, Argon-ion, and carbon-dioxide, ruby, titanium sapphire, neodymium YAG and glass, knowledge of other main laser types.
5. Classify fibers as single-mode, multimode step index and multi-mode graded index.
6. Describe modes in multimode fibers and mode field parameter in single-mode fibers.

Unit- I

Laser Characteristics: Spontaneous and stimulated emission, Einstein's quantum theory of radiation, theory of some optical processes, coherence and monochromacity, kinetics of optical absorption, line broadening mechanism, Basic principle of lasers, population inversion, laser pumping, two & three level laser systems, resonator, Q-factor, losses in cavity, threshold condition, quantum yield.

Unit – II

Laser Systems: Solid state lasers- the ruby laser, Nd:YAG laser, ND: Glass laser, semiconductor lasers – features of semiconductor lasers, intrinsic semiconductor lasers, Gas laser - neutral atom gas laser, He-Ne laser, molecular gas lasers, CO2 laser, Liquid lasers, dye lasers and chemical laser.

Unit-III

Advances in laser Physics : Production of giant pulse -Q-switching, giant pulse dynamics, laser amplifiers, mode locking and pulling, Non-linear optics, Harmonic generation, second harmonic generation, Phase matching, third harmonic generation, optical mixing, parametric generation and self-focusing of light.

Unit – IV

Multi-photon processes; multi-quantum photoelectric effect, Theory of two-photon process, three-photon process, second harmonic generation, parametric generation of light, Laser spectroscopy : Rayleigh and Raman scattering, Stimulated Raman effect, Hyper-Raman effect, Coherent anti-stokes Raman Scattering, Photo-acoustic Raman spectroscopy.

Unit – V

Laser Applications – ether drift and absolute rotation of the Earth, isotope separation, lasma, thermonuclear fusion, laser applications in chemistry, biology, astronomy, engineering and medicine. Communication by lasers: ranging, fiber Optics Communication, Optical fiber, numerical aperture, propagation of light in a medium with variable index, pulse dispersion.

SUGGESTED BOOKS:

1. AjoyGhatak&Thyagarajan 2nd edition,2013,Laser Fundementals and applications Laxmi Publications (P) Ltd
2. Laud, B.B.:1st Edition 2011 Lasers and nonlinear optics, New Age Int.Pub.
3. Thyagarajan, K and Ghatak, A.K 2009: Lasers theory and applications Plenum press,
4. Ghatak, A.K.andThyagarajan, K :2010 Optical electronics CambridgeUniv. Press
5. Seigman, A.E.: Lasers (Oxford Univ. 2008)
6. Maitland, A. and Dunn, M.H. 2013 : Laser Physics N.H.Amsterdam.
7. Hecht, 4thedition 2012 Laser Guide book McGraw Hill, NY.
8. Demtroder, W. : Laser Spectroscopy (Springe series in chemical physics vol.5,Springe verlag, Berlin, 2014).
9. https://nptel.ac.in/noc/courses/noc19/SEM1/noc19-cy13/

SEMESTER III

		L T P C
16PHP303	**ELECTROMAGNETIC THEORY AND ELECTRODYNAMICS**	**4 - - 4**

Course Objectives

- The aim of this course is to provide the students with the fundamental principles of electrical energy (electro- magnetism).
- To understand the propagation of waves in different media, its transmission and reception.
- To understand, develop, and design various engineering applications involving electromagnetic fields.
- To expose the students to the ideas of electromagnetic waves and structure of transmission line
- To obtain an understanding of Maxwell's equations and be able to apply them to solving practical electromagnetic fields
- To provide the understanding to the propagation of EM wave in free space, conductors & dielectrics.

.

Course Outcomes (COs)

After completing the course the students will/can able to

1. Formulate potential problems within electrostatics, magnetostatics and stationary current distributions in linear, isotropic media, and also solve such problems in simple geometries using separation of variables and the method of images. .
2. Define and derive expressions for the energy both for the electrostatic and magnetostatic fields, and derive Poyntings theorem from Maxwells equations and interpret the terms in the theorem physically.
3. Understand the theories and properties of electrostatics
4. Analyze the interaction of electrostatic properties with matter.
5. Acquire the fundamental knowledge in Magnetostatics
6. Understand the basic concepts of electrodynamics

UNIT- I

Electrostatics: Electric intensity – Electric potential – Gauss Law - Dielectric and its polarization - Electric displacement D – Dielectric constant ε_r – Polarisibiltiyα - Clausius-Mossotti relation (Non-polar molecules) – The Langevin equation (Polar molecules) – Electrostatic energy

Magnetostatics: Current density J – Ampere's law of force – Biot-Savart law – Ampere's circuital law – Magnetic scalar potential ϕ_m (no applications) – Magnetic vector potential A –

Magnetisation and magnetization current – Magnetic intensity – Magnetic susceptibility and Permeability.

UNIT- II

Field Equations and Conservation Laws: Equation of continuity - Displacement currents - The Maxwell's equations derivations - physical significance - Poynting vector - Electro magnetic potentials A and ϕ - Maxwell's equations in terms of Electro magnetic potentials - Concept of gauge -Lorentz gauge - Coulomb gauge

UNIT- III

Propagation of Electromagnetic Waves: Electromagnetic waves in Free space - Isotropic dielectric - Anisotropic dielectric – Conducting media - Ionized gases.

Radiating systems: Oscillating electric dipole – Radiation from an oscillating dipole – Radiation from small current element.

UNIT- IV

Interaction of E.M.Waves with matter (Macroscopic): Boundary conditions at interfaces - Reflection and refraction – Frenel's laws-Brewster's law and degree of polarization - Total internal reflection and critical angle.

Interaction of E.M.Waves with matter (Microscopic): Scattering and Scattering parameters - Scattering by a free electron (Thomson Scattering) - Scattering by a Bound electron (Rayleigh scattering) – Dispersion Normal and Anomalous – Dispersion in gases (Lorentz theory) – Dispersion in liquids and solids.

UNIT – V

Relativistic Electrodynamics: Purview of special theory of relativity – 4-vectors and Tensors - Transformation equations for charge and current densities J and ρ – For electromagnetic potentials A and ϕ - Electromagnetic field tensor $F_{\mu\nu}$ - Transformation equations for the field vectors E and B - Covariance of field equations in terms of 4-vectors - Covariance of Maxwell equations in 4-tensor forms – Covariance and transformation law of Lorentz force.

SUGGESTED BOOKS:

1. Chopra &Agarwal 2004, Electromagnetic theory, 6th Edition, Nath& Co, Meerut.
2. Griffiths D., 2013, Introduction to Electrodynamics, 4th Edition, Printice Hall of India, New Delhi.
3. Jacson. J.D., 2009, Classical Electro dynamics, 3rd Edition, Willey Eastern, New Delhi.
4. Schwaritz. M. 2008, Principles of Electro dynamics, McGraw Hill, Auckland.
5. Jordon and Balmain 2ndedition 2002, EMW radiating systems, Prentice Hall of India Pvt Ltd, New Delhi.

6. Gupta, Kumar and Singh, 2007, Electro dynamics, 19th Edition, PragatiPrakasan, Meerut, New Delhi.
7. SatyaPrakash 10th revised 2003, Electromagnetic theory and Electro dynamics, KedarNath Ram Nath& Co, Meerut.
8. https://nptel.ac.in/courses/115101008/
9. https://nptel.ac.in/content/syllabus_pdf/104104085.pdf

SEMESTER III

		L T P C
16PHP304	**DIGITAL ELECTRONICS AND MICROPROCESSOR**	**4 - - 4**

Course Objectives

- Digital electronics is very important in present day life due to its applications in almost all fields of life. Any signals stored in memory are first digitized. So it is important to have knowledge about digital electronics.
- To acquire the basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
- To prepare students to perform the analysis and design of various digital electronic circuits.
- This paper is intended to give an insight into the theory and applications of digital electronics, design of circuits with digital devices, details of microprocessor and its applications.
- To learn interfacing of real world input and output devices.
- To study various hardware & software tools for developing applications

Course Outcomes (Cos)

After completing the course the students can / will able to

1. Acquire the basic knowledge of digital logic levels and application of digital electronics circuits.
2. Perform the analysis and design of various digital electronic circuits.
3. Acquired knowledge about Microprocessors and its need.
4. Ability to identify basic architecture of different Microprocessors.
5. Foster ability to write the programming using 8085 microprocessor.
6. Foster ability to understand the internal architecture and interfacing of different peripheral devices with 8085 Microprocessor.

.

UNIT I

Flip Flops : SR, JK, JK Master Slave, T Flip flop & D Flip Flop (Symbol and Truth table)Registers (Types, shift operations) - Counters (Types, Designing of MOD 5 synchronous Counter, Construction and truth table - verification of MOD 16 Asynchronous UP, Down counter) - Multiplexer And demultiplexer (16:1 and 1:16 description and truth table verification) - Decoders and encoders (Definitions, Seven segment decoder, decimal to BCD encoder)

UNIT ll

Special Function ICs: Timer IC 555 (Block diagram, pin description) , Application as Astable, monostable, bistablemultivibrator - VCO IC 566 (Block diagram and pin description) - PLL IC

565 (Block diagram and pin description) - Fixed voltage Regulator ICs 7800 and 7900 series - Voltage Regulator IC 723 (description, designing for low and high voltage)

UNIT III

Microprocessor: Microprocessor Architecture, Pin out configuration of 8085-bus organization and timings –address bus, data bus, multiplexing address/data bus and control and status signal, Interrupts: maskable and non-maskableinterrupt(concept),8085 interrupt.

UNIT IV

Programming Model of 8085 : Instruction set-Data transfer ,arithmetic, logical and branch instruction-Addressing modes -16 bit data transfer and memory related instructions-stack and subroutine instructions.

Simple Program: 8 bit addition-subtraction-multiplication- finding largest and smallest number, ascending and descending order, 16 bit addition,

UNIT V

Interfacing Peripherals and Applications: Interfacing concepts-peripheral I/O instructions-Interfacing programs- Data Converters, LED interfacing, stepper motor interfacing, Hex Keyboard Interfacing.

SUGGESTED BOOKS:

1. Floyd, 2003, Digital Fundamentals, 8th Edition, Pearson education, New Delhi.
2. Ramesh Gaonkar 6th edition 2013 Microprocessor Architecture, Programming and Applications with 8085, PENRAM International P Ltd
3. Malvino and Leach, 2006, Digital Principles and Applications, 3rd Edition, Tata McGrawHill, New Delhi.
4. Aditya P. Mathur, 24th reprint 2006, Introduction to Microprocessor, 3rd Edition, Tata McGrawHill, New Delhi.
5. Morris Mano. M, 1st 2002, Digital Logic and Computer Design, Prentice Hall, New Delhi.
6. https://nptel.ac.in/courses/117103064/
7. https://nptel.ac.in/courses/117106086/

.

SEMESTER – III

		L T P C
16PHP305A	**NANOSTRUCTURE AND CHARACTERIZATION**	**4 - - 4**

Course Objectives

- This course introduces the fundamentals of nano-scale engineering and manufacturing.
- Current and future applications of nanostructured materials will be reviewed with respect to their impact in commercial products and technologies.
- The main physical forces controlling the nucleation and deposition of nanostructures will be presented allowing a better understanding of key design factors at the nano-scale.
- Well-established and novel synthesis/fabrication methods
- Nanostructures will be critically discussed giving a broad overview of the state-of-the-art nanomanufacturing processes.
- To foster the creation of new and relevant technologies and to transfer them to industry for effective utilization of nano materials
- To participate in the planning and solving of engineering and managerial problems of relevance to global industry and to society at large by conducting basic and applied research in the areas of nano technologies

Course Outcomes (COs)

At the end of the course, Students will understand and:

1. Explain the fundamental principles of nanotechnology and their application to biomedical engineering.
2. Apply engineering and physics concepts to the nano-scale and non-continuum domain.
3. Identify and compare state-of-the-art nanofabrication methods and perform a critical analysis of the research literature.
4. Design processing conditions to engineer functional nanomaterials.
5. Evaluate current constraints, such as regulatory, ethical, political, social and economical, encountered when solving problems in living systems.
6. Motivate selection of deposition techniques for various applications

UNIT - I

Low Dimensional Structures

Preparation of quantum nanostructures - size and dimensionality effects - size effects - potential wells - partial confinement - conduction electrons and dimensionality - Fermi gas and density of states - properties dependent on density of states - excitons - single-electron tunneling - Aplications - infrared detectors - quantum dot lasers - superconductivity. Microelectromechanical Systems (MEMS) - Nanoelectromechanical Systems (NEMS) –Fabrication of nanodevices and nanomachines - Molecular and Supramolecular Switches.

UNIT - II

Carbon Nanostructures

Carbon Molecules - Nature of the Carbon Bond - New Carbon Structures - Carbon Clusters -Small Carbon Clusters - Carbon Nano tubes - Fabrication - Structure – Electrical Properties - Vibrational Properties – Mechanical Properties - Applications of Carbon Nano Tubes - Computers - Fuel Cells - Chemical Sensors - Catalysis – Mechanical Reinforcement - Field Emission and Shielding. Solid Disordered Nanostructures - Methods of Synthesis - Failure Mechanisms of Conventional Grain sized Materials – Mechanical Properties – Nano structured Multi layers -Electrical Properties – Porous Silicon - Metal Nano cluster - Composite Glasses.

UNIT - III

Thermal, Microscopic and Infrared Analysis

Thermal analysis – DTA, DSC and TGA – methodology of DTA, DSC and TGA and Instrumentation.Microscopy – Electron microscopy – Principles and instrumentation – resolution limit – scanning tunnelling microscopy – principles – scanning tunnelling microscope - SEM & TEM. Atomic force microscope

UNIT - IV

Instrumentation

IR spectrophotometers – Theory and Instrumentation- Applications. Fourier transform techniques – FTIR principles and instrumentation. Raman spectroscopy – Principles, Instrumentation and Applications. Microwave Spectroscopy -Instrumentation and Applications

UNIT - V

Mass Spectrometry, Resonance Spectroscopy

Mass Spectrometry - Principle – Instrumentation – Types of ions produced in a Mass spectrometer - Interpretation of Mass spectra – Applications. NMR – Principles and Instrumentation – Chemical shift - Spin-spin coupling - Applications of NMR - Electron spin resonance spectrometry – Theory of ESR –Instrumentation - Interpretation of ESR spectra - Applications.

SUGGESTED BOOKS:

1. Charles P. Poole, Jr. and Frank J. Owens, Istedition 2003, Introduction to Nanotechnology,Wiley,
2. Cornelius T Leondes, MEMS/NEMS: micro electro mechanical systems/nano electromechanical systems Volume 1, Design Methods, Springer, (2006).
3. G. Chatwal& Sham Anand, 5th edition 2013, Instrumental methods of Chemical Analysis, Himalaya
4. Norman D Colthup, Lawrence H Daly and Stephen E Wiberley, 2001 Introduction to Infrared and Raman spectroscopy, Academic press, NY.

5. H.H. Willard, L.L. Merrit, J.A.Dean& F.A. Settle,7th Instrumental methods of analysis, CBS Pub.
6. https://nptel.ac.in/courses/118104008/

SEMESTER III

		L T P C
16PHP305B	**SOLAR ENERGY AND ITS UTILIZATION**	**4 - - 4**

Course Objectives

- Solar energy harvesting and utilizing for day to day purposes has become order of the day. The scarcity and increasing need of the fossil fuel has made man to think about alternate sources, the easiest and best being Solar energy. Hence the course introduced to get knowledge of solar energy and its utilization.
- To introduce the students to the world of solar energy, its different uses, the different methods of harvesting solar energy.
- To understand the basic concepts of energies produced from various energy sources, advantages and disadvantages
- To facilitate the students to achieve a clear conceptual understanding of technical and commercial aspects of Solar Power Development and Management.
- To enable the students to develop managerial skills to assess feasibility of alternative approaches and drive strategies regarding Solar Power Development and Management.
- To develop a comprehensive technological understanding in solar PV system components

Course Outcomes (COs)

After completing the course the students can / will be able to

1. Impart the knowledge of Storage technologies form the autonomous renewable energy sources.
2. Explain the principles that underlie the ability of various natural phenomena to deliver solar energy.
3. Discuss the positive and negative aspects of solar energy in relation to natural and human aspects of the environment.
4. Understand the basic principles in wind energy conversion and advantage and disadvantage of wind energy conversion systems.
5. Gain the knowledge about the energy produced from biomass and biogas.
6. Understand the concepts of solar cell and solar energy

Unit -1

Introduction to Energy Sources: World Energy Features, Indian Energy Scene, Conventional and non-conventional energy sources, Prospects of renewable energy sources.

Solar Energy Source: Introduction, Solar constant, radiation on Earth’s surface, Radiation geometry, Radiation measurements, Radiation data, Average solar radiation, radiation on tilted surfaces

Unit – II

Solar Energy collectors : Principle of conversion of energy, Flat plate collector, Transmissivity of cover system, Collector energy balance equation, Thermal Analysis of FPC, Useful heat gain, Focusing collectors, advantages and disadvantages, Factors affecting collector performance.

Application of Solar Energy: Solar Water Heating, Heating and Cooling of Buildings, Thermo electric conversion, Power generation, PV cells, Solar distillation, Pumping, Cooking, Hydrogen production.

Unit – III

Wind Energy: Principle of energy conversion, Power generation, Forces on blades, energy estimation, Wind data, Components of WECS, Classification of WECS, Advantages and Disadvantages, Types of Wind machines, Performance of Wind machines, Applications of wind energy.Problems

Energy from Biomass: Conversion technology, Factors affecting gas generation, classification of biogas plants, Advantages and disadvantages of different types of plants.

Unit – IV

Fuel Cells: Design and Principle of operation, Classification, Types, Advantages and disadvantages, Conversion efficiency, Types of electrodes, Work output and EMF of Fuel Cells, Applications of Fuel Cells.

Thermo Nuclear Fusion Energy: Fusion Reactions, Requirements, Plasma, Magnetic and Inertial Confinement fusion, Muon Catalyzed Fusion, Characteristics of D-T Reaction, Advantages of Nuclear Fusion, Fusion Hybrid, Cold Fusion.

Unit – V

Principles of working: Geothermal, OTEC, Tidal, Waves, and Hydrogen (Generation and Application)

SUGGESTED BOOKS:

1. G.D.Rai, 2011 ,Non conventional energy sources, Khanna Publishers
2. S.P.Sukhatme. 2008 , Solar Energy, Tata McGraw-Hill Publishing Co. Ltd.
3. G.D.Rai.,2002 , Solar Energy, Khanna Publishers.
4. D. Mukherjee and S. Chakrabarti, 2005 ,Fundamentals of Renewable Energy Systems, New Age International Publishers.
5. D.S. Chauhan and S.K.Srivastava. 2004,Non Conventional Energy Resources, New Age International Publishers.
6. https://nptel.ac.in/courses/112105050/
7. https://nptel.ac.in/courses/115107116/

SEMESTER – III

		L T P C
16PHP305C	**OPTOELECTRONICS**	**4 - - 4**

Course Objectives

- The aim of this course focuses to enable the students to understand optics and nonlinear optics concepts in physics
- Optoelectronics is the science that deals with designing devices that can detect or emit light in any part of the spectrum.
- This paper gives an introduction to semiconductors and light. The application of optics in electronics, usage of optical waves in communications, optical fibers are explained in this paper.
- This course builds on the basic knowledge of both fundamental physics and state-of-the art technologies for optoelectronic components and fibre optics, in order to understand their important applications in optical communications and energy conversions that influence our society and everyday life
- To focuse on the physics of the interaction of photons with semiconductor materials.
- To give adequate knowledge and clear understanding about the fundamentals of optical property.

.

Course Outcomes (COs)

After completing the course / the students will/can able to

1. The students are conversant with the application of optical properties and processes in semiconductor optical sources.
2. The students understand the operation of LEDs and lasers.
3. The students are familiar with the structures and performance of LEDs and lasers.
4. Apply the knowledge of laser in holography
5. Gain the knowledge in Fourier optics and Fourier transforming properties of lenses
6. Understand the concepts of nonlinear optics and harmonic generations.

UNIT - I

Semiconductor Science and Light Emitting Diodes

Semiconductor energy bands - semiconductor statistics – extrinsic semiconductors – compensation doping – degenerate and non degenerate semiconductors – energy band diagrams in applied field - direct and indirect bandgap semiconductors, - p-n junction principles - open circuit- forward and reverse bias – depletion layer capacitance – recombination life time – p-n junction band diagram - open circuit - forward and reverse bias – light emitting diodes – principles - device structures - LED materials, heterojunction high intensity LEDs – double heterostructure – LED characteristics and LEDs for optical fiber communications - surface and edge emitting LEDs.

UNIT - II

Fiber Optics

Symmetric planar dielectric slab waveguide – waveguide condition – single and multimode waveguides – TE and TM modes – modal and waveguide dispersion in the planar waveguide – dispersion diagram – intermodal dispersion – intramodal dispersion – dispersion in single mode fibers – material dispersion – waveguide dispersion – chromatic dispersion – profile and polarization dispersion – dispersion flattened fibers - bit rate and dispersion – optical and electrical bandwidth – graded index optical fiber - light absorption and scattering – attenuation in optical fibers.

UNIT - III

Laser Principles

Laser oscillation conditions - diode laser principles - heterostructure laser diode – double heterostructure – stripe geometry – buried heterostructure – gain and index guiding - laser diode characteristics – laser diode equation - single frequency solid state lasers – distributed feedback – quantum well lasers - vertical cavity surface emitting laser - optical laser amplifiers.

UNIT - IV

Photodetectors and Photovoltaics

Principle of p-n junction photodiode - Ramo's theorem and external photocurrent - absorption coefficient and photodiode materials – quantum efficiency and responsivity - PIN-photodiode – avalanche photodiode – phototransistor - photoconductive detectors and photoconductive gain – noise in photo-detectors – noise in avalanche photodiode - solar energy spectrum - photovoltaic device principles – I-V characteristics - series resistance and equivalent circuit - temperature effects - solar cell materials, device and efficiencies

UNIT - V

Optoelectronic Modulators

Optical polarization, birefringence, retardation plates, electro-optic modulators – Pockels effect - longitudinal and transverse electro-optic modulators, Kerr effect, Magneto-optic effect, acousto-optic effect – Raman Nath and Bragg-types.

Non-linear optics

Wave propagation in an anisotropic crystal - polarization response of materials to light - second order non-linear optical processes – second harmonic generation - sum and frequency generation, optical parametric oscillation - third order non-linear optical processes - third harmonic generation - intensity dependent refractive index - self-focusing - non-linear optical materials, phase matching - angle tuning - saturable absorption - optical bistability - two photon absorption.

SUGGESTED BOOKS:

1. AjoyGhatak&Thyagarajan 2nd edition,2013,Laser Fundementals and applications Laxmi Publications (P) Ltd
2. William T. Silfvast, Laser fundamentals, CUP 2nd Edn. 2009.
3. Pallab Bhattacharya, 2nd edition Semiconductor optoelectronic devices: Pearson(2008)
4. Jasprit Singh,1st edition2014 Optoelectronics: An introduction to materials and devices, McGraw Hill International Edn.
5. A.Yariv and P. Yeh,1st edition 2003 Optical waves in crystals: Propagation and Control of Laser Radiation, John Wiley and Sons Pub.

SEMESTER – III

16PHP311	ADVANCED PHYSICS PRACTICALS	L T P C
		- - 4 2

Course Objectives

- To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
- The course is designed to train the students so that they can efficiently handle various Instruments
- To learn the usage of optical systems for various measurements.
- Apply the analytical techniques and graphical analysis to the experimental data.
- To develop intellectual communication skills and discuss the basic principles of scientific concepts in a group.
- To understand the programming knowledge in MATLAB for various physics problems and electronic circuits
  .

Course Outcomes (COs)

After completing the course the studend can / will able to

1. The course is designed to train the students so that they can efficiently handle various instruments.
2. Students will verify laws studied in the different theory course.
3. Students will measure different properties of materials.
4. Gain the knowledge in quantization of electromagnetic fields.
5. Analyze the characteristics of oscillators and wave shaping circuits
6. Understand the basic concepts of amplifiers and operational amplifiers

ANY TEN EXPERIMENTS

1. Arc spectra – Aluminium and Brass
2. (i) Determination of wavelength of He-Ne laser – Ruler method.

   (ii) Determination of thickness of a wire using He-Ne laser.
3. Determination of e/m using Zeeman effect.
4. Measurement of thickness of a thin film using MBI technique.
5. G.M.Counter – Characteristics.
6. Experiment on rotatory dispersion of quartz.
7. Matlab Programming-Radioactive Decay
8. Matlab Programming-Numerical Integration

9. Matlab Programming-Double Integration
10. Matlab Programming-Solution of Ordinary Differential Equations
11. Matlab Programming-Computer Simulation of Equations of Motion for a System of Particles
12. Matlab Programming-Computer Simulation of 1-D and 2-D Lattice Vibrations
13. Matlab Programming-Computer Simulation of Kronig-Penney Model

SUGGESTED BOOKS:

1. Ouseph C.C., U.J. Rao and V. Vijayendran 2007, Practical Physics and Electronics, S.Viswanathan (Printers & Publishers) Pvt. Ltd., Chennai
2. Singh S.P., 2003, Advanced Practical Physics – 1, 13th Edition, PragathiPrakashan, Meerut
3. Singh S.P., 2000, Advanced Practical Physics – 2, 12th Edition, PragathiPrakashan, Meerut
4. https://nptel.ac.in/noc/courses/noc20/SEM1/noc20-ge05/
5. https://nptel.ac.in/courses/111/102/111102137/

SEMESTER – III

16PHP312	ADVANCED ELECTRONICS PRACTICALS	L T P C - - 4 2

Course Objectives

- To introduce different integrated circuit for students to understand the application to electronics circuits
- To understand the Biasing network for BJT and FET, transient analysis and frequency response of BJT and FET in single stage and multistage amplifier
- To understand the frequency response feedback amplifier using BJT and FET and Tuned amplifier.
- This course introduces the assembly language programming of 8085 Microprocessor. It gives a practical training of interfacing the peripheral devices with the 8086 microprocessor.
- To design and construction of circuits using analog component and trouble shooting of the circuits.
- To provide the real time experience on microprocessor in traffic signal and industry

Course Outcomes (COs)

On completion of this lab course the students will be able to:

1. Understand and apply the fundamentals of assembly level programming of microprocessors and microcontroller.
2. Work with standard microprocessor real time interfaces including GPIO, serial ports, digital-to-analog converters and analog-to-digital converters;
3. Troubleshoot interactions between software and hardware;
4. Analyze abstract problems and apply a combination of hardware and software to address the problem
5. Students will practically study the working of different electronic components circuits.
6. Learn to minimize contributing variables and recognize the limitations of the equipment.
7. Design and construction of circuits using analog component and trouble shooting of the circuits.

ANY TEN EXPERIMENTS

1. Microprocessor – LED interfacing, Musical tone generator interface
2. Microprocessor – Stepper motor interfacing, ADC interface wave form generation
3. Microprocessor –Traffic control simulation
4. Microprocessor –Hex Key board interfacing

5. Multiplexer and de-multiplexer
6. Ring counter using IC's
7. 4-bit binary adder
8. 4-bit binary subtracter
9. Half adder and Half subtractor
10. Full adder and full subtractor
11. BCD counter, using IC 7490 and 7473.
12. A/D Converters any one method, D/A converter – Binary weighted, Ladder methods

SUGGESTED BOOKS:

1. Ouseph C.C., U.J. Rao and V.Vijayendran, 2007, Practical Physics and Electronics, S. Viswanathan (Printers & Publishers), Pvt. Ltd., Chennai.
2. https://nptel.ac.in/courses/108/105/108105102/
3. https://nptel.ac.in/courses/115/102/115102014/

SEMESTER IV

		L T P C
16PHP491	**PROJECT**	**- - - 15**

Course Objectives

- The aim of the M.Sc. Research project work is to expose the students to preliminaries and methodology of research in Theoretical Physics and Experimental Physics.
- To provides the students to get opportunity and participate in some ongoing research activity and development of a laboratory experiment.
- To provide the student with a broad spectrum of physics projects courses
- To emphasize the role of physics in life and other discipline (chemistry ,mathematics and biology)
- To develop the ability of the students to conduct, observe, analyzes and report an experiment and deal with physical models and formulas mathematically.
- To provide the student with different practical, intellectual and transferable skills.
- To understand the objective of a physics laboratory experiment, properly carry out the experiments, and appropriately record and analyze the results.
- To think creatively about scientific problems and their solutions.
- To design experiments, and to constructively question results they are presented with, whether these results are in a newspaper, in a classroom, or elsewhere.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Complete an independent research project, resulting in research outputs in terms of publications in journals and conference proceedings.
2. Demonstrate a depth of knowledge of Physics.
3. Complete an independent research project, resulting in research outputs in terms of publications in journals and conference proceedings.
4. Demonstrate knowledge of contemporary issues in their chosen field of research.
5. Demonstrate an ability to present and defend their research work.
6. Demonstrate an ability to succeed in problem solving in electronics

7. Solve physics problems using qualitative and quantitative reasoning including sophisticated mathematical techniques
8. Conduct independent research or work successfully in a technical position.
9. Successfully pursue career objectives in graduate school or professional schools, in a scientific career in government or industry, in a teaching career, or in a related career.
10. Apply their knowledge to develop the instruments.
11. Verify the basic principles and laws experimentally as a project.

FACULTY OF ENGINEERING

B.E AUTOMOBILE ENGINEERING
SYLLABI 2016 (REGULARPROGRAMME)

Department of Automobile Engineering
Faculty of Engineering

KARPAGAM ACADEMY OF HIGHER EDUCATION
(Established Under Section 3 of UGC Act 1956)
Eachanari Post, COIMBATORE 641 021,INDIA

16BECC101 COMMUNICATIVEENGLISH 3 0 0 3 100

OBJECTIVES:

- To enable students to develop their basic communication skills.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- To ensure the students have their ability to speak without any grammatical error.

COURSE OUTCOMES:

Students undergoing this course will be able to

Upon successful completion of the course, the students should be able to:

- Use the English language for communication: verbal and non-verbal.
- Express comprehension and acquisition of speaking and writing ability.
- Demonstrate word power: lexical, grammatical and communication competence.
- Compose business letters and other forms of technical writing.
- Demonstrate oral communication in formal contexts.
- Do the writing practice.

Unit I

Listening– Types of listening - Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self - Introduction on one"s friend. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative. **Writing** – Formal and Informal letters- Free writing on any topic –My favorite place, hobbies, dreams, goals, etc- - To fill in different application forms. **Grammar** – Articles- WH questions – Yes/No Question - Subject Verb agreement. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit II

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions - Telephone etiquette. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages. **Grammar**– Parts of speech – Noun – Verb – Adjectives - Adverbs. **Vocabulary**– Compound Nouns/Adjectives – Irregularverbs.

Unit III

Listening – Listening for specific task – Fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** – Reading and Comprehension. **Writing** - Autobiographical writing – Biographical writing - Instruction writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

Unit IV

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) Letters to the Editor. **Grammar** – Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit V

Listening - Listening to different accents, speeches/presentations. **Speaking-** Extempore talk –Just-a-minute talk. **Reading-**Reading strategies–Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars and notices – Writing proposal. **Grammar** – Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory@ 2 periods per each unit.

16BECC102 ENGINEERING MATHEMATICS I 3 2 0 4 100

OBJECTIVES:

- To develop analytical skills for solving different engineering problems.
- To understand the concepts of Matrices, sequences and series.
- To solve problems by applying Differential Calculus and Differential equations.
- To use the concepts of Matrices in a real life situations.
- To use the concepts of Differential Calculus in a real life situations.
- To develop analytical skills.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Apply advanced matrix knowledge to Engineering problems.
- Improve their ability in solving geometrical applications of differential calculus problems.
- Solve engineering problems involving hyperbolic functions.
- Solve engineering problems involving Beta and Gamma functions.
- Apply tests of convergence.
- Expose the concept of sequences and series.

UNIT I MATRICES

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS

Overview of Derivatives - Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes- Evolutes as Envelope of normals – Maxima and Minima of functions of two or more Variables – Method of Lagrangian Multipliers

UNIT III DIFFERENTIAL EQUATIONS

Linear Differential equations of second and higher order with constant coefficients - Euler‟s form of Differential equations – Method of variation parameters.

UNIT IV FUNCTIONS OF SEVERALVARIABLES

Partial derivatives – Eule's theorem for homogeneous functions – Total derivatives – Differentiation of implicit functions – Jacobians –Maxima and Minima of functions of two or more Variables - Method of Lagrangian multipliers.

UNIT V SEQUENCES AND SERIES

Sequences: Definition and examples – **Series:** Types and Convergence – Series of positive terms – Tests of convergence: Comparison test, Integral test and D‟Alembert‟s ratio test – Alternating series – Leibnitz‟s test – Series of positive and negative terms – Absolute and conditional convergence.

16BEPH103 **ENGINEERING PHYSICS** **3 0 0 3 100**

OBJECTIVE:

- To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology.
- To enhance the knowledge in Physics and its applications.
- To develop analytical skills in the concepts of Physics.
- To enhance the fundamental knowledge in Physics.
- To use Physics and its applications relevant to various branches of Engineering and Technology.
- To use Physics in various Technology.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Describe the basics of properties of matter and its applications.
- Express the concepts of sound, ultrasonic and their applications.
- Illustrate the thermal properties of materials and advanced physics concepts of quantum theory.
- Identify the basics of light, laser and their applications.
- Identify the basics of fibre optics and their applications.
- Explain the basics of crystals and their structures.

UNIT I PROPERTIES OF MATTER ANDTHERMODYNAMICS

Three types of modulus of elasticity – basic definitions, relation connecting the modulii (Derivation), poison ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniformbending.

Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBEROPTICS

Introduction – emission and absorption process- Einstein‟s coefficients derivation. Types of LASER - CO_2, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS

Introduction to quantum theory – Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger‟s wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electronmicroscope.

UNIT IV CRYSTAL PHYSICS

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEARPHYSICS

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C –scan displays, Medical applications –

Sonogram Introduction – basics about nuclear fission and fusion, nuclear composition –Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

16BECH103 ENGINEERING CHEMISTRY 3 0 0 3 100

OBJECTIVES:

- To understand about the water technology.
- To get the information on electrochemical cells, batteries, fuels and combustion.
- To study about the corrosion and protective coatings.
- To gain knowledge on adsorption phenomena.
- To understand microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces
- To study about the corrosion.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
- Rationalise periodic properties such as ionization potential, oxidation states and electronegativity.
- Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques.
- Rationalise bulk properties and processes using thermodynamic considerations.
- List major chemical reactions that are used in the synthesis of molecules.
- Explain the synthesis of a commonly used drug molecule

UNIT I WATER TECHNOLOGY

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGEDEVICES

Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+}vs dichromate) –Electrolytic conductance-application (conductometric titration)-Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2-O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV-Flue gasanalysis.

-

UNIT IV CORROSION SCIENCE

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings-Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating – Hotdipping.

UNIT V SURFACE CHEMISTRY AND PHASE RULE

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

16BEAE104 BASIC AUTOMOBILE ENGINEERING 3 0 0 3 100

OBJECTIVES:

- To learn the fundamental principles, construction of automotive petrol and diesel engines.
- To understand the basics of Steering System, Brakes and Suspension System.
- To enable the students to grasp latest developments in Automotive Electronics.
- To learn the fundamental principles petrol and diesel engines.
- To learn the construction of automotive petrol and diesel engines.

COURSE OUTCOMES:

UNIT I BASICS OF AUTOMOBILEENGINEERING

Introduction to an Automobile – Brief history of the automobile- Classification of automobile-Layout

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

of an automobile Chassis- Classification of vehicles -Major components and their functions- Manufacturers of motor vehicles

UNIT II AUTOMOTIVE ENGINES

Classification of Engines based on operation and construction-Constructional details of four stroke petrol engine and working principle- Constructional details of two stroke engine and operation, Comparison of four stroke and two stroke engine operation- Diesel Engine Construction and Operation

UNIT III POWER TRAIN UNIT

Requirements of transmission system. Different types of clutches, principle, Construction-Different types of gearboxes – operation- Differential and Propeller Shaft

UNIT IV STEERING AND SUSPENSIONSYSTEM

Types of chassis layout with reference to power plant locations and drive, Vehicle frames. Various types of frames. Constructional details, Materials. Different types of steering gear boxes. Steering linkages and layouts for conventional and independent suspension system- Drum Brakes and Disc Brakes-Construction and Operation

UNIT V ADVANCEMENTS IN AUTOMOTIVEELECTRONICS

Basics of MPFI system-CRDI system-ABS-Airbag-Electronic Stability Program- Traction Control System-Electronic Power Steering.

16BEAE105A **BASICELECTRICAL ANDELECTRONICS ENGINEERING** **3 0 0 3 100**

OBJECTIVES

1. To impart the basic knowledge about the Electric circuits.
2. To understand the working of various Electrical Machines.
3. To know about various measuring instruments.
4. To understand the basic concepts in semiconductor devices and digital electronics.
5. To describe the working principle of DC generators.
6. To describe the working principle of DC motors.

COURSE OUTCOMES

- Explain the basic DC and AC circuits.
- Describe theworking principle of DC generators
- Describe the working principle of DC motors
- Explain the working principle of measuring instruments.
- Describe the semiconductor devices and applications
- Describe the digital electronics

UNIT I ELECTRIC CIRCUITS &MEASUREMENTS

Ohm"s Law – Kirchoff"s Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURINGINSTRUMENTS

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNIT V DIGITAL ELECTRONICS

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressionsusing logic gates - standard forms of Boolean expression.

16BEAE105B ELEMENTS OF MECHANICAL ENGINEERING 3 0 0 3 100

OBJECTIVES

- To expose the thrust areas in Mechanical Engineering and their relevance by covering fundamental concept.
- To familiarize with the basic machine elements
- To familiarize with the Sources of Energy and Power Generation
- To familiarize with the various manufacturing processes
- To familiarize with the Sources of Energy.
- To familiarize with the Power Generation.

COURSE OUTCOMES:

- To expose the thrust areas in Mechanical Engineering and their relevance by covering fundamental concept.
- To familiarize with the basic machine elements
- To familiarize with the Sources of Energy and Power Generation
- To familiarize with the various manufacturing processes
- To familiarize with the Power Generation.
- To familiarize with the Sources of Energy.

UNIT I MANUFACTURING PROCESS

Casting process – Operation of Cupola furnace. Patterns -Moulding tools - Types of moulding - Preparation of green sand mould

UNIT II METAL FORMING AND JOININGPROCESSES

Metal forming processes – Rolling, forging, drawing, extrusion and sheet metal operations-fundamentals only. Metal Joining processes – Welding - arc and gas welding, Soldering and Brazing.

UNIT III MACHININGOPERATIONS

Basics of metal cutting operations – Working of lathe parts of lathe-Operations performed on lathe. Milling machine – Horizontal and vertical milling machine - Milling operations. Drilling machine – Classification – Radial drilling machine - Twist drill nomenclature. Introduction to CNC and VMC

UNIT IV POWERPLANTS

Classification of Power Plants – Working principle of steam, Gas, Diesel, Hydro-electric plants
Nuclear Power plants – Solar and Wind Power plants

UNIT V REFRIGERATION AND AIRCONDITIONING

Principle of vapour compression system- Layout of typical domestic refrigerator – Basic of Psychrometry - Window and Split type room Air conditioner.

16BEPH111 **ENGINEERING PHYSICS LABORATORY** **0042 100**

OBJECTIVES

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To have the knowledge on Physics practical experiments.
- To have the knowledge that will be used by them in different engineering.
- To develop basic laboratory skills.
- To develop basic laboratory skills on the application of physical principles.
- The students will have the knowledge on Physics practical experiments.

COURSE OUTCOMES:

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- To have the knowledge on Physics practical experiments.
- To have the knowledge that will be used by them in different engineering.
- To develop basic laboratory skills.
- To develop basic laboratory skills on the application of physical principles.
- The students will have the knowledge on Physics practical experiments

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonicinterferometer.
2. Determination of wavelength of mercury spectrum – spectrometergrating.
3. Determination of Young‟s modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille‟smethod.
5. Spectrometer Dispersive power of aprism.
6. Torsional pendulum – Determination of Rigiditymodulus.
7. Particle size determination using DiodeLaser
8. Determination of Laser parameters – Wavelength, and angle ofdivergence.
9. Determination of acceptance angle in an opticalfiber.
10. Determination of thickness of a thin wire – Air wedgemethod
11. Determination of Band Gap of a semiconductormaterial.
12. Determination of Specific resistance of a given coil of wire – WheatstoneBridge

16BECH111 ENGINEERING CHEMISTRY LABORATORY 0042 100

OBJECTIVES

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To provide students with practical knowledge of quantitative analysis of materials.
- The students will be outfitted with hands-on knowledge in quantitative chemical analysis.
- To develop basic laboratory skills.
- To develop basic laboratory skills on in quantitative chemical.
- To provide water quality parameters and corrosion measurement.students with practical knowledge water quality parameters and corrosion measurement.

COURSE OUTCOMES:

- The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
- To provide students with practical knowledge of quantitative analysis of materials.
- The students will be outfitted with hands-on knowledge in quantitative chemical analysis.
- To develop basic laboratory skills.
- To develop basic laboratory skills on in quantitative chemical.
- To provide water quality parameters and corrosion measurement.students with practical knowledge water quality parameters and corrosion measurement.

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Watersample.
2. Estimation of hardness of Water byEDTA
3. Estimation of chloride in Water sample (Argentometricmethod)
4. Determination of corrosion rate by weight lossmethod.
5. Conductometric Titration (Simple acidbase).
6. Conductometric Titration (Mixture of weak and strongacids).
7. Conduct metric Titration using $BaCl_2$ vs Na_2SO_4.
8. pH Titration (acid &base).
9. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or$K_2Cr_2O_7$).
10. Estimation of Ferric ion bySpectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Coppersulphate).
12. Determination of molecular weight and degree of polymerization usingViscometry.
13. Determination of chemical oxygendemand.

16BEAE112 ENGINEERING WORKSHOP PRACTICE 0042 100

OBJECTIVES

- To enable the students to have a hands on experience.
- To enable the students to have a hands on experience on various basic engineering practices.
- To enable the students to have a hands on experience on various basic engineering practices in Civil.
- To enable the students to have a hands on experience on various basic engineering practices in Mechanical.
- To enable the students to have a hands on experience on various basic engineering practices in Electrical.
- To enable the students to have a hands on experience Electrical and Electronics Engineering.

COURSE OUTCOMES:

- To enable the students to have a hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.
- To enable the students to have a hands on experience on various basic engineering practices.
- To enable the students to have a hands on experience on various basic engineering practices in Civil.
- To enable the students to have a hands on experience on various basic engineering practices in Mechanical.
- To enable the students to have a hands on experience on various basic engineering practices in Electrical.
- To enable the students to have a hands on experience Electrical and Electronics Engineering

PART – A (CIVIL & MECHANICAL)

1. **WELDING**
   i. Preparation of arc welding of butt joints, lap joints and teejoints.

2. **BASICMACHINING**
   i. Simple Turning and Taperturning
   ii. Drilling andTapping

3. **SHEET METALWORK**
   i. Model making – Trays, funnels,etc.

4. **DEMONSTRATIONON**
   i. Smithyoperations
   ii. Foundryoperations
   iii. PlumbingWorks
   iv. CarpentaryWorks

PART –B (ELECTRICAL & ELECTRONICS)

5. **ELECTRICALENGINEERING**

   i. Study of electrical symbols and electricalequipments.
   ii. Construct the wiring diagram for Stair case wiring and Fluorescent lampwiring.

iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energymeter.
iv. Measurement of electrical quantities – voltage, current, power & power factor in Rload.
v. Measurement of energy using single phase energymeter.

6. ELECTRONICSENGINEERING

i. Study of Electronic components– Resistor (color coding), capacitors andinductors.
ii. Soldering practice – Components Devices and Circuits – Using general purposePCB.
iii. Study of logic gates AND, OR, NOT, NOR andNAND.
iv. Study of HWR andFWR.

1	Jeyachandran, K. and Balasubramanian, S	A Premier on Engineering Practices Laboratory	Anuradha Publications, Kumbakonam	2007
2	Jeyapoovan, T., Saravanapandian, M	Engineering Practices Lab Manual	Vikas Publishing House Pvt. Ltd, Chennai	2006
3	Bawa, H.S	Workshop Practice	Tata McGraw – Hill Publishing Company Limited, New Delhi	2007

16BEAE113 **ENGINEERING GRAPHICS** **2023 100**

OBJECTIVES

- To develop students in graphic skills.
- To expose them to existing national standards.
- To develop students in graphic skills for communication of concepts.
- To develop students in graphic skills for ideas.
- To develop students in graphic skills fordesign of engineering products.
- To expose them to existing national standards related to technical drawings.

COURSE OUTCOMES

- Recognisethe conventions and apply dimensioning concepts while drafting simple objects.
- Draw freehand sketching of multiple views from pictorial views of objects.
- Draw the orthographic projection of points, line and plane surfaces.
- Draw the orthographic projection of solids.
- Draw the isometric projection of the given objects.
- Demonstrate knowledge of the CAD software

UNIT I INTRODUCTION

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANECURVES

SCALES:Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HANDSKETCHING

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANESURFACES

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OFSOLIDS

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam)

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

16BECC151 **HUMAN VALUES** **10 0 - 100**

OBJECTIVE

- Explain the human values.
- Implement the importance of ethics and professionalism.
- Practice the process of management's four functions.
- Understand the stress management
- Understand the budgetary and non-budgetary control technique
- Understand the entrepreneurial characteristics.

COURSE OUTCOMES

- Explain the human values.
- Implement the importance of ethics and professionalism.
- Practice the process of management's four functions.
- Understand the stress management
- Understand the budgetary and non-budgetary control technique
- Understand the entrepreneurial characteristics.

UNIT I

Human life on Earth - Concept of Human Values - Value Education - Aim of education and value education - Types of values - Components of values – Attitudes – types of attitudes

UNIT II

Self Development :Self analysis – Goal Setting - Thought Analysis – Guarding against Anger - Respect to age, experience, maturity, family members, neighbors, co-workers

UNIT III

Individual Qualities – Truthfulness – Constructivity – Sacrifice – Sincerity - Self Control – Altruism – Tolerance - Scientific Vision – RegulatingDesire

UNIT IV

Mind Culture - Modern Challenges of Adolescent - Emotions and behavior - Sex and spirituality - Adolescent Emotions - Meditation

UNIT V

Body and Mind Fitness : (a)PhysicalExercises (b) Activities: (i) Moralization of Desires (ii)

Neutralization of Anger (iii) Eradication of Worries (iv) Benefits ofBlessings

16BECC201A **BUSINESS COMMUNICATION** **3 0 0 3 100**

OBJECTIVES:

- To help students comprehend the role of listening skills in effective communication.
- To familiarize students with verbal and non-verbal communication.
- To expose students to neutral accent.
- To develop emotional intelligence skills in them for enhancing their self-esteem.
- To assist them in setting goals and developing positive attitude.
- To enable students to acquire decision making skills, problem solving skills and assertive skills.

COURSE OUTCOMES:

Students undergoing this course will be able to

- Design and deliver a persuasive presentation that convinces the audience of the topic"s relevance and overcomes resistance, using appropriate visual support and adhering to a specified time limit.
- Use a strategic communication model and critical thinking to identify objectives, analyze audiences, and choose the most effective structure and style for delivering strategically sound written and spoken messages.
- Practice principles of effective business writing and document design in all written documents.
- Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
- Develop their soft skills skills which will make the transition from college to workplace smoother and help them excel in their job.
- Develop their inter personal skills

UNIT I

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- Description of Graphics and visual aids - interpretation of graphs using expressions of comparison and contrast .

UNIT III

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body language – Etiquette- Organization of presentation – brain storming-Negotiations.

UNIT - IV

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT - V

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

16BECC201B **TECHNICALENGLISH** **3 0 0 3 100**

OBJECTIVES:

- To motivate learners to acquire listening & speaking skills in both formal and informal context.
- To focus on question forms & to make them understand the importance of using question tags and also the functional use of transformation of sentences.
- To improve their reading habit and to train them in critical and analytical reading.
- To equip them to write for academic as well as work place context.
- To enable students to face interviews.
- Develop reading, listening and writing skills.

COURSE OUTCOMES:

Students undergoing this course will be able to

- Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
- Enhance them reading texts critically and analytically.
- Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
- Enrich the ability to face interviews with confidence.
- Develop reading, listening and writing skills
- Enrich Vocabulary

UNIT-1

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentences - Question tags. **Vocabulary** – Homonyms andHomophones.

UNIT-II

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar** - Modalverbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs -Idioms.

UNIT – III

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R)**Writing**- Essay writing -Minutes of meeting - Agenda – **Grammar** - Active and Passive voice - Purpose expression. **Vocabulary** - Same words used as noun and verb - Often misspelt and confused words.

UNIT IV

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication. **Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** –

Job application - Resume writing - Checklist preparation. **Grammar** - Numerical expressions – Collocations - Vocabulary - Singular and Plural (Nouns)

UNIT- V

Listening – Types of listening- Improving listening comprehension**. Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing**- Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory@ 2 periods per each unit.

16BECC202 **ENGINEERING MATHEMATICS II** **3 2 0 4 100**

OBJECTIVES:

- To understand the concepts and applications of partial differential equations
- To have knowledge in integral calculus and Vector calculus
- To expose to the concept of Analytical function and Complex integration.
- solve problems in heat and mass transfer etc.
- find the areas and volumes using multiple integrals
- improve their ability in Vector calculus

COURSE OUTCOMES:

The student will be able to

- solve problems in Fluid Dynamics, Theory of Elasticity
- solve problems in heat and mass transfer etc.
- find the areas and volumes using multiple integrals
- improve their ability in Vector calculus
- expose to the concept of Analytical function.
- apply Complex integration in their Engineering problems

UNIT-I MULTIPLEINTEGRALS

Double integral – Cartesian coordinates – Polar coordinates – Change of order of integration – Triple integration in Cartesian co-ordinates – Area as double integrals.

UNIT-II VECTORCALCULUS

Gradient, Divergence and Curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector integration – Green"s theorem, Gauss divergence theorem and Stoke"s theorems (Statement Only)- Surfaces : hemisphere and rectangular parallelopipeds.

UNIT-III PARTIAL DIFFERENTIAL EQUATIONS

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange"s linear equation – Linear partial differential equations of second and higher order withconstantcoefficients.

UNIT IV ANALYTIC FUNCTIONS

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: w = z+a, az, 1/z and bilinear transformation.

UNIT-V COMPLEXINTEGRATION

Complex Integration - Cauchy"s integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy"s residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi circle (excluding poles on the real axis).

16BEPH203 **ENGINEERING PHYSICS** **3 0 0 3 100**

OBJECTIVE:

- To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology.
- To enhance the fundamental knowledge in Physics.
- To enhance the fundamental knowledge in Physicsand its applications.
- The students will have the knowledge on the basics of physics related to properties of matter.
- The students will have the knowledge that will be used by them in different engineering and technology applications
- The students will have the knowledge on the basics of physics related to properties of matter, fiber optics, quantum, crystal physics and that knowledge will be used by them in different engineering and technology applications.

COURSE OUTCOMES:

- Understand the elastic nature of materials.
- Infer the characteristics of laser for various engineering applications.
- Extend the knowledge on optical fiber for communication purposes.
- Illustrate the thermal properties of materials through various methods.
- Develop the idea of quantum mechanics through applications.
- Identify the different atomic arrangements of crystals and its defects.

UNIT I PROPERTIES OF MATTER ANDTHERMODYNAMICS

Three types of modulus of elasticity – basic definitions, relation connecting the modulii (Derivation), poison ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniformbending

Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBEROPTICS

Introduction – emission and absorption process- Einstein‟s coefficients derivation. Types of LASER - CO_2, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS

Introduction to quantum theory – Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger‟s wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electronmicroscope.

UNIT IV CRYSTAL PHYSICS

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEARPHYSICS

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C –scan displays, Medical applications – Sonogram Introduction – basics about nuclear fission and fusion, nuclear composition –Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

16BECH203 **ENGINEERING CHEMISTRY** **3 0 0 3 100**

OBJECTIVES:

- To understand about the water technology.
- To get the information on electrochemical cells, batteries, fuels and combustion.
- To study about the corrosion and protective coatings.
- To gain knowledge on adsorption phenomena.
- This course will create an impact on the students and make them to realize themodern utility
- This course will create an impact on the students and make them to realize the modern utility on electrochemical cells, batteries, fuels and combustion process, corrosion and adsorption methods.

COURSE OUTCOMES:

- Analyse microscopic chemistry in terms of atomic and molecular orbital and intermolecular forces.
- Rationalise periodic properties such as ionization potential, oxidation states and electronegativity.
- Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques.
- Rationalise bulk properties and processes using thermodynamic considerations.
- List major chemical reactions that are used in the synthesis of molecules.
- Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

UNIT I WATERTECHNOLOGY

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGEDEVICES

Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+}vs dichromate) –Electrolytic conductance-application (conductometric titration)-Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2-O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV-Flue gasanalysis.

UNIT IV CORROSION SCIENCE

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings-Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating - Hotdipping.

UNIT V SURFACE CHEMISTRY AND PHASE RULE

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

16BECC204 ENVIRONMENTALSCIENCES 3 0 0 3 100

OBJECTIVES:

- To give a comprehensive insight into natural resources, ecosystem and biodiversity.
- To educate the ways and means of the environment
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures.
- To give a comprehensive insight into natural resources
- Students will prepare themselves to go ecofriendly and help preserving the nature and environment.

COURSE OUTCOMES:

- Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
- Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
- Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
- Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES

Definition, Scope and Importance – Need for publicawareness-Forestresources: Useandover-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of naturalresources.

UNIT II ECOSYSTEM

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystemEnergy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marineecosystem)

UNITIII BIODIVERSITY

Introduction to biodiversity,Definition-Genetic diversity, Species Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNITIV ENVIRONMENTALPOLLUTION

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone andlandslides.

UNITV SOCIAL ISSUES ANDENVIRONMENT

From Unsustainable to Sustainable development, Urban problems related to energy sources, Waterconservation, Rain water harvesting and Watershed management, Resettlement and rehabilitationofpeople,itsproblemsandconcerns,Environmentalethics-Issuesandpossiblesolutions-Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Populationexplosion.

16BEAE205A BASIC ELECTRICAL ANDELECTRONICS ENGINEERING 3 0 0 3 100

OBJECTIVES

1. To impart the basic knowledge about the Electric circuits.
2. To understand the working of various Electrical Machines.
3. To know about various measuring instruments.
4. To understand the basic concepts in semiconductor devices and digital electronics.
5. To know about various measuring instruments.
6. The students shall develop an intuitive understanding of the circuit analysis, basic concepts of electrical machines, basics of electronics and be able to apply them in practical situation

COURSE OUTCOMES

- Understand thebasicknowledgeabouttheElectriccircuits.
- Infer the characteristics of various Electrical Machines.
- Extend the knowledge on concepts of AC and DC currents.
- Understand the various measuringinstruments.
- Develop the idea of semiconductordevices.
- Understand thebasicknowledgeaboutdigitalelectronics

UNIT I ELECTRIC CIRCUITS &MEASUREMENTS

Ohm‟s Law – Kirchoff‟s Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURINGINSTRUMENTS

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNIT V DIGITAL ELECTRONICS

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressionsusing logic gates - standard forms of Boolean expression.

16BEAE205B ELEMENTS OFMECHANICALENGINEERING 3 0 0 3 100

OBJECTIVES:

- To expose the thrust areas in Mechanical Engineering and their relevance by covering fundamental concept.
- To familiarize with the basic machine elements
- To familiarize with the Sources of Energy and Power Generation
- To familiarize with the various manufacturing processes
- To expose the thrust areas in Mechanical Engineering
- To familiarize with the Power Generation

COURSE OUTCOMES:

- To expose the thrust areas in Mechanical Engineering and their relevance by covering fundamental concept.
- To familiarize with the basic machine elements
- To familiarize with the Sources of Energy and Power Generation
- To familiarize with the various manufacturing processes
- To expose the thrust areas in Mechanical Engineering
- To familiarize with the Power Generation

UNIT I MANUFACTURING PROCESS

Casting process – Operation of Cupola furnace. Patterns -Moulding tools - Types of moulding - Preparation of green sand mould

UNIT II METAL FORMING AND JOININGPROCESSES

Metal forming processes – Rolling, forging, drawing, extrusion and sheet metal operations- fundamentals only. Metal Joining processes – Welding - arc and gas welding, Soldering and Brazing.

UNIT III MACHININGOPERATIONS

Basics of metal cutting operations – Working of lathe parts of lathe-Operations performed on lathe. Milling machine – Horizontal and vertical milling machine - Milling operations. Drilling machine – Classification – Radial drilling machine - Twist drill nomenclature. Introduction to CNC and VMC

UNIT IV POWERPLANTS

Classification of Power Plants – Working principle of steam, Gas, Diesel, Hydro-electric plants Nuclear Power plants – Solar and Wind Power plants

UNIT V REFRIGERATION AND AIRCONDITIONING

Principle of vapour compression system- Layout of typical domestic refrigerator – Basic of Psychrometry - Window and Split type room Air conditioner.

16BEPH211 **ENGINEERING PHYSICS LABORATORY** **0042 100**

OBJECTIVES:

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To develop basic laboratory skills
- To demonstrating the application of physical principles.
- The students will have the knowledge on Physics practical experiments
- The students will have the knowledge that will be used by them in different engineering and technology applications
- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications

COURSE OUTCOMES:

- Familiarize the properties of material and basic concepts in physics.
- Get experience in laser wavelngthexperimenattion
- Get practical exposure to analyse the velocity of sound
- Get knowledge in bandgap and wavelengh determination
- Acquire knowledge about different bendings
- Practical knowledge in therml conductivity of wire and its thickness

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometergrating.
3. Determination of Young‟s modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille‟smethod.
5. Spectrometer Dispersive power of aprism.
6. Torsional pendulum – Determination of Rigiditymodulus.
7. Particle size determination using DiodeLaser
8. Determination of Laser parameters – Wavelength, and angle ofdivergence.
9. Determination of acceptance angle in an opticalfiber.
10. Determination of thickness of a thin wire – Air wedgemethod
11. Determination of Band Gap of a semiconductormaterial.
12. Determination of Specific resistance of a given coil of wire – WheatstoneBridge

16BECH211 ENGINEERING CHEMISTRY LABORATORY 0042 100

OBJECTIVES:

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To provide students with practical knowledge of quantitative analysis of materials by classical.
- To provide students with practical knowledge of instrumental methods for developing experimental skills in building technical ompetence.
- The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters.
- The students will be outfitted with hands-on knowledge in corrosion measurement.
- The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.

COURSE OUTCOMES:

1.Familiarize the properties of material and basic concepts in chemistry
2.Get experience in argentometric method experimentation
3.Get practical exposure to analyse the water sample
4.Get knowledge in spectrophotometry
5.Acquire knowledge about different crystal formation in water
6.Practical knowledge in determine the chemical oxygen demand

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Watersample.
2. Estimation of hardness of Water byEDTA
3. Estimation of chloride in Water sample (Argentometricmethod)
4. Determination of corrosion rate by weight lossmethod.
5. Conductometric Titration (Simple acidbase).
6. Conductometric Titration (Mixture of weak and strongacids).
7. Conduct metric Titration using $BaCl_2$ vs Na_2SO_4.
8. pH Titration (acid &base).
9. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or$K_2Cr_2O_7$).
10. Estimation of Ferric ion bySpectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Coppersulphate).
12. Determination of molecular weight and degree of polymerization usingViscometry.
13. Determination of chemical oxygendemand.

16BEAE212 **COMPUTER PRACTICE AND PROGRAMMING LABORATORY** **1043 100**

OBJECTIVES:

- To familiarize with open source office packages
- To understand the basic concept of C Programming write programs to, and its different modules that includes conditional and looping expressions, Arrays, Strings and Functions.
- To understand the basic concept of C Programming write programs.
- To understand the basic concept of different modules that includes conditional and looping expressions
- To understand the basic concept of, Arrays, Strings and Functions.
- Study, analyze and understand logical structure of a computer program, and different construct to develop a program in „C‟ language

COURSE OUTCOMES:

- Study, analyze and understand logical structure of a computer program, and different construct to develop a program in „C‟ language
- To familiarize with open source office packages
- To understand the basic concept of C Programming write programs to, and its different modules that includes conditional and looping expressions, Arrays, Strings and Functions.
- To understand the basic concept of C Programming write programs.
- To understand the basic concept of different modules that includes conditional and looping expressions
- To understand the basic concept of, Arrays, Strings and Functions.

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords-General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings- Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheet and presentation software inLinux

2. Programming inScratch:
   Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming

3. CProgramming:
   Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

16BEAE213 **MACHINE DRAWING** **1022 100**

OBJECTIVES:

- Students will have an ability to apply knowledge of Modeling, science & engineering.
- Students will understand the conventions and assembly concepts and drawing Practices.
- Students will be able to convert sketches to engineered drawings
- Students will have an ability to apply knowledge of Modeling, science & engineering.
- Students will understand the conventions and assembly concepts and drawing Practices.
- Students will be able to convert sketches to engineered drawings

COURSE OUTCOMES:

- Draw the surfaces for sheet metal working applications.
- Understand the representation of details in machine drawing.
- Represent tolerances and fits of machine elements.
- Construct an assembly drawing using part drawings of machine components.
- Construct an assembly drawing of machine components using 2D drafting
- Understand the various Cam Profile

UNIT I CONVENTIONS

Importance of sectional views, Code of practice for engineering drawing, drilled and tapped holes, countersunk and counter bored holes, internal and external threads, undercuts, grooves, chamfers, fillet radii and keyways. Conventions to represent standard components-bolts, nuts, washers, screws, cotters, pins, circlips, bearings, gears, springs and flanges.

UNIT II ASSEMBLY CONCEPTS AND DRAWING PRACTICE

Methods and concepts of assemblies-assembly requirements, Bill of materials. Methods of assembly-bolts, nuts, studs, screws and pins. Methods of arresting motion of a member in anassembly. Drawing Practice of flange coupling, universal coupling, oldhams coupling, swivel bearing, stuffing box, knuckle joint, C clamp, plummer block, screw jack, simple drilljig.

UNIT III FITS AND TOLERANCES

Limits, fits and tolerances-need, types, representation of tolerances on drawing, calculation of minimum and maximum clearances and allowances. Geometric tolerance-uses, types of form and position tolerances, symbols, method of indicating geometric tolerances on part drawings. Surface finish symbols- methods of indicating the surface roughness.

UNIT IV SOLID MODELING

Modelling of flange coupling, universal coupling, oldhams coupling, swivel bearing, stuffing box, knuckle joint, C clamp, plummer block, screw jack, simple drill jig.

UNIT V CAMPROFILE

Classifications, displacement diagrams-parabolic, uniform velocity, simple harmonic paths. Layout of plate cam profiles for different types of followers - knife - edged, roller, mushroom, flat type, derivatives of follower motion, pressure angle and undercutting.

16BEAE251 **APTITUDE TRAINING** **10 0 - 100**

OBJECTIVE

- To achieve the competencies in Analytical ability, Decision making
- Introduction, Speed Math‟s, Problems on Numbers, Averages, Ratios and Proportions, Problems on ages.
- Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest
- Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation and Combination
- Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest
- Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation and Combination

COURSE OUTCOMES

- To achieve the competencies in Analytical ability, Decision making
- Introduction, Speed Math‟s, Problems on Numbers, Averages, Ratios and Proportions, Problems on ages.
- Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest
- Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation and Combination
- Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest
- Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation and Combination

UNIT I
Introduction, Speed Math‟s, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT II
Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest

UNIT III
Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation andCombination

16BEAE301 METHODS OF APPLIED MATHEMATICS 3 2 0 4 100

OBJECTIVES:

- To hone the analytical skills in the minds of Engineers.
- To provide sound foundation in the mathematical fundamentals necessary to formulate, solve and analyze Engineering problems.
- To study the basic principles of different transforms and Partial Differential Equations.
- The students will have a lucid idea about Laplace, Fourier and Z-transforms.
- The Learners can equip themselves in the transform techniques.
- Better understanding in problems related to Heat conduction, communication systems, electro optics and electromagnetic theory, using the techniques will be learnt

COURSE OUTCOMES:

- The students will have a lucid idea about Laplace, Fourier and Z-transforms.
- The Learners can equip themselves in the transform techniques.
- Better understanding in problems related to Heat conduction, communication systems, electro optics and electromagnetic theory, using the techniques will be learnt in this course.
- To hone the analytical skills in the minds of Engineers.
- To provide sound foundation in the mathematical fundamentals necessary to formulate, solve and analyze Engineering problems.
- To study the basic principles of different transforms and Partial Differential Equations.

UNIT-I LAPLACETRANSFORM

Transforms of elementary functions – Basic properties – Transforms of derivatives and integrals – Initial and final value theorems. Inverse Laplace transforms – Convolution theorem (statement only) – Solution of Ordinary Differential Equations with constant coefficients using Laplace transforms – Transform of periodicfunctions.

UNIT-II FOURIER SERIES

Dirichlet‟s conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval‟s identity – Harmonic Analysis.

UNIT-III FOURIER TRANSFORM

Fourier integral theorem (Statement Only) – Fourier transform pair –Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval‟s identity – Relation between Fourier and Laplace transforms

UNIT IV APPLICATIONS OF PARTIAL DIFFERENTIALEQUATIONS

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded)

UNIT-V Z -TRANSFORM AND DIFFERENCE EQUATIONS

Z-transform - Elementary properties – Inverse Z- transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z - transform.

16BEAE302 **ENGINEERING MECHANICS** **3 2 0 4 100**

OBJECTIVES:

- To study the principles involved in Engineering Mechanics.
- To understand the Statics of particles and rigid bodies
- To study the principles involved in Friction and kinematics of particles
- Determine the resultant force and moment for a given system of forces.
- Analyse the plane trusses having different types of supports and determine the forces in each member.
- Identify the location of centroid, centre of gravity and calculate the moment of inertia for different sections.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Determine the resultant force and moment for a given system of forces.
- Analyse the plane trusses having different types of supports and determine the forces in each member.
- Identify the location of centroid, centre of gravity and calculate the moment of inertia for different sections.
- Apply the equations of motion of particles to calculate displacement, velocity and acceleration.
- calculate dynamic forces exerted in rigid body
- Determine the friction and its effects by using the laws of friction.

UNIT I STATICS OFPARTICLES

Forces – system of forces - concurrent forces in plane and space- resultant - problems involving the equilibrium of a particle-free body diagram-equilibrium of particle in space.

UNIT II STATICS OF RIGID BODIES IN TWO DIMENSIONS

Rigid bodies-two dimensional structure-moment of force about an axis-moment of a couple-equivalent system of coplanar forces-Rigid body in equilibrium-problems involving equilibrium of rigid body-types of supports-reactions of beams and frames.

APPLICATION OF STATICS: Roof trusses-Method of joints, method of sections and Tension coefficient method.

UNIT III CENTROID, CENTRE OF GRAVITY AND MOMENT OFINERTIA

Centroids of areas, composite areas, determination of moment of inertia of plane figures, polar moment of inertia-radius of gyration – mass moment of inertia of simple solids.

UNIT IV KINEMATICS OFPARTICLES

Introduction-plane, rectilinear motion - time dependent motion-rectangular coordinates-projectile motion.

IMPULSE AND MOMENTUM: Concept of conservation of momentum- Impulse-Momentum principle- Impact-Direct central impact-oblique central impact.

UNIT V FRICTION

Laws of friction-coefficient of friction-problems involving dry friction- wedge and ladder friction.

KINETICS OF PARTICLES: Equation of motion-rectilinear motion-Newton‟s II law – D‟Alembert‟s principle- Energy - potential energy-kinetic energy-conservation of energy-work done by a force - work energy method.

16BEAE303 **APPLIED THERMODYNAMICS** **3 0 0 3 100**

OBJECTIVES:

- Apply the first law of thermodynamics to closed and open systems.
- Solve the problems related to cycles and cyclic devices using the second law of thermodynamics.
- Determine the thermodynamic properties of pure substances and its phase change processes.
- Evaluate the air standard performance of heat engines.
- Solve the psychrometric problems in various applications.
- Calculate the performance of air compressors and refrigeration systems

COURSE OUTCOMES:

- Apply the first law of thermodynamics to closed and open systems.
- Solve the problems related to cycles and cyclic devices using the second law of thermodynamics.
- Determine the thermodynamic properties of pure substances and its phase change processes.
- Evaluate the air standard performance of heat engines.
- Solve the psychrometric problems in various applications.
- Calculate the performance of air compressors and refrigeration systems

UNIT I BASIC CONCEPTS AND LAWS OFTHERMODYNAMICS

Basic concepts - concept of continuum, macroscopic approach, thermodynamic systems - closed, open and isolated. Zeroth law of thermodynamics - First law of thermodynamics – application to closed and open systems, steady flow process with reference to various thermal equipments. Second law of thermodynamics-Reversibility and irreversibility. Carnot cycle, reversed carnot cycle, Thermodynamic temperature scale, Clausius inequality, concept of entropy, entropy of ideal gas, principle of increase of entropy – Carnot theorem, absolute entropy, availability.

UNIT II PROPERTIES OF PURE SUBSTANCE AND IDEAL & REALGASES

Properties of steam, Pure substance, phase, phase change process, property diagrams, PVT surface. Gas mixtures- properties of ideal and real gases, equation of state, Avagadro‟s law, Vander Waal‟s equation of states, compressibility and its chart. Dalton‟s law of partial pressure, exact differentials, T-D, relations, Maxwell relations, Clausius Clapeyroni equations, Joule Thomson Coefficient, Dryness fraction

UNIT III PSYCHROMETRY

Psychrometry and psychrometric charts, property calculations of air vapour mixtures. Psychrometric process- sensible and latent heat exchange processes.

UNIT IV GAS POWERCYCLES

Air standard cycles-Otto-Diesel-Dual-Work output, Efficiency and MEP calculations – Comparison of the cycles with respect to compression ratio, heat addition, heat rejection, peak pressure, temperature and work output , Simple Brayton cycle.

UNIT V RECIPROCATING AIR COMPRESSORS &REFRIGEREATIONCYCLES

Single acting and double acting air compressors, work required, effect of clearance volume, volumetric efficiency, isothermal efficiency, free air delivery, two stage compression, condition for minimum work.

Fundamentals of refrigeration, C.O.P., reversed carnot cycle, simple vapour compression refrigeration system, T-S, P-H diagrams, simple vapour absorption refrigeration system, desirable properties of an ideal refrigerant.Thermoelectric cooling and chip cooling

16BEAE304 **AUTOMOTIVEENGINES** **3 0 0 3 100**

- Differentiate the construction and operation of two-stroke and four-stroke engines.
- Name and explain various components of the fuel feed system.
- Discuss the combustion process and combustion chambers.
- List and describe the different methods of supercharging and turbocharging.
- Explain the importance of cooling system.
- Explain the importance of lubrication system.

OBJECTIVES:

COURSE OUTCOMES:

- Differentiate the construction and operation of two-stroke and four-stroke engines.
- Name and explain various components of the fuel feed system.
- Discuss the combustion process and combustion chambers.
- List and describe the different methods of supercharging and turbocharging.
- Explain the importance of cooling system.
- Explain the importance of lubrication system.

UNIT I ENGINE CONSTRUCTION AND OPERATION

Constructional details of four stroke petrol and diesel engine, working principle, air standard Otto cycle, Diesel and Dual Cycles actual indicator diagram, two stroke engine construction and operation, comparison of four stroke and two stroke engine, firing order and its significance. Port Timing, Valve Timing of petrol and diesel engines.

UNIT II FUEL FEEDSYSTEM

Carburettor working principle, requirements of an automotive carburettor, starting, idling, acceleration and normal circuits of carburettors. Compensation, maximum power devices, constant choke and constant vacuum carburettors, fuel feed systems; mechanical and electrical fuel feed pumps. Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)-Jerk pumps, distributor pumps, pintle and multihole nozzles, Unit injector and common rail injection systems. Injection pump calibration. Need for a governor for diesel engines. Description of a simple diesel engine governor.

UNIT III COOLING, LUBRICATION AND IGNITIONSYSTEM

Need for cooling system, Types of cooling system: air cooling system, liquid cooling system, forced circulation system, pressure cooling system. Lubrication system; Mist, Dry sump and wet sump lubrication system, properties of lubricants.
Types of ignition systems and its working battery coil, magneto and electronic ignition systems, relative merits and demerits, centrifugal and vacuum advance mechanisms. Types and construction of spark plugs. Dependence of ignition timing on load and speed

UNIT IV COMBUSTION AND COMBUSTION CHAMBERS

Combustion in SI engine; stages of combustion, flame propagation, Delay period, Uncontrolled combustion, Effect of Delay period, rate of pressure rise, abnormal combustion, detonation, effect of engine variables on knock, knock rating. Combustion chambers; different types, Combustion in CI Engines, Direct and indirect injection combustion chambers for CI engines. Importance of Swirl, squish and turbulence. Factors considering combustion chamber design.

UNIT V SUPERCHARGING, TURBOCHARGING AND ENGINE TESTING

Supercharging and Turbocharging, Different methods of turbocharging, Intercooling, Turbocharger controls - wastegate, variable geometry, variable nozzle types. Dynamometers, indicated thermal, brake thermal and volumetric efficiencies. Measurement of friction, Cylinder pressure measurement. Engine performance maps, Engine testing standards.

16BEAE305 **AUTOMOTIVE CHASSIS** **3 0 0 3 100**

- Discuss the types of frame, front axle and steering system.
- Sketch and explain the different types of Power and power assisted steering.
- Describe the components in driveline, final drive and rear axle.
- Describe the suspension systems and wheels.
- Familiar with tyres – tyre construction – tyre designation
- Explain the construction and working principle of different types of brakes.

OBJECTIVES:

COURSE OUTCOMES:

- Students will be able to explain the construction and Working principle of Front Axle, Rear Axle, Wheels, Tyres, Final Drive, Steering System, Brakes and Suspension System.
- Discuss the types of frame, front axle and steering system.
- Sketch and explain the different types of Power and power assisted steering.
- Describe the components in driveline, final drive and rear axle.
- Describe the suspension systems and wheels.
- Explain the construction and working principle of different types of brakes.

UNIT I INTRODUCTION

Types of chassis layout with reference to engine locations and drive, Vehicle frames. Various types of frames. Constructional details, Materials. Testing of vehicle frames. UNIT Ised frame body construction: Loads acting on vehicle frame.

UNIT II FRONT AXLEAND STEERINGSYSTEM

Types of front axles. Construction details. Materials. Front wheel geometry viz. Castor, Camber, King pin inclination, Toe-in - Conditions for true rolling motion of wheels during steering, turning radius, Wheel wobble and shimmy. Ackerman and Davis steering system. Slip angle-Oversteer and Understeer- Constructional details of steering linkages. Different types of steering gear boxes. Steering linkages and layouts for conventional and independent suspension system. Power and power assisted steering.

UNIT III DRIVE LINE, REAR AXLE, FINAL DRIVE, ANDDIFFERENTIAL

Effect of driving thrust and torque reactions. Hotch-kiss drive, torque tube drive and radius rods. Propeller shaft. Universal joints. Constant velocity joints. Front wheel drive. Construction of rear axles. Types of loads acting on rear axles. Fully floating Three quarter floating and Semi floating rear axles. Rear axle housing. Construction of different types of axle housings. Multi axled vehicles. Construction details of multi drive axle vehicles. Different types of final drive. Double reduction. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock - Differential housing.

UNIT IV SUSPENSION SYSTEM

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT V BRAKING SYSTEM, WHEELS ANDTYRES

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory. Determination of braking torque. Brake actuating systems - Mechanical, Hydraulic and Pneumatic – Detailed study of components. Parking and engine exhaust brakes. Factors influencing brake performance. Power and power assisted brakes.

16BEAE306A **ENGINEERING MATERIALS AND METALLURGY** **3 0 0 3 100**

OBJECTIVES:

- Explain the phase diagrams of different engineering materials.
- Recognize the properties and applications of various metals and alloys.
- Identify the appropriate heat treatment processes for the given applications.
- Test the mechanical properties of the given materials for real-time applications.
- Understand the fundamentals of composites
- Identify the appropriate composites for applications in the automotive industry.

COURSE OUTCOMES:

- Explain the phase diagrams of different engineering materials.
- Recognize the properties and applications of various metals and alloys.
- Identify the appropriate heat treatment processes for the given applications.
- Test the mechanical properties of the given materials for real-time applications.
- Understand the fundamentals of composites
- Identify the appropriate composites for applications in the automotive industry.

Review (Not for Examination):

Crystal structure – BCC, FCC and HCP structure – unit cell – crystallographic planes and directions, miller indices – crystal imperfections, point, line, planar and volume defects – Grain size, ASTM grain size number.

UNIT I CONSITITUION OF ALLOYS AND PHASEDIAGRAMS

Constitution of alloys – Solid solutions, substitutional and interstitial – phase diagrams, Isomorphous, eutectic, peritectic, eutectoid and peritectroid reactions, Iron – Iron carbide equilibrium diagram. Classification of steel and cast Iron microstructure, properties andapplication.

UNIT II FERROUS AND NON FERROUSMETALS

Effect of alloying additions on steel (Mn, Si, Cr, Mo, V Ti& W) - stainless and tool steels – HSLA - maraging steels – Gray, White malleable, spheroidal -Graphite - alloy cast irons.

Copper and Copper alloys – Brass, Bronze and Cupronickel – Aluminium and Al-Cu – precipitation strengthening treatment – Bearing alloys.

UNIT III INTRODUCTION TO COMPOSITES

Fundamentals of composites - need for composites – Enhancement of properties - classification of composites – Matrix-Polymer matrix composites (PMC), Metal matrix composites (MMC), Ceramic matrix composites (CMC) – Reinforcement – Particle reinforced composites, Fibre reinforced composites. Applications of various types of composites.

UNIT IV HEAT TREATMENT

Definition – Full annealing, stress relief, recrystallisation and spheroidizing – normalising, hardening and Tempering of steel. Isothermal transformation diagrams – cooling curves superimposed on I.T. diagram CCR - Hardenability, Jominy end quench test – Austempering, martempering – case hardening, carburising, nitriding, cyaniding, carbonitriding – Flame and Inductionhardening.

UNIT V MECHANICAL PROPERTIES ANDTESTING

Mechanism of plastic deformation, slip and twinning – Types of fracture – Testing of materials under tension, compression and shear loads – Hardness tests (Brinell, Vickers and Rockwell) Impact test Izod and charpy, fatigue and creeptest.

16BEAE306B **COMPOSITE MATERIALS** **3 0 0 3 100**

OBJECTIVES:

- Identify suitable reinforcement and matrix materials for different applications.
- Select appropriate fabrication technique for the specific application of polymer matrix composite.
- Selectsuitable processing method for the fabrication of metal matrix composites.
- Select suitable fabrication method for the specific application of ceramic matrix composite.'
- Describes the sol-gel technique
- Identify the advanced composites for appropriate applications

COURSE OUTCOMES:

- To enable the students to gain knowledge on the different types of composite materials, their properties and applications.
- Identify suitable reinforcement and matrix materials for different applications.
- Select appropriate fabrication technique for the specific application of polymer matrix composite.
- Selectsuitable processing method for the fabrication of metal matrix composites.
- Select suitable fabrication method for the specific application of ceramic matrix composite.'
- Describes the sol-gel technique.

UNIT I INTRODUCTION TO COMPOSITES

Fundamentals of composites - need for composites – Enhancement of properties - classification of composites – Matrix-Polymer matrix composites (PMC), Metal matrix composites (MMC), Ceramic matrix composites (CMC) – Reinforcement – Particle reinforced composites, Fibre reinforced composites. Applications of various types of composites.

UNIT II POLYMER MATRIXCOMPOSITES

Polymer matrix resins – Thermosetting resins, thermoplastic resins – Reinforcement fibres – Rovings – Woven fabrics – Non woven random mats – various types of fibres. PMC processes - Hand lay up processes – Spray up processes – Compression moulding – Reinforced reaction injection moulding - Resin transfer moulding – Pultrusion – Filament winding – Injection moulding. Fibre reinforced plastics (FRP), Glass fibre reinforced plastics (GRP).

UNIT III METAL MATRIXCOMPOSITES

Characteristics of MMC, Various types of Metal matrix composites Alloy vs. MMC, Advantages of MMC, Limitations of MMC, Metal Matrix, Reinforcements – particles – fibres. Effect of reinforcement - Volume fraction – Rule of mixtures. Processing of MMC – Powder metallurgy process - diffusion bonding – stir casting – squeeze casting.

UNIT IV CERAMIC MATRIXCOMPOSITES

Engineering ceramic materials – properties – advantages – limitations – Monolithic ceramics - Need for

CMC – Ceramic matrix - Various types of Ceramic Matrix composites- oxide ceramics – non oxide ceramics – aluminium oxide – silicon nitride – reinforcements – particles- fibres- whiskers. Sintering - Hot pressing – Cold isostatic pressing (CIPing) – Hot isostatic pressing (HIPing).

UNIT V ADVANCES IN COMPOSITES

Carbon /carbon composites – Advantages of carbon matrix – limitations of carbon matrix Carbon fibre – chemical vapour deposition of carbon on carbon fibre perform. Sol gel technique. Composites for aerospace applications.

16BEAE311 AUTOMOTIVE ENGINE COMPONENTS LABORATORY 0032 100

OBJECTIVES:

- Identify and assemble the components of an engine.
- Explain the function of various components of an engine.
- Practice the appropriate linear and angular dimensions using precision measuring instruments.
- Examine the major terminologies for the gear and screw thread.
- Explain the suitable type of instrument used to measure the mechanical parameters.
- Understand the calibration of vernier / micrometer / dial gauge

COURSE OUTCOMES:

- To enable the students to have a practical knowledge on dismantling and assembling of engines.
- To give a practical knowledge on all components related to engine.
- Identify and assemble the components of an engine.
- Explain the function of various components of an engine.
- Practice the appropriate linear and angular dimensions using precision measuring instruments.

1. Dismantling and Assembling of 4 cylinder petrolengine.
2. Dismantling and Assembling of 6 cylinder petrolengine.
3. Study of oil filter, fuel filter, fuel injection system, carburetor, MPFI &CRDI
4. Study of ignition system components – coil, magneto and electronic ignitionsystems.
5. Study of engine cooling systemcomponents
6. Study of engine lubrication systemcomponents
7. Ovality and taper measurement of cylinder bore and comparison with standardspecifications
8. Ovality and taper measurement of engine crank shaft and comparison with standard specification
9. Study of 4 cylinder dieselengine

16BEAE312 COMPUTER AIDED MACHINE DRAWING LABORATORY 0 0 3 2 100

- To understand and interpret drawings of machine components.
- To acquire the ability in designing and making the assembly drawing of various components.
- To expose students todrawing of sleeve and cotter joint.
- To expose students toknuckle joint,gib and cotter joint
- To provide an overview ofdrawing of universal coupling,screw jack.
- To make the student acquire sound knowledge ofpiston and connecting rod

OBJECTIVES:

COURSE OUTCOMES:

- To make the students to gain knowledge on how to model and assemble automobile components using a software.
- Sketch the detailed drawing of solid blocks
- Sketch the detailed drawing of knuckle joint
- Sketch the detailed drawing of valves
- Sketch the detailed drawing of universal coupling.
- Sketch the detailed drawing of screw jack.

1. Create the assembly drawing of piston and connecting rod
2. Modeling of solidblocks
3. Modeling of V- Block , L- Block withrib
4. Modeling of blocks withholes
5. Modeling with square cut and Ucut
6. Modeling of pistons and connectingrods
7. Assembly drawing of screwjack
8. Assembly drawing of Universalcoupling
9. Assembly drawing of flangedcoupling
10. Assembly drawing of knucklejoint
11. Modeling ofvalves
12. Modeling of crankshaft

13. Modeling ofbumper
14. Modeling of frameassembly

16BEAE313 COURSEORIENTEDPROJECT-I 1 0 0 1 100

OBJECTIVES:

- The objective of this project is to provide opportunity for the students to implement their skills acquired and design projects based on courses in the third semester
- The students in convenient groups of not more than 3 members have to take up a project work in any subject of their choice in the third semester. Every project work shall have a guide who is the member of the faculty of the institution.

- Identify a problemand develop the solutions.
- Identify, formulate and analyseproblems and justify solutions using scientific knowledge.
- Apply technical ideas, strategies and methodologies.
- Design and conduct experiments, as well as analyseand interpret data.

- Identify a problemand develop the solutions.
- Identify, formulate and analyseproblems and justify solutions using scientific knowledge.
- Apply technical ideas, strategies and methodologies.
- Design and conduct experiments, as well as analyseand interpret data.

- Familiar with cost-effectiveness analysis.
- Prepare technical report and oral presentations.

COURSE OUTCOMES:

16BEAE351 **SOFT SKILLS** **100- 100**

OBJECTIVE

- Demonstrate the adequate soft skills required for the workplace.
- Express the presentation skills
- Express the views in group discussions with confidence.
- Demonstrate the appropriate interview skills.
- Manage time effectively.
- Explain the stress management

COURSE OUTCOMES

- Demonstrate the adequate soft skills required for the workplace.
- Express the presentation skills
- Express the views in group discussions with confidence.
- Demonstrate the appropriate interview skills.
- Manage time effectively.
- Explain the stress management

UNIT I

Overview to communication, self Introduction, Presentation on their own topic, Extempore,Group Activity

UNIT II

Group Discussion, Do's and Don"ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III

Introduction to HRM – Questions - Do's and Don"t's - Interview - Mock GD - Stress Management

UNIT IV

Personality Development - Presentation skills, Interpersonal skills, Critical thinking, Confidence building and Stress management.

REFERENCES

S. NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION

2	Rajiv K. Mishra	Personality Development	Rupa & Co.	2012

16BEAE401 **THEORY OF MACHINES** **3003 100**

OBJECTIVES:

- To impart knowledge on the concept and kinematic analysis of simple mechanisms.
- To introduce the concept of friction drives in kinematic of machines.
- To calculate the speed ratio of various types of the gear train and construct the cam profile for the various types of follower motion.
- To provide knowledge on balancing of rotating and reciprocating masses.
- To learn the concept of free, forced and damped vibrations.
- To provide knowledge on torsional vibration of shaft

COURSE OUTCOMES:

- Identify the simple mechanisms based on a given application, and find velocity and acceleration of simple mechanisms.
- Estimate the amount of power transmitted by drive.
- Calculate the speed ratio of various types of the gear train and construct the cam profile for the various types of follower motion.
- Estimate the balancing mass for rotating and reciprocating masses by using the force and couple polygon.
- Evaluate the natural frequency of a single degrees of freedom system subjected to free and forced vibrations.
- Compute the torsional vibration of shaft

UNIT I MECHANISMS

Machine Structure – Kinematic link, pair and chain – Grueblers criteria – Constrained motion – Degrees of freedom - Slider crank and crank rocker mechanisms – Inversions – Applications – Kinematic analysis of simple mechanisms – Determination of velocity andacceleration.

UNIT II FRICTION

Types of friction -Friction in screw and nut – Screw jack - Pivot and collar – Thrust bearing – Plate and disc clutches – Belt (flat and V) and rope drives. Ratio of tensions – Effect of centrifugal and initial tension – Condition for maximum power transmission – Open and crossed belt drive.

UNIT III GEARING ANDCAMS

Gear profile and geometry – Nomenclature of spur and helical gears – Gear trains: Simple, compound gear trains and epicylic gear trains - Determination of speed and torque- Cams – Types of cams – Design of profiles – Knife edged, flat faced and roller ended followers with and without offsets for various types of follower motions.

UNIT IV BALANCING

Static and dynamic balancing – Single and several masses in different planes –Balancing of reciprocating masses- primary balancing and concepts of secondary balancing – Single and multi cylinder engines (Inline) – Balancing of radial V engine – direct and reverse crank method. Governors and Gyroscopic effects.

UNIT V VIBRATION

Free, forced and damped vibrations of single degree of freedom systems – Force transmitted to supports – Vibration isolation – Vibration absorption – Torsional vibration of shaft – Single and multi rotor systems – Geared shafts – Critical speed of shaft.

16BEAE402 **FLUID MECHANICS AND HEAT TRANSFER** **3 2 0 4 100**

OBJECTIVES:

- To study the fluid laws
- To make the students conversant on properties and measurements.
- To expose the various fluid flow measuring devices and calculate the flow losses in pipes.
- To impart knowledge on various types of pumps and hydraulic turbines.
- To impart knowledge of the conduction heat transfer mechanisms.
- To learn the principles of convection and radiation.

COURSE OUTCOMES:

- Estimate the flow properties and pressure head using fundamental laws of fluid mechanics.
- Evaluate the discharge and loss of energy in flow through pipes.
- Analysethe performance of hydraulic pumps and turbines for a given application.
- Apply the heat conduction equation to compute the rate of heat transfer in simple and composite systems.
- Determine the rate of heat transfer in convection mode.
- Determine the rate of heat transfer in radiation mode.

UNIT I BASIC CONCEPTS AND PROPERTIESOFFLUIDS

Fluid – definition, distinction between solid and fluid - Units and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapour pressure, capillary and surface tension - Fluid statics: concept of fluid static pressure, absolute and gauge pressures - pressure measurements by U Tube Manometer manometers.

UNIT II FLIUD KINEMATICS ANDDYNAMICS

Fluid Kinematics - Flow visualization - lines of flow - types of flow - velocity field and acceleration - continuity equation (one and three dimensional differential forms)- Equation of streamline - stream function - velocity potential function - circulation - flow net – Bernoulli's equation – applications - Venturi meter, Orifice meter, Pitot tube.

Incompressible Fluid Flow:

Viscous flow - Navier - Stoke's equation - flow through pipes - Darcy - weisback's equation - pipe roughness -friction factor - flow through pipes in series and in parallel - power transmission - Introduction to the concept of Boundary layer flows, boundary layer thickness, boundary layer separation ,drag and lift coefficients.

UNIT III HEATCONDUCTION

Basic Concepts – Mechanism of Heat Transfer – Conduction, Convection and Radiation – General Differential equation of Heat Conduction – Fourier Law of Conduction – Cartesian and Cylindrical

Coordinates – One Dimensional Steady State Heat Conduction – Conduction through Plane Wall, Cylinders and Spherical systems – Composite Systems – Conduction with Internal Heat Generation – Extended Surfaces – Unsteady Heat Conduction – Lumped Analysis – Use of Heislers Chart.

UNIT IV HEAT CONVECTION

Basic Concepts – Convective Heat Transfer Coefficients – Boundary Layer Concept – Types of Convection – Forced Convection – Dimensional Analysis – External Flow – Flow over Plates, Cylinders and Spheres – Internal Flow – Laminar and Turbulent Flow – Combined Laminar and Turbulent – Flow over Bank of tubes – Free Convection – Dimensional Analysis – Flow over Vertical Plate, Horizontal Plate, Inclined Plate, Cylinders and Spheres.

UNIT V RADIATION

Basic Concepts, Laws of Radiation – Stefan Boltzman Law, Kirchoff Law –Black Body Radiation –Grey body radiation Shape Factor Algebra – Electrical Analogy – Radiation Shields – (Descriptive study -Gas Radiation).

16BEAE403 **STRENGTH OF MATERIALS** **3 2 0 4 100**

OBJECTIVES:

- Evaluate the stresses and strains in simple and composite structures subjected to axial loads.
- Examine the shear force, bending moment and shear stress of various beams under different loading conditions.
- Examine the stresses induced in the shaft and closed coil helical springs subjected to torsion.
- Evaluate the slope and deflection of beams and buckling loads of columns with different boundary conditions.
- Examine the stresses in two-dimensional systems and thin cylinders.
- Familiar with construction of Mohr's circle

COURSE OUTCOMES:

- Evaluate the stresses and strains in simple and composite structures subjected to axial loads.
- Examine the shear force, bending moment and shear stress of various beams under different loading conditions.
- Examine the stresses induced in the shaft and closed coil helical springs subjected to torsion.
- Evaluate the slope and deflection of beams and buckling loads of columns with different boundary conditions.
- Examine the stresses in two-dimensional systems and thin cylinders.
- Familiar with construction of Mohr's circle

UNIT I STRESS STRAIN AND DEFORMATION OFSOLIDS

Rigid and Deformable bodies – Strength, Stiffness and Stability – Stresses; Tensile, Compressive and Shear – Deformation of simple and compound bars under axial load – Thermal stress – Elastic constants – Strain energy and unit strain energy – Strain energy in uniaxial loads-Volumetric strains and stresses on inclinedplanes

UNIT II BEAMS - LOADS AND STRESSES

Types of beams: Supports and Loads – Shear force and Bending Moment in beams – Cantilever, Simply supported and Overhanging beams – Stresses in beams – Theory of simple bending – Stress variation along the length and in the beam section – Effect of shape of beam section on stress induced – Shear stresses in beams – Shear flow

UNIT III TORSION

Analysis of torsion of circular bars – Shear stress distribution – Bars of Solid and hollow circular section – Stepped shaft – Twist and torsion stiffness – Compound shafts – Fixed and simply supported shafts – Application to close-coiled helical springs – Maximum shear stress in spring section including Wahl Factor – Deflection of helical coil springs under axial loads – Design of helical coil springs –

stresses in helical coil springs under torsionloads

UNIT IV BEAMDEFLECTION

Elastic curve of Neutral axis of the beam under normal loads – Evaluation of beam deflection and slope: Double integration method, Macaulay Method, and Moment-area Method –Columns – End conditions – Equivalent length of a column – Euler equation – Slenderness ratio – Rankine formula for columns

UNIT V ANALYSIS OF STRESSES IN TWO DIMENSIONS

Biaxial state of stresses – Thin cylindrical and spherical shells – Deformation in thin cylindrical and spherical shells – Biaxial stresses at a point – Stresses on inclined plane – Principal planes and stresses – Mohr"s circle for biaxial stresses – Maximum shear stress - Strain energy in bending andtorsion.

16BEAE404 AUTOMOTIVE TRANSMISSION 3 0 0 3 100

OBJECTIVES:

- To enrich the understanding of Clutch and Gear Box
- To introduce Hydrodynamic Drive
- To familiarize the students to understand Planetary Gear Boxes
- To introduce the concepts of Automatic Transmission Applications
- To provide knowledge on Hydrostatic Drive
- To provide knowledge on Electric Drive

COURSE OUTCOMES:

- Discuss the types of clutches
- Sketch and explain the different types of gearboxes.
- Describe the special type of gear boxes
- Describe the automatic transmission.
- Familiar with hydrostatic and electric drives
- Explain the Performance characteristics of electric drives

UNIT I CLUTCH AND GEAR BOX

Requirements of transmission system. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Typical problems involving the above principles.

UNIT II HYDRODYNAMIC DRIVE

Fluid coupling - principle of operation, constructional details, torque capacity, performance characteristics, reduction of drag torque. Torque converter - Principle of operation, constructional details, performance characteristics, converter coupling, multistage and poly phase torque converters.

UNIT III SPECIAL TYPES OFGEARBOXES

Ford –T model gearbox, Wilson gearbox, Cotal electromagnetic transmission, Automatic over drive,

UNIT IV AUTOMATIC TRANSMISSION APPLICATIONS

Chevrolet Turbo glide transmission, Toyota "ECT-i" Power glides Transmission (Automatic Transmission with Intelligent Electronic control system), Mercedes Benz Automatic transmission, Hydraulic actuation system for automatic transmission system.

UNIT V HYDROSTATIC AND ELECTRICDRIVES

Hydrostatic drive – principle, types, advantage and limitations. Comparison of hydrostatic drive with hydrodynamic drive. Construction and working of typical Janny hydrostatic drive.

Electric drive - Principle of early and modified Ward Leonard Control system. Advantage & limitations. Performancecharacteristics.

16BEAE405 **AUTOMOTIVE POLLUTION AND NVH CONTROL** **3 0 0 3 100**

OBJECTIVES:

- Explain the mechanism of pollutant formation in engines.
- Apply the knowledge of post-combustion treatments to control pollution.
- Discuss the control techniques and instrumentation for pollution measurements.
- State the laws and regulations related to automotive emission levels.
- Discuss the properties of tyres affecting vibration and noise
- Design the systems to reduce noise andvibration.

COURSE OUTCOMES:

- Explain the mechanism of pollutant formation in engines.
- Apply the knowledge of post-combustion treatments to control pollution.
- Discuss the control techniques and instrumentation for pollution measurements.
- State the laws and regulations related to automotive emission levels.
- Discuss the properties of tyres affecting vibration and noise
- Design the systems to reduce noise andvibration.

UNIT I MECHANISM OF POLLUTANT FORMATION AND POST COMBUSTION TREATMENTS

Introduction, Pollutants, sources, formation of HC and CO in SI engines, NOx formation in SI and CI engines, Particulate emission from SI and CI engines, Smoke Emission in CI engines. Effect of operating variables on emission formation.

Post combustion treatments**:** physical conditions and exhaust gas compositions before treatment, catalytic mechanism. Thermal reactions, installation of catalyst in exhaust lines, NOx treatment in diesel engines. Diesel trapoxidizers

UNIT II CONTROL TECHNIQUES AND INSTRUMENTATION FOR POLLUTION MEASUREMENTS

Crank case emission control, fuel evaporation & control, EGR, intake temp control, air injected exhaust, thermal reactors, SCR, catalytic converters – types, catalytic mechanism, tuning of mechanical systems - A/F ratio control. NDIR analyzer, flame ionization detectors, chemiliuminescent analyzer, smoke meters, gas chromatograph, On-board Diagonosticsystem.

UNIT III LAWS AND REGULATIONS

Historical background, regulatory test procedures (European cycles), exhaust gas pollutants (European railroad limits), particulate pollutants, European statutory values, inspection of vehicles in circulation (influence of actual traffic conditions and influence of vehicle maintenance) Indian Emission Standards.

UNIT IV NOISE CONTROL

Identification of noise sources, quantification, control of air borne noise - use of noise absorber, barrier, different materials, criteria for the selection of materials, control of structure borne noise - treatments for vibration damping materials for hood liner and head liner, resonance and ill effects of resonance. Characteristics of vehicle noise, sources of vehicle noise, engine noise, techniques for locating and measuring engine noise, engine noise control techniques, inlet and exhaust noise mechanism and control, noise from cooling system, transmission noise and tyre noise. Anechoichamber.

UNIT V VIBRATION CONTROL

Introduction, vibration analysis, sources of vibration, damping of vibration, rubber mountings, vibration isolation and absorption. Constrained and extensive layer dampings. Engine and drivetrain vibrations, vehicle and chassis vibration. Application of plastics and composites in automobiles. Properties of tyres affecting vibration andnoise.

16BEAE411 AUTOMOTIVE CHASSIS AND TRANSMISSION LABORATORY 0 0 3 2 100

OBJECTIVES

- To expose the different types of Clutch, Gear Box, Brake system.
- To provide knowledge on Differential Unit
- To provide knowledge onPropeller Shaft Unit.
- To learn the Clutch, Gear Box, Brake system, Differential Unit
- To study the suspensionsystem.
- To impart knowledge on different Frames.

COURSE OUTCOMES:

- Sketch and explain the working clutch assembly
- Discuss gear boxassembly
- Illustrate the different types of rear axlefloating
- Sketch and explain the propeller shaft and universal jointassembly
- Sketch and explain the different types of rear axlefloating
- Explain the air braking system

LIST OF EXPERIMENTS

1. Dismantling and assembling of clutch assembly with playadjustment
2. Dismantling and assembling of
3. Dismantling and assembling of propeller shaft and universal jointassembly
4. Dismantling and assembling of drive shaftassembly
5. Dismantling and assembling of differentialassembly
6. Dismantling and assembling of different types of rear axlefloating
7. Dismantling and assembling of steering boxassembly
8. Dismantling and assembling of suspensionsystem
9. Dismantling and assembling of air-brakingsystem
10. Dismantling, bleeding, play adjustment and assembling of hydraulic brakingsystem.
11. Study of Frames used for HMV, LMV, Car and TwoWheelers

16BEAE412 SCIENTIFIC COMPUTING LABORATORY 2023 100

OBJECTIVES:

- To introduce the scientific computing, covering some important aspects of solving algebraic equations, IVP,BVP.
- To implement the methods using the spread sheet in Excel
- To develop analytical skills for solving different engineering problems.
- To understand the concepts of Matrices, sequences and series.
- To solve problems by applying Differential Calculus
- To solve problems by applying Differential equations.

COURSE OUTCOMES:

- To develop analytical skills for solving different engineering problems.
- To understand the concepts of Matrices, sequences and series.
- To solve problems by applying Differential Calculus
- To solve problems by applying Differential equations.
- To introduce the scientific computing, covering some important aspects of solving algebraic equations, IVP,BVP.
- To implement the methods using the spread sheet in Excel
- To solve Solution of initial value problems governed by ODE
    - Solution of BVP governed byPDE

LIST OF EXPERIMENTS

1. Solution of Transcendentalequation
    i) Newton – RaphsonMethod
    ii) Bisectionmethod
    iii) Iterative method by reducing the equation to the form x=f(x)
2. Solution of algebraic simultaneousequations
    i) Gauss Jacobimethod
    ii) Gauss Seidelmethod
3. Numericalintegration
    i) Gauss 2 point and 3 pointformulae
    ii) Trapezoidalmethod
    iii) Simpson‟s 1/3rule
4. Solution of initial value problems governed byODE
    i) Runge - Kutta 4th order method
    ii) Modified Euler‟smethod
    iii) Milne‟smethod
    iv) Adam – Bashforthmethod
5. Solution of BVP governed byPDE
    i) Laplace Equation
    ii) One – dimensional heatequation
        a) Explicit method : Bender – Schmidt‟smethod
        b) Implicit method : Crank - Nicolson‟smethod
    iii) One dimensional wave equation
    Implicitmethod

16BEAE413 **FLUID MECHANICS AND STRENGTH OF MATERIALS LABORATORY** 0032 100

OBJECTIVES:

- Calculate the rate of fluid flow and coefficient of discharge in fluid flow devices.
- Measure the losses associated in a pipe flow.
- Evaluate the performance of non-positive and positive displacement pumps.
- Measure the tensile and shear strength of materials.
- Evaluate the hardness and impact strength of materials.
- Evaluate the compression strength of helical springs

COURSE OUTCOMES:

- Calculate the rate of fluid flow and coefficient of discharge in fluid flow devices.
- Measure the losses associated in a pipe flow.
- Evaluate the performance of non-positive and positive displacement pumps.
- Measure the tensile and shear strength of materials.
- Evaluate the hardness and impact strength of materials.
- Evaluate the compression strength of helical springs

LIST OF EXPERIMENTS

1. Determination of the Coefficient of discharge of given Venturi and Orificemeter.
2. Calculation of the rate of flow using Rotometer.
4. Determination of friction factor of given set of pipes.
5. Conducting experiments and drawing the characteristic curves of centrifugal pump/ submersible pump
6. Conducting experiments and drawing the characteristic curves of reciprocatingpump.
7. Conducting experiments and drawing the characteristic curves of Gearpump.
8. Tensile test on metals-stress strain characteristics, ductility, resilience,toughness.
9. Hardness test on metals-Brinell, Vicker and Rockwell Hardnesstests.
10. Impact test on metals-Charpy, Izod impacttests.
11. Shear test on metals-direct shear strength, single shear, doubleshear.
12. Tests on helical springs-compression, tension springs-load deformation characteristics, stiffness, shear stress , modulus of rigidity,energy.
13. Torsion test on beams-torque and angle of twist characteristics, shear stress,modulusof rigidity, energy.
14. Microscopic examination of i) Hardened samples ii) Temperedsamples

16BEAE414 COURSEORIENTEDPROJECT-II 1 0 0 1 100

The objective of this project is to provide opportunity for the students to implement their skills acquired and design projects based on courses in the fourth semester.

The students in convenient groups of not more than 3 members have to take up a project work in any subject of their choice in the third semester. Every project work shall have a guide who is the member of the faculty of the institution.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Identify a problem and develop the solutions.
- Identify, formulate and analyse problems and justify solutions using scientific knowledge.
- Apply technical ideas, strategies and methodologies.
- Design and conduct experiments, as well as analyse and interpret data.
- Familiar with cost-effectiveness analysis.
- Prepare technical report and oral presentations.

16BEAE451 AUTOMOTIVE ERGONOMICS AND SAFETY 10 0 - 100

OBJECTIVES:

- To enable the students to gain knowledge on the ergonomic effect of a vehicle.
- To understand the use of safety systems that can be included in a vehicle
- Illumination, heat ventilation and air conditioning, noise
- Human error, accidents, human factors and the automobile, organizational and social aspects,
- Steps according to ISO/DIS6385, OSHA‟s approach, virtual environments.
- Illumination, heat ventilation and air conditioning, noise

COURSE OUTCOMES:

- To enable the students to gain knowledge on the ergonomic effect of a vehicle.
- To understand the use of safety systems that can be included in a vehicle.
- Illumination, heat ventilation and air conditioning, noise
- Human error, accidents, human factors and the automobile, organizational and social aspects,
- Steps according to ISO/DIS6385, OSHA‟s approach, virtual environments.
- Illumination, heat ventilation and air conditioning, noise

PARTI VEHICLE ERGONOMICS:

Introduction, seating dimensions, interior ergonomics, ergonomics system design, seat comfort, suspension seats, split frame seating, back passion reducers, dash board instruments, electronicdisplays, commercial vehicle cabin ergonomics, mechanical package layout, goods vehiclelayout.

ENVIRONMENTAL CONDITIONS: Illumination, heat ventilation and air conditioning, noise, motion, speed and acceleration, sound, vibration.

PARTII HUMAN FACTORSAPPLICATIONS:

Human error, accidents, human factors and the automobile, organizational and social aspects, steps according to ISO/DIS6385, OSHA‟s approach, virtual environments.

SAFETY: Seat belt, air bag, collapsible steering, warning systems, ABS braking system, collision safety systems, global safety standards in automotiveapplications

16BEAE501 **DESIGN OF MACHINE ELEMENTS** **3204 100**

OBJECTIVES:

- Design machine elements subjected to simple loads.
- Design shaft for various engineering applications.
- Design couplings for various engineering applications.
- Design bolted and welded joints subjected to static and eccentric loading conditions.
- Design helical spring and flywheel for various engineering applications.
- Design and select journal bearings and rolling contact bearings for various machines.

COURSE OUTCOMES:

- Design machine elements subjected to simple loads.
- Design shaft for various engineering applications.
- Design couplings for various engineering applications.
- Design bolted and welded joints subjected to static and eccentric loading conditions.
- Design helical spring and flywheel for various engineering applications.
- Design and select journal bearings and rolling contact bearings for various machines.

UNIT I STEADY STRESSES AND VARIABLE STRESSES IN MACHINEMEMBERS

Introduction to the design process - factor influencing machine design, selection of materials based on mechanical properties – Direct, Bending and torsional stress equations – Impact and shock loading – calculation of principle stresses for various load combinations, eccentric loading – Design of curved beams – Factor of safety - theories of failure – stress concentration.

UNIT II DESIGN OF SOLID AND HOLLOWSHAFTS

Design of solid and hollow shafts based on strength, rigidity and critical speed. Basic concepts of rigid and flexible couplings.–Introduction and concepts of keys, key ways, Knuckle joints.

UNIT III DESIGN OF BOLTED JOINTS AND WELDEDJOINTS

Design of bolted joints including eccentric loading –square threaded screws, Efficiency, Maximum efficiency.. Design of welded joints for structures -Purpose of Screw Jack, Introduction to fasteners.

UNIT IV DESIGN OF SPURGEARS.

Design of energy storing elements- springs and flywheels.

UNIT V DESIGN OFBEARINGS

Introduction to bearings – sliding contact and rolling contact types. – Cubic mean load – Design of Journal bearings – McKee‟s equation – Lubrication in journal bearings – calculation of bearing dimensions.

16BEAE502 **IC ENGINE DESIGN** **3204 100**

OBJECTIVES:

- To learn the design procedure of cylinder and piston.
- To study the design procedure of connecting rod.
- To provide knowledge on the design of crankshaft.
- To impart knowledge on the design of valves and valve actuating components.
- To study the design procedure of timing belt and pulley
- To acquaint the student with the concepts of sprocket and chain.

COURSE OUTCOMES:

- Design cylinder and piston for the specified power and torque.
- Design connecting rod of an engine.
- Design crankshaft of an engine.
- Design valves and valve actuating components.
- Select suitable timing belt and pulley.
- Select suitable transmission chains and sprockets

UNIT I DESIGN OF CYLINDER AND PISTON

Choice of material for cylinder and piston, piston friction, piston slap, design of cylinder, piston, piston pin, piston rings, piston failures, lubrication of piston assembly.

UNIT II DESIGN OF CONNECTING ROD,CRANKSHAFT

Material for connecting rod, determining minimum length of connecting rod, small end and big end design, shank design, design of big end cap bolts, connecting rod failures, balancing of I.C. Engines, significance of firing order, material for crankshaft, design of crankshaft under bending and twisting, balancing weight calculations.

UNIT III DESIGN OF VALVES AND FLYWHEEL

Design aspects of intake and exhaust manifolds, inlet and Exhaust valves, valve springs, tappets, valve train. Materials and design of flywheel.

UNIT IV DESIGN OF VALVE ACTUATINGCOMPONENTS

Design of valve springs, tappet. Cam design, cam profile generation, cam shaft design, rocker and rocker shaft design considerations, materials.

UNIT V DESIGN OF BELT, PULLEY, TIMING CHAIN ANDSPROCKET

Selection of V belts and pulleys – selection of Flat belts and pulleys - Selection of Transmission chains and Sprockets. Design of pulleys and sprockets

16BEAE503A **AUTOMOTIVE ELECTRICAL AND ELECTRONICS SYSTEMS** **3003 100**

OBJECTIVES:

- Sketch and explain the working principle of battery and ignition system.
- Discuss working of the starting system and charging system.
- Illustrate the automobile wiring system.
- Illustrate the automobile lighting system.
- Identify the sensors and actuators used in the automobile.
- Explain the electronic engine management system.

COURSE OUTCOMES:

- Sketch and explain the working principle of battery and ignition system.
- Discuss working of the starting system and charging system.
- Illustrate the automobile wiring system.
- Illustrate the automobile lighting system.
- Identify the sensors and actuators used in the automobile.
- Explain the electronic engine management system.

UNIT I BATTERIES ANDACCESSORIES

Principle and construction of lead acid battery, characteristics of battery, rating capacity and efficiency of batteries, various tests on batteries, maintenance and charging. Lighting system: insulated and earth return system, details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator.

UNIT II CHARGINGSYSTEM

Generation of direct current, shunt generator characteristics, armature reaction, third brush regulation, cutout. Voltage and current regulators, compensated voltage regulator, alternators principle and constructional aspects and bridge rectifiers, new developments.

UNIT III STARTINGSYSTEM

Condition at starting, behavior of starter during starting, series motor and its characteristics, principle and construction of starter motor, working of different starter drive units, care and maintenances of starter motor, starter switches.

UNIT IV FUNDAMENTALS OF AUTOMOTIVEELECTRONICS

Current trends in automotive electronic engine management system, electromagnetic interference suppression, electromagnetic compatibility, electronic dashboard instruments, onboard diagnostic system, security and warning system.

UNIT V SENSORS ANDACTUATORS

Types of sensors: sensor for speed, throttle position, exhaust oxygen level, manifold pressure, crankshaft position, coolant temperature, exhaust temperature, air mass flow for engine application. Solenoids, stepper motors,relay.

16BEAE503B **AUTOMATION & MECHATRONICS** **3003 100**

OBJECTIVES:

- Select the different types of sensor for various mechatronics applications.
- Identify suitable actuator used in a mechatronic system.
- Design a feedback controller for mechatronic systems.
- Develop a controller using microcontroller for the mechatronic system.
- Describe the PLC
- Write a program for PLC used in the mechatronic systems.

COURSE OUTCOMES:

- Select the different types of sensor for various mechatronics applications.
- Identify suitable actuator used in a mechatronic system.
- Design a feedback controller for mechatronic systems.
- Develop a controller using microcontroller for the mechatronic system.
- Describe the PLC
- Write a program for PLC used in the mechatronic systems.

INTRODUCTION

Concept and scope of automation: Socio economic Consideration: Low cost automation. Necessity of Multidisciplinary study – Evolution of Mechatronics – Brief introduction to manufacturing – Principles of Mechatronics.

UNIT I PNEUMATIC AND HYDRAULIC SYSTEMS

Hydraulics and pneumatic power supplies, Direction control valves, Pressure control valve: pressure limiting, pressure relief and pressure sequencing valves, speed control valve, servo valves and servo systems, time delay valves, shuttle valve, Actuators: Single acting and double acting cylinders, Cushion assembly, Rotary actuators, Vane Motor, Pilot operation, Cylinders sequencing and process control.

UNIT II PROGRAMMABLE LOGIC CONTROLLER (PLC)

Function of PLC, Architecture, Components Of PLC, selection of PLC, Ladder Logic Diagram, and Logic Functions: latching, sequencing, counters, shift registers, jumpers, manipulation of data, arithmetic operations. Application of personal computer in control and automation: Data acquisition: ADC, DAC, digital input, digital output, control of DC motor, stepper motor. Solid State Switches, Solenoid, DC/AC Motors, and Stepper Motors.

UNIT III ROBOTICS

Introduction, classification based on geometry, devices, control and path movements, End effectors- types and application: Sensors- types and application, Concept of Robotics/Machine vision, Teach Pendant.

Application: Material transfer, machine loading /unloading, welding, assembly and spray painting operations.

UNIT IV TRANSDUCERS,SENSORS&ACTUATORS

Define Transducer and Sensor - Transduction Principle – Transducer types – Photo emissive, Photoconductive and Photovoltaic Transducers – Thermistors – Thermo devices – Thermocouple – Inductive Transducers – Piezo-electric Transducer- Hall-effect Transducer – Strain-gauge type Transducers.

Sensors: Types – Active or Self-generating and Passive or Modulating types – Pressure Sensing – Variable resister, Variable Inductance, Variable differential transformer, Strain gauge and Piezo-resistive types – Position and Level sensing – Magnetic-variable reluctance, d.c.excited inductive, hall-effect, Reed Switch, Optical &Fibre Optics and Capacitance types – Air Flow Sensing – Hot wire, Flap type and Aneroid Gas Sensing – Exhaust Gas Oxygen Sensor – Knock Sensing.

Actuators: Introduction – Types and application areas – Stepper Motor – Pneumatic actuators –Valves - Hydraulic actuators.

UNIT V MECHATRONIC SYSTEMS

Definition and approach of Mechatronics, Measurement and Control Systems and Mechatronics Approach. Traditional and Mechatronics design, possible Mechatronics design solutions, case studies.

16BEAE5E-- PROFESSIONAL ELECTIVE – II 3 0 0 3 100

16BEAE511 THERMALENGINEERINGLABORATORY 0 0 3 2 100

OBJECTIVES:

- To impart knowledge on the flash point, fire point and viscosity of the fuel.
- To learn the port timing and valve timing diagram of internal combustion engines.
- To study the performance of the internal combustion engine and refrigeration system.
- To understand the thermal conductivity, heat transfer and emissivity.
- To know the effectiveness of heat exchangers.

COURSE OUTCOMES:

- Measure the flash point, fire point and viscosity of given sample.
- Draw the port timing diagram of two-stroke and valve timing diagram of four-stroke internal combustion engines.
- Evaluate the performance of internal combustion engine and reciprocating air compressor.
- Calculate the coefficient of performance of a refrigeration system
- Estimate the thermal conductivity of material, heat transfer from surface and emissivity of a grey surface.
- Calculate the effectiveness of a heat exchanger

List of Experiments:

1. Determination of Viscosity of Oils – Red WoodViscometer.
2. Determination of Flash Point and Fire Point offuels
3. Valve timing and port timingdiagram
4. Performance test on automotive multi-cylinder CIengines
5. Morse test on multi-cylinder SIengine
6. Thermal conductivity measurement by guarded platemethod
7. Natural convection heat transfer from a verticalcylinder
8. Heat transfer from pin-fin (natural & forced convection modes)
9. Determination of emissivity of a greysurface
10. Effectiveness of Parallel/counter flow heatexchanger
11. Determination of COP of a refrigerationsystem
12. Performance test on single/two stage reciprocating aircompressor.

16BEAE512 AUTOMOTIVE ELECTRICAL AND ELECTRONICSLABORATORY

0 0 3 2 100

OBJECTIVES:

- Sketch and explain the working principle of battery and ignition system.
- Discuss working of the starting system and charging system.
- Illustrate the automobile wiring system.
- Illustrate the automobile lighting system.
- Identify the sensors and actuators used in the automobile.
- Explain the electronic engine management system.

COURSE OUTCOMES:

- Sketch and explain the working principle of battery and ignition system.
- Discuss working of the starting system and charging system.
- Illustrate the automobile wiring system.
- Illustrate the automobile lighting system.
- Identify the sensors and actuators used in the automobile.
- Explain the electronic engine management system.

List of Experiments:

A. ElectricalLaboratory

1. Testing of batteries and batterymaintenance
2. Testing of starting motors andgenerators
3. Testing ofalternators
4. Diagnosis of ignition systemfaults
5. Study of Automobile electricalwiring

B. ElectronicsLaboratory

6. Study of rectifiers, filters, logic gates, adder,flip-flops,SCR and ICtimer
7. Interfacing A/D converter and simple dataacquisition
8. Display and Keyboard interface usingmicrocontroller
9. Interfacing sensors usingmicrocontroller.
10. Stepper motor and DC motor interface usingmicrocontroller.
11. Simulation of automotive lightingsystem

16BEAE513 DYNAMICS ANDMECHATRONICSLABORATORY 0 0 3 2 100

- To study the working principle of governor and gyroscope.
- To familiarize the students to understandgyroscopic law and gyroscopic couple
- To provide knowledge on the balancing of rotating and reciprocating masses.
- To learn the concept of transverse and torsional vibration.
- To introduce the concept and working of sensors used in the mechatronic systems.

OBJECTIVES:

COURSE OUTCOMES:

- Select the suitable governor for various engineering applications.
- Familiar with gyroscopic law and determine the gyroscopic couple
- Estimate the balancing mass for rotating and reciprocating masses.
- Calculate the natural frequency of transverse and torsional vibration.
- Select the different types of sensor for various mechatronics applications.
- Develop a controller using the microcontroller for mechatronic system.

LIST OF EXPERIMENTS

1. Governors – Determination of sensitivity, effort, etc. for Watt, Porter, Proell, and spring controlledGovernors
2. Cam – Determination of jump speed and profile of thecam.
3. Motorized Gyroscope–Verification of laws –Determination of gyroscopiccouple.
4. Whirling of shaft–Determination of critical speed of shaft with concentratedloads.
5. Balancing of rotating and reciprocatingmasses.
6. Determination of moment of inertia by oscillation method for connecting rod andflywheel.
7. Vibrating system – spring mass system – Determination of damping co–efficient ofsingle degree of freedomsystem
8. Determination of torsional frequencies for compound pendulum and flywheel systemwith lumped moment ofinertia.
9. Transverse vibration –free– Beam. Determination of natural frequency and deflection ofbeam.

10. Design and testing of fluid power circuits to control
    (i) velocity (ii) direction and (iii) force of single and double actingactuators
11. Design of circuits with logic sequence using Electro pneumatic trainerkits.
12. Simulation of basic Hydraulic, Pneumatic and Electric circuits usingsoftware
13. Circuits with multiple cylinder sequences in Electro pneumatic usingPLC.
14. Modeling and analysis of basic electrical, hydraulic and pneumatic systems using LABVIEW

16BEAE514 COURSE ORIENTED PROJECT-III 1 0 0 1 100

The objective of this project is to provide opportunity for the students to implement their skills acquired and design projects based on courses in the fifth semester

The students in convenient groups of not more than 3 members have to take up a project work in any subject of their choice in the third semester. Every project work shall have a guide who is the member of the faculty of the institution.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Identify a problem and develop the solutions.
- Identify, formulate and analyse problems and justify solutions using scientific knowledge.
- Apply technical ideas, strategies and methodologies.
- Design and conduct experiments, as well as analyse and interpret data.
- Familiar with cost-effectiveness analysis.
- Prepare technical report and oral presentations.

16BEAE551 IN-PLANTTRAINING 0 0 0 0100

Students will undergo industrial training for three weeks during the vacation at the end of IV semester and a report with the training completion certificate from the industry will be subsequently submitted to the department within a week after completion. Viva – Voce exam will be conducted at the end of V semester and 100 marks will be awarded.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Apply theoretical knowledge to practical work situations.
- Become updated with all the modern changes in technological world.
- Learn, practice and acquire the skills necessary
- Acquire knowledge through interaction with professionals
- Prepare report and presentation with effective visual aids
- To deliver effective presentation with clarity

16BEAE552 TECHNICAL PRESENTATION&SEMINAR 1 0 0 -100

COURSE OBJECTIVES:

- To develop self-learning skills of utilizing various technical resources to make a technical presentation.
- To promote technical presentation and communication skills.
- To understand the guidelines to prepare the slides and effectively use it for presentation.
- To promote the ability for interacting and sharing attitude.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Refer and utilise various technical resources available from multiple fields.
- Demonstrate sound technical knowledge on a given topic.
- Learn, practice and acquire the skills necessary
- Use a structured presentation methodology to prepare presentation material and effective visual aids
- Determine and develop personal presentation style
- To deliver effective presentation with clarity

16BEAE601 **AUTOMOTIVE CHASSIS DESIGN** **3204 100**

OBJECTIVES:

- To learn the design procedure of frame and springs.
- To study the design procedure of front axle and steering linkages.
- To provide knowledge on the design of clutches.
- To impart knowledge on the design of three speed and four speed gearboxes.
- To study the design of driveline components.
- To facilitate the understanding ofshafts

COURSE OUTCOMES:

- Design the frame and springs for automotive.
- Analyse the loads, moments and stresses at different sections of front axle.
- Design a suitable clutch for various engineering applications.
- Design the gearbox for various engineering applications.
- Design the propeller shaft to transmit required torque.
- Design the rear axle shafts

UNIT I INTRODUCTION

Assumptions to be made in designing a vehicle, Range of values for Gross Vehicle Weight, Frontal Area, maximum speed, maximum acceleration, gradability in different gears, Basics of Automobile Design.

UNIT II VEHICLE MOTION & PERFORMANCE CURVES

Calculation and Plotting of Driving force, Power requirement for different loads and acceleration, Maximum Power calculation. Calculation, Tabulation and Plotting of Torque and Mechanical Efficiency for different\vehicle speeds, Interpolation of Pressure – Volume diagram, Calculation of frictional Mean Effective Pressure, Calculation of Engine Cubic Capacity, Bore and StrokeLength.

UNIT– III VEHICLE FRAME AND SUSPENSION

Study of loads, moments and stresses on frame members, computer aided design of frame for passenger and commercial vehicles, computer aided design of leaf springs, coil springs and torsion bar springs.

UNIT– IV FRONT AXLEAND STEERINGSYSTEMS

Analysis of loads, moments and stresses at different sections of front axle, determination of loads at kingpin bearings, wheel spindle bearings, choice of bearings, determination of optimum dimensions and proportions for steering linkages ensuring minimum error in steering.

UNIT– V FINAL DRIVE AND REARAXLE

Design of propeller shaft, design details of final drive gearing, design details of full floating, semi-floating and three quarter floating rear shafts and rear axle housings.

16BEAE602 **VEHICLE DYNAMICS** **3003 100**

OBJECTIVES:

- To study the fundamental concept of vibration of a single degree of freedom system.
- To acquire knowledge on the road vehicle dynamics, stability and handling.
- To develop an understanding of the relationships between vehicle design variables and vehicle dynamic behaviour.
- To apply modelling techniques to predict the dynamic behaviour of road vehicles.
- To introduce the concepts ofgradeability, tractive force, braking force and stopping distance
- To provide knowledge onsteady state cornering model to design the steering system.

COURSE OUTCOMES:

- Explain the basic elements of vibration of single degree of freedom system.
- Analyse the cornering and tractive property of a tyre.
- Understand the sources of vibration
- Design and analyse the suspension system of a vehicle.
- Analyse the gradeability, tractive force, braking force and stopping distance of a vehicle.
- Apply steady state cornering model to design the steering system of a vehicle.

UNIT I INTRODUCTION

Fundamental of vibration, Mechanical vibrating systems. Modelling and Simulation - Model of an automobile - Single, two, multi degrees of freedom systems – Free, forced and damped vibrations. Magnification factor - Transmissibility - Vibration absorber.

UNIT II MULTI DEGREE OF FREEDOMSYSTEMS

Closed coupled system - Eigen value problems - Far coupled Systems - Orthogonality of mode shapes – Modal analysis - Forced vibration by matrix inversion. Approximate methods for fundamental frequency - Dunkerley's lower bound - Rayleigh's upper bound - Hozler method for close coupled and branchedsystems.

UNIT III SUSPENSION ANDTYRES

Requirements. Sprung mass frequency. Wheel hop, wheel wobble, wheel shimmy. Choice of suspension spring rate. Calculation of effective spring rate. Vehicle suspension in fore and apt directions. Ride characteristics of tyre - Effect of driving and braking torque - Gough's tyre characteristics.

UNIT IV VEHICLE HANDLING

Over steer, under steer, steady state cornering. Effect of braking, driving torques on steering. Effect of camber, transient effects in cornering. Directional stability of vehicles.

UNIT V STABILITY OFVEHICLES

Load distribution, Calculation of Tractive effort and reactions for different drives - Stability of a vehicle on a slope, on a curve and a banked road.

16BEAE603 VEHICLE BODY ENGINEERING AND SAFETY 3003 100

OBJECTIVES:

- Distinguish the various aerodynamic forces and moments.
- Explain different aspects of the car body, bus body and commercial vehicle.
- Describe the safety aspect of bus body
- Describe the commercial vehicle bodies
- Explain the regulations.
- Describe the material used in bodybuilding, tools used and body repairs.

COURSE OUTCOMES:

- Distinguish the various aerodynamic forces and moments.
- Explain different aspects of the car body, bus body and commercial vehicle.
- Describe the safety aspect of bus body
- Describe the commercial vehicle bodies
- Explain the regulations.
- Describe the material used in bodybuilding, tools used and body repairs.

UNIT I CAR BODY

Types: Saloon, Convertibles, Limousine, Estate Van, racing and sports car - Driver's seat, Body Mechanisms - window winding, Door lock, seat adjustment. Driver's visibility and tests for visibility. Minimum space requirements and methods of improving space in cars. Safety - safety design, safety equipments. Car body construction.

UNIT II BUS BODY

Types: Mini bus, single and double decker, two level, split level and articulated bus. Bus body layout – Floor height - Engine location - Entrance and exit location - Seating dimensions.
Constructional details: Frame construction, Double skin construction -Types of metal section used - Regulations -Conventional and integral type construction.

UNIT III COMMERCIALVEHICLE

Types: Flat platform, drop side, fixed side, tipper body, tanker body. LCV body types: pickup, van. Dimensions of driver's seat in relation to controls and steering angle -Driver cab design.

UNIT IV VEHICLE AERODYNAMICS ANDERGONOMICS

Objectives -Vehicle drag and types - various types of forces and moments -Effects of forces and moments – Side wind effects -Various body optimization techniques for minimum drag –Wind tunnel testing: Flow visualization techniques, Scale model testing, Component balance to measure forces and moments. Simple problems.

ERGONOMICS: Introduction, seating dimensions, interior ergonomics, ergonomics system design, seat comfort, suspension seats, split frame seating, back passion reducers, dash board instruments, electronic displays, commercial vehicle cabin ergonomics, mechanical package layout, goods vehicle layout.

UNIT V BODY MATERIALS, TRIM ANDMECHANISMS

Aluminium alloy sheet, extrusion and casting, stainless steels, alloy steels, Metal Matrix Composites. Structural timbers -properties. Designing in GRP and high strength composites, Thermo plastics, Load bearing plastics, semi-rigid PUR foams and sandwich panel construction. Corrosion, Anticorrosion methods. Selection of paint and painting process -Body trim items. Prototype making and crash test analysis on full scale model

TEXT BOOKS

SL.NO.	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1.	Powloski.J	Vehicle Body Engineering	Business Boob Ltd.	1989

REFERENCE BOOKS

16BEAE604A **MANUFACTURING TECHNOLOGY** **3003 100**

OBJECTIVES:

- To impart knowledge on the basic principle and manufacturing methods of components.
- To study the steps involved in the casting process.
- To learn the theory of metal cutting and calculate the forces involved in it.
- To introduce the basic concepts of integrated manufacturing.
- To introduce the basic concepts of grinding process
- To provide an exhaustive knowledge on various generic process and benefits of rapid prototyping techniques.

COURSE OUTCOMES:

- List and explain the steps involved in the casting process.
- Understand the theory of metal cutting.
- Select the suitable type of machine for machining operations.
- Describe the types of grinding process.
- Select the suitable material handling and storage system for flexible manufacturing systems.
- Select appropriate rapid prototyping process for engineering applications

UNIT I FOUNDRY AND CASTING

Patterns. Moulds-types of moulds, moulding sand characteristics. Core making, melting, Processes-shell moulding, investment castings, centrifugal castings, die casting, Fettling and cleaning of casting. Casting defects andremedies.

UNIT II THEORY OF METAL CUTTING AND MACHINETOOLS

Introduction, mechanics of metal cutting, orthogonal and oblique cutting, merchants equation, chip formation, heat generation, cutting fluids, cutting tool life - recent developments and applications (Dry machining and high speed machining).

Cutting tool materials, cutting tool nomenclature, introduction to machine tools, lathe, shaper, planning, milling, drilling and boring machines, working principle, operations, work holding devices,machining time calculation and cost estimation.

UNIT III MANUFACTURE OF COMPONENTS AND SURFACE FINISHING PROCESSES

Production of axis-symmetrical components- shafts, hubs, pins. Production of prismatic components-housings, lathe beds, gearboxes, machine columns. Hole production in components using drilling and boring.

Gear manufacturing processes-Gear form machining-generation process and gear hobbing, shaping machines, manufacture of spur, helical, bevel, worm and worm wheel. Gear finishing.

Surface finishing processes- Grinding machines, grinding wheel specification, honing, lapping, burnishing, super finishing surface integrity concepts.

UNIT IV INTEGRATED MANUFACTURINGSYSTEM

Definition – application – features – types of manufacturing systems – machine tools – computer control system – DNC systems manufacturing cell Flexible manufacturing systems (FMS) – The FMS concept – transfer systems – head changing FMS, GroupTechnology.

UNIT V RAPIDPROTOTYPING

Introduction, FDM- Principle, process parameters, applications, SLS- Types of machines, principles of operation, process parameters, applications. Rapid Tooling- Indirect rapid tooling - silicone rubber tooling, aluminum filled epoxy tooling, spray metal tooling, direct rapid tooling - direct AIM, quick cast process, copper polyamide, rapid tool.

16BEAE604B **PRODUCTION PROCESS FOR AUTOMOTIVE COMPONENTS** **3003 100**

OBJECTIVES:

- To impart knowledge on basic principle and production methods of automotive components.
- To learn the surface coating technologies used in the automotive industry.
- To understand the importance of suitable process for the manufacturing automotive components.
- To enrich the understanding of casted and forged engine components
- To know the application of the emission control system
- To expose students to the stretch forming of auto body panels

COURSE OUTCOMES:

- List and explain the steps involved in the forging process.
- Explain the steps involved in the casting process
- Describe the powder metallurgy process.
- explain the steps involved in the machining and gear manufacturing.
- Describe the welding processes
- Describe the un conventional machining processes

UNIT I FORMINGPROCESS

Forging - process flow chart, forging of valves, connecting rod, crank shaft, cam shaft ,propeller shaft, transmission gear blanks, foot brake linkage, steering knuckles, Extrusions: Basic process steps, extrusion of transmission shaft, steering worm blanks, brake anchor pins, rear axle drive shaft, axle housing spindles, piston pin and valve tappets. Hydro forming: Process, hydro forming of manifold and comparison with conventional methods- Hydro forming of tail lamp housing. Stretch forming - Process, stretch forming of auto body panels -Super plastic alloys for auto bodypanels.

UNIT II CASTING, MACHINING AND GEARMANUFACTURING

Sand casting of cylinder block and liners - Centrifugal casting of flywheel, piston rings, bearing bushes, and liners, permanent mould casting of piston, pressure die casting of carburettor other small auto parts. Machining of connecting rods - crank shafts - cam shafts - pistons - piston pins - piston rings - valves - front and rear axle housings - fly wheel - Honing of cylinder bores - Copy turning and profile grinding machines. Hobbing and shaping - Gear finishing and inspection.

UNIT III POWDER METALLURGY AND RECENT TRENDS IN MANUFACTURING OF AUTOCOMPONENTS

Process flow chart - Production of metal powders and their raw materials – Manufacture of friction lining materials for clutches and brakes - Testing and inspection of PM parts.

Powder injection moulding – Shot peen hardening of gears - Production of aluminum MMC liners for engine blocks - Plasma spray coated engine blocks and valves - Recent developments in auto body panel forming -Squeeze casting of pistons - aluminum composite brakerotors

UNIT IV WELDING & ALLIED PROCESSES

Classification of Welding Processes; Arc Welding- Principle of Arc, Metal Transfer, Arc Characteristics; Working and applications of Carbon Arc Welding, Flux Shielded Metal Arc Welding (SMAW), TIG (GTAW), MIG (GMAW), SAW and ESW; Resistance Welding- Spot, Seam, Projection and Flash Butt; Gas Welding- Oxy Acetylene and Oxy Hydrogen; Thermit Welding; Solid State Welding Processes; Fusion Welding Pool and Welding Defects, Allied Processes- Brazing and Soldering.

UNIT V UN CONVENTIONAL MACHININGPROCESSES

Abrasive Jet Machining – Water Jet Machining – Ultrasonic Machining. Electric Discharge Machining (EDM) - Wire cut EDM - Chemical machining and Electro-Chemical machining (CHM and ECM) Laser Beam machining (LBM), plasma Arc machining (PAM) and Electron Beam Machining - Working Principles – equipment used – Process parameters – MRR-Variation in techniques used – Applications

16BEAE6E--	**PROFESSIONAL ELECTIVE – IV**	**3 0 0 3 100**

16BEAE611	AUTOMOBILE VEHICLE MAINTENANCE AND RE-CONDITIONING LABORATORY	0032 100

OBJECTIVES:

- To study the garage layout and general procedure for servicing.
- To learn the tuning of gasolineengine.
- To expose students to tuning of diesel engines
- To impart knowledge on fault diagnosis in electrical and electronic ignition systems.
- To provide knowledge on troubleshooting of fuel feed system, charging system, starting system and lighting system.
- To familiarisewith adjustment of the headlight beam.

COURSE OUTCOMES:

- List the procedure for servicing of an automobile.
- Demonstrate the tuning of gasoline engines.
- Demonstrate the tuning of diesel engines.
- Identify the fault in electrical and electronic ignition systems.
- Analyse and troubleshoot the faults of fuel feed system, charging system, starting system and lighting system.
- Demonstrate the adjustment of the headlight beam.

List of Experiments:

<u>I AUTOMOBILE VEHICLEMAINTENANCE</u>

1. Study and layout of an automobile repair, service and maintenanceshop.
2. Study and preparation of different types of tools and instruments, different statements/records required for the repair and maintenanceworks
3. Minor and major tune up of gasoline and dieselengines
4. Fault diagnosis in electrical and electronic ignitionsystems
5. Gasoline fuel system, diesel fuel system and rectification
6. Study of faults in the electrical systems such as Head lights, Side of Parking lights, Trafficator lights, Electric horn system, Windscreen wiper system, Starter system and chargingsystem.
7. Study of fuel filters (both gasoline and diesel engines) and air cleaners (dry andwet)
8. Simple tinkering, soldering works of body panels, study of door lock and window glass rising mechanisms.
9. Adjustment of pedal play in clutch, brake, hand brake lever and steering wheelplay
10. Air bleeding from hydraulic brakes, air bleeding of diesel fuelsystem.
11. Adjustment of head lightsbeam.

II AUTOMOBILE RE-CONDITIONING

12. Removal and fitting of tire andtube.
14. Cylinder reboring – checking the cylinder bore.
14. Setting the tool andreboring.
15. Valve grinding, valve lapping, setting the valve angle and checking for valveleakage
16. Calibration of fuel injectionpump
17. Chassis alignmenttesting

16BEAE612 MANUFACTURING PROCESSES LABORATORY 0032 100

OBJECTIVES:

- To facilitate the understanding of lathe machine and its operations.
- To provide practical knowledge on Preparing a flat and contour surface using milling machine.
- To provide practical knowledge on Preparing holes with higher finish by Drilling / Tapping / Reaming.
- To facilitate the understanding of surface and cylindrical grinding operations for surface finish.
- To introduce Surface preparation and etching techniques, heat treatment and metallographic studies.
- To impart knowledge on Forging processes.

COURSE OUTCOMES:

- Perform various operations on of lathe machine.
- Prepare a flat and contour surface using milling machine.
- Prepare holes with higher finish by Drilling / Tapping / Reaming.
- Perform surface and cylindrical grinding operations for surface finish.
- Prepare Surface preparation and etching techniques, heat treatment and metallographic studies..
- Perform various Forging processes.

List of Experiments:

1. Introduction- lathe machine, plain turning, Step turning & grooving (Including lathe mechanisms, simpleproblems).
2. Taper turning-compound rest/offset method & Drilling using lathe (Including Drilling feed mechanism, Twist drill nomenclature, and Different types of taper turningoperations).
3. External threading-Single start (Including Thread cutting mechanism-simpleproblems)
4. Eccentric turning-Singleaxis
5. Shaping-V-Block (Including Shaper quick returnmechanism)
6. Grinding-Cylindrical /Surface/Tool &cutter
7. Slotting-Keyways (Including Broaching tool nomenclature and Slottermechanism)
8. Milling-Polygon /Spur gear (Including Milling mechanism, simpleproblems)
9. Gear hobbing-Helicalgear
10. Drilling, reaming, counterboring
11. Planning/Capstan lathe/Burnishing process (Planner Mechanism, Description of capstan and turret lathe)
12. Surface preparation and etching techniques, heat treatment and metallographicstudies.
13. Laboratory experiments in fabrication processes: Spot, MIG, ARC and Gas Welding, Testing of Joints.
14. Basic Forging processes like upsetting, drawing down and forgewelding

16BEAE651 **MINIPROJECT** **1 0 0 2 100**

The objective of this project is to provide opportunity for the students to implement their skills acquired in the previous semesters to practical problems.

The students in convenient groups of not more than 4 members have to take one small item for design and fabrication. Every project work shall have a guide who is the member of the faculty of the institution.

The students are required to design and fabricate the chosen item in the college and demonstrate its working apart from submitting the project report. The report should contain assembly drawing, parts drawings, process charts relating to fabrication.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Demonstrate sound technical knowledge of a selected project topic.
- Apply the knowledge of mathematics, science and engineering to solve complex engineering problems.
- Identify, formulate and analyse problems and justify solutions using scientific knowledge.
- Design and conduct experiments
- Analyse and interpret data.
- Prepare technical report and oral presentations.

The mini-project involves the following:

- Preparing a project brief proposalincluding
- Problemidentification
-A statement of system / process specification proposed to be developed (Block diagram / concept tree)
-List of possible solutions including alternative and constraints
-Cost benefit analysis
-Time Line of activities
-A report highlighting the design finalization (based on functional requirements & standards)
- Fabrication
- Testing & Validation of the developedsystem
- Learning in theProject
- Consolidated report preparation

16BECC701 PROFESSIONAL ETHICS & PRINCIPLES OF MANAGEMENT 3 0 0 3100 AND ENTREPRENEURSHIPDEVELOPMENT

OBJECTIVE

- To enable the students to create an awareness on Engineering Ethics, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

- Explain the human values.
- Implement the importance of ethics and professionalism.
- Practice the process of management's four functions.
- Understand the stress management
- Understand the budgetary and non-budgetary control technique

COURSE OUTCOMES:

- Explain the human values.
- Implement the importance of ethics and professionalism.
- Practice the process of management's four functions.
- Understand the stress management
- Understand the budgetary and non-budgetary control technique
- Understand the entrepreneurial characteristics.

**U
N
IT I ENGINEERINGETHICS**

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self–interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OFCHANGES

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING,ORGANISING

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informal organization – Organization Chart.

UNIT IV DIRECTING ANDCONTROLLING

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT V ENTREPRENEURSHIP ANDMOTIVATION

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

16BEAE702 **FINITE ELEMENT ANALYSIS** **3204 100**

OBJECTIVE:

- To impart basic knowledge on the finite element method.
- To provide knowledge on one- and two-dimensional elements.
- To study heat conduction problems using finite element method.
- To present knowledge on the higher order and isoparametric elements.
- To Study and acquire knowledge on numerical methods
- To provide knowledge on Gaussian quadrature method

COURSE OUTCOMES:

- Apply the numerical methods to formulate the simple finite element problems.
- Apply the one-dimensional finite element method to solve bar, beam and truss type problems.
- Apply the finite element method for plane stress, plane strain and axisymmetric conditions.
- Determine the temperature distribution of one and two dimensional heat transfer problems using one and two dimensional finite elements.
- Apply the numerical methods to formulate the higher order and isoperimetric problems.
- Apply Gaussian quadrature method.

UNIT I INTRODUCTION

Historical background – Matrix approach – Application to the continuum – Discretization – Matrix algebra – Gaussian elimination – Governing equations for continuum – Classical Techniques in FEM – Weighted residual method – Ritz method

UNIT II ONE DIMENSIONAL PROBLEMS

Finite element modeling – Coordinates and shape functions– Potential energy approach – Galerkin approach – Assembly of stiffness matrix and load vector – Finite element equations – Quadratic shape functions – Applications to plane trusses

UNIT III TWO DIMENSIONALCONTINUUM

Introduction – Finite element modeling – Scalar valued problem – Poisson equation –Laplace equation – Triangular elements – Element stiffness matrix – Force vector – Galerkin approach – Stress calculation – Temperature effects

UNIT IV AXISYMMETRICCONTINUUM

Axisymmetric formulation – Element stiffness matrix and force vector – Galerkin approach – Body forces and temperature effects – Stress calculations – Boundary conditions – Applications to cylinders under internal or external pressures – Rotating discs

UNIT V ISOPARAMETRIC ELEMENTS FOR TWO DIMENSIONALCONTINUUM

The four node quadrilateral – Shape functions – Element stiffness matrix and force vector – Numerical integration – Stiffness integration – Stress calculations – Four node quadrilateral for axisymmetric problems.

OBJECTIVES:

- To introduce knowledge ofComputerized engine analyzer.
- To provide knowledge on wheelbalancing.
- To impart knowledge on wheelalignment.
- To learn about Head light focusingtest.
- To impart knowledge on emission test
- To expose students toBrakingdistancetestandVisibilitytest

COURSE OUTCOMES:

- Analysis of engine using Computerized engine analyzer.
- Perform wheelbalancing.
- Perform wheelalignment.
- Understand Head light focusingtest
- Perform emission test.
- PerformBrakingdistancetestandVisibilitytest

List of Experiments:

1. Computerized engine analyzer study andpractice;
2. Computerized wheel balancing machine study andpractice:
3. Computerized wheel alignment machine study andpractice;
4. Head light focusingtest;
5. Exhaust emission test of petrol and diesel engine;
   Study of NDIR Gas AnalyserandFID.
   Study of Chemiluminescent NOx analyzer.
   Measurement of HC, CO, CO2, O2 using exhaust gas analyzer.
   Diesel smoke measurement.
6. Braking distance test and Visibilitytest.

16BEAE712 COMPUTER AIDED DESIGN ANALYSIS LABORATORY 0032 100

OBJECTIVES:

- To introduce knowledge of the FEA software as a tool for analysis.
- To provide knowledge on contact stress analysis using FEA software.
- To impart knowledge on transient analysis using FEA software.
- To learn about temperature distribution for heat conduction using FEA software.
- To impart knowledge on coupled field analysis using FEA software.
- To expose students to analysis of the simple structure using FEA software

COURSE OUTCOMES:

- Analysis of piston and connecting rod using FEA software.
- Analysis of bumper using FEA software.
- Analysis of leaf spring using FEA software.
- Analysis of composite structure using FEA software
- Find the temperature distribution for heat conduction using FEA software.
- Dynamic analysis of the simple structure using FEA software.

List of Experiments:

1. Transient analysis of connectingrod.
2. Crash analysis ofbumper.
3. Thermal analysis ofpiston.
4. Contact stress analysis of leafspring.
5. Coupled field analysis of brakeshoes.
6. Study of Combustionanalysis.
7. Study of Aerodynamicanalysis.
8. Contact stress analysis of gearpair.
9. Stress analysis of composite structure.
10. Vibration analysis of quarter carmodel.

16BEAE791 PROJECTWORKPHASE-I 0 0 8 4 100

- Identification of a real life problem in thrustareas
- Developing a mathematical model for solving the aboveproblem
- Finalization of system requirements andspecification
- Proposing different solutions for the problems based on literaturesurvey

- Future trends in providing alternatesolutions
- Consolidated report preparation of theabove

16BEAE751 **INDUSTRIALROBOTICS** **1 0 0 -100**

OBJECTIVES:

- To learn the construction and fundamentals of robots.
- To expose students to the various sensors
- To provide knowledge on types of drives and end effectors in robots.
- To impart knowledge on sensors and machine vision system.
- To provide knowledge on the applications of robots in industries.
- To provide knowledge on economic analysis of robots

COURSE OUTCOMES:

- Identify the components and construction of robot manipulator.
- Understand the sensors.
- Select a suitable drive and an end effectfor industrial robots.
- Choose sensors and machine vision system for industrial robots.
- Discuss the usage and applications of robots in industries.
- Understand the economic analysis of robots.

PART– I FUNDAMENTALS OFROBOT

Robot – Definition – Robot Anatomy – Co-ordinate Systems, Work Envelope, types and classification – Specifications – Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and Their Functions – Need for Robots – Different Applications. Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features. End Effectors – Grippers. Requirements of a sensor, Principles and Applications of sensors – Position of sensors, Proximity Sensors, Touch Sensors - Camera, Frame Grabber, Sensing and Digitizing Image.

PART– II ROBOT CELLDESIGN

Robot cell design – simulation software (Robo Wave). Robot cell layouts – Multiple robots and machine interference – robot cell planning – robot cycle time analysis for assembly, welding and painting shop. Safety Considerations for Robot Operations, Economic Analysis of Robots – Pay back Method, EUAC Method, Rate of ReturnMethod.

16BEAE801 **TOTALQUALITYMANAGEMENT** **3 0 0 3 100**

- To learn concepts, dimension quality and philosophies of TQM.
- To study the TQM principles and its strategies.
- To expose the seven statistical quality and management tools.
- To impart knowledge on TQM tools for continuous improvement.
- To introduce the quality systems and procedures adopted.
- To acquaint the student with the concepts of quality management system

OBJECTIVES:

COURSE OUTCOMES:

- Use the concepts, dimension of quality and philosophies of TQM.
- Apply the principles of TQM and its strategies in industries.
- Apply the statistical quality tools and seven management tools.
- Choose suitable TQM tools for continuous improvement.
- Understand the Failure Modes and Effects Analysis.
- Use the concepts of quality management system in industries.

UNIT I INTRODUCTION

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT II TQM PRINCIPLES

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT III STATISTICAL PROCESS CONTROL (SPC)

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

UNIT IV TQM TOOLS

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

UNIT V QUALITY SYSTEMS

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 – Concept, Requirements and Benefits.

16BEAE8E-- PROFESSIONAL ELECTIVE–VI 3 0 0 3 100

16BEAE891 PROJECT WORK PHASE-II AND VIVA- VOCE --3216300

OBJECTIVE

The objective of the project work is to enable the students in convenient groups of not more than 3 members on a project involving theoretical and experimental studies related to the branch of study. Every project work shall have a guide who is the member of the faculty of the institution. Six periods per week shall be allotted in the time table and this time shall be utilized by the students to receive the directions from the guide, on library reading, laboratory work, computer analysis or field work as assigned by the guide and also to present in periodical seminars on the progress made in the project.

Each student shall finally produce a comprehensive report covering background information, literature survey, problem statement, project work details and conclusion. This final report shall be typewritten form as specified in the guidelines.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Demonstrate sound technical knowledge of the project topic.
- Apply the knowledge of mathematics, science and engineering to solve complex engineering problems.
- Identify, formulate and analyseproblems and justifysolutions using scientific knowledge.
- Design and conduct experiments, as well as analyseand interpret data.
- Execute the project based on the design developed during phase - I.
- Prepare technical report and oral presentations.

16BEAE5E01 DESIGN FOR MANUFACTURE AND ASSEMBLY 3003 100

OBJECTIVES:

- To introduce the way of specifying dimension and tolerance in engineering drawing by using geometric dimensioning and tolerancing.
- To indicate the design considerations while casting, welding and forming of components.
- To familiarisewith the concept and design guidelines for manufacturing parts by different machining processes.
- To study the factors affecting the easy assembly of parts into a final product.
- To impart knowledge on the environmental impact of products manufactured and engineering ways to minimise it
- To Study and acquire knowledge on disassembly, recyclability, remanufacture

COURSE OUTCOMES:

- Apply geometric dimensioning and tolerancing techniques in engineering drawing.
- Apply design considerations to minimise the difficulty in fabrication of components by casting, welding and forming processes.
- Apply design for manufacturing concept to reduce the machining time and manufacturing cost.
- Perform the parts assembly of the given component using design for assembly guidelines.
- Design components taking into consideration the environmental impact.
- Describe disassembly, recyclability, remanufacture.

UNIT I DFM APPROACH, SELECTION AND SUBSTITUTION OF MATERIALS IN INDUSTRY

DFM approach, DFM guidelines, standardization, group technology, value engineering, comparison of materials on cost basis, design for assembly, DFA index, Poka - Yoke principle; 6σ concept; design creativity.

Tolerance Analysis: Process capability, process capability metrics, Cp, Cpk¸cost aspects, feature tolerances, geometric tolerances, surface finish, review of relationship between attainable tolerance grades and different machining process, cumulative effect of tolerances, sure fit law, normal law and truncated normal law.

UNIT II SELECTIVE ASSEMBLY

Interchangeable and selective assembly, deciding the number of groups, Model-I: group tolerances of mating parts equal; Model-II: total and group tolerances of shaft, control of axial play-introducing secondary machining operations, laminated shims, examples.

Datum Systems: Degrees of freedom, grouped datum systems-different types, two and three mutually perpendicular grouped datum planes, grouped datum system with spigot and recess, pin and hole, grouped datum system with spigot and recess pair and tongue-slot pair, computation of translational and rotational accuracy, geometric analysis and applications.

UNIT III TRUE POSITION TOLERANCINGTHEORY

Comparison between co-ordinate and convention method of feature location, tolerancing and true position tolerancing, virtual size concept, floating and fixed fasteners, projected tolerance zone, assembly with gasket, zero true position tolerance, functional gauges, paper layout gauging, compound assembly, examples.

UNIT IV FORM DESIGN OF CASTINGS ANDWELDMENTS

Redesign of castings based on parting line considerations, minimising core requirements, redesigning cast members using weldments, use of welding symbols – design considerations for plastic component manufacturing.

Tolerance Charting Technique: Operation sequence for typical shaft type of components, preparation of process drawings for different operations, tolerance worksheets and centrality analysis, examples, design features to facilitate machining, datum features - functional and manufacturing, component design-machining considerations, redesign for manufacture,examples.

UNIT V LEAN MANUFACTURING

Need for lean concepts, different types of waste, metrics of manufacturing, an overview of value stream mapping- present state map, future state map, evaluation of benefits – Process FMEA, Design FMEA

16BEAE5E02 AUTOMOTIVE AERODYNAMICS 3003 100

OBJECTIVES:

- To provide knowledge on the fundamentals of aerodynamics and vehicle body optimisation.
- To introduce the use of wind tunnels in testing the vehicles.
- various aerodynamic shapes of car
- To introduceaerodynamics for design of the vehicle body
- To study the features ofcharacteristics of forces and moments
- To understand the importance computational fluid dynamics analysis

COURSE OUTCOMES:

- Explain the importance of aerodynamics for automobiles.
- Apply principles of aerodynamics for design of the vehicle body.
- Analyse the various aerodynamic shapes of car.
- Discuss the characteristics of forces and moments.
- Apply the concept of wind tunnel for the aerodynamic design of automobiles.
- Apply the computational fluid dynamics analysis.

UNIT I INTRODUCTION

Scope - historical development trends - Fundamental of fluid mechanics - Flow phenomenon related to vehicles - External & Internal flow problem - Resistance to vehicle motion - Performance - Fuel consumption and performance - Potential of vehicle aerodynamics.

UNIT II AERODYNAMIC DRAG OFCARS

Cars as a bluff body - Flow field around car - drag force - types of drag force - analysis of aerodynamic drag - drag coefficient of cars - strategies for aerodynamic development - low drag profiles.

UNIT III SHAPE OPTIMIZATION OFCARS

Front end modification - front and rear wind shield angle - Boat tailing - Hatch back, fast back and square back - Dust flow patterns at the rear - Effects of gap configuration - effect of fasteners.

UNIT IV VEHICLE HANDLING

The origin of forces and moments on vehicle - side wind problems - methods to calculate forces and moments- vehicle dynamics under side winds - the effects of forces and moments - Characteristics of forces and moments - Dirt accumulation on the vehicle - wind noise - drag reduction in commercial vehicles.

UNIT V WIND TUNNELS FOR AUTOMOTIVEAERODYNAMIC

Introduction - Principle of wind tunnel technology - Limitation of simulation - Stress with scale models – fullscalewindtunnels-measurementtechniques-Equipmentandtransducers-roadtestingmethods – Numericalmethods.

16BEAE5E03 **CONTROL SYSTEM** **3003 100**

OBJECTIVES:

- To understand the use of transfer function models for analysis physical systems and introduce the control system components.
- To provide adequate knowledge in the time response of systems and steady state error analysis.
- To accord basic knowledge in obtaining the open loop and closed-loop frequency responses of systems.
- To introduce stability analysis
- To introduce Driveline Control System
- To introduce Anti - Lock Braking Control Systems.

COURSE OUTCOMES:

- Describe elements in control systems
- Explain the transfer function.
- Apply the frequency model analysis.
- Describe the driveline control system
- Describe the drive line speed control modeling
- Explain the antilock braking system

UNIT1 INTRODUCTION

Control system - Basic elements in control systems - Open and closed Loop - Effect of feedback - System representations - Transfer functions of single input & single output and multivariable systems – Block diagram reduction techniques – Signal flow graphs – Gain formula – Modeling of control components – Mechanical and electrical systems

UNIT-II TRANSFER FUNCTION MODEL ANDANALYSIS

Test signals– Time response of second order system- Time response – Damping ratio - Natural frequency – Effects of adding poles and zeros – Dominant poles - Stability – Routh Hurwitz criterion – Root locus plots of typical systems – Root locus analysis

UNIT-III FREQUENCY DOMAIN ANALYSIS

Polar plots - Magnitude and phase angle curves - Straight line approximation - Corner frequencies - Bode plots - Assessment of stability - Gain margin and phase margin Assessment- Bode plots for automotivesuspension.

UNIT IV DRIVELINE CONTROLSYSTEM

Drive line modeling - Basic drive line equations- Modeling of neutral gear- Stationary and dynamic gear shift equation- Drive line speed control modeling – Transmission torque control criterion – Torque control design. Signal flow graph model for transmission system.

UNIT V ANTI – LOCK BRAKING CONTROLSYSTEMS

Anti-lock braking control systems, control cycles of ABS system - Control of the yaw dynamics-PID for ABS system - Mathematical model for ABS model- vehicle controllability – Vehicle motion characteristics and controllability-Possibility of handling quality evaluation based on driver model – Stability analysis for ABS model.

16BEAE5E04 TWO AND THREE WHEELER TECHNOLOGY 3003 100

OBJECTIVES:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

COURSE OUTCOMES:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICALSYSTEMS

2 stroke and 4 stroke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburetor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS ANDTYRES

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, Types of wheels - construction. Function of tyres - Solid and pneumatic Tyres. Constructional details of pneumatictyres.

UNIT V THREE WHEELERS

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

16BEAE5E05 OPTIMIZATION FOR ENGINEERING DESIGN 3003 100

OBJECTIVES:

- To formulate design optimization problems for engineering applications.
- To provide knowledge on single variable unconstrained problems.
- To learn multi-objective unconstrained optimization problems.
- To introduce concepts of constrained non-linear optimization problems.
- To interpret non-traditional optimization techniques for engineering problems.
- To study the features ofneural network-based optimization

COURSE OUTCOMES:

- Describe single variable optimization algorithm.
- Explain the multi variable optimization algorithm
- Apply the constrained optimization algorithms
- Describe the sensitivity analysis
- Describe the specialized algorithms
- Explain the nontraditional optimization algorithms

UNIT I SINGLE VARIABLE OPTIMIZATION ALGORITHM

Introduction - Engineering optimization problems - Optimality criteria - Bracketing methods – Region elimination methods - Point estimation methods - Gradient based methods - Root finding using optimization techniques - Computer Programmes.

UNIT II MULTI VARIABLE OPTIMIZATION ALGORITHM

Optimality criteria - Unidirectional search - Direct search methods - gradient based methods – Computer programmes.

UNIT III CONSTRAINED OPTIMIZATION ALGORITHMS

Kuhn-Tucker conditions - Transformation methods - sensitivity analysis - Direct search for constrained minimization - Unrearized search techniques method - Gradient projection method - Computer programmes

UNIT IV SPECIALIZED ALGORITHMS

Integer programming - Geometric programming

UNIT V NON TRADITIONAL OPTIMIZATION ALGORITHMS

Genetic algorithms - Simulated annealing - Global optimization - Computer programmes.

16BEAE5E06 **MODERN VEHICLE TECHNOLOGY** **3003 100**

OBJECTIVES:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications

COURSE OUTCOMES:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWERPLANTS

Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II SUSPENSION BRAKES AND SAFETY

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT III NOISE &POLLUTION

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT IV VEHICLE OPERATION AND CONTROL

Computer Control for pollution and noise control and for fuel economy - Transducers and actuators - Information technology for receiving proper information and operation of the vehicle like optimum speed and direction.

UNIT V VEHICLE AUTOMATED TRACKS

Preparation and maintenance of proper road network - National highway network with automated roads and vehicles - Satellite control of vehicle operation for safe and fast travel.

16BEAE5E07 AUTOMOTIVE EMBEDDED SYSTEM 3003 100

OBJECTIVES:

- To provide a clear understanding of Embedded system terminologies and its devices.
- To introduce Electronics in Automobile
- To introduce the concepts of Drive-By-Wire
- To understand the concept of Hardware Modules
- To Study and acquire knowledge Software Development Tools
- To understand Integration of Hardware And Software

COURSE OUTCOMES:

- Discuss aboutelectronics in automobile.
- Explaindrive by wire.
- Discuss about hardware modules.
- Explainsoftware development tools
- Describe automatic code generation.
- Explain integration of hardware and software

UNIT I ELECTRONICS IN AUTOMOBILE

Power train Management – MPFI, GDI & CRDI, ignition systems, body and convenience electronics, vehicle power supply controllers, lighting modules, door control modules, safety anti-lock braking system, electronic stability program, supplementary restraint system, traction control system – 42 V technology.

UNIT II DRIVE-BY-WIRE

Challenges and opportUNITIes of X-by-wire system & design requirements, steer-by-wire, brake-by-wire, electronic throttle including adaptive cruise control, shift-by-wire. Semiconductor concepts for X-by-wire systems, Future of automotive electronics.

UNIT III HARDWARE MODULES

16-bit Infineon microcontrollers-architectural overview of C166 family-memory organization, fundamental CPU concepts and optimization measures, on-chip system resources, peripheral event controller (PEC) ad interrupt control, external bus interface, parallel ports, general purpose timers(GPT), watchdog timer, serial channels, capture/compare units, pulse width modulation unit, analog to digital converter, real time clock, on-chip I^2C bus module, on-chip CAN module, universal serial bus (USB) interface, SDLM interface, power management monitoring features, special features of XC166family.

UNIT IV SOFTWARE DEVELOPMENTTOOLS

Introduction to KEIL integrated development environment (IDE), creating new project, creating new file, adding files to project, options for target, compile and building project, simulation and debugging, set breakpoints, monitor on-chip peripherals using simulators, study of example programs. Introduction to digital application virtual engineer (DAVE) software, configuring the on-chip resources using DAVE software, automatic code generation using DAVE software.

UNIT V INTEGRATION OF HARDWARE ANDSOFTWARE

Introduction to Infineon microcontroller development kit (easy kit), developing project using KEIL software, downloading embedded software into target system, introduction to on-chip debugging resources (JTAG), debugging target system using on-chip debugging support (OCDS).

16BEAE5E08 FUEL CELL TECHNOLOGY 3003 100

OBJECTIVES:

- To address the need and promise of alternative clean energy.
- To introduce the concept of fuel cells for use in automobiles.
- To learn the fuel cell components and their impact on performance.
- To impart knowledge on Alkaline Fuel Cells & Phosphoric Acid Fuel Cells
- To impart knowledge on Solid Oxide Fuel Cells & Molten Carbonate Fuel Cells
- To impart knowledge on Direct Methanol and Proton Exchange Membrane Fuel Cells

COURSE OUTCOMES:

- List the types of fuel cells.
- Explain the thermodynamics and electrochemical kinetics of fuel cells.
- Describe the fuel cell performance characteristics
- Explain the various components of the fuel cell.
- Analyse the performance characteristics of the fuel cell.
- Analyse the impact of the fuel cell system in automobiles.

UNIT I INTRODUCTION AND THERMODYNAMICS

Introduction: Basic operating principles – Historical highlights – Classification. Thermodynamics: Electrochemical energy conversion – Theoretical efficiency – Electrochemical energy conversion – Factors affecting electrochemical energy conversion

UNIT II ELECTRODE KINETICS

Electrode double layer – Electrolyte double layer – Double layer models (Helmoltz model, Gouy-Chapman Model, Stern model, Grahame model – Bockris, Devenathan and Muller model, and chemical models) – Solid metallic electrode – Semiconductor electrode – Specific adsorption – Zero potential.

UNIT III ALKALINE FUEL CELLS & PHOSPHORIC ACID FUELCELLS

Alkaline Fuel Cells: Working principle – Components – Modules and stacks – Performance characteristics (power density, space applications, atmospheric pressure cells) – Limitations and R&D challenges – System issues – Ammonia as fuel. Phosphoric Acid Fuel Cells: Cell reactions – Electrodes (stability of catalysts, electrode fabrication – fuel cell performance) – Stacks and systems.

UNIT IV SOLID OXIDE FUEL CELLS & MOLTEN CARBONATE FUELCELLS

Solid Oxide Fuel Cell: Principle of operation - Benefits and limitations – Cell components (electrolytes, zirconia systems, ceria based electrolytes, perovskite-based systems) – Cathode materials – Anode materials –Interconnects – Fuel reactions –Configurations and performance (tubular, monolithic, planar) – Environmental impact – Applications. Molten Carbonate Fuel Cell: General principle– Components (electrolyte and matrix, cathode and anode materials) – Electrode reactions – Lifetime

UNIT V DIRECT METHANOL AND PROTON EXCHANGE MEMBRANE FUEL CELLS

Direct Methanol Fuel Cells, Operating principle**:** – Noble metal issue – Electro-oxidation of methanol (catalysts, oxygen electro-reduction, electrolyte, non-catalytic aspects) - Methanol crossover – Catalyst optimization – Vapor feed versus liquid feed cells.

Proton Exchange Membrane Fuel Cells: Operating principle (membranes, electrodes and electrolysis, optimization of membrane and electrode assembly,
Impurities) – Technology development (single cell and stacks, composite plates) – Fuel processing – Modeling studies (membrane, electrode, membrane-electrode assembly, fuel cell, stack and system) – Technology development and applications.

16BEAE5E09 HYBRIDVEHICLETECHNOLOGY 3 0 0 3 100

OBJECTIVES:

- Explain the working of different configurations of electric vehicles.
- Analysethe performance characteristics of the battery.
- State the basic principle of operation of the fuel cell.
- Design series and parallel hybrid electric drive trains.
- Discuss the various charging methods for the battery.
- Discuss the energy storage design.

COURSE OUTCOMES:

- Explain the working of different configurations of electric vehicles.
- Analysethe performance characteristics of the battery.
- State the basic principle of operation of the fuel cell.
- Design series and parallel hybrid electric drive trains.
- Discuss the various charging methods for the battery.
- Discuss the energy storage design.

UNIT I ELECTRIC AND HYBRID ELECTRICVEHICLES

Configuration of Electric Vehicles, Performance of Electric Vehicles, Traction motor characteristics, Tractive effort and Transmission requirement, Vehicle performance, Tractive effort in normal driving, Energy consumption Concept of Hybrid Electric Drive Trains, Architecture of Hybrid Electric Drive Trains, Series Hybrid Electric Drive Trains, Parallel hybrid electric drive trains

UNIT II ENERGY STORAGE FOR EV ANDHEV

Energy storage requirements, Battery parameters, Types of Batteries, Modelling of Battery, Fuel Cell basic principle and operation, Types of Fuel Cells, PEMFC and its operation, Modelling of PEMFC, Super Capacitors.

UNIT III ELECTRIC PROPULSION

EV consideration, DC motor drives and speed control, Induction motor drives, Permanent Magnet Motor Drives, Switch Reluctance Motor Drive for Electric Vehicles, Configuration and control of Drives

UNIT IV DESIGN OF ELECTRIC AND HYBRID ELECTRIC VEHICLES

Series Hybrid Electric Drive Train Design: Operating patterns, control strategies, Sizing of major components, power rating of traction motor, power rating of engine/generator, design of PPS

Parallel Hybrid Electric Drive Train Design: Control strategies of parallel hybrid drive train, design of engine power capacity, design of electric motor drive capacity, transmission design, energy storage design

UNIT V POWER ELECTRONIC CONVERTER FOR BATTERY CHARGING

Charging methods for battery, Termination methods, charging from grid, The Z-converter, Isolated bidirectional DC-DC converter, Design of Z-converter for battery charging, High-frequency transformer based isolated charger topology, Transformer lesstopology.

16BEAE6E01 ALTERNATE FUELS ANDENERGYSYSTEMS 3 0 0 3 100

OBJECTIVES:

- To acquire knowledge of alternative fuels and changes in the engine design for handling them.
- To learn the various energy systems for use in the automobiles.
- To equip them with skills to modify the engines
- To make the students conversant of bio fuels
- To make the students conversant of synthetic fuels
- To give exposure to combustion, performance and emission characteristics of engines

COURSE OUTCOMES:

- Analyse the thermodynamics of combustion characteristics of alternative fuels.
- Distinguish the various types of alternative fuels based on need and scope.
- Modify the engines according to the type of alternative fuel.
- Explain the bio fuels
- Explain the synthetic fuels
- Analyse the combustion, performance and emission characteristics of engines

UNIT I INTRODUCTION

Estimation of petroleum reserve - Need for alternate fuel - Availability and properties of alternate fuels – general use of alcohols - LPG - Hydrogen - Ammonia, CNG, and LNG - Vegetable oils and Biogas - Merits and demerits of various alternatefuels.

UNIT II ALCOHOLS

Properties as engine fuel, alcohols and gasoline blends, performance in SI engine. Methanol and gasoline blends - Combustion characteristics in engines - emission characteristics.

UNIT III NATURAL GAS, LPG, HYDROGEN ANDBIOGAS

Availability of CNG, properties, modification required to use in engines - performance and emission characteristics of CNG using LPG in SI & CI engines. Performance and emission for LPG - Hydrogen – Storage and handling, performance and safety aspects.

UNIT IV VEGETABLE OILS

Various vegetable oils for engines - Esterification - Performance in engines - Performance and emission Characteristics

UNIT V ELECTRIC AND SOLAR POWERED VEHICLES

Layout of an electric vehicle - Advantage and limitations - Specifications - System component. Electronic control system - High energy and power density batteries - Hybrid vehicle - Solar powered vehicles.

3.	Bechtold.R.L	Alternative Fuels Guide Book	SAE	1997

16BEAE6E02 ADVANCED THEORY OFICENGINES 3 0 0 3 100

OBJECTIVES:

- To impart knowledge on advancement in IC engine construction and combustion process.
- To familiarise the combustion modelling.
- To enrich the understanding of advances in IC Engines
- To expose students to performance of the IC engines
- To facilitate the understanding ofcomputer control of engine parameters
- To impart knowledge onperformance maps

COURSE OUTCOMES:

- Explain the operating cycles of SI engines, CI engines and gas turbines.
- Understand the IC engine combustion processes.
- Analysethe causes of knocking in combustion.
- Apply new techniques to improve the performance of the IC engines.
- Explain the computer control of engine parameters for pollution control
- Explain the performance maps.

UNIT I CYCLE ANALYSIS

Operating cycles of S.I. and C.I. engines and Gas turbines - Comparison of Air standard cycle - Fuel air cycle and actual cycle.

UNIT II COMBUSTION OFFUELS

Combustion stoichiometry of petrol, diesel, alcohol and hydrogen fuels - Chemical energy and heating values - Chemical equilibrium and maximum temperature - SI engine combustion - Flame velocity and area of flame front - CI engine combustion. Fuel spray characteristics - droplet size, penetration and atomization.

UNIT III COMBUSTIONMODELLING

Basic concepts of engine simulation - Governing equation - Flow models, thermodynamic models - SI engine and CI engine models.

UNIT IV ADVANCES IN IC ENGINES

Adiabatic and L.H.R. engines - MAN combustion chamber and multifuel engines - HCCI, VCR Engines and GDI Engines Stratified charged and lean burn engines - Locomotive and marineengines.

UNIT V OPERATION ANDPERFORMANCE

Computer control of engine parameters for pollution control and better efficiency - Closed loop control of engine parameters - Hybrid operation - performance maps.

TEXT BOOKS

SL.NO	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1.	Ganesan.V	Internal combustion engines, 4th Edition	Tata McGraw Hill Publishing Co.	2012

REFERENCE BOOKS

SL.NO	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1.	Ganesan.V	Computer Simulation of Spark Ignition engine process	Universities Press (India) Ltd, Hyderabad.	1996
2.	John.B.Heywood	Internal Combustion Engine Fundamentals	McGraw Hill Publishing Co., New York.	2011

16BEAE6E03 VIBRATION AND NOISE CONTROL 3003 100

OBJECTIVES:

- To impart knowledge on the basics of vibration and noise.
- To understand the importance of single degree and two degrees of freedom vibration systems.
- To equip them with skills to Calculate the total sound pressure level
- To enrich the understanding of frequency analysis
- To understand the sources of vibration and noise.
- To learn the vibration and noise control techniques.

COURSE OUTCOMES:

- List and explain the types of vibrations
- Analyse a single degree and two degrees of freedom vibration systems.
- Calculate the total sound pressure levelproduced by two sounds of different levels.
- Apply frequency analysis
- Identify the sources of vibrationin automobiles.
- Design the systemsto reduce vibration and noise.

UNIT I SIMPLIFICATION OF VIBRATION PROBLEMS TO ONE DEGREE OF FREEEDOM

Basic equation of motion for various vibration problems – Torsional, Free, Damped and Forced vibration problems, critical speed, nature of exciting forces, vibration isolation, vibration instruments.

UNIT II TWO AND MULTI-DEGREE OF FREEDOMSYSTEMS

Two degree – Formulation of solution - Coupling between rotating and translation - Applications. Multi degree – Governing equation for closed coupled systems - Lateral vibration, Geared systems - Effect of gyroscopic acceleration.

UNIT III SOLUTION OF VIBRATIONPROBLEMS

Approximate methods (or) Numerical methods – Holzer‟s method, Myklestadt‟s method, Sturn sequence Energy methods – Rayleigh‟s Approach – Closed coupled systems. For coupled systems – Dunkerley‟s method, Rayleigh Ritz method.

UNIT IV DIAGNOSTICS AND FIELDMEASUREMENT

Diagnostic tools - Condition monitoring in real time - Balancing of rotors - Field measurements on various compressors, fans, machine foundation.

UNIT V MACHINERY NOISE ANDCONTROL

Basics of noise - Introduction, amplitude, frequency, wavelength and sound - Pressure level, noise dose level - Measurement and analysis of noise. Methods for control of noise - Mechanical noise - Predictive analysis, Sound in enclosures - Sound energy absorption - Sound transmission through barriers.

16BEAE6E04 **FAILURE ANALYSIS AND DESIGN** **3003 100**

OBJECTIVES:

- To impart knowledge on significance of failure analysis in engineering design.
- To understand failure mechanism.
- To equip them with skills to handle the specific failure component
- To enrich the understanding of detailed root-cause analysis
- To understand the material factors that cause the failure
- To learn the corrective and preventive guidelines.

COURSE OUTCOMES:

- Describe the materials and design process
- Explain the fracture mechanics.
- Explain the linear elastic fracture mechanics
- Describe the elastic plastic fracture mechanics
- Determine the fracture toughness values
- Use the failure analysis tools.

UNIT I MATERIALS AND DESIGN PROCESS

Factors affecting the behavior of materials in components, effect of component geometry and shape factors, design for static strength, stiffness, designing with high strength and low toughness materials, designing for hostile environments, material processing and design, processes and their influence on design, process attributes, systematic process selection, screening, process selection diagrams, ranking, process cost.

UNIT II FRACTURE MECHANICS

Ductile fracture, brittle fracture, Cleavage-fractography, ductile-brittle transition-Fracture mechanics approach to design-energy criterion, stress intensity approach, time dependent crack growth and damage

LINEAR ELASTIC FRACTURE MECHANICS: Griffith theory, Energy release rate, instability and R-curve, stress analysis of cracks-stress intensity factor, K-threshold, crack growth instability analysis, crack tip stress analysis.

UNIT III ELASTIC PLASTIC FRACTURE MECHANICS

Crack tip opening displacement (CTOD), J integral, relationship between J and CTOD,dynamic and time-dependent fracture: Dynamic fracture, rapid loading of a stationary crack, rapid crack propagation, dynamic contour integral, Creep crack growth-C Integral, Visco elastic fracture mechanics, visco elastic J integral

UNIT IV DETERMINATION OF FRACTURE TOUGHNESSVALUES

Experimental determination of plane strain fracture toughness, K- R curve testing, J measurement, CTOD testing, effect of temperature, strain rate on fracture toughness.

UNIT V FAILURE ANALYSISTOOLS

Reliability concept and hazard function, life prediction, life extension, application of poisson, exponential and Weibull distribution for reliability, bath tub curve, parallel and series system, MTBF,MTTR, FMEA definition-Design FMEA, Process FMEA , analysis causes of failure,modes , ranks of failure modes, fault tree analysis, industrial case studies/projects on FMEA.

Faculty of Mechanical Engineering, PSG College of Technology “Design Data Book”, DPV Printers,1993

16BEAE6E05 COMPUTER AIDED VEHICLE DESIGN 3003 100

OBJECTIVES:

- To impart knowledge on significance of CAD.
- To impart knowledge on Vehicle Frame and Suspension
- To acquire the ability in designing of Front Axle and Steering Systems
- To acquire the ability in designing of Clutch
- To provide an overview of drawing of Gear Box
- To provide an overview of Drive Line and Read Axle

COURSE OUTCOMES:

- Design the vehicle frame and suspension.
- Design the front axle
- Design the steering systems
- Design the clutch components
- Designthe gearboxes
- Designthe driveline and rear axles

UNIT I VEHICLE FRAME AND SUSPENSION

Study of loads - moments and stresses on frame members. Computer aided design of frame for passenger and commercial vehicle - Computer aided design of leaf springs - Coil springs and torsion barsprings.

UNIT II FRONT AXLEAND STEERINGSYSTEMS

Analysis of loads - moments and stresses at different sections of front axle. Determination of bearing loads at Kingpin bearings. Wheel spindle bearings. Choice of bearings. Determination of optimum dimensions and proportions for steering linkages ensuring minimum error in steering.

UNIT III CLUTCH

Torque capacity of clutch. Computer aided design of clutch components, Design details of roller and sprag type of clutches.

UNIT IV GEARBOX

Computer aided design of three speed and four speed gear boxes.

UNIT V DRIVE LINEAND REARAXLE

Computer aided design of propeller shaft. Design details of final drive gearing. Design details of full floating. semi-floating and three quarter floating rear shafts and rear axle housings.

16BEAE6E06 **INDUSTRIAL ENGINEERING AND OPERATIONSRESEARCH** **3003 100**

OBJECTIVES:

- Select suitable production planning methodologies, production system and plant layout for the industry.
- Execute an effective work study and ergonomics for better productivity.
- Formulate and select a suitable method to solve the linear programming problem.
- Solve different transportation and assignment based models.
- Solve the inventory decision-making problem usingmathematical modelling.
- Describe the economicorderquantity

COURSE OUTCOMES:

- Select suitable production planning methodologies, production system and plant layout for the industry.
- Execute an effective work study and ergonomics for better productivity.
- Formulate and select a suitable method to solve the linear programming problem.
- Solve different transportation and assignmentbased models.
- Solve the inventory decision-making problem usingmathematical modelling.
- Describe the economic order quantity

UNIT I INTRODUCTION

Evolution of industrial engineering, fields and functions of industrial engineering. Methods engineering process charts, motion study, work sampling and work measurement.

UNIT II PRODUCTION PLANNING ANDCONTROL

Introduction, objectives, components of PPC, manufacturing systems, plant layout, types of layouts, forecasting, product planning, loading and scheduling, dispatching, production control, material handling principles, case studies.

Human engineering- Ergonomics, design of controls and displays, heating, ventilation, glare, airflow, influence of factory environment on productivity, industrial safety.

Cost analysis - Cost structure of a product-labor, material, overhead. Overhead absorption, machine hour rate, cost computation for simple machined components, learning curve, „Make-or-Buy" decision.

UNIT III LINEAR PROGRAMMINGTECHNIQUES

Operations research and decision-making, types of mathematical models and constructing the model. Role of computers in operations research, formulation of linear programming problem, applications and limitations, simplex method, variants in simplex method (analytical andgraphical).

UNIT IV DISTRIBUTION METHODS AND ASSIGNMENTMODELS

Vogel"s approximation method, modified distribution method, optimization models, unbalance and degeneracy in transportation model. Hungarian algorithm, traveling salesman problem, routing problems, processing „n" jobs through two machines and three machines, processing two jobs through „m"machines.

UNIT V INVENTORYCONTROL

Variables in inventory problems, inventory models with penalty, storage and quantity discount, safety stock, inventory models with probability, lead time, demand, multi item deterministic model.

16BEAE6E07 **QUALITY CONTROL AND RELIABILITY ENGINEERING** **3003 100**

OBJECTIVES:

- Summarize the concept of quality and process control for variables.
- Apply the process control for attributes.
- Explain the importance of sampling methods and their characteristics.
- Explain the concept of life testing.
- Evaluate the reliability concept with their models.
- Explain the product life cycles

COURSE OUTCOMES:

- Summarize the concept of quality and process control for variables.
- Apply the process control for attributes.
- Explain the importance of sampling methods and their characteristics.
- Explain the concept of life testing.
- Evaluate the reliability concept with their models.
- Explain the product life cycles.

UNIT I INTRODUCTION AND PROCESS CONTROL FOR VARIABLES

Introduction, definition of quality, basic concept of quality, definition of SQC, benefits and limitation of SQC, Quality assurance, Quality cost-Variation in process- factors – process capability – process capability studies and simple problems – Theory of control chart- uses of control chart – Control chart for variables – X chart, R chart and σ chart.

UNIT II PROCESS CONTROL FOR ATTRIBUTES

Control chart for attributes –control chart for proportion or fraction defectives – p chart and np chart – control chart for defects – C and U charts, State of control and process out of control identification in charts.

UNIT III ACCEPTANCESAMPLING

Lot by lot sampling – types – probability of acceptance in single, double, multiple sampling techniques – O.C.curves–producer‟sRiskandconsumer‟sRisk.AQL,LTPD,AOQLconcepts-standardsampling plans for AQL and LTPD- uses of standard samplingplans.

UNIT IV LIFE TESTING -RELIABILITY

Life testing – Objective – failure data analysis, Mean failure rate, mean time to failure, mean time between failure, hazard rate, system reliability, series, parallel and mixed configuration – simple problems. Maintainability and availability – simple problems. Acceptance sampling based on reliability test – O.C Curves.

UNIT V QUALITY ANDRELIABLITY

Reliability improvements – techniques- use of Pareto analysis – design for reliability – redundancy unit and standby redundancy – Optimization in reliability – Product design – Product analysis – Product development – Product life cycles.

Note: Use of approved statistical table permitted in the examination.

16BEAE6E08 **COMPUTATIONAL FLUID DYNAMICS** **3003 100**

OBJECTIVES:

- To introduce governing equations of viscous fluid flows.
- To acquaint the student with the concepts of finite difference and finite volume methods for diffusion.
- To familiarize the students to understand the finite volume method for convective diffusion
- To introduce numerical modelling and its role in the field of fluid flow and heat transfer.
- To provide knowledge on the various discretization methods, solution procedures and turbulence modelling.
- To impart knowledge on use of software tools.

COURSE OUTCOMES:

- Derive the governing equations and boundary conditions for fluid dynamics.
- Analyse finite difference and finite volume methods for diffusion.
- Analyse finite volume method for convective diffusion.
- Analyse the flow field problems.
- Explain and solve the turbulence models and mesh generation techniques.
- Use software tools.

UNIT I GOVERNING EQUATIONS AND BOUNDARYCONDITIONS

Basics of computational fluid dynamics – Governing equations of fluid dynamics – Continuity, Momentum and Energy equations – Chemical species transport – Physical boundary conditions – Time-averaged equations for Turbulent flow - Turbulence -Kinetic -Energy Equations – mathematical behavior of PDEs on CFD: Elliptic, Parabolic and Hyperbolic equations.

UNIT II DISCRETIZATION AND SOLUTIONMETHODOLOGIES

Methods of Deriving the Discretization Equations - Taylor Series formulation – Finite difference method – Control volume Formulation – Spectral method.

Solution methodologies: Direct and iterative methods, Thomas algorithm, Relaxation method, Alternating Direction Implicit method.

UNIT III HEATCONDUCTION

Finite difference and finite volume formulation of steady/transient one-dimensional conduction equation, Source term linearization, Incorporating boundary conditions, Finite volume formulations for two and three dimensional conduction problems

UNIT IV CONVECTION ANDDIFFUSION

Finite volume formulation of steady one-dimensional convection and Diffusion problems, Central, upwind, hybrid and power-law schemes - Discretization equations for two dimensional convection and diffusion.

UNIT V CALCULATION OF FLOWFIELD

Representation of the pressure - Gradient term and continuity equation - Staggered grid - Momentum equations - Pressure and velocity corrections - Pressure - Correction equation, SIMPLE algorithm and its variants. Turbulence models: mixing length model, Two equation (k-ε)models.

16BEAE6E09 INTELLIGENT VEHICLE TECHNOLOGY 3003 100

OBJECTIVES:

- List and explain the various driver assistant systems.
- Discuss the global positioning systems
- Describe the vehicle telematics and its applications.
- Explain the safety and security systems for automotive.
- Discuss the various comfort systems.
- Explain the adaptive control systems.

COURSE OUTCOMES:

- List and explain the various driver assistant systems.
- Discuss the global positioning systems
- Describe the vehicle telematics and its applications.
- Explain the safety and security systems for automotive.
- Discuss the various comfort systems.
- Explain the adaptive control systems.

UNIT I DRIVER ASSISTANCE SYSTEMS

Introduction, driver support systems – driver information, driver perception, driver convenience, driver monitoring. Vehicle support systems – general vehicle control, collision avoidance, vehiclestatus monitoring-Night visionsystem

UNIT II TELEMATICS

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition, driver assistance systems.

UNIT III SAFETY AND SECURITYSYSTEMS

Airbags, seat belt tightening system, collision warning systems, child lock, anti lock braking systems. Anti theft technologies, smart card system, number plate coding.

UNIT IV COMFORT SYSTEMS

Active suspension systems, requirement and characteristics, different types, power steering, collapsible and tiltable steering column, power windows-Adaptive lighting system

UNIT V ADAPTIVE CONTROL SYSTEMS

Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology.-Autonomous vehicles

16BEAE7E01 VEHICLE TRANSPORT MANAGEMENT 3003 100

OBJECTIVES:

- To study Transport Management
- To understand the concept of Organisation
- To learn about Vehicle Maintenance
- To be aware of the Supply Management and Budget
- To provide knowledge on Scheduling and Fare Structure
- To introduce Motor Vehicle Act

COURSE OUTCOMES:

- Acquire in-depth knowledge of Transport Management.
- Analyse concept of Organisation.
- Describe Vehicle Maintenance.
- Knowledge on Supply Management and Budget.
- Knowledge on Scheduling and Fare Structure.
- Awareness on Motor Vehicle Act

UNIT I ORGANISATION AND MANAGEMENT

Forms of Ownership – principle of Transport Management – Staff administration – Recruitment and Training – welfare – health and safety. Basic principles of supervising. Organizing time and people. Driver and mechanic hiring - Driver checklist - Lists for driver and mechanic - Trip leasing - Vehicle operation and types of operations.

UNIT II VEHICLE MAINTENACE

Scheduled and unscheduled maintenance - Planning and scope - Evaluation of PMI programme – Work scheduling - Overtime - Breakdown analysis - Control of repair backlogs - Cost of options.

UNIT III VEHICLE PARTS, SUPPLY MANAGEMENT ANDBUDGET

Cost of inventory - Balancing inventory cost against downtime - Parts control - Bin tag systems – Time management - Time record keeping - Budget activity - Capital expenditures - Classification of vehicle expenses - Fleet management and data processing - Data processing systems - Software. Model - Computer controlling of fleet activity - Energy management.

UNIT IV SCHEDULING AND FARESTRUCTURE

Route planning - Scheduling of transport vehicles - Preparation of timetable – preparation of vehicle and crew schedule - Costs, fare structure – Fare concessions - Methods of fare collection - Preparation of faretable.

UNIT V MOTOR VEHICLE ACT

Schedules and sections - Registration of motor vehicles

- Licensing of drivers and conductors - Control of permits - Limits of speed - traffic signs - Constructional regulations - Description of goods carrier, delivery van, tanker, tipper, municipal, fire fighting and break down service vehicle.

16BEAE7E02 **LEAN MANUFACTURING** **3003 100**

OBJECTIVES:

- To acquire the general knowledge to deliver consistently high quality and value added products and services to the customer in a lean environment.
- To understand the terminology relating to lean operations in both service and manufacturing organizations.
- To impart knowledge on principles of lean manufacturing on the shop floor
- To enrich the understanding of just in time concept
- To expose students to concepts of visual management, 5Sand total productive maintenance
- To expose students to Jidoka principle

COURSE OUTCOMES:

- Summarise the quality requirements to provide products and services in a lean environment.
- Apply the principles of lean manufacturing on the shop floor.
- Explain the just in time
- Explain the concepts of visual management, 5Sand total productive maintenance.
- Examine the Jidoka principle.
- Illustrate the culture of lean management.

UNIT I INTRODUCTION

Objectives of lean manufacturing-key principles and implications of lean manufacturing- Traditional Vs lean manufacturing – Lean benefits. Lean Manufacturing Concepts: Value creation and waste elimination- Major kinds of waste- pull production-different models of pull production-continuous flow-continuous improvement / Kaizen- Worker involvement.

UNIT II GROUPTECHNOLOGY

Part family- Production flow analysis – Composite part concept – Machine cell design-Case studies.

UNIT III LEAN MANUFACTURING TOOLS &METHODOLOGIES

Standard work -communication of standard work to employees -standard work and flexibility -visual controls-quality at the source- 5S principles -preventive maintenance-total quality management-total productive maintenance-changeover/setup time -batch size reduction.

UNIT IV VALUE STREAMMAPPING

The as-is diagram-the future state map-application to the factory simulation scenario-line balancing -poke yoka-Kanban – overall equipment effectiveness.

UNIT V JITAND LEANMANUFACTURING

Just InTime Manufacturing: Introduction - elements of JIT - Kanban system. Implementing Lean - Road map-senior management Involvement-best practices. Reconciling Lean With Other Systems: Toyota production system-lean six sigma-lean and ERP-lean with ISO9001:2000

16BEAE7E03 **SUPPLY CHAIN MANAGEMENT** **3003 100**

- To know the principle methods, areas of usage, possibilities and limitations as well as environmental effects of the Additive Manufacturing technologies
- To be familiar with the characteristics of the different materials those are used in Additive Manufacturing.
- To explain basics of SCM and logistics
- To impart knowledge, need for inventory management
- To expose students to value of information in SCM
- To understand the concept of information technology involved in SCM

OBJECTIVES:

COURSE OUTCOMES:

- Basics of SCM .
- Understand the need for inventory management
- Apply the need for value of information in SCM
- Describe about the various strategic alliances
- Explain about the various issues in the international SCM
- Get knowledge in information technology involved in SCM

UNIT I INTRODUCTION TO SUPPLY CHAINMANAGEMENT

Definition, global optimization, objectives of SCM. Logistics networks- data collection, model and data elevation, solution techniques.

UNIT II INVENTORYMANAGEMENT

Introduction, single warehouse, Inventory examples, economic lot size model, effect of demand uncertainty. Risk pooling, centralized and decentralized system, managing inventory in the supply chain,forecasting.

UNIT III VALUE OFINFORMATION

Bullwhip effect, information and supply chain technology. Supply chain integration- push, pull and push-pull system. Demand driven strategies, impact of internet on SCM, distribution strategies.

UNIT IV STRATEGIC ALLIANCES

Framework for strategic alliance, third party logistics, retailer, supplies partnership, distributor-integration, procurement and out servicing strategies.

UNIT V INTERNATIONAL ISSUES IN SCM

Introduction, risks and advantages- design for logistics, supplies integration into to new product development, mass customization. Issues in customer value. Information Technology for SCM: Goals, standardization, infrastructure, DSS for supply chain management.

16BEAE7E04 PROCESS PLANNING AND COST ESTIMATION 3003 100

OBJECTIVES:

- To introduce the process planning concepts.
- To impart importance of the cost estimation process and procedures.
- To study the procedure to calculate direct, indirect and overhead expenses.
- To facilitate the understanding of the production cost of forging, welding, and foundry.
- To learn the procedure to estimate the various machining costs.
- To acquire the procedure to estimate the machining time for lathe, drilling, boring, shaping, milling and grinding operations.

COURSE OUTCOMES:

- Explain the concepts of process planning and cost estimation.
- Assess the importance of cost estimation process and its procedures.
- Compute direct, indirect and overhead expenses.
- Determine the production cost of forging, welding, and foundry.
- Calculate the machining time for lathe, drilling, boring and shaping operations.
- Calculate the machining time for milling and grinding operations.

UNIT I PROCESS PLANNING

Process Planning, selection and analysis – Manual, Experience based planning – CAPP, Variant, Generative - Processes analysis – Types of Production.

UNIT II COSTING, ESTIMATION, COSTS AND EXPENSES

Aims of costing and Estimation – Functions and Procedure – Introduction to Costs, Computing Material cost, Direct Labor cost, Analysis of Overhead costs, Factory expenses, Administrative expenses, Selling and Distributing expenses – Cost Ladder - Cost of Product - Depreciation – Analysis of Depreciation.

UNIT III ESITMATION OF COSTS IN DIFFERENTSHOPS

Estimation in Foundry shop – Pattern cost, Casting cost - Illustrative examples. Estimation in Forging Shop – Losses in forging – Forging cost - Illustrative examples

UNIT IV ESTIMATION OF COSTS IN FABRICATIONSHOPS

Estimation in welding shop – Gas cutting – Electric Welding - Illustrative examples. Estimation in sheet metal shop – Shearing and Forming - Illustrative examples

UNIT V ESITMATION OF MACHINING TIMES ANDCOSTS

Estimation of machining time for lathe operations - Estimation of machining time for drilling, boring, shaping, planning, milling and grinding operations - Illustrative examples

16BEAE7E05 **AUTOMOTIVE AIR CONDITIONING** **3003 100**

OBJECTIVES:

- To gain knowledge of fundamentals of the automotive air conditioning.
- To study the working of automotive cooling and heating systems.
- To provide knowledge on air conditioning controls, delivery system and refrigerants.
- To impart knowledge on working of automatic temperature control.
- To learn the system servicing and testing.
- To impart knowledge on special tools for servicing

COURSE OUTCOMES:

- Apply the psychrometry principles.
- Explain the components of vehicle air conditioning systems.
- Describe the air conditioning controls.
- Select the suitable sensors and actuators for automatic temperature control.
- Discover and troubleshoot the fault in vehicle air conditioning systems.
- Describe the special tools for servicing vehicle air conditioning

UNIT I AIRCONDITIONING FUNDAMENTALS

Basic air conditioning system - Location of air conditioning components in a car - Schematic layout of a refrigeration system. Compressor components - Condenser and high pressure service ports. Thermostatic expansion value - Expansion value calibration - Controlling evaporator temperature - Evaporator pressure regulator - Evaporator temperatureregulator.

UNIT II AIR CONDITIONER - HEATINGSYSTEM

Automotive heaters - Manually controlled air conditioner - Heater system - Ford automatically controlled air conditioner and heater systems - Automatic temperature control - Air conditioning protection – Engine protection.

UNIT III REFRIGERANTS

Containers - Handling refrigerants - Tapping into the refrigerant container - Refrigeration system diagnosis -Diagnostic procedure - Ambient conditions affecting system pressures.

UNIT IV AIR ROUTING & TEMPERATURECONTROL

Objectives - Evaporator care air flow through the Dash recirculating unit - Automatic temperature control – Duct system - Controlling flow - Vacuum reserve - Testing the air control and handling systems.

UNIT V AIR CONDITIONINGSERVICE

Air conditioner maintenance and service - Servicing heater system Removing and replacing components. Trouble shooting of air controlling system - Compressor service.

TEXT BOOK

16BEAE8E01 **SPECIAL VEHICLES** **3003 100**

OBJECTIVES:

- To impart knowledge of the construction layout and applications of the off-road vehicles.
- To learn the various earth moving constructional machines.
- To study the construction and working details of industrial vehicles.
- To acquire knowledge on the working of tractor attachments and military vehicles.
- To provide knowledge on the mechanism of brake, suspension and steering in off-road vehicles.
- To impart knowledge on earth moving machines

COURSE OUTCOMES:

- Explain the construction layout and features of off-road vehicles.
- Select earth moving constructional machine for a particular application.
- Describe the construction details and working of industrial vehicles.
- State the special features of tractor attachments and military vehicles.
- Illustrate the mechanism of brake
- Illustrate the mechanism of suspension and steering

UNIT I EARTH MOVING AND CONSTRUCTIONALEQUIPMENTS

Construction layout, capacity and applications of earthmovers for dumpers, front-end loaders, bulldozers, excavators, backhoe loaders, scrappers, motor graders etc. criteria for selection of prime mover fro dumpers and front end loaders based on vehicle performance characteristics.

UNIT II POWER TRAIN CONCEPTS

Engine – converter match curves. Epicyclic type transmissions. Selection criteria for universal joints. Constructional details of steerable and drive axles of dumper.

UNIT III VEHICLE SYSTEMS,FEATURES

Brake system and actuation – OCDB and dry disc caliper brakes. Body hoist and bucket operational hydraulics. Hydro-pneumatic suspension cylinders. Power steering system. Kinematics for loader and bulldozer operational linkages. Safety features, safe warning system for dumper. Design aspects on dumper body, loader bucket and water tank of sprinkler. Articulated vehicles, double decker. Fire fighting equipment.

UNIT IV SPECIAL PURPOSE VEHICLES FOR INDUSTRIAL APPLICATIONS

Constructional features, capacity and stability of jib cranes. Vibratory compactors. Stackers, borewell machines, concrete mixtures.

UNIT V FARM EQUIPMENTS, MILITARY AND COMBATVEHICLES

Ride and stability characteristics, power take off, special implementations. Special features and constructional details of tankers, gun carriers and transport vehicles. Harvesting vehicles.

TEXT BOOKS

5.	SAE Handbook – Vol III, 1995.			

16BEAE8E02 TRACTOR AND FARM EQUIPMENTS 3003 100

OBJECTIVES:

- To familiarise the components of a tractor and its controls.
- To impart knowledge on the various farm equipment.
- To expose students to the types of tractors.
- To familiarize the students to understand the performance characteristics of a tractor engine.
- To facilitate the understanding of cooling and lubrication system for troubleshooting.

COURSE OUTCOMES:

- Classify the types of tractors.
- Explain the performance characteristics of a tractor engine.
- Discuss the construction and operation of the valve mechanism.
- Analyse the cooling and lubrication system for troubleshooting.
- Discuss the tractorattachments
- List and explain the various farm equipment.

UNIT I GENERAL DESIGN OFTRACTORS

Classification of tractors - Main components of tractor - Safety rules.

UNIT II CONTROL OF THE TRACTOR AND FUNDAMENTALS OFENGINE OPERATION

Tractor controls and the starting of the tractor engines - Basic notions and definition - Engine cycles – Operation of multi cylinder engines - General engine design - Basic engine performance characteristics.

UNIT III ENGINE FRAME WORK AND VALVE MECHANISM OFTRACTOR

Cylinder and pistons - Connecting rods and crankshafts - Engine balancing - Construction and operation of the valve mechanism - Valve mechanism components - Valve mechanism troubles.

UNIT IV COOLING SYSTEM, LUBRICATION SYSTEM ANDFUELSYSTEM

Cooling system - Classification - Liquid cooling system - Components, Lubricating system servicing and troubles -Fuel tanks and filters - Fuel pumps- Air cleaner and turbo charger

UNIT V FARMEQUIPMENTS

Working attachment of tractors - Farm equipment - Classification - Auxiliary equipment - Trailers and body tippingmechanism.

REFERENCEBOOKS

2.	Kolchin.A and Demidov.V	Design of Automotive engines for tractor	MIR Publishers.	1984

16BEAE8E03 **OFFROADVEHICLES** **3 0 0 3 100**

- To impart knowledge of the construction layout and applications of the off-road vehicles.
- To learn the various earth moving constructional machines.
- To study the construction and working details of industrial vehicles.
- To acquire knowledge on the working of tractor attachments and military vehicles.
- To provide knowledge on the mechanism of brake, suspension and steering in off-road vehicles.
- To impart knowledge on earth moving machines

OBJECTIVES:

COURSE OUTCOMES:

- Explain the construction layout and features of off-road vehicles.
- Select earth moving constructional machine for a particular application.
- Describe the construction details and working of industrial vehicles.
- State the special features of tractor attachments and military vehicles.
- Illustrate the mechanism of brake
- Illustrate the mechanism of suspension and steering

UNIT I CLASSIFICATION AND REQUIREMENTS OF OFF ROADVEHICLES

Power plants, chassis and transmission, Multi axle vehicles.

UNIT II LAND CLEARING MACHINES

Bush cutter, Stampers, Tree dozer, Rippers.

UNIT III EARTH MOVINGMACHINES

Bulldozers, cable and hydraulic dozers. Crawler track, running and steering gears, scrapers, drag and self powered types - Dump trucks and dumpers - Loaders, single bucket, multi bucket and rotary types - Power and capacity of earth movingmachines.

UNIT IV SCRAPERS ANDGRADERS

Scrapers, elevating graders, self powered scrapers and graders.

UNIT V SHOVELS AND DITCHERS

Power shovel, revolving and stripper shovels - drag lines - ditchers - Capacity of shovels.

REFERENCE BOOKS

2.	Wong.J.Y	Theory of Ground vehicles	John Wiley &Sons, NewYork	2008

16BEAE8E04 **VEHICLE MAINTENANCE** **3003 100**

OBJECTIVES:

- To understand the need for vehicle maintenance and its importance.
- To familiarise the maintenance procedure for various components of an automobile.
- To familiarize the students to understand servicing of transmission and driveline components.
- To make the students conversant on the procedure for steering and suspension
- To make the students conversant on the procedure for wheel and brake maintenance.
- To Study and acquire knowledge on the fault diagnosis in the electrical and air conditioner systems.

COURSE OUTCOMES:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in theelectrical and air conditioner systems

UNIT I MAINTENANCE TOOL, SHOP, SCHEDULE,RECORDS

Standard tool set, torque wrenches, compression and vacuum gauges, engine analyzer and scanner, computerized wheel alignment and balancing, gauges for engine tune up and pollution measurement, spark plug cleaner, cylinder re boring machine, fuel injection calibration machine. Importance of maintenance. Schedule and unscheduled maintenance. Scope of maintenance. Equipment downtime. Vehicle inspection. Reports. Log books. Trip sheet. Lay out and requirements of maintenance shop.

UNIT II POWER PLANT REPAIR AND OVERHAULING

Dismantling of power plant and its components. Cleaning methods. Inspection and checking. Repair and reconditioning methods for all engine components. Maintenance of ignition system, fuel injection system, cooling system,- lubrication system. Power plant trouble shootingchart.

UNIT III MAINTENANCE, REPAIR AND OVERHAULING OF THECHASSIS

Maintenance, servicing and repair of clutch, fluid coupling, gearbox, torque converter, propeller shaft. Maintenance of front axle, rear axle, brakes, steering systems. Tyre maintenance.

UNIT IV MAINTENANCE AND REPAIR OF VEHICLEBODY

Body panel tools for repairing. Tinkering and painting. Use of soldering, metalloid paste.

UNIT V MAINTENANCE AND REPAIR OF ELECTRICALSYSTEMS

Care, maintenance, testing and troubleshooting of battery, starter motor, dynamo, alternator and regulator. Transistorized regulator problems.

16BEAE8E05 INTELLECTUAL PROPERTY RIGHTS (IPR) 3003 100

OBJECTIVES:

- To introduce the basic concepts of Intellectual Property Rights (IPR).
- To compare and contrast the different forms of intellectual property protection in terms of their key differences and similarities.
- To study the various agreements and legislation related to IPR.
- To learn digital products and law.
- To provide knowledge on enforcement of IPRs.
- To provide knowledge on the Infringement of IPRs

COURSE OUTCOMES:

- Outline the basic concepts of intellectual property rights.
- Explain the registration of copyrights, trademarks, patents, geographical indications, trade secrets and industrial design registration.
- State the various agreements and legislation related to IPR.
- Describe digital products and law.
- Explain the enforcement measures of IPRs.
- Explain the Infringement of IPRs

UNIT I

Introduction - Invention and Creativity - Intellectual Property (IP) - Importance - Protection of IPR - Basic types of property i. Movable Property ii. Immovable Property and iii. Intellectual Property).

UNIT II

IP - Patents - Copyrights and related rights - Trade Marks and rights arising from Trademark registration - Definitions - Industrial Designs and Integrated circuits - Protection of Geographical Indications at national and International levels – ApplicationProcedures.

UNIT III

International convention relating to Intellectual Property - Establishment of WIPO - Mission and Activities - History - General Agreement on Trade and Tariff (GATT).

UNIT IV

Indian Position Vs WTO and Strategies - Indian IPR legislations - commitments to WTO-Patent Ordinance and the Bill - Draft of a national Intellectual Property Policy - Present against unfair competition.

UNIT V

Case Studies on Patents - Copyright and related rights - Trade Marks - Industrial design and Integrated circuits - Geographic indications - Protection against unfair competition.

16BESHOE01 **PROBABILITY AND RANDOM PROCESS** **3003 100**

OBJECTIVES:

- To gain knowledge in measures of central tendency.
- To provide necessary basic concepts in probability and random processes.
- Mean, Median, Mode
- Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
- The students will have an exposure of various distribution functions, correlation and spectral densities.
- Learners acquire skills in handling situations involving more than one random variable and functions of randomvariables.

COURSE OUTCOMES:

- Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
- The students will have an exposure of various distribution functions, correlation and spectral densities.
- To gain knowledge in measures of central tendency.
- To provide necessary basic concepts in probability and random processes.
- Mean, Median, Mode
- Learners acquire skills in handling situations involving more than one random variable and functions of random variables.

UNIT I MEASURES OF CENTRAL TENDENCY ANDPROBABILITY

Measures of central tendency – Mean, Median, Mode - Standard Deviation ,Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye‟s theorem.

UNIT II STANDARDDISTRIBUTIONS

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev's inequality**.**

UNIT III TWO DIMENSIONAL RANDOMVARIABLES

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT IV CLASSIFICATION OF RANDOMPROCESS

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT V CORRELATION AND SPECTRALDENSITIES

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

16BESHOE02 **FUZZY MATHEMATICS** **3003 100**

OBJECTIVES:

- To understand basic knowledge of fuzzy sets and fuzzy logic.
- To apply the basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations.
- To apply basic fuzzy inference and approximate reasoning.
- To know the applications of fuzzy technology.
- Describe the methods of fuzzy logic.

COURSE OUTCOMES:

- Explain the main subject of fuzzy sets.
- Discuss the concept of fuzziness involved in various systems and fuzzy set theory.
- Describe the methods of fuzzy logic.
- Comprehend the concepts of fuzzy relations.
- Analyse the application of fuzzy logic control to real-time systems.
- Understand the fuzzy relational inference

UNIT I FUZZY SETS

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh‟s Extension Principle

UNIT II OPERATIONS ON FUZZY SETS

Operations on Fuzzy Sets Operations on [0,1] – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

16BESHOE03 **LINEAR ALGEBRA** **3003 100**

OBJECTIVES:

- To introduce the basic concepts of vector space.
- To know the fundamentals of linear algebra.
- To solve the system of linear equations.
- To study the linear transformations.
- To introduce the concepts of inner product spaces.
- Express linear transformations as a matrix form.

COURSE OUTCOMES:

The student will be able to

- Explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- Apply the fundamental concepts in their respective engineering fields.
- Express linear transformations as a matrix form.
- Explain the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers.
- Discuss the importance of linear algebra
- Discuss the applications of linear algebra in branches of mathematics.

UNIT I VECTOR SPACES

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space

UNIT II EIGEN VALUES AND EIGENVECTORS

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAREQUATIONS

Direct methods, Gauss elimination method, Gauss Jordan method, Crout‟s method, iterative methods, Gauss-Jacobi method, Gauss–Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

16BESHOE04 **ENGINEERING ACOUSTICS** **3003 100**

OBJECTIVES:

- To disseminate the fundamentals of acoustic waves.
- To inculcate the characteristics of radiation and reception of acoustic waves.
- To divulge knowledge on the basics of pipe resonators and filters.
- To introduce the features of architectural acoustics.
- To impart the basic knowledge of transducers and receivers.
- Explain the basic ideas of pipe resonators and filters.

COURSE OUTCOMES:

- Develop the idea of the fundamentals of acoustic waves.
- Apply the concepts of radiation and reception of acoustic waves.
- Explain the basic ideas of pipe resonators and filters.
- Illustrate the basics of architectural acoustics.
- Illustrate the transducers and receivers and its applications in various electronic devices.
- Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTICWAVES

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption fromviscosity – complex sound speed and absorption – classical absorptioncoefficient

UNIT III PIPES RESONATORS ANDFILTERS

Resonanceinpipes-standingwavepatternabsorptionofsoundinpipes–longwavelengthlimit–
Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe – acousticfilters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency –voice.

UNIT IV ARCHITECTURAL ACOUSTICS

Sound in enclosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

16BESHOE05 **SOLID WASTE MANAGEMENT** **3003 100**

OBJECTIVES:

- To make the students conversant with the basics of solid wastes and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of hazardous waste management.
- To acquaint the students with the basics of energy generation from waste materials.
- Identify the methods of wastes disposals.

COURSE OUTCOMES:

- Outline the basic principles of solid waste and separation of wastes.
- Identify the concepts of treatment of solid wastes.
- Identify the methods of wastes disposals.
- Examine the level of hazardousness and its management.
- Examine the possible of energy production using waste materials.
- Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

UNIT I SOLID WASTE

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classficaition, Types, Methods &Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediaiton, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformationprocesses.

16BESHOE06 **GREEN CHEMISTRY** **3003 100**

OBJECTIVES:

- To make the students conversant about green chemistry.
- To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- To acquaint the student with concepts of green technology.
- To develop an understanding of the basic concepts of renewable energy resources.
- To acquaint the students with the basics information on catalysis.
- Apply the concepts combustion of green technology.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Outline the basic principles of green chemistry.
- Examine the different atom efficient process and synthesis elaborately.
- Apply the concepts combustion of green technology.
- Identify and apply the concepts of renewable energy.
- Apply the concepts of green catalysts in the synthesis.
- Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

UNIT I INTRODUCTION TO GREEN CHEMICALPRINCIPLES

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENTPROCESSES

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREENCHEMISTRY

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

16BESHOE07 **APPLIED ELECTROCHEMISTRY** **3003 100**

OBJECTIVES:

- To get the information on electro chemical material.
- To study about the conducting polymers
- To understand about the fuel
- To gain knowledge on the batteries and power sources.
- Apply the concepts of electrochemistry in storage devices.
- Identify the concepts of storage devices and their applications.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Outline the basic principles of chemistry in electrochemical material.
- Examine the properties of conducting polymers.
- Apply the concepts of electrochemistry in storage devices.
- Identify the concepts of storage devices and their applications.
- Apply suitable materials for the manufacturing of storage devices.
- Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

UNIT I METALFINISHING

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS ANDELECTROCHEMICALS

Lectropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWERSOURCES-I

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWERSOURCES-II

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells,advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE

Solar cells- Preparation of CdS/Cu_2S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

16BESHOE08 **INDUSTRIAL CHEMISTRY** **3003 100**

OBJECTIVES:

- To understand about the fuel
- To study about the abrasives and lubricants.
- To gain knowledge on inorganic chemicals and explosive materials.
- To get the information on agriculture chemicals.
- Identify the concepts of explosives and smoke screens.
- Identify the usage of agriculture chemicals.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Outline the basic chemistry of cement and lime.
- Examine the uses of abrasives and refractories.
- Identify the usage of inorganic chemicals.
- Identify the concepts of explosives and smoke screens.
- Identify the usage of agriculture chemicals.
- Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

UNIT I CEMENT ANDLIME

Manufacture of Portland cement – settling of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydrauliclime.

UNIT II ABRASIVES ANDREFRACTORIES

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3, caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction ofsulphur – manufacture of H_2SO_4 – chamber – contact processes – industrialuses.

UNIT IV EXPLOSIVES

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gasmask.

UNIT V AGRICULTURE CHEMICALS

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

16BECSOE01 **INTERNET PROGRAMMING** **3003 100**

OBJECTIVES:

- To introduce the Java programming language and explore its current strengths and weaknesses.
- To study the way that object-oriented concepts are implemented in the Java programming language.
- To write working Java code to demonstrate the use of applets for client side programming.
- Discuss the way that exceptions are detected and handled in the Java programming language.
- Create Java code that demonstrates multiple threads of execution.
- Describe internet telephony

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Explain the basic and advanced concepts and techniques of Java.
- Design an application based upon the concepts of Java and advance Java.
- Discuss the way that exceptions are detected and handled in the Java programming language.
- Create Java code that demonstrates multiple threads of execution.
- Describe internet telephony
- Explain multimedia applications

UNIT I INTRODUCTION

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing,Subnetting

UNIT II HTML

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV CLIENT-SERVER PROGRAMMING

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V INTERNET TELEPHONY

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP-Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

TEXT BOOKS:

16BECSOE02 **MULTIMEDIA AND ANIMATION** **3003 100**

OBJECTIVES:

- To study the graphics techniques and algorithms.
- To study the multimedia concepts and various I/O technologies.
- To enable the students to develop their creativity
- To impart the fundamental concepts of Computer Animation and Multimedia. To write working Java code that demonstrates multiple threads ofexecution
- Discuss the fundamental concepts of computer animation and multimedia.
- Explain the various latest interactive multimedia devices, the basic concepts about images

COURSE OUTCOMES:

- Discuss the fundamental concepts of computer animation and multimedia.
- Explain the various latest interactive multimedia devices, the basic concepts about images and image formats.
- Explain the data compression techniques, image compression techniques like JPEG
- Explain the video compression techniques like MPEG, and the basic concepts about animation
- Create an interactive multimedia presentation by using multimedia devices
- Identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

Upon successful completion of the course, the students should be able to:

UNIT I INTRODUCTION

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation– Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II CREATING ANIMATION INFLASH

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D ANIMATION & ITSCONCEPTS

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV MOTION CAPTION

Formats – Methods – Usages – Expression – Motion Capture Software‟s – Script Animation Usage

– Different Language of Script Animation Among the Software.

UNIT V CONCEPT DEVELOPMENT

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

TEXTBOOKS:

16BECSOE03 PC HARDWARE AND TROUBLESHOOTING 3003 100

COURSE OBJECTIVES:

- To assemble/setup and upgrade personal computer systems.
- To perform installation, configuration, and upgrading of microcomputer hardware and software.
- To install/connect associated peripherals.
- Define the terms that are directly related to processors such ascaching, multi-threading, dual-core technology, multi-processing, and pipelining.
- Explain the PC memories such as RAM and ROM devices.
- Discuss about motherboards and the various technologies connected to mainboards such as chipsets, buses, and various BIOS types.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Identify the main components of the PC.
- Use the skills to troubleshoot various power-related problems.
- Define the terms that are directly related to processors such ascaching, multi-threading, dual-core technology, multi-processing, and pipelining.
- Explain the PC memories such as RAM and ROM devices.
- Discuss about motherboards and the various technologies connected to mainboards such as chipsets, buses, and various BIOS types.
- Prepare a HDD for storing data; installWindows OS and various programs.

UNIT I INTRODUCTION

Introduction-ComputerOrganization–NumberSystemsandCodes–Memory–ALU–CU–
Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error DetectionTechniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II PERIPHERAL DEVICES

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC HARDWARE OVERVIEW

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV INSTALLATION AND PREVENTIVEMAINTENANCE

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V TROUBLESHOOTING

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI‟s – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

16BECSOE04 **JAVA PROGRAMMING** **3003 100**

COURSE OBJECTIVES:

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand the fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Demonstrate the concepts of polymorphism and inheritance.
- List the important topics and explain the principles of software development.
- Create a computer program to solve specified problems.
- Use the Java SDK environment to create, debug and run simple Java programs

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Identify classes, objects, members of a class and relationships among them needed for a specific problem.
- Demonstrate the concepts of polymorphism and inheritance.
- List the important topics and explain the principles of software development.
- Create a computer program to solve specified problems.
- Use the Java SDK environment to create, debug and run simple Java programs.
- Describe the basics of event handling

UNIT I INTRODUCTION TO JAVA

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES

Arrays – Strings - Packages – Java-Doc comments –- Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING

Exceptions – Syntax of exception handling code – Multiple catch statements – Using finally statements – Throwing our own exceptions – Using exceptions fordebugging

UNIT V THREADS

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

16BEEEOE01 ELECTRIC HYBRID VEHICLE 3003 100

OBJECTIVES

- To understand the basic concepts of an electric hybrid vehicle.
- To gain knowledge about the electric propulsion unit.
- To understand and gain knowledge about various energy storage devices.
- Evaluate the different energy management strategies.
- Describe the concept of different energy storage devices.
- Analyse the different motor drives used in hybrid electric vehicles.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Explain the concept of hybrid electric vehicles.
- Discuss the concept of hybrid electric drive-trains.
- Evaluate the different energy management strategies.
- Describe the concept of different energy storage devices.
- Analyse the different motor drives used in hybrid electric vehicles.
- Discuss the fuel cell based energy storage and its analysis

UNIT I INTRODUCTION

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGYSTORAGE

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENTSTRATEGIES

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

16BEEEOE02 ENERGY MANAGEMENT AND ENERGY AUDITING 3003 100

OBJECTIVES

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- Analyse the different energy efficient motors.
- Describe the concept of energy conservation.
- Analyse the different methods to improve power factor.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Explain the concept of energy management.
- Analyse the different methods for economic analysis.
- Discuss the basic concept of energy audit and types.
- Analyse the different energy efficient motors.
- Describe the concept of energy conservation.
- Analyse the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worthmethod.

UNIT III BASIC PRINCIPLES OF ENERGYAUDIT

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

16BEEEOE03 PROGRAMMABLE LOGIC CONTROLLER 3003 100

OBJECTIVES

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To understand the principles of PID.
- Describe programmable controller networking and supervisory control.
- Design logic circuits to perform industrial control functions of medium complexity.
- Demonstrate the correct operation of logic circuits by programming them into the programmable logic controller.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Examine the typical PLC hardware structure.
- Interpret relay ladder diagrams.
- Examine the issues related to using PLCs for batch processes and sequential control.
- Describe programmable controller networking and supervisory control.
- Design logic circuits to perform industrial control functions of medium complexity.
- Demonstrate the correct operation of logic circuits by programming them into the programmable logic controller.

UNIT I INTRODUCTION

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLCPROGRAMMING

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray processsystem.

UNIT III REGISTERS AND PLCFUNCTIONS

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PIDPRINCIPLES

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

16BEEEOE04 RENEWABLE ENERGY SOURCES 3003 100

OBJECTIVES

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To understand the basic principles fuel cell, Geo thermal powerplants.
- To gain the knowledge about hydro energy.
- Explain the need of wind energy and the various components used in energy generation.
- Discuss the need of hydro energy and the various types of hydro energy.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Explain the need of renewable energy resources, historical and latest developments.
- Describe the use of solar energy and the various components used in the energy production with respect to applications.
- Explain the need of wind energy and the various components used in energy generation.
- Discuss the need of hydro energy and the various types of hydro energy.
- Analyse the different energy sources for energy production.
- Explain the need of ocean thermal power plants

UNIT I INTRODUCTION

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLARENERGY

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WINDENERGY

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

16BEECOE01 REAL TIME EMBEDDED SYSTEMS 3003 100

OBJECTIVES

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing to study about memory management
- Gain knowledge about task management
- Gain knowledge about semaphore management

COURSE OUTCOMES

- Ability to understand embedded systems, its hardware and software.
- Gain knowledge about devices and buses used for embedded networking.
- Gain knowledge about task management
- Gain knowledge about semaphore management
- Gain knowledge about message passing
- Gain knowledge about memory management

UNIT-I INTRODUCTION TO EMBEDDED SYSTEM

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection &tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM7

UNIT-II OPERATING SYSTEMOVERVIEW

Introduction –Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – ClockTicks.

UNIT-III TASKMANAGEMENT

Introduction - µ C/OS-II Features - Goals of µ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks –Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under µ C/OS-II – Clock Tick - µ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task‟s Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB waits List.

UNIT IV SEMAPHORE MANAGEMENT AND MESSAGEPASSING

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue.

UNIT-V MEMORY MANAGEMENT

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memor y Block – Returning a Memor y Block .Getting Started with µ C/OS-II – Installing µ C/OS-II – Porting µ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with µ C/OS-II - µ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Anal yze the Multichannel ADC with help of µ C/OS-II.

16BEECOE02 **CONSUMER ELECTRONICS** **3003 100**

OBJECTIVES

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study the various telephone networks
- Gain knowledge about various speakers and microphone
- Gain knowledge about the fundamental of television systems and standards

COURSE OUTCOMES

- Gain knowledge about various speakers and microphone
- Gain knowledge about the fundamental of television systems and standards
- Gain knowledge about the process of audio recording and reproduction
- Gain knowledge about the various telephone networks
- To study about various speakers and microphone
- To learn the fundamental of television systems and standards

UNIT I LOUDSPEAKERS AND MICROPHONES

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a Remote Control.

UNIT III OPTICAL RECORDING ANDREPRODUCTION

Audio Disc – Processing of the Audio signal –read out from the Disc – Reconstruction of the audio signal – Video Disc – Video disc formats- recording systems – Playback Systems.

UNIT IV TELECOMMUNICATION SYSTEMS

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT V HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

1	Bali.S.P	Consumer Electronics	Pearson Education	2005

16BEECOE03 NEURAL NETWORKS AND ITS APPLICATIONS 3003 100

OBJECTIVES

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- Understand the basic concepts of neural networks and its applications in various domain
- Ability to develop the use of Soft Computing to solve real-world problems
- Understand the Basic Neural Network.

COURSE OUTCOMES

- Understand the basic concepts of neural networks and its applications in various domain
- Ability to develop the use of Soft Computing to solve real-world problems
- Understand the Basic Neural Network.
- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.

UNIT I INTRODUCTION TO NEURAL NETWORKS

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNIT II LEARNING PROCESS

Error – correction learning – memory based learning - hebbian learning-competitive learning-Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye‟s classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORK ANDART

Hopfield model-BAM model- BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNIT V SELFORGANIZATION

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

16BEECOE04 **FUZZY LOGIC AND ITS APPLICATIONS** **3003 100**

OBJECTIVES

- To introduce the basic concepts of Fuzz y logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Understand the basic concepts of Fuzzy logic and its applications in various sdomain
- Ability to develop how to use Fuzzy computation to solve real-world problems
- Understand basic fuzzy models.

COURSE OUTCOMES

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Ability to develop how to use Fuzzy computation to solve real-world problems
- Understand basic fuzzy models.
- To introduce the basic concepts of Fuzz y logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.

UNIT - I

Basics of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT – II

Theory of Approximate Reasoning**:** Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNIT - III

Fuzz y Knowledge Based Controllers (Fkbc**):** Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures – Design of Fuzz y Logic Controller

UNIT - IV

Adaptive Fuzz y Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzz y in medical applications-Introduction to ANFIS.

16BTBTOE01 **BIOREACTOR DESIGN** **3003 100**

OBJECTIVES

- To impart basic knowledge in bioprocess engineering.
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipments.
- To extendtheknowledge in principle of heat transfer inside a bioreactor.
- To construct the equipments used in mass transfer operations.
- To learn the equipments used in the separation process.

COURSE OUTCOMES

- Summarise the basic concepts in biotechnology
- Summarise the basic concepts in bioprocess engineering.
- Design the bioreactors for various operations.
- Develop the heat transfer equipments for bioprocess engineering.
- Construct the equipments used in mass transfer operations.
- Categorise the equipments used in separation process.

UNIT I ENGINEERING PROPERTIES AND STORAGETANK

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNIT II REACTORDESIGN

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNIT III HEAT TRANSFEREQUIPMENTS

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV MASS TRANSFEREQUIPMENTS

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNIT V SEPARATIONEQUIPMENTS

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotart drum drier and Swenson –walker crystallizer.

16BTBTOE02 FOOD PROCESSING AND PRESERVATION 3003 100

OBJECTIVES

- To learn the scope and importance of food processing.
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarise the students on the concepts of preservation methods for fruits.
- To create a deeper understanding of preservation methods for vegetables.

COURSE OUTCOMES

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarise the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

UNIT I SCOPE AND IMPORTANCE OF FOODPROCESSING

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading,peeling.

UNIT II PROCESSINGMETHODS

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives- fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing- Concepts and equipmentused.

UNIT III FOOD CONVERSIONOPERATIONS

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipmentand application.

UNIT IV FOOD PRESERVATION BYCOOLING

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control wateractivity.

UNIT V PRESERVATION METHODS FOR FRUITS ANDVEGETABLES

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables byacidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservationtechniques.

16BTBTOE03 **BASIC BIOINFORMATICS** **3003 100**

OBJECTIVES

- To understand the available tools and databases for performing research in bioinformatics.
- To expose students to sequence alignment tool in bioinformatics.
- To construct the phylogenetic trees for evolution.
- To get familiar with the 3D structure of protein and classification.
- To acquire basic knowledge in protein secondary structure prediction.
- To extend the brief knowledge in microarray data analysis.

COURSE OUTCOMES

At the end of the course,

- Summarise the basic concepts and importance of bioinformatics in various sectors.
- Demonstrate the sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Analyse the three-dimensional protein structure and classification using various tools.
- Illustrate the protein secondary structure prediction by comparative modelling.
- Extend the knowledge in microarray technology and applications of bioinformatics in various sectors.

UNIT I OVERVIEW OFBIOINFORMATICS

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICALDATA

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system).Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST.Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III PHYLOGENETICS

Phylogenetics, cladistics& ontology; building phylogenetic trees; evolution of macromolecular sequences.Sequence annotation: principles of genome annotation; annotationtools & resources.

UNIT IV STRUCTURALBIOINFORMATICS

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction &predictionstrategies.

UNIT V MICROARRAY DATA ANALYSIS

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling &SAGE.Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharmainformaticsresources.Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; databasemanagement.

16BTBTOE04 FUNDAMENTALSOFNANOBIOTECHNOLOGY 3 0 0 3100

OBJECTIVES

- To impart the skills in the field of nanobiotechnology and its applications.
- To acquire knowledge in the nanoparticles and its significance in various fields.
- To extend the knowledge in types and application of nanoparticles in sensors.
- To define the concepts of biomaterials through the molecular self assembly.
- To equip students with clinical applications of nanodevices.
- To describe a deeper understanding of the socio-economic issues in nanobiotechnology.

COURSE OUTCOMES

At the end of the course,

- Develop skills in the field of nanobiotechnology and its applications.
- Summarise the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nanoparticles in sensors.
- Define the concepts of biomaterials through the molecular self assembly.
- Outline the clinical applications of nanodevices.
- Describe the socio-economic issues in nanobiotechnology.

UNIT I INTRODUCTION

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dentalcare.

UNIT II NANOPARTICLES

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III APPLICATIONS

Nanomedicine, Nanobiocensor and Nanofludics.Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems.Nano-Biodevices and Systems.Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IV NANOBIOTECHNOLOGY

Clinical applications of nanodevices.Artificialneurons.Real-time nanosensors- Applications in cancer biology.Nanomedicine.Synthetic retinyl chips based on bacteriorhodopsins.High throughput DNA sequencing with nanocarbon tubules.Nanosurgical devices.

UNIT V ETHICAL ISSUES INNANOTECHNOLOGY

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to

Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economicchallenges.

16BEMEOE01 **COMPUTER AIDED DESIGN** **3003 100**

OBJECTIVE

- To provide an overview of how computers are being used in mechanical component design.
- To study the various computer graphics concepts.
- To get basic knowledge of geometric modelling.
- To study the basics of parametric design and object representation.
- To get basic knowledge in product design and development.
- Explain the process involved in graphic transformations.

COURSE OUTCOMES

- Give an overview of the CAD systems and its importance.
- Explain the ideas and principles behind the computer graphics.
- Explain the process involved in graphic transformations.
- Understand the operations involved in geometric modelling.
- Describe the concepts of parametric design.
- Understand the basics of product design and development.

UNIT I OVERVIEW OF CAD SYSTEMS

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS ANDGRAPHICS TRANSFORMATIONS

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

16BEMEOE02 INDUSTRIAL SAFETYANDENVIRONMENT 3 0 0 3 100

OBJECTIVES

- To provide in-depth knowledge on industrial safety.
- Understand the various safety techniques involved in the industrial sector.
- Record and investigate the accident zone and prepare reports related to it.
- Conduct basic safety inspections using strategies that they have developed.
- Identify and demonstrate the working of safety monitoring.
- Train about education and training based on safety.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Understand the need and awareness of safety concepts.
- Understand the various safety techniques involved in the industrial sector.
- Record and investigate the accident zone and prepare reports related to it.
- Conduct basic safety inspections using strategies that they have developed.
- Identify and demonstrate the working of safety monitoring.
- Train about education and training based on safety.

UNIT I INTRODUCTION TO LOGISTICS

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLYCHAIN

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAINMODELS

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain withcustomer.

UNIT IV SUPPLY CHAINACTIVITIES

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATIONSYSTEM

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

16BEMEOE03 **TRANSPORT PHENOMENA** **3003 100**

OBJECTIVES

- To provide the basics of transport phenomena and its applications.
- To provide the knowledge over the properties of the systems and unit systems used.
- To understand the basics and mathematics involved in momentum transport.
- To provide the basics and applications of energy transport.
- To give basics and principles involved in the mass transport phenomena.
- Understand the basic concepts involved in momentum transport.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Understand the basic concepts of transport phenomena.
- Understand the essentiality of properties of a system and unit systems used.
- Understand the basic concepts involved in momentum transport.
- Apply the mathematics involved in fluid flow problems.
- Explain the various energy transport phenomena.
- Understand the basics of mass transport phenomena.

UNIT I INTRODUCTION AND BASIC CONCEPTS

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICALPARAMETERS

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUMTRANSPORT

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heattransfer

UNIT V MASSTRANSPORT

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

16BEMEOE04 INTRODUCTION TO BIOMECHANICS 3003 100

OBJECTIVES

- Understand the basics and importance of biomechanics.
- Present the nine fundamentals of biomechanics and its need.
- Explain the nine principles used for the application of biomechanics.
- Describe the human anatomy.
- Explain the need for biomechanics in muscle actions.
- Understand the basics of the mechanics involved in the musculoskeletal system.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Understand the basics and importance of biomechanics.
- Present the nine fundamentals of biomechanics and its need.
- Explain the nine principles used for the application of biomechanics.
- Describe the human anatomy.
- Explain the need for biomechanics in muscle actions.
- Understand the basics of the mechanics involved in the musculoskeletal system.

UNIT I INTRODUCTION

Biomechanics - Improving Performance – Applications - Preventing and Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application ofBiomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETALSYSTEM

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

16BECEOE01 HOUSING, PLANANDMANAGEMENT 3 0 0 3 100

OBJECTIVES:

- To examine the role and tasks of basic housing policies and building bye-laws.
- To understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors.
- To analyse the innovative construction methods and materials.
- To analyse city management strategies and strengthen the urban governance through a problem solving approach.
- Use housing programmes and schemes.
- Plan and design housing projects.

COURSE OUTCOMES

- Explain the importance of basic housing policies and building bye-laws.
- Use housing programmes and schemes.
- Plan and design housing projects.
- Examine innovative construction methods
- Examine innovative construction materials.
- Describe housing finance and loan approval procedures.

UNIT I INTRODUCTION TO HOUSING

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSINGPROGRAMMES

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSINGPROJECTS

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECTAPPRAISAL

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing o f Housing Units, Rents, Recovery Pattern(Problems).

16BECEOE02 **BUILDING SERVICES** **3003 100**

OBJECTIVES:

- To provide knowledge on machineries involved in building construction.
- To impart knowledge onelectrical systems in buildings.
- To understand theprinciples of illumination and design.
- To learn therefrigeration principles and its applications.
- To study the importance of fire safety and its installation techniques.
- Use the principles of illumination and design.

COURSE OUTCOMES

- Explain the machineries involved in building construction.
- Discuss the electrical system and its selection criteria.
- Use the principles of illumination and design.
- Illustrate the principle of refrigeration.
- Explain the importance of fire safety and its installation techniques.
- Apply fire safety installation techniques.

UNIT I MACHINERIES

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION &DESIGN

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES &APPLICATIONS

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compressioncycle–Compressors–Evaporators–Refrigerantcontroldevices–Electricmotors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automaticsprinklers

16BECEOE03 MANAGEMENT OF IRRIGATION SYSTEMS 3003 100

OBJECTIVES:

- At the end of this course the students should have learnt the irrigation system requirements, irrigation scheduling, strategies in water use management, canal operation places and involvement of stakeholder
- At the end of this course the students should have learnt the irrigation system requirements
- At the end of this course the students should have learnt the irrigation scheduling
- At the end of this course the students should have learnt the strategies in water use management
- At the end of this course the students should have learnt the canal operation places and involvement of stakeholder
- At the end of this course the students should have learnt the Frequency and interval of irrigation

COURSE OUTCOMES

- At the end of this course the students should have learnt the irrigation system requirements, irrigation scheduling, strategies in water use management, canal operation places and involvement of stakeholder
- At the end of this course the students should have learnt the irrigation system requirements
- At the end of this course the students should have learnt the irrigation scheduling
- At the end of this course the students should have learnt the strategies in water use management
- At the end of this course the students should have learnt the canal operation places and involvement of stakeholder
- At the end of this course the students should have learnt the Frequency and interval of irrigation

UNIT I IRRIGATION SYSTEMREQUIREMENTS

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigationefficiencies.

UNIT II IRRIGATION SCHEDULING

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III MANAGEMENT

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV OPERATION

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNIT V INVOLVEMENT OF STAKEHOLDERS

Farmer"s participation in System operation – Water user"s associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TEXT BOOKS

16BECEOE04 ADVANCED CONSTRUCTION TECHNOLOGY 3003 100

OBJECTIVES:

- Explain the modern concrete construction.
- Explain the construction methods.
- Describe the construction Equipment used for Earth Moving
- Describe the Construction Equipment used for Conveying,
- Explain the principles and Practices of Temporary structures
- Explain the operation and maintenance of construction equipment

COURSE OUTCOMES

- Explain the modern concrete construction.
- Explain the construction methods.
- Describe the construction Equipment used for Earth Moving
- Describe the Construction Equipment used for Conveying,
- Explain the principles and Practices of Temporary structures
- Explain the operation and maintenance of construction

UNIT I MODERN CONSTRUCTIONMETHODS

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT II CONSTRUCTION METHODS FOR SPECIALSTRUCTURES

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT III MODERN CONSTRUCTION EQUIPEMENTS-I

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting,Tunneling and hoisting

UNIT IV MODERN CONSTRUCTION EQUIPEMENTS-II

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT V PRINCIPLES AND PRACTICES OF TEMPORARYSTRUCTURES

Principles and Practices of Temporary structures, Shoring, and Strutting,Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

TEXT BOOKS

16BEAEOE01 **AUTOMOBILE ENGINEERING** **3003 100**

OBJECTIVES:

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provideinformation on thecurrent and future trends in automobiles.
- Explain the function and working of components in transmission and drive lines.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

UNIT I ENGINE AND FUEL FEEDSYSTEMS

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT II TRANSMISSION SYSTEMS

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT III SUSPENSION SYSTEM

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT IV BRAKES

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT V ELECTRICAL SYSTEM

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator.Starting System and chargingsystem.

16BEAEOE02 BASICS OF TWO AND THREE WHEELERS 3003 100

OBJECTIVES:

- To impart technical knowledge on construction and working of the power train and drive train of two and three wheeler vehicles.
- To familiarise with maintenance procedures of the engine and subsystems of two and three wheelers.
- To impart knowledge on types of transmission systems
- To impart knowledge on types of steering and suspension systems
- To impart knowledge on types of wheels, tyres and brakes for two and three wheelers
- To make the students conversant on servicing of two and three wheelers.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS ANDTYRES

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

16BEAEOE03 AUTOMOBILE MAINTENANCE 3003 100

OBJECTIVES:

- To understand the need for vehicle maintenance and its importance.
- To familiarise the maintenance procedure for various components of an automobile.
- To familiarize the students to understand servicing of transmission and driveline components.
- To make the students conversant on the procedure for steering and suspension
- To make the students conversant on the procedure for wheel and brake maintenance.
- To Study and acquire knowledge on the fault diagnosis in theelectrical and air conditioner systems.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS ANDSCHEDULES

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheelbalancing.

UNIT IV ELECTRICAL SYSTEMMAINTENANCE

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLEBODY

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating systemmaintenance.

2.	James D Halderman	Advanced Engine Performance Diagnosis	Prentice Hall Publications	2011
3.	Service Manuals from Different Vehicle Manufacturers			

16BEAEOE04 **INTRODUCTION TO MODERN VEHICLE TECHNOLOGY** **3003 100**

COURSE OUTCOMES:

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To giveinformationaboutmotor vehicle emission and noise pollution control.
- To provide knowledge ofthe vehicle telematics.
- To give information about the noise control techniques

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWERPLANTS

Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS

Global positioning systems, geographical information systems, navigation systems, automotive vision system, roadrecognition

(Established Under Section 3 of UGC Act 1956)
COIMBATORE 641 021
INDIA.

SemesterI & II

16BECC101 COMMUNICATIVE ENGLISH 3 0 0 3 100

OBJECTIVES:

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To improve word power Receptive Skills
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence

OUTCOMES:

- Use English language for communication: verbal & non –verbal.
- Enrich comprehension and acquisition of speaking & writing ability.
- Gain confidence in using English language in real life situations.
- Improve word power: lexical, grammatical and communication competence.
- Acquire good vocabulary for easy communication.
- Be familiar with sentence structure and sentence formation.

Unit I (9)

Listening–Typesoflistening-Listeningtoclassreading-Videotapes/Audiotapes.**Speaking** –Introductiononself-Introductiononone's friend.**Reading**-Readingfor comprehension– Reading different kind ofpassages likedescriptive, narrative, objective, conversational and argumentative.**Writing**–FormalandInformalletters-Freewritingonany topic–My favorite place,hobbies,dreams,goals,etc--Tofillindifferentapplicationforms.**Grammar**–Articles-WHquestions–Yes/NoQuestion-SubjectVerbagreement.**Vocabulary**-WordFormation–Word expansion (Root word) -Prefix and Suffix.

Unit II (10)

Listening–UnderstandingthepassageinEnglish–Pronunciationpractice.**Speaking**–Asking and answeringquestions - Telephone etiquette. **Reading** –Critical reading – Finding key informationinagiventext(Skimming-Scanning).**Writing**–Coherence andcohesioninwriting –Shortparagraphwriting–Writingshortmessages.**Grammar**–Partsofspeech–Noun–Verb – Adjectives -Adverbs.**Vocabulary**– Compound Nouns/Adjectives–Irregularverbs.

Unit III(10) Listening–Listeningforspecifictask–Fillinthegaps.**Speaking**–Phonemes–Syllables–Role play– Conversation Practice. **Reading** –Reading and Comprehension. **Writing** -Autobiographicalwriting–Biographicalwriting-Instructionwriting.**Grammar**–Preposition–Infinitive–Gerund– Tenses.**Vocabulary**– Foreignwordsusedin English –Britishand American usage.

Unit IV (8)

Listening–Respondingtoquestions–Readinginclassforcompleteunderstandingandfor better pronunciation. **Speaking** –Debate- Presentations in seminars. **Reading** –Making inferencefromthereadingpassage–Predictingthecontentofreadingpassages.**Writing**-Interpretingvisualmaterials(tables,graphs,charts,etc) LetterstotheEditor. **Grammar**–Sentencepattern – Voice(active and passivevoice).**Vocabulary** – Oneword substitution.

Unit V **(8)**

Listening-Listeningtodifferentaccents,speeches/presentations.**Speaking**-Extemporetalk– Just-a-minutetalk.**Reading**-Readingstrategies–Intensivereading–Textanalysis.**Writing**- Creativewriting–Writingcircularsandnotices–Writingproposal.**Grammar**–Directand Indirect speech– Conditional sentences - Auxiliaryverbs. **Vocabulary** –Abbreviations & Acronyms.

Note: Students shall havehands on training in improving listening skill inthe language laboratory@ 2 periods per each unit.

16BECC102 ENGINEERING MATHEMATICS I 3 2 0 4 100

Course Objectives

The goal of this course is for the students

- To develop the use of matrix algebra techniques that is needed by engineers forpractical applications.
- To understand geometrical aspects of curvature and elegant application of differential calculus which are needed in Engineeringapplications.
- To make the student acquire sound knowledge of techniques in solving ordinary differential equations that model Engineeringproblems.
- To familiarize the student with functions of several variables which is the foundation for many branches ofEngineering.
- To introduce sequence and series which is central to many applications in Engineering.
- To make the student to solve various engineering problems

Course Outcomes

Upon completion of this course the students will be able

- To solve the rank, Eigen values and eigenvectors, diagonalization of a matrix,Symmetric matrices and the students will be able to use matrix algebra techniques for practical applications.
- Toequipthestudentstohavebasicknowledgeandunderstandinginonefieldofm aterials, differentialcalculus
- To solve simple standard examples using the ideas of differential equations.
- To apply various techniques to solve Partial DifferentialEquations
- To develop the tool of power series for learning advanced EngineeringMathematics.
- To apply the knowledge acquired to solve various Engineeringproblems.

UNIT I MATRICES (12)

ReviewofMatrixAlgebra-Characteristicequation–EigenvaluesandEigenvectorsofareal matrix–Properties–Cayley-Hamiltontheorem(excludingproof)–Orthogonaltransformation ofasymmetricmatrixtodiagonalform–Quadraticforms–Reductiontocanonicalform through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS (12)

Overview ofDerivatives-CurvatureinCartesianco-ordinates–Centreandradiusofcurvature–Circleofcurvature–Evolutes–Envelopes-EvolutesasEnvelopeofnormals–Maximaand Minima offunctions of two ormoreVariables–Method ofLagrangianMultipliers

UNIT III DIFFERENTIAL EQUATIONS (11)

LinearDifferentialequationsofsecondandhigherorderwithconstantcoefficients-Euler’s form of Differentialequations– Method of variation parameters.

UNIT-IV FUNCTIONSOF SEVERAL VARIABLES (12)

Partial derivatives– Euler’s theorem for homogeneous functions – Total derivatives – Differentiationofimplicitfunctions–Jacobians–MaximaandMinimaoffunctionsoftwoor moreVariables -MethodofLagrangian multipliers.

UNIT V SEQUENCESAND SERIES (13)

Sequences: Definitionandexamples–**Series:**TypesandConvergence–Seriesof positive terms–Testsofconvergence:Comparisiontest,IntegraltestandD’Alembert’sratiotest– Alternatingseries–Leibnitz’stest–Seriesofpositiveandnegativeterms–Absoluteand conditional convergence.

16BEPH103
16BEPH203 **ENGINEERING PHYSICS** **3 0 0 3** **100**

Course Objectives

- To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology
- Understand the basics of laser and optical fiber with appropriate applications.
- Introduce the concepts of quantum mechanics for diverse applications.
- Impart the basic knowledge of crystal and its various crystal structures.
- Disseminate the fundamentals of nuclear physics and their applications.
- To understand about nuclear reactors for energy resources

Course Outcomes

- Identify the elastic nature of materials and its thermodynamic properties.
- Infer the characteristics of laser and optical fibers for engineering applications.
- Develop the idea of quantum mechanics through applications.
- Identify the different atomic arrangements of crystals and its defects
- Make use of the concepts of sound waves for medical applications
- Illustrate the basic ideas for nuclear reactors for energy resources

UNITIPROPERTIESOFMATTERANDTHERMODYNAMICS (9)

Threetypesofmodulusofelasticity –basicdefinitions,relationconnectingthemodulii (Derivation), poison ratio- Torsionalpendulum- bendingof beams- bendingmoment–basic assumption ofmoment–uniform and non uniformbending
Concept of entropy-changeof entropyin reversible and irreversible processes– refrigeration.

UNITII LASER ANDFIBER OPTICS (9)

Introduction–emissionandabsorptionprocess-Einstein'scoefficientsderivation.Typesof LASER-CO_2, SemiconductorLASER-Applications ofLASERin industryand medicine.
Totalinternalreflection–modesofpropagationoflightinopticalfibers–numericalaperture andacceptance angle–derivations,typesof opticalfibers(Material,refractive indexandmode)– fiber optical communication system (block diagram)

UNITIII QUANTUMPHYSICS (9)

Introductiontoquantumtheory–Blackbodyradiation-Photoelectriceffect-dualnatureof matterandradiation–deBrogliewavelength,uncertainty principle–physicalsignificanceof wave function, Schrödinger'swave equation–time dependentandtime independentequations– particle in onedimensional box-scanning electronmicroscope.

UNITIV CRYSTAL PHYSICS (9)

Lattice–unitcell–Bravaislattice–lattice planes–Miller indices–calculationofnumber of atomsper unitcell,atomic radius,coordinationnumber,packingfactorfor SC,BCC,FCCand HCPstructures-crystal defects– point, line and surfacedefects

UNITV ULTRASONICS AND NUCLEARPHYSICS (9)

Productionofultrasonicsby piezoelectricmethod–NonDestructiveTesting–pulseecho system through transmission and reflection modes-A,Band C–scan displays,Medicalapplications–Sonogram Introduction – basics about nuclear fission and fusion, nuclear composition – Radiationdetectors–semiconductor detector.Reactors–essentialsofnuclear reactor- power reactor.

16BECH103
16BECH203 **ENGINEERINGCHEMISTRY** **3 0 0 3** **100**

COURSE OBJECTIVES:

The goal of this course is for students:

- To analyze the basics of Periodic properties, Intermolecularforces
- To infer the terminologies of electrochemistry and to analyze aboutenergy storagedevices
- To build the concept of corrosion and itsprevention
- To summarize the basic water technology and itspurification.
- To analyze about spectroscopictechnique
- To analyze the chemical principles in the field of engineering

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Rationaliseperiodicpropertiessuchasionizationpotential,electronegativity,oxidation states and electronegativity.
- Analyse the mechanism of different energy storagedevices.
- Rationalise different types of corrosion and itsprevention.
- List the various methods in the purification ofwater.
- Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopictechniques
- Integrate the chemical principles in the projects undertaken in field of engineeringand technology

UNITI WATER TECHNOLOGY **(9)**

Sources-Characteristics–Specificationfordrinkingwater,BIS&WHO-Alkalinity–Typesof alkalinity anddetermination–Hardness–Typesandestimationby EDTAmethod(problems)-Domesticwatertreatment–Disinfectionmethods (Chlorination,Ozonation.UVtreatment)– Boiler feedwater–Requirements–Disadvantagesofusinghardwater inboilers–Internal conditioning (Phosphate, Calgonand Carbonate conditioning methods)– Externalconditioning– Demineralization process–Desalination -Reverseosmosis.

UNITII LECTROCHEMISTRYAND STORAGE DEVICES **(9)**

Electrochemicalcells–EMF–Measurement ofemf–Single electrodepotential–Nernst equation – Reference electrodes –Standard Hydrogenelectrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement ofpH – Electrochemical series – Significance– Potentiometrictitrations(Redox-Fe^{2+}vsdichromate)–Electrolyticconductance- application (conductometric titration)-Batteries- Primary batteries-Leclanchecell- Secondary batteries-Lead acid battery.An introduction to Fuel Cell-H_2-O_2Fuel Cell.

UNITIII FUELSAND COMBUSTION **(9)**

Coal-ProximateandUltimateanalysis-Metallurgicalcoke-ManufacturebyOtto-Hoffman method- Petroleumprocessingand fractions-Synthetic petrol- Bergiusand Fischer-Tropsch method-Knocking-Octane number andCetanenumber-Gaseousfuels- Water gas, Producer gas, Combustion offuel-Introduction-GCV-NCV-Flue gas analysis.

UNITIV CORROSIONSCIENCE **(9)**

ChemicalandElectrochemicalcorrosion-Galvaniccorrosion-Differentialaerationcorrosion-Corrosioncontrol- SacrificialanodeandImpressed current cathodicmethods- Corrosion inhibitors -Protective coatings– Organiccoatings-Paints-Constituents and functions –Inorganic coatings-Metalliccoatings- Electroplating (Au) andElectroless plating (Ni)- Surface conversion coating -Hot dipping.

UNITV SURFACE CHEMISTRYAND PHASE RULE **(9)**

Introduction-Adsorption-Types, adsorptionof gases on solids, adsorption of solutes from solutions,Adsorption isotherms-Freundlich adsorption isotherm-Langmuiradsorptionisotherm- Role of adsorbents in industries (catalysisand water softening).
Phase Rule:Definition -Phase diagrams–onecomponentwater system,twocomponentAg-Pb system.

16BEBME104 INTRODUCTION TO BIOMEDICAL ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students :

- To give exposure on the basics of Biomedical engineering to the students.
- To have a basic knowledge on medical devices and equipment
- To understand the evolution of modern health care system
- To induce medical Morality and Ethics in the students
- To understand the various diagnostic methods and therapeutic systems available
- To get to know the various biomedical signals and other parameters associated with the Human body

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- understand the basicsof Bioinstrumentation
- Apply the ethics in their field of work
- Explain basic functions of medical imaging equipment
- Illustrate the HaemodialysisMachines
- Understand the importance and functions of therapeuticeqipment
- Analyze various Ethicalissues

UNIT-I INTRODUCTION(9)

HistoricalPerspective-Evolutionofmodernhealthcare system,Rolesplayedby Biomedical engineers, Professionalstatusof biomedicalengineering, ProfessionalSocieties,Basicsof Anatomyand physiology-Electrical Signals and Conductivity, temperature.

UNIT-IIDIAGNOSTICDEVICES (9)

Sourcesof biomedicalsignals,Basicmedicalinstrumentation system-Generalblockdiagramof a medicalinstrumentationsystem,Diagnostic devices-ECG,EEG, bloodpressuremeasurement, Temperatureand Respiration ratemeasurement, Blood cell counters, General constraints in design of medical instrumentation systems.

UNIT-III DIAGNOSTIC IMAGING (9)

X-rays, Nuclear MedicalImaging-Positron Emission Tomography,MagneticResonanceImaging Scanners, DiagnosticUltrasound, Thermal imaging systems.

UNIT-IV THERAPEUTIC EQUIPMENT (9)

Cardiac Pacemakers,Cardiac Defibrillators,Artificialheart,Instrumentsfor Surgery, HaemodialysisMachines-ArtificialKidney,Dialyzers, Ventilators-Humidifiers, Nebulizers and Aspirators, AnaesthesiaMachine.

UNIT-V ETHICSFOR BIOMEDICAL ENGINEERS (9)

Morality andEthics-A Definitionofterms,HumanExperimentation,Ethicalissuesinfeasibility studies,Ethicalissuesinemergency use,Ethicalissuesintreatmentuse, Codesofethicsforbio engineers, Ethical issues in tissue engineering.

16BEBME105 BASIC ELECTRICALAND ELECTRONICS ENGINEERING 3 0 0 3 100

Course Objectives

- To impart the basic knowledge about the Electric circuits.
- To understand the concept of Electrical Machines and Transformers.
- To understand the basic concepts of star and delta connections
- To understand the operation of AC and DC circuits
- To understand the working of Semiconductor devices and Digital Circuits.
- To impart the basic knowledge of Measuring Instruments and Electrical Installation.

Course Outcomes

At the end of this course, students will be able to

- Attribute the electric circuits with DC and AC excitation by applying various circuit laws.
- Attribute the electrical machines and transformer.
- To understand the working principle of electronic devices and circuits
- Evaluate the various digital circuits in real time applications.
- Analysis various semiconductor devices in real time applications.
- Reproduce the Measuring Instruments and Electrical Installation.

UNITI ELECTRICCIRCUITS& MEASUREMENTS

Ohm's Law–Kirchoff'sLaws–SteadyStateSolutionofDCCircuits–IntroductiontoAC CircuitsWaveformsandRMSValue–PowerandPowerfactor–SinglePhaseandThreePhase balanced Circuits.

UNITII ELECTRICAL MACHINES 9

Construction,PrincipleofOperation,BasicEquationsandApplicationsofDCGenerators,DC Motors, Single PhaseTransformer, single phaseinduction Motor.

UNITIII MEASURING INSTRUMENTS 9

OperatingPrinciplesofMovingCoilandMovingIronInstruments(AmmetersandVoltmeters), DynamometertypeWattmeters and Energymeters.

UNITIV SEMICONDUCTOR DEVICESAND APPLICATIONS 9

Characteristics of PN Junction Diode– Zener Effect– ZenerDiode and itsCharacteristics– Half wave and Fullwave Rectifiers– VoltageRegulation. Bipolar Junction Transistor– CB, CE, CC Configurations and Characteristics

UNITIV-DIGITAL ELECTRONICS 9

Numbersystems–binarycodes-logicgates-Booleanalgebra,laws& theorems-simplification ofBooleanexpression-implementationofBooleanexpressionsusinglogicgates-standard forms of Boolean expression.

16BEPH111
16BEPH211 **ENGINEERING PHYSICS LABORATORY** **0 0 4 2 100**

OBJECTIVES:

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- To analyse the relevant problems in engineering stream.

OUTCOMES:

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS– PHYSICS

1. Determination ofv elocity of soundand compressibilityof liquid– Ultrasonic interferometer.
2. Determination of wavelength of mercuryspectrum– spectrometergrating.
3. Determination of Young'smodulusofthematerial–Nonuniformbending(or)Uniform bending.
4. Determination ofViscosityof liquid– Poiseuille's method.
5. Spectrometer Dispersivepower of aprism.
6. Torsional pendulum– Determination of Rigidity modulus.
7. Particle sizedetermination using Diode Laser
8. Determination ofLaser parameters– Wavelength, and angle of divergence.
9. Determination ofacceptance angle inan optical fiber.
10. Determination of thickness of a thin wire– Air wedge method
11. Determination ofBand Gap of asemiconductor material.
12. Determination of Specific resistanceof a given coil of wire – Wheatstone Bridge

16BECH111
16BECH211 **ENGINEERING CHEMISTRY LABORATORY** **0 0 4 2 100**

COURSE OBJECTIVES

The goal of this course is for students :

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of alkalinity ions, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To acquaint the students with the determination of molecular weight of a polymer by viscometry
- To understand the use of Spectrophotometry
- To carried out different types of titrations for estimation of concerned in materials

COURSE OUTCOMES

Upon completion of the course the students will be able to

- The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
- Estimate the amount of alkalinity ions, hardness, chloride in water sample
- Measure molecular/system properties of conductance of solutions, EMF etc
- Acquaint the students with the determination of molecular weight of a polymer by visocometry
- Determine the corrosion rate of steel by weight loss method.
- Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

LIST OF EXPERIMENTS– CHEMISTRY

1. Estimation of alkalinity of Watersample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Watersample (Argentometric method)
4. Determination of corrosion rate byweightlossmethod.
5. ConductometricTitration (Simple acid base).
6. ConductometricTitration (Mixtureof weak and strong acids).
7. Conduct metricTitration using $BaCl_2$vs Na_2SO_4.
8. pH Titration (acid&base).
9. PotentiometricTitration (Fe^{2+}/ $KMnO_4$or $K_2Cr_2O_7$).
10. Estimation of Ferricion bySpectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).

12. Determination of molecular weight and degree of polymerization using Viscometry.

13. Determination of chemical oxygen demand.

16BEBME112 COMPUTER PRACTICE AND PROGRAMMING LABORATORY 1 0 4 3 100

COURSE OBJECTIVES

- To familiarize with open source office packages
- To write programs for Understand the basic concept of C Programming, and its different modules that includes conditional and looping expressions, Arrays, Strings and Functions.
- To discuss the fundamental principles of C Programming, as well as in-depth data and information processing techniques
- To solve problems, explore real-world software development challenges, and create practical and contemporary applications
- To learn about data structures
- To apply the string handling functions to solve the given problem

COURSE OUTCOMES

- Study logical structure of a computer program
- analyze logical structure of a computer program
- understand computer program, and different constructor to develop a program in 'C'language
- Utilize the basic data structures.
- Distinguish and use the fundamental data types.
- Utilize a simple programming environment, compile programs and interpret compiler errors.

THEORY:

Whatiscomputer- ComputerComponents- WhatisC- CCharacterset-Constants,Variablesand Keywords-Generalformof C Program- Relational andLogicalOperators- Selection Structures-If andnestedif-Switch Case-Loops-Definitionandtypes- Functions- Arrays-IntroductiontoStrings-Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheetandpresentation softwareinLinux

2. Programming in Scratch:

   Practicing fundamental concepts of programminglikesequence, selection decision statements, working of loops and eventdriven programming

3. C Programming:

   Practicingprogramstogetexposuretobasicdatatypes,algebraicexpressions,Conditional statements, Inputand Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Stringsand function, implementation ofpointers.

16BEBME113 ENGINEERING GRAPHICS 0 0 4 2 100

COURSE OBJECTIVES:

The goal of this course is for students :

- To prepare the students to design a system, component, or process to meet desired needs within realistic constraints such as manufacturability, andsustainability
- To Understand the application of industry standards and techniques applied in engineering graphics
- To Apply auxiliary or sectional views to most practically represent engineered parts
- To sketch freehand drawings and to efficiently communicate ideas graphically
- To understand Dimension and annotate two-dimensional engineering drawings
- To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineeringpractice

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Understand the engineering drawing and its place insociety.
- gain the knowledge of usage of Drawing instruments
- Expose the visualization of engineering drawing and engineering graphicsstandards.
- Expose the engineeringcommunication.
- Apply dimensions in drawings
- Use various graphic tools

UNIT I INTRODUCTION 9

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES 8

SCALES:Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING 9

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES 8

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS 8

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam) 3

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

16BECC151 **HUMANVALUES** **1 0 0 -100**

OBJECTIVE

- To create an awareness on Human Values.
- To instill Moral and Social Values and Loyalty
- To appreciate the rights of others.
- To create awareness on assessment of safety and risk
- To attain higher level of consciousness.
- To Develop the Self Discipline, and Self Control

OUTCOME

- Articulate what makes a particular course of action ethically defensible
- Assess their own ethical values and the social context of problems
- Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources and the objective presentation of data
- Demonstrate knowledge of ethical values in non-classroom activities, such as service learning, internships, and field work
- Possess emotional stability
- Develop good health. and fitness

UNIT I **3**

HumanlifeonEarth-ConceptofHumanValues-ValueEducation-Aimofeducationandvalueeducation-Typesofvalues-Components ofvalues– Attitudes–typesofattitudes

UNIT II **3**

SelfDevelopment:Selfanalysis–GoalSetting-ThoughtAnalysis–GuardingagainstAnger-Respectto age, experience, maturity, family members, neighbors,co-workers

UNIT III **3**

IndividualQualities –Truthfulness –Constructivity–Sacrifice–Sincerity-SelfControl –Altruism–

Tolerance-Scientific Vision– RegulatingDesire

UNIT IV **3**

MindCulture- ModernChallengesofAdolescent-Emotionsandbehavior-Sexandspirituality-Adolescent

Emotions-Meditation

UNIT V **3**

Bodyand Mind Fitness :(a)PhysicalExercises (b)Activities:(i)Moralization ofDesires(ii)Neutralizationof

Anger (iii)Eradication ofWorries (iv)Benefits ofBlessings

16BECC201A BUSINESSCOMMUNICATION 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students :

- To help students comprehend the role oflisteningskills in effective communication.
- To familiarizestudents with verbal andnon-verbalcommunication.
- To exposestudents to neutral accent.
- To develop emotional intelligenceskills in them for enhancing their self-esteem.
- To assist them in settinggoals and developing positive attitude.
- To enable students to acquiredecision making skills, problem solving skillsand assertiveskills.

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Design and deliverapersuasive presentation that convinces the audienceofthe topic's relevanceand
- overcomes resistance,using appropriate visual support and adhering to a specified time limit.
- Useastrategic communication model and critical thinking to identifyobjectives, analyzeaudiences,and choosethe most effectivestructure and style for delivering strategicallysound written and spoken messages.
- Practiceprinciples of effectivebusiness writing and document design in allwritten documents.
- Build an understanding of different organizationalcultures, business practices, and social norms to communicate moreeffectivelyin domestic andcross-cultural business contexts.
- Develop their soft skills and inter personal skills, which willmakethe transition from collegeto
- workplacesmoother andhelp them excel in theirjob.

UNITI

What is Business Communication?-Types of Communication– Formal and informal communication– Process of Communication-modes ofCommunication– Barriers to communication.

UNITII

Written Business Communication– Style-word-usage-organisation ofIdeas– mechanics ofwriting and fill upof forms -CoverLetter-Letter for Job Application-Letter ofComplaint-Memos-Resumes- Email-Reports Revising and proofreading-Advertising slogans-jargons- Description of Graphicsand visual aids-interpretation of graphs using expressions ofcomparison and contrast .

UNITIII

ReadingandUnderstandingthenewsarticles-OralBusinessCommunication-FirstImpressions-Attire– EffectivePresentationstrategies-Nuancesofdelivery –Controllingnervousnessandstagefright-Visual aidsPresentations- CapturingAudience- Tone-Behavior-TelephoneEtiquette-Non-verbal communication -Eye contact - Facial expressions - Posture - Gestures - Bodylangage– Etiquette-Organization ofpresentation– brain storming-Negotiations.

UNIT-IV

Differencebetween goalsand dreams -SMART goal setting -3 Ds ofgoal setting-Determination, DisciplineandDirection-Developingtherightattitude-Motivation-IntrinsicandExtrinsicmotivation- Dealing with change -Dedication-Taking responsibilities-Decision making.

UNIT-V

Intrapersonal skills-Self-analysis-Thought process–Interpersonal skills- Confidencebuilding-Resolving conflicts-Analytical skills-Team Building-Leadership skills- Planning/organizing-Abilityto work independently-Professional ethics -Communicating via e-mail. Ethical perspectives and their implications forresponsible communication-Proposal Presentation

16BECC201B TECHNICAL ENGLISH 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students :

- To motivate learners to acquire listening & speaking skills in both formal and informal context
- To focus on question forms & to make them understand the important of using question tags and also the functional use of transformation of sentences.
- To improve their reading habit and to train them in critical and analytical reading
- To equip them to write for academic as well as work place context
- To enable students to face interviews
- To improve business letter writing skill of the students

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
- Enhance them reading texts critically and analytically
- Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
- Enrich the ability to face interviews with confidence.
- Enable to write documents and formal written communication
- Admire and appreciate elegancy in communication.

UNIT-1 (10)

Listening-DifferencebetweenHearing&Listening–Listeningtoinformalconversation.**Speaking**-Spokenstructuresondifferentsituations-Introduction,Greeting,Commentsontopicslike Films,Games etc,Excuse,Request,Agreement,Disagreement,etc.,**Reading**–ExtensiveandIntensivereading.**Writing** –Reportwriting-Writinga coveringletter.**Grammar**–Regular&Irregular verbs-Kindsofsentences- Question tags. **Vocabulary**– Homonymsand Homophones.

UNIT-II (8)

Listening–NoteTaking-Improvinggraspingability.**Speaking**–Welcomeaddress-Voteofthanks-Masterofceremony.**Reading**–ActiveandPassivereading- Readingforvocabulary-Readingfora purpose.**Writing**-Writingareview(Filmreview)-Summary ofastory.**Grammar**-Modalverbs– Conjunction-Expression of causeand effect.**Vocabulary**-Phrasal verbs -Idioms.

UNIT– III (9)

Listening-Barrierstolistening(Physical,Psychological,Linguistic&Cultural).**Speaking**–Stress,Pause andIntonation.**Reading**–Rapidreading– Skimming, Scanningand Surveying.(SQ3R)**Writing**- Essay writing-Minutesofmeeting -Agenda–**Grammar**-ActiveandPassivevoice-Purposeexpression. **Vocabulary** -Same words used as noun and verb- Often misspeltand confused words.

UNIT-IV (8)

Listening –Listening to telephone conversation - Viewing model interviews. **Speaking** –Group Discussion - Correlation between verbal &non - verbal communication. **Reading** – Reading comprehension(short&longtext)-Readingjob advertisementsandprofileofacompany.**Writing**– Job application- Resume writing- Checklistpreparation.**Grammar** - Numericalexpressions– Collocations-**Vocabulary** -Singular and Plural (Nouns)

UNIT-V **(10)**

Listening–Typesoflistening-Improvinglisteningcomprehension.**Speaking**-Oralpresentation-Vocal communicationtechniques-Voice,quality,volume,pitchetc.,**Reading**-Notemaking-Makingnotes frombooks/anyformsofwritingmaterials.**Writing**-Describingprocess&products-Recommendation writing–Shortessayswriting-**Grammar**-Transformationofsentences(Simple,Compound&Complex). **Vocabulary** -Collection ofTechnical Vocabularies with their meanings.

Note: Students shall havehands on training in improving listening skill inthe languagelaboratory@ 2 periods per each unit.

16BECC202 ENGINEERING MATHEMATICS II 3 2 0 4 100

COURSE OBJECTIVES:

The goal of this course is for students :

- To have knowledge in integral calculus.
- Determine mathematical tools needed in evaluating multiple integrals and their usage.
- Utilize Gauss, Stokes and Greens theorems to simplify calculations of integrals and prove simple results.
- Apply the knowledge of Mathematics in various Engineering fields by making them to identify the functions in engineering problems as analytic function and their analyze as a function of a complex variables.
- Develop an understanding of the standard techniques of complex variable theory so as to enable the student to apply them with confidence.
- To specify some difficult integration that appear in applications can be solved by complex integration in application areas such as fluid dynamics and flow of the electric current.

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- solve problems in FluidDynamics, Theoryof Elasticity, heat and mass transfer etc.
- find the areas and volumes using multiple integrals
- improvetheir abilityinVector calculus
- exposeto the concept ofAnalytical function.
- applyComplex integration in their Engineering problems
- Apply various methods of solving differential equation which arise in many application problems.

UNIT-I MULTIPLE INTEGRALS (11)

Doubleintegral–Cartesiancoordinates–Polarcoordinates–Changeoforderofintegration–Triple integration in Cartesian co-ordinates – Areaas double integrals.

UNIT-II VECTOR CALCULUS (13)

Gradient,DivergenceandCurl–Directionalderivative–IrrotationalandSolenoidalvectorfields–Vector integration– Green's theorem, Gauss divergencetheoremand Stoke'stheorems (StatementOnly)- Surfaces
: hemisphereand rectangularparallelopipeds.

UNIT-III PARTIAL DIFFERENTIAL EQUATIONS (11)

Formationofpartialdifferentialequationsbyeliminationofarbitraryconstantsandarbitraryfunctions–Solutionofstandardtypesoffirstorderpartialdifferentialequations–Lagrange'slinearequation–Linear partial differential equations of second and higherorder with constantcoefficients.

UNIT-IVANALYTIC FUNCTIONS (12)

Analyticfunctions -Cauchy-RiemannequationsinCartesianandpolarforms– Sufficientconditionforan analyticfunction(StatementOnly)-Properties ofanalyticfunctions–Constructionsofananalytic function-Conformal mapping: w=z+a, az, 1/zand bilinear transformation.

UNIT-V COMPLEX INTEGRATION (13)

ComplexIntegration-Cauchy's integral theoremand integralformula(Statement Only)– Taylor series and Laurentseries-Residues–Cauchy'sresiduetheorem(StatementOnly)-ApplicationsofResiduetheorem to evaluatereal integralsaroundunitcircleand semicircle(excluding poles on the real axis).

16BECC204 ENVIRONMENTAL SCIENCES 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students :

- To give a comprehensive insight into natural resources.
- To impart knowledge on ecosystem and biodiversity.
- To educate the ways and means of the environment.
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures.
- To impart knowledge on the causes, effects and control or prevention measures of environmental pollution and natural disasters.

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Recognize the importance of natural resources (S)
- Associate themselves with the various ecosystems (S)
- Describe the importance of biodiversity (S)
- Identify and minimize the difference pollutions (S)
- Prioritize and analyses the social issues (S)
- Integrate the environmental principles in the projects undertaken in field of engineering and technology (A)

UNITIINTRODUCTIONTO ENVIRONMENTALSTUDIESANDNATURALRESOURCES (9)

Definition,Scope andImportance–Needfor publicawareness -Forest resources: Use and over-exploitation,deforestation-Waterresources-Use and over-utilization of surface and ground water, floods, drought,conflictsover water-Land resources-Landasa resource,land degradation,maninduced landslides,soilerosionanddesertification–Mineralresources:Use andexploitation,environmentaleffects of extractingandusingmineralresources-Foodresources-Worldfoodproblems,changescausedby agricultureandovergrazing,effectsofmodernagriculture-Energy resources-Growingenergyneeds, renewableandnonrenewableenergysources,useofalternateenergy sources-roleofanindividualin conservation ofnatural resources.

UNITII ECOSYSTEM (9)

Chemistry andEnvironment-Environmental segments, Composition and Structure of atmosphere- Conceptofan ecosystem- Structure,components andfunctionofan ecosystem Energy flow in the ecosystem–Foodchain,FoodwebandEcologicalpyramids,StructureandfunctionofTerrestrial ecosystem (Forest,Desert andGrasslandecosystem) andAquaticecosystem (FreshwaterandMarine ecosystem)

UNITIII BIODIVERSITY (9)

Introductionto biodiversity,Definition-Genetic diversity, Species diversityand Ecosystem diversity,BiogeographicalclassificationofIndia,Importance ofbiodiversity-Value of biodiversity - Hot Spotsofbiodiversity-Threats to biodiversity -Endangered and EndemicSpecies of India – Conservationofbiodiversity-In-SituandEx-Situconservationofbiodiversity.

UNITIV ENVIRONMENTALPOLLUTION **(9)**

Definition–causes,effectsandcontrolmeasuresofAir pollution, Water pollution, Soil pollution, Marinepollution,NoisepollutionandThermalpollution.Solidwastemanagement-causes,effects and controlmeasures of urban and industrial wastes– Role of an individual in preventionof pollution–Disastermanagement-earthquake,tsunami,cycloneandlandslides.

UNITV SOCIALISSUESANDENVIRONMENT **(9)**

From UnsustainabletoSustainabledevelopment,Urbanproblemsrelatedtoenergy sources, Water conservation,Rainwaterharvestingand Watershedmanagement,Resettlementandrehabilitationof people,itsproblemsandconcerns,Environmentalethics-Issuesandpossible solutions-Climate change- Green houseeffect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- HumanRights-Valueeducation, Role of Information Technology in EnvironmentandHumanhealth-Populationgrowth,Variationof populationamongnations-Population explosion.

16BEBME205 MATERIALS SCIENCE 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students

- To inculcate the fundamental principles and concepts of magnetic materials for different engineering applications.
- To impart basic knowledge of superconductivity and associated applications.
- To serve the fundamental concepts of dielectric materials for diverse applications in energy engineering.
- To divulge the basics of crystals, their structures and different crystal growth techniques.
- To make the students familiar in the fundamentals of ceramics, composites and nanomaterials.
- To learn about advanced materials and characterization

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Explain the ideas of classical and quantum electron theories and energy band structures.
- Illustrate the basics of semiconductor physics and its related concepts.
- Compare the different magnetic materials, its properties and infer its role in various fields.
- Identify the properties of superconducting materials and its engineering applications.
- Extend the various polarization techniques and applications of dielectric materials.
- Summarize the basics of nano structures and synthesizing techniques

UNITI CONDUCTING MATERIALS (9)

Conductors–classicalfreeelectrontheory ofmetals–Electricalandthermalconductivity–Wiedemann–Franzlaw–Lorentznumber–Drawbacksofclassicaltheory–Quantumtheory –Fermidistribution function–EffectoftemperatureonFermiFunction–Density ofenergystates–carrierconcentrationin metals.

UNITII SEMICONDUCTINGMATERIALS (9)

Intrinsicsemiconductor–carrierconcentrationderivation–Fermilevel–VariationofFermilevelwith temperature–electricalconductivity– bandgapdetermination–extrinsic semiconductors–carrier concentrationderivationinn-type semiconductor–variationof Fermilevelwithtemperature andimpurity concentration– compound semiconductors– Halleffect–Determination ofHallcoefficient– Applications.

UNITIIIMAGNETIC ANDSUPERCONDUCTING MATERIALS (9)

Originofmagneticmoment–Diaandparamagnetism–Ferromagnetism–Domaintheory–Hysteresis–soft and hard magneticmaterials– anti– ferromagneticmaterials– Ferrites– applications. Superconductivity:properties-Typesofsuperconductors–BCStheoryofsuperconductivity(Qualitative) -High Temperaturesuperconductors– Applications of superconductors– Magneticlevitation.

UNITIVDIELECTRIC MATERIALS (9)

Electricalsusceptibility–dielectricconstant–electronic,ionic,orientationalandspacechargepolarization –frequency andtemperaturedependenceofpolarisation–internalfield–Claussius–Mosottirelation (derivation)–dielectric loss–dielectricbreakdown–Applications ofdielectricmaterials–ferroelectricity and applications.

UNIT V ADVANCED MATERIALS (9)

Metallic glasses: preparation, properties and applications.Shape memory alloys (SMA): Characteristics, properties of NiTi alloy, applications. Composite materials, Aircraft materials and non-metallic materials. Nano materials: synthesis – Physical and chemical vapour deposition – ball milling - properties of nanoparticles and applications. Carbon nanotubes: structure – properties and applications.

16BEBME206 ELEMENTS OF MECHANICAL ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES:
The goal of this course is for students

- To impart the basic knowledge of various basic fields of mechanical engineering.
- To Study about basic manufacturing processes.
- To study about basic machining process.
- To study about power plants.
- To study about automobile engineering
- To understand the concept of energy engineering

COURSE OUTCOMES:
Upon completion of this course, students will be able to:

- Infer the basic knowledgeof various basic fields of mechanicalengineering.
- Demonstrate various manufacturing processes.
- Understand the machining process.
- Discuss about power plants.
- Understand simple problems in Powertransmission of automobile engineering
- Explain about energy engineering

INTRODUCTION(Not included for examination)
EngineeringandTechnology-HistoryofMechanicalEngineering-Mechanics-Staticsanddynamics- Broad areas in Mechanical Engineering.

UNITI MANUFACTURING PROCESSES

FOUNDRY- Principles- Patterns- Types,Molding Processes,Cupola andInduction Furnaces.METAL FORMING-Principles-Hotandcoldworking ofmetals-Forging,rolling,extrusionandwiredrawing, sheetmetaloperations. WELDING- Principles-Oxy-Acetylene WeldingandManualMetalArcWelding, Brazing and Soldering.

UNITII MACHINETOOLS
Machiningprinciples-Constructionandworkingprinciplesofbasicmachinetools -Lathe,Drilling, Shaper, Planerand Milling machine.Introduction to CNC machines.

UNIT III AUTOMOBILE ENGINEERING &POWER TRANSMISSION SYSTEMS
Workingprincipleofpetrolanddieselengines-Fourstrokeandtwostrokecycles-Comparisonbetween fourstrokeandtwostrokeengines-Workingprincipleofsimplecarburetor-Lubricationsystemand cooling system. Beltdrives-Flat,V-belts-Rope,Chaindrive.Gears-Spur,Helical,Bevel,WormandwormwheelandRackand Pinion– Simple problems in Powertransmission.

UNIT IV ENERGY ENGINEERING&HYDRAULICMACHINES
IntroductiontoBoilers-WorkingprincipleofThermal,Hydro-ElectricandNuclearPowerPlants-Meritsand demerits.Solar–Wind powerplants.

Turbines-Impulseturbine-Peltonwheel,Reactionturbines-KaplanandFrancisturbines-Pumps-Working principle ofReciprocatingpumps and Centrifugalpumps.

UNIT V REFRIGERATION AND AIR-CONDITIONING
TerminologyofRefrigerationandAirConditioning-BasicprinciplesofVapourCompressionandAbsorption Refrigeration System– Windowand SplitRoomAirConditioners.

TEXT BOOKS:

S.No	Titleofthe book	Author(s) Name	Publisher	Yearof Publication

2	Basic	Rajput, R.K	Laxmi Publications (P)	2008

16BEBME212 ENGINEERING WORKSHOP PRACTICE 0 0 4 2 100

COURSE OBJECTIVES:

The goal of this course is for students

- To provide exposure to the students with hands on experience on various basic engineering practices in civil, mechanical, electrical and electronics engineering.
- To understand carpendry works
- To understand Plumbing works
- To understand smithy and foundry works
- To classify various tools used in carpendry ,plumbing and foundry works
- To understand basic concept of machining

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Ability to fabricate carpentry components and pipe connections including plumbing works.
- Ability to use welding equipments to join the structures.
- Demonstrate carpendry works
- Demonstrate Plumbing works
- Demonstrate smithy and foundry works
- Ability to fabricate electrical and electronics circuits

PART – A (MECHANICAL)

1. **WELDING**
   i. Preparation of arc welding of butt joints, lap joints and tee joints.
2. **BASIC MACHINING**
   i. Simple Turning and Taper turning
   ii. Drilling and Tapping
   iii. Sheet Metal Work
   iv. Model making – Trays, funnels, etc.
3. **DEMONSTRATION ON**
   i. Smithy operations
   ii. Foundry operations
   iii. Plumbing Works
   iv. Carpentary Works

PART –B (ELECTRICAL & ELECTRONICS)

4. **ELECTRICAL ENGINEERING**
   i. Study of electrical symbols and electrical equipments.
   ii. Construct the wiring diagram for Stair case wiring
   iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter.
   iv. Measurement of electrical quantities – voltage, current, power & power factor in R load.
   v. Measurement of energy using single phase energy meter.
5. **ELECTRONICS ENGINEERING**
   i. Study of Electronic components– Resistor (color coding), capacitors and inductors.
   ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
   iii. Study of logic gates AND, OR, NOT, NOR and NAND.

16BEBME251 **APTITUDE TRAINING** **1 0 0 - 100**

OBJECTIVE:

- To achieve the competencies inAnalyticalability, Decisionmaking
- To enhance the employability skills among the students to meet out the corporate expectations.
- To improve the industry – institute selection ratio
- To enhance the students’ interest towards Industry expectations
- to enhance the students with reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information.
- To apply probabilistic reasoning to draw conclusions, to make decisions, and to evaluate outcomes of decisions.

OUTCOMES:

- Understand the basic concepts of quantitative ability
- Understand the basic concepts of logical reasoning skills
- Solve campus placements aptitude papers
- Compete in various competitive exams
- Acquire satisfactory competency in use of VERBAL REASONING
- Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability

UNIT I **5**
Introduction,SpeedMath’s,ProblemsonNumbers,Averages,RatiosandProportions,Problemson Ages

UNIT II **5**
Percentage, DataInterpretation, Profitand loss, Simple and CompoundInterest

UNIT III **5**
TimeSpeedandDistance,TimeandWork,PipesandCistern,Geometry,Probability,Permutationand Combinati

TOTAL: 15

16BEBME301A OPTIMIZATION AND CALCULUS OF VARIABLES 3 2 0 4 100

COURSE OBJECTIVES:

- To develop analytical skills for solving engineering problems
- To teach the students the basic concepts of LPP, Transportation and Assignment problems
- To make the students to study about the Integer Programming and Network Analysis
- To teach the students the basic concepts PERT & CPM
- To teach the students the basic concepts of Hungarian Algorithm
- To make students understand the concept of Branch Bound Method

COURSE OUTCOMES:

- solve problems in different environments and develop critical thinking
- build and solve Transportation Models
- analyse Assignment Models,
- solve integer programming and Nonlinear programming
- understand Hungarian Algorithm
- Analyse and apply branch bound method in engineering problems

UNIT I LINEAR PROGRAMMING PROBLEM (12)

Formulation of LPP - Graphical Method - Simplex Method - Artificial variable technique and two phase simplex method. Duality - Dual and simplex method - Dual Simplex Method .

UNIT II TRANSPORTATION AND ASSIGNMENT PROBLEM (12)

Transportation Model- finding initial basic feasible solutions- moving towards optimality- Degeneracy. Solution of an Assignment problem - Hungarian Algorithm.

UNIT III INTEGER PROGRAMMING (11)

Integer Programming Problem – Gromory's fractional cut Method – Branch Bound Method

UNIT IV NETWORK ANALYSIS (11)

PERT & CPM- network diagram-probability of achieving completion date- crash time- cost analysis.

UNIT V CALCULUS OF VARIABLES (14)

Calculus of Variations covering, Basic definition, Simplest problem, Isoperimetric problem, Problems with Higher order derivatives, Euler Lagrange Equation, Weierstrass-Erdmann conditions; Pontryagin Maximum Principle; Transversality condition; Applications

16BEBME301B LINEAR ALGEBRA AND SPECIAL FUNCTIONS 3 2 0 4 100

COURSE OBJECTIVES:

- To introduce the basic concepts of vector space
- To study about the linear transformations
- To introduce the concepts of inner product spaces
- To learn about the concepts of hyperbolic, beta and gamma functions
- To learn about the concepts of Bessel functions
- To provide a firm basis for further reading and study in the subject.

INTENDED OUTCOMES:

The student will be able to

- To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- To apply the fundamental concepts in their respective engineering fields
- To visualize linear transformations as matrix form
- To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- To articulate the importance of Linear Algebra and its applications in branches of Mathematics
- To be able to build and solve the special functions

UNIT I VECTOR SPACES (12)

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II LINEAR TRANSFORMATIONS ` (12)

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT III INNER PRODUCT SPACES (12)

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

UNIT IV HYPERBOLIC FUNCTIONS, BETA AND GAMMA FUNCTIONS (12)

Hyperbolic functions: Hyperbolic functions and Inverse Hyperbolic functions – Identities – Real and imaginary parts – solving problems using hyperbolic functions.

Beta And Gamma Functions : Definitions – Properties – Relation between beta and gamma integrals – Evaluation of definite integrals in terms of beta and gamma functions.

UNIT V BESSEL FUNCTIONS (12)

Bessel Functions – Preliminaries – Definitions – Bessel Differential Equation – Differential recurrence relations – the pure recurrence relation – A generating function – Bessel's integral – Index half and odd integer.

16BEBME302 DIGITAL ELECTRONICS 3 2 0 4 100

COURSE OBJECTIVES:

The goal of this course is for students

- To explain the methods for simplifying Booleanexpressions
- Tooutlinetheformalproceduresfortheanalysisanddesignofcombinationalcircuitsandsequential circuits
- To introduce the design of various combinational digital circuits using logic gates
- To illustrate the concept of synchronous sequentialcircuits
- To bring out the analysis and design procedures for asynchronous sequential circuits
- To summarize the concept of memories and programmable logicdevices.

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Demonstrate the methods for simplifying Booleanexpressions
- Design various combinational digital circuits using logic gates.
- Use Boolean algebra and apply it to digital systems.
- Explain the formal procedures for the analysis and design of combinational circuits and sequentialcircuits
- Interpret the concept of synchronous and asynchronous sequentialcircuits
- Apply the concept of memories and programmable logicdevices.

UNIT-I NUMBER SYSTE MS AND BO OLEAN ALGEBRA (12)

Binary, Octal, Decimal, Hexadecimal-Number base conversions – complements – signed Binar y numbers. Binar y Arithmetic- Binar y codes: Weighted –BCD-2421-Gra y code-Excess 3 code-ASCII – Error detecting code – conversion from one code to another-Boolean postulates and laws –De-Morgan's Theorem- Principle of Dualit y- Boolean expression – Boolean function- Minimization of Boolean expressions – Sum of Products (SOP) –Product of Sums (POS)-Minterm- Maxterm- Canonical forms – Conversion between canonical forms –Karnaugh map Minimization – Don't care conditions.

UNIT-II LOGIC GATES AND COMBINA TIONAL CIRCUITS (12)

LOGIC GATES: AND, OR, NOT, NAND, NOR, Exclusive – OR and Exclusive – NOR- Implementations of Logic Functions using gates, NAND –NOR implementations –Multi level gate implementations- Multi output gate implementations. TTL and CMOS Logic and their characteristics – Tristate gates.

COMBINATIO NAL CIRCUITS: Design procedure – Adders-Subtractors – Serial adder/ Subtractor - Parallel adder/ Subtractor- Carr y look ahead adder- BCD adder- Magnitude Comparator- Multiplexer/ Demultiplexer- encoder / decoder – parit y checker – code converters. Implementation of combinational logic using MUX.

UNIT-III SEQUEN TIAL CIRCUIT (12)

Flip flops SR, JK, T, D and Master slave – Characteristic table and equation –Application table – Edge triggering – Level Triggering –Realization of one flip flop using other flip flops –As ynchronous / Ripple counters – S ynchronous counters –Modulo – n counter –Classification of sequential circuits – Moore and Meal y -Design of S ynchronous counters: state diagram- State table –State minimization – State assignment- ASM-Excitation table and maps-Circuit implementation - Register – shift registers- Universal shift register – Shift counters – Ring counters.

UNIT-IV ASYNCH RONOUS SEQUENTIAL CIRCUITS (12)

Design of fundamental mode and pulse mode circuits – primitive state / flow table – Minimization of primitive state table –state assignment – Excitation table – Excitation map- c ycles – Races –Hazards: Static –Dynamic –Essential –Hazards elimination.

UNIT-V MEMORY DEVICES (12)

Classification of memories –RAM organization – Write operation –Read operation – Memory cycle - Timing wave forms – Memory decoding – memory expansion – Static RAM Cell-Bipolar RAM cell – MOSFET RAM cell –Dynamic RAM cell –ROM organization - PROM –EPROM –EEPROM – EAPROM –Programmable Logic Devices – Programmable Logic Array (PLA)- Programmable Array Logic (PAL) – Field Programmable Gate Arrays (FPGA). Implementation of combinational logic using ROM, PAL and P LA

16BEBME303 C++ AND DATA STRUCTURES 3 0 0 3 100

COURSE OBJECTIVES:
The goal of this course is for students:

- To analyse Object Oriented Programming concepts and basic characteristics ofC++
- To design problem solutions using Object Oriented Techniques.
- To infer the principles of packages, inheritance andinterfaces
- To define exceptions and use I/Ostreams
- To develop a C++ application with threads and genericsclasses
- To design and build simple Graphical User Interfaces

COURSE OUTCOMES:
Upon completion of this course, the student will be able to

- Utilize a simple Java programming environment, compile programs and interpret compiler errors.
- Distinguish and use the fundamental datatypes.
- Design classes and organise them intopackages.
- Utilize the basic datastructures.
- Compare the basic search and sortalgorithms.
- Apply appropriate data structure and algorithm to solve aproblem.

UNIT – I INTRODUCTION TO DATA STRUCTURES
Abstract data types – Arrays – Static, Dynamic and Generic arrays. Strings – Fixed and variable size – static and dynamic strings.

UNIT – II LINKED LISTS
Dynamic storage management – singly and doubly linked list – Stack – Application of stack – Fixed, variable and Generic stack – queues – queue based on Dynamic linked list – Trees – Binary Trees – Graphs – Warshall's Algorithms – Shortest paths.

UNIT – III OBJECTS ORIENTED PROGRAMMING
objects and classes – methods, messages, encapsulation, abstraction, inheritance, polymorphism, dynamic building. Traditional approach Versus object orientation; benefits of object orientation – flexibility in software development – reusability – extensibility – maintainability.

UNIT – IV OBJECTS AND CLASSES
specifying classes – using – C++ objects and data types – constructors and destructors – object as function arguments – structures and classes. Array fundamentals – array as class member data – array of objects. Structures – simple structure – accessing structure member – structure within structure – structure and classes – Function overloading – Inline function – Virtual function and polymorphism.

UNIT – V OPERATOR OVERLOADING
Overloading unary operator – overloading binary operator – data conversion. Inheritance – derived class and base class – derived class constructors – public and private inheritance – level of inheritance. C++ graphics – text – mode graphics functions – graphics – mode graphics functions – colors – rectangles and lines – polygons and inheritance – text in graphics mode – Addresses and pointers, Simple file operations: streams – string I/O – character I/O.

16BEBME304 ELECTRONIC DEVICES AND CIRCUITS 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students :

- To discuss the operational characteristics of a Semiconductor in Equilibrium and Non- Equilibrium conditions.
- To aware with the structure of basic electronic devices.
- To understand the operation and applications of electronic devices.
- To explain the working of PN junction diodes and special purposediodes.
- To define the basic working of BJT and FET both in ideal and non- idealconditions.
- To improve knowledge about the working of Rectifiers and Voltageregulators.

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Demonstrate the fundamental concepts of electronicdevices
- Build an electronic circuits using transistors.
- Analyze any electronic circuits logically
- Understand the specifications of regulators and power supply circuits.
- Apply positive feedback principle and design oscillators.
- Design multivibrator circuits.

UNIT I SEMICONDUCTOR DIODES AND SPECIAL PURPOSE DIODES (10)

Overview on Physics and Properties of Semiconductors: Intrinsic semiconductor – extrinsic semiconductor – Fermi level in an intrinsic semiconductor – conductivity of a metal, intrinsic semiconductor and extrinsic semiconductor. Semiconductor diodes : Formation of PN junction – working principle – VI characteristics – PN diode currents – diode current equation – diode resistance – transition and diffusion capacitance. Special purpose diodes : Zener diode–varactor diode – schottky diode, LED.

UNIT II BIPOLAR TRANSISTORS (8)

Bipolar Transistors: Construction – working – transistor currents –transistor configurations and input-output characteristics – Early effect (base width modulation) – transistor as an amplifier Transistor as a switch.

UNIT III FIELD EFFECT TRANSISTORS (9)

Field-Effect Transistors: construction, working and VI characteristics of JFET – comparison of BJT and JFET – MOSFET – enhancement MOSFET, depletion MOSFET, their working principle and VI characteristics, comparison of MOSFET with JFET, comparison of D MOSFET with E MOSFET, CMOS, CCD.

UNIT IV DC POWER SUPPLIES (9)

Rectifiers and Filters: Block schematic of a typical DC power supply, single phase HWR, FWR, full-wave bridge rectifier, power supply filters (ripple factor and efficiency analysis), Voltage regulators: voltage regulation, Zener diode shunt regulator, transistor series regulator, transistor shunt regulator, switching regulators.

UNIT V OSCILLATORS AND MULTIVIBRATORS (9)

RC phase shift oscillator, Wein-bridge oscillator, Hartley oscillator, Colpitts oscillator, types of multivibrators, Astable, monostable and bistable multivibrators.

16BEBME305 ANATOMY AND HUMAN PHYSIOLOGY 3 0 0 3 100

COURSE OBJECTIVES

The goal of this course is for students

- To discuss all the organelles of an animal cell and theirfunction.
- To perceive structure and functions of the various types of systems of humanbody.
- To outline about eye, ear and Endocrine glands ofhuman
- To learn organs and structures involving in system formation and functions.
- To understand all systems in the human body.
- Toinferbasicunderstandingoftheinterconnectionofvariousorgansystemsinhumanbody

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Explain basic structure and functions of cells and itsorganelles
- Demonstrate about anatomy and physiology of various organsystems
- Illustrate eye, ear and Endocrine glands of human
- Explain the interconnect of various organ systems in humanbody
- Enlighten organs and structures involving in system formation and functions.
- Elucidate special senses in the human body.

UNIT I CELL (9)

StructureofCell– Organellesanddescription–Functionofeachcomponentofthecell– Membranepotential–ActionPotential–Generation andConduction –Electrical Stimulation. BloodCell–Composition –OriginofRBC–BloodGroups–EstimationofRBC,WBCandPlatelet.

UNIT II CARDIACANDNERVOUSSYSTEM (9)

Heart,Majorbloodvessels–CardiacCycle–BloodPressure–FeedbackControlforBloodPressure–NervousControlofHeart- Cardiacoutput–CoronaryandPeripheral Circulation –StructureandfunctionofNervous tissue–Neuron -Synapse - Reflexes -Receptors -Brain-Brainstem -Spinal cord–Reflexaction– VelocityofConductionofNerveImpulses–AutonomicNervousSystem.

UNIT III RESPIRATORY SYSTEMANDMUSCULOSKELETALSYSTEM (9)

Physiological aspects ofrespiration –Trachea andlungs -Exchange ofgases –Regulation ofRespiration-Disturbance ofrespirationfunction -Pulmonary function test-Muscles-tissue-types-structure ofskeletalmuscle-typesofmuscleandjoints.

UNIT IV DIGESTIVEANDEXCRETORY SYSTEM (9)

OrganisationofGISystem,Digestionandabsorption –Movements ofGItract–Intestine-Liver-Pancreas-StructureofNephron–Mechanism ofUrineformation–UrineReflex–SkinandSweatGland–Temperature regulation.

UNIT V EYE,EAR,ENDOCRINE GLANDS (9)

Optics ofEye–Retina –Photochemistry ofVision –Accommodation -Neurophysiology ofvision –EOG. Physiologyofinternalear–MechanismofHearing–AuditoryPathway,HearingTests-Endocrineglands.

Total : 45

16BEBME306 BIOCHEMISTRY 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students

- To study about the biochemistry of living cells, metabolism of biomolecules and the methods of investigation and diagnostic tools.
- To summarize the role of these biomolecules by providing basic information on specific metabolic diseases and disorders of these biomolecules.
- To analyse the structural and functional properties of carbohydrates, proteins and lipids
- To discuss about functions of each organelles and Transport of substances across biological membranes
- To infer about the biochemistry of living cells
- Demonstrate the concepts of biochemistry of living cells

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Understand the concepts of biochemistry of living cells
- Understand the concepts of metabolism of carbohydrates
- Understand the concepts of protein biochemistry
- Understand the concepts of biochemistry of lipids
- Understand the concepts of investigation of metabolism.
- Understand the structural and functional properties of various organalles and biomolecules

UNIT I BIOCHEMISTRY OF LIVING CELLS (9)

Biochemistry of living cells, sub cellular fractionation using the differential centrifugation method. Functions of each organelles, redox potential, oxidative phosphorylation, Transport of substances across biological membranes.

UNIT II CARBOHYDRATES (9)

Carbohydrates: Definition, classification, biological functions; glycolysis, TCA cycle, glycogenesis, glycogenolysis, Diabetes Mellitus – Blood Sugar analysis and glucose tolerance test.

UNIT III PROTEINS (9)

Proteins: Definition, classification, architecture, biological functions; Classification of amino acids, Oxidative and non oxidative deamination, transamination, decarboxylation, urea cycle, Purification of proteins.

UNIT IV LIPIDS (9)

Lipids: Definition, classification, biological functions; biosynthesis of long chain fatty acids, degradation of fatty acids - oxidation of fatty acids.

UNIT V METHODS OF INVESTIGATION OF METABOLISM (9)

Liver function tests, Real function tests, Gastric function tests. Diagnostic tools: Principles and applications of photometry, spectrophotometry, flurometry, flame photometry, automation in clinical laboratory. Uses of isotopes in biochemistry.

16BEBME311 CIRCUITS AND DEVICES LABORATORY 003 2 100

The goal of this course is for students :

- To analyze the Biasing network for BJT and FET, transient analysis and frequency response of BJT and FET in single stage and Oscillator
- To develop the ability to analyze and design analog electronic circuits using discrete components.
- To outline the amplitude and frequency responses of electronic circuits
- To simplify the operation of Oscillators and wave form generators.
- Understand the specifications of power supply circuits.
- To understand the concept of AC to DC conversion

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Utilize the fundamental concepts of electronic devices
- Build basic electronic circuits with BJT and FET
- Deduct the circuit defects
- Design oscillator circuits
- Understand wave shaping concepts
- Demonstrate halfwave and full wave rectifier.

1. Characteristics of PN diode
2. Characteristics of Zener diode
3. Input and Output Characteristics of BJT
4. Drain and transfer characteristics of JFET
5. Characteristics of UJT
6. Design of RC coupled amplifier
7. Hartley Oscillator
8. Colpitt Oscillator
9. AstableMultivibrator
10. Clippers and Clampers
11. Half wave rectifier– with and without filter
12. Full wave rectifier – with and without filter

.

16BEBME3 BIOCHEMISTRY AND HUMAN PHYSIOLOGY LABORATORY 0 0 3 2 100

Course Objectives

The goal of this course is for students

- To estimate and quantify biomolecules.
- To divide amino acid molecules
- To evaluate and interpret of biochemical parameter
- To understand differential count of WBCs
- To understand the Ishihara chart
- To understand the auditory conduction

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Solve the quantitative test of different biomolecules
- Label the separation technology of proteins and aminoacids.
- Blood group identification
- Estimate of blood glucose
- Estimaten of Hemoglobin
- Perceive the Biochemistry laboratory functional parameters

1. Generaltestsforcarbohydrates,proteinsand lipids.
2. Preparationofserumandplasmafromblood.
3. Estimationofbloodglucose.
4. Estimationofserumcholesterol.
5. AssayofSGOT/SGPT.
6. Estimationofcreatinineinurine.
7. Electrophoresisofserumproteins.
8. Separationofaminoacidsusingthinlayerchromatography.
9. ESR,PCV,MCH,MCV,MCHC,totalcountofRBCsandHemoglobinestimation
10. Differential count ofdifferentWBCsandBloodgroupidentification
11. IshiharachartforcolorblindnessandSnellen'schartfor myopiaandhyperopia–bylettersreadingandopthalmoscopetoviewretina.
12. Weber'sandRinnee'stestforauditoryconduction.

TOTAL:60

16BEBME313 Course Oriented project-I 0 0 2 1 100

16BEBME351 SOFT SKILLS 1 0 0 - 100

Course Objectives :

- To encourage the all round development of students by focusing on soft skills.
- To make the engineering students aware of the importance, the role and the content of soft skills
- To give instruction, knowledge acquisition, demonstration and practice on soft skills
- To develop and nurture the soft skills of the students through individual and group activities.
- To expose students to right attitudinal and behavioural aspects
- To build the right attitudinal through activities

Course Outcomes:

On completion of the course, student will be able to

- Effectively communicate through verbal/oral communication and improve the listening skills
- Write precise briefs or reports and technical documents .
- Actively participate in group discussion / meetings / interviews and prepare & deliver presentations
- Become more effective individual through goal/target setting, self motivation and practicing creative thinking.
- Function effectively in multi-disciplinary and heterogeneous teams
- Handle team work, Inter-personal relationships, conflict management and leadership quality

People skills – social skills – communication skills – character traits – attitudes – career attributes – emotional intelligence coefficient – common sense – cognitive or emotional empathy– interpersonal skills – courtesy – flexibility – integrity – interpersonal skills – positive attitude – professionalism – responsibility – team work – work ethics.

TOTAL:15HOURS

16BEBME401 PROBABILITY AND STATISTICS 3 2 0 4 100

COURSE OBJECTIVES:

The goal of this course is for students

- To construct the required skill to apply the statistical tools in engineeringproblems.
- To explain the basic concepts of probability and randomvariables.
- To discuss the basic concepts of two dimensional randomvariables.
- To build the knowledge of testing of hypothesis for small and large samples which plays an important role in real lifeproblems.
- To design an experiment
- To infer the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical qualitycontrol.

COURSE OUTCOMES:

Upon successful completion of the course, students will be able to:

- Explain the fundamental concepts of probability and standard distributions which can describe real lifephenomenon.
- Explain the basic concepts of one and two dimensional random variables and their applications inengineering.
- Apply the concept of testing of hypothesis for small and large samples in real life problems.
- Apply the basic concepts of classifications of design of experiments in the fieldof agriculture and statistical qualitycontrol.
- Discuss the notion of sampling distributions and statistical techniques used in engineering and managementproblems.
- Discuss about the techniques in quality control that model engineeringproblems.

UNIT I RANDOM VARIABLES (9)

Discrete and continuous random variables - Properties- Moments - Moment generating functions and their properties. Binomial, Poisson ,Geometric, Negative binomial, Uniform, Exponential, Gamma, and Weibull distributions.

UNIT II TWO DIMENSIONAL RANDOM VARIABLES (9)

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and Regression – function of a random variable-Transformation of random variables - Central limit theorem.

UNIT III TESTING OF HYPOTHESIS (9)

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions - Tests for independence of attributes and Goodness of fit.

UNIT IV DESIGN OF EXPERIMENTS (9)

Analysis of variance – One way classification – CRD - Two – way classification – RBD - Latin square.

UNIT V RELIABILTY AND QUALITY CONTROL (9)

Concepts of reliability-hazard functions-Reliability of series and parallel systems- control charts for measurements (x and R charts) – control charts for attributes (p, c and np charts)

TOTAL : 45

16BEBME402 LINEAR INTEGRATED CIRCUITS 3 0 0 3 100

COURSE OBJECTIVES

The goal of this course is for students :

- To discuss the basic concepts of linear integratedcircuits
- To study the circuit configuration and introduce practical applications of linear integrated circuits.
- To introduce the concept of PassiveandActivefilters
- To infer the theory and applications ofPLL
- To make use of the theory of ADC and DAC using OP –AMPS
- To demonstrate the concepts of waveform generation and introduce some special functionICs

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Define linear and non linear applications of OP – AMPS
- Create waveforms using OP – AMPCircuits
- Ability to design new analog linear circuits and develop linear IC based Systems.
- Understand the concept of application of waveform generators
- Design ADC and DAC using OP –AMPS
- Analyze special functionICs

UNIT I OPERATIONAL AM PLIFIER CHARACTERISTICS (9)

Op-amp symbol, terminals, packages and specifications - Block diagram Representation of op-amp- Ideal op-amp & practical op-amp - Open loop & closed loop configurations – DC & AC performance characteristics of op-amp – Frequency compensation - Noise – Differential amplifiers -Electrical Characteristics and internal schematic of 741 op - amps.

UNIT II OPAMP APPLICATIONS (9)

Basic op-amp circuits: Inverting & Non-inverting voltage amplifiers -Voltage follower -Summing, scaling & averaging amplifiers - AC amplifiers.Linear Applications: Instrumentation Amplifiers-V-to-I and I-to-V converters-Differentiators and Integrators. Non-linear Applications: Precision Rectifiers – Wave Shaping Circuits (Clipper and Clampers) – Log and Antilog Amplifiers – Analog voltage multiplier circuit and its applications - Comparators and its applications.

UNIT III WAVEFORM GENERATORS AND PLL (9)

Waveform Generators: Sine-wave Generators – Square / Triangle / Sawtooth Wave generators. IC 555 Timer: Monostable operation and its applications, Astable operation and its applications P LL: Operation of the Basic P LL-Closed loop analysis of P LL-Voltage Controlled Oscillator-PLL Applications

UNIT IV ACTIVE FILTERS & VOLTAGE REGULATOR (9)

Filters: Comparison betweenPassive and Active Networks-Active Network Design – Filter Approximations-Design of LPF, HPF, BPF and Band Reject Filters – State Variable Filters Voltage Regulators: Basics of Voltage Regulator – Linear Voltage Regulators using Op-amp – IC Regulators (78x x, 79xx, LM 317, 723)-Switching Regulators.

UNIT V DATA CONVERSION DEVICES (9)

Digital to Analog Conversion: DAC Specifications – DAC circuits – Weighted Resistor DAC-R-2R Ladder DAC- Inverted R-2R Ladder DAC Monolithic DAC Analog to Digital conversion: ADC specifications-ADC circuits-Ramp Type ADC-Successive Approximation ADC-Dual Slope ADC-Flash Type ADC.

16BEBME403 BIOSENSORS AND TRANSDUCERS 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students

- To define the basic concepts such as generalized instrumentation system, general properties of input transducers, static and dynamic characteristics of transducers and sensors
- To perceive a thorough understanding of principle of sensors
- To know the principle of transduction, classifications and the characteristics of different transducers
- To create the biomedical applications of the transducers andsensors.
- To discuss working of some of the above transducers andsensors.
- To know the different display and recording devices.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Have a clear understanding of generalized medical instrumentation system, general properties of input transducers, static and dynamic characteristics of transducers and sensors.
- Demonstrate various transducers and sensors in thecourse.
- Describe the purpose and methods of measurements.
- Explain the principle of different sensors and its applications
- Apply the transducers and sensors learnt in the course in suitable medicalcontexts.
- Implement working knowledge of some of the transducers andsensors

UNIT I INTRODUCTION TO TRANSDUCERS AND ITS CHARACTERISTICS (10)

Introduction: Generalized Instrumentation System, General Properties of Input Transducer Static Characteristics: Accuracy, Precision, Resolution, Reproducibility, Sensitivity, Drift, Hysteresis, Linearity, Input Impedance and Output Impedance. Dynamic Characteristics: First Order and Second Order Characteristics, Time Delay, Error Free Instrument, Transfer Functions. Design Criteria, Generalized Instrument Specifications.

UNIT II MEASUREMENTS (8)

Displacement, motion and Pressure Measurement: (with applications) Resistive: Potentiometers, Strain Gauges and Bridge Circuits. Inductive: Variable Inductance and LVDT Capacitive type, Piezoelectric Transducers. Types of Diaphragms, Bellows, Bourdon Tubes.

UNIT III THERMAL MEASUREMENTS (6)

Temperature Measurement: Thermistor, Thermocouple, Resistive Temperature Detector, IC based Temperature Measurement, Radiation Sensors and Applications .

UNIT IV ELECTRODES (10)

Biopotential Electrodes: Electrodes Electrolyte Interface, Half-Cell Potential, Polarization, Polarizable and Non Polarizable, Electrodes, Calomel Electrode, Electrode Circuit Model, Electrode Skin-Interface and Motion Artifact. Body Surface Electrodes. Internal Electrodes: Needle and Wire Electrodes (Different Types). Microelectrodes: Metal, Supported Metal Micropipette (Metal Filled Glass And Glass Micropipette Electrodes)

UNIT V BIOSENSORS (11)

Chemical Sensors: Blood gas and Acid- Base Physiology Potentiometric Sensors, Ion Selective Electrodes, ISFETS. AmperometricSensors, Clark Electrode with examples - pH, pO2, pCO2 Electrodes, Transcutaneous Arterial Oxygen Tension, Carbon Dioxide measurements: capnostat. Fiber Optic Sensors: Design Principles in Fabrication of Fiber Optic Sensors - Temperature, Chemical, Pressure. Biosensor: Classifications: Biological phenomenon, Transduction Phenomenon i.e. Enzyme Sensor and Electrode based: Affinity Sensors (Catalytic Biosensors), Two examples of each Biosensors and Immunosensors.

16BEBME404 SIGNALS AND SYSTEMS 3 0 0 3 100

COURSE OBJECTIVES

The goal of this course is for students :

- To discuss the basic properties of signal andsystems
- To understand about the continuous time and discrete time signals and systems.
- To analyze continuous timesignals
- To analyze discrete timesignals
- To learn the analysis of CT systems using Fourier and Laplace transform.
- To demonstrate the DTFT and Z –transforms for discretesignals

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Describe the continuous time and discrete time signals and systems.
- Analyze the signals in both continuous time and discrete time
- Apply Laplace and Fourier transform for continuous signals
- Analyze continuous time LTI systems using Fourier and LaplaceTransforms
- Apply DTFT and Z transforms for discretesignals
- Analyze discrete time LTI systems using Z transform and DTFT

UNIT-I REPRESENTATION OF SIGNALS (10)

Classification of Signals – Periodic, aperiodic, even, odd – energy and power signals – Deterministic and random signals – complex exponential and sinusoidal signals – periodicity – unit impulse – unit step impulse functions – Transformation in independent variable of signals: time scaling, time shifting. Determination of Fourier series representation of continuous time and discrete time periodic signals – Explanation of properties of continuous time and discrete time Fourier series.

UNIT-II ANALYSIS OF CONTINUOUS TIME SIGNALS AND SYSTEMS (12)

Continuous time Fourier Transform and Laplace Transform analysis with examples – properties of the Continuous time Fourier Transform and Laplace Transform basic properties, Parseval's relation, and convolution in time and frequency domains. Basic properties of continuous time systems: Linearity, Causality, time invariance, stability of frequency response of LT I systems -Analysis and characterization of LT I systems using Laplace transform: Computation of impulse response and transfer function using Laplace transforms.

UNIT-III SAMPLING THEOREM AND Z-TRANSFORMS (10)

Sampling theorem – Reconstruction of a Signal from its samples, aliasing – sampling of band pass signals. Basic principles of z -transform - z-transform definition – Region of Convergence – Properties of ROC – Properties of z-transform – Poles and Zeros – inverse z-transform using Contour integration - Residue Theorem, Power Series expansion and Partial fraction expansion, Relationship between z - transform and Fourier transform.

UNIT-IV DISCRETE TIME SYSTEMS (9)

Computation of Impulse response & Transfer function using Z Transform. DTFT Properties and examples – LTI-DT systems - Characterization using difference equation – Block diagram representation – Properties of convolution and the interconnection of LTI Systems – Causality and stability of LTI Systems.

UNIT-V FILTER REALIZATION STRUCTURES (4)
Realization structures – Direct Form – I, Direct Form – II, Cascade, Parallel and Transpose forms.

16BEBME405 PATHOLOGY AND MICROBIOLOGY 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To appraise the concept of cellbiology.
- To analyse the about the structural and functional aspects of livingorganisms.
- To perceive the etiology and remedy in treating the pathological diseases.
- To define the importance of publichealth.
- To understand the structural and functional aspects of living organisms.
- To know the etiology and remedy in treating the pathological diseases.

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Define about the structural and functional aspects of livingorganisms.
- Demonstrate about the function ofmicroscope
- Elaborate about the importance of publichealth.
- Explain about the methods involved in treating the pathologicaldiseases
- Perceive knowledge on Disease caused by bacteria, fungi and protozoal
- Distinguish Natural and artificial immunity

UNIT I NORMAL CELL STRUCTURE (9)

Normal cell structure – Cell degeneration and regeneration – Inflammations. Neoplasia – Classification, Difference between benign and malignant tumours – Ethiology of tumours – Spread of tumours.

UNIT II MICROBIOLOGICAL TECHNIQUES (9)

Tissue processing – Histokinates – Block making – Microtomes and knives. Cryostat – Frozen section. Basic Stain and special stains (fat, iron stains, PAS).

UNIT III DISEASES DIAGNOSIS METHODS (9)

Diagnosis of diseases by immunological and molecular methods – role of computers in disease diagnosis.

UNIT IV MICROSCOPY (9)

Microscope – Light Microscopy, Phase contrast microscopy, Electron microscopy, Bacterial Cell structure, Growth, development and differentiation.

UNIT V MICROBIAL DISEASES (9)

Sterilization, Diseases caused by bacteria, fungi and viruses and their control by using drugs.

16BEBME406 BIOMATERIALS AND ARTIFICIAL ORGANS 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To discuss the overview of artificial organs
- To extend the principles of implant design with a casestudy
- To explain the implant design parameters and solution inuse
- To simplify about various blood interfacingimplants
- To know the biocompatibility of artificial organs
- To learn about the implantable medical devices

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Explain the implant design parameters and solution inuse
- Analyze about various blood interfacing implants
- Evaluate response of biomaterials in living system
- Perceive knowledge about artificial organs
- Demonstrate different types of soft tissue replacement and hard tissuereplacement
- Assess biocompatibility of artificial organs

INTENDED OUTCOMESBIOMATERIALS AND ARTIFICIAL ORGANS

Understanding and gaining the knowledge of various concepts in biomaterials, bio-compatibility, implant materials, polymeric implant materials, tissue replacements and artificial organs.

UNIT I STRUCTURE OF BIO-MATERIALS AND BIO-COMPATIBILITY (9)

Definition and classification of bio-materials, mechanical properties, visco elasticity, wound-healing process, body response to implants, blood compatibility.

UNIT II IMPLANT MATERIALS (9)

Metallic implant materials, stainless steels, co-based alloys, Ti-based alloys, ceramic implant materials, aluminum oxides, hydroxyapatite glass ceramics carbons, medical applications.

UNIT III POLYMERIC IMPLANT MATERIALS (9)

Polymerization, polyamides, Acryrilic polymers, rubbers, high strength thermoplastics, medical applications. Bio polymers: Collagen and Elastin.

UNIT IV TISSUE REPLACEMENT IMPLANTS (9)

Soft-tissue replacements, sutures, surgical tapes, adhesive, Percutaneous and skin implants, maxillofacial augmentation, blood interfacing implants, hard tissue replacement implants, internal fracture fixation devices, joint replacements.

UNIT V ARTIFICIAL ORGANS (9)

Artificial Heart, Prosthetic Cardiac Valves, Artificial lung (oxygenateor), Artificial Kidney (Dialyser membrane) , Dental Implants.

16BEBME411 LINEAR INTEGRATED CIRCUITS LAB 0 0 3 2 100

COURSE OBJECTIVES:

The goal of this course is for students,

- To discuss working principle of op-amp.
- To experiment with basic functions of multivibrators
- To make use of Oscillators.
- To understand the concept of timer circuit
- To analyse timing characteristics of IC555
- To understand about PLL

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Interpret the characteristics of amplifier
- Illustrate the importance of the sensors and transducers for medicalapplications.
- Analyse the characteristics frequency filter
- Distinguish amplifier and Oscillator
- Design dc power supply
- Design and Simulate the various frequency filters

LIST OF EXPERIMENTS

1. Inverting, Non-inverting and differential amplifiers.
2. Integrator and Differentiator.
3. Instrumentation amplifier.
4. Active lowpass, highpass and Bandpass filter.
5. Astable, Monostable multivibrators and Schmitt Trigger using op-amp.
6. Phase shift and Wienbridge oscillator using op-amp.
7. Astable and Monostable using NE555 Timer.
8. PLL characteristics and Frequency Multiplier using PLL.
9. Study of DC power supply using LM317and LM723 and SMPS control ICSG 3524/SG3525.
10. Simulation of Experiments 1, 2, 3, 4, 5 using PSpice / MultiSim

16BEBME412 BIOSENSORS AND TRANSDUCERS LAB 0 0 3 2 100

COURSE OBJECTIVES:

The goal of this course is for students,

- To discuss working principle of Transducers and various Biomedical sensors.
- To experiment with basic functions of Biosensors.
- To make use of different physiological signals.
- To discuss working principle of Transducers
- To experiment with basic functions of Biosensors.
- To make use of different physiological signals.

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Solve the quantitative test of different biomolecules
- Label the separation technology of proteins and aminoacids.
- Blood group identification
- Estimate of blood glucose
- Estimaten of Hemoglobin
- Perceive the Biochemistry laboratory functional parameters

LIST OF EXPERIMENTS

1. Measurement of strain using strain gauge for(i) Quarter bridge (ii)Half bridge (iii) Full bridge

2. PlottingcharacteristicsofPhotoelectricTransducer,TemperatureTransducer,Piezo- electric Transducer, and Thermoelectric Transducer.

3. DeterminationofcharacteristicsofPolarizedElectrodes,Non-polarizedElectrodes, Multi Point Electrodes.

4. Determinationofcharacteristicsof(i)DCAmplifier(ii)ChopperAmplifierand(iii) Instrumentation Amplifier.

5. Characteristics of Ultrasound Transducer and Phono Transducer.

6. Measurement of Hearing Threshold using Audiometer and plotting its characteristics.

7. Measurement of Skin Resistance &constructionof a simpleLiedetector.

8. Generation of original sequence along with operation on sequence like shifting, folding, time scaling and multiplication.

9. GenerationofPeriodic,Exponential,Sinusoidal,Dampedsinusoidal,Step,Impulse, Ramp

signals using MATLAB in both discrete and analog form

10. Evaluationofconvolutionintegral,Fouriertransformforperiodic&non-periodic signals and simulation of differential equations using MATLAB

11. Cross correlation, Auto correlation & Spectral content of signals.

16BEBME413 Course Oriented project-II 0 0 2 1 100

16BEBME451 HANDS ON TRAINING IN ELECTRONIC EQUIPMENTS 1 0 0 – 100

OBJECTIVE:

- To gain the knowledge on various electronic equipments
- To learn the working principle of voltmeter
- To learn the working principle of digital voltmeter
- To discuss the working principle of Ammeter
- To distinguish analog multimeter digital multimeter
- To understand the operation of function generator

OUTCOME:

- Understand the working of various electronic equipments
- Analyse the operations of voltmeter and Ammeter
- Use RLC meter and LCR meter
- Understand the applications of EMF meter
- handle analog multimeter digital multimeter
- Demonstrate the operation of function generator

Study of Voltmeter – Ammeter– ohmmeter – capacitance meter – regulated power supply – oscilloscope – function generator – time-domain reflectometer – digital voltmeter – digital counter – Analog multimeter & Digital multimeter – Signal injector – RLC meter – LCR meter – EMF meter – Electrometer – AC and DC Power Supplies – digital pattern generator – pulse generator – Frequency synthesizer – probes – IEEE electronic equipment standards.

16BEBME501 BIO CONTROL SYSTEM 3 2 0 4 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To provide insights of modelling techniques of physiologicalsystems
- To discuss the concept of different systems of body in mathematicalmodel.
- To demonstrate the working of physiological system in terms ofequations.
- To define the parameters involved in thermal regulatorysystem
- To model dynamically varying physiological system
- To develop differential equations to describe the dynamic models

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Analyze models of physiological system.
- Recall the application of basic physiologicalsystem
- Reproduce the concept of circulatorysystem
- Describe the parameters involved in thermal regulatorysystem
- Discuss the process of ultra-filtrationsystem
- Explain the mechanism ofrespiration

UNIT I INTRODUCTION TO BIO CONTROL SYSTEM (9)

Introduction: Technologicalcontrol system, transfer function, mathematical approaches, system stability,introductiontobiologicalcontrolsystem,Modelingandblockdiagram, closedloop dynamics of first order and secondordercontrolsystem,similaritiesbetween biological and engineering control system, biological receptors and receptor characteristics.

UNIT II PROCESS REGULATION (9)

Acid-base balance, extra-cellular water and electrolyte, interstitial fluid volume, blood pressure, blood glucose, CO2.

UNIT III MODELINGOF HUMANTHERMALREGULATORYSYSTEM (9)

Parametersinvolved,controlsystemmodeletc.Biochemistryofdigestion,typesofheatlossfrombody,modelsofheattransferbetween subsystems of human body like skin - core etc. and systems like within body, body environment.

UNIT IV BIOLOGICAL CONTROL I (9)

Cardiac rate,bloodpressure,respiratoryrate,massbalancingoflungs, oxygenuptakebyRBCandpulmonarycapillaries, oxygen and carbon dioxide transport in blood and tissues.

UNITV BIOLOGICAL CONTROL II (9)

Urine formation and control,Pupilcontrolsystems, skeletal muscle servomechanism and semicircular canal. Free swinging limbs, Endocrine control system.

16BEBME502A BIOMEDICAL SIGNAL PROCESSING 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To study the formation of an image and its acquisition
- To introduce the use and application of transforms in image processing
- To explain the fundamentals of medical image acquisition, processing andstorage.
- To discuss simple image enhancement techniques in Spatial and Frequencydomain.
- To appraise the concepts of degradation function and restorationtechniques.
- To apply image compression and recognitionmethods.

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Explain the image fundamentals and mathematical transforms necessary for imageprocessing.
- Illustrate the image enhancementtechniques.
- Preprocess the image using filtering techniques
- Utilize image restorationprocedures.
- Segment the region of interest in images.
- Apply the image compressionprocedures.

UNIT I DISCRETE – TIME SIGNALS AND SYSTEMS (9)

Sampling of Analogue signals – aliasing – standard discrete time signals – classification – discrete time systems – Linear time invariant stable casual discrete time systems – classification methods – linear and circular convolution – difference equation representation – DFS, DTFT, DFT – FFT computations using DIT and DIF algorithms.

UNIT II INFINITE IMPULSE RESPONSE DIGITAL FILTERS (9)

Review of design of analogue Butterworth and Chebyshev Filters, Frequency transformation in analogue domain – Design of IIR digital filters using impulse invariance technique – Design of digital filters using bilinear transform – pre warping – Frequency transformation in digital domain – Realization using direct, cascade and parallel forms.

UNIT III FINITE IMPULSE RESPONSE DIGITAL FILTERS (9)

Symmetric and Antisymmetric FIR filters – Linear phase FIR filters – Design using Frequency sampling technique – Window design using Hamming, Hanning and Blackmann Windows – Concept of optimum equiripple approximation – Realisation of FIR filters – Transversal, Linear phase and Polyphase realization structures.

UNIT IV ANALYSIS OF BIO –SIGNALS (9)

Removal of artifacts-ECG, Event detection –ECG,P wave, QRS Complex, T wave, correlation analysis of ECG signals, Averaging of signals-PCG, ECG and EMG.

UNIT V SPECIAL TOPICS IN BSP (9)

Heart rate variability Analysis, Analysis of PCG signals, Analysis of Time variant systems, Fixed segmentation –STFT, ACF, SEM and GLR.

TOTAL : 45

16BEBME502B INSTRUMENTAL METHODS OF ANALYSIS 3 0 0 3 100

OBJECTIVE

- To know about various instrumental techniques and analysis
- To give exposure on the basics of Biomedical engineering to the students.
- To have a basic knowledge on basic measurement
- To be familiarize with instrumental methods
- To analyse he applications of spectroscopy
- To lean about chromatography

OUTCOMES

- To study and understanding the concepts of measurements
- To study and understanding the concepts of optical methods
- To study and understanding the concepts of molecular spectroscopy
- To study and understanding the concepts of thermal methods
- To study and understanding the concepts separation methods
- To analyse various instrumental methods

UNIT I BASICS OF MEASUREMENT (8)

Classification of methods – calibration of instrumental methods – electrical components and circuits – signal to noise ratio – signal – noise enhancement

UNIT II OPTICAL METHODS (8)

General design – sources of radiation – wavelength selectors – sample containers – radiation transducers – types of optical instruments – Fourier transform measurements.

UNIT III MOLECULAR SPECTROSCOPY (11)

Measurement of transmittance and absorbance – beer's law – spectrophotometer analysis – qualitative and quantitative absorption measurements - types of spectrometers – UV – visible – IR – Raman spectroscopy – instrumentation – theory.

UNIT IV THERMAL METHODS (5)

Thermo-gravimetric methods – differential thermal analysis – differential scanning calorimetry.

UNIT V SEPARATION METHODS (13)

Introduction to chromatography – models – ideal separation – retention parameters – van – deemter equation – gas chromatography – stationary phases – detectors – kovats indices – HPLC – pumps – columns – detectors – ion exchange chromatography – size exclusion chromatography – supercritical chromatography – capillary electrophoresis.

REFERNCES & TEXT BOOKS

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Willard and .H. Merrit	Instrumental Methods of Analysis	Phi	1999
2	D. Skoog	Instrumental Methods of Analysis		2000

16BEBME503 BIOMEDICAL INSTRUMENTATION 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To illustrate origin of bio potentials and itspropagations
- To understand the basic theory of Bio potential Electrodes and Bio potential measurement.
- To appraise the different types of electrodes and its placement for variousrecordings
- To design bio amplifier for various physiological recordings
- To study the various bio chemical measurements.
- To perceive the different measurement techniques for non-physiologicalparameters.

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Differentiate different bio potentials and itspropagations.
- Describe the electrode behavior and circuit models
- Illustrate different electrode placement for various physiologicalrecordings
- Design bio amplifier for various physiological recordings
- Explain various technique for non-electrical physiologicalmeasurements
- Measure various biochemical parameters.

UNIT I BIO POTENTIAL ELECTRODES (9)

Origin of bio potential and its propagation. Electrode-electrolyte interface, electrode–skin interface, half-cell potential, impedance, polarization effects of electrode – nonpolarizable electrodes. Types of electrodes - surface, needle and micro electrodes and their equivalent circuits. Recording problems - measurement with two electrodes.

UNIT II ELECTRODE CONFIGURATIONS (9)

Biosignals characteristics – frequency and amplitude ranges. ECG – Einthoven's triangle, standard 12 lead system. EEG – 10-20 electrode system, unipolar, bipolar and average mode. EMG, ERG and EOG – unipolar and bipolar mode.

UNIT III BIO AMPLIFIER (8)

Need for bio-amplifier - single ended bio-amplifier, differential bio-amplifier – right leg driven ECG amplifier. Band pass filtering, isolation amplifiers – transformer and optical isolation - isolated DC amplifier and AC carrier amplifier. Chopper amplifier. Power line interference.

UNIT IV MEASUREMENT OF NON-ELECTRICAL PARAMETER (10)

Temperature, respiration rate and pulse rate measurements. Blood Pressure: indirect methods - auscultatory method, oscillometric method, direct methods: electronic manometer, Pressure amplifiers - systolic, diastolic, mean detector circuit. Blood flow and cardiac output measurement: Indicator dilution, thermal dilution and dye dilution method, Electromagnetic and ultrasound blood flow measurement.

UNIT V BIO-CHEMICAL MEASUREMENT (9)

Biochemical sensors - pH, pO2 and pCo2, Ion selective Field effect Transistor (ISFET), Immunologically sensitive FET (IMFET), Blood glucose sensors - Blood gas analyzers, colorimeter, flame photometer, spectrophotometer, blood cell counter, auto analyzer (simplified schematic description).

16BEBME504 MICROPROCESSORAND MICROCONTROLLER 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students :

- To infer processor architecture and its programming
- To discuss interfacing concepts
- To appraise advanced processor architecture
- To utilize the concepts of Interfacing with Peripherals for buildingapplications
- To demonstrate the concepts Reduced Instruction Set Computer (RISC) architecture and Advanced RISC Machine (ARM)architecture
- To develop skill to explore system design technique .

COURSE OUTCOMES:

At the end of this course students will demonstrate the ability to

- Design assembly language programming (ALP) for different applications for 8085
- Compile assembly language programming (ALP) for different applications for8086
- Perceive knowledge on advanced processors andcontrollers
- Create application by Interfacing memory and I/O device withcontrollers
- Demonstrate the architectures of Reduced Instruction Set Computer (RISC) and Advanced RISC Machine (ARM)processors
- Design and deploy the Interfacing peripherals in real time scenario.

UNIT -I THE 8085 MICROPROCESSOR 9

Introduction to 8085 – Microprocessor architecture – Instruction set – Programming the 8085 – Code conversion.

UNIT II THE 8086 MICROPROCESSOR 9

Introduction to 8086 – Microprocessor architecture – Addressing modes - Instruction set and assembler directives – Assembly language programming – Modular Programming – Interrupts and interrupt service routines – Byte and String Manipulation.

UNIT III I/O INTERFACING 9

Memory Interfacing and I/O interfacing - Parallel communication interface – Serial communication interface – D/A and A/D Interface - Timer – Keyboard /display controller – Interrupt controller – DMA controller – Programming and applications Case studies: Traffic Light control, LED display , LCD display, Keyboard display interface and Alarm Controller.

UNIT IV MICROCONTROLLER 9

Architecture of 8051 – Special Function Registers(SFRs) - I/O Pins Ports and Circuits – Instruction set - Addressing modes - Assembly language programming.

UNIT V INTERFACING MICROCONTROLLER 9

Programming 8051 Timers - Serial Port Programming - Interrupts Programming – LCD & Keyboard Interfacing - ADC, DAC & Sensor Interfacing - External Memory Interface- Stepper Motor and Waveform generation.

16BEBME511 MICROPROCESSOR AND MICROCONTROLLER LAB 0 0 3 2 100

COURSE OBJECTIVES:

The goal of this course is for students,

- To introduce ALP concepts and features
- To design and implement programs on 8085 microprocessor
- To write ALP for arithmetic and logical operations in 8086 and 8051
- To differentiate Serial and Parallel Interface
- To interface different I/Os with Microprocessors
- To be familiar with MASM

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Write ALP Programmes for fixed and Floating Point and Arithmetic operations
- Interface different I/Os with processor
- Generate waveforms using Microprocessors
- Execute Programs in 8051
- Use Serial and Parallel Interface
- Perform A/D and D/A conversion

LIST OF EXPERIMENTS

8085 Programs using kits

1. Basic arithmetic and Logical operations
2. Sorting and searching

8086 Programs using kits

3. Basic arithmetic and Logical operations
4. Code conversion, decimal arithmetic and Matrix operations.
5. Floating point operations, string manipulations, sorting and searching

Peripherals and Interfacing Experiments

6. Traffic light control
7. Stepper motor control
8. Key board and Display
9. Serial interface and Parallel interface
10. A/D and D/A interface and Waveform Generation

8051 Experiments using kits and MASM

11. Basic arithmetic and Logical operations
12. Code conversion

16BEBME512A BIOMEDICALSIGNALPROCESSING LAB 0 0 3 2 100

.

COURSE OBJECTIVES:

The goal of this course is for students:

- To experiment with basic signal processing operations such as Linear Convolution, Circular Convolution, Auto Correlation, Cross Correlation and Frequency analysis in MATLAB
- To analyse FIR and IIR filters in MATLAB and DSPProcessor
- To discuss the architecture of DSPprocessor

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Design different types of biomedical signals and identify their spectral components.
- Utilize different filters on biomedical signals and judge filter performance.
- Identify physiological interferences and artifacts affecting ECG signal.
- Assess power and correlation spectra of EEG signal.
- Analyze biosignals in time and frequency domains.
- Perform classification and recognition Biosignals

LIST OF EXPERIMENTS

1. Representation of time-series; computation of convolution.
2. Response of a difference equation to initial conditions; stability.
3. DFT computation.
4. Computational experiments with digital filtering.
5. Sampling and waveform generation.
6. FIR and IIR filters implementation.
7. Fast Fourier Transform.
8. Simulation of biosignals.
9. Analysis of ECG signals.
10. Analysis of EEG signals
11. Analysis of EMG signals

16BEBME512B INSTRUMENTAL METHODS OF ANALYSIS LAB 0 0 3 2 100

OBJECTIVES

- To have a practical hand on experience on absorption spectroscopic methods
- To acquire experience in the purification by performing chromatography
- To validate and analysis using spectrometric and microscopic techniques
- To understand the concept of nephelometry
- To understand the concept of Flourimetry
- To exlain the concept of Chromatography

OUT COMES

- Understand UV spectra of nucleic acids
- Describe the Precision and validity
- Find the molar absorbtivity and stoichiometry
- Estimate SO – by nephelometry
- Estimatie A13+ by Flourimetry
- Understand Chromatography

LIST OF EXPERIMENTS

1. Precision and validity in an experiment using absorption spectroscopy
2. Validating Lambert-Beer'S law using KMnO4
3. Finding the molar absorbtivity and stoichiometry of the Fe(1, 10 Phenanthroline)3 using absorption spectrometry
4. Finding the pKa of-nitrophenol using absorption spectroscopy
5. UV spectra of nucleic acids
6. Chemical actinometry using potassium ferrioxolate
7. Estimation of SO – by nephelometry
8. Estimation of A13+ by Flourimetry
9. Limits of detection using aluminium alizarin complex
10. Chromatography analysis using TLC
11. Chromatography analysis using column chromatography

16BEBME513 BIOMEDICAL INSTRUMENTATION LAB 0 0 3 2 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To discuss the working principle of Biomedical Instrumentation systems.
- To infer the basic acquisition techniques of bioelectricsignals.
- To learn about Audiometer
- To analyse ECG signal
- To explain about patient monitoring system
- To lean about pH measurement

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Differentiate different bio potentials and its propagations.
- Describe the electrode behavior and circuit models
- Illustrate different electrode placement for various physiological recordings
- Design bio amplifier for various physiological recordings
- Explain various technique for non-electrical physiological measurements
- Measure various biochemical parameters.

LIST OF EXPERIMENTS

1. Study of Biological Preamplifiers.
2. Recording of ECG signal.
3. Audiometer.
4. Recording of EMG.
5. Recording of various physiological parameters using patient monitoring system and telemetry units.
6. Measurement of pH, pO2 and conductivity.
7. Study and analysis of functioning and safety aspects of surgical diathermy.

16BEBME514 Course Oriented project-III 0 0 2 1 100

16BEBME551 **BasicSimulationLaboratory** **1 0 0 - 100**

COURSE OBJECTIVES:

The goal of this course is for students:

- To learn about MATLAB tool in signal processing application
- To infer the basic simulation techniques for ECG/EMG/EEG
- To apply different Detection, correlation and averaging of various biomedicalsignals.
- To analyse ECG signal
- To dunderstand about Detection of QRS complex
- To experiment with basic signal processing operations such as Linear Convolution, Circular Convolution, Auto Correlation, Cross Correlation and Frequency analysis in MATLAB

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Understand correlation techniques.
- Simulate various biosigmals ECG/EEG/EMG
- Analyse ECG signal
- Use MATLAB tool for biosignal analysis
- Use MATLAB tool for biomedical applications
- Understand about SNR improvement

Laboratory Experiments:

1. Simulation of ECG using MATLAB.
2. Simulation of EEG using MATLAB.
3. Simulation of PPG using MATLAB.
4. Simulation of EGG using MATLAB.
5. Simulation of PCG using MATLAB.
6. Simulation of EMG using MATLAB.
7. Simulation of EOG using MATLAB.
8. Detection of QRS complex and heart rate measurement.
9. Signal Averaging to improve the SNR.
10. Auto-correlation and cross correlation of ECG signals.

16BEBME552 **Inplant training** **0 0 0 - 100**

16BEBME601 IMAGE PROCESSING 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To study the formation of an image and its acquisition
- To introduce the use and application of transforms in image processing
- To explain the fundamentals of medical image acquisition, processing andstorage.
- To discuss simple image enhancement techniques in Spatial and Frequencydomain.
- To appraise the concepts of degradation function and restorationtechniques.
- To apply image compression and recognitionmethods.

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Explain the image fundamentals and mathematical transforms necessary for imageprocessing.
- Illustrate the image enhancementtechniques.
- Preprocess the image using filtering techniques
- Utilize image restorationprocedures.
- Segment the region of interest in images.
- Apply the image compressionprocedures.

UNIT I DIGITALIMAGEFUNDAMENTAL (9)

Elementsofdigitalimageprocessingsystems,ElementsofVisualperception,Imagesamplingandquantization,SomeBasicrelationshipsbetweenpixels,MatrixandSingularValuerepresentationofdiscreteimages.

UNIT II IMAGE TRANSFORMS (9)

1D DFT, 2D DFT, Cosine, Sine Hadamard, Haar, Slant, KL transform and their properties.

UNIT III IMAGE ENHANCEMENT (9)

Histogram – Modification and specification techniques, Enhancement by point processing Image smoothening, Image sharpening, generation of spatial masks from frequency domain specification, Homomorphic filtering, and color image processing.

UNIT IV IMAGE RESTORATIONAND RECONSTRUCTION OF MEDICAL IMAGES (9)

Image degradation models, Unconstrained and Constrained restoration, inverse filtering, Least mean square filter, Image reconstruction from projections – Radon transforms, Filter back projection algorithm, 3D tomography, Fourier reconstruction of MRI Images.

UNIT V MEDICAL IMAGE COMPRESSION TECHNIQUES (9)

Run length, Huffman coding, arithmetic coding, Pixel coding, transform coding, JPEG Standard, predictive techniques, Application of image processing techniques in thermography, SPECT, PET images.

16BEBME602A BIOMECHANICS 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To perceive about the principles ofbiomechanics.
- To study about the mechanics involved with various physiological systems.
- To gain knowledge about musculoskeletal mechanics
- To infer the mechanics of physiologicalsystems.
- To discuss the mechanics of joints.
- To create mathematical models used in the analysis of biomechanicalsystems

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Explain the principles of biomechanics.
- Discuss the mechanics of physiologicalsystems.
- Demonstrate the mechanics ofjoints.
- Analyze the biomechanical systems using mathematical models.
- Design and develop the models specific to orthopedic applications
- Illustrate the mathematical models used in the analysis of biomechanicalsystems.

UNIT I BIOFLUIDMECHANICS (9)

Introduction:
Newton'slaws,Stress,Strain,NonViscousfluid,NewtonianViscousfluid,Viscoelasticity, BloodCharacteristics, Mechanical Interaction of Red blood cells with solid wall, Thrombousformation and dissolution,Medicalapplicationsofbloodrhelogy

UNIT II BONE&ITSPROPERTIES (9)

Bone structureandComposition, BloodCirculationinBone, Viscoelasticpropertiesof Bone, ElectricalPropertiesofBone,FractureMechanismandCrackPropagationinbones,KineticsandKinematicsofJoints.

UNIT III CARDIACMECHANICS (9)

Cardiovascularsystem,Mechanicalpropertiesofbloodvessels-Arteries,Arterioles, Capillaries, Veins,Bloodflow-Laminar&turbulent,ProstheticHeartValves&replacement.

UNIT IV BIOMECHANICSOFSPINEANDLOWEREXTREMITY (9)

Biomechanics ofSpine-Structure,Movements, LoadsonSpine,ExoskeletalsystemforParaplegics, Structure ofHip-Movements, LoadsonHip,TotalHipProsthesis,StructureofKnee-Movements,loadsonknee,Knee prosthesis,Poweredwheelchair,Crutchesandcanes.

UNIT V GAITANALYSIS (9)

Human Locomotion- Gait Analysis, Foot Pressure measurements- Pedobarograph , Mechanics of Foot- Arthritis,Biomechanicaltreatment.

16BEBME602B BIOINFORMATICS 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To enablethestudentsto get awareof availabletools anddatabasesfor performingresearchinbioinformatics.
- To provide the thorough understanding of protein structure in detail.
- To understand the bioinformatics at a level appropriate for biology majors
- To infer the knowledge of chemical principles that underlie biochemistry, molecular biology and genomics,
- To analyse the relational databases
- To constructthe predictive mathematical models of biological systems.

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- understand the importance of Bioinformatics in various sectors.
- expose to biological database management and microarray technology.
- Examinethe advanced methods in computational biology
- Be capable of using critical thinking and research methods in Bioinformatics to understand computational and experimental data
- Demonstrate the ability to produce and present original research in Bioinformatics.
- Choose appropriate algorithms forreal time problems.

UNIT I INTRODUCTION (9)

Basic UNIX commands – telnet – ftp – protocols – hardware – topology -search engines – search algorithms – Perl programming.

UNIT II DATABASES (9)

Data management – data life cycle – database technology – interfaces and implementation – biological databases and their uses

UNIT III PATTERN MATCHING & MACHINE LEANING (9)

Pairwise sequence alignment – local vs. global alignment – multiple sequence alignment – dot matrix analysis – substitution matrices – dynamic programming – Bayesian methods – tools – BLAST – FASTA- machine learning – neural networks – statistical methods – Hidden Markov models – Homology Modeling.

UNIT IV PHYLOGENY (9)

Introduction; mutations; irrelevant mutations; controls; mutations as a measure of time; distances; reconstruction; distances between species; estimating time intervals from distances.

UNIT V ADVANCED TOPICS IN BIOINFORMATICS (9)

Biomolecular and cellular computing – micro array analysis – systems biology.

16BEBME603 DIAGNOSTIC EQUIPMENTS 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To perceive the medical devices applied in measurement of parameters related to cardiology, neurology and the methods of continuous monitoring and transmittingthem.
- To analyze some of the cardiac assistdevices.
- To understand the principle of diathermy
- To discuss about the measurement of the signalsgenerated by muscles.
- To summarize the need and use of some of the extracorporealdevices.
- To learn the patient safety measures

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Utilize different medical devices applied in measurement of parameters related to cardiology,neurology
- Explain about cardiac assist devices, its continuous monitoring andtransmission
- Measure signals generated bymuscles
- Analyze different types of diathermy units.
- Identify the electrical hazards and Implement methods of patient safety
- Interpret the need and use of the extracorporealdevices

UNIT I CARDIAC EQUIPMENTS (9)

Electrocardiograph, Normal and Abnormal Waves, Heart rate monitor, Arrhythmia Simulator, Holter Monitor, Phonocardiography, Plethysmography. Cardiac Pacemaker- Internal and External Pacemaker–Batteries, AC and DC Defibrillator- Internal and External.

UNIT II NEUROLOGICAL EQUIPMENTS (9)

Clinical significance of EEG, Multi channel EEG recording system, Epillepsy, Evoked Potential –Visual, Auditory and Somatosensory, MEG (Magneto Encephalon Graph). EEG Bio Feedback Instrumentation.

UNIT III SKELETAL MUSCULAR SYSTEM (9)

Sliding theory of contraction, recording and analysis of EMG waveforms, fatigue characteristics , Muscle stimulators, nerve stimulators, Nerve conduction velocity measurement, EMG Bio Feedback Instrumentation.

UNIT IV RESPIRATORY MEASUREMENT STSTEM (9)

Instrumentation for measuring the mechanics of breathing – Spirometer-Lung Volume and vital capacity, measurements of residual volume, pneumotachometer - Airway resistance measurement, Whole body plethysmography, Intra-Alveolar and Thoracic pressure measurements, Apnea Monitor. Types of Ventilators – Pressure, Volume, Time controlled. Flow, Patient Cycle Ventilators, Humidifiers, Nebulizers, Inhalators.

UNIT V SENSORY MEASUREMENT (9)

Psycho Physiological Measurements-for testing and sensory Responses, Electro occulograph, Electro retinograph, Audiometer-Pure tone, Speech. EGG (Electrogastrograph), galvanic skin resistance(GSR).

16BEBME604 HOSPITAL MANAGEMENT 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To discuss the fundamentals of hospital administration.
- To learn about Bio-Medical Waste Management.
- To analyze the market related research process.
- To summarize the quality and safety aspects in hospital.
- To perceive knowledge about human resource management in hospital
- To explain about hospital information systems

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Explain various information management systems and relative supportiveservices.
- Interpret market related research processes in healthcare and hospitalsectors.
- Illustrate the quality and safety aspects inhospital.
- Demonstrate about human resource management inhospital
- Understand about NABH and NABL
- Explain the importance of supportive services

UNIT I HEALTHSYSTEM (9)

Healthorganisationofthecountry,thestate,thecitiesandtheregion,HealthFinancingSystem,Organisati onofTechnicalSection.

UNIT II HOSPITALORGANISATIONANDMANAGEMENT (9)

Management ofHospitalorganisation,NursingsectionMedicalSector,CentralServices,TechnicalDepartment, Definition and Practice of Management by Objective, Transactional Analysis Human relation in Hospital, ImportancetoTeamWork,LegalaspectinHospitalManagement.

UNIT III REGULATORYREQUIREMENTANDHEAITHCARECODES (9)

FDA Regulation, jointcommission ofAccreditation for Hospitals, National Fire Protection AssociationStandard,IRPC.

UNIT IV EQUIPMENTMAINTENANCEMANAGEMENT (9)

OrganisingMaintenanceOperations,PaperWorkControl,MaintenanceJob, PlanningMaintenanceWorkMeasurement andStandards, Preventive Maintenance, Maintenance Budgeting andForecasting, Maintenance Training,ContractMainframe.

UNIT V TRAINEDTECHNICAL PERSONNEL (9)

FunctionofClinicalEngineer,RoletobeperformedinHospital,ManpowerMarket,Professional Registration, Structureinhospital.

TOTAL : 45

16BEBME6E-- PROFESSIONAL ELECTIVE-II 3 0 0 3 100

16BEBME6E-- PROFESSIONAL ELECTIVE-III 3 0 0 3 100

16BEBME611A BIOMECHANICS LAB 0 0 3 2 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To provide with an overview of the major challenges in movement biomechanics and experience with the engineering tools
- To use to address the challenges in movement biomechanics
- To understand the concept of Fracture Mechanism
- To explain the electrical Properties of Bone
- To learn about Kinetics and Kinematics of Joints.
- To analyse prosthetic devices

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Describe the biological, mechanical, and neurological mechanisms by which muscles produce movement
- Identify and use engineering tools that are used to study movement
- Analyse Kinetics and Kinematics of Joints
- Write and solve equations of motion for simple models of human movement
- Analysis of Knee and spine prosthesis
- Apply biomechanics principles to “real-world” clinical and biomechanical research.

LIST OF EXPERIMENTS

1. Study and Analysis of Newton’slaws,Stress,Strain,NonViscousfluid
2. Study and Analysis of NewtonianViscousfluid,Viscoelasticity,
3. Study of Blood Characteristics
4. Study and Analysis of Thrombous formation and dissolution
5. Study of Blood circulation in bone
6. Study and Analysis of viscoelastic properties of Bone
7. Study of Electrical Properties of Bone
8. Study of Fracture Mechanism and Crack Propagation in bones
9. Analysis of Kinetics and Kinematics of Joints.
10. Analysis of Blood flow-Laminar&turbulent, Prosthetic HeartValves.
11. Analysis of Knee and spine prosthesis
12. Gait analysis,
13. Analysis of Foot Pressure measurements
14. Analysis of Foot Arthritis mechanics

16BEBME611B BIOINFORMATICS LAB 0 0 3 2 100

CourseObjectives

- To explain the sequence retrieving techniques from biologicaldatabases.
- To explain how to utilize the tools such as BLAST, FASTA CLUSTAL OMEGA,EMBOSS, PHYLIPetc.
- To illustrate the basics of pattern matching by pairwise and multiple sequencealignment.
- To explain the molecular visualization tools and impart knowledge on ExPASyServer.
- To understand the basics of Perlprogramming

Course Outcomes

- Outline the techniques to retrieve sequences from different biological databases.
- Discuss the pattern matching by pairwise and multiple sequencealignment
- Construct phylogenetic tree by using distance based and character basedmethods
- Predict and validate 3D structure ofprotein
- Predict the protein parameters using ExPASy proteomicstools.
- Understand the programming using PERLlanguage.

LIST OF EXPERIMENTS

1. Introduction to UNIX basic commands and UNIX Filters.
2. Perl programming and applications to Bioinformatics.
    - Basic scripting.
    - Regular expressions.
    - File i/o& control statement.
    - Subroutines & functions.
    - Writing scripts for automation.
3. Types of Biological Databases and Using it.
    - Genbank.
    - Protein Data Bank .
    - Uniprot.
4. Sequence Analysis Tools
    - Use of BLAST, FASTA (Nucleic Acids &Protiens).
    - Use of Clustal W.
    - Use of EMBOSS.
5. Phylogenetic Analysis
    - Use of Phyllip.
6. Molecular Modeling
    - Homology Modeling – Swissmodeller.
    - Any Open Source Software

16BEBME612 IMAGE PROCESSING LAB 0 0 3 2 100

COURSE OBJECTIVES:

The goal of this course is for students to:

- To implement fundamental image processing techniques in Biomedical Images.
- To infer enhancement and Transformation of Medical Images.
- To perceive knowledge about reconstruction of images.

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Apply various pre-processing techniques in Medical Images.
- Outline enhancement and transformation of Medical Images.
- Simplify and reconstruct medical images.
- Use MATLAB tool for image processing application
- Perform Image analysis
- Perform image compression

LISTOFEXPERIMENTS:

1. DigitalimageFundamentals.
2. ImageEnhancementandTransformation.
3. Edgedetectionandboundarytracingtechniques.
4. Removalofnoiseinmedicalimages.
5. Imagecompressions.
6. RestorationofCTimages.
7. Reconstruction ofimages.
8. ImageAnalysis.
9. Matlabimplementation.

16BEBME651 Mini Project 0 0 1 - 100

16BEBME652 Technical Presentation & Seminar 0 0 1 - 100

16BECC701 PROFESSIONAL ETHICS PRINCIPLES OF MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT **3 0 0 3 100**

COURSE OBJECTIVES

The goal of this course is for students:

- To develop managerial and entrepreneurial skills our culture andethics
- To Distinguish DirectandPreventiveControl
- To perceive Knowledge on the principles of management is essential for all kinds of people inall kinds oforganisations
- To have a clear understanding of the managerial functions like planning, organizing, staffing, leading andcontrolling
- To create an awareness and practice through engineering ethics and humanvalues
- To outline how business ethicsworks

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Advanced philosophical knowledge of the profession of recreation andleisure
- Synthesis of trends and issues as related to current professionalpractice
- Evaluate organizational theories and human resource managementprinciples
- Analyse the informationcompetency
- Follow Ethical practice and ethical management
- Understand Modelsof Professional Roles

UNIT I ENGINEERING ETHICS **9**

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self–interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OF CHANGES **9**

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING, ORGANISING **9**

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informal organization – Organization Chart –.

UNIT IV DIRECTING AND CONTROLLING **9**

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting.

UNIT V ENTREPRENEURSHIP AND MOTIVATION 9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

16BEBME702A VIRTUAL INSTRUMENTATION DESIGN FOR MEDICAL SYSTEM 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To introduce virtual instrumentation concepts and applications.
- To discuss about programming structure inLabVIEW.
- To analyze data acquisitionhardware.
- To infer knowledge on VI programs for specificapplications.
- To perceive the basics of virtualinstrumentation.
- To program virtual instrumentation software for biomedical applications

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Illustrate programming concepts of virtual instruments.
- Compile programming structure inLabVIEW.
- Understand the use of VI for data acquisition.
- analyze different types of interfaces.
- Choose data from hardwaresystems.
- Develop VI programs for specificapplications.

.

UNIT I REVIEW OF VIRTUAL INSTRUMENTATION (9)

Historical perspectives, Need of VI, advantages, Define VI, block diagram and architecture of a virtual instrument, data -flow techniques, graphical programming in data flow, comparison with conventional programming.

UNIT II VI PROGRAMMING TECHNIQUES (9)

VIS and sub-VIS loops and charts, arrays, clusters and graphs, case and sequence structures, formula nodes, local and global variables, string and file I/O, Graphical programming in data flow, comparison with conventional programming.

UNIT III DATA ACQUISITION BASICS (9)

ADC, DAC, DIO, Counters & timers, PC Hardware structure, timing, interrupts, DMA, Software and Hardware Installation. GPIB/IEEE 488 concepts, and embedded system buses - PCI, EISA, CPCI, and USB & VXI. A

UNIT IV COMMON INSTRUMENT INTERFACES (9)

Current loop, RS.232C/RS.485, GPIB, System buses, interface buses: USB, PCMCIA, VXI, SCXI, PXI, etc., networking basics for office &.Industrial applications, Visa and lVI, image acquisition and processing. Motion control. ADC, DAC, DIO, DMM, waveform generator.

UNIT V USE OF ANALYSIS TOOLS (9)

Fourier transforms, power spectrum correlation methods, windowing & filtering, Major equipments- Oscilloscope, Digital Multimeter, Pentium Computers, Application in Biomedical field.

TOTAL : 45

16BEBME702B THERAPEUTIC EQUIPMENTS 3 0 0 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To perceive the medical devices applied in measurement of parameters related to cardiology, neurology and the methods of continuous monitoring and transmittingthem.
- To analyze some of the cardiac assistdevices.
- To understand the principle of diathermy
- To discuss about the measurement of the signalsgenerated by muscles.
- To summarize the need and use of some of the extracorporealdevices.
- To learn the patient safety measures

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Utilize different medical devices applied in measurement of parameters related to cardiology,neurology
- Explain about cardiac assist devices, its continuous monitoring andtransmission
- Measure signals generated bymuscles
- Analyze different types of diathermy units.
- Identify the electrical hazards and Implement methods of patient safety
- Interpret the need and use of the extracorporealdevices.

UNIT I ULTRASONIC TECHNIQUESFORDIAGNOSIS (9)

Basic principlesof Echo technique, display techniques A, B, M modes, Echo cardiograms, Echo encephalogram, Ultrasonicappliedasdiagnostictoolinophthalmology, obstetricsandgynecology.

UNIT II PATIENTMONITORING ANDBIOTELEMETRY (9)

Patient monitoring system – ICU, post-operative, ICCU, single channel telemetry, multi-channel telemetry, frequencyallotment,radiopill.TransmissionofBiosignalsovertelephonelines.

UNIT III DIATHERMY (9)

Clinical applications of electrotherapy, shortwave diathermy, ultrasonic diathermy, microwave diathermy, surgicaldiathermyunit,IRlamps,UVlamps.

UNIT IV SPECIALDIAGNOSTIC TECHNIQUES (9)

PrinciplesofCryogenictechniqueandapplication,Endoscopy,Laproscopy,Thermography.

UNIT V PATIENTSAFETY (9)

Sources ofleakagecurrent, MicroandMacroshock, monitoring circuits, earthingschemes. ElectroMagneticinterference tomedicalelectronic Equipment–SourcesofEMI,EMIeffects,EMItoBiomedicalsensorsandECGequipment.

16BEBME7E-- PROFESSIONAL ELECTIVE IV 3003 100

16BEBME711A VIRTUAL INSTRUMENTATION DESIGN FOR MEDICAL SYSTEM LAB 0 0 3 2 100

COURSE OBJECTIVE:

The goal of this course is for students:

- To perceive the basics of virtual instrumentation
- To familiarize the students with Virtual Instrumentation and to do programming for applications
- To understand the D/A acquisition interface
- To analyse timing issues
- To learn about GPIB
- To do program with Lab view software for biomedical applications

COURSE OUTCOME

Upon completion of this course, the student will be able to:

- study about Programming Techniques
- study about Data Acquisition and inter facing techniques
- do programming for process control and other applications
- use D/A acquisition interface
- use serial communication interface
- use Lab view software for biomedical signal analysis

LISTOFEXPERIMENTS

1.GettingStartedwithLabVIEW–Basicoperations,controlsandindicators.

2.SimpleprogrammingstructuresandTimingIssues

3.LabVIEW–DebuggingaVI,Sub-VI's

4.LabVIEW–TrafficLight-ProgrammingStructure,Sub-Vis,Clusters

5.GPIB-SerialpollByte

6.Communication viaRS232/SerialPort.

7.Oscilloscope-AttributeNodes,Menus

8.RCCircuitmeasurement-Timingissues

9. Lab VIEW – Incorporating user written C subroutines

10. Digital-to-Analog acquisition interfacing - Analog I/O

11. The RS232 Interface – Function Generator

12. Importing pictures, Global/ local variables. Arrays, Clusters

16BEBME711B BIOMEDICAL EQUIPMENTS LAB 0 0 3 2 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To discuss the working principle of Biomedical recording systems.
- To infer the basic acquisition techniques of bioelectricsignals.
- To understand about defibrilator
- To learn about biotelemetry
- to understand the diathermy
- To apply Electrical safetymeasures in biomedical engineering

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Develop preamplifiers and amplifiers for various bio signalrecordings.
- Measure various non-electrical parameters using suitablesensors/transducers
- Apply electrical safety measures
- Simulate ECG signal
- Understand about the pacemaker simulation
- Demonstare defibrilator simulation

LISTOFEXPERIMENTS

1. RecordingandanalysisofECGsignalsRecordingandanalysisofEEGsignals.
2. Recording- FatiguetestofEMGsignals.
3. SimulationofECG–detectionofQRScomplexandheartrate
4. Studyof Pacemaker simulator
5. Studyof Defibrillator simulator
6. Studyofshortwaveandultrasonic diathermy.
7. Studyofbiotelemetry
8. Electrical safetymeasurements.

FOR SEMESTER V (ELECTIVE-I)

16BEBME5E01 BIOFLUIDS AND DYNAMICS 3 0 0 3 100

COURSE OBJECTIVES:

The aim of the course is to:

- Tounderstandthe concept of fluid mechanics
- Study the flow properties of blood and their relation to blood vessel structure
- TorecognizeMechanicalpropertiesofbloodvessels
- ToidentifyissuesinthePhysicsofcardiovasculardiseases.
- Identify the correct advantages and disadvantaintellectual gesof Prostheticheart valves and replacements
- Apply basic concepts in fluid mechanics to clinical fluid dynamic measurements

COURSE OUTCOMES:

Attheendofthecourse,thestudentshouldbe ableto:

- Demonstrateknowledgeengineeringprinciplesunderlyingfluid mechanics.
- Analyze problems involving circulatory biofluid mechanics and blood rheology T
- Evaluate different methods of Cardiac output measurement
- TorecognizeStudy the operation of heart valves and its relation to blood flow in arteries
- Differentiate between viscid and in-viscid flow
- Apply basic concepts in fluid mechanics to clinical fluid dynamic measurements

UNIT I BIO-FLUIDMECHANICS

Newton’slaws,Stress,Strain,Elasticity,Hooks-law,viscosity, Newtonian fluid,Non-Newtonian fluid,Viscoelasticfluids,vasculartree,Relationshipbetweendiameter,velocityandpressureofbloodflow,Resistanceagainstflow. Viscoelasticity -Viscoelastic models, Maxwell, Voigt and KelvinModels,ResponsetoHarmonicvariation,Useofviscoelasticmodels, Bio-Viscoelasticfluids:Protoplasm,Mucus,Saliva,Synovialfluids.

UNITII FLOW PROPERTIESOFBLOOD

Physical, ChemicalandRheological propertiesof blood.Apparentandrelativeviscosity,Bloodviscosityvariation:Effectofshearrate, hematocrit,temperature,proteincontentsofblood.Casson’sequation,Problemsassociatedwithextracorporealbloodflow. Fahraeus-Lindquisteffectandinverseeffect,distributionofsuspendedparticlesinanarrowrigidtube.Natureofredbloodcellsintightlyfittingtubes,hematocritinverynarrow tube.

UNITIII CARDIACMECHANICS

Cardiovascularsystem.Mechanicalpropertiesofbloodvessels: arteries,arterioles,capillariesandveins.Bloodflow:Laminarand Turbulent,Physicsofcardiovasculardiseases,Prostheticheartvalvesandreplacements.

UNITIV RESPIRATORYMECHANICS

Alveoli mechanics, Interaction of Blood and Lung P-V curveofLung:Breathingmechanism,Airwayresistance,PhysicsofLungdiseases.

UNITIV SOFTTISSUEMECHANICS

Pseudoelasticity, non-linear stress-strainrelationship, Viscoelasticity, Structure,functionandmechanicalpropertiesofskin,ligamentsand tendons.

16BEBME5E03 ADVANCED BIOCHEMISTRY 3 0 0 3 100

COURSE OBJECTIVES

The goal of this course is for students

- To study about the biochemistry of living cells, metabolism of biomolecules and the methods of investigation and diagnostic tools.
- To summarize the role of these biomolecules by providing basic information on specific metabolic diseases and disorders of thesebiomolecules.
- To analyse the structural and functional properties of carbohydrates, proteins andlipids
- To discuss about functions of each organelles and Transport of substances across biological membranes
- To infer about the biochemistry of living cells
    - Demonstrate the concepts of biochemistry of livingcells

COURSE OUTCOMES

Upon completion of this course, students will be able to:

- Understanding the concepts of biochemistry of living cells
- Understanding the concepts of metabolism of carbohydrates
- Understanding the concepts of protein biochemistry
- Understanding the concepts of biochemistry of lipids
- Understanding the concepts of investigation of metabolism.
- Understand the structural and functional properties of various organalles and biomolecules

UNIT-I BIOENERGETICS (8)

Energy relationship between the catabolic and anabolic pathways, Five major reactions in living cells, Bioenergetics and thermodynamics. Phosphoryl group transfers;ATP hydrolysis in two steps, Ping-Pong mechanism of nucleoside diphosphate kinase.

UNIT-II METABOLISM OF CARBOHYDRATES (9)

Majorpathwaysofglucoseutilization:glycolysis,fermentation,gluconeogenesis: carbohydratesynthesisfromsimpleprecursors. Pentose phosphatepathway;TCAcycle:Reactions and regulations,geneticdisordersaffecting carbohydrate metabolism

UNIT III METABOLISM OF NUCLEIC ACIDS (9)

Biosynthesis of nucleotides, denovo and salvage pathways for purines and pyrimidines, regulatory mechanisms: Metabolic disorders associated with nucleic acid metabolism.

UNIT-IV METABOLISM OF AMINOACIDS (10)

BiosynthesisofaminoacidsfromacetylcoA, Biosynthesisofessentialaminoacids(Met,Thr,Lys,Ile,Val, Leu, Phe, Trp, Tyr).Glucose-alaninecycle, Ureacycle.Pathwaysofdegradation of aromatic, glucogenic and ketogenic aminoacids. Human genetic disordersaffectingaminoacid metabolism.

UNIT-V METABOLISMOFLIPIDS (9)

Biosynthesisoffattyacid,Triacylglycerol.Biosynthesisofcholesterol. Digestion,mobilization,andtransportoffats,fattyacidentryintomitochondriaviatheacyl-carnitine/carnitinetransporter.The β-oxidationpathway.Oxidationofamonounsaturated and polyunsaturatedfattyacid.GeneticdefectsinfattyAcyl–CoA dehydrogenases causingseriousdiseases.

17BEBME5E04 ELEMENTS OF BIOTECHNOLOGY 3003 100

COURSE OBJECTIVES

The goal of this course is for students

- To develop skills of the students in the field of biotechnology and its applications in various fields.
- The course will serve as an effective course to understand Socio-economic issues of biotechnology.

- Scope of micro particles in biomedical field
- Ethical issues working with micro particles
- Learn about micro surgical devices
- BenefitsandchallengesinMolecularmanufacturing

COURSE OUTCOMES:

Attheendofthecourse,thestudentshouldbe ableto:

- identify the potential areas where biotechnologycan be utilized.
- Expose to the ethical issues regarding the use of biotechnology.
- Explain the TechniqueImmunotechnology
- Distinguish industrial& microbial biotechnology
- Elaborate Patenting of Biological Material

UNIT I BIOTECHNOLOGY 9

General Features of Biotechnology – History, Definition and Scope – Recombinant DNA and Genetic Engineering: Cloning and Expression Vectors Recombinant – DNA and Genetic Engineering: Chimeric DNA, Probes and Genomic/cDNA Libraries – PCR and Microarrays – Isolation and Synthesis of Genes (Including Synthesis of a Bacterial Genome) – Molecular Markers and DNA Sequencing (Including Whole Genome Sequencing).

UNIT II ANIMAL BIOTECHNOLOGY 9

Animal Cell and Tissue Culture – Laboratory Facilities, Culture Media and Procedures – Animal Cell and Tissue Culture – Primary Culture, Cell Lines & Cloning – Animal Cell and Tissue Culture – Tissue and Organ Culture: Primary Explanation Techniques – In Vitro Fertilization and Embryo Transfer in Humans and Livestock – Transfection Methods and Transgenic Animals – Immunotechnology – Immune System, Antibodies, Interferons and Vaccines –. Immunotechnology – Hybridoma and Monoclonal Antibodies (Mabs) – Animal Genomics – Molecular Maps – Animal Genomics – Whole Genome Sequences and Their Annotation – Biotechnology in Medicine.

UNIT III PLANT BIOTECHNOLOGY 9

Plant Cell and Tissue Culture: –Culture Media and Cell Culture; –Plant Cell and Tissue Culture: –Tissue Culture, Micropropagation and Somaclonal Variation; –Plant Cell and Tissue Culture: –Production and Uses of Haploids; – Plant Cell and Tissue Culture: –Protoplast Culture, Regeneration and Somatic Hybridization; –Gene Transfer Methods in Plants; – Transgenic Plants–Chloroplast and Mitochondrion Engineering; –Plant Genomics: –Molecular Maps of Plant Genomes; – Plant Genomics:– Whole Genome Sequences.

UNIT IV INDUSTRIAL& MICROBIAL BIOTECHNOLOGY 9

Enzyme Biotechnology–Protein Engineering – Immunotoxins and Drug Designing –Metabolic Engineering for Overproduction of Metabolites–Microbial Biotechnology –Isolation, Culture and

Genetic Manipulation of Microbes–Microbial Biotechnology–Microbes for Production of Chemicals–Microbial Biotechnology–Microbes for Cleaner Technologies–Microbial Biotechnology–Microbes for Agriculture–Microbial Biotechnology–Microbial Genomics for Industry

UNIT V BIOTECHNOLOGY & INTELLECTUAL PROPERTY RIGHTS ENVIRONMENT 9

Pollution Control–Bioremediation (Including Phytoremediation)–Bioenergy and Biofuels–Restoration of Degraded Lands–Biodiversity and its Conservation–Biotechnology & Intellectual Property–Intellectual Property Rights (IPR) & Intellectual Property Protection (IPP)–Biotechnology & Intellectual Property–Patenting of Biological Material: Obligations and Implications.

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Prof. P. K. Gupta	Elements of Biotechnology	2nd Edition (3rd Reprint)	2015-16

FOR SEMESTER VI (ELECTIVE-II & III)

16BEBME6E01 PHYSIOLOGICAL MODELLING 3 0 0 3 100

COURSE OBJECTIVES

The goal of this course is for students:

- To understand properties of systems and electrical analog.
- To discuss about transfer functions..
- To build simple impedance concept..
- To understand feedback systems.
- To develop simulation of biological systems.
- To gain knowledge about the concepts of physiological modelling.

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Explain the concept of properties of systems and electrical analog
- Analyse various protocols about transfer functions.
- Build simple simpleimpedance concept
- Apply feedback systems.
- Analyse applications simulation of biological systems.
- Utilize concepts of physiological modelling..

UNIT I PROPERTIES OF SYSTEMS AND ELECTRICAL ANALOG 9

System concept, system properties – Resistance, storage, resistance – compliance, piece- wise linear approximation, electrical analog for compliance, thermal storage, step response of first order systems – resistance- compliance systems, and pulse response of first order systems

UNIT II TRANSFER FUNCTIONS 9

Transfer functions and its use, Study of transfer function of first order and second order systems, engineering concept in coupled system, example of Transformed signals.

UNIT III IMPEDANCE CONCEPT 9

Transfer functions with impedance concept, prediction of performance, identification of the system from impedance function, periodic signals, relationship between transfer function and sinusoidal response, evaluation of transfer function from frequency response.

UNIT IV FEEDBACK SYSTEMS 9

Characteristics of physiological feedback systems, stability analysis of systems.

UNIT V SIMULATION OF BIOLOGICAL SYSTEMS 9

Simulation of thermal regulation, pressure and flow control in circulation, occulo motor system, endocrinal system, functioning of receptors.

Total : 45

16BEBME6E02 TELEHEALTH TECHNOLOGY 300 3 100

COURSE OBJECTIVES:

The goal of this course is for students:

- To infer the key principles for telemedicine and health.
- To define telemedical technology.
- To know telemedical standards, mobile telemedicine and it applications.
- To State the principles of clinical telehealth
- To understand the scope, benefits and limitations of Telemedicine and security in telemedicine applications

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Apply multimedia technologies in telemedicine.
- Explain Protocols behind encryption techniques for secure transmission of data.
- Utilize telehealth in healthcare.
- Outline the basic concepts involved in telemetry based transmission and reception
- Discuss the communication devices and Networks of telemedicine.
- Describe telehealth systems for secure transmission of medical data and retrieval of telemedicine based information.

UNITI TELEMEDICINEANDHEALTH 9

HistoryandEvolutionoftelemedicine,Functionaldiagramoftelemedicinesystem,Telemedicine, Telehealth,Telecare,Organsoftelemedicine,GlobalandIndianscenario,Ethicalandlegalaspects ofTelemedicine-Confidentiality,Socialandlegalissues,Safetyandregulatoryissues,Advancesin Telemedicine.

UNITII TELEMEDICALTECHNOLOGY 9

PrinciplesofMultimedia-Text,Audio,Video,data,Datacommunicationsandnetworks,PSTN,POTS, ANT,ISDN,Internet,Air/wirelesscommunications:GSMsatellite,andMicrowave,Modulation techniques,Typesof Antenna,Integrationandoperationalissues,Communicationinfrastructurefor telemedicine–LANandWANtechnology.Satellitecommunication.Mobilehandhelddevicesand mobilecommunication.Internettechnologyandtelemedicineusingworldwideweb(www).Video andaudioconferencing.Clinicaldata–localandcentralized.

UNITIII TELEMEDICALSTANDARDS 9

DataSecurityandStandards:Encryption,Cryptography,Mechanismsofencryption,phasesofEncryption.Protocols:TCP/IP,ISO-OSI,StandardstofollowedDICOM,HL7,H.320series(Video phonebasedISBN)T.120,H.324(VideophonebasedPSTN),VideoConferencing,Real-time Telemedicineintegratingdoctors/Hospitals,Clinicallaboratorydata,Radiologicaldata,andother clinicallysignificantbiomedicaldata,Administrationofcentralizedmedicaldata,securityand confidentiallyofmedicalrecordsandaccesscontrol,Cyberlawsrelatedtotelemedicine.

16BEBME6E03 CANCER BIOLOGY 3003 100

COURSE OBJECTIVES

The goal of this course is for students:

- To infer the key principles for fundamentalsofcancerbiology
- To define principlesofcarcinogenesistechnology.
- To know molecularcellbiologyofcancer.
- To State the principlesofcancermetastasis**.**
- To understand the scope, benefits and limitations of newmoleculesforcancertherapy.
- TodevelopskillsofthestudentsintheareaofCancerBiology.

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Learntaboutpathogenesisofcancer,identificationsofcancerthroughtoolsdevelopedbybiotechnologyresearch&moleculessynthesizedforcancertherapy.Thiswillbeverybeneficialforthestudenttotakeupprojectsin CancerBiology.
- Explain Protocols behind molecularcellbiologyofcancer.
- Utilize principlesofcancermetastasisin healthcare.
- Outline the basic concepts involved in newmoleculesforcancertherapy
- Discuss the fundamentalsofcancerbiology.
- Describe theareaofCancerBiology

UNITI FUNDAMENTALSOFCANCERBIOLOGY 9

Regulationofcellcycle, mutationsthatcausechangesinsignalmolecules, effectsonreceptor,signalswitches,tumoursuppressorgenes,modulationofcellcycleincancer, differentformsof cancers,dietand cancer. Cancerscreeningand early detection, Detectionusingbiochemicalassays,tumormarkers,moleculartoolsforearlydiagnosis ofcancer.

UNITII PRINCIPLESOFCARCINOGENESIS 12

Theoryofcarcinogenesis,Chemicalcarcinogenesis, metabolismofcarcinogenesis, principlesofphysicalcarcinogenesis,x-rayradiation-mechanismsofradiation carcinogenesis.

UNITIII PRINCIPLESOFMOLECULARCELLBIOLOGYOFCANCER 9

Signal targetsandcancer,activationofkinases;Oncogenes,identificationofoncogenes, retrovirusesandoncogenes, detection of oncogenes. Oncogenes/proto oncogene activity, Growthfactorsrelatedtotransformation,Telomerases.

UNITIV PRINCIPLESOFCANCERMETASTASIS 9

Clinical significancesofinvasion, heterogeneity of metastaticphenotype, metastatic cascade,basementmembranedisruption,threesteptheoryofinvasion,proteinasesand tumour cell invasion.

UNITV NEWMOLECULESFORCANCERTHERAPY 6

Different forms oftherapy,chemotherapy,radiationtherapy,detectionofcancers, predictionofaggressivenessofcancer,advancesincancerdetection.Useofsignaltargetstowardstherapyofcancer;Genetherapy.

16BEBME6E04 BIOSIGNAL CONDITIONING CIRCUITS 3 0 0 3 100

COURSE OBJECTIVE

- To gain in depth knowledge of fundamentals of operational amplifier circuits
- To study the various applications using operational amplifiers.
- To analyze the applications of opamp
- To understand A/D conversion
- To study the characteristics of frequency filters
- To learn the need of isolation amplifier

COURSE OUTCOME

- Elaborate the fundamentals of operational amplifier circuits
- Apply the various applications using operational amplifiers.
- Use the applications of opamp
- Distinguish A/D and D/A conversion
- Design the filter circuits for various frequency range
- Explain the need of isolation amplifier

UNIT 1 INTRODUCTION TO OPAMP 9

Introduction, Signal conditioning, 741 General purpose OPAMP: ideal characteristics, offset voltages and currents. Open & Closed Loop Configuration. Inverting, Non-Inverting, Summing, Voltage Follower, Integrator, differentiators, Log & Anti-Log Amplifiers, Differential Amplifiers, CMRR.

UNIT 2 APPLICATION OF OPAMPS 9

Comparator- Zero crossing detector, Inverting and non inverting comparator, Schmitt Trigger, Precision rectifiers- Half wave and Full wave rectifiers, Peak detectors, Monostable, Astable multivibrators, Sawtooth generator, Triangular waveform generator, Sine Wave Generators-RC Phase Shift Oscillator, Wein Bridge oscillator.

UNIT 3 FILTERS 9

Introduction- Analog Filters, Active Filters and Passive Filters, First order and Second order Low Pass Filters, High Pass Filters, Band Pass Filters- Narrow Band Pass, Wide band Pass Filters,, Band Reject Filters- Notch Filter, All Pass filters and higher Order filters- Design and applications.

UNIT 4 A/D AND D/A CONVERTERS 9

Sample and Hold circuit - D/A converters: Resistive divider and R-2R ladder networks, A/D converters: Counting type, Successive approximation, parallel comparator, Voltage to Current Converter, 555 Timer and its applications- Astable multivibrators and Monostable Multivibrator.

UNIT 5 AMPLIFIERS 9

Instrumentation amplifiers, Bridge Amplifiers, Bioelectric Amplifiers: - Properties desired, Isolation Amplifiers:- Battery Powered, Carrier, Optically Coupled, Current Loading, Chopper Stabilized amplifier, Input Guarding.

16BEBME6E05 RADIOLOGICAL EQUIPMENTS3 0 0 3 100

COURSE OBJECTIVE:

- To Understandgenerationofx-raysanditsusesinimaging.
- To Learndifferenttypesof radiodiagnostictechniques.
- To Knowtechniquesusedforvisualizingdifferentsectionsofthebody.
- ToLearnradiationtherapymethodologiesandthe radiationsafety.
- To perceive the knowledge of medical devices applied in measurement of parameters relatedmedical imaging and the methods of continuous monitoring and transmittingthem.
- To understand Radiationtherapy and its safety

COURSE OUTCOME:

- Utilize different medical devices applied in measurement of

parameters

related to medical imaging

- Explain about cardiac assist devices, its continuous monitoring andtransmission
- Measure signals generated bymuscles
- Analyze different types of nuclear medicine systems
- Explainthe differentradio diagnosticandtherapeutictechniques.
- Analyze the safety aspects of Radiationtherapy

UNITI MEDICALX-RAYEQUIPMENT 9

FOR SEMESTER VII (ELECTIVE-IV)

16BEBME7E01 REHABILITATION ENGINEERING 3 0 0 3 100

COURSE OBJECTIVE:

- To perceive the rehabilitation concepts and Rehabilitation team for futuredevelopment andapplications.
- To understand the Primary & secondary Disabilities
- To discuss various Principles of RehabilitationEngineering.
- To infer the various orthotic devices and prosthetic devices to overcomeorthopedic problems.
- To explain the need for medical aids.
- To explain about different types of models of Hand and arm replacement

COURSE OUTCOME:

- Elaborate about the needs of rehabilitations and its futuredevelopment.
- Understand the terminologies used by the rehabilitation team
- Demonstrate Engineering Concepts in Sensory & Motor rehabilitation.
- Apply the different types of Therapeutic Exercise Technique to benefit thesociety.
- Understand the need of virtual reality based rehabilitation
- Simplify about different types of models of Hand and armreplacement.

16BEBME7E02 LASERS AND FIBER OPTICS IN MEDICINE 3 0 0 3 100

OBJECTIVES:

The goal of this course is for students

- To Understand Biomedical Laser principles and applications.
- To be familiar with optical properties of tissues
- To infer the knowledge of photonics
- To be exposed to Optical Holography
- To explain the various applications of Laser
- To understand photodynamictherapy.

OUTCOMES:

Upon completion of this course, students will be able to:

- Analyse the optical properties of tissues
- Use the Photonics instrumentation
- Apply lasers in different areas of medicine.
- Perceive the lasersin ophthalmology
- Discuss about opticalhologram
- Explain the special techniques of Lasers.

UNITI OPTICALPROPERTIESOFTHETISSUES 9

Refraction,scattering,absorption,lighttransportinsidethetissue,tissueproperties,Lightinteraction withtissues,optothermalinteraction,fluorescence,speckles.

UNITII INSTRUMENTATIONINPHOTONICS 9

Instrumentationforabsorption,scatteringandemissionmeasurements,excitationlightsources–highpressurearclamp,solidstateLEDs,opticalfilters,polarisers,timeresolvedandphaseresolved detectors.

UNITIII APPLICATIONSOFLASERS 9

Laserintissuewelding,lasersindermatology,lasersinophthalmology,otolaryngology,urology.

UNITIV OPTICALHOLOGRAPHY 9

Wavefronts,interferencepatterns,principleofhologram,opticalhologram,applications.

UNITV SPECIALTECHNIQUES 9

Nearfieldimagingofbiologicalstructures,in-vitroclinicaldiagnostic,fluorescentspectroscopy, photodynamictherapy.

16BEBME7E03 PATIENT AND DEVICES SAFETY 3 0 0 3 100

COURSEOBJECTIVES:

The goal of this course is for students

- To provide basic knowledge on the concept of Healthcare Quality management towards continuous improvementofpatientcare
- To Understandhospitalsafety.
- To be familiar with electrical & fire safety.
- To infer the knowledge of regulatoryrequirementforhealthcare.
- To be exposed to standardization ofqualitymedicalcareinhospitals
- To explain the assessingqualityhealthcare

COURSE OUTCOME:

Upon completion of this course, students will be able to:

- Makethestudentsawareoftheroleofbiomedicalengineerinhospitals,especiallyinthemanagementofelectricalsupply,maintenanceofelectricalsafety.
- Analyse the hospitalsafety.
- Use the electrical & fire safety.
- Apply regulatoryrequirementforhealthcare in different areas of medicine.
- Perceive thestandardization ofqualitymedicalcareinhospitals.
- Discuss about the assessingqualityhealthcare.

UNITI STANDARDIZATION OFQUALITYMEDICALCAREINHOSPITALS 9

DefineQuality-NeedforStandardization&QualityManagement, TQMinHealthcareorganization-Qualityassurancemethods, Q A in(MedicalImaging&Nuclearmedicine) Diagnosticservices–Classificationofequipments

UNITII REGULATORYREQUIREMENTFORHEALTHCARE 9

FDAregulations,Accreditationforhospitals-JCI,NABHandNABL,OtherregulatoryCodes.

UNITIII HOSPITALSAFETY 9

Security &SafetyofHospital-Property, Staff&Patients, Radiation safety, Safetyprecautions, hazardous effectsofradiation, allowedlevelsofradiation,ICRPregulationsforradiationsafety, DisposalofBiologicalwaste.

UNITIV ELECTRICAL&FIRESAFETY 9

Sourcesofshocks, macro&microshocks-Hazards, monitoring andinterruptingtheOperationfromleakagecurrent- Elements offire,causesoffire,ActiontobetakenincaseoffireinaHospital.

UNITV ASSESSINGQUALITYHEALTHCARE 9

PatientSafetyOrganization-Governmental&Independent,MeasuringQualitycare–Evaluationofhospitalservices–sixsigmaway,QualityAssuranceinHospitalsSop's–PatientOrientationfor TotalPatientSatisfaction.5Stechniques.

FOR SEMESTER VIII (ELECTIVE-V & VI)

16BEBME8E01 BIOLOGICAL SPECTROSCOPY 3 0 0 3 100

COURSE OBJECTIVE

- To develop the skills of students in the area of Biological spectroscopy.
- To learn various aspects of mass spectroscopy
- To Understand NMR Spectroscopy
- To Know various diffraction methods
- To Learn about Polarized light
- To be Familiarised optical rotation

COURSE OUTCOMES:

At the end of the course, the student would have learnt about

- To learn various aspects of mass spectroscopy
- Understand NMR Spectroscopy
- Know various diffraction methods
- Learn about Polarized light
- Familiarise optical rotation
- various kinds spectroscopic techniques to study biological system.

UNIT I OPTICAL ROTATORY DISPERSION 5

Polarized light – optical rotation – circular dichroism – circular dichroism of nucleic acids and proteins.

UNIT II NUCLEAR MAGNETIC RESONANCE 10

Chemical shifts – spin – spin coupling – relaxation mechanisms – nuclear overhauser effect – multidimensional NMR spectroscopy – determination of macromolecular structure by NMR – magnetic resonance imaging.

UNIT III MASS SPECTROMETRY 10

Ion sources sample introduction – mass analyzers and ion detectors – biomolecule mass sepctrometry – peptide and protein analysis – carbohydrates and small molecules – specific applications.

UNIT IV X-RAY DIFFRACTION 10

Scattering by x- rays – diffraction by a crystal – measuring diffraction pattern – bragg reflection – unit cell – phase problem – anomalous diffraction – detemination of crystal structure – electron and neutron diffraction.

UNIT V SPECIAL TOPICS AND APPLICATIONS 10

Electron microscopy – transmission and scanning electron microscopy – scanning tunneling and atomic force microscopy – combinatorial chemistry and high throughput screening methods.

16BEBME8E02 ROBOTICS AND AUTOMATION 3 0 0 3 100

COURSE OBJECTIVES:

- To study the various parts of robots and fields of robotics.
- To study the various kinematics and inverse kinematics of robots.
- To study the Euler, Lagrangianformulation of Robot dynamics.
- To study the trajectory planning for robot.
- To study the control of robots for some specific applications.
- Use Robots in different applications

COURSE OUTCOMES:

Upon completion of the course, the student should be able to:

- Explain the basic concepts of working of robot
- Analyze the function of sensors in the robot
- Write a program to use a robot for a typical application
- Use Robots in different applications
- Know the Euler, Lagrangianformulation of Robot dynamics.

UNIT I BASIC CONCEPTS (9)

Definition and origin of robotics–different types of robotics–various generations of robots–degrees of freedom–Asimov's laws of robotics–dynamic stabilization of robots.

UNITII POWER SOURCESAND SENSORS (9)

Hydraulic, pneumatic and electric drives–determination of HP of motor and gear ingratio–variable speed arrangements–path determination – micro machines in robotics– machine vision – ranging– laser–acoustic –magnetic, fiber optic and tactile sensors.

UNIT III MANIPULATORS, ACTUATORS AND GRIPPERS (9)

Construction of manipulators– manipulator dynamics and force control –electronic and pneumatic manipulator control circuits–end effectors–U various types of grippers –design considerations.

UNIT IV KINEMATICSAND PATH PLANNING (9)

Solution of inverse kinematics problem–multiple solution jacobianwork envelop–hill Climbing Techniques– robot programming languages

UNIT V CASE STUDIES (9)

Multiple robots–machine interface–robots in manufacturing and non-manufacturing applications–robot cell design–selection of robot.

16BEBME8E03 NANOTECHNOLOGY IN MEDICINE 3003 100

COURSE OBJECTIVE:

- To study and gain the knowledge of Nanotechnology in the field of medicine.
- To study and gain the knowledge of Cellular Nano machines and the Building Blocks of Life
- Know the Importance of various nano materials in health and medicine.
- To gain the knowledge of Molecular therapy
- To study Stem cell therapy,
- .Application of nanotechnology in health monitoring systems

COURSE OUTCOMES:

After learning the course the students should be able to understand:

- Applications of nanotechnology health care and medicine.
- Cellular Nano machines and the Building Blocks of Life
- Importance of nanomaterials in drug delivery.
- Application of nanomaterials and nanosystems in Medical Diagnostics and Therapeutics.
- Know Application of nanotechnology in health monitoring systems.
- Familiarise Cellular Nano machines

UNIT I INTRODUCTION (9)

Cellular Nano machines and the Building Blocks of Life, A New Generation of Nano tools, Importance of various nano materials in health and medicine.

UNIT II NANOPARTICLES FOR DIAGNOSTICS (9)

Nanoparticles in Medical Diagnostics and Therapeutics, Targeted drug delivery, Magnetic Nanoparticles as Contrast Agents for Medical Diagnosis, Liposome based delivery, Bio Inspired Nanomaterials for a New Generation of Medicine.

UNIT III THERAPEUTIC NANO DEVICES (9)

Definition and scope, Synthetic Approaches: top-down versus bottom-up Approaches for Nanotherapeutic Device Components, Applications for Nano therapeutic Devices.

UNIT IV NANOSYSTEMS FOR HEALTHCARE MONITORING – I (9)

Single-Molecule Detection Techniques for Monitoring Cellular Activity at the Nano scale Level, Nano probes, Integrated Cantilever-Based Biosensors for the Detection of Chemical and Biological Entities.

UNIT V NANOSYSTEMS FOR HEALTHCARE MONITORING – II (9)

Nano pore Methods for DNA Detection and Sequencing, Nano tube Based Membrane Systems, micro/nano fluidic systems for bio-object sorting, single chip electrophoresis system.

16BEBME8E04 TISSUE ENGINEERING 3 0 0 3 100

COURSE COBJECTIVES:

- To learn the fundamentals of tissue engineering and tissue repairing
- To acquire knowledge on clinical applications of tissue engineering
- To understand the basic concept behind tissue engineering focusing on the stem cells, biomaterials and its applications
- Overall exposure to the role of tissue engineering and stem cell therapy in organogenesis
- Ability to understand the components of the tissue architecture
- To learn the fundamentals of tissue engineering and tissue repairing

COURSE OUTCOMES:

- Ability to understand the components of the tissue architecture
- Opportunity to get familiarized with the stem cell characteristics and their relevance in medicine
- Awareness about the properties and broad applications of biomaterials
- Overall exposure to the role of tissue engineering and stem cell therapy in organogenesis
- To learn the fundamentals of tissue engineering and tissue repairing
- To acquire knowledge on clinical applications of tissue engineering

UNIT I INTRODUCTION (9)

Introduction to tissue engineering: Basic definition; current scope of development; use in therapeutics, cells as therapeutic agents, cell numbers and growth rates, measurement of cell characteristics morphology, number viability, motility and functions. Measurement of tissue characteristics, appearance, cellular component, ECM component, mechanical measurements and physical properties.

UNIT II TISSUE ARCHITECTURE (9)

Tissue types and Tissue components, Tissue repair, Engineering wound healing and sequence of events. Basic wound healing Applications of growth factors: VEGF/angiogenesis, Basicproperties, Cell-Matrix & Cell-Cell Interactions, telomeres and Selfrenewal, Control of cell migration in tissue engineering.

UNIT III BIOMATERIALS (9)

Biomaterials: Properties of biomaterials, Surface, bulk, mechanical and biological properties. Scaffolds & tissue engineering, Types of biomaterials, biological and synthetic materials, Biopolymers, Applications of biomaterials, Modifications of Biomaterials, Role of Nanotechnology.

UNIT IV BASIC BIOLOGY OF STEM CELLS (9)

Stem Cells: Introduction, hematopoietic differentiation pathway Potency and plasticity of stem cells, sources, embryonic stem cells, hematopoietic and mesenchymal stem cells, Stem Cell markers, FACS analysis, Differentiation, Stem cell systems- Liver, neuronal stem cells, Types & sources of stem cell with characteristics: embryonic, adult, haematopoetic, fetal, cord blood, placenta, bone marrow, primordial germ cells, cancer stem cells induced pleuripotent stem cells.

UNIT V CLINICAL APPLICATIONS (9)

Stem cell therapy, Molecular therapy, In vitro organogenesis, Neurodegenrative diseases, spinal cord injury, heart disease, diabetes, burns and skin ulcers, muscular dystrophy, orthopedic applications, Stem cells and Gene therapy Physiological models, tissue engineered therapies, product characterization, components, safety, efficacy. Preservation –freezing and drying. Patent protection and regulation of tissue engineered products, sethical issues.

16BEBME8E05 SPEECH PROCESSING 3 0 0 3 100

COURSE OBJECTIVES:

- Tointroducespeechproductionandrelatedparametersof speech.
- Toshowthecomputationanduseoftechniquessuchas shorttimeFouriertransform,linear predictivecoefficientsandothercoefficientsintheanalysisofspeech.
- Tounderstanddifferentspeechmodelingproceduressuchas Markovandth eir implementationissues.
- To introduce the models of speech production and acoustic phonetics
- . To teach time and frequency domain techniques for estimating speech parameters
- To teach predictive techniques for speech coding

COURSE OUTCOMES:

Uponcompletionofthecourse,studentswillbeableto

- Modelspeechproductionsystemanddescribethefundamentalsof speech.
- Extractandcomparedifferentspeechparameters.
- Chooseanappropriatestatisticalspeechmodelforagivenapplication.
- Designaspeechrecognitionsystem.
- Usedifferentspeechsynthesistechniques.
- .Analyze application of speech processing in speech compression, speech recognition, and speech synthesis

UNITI BASICCONCEPTS 9

SpeechFundamentals:ArticulatoryPhonetics–ProductionandClassificationofSpeechSounds; AcousticPhonetics–Acousticsofspeechproduction;ReviewofDigitalSignalProcessingconcepts; Short-TimeFourierTransform,Filter-BankandLPCMethods.

UNITII SPEECHANALYSIS 9

Features,FeatureExtractionandPatternComparisonTechniques:Speechdistortionmeasures– mathematicalandperceptual–Log–SpectralDistance,CepstralDistances,WeightedCepstral DistancesandFiltering,LikelihoodDistortions,SpectralDistortionusingaWarpedFrequencyScale , LPC,PLPandMFCCCoefficients,TimeAlignmentandNormalization–DynamicTimeWarping, MultipleTime–AlignmentPaths.

UNITIII SPEECHMODELING 9

HiddenMarkovModels:MarkovProcesses,HMMs–Evaluation,OptimalStateSequence–Viterbi Search,Baum-WelchParameterRe-estimation,Implementationissues.

UNITIV SPEECHRECOGNITION 9

LargeVocabularyContinuousSpeechRecognition:Architectureofalargevocabularycontinuous speechrecognitionsystem–acousticsandlanguagemodels–n-grams,contextdependentsub-word units;Applicationsandpresentstatus.

UNITV SPEECHSYNTHESIS 9

Text-to-SpeechSynthesis:Concatenativeandwaveformsynthesismethods,sub-wordunitsfor TTS, intelligibilityandnaturalness–roleofprosody,Applicationsandpresentstatus.

16BEBME8E06 RAPID PROTOTYPING 3 0 0 3 100

OBJECTIVE:

- GeneratingagoodunderstandingofRPhistory,itsdevelopmentandapplications.
- Toexposethe studentstodifferenttypesof Rapidprototypingprocesses,
- MaterialsusedinRPsystemsandreverse engineering.
- ToprovideknowledgeondifferenttypesofRapidPrototypingsystemsanditsapplicationsin variousfields
- Understand SelectiveLaserSintering
- Know Directshellproductioncasting

OUTCOME:

- ToprovideknowledgeondifferenttypesofRapidPrototypingsystemsandits applicationsin variousfields
- GeneratingagoodunderstandingofRPhistory,itsdevelopmentandapplications.
- Toexposethe studentstodifferenttypesof Rapidprototypingprocesses,
- MaterialsusedinRPsystemsandreverse engineering.
- Familiarise LaserEngineeredNetShaping(LENS).
- Know medicaldataprocessing

UNITI INTRODUCTION 9

History–DevelopmentofRP systems–ApplicationsinProductDevelopment,ReverseEngineering, RapidTooling,RapidManufacturing-Principle–Fundamental–Fileformat–Othertranslators–medicalapplicationsofRP-Ondemandmanufacturing–Directmaterialdeposition-Shape DepositionManufacturing.

UNITII LIQUIDBASEDANDSOLIDBASEDRAPIDPROTOTOTYPINGSYSTEMS 9

Classification–Liquidbasedsystem-StereolithographyApparatus(SLA),detailsofSLprocess, products,Advantages,Limitations,ApplicationsandUses.Solidbasedsystem- FusedDeposition Modeling,principle,process,products,advantages,applicationsanduses-LaminatedObject Manufacturing

UNITIII POWDERBASEDRAPIDPROTOTOTYPINGSYSTEMS 9

SelectiveLaserSintering–principlesofSLSprocess,principleofsinterbondingprocess,Laser sinteringmaterials,products,advantages,limitations,applicationsanduses.ThreeDimensional Printing–process,majorapplications,researchanddevelopment.Directshellproductioncasting–keystrengths,process,applicationsanduses,casestudies,researchanddevelopment.Laser SinteringSystem,e-manufacturingusingLasersintering,customizedplasticparts,customizedmetal parts,e-manufacturing-LaserEngineeredNetShaping(LENS).

UNITIV MATERIALSFORRAPIDPROTOTOTYPINGSYSTEMS 9

Natureof material–typeofmaterial–polymers,metals,ceramicsand composites-liquidbased materials,photopolymerdevelopment–solidbasedmaterials,powderbasedmaterials-casestudy.

UNITV REVERSEENGINEERINGandNEWTECHNOLOGIES 9

Introduction,measuringdevice-contacttypeandnon-contacttype,CADmodelcreationfrompoint clouds-preprocessing,pointcloudstosurfacemodelcreation,medicaldataprocessing-typesof medicalimaging,softwareformakingmedicalmodels,medicalmaterials,otherapplications–Casestudy.

SCIENCE AND HUMANITIES

16BTSHOE01 PROBABILITY AND RANDOM PROCESS 3 0 0 3 100

OBJECTIVES:

- To gain knowledge in measures of central tendency.
- To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
- To understand the basic concepts of probability, one- and two-dimensional random variables
- To introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in IT fields.
- To understand the concept of correlation and spectral densities.

COURSE OUTCOMES:

- Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
- To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- To understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
- To apply the concept random processes in engineering disciplines.
- The students will have an exposure of various distribution functions and help in acquiring skills in handling situations involving more than one variable.
- The students will have an exposure of various distribution functions, correlation and spectral densities.

UNIT-I MEASURES OF CENTRAL TENDENCY AND PROBABILITY
Measures of central tendency–Mean, Median, Mode-Standard Deviation Probability-Random Variable-Axioms of Probability-Conditional Probability-Total probability–Bayes' theorem.

UNIT-II STANDARD DISTRIBUTIONS
Functions of a random Variable-Binomial, Poisson, Uniform, Exponential, Gamma (one Parameter only) and Normal Distributions-Moment generating functions, Characteristic function and their properties–Chebyshev's in equality.

UNIT-III TWO DIMENSIONAL RANDOM VARIABLES
Joint Distributions-Marginal and conditional Distributions-Probability Mass Function Probability density functions–Covariance-Correlation and regression

UNIT-IV CLASSIFICATION O FRANDOM PROCESS
Definition and examples-first order, second order, strictly stationary, wide–sense stationary and

Ergodic Processes-Markov Process-Binomial, Poisson and Normal Processes-Sinewave process.

UNIT-V CORRELATION AND SPECTRAL DENSITIES

Autocorrelation-Cross Correlation-Properties–Power spectral density–Cross spectral density- Properties–Wiener-Khintchine relation–Relationship between cross power spectrum and cross correlation Function-Linear time invariant System-System transfer function–Linear systems with random inputs – Autocorrelation and cross correlation functions of input and output.

16BTSHOE02 FUZZY MATHEMATICS 3 0 0 3 100

OBJECTIVES:

- Be able to understand basic knowledge of fuzzy sets and fuzzy logic
- Be able to apply basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations
- Be able to apply basic fuzzy inference and approximate reasoning
- To know the applications of fuzzy Technology.
- To understand the concepts of Probability Measures vs Possibility Measures

COURSE OUTCOMES:

- To gain the main subject of fuzzy sets.
- To understand the concept of fuzziness involved in various systems and fuzzy set theory.
- To gain the methods of fuzzy logic.
- To comprehend the concepts of fuzzy relations.
- To analyze the application of fuzzy logic control to real time systems.
- The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SET (9)

Fuzzy Sets: Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS (9)

Operations on Fuzzy Sets Operations on [0,1] – Fuzzy negation, triangular norms, tonearms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATION (9)

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURE (9)

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures Vs Possibility Measures

UNIT V FUZZY INFERENCE (9)

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

16BTSHOE03 LINEAR ALGEBRA 3 0 0 3 100

OBJECTIVES:

- To introduce the basic concepts of vector space
- To know the fundamentals of linear Algebra
- To solve system of linear equations
- To study about the linear transformations
- To introduce the concepts of inner product spaces
- To understand the importance of Linear Algebra and its applications in branches of Mathematics

OUTCOMES:

- To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- To describe the fundamental concepts of Eigen values and Eigen vectors by using Power method.
- To apply the fundamental concepts in their respective engineering fields
- To visualize linear transformations as matrix form
- To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- To articulate the importance of Linear Algebra and its applications in branches of Mathematics.

UNIT I VECTOR SPACES (9)

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS (9)

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS (9)

Direct methods, Gauss elimination method, Gauss Jordan method, Croute's method, iterative methods, Gauss-Jacobi method, Gauss–Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS (9)

Linear Transformations - The Null Space and Range - I isomorphism - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES (9)

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application: Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

16BTSHOE04 ENGINEERING ACOUSTICS 3 0 0 3 100

OBJECTIVES:

- To disseminate the fundamentals of acoustic waves. (K)
- To inculcate the characteristics of radiation and reception of acoustic waves. (K)
- To divulge knowledge on the basics of pipe resonators and filters.(S)
- To introduce the features of architectural acoustics.**(S)**
- To impart the basic knowledge of transducers and receivers.(K)
- To introduce the applications of Engineering acoustics

COURSE OUTCOMES:

- Develop the idea of the fundamentals of acoustic waves.
- Apply the concepts of radiation and reception of acoustic waves.
- Explain the basic ideas of pipe resonators and filters.
- Illustrate the basics of architectural acoustics.
- Illustrate the transducers and receivers and its applications in various electronic devices.
- Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION (9)

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales .Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES (9)

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS (9)

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS (9)

Sound in endo sure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design.Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION (9)

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

16BTSHOE05 SOLID WASTE MANAGEMENT 3 0 0 3 100

OBJECTIVES:

- To make the students conversant with basics of Solid waste sand its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of Hazardous waste managements.
- To acquaint the students with the basics of energy generation from waste materials.
- To understand the chemical principles in field of engineering and technology

COURSE OUTCOMES:

- Outline the basic principles of Solid waste and separation of wastes (K).
- Identify the concepts of treatment of solid wastes (S).
- Identify the methods of wastes disposals. (S)
- Examine the level of Hazardousness and its management. (S)
- Examine the possible of the energy production using waste materials. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A).

UNIT I SOLID WASTE (9)

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT (9)

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL (9)

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods &Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT (9)

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE (9)

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

16BTSHOE06 GREEN CHEMISTRY 3 0 0 3 100

OBJECTIVES:

- To make the students conversant about the green chemistry
- To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- To acquaint the student with concepts of green technology.
- To develop an understanding of the basic concepts of renewable energy resources.
- To acquaint the students with the basics information on catalysis.
- To understand the chemical principles in in field of engineering and technology

COURSE OUTCOMES:

- Outline the basic principles of green chemistry (K).
- Examine the different atom efficient process and synthesis elaborately (S).
- Apply the concepts combustion of green technology (S).
- Identify and apply the concepts of renewable energy (S).
- Apply the concepts of green catalysts in the synthesis (S).
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES (9)

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES (9)

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIO TECHNOLOGY AND GREEN CHEMISTRY (9)

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES (9)

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY (9)

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

16BTSHOE07 APPLIED ELECTROCHEMISTRY 3 0 0 3 100

OBJECTIVES:

- To make the students conversant with the information on electrochemical material.
- To make the student acquire sound knowledge of conducting polymers.
- To acquaint the student with concepts of Energy storage devices.
- To develop energy storage devices.
- To impart knowledge on basic principles of solar cells and its applications
- To understand about electrochemical material science

COURSE OUTCOMES:

- Outline the basic principles of chemistry in **electrochemical material (K).**
- Examine the properties of conducting polymers (S).
- Apply the concepts of electrochemistry in storage devices. (S)
- Identify the concepts of storage devices and its applications. (S)
- Apply the suitable materials for the manufacturing of storage devices. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING (9)

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electro plating for electronic industry- Alloy plating, brass plating-Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS (9)

Lector polymerization- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene-Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I (9)

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II (9)

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE (9)

Solar cells- Preparation of CdS/Cu_2S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

16BTSHOE08 INDUSTRIAL CHEMISTRY 3 0 0 3 100

OBJECTIVES:

- To make the students conversant with cement and lime and its uses.
- To make the student acquire sound knowledge of abrasives and refractories.
- To acquaint the student with concepts of inorganic chemicals.
- To develop an understanding of the basic concepts explosives.
- To acquaint the students with the basics of agriculture chemicals.
- To understand the chemical principles in in field of engineering and technology

COURSE OUTCOMES:

- Outline the basic chemistry of **cement and lime (K).**
- Examine the uses of abrasives and refractories (S).
- Identify the usage of the inorganic chemicals. (S)
- Identify the concepts of explosives and smoke screens (S).
- Identify the usage of the **agriculture** chemicals (S).
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A).

UNIT I CEMENT AND LIME (9)

Manufacture of Portland cement – settling of hardening of port land cement – re gauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – Magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES (9)

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT IIIINORGANIC CHEMICALS (9)

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3, caustic soda and color-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, Sulphur and sulphuric acid – extraction of Sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES (9)

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS (9)

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

LIST OF OPEN ELECTIVES OFFERED BY

COMPUTER SCIENCE ENGINEERINGDEPARTMENT

16BECSOE01 INTERNET PROGRAMMING 3 0 0 3 100

Course Objectives:

- To introduce the Java programming language and explore its current strengths and Weaknesses
- To study the way that object-oriented concepts are implemented in the Java programming language
- To write working Java code to demonstrate the use of applets for client side programming
- To study the way that exceptions are detected and handled in the Java programming language
- To write working Java code that demonstrates multiple threads of execution
- To understand about various Internet applications

Course outcome:

- Know Java programming language and explore its current strengths and Weaknesses
- Explain about object-oriented concepts
- Learn Java code to demonstrate the use of applets for client side programming
- To study the way that exceptions are detected and handled in the Java programming language
- know Java code that demonstrates multiple threads of execution
- use various Internet applications

UNIT I INTRODUCTION **9**

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Sub netting and addressing- Classful and Classless Addressing, Sub netting

UNIT II HTML **9**

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Color name, Color value. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL **9**

Introduction, Variable, Condition, Loop, Array, implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets-Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV Client-Server programming **9**

Client-Server programming in Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V INTERNET TELEPHON 9

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP-Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

TOTAL:45

TEXT BOOKS:

1. Paul Deitel, Harvey Deitel and Abby Deitel, "Internet and World Wide Web- How to Program", 5th Edition, 2011.

2. Web Technology: A Developer's Perspective, N.P. Gopalan and J. Akilandeswari, PHI Learning, Delhi, 2013.

16BECSOE02 **MULTIMEDIA AND ANIMATION**

3003 100

COURSE OBJECTIVE:

- To study the graphics techniques and algorithms
- To study the multimedia concepts and various I/O technologies.
- To enable the students to develop their creativity
- To impart the fundamental concepts of Computer Animation and Multimedia.
- To understand Techniques of Animation
- To Learn about different 3D Animation

COURSE OUTCOMES:

After the course the student will be able to:

- Get Familiarised With Animation
- Types Of 3D Animation
- Know about motion caption
- Work With The Timeline And Tween-Based Animation
- Learn about 3D Animation
- Master the techniques of computer animation and multimedia

UNIT I Introduction **9**

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation
– Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II Creating Animation in Flash **9**

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D Animation & its Concepts **9**

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV Motion Caption **9**

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V Concept Development **9**

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

TOTAL: 45

Text Books:

1. Computer Graphics, Multimedia and Animation-Malay K. Pakhira,PHI Learning PVT Ltd,2010

16BECSOE03 PC HARDWARE AND TROUBLE SHOOTING 3 0 0 3 100

COURSE OBJECTIVES:

- Assemble/setup and upgrade personal computer systems
- Perform installation, configuration, and upgrading of microcomputer hardware and software.
- Install/connect associated peripherals.
- Diagnose and troubleshoot microcomputer systems hardware and software, peripheral equipment.
- Know Multitasking and Multiprogramming
- Familiarise Various Types of faults

COURSE OUTCOMES

After the course student will be able to:

- Familiarise Special Peripherals.
- Know Computer Organization
- Know about Memory Space
- Familiarise Motherboard Logic
- Know Programmable LSI's
- Know about Data Recovery

UNIT I Introduction 9

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices 9

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC Hardware Overview 9

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV Installation and Preventive Maintenance 9

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting 9

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

Text Books:

16BECSOE04 JAVA PROGRAMMING 3 0 0 3 100

COURSE OBJECTIVES:

- Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Be aware of the important topics and principles of software development.
- Have the ability to write a computer program to solve specified problems.
- Be able to use the Java SDK environment to create, debug and run simple Java programs
- To understand Object oriented programming concepts

COURSE OUTCOMES:

After the course student will be able to:

- Familiar with programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java and work with 2D shapes
- Be familiar with Arrays – Strings - Packages
- Have the ability to write a computer program to solve specified problems.
- Work on Java SDK environment to create, debug and run simple Java programs
- To understand abstract classes

UNIT I INTRODUCTION TO JAVA

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES

Arrays – Strings - Packages – Java-Doc comments –- Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING

Exceptions – Syntax of exception handling code – Multiple catch statements – Using finally statements – Throwing our own exceptions – Using exceptions for debugging

UNIT V THREADS

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

TEXT BOOKS:

1.Cay S. Horstmann and Gary Cornell Core Java: Volume I–Fundamentals Sun Microsystems

Press 2008

LIST OF OPEN ELECTIVES OFFERED BY

ELECTRICAL AND ELECTRONICS ENGINEERING DEPARTMENT

16BEEEOE01 ELECTRIC HYBRID VEHICLES L T P C 3 0 0 3

COURSE OBJECTIVES:

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To understand and gain the knowledge about various energy storage devices.
- To know the concept of electric hybrid vehicle
- Understand the various energy storage schemes
- Know about the various fuel efficiency schemes

COURSE OUTCOMES:

- At the end of the course the student will be understand the concept of electric hybrid vehicle and its energy storage schemes.
- Battery based energy storage and its analysis,
- Familiarise Fuel Cell based energy storage and its analysis
- Super Capacitor based energy storage and its analysis,
- Understand Flywheel based energy storage and its analysis,
- Know Hybridization of different energy storage devices.

UNIT I INTRODUCTION 9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS 9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT 9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE 9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES 9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

16BEEEOE02 ENERGY MANAGEMENT AND ENERGY AUDITING 3 0 0 3 100

Course Objectives:

To gain the knowledge about energy management.

- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behaviour changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT 9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS 9

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT 9

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS 9

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blower's pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS 9

Power factor - methods of improvement, location of capacitors, p.f with nonlinear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

16BEEEOE03 PROGRAMMABLE LOGIC CONTROLLER 3 0 0 3 100

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION 9

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING 9

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS 9

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS 9

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES 9

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

16BEEEOE04 RENEWABLE ENERGY RESOURCES L T P C 3 0 0 3

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION 9

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY

9

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY

9

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY 9

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES 9

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

LIST OF OPEN ELECTIVES OFFERED BY

ELECTRONICS AND COMMUNICATION ENGINEERING DEPARTMENT

16BEECOE01	**REAL TIME EMBEDDED SYSTEMS**	**L T P C** **3 0 0 3**	**100**

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT-I INTRODUCTION TO EMBEDDED SYSTEM 9

Introduction- Embedded systems description, definition, design considerations &requirements-Overview of Embedded SystemArchitecture (CISC and RISC)-Categories of Embedded Systems-embedded processor selection &tradeoffs- Embedded design life cycle -Product specifications-hardware / software partitioning- iterations and implementation- hardware software integration – product testing techniques–ARM7.

UNIT-II OPERATING SYSTEM OVERVIEW 9

Introduction–AdvantageandDisadvantageofUsingRTOS–Multitasking–Tasks-RealTimeKernels – Scheduler- Non-Preemptive Kernels – Preemptive Kernels – Reentrancy- ReentrantFunctions–Round Robin Scheduling- Task Priorities- Static Priorities– Mutual Exclusion–Deadlock– Inter task Communication–Message Mailboxes–Message Queues- Interrupts- TaskManagement–Memory Management-Time Management–Clock Ticks.

UNIT-III TASK MANAGEMENT 9

Introduction-µ C/OS-II Features-Goals ofµ C/OS-II-Hardware and Software Architecture–Kernel Structures: Tasks–Task States–Task Scheduling–Idle Task–Statistics Task–Interrupts Under µC/OS-II –Clock Tick-µ C/OS- II Initialization. Task Management: Creating Tasks–Task Stacks–StackChecking–Task'sPriority–SuspendingTask–ResumingTask.TimeManagement: Delaying aTask–Resuming a Delayed Task–System Time. Event Control Blocks-Placing a Task in the ECB Wait List–Removing a Task from an ECB wait List.

UNIT-IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING 9

Semaphore Management: Semaphore Management Overview– Signaling a Semaphore.

MessageMailbox Management: Creating a Mailbox –Deleting Mailbox–Waiting for a Message box–Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue– Deleting a Message Queue–Waiting for a Message Queue–Sending Message to a Queue– Flushing a Queue.

UNIT-V MEMORY MANAGEMENT **9**

Memory Management: Memory Control Blocks–Creating Partition-Obtaining a Memory Block–Returning a Memory Block. Getting Started withμ C/OS-II–Installingμ C/OS-II–Portingμ C/OS-II:Development Tools–Directories and Files– Testing a Port -IAR Workbench withμ C/OS-II-μ C/OS- II Porting on a 8051CPU– Implementation of Multitasking- Implementation of Scheduling andRescheduling –Analyze the Multichannel ADC with help ofμ C/OS-II.

Total : 45

TEXTBOOKS:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	JeanJ. Labrosse	Micro C/OS–II The Real Time Kernel	CMPBOOKS	2009
2	David Seal	ARM Architecture Reference Manual.	Addison-Wesley	2008
3	Steve Furbe,	ARM System-on-Chip Architecture,	Addison-Wesley Professional, California	2000

REFERENCES:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	K.V.K.K.Prasad	Embedded Real-Time Systems: Concepts, Design & Programming	Dream Tech Press	2005
2	Sriram V Iyer, Pankaj Gupta	Embedded Real Time Systems Programming	Tata McGraw Hill	2004

16BEECOE02 CONSUMER ELECTRONICS L T P C 100
3 0 0 3

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES 9

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters – Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNITII TELEVISION STANDARDS AND SYSTEMS 9

Components of a TV system–interlacing–composite video signal.Colour TV– Luminance and Chrominance signal; Monochrome and Colour Picture Tubes- Color TV systems– NTSC, PAL, SECAM-Components of a Remote Control.

UNITIII OPTICAL RECORDING AND REPRODUCTION 9

Audio Disc– Processing of the Audio signal–readout from the Disc –Reconstruction of the audio signal–Video Disc–Video disc formats- recording systems–Playback Systems.

UNITIV TELECOMMUNICATION SYSTEMS 9

Telephone services-telephone networks–switching system principles–PAPX switching–Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network.Wireless Local Loop.VHF/UHF radio systems, Limited range Cordless Phones; cellular modems.

UNITV HOME APPLIANCES 9

Basic principle and block diagram of microwave oven; washing machine hardware and software;

Components of air conditioning and refrigeration systems.

Total Hours: 45

TEXTBOOKS:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	S.P. Bali	Consumer Electronics	PearsonEducation	2007
2	J.S.Chitode	Consumer Electronics	Technical Publications	2007

REFERENCE:

16BEECOE03 NEURAL NETWORKS AND ITS APPLICATIONS L T P C 100
3 0 0 3

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve

UNIT I INTRODUCTION TONEURAL NETWORKS 9

Introduction-biological neurons and their artificial models-learning, adaptation and neural network's learning rules-types of neural networks-single layer, multiple layer-feed forward, feedback networks

UNIT II LEARNING PROCESS 9

Error– correction learning– memory based learning- hebbian learning-competitive learning-Boltzmann learning-supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION 9

Single layer Perception-Adaptive filtering-unconstrained Optimization-Least-mean square algorithm- Leaning Curve-Annealing Technique-perception convergence Theorem-Relationship between perception and Baye’s Classifier-Back propagation algorithm

UNIT IV ATTRACT OR NEURAL NETWORK AND ART 9

Hopfield model-BAM model -BAM Stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield Design-Application to TSP problem-ART-layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP.

UNIT V SELF ORGANIZATION 9

Self-organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical Vector Quantization. Applications of self-organizing maps: The Neural Phonetic Type Writer Learning Ballistic Arm Movements.

Total Hours: 45

TEXTBOOKS:

16BEECOE04 FUZZY LOGIC AND ITS APPLICATIONS L T P C 100
3 0 0 3

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy fiction and de fuzzy fiction procedures

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNITI 9

Basics of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT II 9

Theory of Approximate Reasoning: Linguistic variables, Fuzzy proportions, Fuzzy if-then statements, inference rules, compositional rule of inference-fuzzy models

UNIT III 9

Fuzzy Knowledge Based Controllers (Fkbc): Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzy fiction and de fuzzy fiction procedures–Design of Fuzzy
Logic Controller

UNIT IV 9

Adaptive Fuzzy Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V 9

Fuzzy based systems: Simple applications of FKBC-washing machines-traffic regulations-lift control-fuzzy in medical Applications-Introduction to ANFIS.

Total Hours: 45

OPEN ELECTIVES
(COURSES OFFERED BY OTHER DEPARTMENTS)
BIO TECHNOLOGY

16BTBTOE01 BIOREACTOR DESIGN 3003100

COURSE OBJECTIVES:

- To understand the basic design of bioreactors
- To understand the principle of heat transfer inside a bioreactor
- Design of various reactors
- Study various mass transfer equipments
- Learn about cylindrical storage tnks and various applications
- Design of plate and frame filters

COURSE OUTCOMES:

After completion of this course students will be able to

- Design bioreactors for various operations.
- Select the appropriate separation equipment based on the nature of the product.
- Familiarise mass transfer equipments
- Work with cylindrical storage tnaks and know various applications
- Design of plate and frame filters in reactors
- Know varius separation equipments

UNITI ENGINEERINGPROPERTIES AND STORAGE TANK (9)

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNITII REACTOR DESIGN (9)

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNITIII HEATTRANSFER EQUIPMENTS (9)

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNITIV MASSTRANSFER EQUIPMENTS (9)

Design of Bollman extractor, fractionating column, packed tower and spray tray absorber

UNITV SEPERATIONEQUIPMENTS (9)

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotartdrum drier and Swenson–walker crystallizer.

TEXTBOOKS:

S.No	Author(s)Name	Title of the book	Publisher	Year o Publications
1	James Edwin Bailey, DavidF.Ollis	Biochemical Engineering Fundamentals	McGraw-Hill	2007
2	DonW.Green,RobertH. Perry	Chemical Engineer Handbook	The McGraw-Hill Companies	2008

REFERENCE BOOKS

S.No	Author(s)Name	Title of the book	Publisher	Year of Publications
1	Pauline.M.Doran	Bioprocess Engineering Principles	Academic Press	2013

16BTBTOE02 FOOD PROCESSING AND PRESERVATION 3003100

OBJECTIVES:

- To understand the importance of food processing
- To make the students learn the various processing and preservation techniques.
- Understand various Pasteurization and Freezing techniques
- Learn about Infrared radiation processing-
- Concepts andequipment used. In various food processing methods
- Learn about preservation of fruits and vegetables

INTENDED OUTCOMES:

The students are exposed to

- Properties off Food materia
- Various methods used for preserving Fruits and vegetables
- Learn about chemical preservation
- Know food preservation by cooling methods
- Learn about Food irradiation
- Understand fermentation techniques

UNITI SCOPE AND IMPORTANCE OF FOOD PROCESSING (9)

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation -Cleaning, sorting, grading, peeling.

UNITII PROCESSING METHODS (9)

Heating- Blanching and Pasteurization. Freezing - De hydration- canning- additives- fermentation- extrusion cooking -hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing –Infrared radiation processing- Concepts and equipment used.

UNITIII FOOD CONVERSION OPERATIONS (9)

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membraneseparation-filtration-equipmentand application.

UNITIV FOOD PRESERVATION BY COOLING (9)

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNITV PRESERVATION METHODS FOR FRUITS ANDVEGETABLES (9)

Preprocessingoperations - preservation by reduction of water content: drying / dehydration and concentration –chemical preservation –preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

TEXT BOOKS

16BTBTOE03 **BASIC BIO INFORMATICS** **3003100**

Course Objectives

- To understand the available tools and databases for performing research in bioinformatics.
- To expose students to sequence alignment tool inbioinformatics.
- To construct the phylogenetic trees forevolution.
- To get familiar with the 3D structure of protein andclassification.
- To acquire basic knowledge in protein secondary structureprediction.
- To extend the brief knowledge in Micro array dataanalysis.

Course Outcomes

- Summarize the basic concepts and importance of Bioinformatics in varioussectors.
- Demonstrate the sequence alignment tool inbioinformatics.
- Construct the phylogenetic trees forevolution.
- Analyze the three dimensional protein structure and classification using varioustools.
- Illustrate the protein secondary structure prediction by comparativemodeling.
- Extend the knowledge in micro array technology and applications of bioinformatics in varioussectors.

UNITI OVERVIEW OFBIOINFORMATICS (9)

The scope of bio informatics; bio informatics & the internet; useful bio informatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases–contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNITII RETRIEVAL OF BIOLOGICAL DATA (9)

Data retrieval with Entrez &DBGET/ Link DB; data retrieval with SRS (sequence retrieval system).Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices ; database searches, FASTA & BLAST; sequence filters; iterative database searches &PSI-BLAST .Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNITIII PHYLO GENETICS (9)

Phylogenetic, cladistics &ontology; building phylogenetic trees; evolution of Macro molecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNITIV STRUCTURAL BIOINFORMATICS (9)

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH &SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNITV MICROARRAYDATAANALYSIS (9)

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling &SAGE. Bioinformatics in pharmaceutical industry: informatics &drug discovery; pharma informatics resources. Basic principles of computing in bio informatics: running computer software; computer operating systems; software downloading &installation; data base management.

16BTBTOE04 FUNDAMENTALS OF NANO BIOTECHNOLOGY 3003100

Course Objectives

- To impart the skills in the field of nano biotechnology and itsapplications.
- To acquire knowledge in the nano particles and its significance in variousfields.
- To extend the knowledge in types and application of nano particles insensors.
- To define the concepts of biomaterials through molecular selfassembly.
- To equip students with clinical applications of nanodevices.
- To describe deeper understanding of the socio-economic issues innanobiotechnology.

Course Outcomes

- Develop skills in the field of nano biotechnology and itsapplications.
- Summarize the nanoparticles and its significance in variousfields.
- Extend the knowledge in types and application of nano particles insensors.
- Define the concepts of biomaterials through molecular selfassembly.
- Outline the clinical applications of nanodevices.
- Describe the socio-economic issues innanobiotechnology.

UNITI INTRODUCTION (9)

Introduction, Scope and Overview, Length scales , Importance of Nano scale and Technology, History of Nanotechnology, Future of Nanotechnology :Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different,Fields:Nanobiotechnology,Materials,Medicine,Dentalcare.

UNITII NANOPARTICLES (9)

Introduction, Types of Nano particles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterial's, Significance of Nanoparticles Nanofabrications-MEMS/NEMS,AtomicForceMicroscopy,Selfassembledmonolayers/Dip-pen Nanolithography, Soft Lithography, PDMS Molding, Nanoparticles, Nanowires and Nanotubes.

UNITIII APPLICATIONS (9)

Nanomedicine, Nano biosensor and Nano fluidics. Nano crystals in biological detection, Electrochemical DNA sensors and Integrated Nano liter systems. Nano-Bio devices and Systems. Fabrication of Novel Biomaterials through molecular self-assembly-Small scale systems for in vivo drug delivery-Future Nano machine.

UNITIV NANO BIOTECHNOLOGY (9)

Clinical applications of Nano devices. Artificial neurons. Real-time Nano Sensors-Applicationsincancerbiology.
Nanomedicine.Syntheticretinylchipsbasedonbacteriorhodopsins. Highthroughput
DNA sequencing with Nano carbon tubules. Nano surgical devices.

UNITV ETHICAL ISSUES IN NANOTECHNOLOGY (9)

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nano medicine, Nano medicine Applied in Nonmedical Contexts, Social Issues Relating to Nano medicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nano technology and Future Socio-economic challenges.

MECHANICAL ENGINEERING
OPEN ELECTIVES
(COURSES OFFERED TO OTHER DEPARTMENTS)

16BEMEOE01 COMPUTER AIDED DESIGN 3 0 0 3 100

Course Objective

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

Course Outcome

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS 9

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS 9

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING 9

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION 9

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT 9

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

16BEMEOE02 INDUSTRIAL SAFETY AND ENVIRONMENT 3 0 0 3 100

Course Objective

- To recognize and evaluate occupational safety and health hazards in the workplace.
- To determine appropriate hazard controls following the hierarchy of controls.
- To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
- To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

- Recognize and evaluate occupational safety and health hazards in the workplace.
- Determine appropriate hazard controls following the hierarchy of controls.
- Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.

- Prevent or mitigate harm or damage to people, property, or the environment

UNIT I INTRODUCTION TO LOGISTICS 9

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN 9

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS 9

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES 9

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM 9

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

16BEMEOE03 TRANSPORT PHENOMENA 3 0 0 3 100

Course Objective

- To generalized equations for mass, momentum and heat.
- To understand the concepts of Reynolds and Gauss theorems.
- To learn combined diffusive and convective transport.
- To apply Film- and penetration models for mass and heat transfer.
- To apply Stefan-Maxwells equations for multi-component diffusion.
- To Solve the given set of equations either analytically or numerically.

Course Outcome

- Generalized equations for mass, momentum and heat.
- Understand the concepts of Reynolds and Gauss theorems.
- Learn combined diffusive and convective transport.
- Apply Film- and penetration models for mass and heat transfer.
- Apply Stefan-Maxwells equations for multi-component diffusion.
- Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS 9

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS 9

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT 9

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT 9

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT 9

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

16BEMEOE04 INTRODUCTION TO BIOMECHANICS 3 0 0 3 100

Course Objective

- To describe the principles of the study of human movement.
- To describe the range of factors that influence the initiation, production and control of human movement.
- To identify the body's lever systems and their relationship to basic joint movement and classification.
- To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
- To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
- To relate the different body systems necessary for human movement to occur.

Course Outcome

- Describe the principles of the study of human movement.
- Describe the range of factors that influence the initiation, production and control of human movement.
- Identify the body's lever systems and their relationship to basic joint movement and classification.
- Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
- Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
- Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION 9

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS 9

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY 9

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION 9

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM 9

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control.

AUTOMOBILE ENGINEERING

16BEAEOE01 AUTOMOBILE ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Identify and explain the types of steering system..

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles

UNIT-I ENGINE AND FUEL FEED SYSTEMS

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburetor working principle, requirements of an automotive carburetor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT –II TRANSMISSION SYSTEMS

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT -III SUSPENSION SYSTEM

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT-IV BRAKES

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT -V ELECTRICAL SYSTEM

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

16BEAEOE02 BASICS OF TWO AND THREE WHEELERS 3 0 0 3 100

COURSE OBJECTIVES

- The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburetor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

16BEAEOE03 AUTOMOBILE MAINTENANCE 3 0 0 3 100

COURSE OBJECTIVES:

- The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.
- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

16BEAEOE04 INTRODUCTION TO MODERN VEHICLE TECHNOLOGY 3 0 0 3 100

COURSE OBJECTIVES

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications

UNIT I TRENDS IN POWER PLANTS

Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti-spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT VTELEMATICS

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

CIVIL ENGINEERING

16BECEOE01 HOUSING, PLAN AND MANAGEMENT 3 0 0 3 100

COURSE OBJECTIVES

- To examine the role and tasks of basic housing policies and building bye laws
- Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
- Analyze the Innovative construction methods and Materials
- Analyze city management strategies and strengthen the urban governance through a problem solving approach
- To know the Importance of basic housing policies and building bye laws
- To use Housing Programmes and Schemes

COURSE OUTCOME

- The students will be able to
- Know the Importance of basic housing policies and building bye laws
- Use Housing Programmes and Schemes
- Plan and Design of Housing projects
- Examine Innovative construction methods and Materials
- Know Housing finance and loan approval procedures
- Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING 9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES 9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighborhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organizations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS 9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL 9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

16BECEOE02 BUILDING SERVICES 3 0 0 3 100

COURSE OBJECTIVES

- Defining and identifying of eng. services systems in buildings.
- The role of eng. services systems in providing comfort and facilitating life of users of the building.
- The basic principles of asset management in a building & facilities maintenance environment
- Importance of Fire safety and its installation techniques
- To Know the principle of Refrigeration and application
- To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

- Machineries involved in building construction
- Understand Electrical system and its selection criteria
- Use the Principles of illumination & design
- Know the principle of Refrigeration and application
- Importance of Fire safety and its installation techniques
- Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES 9

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS 9

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN 9

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilization factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS 9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors –

Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION 9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

16BECEOE03 MANAGEMENT OF IRRIGATION SYSTEMS 3 0 0 3 100

OBJECTIVES

- To enable the students for a successful career as water management professionals.
- To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
- To expose the students the need for an interdisciplinary approach in irrigation water management
- To providing a platform to work in an interdisciplinary team.
- To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
- To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

OUTCOME

At the end of this the students will be in a capacity to

- Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
- Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
- Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
- Gain insight on local and global perceptions and approaches to participatory water resource management
- Learn from successes and failures in the context of both rural and urban communities of water management.
- Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I. IRRIGATION SYSTEM REQUIREMENTS 9

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II. IRRIGATION SCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III. MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV. OPERATION **9**

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNIT V. INVOLVEMENT OF STAKE HOLDERS **9**

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL HRS : 45

TEXT BOOKS

1. Dilip Kumar Majumdar, "Irrigation Water Management – Principles and Practice", Prentice Hall of India Pvt. Ltd., New Delhi, 2000

16BECEOE04 ADVANCED CONSTRUCTION TECHNOLOGY 3 0 0 3 100

OBJECTIVE:

- To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
- To study different methods of construction to successfully achieve the structural design with recommended specifications.
- To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
- To study of construction equipment's, and temporary works required to facilitate the construction process
- To provide a coherent development to the students for the courses in sector of Advanced construction technology.
- To present the new technology of civil Engineering and concepts related Advanced construction technology.

OUTCOMES:

- Implementation of new technology concepts which are applied in field of Advanced construction.
- Different methods of construction to successfully achieve the structural design with recommended specifications.
- Application of scientific and technological principles of planning, analysis, design and management to construction technology.
- Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
- Development to the students for the courses in sector of Advanced construction technology.
- The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT - I MODERN CONSTRUCTION METHODS 9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT - II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT - III MODERN CONSTRUCTION EQUIPEMENTS -I 9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting

UNIT - IV MODERN CONSTRUCTION EQUIPEMENTS -II 9

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES 9

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipment's

Total number of credits:180

L: Lecture Hour **T: Tutorial Hour** **CIA: Continuous Internal Assessment**
P: Practical Hour **C: Credit** **ESE : End semester Examination**

Note:

1.The passing minimum for value added course is 50 marks out of 100 marks.There will be two tests,of which one will be class test covering 50% of syllabus for 50 marks and other for 50marks.

2. Credits for value added course are not counted for computation ofCGPA.

3. Interested students can opt one self study course in eighth semester from open electives which will be reflected in the mark sheet if he/shepasses.

**-- Skill Development
**-- Employability
**--Entrepreneurship

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

PO-1Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO-2 Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO-3 Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO-4 Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO-5 Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO-6 The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO-7 Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO-8 Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO-9 Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO-10Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO-11 Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO-12 Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSO)

The B.E. Degree Programme in Civil Engineering is offered in the department with the following programme specific outcomes:

PSO-13 The Graduates of this Programme with proficiency in mathematics and physical sciences will excel in the core areas of civil engineering such as structural, environmental and water resources engineering.

PSO-14 Utilize principles, methods, software’s and codes of practices to excel in the areas of planning, analysis and designs related to Civil Engineering systems.

PSO-15 Prepare detailed drawings, cost estimates, reports, walk through views, interact with clients, manage workers, work in a team and executes construction works.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

The Civil Engineering education at KAHE, Coimbatore, mainly based on practical oriented learning. The courses offered are focused on training the students to make them adaptable to any type of role in different fields of Civil Engineering.

The B.E. Degree Programme in Civil Engineering is offered in the department with the following educational objectives:

PEO-1 To equip the graduates with sufficient knowledge and experience to become leaders in industry and academia

PEO-2 To offer platform for research and development

PEO-3 To impart professional ethics with a commitment to the society and environment

SEMESTER I&II

SEMESTER I& II

16BECC101 COMMUNICATIVE ENGLISH 3 0 0 3 100

OBJECTIVES:

1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
2. To help students acquire their ability to speak effectively in real life situations.
3. To inculcate the habit of reading and to develop their effective reading skills.
4. To ensure that students use dictionary to improve their active and passive vocabulary.
5. To enable students to improve their lexical, grammatical and communicative competence
6. To acquiregood vocabulary for sentence structure and sentence formation.

OUTCOMES:

1. Use English language for communication: verbal & non –verbal.
2. Enrich comprehension and acquisition of speaking & writing ability.
3. Gain confidence in using English language in real life situations.
4. Improve word power: lexical, grammatical and communication competence.
5. Acquire good vocabulary for easy communication.
6. Be familiar with sentence structure and sentence formation.

UNIT I (9)

Listening– Types of listening - Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self - Introduction on one's friend. **Reading**- Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative. **Writing** – Formal and Informal letters- Free writing on any topic –My favorite place, hobbies, dreams, goals, etc- - To fill in different application forms. **Grammar** – Articles- WH questions –Yes/No Question - Subject Verb agreement. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

UNIT II (10)

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions - Telephone etiquette. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages.**Grammar**– Parts of speech – Noun – Verb – Adjectives - Adverbs. **Vocabulary**– Compound Nouns/Adjectives – Irregular verbs.

UNIT III (10)

Listening – Listening for specific task – Fill in the gaps.**Speaking** – Phonemes – Syllables – Role play – Conversation Practice.**Reading** – Reading and Comprehension.**Writing** - Autobiographical writing – Biographical writing - Instruction writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

UNIT IV (8)

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars.**Reading** – Making inference from the reading passage – Predicting the content of reading passages.**Writing** - Interpreting visual materials (tables, graphs, charts, etc) Letters to the Editor. **Grammar** – Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

UNIT V **(8)**

Listening - Listening to different accents, speeches/presentations. **Speaking-** Extempore talk –Just-a-minute talk.**Reading**-Reading strategies–Intensive reading – Text analysis.**Writing-** Creative writing – Writing circulars and notices – Writing proposal.**Grammar** – Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.**Total-45**

SEMESTER I& II

16BECC102 ENGINEERING MATHEMATICS I 3 2 0 4 100

COURSE OBJECTIVES

1. To develop analyzing skills for solving different engineering problems.
2. To understand the concept of Matrices.
3. To remember the basics of differential calculus and its applications.
4. To apply the problems in differential equations.
5. To Create knowledge about functions of several variables and Sequence and Series.
6. To enhance the knowledge on the concepts of sequences and series.

COURSE OUTCOMES

The students will be able to

1. Acquire the basic knowledge and understanding of mathematics
2. Apply advanced matrix knowledge to engineering problems.
3. Improve their ability in evaluating geometrical applications of differential calculus problems.
4. To solve the problems by applying the differential Equations.
5. Evaluating engineering problems involving functions of several variables.
6. Understand the concepts of sequences and series.

UNIT I MATRICES (12)

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS (12)

Overview of Derivatives - Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes- Evolutes as Envelope of normals – Maxima and Minima of functions of two or more Variables – Method of Lagrangian Multipliers

UNIT III DIFFERENTIAL EQUATIONS (11)

Linear Differential equations of second and higher order with constant coefficients - Euler's form of Differential equations – Method of variation parameters.

UNIT IV FUNCTIONS OF SEVERAL VARIABLES (12)

Partial derivatives – Euler's theorem for homogeneous functions – Total derivatives – Differentiation of implicit functions – Jacobians –Maxima and Minima of functions of two or more Variables - Method of Lagrangian multipliers.

UNIT V SEQUENCES AND SERIES (13)

Sequences: Definition and examples – **Series:** Types and Convergence – Series of positive terms – Tests of convergence: Comparision test, Integral test and D'Alembert's ratio test – Alternating series – Leibnitz's test – Series of positive and negative terms – Absolute and conditional convergence.

Total: 60

16BEPH103 **SEMESTER I& II**
16BEPH203 **ENGINEERING PHYSICS** **3 0 0 3 100**

OBJECTIVES:

1. To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology
2. Understand the basics of laser and optical fiber with appropriate applications.
3. Introduce the concepts of quantum mechanics for diverse applications.
4. Impart the basic knowledge of crystal and its various crystal structures.
5. Disseminate the fundamentals of nuclear physics and their applications.
6. To Disseminate the fundamentals of nuclear physics and their applications

OUTCOMES:

1. Identify the elastic nature of materials and its thermodynamic properties.
2. Infer the characteristics of laser and optical fibers for engineering applications.
3. Develop the idea of quantum mechanics through applications.
4. Identify the different atomic arrangements of crystals and its defects
5. Make use of the concepts of sound waves for medical applications
6. Illustrate the basic ideas of nuclear reactors for energy resources

INTENDED OUTCOME:

1. The students will have the knowledge on the basics of physics related to properties of matter, fiber optics, quantum, crystal physics and that knowledge will be used by them in different engineering and technology applications
2. To identify suitable materials for various engineering applications.
3. To select suitable materials for various engineering applications.
4. To gain the applications of materials in various industries.
5. To impart knowledge on the structure, properties of materials.
6. The students will have the knowledge on how to use Newton's laws of motion.

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS (9)

Three types of modulus of elasticity – basic definitions, relation connecting the modulii (Derivation), poison ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniform bending
Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS (9)

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER - CO_2, Semiconductor LASER- Applications of LASER in industry and medicine.
Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNITIII QUANTUM PHYSICS (9)

Introduction to quantum theory – Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electron microscope.

UNIT IV CRYSTAL PHYSICS (9) Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS (9)

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C –scan displays, Medical applications – Sonogram Introduction – basics about nuclear fission and fusion, nuclear composition –Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

Total- 45

16BECH103 SEMESTER I& II
16BECH203 ENGINEERING CHEMISTRY 3 0 0 3 100

OBJECTIVES:

1. To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
2. To estimate the amount of alkalinity ions, hardness, chloride in water sample
3. To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
4. To acquaint the students with the determination of molecular weight of a polymer by viscometry
5. To carried out different types of titrations for estimation of concerned in materials
6. To acquaint the students with the basics of surface chemistry

OUTCOMES:

1. The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
2. Estimate the amount of alkalinity ions, hardness, chloride in water sample
3. Measure molecular/system properties of conductance of solutions, EMF etc
4. Acquaint the students with the determination of molecular weight of a polymer by visocometry
5. Determine the corrosion rate of steel by weight loss method.
6. Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

UNIT I WATER TECHNOLOGY (9)

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTRO CHEMISTRY AND STORAGE DEVICES (9)

Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+}vs dichromate) –Electrolytic conductance-application (conductometric titration)-Batteries-Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell-H_2-O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION (9)

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV-Flue gas analysis.

UNIT IV CORROSION SCIENCE (9)

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings- Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating - Hot dipping.

UNIT V SURFACE CHEMISTRY AND PHASE RULE (9)

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening). Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pbsystem.

SEMESTER I& II

16BECE104 BASIC CIVIL ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES:

1. To know about different materials and their properties
2. To know about engineering aspects related to buildings
3. To know about importance of surveying and the transportation systems
4. To get exposed to the rudiments of engineering related to dams, water supply, and sewage disposal
5. To know the Longitude and latitude of an object.
6. To gain the basic knowledge in the field of Civil Engineering.

INTENDED OUTCOMES:

1. To impart the properties of various building materials
2. To understand various building components and its uses.
3. To measure the linear distance by using survey equipment's
4. To find out the Longitude and latitude of an object.
5. To understand the formation of roads and formation – Bridge and its uses.
6. To know about the storage of water, retaining structures, water treatment for drink purpose, collection of sewage and to know the method of disposal with functional units

UNIT I SCOPE OF DIFFERENT FIELDS OF CIVIL ENGINEERING 9 Structural Engineering, Geotechnical Engineering, Environmental Engineering, Water Resources Engineering, Transportation Engineering. Recent development in construction techniques – case study

UNIT II – BUILDINGS AND BUILDING MATERIALS 9 Buildings - Definition-Classification according to NBC-plinth area, Floor area, carpet area, floor space index construction materials-stone, brick, cement, cement-mortar, concrete, steel- their properties and uses.

UNIT III - BUILDINGS AND THEIR COMPONENTS 9

Buildings- Various Components and their functions.Soils and their classification - Foundations-Functions and types of foundations, Masonry, Floors-functions and types of floors, Roofs and types of roofs.

UNIT IV - BASIC INFRASTRUCTURE 9

Surveying-classification, general principles of surveying – Basic terms and definitions of chain, compass and levelingsurveying , uses of surveying. Roads-types, Water bound macadam road, cement concrete road, bituminous road. Bridges -components and types of bridges. Dams-Purpose, selection of site, types of dams and components.

UNIT V – BUILDING DRAWING **9**

Types of drawing with appropriate scale & Uses of index map, key plan, village map, site plan, Layout plan –Types of Projection adopted in Building Drawing – Scales for various types of Drawings– Working drawing, large scale drawing– Symbols, Conventions and Abbreviations for – Electrical fittings , water supply ,sanitary fittings, materials of construction – Sizes of various standard papers.

. **Total: 45**

16BECE105A SEMESTER I& II

16BECE205A BASIC ELECTRICAL AND ELECTRONICS ENGINEERING 3 0 0 3 100

OBJECTIVES

1. To impart the basic knowledge about the Electric circuits.
2. To understand the working of various Electrical Machines.
3. To know about various measuring instruments.
4. To understand the basic concepts in semiconductor devices and digital electronics.
5. To understand and analyze basic electric and magnetic circuits.
6. To gain the basic knowledge about the Electric circuits

INTENDED OUTCOMES

1. The students shall develop an intuitive understanding of the circuit analysis, basic concepts of electrical machines, basics of electronics and be able to apply them in practical situation.
2. To study the working principles of electrical machines and power converters.
3. To introduce the components of low-voltage electrical installations.
4. Gained the knowledge in working of Electrical Machines and Transformers.
5. Students will gain the applications of transformers.
6. To understand and analyze basic electric and magnetic circuits.

UNIT I ELECTRIC CIRCUITS & MEASUREMENTS

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES 9

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURING INSTRUMENTS 9

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS 9

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNIT IV- DIGITAL ELECTRONICS 9

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressionsusing logic gates - standard forms of Boolean expression.

16BECE105B SEMESTER I& II
16BECE205B ELEMENTS OF MECHANICAL ENGINEERING 3 0 0 3 100

INTENDED OUTCOMES

1. To impart the basic knowledge of various basic fields of mechanical engineering.
2. To Study about basic manufacturing processes.
3. To study about basic machining process.
4. To study about power plants.
5. To study about automobile engineering
6. The principles of refrigeration and air- conditioning

INTENDED OUTCOMES

In the end of course students will be able to

1. Impart the basic knowledge of various basic fields of mechanical engineering.
2. Study about basic manufacturing processes.
3. Know about basic machining process.
4. Study about power plants.
5. Know about automobile engineering
6. The principles of refrigeration and air- conditioning

INTRODUCTION (Not included for examination)

Engineering and Technology - History of Mechanical Engineering- Mechanics - Statics and dynamics - Broad areas in Mechanical Engineering.

UNIT I MANUFACTURING PROCESSESFOUNDRY - Principles - Patterns - Types, Molding Processes, Cupola and Induction Furnaces. METAL FORMING - Principles - Hot and cold working of metals - Forging, rolling, extrusion and wire drawing, sheet metal operations. WELDING - Principles - Oxy-Acetylene Welding and Manual Metal Arc Welding, Brazing and Soldering.

UNIT II MACHINE TOOLS

Machining principles - Construction and working principles of basic machine tools - Lathe, Drilling, Shaper, Planer and Milling machine. Introduction to CNC machines.

UNIT III AUTOMOBILE ENGINEERING &POWER TRANSMISSION SYSTEMS

Working principle of petrol and diesel engines - Four stroke and two stroke cycles - Comparison between four stroke and two stroke engines - Working principle of simple carburetor - Lubrication system and cooling system.

Belt drives - Flat, V-belts - Rope, Chain drive. Gears - Spur, Helical, Bevel, Worm and worm wheel and Rack and Pinion – Simple problems in Power transmission.

UNIT IV ENERGY ENGINEERING&HYDRAULIC MACHINES

Introduction to Boilers - Working principle of Thermal, Hydro - Electric and Nuclear Power Plants - Merits and demerits. Solar – Wind power plants.

Turbines - Impulse turbine - Pelton wheel, Reaction turbines - Kaplan and Francis turbines - Pumps - Working principle of Reciprocating pumps and Centrifugal pumps.

UNIT V REFRIGERATION AND AIR- CONDITIONING

Terminology of Refrigeration and Air Conditioning - Basic principles of Vapour Compression and Absorption Refrigeration System – Window and Split Room Air Conditioners.

TEXT BOOKS:

S.No	**Title of the book**	**Author(s) Name**	**Publisher**	**Year of Publication**

2	Basic Mechanical Engineering	Rajput, R.K	Laxmi Publications (P) Ltd, New Delhi	2008

16BEPH111 SEMESTER I& II
16BEPH211 ENGINEERING PHYSICS LABORATORY 0 0 4 2 100

OBJECTIVES:

1. To develop basic laboratory skills and demonstrating the application of physical principles.
2. To prepare for the lab experiment and perform individually a wide spectrum of experiments.
3. To present experimental data in various appropriate forms like tabulation, and plots.
4. To analyze, Interpret and Summarize experimental results.
5. To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
6. The ability to use modern engineering physics techniques and tools, including laboratory instrumentation.

OUTCOMES:

1. The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
2. Prepare for the lab experiment and perform individually a wide spectrum of experiments.
3. Present experimental data in various appropriate forms like tabulation, and plots.
4. Analyze, Interpret and Summarize experimental results.
5. Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
6. Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young’s modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille’s method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser

8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

16BECH111 SEMESTER I& II

16BECH211 ENGINEERING CHEMISTRY LABORATORY 0 0 4 2 100

OBJECTIVES:

1. To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
2. To estimate the amount of alkalinity ions, hardness, chloride in water sample
3. To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
4. To acquaint the students with the determination of molecular weight of a polymer by viscometry
5. To carried out different types of titrations for estimation of concerned in materials
6. To gain practical knowledge by applying the experimental methods to correlate with the theory.

OUTCOMES:

1. The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
2. Estimate the amount of alkalinity ions, hardness, chloride in water sample
3. Measure molecular/system properties of conductance of solutions, EMF etc
4. Acquaint the students with the determination of molecular weight of a polymer by visocometry
5. Determine the corrosion rate of steel by weight loss method.
6. Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Water sample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using $BaCl_2$vs Na_2 SO_4.
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or $K_2Cr_2O_7$).
10. Estimation of Ferric ion by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometry.
13. Determination of chemical oxygen demand.

SEMESTER I & II

16BECE112 ENGINEERING WORKSHOP PRACTICE 0 0 4 2 100

Course Objectives

1. To prepare the students to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
2. To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice.
3. To gain knowledge of the different manufacturing processes which are commonly employed in the industry, to fabricate components using different materials.
4. To fabricate components with their own hands.
5. They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
6. By assembling different components, they will be able to produce small devices of their interest.

Course Outcomes

1. Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry, to fabricate components using different materials.
2. Students will be able to fabricate components with their own hands.
3. They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
4. By assembling different components, they will be able to produce small devices of their interest.
5. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
6. Communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice.

PART – A (CIVIL & MECHANICAL)

1. **WELDING** **6**

    i. Preparation of arc welding of butt joints, lap joints and tee joints.

2. **BASIC MACHINING** **6**

    i. Simple Turning and Taper turning

    ii. Drilling and Tapping

3. **SHEET METAL WORK** **6**

    i. Model making – Trays, funnels, etc.

4. **DEMONSTRATION ON** **4**

    i. Smithy operations

ii. Foundry operations

iii. Plumbing Works

iv. Carpentary Works

PART –B (ELECTRICAL & ELECTRONICS)

5. ELECTRICAL ENGINEERING 10

i. Study of electrical symbols and electrical equipments.

ii. Construct the wiring diagram for Stair case wiring and Fluorescent lamp wiring.

iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter.

iv. Measurement of electrical quantities – voltage, current, power & power factor in R load.

v. Measurement of energy using single phase energy meter.

6. ELECTRONICS ENGINEERING 13

i. Study of Electronic components– Resistor (color coding), capacitors and inductors.

ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB.

iii. Study of logic gates AND, OR, NOT, NOR and NAND.

iv. Study of HWR and FWR.

2	Jeyapoovan, T., Saravanapandian, M	Engineering Practices Lab Manual	VikasPuplishing House Pvt. Ltd, Chennai	2006
3	Bawa, H.S	Workshop Practice	Tata McGraw – Hill Publishing Company Limited, New Delhi	2007

SEMESTER I & II

16BECE113COMPUTER PRACTICE AND PROGRAMMING LABORATORY1 0 4 3 100

Course Objectives

1. Identify and understand the working of key components of a computer program.
2. Identify and understand the various kinds of keywords and different data types of C programming
3. Understand, analyze and implement software development tools like algorithm,
4. pseudo codes and programming structure
5. Study, analyze and understand logical structure of a computer program, and different construct to develop a program in “C” language
6. To use algorithms and programs in practical applications.

Course Outcomes

The course will enable the students

1. To formulate simple algorithms for arithmetic and logical problems
2. To translate the algorithms to programs (in C language)
3. To test and execute the programs and correct syntax and logical errors
4. To implement conditional branching, iteration and recursion
5. To decompose a problem into functions and synthesize a complete program using divide and conquer approach
6. To use arrays, pointers and structures to formulate algorithms and programs

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords-General form of C Program - Relational and Logical Operators - Selection Structures-If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings-Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheet and presentation software in Linux
2. Programming in Scratch:
   Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming
3. C Programming:
   Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

Total Hours: 45
REFERENCES:

2. YashavantKanetkar, “ Let us C”, BPB Publications, 13th Edition, 2013

VALUE ADDED COURSE

16BECC151 HUMAN VALUES 1 0 0 - 100

Course Objectives

1.To help the students appreciate the essential complementarily between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity, which are the core aspirations of all human beings

2. To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of Existence.

3. To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behaviour and mutually enriching interaction with Nature.

4.To know the value of being a human being.

5.To provide a much needed orientational input in value education to the young enquiring minds.

6.To study the value of being a useful citizen.

Course Outcomes

1.To involves a systematic and rational study of the human being vis-à-vis the rest of existence.

2. To make free from any dogma or value prescriptions.

3. To analysis process of self-investigation and self-exploration, and not of giving sermons.

4. This process of self-exploration takes the form of a dialogue between the teacher and the students to begin with, and then to continue within the student leading to continuous self-evolution.

5. This self-exploration also enables them to critically evaluate their pre-conditionings and present beliefs.

6. To Educate the values and meaning of life in the young minds and to transform them as responsible citizens

UNIT I **3**

Human life on Earth - Concept of Human Values - Value Education - Aim of education and value education - Types of values - Components of values – Attitudes – types of attitudes

UNIT II **3**

Self Development :Self analysis – Goal Setting - Thought Analysis – Guarding against Anger - Respect to age, experience, maturity, family members, neighbors, co-workers

UNIT III **3**

Individual Qualities – Truthfulness – Constructivity – Sacrifice – Sincerity - Self Control – Altruism – Tolerance - Scientific Vision – Regulating Desire

UNIT IV **3**

Mind Culture - Modern Challenges of Adolescent - Emotions and behavior - Sex and spirituality - Adolescent Emotions - Meditation

UNIT V **3**

Body and Mind Fitness : (a) Physical Exercises (b) Activities: (i) Moralization of Desires (ii) Neutralization of Anger (iii) Eradication of Worries (iv) Benefits of Blessings

TOTAL 15

SEMESTER I &II

16BECC201A BUSINESS COMMUNICATION 3 0 0 3 100

OBJECTIVES:

1. To help students comprehend the role of listening skills in effective communication.
2. To familiarize students with verbal and non-verbal communication.
3. To expose students to neutral accent.
4. To develop emotional intelligence skills in them for enhancing their self-esteem.
5. To assist them in setting goals and developing positive attitude.
6. To develop soft skills and inter personal skills which will make excel in their job.

OUTCOMES:

1. Design and deliver a persuasive presentation that convinces the audience of the topic's relevance and overcomes resistance, using appropriate visual support and adhering to a specified time limit.
2. Use a strategic communication model and critical thinking to identify objectives, analyze audiences, and choose the most effective structure and style for delivering strategically sound written and spoken messages.
3. Practice principles of effective business writing and document design in all written documents.
4. Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
5. Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.
6. Acquire decision making skills, problem solving skills and assertive skills.

UNIT I

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- Description of Graphics and visual aids - interpretation of graphs using expressions of comparison and contrast .

UNIT III

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body langage – Etiquette- Organization of presentation – brain storming- Negotiations.

UNIT - IV

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT - V

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

SEMESTER I &II

16BECC201B TECHNICAL ENGLISH 3 0 0 3 100

OBJECTIVES:

1. To motivate learners to acquire listening & speaking skills in both formal and informal context
2. To focus on question forms & to make them understand the important of using question tags and also the functional use of transformation of sentences.
3. To improve their reading habit and to train them in critical and analytical reading
4. To equip them to write for academic as well as work place context
5. To enable students to face interviews
6. To develop admire and appreciate elegancy in communication.

OUTCOMES:

1. Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
2. Enhance them reading texts critically and analytically
3. Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
4. Enrich the ability to face interviews with confidence.
5. Enable to write documents and formal written communication
6. Admire and appreciate elegancy in communication.

UNIT-1 (10)

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentences - Question tags. **Vocabulary** – Homonyms and Homophones.

UNIT-II (8)

Listening – Note Taking- Improving grasping ability.**Speaking** – Welcome address - Vote of thanks - Master of ceremony.**Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story.**Grammar** - Modal verbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs - Idioms.

UNIT – III (9)

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R)**Writing** - Essay writing -Minutes of meeting - Agenda – **Grammar** - Active and Passive voice - Purpose expression. **Vocabulary** - Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV (8)

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication.**Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company.**Writing**– Job application - Resume writing - Checklist preparation.**Grammar** - Numerical expressions – Collocations - **Vocabulary** - Singular and Plural (Nouns)

UNIT- V **(10)**

Listing – Types of listening- Improving listening comprehension**. Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing- **Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.**Total-45**

SEMESTER I &II

16BECC202 ENGINEERING MATHEMATICS II 3 2 0 4 100

OBJECTIVES:

1. Determine mathematical tools needed in evaluating multiple integrals and their usage.
2. Utilize Gauss, Stokes and Greens theorems to simplify calculations of integrals and prove simple results.
3. To understand the concepts and applications of partial differential equations
4. Apply the knowledge of Mathematics in various Engineering fields by making them to identify the functions in engineering problems as analytic function and their analyze as a function of a complex variables.
5. Develop an understanding of the standard techniques of complex variable theory so as to enable the student to apply them with confidence, to specify some difficult integration that appear in applications can be solved by complex integration in application areas such as fluid dynamics and flow of the electric current.
6. Analysethe concept of complex integrals using the Cauchy integral formula and the residue Theorem and to appreciate how complex methods can be used to prove some important theoretical results.

OUTCOMES:

1. The students will be able to understand mathematical tools needed in evaluating multiple integrals and their usage. Find the areas and volumes using multiple integrals
2. To calculate with them and apply them and also to calculate grad, div and curl in Cartesian and other simple coordinate systems.
3. Improve their ability in Vector calculus
4. The student will be able to Understand how to solve the given standard partial differential equations.
5. To find the Analytic functions using the Cauchy Riemann equations and they will learn mapping properties of elementary functions and mapping properties of some special transcendental functions. They will understand relations between conformal mappings and quadratic differentials and how geometric structures are changing under conformal mappings.
6. To Evaluate complex integrals using the Cauchy integral formula and the residue Theorem and to appreciate how complex methods can be used to prove some important theoretical results.

UNIT I MULTIPLE INTEGRALS (11)

Double integral – Cartesian coordinates – Polar coordinates – Change of order of integration – Triple integration in Cartesian co-ordinates – Area as double integrals.

UNIT II VECTOR CALCULUS (13)

Gradient, Divergence and Curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector integration – Green's theorem, Gauss divergence theorem and Stoke's theorems (Statement Only)- Surfaces : hemisphere and rectangular parallelopipeds.

UNIT III PARTIAL DIFFERENTIAL EQUATIONS (11)

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constantcoefficients.

UNIT IV ANALYTIC FUNCTIONS (12)

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: w = z+a, az, 1/z and bilinear transformation.

UNIT V COMPLEX INTEGRATION (13)

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi circle (excluding poles on the real axis).

SEMESTER I &II

16BECC204 ENVIRONMENTAL SCIENCES 3 0 0 3 100

OBJECTIVES:

1. To give a comprehensive insight into natural resources, ecosystem and biodiversity.
2. To educate the ways and means of the environment
3. To protect the environment from various types of pollution.
4. To impart some fundamental knowledge on human welfare measures
5. To impart knowledge on ecosystem and biodiversity.
6. To inculcate the environmental principles in the field of engineering and technology

OUTCOMES:

1. Recognize the importance of natural resources (S)
2. Associate themselves with the various ecosystems (S)
3. Describe the importance of biodiversity (S)
4. Identify and minimize the difference pollutions (S)
5. Prioritize and analyses the social issues (S)
6. Integrate the environmental principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES (9)

Definition, Scope and Importance – Need for public awareness -Forestresources: Useandover-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources-role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM (9)

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem

UNIT III BIODIVERSITY (9)

Introduction to biodiversity, Definition- Genetic diversity, Species diversity and Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION (9)

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT (9)

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

16BECE206 ENGINEERING MECHANICS 3 0 0 3 100

OBJECTIVES:

1. To develop capacity to predict the effect of force and motion in the course of carrying out the design functions of engineering.
2. A working knowledge of statics with emphasis on force equilibrium and free body diagrams.
3. Provides an understanding of the kinds of stress and deformation and how to determine them in a wide range of simple, practical structural problems.
4. To understanding of the mechanical behavior of materials under various load conditions.
5. To apply Newton's laws ofmotion in practical experiences.
6. To apply basic knowledge of maths and physics to solve real-worldproblems

OUTCOMES:

1. Ability to explain the differential principles applies to solve engineering problems dealing with force, displacement, velocity and acceleration.
2. Ability to analyses the forces in any structures.
3. Ability to solve rigid body subjected to dynamic forces.
4. Analyses the forces in any structures.
5. Solve rigid body subjected to dynamic forces.
6. Gain basic knowledge about the forces and moments.

UNIT – I **9**

STATICS OF PARTICLES: Forces in plane and space - Vector addition of concurrent forces in plane and space-Problems involving the equilibrium of a particle - Free body diagram - Equilibrium of particle in space.

UNIT – II **9**

STATICS OF RIGID BODIES IN TWO DIMENSIONS: Rigid bodies -Two dimensional structure - Moment of force about a point and about an axis - Moment of a couple - Equivalent systems of coplanar forces - Rigid body in equilibrium - Problems involving equilibrium of rigid body

Application of Statics: Types of supports - Reactions of beams and rigid frames -

UNIT – III **9**

FRICTION: Laws of friction - Coefficient of friction - Problems involving dry friction - Wedge & ladder friction.

Introduction To Vibration: Simple Harmonic Motion - Mass spring system-Free vibration(elementary treatment only)

UNIT – IV **9**

KINEMATICS OF PARTICLES: Introduction - Plane, Rectilinear motion -Time dependent motion-Rectangular coordinates - Projectile motion.

Kinetics of Particles: Equation of motion - Rectilinear motion - Work energy method - Potential energy - Kinetic energy - Conservation of energy.

UNIT – V **9**

IMPULSE &MOMENTUM: Impulse - momentum principle - Concept of conservation of momentum - Impact-Direct central impact- Oblique central impact

TOTAL HRS: 45

SEMESTER I &II

16BECE212 ENGINEERING GRAPHICS 2 0 2 3 100

OBJECTIVES

1. To develop in students, graphic skills for communication of concepts, ideas and design of engineering products.
2. To give exposure to solid modeling, computer-aided geometric design, creating working drawings and engineering communication.
3. To develop graphic skill for communication of concepts, ideas and design of engineering products.
4. To give exposure to existing national standards related to technical drawings.
5. To gather skills in technical drawing.
6. To expose them to existing national standards related to technical drawings.

OUTCOMES:

On Completion of the course the student will be able to

1. perform free hand sketching of basic geometrical constructions and multiple views of objects.
2. do orthographic projection of lines and plane surfaces.
3. draw projections and solids and development of surfaces.
4. prepare isometric and perspective sections of simple solids.
5. demonstrate computer aided drafting.
6. Will gather skills in technical drawing

UNIT I INTRODUCTION 9

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES 8

SCALES:Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING 9

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES 8

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS 8

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam) **3**

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings.Introduction to 3D primitives.

VALUE ADDED COURSE

16BECE251 APTITUDE TRAINING 1 0 0 - 100

COURSE OBJECTIVES

1. To understand the basic concepts of QUANTITATIVE ABILITY
2. To understand the basic concepts of LOGICAL REASONING Skills
3. To acquire satisfactory competency in use of VERBAL REASONING
4. To solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
5. To solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
6. To compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

COURSE OUTCOMES

1. Understand the basic concepts of QUANTITATIVE ABILITY
2. Understand the basic concepts of LOGICAL REASONING Skills
3. Acquire satisfactory competency in use of VERBAL REASONING
4. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
5. Solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
6. Compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc

UNIT I 5

Introduction, Speed Math's, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT I I 5

Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest

UNIT I II 5

Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation and Combination

TOTAL 15

SEMESTER III

SEMESTER III

16BECE301 METHODS OF APPLIED MATHEMATICS 3 2 0 4 100

OBJECTIVES:

1. The purpose of this unit to gain familiarity with Laplace transforms, including the Laplace transforms of step functions and related functions.
2. Fourier series to apply physical science and signal systems.
3. Some standard functions and some of the properties of the Fourier transform.
4. To study the basic principles of different transforms and Partial Differential Equations.
5. In mathematics and signal processing, the Z-transform converts a discrete time-domain signal, which is a sequence of real or complex numbers, into a complex frequency-domain representation
6. To enhance the transform techniques.

16BECE412

OUTCOMES:

1. Apply Laplace transform for analyzing linear time invariant systems.
2. To apply Fourier series in sinusoidal signals, such as engineering, physics and applied mathematics.
3. To be able to solve wave equation using Fourier transform.
4. To recognize the heat conduction equation and the wave equation and have some knowledge of their applicability.
5. To equip the student with the capability of applying Z-transform to solve difference equations.
6. The Learners can equip themselves in the transform techniques.

UNIT I LAPLACE TRANSFORM (13)

Transforms of elementary functions – Basic properties – Transforms of derivatives and integrals – Initial and final value theorems. Inverse Laplace transforms – Convolution theorem (statement only) – Solution of Ordinary Differential Equations with constant coefficients using Laplace transforms – Transform of periodic functions.

UNIT II FOURIER SERIES (12)

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT III FOURIER TRANSFORM (12)

Fourier integral theorem (Statement Only) – Fourier transform pair –Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity – Relation between Fourier and Laplace transforms

UNIT IV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS (12)

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded)

UNIT V Z -TRANSFORM AND DIFFERENCE EQUATIONS (11)

Z-transform - Elementary properties – Inverse Z- transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z - transform.

SEMESTER-III

16BECE302 SOLID MECHANICS 3 0 0 3 100

OBJECTIVES:

1. To impart to the students the concepts of stresses and strains and Hooke's law.
2. To enlighten the students about different types of truss analysis.
3. To teach the students about the beam analysis
4. To teach about thin cylindrical and spherical shell analysis when subjected to internal pressure
5. To impart ideas of torsional stresses
6. To evaluate it in circular sections and its applications in spring analysis.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. The concepts of stresses, strains and Hooke's law.
2. Different types of truss analysis, beam behavior and analysis.
3. Thin cylindrical and spherical shell analysis when subjected to internal pressure.
4. Ideas of torsional stresses and how to evaluate it in circular sections
5. Will gain the brief knowledge in the applications in spring analysis.
6. Understand the different types of beams and their applications

UNIT I **9**

SIMPLE STRESSES AND STRAINS-Hooke's Law-Principle of superposition-Composite Sections-Temperature Stress-Hoop Stress-Elastic Constants-Principal Stresses and Strains-Mohr's Circle-Strain Energy and impact loading-Stresses due to gradual, sudden and impact loading-Proof resilience-Shear resilience.

UNIT II **9**

GEOMETRICAL PROPERTIES OF SECTIONS-Centroid-Centre of mass-Centre of gravity-Moment of inertia-Area moment of inertia-Mass Moment of inertia-Rectangular moment of inertia-Polar moments of inertia-Radius of gyration of an area-Perpendicular axis theorem-Parallel axis theorem-Moment of inertia.

UNIT III **9**

BENDING OF BEAMS -Types of beams and loads - Theory of simple bending – B.M.D. and S.F.D for Cantilever, Simply Supported and Overhanging beams subjected to various types of loading –UDL, Point Load, UVL- point of contraflexure- Calculation of shear stress and bending stress

UNIT IV **9**

DEFLECTION OF BEAMS-Slope and Deflection at a point- Estimation of slope and deflection for Cantilever, Simply Supported and Overhanging beams subjected to various types of loading (Only application of formulae) -Mohr's theorem-Strain energy method.

UNIT V **9**

TORSION OF SHAFTS-Assumptions-horse power transmitted by a shaft-Strength of solid shaft, Hollow shafts, composite shafts & stepped shafts -Torsional strain energy.
Spring-Leaf spring-Helical springs-Strain energy stored in a spring.

SEMESTER-III

16BECE303 MECHANICS OF FLUIDS 3 0 0 3 100

OBJECTIVES:

1. To understand the properties of fluids and fluid statics.
2. To solve kinematic problems such as finding particle paths and stream lines.
3. To use important concepts of continuity equation, Bernoulli's equation and turbulence, and apply the same to problems.
4. To study about specific speed and performance characteristics of different types of turbines.
5. To study types of centrifugal Pumps, work done and efficiency of the different types centrifugal pumps
6. To study about performance of pumps & characteristic curves.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Understand the basic principles of fluid mechanics.
2. Understand the concepts of statics and dynamics of fluid flow.
3. Develop skills in analyzing fluid flows through the proper use of modeling and the application of the basic fluid-flow principles.
4. Acquire knowledge in the selection of type of turbine required with reference to available head of water
5. Identification of type of turbine with estimated specific speed.
6. Capable of estimating efficiency of different pumps and performance of the pumps with the study of characteristics curves.

UNIT I 9

TYPES AND PROPERTIES OF FLUIDS: Introduction– Types of fluids- Basic properties – calculation of Viscosity, compressibility, surface tension.

Fluid statics:

Fluid pressure-various methods of measurement. Total pressure and centre of pressure – determination on plane surface only – Equilibrium of floating bodies – conditions and analysis.

UNIT II 9

KINEMATICS OF FLUID FLOW: Classification of fluid flow – stream function and velocity potential – (Reynolds number and its application) - Linear acceleration and constant rotation of fluids in a container – application and simple problems.

UNIT III 9

DYNAMICS OF FLUID FLOW: Euler's equation of motion – Bernoulli's theorem – Limitation of Bernoulli's theorem – Application – simple problems. Venturimeter – Flow nozzle meter – Bend meter – Pitot tube – current meter.

UNIT IV 9

FLOW THROUGH PIPES: Laminar and Turbulent flow – friction and minor losses (Study of Moody's diagram).Transmission of power through pipes – flow between reservoirs – parallel, series and siphon pipes – water hammer.

UNIT V 9

DIMENSIONAL AND MODEL ANALYSIS

Dimensional Homogeneity – Need – Rayleigh's method &Buckingham's Pi theorem – Significance of dimensionless numbers-Reynolds number, Froude number, Euler's number, Mach number and Weber number – Distorted models – Scale effect

SEMESTER-III

16BECE304ABUILDING MATERIALS AND GEOLOGY 3 0 0 3 100

OBJECTIVES:

1. To understand the importance of geological knowledge such as earth, earthquake, volcanism and to apply this knowledge in projects such as dams, tunnels, bridges, roads, airport and harbor as well as to choose types of foundations.
2. Identify the main and most common igneous, sedimentary and metamorphic rocks encountered by foundations and construction.
3. Analyze geological parameters important in geotechnical studies.
4. To establish and describe topographical and geological sections,
5. Identify potential geological hazards and various structures and ways of preventing and dealing with them
6. To collect, analyze, and report geologic data using standards in engineeringpractice

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Will be able to understand the importance of geological knowledge such as earth, earthquake, volcanism and the action of various geological agencies.
2. Will realize the importance of this knowledge in projects such as dams, tunnels, bridges, roads, airport and harbor
3. Can choose the types of foundations and other related aspects.
4. Students are able to know the engineering properties of rocks and geological structures of outer surface which help in construction of dam, bridge, building etc.
5. Students will gain the knowledge of different materials used in construction.
6. To gain the knowledge of manufacturing of different construction materials.

UNIT– ISTONES, BRICKS, CONCRETE BLOCKS 9

Stone as building material – criteria for selection – test on stones – Deterioration and preservation of stone work – Bricks – classification and types– Tests on bricks – Bricks for special use – Refractory bricks – Concrete hollow blocks.

UNIT– IICEMENT, AGGREGATE AND SAND 9

Cement – Ingredients – Manufacturing processes – Types and grades – Properties – Hydration-applications

Aggregate – Natural stone aggregate – crushing strength – Impact strength – Flakiness – abrasion - Sand – bulking – codesofpractice -Mortar and concrete – Ingredients- types – manufacturing, Batching Plants

UNIT– IIITIMBER, STEEL, PAINTS AND OTHER MODERN MATERIALS. 9

Timber –Market forms –Industrial timber– Plywood, Veneer, laminates.

Steel, Aluminum & other materials – composition– uses – market forms– Mechanical treatment.

Paints, varnishes, distempers.

Glass– ceramic– sealants for joints – fiber glass reinforced plastic– clay products– glass refractoriness.

UNIT– IVGENERAL GEOLOGY, STRUCTURAL GEOLOGY & THEIR SIGNIFICANCE. 9

Geology in civil engineering– Earth processes– weathering– geological work of river, wind and sea– seismic activity– seismic zones in India – ground water.

Structural geology –study of structures – dip and strike – fold, faults and joints – Their significance.

UNIT –VMINERALS, ROCKS AND THEIR ENGINEERING SIGNIFICANCE 9

Elementary knowledge on minerals – Physical properties of minerals – study of following rock forming minerals – Quartz , Feldspar, Pyroxene, Hornblende & Mica family –Ore minerals – Clays minerals and their significance.

Rocks - Classification -Igneous, Sedimentary, Metamorphic rocks

SEMESTER-III

16BECE304B CONSTRUCTION MATERIALS AND EQUIPMENT 3 0 0 3 100

OBJECTIVES:

1. Will realize the importance of this knowledge in projects such as dams, tunnels, bridges, roads, airport and harbor
2. Can choose the types of foundations and other related aspects.
3. Students are able to know the engineering properties of rocks and geological structures of outer surface which help in construction of dam, bridge, building etc.
4. Students will gain the knowledge of different materials used in construction.
5. To gain the knowledge of manufacturing of different construction materials.
6. To gain the applications of materials in various fields.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Understand the basic building materials to be used in construction work
2. Know the various construction practices in the field and the different construction equipment used in the field
3. Make aware of the various construction techniques, practices and the equipment needed for different types of construction activities.
4. Will be able to understand the importance of geological knowledge such as earth, earthquake, volcanism and the action of various geological agencies.
5. Will realize the importance of this knowledge in projects such as dams, tunnels, bridges, roads, airport and harbor
6. Can choose the types of foundations and other related aspects.

UNIT– I: STONES, BRICKS, CONCRETE BLOCKS9

Stone as building material – criteria for selection – test on stones – Deterioration and preservation of stone work – Bricks – classification and types– Tests on bricks – Bricks for special use – Refractory bricks – Concrete hollow blocks.

UNIT– II: CEMENT, AGGREGATE AND SAND9

Cement – Ingredients – Manufacturing processes – Types and grades – Properties – Hydration-applications Aggregate – Natural stone aggregate – crushing strength – Impact strength – Flakiness – abrasion - Sand – bulking – codes of practice. Mortar and concrete – Ingredients- types – manufacturing, Batching Plants

UNIT– III: TIMBER, STEEL, PAINTS AND OTHER MODERN MATERIALS. 9

Timber –Market forms –Industrial timber– Plywood, Veneer, laminates.

Steel, Aluminum & other materials – composition– uses – market forms– Mechanical treatment.

Paints, varnishes, distempers.

Glass– ceramic– sealants for joints – fiber glass reinforced plastic– clay products– glass refractoriness.

UNIT IV: CONSTRUCTION PRACTICES: 9

Specifications, Site Clearance – Marking – Earthwork - masonry – stone masonry – concrete hollow block masonry – flooring – damp proof courses – construction joints – movement and expansion joints – pre cast pavements –centering and shuttering sheet piles –scaffoldings – de-shuttering forms –weather and water proof – roof finishes .

UNIT V: CONSTRUCTION EQUIPMENT: 9

Selection of equipment for earth work - earth moving operations - types of earthwork equipment - tractors, motor graders, scrapers, front end waders, earth movers – Equipment for foundation and pile driving. Equipment for compaction, batching and mixing and concreting - Equipment for material handling and erection of structures - Equipment for dredging, trenching, tunneling, drilling, blasting — dewatering and pumping equipment – Transporters.

SEMESTER-III

16BECE305 SURVEYING I 3 0 0 3 100

OBJECTIVES:

1. Chain, Compass, Plane table and Theodolite surveying. Levelling, Engineering surveys.
2. Skill to carry survey and to decide appropriate type of execution in construction works.
3. Numerical solutions for carrying out surveying in civil engineering field. Advanced surveying equipment's.
4. Work with survey observations, and performcalculations,
5. To Provides independent knowledge for carrying out individual projects.
6. To know the different surveys used in civil field.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Explore the different surveying instruments for surveying.
2. Describe the methods of measurement using level instrument and theodolite.
3. Provides independent knowledge for carrying out individual projects.
4. Able to identify and calculate the errors in measurements
5. Apply the knowledge, techniques, skills, and applicable tools of the discipline to engineering and surveyingactivities
6. Translate the knowledge gained for the implementation of Civil infrastructure facilities

UNIT I 9

INTRODUCTION -Definition , Principles and Classification of surveying- Field work and office work - Scales - Conventional signs - Survey instruments, their care and adjustment –chain surveying- Ranging - Reciprocal ranging - Setting perpendiculars – well-conditioned triangles - Traversing - Plotting - Enlarging and reducing figures.

UNIT II 9

COMPASS SURVEYING AND PLANE TABLE SURVEYING : Prismatic compass - Surveyor's compass - Bearing - Systems and conversions - Local attraction - Magnetic declination - Dip - Traversing - Plotting - Adjustment of errors - Plane table instruments and accessories –Merits and demerits - Methods - Radiation - Intersection - Resection – Traversing- Two point and three point problem.

UNIT III 9

LEVELLING AND APPLICATIONS: Level line - Horizontal line - Levels and Staves - Spirit level - Sensitiveness - Bench marks - Temporary and permanent adjustments - Fly and check levelling - Booking - Reduction - Curvature and refraction - Reciprocal levelling - Longitudinal and cross sections

- Plotting - Calculation of areas and volumes - Contouring - Methods - Characteristics and uses of contours - Plotting - Earth work volume - Capacity of reservoirs.

UNIT IV **9**

THEODOLITE SURVEYING: Theodolite - Vernier and microptic - Description and uses - Temporary and permanent adjustments of vernier transit - Horizontal angles - Vertical angles - Heights and distances - Traversing - Closing error and distribution - Gale's tables - Omitted measurements.

UNIT V **9**

ENGINEERING SURVEYS : Reconnaissance, preliminary and location surveys for engineering projects - Lay out - Setting out works - Route Surveys for highways, railways and waterways - Curve ranging - Horizontal and vertical curves - Simple and reverse curves - Setting with chain and tapes, tangential angles by theodolite, double theodolite - Transition curves - Functions and requirements

TOTAL HRS: 45

SEMESTER-III

16BECE311 BUILDING PLANNING AND DRAWING LABORATORY 0 0 3 2 100

OBJECTIVES:

1. To understand the principles of planning and bylaws
2. To draw plan, elevation and section of load bearing and framed structures
3. To draw plan, elevation and section of public and industrial structures
4. To prepare detailed working drawing for doors, windows, etc.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Apply the principles of planning and bylaws used for building planning.
2. Draw plan, elevation and section for various structures.

DRAWING MANUALLY BY CONVENTIONAL METHODS

1. Conventional signs
2. Bonds in brick and stone masonry
3. Plan, elevation and section of simple buildings.

COMPUTER AIDED DRAWING

1. Buildings with load bearing walls (Flat and pitched roof) – Including details of doors and windows
2. Detailed drawings of floor plans, Elevations and Sections to show various features in a Building
3. Preparation of plot plans with study of property lines and Location of Buildings on site
4. RCC framed structures
5. Industrial buildings – North light roof structures – Trusses
6. Perspective view of one and two storey buildings

SEMESTER-III

16BECE312 CONSTRUCTION MATERIALS LABORATORY 0 0 3 2 100

OBJECTIVES:

1. To learn the Procedure and Purpose of carrying out various tests on properties of materials used for construction.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Understand the basic building materials to be used in construction work
2. Know the various construction practices in the field and the different construction equipment used in the field
3. Make aware of the various construction techniques, practices and the equipment needed for different types of construction activities.

TEST ON MATERIALS

1. ORDINARY PORTLAND CEMENT:

Determination of the specific gravity of cement using Le-chaletier flask and the fineness by sieve analysis.

- Determination of the normal consistency and setting times.
- Determination of the soundness of OPC using Le-chaletier apparatus.
- Determination of the compressive strength of Ordinary Portland cement.

2. TEST ON AGGREGATE:

Determination of the Specific gravity, Bulk density and Water Absorption of Aggregates.

- Study of the phenomenon of Bulking of sand – River Sand and M Sand
- Determination of fineness modulus for fine and coarse aggregates by drawing grading curves - River Sand and M Sand.
- Determination of the impurities in aggregates.

3. TEST ON BRICKS:

- Determination of the compressive strength.
- Determination of the water Absorption.
- Determination of the degree of efflorescence.

- Checking of dimensional tolerance and warpage.

.

CODE BOOKS

1. **IS 269 for 33 Grade cement**
2. **IS 8112 for 43 Grade Cement**
3. **IS 12269 for 53 Grade Cement**
4. **IS 383 for Testing of Aggregates**

SEMESTER-III

16BECE313 SURVEYING PRACTICAL I 0 0 3 2 100

OBJECTIVES:

1. Introduction to Chain Surveying
2. Traverse using Compass Surveying.
3. Plane Table Surveying – Radiation, intersection, Traverse, Resection,Leveling.
4. Tachometry and Theodolite survey trigonometric leveling to determine heights/elevations.
5. Total Station.
6. Setting out of curves (horizontal and vertical)

COURSE OUTCOMES

1. Use conventional surveying tools such as chain/tape, compass, plane table, level in the field of civil engineering applications such as structural plotting and highway profiling.
2. Apply the procedures involved in field work and to work as a surveying team.
3. Plan a survey appropriately with the skill to understand the surroundings. Take accurate measurements, field booking, plotting and adjustment of errors can be understood.
4. Traverse using Compass Surveying.
5. Plane Table Surveying – Radiation, intersection, Traverse, Resection,Leveling.
6. Setting out of curves (horizontal and vertical)

1. Study of chains and its accessories
2. Aligning, Ranging and Chaining
3. Chain Traversing
4. Compass Traversing
5. Plane table surveying: Radiation
6. Plane table surveying: Intersection
7. Plane table surveying: Traversing
8. Plane table surveying: Resection –Three point problem
9. Plane table surveying: Resection – Two point problem
10. Study of levels and levelling staff
11. Fly levelling using Dumpy level
12. Check levelling
13. LS and CS
14. Study of Contouring

VALUE ADDED COURSE

16BECE351 **SOFT SKILLS** **1 0 0 - 100**

OBJECTIVE

1. To elevate the students into productivity powerhouses who can employ life skills to better their performances

UNIT I **4**

Overview to communication, self Introduction, Presentation on their own topic, Extempore, Group Activity

UNIT II **3**

Group Discussion, Do's and Don'ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III **4**

Introduction to HRM – Questions - Do's and Don't's - Interview - Mock GD - Stress Management

UNIT IV **4**

Personality Development - Presentation skills, Interpersonal skills, Critical thinking, Confidence building and Stress management.

TOTAL **15**

SEMESTER IV

SEMESTER IV

16BECE401 CONCRETE TECHNOLOGY 3 0 0 3 100

OBJECTIVES:

1. To understand the properties of ingredients of concrete
2. To study the behavior of concrete at its fresh and hardened state
3. To study about the concrete design mix
4. To know about the procedures in concreting
5. To understand special concrete and their use.
6. To know the recent research technologies.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Test all the concrete materials as per IS code.
2. Design the concrete mix using ACI and IS code methods.
3. Will Determine the properties of fresh and hardened of concrete.
4. To Design special concretes and their specific applications.
5. Ensure quality control while testing/ sampling and acceptance criteria.
6. Recent advancements in the field of concrete Technology.

UNIT I **9**

CEMENT& ADMIXTURES: Types – chemical composition – Hydration, Setting of cement – Structure of hydrate cement – Test on physical properties – Different grades of cement – Admixtures – Mineral and chemical admixtures.

UNIT – II **9**

AGGREGATES: Classification of aggregate – Particle shape & texture – Bond, strength & other mechanical properties of aggregate – Specific gravity, Bulk density, porosity, adsorption & moisture content of aggregate – Bulking of sand – Deleterious substance in aggregate – Soundness of aggregate – Alkali aggregate reaction – Thermal properties – Sieve analysis – Fineness modulus – Grading curves – Grading of fine & coarse Aggregates – Gap graded aggregate – Maximum aggregate size.

UNIT – III **9**

FRESHCONCRETE: Workability – Factors affecting workability – Measurement of workability by different tests – Setting times of concrete – Effect of time and temperature on workability – Segregation & bleeding – Mixing and vibration of concrete – Steps in manufacture of concrete – Quality of mixing water.

UNIT IV **9**

HARDENED CONCRETE: Water / Cement ratio – Abram's Law – Gelspaoe ratio – Nature of strength of concrete – Maturity concept – Strength in tension & compression – Factors affecting strength – Relation between compression & tensile strength - Curing.

TESTING OF HARDENED CONCRETE: Compression tests – Tension tests – Factors affecting strength – Flexure tests – Splitting tests – Non-destructive testing methods – codal provisions for NDT.

UNIT V **9**

MIX DESIGN: Factors in the choice of mix proportions – Durability of concrete – Quality Control of concrete – Statistical methods – Acceptance criteria – Proportioning of concrete mixes by various methods – BIS method of mix design.

SPECIAL CONCRETES: Light weight concrete – Cellular concrete – No-fines concrete – High Strength concrete-High performance concrete- High density concrete – Fibre reinforced concrete - Polymer concrete – Properties – Applications — Self compacting concrete

SEMESTER IV

16BECE402 SOLID MECHANICS II 3 0 0 3100

OBJECTIVES:

1. To understand the concept of Principle of virtual work
2. To study the different methods of finding deflection of beam
3. To analyze the Indeterminate beams subjected to various loading
4. To study the different methods to find the deflection of truss
5. To analyze the column with different end conditions and stress in thick cylinders
6. To Analyze the Indeterminate beams subjected to various loading

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Apply the principle of virtual work.
2. Determine deflection of a beam for various loading conditions.
3. Apply unit load method to find the deflection of truss.
4. Determine different stresses developed in thick cylinders.
5. Visualize the behavior of column for combined bending and axial loading.
6. Determine the deflections if beam using different methods
7. Analyze the Indeterminate beams subjected to various loading

UNIT I **9**

FORCES IN STATICALLY DETERMINATE FRAMES-Method of joints-Method of sections-Graphical method –Deflection -Unit load method-Graphical method-Forces in redundant frames-Castigliano’s theorem-Maxwell’s method-Tension Co-efficient method.

UNIT II **9**

UNSYMMETRICAL BENDING-stresses in beams subjected to unsymmetrical bending-Deflection of beams –simply supported beams – fixed end beams – Over hanging beams – different load conditions (Point load, UDL,UVL) - under unsymmetrical bending-shear centre.

UNIT III **9**

COMBINED BENDING AND DIRECT STRESSES-Columns and struts-types-failure modes-Euler’s formula-Rankin’s formula-Johnson’s-IS code formula-practical end conditions and effective length factors**-** Eccentric loading-Middle third rule-Core of a section. Build – up columns and theories of failure

UNIT IV **9**

THIN CYLINDRICAL AND SPHERICAL SHELLS- Assumptions-Internal pressure-Change in volume-Minimum thickness of wall plates.

THICK CYLINDRICAL AND SPHERICAL SHELLS-Assumptions Lami's theory-Compound cylinders-Thick spherical shells.

UNIT V **9**

ELEMENTARY THEORY OF VIBRATIONS - Simple harmonic motion - Longitudinal vibration - Helical and Compound springs -Transverse vibrations of beams with point loads and UDL - Torsional vibrations of shafts.

SEMESTER-IV

16BECE403 APPLIED HYDRAULICS AND MACHINERY 3 0 0 3 100

OBJECTIVES:

1. To classify the types of flows in open channel and also to design open channel sections in a most economical fashion with minimum wetted perimeter and learn about critical flows.
2. To study about non uniform flows in open channel and longitudinal slopes in open channel
3. To learn about the characteristics of hydraulic jump.
4. To develop an understanding of fluid flow patterns
5. To use boundary layer theory and Drag.
6. To provide insights to the Open channel hydraulics and introduce dimensional analysis for fluid flow problems.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Acquire specific knowledge regarding fluid flow phenomena observed.
2. Understand the basic principles of fluid flow patterns and boundary layer theory
3. Develop skills in analyzing fluid flows in open channel hydraulics and measurements such as weirs and flumes.
4. Will gain knowledge about the Open channel flow.
5. Understand hydraulic jump phenomenon
6. Design open channels for rectangular and non-rectangular channels for GVF and RVF.

UNIT I UNIFORM FLOW IN OPEN CHANNELS: 9

Types of Channels - Uniform flow – chezy's equation – Manning's equation-hydraulically best section of rectangular, trapezoidal and circular sections – circular sections not running full-flow measurement using orifices, mouthpieces, notches and weirs.

UNIT IINON-UNIFORM FLOW IN OPEN CHANNELS 9

Introduction - Critical depth – Specific Energy – Characteristics of non uniform flow – Analysis of hydraulic Jump – Back water curves –venturiflume – Surges in channels.

UNIT III IMPACT OF JETS 9

Flow over immersed bodies: Drag and lift – stream lined Bluff bodies – Terminal velocity – Estimation of drags and lift forces. Impulse – Momentum principle – and its application – dynamic force upon a body in motion – Torque in rotating machines – jet propulsion.

UNIT IVPUMPS 9

Classification of pumps – Centrifugal pumps – Reciprocating Pumps – Deep well pumps – Airlift Pump – Working principle only – Characteristic curves – Selection of pumps and Simple problems.

UNIT V TURBINE 9

Classifications – velocity triangles for turbines, work done and efficiency – study of pelton wheel, Francis and axial flow turbines – governing of turbines – characteristic curves – Specific speed – Model testing – Selection of turbines – Simple Problems to determine geometric dimensions.

SEMESTER-IV

16BECE404 MECHANICS OF SOIL 3 0 0 3 100

OBJECTIVES:

1. To explain what Geotechnical Engineering is and how it is important to civil engineering
2. To explain how three phase system is used in soil
3. To know the soil properties estimated using three phase system
4. To explain role of water in soil behavior and how soil stresses, permeability and quantity of seepage including flow net are estimated
5. To determine shear parameters and stress changes in soil due to foundation loads
6. To estimate the magnitude and time-rate of settlement due to consolidation

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Carry out soil classification.
2. Solve three phase system problems.
3. Solve any practical problems related to soil stresses estimation,
4. Gain the knowledge in permeability and seepage including flow net diagram
5. Estimate the stresses under any system of foundation loads.
6. Solve practical problems related to consolidation settlement and time rate of settlement.

UNIT I BASIC PROPERTIES OF SOILS 9

Soil formation-Soil problems in Engineering –Physical properties of soil –Phase relations-Index properties of soil – Grain size distribution –Atterberg limits – classification of soils as per BIS –Fixed identification –simple tests

UNIT II STRESSES IN SOILS 9

Soil water statics – Concept of effective and neutral stresses – Capillary phenomenon –Vertical stress distribution in soil –Bossiness equation – Westerguards equation – Line load –uniformly distributed loads –New marks chart –construction and use –Pressure bulb .

UNIT III PERMEABILITY AND SEEPAGE 9

One dimensional flow through soil –permeability –Darcy’s law –field and laboratory permeability tests –Flow through stratified soil –Seepage pressure quick sand condition-Two dimensional flow –Laplace equation –Electrical analogy –Flow net –Methods of construction –properties –Applications –sheet pile cut off and earth dam –Phreatic line.

UNIT IV CONSOLIDATION AND SETTLEMENT 9

Consolidation –consolidation settlement –Laboratory test -Determination of Cv by curve fitting methods –Terzaghi’s one dimensional consolidation –Definition of terms –Normally consolidated clay –Over consolidated clay –Under consolidated clay –Field curve –Pre consolidation pressure –e vs p curve –Boundary condition –Time Factor –Time of consolidation. –computation of rate of settlement – Types of Settlements – Components of settlements – Factors affecting settlements

UNIT V SHEAR STRENGTH **9**

Shear strength of soil –importance and use –Mohr –coloumbs' theory –Factors affecting the shear strength. –Laboratory test –Direct shear test –Tri-axial compression test –types of triaxial test based on drainage conditions –UCC test –Field test

SEMESTER-IV

16BECE405 SURVEYING II 3 0 03 100

OBJECTIVES:

The student will be able to gain knowledge on

1. Skill to carry survey and to decide appropriate type of execution in construction works.
2. Numerical solutions for carrying out surveying in civil engineering field. Advanced surveying equipment's.
3. Work with survey observations, and performcalculations,
4. To Provides independent knowledge for carrying out individual projects.
5. To know the different surveys used in civil field.
6. To have confidence in carrying out individual projects

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Explore the different surveying instruments for surveying.
2. Describe the methods of measurement using level instrument and theodolite.
3. Provides independent knowledge for carrying out individual projects.
4. Able to identify and calculate the errors in measurements
5. Apply the knowledge, techniques, skills, and applicable tools of the discipline to engineering and surveyingactivities
6. Translate the knowledge gained for the implementation of Civil infrastructure facilities

UINT-I 9

TACHEOMETRIC SURVEYING: Tacheometric systems - Tangential, stadia and subtense methods - Stadia systems - Horizontal and inclined sights - Vertical and normal staffing - Fixed and movable hairs - Stadia constants - Analytic lens - Subtense bar.

UINT-II 9

CONTROL SURVEYING: Working from whole to part - Horizontal and vertical control methods - Triangulation - Signals - Base line - Instruments and accessories - Corrections - Satellite station - Reduction to Centre – Trigonometric levelling - Single and reciprocal observations - Modern trends – Bench marking

UINT-III 9

SURVEY ADJUSTMENTS: Errors - Sources, precautions and corrections - Classification of errors - True and most probable values - weighted observations - Method of equal shifts - Principle of least squares - Normal equation - Correlates - Level nets - Adjustment of simple triangulation networks.

UINT-IV 9

REMOTE SENSING and GPS: Field of Applications –Natural Resources-Agriculture-Soil-Water Resources-Wasteland Management-Social resources-Cadastral Records-LIS Basic concepts of GPS and its applications

UINT-V 9

OTHER TOPICS: Fundamental principal:(Demo)Photogrammetry - Introduction - Terrestrial and aerial Photographs - Stereoscopy - Parallax –Introduction to Total Station- Electromagnetic distance measurement - Carrier waves - Principles - Instruments - Trilateration - Hydrographic Surveying - Tides - MSL - Sounding methods - Location of soundings and methods

SEMESTER-IV

16BECE411 STRENGTH OF MATERIALS LABORATORY 0 0 3 2 100

OBJECTIVES:

1. To find the Young Modulus, torsional strength, hardness and tensile strength of given specimens
2. To find impact value and crushing value of coarse aggregates
3. To find the compressive strength of concrete cubes and bricks
4. To find stiffness of open coiled and closed coiled springs
5. To find the physical properties of given coarse aggregate, fine aggregate and cement samples

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Evaluate Young Modulus, torsional strength, hardness and tensile strength of given specimens.
2. Determine the strength of coarse aggregates.
3. Find the compressive strength of concrete cubes and bricks.
4. Find stiffness of open coiled and closed coiled springs.
5. Determine the physical properties of given coarse aggregates, fine aggregates and cement samples.

LIST OF EXPERIMENTS

1. Study of UTM, Torsion testing machine, Hardness tester, Compression testing machine
2. Tension Test on M.S. and HYSD bars
3. Test involving Torsion to obtain the Torque vs. Angle of twist and hence the stiffness
4. Test on steel beam – Bending test - compression test
5. Tests on Metals
   - Hardness test on metals (Brinell and Rockwell Tests)
   - Impact test. (Izod and Charpy Tests)
   - Shear test
6. Tests on springs for Stiffness

The student should learn the use of deflectometer, extensometer, and strain gauges.

SEMESTER-IV

16BECE412 SCIENTIFIC COMPUTING LABORATORY 2 0 2 3 100

OBJECTIVES:

1. The objective of this course is to familiarize the students with statistical techniques.
2. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling various problems in the discipline.
3. To introduce students to numerical methods used to solve engineering problems.
4. Fundamentals of numerical methods/algorithms to solve systems of different mathematical equations (e.g. linear/ non-linear algebraic equations, ordinary /partial differential equations), will be introduced.
5. The course would enable students to write their own computer programs using programming languages like C and software like Excel.
6. To give the practical knowledge on the solving of partial differential equations using programming languages like C and software like Excel

COURSE OUTCOMES:

1. To solve engineering problems involving Linear and non-linear equations.
2. Hands-on experience will be provided to apply these computer programs to solve problems in different areas of engineering.
3. To acquire skills in handling situations involving linear/ non-linear algebraic equations, ordinary /partial differential equations
4. To solving actual engineering problems through computer programming and coding.
5. To solve ordinary and partial differential equations using programming languages like C and software like Excel.
6. Student will understand procedure-oriented Excel concepts. Student will be capable of writing C and Excel programs efficiently.

LIST OF EXPERIMENTS

1. Finding solution of Transcendental equation
   i) Newton – Raphson Method
   ii) Bisection method
   iii) Iterative method by reducing the equation to the form x= f(x)
2. Finding the dominant eigenvalue and eigenvector by power method
3. Numerical integration
   i) Gauss 2 point and 3 point formulae
   ii) Trapezoidal method
   iii) Simpson's 1/3 rule
4. Solution of initial value problems governed by ODE
   i) Runge - Kutta 4^{th} order method
   ii) Modified Euler's method
   iii) Milne's method

iv) Adam – Bashforth method

5. Solution of BVP governed by PDE
   i) Laplace Equation
   ii) One – dimensional heat equation
      a) Explicit method : Bender – Schmidt's method
      b) Implicit method : Crank - Nicolson's method
   iii) One dimensional wave equation
      Implicit method

SE ME

SEMESTER-IV

16BECE413 SURVEYING PRACTICAL II 0 0 3 2 100

OBJECTIVES:

The Lab sessions would include experiments on

1. Introduction to Chain Surveying
2. Traverse using Compass Surveying.
3. Plane Table Surveying – Radiation, intersection, Traverse, Resection, Leveling.
4. Tachometry and Theodolite survey trigonometric leveling to determine heights/elevations.
5. Total Station.
6. Setting out of curves (horizontal and vertical)

Course outcomes

On completion of the course, the students will be able to:

1. Use conventional surveying tools such as chain/tape, compass, plane table, level in the field of civil engineering applications such as structural plotting and highway profiling.
2. Apply the procedures involved in field work and to work as a surveying team.
3. Plan a survey appropriately with the skill to understand the surroundings. Take accurate measurements, field booking, plotting and adjustment of errors can be understood.
4. Traverse using Compass Surveying.
5. Plane Table Surveying – Radiation, intersection, Traverse, Resection, Leveling.
6. Setting out of curves (horizontal and vertical)

1. Study of Theodolite, Total Station and GPS
2. Measurement of horizontal angles by reiteration and repetition and vertical angles
3. Heights and distances - Triangulation - Single plane method.
4. Tachometry - Tangential system - Stadia system - Subtense bar.
5. Setting out works - Foundation marking - Simple curve (right/left-handed).
6. Distance, height and area measurements using total station
7. Horizontal curve setting using total station for roads

SEMESTER-IV
VALUE ADDED COURSE

16BECE451 TECHNICAL PRESENTATION/SEMINAR 1 0 0 -100

OBJECTIVES:
At the end of this course students should have learnt the presentation skills needed for the presentation in national and international conferences.

Topics are given in the current real time problems and students are required to present solutions to the problems by referring to Journals, magazines or by consulting experts.

SEMESTER V

SEMESTER-V

16BECE501 STRUCTURAL ANALYSIS I 3 0 0 3 100

OBJECTIVES:

1. To understand the concept of analysis of indeterminate structures by various classical methods
2. To study the use of ILD for determinate structure
3. To learn the concepts of moving loads and its effect on structures
4. To understand the concept of equivalent UDL
5. To study the reversal of stress under live load
6. To determine the reversal of stresses in trusses using ILD.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Use various classical methods for analysis of indeterminate structures.
2. Determine the effect of support settlements for indeterminate structures.
3. Apply the concepts of ILD and moving loads on determinate structures.
4. Apply the concept of equivalent UDL.
5. Determine the reversal of stresses in trusses using ILD.
6. To Analyse the building using different methods available for designing and analysing.

UNIT I STATIC AND KINEMATIC INDETREMINANCY 9

Degree of static and kinematic indeterminacies of frames- analysis of indeterminate frame- Degree of redundancy-Static and Kinematic indeterminacies-propped cantilever and fixed beams - reaction-B.M.D. and S.F.D.

UNIT II MOMENT DISTRIBUTION METHODS 9

Moment-Distribution and carryover of moments – Stiffness and carryover of factors – Analysis of Continuous beams – Analysis of Simple frames – Plane rigid frame with and without sway - Two cycle moment distributions method (No problems)

UNIT III INFLUENCE LINE DIAGRAM 9

Analysis for moving loads-Influence line Diagram (ILD) –ILD for beam with point loads, UDL shorter than span and several point loads at a section -Equivalent UDL-Absolute maximum bending moments for two wheel loads at a fixed distance apart.

UNIT IV ARCHES 9

Arches as structural forms-types of arches-Three-hinged arches-Horizontal thrust-Effect of Temperature change-Straining actions- Parabolic and Circular arches-Two-hinged arches-Horizontal thrust-Effect of temperature change-Straining actions- Parabolic and Circular arches.

UNIT V CABLES AND SUSPENSION BRIDGES 9

Equation of the cable-Horizontal thrust on the cable-Tension in the cable-Length of the cable-Effect of temperature on the cable-Stiffening girders in suspension bridges-with three-hinged and two-hinged stiffening girders

TOTAL: 45HRS

SEMESTER-V

16BECE502 DESIGN OF RC STRUCTURES I 3 0 0 3 100

OBJECTIVE

1. To study the stress strain behavior of steel and concrete
2. To understand the concept of working stress and limit state methods
3. To gain the knowledge of limit state design for flexure, shear, torsion, bond and anchorage
4. To understand the behavior of columns subjected to eccentric load and use of interaction diagrams
5. To design the beams, slab, stairs, column and footing.
6. To draw detailing of various RCC structural elements

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Apply the fundamental concepts of working stress method and limit state method.
2. Use IS code of practice for the design of concrete elements.
3. Design the beams, slab, stairs, column and footing.
4. Draw detailing of various RCC structural elements.
5. understand the behavior of columns subjected to eccentric load and use of interaction diagrams
6. gain the knowledge of limit state design for flexure, shear, torsion, bond and anchorage

UNIT I

INTRODUCTION 9

Materials for concrete- Stress-Strain curve for concrete in compression-Concrete mix proportioning-Design mix and nominal mix-Types of reinforcement-Plain and deformed bars-Stress-strain curve for reinforcing steel.

Concept of WSD (No problems) and LSD-Difference between WSD and LSD-Characteristic loads and strengths-Partial safety factor-Various limit states.

DESIGN FOR FLEXURE:

Design of singly and doubly reinforced rectangular and flanged sections as per IS code

UNIT II

DESIGN BASICS FOR SHEAR, BOND AND TORSION 9

Design for shear-concept of bond and anchorage-Design for torsion-IS code provision for the design of beams-Design of lintels-Design of continuous beams using B.M. and S.F. co-efficient as per IS code-detailing.

UNIT III

DESIGN OF SLABS 9

Types of slabs-IS code regulations-Stiffness requirements-Design of one-way simply supported and continuous slab using BM and SF co-efficient as per IS code-Principles of Rankine-Grashof'smethod(no problems)-design of two way, simply supported and continuous slab as per IS code.

UNIT IV

DESIGN OF COLUMNS 9

IS-code regulations-Design of short rectangular and circular columns subjected to axial compressive load-Design of short columns subjected to combined axial compressive load and uni-axial and biaxial bending moments using design aids(SP 16)- Introduction to long column design

UNIT V

DESIGN OF FOOTINGS 9

Design of wall footings- Design of isolated, square and rectangular footings.-combined rectangular and trapezoidal footings.

SEMESTER V

16BECE503A TRANSPORTATION ENGINEERING 3 0 0 3 100

OBJECTIVES:

1. To understand the importance of transportation and characteristics of road transport
2. To know about the history of highway development, surveys and classification of roads
3. To study about the geometric design of highways
4. To study about traffic characteristics and design of intersections
5. To know about the pavement materials and design
6. To design flexible and rigid pavements as per IRC.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Carry out surveys involved in planning and highway alignment.
2. Design cross section elements, sight distance, horizontal and vertical alignment.
3. Implement traffic studies, traffic regulations and control, and intersection design.
4. Determine the characteristics of pavement materials.
5. Design flexible and rigid pavements as per IRC.
6. Will gain the knowledge of horizontal and vertical curves.

UNIT I 9

CLASSIFICATION OF ROADS-Highway alignment and surveys-Highway economics and financing. Geometric design of High way-design speed-Cross sectional elements-super elevation-sight distances-Gradients-extra widening at curves.

UNIT II 9

HIGHWAY MATERIALS-Aggregates and Bituminous Materials-Selection and testing-Construction methods for Earth roads,gravel,W.B.M, roads, Bituminous pavements and Cement concrete pavements

UNIT III 9

TRAFFIC ENGINEERING-Traffic volume-Speed and delay studies-Parking and accident studies-Traffic signs, marking and signals-road intersections-Traffic forecasting-Need-limitation-Types of traffic-Forecasts of traffic. Traffic Compositions-Future traffic estimates-Design Vehicle-Dimensions-Types of Design Vehicles.

UNIT IV 9

NATURE OF TRAFFIC PROBLEMS IN CITIES: Growth of towns-Growth of Traffic-Nature of Present Difficulties-Measures to meet problems-Need for Study-Land use and City Planning Controls-Restrain measures-Public transport-Promotion of public transport pedestriauisation-Staggy traffic hours.
Traffic and free environment-Effects of traffic on the environment-Noise-Air-Vibration-Degrading the aesthetic-Land consumption-Evaluation procedures-Environmental areas-computer application in traffic engineering-Public transport systems-Simulation, Traffic Planning and Computer application-situation in India.

UNIT V **9**

AIRPORTS-their importance-spacing and position in relation to their zone-details of their location and layout-auxiliary and terminal buildings-their location and layout.

Runway lighting and drainage-Other accessories such as hangers and repair yards-airport zoning.

SEMESTER V

16BECE503B HIGHWAY ENGINEERING 3 0 0 3 100

OBJECTIVES:

1. To understand the importance of transportation and characteristics of road transport
2. To know about the history of highway development, surveys and classification of roads
3. To study about the geometric design of highways
4. To study about traffic characteristics and design of intersections
5. To know about the pavement materials and design
6. To select pavement materials and design

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Carry out surveys involved in planning and highway alignment.
2. Design cross section elements, sight distance, horizontal and vertical alignment.
3. Implement traffic studies, traffic regulations and control, and intersection design.
4. Determine the characteristics of pavement materials.
5. Design flexible and rigid pavements as per IRC.
6. The pavement materials and design

UNIT I 9

HIGHWAY PLANNING AND ALIGNMENT: Macadam's method of Road Construction, Highway Development in India - Jayakar Committee RecommendationsTwenty-year Road Development Plans, Concepts of On-going Highway Development Programmed at National Level- Indian Roads Congress, Highway Research Board, National Highway Authority of India, Ministry of Road Transport and Highways (MORTH) and Central Road Research Institute. Requirements of Ideal Alignment, Factors Controlling Highway Alignment -Engineering Surveys for Alignment - Classification and Cross Section of Urban and Rural Roads (IRC), Highway Cross Sectional Elements – Right of Way, Carriage Way, Camber, Kerbs, Shoulders and Footpaths [IRC Standards],

UNIT II 9

GEOMETRIC DESIGN OF HIGHWAYS: Design of Horizontal Alignments – Super elevation, Widening of Pavements on Horizontal Curves and Transition Curves [Derivation of Formulae and Problems]-Design of Vertical Alignments – Rolling, Limiting, Exceptional and Minimum Gradients, Summit and Valley Curves-Sight Distances - Factors affecting Sight Distances, PIEV theory, Stopping Sight Distance (SSD), Overtaking Sight Distance (OSD), Sight Distance at Intersections, Intermediate Sight Distance and Illumination Sight Distance [Derivations and Problems in SSD and OSD]-Geometric Design of Hill Roads [IRC Standards Only]

UNIT III 9

DESIGN OF RIGID AND FLEXIBLE PAVEMENTS: Rigid and Flexible Pavements- Components and their Functions-Design Principles of Flexible and Rigid Pavements, Factors affecting the Design of Pavements - ESWL, Climate, Sub-grade Soil and Traffic-Design Practice for Flexible Pavements [CBR method, IRC Method and Recommendations- Problems]-Design Practice for Rigid Pavements – [IRC Recommendations-Problems] – Joints

UNIT IV **9**

HIGHWAY MATERIALS AND CONSTRUCTION PRACTICE: Desirable Properties and Testing of Highway Materials: Soil – California Bearing Ratio Test, Field Density Test- Aggregate - Crushing, Abrasion, Impact Tests, Water absorption, Flakiness and Elongation indices and Stone polishing value test-Bitumen - Penetration, Ductility, Viscosity, Binder content and Softening point Tests.-Construction Practice - Water Bound Macadam Road, Bituminous Road and Cement Concrete Road [as per IRC and MORTH specifications]-Highway Drainage [IRC Recommendations]

UNIT V **9**

HIGHWAY MAINTENANCE: Types of defects in Flexible pavements – Surface defects, Cracks, Deformation, Disintegration – Symptoms, Causes and Treatments. Types of Pavement, Failures in Rigid Pavements – Scaling, Shrinkage, Warping, Structural Cracks Spalling of Joints and Mud Pumping – and Special Repairs. Pavement Evaluation – Pavement Surface Conditions and Structural Evaluation, Evaluation of pavement Failure and strengthening - Overlay design by Benkelman Beam Method [Procedure only], Principles of Highway Financing

SEMESTER V

16BECE504 ENVIRONMENTAL ENGINEERING I 3 0 0 3 100

OBJECTIVES:

1. To make the students conversant with sources and its demand of water
2. To understand the basic characteristics of water and its determination
3. To expose the students to understand the design of water supply lines
4. To provide adequate knowledge about the water treatment processes and its design
5. To have adequate knowledge on operation and maintenance of water supply
6. To gain the knowledge of distribution system and their methods

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Identify the source of water and water demand.
2. Apply the water treatment concept and methods.
3. Apply water distribution processes and operation and maintenance of water supply.
4. Prepare basic process designs of water and wastewater treatment plants collect, reduce, analyze, and evaluate basic water quality data.
5. Gain the knowledge of distribution system and their methods.

understand the design of water supply lines

UNIT I **9**

PLANNING FOR WATER SUPPLY SYSTEMS: Planning Factors for Water Supply schemes-Population forecasting – Design period – Variations in demand pattern-Water demand characteristics - Standards –

UNIT II **9**

SOURCES OF WATER-classification of source- water quality parameters & significance –Intake structures, Wells,Infiltration Gallery, Tube wells- Construction & Development-Sanitary Protection of wells- yield of wells.

UNIT III **9**

CONVEYANCE OF WATER: Pipes and channels for transmitting water -Selection of materials for pipes and conduits-Laying, jointing & testing of pipes – Pipe appurtenances-Various types of pumps-Pump selection–Pumping station.

UNIT IV **9**

WATER TREATMENT: General layout of a water treatment plant– Principles of screening, flocculation, flash mixing, sedimentation, filtration-various techniques of disinfection– Brief on water softening, De-mineralization, and aeration

UNIT V

STORAGE&DISTRIBUTION OF WATER: **9**

Service reservoirs-elevated and ground level reservoirs-equalizing and service storage- factors affecting storage capacity-distribution network patterns – Analysis of distribution network – Hardy Cross method – Equivalent Pipe method – Leak detection in pipe network - Corrosion control, Lining of pipes-Appurtenances

TOTAL HRS: 45

SEMESTER-V

16BECE511APPLIED HYDRAULICS &HYDRAULIC MACHINERYLABORATORY

0 0 3 2 100

OBJECTIVES:

1. To understand the flow measurement in a pipe flow
2. To understand the flow measurement in a pipe flow using Constant Head method
3. To determine the energy loss in pipe flow
4. To study the characteristics of turbines
5. To study the characteristics of pumps
6. To measure the discharge in a open channel flow

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Measure discharge in pipes.
2. Determine the energy loss in conduits.
3. Demonstrate the characteristics curves of pumps
4. Demonstrate the characteristics curves of turbines.
5. Carry out discharge measurements in open channel.
6. understand the flow measurement in a pipe flow using Constant Head method

LIST OF EXPERIMENTS

1. Determination of co-efficient of discharge for orifice
2. Determination of co-efficient of discharge for venturimeter
3. Determination of co-efficient of discharge for orifice meter
4. Friction losses in pipes(Major& minor)
5. Determination of performance characteristics of Francis turbine
6. Determination of performance characteristics of Centrifugal pumps (Constant speed / variable speed)
7. Study on performance characteristics of Reciprocating pump.
8. Determination of performance characteristics of Submersible pump.
9. Experiment on Bernoulli’s theorem

SEMESTER-V

16BECE512 GEOTECHNICAL LABORATORY 0 0 3 2 100

OBJECTIVES:

1. To estimate index properties of soils (coarse and fine).
2. To estimate consistency limit of fine grained soils.
3. To estimate shear strength of soils by direct shear test, triaxial shear test, vane shear test & unconfined compressive test.
4. To estimate the engineering properties of the soils by density test, CBR test
5. To estimate the engineering properties of permeability test and consolidation test.
6. To classify the soil by physical observation of soil.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Classify soil by physical observation of the soils.
2. Classify soil based on estimated index and engineering characteristics of soils.
3. Carry out interpolation among the estimated soil design parameters.
4. Estimate shear strength of soils by direct shear test, triaxial shear test, vane shear test & unconfined compressive test.
5. Estimate the engineering properties of the soils by density test, CBR test
6. Estimate the engineering properties of permeability test and consolidation test.

LIST OF EXPERIMENTS

1. Specific gravity of soil grains(Specific gravity bottle &Pycnometer)
2. Grain size distribution - Sieve analysis
3. Relative density of sands
4. Atterberg limits test

   a) Liquid Limit
   b) Plastic Limit
   c)Shrinkage Limit

- Determination of moisture - Density relationship using standard Proctor test.
- Permeability determination (constant head and falling head methods)
- Determination of shear strength parameters.

  a) Direct shear test on cohesionless soil
  b) Unconfined compression test on cohesive soil
  c) Triaxial compression test (Study Experiment)
- One dimensional consolidation test (Determination of co-efficient of consolidation only, Study Experiment)
- Field density test

  a) Core cutter and

b) Sand replacement methods

SEMESTER V

16BECE513 CONCRETE AND HIGHWAY LABORATORY 0 0 3 2 100

OBJECTIVE

1. To find impact value and crushing value of coarse aggregates
2. To find the compressive strength of concrete cubes and bricks
3. To find the physical properties of given coarse aggregate, fine aggregate
4. To find the physical properties of given cement samples
5. To learn the characteristics, properties and testing procedures of aggregate
6. To learn the characteristics, properties and testing procedures of bitumen

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Determine the strength of coarse aggregates.
2. Find the compressive strength of concrete cubes and bricks.
3. Determine the physical properties of given coarse aggregates, fine aggregates and cement samples.
4. Characterize the aggregate used for road construction
5. Characterize the bitumen used for road construction.
6. Know the characteristics, properties and testing procedures of bitumen

LIST OF EXPERIMENTS

A. TEST ON CONCRETE

- Workability test on concrete- Slump, Compaction factor and Vee –Bee test
- Strength test on concrete – Compressive Strength ,Direct tensile strength, Split tensile strength test and Flexural strength test

B. TEST ON AGGREGATE

- Flakiness Index and Elongation Index
- Crushing Value and Impact Value
- Abrasion test- Deval abrasion test

C. TEST ON BITUMEN

- Ductility Test
- Viscosity Test
- Specific Gravity Test
- Flash and Fire Point Test

SEMESTER-V

VALUE ADDED COURSE

16BECE551 INPLANT TRAINING - - - -100

OBJECTIVE

At the end of this course students should be able to know the practical applications of theory in the field.

Students are emphasised to take one month intensive training in reputed construction or design or architecture firm.

16BECE552 SURVEY CAMP - - - - 100

OBJECTIVE

At the end of this course students should be able to know the practical applications of survey in the field.

Students are emphasised to take intensive training in the field limited to one week.

SEMESTER VI

SEMESTER VI

16BECE601 STRUCTURAL ANALYSIS II 3 0 0 3100

OBJECTIVES:

1. To understand the influence line concepts for indeterminate structures
2. To understand the methods of analysis of intermediate trusses for external loads, lack of fit and thermal effect
3. To study behaviour of arches and their methods of analysis
4. To know the concept and analysis of cable stayed bridge
5. To study the multi storey frames subjected to gravity loads and lateral loads
6. To apply the methods of indeterminate truss analysis

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Demonstrate the concepts of qualitative influence line diagram for continuous beams and frames
2. Apply the methods of indeterminate truss analysis.
3. Demonstrate the behavior of arches and their methods of analysis.
4. Analyse cable suspension bridges.
5. Analyse multistory frames subjected to gravity loads and lateral loads.
6. Analyse multi storey frames subjected to gravity loads and lateral loads

UNIT I 9

Indeterminate structures - Slope deflection method - Continuous beams and fixedbeam– Simplification of hinged end – support settlement - Simple frames - Portal frames
Consistent-deformation method-continuous beams.

UNIT II 9

Strain energy method- Castigliano's theorem- Deflection by strain energy method – evaluation of strain energy in member under different loading – Application of strain energy method for Beams and frames - Beams curved in plan.

UNIT III 9

Flexibility method -Equilibrium and Compatibility – Determinate vs Indeterminate structures – Indeterminacy – Primary Structure – Compatibility conditions – Analysis of indeterminate pin – jointed plane frames, continuous beams, rigid jointed plane frames (with redundancy restricted to two).

UNIT IV 9

Stiffness method-Beams-Trusses-Simple frames-Portal frames-Grids-Lack of fit-Temperature stresses-Support settlements-Elastic supports.(Direct approach)- Introduction to Finite element.

UNIT V 9

Plastic Analysis of Structures : Statically indeterminate axial problems – Beams in pure bending – Plastic moment of resistance – Plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism – Plastic analysis of indeterminate beams and frames.

SEMESTER VI

16BECE602 DESIGN OF RC STRUCTURES II 3 0 0 3100

OBJECTIVE

1. To understand the design concept of various structures and detailing of reinforcements.
2. To understand the design of underground and elevated liquid retaining structures.
3. To study the design of material storage structures.
4. To know the effect of temperature on concrete structures.
5. To study the design of bridges subjected to IRC loading.
6. To draw the various reinforcements of structures

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Apply the concepts of liquid retaining structures.
2. Design material storage structures using various theories.
3. Apply the concepts of environmental and transportation structures.
4. Demonstrate the detailing of reinforcement.
5. Draw the various RCC structures.
6. design of material storage structures

UNIT 1

YIELD LINE THEORY 9

Introduction-Assumptions - Characteristics of yield line - Determination of collapse load / plastic moment- Application of virtual work method - square, rectangular, circular and triangular slabs With point load and UDL (Simply support and Fixed support)- Design problems.

UNIT II

BUILDING FRAMES 9

Multi storeyed structures and framed structures-Elastic analysis ,Suitable substitute frames for gravity loadings-Approximate analysis of single and two bay frames up to three storeys using portal method and cantilever method.

UNIT III

RETAINING WALLS 9

Design of Cantilever retaining wall – Design of Counterfort Retaining walls-Stability Analysis.

UNIT IV

WATER TANKS 9

Classification-IS code provisions-Principles of design-Design of rectangular and circular water tanks , below ground level, tanks resting on ground and Elevated tanks – Intze type water tank (Theory only)

UNIT V

SPECIAL ELEMENTS9

Design of staircases (Straight and doglegged) – Design of flat slabs – Design Principles of Mat foundation and box culvert.

SEMESTER-VI

16BECE603A WATER RESOURCES ENGINEERING 3 0 0 3 100

OBJECTIVES:

1. To build on the student's background in hydrology and hydraulics an understanding of water resources systems.
2. To develop the skills in modeling of flood flows and flood routing
3. To develop skills in the ground water flow, type of aquifer and yield from the well.
4. To provide the knowledge of design of reservoir, operation and sedimentation
5. To know the different aquifers and the water table level.
6. To planning of reservoirs and storage tanks.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Incorporate the analytical abilities in the planning and design of water resource systems.
2. Apply the knowledge on reservoir planning and investigation
3. Model the flood flows and flood routings.
4. Gain the knowledge of design of reservoir, operation and sedimentation
5. Will know the different aquifers and the water table level.
6. Planning of reservoirs and storage tanks.

UNIT I 9

INTRODUCTION: Irrigation – Need and mode of irrigation – Merits and demerits of irrigation – environmental impacts of irrigation- Classification of irrigation projects - Crop and crop seasons – consumptive use of water – Duty, Delta and Base period – Factors affecting duty – Irrigation efficiencies.

PRECIPITATION: Types of precipitation – Forms of precipitation – Measurement of Rainfall –Losses from precipitation-- Hydrograph - Factors affecting Hydrograph – Base flow separation – Unit hydrograph – S curve hydrograph

UNIT II 9

RIVER ENGINEERING: Rivers –Types and Behavior

WATER LOGGING: Causes of water logging - Effects of water logging – Remedial measures for water logging

DRAINAGE: Necessity – Advantages – Methods.

RIVER STRUCTURES: Diversion Head works- Brief Description of component parts and their functions- - Seepage theories.

UNIT III 9

CANAL ENGINEERING: Alignment of canals – Classification of canals - Distribution network - Canal Losses - Cross sectional details - Sedimentation in canals - Silt theories - Balancing depth of cutting

CANAL LINING: Types, Construction and Maintenance

CANAL AND RIVER STRUCTURES: Canal regulators and Types - Canal Falls and Types

CROSS DRAINAGE WORKS: Types- Selection -River Training works – types.

UNIT IV **9**

RIGID STORAGE STRUCTURES: Gravity dams Description– Arch and Buttress dam – Spillways – Factors affecting location and type of dams – Forces on a dam – Galleries and types.

Non Rigid Storage Structures: Earth dams - Causes of failure - Typical cross sections to suit site conditions and available materials - Phreatic line – Tanks – Classification – Components - types of Bunds

UNIT V **9**

RESERVOIR PLANNING: Reservoirs- Types- Zones of storage – Capacity - Yield- Area - Elevation and capacity- Elevation curves - Mass curve analysis - Capacity for specific demand and yield for given capacity- Fixing reservoir capacity- Reservoir sedimentation and control- Selection of site for reservoir

Other Irrigation Structures: Surplus Weir- Tower Head Sluice- Wing wall type- (Theoretical Approach only)- Culverts- Small ROAD bridges across drains- Canal outlets and flumes- Types (Theoretical Aspect only).

SEMESTER-VI

16BECE603B IRRIGATION ENGINEERING 3 0 0 3 100

OBJECTIVES:

1. To understand the basic types of irrigation, irrigation standards and crop water assessment
2. To study the different aspects of design of hydraulic structures
3. To provide knowledge on various hydraulic structures such as energy dissipaters, head and cross regulators, canal falls and structures involved in cross drainage works
4. To understand the analysis of seepage and hydraulic jump
5. To design different types of dams.
6. To understand the different types of cross drainage works

Course outcomes

On completion of the course, the students will be able to:

1. Find the crop water requirement for various crops in the command area.
2. Understand the complete design of Dams and channel systems.
3. Understand the different types of cross drainage works.
4. Design various river training methods.
5. Gained Knowledge on various hydraulic structures such as energy dissipaters, head and cross regulators
6. design different types of dams

UNIT I **9**

INTRODUCTION: Irrigation – Need and mode of irrigation – Merits and demerits of irrigation – environmental impacts of irrigation-History of irrigation development in India-Classification of irrigation projects Crop and crop seasons – consumptive use of water – Duty – Factors affecting duty – Irrigation efficiencies – Planning and Development of irrigation projects.

UNIT II **9**

IRRIGATION METHODS: Requirement of an irrigation method- sub surface irrigation-surface irrigation-burried irrigation-seepage line irrigation- Canal irrigation – Lift irrigation – Tank irrigation – Flooding methods – Merits and demerits – Sprinkler irrigation – Drip irrigation – barrow pit method-participatory approach – water user associations- social aspects in water pricing

UNIT III **9**

DIVERSION AND IMPOUNDING STRUCTURES: Weirs – elementary profile of a weir – weirs on pervious foundations - Types of impounding structures - Tanks, Sluices and Weirs – Gravity dams – Earth dams – Arch dams – Spillways – Factors affecting location and type of dams – Forces on a dam – Hydraulic design of dams.

UNIT IV **9**

CANAL IRRIGATION: Design of irrigation channels - Alignment of canals – Classification of canals –Typical capacity –statement of roughness coefficient- Maximum and minimum permissible velocity - Canal drops – side slopes of banks- side slopes of canal- Hydraulic design of drops – Cross drainage works – Hydraulic design of cross drainage works – Canal Head works – Canal regulators – River Training works.

UNIT V **9**

IRRIGATION WATER MANAGEMENT: Need for optimisation of water use – Minimizing irrigation water losses – On farm development works – Percolation ponds – Participatory irrigation management – Water users associations – Changing paradigms in water management – Performance evaluation. Selection of site for hydropower plant- essential data for waterpower studies- requirement of water for hydel power

SEMESTER-VI

16BECE604 ENVIRONMENTAL ENGINEERING II 3 0 0 3 100

OBJECTIVE

1. To learn the basics of sewage composition and its characteristics
2. To depict the information about various sewage treatment processes
3. To provide the adequate information on various disposal standards for industrial effluents
4. To study the information about air pollution and its effects
5. To understand the knowledge about solid waste generation and disposal methods.
6. To gain knowledge information about various sewage treatment processes

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Determine the sewage characteristics and design various sewage treatment plants.
2. Analyze the status of surface water and ground water quality and the remediation technologies.
3. understand the information about air pollution and its effects
4. gain knowledge information about various sewage treatment processes
5. Carry out municipal water and wastewater treatment system design and operation.
6. Manage hazardous wastes, risk assessment and treatment technologies apply environmental treatment technologies and design process.

UNIT I 9

SEWERAGE SYSTEM: Definitions-Classification – Quantity of sewage – Fluctuations in Flow pattern- Estimation of storm run off-Design of flow for separate and combined systems

UNIT II 9

SEWAGE COLLECTION: Sanitary Fixtures and Fittings- Systems of House Drainage- General Layout- Anti siphonage- Connection of House sewer to public sewer- Materials for sewers- – Laying, jointing and testing of sewers- Sewer Maintenance- Sewage pumping- Types of pumps Sewer appurtenances – Pump selection

UNIT III 9

SEWAGE TREATMENT- PHYSICO CHEMICAL: Objectives- Characteristics and Composition of sewage-Analysis- Cycles of decomposition- design - principles of sewage treatment- screen chamber, grit chamber, primary sedimentation tanks

UNIT IV 9

SEWAGE TREATMENT- BIOLOGICAL: Fundamentals of microbiology of waste water- Basic Principles of Biological Treatment-Design principles - trickling filter - activated sludge process- UASB reactor- Modifications- Low cost treatment methods

UNIT V 9

SLUDGE TREATMENT AND EFFLUENT DISPOSAL: Objectives of sludge treatment- Properties and characteristics of sludge- methods of disposal- Conventional and high rate digesters- Sludge Lagooning- Sludge thickening methods- Effluent disposal on land- Sewage farming practices- Dilution- Standards for disposal - Disposal into water bodies Eutrophication- Oxygen sag curve- Recycle and reuse of waste effluents

TOTAL HRS: 45

SEMESTER-VI

16BECE6E-- PROFESSIONALELECTIVE III 3 0 0 3 100

TOTAL HRS: 45

SEMESTER-VI

16BECE611IRRIGATION AND ENVIRONMENTAL ENGINEERING DRAWING

0 0 3 2 100

OBJECTIVES:

1. To learn the software developing skills for structural design.
2. To understand the computing techniques in the field of transportation.
3. To gain knowledge in problem solving in water resources.
4. To apply computing techniques to transportation engineering.
5. To apply computing skills to water resources and environmental engineering.
6. To apply computing skills to geotechnical engineering.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Apply the software skills in the design of infrastructure.
2. Apply computing techniques to transportation engineering.
3. Apply computing skills to water resources and environmental engineering.
4. Apply computing skills to geotechnical engineering.
5. Learn the software developing skills for structural design.
6. Understand the computing techniques in the field of transportation.

ENVIRONMENTAL ENGINEERING DRAWING

This subject includes process design (excluding Structural Design) of major units associated with water and sewage treatment and transport including house building drainage. At the end of the course, the student is expected to know about the sizing of treatment plant units and draw the general arrangement.

1. General layout of water and waste treatment plants
2. Sedimentation aided with coagulation
3. Slow sand filter
4 Rapid sand filter
5 Trickling filter
6 Septic tank

SEMESTER-VI

16BECE612 ENVIRONMENTAL ENGINEERING LABORATORY0 0 3 2 100

OBJECTIVES:

1. To quantify the water and wastewater pollutant
2. To measure the concentration of air pollutants
3. To analyze the characteristics of water
4. To analyze the characteristics of wastewater and ambient air
5. To determine the characteristics of ambient air
6. To study the growth of microorganism and its quantification

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Quantify the pollutant concentration in water, wastewater and ambient air.
2. Recommend the degree of treatment required for the water and wastewater.
3. Analyse the survival conditions for the microorganism and its growth rate.
4. Quantify the water and wastewater pollutant
5. Measure the concentration of air pollutants
6. Analyze the characteristics of water

LIST OF EXPERIMENTS

1. Sampling and preservation methods and significance of characterization of water and wastewater.
2. Determination of
   i) PH and turbidity
   ii) Hardness
3. Determination of iron & fluoride
4. Determination of residual chlorine
5. Determination of Chlorides
6. Determination of Ammonia Nitrogen
7. Determination of Sulphate
8. Determination of Optimum Coagulant Dosage
9. Determination of available Chlorine in Bleaching powder
10. Determination of dissolved oxygen
11. Determination of suspended, volatile and fixed solids
12. B.O.D. test
13. C.O.D. test
14. Introduction to Bacteriological Analysis (Demonstration only)

SEMESTER-VI

VALUE ADDED COURSE

16BECE651 COMPUTER AIDED DESIGN LABORATORY 1 00 - 100

OBJECTIVE

1. Students should be trained about the general purpose analysis and design software commands and input instructions and command formats and analysis of various structures.
2. They should also get familiar with various unit systems, co-ordinate systems and various structural analysis.
3. To apply basic concepts to develop construction (drawing) techniques.
4. To ability to manipulate drawings through editing and plotting techniques.
5. To understand geometric construction and Produce template drawings.
6. To understand and demonstrate dimensioning concepts and techniques.

Course Outcome

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

LIST OF EXPERIMENTS

1. Model generation using Node/Beam Editor
2. Assigning Properties, Supports, Loads Analysis and design for 2 storey building
3. Analysis of Framed Structure and Applying Floor Loads and Wind load for 3 storey building
4. Analysis of Framed Structure and Applying Seismic Analysis for 3 storey building
5. Analysis of 3 storey school building and generate the stress diagrams on each beam and column
6. Analysis of Retaining Wall

SEMESTER VII

16BECC701 **SEMESTER-VII**

PROFESSIONAL ETHICS, PRINCIPLES OF MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT **3 0 0 3 100**

OBJECTIVES:

1. To enable the students to create an awareness on Engineering Ethics, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.
2. To familiarize the students to what constitutes professional practice, introduction of various stakeholders and their respective roles; understanding the fundamental ethics governing theprofession
3. To give a good insight into contracts and contracts management in civil engineering, dispute resolution mechanisms; laws governing engagement oflabour.
4. To give an understanding of Intellectual Property Rights,Patents.
5. To make the students understand the types of roles they are expected to play in the society as practitioners of the civil engineeringprofession
6. To develop good ideas of the legal and practical aspects of theirprofession

OUTCOMES:

1. To familiarize the students to what constitutes professional practice, introduction of various stakeholders and their respective roles; understanding the fundamental ethics governing theprofession
2. To give a good insight into contracts and contracts management in civil engineering, dispute resolution mechanisms; laws governing engagement oflabour.
3. To give an understanding of Intellectual Property Rights,Patents.
4. To make the students understand the types of roles they are expected to play in the society as practitioners of the civil engineeringprofession
5. To develop good ideas of the legal and practical aspects of theirprofession
6. Gathered ideas of the legal and practical aspects of theirprofession

UNIT I ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self–interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OF CHANGES 9

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws.Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING, ORGANISING 9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informal organization – Organization Chart –.

UNIT IV DIRECTING AND CONTROLLING 9

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job

Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT V ENTREPRENEURSHIP AND MOTIVATION 9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

SEMESTER-VII

16BECE702 DESIGN OF STEEL STRUCTURES 3 0 0 3 100

OBJECTIVE

1. To learn IS 800-2007 code of practice for the design of Compression, Tension and Flexural members using various cross-sections.
2. To study the behaviour and design of compression and tension members using simple and built-up sections.
3. To understand behaviour of flexural members and the design laterally restrained and unrestrained beams.
4. To study the components of truss, loads on trusses, analysis
5. To design of purlins and truss members.
6. To study the design of bolted and welded connections and arranging field visit to industries.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Apply the IS code of practice for the design of steel structural elements.
2. Design compression and tension members using simple and built-up sections.
3. Calculate forces on the various members of the truss and design them.
4. Analyze the behavior of bolted connections and design them.
5. Design welded connections for both axial and eccentric forces.
6. Design components of truss, loads on trusses, analysis and design of purlins and truss members

UNIT I 9

INTRODUCTION: Properties of steel – Structural steel sections – Limit State Design Concepts – Loads on Structures – Metal joining methods using, welding, bolting – Design of bolted, and welded joints – Eccentric connections - Efficiency of joints – High Tension bolts

UNIT II 9

TENSION MEMBERS: Types of sections – Net area – Net effective sections for angles and Tee in tension – Design of connections in tension members – Use of lug angles – Design of tension splice – Concept of shear lag

UNIT III 9

COMPRESSION MEMBERS: Types – Basis of codal provision for compression member design – Slenderness ratio – Design of single section and compound section– Design of lacing and battening – Design of column bases – Gusseted base

UNIT IV 9

BEAMS: Design of laterally supported and unsupported beams – Built up beams – Design of plate girders bolted and welded – Intermediate and bearing stiffeners – flange and Web splices

UNIT V 9

ROOF TRUSSES AND INDUSTRIAL STRUCTURES: types of Roof trusses – Roof and side coverings –Design loads, design of purlin and elements of truss; end bearing - Design of Gantry Girders

SEMESTER VII

16BECE711 STRUCTURAL DETAILING AND DRAWING LABORATORY 0 0 3 2 100

OBJECTIVE

1. To learn the software skills in structural engineering.
2. To learn the software skills in the field of transportation engineering.
3. To learn the software skills in water resources engineering.
4. To apply the software skills in the field of transportation engineering
5. To apply the software skills in the field of water resource engineering.
6. To apply the software skills in the field of geotechnical engineering.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Apply the software skills in the field of structural engineering.
2. Apply the software skills in the field of transportation engineering
3. Apply the software skills in the field of water resource engineering.
4. Apply the software skills in the field of geotechnical engineering.
5. Learn the software skills in structural engineering.
6. Learn the software skills in the field of transportation engineering.

Concrete structures:

1.Design and detailing of R.C (Residential building)
2.Design and detailing of frame structure
3.Design and detailing of underground structure

The drawing includes

Design and detailing of RC beams (Simple Beam/Lintel, 'T' Beam floor)
Design and detailing of RC slabs
Design and detailing of RC columns
Design and detailing of RC footings
Design and detailing of RC retaining walls

Steel structures:

1. Design and detailing of industrial structures

The drawing includes

Design and detailing of beam column connection
Design and detailing of column and gusset plate connection
Design and detailing of trusses
Design and detailing of beams
Design and detailing of columns
Design and detailing of simple beam to column connections

16BECE791 PROJECT WORK-PHASE I0 0 8 4 100

INTENDED OUTCOMES

At the end of this, the students shall be able

1. To work in convenient groups of not more than four members in a group on a project involving theoretical and experimental studies related to Civil Engineering.
2. Each student shall finally produce a comprehensive report covering background information, literature Survey, problem statement, Project work details and conclusions.
3. This experience of project work shall help the student in expanding his / her knowledge base
4. Will provide opportunity to utilise the creative ability and inference capability.
5. Students will gain the presentation skills.
6. To explain his/her project to the external examiner and can publish the projects in a reputed journal.

VALUE ADDED COURSE

16BECE751PLANNING AND EXECUTION OF CIVILENGINEERING PROJECTS1 0 0 - 100

OBJECTIVES:

The students are emphasized to learn the by- laws (NBC),Planning, Marking, Testing of materials and Execution procedures of the building structures

Site visit to ongoing projects.

SEMESTER VIII

SEMESTER-VIII

16BECE801 ESTIMATION, QUANTITY SURVEYING AND VALUATION 3 0 0 3 100

OBJECTIVES:

1. To know the importance of preparing the types of estimates under different conditions.
2. To know about the rate analysis and bill preparations.
3. To study about the specification writing.
4. To understand the valuation of land and buildings.
5. To gain the knowledge of contracts.
6. To rate analysis and bill preparations

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Apply different types of estimates in different situations.
2. Carry out analysis of rates and bill preparation at different locations.
3. Demonstrate the concepts of specification writing.
4. Carry out valuation of assets.
5. The rate analysis and bill preparations
6. The types of estimates under different conditions

UNIT-I

INTRODUCTION **9**

Types of estimates – Units of measurements – Methods of estimates – Advantages - cost analysis.

UNIT-II **9**

ESTIMATE OF BUILDINGS: Detailed and abstract estimate –Calculation of quantities by centre line method – Long wall – Short wall method – Load bearing and framed structures.

UNIT-III **9**

ESTIMATE OF OTHER STRUCTURES: Estimating of septic tank, soak pit – water supply pipe line – sewer line –estimate of bituminous and cement concrete roads – estimate of retaining walls – culverts.

UNIT-IV **9**

RATE, SPECIFICATIONS AND TENDERS: Data – Schedule of rates – Analysis of rates – Specifications –Detailed and general specifications – Tenders – Contracts – Types of contracts – Arbitration and legal requirements.

UNIT-V **9**

VALUATION &REPORT PREPARATION: Necessity – Basics of value engineering – Capitalised value – Depreciation – Escalation – Value of building – Calculation of Standard rent – Mortage – Lease -Principles for report preparation – report on estimate of residential building , Culvert , Roads , Water supply and sanitary installations , Tube wells and Open wells.

SEMESTER-VIII

16BECE8E-- PROFESSIONAL ELECTIVE VI3 0 0 3100

TOTAL HRS: 45

SEMESTER-VIII

16BECE891 PROJECT WORK-PHASE II & Viva voce00 32 16 300

OBJECTIVE

1. To work in convenient groups of not more than four members in a group on a project involving theoretical and experimental studies related to Civil Engineering.
2. Each student shall finally produce a comprehensive report covering background information, literature Survey, problem statement, Project work details and conclusions.
3. This experience of project work shall help the student in expanding his / her knowledge base
4. Will provide opportunity to utilise the creative ability and inference capability.
5. Students will gain the presentation skills.
6. To explain his/her project to the external examiner and can publish the projects in a reputed journal.

LIST OF ELECTIVES

PROFESSIONAL ELECTIVES (PE)

16BECE501 HYDROLOGY 3 0 0 3 100

OBJECTIVE:

1. To know the types of aquifers
2. To understand the surface and subsurface investigation in detail
3. To integrate the fundamental and basic knowledge of ground water movement
4. To understand the process of sea water intrusion and recharge
5. To introduce the different model studies
6. To visualize the occurrence and movement of groundwater.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Identify types of aquifers.
2. Carry out surface and subsurface investigation to locate groundwater.
3. Visualize the occurrence and movement of groundwater.
4. Select suitable type of ground water recharge.
5. Assess sea water intrusion and its control.
6. Understand the process of sea water intrusion and recharge

UNIT I 9

Precipitation: Hydrologic cycle – Types of precipitation – Forms of precipitation – Measurement of Rainfall – Spatial measurement methods – Temporal measurement methods – Frequency analysis of point rainfall – Intensity, duration, frequency relationship – Probable maximum precipitation.

UNIT II 9

Abstraction From Precipitation: Losses from precipitation – Evaporation process – Reservoir evaporation – Infiltration process – Infiltration capacity – Measurement of infiltration – Infiltration indices – Effective rainfall.

UNIT III 9

Hydrographs: Factors affecting Hydrograph – Base flow separation – Unit hydrograph – Derivation of unit hydrograph – S curve hydrograph – Unit hydrograph of different deviations - Synthetic Unit Hydrograph

UNIT IV 9

Floods And Flood Routing: Flood frequency studies – Recurrence interval – Gumbel's method – Flood routing – Reservoir flood routing – Muskingum's Channel Routing – Flood control

UNIT V 9

Ground Water Hydrology: Types of aquifers – Darcy's law – Dupuit's assumptions – Confined Aquifer – Unconfined Aquifer – Recuperation test – Transmissibility – Specific capacity – Pumping test – Steady flow analysis only.

16BECE502 CARTOGRAPHY 3 0 0 3 100

OBJECTIVE:

1. To develop an understanding of cartography (earth-map relationship, map design, sources of data)
2. To expose the students to the integration of computers, automated surveying, remote sensing, GPS, and GIS for the cartographic process.
3. To get the sources of data's from maps.
4. To produce map.
5. To learnt the Nature and history of cartography
6. To learn about the Earth-Map relation

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. learnt the Nature and history of cartography
2. Earth-Map relation
3. Sources of data
4. Perception and design
5. Map production
6. Reproduction.

UNIT I **9**

Introduction: Cartography today - Nature of Cartography - History of Cartography - Graticules – Cartometry – applications.

UNIT II **9**

Earth: Earth-Map Relations - Basic Geodesy - Map Projections, Scale, Reference and Coordinate system - Transformation - Basic Transformation - Affin Transformation.

UNIT III **9**

Sources of Data: Sources of data - Ground Survey and Positioning - Remote Sensing data collection - Census and sampling - data - Models for digital cartographic information, Map digitizing.

UNIT IV **9**

Perception and Design: Cartographic design - Color theory and models - Color and pattern creation and specification - Color and pattern - Typography and lettering the map - Map compilation.

UNIT V **9**

Cartography Abstract: Selection and Generalisation Principles - Symbolisation - Topographic and thematic maps - Map production and Reproduction - Map series.

16BECE503 COMPOSITE MATERIALS AND STRUCTURES 3 0 0 3 100

OBJECTIVE:

1. To study the behaviour of composite materials and to investigate the failure and fracture characteristics.
2. To understand the fabrication, analysis and design of composite materials & structures
3. To discuss the benefits and disadvantages of using composites in aerospace structures
4. To describe current and emerging applications of composites in the aerospace industry
5. To calculate the elastic and strength properties of unidirectional laminates using micromechanics theory
6. To select the most appropriate manufacturing process for fabricating composite components

COURSE OUTCOMES

1. Discuss the benefits and disadvantages of using composites in aerospace structures
2. Describe current and emerging applications of composites in the aerospace industry
3. Calculate the elastic and strength properties of unidirectional laminates using micromechanics theory
4. Select the most appropriate manufacturing process for fabricating composite components
5. Demonstrate understanding of the different materials (fibers, resins, cores) used in composites
6. Behaviour of composite materials and to investigate the failure and fracture characteristics.

UNIT I INTRODUCTION 9

Introduction to Composites, Classifying composite materials, commonly used fiber and matrix constituents, Composite Construction, Properties of Unidirectional Long Fiber Composites and Short Fiber Composites.

UNIT II STRESS STRAIN RELATIONS 9

Concepts in solid mechanics, Hooke’s law for orthotropic and anisotropic materials, Linear Elasticity for Anisotropic Materials, Rotations of Stresses, Strains, Residual Stresses

UNIT III ANALYSIS OF LAMINATED COMPOSITES 9

Governing equations for anisotropic and orthotropic plates. Angle-ply and cross ply laminates – Static, Dynamic and Stability analysis for Simpler cases of composite plates, Interlaminar stresses.

UNIT IV FAILURE AND FRACTURE OF COMPOSITES 9

Netting Analysis, Failure Criterion, Maximum Stress, Maximum Strain, Fracture Mechanics of Composites, Sandwich Construction.

UNIT V APPLICATIONS AND DESIGN 9

Metal and Ceramic Matrix Composites, Applications of Composites, Composite Joints, Design with Composites, Review, Environmental Issues

TOTAL: 45 HRS

16BECE504 FOUNDATION ENGINEERING 3 0 0 3 100

OBJECTIVE:

1. To explain the analysis of sheet pile wall under different support conditions
2. To explain overall stability analysis of well foundation
3. To explain fundamentals of soil dynamics and its application to machine foundation analysis including codal provisions
4. To explain problems related to expansive soils and solution to overcome
5. To explain the concept of slope stability analysis for various slope conditions including graphical methods
6. To analyse the stability of any kind of slope by using both theoretical and graphical methods.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Analyse and design any kind of sheet pile wall system including coffer dam.
2. Analyse and design well foundation including complete stability analysis.
3. Estimate soil parameters under dynamic conditions including machine foundations.
4. Design a suitable foundation system for any kind of problematic soils.
5. Analyse the stability of any kind of slope by using both theoretical and graphical methods.
6. Know the fundamentals of soil dynamics and its application to machine foundation analysis including codal provisions

UNIT I 9

Site Investigation And Selection Of Foundation: Scope and Objectives – Methods of exploration - Borings for Exploration – Wash boring and rotatory drilling – Depth of boring - Sampling – Representative and undisturbed sampling – sampling techniques – Split spoon sampler, Thin tube sampler, Stationary piston sampler – Penetration tests (SPT and SCPT) – Core cutter method, its significances and applications- Selection of foundation based on soil condition.

UNIT II 9

Shallow Foundation: Introduction – Location and depth of foundation — bearing capacity of shallow foundation on homogeneous deposits – Terzaghi's formula and BIS formula – factors affecting bearing capacity – problems - Bearing Capacity from insitu tests (SPT, SCPT and plate load) –Settlement – Components of settlement – Methods of minimizing settlement, differential settlement - subsoil stabilization - codalprovisions .

UNIT III 9

Footings and Rafts: Types of foundation – Raft foundation - Deep foundations – Dewatering system –- Contact pressure distribution below footings & raft - Isolated and combined footings – Types – proportioning - Mat foundation – Types – use - proportioning – Floating foundation.

UNIT IV 9

Piles: Types of piles and their function – Factors influencing the selection of pile – Load Carrying capacity of single pile in granular and cohesive soil - Static formula - dynamic formulae (Engineering News and Hiley's) – Negative skin friction –- Settlement of pile groups – Under reamed piles .

UNIT V **9**

Retaining Walls: Plastic equilibrium in soils –Types of Retaining Wall – Active and Passive states – Rankine's theory – cohesionless and cohesive soil –Coloumb's wedge theory – Graphical methods (Rebhann and Culmann) - Pressure on the wall due to line load – Stability of Retaining walls.
Introduction to Geo textiles – applications.

16BECE505 GROUND WATER ENGINEERING 3 0 0 3 100

OBJECTIVES:

1. To introduce the student to the principles of Groundwater governing Equations and Characteristics of different aquifers,
2. To understand the techniques of development and management of groundwater.
3. To understand aquifer properties and its dynamics after the completion of the course.
4. It gives an exposure towards well design and practical problems of groundwater aquifers.
5. To understand the importance of artificial recharge and groundwater quality concepts.
6. To know the State of aquifers

COURSE OUTCOMES

1. Students will be able to understand aquifer properties and its dynamics after the completion of the course.
2. It gives an exposure towards well design and practical problems of groundwater aquifers.
3. Students will be able to understand the importance of artificial recharge and groundwater quality concepts.
4. Understand the techniques of development and management of groundwater.
5. Understand aquifer properties and its dynamics after the completion of the course.
6. Exposure towards well design and practical problems of groundwater aquifers.

UNIT I 9

Fundamentals of Ground Water: Introduction – Characteristic of Ground water – Distribution of water - ground water column –Permeability - Darcy's Law - Laboratory permeability test - Types of aquifers - Hydrogeological Cycle – water level fluctuations.

UNIT II 9

Hydraulics of Flow: Storage coefficient - Specific field - Heterogeneity and Anisotrophy - Transmissivity - Governing equations of ground water flow - Steady state flow - DupuitForchheimer assumptions - Velocity potential - Flow nets

UNIT III 9

Estimation Of Parameters: Transmissivity and Storativity – Pumping test - Unsteady state flow - Thiess method - Jacob method - Image well theory – Effect of partial penetrations of wells - Collectors wells.

UNIT IV 9

Ground Water Development: Infiltration gallery - Conjunctive use - Artificial recharge -Safe yield - Yield test – Geophysical methods – Selection of pumps.

UNIT V 9

Water Quality: Ground water chemistry - Origin, movement and quality - Water quality standards - Saltwater intrusion –Environmental concern.

SEMESTER VI

16BECE6E01 URBAN WATER RESOURCES MANAGEMENT 3 0 0 3 100

OBJECTIVE:

1. To identify and quantify the hydrological data inputs necessary for various design applications in the field of water resources.
2. To introduce to the quantitative relationship that explains the understanding of hydrological processes in answering scientific and water-resources-management questions.
3. To know about urban hydrological cycle
4. To gather knowledge of urban water resources management models
5. To find the different and Effective urban water user organizations
6. To get the knowledge of Operation and maintenance of hydraulic structures.

COURSE OUTCOMES

Students will be able to understand

1. About urban hydrological cycle,
2. urban water resources management models,
3. urban storm water management,
4. Effective urban water user organizations,
5. Operation and maintenanceof hydraulic structures.
6. Quantify the hydrological data inputs necessary for various design applications in the field of water resources.

UNIT IURBAN HYDROLOGIC CYCLE 9

Water in the urban eco-system – Urban Water Resources – Major problems – Urban hydrological cycle – Storm water management objectives and limitations – Storm water policies – Feasibility consideration.

UNIT II URBAN WATER RESOURCES MANAGEMENT MODELS 9

Types of models – Physically based – conceptual or unit hydrograph based – Urban surface runoff models – Management models for flow rate and volume control rate – Quality models.

UNIT IIIURBAN STORM WATER MANAGEMENT 9

Storm water management practices (Structural and Non-structural Management measures) – Detention and retention concepts – Modeling concept – Types of storage – Magnitude of storage – Hydraulic analysis and design guidelines – Flow and storage capacity of urban components – Temple tanks.

UNIT IV MASTER PLANS 9

Planning and organizational aspects – Inter dependency of planning and implementation of goals and measures – Socio – economics financial aspects – Potential costs and benefit measures – Measures of urban drainage and flood control benefits – Effective urban water user organizations.

UNIT V OPERATION AND MAINTENANCE 9

General approaches to operations and maintenance – Complexity of operations and need for diagnostic analysis – Operation and maintenance in urban water system – Maintenance Management System – Inventories and conditions assessment – Social awareness and involvement.

16BECE6E02 GROUND IMPROVEMENT TECHNIQUES 3 0 0 3 100

OBJECTIVE:

- At the end of the course student is expected to identify the problematic soil and suitable suggest remedial measures
- To understand the different problematic soils and effect of ground improvement techniques.
- To describe the seepage analysis and suitable dewatering systems for the particular soil conditions.
- To express the concept of compaction efforts on ground improvement and their installation and working principles.
- Describe the load transfer mechanism and effect of geotextiles reinforcements in ground improvement.
- Describe the various stabilization methods for the different types of problematic soils.

COURSE OUTCOMES

1. Student will be in a position to identify and evaluate the deficiencies if any in the deposits of a project area.
2. Capable of providing alternate methods to improve its character suitable to the project, so that the structures built will be stable and serve.
3. Describe the dewatering systems for different soil conditions and their effect.
4. Express the working principlesof different compaction methods on improving weak deposits.
5. Express the design of geo textiles reinforcements for ground improvement.
6. Express the soil stabilization methods for the problematic soils.

UNIT I 9

Introduction: Role of ground improvement in foundation engineering - methods of ground improvement – Geotechnical problems in alluvial, laterite and black cotton soils -Selection of suitable ground improvement techniques based on soil condition.

UNIT II 9

Drainage and Dewatering: Drainage techniques - Well points - Vacuum and electro osmotic methods - Seepage analysis for two-dimensional flow-fully and partially penetrating slots in homogenous deposits (Simple cases only).

UNIT III 9

Insitu Treatment of Cohesion less and Cohesive Soils : Insitu densification of cohesion less and consolidation of cohesive soils -Dynamic compaction and consolidation – Vibro flotation - Sand pile compaction - Preloading with sand drains and fabric drains – Stone columns – Lime piles - Installation techniques only - relative merits of various methods and their limitations.

UNIT IV 9

Earth Reinforcement: Concept of reinforcement - Types of reinforcement material - Applications of reinforced earth – use of Geotextiles for filtration, drainage and separation in road and other works.

UNIT V 9

Grout Techniques: Types of grouts - Grouting equipment and machinery - Injection methods - Grout monitoring – Stabilisation with cement, lime and chemicals - Stabilization of expansive soils.

16BECE6E03 BUILDING SERVICES 3 0 0 3 100

OBJECTIVE:

1. To impart knowledge on electrical systems and light illumination in buildings.
2. To understand the basic principles of fire safety and its codal provisions in buildings.
3. To apply various fire safety installations.
4. To gain knowledge of different electrical systems in buildings
5. To know about motors and generators and services used in concrete mixers.
6. To gain the knowledge of the refrigerators and its applications.

COURSE OUTCOMES

Students will be able to understand

1. Various machineries of construction, electrical systems in building,
2. Design and principle of illumination, refrigeration principle
3. Application Various fire safety installations.
4. Different electrical systems in buildings
5. Different motors and generators and services used in concrete mixers.
6. Will gain the knowledge of the refrigerators and its applications.

UNIT I MACHINERIES 9

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS 9

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN 9

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS 9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION 9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

16BECE6E04 PREFABRICATED STRUCTURES 3 0 0 3 100

OBJECTIVE:

1. To impart knowledge to students on modular construction, industrialized construction
2. To design of prefabricated elements and construction methods.
3. To know the different components of Prefabricated structures.
4. To design join flexibility.
5. To understand the assembling and dismantling of prefabricated components
6. To understand the joining techniques in prefabrication

COURSE OUTCOMES

1. The student shall be able to design some of the prefabricated elements
2. The procedure of prefabrication
3. Have the knowledge of the construction methods in using these elements.
4. Design join flexibility.
5. Familiarize with joining techniques used for prefabrication.
6. Abnormal loads which are hazardous to the prefabricated structures.

UNIT I 9

Introduction: Need for prefabrication – Principles – Materials – Modular coordination – Standardization – Systems – Production – Transportation – Erection.

UNIT II 9

Prefabricated Components: Behavior of structural components – Large panel constructions – Construction of roof and floor slabs – Wall panels – Columns – Shear walls

UNIT III 9

Design Principles: Disuniting of structures- Design of cross section based on efficiency of material used – Problems in design because of joint flexibility – Allowance for joint deformation.

UNIT IV 9

Joint in Structural Members: Joints for different structural connections – Dimensions and detailing – Design of expansion joints

UNIT V 9

Design for Abnormal Loads: Progressive collapse – Code provisions – Equivalent design loads for considering abnormal effects such as earthquakes, cyclones - Importance of avoidance of progressive collapse.

16BECE6E05 SOIL POLLUTION ENGINEERING 3 0 0 3 100

OBJECTIVE:

The students will

1. To develop an understanding of the classification, sources and effects of pollutants
2. To understand the fundamentals of meteorology
3. To study the principles and equipment description of control technologies
4. To review the sources and control of soil pollution.
5. To understand the sources and effects of key types of environmental pollutants
6. To have insight into fundamentals of meteorology

COURSE OUTCOMES

At the end of the course the students will be able to:

1. Understand the sources and effects of key types of environmental pollutants
2. Have insight into fundamentals of meteorology
3. Appreciate different pollution control strategies
4. Understand indoor air pollution and be aware of the control technologies
5. Develop an understanding of the classification, sources and effects of pollutants
6. Understand the fundamentals of meteorology

UNIT I PHYSICS AND CHEMISTRY OF SOIL 9

Soil formation – composition – soil fabric – mass-volume relationship – Index properties and soil classification – hydraulic and consolidation characteristics – Chemical properties – soil pH – Surface charge and point of zero charge – Anion and Cation exchange capacity of clays– Specific surface area- bonding in clays-soil pollution-factors governing soil-pollutant interaction.

UNIT II INORGANIC AND ORGANIC GEOCHEMISTRY 9

Inorganic geochemistry – Metal contamination – Distribution of metals in soils – Geochemical processes controlling the distribution of metals in soils – Chemical analysis of metal in soil – Organic geochemistry – Organic contamination – Distribution of NAPLs in soils – Process controlling the distribution of NAPLs in soil – Chemical analysis of NAPLs in soils.

UNITIIICONTAMINANTFATEANDTRANSPORTINSOIL 9

Transport processes – advection – diffusion – dispersion – chemical mass transfer processes – sorption and desorption – precipitation and dissolution – oxidation and reduction – acid base reaction – complexation – ion exchange – volatilization – hydrolysis – biological process-microbial transformation of heavy metals.

UNIT IV GROUND IMPROVEMENT TECHNIQUES IN WASTE MANAGEMENT 9

Role of Ground Improvement-Drainage and Ground Water Lowering-Electro osmotic Methods-Diaphragm walls-Thermal and Freezing methods - Insitu Densification - Deep Compaction -Dynamic Compaction -Blasting Sand piles pre-loading with sand drains-Stone Columns Lime piles- Earth reinforcement -rock bolts Cables and guniting Geotextiles as reinforcement Filtration. Drainage and Erosion control.

UNIT V SOIL REMEDIATION TECHNOLOGIES 9

Contaminated site characterization – Containment – Soil vapour extraction - Soil washing – Solidification and Stabilization – Electro-kinetic remediation – Thermal desorption – Vitrification – In-situ and Ex-situ Bioremediation – Phytoremediation – Soil fracturing – Biostimulation – Bioaugmentation –Chemical oxidation and reduction.

16BECE6E06 RAILWAYS, AIRPORTS AND HARBOURS 3 0 0 3 100

OBJECTIVE:

1. To expose the students to Railway planning, design, construction and maintenance and planning and design principles of Airports and Harbours.
2. Understand the history and development, role of railways, railway planning and development based on essential criteria's.
3. Learn different types of structural components, engineering properties of the materials, to calculate the material quantities required for construction
4. Understand various aspects of geometric elements, points and crossings, significance of maintenance of tracks.
5. Design and plan airport layout, design facilities required for runway, taxiway and impart knowledge about visual aids
6. Apply design features of tunnels, harbours, dock and necessary navigational aids; also expose them to various methods of tunneling and tunnel accessories.

COURSE OUTCOMES

1. At the end of this course the students should have learnt the Railway planning and design, railway track construction, Maintenance and operation, Airport planning and designing,
2. Airport layout, visual aids and air traffic control, Harbour engineering and other modes of transport.
3. cquires capability of choosing alignment and also design geometric aspects of railway system, runway and taxiway.
4. Suggest and estimate the material quantity required for laying a railway track and also will be able to determine the hauling capacity of a locomotive.
5. Develop layout plan of airport, harbor, dock and will be able relate the gained knowledge to identify required type of visual and/or navigational aids for the same.
6. Apply the knowledge gained to conduct surveying, understand the tunneling activities.

UNIT I **9**

Railway Planning And Design: Role of Indian Railways in National Development - Engineering Surveys for Track Alignment – Obligatory points - Permanent Way, its Components and Functions of each Component: Rails - Types of Rails, Rail Fastenings, Concept of Gauges, Coning of Wheels, Creeps and kinks Sleepers-Density-Ballasts - Materials, Ballast less- Tracks -Geometric Design of Railway Tracks – Gradients and Grade Compensation, Super-Elevation, Widening of Gauges in Curves, Transition Curves, Horizontal and Vertical Curves (Derivations of Formulae and Problems)

UNIT II **9**

Railway Track Construction, Maintenance And Operation: Points and Crossings - Design of Turnouts, Working Principle -Signaling, Interlocking and Track Circuiting-Construction & Maintenance – Conventional, Modern methods and Materials, Track Drainage-Track Modernization– Automated maintenance and upgrading, Technologies, Re-laying of Track -Lay outs of Railway Stations and Yards, Rolling Stock, Tractive Power, Track Resistance, Level Crossings

UNIT III **9**

Airport Planning And Design: Advantages and Limitations of Air Transport, Components of Airports- Airport Planning – Air traffic potential, Site Selection, Design of Components- Institutional arrangements- Runway Design- Orientation, Cross wind Component, Wind rose Diagram (Problems), Geometric Design and Corrections for Gradients (Problems), Drainage-Taxiway Design – Geometric Design Elements, Minimum Separation Distances, Design Speed-Airport Drainage -Airport Zoning - Clearance over Highways and Railways

UNIT IV ***9***

Airport Layouts, Visual Aids, And Air Traffic Control: Airport Layouts – Apron, Terminal Building, Hangars, Motor Vehicle Parking Area and Circulation Pattern, Case studies of Airport Layouts-Airport Buildings – Primary functions, Planning Concept, Principles of Passenger Flow, Passenger Facilities -Visual Aids – Runway and Taxiway Markings, Wind Direction Indicators, Runway and Taxiway Lightings-Air Traffic Control – Basic Actions, Air Traffic Control Network-Helipads, Hangars, Service Equipments.

UNIT V **9**

Harbour Engineering & Other Modes Of Transport: Harbours, Ports, Docks, Tides and Waves, Littoral Drift, Sounding, Area, Depth, Satellite Ports-Requirements and Classification of Harbours– Speed of water, Dredging, Range of Tides, Waves and Tidal Currents, Soundings, Anchoring Grounds-Winds & Storms, Position and Size of Shoals-Shore Considerations- Coast Lines- Dry and Wet Docks,, Planning and Layouts- Position of Light Houses, Navigating -Terminal Facilities – Port Buildings, Warehouse, Transit Sheds -Coastal Structures- Piers, Breakwaters Spring Fenders-Coastal Shipping, Inland Water Transport and Container Transportation-Pipe Ways, Rope Ways,

16BECE6E07 REPAIR AND REHABILITATION OF STRUCTURES 3 0 0 3 100

OBJECTIVE:

1. To make the students to gain the knowledge on quality of concrete, durability aspects, causes of deterioration.
2. To the assessment of distressed structures, repairing of structures and demolition procedures.
3. To gain the knowledge of available techniques and their application for strengthening or upgrading existing structural system
4. To conduct field monitoring and non-destructive evaluation of concrete structures.
5. To have a brief knowledge on various Nondestructive testing's.
6. To gain some knowledge on the different materials used for maintenance of structures.

COURSE OUTCOMES

1. Students must gained knowledge on quality of concrete, durability aspects, causes of deterioration, assessment of distressed structures, repairing of structures and demolition procedures.
2. Assessment of distressed structures, repairing of structures and demolition procedures.
3. Available techniques and their application for strengthening or upgrading existing structural system
4. Conducting field monitoring and non-destructive evaluation of concrete structures.
5. Knowledge on various Nondestructive testing's.
6. Different materials used for maintenance of structures.

UNIT – I INTRODUCTION 9

Quality assurance for concrete construction as built concrete properties strength, permeability, thermal properties and cracking. Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors.

UNIT – II DURABILITY OF STRUCTURES 9

Corrosion mechanism – diagnosis- causes and effects - cover thickness and cracking, measurements for corrosion - methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings, cathodic protection.

UNIT - III MAINTENANCE AND REPAIR STRATEGIES 9

Definitions: Maintenance, repair and rehabilitation, Facets of Maintenance importance of Maintenance Preventive measures on various aspects Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration - testing techniques.

UNIT - IV MATERIALS FOR REPAIR 9

Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, ferro cement, Fibre reinforced concrete. eliminators and polymers coating for rebars during repair foamed concrete, mortar and dry pack, vacuum concrete.

UNIT - V TECHNIQUES FOR REPAIR AND REPAIR OF STRUCTURES 9

Non-destructive Testing Techniques , Corrosion protection techniques , Gunite and Shotcrete Epoxy injection, Mortar repair for cracks, shoring and underpinning. Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering wear, fire, leakage, marine exposure Engineered demolition techniques for Dilapidated structures - case studies

16BECE6E08 MUNICIPAL SOLID WASTE MANAGEMENT 3 0 0 3 100

OBJECTIVE:

1. To understand the components of solid waste management system
2. To learn about recycling, reuse and reclamation of solid wastes
3. To study the collection, transfer, and transport of municipal solid waste
4. To examine the operation of a resource recovery facility
5. To study the design and operation of a municipal solid waste landfill
6. To study the different disposal methods of MSW

COURSE OUTCOMES

At the end of the course the students will be able to:

1. Review the components of solid waste management system
2. Be aware of the significance of recycling, reuse and reclamation of solid wastes
3. Develop an insight into the collection, transfer, and transport of municipal solid waste
4. Understand the importance and operation of a resource recovery facility
5. Understand the design and operation of a municipal solid waste landfill
6. the different disposal methods of municipal solid waste

UNIT I 9

Sources and Types of Municipal Solid Wastes: Sources and types of solid waste - Quantity – factors affecting generation of solid wastes; characteristics – methods of sampling and characterization; Effects of improper disposal of solid wastes – public health effects. Principle of solid waste management – social & economic aspects; Public awareness; Role of NGOs; Legislation.

UNIT II 9

On-Site Storage &Processing : On-site storage methods – materials used for containers – on-site segregation of solid wastes – public health & economic aspects of storage – options under Indian conditions – Critical Evaluation of Options.

UNIT III 9

Collection and Transfer : Methods of Collection – types of vehicles – Manpower requirement – collection routes; transfer stations – selection of location, operation & maintenance; options under Indian conditions.

UNIT IV 9

Off-Site Processing : Processing techniques and Equipment; Resource recovery from solid wastes – composting, incineration, Pyrolysis - options under Indian conditions.

UNIT V 9

Disposal: Dumping of solid waste; sanitary land fills – site selection, design and operation of sanitary landfills - Landfill liners- Management of leachate and landfill gas- Leachate collection & treatment

TOTAL HRS : 45

16BECE6E09 AIR POLLUTION MANAGEMENT 3 0 0 3 100

OBJECTIVE:

The students will

1. Develop an understanding of the classification, sources and effects of pollutants
2. Understand the fundamentals of meteorology
3. Study the principles and equipment description of control technologies
4. Review the sources and control of indoor air pollution.
5. To induce operational considerations under the processing and control monitoring.
6. To apply sampling techniques of gaseous contaminants.

COURSE OUTCOMES

At the end of the course the students will be able to:

1. Understand the sources and effects of key types of environmental pollutants
2. Have insight into fundamentals of meteorology
3. Appreciate different pollution control strategies
4. Understand indoor air pollution and be aware of the control technologies
5. Control noise pollution by specific measurements, standard and preventive measures.
6. Gain the knowledge on the principles and design of control of indoor/ particulate / gaseous air pollutant and its emerging trends

UNIT I 9

Sources and Effects of Air Pollutants: Classification of air pollutants – Particulates and gaseous pollutants – Sources of air pollution – Source inventory – Effects of air pollution on human beings, materials, vegetation, animals – global warming-ozone layer depletion, Sampling and Analysis – Basic Principles of Sampling – Source and ambient sampling – Analysis of pollutants – Principles.

UNIT II 9

Dispersion of Pollutants: Elements of atmosphere – Meteorological factors – Wind roses – Lapse rate - Atmospheric stability and turbulence – Plume rise – Dispersion of pollutants – Dispersion models – Applications.

UNIT III 9

Air Pollution Control: Concepts of control – Principles and design of control measures – Particulates control by gravitational, centrifugal, filtration, scrubbing, electrostatic precipitation – Selection criteria for equipment - gaseous pollutant control by adsorption, absorption, condensation, combustion – Pollution control for specific major industries.

UNIT IV 9

Air Quality Management: Air quality standards – Air quality monitoring – Preventive measures - Air pollution control efforts – Zoning – Town planning regulation of new industries – Legislation and enforcement – Environmental Impact Assessment and Air quality

UNIT V 9

Noise Pollution: Sources of noise pollution – Effects – Assessment - Standards – Control methods - Prevention

SEMESTER VII

16BECE7E01 DESIGN OF BRIDGES 3 0 0 3 100

OBJECTIVE:

1. To develop an understanding of basic concepts in bridge engineering like components, classification, importance, investigation of bridges and loading conditions.
2. To study the design of Culvert, Foot Bridge, Slab Bridge, T-beam Bridge and Box Culvert using IRC.
3. To study the design of various sub-structures like piers, abutments, foundations
4. To study the importance of the bearing and joints in construction of the bridge.
5. To select the suitable site and type of the bridge.
6. To prepare a detailed project report for the construction of bridge giving hydraulic particulars of the river and soil details

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

1. Prepare a detailed project report for the construction of bridge giving hydraulic particulars of the river and soil details
2. Select the suitable site and type of the bridge.
3. Design various types of bridges like Culvert, Slab Bridge and T-beam Bridge using provisions of IRC.
4. Design pier, abutment, foundations, bearing and detailing of joints.
5. Design of Culvert, Foot Bridge, Slab Bridge, T-beam Bridge and Box Culvert using IRC.
6. understanding of basic concepts in bridge engineering like components, classification, importance, investigation of bridges and loading conditions.

UNIT I 9

Introduction: History of Bridges - Components of a Bridge and its definitions- Classification of Road Bridges - Selection of Site and Initial Decision Process - Survey and Alignment; Geotechnical Investigations and Interpretations. River Bridge: Selection of Bridge site and planning - Collection of Bridge design data - Hydrological calculation Road Bridges - IRC codes - Standard Loading for Bridge Design - Influence lines for statically determinate structures - I.L. for statically indeterminate structures - Transverse distribution of Live loads among deck longitudinal - Load combinations for different working state and limit state designs

Railway Bridges: Loadings for Railway Bridges; Railroad data. Pre-design considerations-
Railroad vs. Highway bridges

UNIT II 9

Steel Bridges : Design of through type steel highway bridges for IRC loading - Design of stringers, cross girders and main girders- Design of deck type plate girder railway bridges for railway loading- Design of main girders

UNIT III 9

Reinforced Concrete Slab Bridges : Design of solid slab bridges for IRC loading - Pigeaud's curves- Design of panel and cantilever for IRC loading

UNIT IV 9

Reinforced Concrete Girder Bridges : Courbon's theory – Design of Tee beam Girder bridges - Deck slab -Main girder-Cross girder - Design of PSC bridge.

UNIT V 9

Substructure, bearings and deck joints, parapets and railings

Substructure - Pier; Abutment - Wing walls- Importance of Soil-Structure Interaction - Types of foundations - Open foundation- Pile foundation- Well foundation- Simply supported bridge- Continuous Bridge - Bearings and Deck Joints - Different types of bridge bearings and expansion joints - Parapets and Railings for Highway Bridges

TOTAL HRS: 45

16BECE7E02 TALL BUILDINGS 3 0 0 3 100

OBJECTIVE:

1. The design aspects and analysis methodologies of tall buildings will be introduced.
2. . The stability analysis of tall buildings is another important objective of this course.
3. To learn the general planning consideration of various load factors, vertical structure plane, High rise building structure
4. To have the behavior, structural analysis and design and also other high-rise building structure.
5. To understand the behaviour of tall buildings subjected to lateral building.
6. To know the rudimentary principles of designing tall buildings as per the existing codes.

COURSE OUTCOMES

1. At the end of this course students should have learnt the general planning consideration of various load factors, vertical structure plane, High rise building structure
2. Will have the behavior, structural analysis and design and also other high-rise building structure.
3. Understanding on the behaviour of tall buildings subjected to lateral building.
4. Knowledge about the rudimentary principles of designing tall buildings as per the existing codes.
5. Design aspects and analysis methodologies of tall buildings will be introduced.
6. Stability analysis of tall buildings is another important objective of this course

UINT I 9

Introduction: The Tall Building in the Urban Context - The Tall Building and its Support Structure - Development of High Rise Building Structures - General Planning Considerations. Dead Loads - Live Loads-Construction Loads -Snow, Rain, and Ice Loads - Wind Loads-Seismic Loading –Water and Earth Pressure Loads - Loads - Loads Due to Restrained Volume Changes of Material - Impact and Dynamic Loads - Blast Loads -Combination of Loads.

UINT II 9

The Vertical Structure Plane: Dispersion of Vertical Forces- Dispersion of Lateral Forces - Optimum Ground Level Space - Shear Wall Arrangement - Behaviour of Shear Walls under Lateral Loading. The Floor Structure or Horizontal Building Plane Floor Framing Systems-Horizontal Bracing- Composite Floor Systems The High - Rise Building as related to assemblage Kits Skeleton Frame Systems - Load Bearing Wall Panel Systems - Panel – Frame Systems - Multistory Box Systems.

UINT III 9

Common High-Rise Building Structures and Their Behavior Under Load: The Bearing Wall Structure- The Shear Core Structure - Rigid Frame Systems- The Wall - Beam Structure: Interspatial and Staggered Truss Systems - Frame - Shear Wall Building Systems - Flat Slab Building Structures - Shear Truss - Frame Interaction System with Rigid - Belt Trusses - Tubular Systems-Composite Buildings - Comparison of High - Rise Structural Systems Other Design Approaches Controlling Building Drift Efficient Building Forms - The Counteracting Force or Dynamic Response.

UINT IV 9

Approximate Structural Analysis and Design of Buildings: Approximate Analysis of Bearing Wall Buildings The Cross Wall Structure - The Long Wall Structure The Rigid Frame Structure Approximate Analysis for Vertical Loading - Approximate Analysis for Lateral Loading - Approximate Design of Rigid Frame Buildings-Lateral Deformation of Rigid Frame Buildings The Rigid Frame - Shear Wall Structure - The Vierendeel Structure - The Hollow Tube Structure.

UINT V 9

Other High-Rise Building Structure: Deep - Beam Systems -High-Rise Suspension Systems -

Pneumatic High -Rise Buildings - Space Frame Applied to High - Rise Buildings - Capsule Architecture.

16BECE703 TRAFFIC ENGINEERING AND MANAGEMENT 3 0 0 3 100

OBJECTIVE:

1. To learn the fundamentals of traffic engineering
2. To learn the methods of intersection design
3. To learn the skills of traffic control
4. To be introduced to the different theories of traffic flow
5. To be aware of the importance of traffic safety
6. To be aware of traffic flow theory

COURSE OUTCOMES

Upon completing of this course, the students should be able to:

1. Carry out traffic studies
2. Design intersections
3. Implement traffic system management
4. Be aware of traffic flow theory
5. Enhance safety in all design aspects
6. The skills of traffic control

•

UNIT I **9**

Introduction: Significance and scope, Characteristics of Vehicles and Road Users, Skid Resistance and Braking Efficiency (Problems), Components of Traffic Engineering- Road, Traffic and Land Use Characteristics

UNIT II **9**

Traffic Surveys And Analysis : Surveys and Analysis - Volume,Journey time ,Capacity, Speed and Delays, Origin and Destination, Parking Survey, Pedestrian Studies, Accident analysis and Safety Level of Services- applications and significance.

UNIT III **9**

Traffic Control: Traffic signs, Road markings, Design of Traffic signals and Signal co-ordination (Problems), Traffic control aids and Street furniture, Street Lighting, Computer applications in Signal design

UNIT IV **9**

Geometric Design Of Intersections : Conflicts at Intersections, Classification of Intersections at Grade, - Chanallised and Unchanallised Intersection - Grade Separators (Concepts only), Principles of Intersection Design, Elements of Intersection Design, Chanallisation and Rotary design (Problems), Grade Separators

UNIT V **9**

Traffic Management: Area traffic Management system- Traffic System Management (TSM) and Travel Demand Management (TDM), Traffic Forecasting techniques, Restrictions on turning movements, One-way Streets, Traffic Segregation, Traffic Calming, Tidal flow operations, Exclusive Bus Lanes - Introduction to Intelligence Transport System (ITS)-enforcement and education.

16BECE7E04 SMART STRUCTURES AND SMART MATERIALS 3 0 0 3 100

OBJECTIVE:

1. To learn the smart materials and structures
2. To learn about the various strain measuring instruments
3. To learn about the sensors and its physical measurements
4. To learn about the signal processing and control systems
5. To know about the sensor technologies in the field of Civil engineering.
6. To gain knowledge of Data Acquisition and Processing

COURSE OUTCOMES

Upon completing of this course, the students should be able to:

1. Learn the types of smart material and its response, Strain measuring techniques, Sensing technology, Actuator techniques ,Signal processing and control systems.
2. Learn about the various strain measuring instruments
3. The sensors and its physical measurements
4. The signal processing and control systems
5. Know about the sensor technologies in the field of Civil engineering.
6. Gain knowledge of Data Acquisition and Processing

UNIT I 9

Introduction : Introduction to Smart Materials and Structures – Instrumented structures functions and response – Sensing systems – Self diagnosis – Signal processing consideration – Actuation systems and effectors.

UNIT II 9

Measuring Techniques : Strain Measuring Techniques using Electrical strain gauges, Types – Resistance – Capacitance – Inductance – Wheat stone bridges – Pressure transducers – Load cells – Temperature Compensation – Strain Rosettes.

UNIT III 9

Sensors : Sensing Technology – Types of Sensors – Physical Measurement using Piezo Electric Strain measurement – Inductively Read Transducers – The LVOT – Fiber optic Techniques. Chemical and Bio-Chemical sensing in structural Assessment – Absorptive
chemical sensors – Spectroscopes – Fibre Optic Chemical Sensing Systems and Distributed measurement.

UNIT IV 9

Actuators : Actuator Techniques – Actuator and actuator materials – Piezoelectric and Electrostrictive Material – Magneto structure Material – Shape Memory Alloys – Electro archeological Fluids– Electro magnetic actuation – Role of actuators and Actuator Materials.

UNIT V 9

Signal Processing and Control Systems : Data Acquisition and Processing – Signal Processing and Control for Smart Structures – Sensors as Geometrical Processors – Signal Processing – Control System – Linear and Non-Linear.

16BECE7E05 FINITE ELEMENT TECHNIQUES 3 0 0 3 100

OBJECTIVE:

1. To apprise the students about the basics of Finite Element theory
2. To know the implementation of computer and its practical applications.
3. To learn basic principles of finite element analysis procedure.
4. To learn the theory and characteristics of finite elements that represent engineering structures.
5. To learn and apply finite element solutions to structural, thermal, dynamic problem.
6. To develop the knowledge and skills needed to effectively evaluate finite element analyses.

COURSE OUTCOMES

1. Students will be in a position to develop computer codes for any physical problems using FE techniques.
2. Understand the concepts behind formulation methods in FEM.
3. Identify the application and characteristics of FEA elements such as bars, beams, plane and iso-parametric elements.
4. Develop element characteristic equation and generation of global equation.
5. Apply suitable boundary conditions to a global equation for bars, trusses, beams, circular shafts, heat transfer, fluid flow
6. Apply suitable boundary conditions to axis symmetric and dynamic problems and solve them displacements, stress and strains induced.

UNIT I 9

Variational Formulation: General field problems in Engineering – Modelling – Discrete and Continuous models – Characteristics – Difficulties involved in solution – The relevance and place of the finite element method – Historical comments – Basic concept of FEM, Boundary and initial value problems – Gradient and divergence theorems – Functionals – Variational calculus – Variational formulation of VBPS. The method of weighted residuals – The Ritz method.

UNIT II 9

Finite Element Analysis of One Dimensional Problems : One dimensional second order equations – discrimination of domain into elements – Generalised coordinates approach – derivation of elements equations – assembly of elements equations – imposition of boundary conditions – solution of equations – Cholesky method – Post processing – Extension of the method to fourth order equations and their solutions – time dependant problems and their solutions – example from heat transfer, fluid flow and solid mechanics.

UNIT III 9

Finite Element Analysis of Two Dimensional Problems : Second order equation involving a scalar-valued function – model equation – Variational formulation – Finite element formulation through generalised coordinates approach – Triangular elements and quadrilateral elements – convergence criteria for chosen models – Interpolation functions – Elements matrices and vectors – Assembly of element matrices – boundary conditions – solution techniques.

UNIT IV 9

Isoparametric Elements and Formulation: Natural coordinates in 1, 2 and 3 dimensions – use of area coordinates for triangular elements in - 2 dimensional problems – Isoperimetric elements in 1,2 and 3 dimensional – Largrangean and serendipity elements – Formulations of elements equations in one and two dimensions - Numerical integration.

UNIT V 9

Applications to Field Problems in Two Dimensionals : Equations of elasticity – plane elasticity problems – axisymmetric problems in elasticity – Bending of elastic plates – Time dependent problems in elasticity – Heat – transfer in two dimensions – incompressible fluid flow.

16BECE6E06 GEOGRAPHICAL INFORMATION SYSTEM 3 0 0 3 100

OBJECTIVE:

1. To know about the principles of remote sensing and spectral signatures
2. To know about satellites, types of remote sensing and digital image processing
3. To study about the history and components of GIS
4. To study about data types and operations.
5. To know the applications of remote sensing and GIS for various applications on Civil Engineering.
6. To apply the concepts of DBMS in GIS.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Demonstrate the concepts of Electro Magnetic energy, spectrum and spectral signature curves.
2. Apply the concepts of satellite and sensor parameters and characteristics of different platforms.
3. Apply the concepts of DBMS in GIS.
4. Analyze raster and vector data and modeling in GIS.
5. Apply GIS in land use, disaster management, ITS and resource information system.

Know the types of remote sensing and digital image processing UNIT I 9
GIS Technique And Data Input : Development of GIS – Components of GIS – Hardware, software-MAP – Types of Maps.

UNIT II 9
Data Analysis And Modelling : Simple Analysis – Spatial Analysis – Overlay – Vector Data Analysis – Raster Data Analysis – Data Retrieval – Query –Modelling using GIS – Digital Elevation Model – Cost and path analysis – Expert Systems – Artificial Intelligence – Integration with GIS

UNIT III 9
Data Output And Error Analysis : Data Output – Types – Devices used – Raster and Vector Display Devices – Printers – Plotters – Photo write Devices – Sources of Errors – Types of Errors – Elimination – Accuracies

UNIT IV 9
GIS Applications In Resource Management: Fields of Applications – Natural Resources – Agriculture – Soil – Water Resources – Wasteland Management – Social Resources – Cadastral Records – LIS

UNIT V 9
Advanced GisApplication : AM/FM – Utility Network Management – Integration with Remote Sensing – Knowledge based techniques – Multicriteria Techniques – Introduction to Object Oriented Data base Models.

TOTAL HRS : 45

16BECE7E07 REMOTE SENSING TECHNIQUES AND APPLICATIONS 3 0 0 3 100

OBJECTIVE:

1. To gain a sound fundamental understanding of the GIS and remote sensing technologies
2. To understand the basic principles underlying the GIS/model-based management of water resources and environment.
3. To become familiar with the GIS-based analytical and problem-solving techniques for sustainable planning and management of water resources and environmental problems.
4. Different types of remotely sensed images and data available for water resource applications.
5. To apply the GIS-based analytical and problem-solving techniques for sustainable planning and management of water resources and environmental problems.
6. To develop a project report and can develop Water Resource Information Systems (WRIS) for regional and basin scale.

COURSE OUTCOMES

By the end of this course the students will be able to

1. Develop fundamental understanding of the GIS and remote sensing technologies
2. Understand the basic principles underlying the GIS based management of water resources and environment.
3. Apply the GIS-based analytical and problem-solving techniques for sustainable planning and management of water resources and environmental problems.
4. Understand the types of remotely sensed images and data available for water resource applications.
5. Develop a project report and can develop Water Resource Information Systems (WRIS) for regional and basin scale.
6. Understand the basic principles underlying the GIS/model-based management of water resources and environment.

UNIT I 9
Introduction: Definition – Physics of remote sensing – electromagnetic radiation (EMR) – remote sensing windows – interaction of EMR with atmosphere, earth surface, soil, water and vegetation – platform and sensor – image interpretation.

UNIT II 9Land Use
Studies: Definition of land use – land use / land cover classification – schemes and levels of classification systems with RS data – land use mapping – change detection – urban land use planning, site suitability analysis, transportation planning.

UNIT III 9Water
Resources :Area assessment of surface water bodies – Capacity survey of water bodies – mapping of snow-covered areas – flood risk zone mapping – identification of groundwater potential zones, recharge areas – droughts-definition-drought assessment and management.

UNIT IV 9
Agriculture, Soil And Forestry: Crop inventory mapping – production estimation – command area monitoring – soil mapping – crop stress detection - estimation of soil erosion – forest types and density

mapping – forest fire risk zone mapping.

UNIT V9

Earth Science: Lithology – lithological mapping – structural mapping – Geomorphology – nature and type of landforms – identification – use of remote sensing data for land slides – targeting mineral resources – Engineering geology and Environmental geology.

INTRODUCTION TO SOIL DYNAMICS AND MACHINE
16BECE8E08 FOUNDATIONS 3 0 0 3 100

OBJECTIVE:

1. To explain the significance of dynamic load in machine foundation analysis
2. To explain theory of vibration for different field conditions
3. To explain the principles of machine foundation design for reciprocating and impact machines
4. To explain the concept and method of foundation isolation.
5. To understand foundation isolation and its significance in machine foundation.
6. To use vibration theory in soil dynamics and ascertain soil behaviour accordingly

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Understand the influence of dynamic load in the machine foundation analysis and design
2. Use vibration theory in soil dynamics and ascertain soil behviour accordingly
3. Do machine foundation analysis and design for reciprocating and impact machines.
4. Understand foundation isolation and its significance in machine foundation.
5. The principles of machine foundation design for reciprocating and impact machines

Explain the concept and method of foundation isolation

UNIT I 9

Introduction : Vibration of elementary systems-vibratory motion-single degree freedom system-free and forced vibration with and without damping

UNIT II 9

Waves and Wave Propagation: Wave propagation in an elastic homogeneous isotropic medium-Raleigh, shear and compression waves-waves in elastic half space

UNIT III 9

Dynamic Properties of Soils: Elastic properties of soils-coefficient of elastic, uniform and non-uniform compression - shear-effect of vibration dissipative properties of soils-determination of dynamic properties of soil- codal provisions

UNIT IV 9

Design Procedures: Design criteria -dynamic loads - simple design procedures for foundations under reciprocating machines - machines producing impact loads - rotary type machines

UNIT V 9

Vibration Isolation: Vibration isolation technique-mechanical isolation-foundation isolation-isolation by location-isolation by barriers- active passive isolation tests.

16BECE7E09 INDUSTRIAL WASTE MANAGEMENT 3 0 0 3 100

OBJECTIVE:

1. To impart knowledge on sources and characteristics of various industrial wastes and strategies for its prevention and control.
2. To know the Industrial waste generation patterns, as well as management and disposal techniques
3. To gain knowledge of Central and state pollution control board guidelines on industrial waste management
4. To know the schemes, incentives, policies on industrial waste management
5. To overview of product design for waste minimization
6. Cost benefit analysis of different waste management techniques

COURSE OUTCOMES

The students completing the course will have

1. An insight into the pollution from major industries including the sources and characteristics of pollutants
2. Ability to plan minimization of industrial wastes
3. Ability to design facilities for the processing and reclamation of industrial waste water.
4. Industrial waste generation patterns, as well as management and disposal techniques
5. Knowledge of Central and state pollution control board guidelines on industrial waste management.
6. To know the schemes, incentives, policies on industrial waste management

UNIT I **9**

Introduction: Types of industries and industrial pollution – Characteristics of industrial wastes – Population equivalent – Bioassay studies – effects of industrial effluents on streams, sewer, land, sewage treatment plants and human health – Environmental legislations related to prevention and control of industrial effluents and hazardous wastes

UNIT II **9**

Cleaner Production: Waste management Approach – Waste Audit – Volume and strength reduction – Material and process modifications – Recycle, reuse and byproduct recovery – Applications.

UNIT III **9**

Pollution from Major Industries: Sources, Characteristics, waste treatment flow sheets for selected industries such as Textiles, Tanneries, Pharmaceuticals, Electroplating industries, Dairy, Sugar, Paper, distilleries, Steel plants, Refineries, fertilizer, thermal power plants – Wastewater reclamation concepts

UNIT IV **9**

Treatment Technologies: Equalisation – Neutralisation – Removal of suspended and dissolved organic solids - Chemical oxidation – Adsorption - Removal of dissolved inorganics – Combined treatment of industrial and municipal wastes – Residue management – Dewatering - Disposal

UNIT V **9**

Hazardous Waste Management : Hazardous wastes - Physico chemical treatment – solidification – incineration – Secured land fills

SEMESTER VIII

16BECE8E01 INDUSTRIAL STRUCTURES 3 0 0 3 100

OBJECTIVE:

1. This course deals with some of the special aspects with respect to Civil Engineering structures in industries.
2. To Know the different classification of industrial structures.
3. To Know the functional requirement of industrial structures.
4. To design Bunkers and silos.
5. To design the RC structures like Chimneys, bunkers and silos.
6. To know the principles of roof trusses.

COURSE OUTCOMES

1. At the end of this course the student shall be able to design some of the structures used in industries.
2. Special aspects with respect to Civil Engineering structures in industries.
3. The different classification of industrial structures.
4. The functional requirement of industrial structures.
5. Design Bunkers and silos.
6. Design the RC structures like Chimneys, bunkers and silos.

UNIT I 9

Planning : Classification of Industries and Industrial structures – General requirements for industries like cement, chemical and steel plants – Planning and layout of buildings and components.

UNIT II 9

Functional Requirements : Lighting – Ventilation – Accounts – Fire safety – Guidelines from factories act.

UNIT III 9

Design of Steel Structures : Industrial roofs – Crane girders – Mill buildings – Design of Bunkers and Silos

UNIT IV 9

Design of R.C. Structures : Silos and bunkers – Chimneys – Principles of folded plates and shell roofs

UNIT V 9

Prefabrication : Principles of prefabrication – Prestressed precast roof trusses- Functional requirements for Precast concrete units

16BECE8E02SEISMIC DESIGN OF REINFORCED CONCRETE STRUCTURES

3 0 0 3 100

OBJECTIVE:

1. To introduce the basics of Earthquake Engineering
2. To introduce the engineering seismology, building geometrics & characteristics, structural irregularities,
3. To introduce tips on earthquake engineering - do's and don'ts
4. To introduce cyclic loading behaviour of RC, steel and pre-stressed concrete elements
5. To discuss code provisions and their application on different types of structures
6. To apply codal provisions on different types of structures

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Apply the basics of Earthquake Engineering
2. Demonstrate the dynamics of structural system under earthquake load
3. Analyze the influence of the structural / geometrical design in building characteristics
4. Demonstrate the cyclic loading behaviour of RC steel and pre-stressed concrete elements
5. Apply codal provisions on different types of structures.
6. Cyclic loading behaviour of RC, steel and pre-stressed concrete elements

UNIT I **9**

Single Degree Of Freedom Systems: Formulation of equation of motion, Free and forced vibrations, Damping, Types of Damping – Damped and undamped vibrations, Response to dynamic loading. Introduction of Free and forced vibration of undamped and damped MDOF systems

UNIT II **9**

Engineering Seismology: Elements of Engineering Seismology, Characteristics of Earthquake Engineering, Earthquake History, Indian Seismicity. Performance of structures under past earthquakes, Lessons learnt from past earthquakes.

UNIT III **9**

Seismic Analysis: Seismic Design Concepts- Calculation of base shear as per IS1893- Lateral Load analysis of building frames by Portal method and Cantilever method.

UNIT IV **9**

Earthquake Resistant Design: Concept of Earthquake Resistant Design, Provisions of Seismic Code IS 1893 (Part I), Response Spectrum, Design Spectrum, Design of Buildings.

UNIT V **9**

Ductile Detailing: Ductility- Assessment of Ductility- Member/ Element ductility, Structural Ductility- Factors affecting ductility-Ductile Detailing, Provisions of IS 13920.for beams, columns and footings- Special Confining Requirements.

16BECE8E03 ENVIRONMENTAL IMPACT ASSESSMENT OF WATER RESOURCES DEVELOPMENT 3 0 0 3 100

OBJECTIVE:

1. To be introduced to environmental impact assessment and the current legislation covering it.
2. To understand Prediction and Assessment of Impact.
3. To learn planning for mitigation of adverse impact on environment.
4. To Analyse case studies.
5. Through case studies, learn to present and explain the components and decision-making processes involved in environmental assessment.
6. To present and explain the components and decision-making processes involved in environmental assessment through various case studies.

COURSE OUTCOMES

At the end of the course the students will be able to:

1. Review the key concepts of environmental impact assessment and the current legislation covering it
2. Understand the Prediction and Assessment of Impact on land, water, air, noise and energy, flora and fauna and Socio Economics
3. Plan options for mitigation of adverse impact on environment
4. Present and explain the components and decision-making processes involved in environmental assessment through various case studies.
5. Learn planning for mitigation of adverse impact on environment.
6. Analyse case studies.

UNIT I ENVIRONMENTAL ISSUES 9

Water resources development and environmental issues – Environment in water resources project planning – Environmental regulations and requirements – The EIA (Environmental Impact Assessment) notification.

UNIT II EIA FUNDAMENTALS 9

Environmental Impact Assessment (EIA) – Environmental Impact Statement – EIA in Project Cycle – Legal and Regulatory aspects in India according to Ministry of Environment and Forests – Types and limitations of EIA – Cross sectoral issues and terms of reference in EIA –Participation of Public and Non-Governmental Organizations in environmental decision making

UNIT III ENVIRONMENTAL IMPACTS 9

Hydrological and water quality impacts – Ecological and biological impacts – Social and cultural impacts – Soil and landscape changes – Agro economic issues – Human health impacts – Ecosystem changes.

UNIT IV METHODS OF EIA 9

EIA team formation – Development of scope, mandate and study design – Base line survey – Check lists – Ad hoc procedures – Network and matrix methods – Semi-quantitative methods – ICID checklist – Economic approaches – Environmental Impact Statement (EIS) preparation.

UNIT V ENVIRONMENTAL MANAGEMENT 9

In-stream ecological water requirements **-** Public participation in environmental decision making – Sustainable water resources development – Ecorestoration – Hydrology and global climate change – Human ecology – Ecosystem services – Environmental monitoring programs.

16BECE8E04 CONSTRUCTION RESOURCE PLANNING AND MANAGEMENT

3 0 0 3 100

OBJECTIVE:

1. To explain how do optimize construction period by suing management techniques
2. To explain the role of construction planning in civil construction projects
3. To emphasis project monitoring during execution time and quality control
4. To understand different construction methods and selection of methods based on the project requirements
5. To explain role of construction equipment's in civil construction projects and selection of equipment with project specific.
6. To select proper and effective construction methods and equipment's

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Understand the importance of management techniques in civil construction
2. Do proper construction planning for effective project execution
3. Prepare tender & contract documents and project quality control as per national and international standards
4. Select proper and effective construction methods and equipment's
5. Explain the role of construction planning in civil construction projects
6. Emphasis project monitoring during execution time and quality control

UNIT I **9**

Construction Planning: Basic concepts in the development of construction plans-choice of Technology and Construction method-Defining Work Tasks- Definition- Precedence relationships among activities-Estimating Activity Durations-Estimating Resource Requirements for work activities-coding systems

UNIT II **9**

Scheduling Procedures And Techniques: Relevance of construction schedules-Bar charts - The critical path method-Calculations for critical path scheduling-Activity float and schedules-Presenting project schedules-Critical path scheduling for Activity-on-node and with leads, Lags and Windows-Calculations for scheduling with leads, lags and windows-Resource oriented scheduling-Scheduling with resource constraints and precedences -Use of Advanced Scheduling Techniques-Scheduling with uncertain durations-Crashing and time/cost trade offs -Improving the Scheduling process – Introduction to application software

UNIT III **9**

Cost Control Monitoring And Accounting: The cost control problem-The project Budget-Forecasting for Activity cost control - financial accounting systems and cost accounts-Control of project cash flows-Schedule control-Schedule and Budget updates-Relating cost and schedule information

UNIT IV **9**

Quality Control And Safety During Construction: Quality and safety Concerns in Construction-Organizing for Quality and Safety-Work and Material Specifications-Total Quality control-Quality control by statistical methods -Statistical Quality control with Sampling by Attributes-Statistical Quality control by Sampling and Variables-Safety.

UNIT V **9**

Organization And Use Of Project Information: Types of project information-Accuracy and Use of Information-Computerized organization and use of Information -Organizing information in databases-relational model of Data bases-Other conceptual Models of Databases-Centralized database Management systems-Databases and application programs-Information transfer and Flow.

16BECE8E05 PRE-STRESSED CONCRETE STRUCTURES 3 0 0 3 100

OBJECTIVES:

1. To learn the principles, materials, methods and systems of prestressing
2. To know the different types of losses and deflection of prestressed members
3. To learn the design of prestressed concrete beams for flexural, shear and tension and to calculate ultimate flexural strength of beam
4. To learn the design of anchorage zones, composite beams, analysis and design of continuous beam
5. To learn the design of water tanks
6. To design the anchorage zone for post tensioned members.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Design a pre-stressed concrete beam accounting for losses.
2. Design the anchorage zone for post tensioned members.
3. Design composite members.
4. Design continuous beams.
5. Design water tanks.

Design of prestressed concrete beams for flexural, shear and tension and to calculate ultimate flexural strength of beam

UNIT I 9

Introduction – Theory and Behaviour: Basic concepts – Advantages – Materials required – Systems and methods of prestressing – Analysis of sections – Stress concept – Strength concept – Load balancing concept – Effect of loading on the tensile stresses in tendons – Effect of tendon profile on deflections – Factors influencing deflections – Calculation of deflections – Short term and long term deflections - Losses of prestress – Estimation of crack width

UNIT II 9

Design : Flexural strength – Simplified procedures as per codes – strain compatibility method – Basic concepts in selection of cross section for bending – stress distribution in end block, Design of anchorage zone reinforcement – Limit state design criteria – Partial prestressing – Applications.

UNIT III 9

Circular Prestressing: Methods of circular prestressing – types classifications - merits and demerits – effects - Design of prestressed concrete tanks – Poles and sleepers –Applications.

UNIT IV 9

Composite Construction : Various types of composite construction - beams and columns –Analysis for stresses – Estimate for deflections – Flexural and shear strength of composite members

UNIT V 9

Pre-Stressed Concrete Bridges : General aspects –Methods of pretensioning –methods of post tensioning- pretensioned slabs- pretensioned bridge decks – Post tensioned prestressed bridge decks – Principles of design only.

16BESHOE01, 16BTSHOE01 PROBABILITY AND RANDOM PROCESS 3 0 0 3

OBJECTIVES:

1. To gain knowledge in measures of central tendency.
2. To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
3. To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
4. To understand the basic concepts of random processes which are widely used in IT fields.
5. To understand the concept of correlation and spectral densities.
6. To acquire the knowledge on random process in engineering disciplines

OUTCOMES:

1. Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
2. The students will have an exposure of various distribution functions, correlation and spectral densities.
3. To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
4. To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
5. To apply the concept random processes in engineering disciplines.
6. To understand and apply the concept of correlation and spectral densities.

UNIT- I MEASURES OF CENTRAL TENDENCY AND PROBABILITY (9)

Measures of central tendency – Mean, Median, Mode - Standard Deviation
Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye’s theorem.

UNIT- II STANDARD DISTRIBUTIONS (9)

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – ***Chebyshev's inequality***.

UNIT -III TWO DIMENSIONAL RANDOM VARIABLES (9)

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT- IV CLASSIFICATION OF RANDOM PROCESS (9)

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT -VCORRELATION AND SPECTRAL DENSITIES(9)

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

16BESHOE02, 16BTSHOE02 FUZZY MATHEMATICS 3 0 0 3

COURSE OBJECTIVES:

1. Be able to understand basic knowledge of fuzzy sets and fuzzy logic
2. Be able to apply basic knowledge of fuzzy operations.
3. To know the basic definitions of fuzzy relations
4. Be able to apply basic fuzzy inference and approximate reasoning
5. To know the applications of fuzzy Technology.
6. Be able to acquire the knowledge on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology

COURSE OUTCOME:

7. To gain the main subject of fuzzy sets.
8. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
9. To gain the methods of fuzzy logic.
10. To comprehend the concepts of fuzzy relations.
11. To analyze the application of fuzzy logic control to real time systems.
12. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS (9)

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS (9)

Operations on Fuzzy Sets Operations on [0,1] – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS (9)

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES (9)

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE (9)

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

16BESHOE03, 16BTSHOE03 LINEAR ALGEBRA 3 0 0 3

OBJECTIVES:

1. To introduce the basic concepts of vector space
2. To know the fundamentals of linear Algebra
3. To solve system of linear equations
4. To study about the linear transformations
5. To introduce the concepts of inner product spaces
6. To give the knowledge on the importance of Linear Algebra.

COURSE OUTCOMES:

The student will be able to

1. To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
2. To apply the fundamental concepts in their respective engineering fields
3. To visualize linear transformations as matrix form
4. To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
5. To articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNIT I VECTOR SPACES (9)

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS (9)

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS (9)

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss–Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS (9)

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES (9)

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

16BESHOE04, 16BTSHOE04 ENGINEERING ACOUSTICS 3 0 0 3

OBJECTIVES:

1. To disseminate the fundamentals of acoustic waves.
2. To inculcate the characteristics of radiation and reception of acoustic waves.
3. To divulge knowledge on the basics of pipe resonators and filters.
4. To introduce the features of architectural acoustics.
5. To impart the basic knowledge of transducers and receivers.
6. To impart the basic knowledge of transducers and receivers.

COURSE OUTCOMES:

1. Develop the idea of the fundamentals of acoustic waves.
2. Apply the concepts of radiation and reception of acoustic waves.
3. Explain the basic ideas of pipe resonators and filters.
4. Illusrate the basics of architectural acoustics.
5. Illustrate the transducers and receivers and its applications in various electronic devices.
6. Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION (9)

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales.Reflection and Transmission:Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES (9)

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers.Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS (9)

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS (9)

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION (9)

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – oving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

16BESHOE05, 16BTSHOE05 SOLID WASTE MANAGEMENT 3 0 0 3

OBJECTIVES:

1. To make the students conversant with basics of Solid wastes and its classification.
2. To make the student acquire sound knowledge of different treatments of solid wastes.
3. To acquaint the student with concepts of waste disposals.
4. To develop an understanding of the basic concepts of Hazardous waste managements.
5. To acquaint the students with the basics of energy generation from waste materials.
6. To get the information on energy conservation.

OUTCOMES:

1. Outline the basic principles of Solid waste and separation of wastes (K)
2. Identify the concepts of treatment of solid wastes (S)
3. Identify the methods of wastes disposals. (S)
4. Examine the level of Hazardousness and its management. (S)
5. Examine the possible of the energy production using waste materials. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I SOLID WASTE (9)

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT (9)

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL (9)

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classficaition, Types, Methods &Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT (9)

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediaiton, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE (9)

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

16BESHOE06, 16BTSHOE06 GREEN CHEMISTRY 3 0 0 3

OBJECTIVES:

1. To make the students conversant about the green chemistry
2. To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
3. To acquaint the student with concepts of green technology.
4. To develop an understanding of the basic concepts of renewable energy resources.
5. To acquaint the students with the basic information on catalysis.
6. To inculcate the chemical principles in the field of engineering and technology

OUTCOMES:

1. Outline the basic principles of green chemistry (K)
2. Examine the different atom efficient process and synthesis elaborately (S)
3. Apply the concepts combustion of green technology (S)
4. Identify and apply the concepts of renewable energy (S)
5. Apply the concepts of green catalysts in the synthesis (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES (9)

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES (9)

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY (9)

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES (9)

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY (9)

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

16BESHOE07, 16BTSHOE07 APPLIED ELECTROCHEMISTRY 3 0 0 3

OBJECTIVES:

1. To make the students conversant with **the information on electrochemical material**.
2. To make the student acquire sound knowledge of **conducting polymers**.
3. To acquaint the student with concepts of Energy storage devices.
4. To develop energy storage devices.
5. To impart knowledge on basic principals of solar cells and its applications
6. To inculcate the chemical principles in the field of engineering and technology

OUTCOMES:

1. Outline the basic principles of chemistry in **electrochemical material (K)**
2. Examine the properties of conducting polymers (S)
3. Apply the concepts of electrochemistry in storage devices. (S)
4. Identify the concepts of storage devices and its applications. (S)
5. Apply the suitable materials for the manufacturing of storage devices. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING (9)

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating-Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS (9)

lectropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I (9)

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II (9)

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE (9)

Solar cells- Preparation of CdS/Cu_2S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

16BESHOE08, 16BTSHOE08 INDUSTRIAL CHEMISTRY 3 0 0 3

OBJECTIVES:

1. To make the students conversant with **cement and lime** and its uses.
2. To make the student acquire sound knowledge of abrasives and refractories.
3. To acquaint the student with concepts of inorganic chemicals.
4. To develop an understanding of the basic concepts**explosives**.
5. To acquaint the students with the basics of **agriculture chemicals**.
6. To inculcate the chemical principles in the field of engineering and technology

OUTCOMES:

1. Outline the basic chemistry of **cement and lime (K)**
2. Examine the uses of abrasives and refractories (S)
3. Identify the usage of the inorganic chemicals. (S)
4. Identify the concepts of explosives and smoke screens (S)
5. Identify the usage of the **agriculture** chemicals (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENT AND LIME (9)

Manufacture of Portland cement – settling of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES (9)

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT IIIINORGANIC CHEMICALS (9)

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3, caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES (9)

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS (9)

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

16BECSOE01	Internet Programming	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To study concepts of Internet, IP addresses and protocols
2. To explain the concept of web page development through HTML
3. To introduce the PERL and explore its current strengths and Weaknesses
4. To write working Java code to demonstrate the use of applets for client-side programming
5. To study Internet telephony and various multimedia applications
6. To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

1. Learn the advanced concepts& techniques of Internet and Java.
2. Analyze the requirements for and create and implement the principles of web page development
3. Understand the concepts of PERL
4. Implement client-side programming using java applets
5. Generate internet telephony based upon advanced concepts
6. Develop applications on internet programming based on java applets and scripts

UNIT I Introduction **9**

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML **9**

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL **9**

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets-Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV Client-Server programming **9**

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V Internet Telephony **9**

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP-Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

Total Hours: 45

Text Books:

1. Paul Deitel, Harvey Deitel and Abby Deitel, “Internet and World Wide Web-How to Program”, 5th Edition, 2011.
2. Web Technology: A Developer's Perspective, N.P. Gopalan and J. Akilandeswari, PHI Learning, Delhi, 2013.

16BECSOE02 **Multimedia and Animation**

L	T	P	C
3	**0**	**0**	**3**

COURSE OBJECTIVES:

1. To impart the fundamental concepts of Computer Animation and Multimedia
2. To study the graphic techniques and algorithms using flash
3. Explain various concepts available in 3D animation
4. Explain various devices available for animation
5. To study the multimedia concepts and various I/O technologies for concept development
6. To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

1. Develop their creativity using animation and multimedia
2. Understand the concepts of Flash and able to develop animation using it
3. Understand about various latest interactive 3D animation concepts
4. Know the various devices and software available in motion capture
5. Understand the concept development process
6. Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I **Introduction** **9**

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II **Creating Animation in Flash** **9**

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III **3D Animation & its Concepts** **9**

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV **Motion Caption** **9**

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V **Concept Development** **9**

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

Total Hours: 45

Text Books:

1. Computer Graphics, Multimedia and Animation-Malay K. Pakhira,PHI Learning PVT Ltd,2010

References:

1. Principles of Multimedia – Ranjan Parekh, 2007, TMH. (Unit I, Unit V)
2. Multimedia Technologies – Ashok Banerji, Ananda Mohan Ghosh – McGraw Hill Publication.
3. Encyclopedia of Multimedia and Animations-Pankaj Dhaka, Anmol Publications-2011

16BECSOE03	PC Hardware and Trouble shooting	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To study the basic parts of computer in detail
2. Introduce various peripheral devices available for computer and its detailed working concepts
3. Overview of various interfaces and other hardware overview
4. Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
5. To study basic concepts and methods in troubleshooting
6. To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

1. Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
2. Identify various peripheral devices available and its working
3. Understand various concepts of hardware and its interface and control
4. Perform basic installation of PC. Importance of maintenance is understood
5. Understand Various faults and failures are identified and troubleshooting in detail
6. Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I Introduction 9

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices 9

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC Hardware Overview 9

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV Installation and Preventive Maintenance 9

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting 9

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

Total Hours: 45

2. Scott Mueller, “Repairing PC's”, PHI, 1992

16BECSOE04	JAVA PROGRAMMING	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To understand Object Oriented Programming concepts and basic characteristics of Java
2. To know the principles of packages, inheritance and interfaces
3. To define exceptions and use I/O streams
4. To develop a java application with threads, generics classes and swings
5. To explain the need for generic programming
6. To design and build simple Graphical User Interfaces

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

1. Develop Java programs using OOP principles
2. Develop Java programs with the concepts of inheritance and interfaces
3. Build Java applications using exceptions and I/O streams
4. Develop Java applications with threads and generics classes and swings
5. Understand various aspects for motivation of generic programming
6. Develop various interactive Java programs using OOP concepts of Java

UNIT I INTRODUCTION TO JAVA

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES

Arrays – Strings - Packages – Java-Doc comments –- Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING

Exceptions – Syntax of exception handling code – Multiple catch statements – Using finally statements – Throwing our own exceptions – Using exceptions for debugging

UNIT V THREADS

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

TEXT BOOKS:

1. Cay S. Horstmann and Gary Cornell Core Java: Volume I–Fundamentals Sun Microsystems Press 2008

REFERENCE BOOKS:

1. K. Arnold and J. Gosling The JAVA programming language Third edition, Pearson Education, 2009

2. Timothy Budd Understanding Object-oriented programming with Java Updated Edition, Pearson Education 2002

16BEEEOE01 ELECTRIC HYBRID VEHICLE L T P C 3 0 0 3

Course Objectives

1. To understand the basic concepts of electric hybrid vehicle.
2. To gain the knowledge about electric propulsion unit.
3. To gain the concept of Hybrid Electric Drive-Trains.
4. To gain the different Energy Management Strategies.
5. To study about the efficiency manipulation in drives
6. To understand and gain the knowledge about various energy storage devices

Course Outcomes:

1. Summarize the basic concepts in bioprocess Engineering.
2. Explain the concept of Hybrid Electric Vehicles.
3. Understand the concept of Hybrid Electric Drive-Trains.
4. Identify the different Energy Management Strategies.
5. Understand the concept of different Energy Storage devices.
6. Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION 9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS 9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT 9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE 9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES 9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

TOTAL: 45 HOURS

16BEEEOE02 ENERGY MANAGEMENT & ENERGY AUDITING L T P C 3 0 0 3

Course Objectives:

1. To gain the knowledge about energy management.
2. To understand the basic concepts in economic analysis in energy management.
3. To understand the basic principles of energy audit.
4. To gain the knowledge about the basic concept of types of Energy Audit
5. To gain and Evaluate the different energy efficient motors
6. Understand the concept of Energy conservation.
7. To study about the behaviour changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Understand the concept of Energy Management.
2. Analyze the different methods for economic analysis
3. Knowledge about the basic concept of Energy Audit and types.
4. Evaluate the different energy efficient motors
5. Understand the concept of Energy conservation.
6. Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT 9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS 9

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT 9

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS 9

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS 9

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

16BEEEOE03 PROGRAMMABLE LOGIC CONTROLLER L T P C 3 0 0 3

Course Objectives

1. To understand the basic principles of PLC systems.
2. To gain the knowledge about data handling functions.
3. To gain the knowledge of storage techniques in PLC
4. To acquire the knowledge about how to handle the data and functions
5. To study about flow charts of ladder and spray process system
6. To understand the principles of PID.

Course Outcome

1. At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
2. To acquire the knowledge of storage techniques in PLC
3. Students know how to handle the data and functions
4. Students known about advanced controller in PLC applications
5. Students gather real time industrial application of PLC
6. Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION 9

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING 9

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS 9

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS 9

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES 9

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

16BEEEOE04 RENEWABLE ENERGY RESOURCES L T P C 3 0 0 3

Course Objectives

1. To gain the knowledge about environmental aspects of energy utilization.
2. To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
3. To study about solar energy collectors and its storages
4. To study about the inter connected system in wind power
5. To understand the basic principles fuel cell, Geo thermal power plants.
6. To gain the knowledge about hydro energy.

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Analyze the Energy Scenario in india
2. Understand the concept of Solar Energy
3. Understand the concept of Wind Energy
4. Understand the concept of Hydro Energy
5. Analyze the different energy sources
6. Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION 9

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY

9

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY

9

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY 9

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes.Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES 9

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

16BEECOE01 REAL TIME EMBEDDED SYSTEMS 3 0 0 3 100

Course Objectives

1. To introduce students to the embedded systems, its hardware and software.
2. To introduce devices and buses used for embedded networking.
3. To study about task management
4. To learn about semaphore management and message passing
5. To study about memory management
6. To imparts knowledge on

Course Outcomes

At the end of the course the students will be able to

1. Understand overview of embedded systems architecture
2. Acquire knowledge on embedded system, its hardware and software.
3. Gain knowledge on overview of Operating system
4. Discuss about task Management
5. Gain knowledge about semaphore management and message passing.
6. Gain knowledge about memory management.

UNIT - I INTRODUCTION TO EMBEDDED SYSTEM

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection &tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM 7

UNIT - II OPERATING SYSTEM OVERVIEW

Introduction –Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock –Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – Clock Ticks.

UNIT - III TASK MANAGEMENT

Introduction - μ C/OS-II Features - Goals of μ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks –Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under μ C/OS-II – Clock Tick - μ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB waits List.

UNIT - IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue.

UNIT - V MEMORY MANAGEMENT

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memor y Block – Returning a Memor y Block .Getting Started with µ C/OS-II – Installing µ C/OS-II – Porting µ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with µ C/OS-II - µ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Anal yze the Multichannel ADC with help of µ C/OS-II.

REFERENCES

1. Jean J. Labrosse “MicroC/OS – II The Real Time Kernel”-CMP BOOKS- 2009

16BEECOE02 CONSUMER ELECTRONICS 3 0 0 3 100

Course Objectives

1. To study about various speakers and microphone
2. To learn the fundamental of television systems and standards
3. To learn the process of audio recording and reproduction
4. To study various telephone networks
5. To discuss about the working of home appliances
6. To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

1. Understand working of various type of loud speakers
2. Acquire knowledge on various types of picture tubes
3. Demonstrate the working of various optical recording systems
4. Distinguish various standards for color TV system
5. Acquire knowledge on various telecommunication networks
6. Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT – II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a Remote Control.

UNIT – III OPTICAL RECORDING AND REPRODUCTION

Audio Disc – Processing of the Audio signal –read out from the Disc – Reconstruction of the audio signal – Video Disc – Video disc formats- recording systems – Playback Systems.

UNIT – IV TELECOMMUNICATION SYSTEMS

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT – V HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

Text Book:

1. S.P.Bali, “Consumer Electronics”, Pearson Education, 2005.

16BEECOE03 NEURAL NETWORKS AND ITS APPLICATIONS 3 0 0 3 100

Course Objectives

1. To introduce the basic concepts of neural networks and its applications in various domain
2. To educate how to use Soft Computing to solve real-world problems
3. To have a solid understanding of Basic Neural Network.
4. To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
5. To gain exposure in the field of neural networks and relate the human neural system into the digital world
6. To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

1. Understand the basic concepts of neural networks and its applications in various domains
2. Gain knowledge about learning process in Neural Networks
3. Apply perception concept in design
4. Design using ART phenomena
5. Gain knowledge on SOM concepts
6. Ability to develop the use of Soft Computing to solve real-world problems

UNIT I: INTRODUCTION TO NEURAL NETWORKS

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNIT II LEARNING PROCESS

Error – correction learning –memory based learning - hebbian learning-competitive learning-Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCE PTION

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye's classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORK AND ART

Hopfield model-BAM model- BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNIT V SELF ORGANIZATION

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

16BEECOE04 FUZZY LOGIC AND ITS APPLICATIONS 3 0 0 3 100

Course Objectives

1. To introduce the basic concepts of Fuzzy logic and its applications in various domain
2. To educate how to use Fuzzy computation to solve real-world problems
3. To have a solid understanding of Basic fuzzy models.
4. Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
5. To learn about applications on Fuzzy based systems
6. To familiarize with fuzzy fiction and de fuzzy fiction procedures

Course Outcomes

At the end of the course the students will be able to

1. Understand the basic concepts of Fuzzy logic and its applications in various domain
2. Gain knowledge on theory of Reasoning
3. Develop fuzzy controllers
4. Understand concepts of adaptive fuzzy control
5. Ability to develop how to use Fuzzy computation to solve real- world problems
6. Design fuzzy based model for any application

UNIT - I

Basics Of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT – II

Theory Of Approximate Reasoning**:** Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNIT - III

Fuzz y Knowledge Based Controllers (Fkbc)**:** Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures – Design of Fuzz y Logic Controller

UNIT - IV

Adaptive Fuzz y Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V FUZZY BASED SYSTEMS

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzz y in medical applications-Introduction to ANFIS.

TEXT BOOKS:

1. An Introduction to Fuzz y Control- D. Diankar, H. Hellendoom and M. Reinfrank- Narosa Publishers India, 1996.

2. Fuzzy Sets Uncertainty and Information- G. J. Klir and T. A. Folger- PHI IEEE, 1995.

16BTBTOE01 BIOREACTORDESIGN 3003100

Course Objectives:

1. To impart basic knowledge in bioprocess Engineering
2. To design the bioreactors for various operations.
3. To understand the principle and working of heat transfer equipments.
4. To extend the knowledge in principle of heat transfer inside a bioreactor
5. To construct the equipments used in mass transfer operations.
6. To learn the equipments used in separation process.

Course Outcomes:

1. Summarize the basic concepts in bioprocess Engineering.
2. Design the bioreactors for various operations.
3. Develop the heat transfer equipments for Bioprocess Engineering.
4. Elaborate the principle of heat transfer in bioreactor.
5. Construct the equipments used in mass transfer operations.
6. Categorize the equipments used in separation process.

UNITI ENGINEERINGPROPERTIESANDSTORAGETANK (9)

Introductiontovariousmechanicalpropertiesofmaterialtobeusedmaterialofconstruction, designofcylindricalstoragetank.

UNITII REACTORDESIGN (9)

DesignofAirliftfermentor,BubblecolumnreactorandContinuousstirredtankreactor.

UNITIII HEATTRANSFEREQUIPMENTS (9)

DesignofShellandtubeHeatexchanger,Doublepipeheatexchanger,longtube verticalevaporatorandforcedcirculationevaporator.

UNITIV MASSTRANSFEREQUIPMENTS (9)

DesignofBollmannextractor,fractionatingcolumn,packedtowerandspraytrayabsorber

UNITV SEPARATIONEQUIPMENTS (9)

Designof plate andframefilterpress,leaffilter,rotarydrumfilter,discbowlcentrifuge, rotartdrumdrierandSwenson–walkercrystallizer.

16BTBTOE02 FOODPROCESSINGANDPRESERVATION 3003100

Course Objectives

1. To learn the scope and importance of food processing.
2. To impart basic knowledge in different food processing methods carried out in the food tech companies.
3. To extend the brief knowledge in food conservation operations.
4. To study the methods of food preservation by cooling.
5. To familiarize the students on the concepts of preservation methods for fruits.
6. To create deeper understanding on preservation methods for vegetables.

Course Outcomes

1. Describe the scope and importance of food processing.
2. Outline the various processing methods for foods.
3. Extend the knowledge in food conservation operations.
4. Describe the methods of food preservation by cooling.
5. Summarize the preservation methods for fruits.
6. Demonstrate the preservation methods for vegetables.

UNITI SCOPEANDIMPORTANCEOFFOODPROCESSING (9)

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning,sorting,grading,peeling.

UNITII PROCESSINGMETHODS (9)

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives- fermentation- extrusioncooking- hydrostatic pressure cooking- dielectric heating- microwave processingandasepticprocessing–Infraredradiationprocessing- Conceptsandequipmentused.

UNITIII FOODCONVERSIONOPERATIONS (9)

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation-filtration-equipmentandapplication.

UNITIV FOODPRESERVATIONBYCOOLING (9)

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect oflowtemperatureonfood. Water activity, methods tocontrolwateractivity.

UNITV PRESERVATIONMETHODSFORFRUITSANDVEGETABLES (9)

Preprocessing operations-preservation byreductionofwatercontent:drying/dehydration and concentration –chemicalpreservation –preservation ofvegetablesbyacidification, preservation withsugar-Heatpreservation–Foodirradiation-Combinedpreservationtechniques.

16BTBTOE03 BASICBIOINFORMATICS 3003100

Course Objectives

1. To understand the available tools and databases for performing research in bioinformatics.
2. To expose students to sequence alignment tool in bioinformatics.
3. To construct the phylogenetic trees for evolution.
4. To get familiar with the 3D structure of protein and classification.
5. To acquire basic knowledge in protein secondary structure prediction.
6. To extend the brief knowledge in Micro array data analysis.

Course Outcomes

1. Summarize the basic concepts and importance of Bioinformatics in various sectors.
2. Demonstrate the sequence alignment tool in bioinformatics.
3. Construct the phylogenetic trees for evolution.
4. Analyze the three dimensional protein structure and classification using various tools.
5. Illustrate the protein secondary structure prediction by comparative modeling.
6. Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNITI OVERVIEWOFBIOINFORMATICS (9)

Thescopeofbioinformatics; bioinformatics&theinternet;usefulbioinformaticssites.Dataacquisition:sequencingDNA,RNA&proteins;determinationofproteinstructure;gene&proteinexpression data;proteininteractiondata. Databases–contents,structure&annotation:fileformats; annotatedsequencedatabases;miscellaneousdatabases.

UNITII RETRIEVALOFBIOLOGICALDATA (9)

DataretrievalwithEntrez&DBGET/LinkDB;dataretrievalwithSRS(sequence retrieval system).Searching sequencedatabasesbysequencesimilaritycriteria:sequencesimilarity searches;aminoacidsubstitutionmatrices;databasesearches,FASTA&BLAST;sequencefilters;iterative databasesearches&PSI-BLAST.Multiple-sequencealignment,gene&proteinfamilies:multiple-sequencealignment&familyrelationships;proteinfamilies&patterndatabases;proteindomainfamilies.

UNITIII PHYLOGENETICS (9)

Phylogenetics, cladistics &ontology; building phylogenetic trees; evolution of macromolecularsequences.Sequenceannotation:principlesofgenomeannotation;annotationtools &resources.

UNITIV STRUCTURALBIOINFORMATICS (9)

Conceptualmodelsofproteinstructure;therelationshipofproteinthree-dimensional structureto proteinfunction;theevolutionofproteinstructure&function;obtaining, viewing&analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure:CATH&SCOP;introductiontoproteinstructureprediction;structurepredictionbycomparative modeling;secondarystructureprediction;advancedproteinstructureprediction&predictionstrategies.

UNITV MICROARRAYDATAANALYSIS (9)

Microarray data,analysismethods;microarraydata,tools&resources;sequencesampling&SAGE.Bioinformatics inpharmaceuticalindustry:informatics&drugdiscovery; pharmainformaticsresources.Basicprinciplesofcomputinginbioinformatics:runningcomputer software;computeroperatingsystems;softwaredownloading&installation;databasemanagement.

16BTBTOE04 FUNDAMENTALSOFNANOBIOTECHNOLOGY 3003100

Course Objectives

1. To impart the skills in the field of nano biotechnology and its applications.
2. To acquire knowledge in the nano particles and its significance in various fields.
3. To extend the knowledge in types and application of nano particles in sensors.
4. To define the concepts of biomaterials through molecular self assembly.
5. To equip students with clinical applications of nano devices.
6. To describe deeper understanding of the socio-economic issues in nanobiotechnology.

Course Outcomes

1. Develop skills in the field of nano biotechnology and its applications.
2. Summarize the nanoparticles and its significance in various fields.
3. Extend the knowledge in types and application of nano particles in sensors.
4. Define the concepts of biomaterials through molecular self assembly.
5. Outline the clinical applications of nano devices.
6. Describe the socio-economic issues in nanobiotechnology.

UNITI INTRODUCTION (9)

Introduction, ScopeandOverview,Lengthscales,ImportanceofNanoscaleandTechnology, HistoryofNanotechnology,FutureofNanotechnology:NanoTechnologyRevolution,SiliconbasedTechnology, BenefitsandchallengesinMolecularmanufacturing: TheMolecularassemblerconcept,Controversiesandconfusions,Understandingadvancedcapabilities, NanotechnologyinDifferent,Fields:Nanobiotechnology,Materials,Medicine,Dentalcare.

UNITII NANOPARTICLES (9)

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, CharacterizationofNanoparticles, Applications,ToxiceffectsofNanomaterials, Significance ofNanoparticlesNanofabrications-MEMS/NEMS,AtomicForceMicroscopy,Selfassembledmonolayers/Dip-penNanolithography, SoftLithography, PDMSMolding,NanoParticles, NanowiresandNanotubes.

UNITIII APPLICATIONS (9)

Nanomedicine,NanobiocensorandNanofludics.Nanocrystalsinbiologicaldetection, ElectrochemicalDNAsensorsandIntegratedNanolitersystems.Nano-Biodevices and Systems.FabricationofNovelBiomaterialsthroughmolecularselfassembly-Small scale systemsforinvivodrugdelivery-Futurenanomachine.

UNITIV NANOBIOTECHNOLOGY (9)

Clinicalapplicationsofnanodevices.Artificialneurons.Real-timenanosensors-Applicationsin cancerbiology.Nanomedicine.Syntheticretinylchipsbasedonbacteriorhodopsins.High throughputDNAsequencingwithnanocarbontubules.Nanosurgicaldevices.

UNITV ETHICALISSUESINNANOTECHNOLOGY (9)

Introduction,SocioeconomicChallenges,EthicalIssuesinNanotechnology: WithEspecialReferencetoNanomedicine, NanomedicineAppliedinNonmedicalContexts,SocialIssuesRelatingtoNanomedicine. SocialandEthicalIssues,EconomicImpacts,OtherIssues, NanotechnologyandFutureSocio-economicchallenges.

COMPUTER AIDED DESIGN 3 0 0 3 100

Course Objective

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

Course Outcome

7. Apply basic concepts to develop construction (drawing) techniques.
8. Ability to manipulate drawings through editing and plotting techniques.
9. Understand geometric construction and Produce template drawings.
10. Understand and demonstrate dimensioning concepts and techniques
11. Understand Section and Auxiliary Views
12. Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS 9

Conventional and computer aided design processes-advantages and disadvantages.Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations.Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS 9

Generative, cognitive and image processing graphics.Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transpformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING 9

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid.Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION 9

Types of co-ordinate systems.Parametric design - definition and advantages.Parametric representation of analytic and synthetic curves.Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT 9

Automated 2D drafting - basics, mechanical assembly - bill of materials generation.Mass property calculations.

INDUSTRIAL SAFETY AND ENVIRONMENT 3 0 0 3 100

Course Objective

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNIT I INTRODUCTION TO LOGISTICS 9

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN 9

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS 9

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES 9

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM 9

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

TRANSPORT PHENOMENA 3 0 0 3 100

Course Objective

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

Course Outcome

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS 9

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS 9

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT 9

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT 9

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT 9

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

INTRODUCTION TO BIOMECHANICS 3 0 0 3 100

Course Objective

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

Course Outcome

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION 9

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS 9

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application ofBiomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY 9

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION 9

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM 9

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

TOTAL 45

Article II. REFERENCE

16BEAEOE01 AUTOMOBILE ENGINEERING 3 0 0 3 100

Course Objectives:

1. To impart knowledge on the constructional details and principle of operation of various automobile components.
2. To learn the function and working of various components in transmission and drive lines.
3. To study the concept and working of steering and suspension systems in an automobile.
4. To give knowledge on the wheels, tyres and brakes of automobiles.
5. To provide information on the current and future trends in automobiles.
6. Identify and explain the types of steering system.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

1. Demonstrate the operating principles and constructional details of various automobile components.
2. Explain the function and working of components in transmission and drive lines.
3. Identify and explain the types of steering system.
4. Identify and explain the types of suspension system.
5. Classify and describe the types of wheels, tyres and brakes of automobiles.
6. Discuss the current and future trends in the automobiles.

UNIT-I ENGINE AND FUEL FEED SYSTEMS

Classification of Engine , construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT –II TRANSMISSION SYSTEMS

Requirements of transmission system.Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propellar Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT -III SUSPENSION SYSTEM

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT-IV BRAKES

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theoryBrake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT -V ELECTRICAL SYSTEM

Principle and construction of lead acid battery.Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator.Starting System and charging system.

16BEAEOE02 BASICS OF TWO AND THREE WHEELERS 3 0 0 3 100

Course Objectives

1. The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
2. Construct the frames of two and three wheelers of different layouts.
3. Demonstrate the constructional details and principle of operation of various engine components.
4. Identify and explain the types of transmission systems.
5. Identify and explain the types of steering and suspension systems.
6. Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

Course Outcomes

Upon successful completion of the course, the students should be able to:

1. Construct the frames of two and three wheelers of different layouts.
2. Demonstrate the constructional details and principle of operation of various engine components.
3. Identify and explain the types of transmission systems.
4. Identify and explain the types of steering and suspension systems.
5. Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
6. Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

16BEAEOE03 AUTOMOBILE MAINTENANCE 3 0 0 3 100

Course Objectives

1. The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems inAutomobile.
2. Describe and differentiate the types of maintenance.
3. List the procedure for dismantling, servicing and assembling of engine components.
4. Demonstrate the servicing of transmission and driveline components.
5. Discuss the procedure for steering and suspension
6. Discuss the procedure for wheel and brake maintenance.

Course Outcomes

Upon successful completion of the course, the students should be able to:

1. Describe and differentiate the types of maintenance.
2. List the procedure for dismantling, servicing and assembling of engine components.
3. Demonstrate the servicing of transmission and driveline components.
4. Discuss the procedure for steering and suspension
5. Discuss the procedure for wheel and brake maintenance.
6. Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE

Dismantling of engine components and cleaning, cleaning methods, visual anddimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

TEXT BOOKS

2.	James D Halderman	Advanced Engine Performance Diagnosis	Prentice Hall Publications	2011
3.	Service Manuals from Different Vehicle Manufacturers			

16BEAEOE04 INTRODUCTION TO MODERN VEHICLE TECHNOLOGY 3 0 0 3 100

Course Objectives:

1. To impart knowledge on trends in the vehicle power plants.
2. To learn the various advanced driver assistance systems.
3. To study the working of advanced suspension and braking systems in an automobile.
4. To give information about motor vehicle emission and noise pollution control.
5. To provide knowledge of the vehicle telematics.
6. To give information about the noise control techniques

Course Outcomes:

Upon successful completion of the course, the students should be able to:

1. Distinguish and describe the various modern vehicle power plant systems.
2. List and explain the various driver assistant mechanisms.
3. Identify and describe the working of advanced suspension and braking systems.
4. Apply the knowledge of motor vehicle emission and noise pollution control.
5. Describe the noise control techniques
6. Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWER PLANTS

Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT VTELEMATICS

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

16BECEOE01 HOUSING, PLAN AND MANAGEMENT 3 0 0 3 100

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING 9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES 9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS 9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL 9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing o f Housing Units, Rents, Recovery Pattern (Problems).

TOTAL : 45 HRS

TEXT BOOKS

1. Meera Mehta and Dinesh Mehta, Metropolitan Housing Markets, Sage Publications Pvt. Ltd., New Delhi, 2002.

16BECEOE02 BUILDING SERVICES 3 0 0 3 100

COURSE OBJECTIVES

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES 9

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS 9

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN 9

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS 9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants –

Vapourcompression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION 9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

TOTAL : 45 HRS

TEXT BOOKS

3 National Building Code.

16BECEOE03 MANAGEMENT OF IRRIGATION SYSTEMS 3 0 0 3 100

OBJECTIVES

1. To enable the students for a successful career as water management professionals.
2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
3. To expose the students the need for an interdisciplinary approach in irrigation water management
4. To providing a platform to work in an interdisciplinary team.
5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

OUTCOME

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I. IRRIGATION SYSTEM REQUIREMENTS 9

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II. IRRIGATION SCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III. MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV. OPERATION 9

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNIT V. INVOLVEMENT OF STAKE HOLDERS 9

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL : 45 HRS

TEXT BOOKS

1. Dilip Kumar Majumdar, "Irrigation Water Management – Principles and Practice", Prentice Hall of India Pvt. Ltd., New Delhi, 2000
2. Hand book on Irrigation Water Requirement, R.T. Gandhi, et. al., Water Management Division, Department of Agriculture, Ministry of Agriculture, New Delhi

REFERENCES

16BECEOE04 ADVANCED CONSTRUCTION TECHNOLOGY 3 0 0 3 100

OBJECTIVE:

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

OUTCOMES:

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT - I MODERN CONSTRUCTION METHODS 9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT - II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT - III MODERN CONSTRUCTION EQUIPEMENTS -I 9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting,Tunneling and hoisting

UNIT - IV MODERN CONSTRUCTION EQUIPEMENTS -II 9

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES 9

Principles and Practices of Temporary structures, Shoring, and Strutting,Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

16BECC101	COMMUNICATIVE ENGLISH	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence
- To study formal context

COURSE OUTCOMES:

- Use English language for communication: verbal & non –verbal.
- Enrich comprehension and acquisition of speaking & writing ability.
- Gain confidence in using English language in real life situations.
- Improve word power: lexical, grammatical and communication competence.
- Acquire good vocabulary for easy communication.
- Be familiar with sentence structure and sentence formation.

Unit I **(9)**

Listening– Types of listening - Listening to class reading - Video tapes/ Audio tapes.**Speaking** – Introduction on self - Introduction on one's friend.**Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative.**Writing** – Formal and Informal letters- Free writing on any topic –My favorite place, hobbies, dreams, goals, etc- - To fill in different application forms. **Grammar** – Articles- WH questions –Yes/No Question - Subject Verb agreement. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit II
(10)

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions - Telephone etiquette. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages.**Grammar**– Parts of speech – Noun – Verb – Adjectives - Adverbs. **Vocabulary**– Compound Nouns/Adjectives – Irregular verbs.

Unit III
(10)

Listening – Listening for specific task – Fill in the gaps.**Speaking** – Phonemes – Syllables – Role play – Conversation Practice.**Reading** – Reading and Comprehension.**Writing** - Autobiographical writing – Biographical writing - Instruction writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

Unit IV **(8)**

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars.**Reading** – Making inference from the reading passage – Predicting the content of reading passages.**Writing** - Interpreting visual materials (tables, graphs, charts, etc) Letters to the Editor. **Grammar** – Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit V **(8)**

Listening - Listening to different accents, speeches/presentations. **Speaking**- Extempore talk – Just-a-minute talk.**Reading**-Reading strategies–Intensive reading – Text analysis.**Writing** - Creative writing – Writing circulars and notices – Writing proposal.**Grammar** – Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

Total Hours-45

16BECC102	**ENGINEERING MATHEMATICS I**	**L**	**T**	**P**	**C**
		3	**2**	**0**	**4**

COURSE OBJECTIVES

1. To develop analyzing skills for solving different engineering problems.
2. To understand the concept of Matrices.
3. To remember the basics of differential calculus and its applications.
4. To apply the problems in differential equations.
5. To Create knowledge about functions of several variables and Sequence and Series.
6. To study the algebraic manipulation

COURSE OUTCOMES

The students will be able to

- Acquire the basic knowledge and understanding of mathematics
- Apply advanced matrix knowledge to engineering problems.
- Improve their ability in evaluating geometrical applications of differential calculus problems.
- To solve the problems by applying the differential Equations.
- Evaluating engineering problems involving functions of several variables.
- Understand the concepts of sequences and series.

UNIT I MATRICES (12)

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS (12)

Overview of Derivatives - Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes- Evolutes as Envelope of normals – Maxima and Minima of functions of two or more Variables – Method of Lagrangian Multipliers

UNIT III DIFFERENTIAL EQUATIONS (11)

Linear Differential equations of second and higher order with constant coefficients - Euler's form of Differential equations – Method of variation parameters.

UNITIV FUNCTIONS OF SEVERAL VARIABLES (12)

Partial derivatives – Euler's theorem for homogeneous functions – Total derivatives – Differentiation of implicit functions – Jacobians –Maxima and Minima of functions of two or more Variables - Method of Lagrangian multipliers.

UNIT V SEQUENCES AND SERIES (13)

Sequences: Definition and examples – **Series:** Types and Convergence – Series of positive terms – Tests of convergence: Comparision test, Integral test and D'Alembert's ratio test – Alternating series – Leibnitz's test – Series of positive and negative terms – Absolute and conditional convergence.

16BEPH103, 16BEPH203ENGINEERING PHYSICS

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology
- Understand the basics of laser and optical fiber with appropriate applications.
- Introduce the concepts of quantum mechanics for diverse applications.
- Impart the basic knowledge of crystal and its various crystal structures.
- Disseminate the fundamentals of nuclear physics and their applications.
- To study applications of quantum mechanics.

COURSE OUTCOMES:

- Identify the elastic nature of materials and its thermodynamic properties.
- Infer the characteristics of laser and optical fibers for engineering applications.
- Develop the idea of quantum mechanics through applications.
- Identify the different atomic arrangements of crystals and its defects
- Make use of the concepts of sound waves for medical applications
- Illustrate the basic ideas of nuclear reactors for energy resources

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS (9)

Three types of modulus of elasticity – basic definitions, relation connecting the modulii (Derivation), poison ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniform bendingConcept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS (9)

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER -CO_2, Semiconductor LASER- Applications of LASER in industry and medicine.Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS (9)

Introduction to quantum theory – Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electron microscope.

UNIT IV CRYSTAL PHYSICS (9)

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS (9)

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C –scan displays, Medical applications – Sonogram Introduction – basics about nuclear fission and fusion, nuclear composition – Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

***common to semester 1 & 2**

16BECH103, 16BECH203ENGINEERING CHEMISTRY L TPC 3 0 0 3

COURSE OBJECTIVES:

- To gain knowledge on adsorption phenomena.
- To make the students conversant with basics of water technology.
- To make the student acquire sound knowledge of electrochemistry and storage devices.
- To acquaint the student with concepts of fuels and rocket propellants.
- To develop an understanding of the basic concepts of corrosion science.
- To acquaint the students with the basics of surface chemistry.

COURSE OUTCOMES:

- Outline the basic principles of chemistry for water treatment (K)
- Examine the electrochemical properties to design non – conventional energy storage devices (S)
- Apply the concepts combustion of different fuels (S)
- Identify the concepts of corrosion and its protection in the engineering field (S)
- Apply the concepts of surface chemistry in the field of engineering (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I WATER TECHNOLOGY (9)

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES (9)

Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+}vs dichromate) –Electrolytic conductance-application (conductometric titration)-Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2-O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION (9)

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV-Flue gas analysis.

UNIT IV CORROSION SCIENCE (9)

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings- Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating - Hot dipping.

UNIT V SURFACE CHEMISTRY AND PHASE RULE
(9)

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm-Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

***common to semester 1 & 2**

		L	**T**	**P**	**C**
16BECS104	**PROBLEM SOLVING TECHNIQUES**	**3**	**0**	**0**	**3**

COURSE OBJECTIVE:

- Identify and understand the working of key components of a computer system.
- Identify and understand the various kinds of input-output devices and different types of storage media commonly associated with a computer
- Understand, analyze and implement software development tools like algorithm, pseudo codes and programming structure
- Study, analyze and understand logical structure of a computer program, and different construct to develop a program in 'C' language
- Write small programs related to simple/ moderate mathematical and logical problems in 'C'.
- Study, analyze and understand simple data structures and how to use it in C language

COURSE OUTCOMES:

- Develop algorithms for mathematical and scientific problems
- Explore alternate algorithmic approaches to problem solving
- Understand the components of computing systems
- Choose the structures to solve mathematical and scientific problem

- Write programs to solve real world problems using object-oriented features
- Use different data structures and create / manipulate basic data files and developing applications for real world problems.

UNIT I INTODUCTION (9)

General problem solving concepts, approaches and challenges, problem solving with computers, problem solving tools: flowcharts, algorithms, data structures, Pseudo code. Various Approaches: Solve by analogy, Decompose the task into smaller subtasks, Building block approach, Merging solutions, Algorithmic thinking, Choice of appropriate data structures, Implementation of the Pseudo-code, implementing the code, Testing the solution

UNIT II FUNDAMENTAL ALGORITHMS (9)

Exchanging the Values – Counting – Summation of Set of Number – Factorial Computation – Sine Computation – Fibonacci Sequence – Reversing the Digits of an Integer – Base Conversion

– Character to Number Conversion- Algorithm Comparison

UNIT III FACTORING METHODS (9)

Finding the Square Root of a Number – Smallest Divisor of an Integer – GCD of Two Integers – Generating Prime Numbers – Computing the Prime Factors of an Integer – Generation of Pseudo-Random Numbers – Raising a Number to a Large Power – Computing the Nth Fibonacci Number- Algorithm Comparison

UNIT IV ARRAY TECHNIQUES (9)

Array Order Reversal – Array Counting or Histogramming – Finding the Maximum Number in a Set – Removal of Duplicates from an Ordered Array – Partitioning an Array – Finding the kth Smallest Element– Longest Monotone Subsequence- Algorithm Comparison

UNIT V MERGING, SORTING AND SEARCHING (9)

Two Way Merge - Sorting by Selection, Exchange, Insertion, and Partitioning - Binary Search – Hash Searching- Algorithm Comparison

Total Hours: 45

TEXTBOOK

16BECS105BASIC ELECTRICAL AND ELECTRONICS ENGINEERING

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To impart the basic knowledge about the Electric circuits.
- To understand the working of various Electrical Machines.
- To know about various measuring instruments.
- To understand the basic concepts in semiconductor devices and digital electronics.
- Highlight the importance of transformers in transmission and distribution of electric power.
- To study the applications of basic of power system

COURSE OUTCOMES:

On completion of the course students will be able to

- Predict the behavior of any electrical and magnetic circuits.
- Formulate and solve complex AC, Dc circuits.
- Identify the type of electrical machine used for that particular application.
- Realize the requirement of transformers in transmission and distribution of electric power and other applications.
- Function on multi-disciplinary teams
- The students shall develop an intuitive understanding of the circuit analysis, basic concepts of electrical machines, basics of electronics and be able to apply them in practical situation.

UNIT I ELECTRIC CIRCUITS & MEASUREMENTS (9)

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES (9)

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURING INSTRUMENTS (9)

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS (9)

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNIT V DIGITAL ELECTRONICS (9)

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressionsusing logic gates - standard forms of Boolean expression.

Total Hours: 45

	L	T	P	C
16BEPH111, 16BEPH211ENGINEERING PHYSICS LABORATORY	**0**	**0**	**4**	**2**

COURSE OBJECTIVES:

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure
- To learn the band gap of semiconductor

COURSE OUTCOME:

Upon completion of this course the students will be able to:

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young’s modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille’s method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

Total Hours: 45

***common to semester 1 & 2**

	L	T	P	C
16BECH111, 16BECH211 ENGINEERING CHEMISTRY LABORATORY	**0**	**0**	**4**	**2**

COURSE OBJECTIVE

- To provide students with practical knowledge of quantitative analysis of materials
- Provide details of analysis done by classical and instrumental methods
- Study concepts of developing experimental skills in building technical competence.
- Study various conductometric and potentiometric titrations on various chemicals
- Determination of molecular weight and degree of polymerization
- Determination of corrosion rate by weight loss method.

COURSE OUTCOMES

Upon completion of this course, the students will be able to:

- Estimate rate constants of reactions from concentration of reactants/products as a function of time
- Measure molecular/system properties such as surface tension, viscosity
- Determine conductance of solutions, redox potentials, chloride content of water, etc
- Synthesize a small drug molecule and analyse a salt
- Understand all the concepts of developing experimental skills in building technical competence.
- Understand various conductometric and potentiometric titrations on various chemicals

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Water sample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using $BaCl_2$vs Na_2 SO_4.
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or $K_2Cr_2O_7$).
10. Estimation of Ferric ion by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometry.
13. Determination of chemical oxygen demand.

Total Hours: 45

***common to semester 1 & 2**

16BECS112	ENGINEERING WORKSHOP PRACTICES LAB	L	T	P	C
		0	0	4	2

COURSE OBJECTIVE:

- To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.
- To provide knowledge on arc welding of butt joints, lap joints and tee joints.
- To provide demonstration on Smithy operations, Foundry operations, Plumbing Works and Carpentary Works
- To discuss about various electrical symbols and electrical equipments
- To explain general electronics components and concepts
- To prepare students for handling the tools in engineering and furnace division

COURSE OUTCOMES:

- Sketch general workshop layout.
- To identify different Tools required for Wood working.
- Ability to fabricate carpentry components and pipe connections including plumbing works.
- Ability to use welding equipments to join the structures
- Ability to fabricate electrical and electronics circuits
- Select appropriate fitting tools for the required application.
- Prepare the simple jobs as per specification using fitting tools.

PART – A (CIVIL & MECHANICAL)

1. **WELDING** **(6)**
   i. Preparation of arc welding of butt joints, lap joints and tee joints.
2. **BASIC MACHINING** **(6)**
   i. Simple Turning and Taper turning
   ii. Drilling and Tapping
3. **SHEET METAL WORK** **(6)**
   i. Model making – Trays, funnels, etc.
4. **DEMONSTRATION ON** **(4)**
   i. Smithy operations
   ii. Foundry operations
   iii. Plumbing Works
   iv. Carpentary Works

PART –B (ELECTRICAL & ELECTRONICS)

5. **ELECTRICAL ENGINEERING** **(10)**
   i. Study of electrical symbols and electrical equipments.
   ii. Construct the wiring diagram for Stair case wiring and Fluorescent lamp wiring.

iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter.
iv. Measurement of electrical quantities – voltage, current, power & power factor in R load.
v. Measurement of energy using single phase energy meter.

6. ELECTRONICS ENGINEERING (13)

i. Study of Electronic components– Resistor (color coding), capacitors and inductors.
ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
iii. Study of logic gates AND, OR, NOT, NOR and NAND.
iv. Study of HWR and FWR.

Total Hours: 45

16BECS113	ENGINEERING GRAPHICS	L	T	P	C
		1	0	3	3

COURSE OBJECTIVES:

- To understand the importance graphics in engineering
- To learn basic engineering drawing formats
- To develop the graphical skills for communication of concepts, ideas and design of engineering products through technical drawings.
- To learn to take data and transform it into graphic drawings.
- To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice
- To study applications of the theory of projection.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Know and understand the conventions and the method of engineering drawing.
- Interpret engineering drawings using fundamental technical mathematics.
- Construct basic and intermediate geometry.
- Improve their visualization skills so that they can apply these skill in developing new products.
- Improve their technical communication skill in the form of communicative drawings.
- Comprehend the theory of projection.

UNIT I INTRODUCTION (9)

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES (8)

SCALES:Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING (9)

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES (8)

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS (8)

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam) **(3)**

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

Total Hours: 45

16BECC201A BUSINESS COMMUNICATION

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To help students comprehend the role of listening skills in effective communication.
- To familiarize students with verbal and non-verbal communication.
- To expose students to neutral accent.
- To develop emotional intelligence skills in them for enhancing their self-esteem.
- To assist them in setting goals and developing positive attitude.
- To enable students to acquire decision making skills, problem solving skills and assertive skills.

COURSE OUTCOMES:

Students undergoing this course will be able to

- Design and deliver a persuasive presentation that convinces the audience of the topic's relevance
- Have overcome resistance, using appropriate visual support and adhering to a specified time limit.
- Use a strategic communication model and critical thinking to identify objectives, analyze audiences, and choose the most effective structure and style for delivering strategically sound written and spoken messages.
- Practice principles of effective business writing and document design in all written documents.
- Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
- Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.

UNIT I **(9)**

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II **(9)**

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- Description of Graphics and visual aids - interpretation of graphs using expressions of comparison and contrast .

UNIT III **(9)**

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body langage – Etiquette- Organization of presentation – brain storming- Negotiations.

UNIT - IV **(9)**

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT – V **(9)**

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building -Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

16BECC201B **TECHNICAL ENGLISH**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To motivate learners to acquire listening & speaking skills in both formal and informal context.
- To focus on question forms & to make them understand the importance of using question tags and also the functional use of transformation of sentences.
- To improve their reading habit and to train them in critical and analytical reading.
- To equip them to write for academic as well as work place context.
- To enable students to face interviews.
- To study the receptive and productive skill

COURSE OUTCOMES:

Students undergoing this course will be able to

- Acquire second language: speaking convincingly
- Able to express their opinions clearly, negotiating and arguing using appropriate communicative strategies.
- Enhance them reading texts critically and analytically.
- Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument
- Be able to perfoem creative, critical, analytical and evaluative writing.
- Enrich the ability to face interviews with confidence.

UNIT-1 **(10)**

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentences - Question tags. **Vocabulary** – Homonyms and Homophones.

UNIT-II **(8)**

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar** - Modal verbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs - Idioms.

UNIT – III **(9)**

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R)**Writing** - Essay writing -Minutes of meeting - Agenda – **Grammar** - Active and Passive voice - Purpose expression. **Vocabulary** - Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV **(8)**

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication. **Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Job application - Resume writing - Checklist preparation. **Grammar** - Numerical expressions – Collocations - **Vocabulary** - Singular and Plural (Nouns)

UNIT- V **(10)**

Listening – Types of listening- Improving listening comprehension**. Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** - Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing- **Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

Total Hours: 45

16BECC202 ENGINEERING MATHEMATICS II

L	T	P	C
3	**2**	**0**	**4**

COURSE OBJECTIVES:

- To understand the concepts and applications of partial differential equations
- To have knowledge in integral calculus and Vector calculus
- To expose to the concept of Analytical function and Complex integration.
- To introduce sequence and series and Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems
- To understand the concept of functions of several variables and vector identities.
- To acquaint the student with mathematical tools needed in evaluating multiple integrals and their usage

COURSE OUTCOMES:

The student will be able to

- Solve problems in Fluid Dynamics, Theory of Elasticity, heat and mass transfer etc.
- Find the areas and volumes using multiple integrals
- Improve their ability in Vector calculus
- Expose to the concept of Analytical function.
- Apply Complex integration in their Engineering problems
- To understand the ideas of limits and continuity and an ability to calculate with them and apply them and also to calculate grad, div and curl in Cartesian and other simple coordinate systems.

UNIT-I MULTIPLE INTEGRALS (11)

Double integral – Cartesian coordinates – Polar coordinates – Change of order of integration – Triple integration in Cartesian co-ordinates – Area as double integrals.

UNIT-II VECTOR CALCULUS (13)

Gradient, Divergence and Curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector integration – Green's theorem, Gauss divergence theorem and Stoke's theorems (Statement Only)- Surfaces : hemisphere and rectangular parallelopipeds.

UNIT- III PARTIAL DIFFERENTIAL EQUATIONS (11)

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constantcoefficients.

UNIT-IV ANALYTIC FUNCTIONS (12)

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: w = z+a, az, 1/z and bilinear transformation.

UNIT-V COMPLEX INTEGRATION (13)

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi circle (excluding poles on the real axis).

Total Hours: 60

16BECC204	ENVIRONMENTAL SCIENCE	L	T	P	C
		3	0	0	3

COURSEOBJECTIVES:

- To give a comprehensive insight into natural resources.
- To impart knowledge on ecosystem and biodiversity.
- To educate the ways and means of the environment.
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures.
- To motivate public to participate in environment protection and improvement.

COURSE OUTCOMES:

- Recognize the importance of natural resources (S).
- Associate themselves with the various ecosystems (S).
- Describe the importance of biodiversity (S).
- Identify and minimize the difference pollutions (S).
- Prioritize and analyses the social issues (S).
- Integrate the environmental principles in the projects undertaken in field of engineering and technology (A).

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL ESOURCES (9)

Definition, Scope and Importance – Need for public awareness -Forestresources: Useandover-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNITII ECOSYSTEM(9)

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY(9)

Introduction to biodiversity, Definition-
Geneticdiversity, Speciesdiversity and Ecosystem diversity,Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION(9)

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT (9)

From Unsustainable to Sustainable development,Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

	L	T	P	C
16BECS205 ELECTRON DEVICES	**3**	**0**	**0**	**3**

COURSE OBJECTIVES:

- To understand the fundamentals of material science and their applications.
- To inculcate the characteristics of conducting materials
- To divulge knowledge on the basics of semiconducting materials for diode applications.
- To introduce the features of magnetic and superconducting materials.
- To impart the basic knowledge of new semiconducting materials for engineering applications.
- To discuss the features new semiconducting materials for engineering applications.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to

- Develop the idea of quantum mechanics through applications.
- Apply the concepts of quantum theory for various methodologies.
- Explain the basic ideas of classical electron theory and energy band structures.
- Illustrate the basics of semiconductor physics and its applications in various electronic devices.
- Identify the basic properties and functioning of dielectric materials and advances materials.
- Summarize the features new semiconducting materials for engineering applications.

UNIT I SEMICONDUCTORS (9)

Motion of Charged particle in electric, magnetic and combined fields- Semiconductor fundamentals - Fermi Level - Energy Band diagram - Intrinsic and Extrinsic Semiconductors-Carrier Concentration -Drift and Diffusion currents - Space charge effect.

UNIT II CHARACTERISTICS OF DIODES (9)

Working and description of a PN diode- Diode Equation - Minority carrier Concenteration - Varactor Diode -Avalanche and Zener Breakdown - Zener diode - Tunnel Diode -PIN diode - Photo diode - Photo voltaic cell - Light emitting diode - Liquid crystal display - Light dependant resistor- Thermistors.

UNIT III TRANSISTORS (9)

Principle of transistor action - Current Components - Cut off, Active and saturation regions of a transistor - CE,CB,CC Configurations - Ebers Moll model of a BJT - Evaluation of H-parameters - Hybrid pi model - Charge control approach of Hybrid pi model - Transistor as a switch - Use of a heat sink

UNIT IV FIELD EFFECT TRANSISTORS (9)

Constructional features of a field effect transistor - theory of operation and current equations - VVR operation of a FET - MOSFET -Working and V-I Characteristics - Depletion and enhancement types -Threshold Voltage - Gate capacitance - MOS as a charge transferring Device - CCD, BBD -Power MOSFET-characteristics of UJT.

UNIT V THYRISTORS AND IC FABRICATION (9)

Working and V-I characteristics features of Silicon Controlled Rectifier, DIAC, TRIAC, GTO - Device Technology - Planar process -Diffusion - Ion Implantation - Vapour Deposition - NMOS, PMOS Fabrication - Twin Tub Process of CMOS - Thick film and thin film Technology.

16BECS206 C PROGRAMMING

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To Identify and understand the working of key components of a computer program.
- To Identify and understand the various kinds of keywords and different data types of C programming
- To Understand, analyze and implement software development tools like algorithm,
- To develop pseudo codes and programming structures.
- To Study, analyze and understand logical structure of a computer program, and different constructs to develop a program in "C" language.
- To discuss the methods of using file system in C

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Formulate simple algorithms for arithmetic and logical problems
- Translate the algorithms to programs (in C language)
- Test and execute the programs and correct syntax and logical errors
- Implement conditional branching, iteration and recursion
- Decompose a problem into functions and synthesize a complete program using divide and conquer approach
- Preform programs using file system in C

UNIT I INTRODUCTION TO C LANGUAGE (8)

Character Set, Variables And Identifiers, Keywords- Built-In Data Types- Arithmetic Operators And Expressions, Constants And Literals, Simple Assignment Statement- Basic Input/Output Statement-Simple 'C' Programs, usage of const keyword

UNIT II CONDITIONAL STATEMENTS AND LOOPS (8)

Logical and Relational Operators- If Statement, If-Else Statement- Loops: While Loop, Do While, For Loop- Nested Loops, Infinite Loops- Switch Statement

UNIT III ARRAYS (9)

One Dimensional Arrays- Array Manipulation; Searching, Insertion, Deletion Of An Element From An Array- Finding The Largest/Smallest Element In An Array- Two Dimensional Arrays, -Addition / Multiplication Of Two Matrices- Strings As Array Of Characters.

UNIT IV POINTERS AND FUNCTIONS (10)

Pointers - Definition – Initialization – Pointers arithmetic – Pointers and arrays Example Problems-Function – definition of function – Declaration of function – Pass by value – Pass by reference – Recursion.

UNIT V USER DEFINED DATATYPES AND FILES (10)

Structures – initialization - nested structures – structures and arrays – structures and pointers - union – typedef and enumeration types - bit fields - File Management in C – Files and Streams – File handling functions – Sequential access file- Random access file – Command line arguments.

	L	T	P	C
16BECS212 C PROGRAMMING LAB	**0**	**0**	**3**	**2**

COURSE OBJECTIVES:

- To provide an awareness to Computing and C Programming
- To know the correct and efficient ways of solving problems
- To learn to develop algorithm for simple problem solving
- To understand the concept of Array and pointers dealing with memory management.
- To understand the concept of structures and unions through which derived data types can be formed
- To discuss the application of pointers, memory allocation techniques and use of files for dealing with variety of problems.

COURSE OUTCOMES:

- Able to understand the basic terminology used in computer programming
- Able to write, compile and debug programs in C language.
- Able to use different data types in a computer program.
- Able to design programs involving decision structures, loops and functions.
- Able to understand the dynamics of memory by the use of pointers.
- Understand and apply the pointers, memory allocation techniques and use of files for dealing with variety of problems.

List of Experiments

1. Write a C program to find Factorial of a given number using do while loop.
2. Write a C Program to print Fibonacci series using while loop.
3. Write a C Program to check a given number is Prime or Not.
4. Write a C Program to compute the sum of even numbers for a given n value.
5. Write a C Program to check the given string is Palindrome or Not.
6. Write a C Program to check the given number is Armstrong or Not using functions.
7. Write a C Program to count the number of vowels from the given string using switch case.
8. Write a C Program to read a line of text from keyboard and print the number of characters, words and spaces.
9. Write a C Program to print the student's record using structure.
10. Write a C Program to find factorial of a number using recursion function.

Total Hours: 45

		L	**T**	**P**	**C**
16BECS301	**DISCRETE STRUCTURES**				
		3	**2**	**0**	**4**

COURSE OBJECTIVES:

- To acquire the knowledge needed to test the logic of a program.
- To gain knowledge in the applications of expert system, in data base.
- To gain understanding on set theory and functions
- To provide understanding on various mathematical logics
- To provide adequate knowledge in class of functions, lattices and Boolean algebra
- To explain about Number theory and graph theory.

COURSE OUTCOMES:

- The student will gain the fundamentals about the logic of a programme.
- Be able to construct simple mathematical proofs
- Enrichment of the knowledge in applications of expert system, in data base.
- Gaining the adequate concepts in class of functions, lattices and Number theory
- Incrementally build sophisticated programs by a systematic design process based on discrete mathematics.
- Permutations and combinations and Graph Theory.

UNIT- I SET THEORY AND FUNCTIONS (13)

Basic concepts – Notation – Subset –The power set – Ordered pairs and Cartesian product – Relations on sets – Types of relations and their properties – Relation matrix and the graph of a relation – Equivalence relations – Composition of binary relations - Functions – Injective, Surjective, Bijective, Composition, Identity, Inverse and Characteristic function of a set – Permutation functions.

UNIT -II MATHEMATICAL LOGIC (13)

Basic connectives and truth tables – Tautologies – Logical equivalence and Implications – Propositional logic and First order Logic – Laws of logic – Rules of inference – The Predicate calculus – The Statement Function, Variables and Quantifiers – Predicate Formulas – Free and Bound Variables – The Universe of discourse.

UNIT- III LATTICES AND BOOLEAN ALGEBRA (12)

Lattices as Partially ordered sets – Hasse diagram – Some Properties of Lattices – Sublattices, Direct product and Homomorphism – Some Special Lattices - Boolean algebra – Definition and Examples.

UNIT -IV NUMBER THEORY (12)

Theory of Numbers – Prime – Composite – Perfect amicable numbers – The Sieve of Eratosthenes – Number of primes is infinite – Resolution of composite numbers in to prime factors – Divisor of a given number – Euler's function $\phi(N)$ – Highest power of prime p

contained in $n!$ – Congruence – Fermat's theorem – Generalization of Fermat's theorem – Wilson's theorem – Lagrange's theorem. (Statements and simple problems only)

UNIT – V GRAPH THEORY (10)

Graphs and graph models –Graph terminology and special types of graphs– Representation graphs and graph-isomorphism – Connectivity – Matrix Representation of Graphs – Trees.

16BECS302	**Data Structures**	**L**	**T**	**P**	**C**
		2	**2**	**0**	**3**

COURSE OBJECTIVES:

- Understand the properties of various data structures
- Identify the strengths and weaknesses of different data structures
- Design and employ appropriate data structures for solving computing problems
- Possess the knowledge of various existing algorithms
- Analyze and compare the efficiency of algorithms
- Possess the ability to design efficient algorithms for solving computing problems

COURSE OUTCOMES:

- An understanding of the basic data structures.
- Able to identify the strength and weakness of data structures
- Able to implement Linear data structures for singly linked list, stack and Queue
- Design and implement the basic search and sorting algorithms
- Able to implement non-linear data structures for Binary Trees
- Design and employ non-linear data structure for solving graph application

UNIT-1 Introduction to Data Structures and Algorithms (7)

Arrays, Structures, Pointers to structures and Strings- Algorithm Development- Complexity Analysis-Recursion

UNIT-II Linear Data Structures (9)

Abstract Data Type(ADT)-Definition- List ADT – Linked List- Operations-Creation-Insertion-Deletion-Doubly Linked List- Stack ADT-Definition-Implementation - Operations and Applications-Queue ADT-Definition-Implementation, Operations and Applications

UNIT-III Sorting and Searching (10)

Bubble sort-Selection Sort-Insertion Sort-Merge Sort-Quick Sort- Running Time analysis of each sort – Linear Search-Binary Search-Hash Search Table

UNIT-IV Non Linear Data Structures-I (10)

Trees-terminologies- binary Tree-Applications-Tree Traversals-Search Trees- Binary Search Tree- AVL Trees- Operations and Applications- B-Trees

UNIT-V Non Linear Data Structures-II (9)

Graph-Definition-Terminologies- Graph Representations- Graph Traversals- Basic Algorithms-Shortest Path Algorithm- Minimum Spanning Tree Construction Algorithms-Prim‟s and Kruskal‟s- Bi-connectivity- Graph Applications

16BECS303	**DIGITAL PRINCIPLES AND SYSTEMS DESIGN**	**L**	**T**	**P**	**C**
		2	**2**	**0**	**3**

COURSE OBJECTIVES:

- To introduce basic postulates of Boolean algebra and shows the correlation between boolean expressions.
- To introduce the methods for simplifying Boolean expressions
- To outline the formal procedures for the analysis and design of combinational circuits and sequential circuits
- To introduce the concept of memories and programmable logic devices.
- To illustrate the concept of synchronous and asynchronous sequential circuits
- To study, analyze and design sequential circuits.

COURSE OUTCOMES:

- Understand number systems and codes
- Understand basic postulates of Boolean algebra and shows the correlation between Boolean expressions
- Understand the methods for simplifying Boolean expressions
- Understand the formal procedures for the analysis and design of combinational circuits and sequential circuits
- Understand the concept of memories and programmable logic devices.
- Possess the ability to design an efficient digital circuit for simple real time applications

UNIT -I BOOLEAN ALGEBRA AND LOGIC GATES (9)

Review of binary number systems - Binary arithmetic – Binary codes – Boolean algebra and theorems - Boolean functions – Simplifications of Boolean functions using Karnaugh map and tabulation methods – Logic gates

UNIT- II COMBINATIONAL LOGIC (9)

Combinational circuits – Analysis and design procedures - Circuits for arithmetic operations - Code conversion – Introduction to Hardware Description Language (HDL)

UNIT -III DESIGN WITH MSI DEVICES (9)

Decoders and encoders - Multiplexers and demultiplexers - Memory and programmable logic - HDL for combinational circuits

UNIT- IV SYNCHRONOUS SEQUENTIAL LOGIC (9)

Sequential circuits – Flip flops – Analysis and design procedures - State reduction and state assignment - Shift registers – Counters - HDL for sequential logic circuits, Shift registers and counters.

UNIT -V ASYNCHRONOUS SEQUENTIAL LOGIC (9)

Analysis and design of asynchronous sequential circuits - Reduction of state and flow tables – Race-free state assignment – Hazards.

16BECS304 **Object-Oriented Programming with Java**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- Understand the concepts of object-oriented, event driven, and concurrent Programming paradigms .
- Develop skills in using these paradigms using Java.
- Analyze and compare the efficiency of algorithms.
- Possess the ability to design efficient algorithms for solving computing problems.
- Explain simple Java programming environment, compile programs and interpret compiler errors.
- Explain syntax and use of the fundamental data types.

COURSE OUTCOMES:

- Able to use a simple Java programming environment, compile programs and interpret compiler errors
- Able to understand and use the fundamental data types.
- Able to design classes and organize them into packages.
- Able to test programs to ensure that they perform as intended.
- Able to identify the objects and classes and apply in the suitable context.
- Able to develop a program from a given design

UNIT I Fundamentals of Object-Oriented Programming with JAVA (9)

Introduction to Object oriented programming – Benefits and Applications of OOP- structural programming versus object oriented programming - Simple Java Program - Data Types – Operators – Expressions - Decision Making and Loop control Statements - The? : Operator - Arrays-Strings – Getting input in java.

UNIT II Classes, Objectsand Methods (9)

Defining a Class-Creating Objects-Accessing Class Members-Constructors-Methods Overloading-Static Members-Nesting of Methods-Final Variables and Methods- Final Classes-Finalize Methods-Visibility Control

UNIT IIIInheritance and Interfaces (9)

Motivation -Inheritance: Extending a Class– Types of Inheritance -Overriding Methods-Interfaces in Java (Interface and Implement) -Multiple inheritance – Examples

UNIT IVManaging Errors andException Handling (9)

Motivation – Exception handling – Exceptionhierarchy – Throwing and Catching exceptions - Syntax of Exception Handling Code - Types of Errors -Multiple Catch Statements-Using Finally Statement -User defined Exceptions -Using Exceptions for Debugging.

UNIT V Input /Output Streams (9)

Motivation - I/OStreams - Concept of Streams-Stream Classes-Byte Stream Classes-Character Stream Classes-Using Streams-Other Useful I/O Classes-Using the File Class-Input/Output Exceptions-Creation of Files-Reading/Writing Characters-Reading/Writing Bytes-Handling Primitive Data Types-Concatenating and Buffering Files-Random Access Files-Interactive Input and Output-Other Streamclasses.

16BECS305A **SYSTEM SOFTWARE**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To have an understanding of foundations of design of assemblers, loaders, linkers, and macro processors
- To understand the relationship between system software and machine architecture.
- To know the design and implementation of assemblers
- To know the design and implementation of linkers and loaders.
- To have an understanding of macro processors.
- To discuss the functions of Operating Systems and usage of system software tools

COURSE OUTCOMES:

- To have an understanding of foundations of design of assemblers, loaders, linkers, and macro processors
- To understand the relationship between system software and machine architecture.
- To know the design and implementation of assemblers
- To know the design and implementation of linkers and loaders.
- To have an understanding of macro processors.
- To understand the functions of Operating Systems and usage of system software tools

UNIT- I Introduction
(9)

System software and machine architecture – The Simplified Instructional Computer (SIC) - XE - Machine architecture - Data and instruction formats - addressing modes - instruction sets - I/O and programming.

UNIT- II Assemblers
(9)

Basic assembler functions - A simple SIC assembler – Assembler algorithm and data structures - Machine dependent assembler features - Instruction formats and addressing modes – Program relocation - Machine independent assembler features - Literals – Symbol-defining statements – Expressions - One pass assemblers and Multi pass assemblers - Implementation example - MASM assembler.

UNIT- III Loaders and Linkers **(9)**

Basic loader functions - Design of an Absolute Loader – A Simple Bootstrap Loader - Machine dependent loader features - Relocation – Program Linking – Algorithm and Data Structures for Linking Loader - Machine-independent loader features - Automatic Library Search – Loader Options - Loader design options - Linkage Editors – Dynamic Linking – Bootstrap Loaders - Implementation example - MSDOS linker.

UNIT-IV Macro Processors
(9)

Basic macro processor functions - Macro Definition and Expansion – Macro Processor Algorithm and data structures - Machine-independent macro processor features - Concatenation of Macro Parameters – Generation of Unique Labels – Conditional Macro Expansion – Keyword Macro Parameters-Macro within Macro-Implementation example - MASM Macro Processor – ANSI C Macro language.

UNIT- V Operating system and system software tools
(9)

Basic Operating System Functions-Machine Dependent Operating System Features:Interrupt Processing-Process Scheduling-I/O Supervision- Machine Independent Operating System Features: File Processing, Operating System Design Options: Multiprocessor Operating Systems-Distributed Operating Systems-Object Oriented Operating Systems. Text editors - Editor Structure. - Interactive debugging systems

Total Hours: 45

16BECS305B **Programming with Java Script**

L	T	P	C
2	0	2	3

COURSE OBJECTIVES:

- Understand and use basic programming syntax using JavaScript
- Understand and use JavaScript to enhance HTML documents.
- Understand the Java Scripts Object Model.
- Understand and use predefined JavaScript objects
- Explain various concepts of Javascript and webpages behavior
- Discuss about advanced libraries in JavaScript

COURSE OUTCOMES:

- Describe the origins of JavaScript and list its key characteristics.
- Communicate with users using JavaScript.
- Identify and use the JavaScript language objects.
- Use JavaScript with HTML form controls.
- Define and utilize cookies.
- Create custom JavaScript objects.

UNIT I Programming Fundamentals (9)

What is JavaScript? Brief history-Common use-cases-Runtime environments-Overview of language features-Running JavaScript in the browser and at the command line-Debugging JavaScript in the browser- Authoring and debugging code -The roles and relationships between HTML, CSS and Javascript

UNIT II The Javascript Language (9)

Basic data types, variables, objects, and mathematical operations- Control structures, conditionals, looping, functions- Data and data structures : Objects -Arrays - Dates and other built-in data objects- More data structures :Functions, objects, and data -JSON - Advanced control structures

UNIT III Javascript and the behavior of Web pages (9)

Making Web pages behave: manipulating the DOM- Working with Browser Events • Script loading, responding to keyboard input or mouse activity, scrolling- Forms and AJAX- Using Javascript Libraries for Advanced Behavior :JQuery and others • Animations, AJAX, form and data handling

UNIT IV Javascript Libraries and Advanced Applications (9)

Understanding How Libraries Work -Library Architecture and design patterns -Writing a JQuery plugin- Other kinds of libraries-Media players, layout managers -Writing your own library-Javascript and multimedia

UNIT V Security (9)

Same-origin policy. Cross-site scripting attacks (reflected and persisted). Cookie theft and forgery. Whitelisting and blacklisting.

16BECS311	Java Programming Lab	L	T	P	C
		0	0	3	2

COURSE OBJECTIVES:

- A competence to design, write, compile, test and execute straightforward programs using a high level language;
- An awareness of the need for a professional approach to design and the importance of good documentation to the finished programs.
- Be able to implement, compile, test and run Java programs
- Developing Java programs comprising more than one class, to address a particular software problem.
- Demonstrate the ability to use simple data structures like arrays in a Java program.
- Explain simple Java programming environment, compile programs and interpret compiler errors.

COURSE OUTCOMES:

1. Understand the principles of OOP;
2. Be able to demonstrate good object-oriented programming skills in Java;
3. Understand the capabilities and limitations of Java;
4. Be able to describe, recognise, apply and implement selected design patterns in Java;
5. Be familiar with common errors in Java and its associated libraries.
6. Develop various Multithreaded GUI application using Java

LIST OF EXPERIMENTS

1. Create Java package with simple stack and queue class
2. Write a Java program to perform Complex number manipulation
3. Write a Java program for Date class similar to java.util package
4. Write a Java program for implementing dynamic polymorphism in java
5. Write a Java program for ADT stack using Java interface
6. Write a Java program for DNA file creation
7. Develop a simple paint like program using applet
8. Develop a scientific calculator using java
9. Developing a template for linked list
10. Develop a multi threaded producer consumer Application
11. Write a Java program for generating prime numbers and Fibonacci series
12. Write a Java program for Multithreaded GUI application

Total Hours: 45

		L	**T**	**P**	**C**
16BECS312	**DIGITAL ELECTRONIC LAB**				
		0	**0**	**3**	**2**

COURSE OBJECTIVES:

- To learn and understand basic digital design techniques.
- To learn and understand design and construction of combinational and sequential circuits.
- To understand the digital logic and create various systems by using these logics.
- Explain analysis and design digital combinational circuits like decoders, encoders, multiplexers, and de-multiplexers including arithmetic circuits (half adder, full adder, multiplier).
- Explain how to analyze sequential digital circuits like flip-flops, registers, counters.
- Understand the importance and need for verification, testing of digital logic and design for testability

COURSE OUTCOMES

- Learn the basics of gates.
- Construct basic combinational circuits and verify their functionalities
- Apply the design procedures to design basic sequential circuits
- Able to analyze and design digital combinational circuits like decoders, encoders, multiplexers, and de-multiplexers including arithmetic circuits (half adder, full adder, multiplier).
- Able to analyze sequential digital circuits like flip-flops, registers, counters.
- Understand the importance and need for verification, testing of digital logic and design for testability.

LIST OF EXPERIMENTS

1.Verification of Boolean theorems using digital logic gates
2.Design and implementation of combinational circuits using basic gates for arbitrary functions, code converters, etc.
3.Design and implementation of 4-bit binary adder / subtractor using basic gates and MSI devices
4.Design and implementation of parity generator / checker using basic gates and MSI devices
5.Design and implementation of magnitude comparator
6.Design and implementation of application using multiplexers
7.Design and implementation of Shift registers
8.Design and implementation of Synchronous and Asynchronous counters
9.Coding combinational circuits using Hardware Description Language (HDL software required)
10.Coding sequential circuits using HDL (HDL software required)

Total Hours: 45

16BECS313 **Data Structures Lab**

L	T	P	C
0	0	3	2

COURSE OBJECTIVES:

- Analyze performance of algorithms.
- Choose the appropriate data structure and algorithm design method for a specified application.
- Determine which algorithm or data structure to use in different scenarios
- Demonstrate understanding of the abstract properties of various data structures such as stacks, queues, lists, trees and graphs
- Demonstrate understanding of various sorting algorithms, including bubble sort,selection sort, heap sort and quick sort.
- Understand and apply fundamental algorithmic problems including Tree traversals,Graph traversals, and shortest paths.

COURSE OUTCOMES:

- Able to understand the importance of structure and abstract data type, and their basic usability indifferent applications through different programming languages.
- Able to analyze and differentiate different algorithms based on their time complexity.
- Able to understand the linked implementation
- Able to understand uses of both linear and non-lineardata structure.
- Able to understand various data structure such as stacks, queues, trees, graphs, etc.
- Able to solve various computing problems

LIST OF EXPERIMENTS

1. Implementation of List using Arrays
2. Implementation of Singly Linked List
3. Implementation of Linked Stack

4. Implementation of Linked Queue
5. Implementation of any two stack applications
6. Implementation of Insertion Sort
7. Implementation of Merge Sort
8. Implementation of Quick Sort
9. Implementation of Insertion operation in Binary Search Tree
10. Implementation of Tree Traversals
11. Implementation of Hashing with any one collision resolution method

12. Implementation of Dijkstra‟s Shortest Path Algorithm

Total Hours: 45

16BECS401 **Database Management Systems**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- Understand the internal storage structures using different file and indexing techniques which will help in physical DB design.
- Learn the fundamentals of data models and to conceptualize and depict a database system using ER diagram.
- Be able to explain a database and report on the process.
- Be able to teach how to write query in databases
- Know the fundamental concepts of transaction processing- concurrency control techniques and recovery procedure.
- Possess the knowledge about the emerging trends in the area of distributed DB- OO DB- Data mining and Data Warehousing and XML.

COURSE OUTCOMES:

On successful completion of this module, the student should:

- Have gained knowledge and understanding of what is involved in the design of a database.
- Have gained knowledge and understanding of the models used for structuring data in database systems.
- Be able to implement a database and report on the process.
- Be able to query a database.
- Apply the database knowledge to avoid the concurrency and deadlock problems
- Able to apply the database knowledge in the upcoming current trends.

UNIT-I Introduction and Conceptual Modeling (9)

Introduction to File and Database systems- Database system structure –Introduction and concept Modeling-Database user Data Models – Introduction to Network and Hierarchical Models – ER model – Relational Model – Relational Algebra and Calculus.

UNIT-II Relational Model (9)

SQL – Data definition- Queries in SQL- Updates- Views – Integrity and Security – Relational Database design-Relational Models-Design issues – Functional dependences and Normalization for Relational Databases (up to BCNF).

UNIT- III Data Storage and Query Processing (9)

Record storage and Primary file organization- Secondary storage Devices- Operations on Files- Heap File-Sorted Files- Hashing Techniques – Index Structure for files –Different types of Indexes- B-Tree - B+Tree– Query Processing. Record storage and Primary file organization- Secondary storage Devices- Operations on Files- Heap File- Sorted Files- Hashing Techniques – Index Structure for files –Different types of Indexes- B-Tree - B+Tree – Query Processing.

UNIT- IVTransaction Management (9)

Transaction Processing – Introduction- Need for Concurrency control- Desirable properties of Transaction- Schedule and Recoverability- Serializability and Schedules – Concurrency Control

– Types of Locks- Two Phases locking- Deadlock- Time stamp based concurrency control – Recovery Techniques
– Concepts- Immediate Update- Deferred Update - Shadow Paging.

UNIT- V Current Trends (9)
Object Oriented Databases – Need for Complex Data types- OO data Model- Nested relations- Complex Types- Inheritance Reference Types - Distributed databases- Homogenous and Heterogenous- Distributed data Storage – XML – Structure of XML- Data- XML Document- Schema- Querying and Transformation.– Data Mining and Data Warehousing.

16BECS402 **Computer Architecture**

COURSE OBJECTIVES:

- To discuss the basic structure of a digital computer and basic operational concepts
- To study in detail the organization of the Control unit, the Arithmetic and Logical unit, the Memory unit and the I/O unit.
- To have a thorough understanding of the basic structure and operation of a digital computer.
- To discuss in detail the operation of the arithmetic unit including the algorithms
- To discuss implementation of fixed-point and floating-point addition, subtraction, multiplication & division.
- To study in detail the different types of control and the concept of pipelining.

COURSE OUTCOMES:

The main goal of the course is for students to:

- Be able to understand simple circuits from logic formula.
- Understand the basics of assembly language.
- Understand the main concepts of computer architecture
- Be able to explain how the various parts of a modern computer function and cooperate.
- Be able to exploit the advantages of an advanced computer memory having virtual memory and Cache
- Implement assembly programs that accomplish basic computational and I/O operations

UNIT- I Basic structure of computers (9)

Functional units - Basic operational concepts - Bus structures - Software performance – Memory locations and addresses – Memory operations – Instruction and instruction sequencing – Addressing modes – Assembly language – Basic I/O operations – Stacks and queues.

UNIT- II Arithmetic unit (9)

Addition and subtraction of signed numbers – Design of fast adders – Multiplication of positive numbers - Signed operand multiplication and fast multiplication – Integer division – Floating point numbers and operations.

UNIT- III Basic processing unit (9)

Fundamental concepts – Execution of a complete instruction – Multiple bus organization – Hardwired control – Microprogrammed control - Pipelining – Basic concepts – Data hazards – Instruction hazards – Influence on Instruction sets – Data path and control consideration – Superscalar operation.

UNIT- IV Memory system and i/o organization **(9)**

Basic concepts – Semiconductor RAMs - ROMs – Speed - size and cost – Cache memories - Performance consideration – Virtual memory- Memory Management requirements – Secondary storage. Accessing I/O devices – Interrupts – Direct Memory Access – Buses – Interface circuits-Serial Communication

UNIT- V Multiprocessor architecture (9)

Forms of Parallel Processing:Array Processors-Multiprocessors-Interconnection Networks :Single Bus-Crossbar NetworksMultistage Networks-Hypercube NetworksMesh Networks-Tree Networks Ring Networks-Memory Organization in Multiprocessors- Program Parallelism and Shared Variables-Performance Consideration: Amdahl's Law –Performance Indicators-Intel connection structure, intel connection arbitration

Total Hours: 45

16BECS403A	Microprocessors And Microcontrollers	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To introduce the architecture and programming of 8085 microprocessor.
- To introduce the interfacing of peripheral devices with 8085 microprocessor.
- To introduce the architecture and programming of 8086 microprocessor.
- To introduce the architecture, programming and interfacing of 8051 micro controller.
- Explain various analysis using assembly language programs
- Describe various assembly language programs

COURSE OUTCOMES:

- Assess and solve basic binary math operations using the microprocessor and explain the microprocessor's and Microcontroller's internal architecture and its operation within the area of manufacturing and performance.
- Apply knowledge and demonstrate programming proficiency using the various addressing modes and data transfer instructions of the target microprocessor and microcontroller.
- Compare accepted standards and guidelines to select appropriate Microprocessor (8085 & 8086) and Microcontroller to meet specified performance requirements.
- Analyze assembly language programs; select appropriate assemble into machine a cross assembler utility of a microprocessor and microcontroller.
- Design electrical circuitry to the Microprocessor I/O ports in order to interface the processor to external devices.
- Evaluate assembly language programs and download the machine code that will provide solutions real-world control problems

UNIT -I THE 8085 MICROPROCESSOR (9) Introduction to 8085 – Microprocessor architecture – Instruction set – Programming the 8085 – Code conversion.

UNIT- II 8086 SOFTWARE ASPECTS (9)

Intel 8086 microprocessor – Architecture – Instruction set and assembler directives – Addressing modes – Assembly language programming – Procedures – Macros – Interrupts and interrupt service routines.

UNIT- III 8086 SYSTEM DESIGN (9)

8086 signals and timing – MIN/MAX mode of operation – Addressing memory and I/O – Multiprocessor configurations – System design using 8086

UNIT- IV I/O INTERFACING (9)

Memory Interfacing and I/O interfacing - Parallel communication interface – Serial communication interface – Timer – Keyboard /display controller – Interrupt controller – DMA controller – Programming and applications.

UNIT- V MICROCONTROLLERS (9)

Architecture of 8051 – Signals – Operational features – Memory and I/O addressing – Interrupts – Instruction set – Applications.

Total Hours: 45

16BECS403B Information Storage and Management LT P C

3 0 03

COURSE OBJECTIVES:

- Evaluate storage architectures and key data center elements in classic, virtualized and cloud environments
- Explain physical and logical components of a storage infrastructure including storage subsystems, RAID and intelligent storage systems
- Describe storage networking technologies such as FC-SAN, IP-SAN, FCoE, NAS and object- based, and unified storage
- Understand and articulate business continuity solutions – backup and replications, along with archive for managing fixed content
- Explain key characteristics, services, deployment models, and infrastructure components for a cloud computing
- Discuss the management of virtual servers and storage between remote locations

COURSE OUTCOMES:

- Describe and apply storage technologies
- Identify leading storage technologies that provide cost-effective IT solutions for medium tolarge scale businesses and data centers
- Describe important storage technologies‟ features such as availability, replication,scalability and performance
- Work in project teams to install, administer and upgrade popular storage solutions
- Identify and install current storage virtualization technologies
- Manage virtual servers and storage between remote locations

UNIT I Storage System (9)

Introduction to information storage, Virtualization and cloud computing, Key data center elements, Compute, application, and storage virtualization, Disk dive & flash drive components and performance, RAID, Intelligent storage system and storage provisioning (including virtual provisioning)

UNIT II Storage Networking Technologies and Virtualization (9)

Fibre Channel SAN components, FC protocol and operations, Block level storage virtualization, iSCL and FCIP as an IP-SAN solutions, Converged networking option – FcoE, Network Attached Storage (NAS) – components, protocol and operations, File level storage virtualization, Object based storage and unified storage platform.

UNIT III Backup, Archive and Replication (9)

Business continuity terminologies, planning and solutions, Clustering and multipathing to avoid single points of failure, Backup and recovery – methods, targets and topologies, data deduplication and backup in virtualized environment, fixed content and data archive, Local replication in classic and virtual environments, Remote replication in classic and virtual environments, Three-site remote replication and continuous data protection.

UNIT IV Cloud Computing (9)

Characteristics and benefits**,** Services and deployment models, Cloud infrastructure components, Cloud migration considerations.

UNIT V Securing and Managing (9)

Storage Infrastructure Security threats, and countermeasures in various domains, Security solutions for FC-SAN, IP-SAN and NAS environments, Security in virtualized and cloud environments, Monitoring and managing various information infrastructure components in classic and virtual environments, Information lifecycle Management (ILM) and storage tiering.

Total Hours:45

TEXT BOOKS:

1. Information Storage and Management: Storing, Managing and Protecting Digital Information in classic, Virtualized and Cloud Environments, 2nd Edition, EMC Educations Services, Wiley, May 2012.

REFERENCES:

1. Ulf Troppens, Rainer Erkens, Wolfgang Mueller-Friedt, Rainer Wolafka, Nils Haustein ,"Storage Networks Explained: Basics and Application of Fibre Channel SAN, NAS, iSCSI, InfiniBand and FCoE, 2nd Edition, Wiley, July 2009

16BECS404	Design and Analysis of Algorithms	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

The student should be made to:

- Learn the algorithm analysis techniques.
- Become familiar with the different algorithm design techniques.
- Understand the limitations of Algorithm power.
- Develop a base for advanced study in Computer Science.
- To explain applications of the algorithms and design techniques to solve problems
- To describe the complexities of various problems in different domains.

COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the different algorithm design techniques for a given problem.
- Ability to decide the appropriate data type and data structure for a given problem.
- Ability to select the best algorithm to solve a problem
- Considers various problem characteristics, such as the data size, the type of operations, etc.

UNIT I INTRODUCTION (9)

Fundamentals of Algorithmic Problem Solving – Performance Analysis- Asymptotic Notations and its properties – Mathematical analysis for Recursive and Non-recursive algorithms, Ex: Fibonacci Series-Probabilistic analysis-Amortized Analysis.

UNIT II BRUTE FORCE AND DIVIDE-AND-CONQUER (9)

Brute Force – Closest-Pair and Convex-Hull Problems-Bubble Sort-Sequential Search –Divide and conquer methodology – Merge sort – Quick sort-Strassen's Matrix Multiplication.

UNIT III DYNAMIC PROGRAMMING AND GREEDY TECHNIQUE (9)

Dynamic Programming – Warshall's and Floyd' algorithm – Optimal Binary Search Trees – Greedy Techniques-Prim's algorithm- Kruskal's Algorithm- Dijkstra's Algorithm-Huffman Trees.

UNIT IV BACK TRACKING AND BRANCH AND BOUND (9)

Backtracking – n-Queens problem – Hamiltonian Circuit Problem – Subset Sum Problem-graph colouring-Branch and Bound – Assignment problem – Knapsack Problem – Traveling Salesman Problem

UNIT V NP HARD AND NP COMPLETE (9)

Basic Concepts- Non Deterministic algorithms-NP Hard and NP Complete Classes-Cool's Theorem

Total Hours:45

TEXT BOOK:

16BECS405 **Formal Languages and Automata**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To have an introductory knowledge of automata, formal language theory and computability.
- To have an understanding of finite state and pushdown automata.
- To have a knowledge of regular languages and context free languages.
- To know the relation between regular language, context free language and corresponding recognizers.
- To study the Turing machine and classes of problems
- To teach methods of writing a very simple code generator

COURSE OUTCOMES:

Upon completion of the course, the students should be able to :

- Design a finite automaton for a specific language.
- Design a Turing machine.
- Select appropriate grammar for the implementation of compiler phases
- Design a lexical analyzer
- Design a simple parser
- Design and implement techniques used for optimization by a compiler.
- Write a very simple code generator

UNIT- I Introduction To Automata (9)

Basics of String and Alphabets - Finite Automata (FA) – Deterministic Finite Automata (DFA)– Non-deterministic Finite Automata (NFA) – Conversion of NFA to DFA- Finite Automata with Epsilon transition-Equivalence and Minimization of Automata

UNIT- II Regular Expressions And Languages (9)

Regular Expression – FA and Regular Expressions – Proving languages not to be regular – Pumping lemma for regular sets - Closure properties of regular languages- Decision Properties of Regular Languages

UNIT- III Context-Free Grammar And Languages (9)

Context-Free Grammar (CFG) – Parse Trees – Ambiguity in grammars and languages – Definition of the Pushdown automata – Languages of a Pushdown Automata – Equivalence of Pushdown automata and CFG, Deterministic Pushdown Automata- Pumping Lemma for CFL - Closure Properties of CFL- Context Sensitive Grammar (CSG) & Languages

UNIT IV Properties of Context Free Grammar (9)

Normal forms for Context Free Grammar- Chomsky Normal Form- The Pumping lemma for Context free Languages- Closure properties of Context Free Languages-Inverse Homomorphism-Decision Properties of CFL

UNIT- V Turing Machine (9)

Turing Machines – Introduction- Definition – Turing machine construction- Storage in Finite control-Multiple tracks- Subroutines-Checking of Symbols – Two way infinite tape-Undecidability .

Total Hours: 45

16BECS411 **Advanced Java Programming Laboratory**

L	T	P	C
2	0	2	3

COURSE OBJECTIVES:

- Understand the concepts of object-oriented, event driven, and concurrent programming paradigms
- Develop skills in using these paradigms using Java.
- To understand and implement the concepts of interfaces and packages
- To implement a multithreaded program
- Explain how to manage exceptions for real time applications
- Explain how to design an event driven program using applet

COURSE OUTCOMES:

After completion of this course, the students would be able to

- Understand programming language concepts, particularly Java and object-oriented concepts.
- Write, debug, and document well-structured Java applications and Implement Java classes from specifications.
- Effectively create and use objects from predefined class libraries.
- Understand the behavior of primitive data types, object references, and arrays.
- Apply decision and iteration control structures to implement algorithms.
- Implement interfaces, inheritance, and polymorphism as programming techniques and apply exceptions handling.

Theory:

Creating Threads-Extending the Thread Class- Thread states -Stopping and Blocking a Thread-Life Cycle of a Thread- Thread Exceptions- Thread Priority- Synchronization
The Object class – Reflection – interfaces – object cloning – inner classes – generic classes – generic methods – inheritance and generics – reflection and generics
Preparing to Write Applets-Building Applet Code-Applet Life Cycle-Creating an Executable Applet-Designing a Web Page-Applet Tag-Adding Applet to HTML File-Running the Applet-Getting Input from the User-Event Handling-The Graphics Class
Sockets – secure sockets – custom sockets –Java Messaging services
JUnit – Overview - Environment Setup - Test Framework - JUnit Basic Usage - API's of JUnit - Writing Test – Executing Tests - Suite Test - Ignore Test - Time Test - Exceptions Test - Parameterized Test - Plug with Eclipse – Extensions

List of Experiments

- Write a java program to implement the concept of threading by extending Thread Class
- Write a java program to implement the concept of thread priority.
- Write a java program to implement the methods of thread States.
- Write a java program to implement the concept of thread Synchronization.

- Write a java program to implement the concept of Object Cloning.
- Write a java program to implement the concept of Reflection.
- Write a java program to implement the concept of inner Classes.
- Write a java program to implement the concept of Generic Classes and Generic Methods.
- Write a Java Program to demonstrate Keyboard event in Applet
- Write a Java Program to demonstrate Mouse events in Applet.
- Write a Java Program to draw different shapes using Graphics Class in Applet
- Write a Java program to create Client-Server network for Chatting between Client and Server.
- Write a java program and test that program using JUnit Testing in Eclipse

Total Hours: 45

16BECS412	Database Management Systems Lab	L	T	P	C
		0	0	3	2

COURSE OBJECTIVES:

- Master the basic concepts and appreciate the applications of database systems.
- Master the basics of SQL and construct queries using SQL.
- Be familiar with a commercial relational database system (Oracle) by writing SQL using the system.
- Be familiar with the relational database theory, and be able to write relational algebra expressions for queries.
- Mater sound design principles for logical design of databases, including the E-R method and normalization approach.
- Master the basics of query evaluation techniques and query optimization.

COURSE OUTCOMES:

After completion of this course, the students would be able to

- Understand, appreciate and effectively explain the underlying concepts of database technologies
- Design and implement a database schema for a given problem-domain Normalize a database
- Populate and query a database using SQL DML/DDL commands.
- Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS
- Programming PL/SQL including stored procedures, stored functions, cursors, packages.
- Design and build a GUI application.

LIST OF EXPERIMENTS

1. Data Definition Language (DDL) commands in RDBMS.
2. Data Manipulation Language (DML) and Data Control Language (DCL) commands in RDBMS.
3. High-level language extension with Cursors.
4. High level language extension with Triggers
5. Procedures and Functions.
6. Embedded SQL.
7. Database design using E-R model and Normalization.
8. Design and implementation of Payroll Processing System.
9. Design and implementation of Banking System.
10. Design and implementation of Library Information System.
11. Database connectivity using JDBC
12. Database connectivity using ODBC

Total Hours: 45

		L	**T**	**P**	**C**
16BECS413	**Embedded Computing Systems**				
		1	**0**	**2**	**3**

COURSE OBJECTIVES:

- The student should be made to:
- Introduce ALP concepts and features
- Explain to write a program for 8085 Microprocessor
- Write ALP for arithmetic and logical operations in 8086 and 8051
- Differentiate Serial and Parallel Interface
- Interface different I/Os with Microprocessors

COURSE OUTCOMES

- Ability to write a program for 8085 Microprocessor
- Ability to write a program for 8086 Microprocessor
- Ability to determine the program for Interfacing
- Ability to write a program for 8051 Microcontroller
- Design and implement 8051 microcontroller based systems
- To Understand the concepts related to I/O and memory interfacing

List of Experiments

1. Use of 8-bit and 32-bit Microcontrollers (such as 8051 Microcontroller, ARM2148 / ARM2378, LPC 2141/42/44/46/48), Microcontroller and C –compiler (Keil), Arduino IDE :
   I) Interface Input – Output and other units such as: Relays, LEDs, LCDs, Switches, keypads, Stepper Motors, Sensors, ADCs, Timers.
   II) Demonstrate Communications: RS232, IIC and CAN protocols,
   II) Develop Control Applications such as: Temperature controller, Elevator controller, Traffic Controller.

2. Development and Porting of Real time applications on to Target machines such as Intel or other Computers using any RTOS.
   I) Understanding Real Time Concepts using any RTOS through demonstration of:
      a)Timing
      b)Multi-tasking
      c)Semaphores
      d)Message Queues
      e)Round-Robin Task Scheduling
      f)Preemptive Priority based Task Scheduling
      g)Priority Inversion
      h)Signals
   II) Applications development using any RTOS:
      a)Any RTOS Booting.
      b)Application Development under any RTOS.

TEXT BOOKS:

16BECS501	Operating Systems	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To have a thorough knowledge of processes, scheduling concepts, memory management, I/O andfile systems in an operating system
- To have an overview of different types of operating systems
- To know the components of an operating system.
- To have a thorough knowledge of process management
- To have a thorough knowledge of storage management
- To know the concepts of I/O and file systems.

COURSE OUTCOMES:

- Understand device and I/O management functions in operating systems as part of a uniform
  device abstraction.
- Have an understanding of disk organization and file system structure.
- Be able to give the rationale for virtual memory abstractions in operating systems.
- Understand the main principles and techniques used to implement processes and threads as well as the different algorithms for process scheduling.
- Understand the main mechanisms used for inter-process communication.
- Understand the main problems related to concurrency and the different synchronization mechanisms available.

UNIT- I Introduction (9)

Introduction – OS Concepts- OS Structures- kernel, shell-Evolution of OS- Mainframe systems – Desktop Systems – Multiprocessor Systems – Distributed Systems – Clustered Systems – Real Time Systems – Handheld Systems - Hardware Protection - System Components – Operating System Services – System Calls – System Programs - Process Concept – Process Scheduling – Operations on Processes – Cooperating Processes – Inter-process Communication.

UNIT –II Scheduling (9)

Threads – Overview – Threading issues - CPU Scheduling – Basic Concepts – Scheduling Criteria – Scheduling Algorithms – Multiple-Processor Scheduling – Real Time Scheduling - The Critical-Section Problem – Synchronization Hardware – Semaphores – Classic problems of Synchronization – Critical regions – Monitors.

UNIT- III Deadlocks (9)

System Model – Deadlock Characterization – Methods for handling Deadlocks -Deadlock Prevention – Deadlock avoidance – Deadlock detection – Recovery from Deadlocks - Storage Management – Swapping– Contiguous Memory allocation – Paging – Segmentation – Segmentation with Paging.

UNIT- IV Virtual Memory **(9)**

Virtual Memory – Demand Paging – Process creation – Page Replacement – Allocation of frames – Thrashing - File Concept – Access Methods – Directory Structure – File Sharing – Protection

UNIT- V File Systems **(9)**

File System Structure – File System Implementation – Directory Implementation – Allocation Methods – Free-space Management. Kernel I/O Subsystems - Disk Structure – Disk Scheduling – Disk Management– Swap-Space Management. Case Study: The Linux System, Windows 2000 –Introduction -UNIX

Total Hours: 45

16BECS502	Computer Networks	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- Understand the division of network functionalities into layers.
- Be familiar with the components required to build different types of networks
- Be exposed to the required functionality at each layer
- Learn the flow control and congestion control algorithms
- To introduce the concepts, terminologies and technologies used in modern days data communication and computer networking.
- To understand the concepts of data communications.

COURSE OUTCOMES:

- To understand the division of network functionalities into layers
- To understand the concepts of data communications
- To understand the working of router
- Able to identify the ports used for transferring and receiving data
- Able to identify the flow control mechanism to be adopted in transport layer
- Able to understand the functions of application layer

UNIT- I Fundamentals & Link layer (9)

Building a network - ISO / OSI model - Requirements - Layering and protocols - Internet Architecture - Network software - Performance ; Link layer Services - Framing - Error Detection - Flow control

UNIT –II Media access & Internetworking (9)

Media access control - Ethernet (802.3) - Wireless LANs - 802.11 - Bluetooth - Switching and bridging - Basic Internetworking (IP, CIDR, ARP, DHCP,ICMP)

UNIT –III Routing (9)

Routing (RIP, OSPF, metrics) - Switch basics - Global Internet (Areas, BGP, IPv6), Multicast - addresses - multicast routing (DVMRP, PIM)

UNIT- IV Transport layer (9)

Overview of Transport layer - UDP - Reliable byte stream (TCP) - Connection management - Flow control - Retransmission - TCP Congestion control - Congestion avoidance (DECbit, RED) - QoS - Application requirements

UNIT –V Application layer (9)

Traditional applications -Electronic Mail (SMTP, POP3, IMAP, MIME) - HTTP - Web Services - DNS – SNMP

Total Hours: 45

16BECS503	Software Engineering	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To introduce the methodologies involved in the development and maintenance of software over its entire life cycle.
- To be aware of Different life cycle models and requirement dictation process
- To explain the various effective software engineering processes
- To explain design, cost and principles in a software engineering describe different projects of software testing
- To discuss ways of back tracking effectively to improve the current functionalities using appropriate software measures

COURSE OUTCOMES:

- Plan and deliver an effective software engineering process, based on knowledge of widely used development lifecycle models.
- Employ group working skills including general organization, planning and time management and inter-group negotiation.
- Translate a requirements specification into an implementable design, following a structured and organised process.
- Formulate a testing strategy for a software system, employing techniques such as unit testing, test driven development and functional testing.
- Evaluate the quality of the requirements, analysis and design work done during the module.
- Able to back track effectively to improve the current functionalities using appropriate software measures

UNIT –I Software Process (9)

Introduction –S/W Engineering Paradigm – life cycle models (water fall, incremental, spiral, WINWIN spiral, evolutionary, prototyping, object oriented) - system engineering – computer based system – verification – validation – life cycle process – development process –system engineering hierarchy.

UNIT- II Software Requirements (9)

Functional and non-functional - user – system –requirement engineering process – feasibility studies – requirements – elicitation – validation and management – software prototyping – prototyping in the software process – rapid prototyping techniques – user interface prototyping - S/W document. Analysis and modelling – data, functional and behavioural models – structured analysis and data dictionary.

UNIT- III Design Concepts and Principles (9)

Design process and concepts – modular design – design heuristic – design model and document. Architectural design – software architecture – data design – architectural design – transform and transaction mapping – user interface design – user interface design principles. Real time systems – Real time software design – system design – real time executives – data acquisition system –

monitoring and control system.

UNIT- IV Testing (9)

Taxonomy of software testing – levels – test activities – types of s/w test – black box testing – testing boundary conditions – structural testing – test coverage criteria based on data flow mechanisms – regression testing – testing in the large. S/W testing strategies – strategic approach and issues - unit testing– integration testing – validation testing – system testing and debugging.

UNIT- V Software Project Management (9)

Measures and measurements – S/W complexity and science measure – size measure – data and logic structure measure – information flow measure. Software cost estimation – function point models – COCOMO model- Delphi method. - Defining Task Network – Scheduling – Earned Value Analysis – Error Tracking - Software changes- program evolution dynamics- software maintenance – Risk management -Architectural evolution.

Total Hours: 45

		L	T	P	C
16BECS511	**Computer Networks Lab**	**0**	**0**	**3**	**2**

COURSE OBJECTIVES:

- Understand fundamental underlying principles of computer networking
- Understand details and functionality of layered network architecture
- Apply mathematical foundations to solve computational problems in computer networking

- Utilizing Network tools and simulator
- Explain computer networking concepts and vocabulary
- Explain the concept of protocols

COURSE OUTCOMES:

- Understand fundamental underlying principles of computer networking
- Understand details and functionality of layered network architecture
- Apply mathematical foundations to solve computational problems in computer networking
- Understands computer networking concepts and vocabulary
- Understands the concept of protocols
- Utilizing Network tools and simulator

LIST OF EXPERIMENTS

1. Implementation of Sliding Window Protocol.
2. Study of Socket Programming and Client - Server model
3. Write a code simulating ARP /RARP protocols.
4. Write a code simulating PING and TRACEROUTE commands
5. Create a socket for HTTP for web page upload and download.
6. Write a program to implement RPC (Remote Procedure Call)
7. Implementation of Subnetting .
8. Applications using TCP Sockets like Echo client and echo server
9. Applications using TCP and UDP Sockets like File Transfer
10. Study of Network simulator (NS3), Wireshark

Total Hours: 45

16BECS512 **Operating Systems Lab**

L	T	P	C
0	0	3	2

COURSE OBJECTIVE:

- Grasp a fundamental understanding of computer and operating systems
- Explain various Identify the services provided by operating system
- Learn basic shell programming
- Understand memory management
- Understand process concurrency and synchronization
- Learn the scheduling policies of operating systems

COURSE OUTCOMES:

- Identify the services provided by operating system
- Able to write programs on Shell Script
- Understand the internal structure of an operating system and be able to write programs
- Understand and solve problems involving key concepts and theories in operating systems
- Able to implement scheduling algorithms
- Able to understand the memory management concepts

LIST OF EXPERIMENTS

(Implement the following on LINUX platform. Use C for high level language implementation)

1. Shell programming
    - command syntax
    - write simple functions
    - basic tests
2. Shell programming
    - loops
    - patterns
    - expansions
    - substitutions
3. Write programs using the following system calls of UNIX operating system: fork, exec, getpid, exit, wait, close, stat, opendir, readdir
4. Write programs using the I/O system calls of UNIX operating system (open, read, write, etc)
5. Write C programs to simulate UNIX commands like ls, grep, etc.
6. Given the list of processes, their CPU burst times and arrival times, display/print the Gantt chart for FCFS and SJF. For each of the scheduling policies, compute and print the average waiting time and average turnaround time
7. Given the list of processes, their CPU burst times and arrival times, display/print the Gantt chart for Priority and Round robin. For each of the scheduling policies, compute and print the average waiting time and average turnaround time
8. Implement the Producer – Consumer problem using semaphores.
9. Implement some memory management schemes – I
10. Implement some memory management schemes – II
11. Case study: “awk” Scripting Language

Total Hours: 45

16BECS513	**Case Tools Lab**	**L**	**T**	**P**	**C**
		0	**0**	**3**	**2**

COURSE OBJECTIVES:

- Practicing the different types of case tools such as Rational Rose / other Open Source to beused for all the phases of Software development life cycle.
- Learn the basics of OO analysis and design skills.
- Be exposed to the UML design diagrams.
- Learn to map design to code.
- Be familiar with the various testing techniques
- To discuss definition, formulation and analysis of a problem

COURSE OUTCOMES:

- The students understands the process to be followed in the software development life Cycle
- find practical solutions to the problems
- solve specific problems alone or in teams
- manage a project from beginning to end
- work independently as well as in teams
- define, formulate and analyze a problem

LIST OF EXPERIMENTS

1. Implementation of Student Marks Analyzing System
2. Implementation of Quiz System
3. Implementation of Online Ticket Reservation System
4. Implementation of Payroll System
5. Implementation of Course Registration System
6. Implementation of Expert Systems
7. Implementation of ATM Systems
8. Implementation of Stock Maintenance

Total Hours: 45

16BECS601	Compiler Design	L	T	P	C
		2	2	0	3

COURSE OBJECTIVES:

- At the end of the course the student will be able to design and implement a simple compiler.
- To understand, design and implement a lexical analyzer.Explain how to build lexical analyzers and use them in the construction of parsers;
- To understand, design and implement a parser.
- To understand various grammars of a programming langugage
- To understand, design code generation schemes
- To discuss methods to design and Implement a simple compiler

COURSE OUTCOMES:

On completion of the course, the students will be able to:

- build lexical analyzers and use them in the construction of parsers;
- express the grammar of a programming language;
- build syntax analyzers and use them in the construction of parsers;
- perform the operations of semantic analysis;
- discuss the merits of different optimization schemes.
- Able to design and Implement a simple compiler

UNIT- I Introduction to compiling (9)

Compilers – Analysis of the source program – Phases of a compiler – Cousins of the Compiler – Grouping of Phases – Compiler construction tools – Lexical Analysis – Role of Lexical Analyzer – Input Buffering – Specification of Tokens.

UNIT- II Syntax Analysis (9)

Role of the parser –Writing Grammars –Context-Free Grammars – Top Down parsing – Recursive Descent Parsing – Predictive Parsing – Bottom-up parsing – Shift Reduce Parsing – Operator Precedent Parsing – LR Parsers – SLR Parser – Canonical LR Parser – LALR Parser.

UNIT –III Intermediate code generation (9)

Intermediate languages – Declarations – Assignment Statements – Boolean Expressions – Case Statements – Back patching – Procedure calls.

UNIT- IV Code generation (9)

Issues in the design of code generator – The target machine – Runtime Storage management – Basic Blocks and Flow Graphs – Next-use Information – A simple Code generator – DAG representation of Basic Blocks – Peephole Optimization.

UNIT- V Code optimization and run time environments (9)

Introduction– Principal Sources of Optimization – Optimization of basic Blocks – Introduction to Global Data Flow Analysis – Runtime Environments – Source Language issues – Storage Organization – Storage Allocation strategies – Access to non-local names – Parameter Passing.

Total Hours: 45

TEXT BOOKS:

1. Compilers Principles, Techniques and Tools, Alfred Aho, Ravi Sethi, Jeffrey D Ullman, Pearson Education Asia, 2nd edition,2013

2. Compiler Design in C, Allen I. Holub, Prentice Hall of India, 2006.

16BECS602A	Network Security	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To understand the basics of Information Security and its model.
- To learn the legal, ethical and professional issues in Information Security
- To understand the need of risk management and risk control.
- To study the critical need for ensuring Information Security in Organizations.
- To learn the security policy, standards and security analyzing tools.
- To discuss about the CIA triad of Confidentiality, Integrity and Availability

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Analyze the appropriate techniques to tackle and solve problems in the discipline of information security management.
- Gain the knowledge of security and its management for any modern organization.
- Develop an understanding of security policies to implement, such policies in the form of message exchanges.
- Develop security management system should be planned, documented, implemented and improved, according to the security standard on information security management.
- Use and Examine the threats by security analysis tools
- Understand the CIA triad of Confidentiality, Integrity and Availability

UNIT I Conventional and Modern Encryption **(9)**

Model of network security – Security attacks, services and attacks – OSI security architecture – Classical encryption techniques – SDES – Block cipher Principles- DES – Strength of DES - Block cipher design principles – Block cipher mode of operation – Evaluation criteria for AES – RC5 - Differential and linear crypto analysis – Placement of encryption function – traffic confidentiality

UNIT II Public Key Encryption **(9)**

Number Theory – Prime number – Modular arithmetic – Euclid‟s algorithm – Fermet‟s and Euler‟s theorem – Primality – Chinese remainder theorem – Discrete logarithm – Public key cryptography and RSA – Key distribution – Key management – Diffie Hellman key exchange – Elliptic curve cryptography

UNIT III Authentication **(9)**

Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC – MD5 – SHA - HMAC – Digital signature and authentication protocols – DSS

UNIT IV Security Practice **(9)**

Authentication applications – Kerberos – X.509 Authentication services - E-mail security – IP security - Web security

UNIT V System Security **(9)**

Intruder – Intrusion detection system – Virus and related threats – Countermeasures – Firewalls design principles – Trusted systems – Practical implementation of cryptography and security

Total Hours: 45

TEXT BOOKS:

1. William Stallings, "Cryptography & Network Security", Pearson Education, 4th Edition 2010.

16BECS602B **Mobile and Pervasive Computing** **L T P C**
3 0 0 3

COURSE OBJECTIVES:

- Understand the advanced concepts of wireless mobile networks
- Apply transactions for complex model
- Explore the modern design structures of pervasive computing
- Analyze various advanced mobile network models
- Discuss the pervasive computing application device
- Discuss the process to propose solutions with comparisons for problems related to pervasive computing system through investigation.

COURSE OUTCOMES:

- Outline the basic problems, performance requirements of pervasive computing applications
- Understand the trends of pervasive computing and its impacts on future computing applications and society.
- Analyze and compare the performance of different data dissemination techniques
- Understand the algorithms for mobile real-time applications
- Analyze the performance of different sensor data management and routing algorithms for sensor networks.
- Develop an attitude to propose solutions with comparisons for problems related to pervasive computing system through investigation.

UNIT I Introduction to Mobile Computing (9)

obility of bits and bytes – Wireless the beginning – Mobile computing- Dialogue control- Networks– Middleware and gateways- Application and services- Developing mobile computing applications-Security- Standards- Players in wireless space- Architecture for mobile computing- Three tier architecture- Design considerations-Mobile computing through internet-Making existing applications mobile enabled-Developing IVR application.

UNIT II Mobile Technologies (9)

Emerging technologies: Bluetooth-Radio frequency identification- Wireless broadband-Mobile IP-Internet protocol version 6-Java card- GSM- Short message services- General packet radio services: Packet data network Architecture-Operations-Data services-Application for GPRS-Limitations of GPRS-Wireless application protocol CDMA and 3G.

UNIT III Mobile Networking Wireless (9)

LAN advantage-Standards-Architecture-Mobility-Deploying-Mobile Ad Hoc networks and sensor networks-Security- Wi Fi verses 3G-Internet networks and interworking: Fundamentals of call processing – Intelligence in the networks-SS #7 signaling-IN conceptual model-Soft switch-Programmable networks-Client programming.

UNIT IV Introduction to Pervasive Computing (9)

Introduction to pervasive computing: Scenarios–Roaming environment-Pervasive computing infrastructure Personalized services – Pervasive computing market- m-business- Applications examples-Hardware - Human - Machine interfaces biometrics and Operating systems-Java for pervasive devices.

UNIT V Pervasive Computing Application Device (9)

Connectivity – Protocols, security and device management - Pervasive web application architecture– Transcoding –Client authentication via internet- WAP and beyond - Voice technology: Speech application–Personal digital assistants: Device- Operating systems-Characteristics-Software components-Standards-Mobile applications.

Total Hours - 45

		L	**T**	**P**	**C**
16BECS603	**Artificial Intelligence**				
		3	**0**	**0**	**3**

COURSE OBJECTIVES:

- Artificial Intelligence aims at developing computer applications, which encompasses
- perception, reasoning and learning and to provide an in-depth understanding of majortechniques used to simulate intelligence.
- To provide a strong foundation of fundamental concepts in Artificial Intelligence
- To provide a basic exposition to the goals and methods of Artificial Intelligence
- To enable the student to apply these techniques in applications which involve perception, reasoning and learning.
- To discuss the techniques based on probability theory and possibility theory

COURSE OUTCOMES:

- Understand the history, development and various applications of artificial intelligence
- Familiarize with propositional and predicate logic and their roles in logic programming;
- Understand the programming language Prolog and write programs in declarativeprogramming style;
- Learn the knowledge representation and reasoning techniques in rule-based systems, case based systems, and model-based systems;
- Appreciate how uncertainty is being tackled in the knowledge representation and reasoningprocess, in particular,
- Interpreted the techniques based on probability theory and possibility theory (fuzzylogic);

UNIT I Introduction and Problem Solving (9)

Introduction – Foundations of AI – History of AI – Intelligent agent – Types of agents - Structure – Problem solving agents – Uninformed search strategies – Breadth first search – Uniform cost search– Depth first search –Depth limited search – Bidirectional search – Searching with partial Information.

UNIT II Informed Search and Game Playing (9)

Informed search – Strategies – A* Heuristic function – Hill Climbing – Simulated Annealing – Constraint Specification problem – Local Search in continuous space – Genetic algorithm – Optimal decisions in games - Pruning- Imperfect decisions –Alpha-Beta pruning – Games that include an element of chance.

UNIT III Knowledge and Reasoning (9)

Knowledge based agent – The Wumpus world environment – Propositional logic – Inference rules – First-orderlogic – Syntax and semantics – Situation calculus – Buliding a knowledge base – Electronic circuit domain – Ontology– Forward and backward chaining – Resolution – Truth maintenance system.

UNIT IV Acting Logically (9)

Planning – Representation of planning – Partial order planning –Planning and acting in real world – Acting under uncertainty – Bayes's rules – Semantics of Belief networks – Inference in Belief networks – Making simple decisions – Making complex decisions.

UNIT V Learning and Communication (9)

Learning from observation – Learning decision trees –Ensemble learning – Learning general logical descriptions – Computational learning theory – Neural networks – Applications – Reinforcement learning– Passive reinforcement – Active reinforcement – Communication as action – Types of communicating agents – Parsing – DCG – Semantic interpretation.

Total hours:45

TEXT BOOKS:

1. Stuart J.Russel, Peter Norvig, "Artificial Intelligence A Modern Approach", Pearson Education, 2010.

REFERENCES:

1. Elaine Rich, Kevin Knight, "Artifical Intelligence", 2nd Edition, Tata McGraw Hill, 2001.

16BECS604A	Data Warehousing and Data Mining	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To serve as an introductory course to under graduate students with an emphasis on the design aspects of Data Mining and Data Warehousing
- To introduce the concept of data mining with in detail coverage of basic tasks, metrics, issues, and implication.
- To introduce the concept of data warehousing with special emphasis on architecture and design.
- Core topics like classification, clustering and association rules are exhaustively dealt with.
- Various association rules are to be discussed.
- Discuss recent trends in data mining

COURSE OUTCOMES:

- Understand why there is a need for data warehouse in addition to traditional operational database system
- Identify components in typical data warehouse architectures
- Understand why there is a need for data mining and in what ways it is different fromtraditional statistical techniques
- Understand the details of different algorithms
- Solve real data mining problems to find interesting patterns
- Understand a typical knowledge discovery process

UNIT I DATA WAREHOUSING (9)

Data warehousing Components –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata.

UNIT II BUSINESS ANALYSIS (9)

Reporting and Query tools and Applications – Tool Categories – The Need for Applications – Cognos Impromptu – Online Analytical Processing (OLAP) – Need – Multidimensional Data Model – OLAP Guidelines – Multidimensional versus Multirelational OLAP – Categories of Tools–OLAP Tools and the Internet.

UNIT III DATA MINING (9)

Introduction – Data – Types of Data – Data Mining Functionalities – Interestingness of Patterns – Classification of Data Mining Systems – Data Mining Task Primitives – Integration of a Data Mining System with a Data Warehouse – Issues –Data Preprocessing.

UNIT IV ASSOCIATION RULE MINING AND CLASSIFICATION (9)

Mining Frequent Patterns, Associations and Correlations – Mining Methods – Mining Various Kinds of Association Rules – Correlation Analysis – Constraint Based Association Mining – Classification and Prediction - Basic Concepts - Decision Tree Induction - Bayesian Classification – Rule Based Classification – Classification by Backpropagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction - Measuring the Dispersion of Data: Range, Quartiles, Variance, Standard Deviation, and Interquartile Range using WEKA

UNIT V CLUSTERING AND APPLICATIONS AND TRENDS IN DATA MINING (9)

Cluster Analysis - Types of Data – Categorization of Major Clustering Methods - K- means – Partitioning Methods – Hierarchical Methods - Density-Based Methods –Grid Based Methods – Model-Based Clustering Methods – Clustering High Dimensional Data - Constraint – Based Cluster Analysis – Outlier Analysis – Data Mining Applications.Use WEKA for cleaning and integration

16BECS604B	OBJECT ORIENTED ANALYSIS AND DESIGN	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To understand the fundamentals of object modeling
- To understand and differentiate Unified Process from other approaches.
- To design with static UML diagrams.
- To design with the UML dynamic and implementation diagrams.
- To improve the software design with design patterns.
- To test the software against its requirements specification

COURSE OUTCOMES:

- At the end of the course, the students will be able to:
- Express software design with UML diagrams
- Design software applications using OO concepts.
- Identify various scenarios based on software requirements
- Transform UML based software design into pattern based design using design patterns
- Understand the various testing methodologies for OO software

.

UNIT- I INTRODUCTION (9)

An Overview of Object Oriented Systems Development - Object Basics – Object Oriented Systems Development Life Cycle.

UNIT- II OBJECT ORIENTED METHODOLOGIES (9)

Rumbaugh Methodology - Booch Methodology - Jacobson Methodology - Patterns – Frameworks – Unified Approach – Unified Modeling Language – Use case - class diagram - Interactive Diagram - Package Diagram - Collaboration Diagram - State Diagram - Activity Diagram.

UNIT- III OBJECT ORIENTED ANALYSIS (9)

Identifying use cases - Object Analysis - Classification – Identifying Object relationships - Attributes and Methods.

UNIT- IV OBJECT ORIENTED DESIGN (9)

Design axioms - Designing Classes – Access Layer - Object Storage - Object Interoperability.

UNIT- V SOFTWARE QUALITY AND USABILITY (9)

Designing Interface Objects – Software Quality Assurance – System Usability - Measuring User Satisfaction

16BECS611	PYTHON PROGRAMMING	L	T	P	C
		2	0	2	3

COURSE OBJECTIVES:

- To learn how to use and manipulate several core data structures: Lists, Dictionaries, Tuples, and Strings.
- To study decision structures and loops
- To understand the process and skills necessary to effectively deal with problem solving in relation to writing programs.
- To understand the process and skills necessary to effectively deal with problem solving
- To discuss in relation to writing programs.
- To study various program object and graphics based on python

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- Develop algorithmic solutions to simple computational problems Read, write, execute by hand simple Python programs.
- Structure simple Python programs for solving problems.
- Decompose a Python program into functions.
- Represent compound data using Python lists, tuples, dictionaries
- Read and write data from/to files in Python Programs.
- Understand various program object and graphics based on python

Theory Introduction and overview (10)

Introduction, What is Python, Origin, Comparison, Comments, Operators, Variables and Assignment, Numbers, Strings, Lists and Tuples, Dictionaries, if Statement, while Loop, for Loop and the range() Built-in Function, Files and the open() Built-in Function, Errors and Exceptions, Functions, Classes, Modules. Syntax and Style Statements and Syntax, Variable Assignment, Identifiers, Basic Style Guidelines, Memory Management, Python Application Examples.

LIST OF EXPERIMENTS:

1. Create a calculator program.
2. Explore String functions.
3. Implement sequential search.
4. Implement Selection sort.
5. Implement Stack.
6. Creating a CSV File based on user input.
7. Reading a CSV File already created and check for a specific pattern.

Total Hours: 45

16BECS612	**Artificial Intelligence Lab**	**L**	**T**	**P**	**C**
		0	**0**	**3**	**2**

COURSE OBJECTIVES:

- Use various symbolic knowledge representations to specify domains
- To discuss reasoning tasks of a situated software agent.
- Use different logical systems for inference over formal domain representations
- To trace how a particular inference algorithm works on a given problem specification.
- Use key logic-based techniques in a variety of research settings
- To enable the student to apply these techniques in applications which involve perception, Reasoningand learning.

LEARNING OUTCOME:

Upon completion of the course, students will be able to:

- Communicate scientific knowledge at different levels of abstraction
- Implement Decision tree and Regression models
- Implement Ada Boosting
- Implement multi-layer perceptron, SVM and Random forests
- Implement PCA, Factor analysis and K-nearest neighbor
- Implement Hidden Markov modeling

LIST OF EXPERIMENTS:

1. Implementation of Decision tree
2. Implementation of Regression Models
3. Implementation of Multi-Layer Perceptron
4. Classification using SVM
5. Implementation of Ada Boosting
6. Bagging using Random forests
7. Implementation of PCA for Dimensionality Reduction
8. Implementation of Factor Analysis
9. Implementation of K-Nearest Neighbor
10. Implementation of Hidden Markov modeling

Total Hours: 45

16BECC701 PROFESSIONAL ETHICS, PRINCIPLES OF MANAGEMENTAND ENTREPRENEURSHIP DEVELOPMENT	L	T	P	C
	3	0	0	3

COURSE OBJECTIVE:

- To enable the students to create an awareness on engineering ethics, to install moral and social values and loyalty and to appreciate the rights of others
- To develop managerial and entrepreneurial skills our Culture and Ethics
- Knowledge on the principles of management is essential for all kinds of people in all kinds of organizations.
- After studying this course, students will be able to have a clear understanding of the managerial functions like planning, organizing, staffing, leading and controlling.
- Student should understand concepts of directing and controlling
- To create an awareness and practice through Engineering Ethics and Human Values.

COURSE OUTCOMES:

- To Discuss and communicate the management evolution and how it will affect future managers.
- Identify and evaluate social responsibility and ethical issues involved in business situations and logically articulate own position on such issues.
- To Practice the process of management's four functions: planning, organizing, leading, and controlling.
- To evaluate leadership styles to anticipate the consequences of each leadership style.
- To understand the nature of professional responsibility and be able to identify the ethical elements in decisions.
- To develop critical thinking skills and professional judgment and understand practical difficulties of bringing about change.

UNIT I ENGINEERING ETHICS (9)

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self–interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OF CHANGES (9)

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING, ORGANISING (9)

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informal organization – Organization Chart –.

UNIT IV DIRECTING AND CONTROLLING (9)

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT V ENTREPRENEURSHIP AND MOTIVATION (9)

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

TEXT BOOKS:

16BECS702Internet and Web Technology

	L	T	P	C
	3	**0**	**0**	**3**

COURSE OBJECTIVES:

- To learn the basic web concepts and Internet protocols.
- To understand CGI Concepts & CGI Programming.
- To familiarize with Scripting Languages.
- To discuss the concepts of DHTML
- To study XML, SERVELETS AND JSP.
- To discuss web pages based on various concepts of scripting, DHTML, XML, SERVELETS AND JSP.

COURSE OUTCOMES:

- Demonstrate an understanding of the components of a computer information networked system,
- To learn about application and software, communication protocols, and networking hardware and software.
- Create, install and update sophisticated web sites.
- Install and manage server software and other server side tools.
- Demonstrate critical thinking in the understanding, evaluation and application of technology solutions to a variety of real-life situations.
- Articulate ethical and professional standards as they apply to the use of the computer systems and computer based data.

UNIT-IIntroduction (9)

Internet Principles – Basic Web Concepts – Client/Server model – retrieving data from Internet – HTML and Scripting Languages – Standard Generalized Mark –up languages – Next Generation – Internet – Protocols and Applications.

UNIT-II Common gateway interface programming (9)

CGI Concepts – HTML tags Emulation – Server – Browser Communication – E-mail generation – CGI client Side applets – CGI server applets – authorization and security.

UNIT-III Scripting languages (9)

HTML – forms – frames – tables – web page design- XML - JavaScript introduction – control structures – functions – arrays – objects – simple web applications

UNIT-IV Dynamic HTML (9)

Dynamic HTML – introduction – cascading style sheets – object model and collections – event model – filters and transition – data binding – data control – ActiveX control – handling of multimedia data

UNIT-VServlets and JSP **(9)**

JSP Technology Introduction-JSP and Servelets- Running JSP Applications Basic JSP-JavaBeans Classes and JSP-Tag Libraries and Files- Support for the Model-View- Controller Paradigm- Case Study-Related Technologies.

Total Hours: 45

TEXT BOOKS:

1. Deitel H.M. and Deitel P.J., "Internet and World Wide Web How to program", PearsonInternational, 2012, 4th Edition. (Ch-1,4,5,6,12,14,26,27)

16BECS711	Web Technology Lab	L	T	P	C
		0	0	3	2

COURSE OBJECTIVES:

- To learn the basic web concepts and Internet protocols.
- To develop web page using HTML
- To familiarize with Scripting Languages.
- To study DHTML, XML, SERVELETS AND JSP.
- Create, install and update sophisticated web sites.
- Install and manage server software and other server side tools.

COURSE OUTCOMES:

- The students will be able to design Web pages using HTML/XML and style sheets
- Able to use XML to store and forwarding data.
- Students will find the ease of implementation of a website and the role of servlets in creating the dynamic websites
- The students will be able to write Client Server applications
- The students will be able to create dynamic web pages using server side scripting.
- Able to create a complete Web Application with all the required modules.

LIST OF EXPERIMENTS

1. Develop a web page using HTML with containing map with hot spots that hyperlinks to related information.
2. Develop a web page and use various CSS formatting options on the text.
3. Develop a web page and use external CSS formatting with different formatting options than the ones" used in the previous experiment.
4. Develop a XSL parser for an XML document for data display.
5. Using CSS to format an XML Document
6. Develop a mechanism to validate user input at the client side using JavaScript.
7. Program to set a cookie using JavaScript
8. Develop a computer program that utilizes Java Applet technology to demonstrate some functions.
9. Developing a Java Applet that utilizes the Sound function and is included in the HTML document
10. Develop a mini web application of your choosing.

Total Hours: 45

16BECS801	Software Testing	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To explain the basics of software testing
- To highlight the strategies for software testing
- To stress the need and conduct of testing levels
- To identify the issues in testing management
- To bring out the ways and means of controlling and monitoring testing activity
- To identify and write the test plan, design test cases, document test cases using an open source test management tool.

COURSE OUTCOMES:

- Understand complete software testing life cycle.
- Demonstrate understanding of various terms and technologies used in testing domain.
- Demonstrate understanding of usage of testing framework, process and test management.
- Demonstrate understanding of generating test plan and designing test cases
- Demonstrate understanding of test management process.
- Given a business scenario, identify and write the test plan, design test cases, document test cases using an open source test management tool.

UNIT- I Introduction (9)

Introduction to Testing – why and what,Why is testing necessary? What is testing? Role of Tester, Testing and Quality, Overview of STLC**,** Software Testing Life Cycle - V model**,** SDLC vs STLC, different stages in STLC, document templates generated in different phases of STLC, different levels of testing, different types of testing

UNIT -II Static Testing (9)

Static Testing**,** Static techniques, reviews, walkthroughs**,** Basics of test design techniques**,** various test categories, test design techniques for different categories of tests. Designing test cases using MS-Excel.

UNIT-III Test Management (9)

Test management**,** Documenting test plan and test case, effort estimation, configuration management, project progress management. Use of Testopia for test case documentation and test management.Defect management**,** Test Execution, logging defects, defect lifecycle, fixing / closing defects. Use of Bugzilla for logging and tracing defects.

UNIT- IVTest Data Management (9)

Test Data Management**,** Test Data Management –Overview, Why Test Data Management, Test Data Types, Need for Test Data Setup, Test Data Setup Stages, Test data management Challenges. Creating sample test data using MS-Excel**,** Basics of Automation testing**,** Introduction to automation testing, why automation, what to automate, tools available for automation testing

UNIT- V Basics of Automation Testing Using Selenium (9)

Basics of Automation testing using Selenium**,** Introduction to Selenium, using Selenium IDE for automation testing, using Selenium Web driver for automation testing, understanding TestNG framework with Selenium Web driver for automation testing

Total Hours: 45

TEXT BOOKS:

VALUE ADDED COURSES

16BECC151HUMAN VALUES

L	T	P	C
1	0	0	-

Course Objectives

- To help the students appreciate the essential complementarily between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity, which are the core aspirations of all human beings
- To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of Existence.
- To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behaviour and mutually enriching interaction with Nature.
- To know the value of being a human being.
- To provide a much needed orientational input in value education to the young enquiring minds.
- To study the value of being a useful citizen.

Course Outcomes

- To involves a systematic and rational study of the human being vis-à-vis the rest of existence.
- To make free from any dogma or value prescriptions.
- To analysis process of self-investigation and self-exploration, and not of giving sermons.
- This process of self-exploration takes the form of a dialogue between the teacher and the students to begin with, and then to continue within the student leading to continuous self-evolution.
- This self-exploration also enables them to critically evaluate their pre-conditionings and present beliefs.
- To Educate the values and meaning of life in the young minds and to transform them as responsible citizens

(3)

UNIT I

Human life on Earth - Concept of Human Values - Value Education - Aim of education and value education - Types of values - Components of values – Attitudes – types of attitudes

UNIT II **(3)**

Self Development : Self analysis – Goal Setting - Thought Analysis – Guarding against Anger - Respect to age, experience, maturity, family members, neighbors, co-workers

UNIT III **(3)**

Individual Qualities – Truthfulness – Constructivity – Sacrifice – Sincerity - Self Control – Altruism – Tolerance - Scientific Vision – Regulating Desire

UNIT IV **(3)**

Mind Culture - Modern Challenges of Adolescent - Emotions and behavior - Sex and spirituality - Adolescent Emotions - Meditation

UNIT V **(3)**

Body and Mind Fitness : (a) Physical Exercises (b) Activities: (i) Moralization of Desires (ii) Neutralization of Anger (iii) Eradication of Worries (iv) Benefits of Blessings

Total hours: 15

16BECS251INTRODUCTION TO PROGRAMMING WITH SCRATCH TOOL

	L	T	P	C
	2	0	0	-

COURSE OBJECTIVES:

- Study various tools like Text editor, Spread sheet and Power point presentation
- Determine methods to draw flowcharts and write Algorithms
- Provide methods to design and develop C problem solving skills
- Determine methods to trace and debug a program
- Determine methods to write C programs using functions and arrays
- Determine to use concepts of pointers,structures and files to write C programs

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Ability to use Text editor, Spread sheet and Power point presentation
- Ability to draw flowcharts and write Algorithms
- Ability to design and develop C problem solving skills
- Ability to trace and debug a program
- Ability to write C programs using functions and arrays
- Ability to use concepts of pointers,structures and files to write C programs

LIST OF EXPERIMENTS

1. Programming in Scratch:

   Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops.

2. Practicing programs to get exposure Conditional statements, Switch Case, Control structures, function. event driven programming.

Total Hours: 30

16BECS351	PC Hardware Assembly and Trouble shooting	L	T	P	C
		1	1	0	-

COURSE OBJECTIVES:

- To study the basic parts of computer in detail
- Introduce various peripheral devices available for computer and its detailed working concepts
- Overview of various interfaces and other hardware overview
- Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- To study basic concepts and methods in troubleshooting
- To study the installation/connectionand maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
- Identify various peripheral devices available and its working
- Understand various concepts of hardware and its interface and control
- Perform basic installation of PC. Importance of maintenance is understood
- Understand Various faults and failures are identified and troubleshooting in detail
- Install or connect and maintain computer and its associated peripherals.

UNIT I Introduction **(6)**

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques– Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices **(6)**

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC Hardware Overview(6)

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV Installation and Preventive Maintenance **(6)**

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting (6)

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI‶s – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

Total Hours: 30

TEXT BOOK:

1. B. Govindarajalu, "IBM PC Clones Hardware, Troubleshooting and Maintenance", 2/E, TMH, 2002.

2. Scott Mueller, "Repairing PC's", PHI, 1992

16BECS451 **Mobile Application Development**

L	T	P	C
1	1	0	-

COURSE OBJECTIVES:

- Describe those aspects of mobile programming that make it unique from programming for other platforms
- Explain installation and working of Android
- Critique mobile applications on their design pros and cons
- Utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces,
- Program mobile applications for the Android operating system that use basic and advanced phone features
- Deploy applications to the Android marketplace for distribution.

COURSE OUTCOMES:

- Ability to install Android in Eclipse
- Understanding of the Android environment to develop projects
- Ability to develop simple Android projects
- Understanding of the android widgets and inclusion of it in projects
- Ability to create android application for playing audio and video files
- Ability to deploy application to the android market place for distribution

LIST OF EXPERIMENTS

1. Installation of Android in eclipse and study of Android Development Tools, Components and Architecture.
2. Creating and Running Android Virtual Device (AVD)
3. Running Hello World Android Project
4. Working with different Android User Interface
5. A simple android application to study various android widgets like text box, buttons, toggle Buttons and Images
6. Working with Android Activity life cycle
7. Working with intents
8. Working with fragments

9. Working with TTS engine in Android
10. A simple android application for playing audio and video files

Total Hours: 30

16BECS561	SOFT SKILLS	L	T	P	C
		0	1	0	-

COURSE OBJECTIVES:

- To bring out behavioral changes among the trainees so that they develop interpersonal
- To inculcate communication, team building skills and leadership skills.
- It helps the min enhancing productivity and performance at the workplace.
- The training helps them to acquire employability skills so that they can get employment easily.
- The objective of this course is to enhance the problem solving skills in the areas of 'Quantitative Aptitude' and 'Reasoning' which will enable the students to achieve in Campus Placements and competitive examinations.
- To enable the students to give better presentation and explanation on their projects, posters and assignments – this makes them industry ready.

COURSE OUTCOMES:

- To solve basic and complex mathematical problems in short time.
- To perform well in various competitive exams and placement drives.
- To communicate with more confidence using better spoken and written English
- To give better presentation and explanation with the use of digital inventions
- During class time the students are expected to engage in group & pair work
- To perform well during Campus Drives and different Interviews

UNIT I **(4)**

Overview to communication, self introduction, Presentation on their own topic, Extempore, Group Activity

UNIT II **(3)**

Group Discussion, Do's and Don'ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III **(4)**

Introduction to HRM – Questions - Do's and Don't's - Interview - Mock GD - Stress Management

UNIT IV **(4)**

Personality Development - Presentation skills, Interpersonal skills, Critical thinking, Confidence building and Stress management.

Total Hours:15

REFERENCES

1. Barun K Mitra Personality Development and Soft Skills Oxford University Press-New Delhi 2012
2. Rajiv K. Mishra Personality Development Rupa& Co. 2012

16BECS651 CCNA- Introduction to Networks

L	T	P	C
0	0	1	-

COURSE OBJECTIVES:

- To describe how networks impact our daily lives.
- To describe the role of data networking in the human network.
- To identify the key components of any data network.
- To describe network access, ethernet and network layers concept
- To describe the characteristics of network architectures: fault tolerance, scalability, quality of service and security.
- To devices that make up the network.

COURSE OUTCOMES:

Upon completion of this course the student will be able to:

- Identify and describe internet architecture, structure, functions, components, and models;
- Describe the use of OSI and TCP layered models;
- Identify and describe the nature and roles of protocols and services at the application, network, data link, and physical layers;
- Describe principles and structure of IP addressing and the fundamentals of Ethernet concepts, media, and operations;
- Build simple LAN topologies by applying basic principles of cabling, device configuration, and IP subnetting
- To develop the applications of networks

UNIT-1(3)

Exploring the Network: Globally Connected-LANs, WANs, and the Internet -The Network as a Platform-The Changing Network Environment, **Configuring a Network Operating System:** Introduction-IOS Bootcamp-Getting Basic-Addressing Schemes**, Network Protocols and Communications:** Rules of Communication-Network Protocols and Standards-Moving Data in the Network

UNIT-2(4)

Network Access: Physical Layer Protocols-Network Media-Data Link Layer Protocols-Media Access Control**, Ethernet:** Introduction-Ethernet Protocol -Address Resolution Protocol -LAN Switches, **Network Layer-** Network Layer Protocols- Routing-Routers-Configuring a Cisco Router

UNIT-3(4)

Transport Layer: Introduction-Transport Layer Protocols-TCP and UDP**, IP Addressing:** Introduction-IPv4 Network Addresses -IPv6 Network Addresses -Connectivity Verification, **Subnetting IP Networks:** Introduction-Subnetting IPv4 Network-Addressing Schemes-Design Considerations for IPv6

UNIT-4(4)

Application Layer: Introduction-Application Layer Protocols -Well-Known Application Layer Protocols and Service -The Message Heard around the World**, It's a Network:** Introduction-Create and Grow-Keeping the Network Safe-Basic Network Performance-Managing IOS Configuration Files-Integrated Routing Services

Total Hours:15

REFERENCES:

	L	T	P	C
16BECS751 CCNA–Routing and Switching Essentials	**0**	**0**	**1**	**-**

COURSE OBJECTIVES:

- To discuss the concepts of basic switched networks and configuration
- To describe the concepts of VLAN and routing concepts
- To describe Inter-VLAN Routing and static routing concepts
- To describes the architecture, components, and operation of routers, and explains the principles of routing and routing protocols.
- To analyze, configure, verify, and troubleshoot the primary routing protocols RIPv1, RIPv2, EIGRP, and OSPF.
- To Recognize and correct common routing issues and problems. Model and analyze routing processes.

LEARNING OUTCOMES:

Upon completion of this course the student will be able to:

- Describe the purpose, nature, and operations of a router; describe the purpose and nature of routing tables;
- Describe the purpose and procedure of configuring static routes;
- Develop Inter-VLAN Routing and static routing based applications
- Design and implement a classless IP addressing scheme for a given network;
- Describe the basis features and concepts of link-state routing protocols;
- Configure and verify basic RIPv1, RIPv2, single area OSPF, and EIGRP operations in a small routed network.

UNIT-1
(3)

Introduction to Switched Networks-Objectives-Key Terms-Introduction-LAN Design The Switched Environment. **Basic Switching Concepts and Configuration**-Objectives-Key Terms-Introduction-Basic Switch Configuration-Configure Switch Ports-Switch Security: Management and Implementation

UNIT-2 (3)

VLANs Objectives-Key Terms-Introduction-VLAN Segmentation-VLANs in a Multiswitched Environment-VLAN Implementations-VLAN Trunks-Dynamic Trunking Protocol-Troubleshoot VLANs and Trunks-VLAN Security and Design-Design Best Practices for VLANs **Routing Concepts**-Objectives-Key Terms-Introduction-Functions of a Router Connect Devices-Basic Settings on a Router-Verify Connectivity of Directly Connected-Networks Switching Packets Between Networks-Path Determination-Analyze the Routing Table-Directly Connected Routes-Statically Learned Routes- Dynamic Routing Protocols

UNIT-3 (3)

Inter-VLAN Routing-Objectives-Key Terms-Introduction-Inter-VLAN Routing Configuration-Configure Legacy Inter-VLAN Routing-Configure Router-on-a-Stick Inter-VLAN Routing Troubleshoot Inter-VLAN Routing-Layer 3 Switching-Troubleshoot Layer 3 Switching. **Static Routing**-Objectives-Key Terms-Introduction-Static Routing-Types of Static Routes-Configure IPv4 Static Routes-Configure IPv4 Default Routes-Configure IPv6 Static Routes -Configure IPv6 Default Routes-Review of CIDR and VLSM-CIDR-VLSM-Configure IPv6

UNIT-4 **(3)**

Routing Dynamically-Routing Dynamically-Dynamic Routing Protocol-Operation Dynamic Versus Static Routing-Routing Protocol Operating Fundamentals-Types of Routing Protocols - Distance Vector Routing Protocol Operation-Types of Distance Vector Routing Protocols-RIP and RIPng Routing-Configuring the RIPng Protocol-Link-State Dynamic Routing

Single-Area OSPF-Characteristics of OSPF-OSPF Messages-OSPF Operation-Configuring Single-Area-OSPFv2

UNIT-5 **(3)**

Access Control Lists-IP ACL Operation-Standard Versus Extended IPv4 ACLS-Wildcard Masks in ACLs-Guidelines for ACL Creation- Securing VTY Ports with a Standard IPv4 ACL-IPv6 ACLs.**DHCP**-Dynamic Host Configuration Protocol v4-Configuring a Basic DHCPv4 Server-Configure DHCPv4 Client-Troubleshoot DHCPv4. **Network Address Translationfor IPv4** - NAT Operation-Types of NAT-Benefits of NAT-Configuring NAT- Configuring Dynamic NAT Configuring- Port Address Translation (PAT)-Port Forwarding

Total Hours:15

4. Kevin Wallace, CCNP Routing and Switching ROUTE 300-101 Official Cert Guide, Cisco Press, 2014

COMPUTER SCIENCE AND ENGINEERING

PROFESSIONAL ELECTIVES

16BECS5E01 **Advanced Data Structures**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To enhance the students' knowledge of advanced data structures and algorithmic analysis
- To enhance their expertise in designing and analyzing implementations of data structures for different kinds of problems using heap structures.
- To increase the ability to summarize advanced tree concepts.
- To understand problem solving and applications of Set & Graph Algorithms
- To learn and compute advanced geometric algorithms.
- To explain applications of advanced data structures

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Understand the advanced concepts of data structures and algorithms
- Apply data structures to design and analyze and to solve problems using heap structures.
- Solve problems using the classical algorithms and tree data structures.
- Develop various problem solving applications using Set & Graph Algorithms.
- Interpret and apply various advanced geometric algorithms
- Design and Implement advanced datastructure applications.

UNIT I Fundamentals (9)

Asymptotic Notations – Properties of Big-oh Notation –Conditional Asymptotic Notation – Algorithm Analysis – Amortized Analysis – Introduction to NP-Completeness/NP-Hard – Recurrence Equations – Solving Recurrence Equations

UNIT II Heap Structures (9)

Priority Queues-Min/Max heaps – Leftist Heaps – Binomial Heaps – Fibonacci Heaps – Skew Heaps– lazy Binomial Heaps.

UNIT III Trees (9)

Counting Binary Trees-Huffman coding – Red-Black trees – Multi-way Search Trees –B-Trees – Splay Trees – Tries.

UNIT IV Set & Graph Algorithms (9)

Set ADT- Union & Find data structure and Applications- Graph traversals-DFS, BFS, Bi connected components, Cut vertices, Graph Matching, Network flow Problems

UNIT V Geometric Algorithms(9)

Segment Trees – 1-Dimensional Range Searching - k-d Trees – Line Segment Intersection – Convex Hulls - Computing the Overlay of Two Subdivisions - Range Trees – Voronoi Diagram.

Total Hours: 45

3. AhoHopcroft and Ullman, "Data Structures and Algorithms, Pearson Education,

   4th Edition,2009.

16BECS5E02 **Advanced Computer Architecture**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To understand the advanced concepts of computer, its design and the design of computer design.
- To elaborate advanced concepts of computer architecture, Parallel Processing, inter-processor communication and synchronization.
- To learn various concepts of the Instruction Level parallelism and its issues.
- To understand the different multiprocessor and multi-core architectures.
- To explain multi- core architecture and memory hierarchy design
- To study the Memory and I/O systems and its optimization.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Demonstrate concepts of parallelism in hardware/software
- Understand the Concept of Parallel Processing and its applications
- Analyze the performance of different multiprocessor and multi-core architectures
- Develop the Pipelining Concept for a given set of Instructions
- Discuss memory organization and mapping techniques
- Describe architectural features of advanced processors.

UNIT I Pipelining and ILP (9)

Fundamentals of Computer Design - Measuring and Reporting Performance - Instruction Level Parallelism and Its Exploitation - Concepts and Challenges - Overcoming Data Hazards with Dynamic Scheduling – Dynamic Branch Prediction - Speculation - Multiple Issue Processors – Case Studies.

UNIT II Advanced Techniques for Exploiting ILP (9)

Compiler Techniques for Exposing ILP - Limitations on ILP for Realizable Processors - Hardware versus Software Speculation - Multithreading: Using ILP Support to Exploit Thread-level Parallelism - Performance and Efficiency in Advanced Multiple Issue Processors - Case Studies.

UNIT IIIMultiprocessors (9)

Symmetric and distributed shared memory architectures – Cache coherence issues - Performance Issues – Synchronization issues – Models of Memory Consistency - Interconnection networks – Buses, crossbar and multi-stage switches.

UNIT IV Multi-Core Architectures
(9)

Software and hardware multithreading – SMT and CMP architectures – Design issues – Case studies
– Intel Multi-core architecture – SUN CMP architecture – IBM cell architecture.- hp architecture.

UNIT V Memory Hierarchy Design
(9)

Introduction - Optimizations of Cache Performance - Memory Technology and Optimizations - Protection: Virtual Memory and Virtual Machines - Design of Memory Hierarchies - Case Studies.

Total Hours: 45

TEXT BOOKS:

16BECS5E03 **DESIGN PATTERNS** **L T P C**

3 0 0 3

COURSE OBJECTIVES:

- To Understand the concept of Design patterns and their importance
- To explain various kinds of design patterns
- To Understand the behavioral knowledge of the patterns
- To explain about catalogs
- To Relate the Creational, Structural , behavioral Design patterns
- To Apply the suitable design patterns to refine the basic design for given context

COURSE OUTCOMES:

Upon Completion of this course the student will be able to

- Identify the appropriate design patterns to solve object-oriented design problems
- Develop design solutions using creational patterns
- Able to design various types of patterns design
- Apply structural patterns to solve design problems using catalogs
- Construct design solutions using advanced patterns
- Construct a design consisting of a collection of modules.

UNIT I INTRODUCTION
(9)

History and Origin of Patterns – Applying Design Patterns – Prototyping –Testing.

UNIT II DESIGN PATTERNS
(9)

Kinds of Pattern – Quality and Elements – Patterns and Rules – Creativity and Patterns– Creational Patterns – Structural Patterns – Behavioral Patterns, Factory Patterns

UNIT III FRAMEWORKS
(9)

State and Strategy of Patterns. Singleton, Composite, Functions and the Command Patterns, Adaptor, Proxy Pattern, Decorator Pattern – Pattern Frameworks and Algorithms.

UNIT IV CATALOGS
(9)

Pattern Catalogs and Writing Patterns, Patterns and Case Study

UNIT V ADVANCED PATTERNS
(9)

Anti-Patterns - Case Studies In UML and CORBA, Pattern Community

Total Hours: 45

16BECS5E04	Advanced Databases	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To Introduce and describe current and emerging database models and technologies.
- To Design and implement relational database solutions for general applications.
- To Explain the query processing and techniques involved in query optimization
- To Explain common database administration tasks, such as database monitoring, performance tuning, data transfer, and security.
- explain tools required for current issues in databases
- To Understand the concepts, current practices and issues of data warehouses and databases.

COURSE OUTCOMES:

Upon Completion of this course the student will be able to

- Know recent developments and current trend in database models.
- Develop applications for various relational databases
- Learn and optimize query processing techniques
- Evaluate designs and architectures for databases and data warehouses
- Analyze and develop tools for current issues in databases
- Organize strategic data in an enterprise and build a data Warehouse

UNIT I Relational Model Issues (9)

ER Model – Normalization – Query processing – Query optimization – Transaction processing – Concurrency control – Recovery – Database tuning.

UNIT II Distributed Databases (9)

Parallel databases – Inter and intra query parallelism – Distributed database features – Distributed database architecture – Fragmentation – Distributed query processing – Distributed transactions processing – Concurrency control – Recovery – Commit protocols

UNIT III Object Oriented Databases (9)

Introduction to object oriented databases – Approaches – Modeling and design – Persistence – Query languages – Transaction – Concurrency – Multi version locks – Recovery – POSTGRES – JASMINE– GEMSTONE – ODMG model.

UNIT IV Emerging Systems (9)

Enhanced data models – Client/Server model – Data warehousing and data mining – Web databases – Mobile databases – XML and web databases.

UNIT V Current Issues

(9)

Rules – Knowledge bases – Active and deductive databases – Multimedia databases – Multimedia data structures – Multimedia query languages – Spatial databases.

Total Hours: 45

TEXT BOOKS:

1. Thomas Connolly and CarlolynBegg, "Database Systems, A Practical Approach to Design, Implementation and Management", Pearson Education 2009.

		L	**T**	**P**	**C**
16BECS5E05	**Distributed Computing**				
		3	**0**	**0**	**3**

COURSE OBJECTIVES:

- To understand the fundamentals and acquire knowledge of the architectures of distributed systems.
- To gain knowledge of various remote procedure call models.
- To understand concepts of distributed shared memory systems.
- To make students aware about synchronization and management mechanism for distributed environment.
- To learn features of distributed file systems.
- To discuss the security aspects of distributed systems

COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

- Understand the principles and desired properties of distributed systems based on different application areas.
- Understand and apply the basic theoretical concepts and algorithms of distributed systems in problem solving.
- Learn the concepts of distributed shared memory systems.
- Analyze various synchronization and management techniques for distributed environment.
- Identify the features of distributed file systems.
- An ability to understand the security aspect of distributed systems.

UNIT I Fundamentals (9)

What is distributed computing systems – Evolution of distributed computing systems – Distributed computing system models – What is distributed operating system – Issues in designing distributed operating systems. Message passing – Features of a good message-passing system – Issues in IPC by message passing – Synchronization –Buffering – Multidatagram messages – Encoding and decoding of message data – Failure handling – Group communication.

UNIT II Remote Procedure Calls (9)

RPC Models –Transparency of RPC – Implementing RPC mechanism – Stub generation – RPC messages –Marshaling arguments & results – Server Management – Parameter-passing semantics – Call semantics – Communication protocols for RPCs – Complicated RPCs – Client server binding – Security – Special types of RPCs – Light weight RPC.

UNIT III Distributed Shared Memory (9)

General architecture of DSM systems – Design & implementation issues of DSM – Granularity –

Structure of shared memory space – Consistency models – Replacement strategy – Thrasing – Hetrogenous DSM – Advantages of DSM.

UNIT IV Synchronization and Management (9)

Synchronization – Clock synchronization – Mutual exclusion – Election algorithms – Deadlocks.-Resource Management – Task assignment approach – Load balancing approach – Load sharing approach - Process Management – Process migration – Threads.

UNIT V Distributed File Systems (9)

Desirable features of a good distributed file system – File models – File accessing models – File sharing semantics – File caching schemes – File replications – Fault tolerance – Atomic transaction.

Total Hours: 45

TEXT BOOK:

1. Andrew S.Tanenbaum, and Steen, Maarten van, “Distributed Systems”, 2nd Edition, Prentice Hall of India, 2007

REFERENCES:

1. Pradeep K Sinha, ”Distributed Operating Systems, Concepts & Design”, Prentice Hall of India, 2009.
2. Andrew S.Tanenbaum, ”Distributed Operating Systems”, Prentice Hall of India, 2005.

16BECS5E06	C# and .NET	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To Learn the technologies of the .NET framework
- To Know the object oriented aspects of C#
- To Understand concepts of assemblies, interfaces and collections
- To apply application development in ADO.NET
- Learn web based applications on .NET(ASP.NET)
- To discuss about applications based on C# and .NET in Mobile Application Development.

COURSE OUTCOMES:

Upon Completion of the course, the students should be able to:

- List the major elements of .NET framework
- Explain how C# fits into the .NET platform
- Analyze and apply the concepts of assemblies, interfaces and collections
- Develop, debug, compile and run simple applications of C#
- Implement applications in ADO.NET
- To develop Assemblies and Deployment in .NET, Mobile Application Development.

UNIT I Introduction (9)

Overview of .NET – Advantages of .NET over the other languages – Overview of .NET binaries – Intermediate Language – Metadata – .NET Namespaces – Common language runtime – Common type system – Common language specification – C# fundamentals – C# class – object – string formatting – Types – scope – Constants – C# iteration – Control flow – Operators –

Array – String – Enumerations – Structures – Custom namespaces – Object oriented programming concepts –Class – Encapsulation – Inheritance – Polymorphic – Casting.

UNIT II Assemblies
(9)

Assemblies – Versioning – Attributes – Reflection – Viewing metadata – Type discovery – Reflecting on a type –Marshaling – Remoting – Understanding server object types – Specifying a server with an interface – Building a server – Building the client – Exception handling – Garbage collector.

UNIT III Interfaces and Collections
(9)

Interfaces and collections – Enumerator – Cloneable objects – Comparable objects – Collections – Indexes – Delegates – Events – Multithreaded programming. Programming with windows form controls – Windows form control Hierarchy – Adding controls – TextBox – CheckBoxes – RadioButtons – GroupBoxes – ListBoxes – ComboBoxes – TrackBar – Calender – Spin Control – Panel – ToolTips –ErrorProvider – Dialog Boxes.

UNIT IVIO Namespace and ADO .NET **(9)**

Input and output – Introduction to System. IO .namespace – File and folder operations – Stream class

– Introduction to ADO .NET – Building data table – Data view – Data set – Data relations
– ADO.NET managed providers – OleDb managed provider – SQL.

UNIT V ASP .NET and Web Services (9)

Web development and ASP.NET – Web applications and web servers – HTML form development – Client side scripting – GET and POST – ASP.NET application – ASP.NET namespaces – creating sample C# web Applications. Understanding Web Security – Windows authentication – Forms authentication – Web services – Web services – Web service clients – The City View application.

Total Hours: 45

TEXT BOOK:

1. Andrew Troelsen, "C# and the .NET Platform", A! Press, 6th edition, 2012.

REFERENCE:

16BECS5E07SERVLETS AND JSP

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- Write servlets using the Java programming language (Java servlets)
- Understand and manage HTTP sessions in a web application
- Create servlet filters and listeners
- Write pages created with Java Server Pages technology (JSP pages)
- Create easy-to-maintain JSP pages using the Expression Language and the JSP Standard Tag Library (JSTL)
- Use integrated development environments (IDEs) and application servers for Java EE development and deployment

COURSE OUTCOMES:

- Construct and deploy small-to-medium scale web applications found in intranet and low-volume commercial sites by using JavaServer Page (JSP page) technology and servlets.
- Apply Model-View-Controller (MVC) architecture to projects in EE environments.
- Create servlet filters and listeners.
- Understand and manage HTTP sessions in a web application.
- Create easy-to-maintain JSP pages using Expression Language and the JSP Standard Tag Library (JSTL).
- Analyze, design, develop and deploy web applications with Java EE 6 SDK and the application server Oracle WebLogic Server

UNIT I SERVLETS (9)

Web Application - Java Servlets - Servlet Lifecycle - Servlet Context - Session management - Building the first Servlet - Deploying the Servlet

UNIT II INTRODUCTION TO JSP (9)

Introduction to Java Server Pages - Features of JSP - Basic HTML Tags - JSP Tag library - JSP Page Life cycle - Developing a Simple Java server Page - - JSP Processing Model - Comments and Character Coding - MVC architecture - 3-tier architecture - Advantages of JSP over competing technologies

UNIT III JSP SCRIPTING ELEMENTS AND DIRECTIVES (9)

Forms of Scripting Elements - Predefined Variables - Examples using Scripting Elements - JSP Directives - JSP Page Directive - JSP Include Directive

UNIT IV JSP ACTIONS AND CUSTOM TAGS (9)

JSP Actions - include Action - forward Action - plugin Action - Java Beans - Bean Related – Actions - Custom Tag - Types of Tags - Creating Custom Tags

UNIT V ADVANCE CUSTOM TAGS AND JSTL (9)

Introduction - Using Simple Tag - Using tag files - JSP Standard Tag Library – purpose JSTL - Using Expression Language - Using JSTL

Total Hours: 45

16BECS5E08 **User Interface Design**

COURSE OBJECTIVES:

- To study the concept of menus, windows, interfaces.

- To study about business functions.
- To study the characteristics and components of windows.
- To study the various controls for the windows.
- To study about various problems in windows design with color, text, graphics
- To implement the basics and in-depth knowledge about UID. It enables the students to take upthe design the user interface, design, menu creation and windows creation and connection between menu and windows

COURSE OUTCOMES:

Upon Completion of the course, the students will be able:

- To demonstrate knowledge of some theories of design of user interfaces
- To demonstrate knowledge of different interaction styles
- To analyze a user interface from a communication perspective
- To demonstrate an awareness of the relation between interaction design and user expectations.
- To design the user interface, design, menu creation and windows creation and connection between menu and windows.
- To study the Testing Methods.

UNIT- I Introduction

Introduction- Importance-Human-Computer interface-characteristics of graphics interface-Direct manipulation graphical system - web user interface-popularity-characteristic & principles.

UNIT- II UI Design Process
(9)

User interface design process- obstacles-usability-human characteristics in design - Human interaction speed-business functions-requirement analysis-Direct-Indirect methods-basic business functions-Design standards-system timings - Human consideration in screen design - structures of menus - functions of menus-contents of menu-formatting -phrasing the menu - selecting menu choice-navigating menus-graphical menus.

UNIT- III UI Controls
(9)

Windows: Characteristics-components-presentation styles-types-managements-organizations-operations-web systems-device-based controls: characteristics-Screen -based controls: operate control - text boxes-selection control-combination control-custom control-presentation control.

UNIT- IVWeb Page Designing (9)

Text for web pages - effective feedback-guidance & assistance-Internationalization-aaccessibility-Icons-Image-Multimedia -coloring.

UNIT- V UI Tests
(9)

Windows layout-test: prototypes - kinds of tests - retest - Information search - visualization - Hypermedia - www - Software tools.

Total Hours: 45

16BECS6E01	INTERNET OF THINGS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To understand the basics of Internet of Things
- To get an idea of some of the application areas where Internet of Things can be applied
- To understand the middleware for Internet of Things
- To understand the concepts of Web of Things
- To understand the concepts of Cloud of Things with emphasis on Mobile cloud computing
- To understand the IOT protocols

COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

- Understand the concepts of Internet of Things
- Identify and design the new models for various applications using IoT
- Design business intelligence and information security for WoB (Web of Things)
- Analyze various protocols for IoT
- Design a middleware for IoT
- Analyze and design different models for network dynamics

UNIT I INTRODUCTION
(**10)**

Definitions and Functional Requirements –Motivation – Architecture - Web 3.0 View of IoT– Ubiquitous IoT Applications – Four Pillars of IoT – DNA of IoT - The Toolkit Approach for End-user Participation in the Internet of Things. Middleware for IoT: Overview – Communication middleware for IoT –IoT Information Security

UNIT II IOT PROTOCOLS
(8)

Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols –
Issues with IoT Standardization – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus – KNX – Zigbee Architecture – Network layer – APS layer – Security

UNIT III WEB OF THINGS (10)

Web of Things versus Internet of Things – Two Pillars of the Web – Architecture Standardization for WoT– Platform Middleware for WoT – Unified Multitier WoT Architecture – WoT Portals and Business Intelligence. Cloud of Things: Grid/SOA and Cloud Computing – Cloud Middleware – Cloud Standards

– Cloud Providers and Systems – Mobile Cloud Computing – The Cloud of Things Architecture

UNIT IV INTEGRATED
(9)

Integrated Billing Solutions in the Internet of Things Business Models for the Internet of Things - Network Dynamics: Population Models – Information Cascades - Network Effects - Network Dynamics: Structural Models - Cascading Behavior in Networks - The Small-World Phenomenon

UNIT V APPLICATIONS
(8)

The Role of the Internet of Things for Increased Autonomy and Agility in Collaborative Production Environments - Resource Management in the Internet of Things: Clustering, Synchronisation and Software Agents. Applications - Smart Grid – Electrical Vehicle Charging

Total Hours: 45

TEXT BOOK:

16BECS6E02 NETWORK ROUTING ALGORITHMS

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To expose the students to the layered architecture for communication networks
- To explain about Internet Routing protocols
- To discuss specific functionality of the network layer.
- To enable the student to understand the basic principles of routing and implementation in conventional networks and the evolving routing algorithms based on Internetworking requirements, optical backbone and the wireless access part of the network.
- Explain about mobile ad –hoc networks
- To enable the student to understand the different routing algorithms existing and their performance characteristics.

COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

- Understand layered architecture and its significance.
- Learn network layer and various routing techniques available.
- Apply knowledge for identifying a suitable routing algorithm ,implementing it and analyzing its performance for any given network and user requirements and the type of channel over which the network has to operate,
- Design a new algorithm or modify an existing algorithm to satisfy the evolving demands in the network and by the user applications.
- Compare Routing techniques and protocols.
- Acquire the knowledge of how data transfer happen in conventional networks.

UNIT I Introduction
(7)

ISO OSI Layer Architecture, TCP/IP Layer Architecture, Functions of Network layer, General Classification of routing, Routing in telephone networks, Dynamic Non hierarchical Routing (DNHR), Trunk status map routing (TSMR), real-time network routing (RTNR), Distance vector routing, Link staterouting, Hierarchical routing.

UNIT II Internet Routing
(10)

Interior protocol : Routing Information Protocol (RIP), Open Shortest Path First(OSPF), Bellman Ford Distance Vector Routing. Exterior Routing Protocols: Exterior Gateway Protocol (EGP) and Border Gateway Protocol (BGP). Multicast Routing: Pros and cons of Multicast and Multiple Unicast Routing, Distance Vector Multicast Routing Protocol (DVMRP), Multicast

Open Shortest Path First (MOSPF), MBONE, Core Based Tree Routing.

UNIT III Routing In Optical Wdm Networks
(10)

Classification of RWA algorithms, RWA algorithms, Fairness and Admission Control, Distributed Control Protocols, Permanent Routing and Wavelength Requirements,Wavelength Rerouting-Benefits and Issues, Lightpath Migration, Rerouting Schemes, Algorithms- AG, MWPG.

UNIT IV Mobile - IP Networks
(9)

Macro-mobility Protocols, Micro-mobility protocol:Tunnel based : Hierarchical Mobile IP, Intra domain Mobility Management, Routing based: Cellular IP, Handoff Wireless Access Internet Infrastructure (HAWAII).

UNIT V Mobile Ad –Hoc Networks
(9)

Internet-based mobile ad-hoc networking communication strategies, Routing algorithms – Proactive routing: destination sequenced Distance Vector Routing (DSDV), Reactive routing: Dynamic Source Routing (DSR), Ad hoc On-Demand Distance Vector Routing (AODV), Hybrid Routing: Zone Based Routing (ZRP).

Total Hours: 45

16BECS6E03 **ADVANCED OPERATING SYSTEMS**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To learn the advance concepts of Operating Systems
- To gain knowledge on Distributed operating system concepts that includes architecture, Mutual exclusion algorithms, Deadlock detection algorithms and agreement protocols
- To gain insight on to the distributed resource management components viz. the algorithms for implementation of distributed shared memory, recovery and commit protocols
- To know the components and management aspects of Real timeand Mobile operating systems
- To explain case studies in Linux, iOS and Android systems
- To explain real time operating systems

LEARNING OUTCOME:

Upon Completion of the course, the students will be able to:

- Discuss the various synchronization, scheduling and memory management issues
- Demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system
- Discuss the various resource management techniques for distributed systems components viz. the algorithms for implementation of distributed shared memory, recovery and commit protocols
- Identify the different features of real time and mobile operating systems
- Install and use available open source kernel in Linux, iOS and Android systems
- Modify existing open source kernels in terms of functionality or features used.

UNIT I FUNDAMENTALS OF OPERATING SYSTEMS (9)

Overview – Synchronization Mechanisms – Processes and Threads - Process Scheduling – Deadlocks: Detection, Prevention and Recovery – Models of Resources – Memory Management Techniques.

UNIT II DISTRIBUTED OPERATING SYSTEMS (9)

Issues in Distributed Operating System – Architecture – Communication Primitives – Lamport's Logical clocks – Causal Ordering of Messages – Distributed Mutual Exclusion Algorithms – Centralized and Distributed Deadlock Detection Algorithms – Agreement Protocols.

UNIT III DISTRIBUTED RESOURCE MANAGEMENT (9)

Distributed File Systems – Design Issues - Distributed Shared Memory – Algorithms for Implementing Distributed Shared memory–Issues in Load Distributing – Scheduling Algorithms – Synchronous and Asynchronous Check Pointing and Recovery – Fault Tolerance – Two-Phase Commit Protocol – Nonblocking Commit Protocol – Security and Protection.

UNIT IV REAL TIME AND MOBILE OPERATING SYSTEMS (9)

Basic Model of Real Time Systems - Characteristics- Applications of Real Time Systems – Real Time Task Scheduling - Handling Resource Sharing - Mobile Operating Systems – Micro Kernel Design - Client Server Resource Access – Processes and Threads - Memory Management – File system.

UNIT V CASE STUDIES (9)

Linux System: Design Principles - Kernel Modules - Process Management Scheduling – Memory Management - Input-Output Management - File System - Interprocess Communication. iOS and Android: Architecture and SDK Framework - Media Layer - Services Layer - Core OS Layer – File System.

Total Hours: 45

16BECS6E04 **VIDEO ANALYTICS**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To introduce big data & data analysis concepts
- To learn various techniques for mining data streams.
- To understand the models used for recognition of objects in videos.
- To learn Event Modeling for different applications.
- To acquire the knowledge of extracting information from surveillance videos.
- Discuss identification, analysis and applications of algorithm for developing real world problems

COURSE OUTCOMES:

- Work with big data platform and its analysis techniques.
- Understand the approaches for identifying and tracking objects and person with motion based algorithms.
- Understand the algorithms available for searching and matching in video content.
- Analyze approaches for action representation and recognition.
- Identify, Analyze and apply algorithms for developing solutions for real world problems.
- Design video analytic algorithms for business intelligence

UNIT I INTRODUCTION TO BIG DATA & DATA ANALYSIS(9)

Introduction to Big Data Platform – Challenges of Conventional systems – Web data- Evolution of Analytic scalability- analytic processes and tools- Analysis Vs Reporting- Modern data analytic tools- Data Analysis: Regression Modeling- Bayesian Modeling- Rule induction.

UNIT II MINING DATA STREAMS (9)

Introduction to Stream concepts- Stream data model and architecture – Stream Computing-Sampling data in a Stream- Filtering Streams- Counting distinct elements in a Stream-Estimating moments- Counting oneness in a window- Decaying window- Real time Analytics platform(RTAP) applications- case studies.

UNIT III VIDEO ANALYTICS (9)

Introduction- Video Basics - Fundamentals for Video Surveillance- Scene Artifacts - Object Detection and Tracking: Adaptive Background Modelling and Subtraction- Pedestrian Detection and Tracking-Vehicle Detection and Tracking- Articulated Human Motion Tracking in Low-Dimensional Latent Spaces

UNIT IV BEHAVIOURAL ANALYSIS & ACTIVITY RECOGNITION (9)

Event Modelling- Behavioural Analysis- Human Activity Recognition-Complex Activity Recognition- Activity modelling using 3D shape, Video summarization, shape based activity models- Suspicious Activity Detection

UNIT V HUMAN FACE RECOGNITION & GAIT ANALYSIS (9)

Introduction: Overview of Recognition algorithms – Human Recognition using Face: Face Recognition from still images, Face Recognition from video, Evaluation of Face Recognition

Technologies- Human Recognition using gait: HMM Framework for Gait Recognition, View Invariant Gait Recognition, Role of Shape and Dynamics in Gait Recognition

Total Hours: 45

TEXT BOOK:

16BECS6E05	Ad-Hoc Network	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To learn Ad-Hoc Wireless Networks, Issues, and Classification of MAC Protocols.
- To understand the different types of AdHoc Routing Protocols and TCP over AdHoc Protocol.
- To understand about Sensor Network Architecture, its Applications and MAC Protocols for sensor networks.
- To learn the Different Issues in Wireless Sensor Routing and also Indoor and outdoor Localization and Quality of Service in WSN.
- To learn Mesh Networks, IEEE 802.11s Architecture and different types of Mesh Networks.
- Investigation of different protocols and mobile/wireless networks.□□□

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Gain the knowledge of Ad-Hoc Network and its issues.
- Identify the basic problems, limitations, strengths and current trends of mobile computing
- Analyze the current wireless networking mechanisms for mobile computing
- Analyze and critique the performance of different networks and algorithms for mobile Computing
- Develop an attitude to propose solutions with comparisons for problems related to mobile computing
- Investigation of different protocols and mobile/wireless networks

UNIT I Ad-Hoc MAC (9)

Issues in Ad-Hoc Wireless Networks. MAC Protocols – Issues, Classifications of MAC protocols, Multi channel MAC & Power control MAC protocol.

UNIT II Ad-Hoc Network Routing & TCP (9)

Issues – Classifications of routing protocols – Hierarchical and Power aware. Multicast routing – Classifications, Tree based, Mesh based. Ad Hoc Transport Layer Issues. TCP Over Ad Hoc – Feedback based, TCP with explicit link, TCP-Bus, Ad Hoc TCP, and Split TCP.

UNIT III WSN –MAC (9)

Introduction – Sensor Network Architecture, Data dissemination, Gathering. MAC Protocols – self-organizing, Hybrid TDMA/FDMA and CSMA based MAC.

UNIT IVWSN Routing, Localization & QOS (9)

Issues in WSN routing – OLSR, AODV. Localization – Indoor and Sensor Network Localization. QoS in WSN.

UNIT V Mesh Networks (9)

Necessity for Mesh Networks – MAC enhancements – IEEE 802.11s Architecture – Opportunistic routing – Self configuration and Auto configuration – Capacity Models – Fairness – Heterogeneous Mesh Networks – Vehicular Mesh Networks.

Total Hours: 45

		L	T	P	C
16BECS6E06	Cloud Computing				
		3	0	0	3

COURSE OBJECTIVES:

- To learn the basic concepts of cloud computing.
- To learn types of cloud services and its applications.
- To understand the key components of Amazon Web Services.
- To collaborate with real time cloud services.
- To understand the security risk and application of cloud computing.
- Discuss the assess the risks, opportunities, costs and steps towards migrating existing systems to service and cloud computing

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Define basic concepts of cloud computing.
- Use and Examine different cloud computing services.
- Understand and appreciate the technological impact of service and cloud computing for
- future enterprises, and the technologies underpinning it.
- Describe importance of virtualization along with their technologies
- Analyze the key components of Amazon web Service
- Review and assess the risks, opportunities, costs and steps towards migrating existingsystems to service and cloud computing.

UNIT- I Cloud Introduction (9)

Cloud Computing Fundamentals: Cloud Computing definition, Types of cloud, Cloud services: Benefits and challenges of cloud computing, Evolution of Cloud Computing , usage scenarios and Applications, Business models around Cloud – Major Players in Cloud Computing - Issues in Cloud - Eucalyptus - Nimbus – Open Nebula, CloudSim.

UNIT-II Cloud Services and File System (9)

Types of Cloud services **:** Software as a Service - Platform as a Service – Infrastructure as a Service - Database as a Service - Monitoring as a Service – Communication as services. Service providers - Google App Engine, Amazon EC2, Microsoft Azure, Sales force. Introduction to MapReduce, GFS, HDFS, Hadoop Framework.

UNIT-IIICollaborating with Cloud **(9)**

Collaborating on Calendars, Schedules and Task Management – Collaborating on Event Management, Contact Management, Project Management – Collaborating on Word Processing ,Databases – Storing and Sharing Files- Collaborating via Web-Based Communication Tools – Evaluating Web Mail Services – Collaborating via Social Networks – Collaborating via Blogs and Wikis.

UNIT-IV Virtualization for Cloud
(9)

Need for Virtualization – Pros and cons of Virtualization – Types of Virtualization – System Vm, Process VM, Virtual Machine monitor – Virtual machine properties - Interpretation and binary translation, HLL VM - Hypervisors – Xen, KVM , VMWare, Virtual Box, Hyper-V.

UNIT-VSecurity, Standards, and Applications
(9)

Security in Clouds: Cloud security challenges – Software as a Service Security, Common Standards: The Open Cloud Consortium – The Distributed management Task Force – Standards for application Developers – Standards for Messaging – Standards for Security, End user access to cloud computing, Mobile Internet devices and the cloud.

Total Hours: 45

		L	T	P	C
16BECS6E07	**Software Project Management**				
		3	0	0	3

L **T P C**

COURSE OBJECTIVES:

- understand the concepts of software process and its models
- To understand software metrics and measurement.
- To learn quality assurance and various tools used in quality management.
- To learn in detail about various quality assurance models.
- To understand the audit and assessment procedures to achieve quality.
- To discuss construction of a quality model for a software development project.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Understand in the context of software development projects, what approaches exist to manage the issues
- Identify the fundamental issues that a project manager has to consider, and describe, chiefly

  in the context of software development projects, what approaches exist to manage these issues

- Identify and analyze software project activities using contemporary work breakdown techniques

- Identify and apply selected techniques for estimating the effort and duration of project activities
- Construct a schedule of project activities using contemporary planning techniques

- Construct a quality model for a software development project, including identification of

  suitable quality attributes, suitable metrics for measuring these, and suitable threshold values for these metrics to indicate acceptable quality

UNIT I Software Process and People Management **(9)**

Process Maturity – Capability Maturity Model (CMM) – Variations in CMM - Productivity improvement process. Organization structure – Difficulties in people management - Effective team building – Role of Project manager - Team structures – Comparison of different team structures.

UNIT IISoftware Metrics **(9)**

Role of metrics in software development - Project metrics – Process metrics – Data gathering - Analysis of Data for measuring correctness, integrity, reliability and maintainability of Software products.

UNIT III Project Management **(9)**

Project initiation – Feasibility study - Planning - Estimation - Resource allocation
- RootCause Analysis.

UNIT IVRisk Management **(9)**

Risk analysis and management - Types of Risk involved - RMM plan.

UNIT VProject Scheduling and Tracking Software Configuration Management **(9)**

Scheduling - Critical path – Tracking - Timeline chart – Earned value chart. Baselines - Software configuration items - The SCM process- Version control- Change control -Configuration audit - SCM standards.

Total Hours:45

TEXT BOOK:

16BECS6E08 **TCP / IP DESIGN AND IMPLEMENTATION**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To understand the IP addressing schemes.
- To learn the fundamentals of network design and implementation
- To understand the design and implementation of TCP/IP networks
- To learn the network management issues
- To understand the design and implement network applications.
- Able to solve network management issues.

COURSE OUTCOME:

Upon completion of this course, the students will be able to:

- Design and implement TCP/IP networks.
- Explain network management issues.
- Develop data structures for basic protocol functions of TCP/IP.
- Apply the members in the respective structures.
- Design and implement data structures for maintaining multiple local and global timers.
- Able to solve network management issues.

UNIT- I INTRODUCTION
(9)

Internetworking concepts and architectural model- classful Internet address – CIDR-Subnetting and Supernetting –ARP- RARP- IP – IP Routing –ICMP – Ipv6

UNIT- II TCP
(9)

Services – header – connection establishment and termination- interactive data flow- bulk data flow-timeout and retransmission – persist timer - keepalive timer- futures and performance

UNIT- III IP IMPLEMENTATION
(9)

IP global software organization – routing table- routing algorithms-fragmentation and reassembly-error processing (ICMP) –Multicast Processing (IGMP)

UNIT- IV TCP IMPLEMENTATION I
(9)

Data structure and input processing – transmission control blocks- segment format- comparison-finite state machine implementation-Output processing- mutual exclusion-computing the TCP data length

UNIT- V TCP IMPLEMENTATION II (9)

Timers-events and messages- timer process- deleting and inserting timer event- flow control and adaptive retransmission-congestion avoidance and control – urgent data processing and push function.

Total Hours:45

TEXT BOOK:

1. Douglas E.Comer, Internetworking with TCP/IP Principles Protocols and Architecture (4^{th} edition), Pearson Education Asia, 2006

16BECS7E01	Managing Big Data	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To explore the fundamental concepts of big data analytics □□
- To learn and analyze big data like Hadoop, NoSql MapReduce. □□□
- To understand the various search methods and visualization techniques. □□□
- To learn the techniques and principles in achieving big data analytics with scalability and streaming capability
- To learn Hive and Pig scripts in the Hadoop environment.
- To explain the challenges and solutions in Big Data.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Gain knowledge of Big Data and Hadoop ecosystem
- Acquire fundamental enabling techniques and scalable algorithms like Hadoop, Map Reduce and NO SQL in big data analytics.
- Interpret business models and scientific computing paradigms, and apply software tools for big data analytics.
- Design and implement MapReduce programs and implementing HBase
- Implement Hive and Pig scripts in the Hadoop Environment.
- Discuss the Challenges and Solutions in Big Data.

UNIT I Introduction to Big Data (9)

Introduction to BigData Platform –Challenges of Conventional Systems -Intelligent data analysis – Nature of Data -Analytic Processes and Tools -Analysis vs Reporting-Modern Data Analytic Tools - Statistical Concepts: Sampling Distributions -Re-Sampling -Statistical Inference -Prediction Error.

UNIT II Mining Data Streams (9)

Introduction To Streams Concepts –Stream Data Model and Architecture -Stream Computing -Sampling Data in a Stream –Filtering Streams –Counting Distinct Elements in a Stream –Estimating Moments –Counting Oneness in a Window –Decaying Window -Real time Analytics Platform(RTAP)Applications -Case Studies -Real Time Sentiment Analysis, Stock Market Predictions.

UNIT III Hadoop (9)

History of Hadoop-The Hadoop Distributed File System –Components of Hadoop-Analyzing the Data with Hadoop-Scaling Out-Hadoop Streaming-Design of HDFS-Java interfaces to

HDFSBasics-Developing a Map Reduce Application-How Map Reduce Works-Anatomy of a Map Reduce Job run-Failures-Job Scheduling-Shuffle and Sort –Task execution -Map Reduce Types andFormats-Map Reduce Features

UNIT IV Hadoop Environment
(9)

Setting up a Hadoop Cluster -Cluster specification -Cluster Setup and Installation –Hadoop Configuration-Security in Hadoop -Administering Hadoop –HDFS -Monitoring-Maintenance-Hadoop bench marks-Hadoop in the cloud

UNIT V Frameworks
(9)

Applications on Big Data Using Pig and Hive–Data processing operators in Pig –Hive services –HiveQL –Querying Data in Hive-fundamentals of HBase and ZooKeeper -IBM InfoSphereBigInsights and Streams. Visualizations-Visual data analysis techniques, interaction techniques;Systems and applications.

16BECS7E02 **Wireless Sensor Networks**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To understand the concepts of wireless sensor networks.
- To learn how to program sensor nodes
- To understand the medium access protocol and address the physical layer issues.
- To learn network and transport layer protocols for sensor networks and design requirements.
- To learn the efficient routing algorithm
- To understand the middleware and security issues of wireless sensor networks.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Apply knowledge of wireless sensor networks to various application areas.
- Design, implement and maintain wireless sensor networks.
- Define medium access layer issues.
- Address the transport protocol design issues.
- Design the efficient routing algorithm
- Analyze the security issues in wireless sensor networks

UNIT I Fundamentals of Sensor Networks
(9)

Introduction and Overview - Overview of sensor network protocols, architecture, and applications, Challenges, Main features of WSNs; Research issues and trends, Platforms-Standards and specifications-IEEE802.15.4/Zigbee, Hardware: Telosb, Micaz motes ,Software: Overview of Embedded operating systems-Tiny OS, Introduction to Simulation tools- TOSSIM, OPNET, Ns-2.

UNIT II Communication Characteristics and Deployment Mechanisms
(9)

Wireless Communication characteristics - Link quality, fading effects, Shadowing, Localization, Connectivity and Topology - Sensor deployment mechanisms, Coverage issues, Node discovery protocols.

UNIT III Mac Layer
(9)

Fundamentals of Medium access protocol- Medium access layer protocols - Energy efficiency, Power allocation and Medium access control issues.

UNIT IV Network Layer and Transport Layer
(9)

Network layer protocols-Data dissemination and processing, multichip and cluster based routing protocols- Energy efficient routing- Geographic routing, Transport layer- Transport protocol Design issues- Performance of Transport Control Protocols.

UNIT V Middleware and Security Issues
(9)

Middleware and Application layer -Data dissemination, Data storage, Query processing, Security - Privacy issues, Attacks and Countermeasures

Total Hours :45

TEXT BOOKS:

1. WaltenegusDargie, Christian Poellabauer , “Fundamentals of Wireless Sensor Networks, Theory and Practice”, Wiley Series on wireless Communication and Mobile Computing,

   2010.

2. KazemSohraby, Daniel manoli , “Wireless Sensor networks- Technology, Protocols and Applications”, Wiley InderScience Publications, 2010.

REFERENCES:

1. BhaskarKrishnamachari , “ Networking Wireless Sensors”, Cambridge University Press, 2011.

16BECS7E03 **HUMAN COMPUTER INTERACTION**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To understand the concepts relating to the design of human-computer interfaces in ways making computer-based systems comprehensive, friendly and usable.
- To understand the design and evaluation of interactive systems
- To understand various universal design principles and multimodal systems
- To understand the theoretical dimensions of human factors involved in the acceptance of computer interfaces.
- To understand the important aspects of implementation of human-computer interfaces.
- To identify the various tools and techniques for interface analysis, design, and evaluation.

COURSE OUTCOMES:

- Understand key aspects of human psychology which can determine user actions at and satisfaction of the interface.
- Describe the key design principles for user interfaces.
- Set up and carry out a process to gather requirements for, engage in iterative design of, and evaluate the usability of a user interface.
- Describe how user interface development can be integrated into an overall software development process.
- Understanding of the ethical issues involved in testing user interfaces.
- □pply Human Computer Interface in real time applications

UNIT I Design Process
(9)

Humans – Information Process – Computer – Information Process – Differences and Similarities – Need for Interaction – Models – Ergonomics – Style – Context – Paradigms – Designing of Interactive Systems – Usability – Paradigm shift – Interaction Design Basics – Design Process – Scenarios – Users Need –Complexity of Design

UNIT II Design and Evaluation of Interactive Systems
(9)

Software Process – Usability Engineering – Issue based Information Systems – Iterative Design Practices – Design Rules – Maximum Usability – Principles – Standards and Guidelines – Design Patterns – Programming Tools – Windowing Systems – Interaction Tool Kit – User Interface Management System – Evaluation Techniques – Evaluation Design – Evaluating Implementations – Observational Methods.

UNIT III Models
(9)

Universal Design Principles – Multimodal Systems – User Support – Presentation and Implementation Issues – Types – Requirements – Approaches – Cognitive Model – Hierarchical Model – Linguistic Model – Physical and Device Models – Socio technical Models – Communication and Collaboration Models – Task Models – Task Analysis And Design.

UNIT IVExperimental Design and Statistical Analysis of HCI
(9)

Basic Design Structure – Single Independent Variable – Multiple Independent Variable – Factorial Design – Split-Plot Design – Random Errors – Experimental Procedure – Statistical Analysis – T Tests – Analysis of Variance Test – Regression – Chi-Square Test – Survey – Probabilistic Sampling
– Non-Probabilistic Sampling – Developing Survey Questions.

UNIT V Theories
(9)

Dialogue Notations and Design – Dialogue Need – Dialogue Design Notations – Graphical – Textual - Representing Dialogue – Formal Descriptions – Dialogue Analysis – System Models – Interaction Models – Relationship with Dialogue – Formalisms – Formal Notations – Interstitial Behavior – Virtual Reality – Modeling Rich Interaction – Status Event Analysis – Properties – Rich Contexts – Sensor-based Systems – Groupware – Applications – Ubiquitous Computing – Virtual Reality

Total Hours:45

TEXT BOOKS:

1. Alan Dix, Janet Finlay, Gregory Abowd, Russell Beale, "Human Computer Interaction", Third Edition, Prentice Hall, 2004.

REFERENCES:

1. Jonathan Lazar Jinjuan Heidi Feng, Harry Hochheiser, "Research Methods in Human Computer Interaction", Wiley, 2010.

2. Ben Shneiderman and Catherine Plaisant, "Designing the User Interface: Strategies for

   Effective Human-Computer Interaction", Fifth Edition, Addison-Wesley Publishing Co, 2010.

16BECS7E04 INFORMATION SECURITY

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To understand the basics of Information Security and its model.
- To learn the legal, ethical and professional issues in Information Security
- To understand the need of risk management and risk control.
- To study the critical need for ensuring Information Security in Organizations.
- To learn the security policy, standards and security analyzing tools.
- Discuss the CIA triad of Confidentiality, Integrity and Availability

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Analyze the appropriate techniques to tackle and solve problems in the discipline of information security management.
- Gain the knowledge of security and its management for any modern organization.
- Develop an understanding of security policies to implement, such policies in the form of message exchanges.
- Develop security management system should be planned, documented, implemented and improved, according to the security standard on information security management.
- Use and Examine the threats by security analysis tools
- Understand the CIA triad of Confidentiality, Integrity and Availability

UNIT I Introduction (9)

History, Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC.

UNIT II Security Investigation (9)

Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues

UNIT III Security Analysis (9)

Risk Management: Identifying and Assessing Risk, Assessing and Controlling Risk

UNIT IV Logical Design (9)

Blueprint for Security, Information Security Policy, Standards and Practices, ISO 17799/BS 7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity

UNIT VPhysical Design
(9)

Security Technology, IDS, Scanning and Analysis Tools, Cryptography, Access Control Devices, Physical Security, Security and Personnel

Total Hours: 45

TEXT BOOK:

1. Michael E Whitman and Herbert J Mattord. "Principles of Information Security", Second Edition, Vikas Publishing House, New Delhi, 2003.

REFERENCES:

1. Micki Krause, Harold F. Tipton," Handbook of Information Security Management", Auerbach Publications, 4^{th} edition,2012.

2. Stuart McClure, Joel Scrambray, George Kurtz, "Hacking Exposed", Tata McGraw-Hill, 7^{th} edition, 2012.

16BECS8E01 **SEMANTIC WEB**

L	T	P	C
3	0	0	3

COURSE OBJECTIVE:

- To understand the basic concepts and layers of semantic web.
- To learn RDF data models and querying the semantic web using SPARQL
- To learn Ontology Engineering, construction and reusing.
- To understand the description logics and monotonic rules.
- To learn Social Network Analysis and semantic web
- Discuss the Semantic web technologies for real world applications.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Describe the rationale behind Semantic Web.
- Model ontologies using Resource Description Framework (RDF).
- Design RDF Schemas for ontologies.
- Model and design ontologies using Web Ontology Language (OWL).
- Query ontologies using SPARQL.
- Apply Semantic web technologies to real world applications.

UNIT IINTRODUCTION (9)

History – Semantic web layers –Semantic web technologies – Semantics in semantic web – XML: Structuring – Namespaces – Addressing – Querying-Processing XML.

UNIT II Rdf and Querying the Semantic Web (9)

RDF data model-syntaxes-Adding semantics -RDF schema-RDF and RDF schema in RDF schema-An axiomatic semantics for RDF and RDF schema-Querying the semantic web-SPARQL-Basics-Filters-Constructs-Organizing result sets-Querying schemas.

UNIT III Ontology (9)

Introduction – Ontology movement – OWL – OWL specification - OWL elements – OWL constructs: Simple and complex – Ontology engineering: Introduction – Constructing ontologies – Reusing ontologies – On-To-Knowledge semantic web architecture

UNIT IV Logic and Inference (9)

Logic – Description logics - Rules – Monotonic rules: syntax, semantics and examples – Non-monotonic rules – Motivation, syntax, and examples – Rule markup in XML: Monotonic rules - Non-Monotonic rules

UNIT V Applications of Semantic Web Technologies (9)

Good relations-BBC artists-BBC world cup 2010 website-Government data, Newyork times-Sigma and sindiceopen Calais-schema.org-Future of semantic web

Total Hours - 45

TEXT BOOKS:

1. Grigorous Antoniou and Van Hermelen, A Semantic Web Primer. New Delhi: The MIT Press, 2012.

2. James Hendler, Henry Lieberman and Wolfgang Wahlster, Spinning the Semantic Web: Bringing the World Wide Web to its full potential. New Delhi: The MIT Press, 2005.

REFERENCES:

2. Pascal Hitzler, Markus Krötzsch, Sebastian Rudolph, Foundations of Semantic Web Technologies, Chapman & Hall/CRC, 2009

16BECS8E02 **E-COMMERCE**

COU RSE

OBJECTIVES:

- To understand the basic concepts of E-commerce and its values.
- To learn key features of Internet, Intranets and Extranets and explain how they relate to each other
- To understand web servers, protocol and EC software.
- To obtain the knowledge of online security issues to assess existing websites.
- To understand the web-based marketing and its advantages
- To discuss the use of a social media technology in a business or government application

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Demonstrate an understanding of the foundations and importance of E-commerce.
- Describe the infrastructure required for E-commerce.
- Describe the key features of Internet, Intranets and Extranets and explain how they relate to each other.
- Analyze the online threats and strategies for marketing.
- Discuss legal issues and privacy in E-Commerce.
- Demonstrate the use of a social media technology in a business or government application

UNIT I INTRODUCTION (9)

Traditional commerce and E commerce – Internet and WWW – role of WWW – value chains – strategic business and Industry value chains – role of E commerce.

L	T	P	C
3	0	0	3

UNIT II INFRASTRUCTURE FOR E COMMERCE (9)

Packet switched networks – TCP/IP protocol script – Internet utility programmes – SGML, HTML and XML – web client and servers – Web client/server architecture – intranet and extranets.

UNIT III WEB BASED TOOLS FOR E COMMERCE (9)

Web server – performance evaluation - web server software feature sets – web server software and tools – web protocol – search engines – intelligent agents –EC software – web hosting – cost analysis

UNIT IV SECURITY (9)

Computer security classification – copy right and Intellectual property – electronic commerce threats – protecting client computers – electronic payment systems – electronic cash – strategies for marketing – sales and promotion – cryptography – authentication.

UNIT V INTELLIGENT AGENTS (9)

Definition and capabilities – limitation of agents – security – web based marketing – search engines and Directory registration – online advertisements – Portables and info mechanics – website design issues.

Total Hours - 45

TEXT BOOKS:

1. Ravi Kalakota, “ Electronic Commerce”, Pearson Education,
2. Gary P Schneider “Electronic commerce”, Thomson learning & James T Peny Cambridge USA, 2001.
3. Manlyn Greenstein and Miklos “Electronic commerce” McGraw-Hill, 2002.

1. EfraimTurvanJ.Lee, David kug and chung, “Electronic commerce” Pearson Education Asia 2001.
2. Brenda Kienew E commerce Business Prentice Hall, 2001.

16BECS8E03 **SERVICE ORIENTED ARCHITECTURE**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To gain knowledge of the basic concepts of SOA, comparison with older architectures and principles of service orientation.
- To learn about web services, messaging with SOAP and different layers of SOA.
- To learn about advanced concepts such as Orchestration and Choreography.
- To learn about various service-oriented analysis and design.
- To know about various WS- specification standards.
- To discuss the concept of Standards and Security on SOA.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Obtainknowledge on basic concepts of SOA and how it differs with other architectures.
- Gain knowledge on advanced concepts of service composition, Orchestration and Choreography.
- Understand web service framework with respect to SOA.
- Acquireknowledge on various open standards available for developing SOA compliant web services.
- Design and implement Web based services using ASP.NET
- Appreciate the concept of Standards and Security on SOA.

UNIT I Introduction **(9)**

Roots of SOA – Characteristics of SOA - Comparing SOA to client-server and distributed internet architectures – Anatomy of SOA- How components in an SOA interrelate - Principles of service orientation

UNIT II Services
(9)

Web services – Service descriptions – Messaging with SOAP –Message exchange Patterns – Coordination –Atomic Transactions – Business activities – Orchestration – Choreography - Service layer abstraction – Application Service Layer – Business Service Layer – Orchestration Service Layer

UNIT III Analysis
(9)

Service oriented analysis – Business-centric SOA – Deriving business services - service modeling - Service Oriented Design – WSDL basics – SOAP basics – SOA composition guidelines – Entity-centric business service design – Application service design – Task- centric business service design

UNIT IVSOA (9)

SOA platform basics – SOA support in J2EE – Java API for XML-based web services (JAX-WS) - Java architecture for XML binding (JAXB) – Java API for XML Registries (JAXR) - Java API for XML based RPC (JAX-RPC)- Web Services Interoperability Technologies (WSIT) - SOA support in.NET – Common Language Runtime - ASP.NET web forms – ASP.NET web services – Web Services Enhancements (WSE)

UNIT V WS(9)

WS-BPEL basics – WS-Coordination overview - WS-Choreography, WS-Policy, WS- Security

Total Hours: 45

TEXT BOOKS:

1. Thomas Erl, "Service-Oriented Architecture: Concepts, Technology, and Design", Pearson Education, 2nd edition, 2016.
2. Judith Hurwitz, Robin Bloor, "Service Oriented Architecture for Dummies", Willey Publications, 2nd edition, 2009

REFERENCES:

16BECS8E04	NATURAL LANGUAGE PROCESSING	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To understand Overview and Language Modeling
- To understand the various levels of analysis involved in NLP.
- To learn language modeling.
- To gain knowledge in automated natural language generation and machine translation.
- To understand the concepts of information Retrieval and Lexical resource.
- To discuss concepts of Natural Language Processing in real time application

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Compose key NLP elements to develop higher level processing chains
- Assess / Evaluate NLP based systems
- Choose appropriate solutions for solving typical NLP sub problems (tokenizing, tagging, parsing)
- Describe the Machine translation approaches.
- Gain knowledge in design features in information retrieval and lexical analysis techniques.
- Analyze Natural Language Processing in real time application

UNIT I Overview and Language Modeling (9)

OVERVIEW**:** Origins and challenges of NLP- Language and Grammar- Processing Indian Languages-NLP Applications-Information Retrieval.

LANGUAGE MODELING: Introduction-Various Grammar-based Language Models-Statistical Language Model.

UNIT II Word Level and Syntactic Analysis (9)

WORD LEVEL ANALYSIS: Introduction- Regular Expressions-Finite-State Automata-Morphological Parsing-Spelling Error Detection and correction-Words and Word classes-Part-of Speech Tagging. SYNTACTIC ANALYSIS: Introduction-Context-free Grammar-Constituency-Parsing-Probabilistic Parsing.

UNIT III Semantic Analysis and Discourse Processing (9)

SEMANTIC ANALYSIS: Introduction- Meaning Representation-Lexical Semantics-Ambiguity-Word Sense Disambiguation. DISCOURSE PROCESSING: Introduction- cohesion-Reference Resolution- Discourse Coherence and Structure.

UNIT IV Natural Language Generation and Machine Translation (9)

NATURAL LANGUAGE GENERATION**:** Introduction-Architecture of NLG Systems-Generation Tasks and Representations-Application of NLG.MACHINE TRANSLATION: Introduction-Problems in Machine Translation- Characteristics of Indian Languages- Machine Translation Approaches-Translation involving Indian Languages.

UNIT V Information Retrieval and Lexical Resources (9)

INFORMATION RETRIEVAL**:** Introduction -Design features of Information Retrieval Systems-Classical, Non-classical, Alternative Models of Information Retrieval – Evaluation. LEXICAL RESOURCES**:** Introduction-WordNet-FrameNet-Stemmers-POS Tagger- Research Corpora.

Total Hours: 45

TEXT BOOKS:

1. TanveerSiddiqui, U.S. Tiwary, "Natural Language Processing and Information Retrieval", Oxford University Press, 2008.

REFERENCES:

1. Daniel Jurafsky and James H Martin, "Speech and Language Processing: An introduction to Natural Language Processing, Computational Linguistics and Speech Recognition", Prentice Hall, 2nd Edition, 2008.
2. James Allen, Bejamin/cummings, "Natural Language Understanding", 2nd edition, 1995.

OPEN ELECTIVES OFFERED BY COMPUTER SCIENCE AND ENGINEERING

16BECSOE01	**INTERNET PROGRAMMING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES:

- To study concepts of Internet, IP addresses and protocols
- To explain the concept of web page development through HTML
- To introduce the PERL and explore its current strengths and Weaknesses
- To write working Java code to demonstrate the use of applets for client side programming
- To study Internet telephony and various multimedia applications
- To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Learn the advanced concepts& techniques of Internet and Java.
- Analyze the requirements for and create and implement the principles of web page development
- Understand the concepts ofPERL
- Implement client side programming using java applets
- Generate internet telephony based upon advanced concepts
- Develop applications on internet programming based on java applets and scripts

UNIT I Introduction
(9)

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT IIHTML (9)

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction-Environment Variable, GET and POST Methods.

UNIT III PERL (9)

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets-Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV Client-Server programming (9)

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT VInternet Telephony (9)

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP-Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

Total Hours: 45

TEXT BOOKS:

1. Paul Deitel, Harvey Deitel and Abby Deitel, “Internet and World Wide Web- How to Program”, 5th Edition, 2011.

2. Web Technology: A Developer's Perspective, N.P. Gopalan and J. Akilandeswari, PHI Learning, Delhi, 2013.

REFERENCES:

1. Rahul Banerjee, Internetworking Technologies, An Engineering Perspective, PHI Learning, Delhi, 2011.

2. Robert W. Sebesta, “Programming the World Wide Web”, Pearson Education, 2016

		L	T	P	C
16BECSOE02	**MULTIMEDIA AND ANIMATION**				
		3	0	0	3

COURSE OBJECTIVES:

- To impart the fundamental concepts of Computer Animation and Multimedia
- To study the graphic techniques and algorithms using flash
- Explain various concepts available in 3D animation
- Explain various devices available for animation
- To study the multimedia concepts and various I/O technologies for concept development
- To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Develop their creativity using animation and multimedia
- Understand the concepts of Flash and able to develop animation using it
- Understand about various latest interactive 3D animation concepts
- Know the various devices and software available in motion capture
- Understand the concept development process
- Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I Introduction (9)

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation

– Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II Creating Animation in Flash (9)

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D Animation & its Concepts (9)

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV Motion Caption (9)

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage

– Different Language of Script Animation Among the Software.

UNIT V Concept Development (9)

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

Total Hours: 45

TEXT BOOK:

1. Computer Graphics, Multimedia and Animation-Malay K. Pakhira,PHI Learning PVT Ltd,2010

REFERENCES:

1. Principles of Multimedia – Ranjan Parekh, 2007, TMH. (Unit I, Unit V)

16BECSOE03 **PC HARDWARE AND TROUBLE SHOOTING**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To study the basic parts of computer in detail
- Introduce various peripheral devices available for computer and its detailed working concepts
- Overview of various interfaces and other hardware overview
- Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- To study basic concepts and methods in troubleshooting
- To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
- Identify various peripheral devices available and its working
- Understand various concepts of hardware and its interface and control
- Perform basic installation of PC. Importance of maintenance is understood
- Understand Various faults and failures are identified and troubleshooting in detail
- Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I Introduction (9)

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques– Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices (9)

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC Hardware Overview (9)

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV Installation and Preventive Maintenance (9)

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting (9)

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

Total Hours: 45

16BECSOE04	JAVA PROGRAMMING	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To understand Object Oriented Programming concepts and basic characteristics of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads, generics classes and swings
- To explain the need for generic programming
- To design and build simple Graphical User Interfaces

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- Develop Java programs using OOP principles
- Develop Java programs with the concepts inheritance and interfaces
- Build Java applications using exceptions and I/O streams
- Develop Java applications with threads and generics classes and swings
- Understand various aspects for motivation of generic programming
- Develop various interactive Java programs using OOP concepts of Java

UNIT I INTRODUCTION TO JAVA (9)

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES (9)

Arrays – Strings - Packages – Java-Doc comments –- Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS (9)

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING

(9)

Basics of event handling – event handlers – adapter classes – actions – mouse events – AWT event hierarchy – introduction to Swing – Model-View-Controller design pattern –buttons – layout management – Swing Components – exception handling – exception hierarchy – throwing and catching exceptions.

UNIT V MOTIVATION FOR GENERIC PROGRAMMING (9)

Motivation for generic programming – generic classes – generic methods – generic code and virtual machine – inheritance and generics – reflection and generics - Multi-threaded programming – interrupting threads – thread states – thread properties – thread synchronization – Executors – synchronizers.

LIST OF OPEN ELECTIVES

LIST OF OPEN ELECTIVES OFFERED BY OTHER DEPARTMENTS SCIENCE AND HUMANITIES

16BESHOE01 PROBABILITY ANDRANDOMPROCESS **L T P C 3 0 0 3 Co**

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- To study statistical methods of the sample data.

Course Outcomes

1. Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
2. The students will have an exposure of various distribution functions, correlation and spectral densities.
3. To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
4. To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
5. To apply the concept random processes in engineering disciplines.
6. To understand and apply the concept of correlation and spectral densities

UNIT-I MEASURES OF CENTRAL TENDENCYANDPROBABILITY 9

Measures of central tendency – Mean, Median, Mode - Standard Deviation Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem.

UNIT-II STANDARDDISTRIBUTIONS 9

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev's inequality.

UNIT-III TWO DIMENSIONALRANDOMVARIABLES 9

Joint distributions - Marginal andconditionaldistributions - Probability mass function - Probability density functions – Covariance - Correlation andregression

UNIT-IV CLASSIFICATION OFRANDOM PROCESS **9**

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT-V CORRELATION ANDSPECTRAL DENSITIES **9**

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input andoutput.

16BESHOE02 **FUZZYMATHEMATICS** **L T P C 3 0 0**

Course Outcomes

- To gain the main subject of fuzzy sets.
- To understand the concept of fuzziness involved in various systems and fuzzy set theory.
- To gain the methods of fuzzy logic.
- To comprehend the concepts of fuzzy relations.
- To analyze the application of fuzzy logic control to real time systems.
- The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.
- To know the applications of fuzzy Technology.
- To study and acquire the knowledge to comprehend the concepts of fuzzy relations

UNITI FUZZYSETS **9**

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNITII OPERATIONS ONFUZZYSETS **9**

Operations on Fuzzy Sets Operations on [0,1] – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNITIII FUZZYRELATIONS **9**

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNITIV FUZZYMEASURES **9**

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNITV FUZZYINFERENCE **9**

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

16BESHOE03 **LINEARALGEBRA** **L T P C 3 0 0 3 C**

Course Outcomes

The student will be able to

- To introduce the basic concepts of vector space
- To know the fundamentals of linear Algebra
- To solve system of linear equations
- To study about the linear transformations
- To introduce the concepts of inner product space

- To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- To describe the fundamental concepts of Eigen values and Eigen vectors by using Power method.
- To apply the fundamental concepts in their respective engineering fields
- To visualize linear transformations as matrix form
- To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- To articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNITI VECTORSPACES **9**

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES ANDEIGENVECTORS **9**

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OFLINEAREQUATIONS **9**

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss–Seidel method, convergence criteria.

UNIT IVLINEARTRANSFORMATIONS **9**

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigen values and Eigenvectors Eigen values and Eigen vectors – Diagonalization

UNIT V INNERPRODUCT SPACES **9**

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

16BESHOE04 **ENGINEERINGACOUSTICS** **L T P C 3 0 0 3 Co**

- To disseminate the fundamentals of acoustic waves. (K)
- To inculcate the characteristics of radiation and reception of acoustic waves. (K)
- To divulge knowledge on the basics of pipe resonators and filters.(S)
- To introduce the features of architectural acoustics
- To impart the basic knowledge of transducers and receivers.(K)
- To study about the pipes resonant and filters

Course Outcomes

- Develop the idea of the fundamentals of acoustic waves.
- Apply the concepts of radiation and reception of acoustic waves.
- Explain the basic ideas of pipe resonators and filters.
- Illustrate the basics of architectural acoustics..
- Illustrate the transducers and receivers and its applications in various electronic devices.
- Apply the knowledge inputs of the course for engineering applications.

UNITI INTRODUCTION **9**

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OFACOUSTICWAVES **9**

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORSANDFILTERS **9**

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency –voice.

UNIT IVARCHITECTURALACOUSTICS **9**

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design ofportions.

UNITV TRANSDUCTION **9**

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

TOTAL : 45 HOURS

16BESHOE05 SOLIDWASTEMANAGEMENT L T P C 3 0 0 3 Cou

- To make the students conversant with basics of Solid wastes and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of Hazardous waste managements.
- To acquaint the students with the basics of energy generation from waste materials.
- To understand about the solid waste and to get the information on energy conservation.

Course Outcomes:

- Outline the basic principles of Solid waste and separation of wastes (K)
- Identify the concepts of treatment of solid wastes (S)
- Identify the methods of wastes disposals. (S)
- Examine the level of Hazardousness and its management. (S)
- Examine the possible of the energy production using waste materials. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNITI SOLIDWASTE **9**

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT IIWASTE TREATMENT **9**

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due toIncineration

UNIT IIIWASTE DISPOSAL **9**

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUSWASTE MANAGEMENT **9**

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNITV ENERGY GENERATIONFROMWASTE **9**

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low

solids. Anaerobic digestion, high solids anaerobic digestion, Energy production
from biological conversion products, other biological transformation processes.
Chemical transformation processes.

16BESHOE06 GREENCHEMISTRY L T P C 3 0 0 3 Co

1. To make the students conversant about the green chemistry
2. To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
3. To acquaint the student with concepts of green technology.
4. To develop an understanding of the basic concepts of renewable energy resources.
5. To acquaint the students with the basic's information on catalysis.
6. To gain knowledge on the green technology and renewable energyresources

Course Outcomes

- Outline the basic principles of green chemistry (K)
- Examine the different atom efficient process and synthesis elaborately (S)
- Apply the concepts combustion of green technology (S)
- Identify and apply the concepts of renewable energy (S)
- Apply the concepts of green catalysts in the synthesis (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREENCHEMICALPRINCIPLES 9

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOMEFFICIENT PROCESSES 9

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY ANDGREENCHEMISTRY 9

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e- green propellants and bio catalysts.

UNIT IVRENEWABLE RESOURCES 9

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS INGREENCHEMISTRY 9

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

16BESHOE07 APPLIED ELECTROCHEMISTRY L T P C 3 0 03

Course Objectives

- To get the information on electrochemical material.
- To study about the conducting polymers.
- To acquaint the student with concepts of Energy storage devices.
- To gain knowledge on the batteries and power sources.
- To develop energy storage devices.
- To study and identify the concepts of storage devices and its applications. (S)

Course Outcomes

1. Outline the basic principles of chemistry in **electrochemical material (K).**
2. Examine the properties of conducting polymers (S).
3. Apply the concepts of electrochemistry in storage devices. (S)
4. Identify the concepts of storage devices and its applications. (S)
5. Apply the suitable materials for the manufacturing of storage devices. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNITI METALFINISHING 9

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERSANDELECTROCHEMICALS 9

Electro polymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES ANDPOWERSOURCES-I 9

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES ANDPOWERSOURCES-II 9

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE **9**

Solar cells- Preparation of CdS/Cu_2S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

16BESHOE08 **INDUSTRIALCHEMISTRY** **L T P C 3 0 0 3 Co**

- To make the students conversant with **cement and lime** and its uses.
- To make the student acquire sound knowledge of abrasives and refractories.
- To acquaint the student with concepts of inorganic chemicals.
- To develop an understanding of the basic concepts **explosives**.
- To acquaint the students with the basics of **agriculture chemicals**.
- To study the concepts of explosives and smoke screens(S)

Course Outcomes

- Outline the basic chemistry of **cement and lime (K)**
- Examine the uses of abrasives and refractories (S)
- Identify the usage of the inorganic chemicals. (S)
- Identify the concepts of explosives and smoke screens (S)
- Identify the usage of the **agriculture** chemicals (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENTANDLIME **9**

Manufacture of Portland cement – settling of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials-manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesium lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVESANDREFRACTORIES **9**

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories
– definition – classification – acid refractories – basic refractories – neutral refractories – properties –uses.

UNIT IIIINORGANICCHEMICALS **9**

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3, caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrialuses.

UNITIVEXPLOSIVES **9**

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT VAGRICULTURE CHEMICALS **9**

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmentalimpacts.

ELECTRONICS AND COMMUNICATION ENGINEERING

16BEECOE01 REAL TIMEEMBEDDEDSYSTEMS L T P C 3 0

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management

UNIT - I INTRODUCTION TOEMBEDDEDSYSTEM

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection &tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM7

UNIT - II OPERATINGSYSTEMOVERVIEW

Introduction –Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – ClockTicks.

UNIT - IIITASK MANAGEMENT

Introduction - µ C/OS-II Features - Goals of µ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks –Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under µ C/OS-II – Clock Tick - µ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB waits List.

UNIT - IV SEMAPHORE MANAGEMENT ANDMESSAGEPASSING

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue.

UNIT - VMEMORYMANAGEMENT

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memory Block – Returning a Memory Block .Getting Started with µ C/OS-II – Installing µ C/OS-II – Porting µ C/OS- II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with µ C/OS-II - µ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Analyze the Multichannel ADC with help of µ C/OS-II.

16BEECOE02 CONSUMERELECTRONICS L T P C 3

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERSANDMICROPHONES 9

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT – II TELEVISION STANDARDSANDSYSTEMS 9

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a Remote Control.

UNIT – III OPTICAL RECORDINGANDREPRODUCTION 9

Audio Disc – Processing of the Audio signal –read out from the Disc – Reconstruction of the audio signal – Video Disc – Video disc formats- recording systems – Playback Systems.

UNIT – IVTELECOMMUNICATIONSYSTEMS 9

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT – VHOME APPLIANCES 9

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

16BEECOE03 NEURAL NETWORKS AND ITS APPLICATIONS L T P C 3 0 0 3

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes:

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts

UNIT I INTRODUCTION TONEURALNETWORKS **9**

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNIT IILEARNING PROCESS **9**

Error – correction learning – memory based learning - hebbian learning-competitive learning- Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT IIIPERCEPTION **9**

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm- Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye's classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORKANDART **9**

Hopfield model-BAM model- BAM stability-Adaptive BAM -Lyapunov function-effect of gain- Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNIT VSELFORGANIZATION **9**

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

TOTAL: 45 HOURS

16BEECOE04 FUZZY LOGIC ANDITSAPPLICATIONS **L T P C 3 0 0 3**

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy fiction and de fuzzy fiction procedures

Course Outcomes:

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications invarious domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT– I **9**

Basics Of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT– II **9**

Theory Of Approximate Reasoning**:** Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNIT– III **9**

Fuzz y Knowledge Based Controllers (Fkbc**):** Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures – Design of Fuzz y Logic Controller

UNIT– IV **9**

Adaptive Fuzz y Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V FUZZYBASEDSYSTEMS **9**

Simple applications of FKBC -washing machines- traffic regulations - lift control-fuzz y in medical applications-Introduction to ANFIS.

TOTAL: 45 HOURS

BIO TECHNOLOGY

16BTBTOE01 **BIOREACTORDESIGN** **L T P C**
3 0 03

Course Objectives

- To impart basic knowledge in bioprocess Engineering
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipments.
- To extend the knowledge in principle of heat transfer inside a bioreactor
- To construct the equipments used in mass transfer operations.
- To learn the equipments used in separation process.

Course Outcomes

- Summarize the basic concepts in bioprocess Engineering.
- Ability to design the bioreactors for various operations.
- Ability to develop the heat transfer equipments for Bioprocess Engineering.
- Ability to construct the equipments used in mass transfer operations.
- To acquire the knowledge of regulatory constraints in bioprocess
- Categorize the equipments used in separation process

UNITI ENGINEERING PROPERTIES ANDSTORAGETANK **9**

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNITII REACTORDESIGN **9**

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNITIII HEATTRANSFEREQUIPMENTS **9**

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNITIV MASSTRANSFEREQUIPMENTS **9**

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNITV SEPARATIONEQUIPMENTS **9**

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotart drum drier and Swenson –walker crystallizer.

16BTBTOE02 FOOD PROCESSINGANDPRESERVATION L T P C 3 0 03

Course Objectives

- To understand the importance of foodprocessing
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarize the students on the concepts of preservation methods for fruits.
- To create deeper understanding on preservation methods for vegetables.

Course Outcomes

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarize the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

UNIT I SCOPE AND IMPORTANCE OFFOODPROCESSING 9

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading,peeling.

UNIT IIPROCESSINGMETHODS 9

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives- fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing- Concepts and equipmentused.

UNIT III FOODCONVERSIONOPERATIONS 9

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipmentand application.

UNIT IV FOOD PRESERVATIONBYCOOLING 9

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control wateractivity.

UNITV PRESERVATION METHODS FOR FRUITS AND VEGETABLES9

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

16BTBTOE03 **BASICBIOINFORMATICS** **L T P C 3 0 0**

- To enable the students to get aware of available tools and databases for performing research in bioinformatics.
- Toprovidethethoroughunderstandingofproteinstructureindetail.
- To construct the phylogenetic trees for evolution.
- To get familiar with the 3D structure of protein and classification.
- To acquire basic knowledge in protein secondary structure prediction.
- To extend the brief knowledge in Micro array data analysis.

Course Outcomes

- Summarize the basic concepts and importance of Bioinformatics in various sectors.
- Demonstrate the sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Analyze the three dimensional protein structure and classification using various tools.
- Illustrate the protein secondary structure prediction by comparative modeling.
- Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I OVERVIEWOFBIOINFORMATICS **9**

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OFBIOLOGICALDATA **9**

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system).Searching sequence databases by sequence similarity criteria:sequencesimilarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domainfamilies.

UNITIII PHYLOGENETICS **9**

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IVSTRUCTURALBIOINFORMATICS **9**

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data;

structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNITV MICROARRAYDATAANALYSIS

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

16BTBTOE04 FUNDAMENTALSOFNANOBIOTECHNOLOGY L T P C 3 0 0 3

Course Objectives

- To develop skills of the students in the field of nano biotechnology and its applications in variousfields.
- The course will serve as an effective course to understand Socio-economic issues of nano biotechnology.
- To extend the knowledge in types and application of nano particles in sensors.
- To define the concepts of biomaterials through molecular self assembly.
- To equip students with clinical applications of nano devices.
- To describe deeper understanding of the socio-economic issues in nanobiotechnology

Course Outcomes

- Develop skills in the field of nano biotechnology and its applications.
- Summarize the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nano particles in sensors.
- Define the concepts of biomaterials through molecular self assembly.
- Outline the clinical applications of nano devices.
- Describe the socio-economic issues in nanobiotechnology.

UNITIINTRODUCTION **9**

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dentalcare.

UNIT IINANOPARTICLES **9**

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNITIIIAPPLICATIONS **9**

Nanomedicine, Nanobiocensor and Nanofludics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems.Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNITIVNANOBIOTECHNOLOGY **9**

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology.Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nanocarbon tubules.Nanosurgical devices.

UNIT V ETHICAL ISSUESINNANOTECHNOLOGY **9**

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economicchallenges.

MECHANICAL ENGINEERING

16BEMEOE01 **COMPUTERAIDEDDESIGN** **L T P C 3 0**

Course Objective

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

Course Outcomes

Upon completion of the course, the students will be able to

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNITI OVERVIEW OFCADSYSTEMS 9

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNITII INTERACTIVE COMPUTER GRAPHICS ANDGRAPHICS TRANSFORMATIONS

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRICMODELING

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN ANDOBJECTREPRESENTATION

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGNANDDEVELOPMENT

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

16BEMEOE02 INDUSTRIAL SAFETYANDENVIRONMENT **L T P C 3 0 0 3**

Course Objective

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyses the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

At the end of the course, student will be able to

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNITI INTRODUCTIONTO LOGISTICS

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNITII PHASES OFSUPPLYCHAIN

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNITIII EVOLUTION OF SUPPLYCHAINMODELS

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chainredesign
- Linking supply chain withcustomer.

UNITIV SUPPLYCHAINACTIVITIES

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNITV SCM ORGANISATION ANDINFORMATIONSYSTEM

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

16BEMEOE03 TRANSPORTPHENOMENA L T P C 3 0 0 3

Course Objective

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

Course Outcomes

Upon completion of this course, the students can be able to

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION ANDBASICCONCEPTS

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHERPHYSICALPARAMETERS

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT IIIMOMENTUMTRANSPORT

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidizedbed

UNIT IVENERGYTRANSPORT

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heattransfer

UNIT VMASS TRANSPORT

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

16BEMEOE04 INTRODUCTIONTOBIOMECHANICS L T P C 3

Course Objective

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

Course Outcomes

Upon completion of this course, the students will be able to,

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNITI INTRODUCTION 9

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNITII KEYMECHANICAL CONCEPTS 9

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNITIII HUMAN ANATOMY AND SOMEBASICTERMINOLOGY 9

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNITIV ANATOMICAL DESCRIPTION 9

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNITV MECHANICS OF THEMUSCULOSKELETALSYSTEM 9

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

16BEAEOE01 AUTOMOBILEENGINEERING L T P C 3 0 0 3

Course Objectives:

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Identify and explain the types of steering system.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

UNITI ENGINE AND FUELFEED SYSTEMS **9**

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT IITRANSMISSION SYSTEMS **9**

Requirements of transmission system.Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. **Course Objectives** of the gearbox - Determination of gear ratios for vehicles.Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNITIIISUSPENSION SYSTEM **9**

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNITIV BRAKES **9**

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System(ABS).

UNITV ELECTRICALSYSTEM **9**

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator.Starting System and chargingsystem.

16BEAEOE02 BASICS OF TWO ANDTHREE WHEELERS L T P C 3 0 0 3

Course Objectives

- The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION 9

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNITII POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS 9

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHESANDTRANSMISSION 9

Types of clutches for 2 and 3 wheelers.Design of clutch system.Gears for two and three wheelers.Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELSANDTYRES 9

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS 9

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

16BEAEOE03 AUTOMOBILEMAINTENANCE **L T P C 3 0 0 3**

Course Objectives

- The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.
- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

UNITI MAINTENANCE OF RECORDSAND SCHEDULES **9**

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT IIENGINE MAINTENANCE **9**

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT IIICHASSIS MAINTENANCE **9**

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheelbalancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE
9

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY
9

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

16BEAEOE04 INTRODUCTION TO MODERN VEHICLE TECHNOLOGY
L T P C 3 0 0 3

Course Objectives:

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

UNITI TRENDS IN POWERPLANTS 9

Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNITII DRIVER ASSISTANCE SYSTEMS 9

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNITIII SUSPENSION BRAKES AND SAFETY 9

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNITIV NOISE &POLLUTION 9

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNITV TELEMATICS 9

Global positioning systems, geographical information systems,

16BECEOE01 **HOUSING, PLANANDMANAGEMENT**
L T P C 3 0 03

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNITI INTRODUCTIONTO HOUSING **9**

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, **Course Objectives** and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Locallevels

UNIT IIHOUSINGPROGRAMMES **9**

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OFHOUSINGPROJECTS **9**

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE ANDPROJECTAPPRAISAL **9**

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow

Analysis, Subsidy and Cross Subsidy, Pricing o f Housing Units, Rents, Recovery Pattern (Problems).

16BECEOE02 BUILDINGSERVICESL T P C 3 0 03

COURSE OBJECTIVES

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNITIMACHINERIES 9

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMSINBUILDINGS 9

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION&DESIGN

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES&APPLICATIONS 9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid –

Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRESAFETYINSTALLATION **9**

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non- combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

16BECEOE03 MANAGEMENT OFIRRIGATIONSYSTEMS

L T P C 3 0 0 3

OBJECTIVES

- To enable the students for a successful career as water management professionals.
- To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
- To expose the students the need for an interdisciplinary approach in irrigation water management
- To providing a platform to work in an interdisciplinary team.
- To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
- To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

OUTCOME

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNITI IRRIGATIONSYSTEMREQUIREMENTS 9

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNITII IRRIGATIONSCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNITIII MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNITIV OPERATION 9

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNITV INVOLVEMENT OFSTAKE HOLDERS **9**

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL: 45 HOURS

16BECEOE04 ADVANCED CONSTRUCTION TECHNOLOGY **L T P C**
3 0 0 3

OBJECTIVE:

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

OUTCOMES:

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process

UNIT-I MODERN CONSTRUCTION METHODS 9
Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT-II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9
Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT-III MODERN CONSTRUCTION EQUIPEMENTS-I 9
Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting,Tunneling and hoisting

UNIT-IV MODERN CONSTRUCTION EQUIPEMENTS-II 9
Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT-V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES **9**

Principles and Practices of Temporary structures, Shoring, and Strutting,Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

TOTAL: 45 HOURS

16BECC 101 **COMMUNICATIVE ENGLISH** **L T P C**

3 0 0 3

OBJECTIVES:

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.

INTENDED OUTCOMES:

Students undergoing this course will be able to

- Use English language for communication: verbal & non –verbal.
- Enrich comprehension and acquisition of speaking & writing ability.
- Gain confidence in using English language in real life situations.
- Improve word power: lexical, grammatical and communication competence.
- Acquire good vocabulary for easy communication.
- Be familiar with sentence structure and sentence formation

Unit I **(9)**

Listening– Types of listening - Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self - Introduction on one's friend. Reading - Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative.**Writing** – Formal and Informal letters- Free writing on any topic –My favorite place, hobbies, dreams, goals, etc- - To fill in different application forms. Grammar – Articles- WH questions –Yes/No Question - Subject Verb agreement. Vocabulary - Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit II **(10)**

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions - Telephone etiquette. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages. **Grammar**– Parts of speech – Noun – Verb – Adjectives - Adverbs. **Vocabulary**– Compound Nouns/Adjectives – Irregular verbs.

Unit III **(10)**

Listening – Listening for specific task – Fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** – Reading and Comprehension. **Writing** - Autobiographical writing – Biographical writing - Instruction writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

Unit IV **(8)**

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) Letters to the Editor. **Grammar** – Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit V **(8)**

Listening - Listening to different accents, speeches/presentations. **Speaking**- Extempore talk –Just-a-minute talk. **Reading**-Reading strategies–Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars and notices – Writing proposal. **Grammar** – Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.
Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

16BECC102 **ENGINEERING MATHEMATICS -I** **L T P C**
3 2 0 4

OBJECTIVES:

- To develop analyzing skills for solving different engineering problems.
- To understand the concept of Matrices.
- To remember the basics of differential calculus and its applications.
- To apply the problems in differential equations.
- To Create knowledge about functions of several variables and Sequence and Series.

INTENDED OUTCOMES:

The student will be able to

- Acquire the basic knowledge and understanding of mathematics
- Apply advanced matrix knowledge to engineering problems.
- Improve their ability in evaluating geometrical applications of differential calculus problems.
- To solve the problems by applying the differential Equations.
- Evaluating engineering problems involving functions of several variables.
- Understand the concepts of sequences and series.

UNIT I MATRICES (12)

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS (12)

Overview of Derivatives - Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes- Evolutes as Envelope of normals – Maxima and Minima of functions of two or more Variables – Method of Lagrangian Multipliers

UNIT III DIFFERENTIAL EQUATIONS (11)

Linear Differential equations of second and higher order with constant coefficients - Euler's form of Differential equations – Method of variation parameters.

UNIT -IV FUNCTIONS OF SEVERAL VARIABLES (12)

Partial derivatives – Euler's theorem for homogeneous functions – Total derivatives – Differentiation of implicit functions – Jacobians –Maxima and Minima of functions of two or more Variables - Method of Lagrangian multipliers.

UNIT V SEQUENCES AND SERIES (13)

Sequences: Definition and examples – **Series:** Types and Convergence – Series of positive terms – Tests of convergence: Comparision test, Integral test and D'Alembert's ratio test – Alternating series – Leibnitz's test – Series of positive and negative terms – Absolute and conditional convergence.

16BEPH103 16BEPH203	ENGINEERING PHYSICS	L T P C 3 0 0 3

OBJECTIVE:

- To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology
- Understand the basics of laser and optical fiber with appropriate applications.
- Introduce the concepts of quantum mechanics for diverse applications.
- Impart the basic knowledge of crystal and its various crystal structures.
- Disseminate the fundamentals of nuclear physics and their applications

INTENDED OUTCOME:

- Identify the elastic nature of materials and its thermodynamic properties.
- Infer the characteristics of laser and optical fibers for engineering applications.
- Develop the idea of quantum mechanics through applications.
- Identify the different atomic arrangements of crystals and its defects
- Make use of the concepts of sound waves for medical applications.
- Illustrate the basic ideas of nuclear reactors for energy resources

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS (9)

Three types of modulus of elasticity – basic definitions, relation connecting the modulii (Derivation), poison ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniform bending

Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS (9)

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER -CO_2, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS (9)

Introduction to quantum theory – Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electron microscope.

UNIT IV CRYSTAL PHYSICS (9)

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS (9)

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C –scan displays, Medical applications – SonogramIntroduction – basics about nuclear fission and fusion, nuclear composition –Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

16BECH103 ENGINEERING CHEMISTRY L T P C
16BECH203 3 0 0 3

OBJECTIVES:

- To gain knowledge on adsorption phenomena.
- To make the students conversant with basics of water technology.
- To make the student acquire sound knowledge of electrochemistry and storage devices.
- To acquaint the student with concepts of fuels and rocket propellants.
- To develop an understanding of the basic concepts of corrosion science.
- To acquaint the students with the basics of surface chemistry.

INTENDED OUTCOME:

- Outline the basic principles of chemistry for water treatment (K)
- Examine the electrochemical properties to design non – conventional energy storage devices (S)
- Apply the concepts combustion of different fuels (S)
- Identify the concepts of corrosion and its protection in the engineering field (S)
- Apply the concepts of surface chemistry in the field of engineering (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I WATER TECHNOLOGY (9)

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES (9)

Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode –

Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+}vs dichromate) –Electrolytic conductance-application (conductometric titration)-Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2-O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION (9)

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV-Flue gas analysis.

UNIT IV CORROSION SCIENCE (9)

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings-Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating - Hot dipping.

UNIT V SURFACE CHEMISTRY AND PHASE RULE (9)

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).
Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

16BEEC104 BASIC ELECTRICAL ENGINEERING **L T P C**
3 0 0 3

Course Objectives

The goal of this course for students is :

- To impart the basic knowledge about the Electric circuits.
- To understand the concept of Electro Mechanical Energy Conversion and Transformers.
- To understand the working of Semiconductor devices and Measuring Instruments.
- To impart the basic knowledge of Digital Circuits.
- To understand the fundamentals of mutual inductance and self inductance.
- To imparts a good knowledge about mesh analysis and nodal analysis.

Course Outcomes

At the end of this course, students will be able to

- Attributing the electric circuits with DC and AC excitation by applying various circuit laws.
- Attributing the magnetic circuits and transformer.
- Reproduce the two port networks.
- Evaluate the various digital circuits in real time applications.
- Analysis various semiconductor devices in real time applications.
- Reproduce the Measuring Instruments.

UNIT I – FUNDAMENTALS OF DC CIRCUITS

Introduction to DC and AC circuits, Active and passive two terminal elements, Ohms law, Voltage-Current relations for resistor, inductor, capacitor, Kirchhoff's laws, Mesh analysis, Nodal analysis –equivalent resistor, current division, voltage division

UNIT II – MAGNETIC CIRCUITS

Introduction to magnetic circuits-Simple magnetic circuits-Faraday's laws, Lenz law-Flemings rules - induced emfs and inductances-self and mutual inductance.

UNIT III – AC CIRCUITS (Elementary treatment only)
Generation of AC, Average and RMS values, Form and peak factors, concept of phasor representation, J operator – representation of AC in rectangular and polar form – power and power factor - Introduction to three phase systems - types of connections, relationship between line and phase values.

UNIT IV–ELECTRICAL MACHINES (Elementary treatment only)
Working principle, construction, types and applications of DC machines and AC machines -single phase transformers - single phase induction motors: capacitor start and capacitor start & run motors

UNIT V–ELECTRICAL SAFETY, WIRING AND INTRODUCTION TO POWER SYSTEM
Safety measures in electrical system- types of wiring- wiring accessories staircase,
Fluorescent lamps & corridor wiring- Basic principles of earthing- Types of earthing- protection devices MCB - fuses and its types – calculation of fuses.

TEXT BOOK

16BEEC105 BASIC ELECTRONICS ENGINEERING L T P C
3 0 0 3

UNIT I- ELECTRONIC COMPONENTS

Passive components – resistors, capacitors and inductors -properties, common types, I-V relationship and uses.

UNIT II- SEMICONDUCTOR DEVICES

Semiconductor Devices - Overview of Semiconductors - basic principle, operation and characteristics of PN diode, zener diode, BJT, JFET.

UNIT III – OPTOELECTRONIC DEVICES

LED, LCD, LDR, Photodiode, Phototransistor, Solar cell, Opto couplers

UNIT IV- TRANSDUCERS

Transducers - Instrumentation – general aspects, classification of transducers,basic requirements of transducers, passive transducers - strain gauge, thermistor,Hall-Effect transducer, LVDT, and active transducers – piezoelectric andthermocouple.

UNIT V- DIGITAL ELECTRONICS

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressionsusing logic gates - standard forms of Boolean expression.

16BEPH111 ENGINEERING PHYSICS LABORATORY L T P C
16BEPH211 0 0 4 2

OBJECTIVES:

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.

OUTCOMES:

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young’s modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille’s method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

16BECH111 ENGINEERING CHEMISTRY LABORATORY L T P C
16BECH211 0 0 4 2

OBJECTIVES:

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of alkalinity ions, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To acquaint the students with the determination of molecular weight of a polymer by viscometry
- To carried out different types of titrations for estimation of concerned in materials

OUTCOMES:

- The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
- Estimate the amount of alkalinity ions, hardness, chloride in water sample
- Measure molecular/system properties of conductance of solutions, EMF etc
- Acquaint the students with the determination of molecular weight of a polymer by visocometry
- Determine the corrosion rate of steel by weight loss method.
- Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Water sample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using $BaCl_2$ vs Na_2 SO_4.
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or $K_2Cr_2O_7$).
10. Estimation of Ferric ion by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometry.

13. Determination of chemical oxygen demand.

16BEEC112 ENGINEERING WORKSHOP PRACTICE L T P C
0 0 4 2

Course Objectives

- To prepare the students to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice
- Prepare the student for future Engineering positions.
- To divulge the basics of metal casting.
- To make the students familiar with welding and brazing.
- To learn about the CNC machining.

Course Outcomes

- Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry, to fabricate components using different materials.
- Students will be able to fabricate components with their own hands.
- They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
- By assembling different components, they will be able to produce small devices of their interest.
- Gain good knowledge of various manufacturing methods.
- Clear idea about fitting operations and its power tools.

PART – A (MECHANICAL)

i. **WELDING**
   i. Preparation of arc welding of butt joints, lap joints and tee joints.

ii. **BASIC MACHINING**
   i. Simple Turning and Taper turning
   ii. Drilling and Tapping
   iii. Sheet Metal Work
   iv. Model making – Trays, funnels, etc.

iii. **DEMONSTRATION ON**
   i. Smithy operations
   ii. Foundry operations
   iii. Plumbing Works
   iv. Carpentary Works

PART –B (ELECTRICAL & ELECTRONICS)

i. **ELECTRICAL ENGINEERING**
   i. Study of electrical symbols and electrical equipments.
   ii. Construct the wiring diagram for Stair case wiring and Fluorescent lamp wiring.
   iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter.
   iv. Measurement of electrical quantities – voltage, current, power & power factor in R load.
   v. Measurement of energy using single phase energy meter.

ii. **ELECTRONICS ENGINEERING**
   i. Study of Electronic components– Resistor (color coding), capacitors and inductors.
   ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
   iii. Study of logic gates AND, OR, NOT, NOR and NAND.
   iv. Study of HWR and FWR.

REFERENCES

16BEEC113	ELECTRICAL ENGINEERING LABORATORY	L T P C
		0 0 3 2

OBJECTIVES

- To introduce the basic electrical equipments in the lab.
- To enable the students to understand the DC circuit analysis and network theorems.
- To understand the measurement of three phase power by using two wattmeter method.
-

INTENDED OUTCOMES

- At the end of this course Students are able to deal with some of the frequently used instruments and equipments like the digital multimeter and DC Power supply and are able to deal with some Network Theorems.

LIST OF EXPERIMENTS

1. Study of Electrical Measurements and the Oscilloscope.
2. Study of Potentiometers and Rheostats.
3. Study and verification of Series Circuits, Parallel Circuits in DC Circuits.
4. Study and verification of Series-Parallel Circuits in DC Circuits.
5. Study and verification of Ohm’s Law and Kirchoff’s law.
6. Study and verify of Mesh Analysis.
7. Study and verify of Nodal Analysis.
8. Study of V-I Characteristics of Incandescent lamp.
9. Measurement of three phase power by using two wattmeter method.

16BECC151	**HUMAN VALUES**	**L T P C**
		1 0 0 -

Course Objectives

1.To help the students appreciate the essential complementarily between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity, which are the core aspirations of all human beings
2. To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of Existence.
3. To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behaviour and mutually enriching interaction with Nature.
4.To know the value of being a human being.
5.To provide a much needed orientational input in value education to the young enquiring minds.
6.To study the value of being a useful citizen.

Course Outcomes

1.To involves a systematic and rational study of the human being vis-à-vis the rest of existence.
2. To make free from any dogma or value prescriptions.
3. To analysis process of self-investigation and self-exploration, and not of giving sermons.
4. This process of self-exploration takes the form of a dialogue between the teacher and the students to begin with, and then to continue within the student leading to continuous self-evolution.
5. This self-exploration also enables them to critically evaluate their pre-conditionings and present beliefs.
6. To Educate the values and meaning of life in the young minds and to transform them as responsible citizens

UNIT I **3**

Human life on Earth - Concept of Human Values - Value Education - Aim of education and value education - Types of values - Components of values – Attitudes – types of attitudes

UNIT II **3**

Self Development : Self analysis – Goal Setting - Thought Analysis – Guarding against Anger - Respect to age, experience, maturity, family members, neighbors, co-workers

UNIT III **3**

Individual Qualities – Truthfulness – Constructivity – Sacrifice – Sincerity - Self Control – Altruism – Tolerance - Scientific Vision – Regulating Desire

UNIT IV **3**

Mind Culture - Modern Challenges of Adolescent - Emotions and behavior - Sex and spirituality - Adolescent Emotions - Meditation

UNIT V **3**

Body and Mind Fitness : (a) Physical Exercises (b) Activities: (i) Moralization of Desires (ii) Neutralization of Anger (iii) Eradication of Worries (iv) Benefits of Blessings

TOTAL **15**

16BECC201A **BUSINESS COMMUNICATION** **L T P C**
3 0 0 3

OBJECTIVES:

- To help students comprehend the role of listening skills in effective communication.
- To familiarize students with verbal and non-verbal communication.
- To expose students to neutral accent.
- To develop emotional intelligence skills in them for enhancing their self-esteem.
- To assist them in setting goals and developing positive attitude.
- To enable students to acquire decision making skills, problem solving skills and assertive skills.

INTENDED OUTCOMES:

Students undergoing this course will be able to

- Design and deliver a persuasive presentation that convinces the audience of the topic's relevance and overcomes resistance, using appropriate visual support and adhering to a specified time limit.
- Use a strategic communication model and critical thinking to identify objectives, analyze audiences, and choose the most effective structure and style for delivering strategically sound written and spoken messages.
- Practice principles of effective business writing and document design in all written documents.
- Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
- Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.

UNIT I

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNITII

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- Description of Graphics and visual aids - interpretation of graphs using expressions of comparison and contrast .

UNIT III

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body langage – Etiquette- Organization of presentation – brain storming- Negotiations.

UNIT - IV

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT - V

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

16BECC201B **TECHNICAL ENGLISH** **L T P C**
3 0 0 3

OBJECTIVES:

- To motivate learners to acquire listening & speaking skills in both formal and informal context.
- To focus on question forms & to make them understand the importance of using question tags and also the functional use of transformation of sentences.
- To improve their reading habit and to train them in critical and analytical reading.
- To equip them to write for academic as well as work place context.

- To enable students to face interviews.

INTENDED OUTCOMES:

Students undergoing this course will be able to

- Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
- Enhance them reading texts critically and analytically.
- Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
- Enrich the ability to face interviews with confidence.

UNIT-1 **(10)**

Listening - Difference between Hearing & Listening –Listening to informal conversation. Speaking - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentences - Question tags. **Vocabulary** – Homonyms and Homophones.

UNIT-II **(8)**

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar** - Modal verbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs - Idioms.

UNIT – III **(9)**

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R)**Writing** - Essay writing -Minutes of meeting - Agenda – **Grammar** - Active and Passive voice - Purpose expression. **Vocabulary** - Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV **(8)**

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication. **Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Job application - Resume writing - Checklist preparation. **Grammar** - Numerical expressions – Collocations - **Vocabulary** - Singular and Plural (Nouns)

UNIT- V **(10)**

Listening – Types of listening- Improving listening comprehension**. Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing- **Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

16BECC202 **ENGINEERING MATHEMATICS- II** **L T P C**
3 2 0 4

OBJECTIVES:

- Determine mathematical tools needed in evaluating multiple integrals and their usage.
- Utilize Gauss, Stokes and Greens theorems to simplify calculations of integrals and prove simple results.
- To understand the concepts and applications of partial differential equations

- Apply the knowledge of Mathematics in various Engineering fields by making them to identify the functions in engineering problems as analytic function and their analyze as a function of a complex variables.
- Develop an understanding of the standard techniques of complex variable theory so as to enable the student to apply them with confidence, to specify some difficult integration that appear in applications can be solved by complex integration in application areas such as fluid dynamics and flow of the electric current.

OUTCOMES:

- The students will be able to understand mathematical tools needed in evaluating multiple integrals and their usage. Find the areas and volumes using multiple integrals

- To calculate with them and apply them and also to calculate grad, div and curl in Cartesian and other simple coordinate systems.

- Improve their ability in Vector calculus
- The student will be able to Understand how to solve the given standard partial differential equations.
- To find the Analytic functions using the Cauchy Riemann equations and they will learn mapping properties of elementary functions and mapping properties of some special transcendental functions. They will understand relations between conformal mappings and quadratic differentials and how geometric structures are changing under conformal mappings.
- To Evaluate complex integrals using the Cauchy integral formula and the residue Theorem and to appreciate how complex methods can be used to prove some important theoretical results.

UNIT-I MULTIPLE INTEGRALS (11)

Double integral – Cartesian coordinates – Polar coordinates – Change of order of integration – Triple integration in Cartesian co-ordinates – Area as double integrals.

UNIT-II VECTOR CALCULUS (13)

Gradient, Divergence and Curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector integration – Green's theorem, Gauss divergence theorem and Stoke's theorems (Statement Only)- Surfaces : hemisphere and rectangular parallelopipeds.

UNIT- III PARTIAL DIFFERENTIAL EQUATIONS (11)

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

UNIT-IV ANALYTIC FUNCTIONS (12)

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: w = z+a, az, 1/z and bilinear transformation.

UNIT-V COMPLEX INTEGRATION (13)

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi circle (excluding poles on the real axis).

16BECC204 **ENVIRONMENTAL SCIENCES** **L T P C**
3 0 0 3

OBJECTIVES:

- To give a comprehensive insight into natural resources, ecosystem and biodiversity.
- To educate the ways and means of the environment
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures.

INTENDED OUTCOME:

- Students will prepare themselves to go ecofriendly and help preserving the nature and environment.

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES **(9)**

Definition, Scope and Importance – Need for public awareness -Forestresources: Useandover-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources-role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM **(9)**

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY **(9)**

Introduction to biodiversity, Definition- Genetic diversity, Species diversity and Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION (9)

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT (9)

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

ELECTIVE PAPER
(COMMON TO ALL UG COURSES AND PG COURSES 2015 – 2016)

16BEEC205	**CIRCUIT THEORY**	**L T P C**
		3 1 0 4

OBJECTIVES

- To understand the concept of circuit elements lumped circuits, waveforms, circuit laws and network reduction. To solve the electrical network using mesh and nodal analysis by applying network theorems.
- To understand the concept of active, reactive and apparent powers, power factor and resonance in series and parallel circuits
- To know the basic concepts of coupled circuits, three phase loads and power measurement.
- To analyze the transient response of series and parallel A.C. circuits and to solve problems in time domain using Laplace Transform

INTENDED OUTCOMES:

- To become familiar with various network theorems
- To analyze circuits
- To understand various resonant, coupled circuits and transient response

UNIT- I DC CIRCUIT ANALYSIS
Basic components and electric circuits – Charge – Current – Voltage and Power– Voltage and Current Sources – Ohms Law – Voltage and Current laws – Kirchoff's Current Law – Kirchoff's voltage law – The single Node – Pair Circuit – Series and Parallel Connected Independent Sources – Resistors in Series and Parallel – Voltage and Current division – Basic Nodal and Mesh anal ysis – Nodal analysis – Mesh anal ysis.

UNIT- II NETWORK THEOREM AND DUALITY
Useful Circuit Analysis techniques – Linearity and superposition – Thevenin and Norton Equivalent Circuits – Maximum Power Transfer – Delta – Wye Conversion – Duality – Dual circuits.

UNIT –III SINUSOIDAL STEADY STATE ANALYSIS
Sinusoidal Steady – State analysis – Characteristics of Sinusoids– The Complex Forcing Function– The Phasor– Phasor relationship for R– L – C – impedance and Admittance – Nodal and Mesh Anal ysis– Phasor Diagrams – AC Circuit Power Anal ysis – Instantaneous Power – Average Power – apparent Power and Power Factor – Complex Power.

UNIT -IV TRANSIENTS AND RESONANCE IN RLC CIRCUITS
Basic R L and RC Circuits – The Source – Free R L Circuit – The Source–Free RC Circuit – The Unit- Step Function – Driven R L Circuits – Driven RC Circuits – R LC Circuits – Frequency Response – Parallel Resonance – Series Resonance – Quality Factor.

UNIT- V COUPLED CIRCUITS AND TOPOLOGY

Magnetically coupled circuits – Mutual inductance – the Linear Transformer – the Ideal Transformer – An introduction to Network Topology – Trees and General Nodal analysis – Links and Loop analysis.

16BEEC212 ELECTRIC CIRCUIT LABORATORY L T P C
0 0 3 2

LIST OF EXPERIMENTS

1. Verification of Kirchoff's voltage and Current Laws
2. Verification of Superposition Theorem
3. Verification of Thevenin's Theorem & Norton's Theorem
4. Verification of Maximum Power Transfer Theorem
5. Verification of Tellegen's and Reciprocity Theorem
6. Time domain response of R L Transient Circuit.
7. Time domain response of RC Transient Circuit.
8. Series R LC Resonance Circuits (Frequency response& resonant frequency)
9. Parallel R LC Resonance Circuits (Frequency response & resonant frequency)
10. Simulation experiments using PSP ICE or MultiSim.

16BEEC213 ENGINEERING GRAPHICS L T P C
1 0 4 3

OBJECTIVES

1.	To develop in students, graphic skills for communication of concepts, ideas and design of engineering products.
2.	To expose them to existing national standards related to technical drawings.

UNIT I INTRODUCTION **9**

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES **8**

SCALES: Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING **9**

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES **8**

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS **8**

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam) **3**

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

TOTAL **45**

    - ii. Dip soldering
    - iii. Dry soldering
    - iv. Improper soldering

16BEEC301A OPTIMIZATION AND CALCULUS OF VARIABLES **L T P C**
3 2 0 4

OBJECTIVES:

- To develop analytical skills for solving engineering problems
- To teach the students the basic concepts of LPP, Transportation and Assignment problems
- To make the students to study about the Integer Programming and Network Analysis

INTENDED OUTCOMES:

• Be able to solve problems in different environments and develop critical thinking • Be able to build and solve Transportation Models, Assignment Models, integer programming and Non linear programming

UNIT I LINEAR PROGRAMMING PROBLEM (12)

Formulation of LPP - Graphical Method - Simplex Method - Artificial variable technique and two phase simplex method. Duality - Dual and simplex method - Dual Simplex Method .

UNIT II TRANSPORTATION AND ASSIGNMENT PROBLEM (12)

Transportation Model- finding initial basic feasible solutions- moving towards optimality-Degeneracy.Solution of an Assignment problem - Hungarian Algorithm.

UNIT III INTEGER PROGRAMMING (11)

Integer Programming Problem – Gromory's fractional cut Method – Branch Bound Method

UNIT IV NETWORK ANALYSIS (11)

PERT & CPM- network diagram-probability of achieving completion date- crash time- cost analysis.

UNIT V CALCULUS OF VARIABLES (14)

Calculus of Variations covering, Basic definition, Simplest problem, Isoperimetric problem, Problems with Higher order derivatives, Euler Lagrange Equation, Weierstrass-Erdmann conditions; Pontryagin Maximum Principle; Transversality condition; Applications

16BEEC301B LINEAR ALGEBRA AND SPECIAL FUNCTIONS **L T P C**

3 2 0 4

OBJECTIVES:

- To develop analytical skills for solving engineering problems.
- To make the students to study about linear algebra and some useful special functions.
- To understand the concepts of vector space, linear transformations and diagonalization.
- To apply the concept of inner product spaces in orthogonalization.
- To understand the procedure to solve partial differential equations.
- To give an integrated approach to number theory and abstract algebra, and provide a firm

.

INTENDED OUTCOMES:

- Be able to acquire basic knowledge on vector spaces and linear transformations.
- Be able to build and solve the special functions.
- Illustrate accurate and efficient use of advanced algebraic techniques.
- Demonstrate their expertise by solving non - trivial problems related to the concepts

and by proving simple theorems about the statements proven by the text.

- Gain the capability to solve Bessel Function equations.
- Ability to clarify engineering problems using Fourier series.

UNIT I VECTOR SPACES (12)

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II LINEAR TRANSFORMATIONS (12)

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT III INNER PRODUCT SPACES (12)

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

UNIT IV HYPERBOLIC FUNCTIONS, BETA AND GAMMA FUNCTIONS (12)

Hyperbolic functions: Hyperbolic functions and Inverse Hyperbolic functions – Identities – Real and imaginary parts – solving problems using hyperbolic functions.

Beta And Gamma Functions : Definitions – Properties – Relation between beta and gamma integrals – Evaluation of definite integrals in terms of beta and gamma functions.

UNIT V BESSEL FUNCTIONS (12)

Bessel Functions – Preliminaries – Definitions – Bessel Differential Equation – Differential recurrence relations – the pure recurrence relation – A generating function – Bessel's integral – Index half and odd integer.

16BEEC302 ELECTRONIC DEVICES AND CIRCUITS **L T P C**

3 0 0 3

OBJECTIVES

- To understand the operational characteristics of a Semiconductor in Equilibrium and Non-Equilibrium conditions.
- To understand the working of PN junction diodes and special purpose diodes.

- To understand the basic working physics of BJT and FET both in ideal and non- ideal conditions.
- To understand the working of Rectifiers and Voltage regulators.
- To understand the fabrication process of Monolithic Ics
- To expose the students about the construction working and applications of basic electronic devices essential for subsequent courses on Analog electronics, Analog & digital communication and CMOS design.

INTENDED OUTCOMES

- Understand the fundamental concepts
- Logically analyze any electronic circuit
- Ability to construct DC power supply for given specification.
- Gain knowledge on construction and applications of Diodes
- Understand MOS transistors for circuits and systems
- Gain knowledge on Construction and working of Field effect Transistors

UNIT I-SEMICONDUCTOR DIODES AND SPECIAL PURPOSE DIODES

Overview on Physics and Properties of Semiconductors: Intrinsic semiconductor – extrinsic semiconductor – Fermi level in an intrinsic semiconductor – conductivit y of a metal, intrinsic semiconductor and extrinsic semiconductor – drift – diffusion – recombination – carrier life time. Semiconductor diodes : Formation of PN junction – working principle – VI characteristics – PN diode currents – diode current equation – diode resistance – transition and diffusion capacitance – diode models – voltage breakdown in diodes.

Special purpose diodes : Zener diode – point-contact diode – backward diode – varactor diode – step- recover y diode – schottky diode, PNPN diode – RF diode.

UNIT II-BIPOLAR TRANSISTORS

Bipolar Transistors: Construction – working – transistor currents –transistor configurations and input- output characteristics – Earl y effect (base width modulation) – Ebers Moll model – transistor as an amplifier –Transistor as a switch.

UNIT III-FIELD EFFECT TRANSISTORS

Field-Effect Transistors: construction, working and VI characteristics of JFET – comparison of BJT and JFET – MOSFET – enhancement MOSFET, depletion MOSFET, their working principle and VI characteristics, comparison of MOSFET with JFET, comparison of D MOSFET with E MOSFET, CMOS, MESFET, CCD.

UNIT IV-DC POWER SUPPLIES

Rectifiers and Filters: Block schematic of a t ypical DC power suppl y, single phase HWR, FWR, full- wave bridge rectifier, power suppl y filters (ripple factor and efficiency anal ysis), bleeder resistor, voltage dividers.

Voltage regulators: voltage regulation, Zener diode shunt regulator, transistor series regulator, transistor shunt regulator, switching regulators, design of complete DC power suppl y circuit.

UNIT V-INTEGRATE D CIRCUIT FABRICATION

Integrated circuit – advantages and drawback of ICs – scale of integration –classification of ICs – definition of linear IC and digital IC with examples –manufacturing process of monolithic ICs – fabrication of components (diode, capacitor, bipolar transistor and resistor) on monolithic IC – comparison of MOS ICs and bipolar ICs.

16BEEC303 DIGITAL ELECTRONICS L T P C
3 0 0 3

OBJECTIVES

- To introduce basic postulates of Boolean algebra and shows the correlation between boolean expressions
- To introduce the methods for simplifying Boolean expressions
- To outline the formal procedures for the analysis and design of combinational circuits and sequential circuits
- To introduce the concept of memories and programmable logic devices.
- To illustrate the concept of s ynchronous and as ynchronous sequential circuits
- To imparts the knowledge of memory devices like FPGA

INTENDED OUTCOMES:

- Understand number systems and codes
- Understand basic postulates of Boolean algebra and shows the correlation between Boolean expressions
- Understand the methods for simplifying Boolean expressions
- Understand the formal procedures for the analysis and design of combinational circuits and sequential circuits
- Understand the concept of memories and programmable logic devices.
- Gain knowledge about various memory devices and implement using PLAs

UNIT-I NUMBER SYSTEMS AND BOOLEAN ALGEBRA

Binar y, Octal, Decimal, Hexadecimal-Number base conversions – complements – signed Binar y numbers. Binar y Arithmetic- Binar y codes: Weighted –BCD-2421-Gra y code-Excess 3 code-ASCII – Error detecting code – conversion from one code to another-Boolean postulates and laws –De-Morgan's Theorem- Principle of Dualit y- Boolean expression – Boolean function- Minimization of Boolean expressions – Sum of Products (SOP) –Product of Sums (POS)-Minterm- Maxterm- Canonical forms – Conversion between canonical forms –Karnaugh map Minimization – Don't care conditions.

UNIT-II LOGIC GATES AND COMBINATIONAL CIRCUITS

LOGIC GATES: AND, OR, NOT, NAND, NOR, Exclusive – OR and Exclusive – NOR-Implementations of Logic Functions using gates, NAND –NOR implementations –Multi level gate implementations- Multi output gate implementations. TTL and CMOS Logic and their characteristics – Tristate gates.

COMBINATIONAL CIRCUITS: Design procedure – Adders-Subtractors – Serial adder/ Subtractor - Parallel adder/ Subtractor- Carr y look ahead adder- BCD adder- Magnitude Comparator- Multiplexer/ Demultiplexer- encoder / decoder – parit y checker – code converters. Implementation of combinational logic using MUX.

UNIT-III SEQUENTIAL CIRCUIT

Flip flops SR, JK, T, D and Master slave – Characteristic table and equation –Application table – Edge triggering – Level Triggering –Realization of one flip flop using other flip flops –As ynchronous / Ripple counters – S ynchronous counters –Modulo – n counter –Classification of sequential circuits – Moore and Meal y -Design of S ynchronous counters: state diagram- State table –State minimization –State assignment- ASM-Excitation table and maps-Circuit implementation - Register – shift registers- Universal shift register – Shift counters – Ring counters.

UNIT-IV ASYNCHRONOUS SEQUENTIAL CIRCUITS

Design of fundamental mode and pulse mode circuits – primitive state / flow table – Minimization of primitive state table –state assignment – Excitation table – Excitation map- c ycles – Races –Hazards: Static –Dynamic –Essential –Hazards elimination.

UNIT-V MEMORY DEVICES

Classification of memories –RAM organization – Write operation –Read operation – Memory c ycle - Timing wave forms – Memory decoding – memory expansion – Static RAM Cell-Bipolar RAM cell – MOSFET RAM cell –D ynamic RAM cell –ROM organization - PROM –EPROM –EEPROM –EAPROM –Programmable Logic Devices –Programmable Logic Arra y (P LA)- Programmable Arra y Logic (PAL)-Field Programmable Gate Arra ys (FPGA). Implementation of combinational logic using ROM, PAL and P LA

16BEEC304 C PROGRAMMING L T P C
3 0 0 3

OBJECTIVES:

- Identify and understand the working of key components of a computer program.
- Identify and understand the various kinds of keywords and different data types of C programming
- Understand, analyze and implement software development tools like algorithm, pseudo codes and programming structure
- Study, analyze and understand logical structure of a computer program, and different construct to develop a program in 'C' language
- Ability to work with arrays and structures.
- To discuss the implementation of different non linear data structures such as trees and graphs.

LEARNING OUTCOMES:

- Write small programs related to simple/ moderate mathematical and logical problems in 'C'.
- Study, analyze and understand simple data structures and how to use it in C language
- Identify and understand the working of different operating systems like windows and Linux etc.
- Perceptive of the basic data structures.
- Understand the basic search and sort algorithms.
- Cultivate the knowledge to use a particular data structure and algorithm to solve a problem

UNIT I INTRODUCTION TO C LANGUAGE (8)

Character Set, Variables And Identifiers, Keywords- Built-In Data Types- Arithmetic Operators and Expressions, Constants And Literals, Simple Assignment Statement- Basic Input/Output Statement-Simple 'C' Programs, usage of const keyword

UNIT II CONDITIONAL STATEMENTS AND LOOPS (8)

Logical and Relational Operators- If Statement, If-Else Statement- Loops: While Loop, Do While, For Loop- Nested Loops, Infinite Loops- Switch Statement

UNIT III ARRAYS (9)

One Dimensional Arrays- Array Manipulation; Searching, Insertion, Deletion Of An Element From An Array- Finding The Largest/Smallest Element In An Array- Two Dimensional Arrays, -Addition / Multiplication Of Two Matrices- Strings As Array Of Characters.

UNIT IV POINTERS AND FUNCTIONS (10)

Pointers - Definition – Initialization – Pointers arithmetic – Pointers and arrays Example Problems- Function – definition of function – Declaration of function – Pass by value – Pass by reference – Recursion.

UNIT V USER DEFINED DATATYPES AND FILES (10)

Structures – initialization - nested structures – structures and arrays – structures and pointers - union – typedef and enumeration types - bit fields - File Management in C – Files and Streams – File handling functions – Sequential access file- Random access file – Command line arguments.

Total Hours: 45

16BEEC305 ELECTRO MAGNETIC FIELDS L T P C
3 1 0 4

OBJECTIVES:

- To impart knowledge on the basics of static electric and magnetic field and the associated laws.
- To give insight into the propagation of EM waves and also to introduce the methods in computational electromagnetic
- To make students have depth understanding of antennas, electronic devices, Waveguides is possible
- To study the various law in static magnetic fields
- To understand magnetic field concepts
- To learn the concept of Maxwell’s equations

INTENDED OUTCOMES:

- Analyze field potentials due to static changes and static magnetic fields.
- Explain how materials affect electric and magnetic fields.
- Analyze the relation between the field sunder time varying situations.
- Discuss the principles of propagation uniform plane waves.
- Apply Magnetic boundary conditions in evolving magnetic fields.
- Understand Faraday’s law for Electromagnetic induction

UNITI STATIC ELECTRICFIELD 9

Vector Algebra, Coordinate Systems, Vector differential operator, Gradient, Divergence, Curl, Divergence theorem, Stokes theorem, Coulombs law,Electric field intensity,Point,Line,Surface and Volume charged distributions, Electric flux density,Gauss law and its applications, Gauss divergence theorem, Absolute Electric potential,Potential difference,Calculation of potential differences for different configurations.Electric dipole,Electro static Energy and Energy density.

UNITII CONDUCTORS AND DIELECTRICS 9

Conductors and dielectrics in Static Electric Field,Current and current density,Continuity equation, Polarization, Boundary conditions, Methodofimages, Resistance of a conductor,Capacitance, Parallel plate,Coaxial and Spherical capacitors, Boundary conditionsfor perfect dielectric materials, Poisson’sequation,Laplace’sequation,Solution of Laplace equation,Application of Poisson’s and Laplace’s equations.

UNITIII STATIC MAGNETIC FIELDS 9

Biot-Savart Law,Magneticfield Intensity,Estimation of Magneticfield Intensity for straight and circular conductors, Ampere’s Circuital Law,Point form of Ampere’s Circuital Law,Stokes theorem, Magnetic flux and magnetic flux density, The Scalar and Vector Magnetic potentials,Derivation of Steady magneticfield Laws.

UNITIV MAGNETICFORCES AND MATERIALS 9

Forceona moving charge,Force on a differential current element,Force between current elements, Force and torque on a closed circuit, The nature magnetic materials,Magnetization and permeability,Magnetic boundary conditions in evolving magnetic fields,Themagnetic circuit, Potential energy and forceson magnetic materials,Inductance,Basic expressions fo rself and mutual inductances, Inductance evaluation for solenoid, toroid,coaxial cables and transmissionlines,Energy stored in Magneticfields.

UNITV TIME VARYING FIELDS AND MAXWELL'S EQUATIONS 9

Fundamental relations for Electro static and Magneto static fields,Faraday's law for Electromagnetic induction, Transformers, Motional Electromotive forces, Differential form of Maxwell's equations, Integral form of Maxwell's equations, Potential functions, Electromagnetic boundary conditions, Wave equations and their solutions,Poynting'stheorem, Time harmonic fields,Electro magnetic Spectrum.

16BEEC311 C PROGRAMMING LABORATORY L T P C

0 0 3 2

OBJECTIVES:

- To provide an awareness to Computing and C Programming.
- To know the correct and efficient ways of solving problems.
- To learn to develop algorithm for simple problem solving.
- Analyze the given algorithms.
- Enable to write algorithms for solving problems with the help of fundamental data structures
- Write programs that implement of different non linear data structures such as trees and graphs.

INTENDED OUTCOMES:

- Able to understand the basic terminology used in computer programming.
- Able to write, compile and debug programs in C language.
- Able to use different data types in a computer program.
- Able to design programs involving decision structures, loops and functions.
- Able to understand the dynamics of memory by the use of pointers.
- Capability to analyze and differentiate different algorithms based on their time complexity.

LIST OF EXERCISES

1. Write a C program to find Factorial of a given number using do while loop.
2. Write a C Program to print Fibonacci series using while loop.
3. Write a C Program to check a given number is Prime or Not.
4. Write a C Program to compute the sum of even numbers for a given n value.
5. Write a C Program to check the given string is Palindrome or Not.
6. Write a C Program to check the given number is Armstrong or Not using functions.
7. Write a C Program to count the number of vowels from the given string using switch case.
8. Write a C Program to read a line of text from keyboard and print the number of characters, words and spaces.
9. Write a C Program to print the student's record using structure.
10. Write a C Program to find factorial of a number using recursion function.

16BEEC312 ELECTRON DEVICES AND CIRCUITS LABORATORY L T P C

0 0 3 2

OBJECTIVES

- To study experimentally the characteristics of diodes,BJT's and FET's.
- To verify practically, there sponse of various special purpose electron devices.
- To verify practically, the response of various special purpose electron devices.
- To understand the characteristic of LED.
- To learn how to use software's for simulating characteristics of various circuits.
- To divulge the basics of rectifier circuits.

INTENDED OUTCOMES:

- Familiarize the electronic devices and basic electronic components.
- Familiarize with basic electronic design.
- Gain in-depth core knowled gein the design of electronic devices
- Gain knowledge inverifying the characteristics of electronic devices by simulation.
- Divulge the basics of LED with three different wavelengths.
- Enable the students familiar with construction series voltage regulator.

LIST OF EXPERIMENTS

1. Characteristics of PN junction and Zenerdiode.
2. Input, Output and Transfer characteristics of CE Configuration.
3. Input, Output and Transfer characteristics of CC Configuration
4. Characteristics of LDR, Photo-diode and Phototransistor.
5. Transfer characteristics of JFET.
6. Transfer characteristics of MOSFET (with depletion and enhancement mode)
7. Characteristics of LED with three different wavelengths.
8. Halfwave rectifier, Fullwave rectifier and Fullwave Bridge rectifier with and without Capacitive filter
9. Series voltage Regulator
10. Simulation experiments1, 2,3,5,6 using PSPICE or Multisim.

16BEEC313 DIGITAL ELECTRONICS LABORATORY L T P C
0 0 3 2

OBJECTIVES

- To verify operation of logic gates and flip-flops.
- To design and construct digital circuits
- To do simulation of simple combinational and sequential circuits
- To design synchronous sequential circuits.
- To simulate simple combinational and sequential circuits
- To learn about Encoders and Decoders design.

INTENDED OUTCOMES:

- Differentiate between combinational and sequential circuits.
- Design simple digital circuits for various applications.
- Learn to simulate using HDL.
- Construct counter circuits for different application
- Simulate a design using VHD/Verilog HDL
- Design a two bit magnitude comparator.

LISTOFEXPERIMENTS

1. Study of Gates &Flip-flops.
2. HalfAdder and FullAdder.
3. Magnitude Comparator (2-Bit).
4. Encoders and Decoders.
5. Multiplexer and Demultiplexer.
6. Code Converters.
7. Implementation of combinational logic functions using standard ICs
8. Synchronous Counters.

9. Ripple Counter.
10. Mod–N Counter.
11. Shift Registers and Shift Register Counters.
12. Implementation of sequential logic functions using standard ICs.
13. Simulation Experiments using VHDL

16BEEC351 PCB DESIGNING **L T P C**
1 0 0 –

1 0 0 –

OBJECTIVES:

- To learn software used for PCB design
- To learn about the tools used in PCB.
- To create a net list for a design.
- To divulge the basics of OR-CAD PCB software.
- To make the students familiar with design verification.
- To learn the automatic routing and manual routing.

INTENDED OUTCOME:

- At the end of this course students will demonstrate the ability to simulate any circuit design using simulation software.
- Able to carry out any PCB design necessary for their graduation projects
- The course is intended to give the students the necessary knowledge and of PCB design steps, starting from a simple schematics, through creating new components, and all the way to down a final PCB layout ready for population.
- Gain good knowledge about PCB design .
- Clear idea about automatic routing and manual routing.
- Understand the basics tools used in PCB.

1. Introduction to OR-CAD PCB
2. Installation and Setup
3. PCB Basics(Tools)
4. PCB Design Session
5. Automatic Routing
6. Manual Routing
7. Design Verification
8. Creation of Net list

16BEEC401 LINEAR INTEGRATED CIRCUITS L T P C

3 0 0 3

OBJECTIVES

- To introduce the basic building blocks of linear integrated circuits.
- To teach the linear and non-linear application s of operational amplifiers.
- To introduce the theory and applications of analog multipliers and P LL.
- To introduce the concepts of waveform generation and introduce some special function ICs.
- To teach the theory of ADC
- To learn the theory of DAC.

INTENDED OUTCOMES:

- Knowledge about the basic building blocks of linear integrated circuits.
- Knowledge about the linear and non-linear applications of operational amplifiers.
- Knowledge about the theory and applications of analog multipliers and P LL.
- Knowledge about the theory of ADC and DAC
- Knowledge about a few special function integrated circuits
- Design of Filters and Voltage regulators

UNIT I-OPERATIONAL AM PLIFIER CHARACTERISTICS

Op-amp symbol, terminals, packages and specifications - Block diagram Representation of op-amp-Ideal op-amp & practical op-amp - Open loop & closed loop configurations – DC & AC performance characteristics of op-amp – Frequency compensation - Noise – Differential amplifiers -Electrical Characteristics and internal schematic of 741 op - amps.

UNIT II-OP–AMP APPLICATIONS

Basic op-amp circuits: Inverting & Non-inverting voltage amplifiers -Voltage follower -Summing, scaling & averaging amplifiers - AC amplifiers.Linear Applications: Instrumentation Amplifiers-V-to-I and I-to-V converters-Differentiators and Integrators.

Non-linear Applications: Precision Rectifiers – Wave Shaping Circuits (Clipper and Clampers) – Log and Antilog Amplifiers – Analog voltage multiplier circuit and its applications - Comparators and its applications.

UNIT III- WAVEFORM GENERATORS AND PLL

Waveform Generators: Sine-wave Generators – Square / Triangle / Sawtooth Wave generators. IC 555 Timer: Monostable operation and its applications, Astable operation and its applications

P LL: Operation of the Basic P LL-Closed loop analysis of P LL-Voltage Controlled Oscillator-P LL Applications

UNIT IV-ACTIVE FILTERS & VOLTAGE REGULATOR

Filters: Comparison betweenPassive and Active Networks-Active Network Design – Filter Approximations-Design of LPF, HPF, BPF and Band Reject Filters – State Variable Filters

Voltage Regulators: Basics of Voltage Regulator – Linear Voltage Regulators using Op-amp – IC Regulators (78x x, 79xx, LM 317, 723)-Switching Regulators.

UNIT V-DATA CONVERSION DEVICES

Digital to Analog Conversion: DAC Specifications – DAC circuits – Weighted Resistor DAC-R-2R Ladder DAC- Inverted R-2R Ladder DAC Monolithic DAC

Analog to Digital conversion:ADC specifications-ADC circuits-Ramp Type ADC-Successive Approximation ADC-Dual Slope ADC-Flash Type ADC.

16BEEC402 **SIGNALS AND SYSTEMS** **L T P C**
3 2 0 4

OBJECTIVES

- To study the properties and representation of discrete and continuous signals.
- To study the sampling process and analysis of discrete systems using z-transforms.
- To study the analysis and synthesis of discrete time systems.
- To inculcate the characteristics of various signals.
- To familiarize with Z Transform and its application on signals
- To get familiarize of sampling of signals

INTENDED OUTCOMES:

- Knowledge about the properties and representation of discrete and continuous signals.
- Knowledge about the sampling process and analysis of discrete systems using z-transforms
- Knowledge about the analysis and synthesis of discrete time systems.
- Depict discrete systems in different domain using Fourier Transform
- Investigate stability of the system
- Carry on state-space analysis of signals and its multi-input, multi-output representation

UNIT-I REPRESENTATION OF SIGNALS

Classification of Signals – Periodic, aperiodic, even, odd – energy and power signals – Deterministic and random signals – complex exponential and sinusoidal signals – periodicity – unit impulse – unit step impulse functions – Transformation in independent variable of signals: time scaling, time shifting. Determination of Fourier series representation of continuous time and discrete time periodic signals – Explanation of properties of continuous time and discrete time Fourier series.

UNIT-II ANALYSIS OF CONTINUOUS TIME SIGNALS AND SYSTEMS

Continuous time Fourier Transform and Laplace Transform analysis with examples – properties of the Continuous time Fourier Transform and Laplace Transform basic properties, Parseval's relation, and convolution in time and frequency domains. Basic properties of continuous time systems: Linearity, Causality, time invariance, stability of frequency response of LT I systems -Analysis and characterization of LT I systems using Laplace transform: Computation of impulse response and transfer function using Laplace transforms.

UNIT-III SAMPLING THEOREM AND Z-TRANSFORMS

Sampling theorem – Reconstruction of a Signal from its samples, aliasing – sampling of band pass signals. Basic principles of z -transform - z-transform definition – Region of Convergence – Properties of ROC – Properties of z-transform – Poles and Zeros – inverse z-transform using Contour integration - Residue Theorem, Power Series expansion and Partial fraction expansion, Relationship between z - transform and Fourier transform.

UNIT-IV DISCRETE TIME SYSTEMS

Computation of Impulse response & Transfer function using Z Transform. DTFT Properties and examples – LTI-DT systems - Characterization using difference equation – Block diagram representation – Properties of convolution and the interconnection of LTI Systems – Causality and stability of LTI Systems.

UNIT-V FILTER REALIZATION STRUCTURES

Realization structures – Direct Form – I, Direct Form – II, Cascade, Parallel and Transpose forms.

16BEEC403 TRANSMISSION LINES AND NETWORKS L T P C
3 0 0 3

OBJECTIVES

- To become familiar with propagation of signals through lines.
- To know about various line parameters by conventional and graphical methods.
- To understand the need for impedance matching
- To understand the different impedance matching techniques.
- To understand the design of different types of filters
- To know about the usuage of equalizer and attenuators.

INTENDED OUTCOMES:

- Familiar with propagation of signals through lines.
- Gain knowledge about calculation of various line parameters by conventional and graphical methods.
- Gain knowledge about Need for impedance matching and different impedance matching techniques.
- Students could understand the different impedance matching techniques.
- Students could understand the design of different types of filters
  Students will know about the usuage of equalizer and attenuators.

UNITI-TRANSMISSION LINE THEORY

General theory of Transmission lines – the transmission line– general solution–The infinite line–Wavelength, velocity of propagation– Waveform distortion– the distortion lessline- Loading and different methods of loading– Line not terminated in Z0 –Reflection coefficient–Calculation of current, voltage, power delivered and efficiency of transmission–Input and transfer impedance-Open and short circuited lines–reflection factor and reflection loss.

UNITII-HIGH FREQUENCY TRANSMISSION LINES

Transmission line equations at radio frequencies–Line of Zero dissipation–Voltage and current on the dissipation less line, StandingWaves, Nodes Standing Wave Ratio–Input impedance of the dissipation less line - Open and short circuited lines – Powerand impedance measurement on lines – Reflection losses– Measurement of VSWR and wavelength.

UNITIII-IMPEDANCE MATCHING IN HIGH FREQUENCY LINES

Impedance matching: Quarter wave transformer – Impedance matching bystubs–Single stuband double stubmatching– Smith chart – Solutions of problems using Smith chart – Single and double stubmatching using Smithc hart.

UNITIV-PASSIVE FILTERS

Characteristic impedance of symmetrical networks–filter fundamentals.Design of filters: Constant K, LowPass, High Pass, Band Pass, Band Elimination, m-derived sections and composite.

UNITV-ATTENUATORS AND EQUALIZERS

Attenuators: Lattice Attenuators, Bridged– Tattenuator, L-Type Attenuator. Equalizers:Inversenetwork, series, fullseries, shunt, fullshunt, constant resistanceT, constant resistance constant resistance lattice and bridged Tnetwork.

16BEEC404 COMMUNICATION THEORY L T P C
3 0 0 3

OBJECTIVES

- To provide various Amplitude modulation and demodulation systems.
- To provide various Angle modulation and demodulation systems.
- To provide some depth analysis in noise performance of various receiver.
- To study some basic information theory with some channel coding theorem.
- To learn the transmission of a Random Process through a LTI filter.
  - To study the concept of differential entropy.

INTENDED OUTCOMES:

- Knowledge on various Amplitude modulation and demodulation systems.
- Knowledge on various Angle modulation and demodulation systems.
- Knowledge on some depth analysis in noise performance of various receiver.
- Knowledge on some basic information theory with some channel coding theorem.
- Some basic information theory with some channel coding theorem.
- Transmission of a Random Process through a LTI filter.

UNIT-I AMPLITUDE MODULATION

Generation and demodulation of AM, DSB-SC, SSB-SC, VSB Signals, Filtering of sidebands, Comparison of Amplitude modulation systems, Frequency translation, Frequency Division multiplexing, AM transmitters – Super heterodyne receiver, AM receiver.

UNIT-II ANGLE MODULATION

Angle modulation, frequency modulation, Narrowband and wideband FM, transmission bandwidth of FM signals, Generation of FM signal – Direct FM – indirect FM, Demodulation of FM signals, FM stereo multiplexing, P LL – Nonlinear model and linear model of P LL, Non-linear effects in FM systems, FM Broadcast receivers, FM stereo receives.

UNIT-III NOISE PERFORMANCE OF DSB, SSB RECEIVERS

Noise – Shot noise, thermal noise, White noise, Noise equivalent Bandwidth, Narrowband noise, Representation of Narrowband noise in terms of envelope and phase components, Sine wave plus Narrowband Noise, Receiver model, Noise in DSB-SC receiver, Noise in SSB receiver

UNIT-IV NOISE PERFORMANCE OF AM AND FM RECEIVERS

Noise in AM receivers threshold effect, Noise in FM receivers capture effect, FM threshold effect, FM threshold reduction, Pre-emphasis and de-emphasis in FM, Comparison of performance of AM and FM systems.

UNIT-V INFORMATION THEORY

Uncertainty, Information and entropy, Source coding theorem, Data compaction, Discrete memory less channels, mutual information, channel capacity, channel coding theorem, differential entropy, and mutual information for continuous ensembles, information capacity theorem, implication of the information capacity theorem, rate distortion theory, Compression of information.

16BEEC405 **ELECTRONIC CIRCUITS** **L T P C**
3 0 0 3

OBJECTIVES
At the end of this course the students will learn and apply

- Operating point calculations and working of basic amplifiers.
- Working of different types of feedback amplifiers & oscillators.
- Frequency response and design of tuned amplifiers.
- Basic working & design of wave shaping circuits.
- Impart knowledge on feedback and oscillator circuits.
- Understand the concept of multivibrators.

INTENDED OUTCOMES:
- The purpose of this course is to introduce to the students
- The basics of biasing transistor circuits, feedback amplifiers, large signal amplifiers, tuned amplifiers, oscillators, wave shaping circuits, and to design and analyze various electronic circuits and systems
- Frequency response and design of tuned amplifiers.
- Basic working & design of wave shaping circuits.
- Design power supply for various application
- Design regulators for different application

UNIT I-BIASING CIRCUITS AND SMALL SIGNAL MODELS
Biasing circuits: DC load line and Q point – BJT biasing circuits – FET biasing circuits-Bias
Stabilization. Small-signal models: AC load line, BJT models and parameters – hybrid equivalent model, Hybrid π model, FET small-signal model and parameters.

UNIT II-SMALL -SIGN AL AMPLIFIERS - AN ALYSIS AND FREQUENCY RESPONSE
BJT amplifiers: CE, CB and CC amplifiers – multistage amplifiers -differential amplifier. Frequency response: low frequency response of BJT and FET amplifiers –Miller effect capacitance –high frequency response of BJT and FET amplifiers.

UNIT III-FEEDBACK AND OSCILLATO R CIRCUITS
Feedback circuits: concept of feedback – effects of negative feedback –Types of negative feedback topologies Oscillator circuits: oscillator principles – LC oscillators – RC oscillators – crystal oscillators.

UNIT IV-POWER AMPLIFIERS AND TUNED AMPLIFIERS
Power amplifiers: Class A amplifier – Class B and Class AB push-pull amplifiers – Class C amplifiers-Amplifier distortions – heat sink .
Tuned amplifiers: need for tuned circuits – single tuned – double tuned – video amplifier (CA3040).

UNITV-SOLID STATE SWITCHING CIRCUITS
Transistor switching times – multivibrators – astable multivibrator – monostable multivibrator – bistable multivibrator – Schmitt trigger .Oscillator-Sweep generators.

16BEEC406A **CONTROL SYSTEMS** **L T P C**
3 0 0 3

OBJECTIVES:

- To understand the open loop and closed loop (feed back) systems
- To understand time domain and frequency domain analysis of control systems required for stability analysis.
- To understand the compensation technique that can be used to stabilize control systems
- To introduce the concept of compensators.
- To introduce control system componets and its applications.
- To gain basic knowledge on open loop and closed–loop frequency response of systems.

INTENDED OUTCOMES:

- Upon completion of the course, students will be able to:
- Perform time domain and frequency domain analysis of control systems required for stability analysis.
- Design the compensation technique that can be used to stabilize control systems.
- Analyze frequency and time response for any given system
- Design various controllers
- Describe the necessity of controllability and observability

UNIT-I CONTROL SYSTEM MODELLING
System concept, differential equations and transfer functions. Modeling of electric systems, translational and rotational mechanical systems, Simple electromechanical systems.
Block diagram representation of systems – Block diagram reduction methods – Closed loop transfer function, determination of signal flow graph. Mason's gain formula – Examples.

UNIT-II TIME DOMAIN ANALYSIS
Test signals – time response of first order and second order systems – time domain specifications – types and order of systems – generalized error co-efficient – steady state errors – concepts of stability – Routh-Hurwitz stability – root locus. Analysis using MATLAB

UNIT-IIIFREQUENCY DOMAIN ANALYSIS
Introduction – correlation between time and frequency response – stability analysis using Bode plots, Polar plots, Nichols chart and Nyquist stability criterion – Gain margin – phase margin. , Analysis using MATLAB.

UNIT-IVCOMPENSATORS
Realization of basic compensators – cascade compensation in time domain and frequency domain and feedback compensation – design of lag, lead, lag-lead compensator using Bode plot and Root locus. Introduction to P, PI and PID controllers. Analysis using MATLAB.

UNIT-VCONTROL SYSTEM COMPONENTS AND APPLICATION OF CONTROL SYSTEMS
Stepper motors – AC servo motor – DC servo motor – Synchros – sensors and encoders – DC tacho generator – AC tacho generator – Hydraulic controller – Pneumatic controller – Typical application of control system in industry.

16BEEC406B　　COMPUTER NETWORKS　　L T P C

3 0 0 3

OBJECTIVES

- To introduce the students the functions of different layers.
- To introduce IEEE standard employed in computer networking.
- To make students to get familiarized with different protocols and network components.
- To familiarize the students with layering concepts.
- To imparts a good knowledge in transport layer protocol
- To learn about congestion avoidance mechanisms and quality of service

INTENDED OUTCOMES:

- Adequate knowledge about the functions of different layers.
- Adequate knowledge about IEEE standard employed in computer networking.
- Familiarize with different protocols and network components.
- Trace the flow of information from one node to another node in the network.
- Gain knowledge to allocate appropriate resources
- Analyze the performance of the network

UNIT I DATA COMMUNICATIONS

Components – Direction of Data flow – networks – Components and Categories – types of Connections – Topologies –Protocols and Standards – ISO / OS I model – Transmission Media – Coaxial Cable – Fiber Optics – Line Coding – Modems – RS232 Interfacing sequences-Real time applications.

UNIT II DATA LINK LAYER

Error – detection and correction – Parity – LRC – CRC – Hamming code – Flow Control and Error control: stop and wait – go back N ARQ – selective repeat ARQ- sliding window techniques – HDLC.LAN: Ethernet IEEE 802.3, IEEE 802.4, and IEEE 802.5 – IEEE 802.11–FDD I, SONET – Bridges. Real time applications.

UNIT III NETWORK LAYER

Internetworks - Packet Switching and Datagram approach – IP addressing methods – IP4 and IP6 - Subnetting – Routing – Distance Vector Routing – Link State Routing – Routers- Real time applications.

UNIT IV TRANSPORT LAYER

Duties of transport layer – Multiplexing – Demultiplexing – Sockets – User Datagram Protocol (UDP) – Transmission Control Protocol (TCP) – Congestion Control – Quality of services (QOS) – Integrated Services- Real time applications.

UNIT V APPLICATION LAYER

Domain Name Space (DNS) – SMTP, FTP, HTTP, WWW, Email, Search engines - POP server – Security – Cryptograph y- Real time applications.

16BEEC411 ELECTRONIC CIRCUITS AND SIMULATION LABORATORY **L T P C**
0 0 3 2

OBJECTIVES

- To study experimentally the working of amplifiers, regulators and analyze their behavior by plotting graphs.
- To study the Harlet and Colpitts Oscilaltor
- To know the design of Wein Bridge Oscillator
- To learn about Integrators, Differentiators, Clippers and Clampers
- To know the design of Astable, Monostable and Bistable multivibrators
- To design Class C Amplifier

INTENDED OUTCOME:

- Ability to simulate and design any given electronic circuit and analyze their performance frequency response and characteristics.
- Design the Harlet and Colpitts Oscilaltor
- Design of Wein Bridge Oscillator
- Know Integrators, Differentiators, Clippers and Clampers
- Design Astable, Monostable and Bistable multivibrators
- Design Class C Amplifier

LIST OF EXPERIMENTS

1. Series and Shunt feed back amplifiers: Frequency response, Input and output impedance calculation
2. Design of RC Phaseshift oscillator: Design Wein Bridge Oscillator
3. Design of Hartley and Colpitts Oscillator
4. Tuned Class C
5. Integrators, Differentiators, Clippers and Clampers
6. Design of Astable, Monostable and Bistable multivibrators

SIMULATION USING PSPICE:

7. Differentiate amplifier
8. Activefilter: Butter worth IInd order LPF
9. Astable, Monostable and Bistable multivibrator – Transistor bias
10. D/A and A/D converter (Successive approximation)
11. Analog multiplier
12. CMOS Inventor, NAND and NOR

16BEEC412 LINEAR INTEGRATED CIRCUITS LABORATORY **L T P C**
0 0 3

OBJECTIVES

- To expose the students to linear and integrated circuits
- To understand the basics of linear integrated circuits and available ICs
- To apply operational amplifiers in linear and nonlinear applications.
- To acquire the basic knowledge of special function IC.
- To study the characteristics of PLL
- To use PSPICE/ MultiSim software for circuit design.

INTENDED OUTCOMES:

- Design oscillators and amplifiers using operational amplifiers.
- Design filters using Opamp and perform experiment on frequency response.
- Analyse the working of PLL and use PLL as frequency multiplier.

- Design DC power supply using ICs.
- Design ofADC andDAC using discrete components.
- Analyse the performance of oscillators and multivibrators using PSPICE/MultiSim.

LIST OF EXPERIMENTS

1. Inverting, Noninverting and differential amplifiers.
2. Integrator and Differentiator.
3. Instrumentation amplifier.
4. Active lowpass, highpass and Bandpass filter.
5. Astable, Monostable multivibrators and SchmittTrigger using op-amp.
6. Phase shift and Wienbridge oscillator using op-amp.
7. Astable and Monostable using NE555 Timer.
8. PLL characteristics and Frequency Multiplier using PLL.
9. Design of ADC and DAC using discrete components.
10. Study of DC power supply using LM317and LM723 and SMPS control ICSG 3524/SG3525.
11. Simulation of Experiments1,2,3,4,5 using PSpice / MultiSim

16BEEC451	**LIFE SKILLS**	**L T P C**
		1 0 0 –

Course Objectives

- To elevate the students into productivity powerhouses who can employ life skills to better their performances.
- To help the students understand interpersonal skills.
- To support them in building interpersonal skills.
- To better the ability to work with others.
- To imparts good knowledge in stress management.
- To understand the leadership teamwork, creativity, efficiency & productivity

Course Outcomes

- Ability to communicate smartly and effectively with co-workers, relationship enhancement
- Improvement of time management and organizational skill.
- Development of leadership teamwork, creativity, efficiency & productivity
- Development of presentation skills
- Recognize stress symptom & develop stress deflecting strategies
- Brain storming & problem solving strategies to increase creativity and collaborative outcomes

UNIT I 4

Overview to communication, self Introduction, Presentation on their own topic, Extempore, Group Activity

UNIT II 3

Group Discussion, Do's and Don’ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III 4

Introduction to HRM – Questions - Do's and Don’t's - Interview - Mock GD - Stress Management

UNIT IV 4

Personality Development - Presentation skills, Interpersonal skills, Critical thinking, Confidence building and Stress management.

TOTAL 15

16BEEC452 TECHNICAL SEMINAR L T P C
1 0 0 -

Course Objectives

The goal of this course for students is :

- To make students aware of recent technical advancements in electronics
- To enable students to overcome stage fear

Course Outcomes

At the end of this course students will be able to :

- Gain knowledge on recent trends in electronics
- Acquire fluency and confidence for conference presentation

16BEEC501 DIGITAL SIGNAL PROCESSING L T P C
3 1 0 4

OBJECTIVES

- To study DFT and its computation
- To study the design techniques for digital filters
- To study the finite word length effects in signal processing
- To study the fundamentals of digital signal processors
- To study the concept of Adaptive Filters
- To understand Direct I and Direct II structures

INTENDED OUTCOMES:

- Understand the structures of Discrete time signals and s ystems
- Understand Frequenc y response and desi gn of FIR and IIR filters.
- Understand Finite word length effect
- Understand DSP Processor- TMS320C5X.
- Apply Adaptive Filters to equalization.
- Apply direct form I and direct form II structures.

UNIT I-REVIE W OF D ISCRETE TIME SIGNALS AND SYSTEMS

Overview of signals and systems – DFT–FFT using DIT and DIF algorithms – Inverse DFT- FFT using DIT and DIF al gorithms – Applications – Circular convolution – MATLAB programs for DFT and FFT.

UNIT II-DESIGN AND IM PLE MENTATION OF IIR FILTERS

Design of analog filters using Butterworth and Chebyshev approximations – IIR digital filter design from analog filter using impulse invariance technique and bilinear transformations – Matlab programs for IIR filters.

UNIT III-DESIGN AN D IM PLE M ENTA TIO N OF FIR FILTERS

Linear phase response – Design techniques for FIR filters – Fourier series method and frequency sampling method –Design of Linear phase FIR filters using windows: Rectangular, Hanning and Hamming windows – Matlab programs for FIR filters.

UNIT IV- FINITE WORD LENGTH EFFECTS IN DIGITAL FILTERS

Fixed point arithmetic – effect of quantization of the input data due to Finite word length. Product round off – need for scaling – Zero input limit cycle oscillations - Limit cycle oscillations due to overflow of adders – Table look up implementation to avoid multiplications.

UNIT V-PROCESSOR FUNDAMENTALS

Features of DSP processors – DSP processor packaging(Embodiments) – Fixed point Vs floating point DSP processor data paths – Memory architecture of a DSP processor (Von Neumann – Harvard) – Addressing modes – pipelining – TMS320 family of DSPs (architecture of C6x).

16BEEC502 DIGITAL COMMUNICATION

L T P C
3 0 0 3

OBJECTIVES

- To learn and understand Pulse modulation and discuss the process of sampling, quantization and coding that are fundamental to the digital transmission of analog signals.
- Baseband pulse transmission which deal swith the transmission of pulse amplitude modulated signals in their baseband form Pass band data transmission methods
- To learn error control coding which encompasses techniques for the encoding and decoding of digital data streams for their reliable transmission over noisy channels.
- To understand Pulse Code Modulation (PCM) techniques
- To provide knowledge on inter symbol interference and nyquist criterion.
- To learn about pass band digital modulation

INTENDEDOUTCOMES:

- Gain knowledge in pulse modulation and discuss the process of sampling, quantization and coding that is fundamental to the digital transmission of analog signals.
- Gain adequate knowledge in baseband pulse transmission,which deals with the transmission of pulse-amplitude,modulated signals in their baseband form.
- Gain adequate knowledge in M-ary signaling and spread spectrum Technique.
- Analyze the spectral characteristics of band pass signaling schemes and their noise performance.
- Analyze the behavior of a communication system in the presence of noise.
- Investigate pulsed modulation system and analyze the system performance.

UNIT I-SAMPLING AND QUANTIZATION

Sampling Process – Aliasing – Instantaneous sampling – Natural Sampling – Flat Sampling – Quantization of signals – sampling and quantiz ing effects – channel effects – SNR for quantiz ation pulses – data formattin g techniques – Time division multiplexing.

UNIT II-DIGITAL M O DUL ATIO N SYSTEMS

PCM Systems – Noise Considerations in PCM s ystem – Overall Signal-to- noise ratio for PCM system – Threshold effect – Channel Capacity – Virtues, Limitations & Modification of PCM system – PCM Signal Multiplexing – Differential PCM – Delta Modulation – Noise Considerations in Delta Modulation – SNR Calculations – Comparison of PCM, DPCM & DM.

UNIT III-B ASE BAND PULSE TRANSMISSION

Maximum likelihood receiver structure – Matched filter receiver – Probabilit y error of the Matched filter – Inter symbol interference – Nyquist criterion for distortionless baseband transmission – Correlative coding – Eye pattern.

UNIT IV-PASS BAND DATA TRANSMISSION

Pass Band Transmission Model – Generation, Detection, Signal Space Diagram, Probability of Error for BFSK, BPSK, QPSK, DPSK, and Schemes– Comparison.

UNIT V-M-ARY SIGNALING AND INTRODUCTION TO SPREAD SPECTRUM TECHNIQUES

M-ary signaling, vectoral view of MPSK and MFSK signalin g, symbol error performance of M-ary systems – Introduction – Discrete Sequence Spread Spectrum technique – Use of Spread Spectrum with CDMA-Ranging Using Discrete Sequence Spread Spectrum – Frequency Hopping Spread Spectrum – Generation & Characteristics of PN Sequence.

16BEEC503 ANTENNAS AND WAVE PROPAGATION **L T P C**
3 0 0 3

OBJECTIVES

- To stud y various antennas, arra ys and radiation patterns of antennas.

- To learn the basic working of antennas
- To understand various techniques involved in various antenna param eter measurements.
- To understand the propagation of radio waves in the atmosphere
- To have an exposure on special purpose antennas
- To understand the concept of beam forming in smart antennas

INTENDED OUTCOMES:

- Gain knowledge in various antennas, arra ys and radiation patterns of antennas.
- Gain knowledge in the basic workin g of antennas.
- Understand various techniques involved in various antenna parameter measurements.
- Understand the propagation of radio waves in the atmosphere.
- Choose appropriate antennas based on applications
- Analyze the antenna arrays and special antennas with introduction nto CAD modeling

UNIT I-ANTENNA FU ND AM E NTALS AND RADIATION

Definition and function of antennas – Antenna theorems-Antenna parameters – Radiation Mechanism – Antenna field z ones – Radiation from a small current element – Power radiated by a small current element and its radiation resistance – Hertzian dipole – Half wave dipole – Monopole – Current distributions.

UNIT II-ANTENN A A RRAYS AND SYNTHESIS

Linear arrays – Analysis of linear arrays – Phased arrays – Binomial arrays – Pattern multiplication – Method of excitation of antennas – Impedance matching techniques. Synthesis methods: Schelkunoff polynomial – Fourier transform – Wooden Lawson method.

UNIT III-SPECIAL PURPOSE ANTENNAS

Travelling wave – Loop – small loop – Dipole and Folded dipole antennas – Horn antenna – Reflector antenna – Yagi – Uda antenna – Log periodic antenna – Helical and Microstrip antennas. Introduction to CAD tools used for antenna modeling.

UNIT IV-ANTENNA MEASUREMENTS

Drawbacks in measurements of antenna parameters – Methods to overcome drawbacks in measurements –Measurement ranges – Impedance – Gain – Radiation pattern – Beam width – Radiation resistance – Antenna efficiency- Directivity-Polarization and Phase Measurements.

UNITV-RADIO WAVE PROPAGATION

Basics of propagation-Ground wave propagation – Space wave propa gation- Considerations in space wave propagation – Super refraction – Ionospher ic wave propagation – Structure of ionosphere – Mechanism of ionospheric propagation – Effect of earth’s Magnetic field on Radio wave propagation – Virtual height – MUF – Skip distance – OWF – Ionosphere abnormalities.

16BEEC504 MICROPROCESSORS AND MICROCONTROLLERS **L T P C**
3 0 0 3

OBJECTIVES

- To introduce the h/w architecture, instruction set and programming of 8086 microprocessor.
- To introduce the peripheral interfacing of microprocessors.
- To introduce the h/w architecture of ARM processor
- To introduce the h/w architecture, instruction set, programming and interfacing of 8051 microcontroller.
- To study advanced processor architecture
- To expose them to programming concepts

INTENDED OUTCOMES:

- Adequate knowledge about the architecture and programming of 8085 microprocessor.
- Adequate knowledge about the architecture of ARM processor
- Adequate knowledge about the architecture and programming of 8086 microprocessor.
- Gain knowledge on ARMv7 processor.
- Interface memory and I/O device with controllers
- Gain knowledge about architectures of RISC and ARM processors

UNIT I-MICROPROCESSOR- 8086

Review of 8085- Introduction to 8086 -Register Organization -Architecture-Signals-Memor y Organization-Bus Operation-I/O Addressing-Minimum Mode-Maximum Mode-Timing Diagram-Interrupts - Service Routines – I/O and Memory Interfacing concepts.

UNIT II-PROGRAMMING OF 8086

Addressing Modes- Instruction format-Instruction set-Assembly language programs in 8086. R ISC architecture – introduction to ARM Programming-register configuration and instruction set – sample program.

UNIT III-MICROCONTROLLER-8051

Register Set-Architecture of 8051 microcontroller- I/O and memory addressing- Interrupts-
Instruction set- Addressing modes.

UNIT IV-PROGRAMMINGANDINTERFACINGOF8051

Timer-Serial Communication-Interrupts Programming- Interfacing t oExternal Memory-Interfacing to ADC,LCD,DAC,Keyboard and stepper motor.

UNIT V-OVERVIEWOFARMPROCESSOR

Review of ARM v7 core and its architecture, Introductionto Advanced ARM CORTEX M4 architecture,Peripherals over view,Advantages of using Cortex M4, Instructionset implementation, CPU timers introduction.

16BEEC5E** **PROFESSIONAL ELECTIVE** **L T P C**
3 0 0 3

16BEEC511 DIGITAL SIGNAL PROCESSING LABORATORY **L T P C**
0 0 3 2

OBJECTIVES

- To implement the processing techniques using TMS320C5X

- To implement the IIR and FIR filter using MATLAB.
- To familiarize with DSP system simulations.
- To study the knowledge about various addressing modes of DSP.
- To imparts a good knowledge sampling and effect of aliasing.
- To familiarize with fast fourier transform and its simulation using MATLAB.

INTENDED OUTCOMES:

- Carry out simulation of DSP systems.
- Demonstrate the applications of FFT to DSP.
- Implement adaptive filters for various applications of DSP.
- Acquire good knowledge about IIR and FIR filters.
- Understand the Sampling and effect of aliasing
- Clear idea about various addressing modes of DSP.

LIST OF EXPERIMENTS USING TMS320C5X

1. Study of various addressing modes of DSP using simple programming examples
2. Sampling of input signal and display
3. Implementation of FIR filter
4. Calculation of FFT

USING MATLAB

5. Generation of Signals
6. Linear and circular convolution of two sequences
7. Sampling and effect of aliasing
8. Design of FIR filters
9. Design of IIR filters
10. Calculation of FFT of asignal

16BEEC512 COMMUNICATION SYSTEMS LABORATORY **L T P C**
0 0 3 2

OBJECTIVES:

- To Understand the radiation patterns and applications of all types of antennas
- Understand the design of Yagi antenna.
- Design Half-wave dipole Antenna using Matlab.
- To Implement AM & FM modulation and demodulation.
- To implement PCM & DM.
- To implement FSK, PSK and DPSK schemes.

INTENDED OUTCOMES:

- Distinguuish between radiation patterns of various antennas.
- Design antenna for any application
- Select proper type of antenna based on applications
- Distinguish between various antennas based on their radiation patterns.
- Demonstrate their knowledge in AM, FM transmission and reception.
- Demonstrate their knowledge in base band signaling schemes through implementation of FSK, PSK and DPSK.

LISTOFEXPERIMENTS

1 Radiation pattern of Halfwave dipole Antenna
2. Radiation pattern of Yagi Antenna
3. Radiation pattern of loop Antenna
4. Characteristics of AM receiver (Selectivity&Sensitivity)
5. Characteristics of FM receiver (Selectivity &Sensitivity)
6. Signal Sampling & Time division multiplexing
7. Pulse modulation and demodulation-PAM/PWM/PPM
8. Pulse code modulation & demodulation
9. Line Coding & Decoding
10. Delta modulation & demodulation
11. Digital modulation & demodulation–ASK,PSK,FSK
12. Simulation of hardware mentioned above using Lsim software

16BEEC513 MICROPROCESSOR AND MICROCONTROLLER LABORATORY

L T P C
0 0 3 2

OBJECTIVES

- Introduce ALP concepts and features.
- Write ALP for arithmetic and logical operations in 8086.
- Interface peripherals with microprocessor and microcontroller.
- Excute programs in 8051
- Know the concept of CPU timers.
- Gain knowledge on ARMv7 processor

INTENDED OUTCOMES:

- Write ALP Programmes for fixed and Floating Point and Arithmetic.
- Interface different I/Os with processor.
- Execute Programs in 8051.
- Design Memory Interfacing circuits using 8051.
- Gain knowledge on ARMv7 processor.
- Introduce the CPU timer's

LIST OF EXPERIMENTS

Minimum 12 Experiments to be conducted

1. Programs for 8/16 bit Arithmetic operations (Using 8085 and 8086).
2. Programs for Sorting and Searching (Using 8086).
3. Programs for String manipulation operations (Using 8086).
4. Programs for Di gital clock and Stop watch (Using 8086).
5. Programs on Subroutines (Using 8086)
6. Interfacing ADC and DAC(Using MSP 430 CONTROLLER).
7. 8255 PP I.
8. Transfer data seriall y between two kits (8253/8251).
9. 8279 Keyboard & displa y
10. Temperature control.
11. Traffic Control Using MSP 430 CONTRO LLER.
12. 8259 Programmable Interrupt Controller.
13. Interfacing and Programming of DC Motor Speed control(Using MSP 430 CONTROLLER)
14. Interfacing and Programming of Stepper Motor and (8051).
15. Programming using Arithmetic, Logical and Bit Manipulation instructions of 8051 microcontroller.

16BEEC551	INPLANT TRAINING	L T P C
		- - - -

Course Objective

The goal of this course for students is :

- To bridge the gap between academia and industry in providing a industry exposure for satisfying local industrial needs .

Course Outcomes

At the end of this course, the students will be able to :

- Gain knowledge on various tools used in industry
- Know recent technological advancement happening in industry

16BEEC601	MOBILE COMMUNICATION	L T P C
		3 0 0 3

OBJECTIVES

- To learn the fundamental cellular radio concepts
- To learn radio propagation models
- To provide ideas about analog and digital modulation techniques used in mobile communication
- To learn various coders and multiple access techniques used in mobile communication
- To study the architectures of AMPS, GSM, WLL, Bluetooth, DECT, GPRS
- To provide ideas about digital modulation techniques used in mobile communication

INTENDED OUTCOMES:

- Gain adequate knowledge in the fundamentals of cellular radio concepts
- Gain adequate knowledge in radio propagation models
- Ability to provide ideas about analog and digital modulation techniques used in mobile communication
- Provide ideas about digital modulation techniques used in mobile communication.
- Familiarize with the fundamentals of Multiple Access Techniques.
- Analyze the architectures of AMPS, GSM, WLL, Bluetooth, DECT, GPRS

UNIT-I CELLULAR CONCEPT AND S YSTEM DESIGN FUNDAMENTALS

Introduction to wireless communication: Evolution of mobile communications, mobile radio systems- Examples, trends in cellular radio and personal communications.

Cellular Concept: Frequency reuse, channel assignment, hand off, Interference and system capacity, tracking and grade of service, Improving Coverage and capacity in Cellular systems.

UNIT-II MOBILE RADIO PROPAGATION

Free space propagation model, reflection, diffraction, scattering, link budget design, Outdoor Propagation models, Indoor propagation models, Small scale Multipath propagation, Impulse model, Small scale Multipath measurements, parameters of Mobile multipath channels, types of small scale fading, statistical models for multipath fading channels.

UNIT-III MODUL ATION T ECH NIQUES AND EQUILISATION

Modulation Techniques: Minimum Shift Keying, Gauss ion MSK, M-ary QAM, M-ary FSK, Orthogonal Frequency Division Multiplexing, Performance of Digital Modulation in Slow-Flat Fading Channels and Frequency Selective Mobile Channels. Equalization: Survey of Equalization Techniques, Linear Equalization, Non-linear Equalization, Algorithms for Adaptive Equalization. Diversity Techniques, RAKE receiver.

UNIT-IV CO DING AND MULTIPLE ACCESS

Coding: Vocoders, Linear Predictive Coders, Selection of Speech Coders for Mobile Communication, GSM Codec, RS codes for CDPD. Multiple Access Techniques: FDMA, TDMA, CDMA, SDMA, Capacity of Cellular CDMA and SDMA.

UNIT V WIREL E SS SYSTEMS ANTEN NAS AND STANDARDS

AMPS, GSM, W LL, Bluetooth, IS-95 and DECT - RFID antennas – Mobile Antennas - GPRS

16BEEC602A **VLSIDESIGN** **L T P C**
3 0 0 3

OBJECTIVES

- To learn the basic MOS Circuits.
- To learn the MOS process technology
- To learn the concepts of modeling a digital system using Hardware Description Language.
- To learn techniques of chip design using programmable devices.
- To learn the concepts of designing V LS I subsystems.
- To learn the concepts of VLSI implementation strategies.

INTENDED OUTCOMES:

- Gain knowledge in the basic MOS Technology.
- Gain knowledge in the MOS Process Technology and its second order effect.
- Gain knowledge in the concepts of modeling a digital system using Hardware DescriptionLanguage.
- Gain knowledge in basic concept of V LS I implementation strategies based on CMOS and FPGA.
- Explore high speed adders and multipliers
- Gain exposure on clocking Strategies

UNIT I-MOS TECHNOLOGY

Chip Design Hierarchy – IC Layers – Photolithography and Pattern Transfers – Basic MOS Transistors – CMOS Fabrication: n-well – p-well – twin tub – Latch up and prevention- Layout design rules, physical design- basic concepts, CAD tool sets, physical design of logic gates- Inverter, NAND, NOR.

UNIT II-MOS CIRCUIT DESIGN PROCESS

Introduction to MOSFET: Symbols, Enhancement mode-Depletion mode transistor operation – Threshold voltage derivation – body effect – Drain current Vs voltage derivation – channel length modulation. NMOS and CMOS inverter – Determination of pull up to pull down ratio –Stick diagrams – V LS I Circuit Design Flow.

UNIT III-CMOS LOGIC GATES & OTHER COMPLEX GATES

Gate delays – Logical Effort - CMOS Static Logic – Transmission Gate Logic – Tri-State Logic – Pass Transistor Logic – Dynamic CMOS Logic – Domino CMOS Logic,NORA CMOS Logic, True Single Phase Clock (TSPC) Dynamic Logic

UNIT IV-VERIL OG HDL

Hierarchical modeling concepts – Basic concepts: Lexical conventions – Data types – Modules and ports. Gate level modeling – Dataflow modeling – Behavioral modeling – Design examples of Combinational and Sequential circuits – Switch level modeling – Functions – UDP concepts.

UNIT V-VLSI IM PLE MENTATION STRATEGIES

Introduction – Design of Adders: carry look ahead-carry select-carry save. Design of multiplier s: Array – Braun array – Baugh-Wooley Array. Introduction to FPGA – Full custom and Semi custom design, Standard cell design and cell libraries, FPGA building block architectures.

16BEEC602B OPTICAL COMMUNICATION **L T P C**

3 0 0 3

OBJECTIVES

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures.
- To understand the different kind of losses, signal distortion in optical wave guides and other
- signal degradation factors.Design optimization of SM fibers, R I profile and cut-off wave length.
- To learn the various optical source materials, LED structures, quantum efficiency, Laser diodes and different fiber amplifiers.
- To learn the fiber optical receivers such as P IN AP D diodes, noise performance in photo detector, receiver operation and configuration.
- To learn fiber slicing and connectors, noise effects on system performance, operational principles W DM and solutions.

INTENDED OUTCOMES:

- Gain knowledge in basic elements of optical fiber transmission link, fiber modes configurations and structures.
- Gain knowledge in different kind of losses, signal distortion in optical wave guides and other signal degradation factors. Design optimization of SM fibers, R I profile and cut-off wave length.
- Gain knowledge in the various optical source materials, LED structures, quantum efficiency, Laser diodes and different fiber amplifiers.
- Gain knowledge in the fiber optical receivers such as P IN APD diodes, noise performance in photo detector, receiver operation and configuration.
- Gain knowledge in fiber slicing and connectors, noise effects on system performance, operational principles WDM and solutions.
- Gain knowledge on optical amplifiers and networks.

UNIT-I INTROD UCTION TO OPTICA L FIBERS

Evolution of fiber optic system- Element of an Optical Fiber Transmission link- Ra y Optics-Optical Fiber Modes and Configurations –Mode theory of Circular Wave guides- Overview of Modes-Key Modal concepts- Linearly Polarized Modes –Single Mode Fibers-Graded Index fiber structure.

UNIT-II SIGNAL DEGRADATION OPTICAL FIBERS

Attenuation – Absorption losses, Scattering losses, Bending Losses, Core and Cladding losses, Signal Distortion in Optical Wave guides-Information Capacity determination –Group Delay-Material Dispersion, Wave guide Dispersion, Signal distortion in SM fibers-Polarization Mode dispersion, Intermodal dispersion, Pulse Broadening in G I fibers-Mode Coupling –Design Optimization of SM fibers-RI profile and cut-off wavelength.

UNIT-III FIBER OPTICAL SOURCES AND COUPLING

Direct and indirect Band gap materials-LED structures –Light source materials –Quantum efficiency and LED power, Modulation of a LED, lasers Diodes-Modes and Threshold condition –Rate equations –External Quantum efficiency –Resonant frequencies –Laser Diodes, Temperature effects, Introduction to Quantum laser, Fiber amplifiers- Power Launching and coupling, Lancing schemes, Fibre –to- Fibre joints, Fibre splicing – Energy efficiency of LAS ER.

UNIT-IV FIBER OPTICAL RECEIVERS

P IN and APD diodes –Photo detector noise, SNR, Detector Response time, Avalanche Multiplication Noise –Comparison of Photo detectors –Fundamental Receiver Operation – preamplifiers, Error Sources –Receiver Configuration –Probability of Error – Quantum Limit.

UNIT-V DIGITAL TRANSMISSION SYSTEM

Point-to-Point links System considerations –Link Power budget –Rise - time budget –Noise Effects on System Performance-Operational Principles of WDM, Solutions-Erbium-doped Amplifiers. Basic on concepts of SONET/SDH Network.

16BEEC603A MICROWAVE ENGINEERING L T P C

3 0 0 3

OBJECTIVES:

- To inculcate under standing of the basics required for circuit representation of RFnetworks.
- To deal with the issues in the design of microwave amplifier.
- To instill knowledge on the properties of various microwave components.
- To deal with the microwave generation and microwave measurement techniques
- To familiarize the students with the analysis of RF and microwave transmission lines.
- To acquaint the student with concepts microwave semiconductor devices and microwave tubes.

INTENDED OUTCOMES:

- Explain the active & passive microwave devices & components used in Microwave communication systems.
- Analyze the multi- port RF networks and RF transistor amplifiers.
- Generate Microwave signals and design microwave amplifiers.
- Measure and analyze Microwave signal and parameters.
- Understand the principle behind microwave measurements
- Design microwave systems for different practical application.

UNITI TWO PORT NETWORK THEORY 9

Review of Low frequency parameters: Impedance, Admittance, Hybridand ABCD parameters, Different types of inter connection of Two port networks, High Frequency parameters, Formulation of Sparameters, Properties of Sparameters, Reciprocal and lossless Network, Transmission matrix, RF behavior of Resistors,Capacitors and Inductors.

UNITII RF AMPLIFIERS AND MATCHING NETWORKS **9**

Characteristics of Amplifiers, Amplifier power relations, Stability considerations, Stabilization Methods, Noise Figure, Constant VSWR, Broadband, Highpower and Multistage Amplifiers, Impedance matching using discrete components,Two component matching Networks,Frequency responseand quality factor, T and Pi Matching Networks, Microstrip Line Matching Networks.

UNITIII PASSIVE AND ACTIVE MICROWAVE DEVICES **9**

Terminations, Attenuators, Phase shifters, Directional couplers, Hybrid Junctions, Power dividers, Circulator, Isolator, Impedance matching devices: Tuning screw, Stub and quarter wave transformers. Crystal and Schottkey diode detector and mixers, PIN diode switch,Gunn diode oscillator,IMPATT diode oscillator and amplifier,Varactor diode, Introduction toMIC.

UNITIV MICROWAVE GENERATION **9**

Review of conventional vacuum Triodes,Tetrodes and Pentodes, High frequency effects in vacuum Tubes,Theory and application of Two cavity Klystron Amplifier, Reflex Klystron oscillator, Traveling wave tube amplifier,Magnetron oscillator using Cylindrical,Linear,Coaxial Voltage tunable Magnetrons, Backwardwave Crossed field amplifier and oscillator.

UNITV MICROWAVE MEASUREMENTS **9**

Measuring Instruments: Principle of operation and application of VSWR meter, Power meter, Spectrumanalyzer, Networkanalyzer, Measurement of Impedance, Frequency, Power, VSWR, Q- factor, Dielectric constant, Scattering coefficients, Attenuation, S-parameters.

16BEEC603B **EMBEDDED SYSTEMS** **L T P C**

3 0 0 3

OBJECTIVES

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To develop knowledge on ARMv7core and ARMCORTEXM4 architecture.
- To developknowledge on Floating Point Unit
- To develop knowledge on Motion Control
- To imparts a good knowledge in Ports- Timer and Counting Devices

INTENDEDOUTCOMES:

- Gain adequate knowledge about devices and buses used for embedded networking.
- Gain adequate knowledge about ARMv7 core and ARMCORTEXM4 architecture.
- Gain adequate knowledge about Floating Point Unit
- Gain adequate knowledge about Motion Control
- Suggest design approach using advanced controllers to real-life situations.
- Gain knowledge on buses and devices for network

UNIT-I INTRODUCTION TO EMBEDDED SYSTEMS

Definition and Classification–Overview of Processors and hardware units in an embedded system–Software embedded into the system–Exemplary Embedded Systems –Embedded Systems on a Chip (SoC)and the use of VLSI designed circuits

UNIT-II DEVICES AND BUSES FOR DEVICES NETWORK

I/O Devices- Device I/O Types and Examples–Synchronous-Iso –synchronous and Asynchronous Communications from Serial Devices- Examples of Internal Serial-Communication Devices-UART and HDLC- Parallel Port Devices-Sophisticated interfacing features in Devices/ Ports-Timerand Counting Devices-'12C','USB','CAN'and advanced I/O Serial high speed buses.

UNIT-III OVERVIEW OF ARCHITECTURE

Review of ARM v7 core and its architecture, Introductionto AdvancedARM CORTEX M4 architecture,Peripherals overview,Advantages of using Cortex M4, Instruction se timplementation, CPU timers introduction.

UNIT-IV FLOATING POINT UNIT

Introduction to Floating Point Architecture, Advantages of FPU,Need for FPU,IEEEStandards for implementing FPU, Various FPU Modules in Cortex M4 Processors, Software flow for FPU implementation.

UNIT-V MOTION CONTROL

Introduction to motion control, advantages for using motion control modules, Implantation of motion control overview, introductionto PWM Modules, PWM Concepts for Motion Control, Configuration of PWM Modules,Introduction to encoders,types of encoders,QEP Module.

OBJECTIVES

- To learn Hardware Descriptive Language(Verilog/VHDL).
- To learn the fundamental principles of VLSI circuit design in digital and analog domain.
- To familiarise fusing of logical modules on FPGAs.
- To learn simulation, synthesis and implementation using Cadence tools.
- To familiarize the students with the design of adders using VHDL.
- To know about the various CAD tools.

INTENDED OUTCOMES:

- Write HDL code for basic as well as advanced digital integrated circuits.
- Import the logic modules into FPGA Boards.
- Acquire the knowledge of procedural assignments in VHDL.
- Acquire the knowledge of conditional statements
- Understand the concept of mixed language programming
- Ability to write verilog programmes for digital circuits.

LIST OF EXPERIMENTS

All the experiments must be implemented using Cadence tool

1. Study of Simulator tools
2. Study of Synthesis tools
3. Place and Root and Back annotation for FPGAs
4. Study of development tool for FPGAs for schematic entry and verilog
5. Design of traffic light controller using verilog and above tools
6. Design and simulation of pipelined serial and parallel adder to add/ subtract 8 number of size, 13 bits each in 2's complement
7. Design and simulation of back annotated verilog files for multiplying two signed, 8 bit numbers in 2's complement. Design must be pipelined and completely RTL compliant
8. Study of FPGA board and testing on board LEDs and switches using verilog codes
9. Testing the traffic controller design developed in S I. NO.5 on the FPGA board
10. Design a Real-time Clock (2 digits, 7 segments LED displays each for HRS., MTS, and SECS.) and demonstrate its working on the FPGA board. An expansion card is required for the displays.

16BEEC611B **OPTICAL COMMUNICATION LABORATORY** **L T P C**
0 0 3 2

OBJECTIVES

- To understand the working principle of optical sources, detector, fibers.
- To develop understanding of simple optical communication link.
- To undersstand the different characteristics of Fibres
- To learn about the characteristics and measurements in optical fiber.
- To learn about LED charateristics of fiber optic analog link for 3mm and 6mm cable
- To know the fiber optic tools

INTENDEDOUTCOMES:

- Analyze the performance of simple optical link.
- Analyse the mode characteristics of fiber.
- Understand Coupling Fibers to Semi-Conductor Source –Connectors & Splices.
- Understand LED charateristics of fiber optic analog link for 3mm and 6mm cable.
- Analyze the fiber optic tools.
- Analyze Photo Diode Characteristics of fiber optic receiver

LISTOFEXPERIMENTS

1. Numerical aperture determination for fibers and Attenuation Measurement in 3 mm cable Fibers.
2. Numerical aperture determination for fibers and Attenuation Measurement in 6 mm cable Fibers
3. Mode Characteristics of Fibres–SMFibres.
4. Study of Coupling Fibers to Semi-Conductor Source –Connectors & Splices.
5. Fiber optic analog link for 3mm and 6mm cable
6. Fiber optic digital link for 3mm and 6mm cable
7. LED Characteristics of fiber optic transmitter using 3 mm cable
8. LED Characteristics of fiber optic transmitter using 6 mm cable
9. Photo Diode Characteristics of fiber optic receiver
10. Study of fiber optic tools

16BEEC612A MICROWAVE ENGINEERING LABORATORY

L T P C
0 0 3 2

OBJECTIVES

- Know about the behavior of microwave components.
- Practice microwave measurement procedures
- To expose to magic tee coupler and its usage.
- To study the microwave power measurement.
- To understand the different attenuators.
- To learn the various components of microwave systems

INTENDED OUTCOMES:

- Analyse the radiation of pattern of antenna.
- Test various microwave components.
- Analyze the working of Gunn diode oscillators
- Gain knowledge on the usage of magic tee coupler
- Understand the concepts of couplers .
- Gain knowledge on implementation of couplers in specific areas

LIST OF EXPERIMENTS

1. VSWR Measurements–Determination of terminated impedance
2. Determination of guide wavelength, frequency measurement.

3. Radiation Pattern of Horns, Paraboloids.
4. Microwave Power Measurement.
5. Characteristics of Gunn diode Oscillator
6. Study of MagicTee
7. Study of attenuators (fixedandvariable)
8. Conduct an experiment using microwave test bench.
9. Study of resonant cavity
10. Simulation using CAD tools.

16BEEC612B EMBEDDED SYSTEMS DESIGN LABORATORY L T P C
0 0 3 2

OBJECTIVES

- To learn the working of ARM processor and PIC microcontroller.
- To understand the Building Blocks of Embedded Systems.
- To earn the concept of memory map and memory interface.
- To gain knowledge on PIC microcontroller interfacing
- To expose them to the concept of memory
- To gain inputs on stepper motor interface.

INTENDED OUTCOMES:

- Write programs in ARM and PIC microcntroller for a specific Application.
- Interface memory and Write programs related to memory operations
- Interface A/D and D/A convertors with ARM system.
- Write programmes for interfacing keyboard, display, motor and sensor.
- Enhance programming skill using EPROM and interrupt.
- Write programs for various interfacing boards.

1. Program for arithmetic operations and LED interface using PIC microcontroller.
2. Program for PWM Generation and motor speed control or Servo motor control using PICmicrocontroller.
3. Program for Key Board Interfacing using PICmicrocontroller.
4. Program for LCD Interfacing using PIC microcontroller.
5. Program for ADC interface and temperature control.
6. Program for DAC interface and generate waveforms.
7. Program for RS232C Serial port interfacing using PICmicrocontroller.
8. Program for I2C basedRTC/Memory interface using PIC microcontroller.
9. Program for Timer using PIC microcontroller.
10. Program for Compare and capture operation using PICmicrocontroller.

16BEEC651 COMMUNICATION SKILLS AND DEVELOPMENT L T P C
1 0 0 -

16BEEC652 BASIC SIMULATION LABORATORY **L T P C**
1 0 0 -

1. Simulation using PSPICE
2. Simulation using OR CAD
3. Basic Bio signal pre processing using MATLAB
4. Basic Bio saignal pre processing using LabVIEW
5. Image processing using MATLAB

16BECC701 PROFESSIONAL ETHICS PRINCIPLES OF MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT **L T P C**
3 0 0 3

OBJECTIVE

- To enable the students to create an awareness on Engineering Ethics and Human Values.
- To instill Moral and Social Values and Loyalty and to appreciate the rights of others.
- To understand social responsibility of an engineer.
- To appreciate ethical dilemma while discharging duties in professional life.
- To familiarize the student with professional rights and employee rights
- To imparts a good knowledge in weapons development.

INTENDEDOUTCOMES:

- Gain knowledge on human values
- Apply ethics in society,
- Discuss the ethical issues related to engineering
- Realize the responsibilities and rights in the society
- Understand about Computer Ethics
- Gain knowledge on Corporate Social Responsibility

UNIT I ENGINEERING ETHICS **9**
Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self–interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OF CHANGES **9**
Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING, ORGANISING **9**
Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informal organization – Organization Chart –.

UNIT IV DIRECTING AND CONTROLLING **9**
Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership

Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment – Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT V ENTREPRENEURSHIP AND MOTIVATION 9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

16BEEC702A MEASUREMENTS AND INSTRUMENTATION L T P C
3 0 0 3

OBJECTIVES:

- To gain knowledge about basic measurement concepts.
- To introduce Concepts of electronic measurements.
- To give exposure to different types of waveform generators and analyzers and their applications.
- To learn about digital instruments in measurements.
- To educate on virtual instrumentation, its applications, programming and DAQ cards and modules.
- To introduce data acquisition elements and transducers

INTENDED OUTCOMES:

- Basic measurement concepts
- Concepts of electronic measurements
- Importance of signal generators and signal analyzers in measurements
- Relevance of digital instruments in measurements
- The need for data acquisition systems
- Measurement techniques in optical domains.

UNIT-I BASIC MEASUREMENT CONCEPTS

Measurement systems – Static and dynamic characteristics – units and standards of measurements – error analysis – moving coil, moving iron meters – multimeters – True RMS meters – Bridge measurements – Maxwell, Hay, Schering, Anderson and Wien bridge.

UNIT-II BASIC ELECTRONIC MEASUREMENTS
Electronic multimeters – Cathode ray oscilloscopes – block schematic – applications – special oscilloscopes – Q meters – Vector meters – RF voltage and power measurements - Carbon microphone - Loud speaker.

UNIT-III SIGNAL GENERATORS AND ANALYZERS
Function generators – RF signal generators – Sweep generators – Frequency synthesizer – wave analyzer – Harmonic distortion analyzer – spectrum analyzer.

UNIT-IVDIGITAL INSTRUMENTS
Comparison of analog and digital techniques – digital voltmeter – multimeters – frequency counters – measurement of frequency and time interval – extension of frequency range – measurement errors.

UNIT-VDATA ACQUISITION SYSTEMS AND FIBER OPTIC MEASUREMENTS
Elements of a digital data acquisition system – interfacing of transducers – multiplexing –computer controlled instrumentation – IEEE 488 bus – fiber optic measurements for power and system loss – optical time domains reflect meter.

16BEEC702B ROBOTICS AND AUTOMATION L T P C
3 0 0 3

OBJECTIVES:

- To study the various parts of robots and fields of robotics.
- To study the various kinematics and inversekinematics of robots.
- To study the Euler of Robot dynamics.
- To study the Lagrangian formulation of Robot dynamics.
- To study the trajectory planning for robot.
- To study the control of robots for some specific applications.

INTENDED OUTCOMES:

Uponcompletionof thecourse, thestudent shouldbeableto:

- Explain the basic concepts of working of robot
- Analyze the function of sensors in the robot
- Write a program tousea robot for a typical application
- Use Robots indifferent applications
- Analyze the trajectory planning for robot.
- Understand the control of robots for some specific applications.

UNITI BASIC CONCEPTS 9

Definition and origin of robotics–different types of robotics–various generations of robots– degrees of freedom–Asimov'slaws of robotics–dynamic stabilization ofrobots.

UNITII POWER SOURCESAND SENSORS 9

Hydraulic,pneumatic and electric drives–determination of HPof motor and gear ingratio–variable speed arrangements–path determination – micro machines in robotics– machine vision – ranging– laser–acoustic –magnetic, fiber opticandtactilesensors.

UNITIIIMANIPULATORS,ACTUATORSAND GRIPPERS **9**

Construction of manipulators– manipulator dynamics and forcec ontrol –electronic and pneumatic manipulator control circuits–endeffectors–U various typesof grippers –design considerations.

UNITIV KINEMATICSAND PATH PLANNING **9**

Solution of inverse kinematics problem–multiple solution jacobian workenvelop–hill Climbing Techniques– robot programminglanguages

UNITV CASESTUDIES **9**

Multiplerobots–machine interface–robots in manufacturing and non-manufacturing applications–robotcell design–selection of robot.

16BEEC751A REAL TIME CONTROLLER **L T P C**
1 0 0 –

INTRODUCTION
Real Time Systems, Types of Real Time systems – Hard and Soft, Real Time Event Characteristics, Challenges in Real Time System Design, Distributed and Multi-processor Architecture, Embedded systems and its Characteristics

ARCHITECTURE OF TI C2000
Introduction to Software Development and the Process, Assembler Directives, C2000 Architecture Overview, Central Processing Unit, Program Control, Programming and System Issues, Phase Locked Loop Application
Demo Classes
- Temperature Sensor Demo
- Low Power Modes of C2000

16BEEC751B VLSI DESIGN USING CADENCE TOOL **L T P C**
1 0 0 –

Course Objectives
- To understand the basics of VLSI, CMOS techniques.
- To know about the various CAD tools.
- To understand design styles & programming using verilogHDL language
- To learn simulation, synthesis and implementation using Cadence tools.
- To familiarize the students with the design of adders using VHDL.
- To indulge the fundamentals of Cadence IES.

Course Outcomes
- Familiar with VLSI basics.
- Ability to write verilog programmes for digital circuits.
- Gain mastery to work on cadence tools
- Acquire the knowledge of procedural assignments in VHDL.
- Acquire the knowledge of conditional statements
- Understand the concept of mixed language programming

Design using Cadence Tool

1.An Inverter
2. A Buffer
3.Transmission gates
4.Basic/Universal Gates.
5. T Flip-Flops
6.NCO (10 Bit number controlled oscillator)
7. Counter designs
8. Automatic generation layout followed by post layout extraction and simulation of NCO.

16BEEC801A **MEDICAL ELECTRONICS** **L T P C**
3 0 0 3

OBJECTIVES

- To study the method s of recording various bio potentials
- To study how to measure biochemical and various physiological information
- To understand the working of units whichwill help to restore normal functioning
- To understand the use of radiation for diagnostic and therapy
- To understand the need and technique of electrical safety in Hospitals
- To imparts good knowledge in diagnostic x-ray equipments.

INTENDEDOUTCOMES:

- Gainknowledgeaboutthemethodsofrecording variousBio potential
- Gainknowledgeabouthowto measurebiochemicalandvariousphysiological information
- Gainknowledgeabouttheworking ofunitswhichwillhelptorestorenormal functioning
- Gainknowledgeabouttheuseofradiationfordiagnosticandtherapy
- Gainknowledgeabouttheneedandtechniqueofelectrical safety inHospitals
- Gain knowledge on recent medical instruments

UNIT-I ELECTRO-PHYSIOLOGY AND BIO-POTENTIAL RECORDING

Theorigin of Bio-potentials; Biopotential electrodes, biological amplifiers, ECG,EEG,EMG, PCG, EOG, leadsystems and recording methods, typical waveforms and signal characteristics.

UNIT-II BIO-CHEMICAL AND NON ELECTRICAL PARAMETER MEASUREMENT

PH, PO2, PCO2, PHCO3, Electrophoresis, colorimeter, photometer, Auto analyzer, Blood flow meter, cardiac output, respiratory measurement, Blood pressure, temperature, pulse, Blood cell counters.

UNIT-III ASSIST DEVICES AND BIO-TELEMETRY

Cardiac pacemakers, DC Defibrillator, Telemetry principles, frequency selection, Bio-telemetry radio- pill and tele-stimulation.

UNIT-IV RADIOLOGICAL EQUIPMENTS

Ionizing radiation, Diagnostic x-ray equipments, use of Radio Isotope in diagnosis, Radiation Therapy.

UNIT-V RECENT TRENDS IN MEDICAL INSTRUMENTATION

Thermograph, endoscopy unit, Laserin medicine, Diathermy units, Electrical safetyin medical equipment.

16BEEC801B DIGITAL IMAGE PROCESSING L T P C
3 0 0 3

OBJECTIVES

- To understand the Fundamentals of image processing.
- To learn Various transforms used in image processing.
- To learn the Image processing techniques like image enhancement, reconstruction, compression and segmentation.
- To familiarize the students with the the images for enhancement of certain properties or for optimized use of the resources.
- To inculate colour transformations.
- To study smoothing and sharpening of images

INTENDED OUTCOMES:

- Understand the Fundamentals of image processing.
- Knowledge about various transforms used in image processing.
- Knowledge about the Image processing techniques like image enhancement, reconstruct ion, compression and segmentation.
- Gain knowledge on Multi resolution analysis.
- Understand about video coding and compression techniques.
- Develop algorithms for image compression and coding

UNIT I-DIGITAL IMA GE FUNDAMENTALS

Introduction -Elements of Digital Image Processing system- elements of visual perception – image sensing and acquisition – Image sampling and quantization - image representation -Some basic relationship between pixels.

UNIT II-IMAGE TRANSFORMS

Introduction -2D Discrete Fourier Transform – Properties- Importance of Phase -Walsh –Hadamard – Discrete Cosine Transform, Haar –K L transforms –Singular Value Decomposition.

UNIT III-IMAGE ENHANCEMENT

Enhancement through point operation- Histogram manipulation – Gray level transformation-Neighborhood operation – Median filter - Image Sharpening- Bit plane slicing - Homomorphism Filtering – Zooming operation.

UNIT IV-IMAGE RESTORATION

Model of Image Degradation/restoration process –Inverse filtering -Least mean square (Wiener)filtering – Constrained least mean square restoration – Singular value decomposition-Recursive filtering.

UNIT V-IMA GE CO M PRESSIO N AND SEGMENTATION
Image compression schemes – Information theory – Run length, Huffman and arithmetic coding –Vector quantization - JPEG. Image Segmentation – Classification – Threshold – edge based segmentation – Hough transform – Active contour.

LIST OF ELECTIVES FOR V SEMESTER - ELECTIVE I
B.E. ELECTRONICS AND COMMUNICATION ENGINEERING

16BEEC5E01 ADVANCED ELECTRONIC SYSTEM DESIGN L T P C
3 0 0 3

OBJECTIVES

- To study RF component such as resonator, filter, transmission lines, etc…
- To learn design of RF amplifiers using transistors.
- To study modern Power Supplies using SCR.
- To study modern Power Supplies using SMPS technology.
- To learn about signal shielding & grounding techniques and study of A/D and D/A Converters.
- To learn knowledge about fabrication of PCBs using CAD.
- To learn design of RF amplifiers using transistors.

INTENDED OUTCOMES:

- Gain knowledge in RF component such as resonator, filter, and transmission lines, etc…
- Gain knowledge in design of RF amplifiers using transistors.
- Gain knowledge in Power Supplies using SCR
- Gain knowledge on modern Power Supplies using SMPS technology.
- Gain knowledge about signal shielding & grounding techniques and stud y of A/D and D/A Converters.
- Gain knowledge about fabrication of PCBs using CAD.

UNIT-I INTRODUCTION TO RF DESIGN

RF behaviour of passive components, chip components and circuit board considerations, Review of transmission lines, Impedance and admittance transformation, Parallel and series connection of networks, ABCD and scattering parameters, Analysis of amplifier using scattering parameter. RF filter– Basic resonator and filter configurations – Butterworth and Chebyshev filters. Implementation of micro strip filters design. Band pass filter and cascading of band pass filter elements.

UNIT-II RFTRANSISTOR AMPLIFIER DESIGN

Impedance matching using discrete components. Micro strip line matching networks. Amplifier classes of operation and biasing networks – Amplifier power gain, Unilateral design (S13 =0) – Simple input and output matching networks – Bilateral design - Stability circle and conditional stability, Simultaneous conjugate matching for unconditionally stable transistors. Broadband amplifiers, High power amplifiers and multistage amplifiers.

UNIT-III DESIGN OF POWER SUPPLIES

DC power supply design using transistors and SCRs, Design of crowbar and fold back protection circuits, switched mode power supplies, Forward, fly back, buck and boost converters, Design of transformers and control circuits for SMPS.

UNIT-IV DESIGN OF DATA ACQUISITION SYSTEMS

Amplification of Low level signals, Grounding, Shielding and Guarding techniques, Dual slope, quad slope and high speed A/ D converters, Microprocessors Compatible A/D converters, Multiplying A/D converters and Logarithmic A/D converters, Sample and Hold, Design of two and four wire transmitters.

UNIT-V DESIGN OF PRINTED CIRCUIT BOARDS

Introduction to technology of printed circuit boards (PCB), General la y out and rules and parameters, PCB design rules for Digital, High Frequency, Analog, Power Electronics and Microwave circuits, Computer Aided design of PCBs.

16BEEC5E02 TELECOMMUNICATION SWITCHING AND NETWORKS **L T P C**
3 0 0 3

OBJECTIVES

- To introduce the concept soft Frequency and Time division multiplexing.
- To introduce digital multiplexing and digital hierarchy namely SONET/SDH
- To introduce the concepts of space switching, times switching and combination switching, example of a switch namely No.4ESS Toll switch.
- To introduce the need for network synchronization and study synchronization issues. To outline network control and management issues.
- To study the enhanced local loop systems in digital environment. To introduce ISDN, DSL/ ADSL, and fiber optic system sine subscriber loop.
- To introduce statistical modeling of telephone traffic. To study blocking system characteristics and queuing system characteristics.
- To characterizeblockingprobabilityholdingservicetimedistributionsforinspeechanddata networks.

INTENDED OUTCOMES:

- Knowledge about the concepts of Frequency and Time division multiplexing.
- Knowledge about digital multiplexing and digital hierarchy namely SONET/ SDH
- Knowledge about the concepts of space switching, time switching and combination switching, example of a switch namely No.4ESS Toll switch.
- Knowledge about the need for network synchronization and study synchronization issues. To outline network control and management issues.
- Knowledge about the enhanced local loop systems in digital environment.
- Knowledge about ISDN, DSL/ADSL, and fiber optic system sin subscriber loop.
- Knowledge about statistical modeling of telephone traffic. Knowledge
- about blocking system characteristics and queuing system characteristics.
- Knowledge about characterize blocking probability holding service time
- distributions for in speech and data networks.

UNIT-I MULTIPLEXING

Transmission Systems, FDM Multiplexing and modulation, Time Division Multiplexing, Digital Transmission and Multiplexing: Pulse Transmission, Line Coding, Binary N-Zero Substitution, Digital Biphase, Differential Encoding, Time Division Multiplexing, Time Division Multiplex Loops and Rings. SONET/SDH: SONET Multiplexing Overview, SONET Frame Formats, SONET Operations, Administration and Maintenance, Payload Framing and Frequency Justification, Virtual Tributaries, DS3 Payload Mapping, E4 Payload Mapping, SONET Standards, SONET Networks. SONET Rings: Unidirectional Path-Switched Ring, Bidirectional Line-Switched Ring.

UNIT-II DIGITAL SWITCHING

Switching Functions, Space Division Switching, and Time Division Switching, two-dimensional is switching: STS Switching, TST Switching, No.4 ESS Toll Switch, Digital Cross-Connect Systems, Digital Switching in an Analog Environment. Elements of SSN07 signaling.

UNIT-III NETWORK SYNCHRONIZATIONCONTROL AND MANAGEMENT

Timing: Timing Recovery: Phase-Locked Loop, Clock Instability, Jitter Measurements, Systematic Jitter. Timing Inaccuracies: Slips, Asynchronous Multiplexing, Network Synchronization, U.S. Network Synchronization, Network Control, Network Management.

UNIT-IV DIGITAL SUBSCRIBER ACCESS

ISDN: ISDN Basic Rate Access Architecture, ISDNU Interface, ISDND Channel Protocol. High- Data-Date Digital Subscriber Loops: Asymmetric Digital Subscriber Line, VDSL. Digital Loop Carrier Systems: Universal Digital Loop Carrier Systems, Integrated Digital Loop Carrier Systems, Next-Generation Digital Loop Carrier, Fiber in the Loop, Hybrid Fiber Coax Systems, Voice band Modems: PCM Modems, Local Microwave Distribution Service, Digital Satellite Services.

UNIT-V TRAFFIC ANALYSIS

Traffic Characterization: Arrival Distributions, Holding Time Distributions, Loss Systems, Network Blocking Probabilities: End-to-End Blocking Probabilities, Overflow Traffic, Delay Systems: Exponential service Times, Constant Service Times, Finite Queues.

16BEEC5E03 TELEVISION AND VIDEO ENGINEERING **L T P C**
3 0 0 3

OBJECTIVES

- To study the analysis and synthesis of TV Pictures, Composite Video Signal, Receiver
- Picture Tubes and Television Camera Tubes
- To study the principles of Monochrome Television Transmitter and Receivers systems.
- To study the various Color Television systems with a greater emphasis on PAL system.
- To study the advanced topics in Television systems and Video Engineering
- To gain knowledge about ISDN, DSL/ADSL, and fiber optic system sin subscriber loop.
- Togain knowledge about statistical modeling of telephone traffic.

INTENDED OUTCOMES:

- Gain adequate knowledge about the analysis and synthesis of TV Pictures, Composite Video Signal, Receiver Picture Tubes and Television Camera Tubes
- Gain adequate knowledge about the principles of Mono Chrome Television Transmitter and Receiver systems.
- Gain adequate knowledge about the various Color Television systems with a greater Emphasis on PAL system
- Gain adequate knowledge about the advanced topic sin Television systems and Video Engineering
- Understand blocking probability holding service time distributions for in speec hand data networks.

UNIT-I FUNDAMENTAL SOF TELEVISION

Geometry form and Aspect Ratio-Image Continuity-Number of scanning Lines-Interlaced scanning-Picture resolution- Camera Tubes-Image Orthicon-Videocon-plumb icon-silicon diode array Videocon-solid state image scanners-monochrome picture tubes-composite video signal-video signal dimension-horizontal sync. Composition-vertical sync. Details – functions of vertical pulse train – scanning sequence details. Picture signal transmission–positive and negative modulation–VSB transmission sound signal transmission–standard channel bandwidth.

UNIT-II MONOCHROME TELEVISION TRANSMITTER AND RECEIVER

TV transmitter–TV signal propagation–Interference–TV transmission Antennas–Monochrome TV receiver–RF tuner–UHF, VHF Tuner-Digital tuning techniques-AFT-IF subsystems-AGC–Noise cancellation- Video and sound inter carrier detection- vision IF subsystem- video amplifiers Requirements and configurations-DC re-Insertion-Video Amplifier Circuits-Sync separation–typical Sync processing Circuits-Deflection current wave form– Deflection Oscillators– Frame deflection Circuits–Requirements-Line Deflection circuits–EHT generation–Receiver Antennas.

UNIT-III ESSENTIAL SOF COLOUR TELEVISION

Compatibility– colour perception-Three colour theory- luminance, hue and saturation-colour television cameras-values of luminance and colour difference signals-colour television display tubes- delta–gun-precision–in-line and Trinitron colour picture tubes-purity and convergence-purity and static and dynamic convergence adjustments- pincushion correction techniques-automatic degaussing circuit-grey scale tracking–colour signal transmission-bandwidth-modulation of colour difference signals–weighting factors-Formation of chrominance signal.

UNIT-IV COLOUR TELEVISION SYSTEMS

NTS colour TV system-NTSC colour receiver-limitations of NTSC system–PAL colour TV system

–cancellation of phase errors-PAL–D colour system-PAL coder–Pal-De colour receiver-chromo signal amplifier-separation of U and V signals-colour burst separation–Burst phase Discriminator– ACC amplifier- Reference Oscillator-Indented colour killer Circuits-U and V demodulators-Colour signal mixing–merits and demerits of the PAL system–SECAM system–merits and demerits of SECAM system.

UNIT-V ADVANCED TELEVISIONSYSTEMS

Satellite TV technology- Cable TV–VCR-Video Disc recording and play Back-Tele Text broadcast receiver–digital television–Transmission and reception-projection Television–Flat panel display TV receiver–Stereo sound in TV–3DTV–EDTV–Digital equipment's for TV studios.

16BEEC5E04 COMPUTER ARCHITECTURE **L T P C**

3 0 0 3

OBJECTIVES

- To have a thorough understanding of the basic structure and operation of a digital computer.
- To discuss in detail, the operation of the arithmetic unit including the algorithms &
- Implementation of fixed-point and floating-point addition, subtraction, multiplication & Division.
- To study in detail, the different types of control and the concept of pipelining.
- To study the hierarchical memory system including cache memories and virtual memory.
- To study the different way so for communicating with I/O devices and standard I/O
- Interfaces.

INTENDED OUTCOMES:

- Through knowledge about the basic structure and operation of a digital computer.
- Understand the operation of the arithmetic unit including the algorithms & implementation of fixed-point and floating-point addition, subtraction, multiplication & division.
- Detailed exposure about the different types of control and the concept of pipelining.
- Detailed exposure about the hierarchical memory system including cache memories and virtual memory.
- Detailed exposure about the different ways of communicating with I/O devices and standard I/O interfaces.

UNIT-I ARCHITECTURE OF COMPUTING SYSTEMS

Functional units – Basic Operational Concepts, Bus Structures, Software Performance– Memory Locations & addresses– Memory operations– Instruction and instruction sequencing– addressing modes–assembly language–Basic I/O operations–stacks and queues.

UNIT-II ARITHMETIC UNIT

Addition and subtraction of signed numbers– Design of fast adders – multiplication of positive Numbers-signed operand multiplication and fast multiplication– Integer division– floating point numbers and operations.

UNIT-III BASIC PROCESSING UNIT

Fundamental concepts –Execution of a complete Instruction–Multiple bus organization–Hard wired control–micro programmed control. Pipelining–Basic concepts–data hazards–instruction hazards–influence on Instruction sets–Data path and control consideration–Super scalar operation.

UNIT-IV MEMORY SYSTEM

Basic concepts–semiconductor RAMs, ROMs–Speed, size and cost–cache Memories-Performance consideration –Virtual Memory-Memory Management requirements–Secondary storage.

UNIT-V I/O ORGANIZATION

Accessing I/O devices–Interrupts–Direct Memory Access–Buses–Interface Circuits–Standard I/O Interfaces (PCI, SCSI, USB).

16BEEC6E01 ADVANCED MICROPROCESSORS L T P C

3 0 0 3

OBJECTIVES

- To introduce the concepts in internal programming model of Intel family of microprocessors.
- To introduce the programming techniques using MASM, DOS and BIOS function calls.
- To introduce the basic architecture of Pentium family of processors.
- To introduce the architecture programming and interfacing of 16 bit microcontrollers.
- To introduce the concepts and architecture of RISC processor
- To introduce the concepts and architecture of ARM.

INTENDED OUTCOMES:

- Gain knowledge about the concept sin internal programming model of Intel family of microprocessors.
- Gain knowledge about the programming techniques using MASM, DOS and BIOS Function calls.
- Gain knowledge about the basic architecture of Pentium family of processors.
- Gain knowledge about the architecture programming and interfacing of 16 bit microcontrollers.
- Gain knowledge about the concepts and architecture of RISC processor
- Gain the concepts and architecture of ARM and ARM.

UNIT-I ADVANCED MICROPROCESSOR ARCHITECTURE

Internal Microprocessor Architecture-Real mode memory addressing– Protected Mode Memory addressing–Memory Paging-Data addressing modes–Program memory addressing modes–Stack memory addressing modes–Data movement instructions–Program control Instructions-Arithmetic and Logic Instructions.

UNIT-II MODULAR PROGRAMMING AND ITS CONCEPTS

Modular programming–UsingkeyboardandVideodisplay–DataConversions-Diskfiles-Interrupt hooks-using assembly languages with C/C++

UNIT-III PENTIUM PROCESSORS

Introduction to Pentium Microprocessor–Special Pentium Registers-Pentium memory management–New Pentium Instructions–Pentium Processor–Special Pentium pro features–Pentium4 processor

UNIT-IV 16-BIT MICRO CONTROLLER

8096/8097 Architecture-CPU registers–RALU-Internal Program and Data Memory Timers-High-speed Input and Output–Serial Interface-I/O ports–Interrupts–A/D Converter-Watch dog timer–Power down feature–Instruction Set-External memory Interfacing–External I/O interfacing.

UNIT-V RISC PROCESSORS ANDARM

The RISC revolution–Characteristics of RISC Architecture–The Berkeley RISC–Register Windows –Windows and parameter passing–Window overflow–RISC architecture and pipelining–Pipeline bubbles–Accessing external memory in RISC systems–Reducing the branch penalties–Branch Prediction–The ARM processors–ARM registers–ARM instructions–The ARM built-in shift Mechanism–ARM branch instructions–sequence control–Data movement and memory reference instructions.

16BEEC6E02 **WIRELESS NETWORKS** **L T P C**

3 0 0 3

OBJECTIVES

- To study about Wireless networks, protocol stack and standards.
- To study about fundamentals of 3G Services, its protocols and applications.
- To study about evolution of 4G Networks, its architecture and applications.
- To study the fundamentals of wireless communications
- To introduce the concept of diversity for reception
- To learn the main factors affecting performance of networks.

INTENDED OUTCOMES:

- Conversant with the latest 3G/4G and WiMAX networks and its architecture.
- Design and implement wireless network environment for any application using latest wireless protocols and standards.
- Apply the concept of fading to improve the quality of reception
- Identify the importance of multiplexing technique
- Understand the concept of diversity for reception
- Implement different type of applications for smart phones and mobile devices with latest network strategies.

UNIT-I PHYSICAL AND WIRELESS MAC LAYER ALTERNATIVES

Wired transmission techniques: design of wireless modems, power efficiency, out of band radiation, applied wireless transmission techniques, short distance base band transmission, VWB pulse transmission, broad Modems for higher speeds, diversity and smart receiving techniques, random access for data oriented networks, integration of voice and data traffic.

UNIT-II WIRELESS NETWORK PLANNING AND OPERATION

Wireless networks topologies, cellular topology, cell fundamentals signal to interference Ratio calculation, capacity expansion techniques, cell splitting, use of directional antennas for cell sectoring, microcell method, overload cells, channels allocation techniques and capacity expansion FCA, channel borrowing techniques, DCA, mobility management, radio resources and power management securities in wireless networks.

UNIT-III WIRELESS WAN

Mechanism to support a mobile environment, communication in the infrastructure, IS-95CDMA Forward channel, IS–95CDMA reverse channel, pallet and frame formats in IS–95, IMT–2000; Forward channel in W-CDMA and CDM A 2000, reverse channels in W-CDMA and CDMA-2000, GPRS and higher data rates, short messaging service in GPRS mobile application protocols.

UNIT-IV WIRELESS LAN

Historical overviews of the LAN industry, evolution of the WLAN industry, wireless home networking, IEEE 802.11. The PHY Layer, MAC Layer, wireless ATM, HYPERLAN, HYPERLAN –2.

UNIT-V WPAN AND GEOLOCATIONS YSTEMS

IEEE 802.15WPAN, Home RF, Bluetooth, interface between Bluetooth and 802.11, wireless geo location technologies for wireless geo location, geo location standards for E.911 service.

16BEEC6E03 SATELLITE COMMUNICATION L T P C
3 0 0 3

OBJECTIVES

- Overview of satellite systems in relation to the terrestrial systems.
- Study of satellite orbits and launching.
- Study of earth segment and space segment components
- Study of satellite access by various users.
- Study of DTH and compression standards.
- To familiarize the students with the drafting of satellite link budget and C/N ratio calculations in clear air and rainy conditions.

INTENDED OUTCOMES:

- Gain knowledge in the overview of satellite systems in relation too the terrestrial systems.
- Gain adequate knowledge in satellite orbit sand launching.
- Gain adequate knowledge in earth segment and space segment components
- Gain adequate knowledge in satellite access by various users.
- Gain adequate knowledge in DTH and compression standards.
- Solve numerical problems related to orbital motion and design of link budget for the given parameters and conditions

UNIT-I OVERVIEW OF SATELLITE SYSTEMS, ORBITS AND LAUNCHING METHODS

Introduction– Frequency Allocations for Satellite Services–Intelsat–U.S. Domsats– Polar Orbiting Satellites– Problems–Kepler's First Law–Kepler's Second Law–Kepler's Third Law–Definitions of Terms for Earth-orbiting Satellites–Orbital Elements–Apogee and Perigee Heights–Orbital Perturbations–Effects of a Non spherical Earth–Atmospheric Drag–Inclined Orbits–Calendars– Universal Time– Julian Dates– Sidereal Time– The Orbital Plane– The Geocentric-Equatorial CoordinateSystem– EarthStationReferredtotheIJKFrame–TheTopcentric-HorizonCo-ordinate System–The Sub-satellite Point– Predicting Satellite Position.

UNIT-II GEO STATIONARY ORBIT & SPACE SEGMENT

Introduction–Antenna Look Angels–The Polar Mount Antenna– Limits of Visibility– Near Geostationary Orbits–Earth Eclipse of Satellite–Sun Transit Outage–Launching Orbits–Problems– Power Supply–Attitude Control–Spinning Satellite Stabilization–Momentum Wheel Stabilization–
Station Keeping–Thermal Control–TT & C Subsystem–Transponders–Wide band Receiver–Input De multiplexer – Power Amplifier– Antenna Subsystem– Morelos– Anik- E– Advanced Tiros -N Spacecraft

UNIT-III EARTH SEGMENT & SPACE LINK

Introduction–Receive-Only Home TV Systems–Outdoor Unit–Indoor Unit for Analog (FM) TV– Master Antenna TV System–Community Antenna TV System–Transmit-Receive Earth Stations– Problems– Equivalent Isotropic Radiated Power–Transmission Losses–Free-Space Transmission– Feeder Losses– Antenna Misalignment Losses–Fixed Atmospheric and Ionospheric Losses– Link Power Budget Equation– System Noise–Antenna Noise–Amplifier Noise Temperature–Amplifiers in Cascade– Noise Factor– Noise Temperature of Absorptive Networks– Overall System Noise Temperature–Carrier-to-NoiseRatio–Uplink– SaturationFluxDensity–Input Back Off– The Earth Station HPA –Downlink–Output Back off –Satellite TWTA Output–Effects of Rain–Uplink rain- fade margin– Downlink rain-fade margin– Combined Uplink and Downlink C/N Ratio – Inter modulation Noise.

UNIT-IV SATELLITE ACCESS

Single Access–Pre assigned FDMA, Demand-Assigned FDMA, SPADE System. Bandwidth- limited a Power-limited TWT amplifier operation, FDMA downlink analysis.
TDMA: Reference Burst; Preamble and Post amble, Carrier recovery, Network synchronization, unique word detection, Traffic Date, Frame Efficiency and Channel capacity, Pre assigned TDMA, Demand assigned TDMA, Speech Interpolation and Prediction, Downlink analysis for Digital transmission. Companion of uplink Power requirements for FDMA&TDMA. On-board signal Processing for TDMA / FDMA operation,

Satellite switched TDMA Code-Division Multiple Access – Direct- Sequence spread spectrum– code signal c(t) – auto correlation function for c(t)– Acquisition and tackling–Spectrum spreading and dispreading–CDMA throughput–Problems–Network Layers– TCP Link– Satellite Links and TCP – Enhancing TCP Over Satellite Channels Using Standard Mechanisms(RFC-2488)–Requestsforcomments–SplitTCPconnections–Asymmetric Channels– Proposed Systems.

UNIT-V DIRECT BROADCAST SATELLITE SERVICES

Introduction–Orbital Spacing–Power Rating and Number of Transponders–Frequencies and Polarization –Transponder Capacity– Bit Rates for Digital Television – MPEG Compression Standards–Forward Error Correction–Home Receiver Outdoor Unit(ODU)–Home Receiver Indoor Unit (IDU)–Downlink Analysis–Uplink-Problems-Satellite Mobile Services–VSATs–Radar sat –Global Positioning Satellite System–Orbcomm.

16BEEC6E04 **DISASTER MANAGEMENT** **L T P C**

3 0 0 3

OBJECTIVES

- To understand the six elements of disaster management.
- To understand the "relief system" and the "disaster victim."
- To understand traditional patterns off foreign assistance
- To understand the tools of post-disaster management
- To gain knowledge about the organization of disaster management

INTENDED OUTCOMES:

- Understand the six elements of disaster management.
- Understand the "relief system "and the "disaster victim."
- Understand traditional patterns of foreign assistance
- Understand the tools of post-disaster management
- Gain knowledge about the organizations that are involved in natural disaster assistance
- Gain knowledge on seismicity

UNIT I: INTRODUCTION

Introduction – Disaster preparedness–Goals and objectives of ISDR Programme-Risk identification–Risk sharing–Disaster and development: Development plans and disaster management–Alternative to dominant approach–disaster-development linkages-Principle of risk partnership

UNIT II:APPLICATION OF TECHNOLOGY IN DISASTER RISK REDUCTION

Application of various technologies: Databases–RDBMS–Management Information systems–Decision support system and other systems–Geo graphic information systems–Intranets and extranets–video teleconferencing. Trigger mechanism–Remote sensing-an insight–contribution of remote sensing and GIS-Case study.

UNIT III: AWARENESS OF RISK REDUCTION

Trigger mechanism– constitution of trigger mechanism– risk reduction by education– disaster information network– risk reduction by public awareness

UNIT IV: DEVELOPMENT PLANNING ON DISASTER

Implication of development planning–financial arrangements–areas of improvement–disaster preparedness–community based disaster management–emergency response.

UNIT V: SEISMICITY

Seismic waves–Earthquakes and faults–measures of an earthquake, magnitude and intensity–ground damage–Tsunamis and earthquakes

16BEEC6E05 RADAR AND NAVIGATIONAL AIDS **L T P C**
3 0 0 3

OBJECTIVES

- To study RADAR theory.
- To study and learn different types of RADAR and their working principle.
- To study RADAR signal detection methods.
- To study an overview of RADAR Navigation.
- To study Decca Navigation System
- To learn about RADAR systems and components.

INTENDED OUTCOMES:

- Gain adequate knowledge about RADAR theory.
- Gain adequate knowledge about different types of RADAR and their working principle.
- Gain adequate knowledge about RADAR signal detection methods.
- Gain adequate knowledge about RADAR Navigation.
- Gain adequate knowledge about RADAR systems and components.
- Gain adequate knowledge Decca Navigation System

UNIT I-RADAR QUATIONS

RADAR Block Diagram & operation– RADAR Frequencies– RADAR Equation–Detection of signal sin Noise – RADAR cross section of targets–RADAR cross section fluctuations – transmitter power–pulse repetition frequency–system losses and propagation effects.

UNIT II-MTI AND PULSE DOPPLER RADAR

Introduction to Doppler & MTIRADAR– Delay Line canceller–Moving Target Detector– Pulse Doppler RADAR– Non-Coherent MTI– CW RADAR– FMCWRADAR – Tracking RADAR– Mono pulse Tracking–Conical Scan and Sequential Lobbing.

UNIT III-RADAR SIGNAL DETECTION AND PROPAGATION ON WAVES

Detection criteria–automatic detection–constant false alarm rate receiver–Ambiguity diagram– pulse compression – introduction to clutter – surface clutter RADAR equation – anomalous propagation and diffraction.

UNIT IV-RADIO NAVIGATION

Ad cock directional finder–automatic directional finder– Decca Navigation System–Tactical Air Navigation –Instrument Landing System–Ground Controlled Approach.

UNIT V-RADAR TRANSMITTER AND RECEIVER

Linear beam power tubes– Solid state RF power sources–solid state devices used in RADAR–Magnetron-crossed field amplifiers – other aspects of radar transmitter–RADAR Receiver–Receiver noise figure–super hetero dyne receiver–dynamic range–RADAR Displays.

16BEEC6E06 **INTERNET AND JAVA** **L T P C**
3 0 0 3

OBJECTIVES

- To learn Internet working with TCP/IP.

- To learn routing for high speed multimedia traffic
- To learn the fundamental sin WWW, HTML and XML.
- To learn Java for Networking application
- To understand the basic concepts in E-com, Network operating system.
- To understand the basic concepts in Web design.

INTENDED OUTCOMES:

- Thorough knowledge in Internet working with TCP/IP.
- Thorough knowledge about routing for high speed multimedia traffic
- Thorough knowledge in WWW, HTML and XML.
- Thorough knowledge in Java for Networking application
- Understand the basic concept sin E-com, Network operating system
- Understand the concepts in Web design.

UNIT-I INTERNET WORKING WITH TCP/IP

Review of network technologies, Internet addressing, Address resolution protocols (ARP/ RARP), Routing IP data gram's, Reliable stream transport service(TCP)TCP/IP over ATM networks, Internet Applications-E-mail, Telnet, FTP, NFS, Internet traffic management.

UNIT-II INTERNET ROUTING

Concepts of graph theory, Routing protocols, Distance vector protocols(RIP), Link state protocol (OSPP), Path vector protocols (BGP and IDRP), Routing for high speed multimedia traffic, Multicasting, Resource reservation(RSVP), IP switching.

UNIT-III WORLD WIDE WEB

HTTP protocol, Web browsers net scape, Internet explorer, Website and Web page design, HTML, XML, Dynamic HTML, CGI.

UNIT-IV JAVA PROGRAMMING

Language features, Classes, Object and methods, Sub classing and dynamic binding, Multithreading, Overview of class library, Object method serialization, Remote method invocation, JavaScript.

UNIT-V MISCELLANEOUS TOPICS

E-Commerce, Network operating systems, Web Design case studies.

16BEEC6E07 TOTAL QUALITY MANAGEMENT L T P C

3 0 0 3

OBJECTIVES:

- To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management.
- To understand the statistical approach for quality control.
- To create an awareness about the ISO and QS certification process and its need for the industries.
- To familiarize the students with statistical fundamentals.
- To imparts a good knowledge in stages of FMEA.
- To learn about the New seven Management tools.

INTENDED OUTCOMES:

- Apply the tools and techniques of quality managements to manufacturing and servicing process
- Understand the Principles behind TQM
- List tools of quality
- Gain knowledge on Benchmarking process
- Understand the ISO Quality standards
- Gain knowledge on ISO auditing

UNIT1 INTRODUCTION

Definition of Quality, Dimensions of Quality, Quality Planning, Quality Costs-Analysis Techniques For Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership–Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT2 TQM PRINCIPLES

Customer satisfaction– Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement– Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement–Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership– Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures– Basic Concepts, Strategy, Performance Measure.

UNIT3 STATISTICAL PROCESS CONTROL(SPC)

The seven tools of quality, Statistical Fundamentals–Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

UNIT4 TQM TOOLS

Bench marking–Reasons to Benchmark, Bench marking Process, Quality Function Deployment(QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM)–Concept, Improvement Needs, FMEA–Stages of FMEA.

UNIT5 QUALITY SYSTEMS

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System–Elements, Implementation of Quality System, Documentation, Quality Auditing, QS9000, ISO 14000–Concept, Requirements and Benefits.

16BEEC6E08 **PHOTONICS** **L T P C**
3 0 0 3

OBJECTIVES

- To study about Nature of light and the production of EM radiation for photonics application
- To study about the production of EM radiation for photonics application
- To study about applications &Trends and new direction sin photonic applications

INTENDEDOUTCOMES:

- Knowledge about Nature of light and the production of EM radiation for photonics application
- Knowledge about the production of EM radiation for photonics application
- Knowledge about applications &Trends and new directions in photonic applications

UNIT-I NATURE OF LIGHT AND THE PRODUCTION OF EM RADIATION FOR PHOTONICS APPLICATION

Wave descriptions (spectrum, superposition, interference effects), photon effects (photo electric effect, momentum, interaction with matter). Sources of light: thermal, discharge lamps, lasers, solid-state sources (such as LED's and laser diodes).

UNIT-II THEPRODUCTIONOFEMRADIATIONFORPHOTONICSAPPLICATION

Characteristics of light (polarization, coherence, mono chromaticity), ways to define these mathematically (Stokes parameters, Jones vectors & matrices) and how to determine these characteristics

UNIT-III TRANSMISSION & DETECTION OF LIGHT RADIATION

Ray optics ABCD matrix methods for transmission of light. Stability of a cavity. The q-parameter of a laser beam. Light detectors: photo multiplier tubes, Photodiodes, thermal detectors, Bolometers, CCD's, single photon detectors. Generic system issues: sources of noise and signal-to-noise ratio, limitation son temporal response and effective bandwidth.

UNIT-IV IMPARTING INFORMATION ON TO EM RADIATION & COMMUNICATION TECHNIQUES

Acousto-optic and electro-optic techniques, LED switching, analogue and digital techniques using lasers, AM, FM, phase modulation techniques Delivery methods. Basics of optical fiber techniques: step index fiber; acceptance angles, single and multimode fibers, dispersion limitations, transmission characteristics.

UNIT-V APPLICATIONS

Spectroscopy using etalons, spectrometers, interferometers Display systems (LCD's, plasmas etc.) Range-finding systems and applications (LIDAR etc.). More exotic applications (laser trapping, laser tweeze ring, different forms of measurements) Trends and new directions in photonic applications: Laser safety, practical tips on experimental techniques, different forms of laser systems used in research.

16BEEC6E09 DATA STRUCTURES AND ALGORITHMS **L T P C**

3 0 0 3

OBJECTIVES

- To learn the systematic way of solving problems
- To understand the different methods of organizing large amounts of data
- To learn top Program in C
- To efficiently implement the different data structures
- To efficiently implement solutions for specific problems
- To learn lists, stacks and queues

INTENDED OUTCOMES:

- Gain adequate knowledge about the systematic way of solving problems
- Gain adequate knowledge about the different methods of organizing large amounts of data
- Gain adequate knowledge to program in C
- Gain adequate knowledge to implement the different data structures
- Gain learn lists, stacks and queues.
- Gain adequate knowledge about to implement solutions for specific problems

UNIT-I PROBLEM SOLVING

Problem solving–Top-down Design–Implementation–Verification–Efficiency–analysis–Sample algorithms.

UNIT-II LISTS, STACKS AND QUEUES

Abstract Data Type(ADT)–The List ADT–The Stack ADT–The Queue ADT

UNIT-III TREES

Preliminaries– Binary Trees– The Search Tree ADT– Binary Search Trees– AVL Trees– Tree Traversals–Hashing–General Idea–Hash Function –Separate Chaining–Open Addressing–Linear Probing–Priority Queues (Heaps)–Model–Simple implementations–Binary Heap

UNIT-IV SORTING

Preliminaries–InsertionSort–Shellsort–Heapsort–Mergesort–Quicksort–ExternalSorting

UNIT-V GRAPHS

Definitions– Topological Sort– Shortest-Path Algorithms– Unweighted Shortest Paths– Dijkstra's Algorithm– Minimum Spanning Tree – Prim's Algorithm– Applications of Depth-First Search– Undirected Graphs–Bi connectivity –Introduction to NP-Completeness

16BEEC6E10 PROBABILITY AND RANDOMPROCESS **L T P C**
3 0 0 3

OBJECTIVES

- To acquire knowledge about probability and random variables.
- To gain knowledge on 2-Drandomvariables.
- To gain knowledge about correlation functions.
- To learn about the applications of Fourier transforms like spectral density and others.
- To expose the concepts of random process
- To learn about Ergodicity

INTENDED OUTCOMES:

- Gain knowledge about probability and random variables.
- Gain knowledge on 2-D random variables.
- Gain knowledge about correlation functions.
- Gain knowledge about the applications of Fourier transforms like spectral density and others.
- Gain knowledge about the concepts of random process
- Gain knowledge about Ergodicity

UNIT I-PROBABILITY DISTRIBUTIONS

Random Variables- Moments- Moment generating function- Binomial, Poisson, Geometric, Exponential and Normal Distributions-Functions of Random Variables.

UNIT II-TWO DIMENSIONAL RANDOM VARIABLES

Two dimensional Random Variables-Marginal and conditional distributions–Transformation of Random Variables-central limit theorem-simple problems.

UNIT III-RANDOM PROCESSES

Classification of Random Processes-Stationarity-WSS and SSS Processes-Poisson Random Process-Renewal Process-Markov Chain and transition probabilities.

UNIT IV-CORRELATION FUNCTIONS

Auto correlation function and its Properties-Cross Correlation function and its Properties-Linear System with Random Inputs-Ergodicity.

UNIT V-SPECTRAL DENSITY

Power spectral Density Function-Properties-System in the form of convolution - Unit Impulse Response of the System - Einstein - Weiner-Khinchine Relationship-Cross Power Density Spectrum-Properties.

16BEEC6E11 **REMOTE SENSING** **L T P C**
3 0 0 3

OBJECTIVES

- To understand the basic concepts of Remote Sensing.
- To understand the concepts of optical and microwave remote sensing.
- To understand the concepts of geometric information systems.
- To understand the EMR interaction with Earth Surface Materials.
- To study about description of Sensors in Landsat.
- To study about Sonar remote sensing systems.

INTENDED OUTCOMES:

- Understand the basic concepts of Remote Sensing.
- Understand the concepts of optical and microwave remote sensing
- Understand the concepts of geometric information systems
- Understand the EMR interaction with Earth Surface Materials.
- Gain knowledge about description of Sensors in Landsat.
- Gain knowledge about Sonar remote sensing systems.

UNIT-1 REMOTE SENSING

Definition–Components of Remote Sensing–Energy, Sensor, Interacting Body-Active and Passive Remote Sensing– Platforms– Aerial and Space Platforms– Balloons, Helicopters, Aircraft and Satellites– Synoptivity and Receptivity– Electro Magnetic Radiation(EMR)– EMR spectrum– Visible, Infra-Red(IR), Near IR, Middle IR, Thermal IR and Microwave–Black Body Radiation - Planck's law–Stefan-Boltzman law.

UNIT-II EMRINT ERACTION WITH ATMOSPHERE AND EARTH MATERIALS

Atmospheric characteristics–Scattering of EMR–Raleigh, Mie, Non-selective and Raman Scattering – EMR Interaction with Water vapour and ozone – Atmospheric Windows– Significance of Atmospheric windows – EMR interaction with Earth Surface Materials – Radiance, Irradiance, Incident, Reflected, Absorbed and Transmitted Energy–Reflectance–Specular and Diffuse Reflection Surfaces-Spectral Signature–Spectral Signature curves–EMR interaction with water, soil and Earth Surface: Imaging spectrometry and spectral characteristics.

UNIT-III OPTICALANDMICROWAVEREMOTESENSING

Satellites- Classification–Based on Orbits and Purpose–Satellite Sensors-Resolution–Description of Multi Spectral Scanning–Along and Across Track Scanners –Description of Sensors in Landsat, SPOT, IR S series–Current Satellites-Radar–Speckle-Back Scattering–Side Looking Airborne Radar–Synthetic Aperture Radar–Radiometer–Geometrical characteristics; Sonar remote sensing systems.

UNIT-IV GEOGRAPHICINFORMATIONSYSTEM

GIS–Components of GIS–Hardware, Software and Organizational Context–Data–Spatial and Non-Spatial–Maps–Types of Maps–Projection–Types of Projection-Data Input–Digitizer, Scanner– Editing–Raster and Vector data structures– Comparison of Raster and Vector data structure– Analysis using Raster and Vector data– Retrieval, Reclassification, Overlaying, Buffering– Data Output–Printers and Plotters

UNIT-V MISCELLANEOUS TOPICS

Visual Interpretation of Satellite Images – Elements of Interpretation - Interpretation Keys Characteristics of Digital Satellite Image–Image enhancement–Filtering–Classification-Integration of GIS and Remote Sensing– Application of Remote Sensing and GIS – Urban Applications- Integration of GIS and Remote Sensing–Application of Remote Sensing and GIS–Water resources– Urban Analysis – Watershed Management – Resources Information Systems. Global positioning system– an introduction.

16BEEC6E12 OPTO ELECTRONIC DEVICES **L T P C**
3 0 0 3

OBJECTIVES

- To know the basics of solid state physics and understand the nature and characteristics of light.

- To understand different methods of luminescence, display devices and laser types and their applications.
- To learn the principle of optical detection mechanism in different detection devices.
- To understand different light modulation techniques and the concepts and applications of optical switching.
- To study the integration process and application of optoelectronic integrated circuits in Transmitters and receivers.
- To study the design of opto electronic modulator.

INTENDED OUTCOMES:

- Thorough knowledge in the basics of solid state physics and characteristics of light.
- Knowledge in different methods of luminescence, display devices and laser types and their applications.
- Adequate knowledge about the principle of optical detection mechanism in different detection devices.
- Adequate knowledge about different light modulation techniques and the concepts and applications of optical switching.
- Adequate knowledge about the integration process and application of opto electronic integrated circuits in transmitters and receivers.
- Understand the design of optoelectronic integrated circuits.

UNIT-I ELEMENTS OF LIGHTAND SOLID STATE PHYSICS

Wave nature of light, Polarization, Interference, Diffraction, Light Source, review of Quantum Mechanical concept, Review of Solid State Physics, Review of Semiconductor Physics and Semiconductor Junction Device.

UNIT-II DISPLAY DEVICES AND LASERS

Introduction, Photo Luminescence, Cathode Luminescence, Electro Luminescence, Injection Luminescence, Injection Luminescence, LED, Plasma Display, Liquid Crystal Displays, Numeric Displays, Laser Emission, Absorption, Radiation, Population Inversion, Optical Feedback, Threshold condition, Laser Modes, Classes of Lasers, Mode Locking, laser applications.

UNIT-III OPTICAL DETECTION DEVICES

Photo detector, Thermal detector, Photo Devices, Photo Conductors, Photo diodes, Detector Performance.

UNIT-IV OPTO ELECTRONIC MODULATOR

Introduction, Analog and Digital Modulation, Electro-optic modulators, Magneto Optic Devices, Acoustic optic devices, Optical, Switching and Logic Devices.

UNIT-V OPTO ELECTRONIC INTEGRATED CIRCUITS

Introduction, hybrid and Mono Lithic Integration, Application of Opto Electronic Integrated Circuits, Integrated transmitters and Receivers, Guided wave devices.

LIST OF ELECTIVES FOR VII SEMESTER-ELECTIVE V
B.E. ELECTRONICS AND COMMUNICATION ENGINEERING

16BEEC7E01 **SENSORS AND TRANSDUCERS** **L T P C**

3 0 0 3

OBJECTIVES

- To study basic concepts of various sensors and transducers.
- To develop knowledge in selection of suitable sensor based on requirement
- To familiarize the concepts of inductive and capacitive sensors and its comparison
- To imparts the knowledge in analysis of error.
- To learn the fundamentals of various thermal and radiation sensors.
- To study about applications of sensors in various field.

INTENDED OUTCOMES:

- Characterize and classify errors
- Understand basic concepts of mechanical sensors.
- Gain knowledge about thermal sensors
- Explain the principle behind magnetic sensors
- Gain knowledge about electro analytical sensors
- Gain thorough knowledge in selection of suitable sensor based on requirement and application.

UNIT I-INTRODUCTION

Definition, classification, static and dynamic parameters, Characterization–Electrical, mechanical, thermal, optical, biological and chemical, Classification of errors–Error analysis, Static and dynamic characteristics of transducers, Performance measures of sensors.

UNIT II- MECHANICAL AND ELECTRO MECHANICAL SENSORS

Resistive Potentiometer, strain gauge, Inductive sensors and transducer, capacitive sensors, ultrasonic sensors.

UNIT III-THERMAL AND RADIATION SENSOR

Thermal Sensors: Gas thermometric sensors, acoustic temperature sensors, magnetic thermometer, resistance change-type thermometric sensors, thermos emf sensors, junction semiconductor types, Thermal radiation sensors, spectroscopic thermometry

Radiation Sensors: Photo detectors, photovoltaic and photo junction cells, photo sensitive cell, photo FET sand other devices.

UNIT IV-MAGNETIC AND ELECTRO ANALYTICAL SENSOR

Magnetic Sensors: Force and displacement measurement, magneto resistive sensors, Hall Effect sensor, Inductance and eddy current sensors, Angular/rotary movement transducer, Electromagnetic flowmeter, squid sensor.

Electroanalytical Sensors: Electro chemical cell, cell potential, sensor electrodes, electro ceramics in gas media, chem FET.

UNIT V-SENSORS AND THEIR APPLICATIONS

Auto mobile sensor, Home appliance sensor, Aero space sensors, sensors for manufacturing, medical diagnostic sensors, environmental monitoring.

16BEEC7E02 COMPUTER HARDWARE AND INTERFACING **L T P C**

3 0 0 3

OBJECTIVES

- To introduce issues related to CPU and memory.
- To understand the components on them other board.
- To understand BIOS and Boot sequences
- To understand different storage media.
- To introduce the features of different I/O peripheral devices and the interfaces.
- To understand bus architecture

INTENDED OUTCOMES:

- Knowledge about issues related to CPU and memory.
- Understand the components on them other board
- Understand BIOS and Boot sequences
- Understand different storage media
- Knowledge about the features of different I/O peripheral devices and their interfaces.
- Knowledge about bus architecture

UNIT-I CPU ANDMEMORY

CPU essentials–processor modes–modern CPU concepts–Architectural performance features–the Intel's CPU–CPU overclocking–over clocking requirements–overclocking the system–over clocking the Intel processors–Essential memory concepts–memory organizations–memory packages –modules–logical memory organizations–memory considerations–memory types–memory techniques–selecting and installing memory.

UNIT-II MOTHER BOARDS

Active motherboards–sockets and slots–Intel D850GB–Pentium 4 motherboard–expansion slots– form factor–upgrading motherboard–chipsets–north bridge–south bridge–CMOS–CMOS optimization tactics–configuring the standard CMOS setup–motherboard BIOS–POST–BIOS features–BIOS and Boot sequences–BIOS short comings and compatibility issues–power supplies and power management–concepts of switching regulation – potential power problems– power management.

UNIT-III STORAGE DEVICES

The floppy drive–magnetic storage–magnetic recording principles–data and disk organization– floppy drive–hard drive–data organization and hard drive–sector layout–IDE drive standard and features–Hard drive electronics–CD-ROM drive–construction–CDROM electronics–DVD-ROM –DVD media–DVD drive and decoder.

UNIT-IV I/O PERIPHERALS

Parallel port–signals and timing diagram–IEEE 1384 modes–asynchronous communication-serial port signals–video adapters–graphic accelerators–3D graphics accelerator issues–DirectX–mice– modems–keyboards–soundboards– audio bench.

UNIT-V BUS ARCHITECTURE

Buses–Industry standard architecture(ISA), peripheral component Interconnect(PCI)–Accelerated Graphics port(AGP)–plug-and-play devices–SCSI concepts–USB architecture.

16BEEC7E03 HIGH SPEED NETWORKS L T P C

3 0 0 3

OBJECTIVES

- To introduce about ATM and Frame relay.
- Overview of an up-to-date survey of developments in High Speed Networks.
- To know techniques involved to support real-time traffic and congestion control.
- To learn different levels of quality of service (Q.S) to different applications.
- To divulge the basics of RSVP.
- To make the student acquire Integrated Services Architecture.

INTENDED OUTCOMES:

- Knowledge about ATM and Frame relay.
- Knowledge on up-to-date survey of developments in High Speed Networks.
- Enable the students to know techniques involved to support real-time traffic and congestion control.
- Understand different levels of quality of service (Q.S) to different applications.
- Knowledge about ISDN architecture and its services
- Gain exposure on various protocols for QoS support.

UNIT-I HIGH SPEED NETWORKS

Frame Relay Networks–Asynchronous transfer mode–ATM Protocol Architecture, ATM logical Connection, ATM Cell–ATM Service Categories–AAL.
High Speed LANs: Fast Ethernet, Gigabit Ethernet, Fiber Channel–Wireless LANs: applications, requirements–Architecture of 802.11

UNIT-II CONGESTION AND TRAFFIC MANAGEMENT

Queuing Analysis-Queuing Models–Single Server Queues–Effects of Congestion–Congestion Control–Traffic Management–Congestion Control in Packet Switching Networks–Frame Relay Congestion Control.

UNIT-III TCP AND ATM CONGESTION CONTROL

TCP Flow control –TCP Congestion Control–Re transmission–Timer Management–Exponential RTO back off–KARN's Algorithm–Window management–Performance of TCP over ATM. Traffic and Congestion control in ATM– Requirements– Attributes– Traffic Management Frame work, Traffic Control– ABR traffic Management– ABR rate control, RM cell formats, ABR Capacity allocations–GFR traffic management.

UNIT-IV INTEGRATED AND DIFFERENTIATED SERVICES

Integrated Services Architecture–Approach, Components, Services-Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ–Random Early Detection, Differentiated Services

UNIT-V PROTOCOLSFORQOSSUPPORT

RSVP–Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms–Multiprotocol Label Switching–Operations, Label Stacking, Protocol details–RTP–Protocol Architecture, Data Transfer Protocol, RTCP.

16BEEC7E04 **NANO ELECTRONICS** **L T P C**
3 0 0 3

OBJECTIVES

- To Understand the basics of Quantum mechanics concepts and process involved in preparation of nano particle.
- To imparts a good knowledge in nanosensors and nanobiosensors
- To familiarize the students with the benefits of the nano-materials and appropriate use in solving practical problems.
- To inculate the nanoscale MOSFET.
- To divulge the applications of nanosenors in various fields.
- To make the student acquire the knowledge of carbon nanotubes and its application in various fields

INTENDED OUTCOMES:

- Understand the basics of Quantum Mechanics
- Gain knowledge on shrink down approaches
- Characterize SET and tunnel diodes
- Understand various aspects of carbon nano structures
- Advantages of the carbon nano sensors
- Knowledge on benefits of the nano-materials and appropriate use in solving practical problems.

UNIT I: BASICS OF NANO ELECTRONICS

Capabilities of nano electronics– physical fundamentals of nano electronics– basics of information theory – the tools for micro and nano fabrication – basics of lithographic techniques for nano electronics.

UNITII: QUANTUM ELECTRON DEVICES

From classical to quantum physics: upcoming electronic devices –electrons in mesoscopic structure– Short channel MOS transistor–split gate transistor–Electron wave transistor–Electron spin transistor –quantum cellular automate –quantum dot array –Principles of Single Electron Transistor(SET)– SET circuit design–comparison between FET and SET circuit design.

UNIT III: NANO ELECTRONICS WITH TUNNELING DEVICES AND SUPERCONDUCTING DEVICES

Tunneling element technology- RTD: circuit design–Defect tolerant circuits - Molecular electronics –elementary circuits–flux quantum devices–application of Super conducting devices–Nanotubes Based sensors, fluid flow, gas, temperature, Strain–oxide nano wire, gas sensing (ZnO,TiO, SnO, WO), LPG sensor (SnO powder)- Nano 2232 designs and Nano contacts-metallic nano structures.

UNIT IV: A SURVEY ABOUT THE LIMITS

Replacement Technologies– Energy and Heat dissipation– Parameter spread as Limiting Effect– Limitsduetothermalparticlemotion–Reliabilityaslimitingfactor–Physicallimits–Final objectives of integrated chip and systems.

UNITV: MEMORY DEVICES AND SENSORS

Nano ferroelectrics –Ferro electric random access memory–Fe-RAM circuit design –ferroelectric thin film properties and integration–calorimetric sensors–electro chemical cells–surface and bulk acoustic devices–gas sensitive FETs–resistive semiconductor gas sensors–electronic noses –identification of hazardous solvents and gases–semiconductor sensor array.

LIST O FELECTIVES FOR VIII SEMESTER - ELECTIVE VI
B.E. ELECTRONICS AND COMMUNICATION ENGINEERING

16BEEC8E01 ARTIFICIAL NEURAL NETWORKS L T P C
3 0 0 3

OBJECTIVES

- To learn the various architectures of building an ANN and its applications.
- Advanced methods of representing information in ANN like elf organizing.
- Networks, associative and competitive learning.
- To learn architecture of Neocognitron.
- To imparts a good knowledge in self-organizing map-learning algorithm.
- To familiarize the students with the Data processing and performance of architecture of spacio -temporal networks for speech recognition.

INTENDED OUTCOMES:

- Gain adequate knowledge about the various architectures of building an ANN and its applications.
- Sufficient knowledge regarding BPN and BAM.
- Understand the process of Annealing
- Gain knowledge about self organizing networks, associative and competitive learning.
- Understand the architecture of ART
- Aply neural networks for classification of various applications.

UNIT I: INTRODUCTION TO ARTIFICIAL NEURAL NETWORKS
Neuro-Physiology-General Processing Element-ADALINE-LMS learning rule-MADALINE- MR2 training algorithm.

UNIT II: BPN AND BAM
Back Propagation Network-updating of output and hidden layer weights-application of BPN–associative memory- Bi-directional Associative Memory-Hopfield memory-traveling sales man problem.

UNIT III: SIMULATED ANNEALING AND CPN
Annealing, Boltzmannmachine-learning-application-CounterPropagationnetwork-architecture-Training-Applications.

UNIT IV: SOM AND ART
Self-organizing map-learning algorithm-feature map classifier-applications -architecture of Adaptive Resonance Theory-pattern matching in ART network.

UNIT V: NEOCOGNITRON
Architecture of Neocognitron -Data processing and performance of architecture of spacio -temporal networks for speech recognition.

16BEEC8E02 VIRTUAL INSTRUMENTATION USING LABVIEW L T P C
3 0 0 3

OBJECTIVES

- To understand the basic needs of VI.
- To learn LabVIEW software basics.
- To understand data acquisition techniques.
- To learn different interfacing techniques.
- To design some real time application using LabVIEW software.
  - To learn programming techniques

INTENDED OUTCOMES:

- The students will be able to am iliarize the basic sand need of VI.
- The students will be able to learn LabVIEW software basics.
- To get better understanding of data acquisition techniques.
- The students can have an exposure to different interfacing techniques.
- The students can able to design some real time application using LabVIEW software.
  - Learn programming techniques

UNIT I-VIRTUAL INSTRUMENTATION

Historical perspective, Need of VI, Advantages of VI, Define VI, block diagram & architecture of VI, data flow techniques, graphical programming in data flow, comparison with conventional programming.

UNIT II-VIPRO GRAMMING TECHNIQUES

VIS and sub-VIS, loops & charts, arrays, clusters, graphs, case & sequence structures, formula modes,
Local and global variable, string &file
input.

UNIT III -DATA ACQUISITION BASICS

Introduction to data acquisition on PC, Sampling fundamentals, Input / Output techniques and buses. ADC, DAC, DIO, Counters &timers, PC Hardware structure, timing, interrupts, DMA, Software and Hardware Installation, Simple applications using NIM y DAQ and NIELVIS.

UNIT IV-LabVIEW IN SIGNAL PROCESSING

Waveform Generation, Sampling, Quantization, Aliasing, Signal Reconstruction. Fourier transforms, Power spectrum, Correlation methods, windowing &filtering. Digital Filter Design, IIR/FIR Filtering system Design, Adaptive Filter design.

UNITV-FREQUENCY DOMAIN PROCESSING

Discrete Fourier Transform and Fast Fourier Transform, STFT, Wavelet Transform, Signal Processing applications.

16BEEC8E03 **FPGA DESIGN** **L T P C**

3 0 0 3

OBJECTIVES

- To Provide an understanding of FPGA lifecycle
- To understand the concept of selecting a FPGA based on project specifications
- To enable the student to understand the floor planning, place and route optimization techniques.
- To introduce the lower power reduction techniques to analyze and design FPGA.
- To imparts a good knowledge in logical replications-I/O registers.
- To familiarize the students with the power consumption reduction techniques

INTENDED OUTCOMES:

- Ability to understand FPGA lifecycle
- Understand the concept of selecting a FPGA based on project specifications
- Understand the placement techniques
- Knowledge on lower power reduction techniques to analyze and design FPGA.
- Understand the floor planning techniques
- Understand the route optimization techniques

UNIT1 Introduction to Gate Array and CMOS Logic

Types of gate array–Design flow-CMOS Logic-Combinational–Sequential–Data path–Transistor as resistor–Capacitance-Hardware description language.

UNIT2 Field Programmable Gate Array

FPGA Architecture- Altera FPGA technologies- Xilinx FPGA technologies – Lattice FPGA technologies-Actel FPGA technologies.

UNIT 3 FPGA Implementation Issues

Lookuptables–Memoryavailability-Fixedcoefficientdesigntechnique–Distributedarithmetic.

UNIT 4 Floor Planning, Place and Route Optimization

Design Partitioning-Optimal floor planning–Relationship between placement and routing–Logical Replications-I/O registers–Register Ordering-Placement seed.

UNIT 5 Low Power FPGA Implementation

Sources of power Consumption-Power consumption reduction Techniques-Voltage scaling FPGA’s–Data reordering- Pipeline.

16BEEC8E04 **ASIC DESIGN** **L T P C**

3 0 0 3

OBJECTIVES

- To give basic knowledge of ASIC internals.
- To impart knowledge on ASIC types.
- To give basic understanding of tools used.
- To make the students acquire the design of ASIC library.
- To make the student acquire the knowledge of automatic test pattern generation algorithm.
- To acquaint the student with the introduction of SOC

INTENDED OUTCOMES:

- Understand basic knowledge of ASIC internals.
- Gain knowledge on types of ASIC.
- Gain knowledge about the tools used in ASIC design.
- Simulate and synhezise any circuit
- Perform testing of ASIC
- Gain knowledge about the optimization of area

UNIT I-INTRODUCTION TO ASICS

Introduction to ASICs: Full-custom and Semi-custom ASIC–CMOS logic –ASIC library design.

UNIT II-PROGRAMMABLE ASICS

Programmable ASICs–Anti fuse–static RAM–EPROM and technology–Actel ACT–Xilinx LCA –Altera flex–Altera MAX Logic cells– I/O cells–Interconnects– Low level design entry: Schematic entry.

UNIT III-SIMULATION AND SYNTHESIS

Logic synthesis: A comparator MUX, Inside a logic synthesizer, VHDL and logic synthesis, FSM synthesis, memory synthesis–Simulation: Types of simulation–logic systems–how logic simulation works.

UNIT IV-ASIC TESTING

Boundary scantest– Faults–Fault simulation–Automatic test pattern generation algorithm: D-algorithm, PODEM –Built in self-test.

UNIT V-ASIC CONSTURCTION

System partitioning–power dissipation–partitioning methods–floor planning and placement: –Routing: Global routing, detailed routing, special routing–Introduction to SOC.

16BESHOE01 PROBABILITY AND RANDOM PROCESS **L T P C**
3 0 0 3

OBJECTIVES:

- To gain knowledge in measures of central tendency.
- To provide necessary basic concepts in probability and random processes.

INTENDED OUTCOMES:

- Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
- The students will have an exposure of various distribution functions, correlation and spectral densities.

UNIT-I MEASURES OF CENTRAL TENDENCY AND PROBABILITY
Measures of central tendency–Mean, Median, Mode-Standard Deviation
Probability-Random Variable-Axioms of Probability-Conditional Probability-Total probability–Bayes' theorem.

UNIT-II STANDARD DISTRIBUTIONS
Functions of a random Variable-Binomial, Poisson, Uniform, Exponential, Gamma (one Parameter only) and Normal Distributions-Moment generating functions, Characteristic function and their properties–Chebyshev's in equality.

UNIT-III TWO DIMENSIONAL RANDOM VARIABLES
Joint Distributions-Marginal and conditional Distributions-Probability Mass Function-Probability density functions–Covariance-Correlation and regression

UNIT-IV CLASSIFICATION OF RANDOM PROCESS
Definition and examples-first order, second order, strictly stationary, wide–sense stationary and Ergodic Processes-Markov Process-Binomial, Poisson and Normal Processes-Sinewave process.

UNIT-V CORRELATION AND SPECTRAL DENSITIES
Autocorrelation-Cross Correlation-Properties–Power spectral density–Cross spectral density-Properties–Wiener-Khintchine relation–Relationship between cross power spectrum and cross correlation Function-Linear time invariant System-System transfer function–Linear systems with random inputs– Autocorrelation and cross correlation functions of input and output.

16BESHOE02 FUZZY MATHEMATICS **L T P C**

3 0 0 3

OBJECTIVES:

- To know the fundamentals of fuzzy Algebra.
- To know the basic definitions of fuzzy theory
- To know the applications of fuzzy Technology

INTENDED OUTCOME:

- The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SET (9)

Fuzzy Sets: Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS (9)

Operations on Fuzzy Sets Operations on [0,1] – Fuzzy negation, triangular norms, tonearms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATION (9)

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURE (9)

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures Vs Possibility Measures

UNIT V FUZZY INFERENCE (9)

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

16BESHOE03 LINEAR ALGEBRA L T P C
3 0 0 3

OBJECTIVES:

- To know the fundamentals of linear Algebra.
- To study about the linear transformations
- To introduce the concepts of inner product spaces

INTENDED OUTCOMES:

The student will be able to

- Recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- Visualize linear transformations as matrix form
- Articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNIT I VECTOR SPACES (9)

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS (9)

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS (9)

Direct methods, Gauss elimination method, Gauss Jordan method, Croute's method, iterative methods, Gauss-Jacobi method, Gauss–Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS (9)

Linear Transformations - The Null Space and Range - I isomorphism - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES (9)

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application: Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

16BESHOE04 ENGINEERING ACOUSTICS **L T P C**

3 0 0 3

OBJECTIVES:

- To provide mathematical basis for acoustics waves and the characteristic behavior of sound in pipes, resonators and filters.
- To introduce the properties of hearing and speech

INTENDED OUTCOME:

- The students will have the knowledge on acoustics waves, the characteristic behavior of sound in pipes, resonators and filters and that knowledge will be used by them in different engineering and technology applications

UNIT I INTRODUCTION (9)

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales .Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES (9)

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS (9)

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS (9)

Sound in endo sure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION (9)

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers
