SEMESTER-IV

16CAP404W **XML** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To be aware of a range of XML tools (Many of them are free).
- To know how to set out an XML document
- To define custom markup language
- To understand the purpose of using DTDs and Schemas to validate XML
- To use XSLT to write a style sheet for XML document to produce multiple output
- To know about DOM

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Learn the basics of creating XML documents, transforming XML documents, and validating XML documents.
2. More specifically, you will learn the basics and history of XML and how to write your own XML documents.
3. Learn how to transform XML documents into documents of other types using XSLT.
4. Learn how to write valid XML documents based on a DTD.
5. Combine XML with existing web technologies.
6. Implement using XML Path language

UNIT I - INTRODUCTION

World Wide Web: Introduction to the Internet and World Wide Web: W3C – History of Internet-World Wide Web- SGML – XML Resources – Internet and World Wide Web resources. Creating Mark up with XML: Introduction – Parsers and well formed XML Documents – Parsing an XML Document - Characters – Mark up – CDATA Sections – XML Namespaces

UNIT II – INTRODUCTION TO DTD

Document Type Definition – Parsers, Well formed and valid XML documents – Element type declarations – Attribute declarations- Attributes Types. Schemas:– Schemas VS DTD's – MSXML Schemas, W3C XML Schema –Declaring Types and Elements –Attribute constraints and Defaults - Simple type - Empty elements -Mixed content elements – Creating Attribute Groups

UNIT III – INTRODUCTION TO DOM

Document Object Model: DOM implementations – DOM with JavaScript – Components-Creating nodes – Traversing the DOM. Simple API for XML: DOM vs SAX – SAX based Parsers.

UNIT IV –XML PATH LANGUAGE

XML Path Language: Nodes – Location Paths; XSLT: Templates - Creating Elements and attributes – Iteration and Sorting – Conditional Processing – Copying Nodes – Combining style sheets – variables. XLink, XPointer, XInclude and XBase.

UNIT V - XML TECHNOLOGIES AND APPLICATIONS

XML Technologies and Applications: XML Query Language – Directory Services Markup Language – Resources Definition Framework – XML topic Maps – Virtual Hyper Glossary – Channel Definition Format – Information and Content Exchange Protocol – Platform for Privacy preferences – XML Metadata Interchange.

SUGGESTED READINGS

1. Ann Novarro, Chuck white, Linda Burman. (2000). Mastering XML, 1st Edition, BPB Publi, New Delhi.
2. Steve Holzner.(2001). Inside XML, 1st Edition, TechMedia, New Delhi.
3. Deitel & Deitel. (2008), XML How to Program . 1st Edition, Pearson Education, New Delhi.

4. http://www.cs.nmsu.edu/~epontell/courses/XML/material/xmlparsers.html#shapes_SAX

SEMESTER-IV

16CAP404B MANAGERIAL ECONOMICS 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To provide students with a basic understanding of the economic theory and analytical tools that can be used in decision making problems.
- To have a good understanding of economic concepts and tools, that have direct managerial applications.
- To sharpen their analytical skills through integrating their knowledge of the economic theory with decision making techniques.
- To provide a basic introduction to econometric analysis and its role in managerial decision making.
- Make optimal business decisions by integrating the concepts of economics, mathematics and statistics.
- To know about demand analysis

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Understand the roles of managers in firms
2. Understand the internal and external decisions to be made by managers
3. Analyze the demand and supply conditions and assess the position of a company
4. Design competition strategies, including costing, pricing, product differentiation, and market environment according to the natures of products and the structures of the markets.
5. Analyze real-world business problems with a systematic theoretical framework.
6. Maintain product and cost analysis

UNIT I - NATURE AND SCOPE OF MANAGERIAL ECONOMICS

Nature and scope of managerial economics. Objectives of the firm. Managerial and behavioral theories of the firm.

UNIT II - DEMAND ANALYSIS

Concepts of opportunity cost, incremental, time perspective. Principles of discounting and equimargins. Demand analysis - purposes and concepts. Elasticity of demand. Methods of demand forecasting.

UNIT III - PRODUCT AND COST ANALYSIS

Product and cost analysis: short run and long run average cost curves. Law of supply. Economies and diseconomies of scale. Law of variable proportions. Production function - single output isoquants.

UNIT IV – CONCEPT OF PRICING

Pricing: Prescriptive approach. Price determination under perfect competition. Monopoly, oligopoly and monopolistic competition. Full cost pricing, product line pricing. Pricing strategies.

UNIT V – INTRODUCTION TO PROFIT

Profits: Nature and. measurement policy. Break-even analysis. Case study.

SUGGESTED READINGS

SEMESTER-IV

16CAP405D DISTRIBUTED DATABASE MANAGEMENT SYSTEM 4H -4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To design good performing distributed database schemas.
- To create optimized query execution plan.
- To efficiently distribute and manage the data.
- To manage distributed access control
- To know how to make secure the databases.
- To know how to deployment of DDBE Software

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. The physical structure of the database to handle data
2. Students would be able to implement the logic by using tools like ERD
3. Ability to normalize the database & understand the internal data structure
4. Students would clearly understand the transaction system
5. Extract the data efficiently
6. Detect or Avoid deadlock using the deadlock handling method

UNIT I – INTRODUCTION TO DATABASE CONCEPTS

Database concepts: Data Models- Database Operations- Database Management-DB Clients, Servers, and Environments. DBE Architecture**:** Services- Components and Subsystems- Sites - Expected Services-Expected Subsystems- Typical DBMS Services**–** DBE Taxonomy**:** COS Distribution and Deployment- COS Closeness or Openness-Schema and Data Visibility- Schema and Data Control.

UNIT II – DESIGN ALTERNATIVES AND FRAGMENTATION

Data Distribution Alternatives: Design Alternatives- Localized Data- Distributed Data. Fragmentation: Vertical Fragmentation- Horizontal Fragmentation. Distribution Transparency: Location Transparency-Fragmentation Transparency-Replication Transparency-Location, Fragmentation, and Replication Transparencies.

UNIT III - QUERY OPTIMIZATION

Query Optimization: Sample Database- Query Processing in Centralized Systems: Query Parsing and Translation - Query Optimization- Query Processing in Distributed Systems- Heterogeneous Database Systems - Concurrency Control in Distributed Database Systems.

UNIT IV - DEADLOCK HANDLING

Deadlock Handling: Deadlock Definition- Deadlocks in Centralized Systems- Deadlocks in Distributed Systems- Distributed Deadlock Detection. Replication Control: Replication Control Scenarios. Failure and Commit Protocols: Terminology- Commit Protocols.

UNIT V - DDBE SECURITY

DDBE Security: Cryptography- Securing Data. Traditional DDBE Architectures: Classifying the Traditional DDBMS Architecture- The MDBS Architecture Classifications- Approaches for Developing A DDBE- Deployment of DDBE Software.

SUGGESTED READINGS

Semester-IV

16CAP405N	**TCP/IP**	**4H- 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To learn about IPv4 forwarding and routing.
- To learn about host name resolution and the Domain Name System (DNS).
- To learn about IPv6 addresses.
- To know the Architectural Overview of the TCP/IP Protocol Suite
- Describe the DHCP discovery process
- To know about UDP operation

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Configure subnets using IP classes B and C
2. Explain TCP/IP protocols, ports, sockets, and data encapsulation
3. Describe the process of packet fragmentation and reassembly
4. Explain the key features and functions of TCP and UDP
5. Use Wireshark to identify ICMP request and reply packets
6. Know the operation of DHCP

UNIT I - INTRODUCTION
Introduction: WAN, WAN technologies - Internetworking concepts - Protocols and Standards - TCP/IP protocol suite - Internetworking Devices – Routing Concept - Classful IP Addressing – Subnetting – Supernetting – Classless Addressing

UNIT II – ARP & RARP
ARP & RARP – Proxy ARP – ARP over ATM – ARP and RARP Protocol Format. IP Datagram – Fragmentation – Options – IP Datagram Format – Routing IP Datagrams – Checksum. ICMP: Types of Messages - Message Format – Error Reporting – Query – Checksum - ICMP Package

UNIT III - ROUTING AND ROUTED PROTOCOLS
Routing and Routed Protocols - Autonomous Systems – Routing Table - Interior Gateway Protocols – Exterior Gateway Protocols – Routing in Internet. Group Management – IGMP Message – IGMP Operation – Process to Process Communication.

UNIT IV - UDP OPERATION

UDP Operation – TCP Services - Flow Control – Multicast Routing – Multicast Routing Protocols. BOOTP - DHCP – Address Discovery and Binding. DNS – Name Space – DNS in Internet – Resolution – Resource Records.

UNIT V – REMOTE LOGIN

Remote Login - FTP – SMTP – SNMP. IP over ATM Wan – Cells – Routing the Cells. Mobile IP: Addressing – Agents – Agent discovery – Registration – Data Transfer – VPN.

SUGGESTED READINGS

4. www.w3schools.com/tcpip/default.asp

SEMESTER-IV

16CAP405S OBJECT ORIENTED ANALYSIS AND DESIGN WITH UML 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3Hours

Course Objectives

Enable the student

- To use object-oriented technologies and Unified Modeling Language 2.2
- To perform object-oriented analysis and design
- To explain how the Unified Modeling Language (UML) represents an object-oriented system using a number of modeling views.
- To know about class diagrams
- To design the application using interaction diagram
- To construct various UML models (including use case diagrams, class diagrams, interaction diagrams, state chart diagrams, activity diagrams, and implementation diagrams) using the appropriate notation.

Course Outcomes (Cos)

Upon Completion of this course, student will be able to

1. Understand of programming language concepts;
2. Demonstrate the software engineering principles
3. Apply the principles of software engineering to software design;
4. Apply the knowledge of OOAD to complete large software project
5. Analyze the deployment of UML diagrams for software design
6. Apply the principles of software engineering quality principles for developing quality software

UNIT I - STRUCTURE OF COMPLEX SYSTEMS

Complexity: The structure of complex systems-the inherent complexity of software-The five attributes of a complex system-Organized and Disorganized complexity-Bringing order to Chaos-On Designing complex systems. The Object model: The evolution of the object model-Foundations of the object model-Elements of the object model-Applying the object model.

UNIT II – INTRODUCTION OF CLASSES AND OBJECTS

Classes and Objects: The nature of an object-Relationship among objects-The nature of a class-Relationships among classes-The interplay of classes and objects-On building quality classes and objects.

UNIT III – CLASSIFICATION AND NOTATION

Classification: The importance of proper classification-Identifying classes and objects-Key abstraction and mechanisms. Notation: The unified modeling language-Package diagrams-Component diagrams.

UNIT IV - DEPLOYMENT DIAGRAMS
Deployment diagrams-Use case diagrams-Activity diagrams-Class diagrams-Sequence diagrams-Interaction overview diagrams-Composite structure diagrams -State machine diagrams-Timing diagrams-Object diagrams-communication diagrams.

UNIT V - PROCESS AND PRAGMATICS
Process: First principles-The Macro Process: The software development lifestyle- The Micro Process: The analysis and design process. Pragmatics: Management and planning-Staffing-Release management-Reuse-Quality assurance and metrics-

SUGGESTED READINGS

1. Martin Fowler, Kendall Scott. (2004). UML Distilled, 2nd Edition, Pearson Education, New Delhi. [UNIT 5]
2. James Rumbaugh, Ivar Jcobson and Grady Booch.(2003). The Unified Modeling Language Reference Manual, 1st Edition, Addison Wesley, New Delhi.
3. Boar (2004).Xml Web Services In The Organization, Wppublisher
4. Grady Booch. (2007). Object Oriented Analysis and Design, 3rd Edition, Addison Wesley, New Delhi. [UNIT 1 to 4]

2. http://www.devshed.com/c/a/Practices/Introducing-UMLObjectOriented-Analysis-and-Design/
3. http://community.sparxsystems.com/tutorials/object-oriented-analysis-and-design

SEMESTER-IV

16CAP405W **WEB SERVICES** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3Hours

Course Objectives

Enable the student

- To be able to describe the interoperable web services architecture, including the roles of SOAP and WSDL.
- To use lower-level SOAP and XML APIs for services and/or clients.
- To build and Host Web Services.
- To apply the web service security
- To know the basic WSDL structure
- To develop the web service application

Course Outcomes (Cos)

Upon completion of the course, students will be able to

1. Understand the use of web services in B2C and B2B applications.
2. Understand the design principles and application of SOAP
3. To know the principles of REST based web services.
4. Design collaborating web services according to a specification.
5. Implement an application that uses multiple web services in a realistic business scenario.
6. Use industry standard open source tools such as Apache Axis2, Tomcat, Derby and Eclipse to build, test, deploy and execute web services and web applications that consume them.

UNIT I – INTRODUCTION TO WEB SERVICES

Introduction: What are Web Services – Importance of web services – Web services and enterprises; XML Fundamentals:: XML Documents - Namespaces – Schema – Processing XML.

UNIT II – SOAP AND WSDL

SOAP: SOAP Model – messages – Encoding – RPC – Alternative SOAP encodings – Document, RPC, Literal, Encoded – SOAP, Web Services and the REST Architecture
WSDL: Structure – Using SOAP and WSDL. UDDI- UDDI Business Registry – Specification – Data Structures – Life cycle Management – Dynamic Access Point Management.

UNIT III – INTRODUCTION TO WEB SERVICES AND WORKFLOW

Advanced Web Services Technologies and Standards: Conversation – Overview – Web Services Conversation Language – WSCL Interface Components- Workflow-Business Process

Management – Workflow and Workflow Management systems – BPEL. Transaction –ACID transaction – Distributed Transaction – OASIS Business Transaction Protocol.

UNIT IV - WEB SERVICE SECURITY

Security – Security Basics – Security Issues – Types of Security Attacks – WS –Security.
Mobile and Wireless – Mobile Web Services – Challenges with mobile – Proxy Based Mobile Systems -Direct Mobile Web service access - J2ME Web Services

UNIT V - WEB SERVICE APPLICATIONS

Building Real World Enterprise Web Service and Applications: Real World Web Service Application Development – Development of Web services and Applications onto Tomcat application Server and Axis Soap Server.

SUGGESTED READINGS

SEMESTER-IV

16CAP405B **CORPORATE PLANNING** **4H -4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To explain the relationship between planning and organizational performance.
- To define corporate planning.
- To explain why corporate plan do fail and what can be done to ensure its success.
- To explain when should a strategic plan be made?
- To define objectives and why are they considered the foundation of planning
- To describe the organization behaviour

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Understand the strategic decisions that organizations make and have an ability to engage in strategic planning.
2. Explain the basic concepts, principles and practices associated with strategy formulation and implementation.
3. Integrate and apply knowledge gained in basic courses to the formulation and implementation of strategy from holistic and multi-functional perspectives.
4. Analyze and evaluate critically real life company situations
5. Develop creative solutions, using a strategic management perspective.
6. Conduct and present a credible business analysis in a team setting.

UNIT I - SIGNIFICANCE OF PLANNING

Significance of Planning: Types. Needs. Requisites. Corporate planning: system approach. Role of the planner. Corporate planning and budgeting.

UNIT II - SOCIAL RESPONSIBILITIES

Social responsibilities: Scope, contents, cooperation and society, consumers, corporation and democracy, community and government.

UNIT III - PROFITABILITY AND PRODUCTIVITY

Social responsibility versus profitability and productivity. Growth. Professionalism as a means of social behavior.

UNIT IV - BUSINESS OBJECTIVES AND GOALS

Mission and purpose: Business definitions - objectives and goals. Environment appraisal: Concepts, components-Scanning and appraising the environment.

UNIT V - APPRAISAL

Organization appraisal: Dynamics. Capability factors. Considerations. Methods and techniques. Structuring. Planning gaps: Gap analysis. Manager audit: Significance of gaps.

SUGGESTED READINGS

1.Kazni. A . (1992). Business Policy. Tata McGraw Hill. New Delhi.

2.Johnson. G.. etal. (1994). Exploring corporate Strategy, 3rd edition. Prentice Hall of India, New Delhi.

3. Peter Lorange. (2013). Corporate Planning: An Executive Viewpoint, Primary source edition. Nabu Press

SEMESTER-IV

16CAP411 J2EE - PRACTICAL 5H - 2C

Instruction Hours / week: L: 0 T: 0 P: 5 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

Enable the student

- To understand J2EE as an architecture and platform for building
- To deploy web-based, n-tier, transactional, component-based enterprise applications
- To understand the fundamental concepts of XML and related technologies
- To acquire knowledge on how XML is currently being used in various application areas
- To know how to parse and transform XML documents via tools and through programming APIs
- To understand the EJB architecture and have a good grasp on when to use and how to use various EJB bean types and acquire relevant Java programming experience

Course Outcomes (COs)

Upon completion of this course, Students will be able to :

1. Characterize the concepts J2SE and J2EE
2. Develop Enterprise Applications using Session Bean, Entity Bean and MDB
3. Demonstrate the hierarchy of Java classes to provide software solutions using Java APIs
4. Analyze the components and patterns of Java Servlet architecture for webapplications
5. Apply systematic Java programming knowledge to connect backend and front end
6. Implement the Java Servlet to transfer data

List of Practical

1. Create a sign in form in servlets.
2. Write a servlet Program to lock a server.
3. Write a servlet program that returns list of information in table format.
4. Design a counter that counts number of times user has visited the site in current browsing session.
5. Write a program to create JDBC connectivity with Oracle Database.
6. Build a JAVA Bean for opening an applet from JAR file.
7. Write a program to create RMI client and server to invoke remove method of RMI server.
8. Design a counter in JAVA BEAN.
9. Write a program to stream contents of a file using JSP.
10. Write a program to insert a menu applet into JSP page.

SUGGESTED READINGS

1. Joseph J Bambaraetal. (2001). J2EE Unleashed, 1st Edition, Tech Media.
2. Paul J Perrone, Venkata S R R Chaganti, S .R.Venkata Krishna, R Chaganti and Tom Schwenk. (2003). J2EE Developer's Handbook, Sams Publications.
3. Rod Johnson. (2004). J2EE Development without EJB, 1st Edition, Wiley Dream Tech India, New Delhi.

4. Rod Johnson. (2004). Expert One-On-One J2ee Design and Development , John Wiley & Sons, Incorporated.
5. Jim Keogh. (2017). The Complete Reference J2EE, 1st Edition, Tata MGraw Hill Edition, New Delhi .

SEMESTER-IV

16CAP412 MOBILE COMPUTING - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To introduce an advanced element of learning in the field of wireless communication and the concepts of wireless devices and mobile computing.
- To introduce wireless communication and networking principles, that support connectivity to cellular networks, wireless internet and sensor devices.
- To understand the use of transaction and e-commerce principles over devices to support mobile business concepts
- To learn the basic concepts, aware of the GSM, SMS, GPRS Architecture.
- To understand the mobile operating system development environment such as android.
- To demonstrate the features of Android Mobile Operating System for developing Android Applications

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Gain the knowledge about various types of Wireless Data Networks and Wireless Voice Networks.
2. Analyze the architectures and the challenges of Wireless Networks.
3. Analyze the role of Wireless Protocols in Wireless Networks.
4. Know about different types of Wireless Communication Networks and their functionalities.
5. Develop Mobile Applications Using Android
6. Identify the features involved in Bluetooth technology.

List of Practical

1. Write a program to build your first Android Application “Hello World” with common activity.
2. Write a program which will implement Sub menu in android application.
3. Write a program which will implement Context menu (Floating List of Menu Items) in android application.
4. Write a program to displays the use of Relative Layout Views with different attributes.
5. Write a program to displays the use of Linear Layout Views with different attributes.

6. Write a program to implement a Custom Button and handle the display message on button press.
7. Write a program to implement the List View in your android application.
8. Write a program to implement between animations and rotate the text in your android application.
9. Write a sample program to create a progress bar for your android applications.
10. Write a program to show how to use Date picker control of ADK in your android applications.
11. Write a program which enables you to draw an image using bitmap class object.
12. Write a program which allows you to get image from web and displayed them using the Image View.

10. service creation, New Delhi ,Tata McGraw Hill.

SEMESTER-IV

16CAP413D DBA - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

Course Objective

Enable the student

- To install and configure database
- To create users and assign roles
- To optimize schemas, tables, indexes and views
- To manage database services and clients
- To move the data from one database to another database.
- To take backup and perform recovery.

Course Outcomes(COs)

Upon completion of this course, students will be able to:

1. Design, model and install any database management systems by using Oracle database as sample.
2. Plan, design, construct, control and manage database instances, database network environment, storage structures, user security, database backup and recovery, database maintenance
3. Define and devise transaction management, concurrency control, crash recovery components
4. Examine and perform data base administration roles
5. Examine the database operations by using Oracle database system as a sample.
6. Apply the knowledge of VLDB to control the distributed databases

List of Practical

1. Demo for Globalization Support
2. Setup Listener Security
3. Configuring Recovery Manager
4. Write a program Using Recovery Manager
5. Write a program for Managing Diagnostic Sources
6. Implement Database Recovery
7. Demo for Flashback Database
8. Implement User Error Recovery
9. Write a program for Dealing with Corruption

10. Show the demo for Automated Management
11. Creating a database and do the manipulation.
12. Managing index tables

SUGGESTED READINGS

1. Bob Bryla, Kevin Loney. (2008). Oracle Database 11g DBA Handbook, McGraw-Hill Osborne.
2. Saikat Basak .(2010), Oracle DBA Concise Handbook , Ensel Software.
3. Amarnath Reddy. (2018), Oracle DBA 11g/12c – Database Administration for junior DBA.

SEMESTER-IV

16CAP413N NETWORK SECURITY - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

Enable the student

- To teach fundamental aspects of security in a modern networked environment with the focus on system design aspects and cryptography in the specific context of network.
- To build protection mechanisms in order to secure computer networks.
- To write coding to encrypt "Plain Text" into "Cipher Text" and vice versa, using different encryption algorithms.
- To choose a suitable ciphering algorithm according to the required security level.
- To build cryptosystems by applying encryption algorithms,
- To build secure authentication systems by use of message authentication techniques.
- To know about the blockchain technology

Course Outcomes (Cos)

Upon completion of this course, students will be able to:

1. Classify the symmetric encryption techniques
2. Illustrate various Public key cryptographic techniques
3. Evaluate the authentication and hash algorithms.
4. Summarize the intrusion detection and its solutions to overcome the attacks.
5. Demonstrate the basic concepts of system level security
6. Apply the block chain technology for security

List of Practical

1. Write a program to convert your college name from plain text to cipher text using Transposition cipher method of encryption.
2. Write a program to convert your name from plain text to cipher text using the One Time Pads method of encryption.
3. Write a program to encrypt a paragraph using the Data Encryption Standard Algorithm.
4. Write a program to encrypt your biodata using the Advanced Encryption Standard Algorithm.
5. Write a program to decrypt the "Network Security" theory syllabus using the RSA Algorithm.

6. Write a program that takes a binary file as input and performs bit stuffing and Cyclic Redundancy Check Computation.
7. Write a program to simulate the working of Sliding-Window protocol.
8. Write a program to find the shortest path in a network using Dijkstra's Algorithm.

9. Write a program for the following chat application:
   One to One: Open a Socket connection and display what is written by one to another.
   Many to Many: Each Client Opens a Socket connection to the client server and writes to the socket. Whatever is written by one can be seen by all. Implement symmetric key cryptography.
10. Write a program to implement *International Data Encryption* Algorithm (*IDEA*).

SUGGESTED READINGS

SEMESTER-IV

16CAP413S SOFTWARE TESTING – PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

Enable the student

- To perform test each time they are run, thereby eliminating human error.
- To test how the software reacts under repeated execution of the same operations.
- To program sophisticated tests which bring out hidden information from the application.
- To reuse tests on different versions of an application, even if the user interfaces changes.
- To know the risks in project management system
- To know about various testing

Course Outcomes (COs)

Upon completion of this course, students will be able to

1. Test the software by applying testing techniques to deliver a product free from bugs
2. Evaluate the web applications using bug tracking tools.
3. Investigate the scenario and the able to select the proper testing technique
4. Explore the test automation concepts and tools
5. Deliver quality product to the clients by way of applying standards such as TQM, Six Sigma
6. Evaluate the estimation of cost, schedule based on standard metrics

List of Practical

1. Create a VB form with the following fields and create the database also for them. Insert 3 records. Using Win Runner tool record the above 3 transaction and test them and produce the Report. (Black box Testing).

2. Create a VB form and then add login dialog form. Using Win Runner tool check the Username and Password and produce the Report. (Security testing).

3. Create a VB form with the following fields and check the calculation is correct or not by using the test toll Win Runner. (Functional Testing) Fields – Name, Designation, Department, Basic, HRA, DA, PF and netsal.

4. Using Win Runner test tool check the database values after changing. Using Flight database. (Regression testing).

5. Write a C program for Boundary Testing.

6. Write a C program for Loop Testing.

7. Write a C program for Integration Testing.

8. Write a C program for Interface Testing.

9. Write a C program for Unit testing.

10. Write a program to do JUnit test for comparing two list of user defined objects.

Software Quality Assurance

1. To develop a banking application, perform the requirement analysis and give a quality status report.
2. Perform the system testing to develop an electricity application and give a quality status report.
3. Perform the report design and give a quality status report.
4. Develop a library management system and give a quality status report.
5. Develop a hospital management system and a quality status report and give a comparison performance report in Linux and windows operating system.

SUGGESTED READINGS

1. Boris Beizer. (2003). Software Testing Techniques, II Edn., DreamTech India, New Delhi. (UNIT – I, II, III, IV)
2. Marnie L Hutcheson. (2003). Software testing fundamentals, 1st Edison, Wiley, DreamTech India, New Delhi. (UNIT – V)
3. Burnstein. (2003).Practical Software Testing, Springer International Edison.
4. E. Kit. (1995). Software Testing in the Real World: Improving the Process, Pearson Education, Delhi.
5. R.Rajani, and P.P.Oak.(2004). Software Testing, Tata Mcgraw Hill, New Delhi.
6. Dorothy Graham,Rex Black, and et.al(2011). Foundations of Software Testing - ISTQB Certification. 3rd Edition, Cengage Learning

SEMESTER-IV

16CAP413W XML - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To be aware of a range of XML tools (Many of them are free).
- To know how to set out an XML document
- To define custom markup language
- To understand the purpose of using DTDs and Schemas to validate XML
- To use XSLT to write a style sheet for XML document to produce multiple output
- To know about DOM

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Learn the basics of creating XML documents, transforming XML documents, and validating XML documents.
2. More specifically, you will learn the basics and history of XML and how to write your own XML documents.
3. Learn how to transform XML documents into documents of other types using XSLT.
4. Learn how to write valid XML documents based on a DTD.
5. Combine XML with existing web technologies.
6. Implement using XML Path language

List of Practical

1. Create a menu in XML.
2. Create a demo for XSLT.
3. Display XML information in Tree structure format.
4. Integrate XML in Web Applications
5. Write a program to navigate the records in the file.
6. Write a database access with XML.
7. Write a program to extract all the information about circles which are elements in a given XML document using DOM parser.
8. Write a program to extract all the information about circles which are elements in a given XML document using SAX parser.
9. Write a program to show the function of CDATA.
10. Write a program to generate XML file on the server.

11. Write a program to generate XML file from the Database
12. Write a program to load a text file into a div element with XML HTTP.
13. Write a program to create a simple application for web services.

SUGGESTED READINGS

1. Deitel & Deitel. (2008), XML How to Program . 1st Edition, Pearson Education, New Delhi.
2. Ann Novarro, Chuck white, Linda Burman. (2000). Mastering XML, 1st Edition, BPB Publi, New Delhi.
3. Steve Holzner.(2001). Inside XML, 1st Edition, TechMedia, New Delhi.

SEMESTER-IV

16CAP413B **WAP- PRACTICAL** **4H -2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To understand the basics of wireless voice and data communication technologies
- To build skills in working with Wireless application Protocols to develop mobile content applications.
- To understand the various wireless topology
- To describe the various routing
- To know the basic knowledge about Xgraph
- To identify the QOS parameters

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Able to understand the infrastructure to develop mobile communication systems
2. Able to characterize of different multiple access techniques in mobile communication.
3. Know about NS2 script
4. Simulate the network traffic and routing
5. Measure the performance
6. Demonstrate the OSPF routing

List of Practical

1. Demonstrate the creation of output files for Xgraph.
2. Illustrate NS2 script to send data between two nodes.
3. Create a simple simulation topology to generate TCP and UDP traffic
4. Simulate a NS2 scenario to handle link failures.
5. Write a NS2 script to handle Multicast traffic.
6. Demonstrate OSPF routing.
7. Create a simulation topology and analyze QOS parameters.
8. Demonstrate the creation of wireless topology.

SUGGESTED READINGS

1. Kamlesh N Agarwala. (2001).WAP the Net: An Introduction to Wireless Application Protocol, Laxmi Publications; First edition
2. Issariyakul, Teerawat, Hossain, Ekram . (2009).Introduction to Network Simulator NS2,Springer.

SEMESTER-V

16CAP501 PHP5 / MYSQL 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

Course Objectives

To help the students

- To get hands-on experience in scripting, debugging, testing.
- To establish a working environment for PHP web page development
- To learn to create dynamic interactive pages with PHP.
- To learn to manipulate files with PHP.
- To learn to use SQL to output reports with MySQL
- To write pseudo code for an application

Course Outcomes (Cos)

Upon completion of this course, student will be able to

1. Implement regular expressions in PHP programming including modifiers, operators, and meta characters.
2. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
3. Analyze and solve various database tasks using the PHP language.
4. Create server side web applications using PHP and MySQL.
5. Analyze the structure of an E-Mail message
6. Develop the files and directories management operation

UNIT I

Creating a Simple PHP Programs: How PHP Code Works- How Online PHP Programs Run Web; Communications: Internet Protocols and HTTP: TCP/IP- The HTTP Protocol; Using Variable in PHP Issues concerning Creating Variables-Defined Constants; Operators and Expressions: PHP Operators – PHP Expressions- Operators Types- Arrays

HTML Primer: The HTML Document type definition- The Form and Input Elements; Accessing PHP and HTTP Data: Predefined Variables- Variables in HTTP Request and Response- Super Global Arrays; Links; Query Strings; HTML(Web) Forms; HTML Form Elements-HTML Form Fields(Controls) and PHP; The Concept Of State: State Maintenance-Native Sessions in PHP.

Designing PHP Program Logic: Problem Statement- Writing Pseudo Code- Boolean Logic; Conditional Or Branching Statements: if statements- Switch statements- Loops and Arrays: Loops- Arrays.

UNIT II

Testing and Debugging: Values that break your code- Basic error types; Debugging PHP Script: Understanding PHP error Massages- Syntax Errors- Logic Errors-Runtime Errors; Debugging and Handling Errors in PHP5: Preventing the display of private information-Roll your-Own Debugging tools; Form Validation: Using the Exit statement- string validation and regular expressions- validating data entry- using reg exps to check file path parameters; Handling Errors: Gracefully- Configuring PHP for error handling- Try/Catch-New in PHP5.
Development planning: Formal software Development processes – optimizing your code- Using Coding standard; Writing user-defined functions in PHP: The Structure of Functions- Switching Functions – How Values Get Inside functions; Scope of variables: Global and Local Variables- Creating Static Function Variable-Nesting-Recursion-The Include and Require Statements- Things to be careful about with include and require.

UNIT III

Files and Directories: Files and Directory Handling- Working with Files- Opening and Closing files-Getting Information about a file-reading and writing to files-Reading and writing characters in files-Reading Entire files-Random Access to file data-Getting Information on Files-Ownership and permissions; Working with files you own: Splitting the Name and path from a file-copying ,renaming and deleting files; Working with Directories: other Directory Functions –Traversing a directory hierarchy-creating a directory navigator-Building a Text Editor-Uploading Files.
Classes- Objects: Creating class- Adding a Method- Adding a Property- Protecting Access to Member Variables- Using _get and _set- Initializing objects- Destroying Objects- Inheritance- Overriding Methods- Interfaces- Encapsulation

UNIT IV

The SQL Framework- Managing databases-Creating & Managing tables- Managing indexes; Inserting & Updating data in a MYSQL database-Deleting & Retrieving data from a MySQL database; SELECT statement- Optional clauses of a SELECT statement; Creating MySQL Expressions-using operators in expressions-Comparing and Converting Data; Managing different types of data: String functions-Numeric function- Date/Time functions- Summarizing date- Summary functions.
Performing System Operations: Encryption functions- System related Functions- Query and Insert Functions; Accessing data from Multiple tables: Creating joins in your SQL statement- Creating subqueries in your SQL statements; Creating Unions that join SELECT statements.
Exporting, Copying and importing data; Managing transactions: Introducing transactions- Performing a transaction- Setting the auto commit mode and transaction isolation level- Locking Nontransactional tables

UNIT V

Connecting to MySQL from a PHP application- Inserting and updating records in table- Deleting and retrieving data from table- Creating a user Registration Script. Structure of an E-Mail Message-sending E-mail with PHP- Working with Raster Images- Manipulating Raster Images- Using Text in Images

SUGGESTED READINGS

3. www.w3schools.com/PHP/DEfaULT.asP

SEMESTER-V

16CAP502 **.NET PROGRAMMING** **4H -4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3Hours

Course Objective

Enable the student

- Create windows forms using arrays and flow control statements.
- Learn to use the classes and namespaces in the .NET Framework class library.
- Develop Web Applications using Microsoft ASP.NET programming.
- Learn to use Basic windows controls using Visual Basic.Net
- Understand the concept of Multiple Document Interface
- Learn the architecture of .NET

Course Outcomes (Cos)

Upon completion of the course, students will be able to

1. Develop Windows based applications using Visual Basic.Net
2. Implement ADO.Net concept in VB.Net and ASP.Net applications
3. Create server side web applications using ASP.NET
4. Analyze the concept of data sources and data bound controls in VB.NET and ASP.NET
5. Demonstrate the working of ADO.Net controls for developing ASP.Net web applications
6. Design the application using ASP.NET Web Server Control

UNIT I
Introduction: Getting Started With VB.NET: The Integrated Development Environment-IDE Components-Environment Options.Visual Basic: The Language Variables-Constants-Arrays – Variables as Objects-Flow Control Statements.Working with forms: The appearance of Forms-Loading and Showing Forms-Designing Menus.

UNIT II
Basic Windows Controls: Textbox Control- ListBox, CheckedListBox-Scrollbar and TrackBar Controls-More Windows Control-The common Dialog Controls-The Rich TextBox Control - Handling Strings, characters and Dates. The TreeView and ListView Controls: Examining the Advanced Controls-The TreeView Control-The ListView Control

UNIT III
The Multiple Document Interface-Databases: Architecture and Basic Concepts-Building Database Application with ADO.NET-Programming with ADO.NET

UNIT IV

Goal of ASP.NET –ASP.NET Web Server Control-Validation Server Controls-Themes and Skins -Content Page Holder

UNIT V

Data Binding in ASP.Net: Data source Controls – Configuring data source control caching – storing connection information-Using Bound list controls with Data Source Controls – Other Data bound Controls-Data Management with ADO.Net.

SUGGESTED READINGS

SEMESTER-V

16CAP503 OPTIMIZATION TECHNIQUES 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To formulate, analyze, and solve mathematical models that represent real-world problems.
- Linear programming, network flow problems, integer programs and queuing models.
- Implement PERT concept in Computer Project Management optimization problems
- To know the optimization techniques for various management system
- To know the basic Inventoy theory
- To know about transportation model

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Formulate a real-world problem as a mathematical programming model.
2. Understand the theoretical workings of the simple method for linear programming and perform iterations of it by hand.
3. Understand the relationship between a linear program and its dual, including strong duality and complementary slackness
4. Understand the importance of optimization techniques in industrial process management
5. Understand the concept of Inventory theory in solving industry based optimization problems
6. Estimate the time and cost for the process

UNIT-I

Optimization Techniques Linear Programming: Graphical method for two dimensional problems - Central problem of linear programming various definitions - statements of basic theorems and properties - Phase I and Phase II of the simplex method - - primal and dual - dual simplex method.

UNIT-II

Transportation model: Introduction – Mathematical Formulation –Finding initial Basic Feasible solutions – Optimum solution for non degeneracy and degeneracy model - Unbalanced Transportation problems and Maximization case in Transportation problem.

The Assignment problem - Mathematical formulation of the problem – Hungarian method – Unbalanced Assignment problem- Maximization case in Assignment problem.

UNIT-III

Integer Programming: Gomory cutting plane methods - Branch and Bound method.

QueueingTheory: Introduction – Characteristics of queuing system. Poisson process and Exponential Distribution – Classification of Queues. Single server – Infinite Capacity (M/M/1):(□/FIFO), Single server – Finite Capacity (M/M/1):(N/FIFO), Multi server – Infinite Capacity (M/M/C):(□/FIFO) and Multi server – Finite Capacity (M/M/C):(N/FIFO) models

UNIT-IV

Inventory theory: Costs involved in inventory problems - single item deterministic models-economic lot size models without shortages and with shortages having production rate infinite and finite.

UNIT-V

PERT and CPM: Arrow networks - time estimates- earliest expected time, latest allowable occurrence time and slack - critical path - probability of meeting scheduled date of completion of project calculations on CPM network - various floats for activities - critical path - updating project - operation time cost trade off curve - project time cost trade off curve - selection of schedule based on cost analysis.
(Remarks: No mathematical derivations included).

SUGGESTED READINGS

1. Gillet, B.E.,(1994), "Introduction to Operations Research : A Computer Oriented Algorithmic Approach". Tata McGraw Hill, New York.
2. Gross D., and Harris. C.M (2018), "Fundamentals of Queueing Theory"(5th ed.), John Wiley and Sons, New York.
3. Hillier F., and Lieberman. GJ.(1986), "Introduction to Operations Research"(4th ed.), Holden Day, New York.

SEMESTER-V

16CAP504D DATA MINING AND DATA WAREHOUSING 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

Course Objectives

Enable the student

- To gain the knowledge of the concepts and techniques in data mining
- To understand the data mining functionalities and pattern classification.
- To understand the cleaning and clustering process of data mining.
- To gain the knowledge of data warehouse architecture in data mining process
- To know about the Multimedia database
- To know about data warehouse

Course Outcomes (Cos)

Upon completion of this course, student will be able to :

1. To understand the data mining process of voluminous data using OLAP
2. To implement the preprocessing concept in data mining applications
3. To apply the data mining algorithms on big data to extract useful data
4. To implement data mining techniques for complex data types
5. To implement Decision Support System concept in data mining for developing intelligence business applications
6. To apply the web data mining

UNIT I
Introduction to Data Mining: Motivation and importance, Data Mining, Relational Databases, Data Warehouses, Transactional Databases, Advanced Database Systems and Advanced Database Applications, Data Mining Functionalities, Pattern Classification of Data Mining Systems, Major issues in Data Mining. Pre-process the Data- Data Cleaning, Data Integration and Transformation.

UNIT II
Classification and Regression Algorithms : Naïve Bayes – Multiple Regression Analysis – Logistic Regression – k-Nearest Neighbour Classification – GMDH –Computing and Genetic Algorithms. Support Vector Machines : Linear SVM - SVM with soft margin – Linear kernel – Proximal SVM – Generating Datasets.
Cluster Analysis : Partitional Clusterings – k-medoids – Birch – DBSCAN – Optics – Graph Partitioning – CHAMELEON – COBWEB – GCLuto.

UNIT III
Mining Association rule in large Databases Association Rule Mining, Mining Single - Dimensional Boolean Association Rules from Transactional Databases, Mining Multilevel

Association Rules from Transaction Databases, Mining Multidimensional Association Rules from Relational Databases and Dataware houses, From Association Mining to Correlation Analysis, Constraint-Based Association Mining.

UNIT IV

Mining Complex Types of Data : Mining Spatial Databases – Multimedia Databases – Time-series and Sequence Data – Text Databases – Web Data Mining – Search Engines.

UNIT V

Data Warehouse and OLAP Technology for Data Mining. What is a Data Warehouse? Multi-Dimensional Data Model, Data Warehouse Architecture, Data Warehouse Implementation, Development of Data Cube Technology, Data Ware housing to Data Mining Data Preprocessing Data Warehousing: Failures of past Decision Support System- Operational vs. DSS- Building blocks: features- Data warehouse and Data Mart- Overview of the Components- Metadata Architectural Components: Distinguishing Characteristics- Architectural Framework- Technical Architecture.

SEMESTER-V

16CAP504N NETWORK ARCHITECTURE AND MANAGEMENT 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

Course Objectives
Enable the student

- Understand the concepts and terminology associated with SNMP and TMN
- Understand the working of routing protocol in complex computer networks
- Gain knowledge the internal architecture of routers
- Understand the fundamentals and requirements for packet routing in computer communication network.
- Analyze the security mechanism in Computer routing process
- Understand the design metrics

Course Outcomes (Cos)
Upon completion of this course, student will be able :

1. To solve the problems in computer network system management
2. To analyze the challenges in the implementation of ATM networks
3. To implement SNMP Model in the management of computer networks
4. To configure routers using computer network software tools
5. To implement service level agreement in Computer Network management systems
6. To know the Network Management Tools and Systems

UNIT I
Introduction: Objectives - Component architectures – Reference architecture – Architectural models; Addressing and Routing Architecture: Addressing mechanisms – Routing mechanisms – Addressing strategies – Routing strategies – Architectural considerations; Network Management Architecture: Defining Network Management – Network Management Mechanism - Architectural considerations; Performance Architecture; Developing goals – Performance mechanisms – Architectural considerations

UNIT-II
Security And Private Architecture: Developing a security and privacy plan – Security and privacy Administration & Mechanism - Architectural considerations; Selecting Technologies for the Network Design: Goals – Design Concepts – Design Process – Vendor, Equipment and Service-Provider Evaluations – Network Layout – Design Traceability - Design Metrics.

UNIT-III

Case history of Networking and Management: Challenges of Information Technology Managers – Goals, organization and functions – Network and System Management – Network Management System Platform; SNMP, Broadband and TMN Management: Network Management Standards & Model – Organization, Information and Communication Model – ASN.1 – Encoding structure – Macros – Functional model; Organization and Information Model: Managed Networks – The History of Network Management – Internet Organization and standards – SNMP Model – The Organization and Information Model; Communication and Functional Model: The SNMP Communication Model – Functional Model.

UNIT-IV

SNMPv2 Management: Major changes – System architecture – Structure of Management Information – Management Information Base – SNMPv2 protocol – Compatibility; RMON: Remote monitoring – RMON1 – RMON2 – ATM remote monitoring; Broadband Network Management: ATM Networks - Network and Services – ATM Technology – ATM Network Management; Telecommunication Management Network: Operations systems – Conceptual model – Standards – Architecture – TMN Management service architecture – Integrated view of TMN – Implementation issues.

UNIT-V

Network Management Tools and Systems: Network management tools – Network statistics measurement system – Network Management Systems – System Management; Network Management Applications: Configuration Management - Fault Management - Performance Management – Security Management – Accounting Management – Report Management - Policy Based Management – Service Level Management.

SUGGESTED READINGS

2. Mani Subramanian. (2012), Network Management Principles and Practice, 2nd Edition, Pearson Education Asia Pvt. Ltd.,.
3. William Stallings. (2002), SNMP, SNMPv2, SNMPv3 and RMON 1 and 2, 3rd Edition, Pearson Education Asia Pvt. Ltd.

SEMESTER-V

16CAP504S SOFTWARE PROJECT MANAGEMENT 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3Hours

Course Objective

Enable the student

- To design, select and apply the most appropriate software engineering process for developing any software project
- To implement planning for a software project and identify the risks in software planning.
- To analyze the software requirements for developing any software.
- To understand the importance of negotiation, effective work habits, leadership in the software development process.
- To identify the risks involved in software project management
- To know the organization structure to develop the software project

Course Outcomes (Cos)

Upon Completion of this course, the student Will be able to

1. Implement the concept of software effort estimation in developing software project.
2. Develop a responsible attitude towards the use of computer as well as the technology.
3. Evaluate the risks during the development of software projects
4. Understand the organization behavior in software project management.
5. Implement team management process in developing quality software
6. Monitor the software project management in various ways such as cost control, performance control, etc.,

UNIT I

Introduction-Software Project Management -Project evaluation and programme Management-An overview of Project planning- Stepwise planning-Selection of an appropriate project Approach.

UNIT II

Software effort estimation: Problems with over- and underestimates-Software effort estimation Techniques - Estimating by analogy -Albrecht function point analysis -Function points Mark II – COSMIC full function points - COCOMO 13: a parametric productivity model. Activity planning: The objectives of activity Planning-Project schedules - Projects and activities -

Sequencing and scheduling activities - Network planning models - Formulating a network model - Adding the time dimension - The forward pass - The backward pass - Identifying the critical path.

UNIT III

Risk management: Introduction to Risk - Categories of risk - A framework for dealing with risk - Risk identification - Risk assessment - Risk planning - Risk management - Evaluating risks to the schedule - Applying the PERT technique - Monte Carlo simulation - Critical chain concepts. Resource allocation :-Introduction -The nature of resources - Identifying resource requirements - Scheduling resources -Creating critical paths -Counting the cost - Being specific -Publishing the resource schedule - Cost schedules -The scheduling sequence.

UNIT IV

Monitoring and control: Creating the framework-Collecting the data- Visualizing progress- Cost monitoring -Earned value analysis-Prioritizing monitoring - Getting the project back to target - Change control. Managing people in software environments: Understanding behavior - Organization behavior: a background - Selecting the right person for the job - Instruction in the best methods - Motivation - Stress -Health and safety -Some ethical and professional concern

UNIT V

Working in teams: Becoming a team - Decision making - Organizational structures - Coordination dependencies - Dispersed and virtual teams - Communication genres - Communication plans - Leadership. Software quality: Introduction -The place of software quality in project planning - The importance of software quality - Defining software quality - ISO 9126 -Product versus process quality management -Quality management systems -Process capability models -Techniques to help enhance software quality -Testing -Quality plans

SUGGESTED READINGS

SEMESTER-V

16CAP504W RUBY PROGRAMMING 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- Develop server-side Ruby scripts for publishing on the Web
- Employ control structures, methods, procs, arrays and hashes to create Ruby programs
- Distinguish and use various Ruby datatypes
- Master the use of arrays and hashes
- Use the extensive pre bundled classes
- Implement the web application using exception handling, thread, etc.,

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Use the I/O facilities of Ruby to read and write binary and text files
2. Master the use of Iterators to loop through various data structures
3. Use Exceptions in handling various run time errors
4. Create Ruby modules
5. Use the wide variety of Ruby Modules that come with the Ruby distribution
6. Use object-oriented programming conventions to develop dynamic interactive Ruby applications

UNIT I

Introduction to Ruby: Installing Ruby - THE STRUCTURE AND EXECUTION OF RUBY PROGRAMS: Lexical Structure- Syntactic Structure - Block Structure in Ruby- File Structure - Program Execution. DATA TYPES: Numbers - Text - String Literals - Character Literals - String Operators - Accessing Characters and Substrings - Iterating Strings – Arrays – Hashes – Ranges – Symbols – True & False – Ruby Documentation: RDoc and ri.

UNIT II

STATEMENTS AND CONTROL STRUCTURES: Conditionals – Loops - Iterators and Enumerable objects: custom iterators – enumerators – External iterators – Blocks: Variable scope – passing argument to blacks. Flow-altering statements like return and break- The special-case BEGIN and END statements. CLASSES : Creating and initializing class – Accessor and attributes – class methods – class variables – Defining operators. SUBCLASSING AND INHERITANCE: visibility – Overriding methods. OBJECTS: Object creation and initialization.

UNIT III

METHODS: Defining a Method, Calling a Method; Undefining methods – Methods with Exception – Operator methods and names – Method Arguments – Method objects - Defining

Attribute Accessor Methods - Dynamically Creating Methods. EXCEPTIONS AND EXCEPTION HANDLING: Hierarchy – Exception classes and objects – Raising Exception with raise – Handling Exception with rescue – Exception propagation – Else clause and ensure class.

UNIT IV

MODULES: Namespaces - Modules as Mixins - Includable Namespace Modules - Loading and Requiring Modules - Executing Loaded Code. Reflection and Meta programming: Evaluating Strings and Blocks - Querying, Setting, and Testing Variables – Regular Expressions. FILES AND DIRECTORIES: Listing and manipulating Directories and testing files. BASIC INPUT AND OUTPUT: Opening Stream – Reading from a Stream – Writing to a stream – Random Access Methods – Closing, Flusing and testing streams.

UNIT V

THREADS AND PROCESSES: Thread Life Cycle – Thread scheduling – Thread Exclusion – Deadlock. Ruby Tk: Introduction- Widgets and classes. Networks: A Very Simple Client - A Very Simple Server – Datagram - A Multiplexing Server - Fetching Web Pages. Ruby on Rails: Building a development Environment: Installation – Installing Databases – Code editors – web server Configuration – Creating an web application.

SUGGESTED READINGS:

SEMESTER-V

16CAP504B MIS FRAMEWORK 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To understand the frameworks for identifying information technology applications
- To understand the benefits of information technology applications in an organization
- To analyze the impact of information systems on organizations markets
- To understand the concept of Business Process Engineering in the Management Information System
- To understand about Socio-economic environment
- To identify the role of security systems in IT

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Analyze the major technological, organizational, behavioral, and ethical issues facing today's information systems professional.
2. Implement IT strategy in managing the information system of any organization.
3. Analyze the emerging technologies
4. Impact of emerging technologies on corporate performance.
5. Implement the principles of Business Process Engineering in improving the business of any organization
6. Analyze the critical success factors in implementing IT applications

UNIT I
Frameworks for identifying information technology applications.- Management Information System-Decision Support System- Executive Information System and Expert System.

UNIT II
Benefits of information technology applications in an organization through transaction processing, management and operational control, decision support systems, office automation, organizational communications and group work support.

UNIT III
Socio-economic environment and information systems in organization and the impact of information systems on organizations markets; frameworks for information systems planning.

information systems and competitive advantage; the new strategic role of information systems: methodologies for evaluating investments in IT; frameworks and methodologies -case studies.

UNIT IV

Design of reporting system including a discussion of principles in indicator design; managing information support activity in organizations; concept of the business process re-engineering (BPR) and how IT can enable BPR.

UNIT V

Critical success factor in implementing IT applications including the need for managing the process of change illustrated through case studies of successful/failed IT projects. Critical role of security in implementing IT applications should be discussed.

SUGGESTED READINGS

1. L.M. Applegate, R.D. Austin and F.W. McFarlan.(2007), Corporate Information Strategy and Management: Text and Cases ,7th Edition, McGraw Hill.

SEMESTER-V

16CAP505D BIG DATA ANALYTICS 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

Course Objective

Enable the student

- To understand the evolution and architecture of Big Data
- To learn the virtualization concept of big data
- To learn the Hadoop framework in processing big data
- To understand the concepts of big data analytics
- To define the concept of data source integration for big data processing
- To learn Hadoop distributed file system

Course Outcomes (Cos)

Upon completion of this course, the students will be able to

1. Analyze the big data analytic techniques for useful business applications.
2. Implement the concept of virtualization and abstraction in analyzing big data
3. Analyze the HADOOP and Map Reduce technologies associated with big data analytics
4. Understand the fundamentals of various bigdata analysis techniques
5. Implement the integration of data sources in operationalizing Big Data
6. Implement the text analytics using Hadoop

UNIT-I
Fundamentals of Big Data - The Evolution of Data Management Understanding the Waves of Managing Data- Defining Big Data - Big Data Management Architecture- The Big Data Journey -Big Data Types-Defining Structured Data-Defining Unstructured Data-Putting Big Data Together.

UNIT-II
Big Data Stack- Basics of Virtualization - The importance of virtualization to big data -Server virtualization - Application virtualization - Network virtualization -Processor and memory virtualization - Data and storage virtualization-Abstraction and Virtualization-Implementing Virtualization to Work with Big Data.

UNIT-III
Hadoop - Hadoop Distributed File System - Hadoop MapReduce- The Hadoop foundation and Ecosystem.

UNIT-IV
Big Data Analytics-Text Analytics and Big Data-Customized Approaches for Analysis of Big Data

UNIT-V
Integrating Data Sources-Real-Time Data Streams and Complex Event Processing-Operationalizing Big Data.

SUGGESTED READINGS

1. Judith Hurwitz, Alan Nugent, Fern Halper, Marcia Kaufman (2013), Big Data For Dummies, Wiley India,New Delhi.

SEMESTER-V

16CAP505N DISTRIBUTED COMPUTING 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- Understand the architecture and topology of network
- Understand the design process of a distributed systems
- Examine distributed and parallel computing operating system
- Understand the need and challenges of distributed database
- Differentiate the centralized database with distributed database
- Know about distributed shared memory

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able :

1. To develop and apply knowledge of parallel and distributed computing techniques and methodologies.
2. To Apply design, development, and performance analysis on parallel and distributed applications
3. To implement the application of fundamental Computer Science methods
4. To implement the algorithms in the development of parallel applications.
5. Implement distributed shared memory concepts in distributed computing.
6. To apply Authentication methods in distributed application

UNIT – I
Introduction: Distributed Computing – Relation to multiprocessor and multi computer systems-message passing systems versus shared memory systems – primitives for distributed computing. Distributed Computations: distributed program – global state of a distributed system – models of process communications.

UNIT – II
Message ordering and Group Communication: message ordering paradigm – Asynchronous execution with synchronous communication – classification of application level multicast algorithm – distributed multicast algorithm at the network layer.

UNIT – III
System model for distributed computation – termination detection using distributed snapshots – termination detection in a faulty distributed system – Distributed mutual execution algorithm : Lamport’s algorithm – Token Based algorithm – Raymond’s tree-based algorithm.

UNIT – IV

DeadLock : system model – models of deadlocks – knapp's classification of distributed deadlock detection algorithms – chandy model – stable and unstable predicates – distributed algorithms for conjunctive predicates .

UNIT – V

Distributed shred memory: Abstraction – memory consistency – shared memory mutual execlution – register hierarchy and wait free simulations- issues in failure recovery – check point based recovery – Authentication: protocols – password-based authentication- authentication protocol failures.

SUGGESTED READINGS

SEMESTER-V

16CAP505S SOFTWARE METRICS 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

Enable the student

- To understand the basic terminology and state fundamental facts about software metrics and process models.
- To identify the essential elements of a given metric or model, describe the interrelationships among its various elements
- To understand software process assessment cycles, complexity metrics and models.
- To measure and analyze customer satisfaction in development of software
- To know the techniques to improve the software process development
- To identify how to remove the defects in the software project

Course Outcomes (COs)

Upon Completion of this course, student will be able to

1. To analyze the importance of modeling and modeling languages
2. To apply the basic quality tools in software development
3. Analyze the software process metrics in the process of software testing
4. Implement function point metrics to measure software process improvement
5. Explain the business requirements pertaining to software development
6. Assess the software project using the metrics

UNIT I

Introduction:- software quality-popular views-the role of the customer-software quality- Total quality management.Software development process models-the spiral model-itrative Devalopment process-The Cleanroom Methodology-Process Maturity Framework and Quality standards. Fundamentals of Measurement theory-Level of measurement-Reliability and validity-Measurement Errors

UNIT-II

Applying the seven basic quality tools in software development-Defact removal effectivenes-The rayaleigh model-Exponential distribution and reliability growth models-Quality management models

UNIT-III

In-process metrics for software testing-Complexity metrics and models-Metrics and lessons learned for object oriented projects-Availability metrics

UNIT-IV

Measuring and analyzing customer satisfaction-Conducting in-process quality assessments

UNIT-V

Software project assessments-Dos and Don’t of software process improvement-Using function point metrics to measure software process improvement-Concluding remarks

SUGGESTED READINGS:

1. Stephen H.Kan . Metrics and Models in Software Quality Engineering (2013), Second Edition, Pearson India.
2. Norman Fenton(2014), Software Metrics: A Rigorous and Practical Approach, Third Edition (Chapman & Hall/CRC Innovations in Software Engineering and Software Development Series)
3. C. Ravindranath Pandian.(2003), Software Metrics: A Guide to Planning, Analysis, and Application,

SEMESTER-V

16CAP505W **SEMANTIC WEB** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To represent data from a chosen problem in XML with appropriate semantic tags obtained or derived from the ontology.
- To understand the semantic relationships among these data elements using Resource.
- To design and implement a web services application that "discovers" the data and/or other Description Framework (RDF).web services via the semantic web
- To understand the capabilities and limitations of semantic web technology for many applications.
- To know about Web ontology language
- To aggregate and reasoning social network data

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Analyze fundamental concepts, advantages and limits of the semantic web
2. Implement ontologies in the context of developing semantic web
3. Implement RDF framework and associated technologies for developing semantic web
4. Implement semantic Web Tools like Jena and SPARL for developing architecture for semantic web
5. Analyze the social network data
6. Implement the problem using the web ontology language

UNIT I

Introduction : Introduction to the Syntactic web and Semantic Web – Evolution of the Web – The visual and syntactic web – Levels of Semantics – Metadata for web information - The semantic web architecture and technologies –Contrasting Semantic with Conventional Technologies –Semantic Modeling - Potential of semantic web solutions and challenges of adoption

UNIT II

Ontological Engineering: Ontologies – Taxonomies –Topic Maps – Classifying Ontologies – Terminological aspects: concepts, terms, relations between them – Complex Objects –Subclasses and Sub-properties definitions – Upper Ontologies – Quality – Uses - Types of terminological resources for ontology building – Methods and methodologies for building ontologies – Multilingual Ontologies -Ontology Development process and Life cycle – Methods for Ontology Learning – Ontology Evolution – Versioning

UNIT III

Structuring And Describing Web Resources :Structured Web Documents - XML – Structuring – Namespaces – Addressing – Querying – Processing - RDF – RDF Data Model – Serialization Formats- RDF Vocabulary –Inferencing - RDFS – basic Idea – Classes – Properties- Utility Properties – RDFS Modeling for Combinations and Patterns- Transitivity

UNIT IV

Web Ontology Language :OWL – Sub-Languages – Basic Notions -Classes- Defining and Using Properties – Domain and Range – Describing Properties - Data Types – Counting and Sets- Negative Property Assertions – Advanced Class Description – Equivalence – Owl Logic.

UNIT V

Semantic Web Tools And Applications :Development Tools for Semantic Web – Jena Framework – SPARL –Querying semantic web - Semantic Wikis - Semantic Web Services – Modeling and aggregating social network data - Ontological representation of social relationships, Aggregating and reasoning with social network data Understand semantic web basics, architecture and technologies

SUGGESTED READINGS

1. Grigoris Antoniou, Frank van Harmelen. 3rd Edition (2012), A Semantic Web Primer.,MIT Press, USA
2. Liyang Yu (2011), “A Developer's Guide to the Semantic Web”, First Edition ,Springer.
3. John Hebeler, Matthew Fisher, Ryan Blace and Andrew Perez-Lopez (2009), “Semantic Web Programming”, First Edition Wiley.
4. Robert M. Colomb(2007), “Ontology and the Semantic Web”, Volume 156 Frontiers in Artificial Intelligence and Applications (Frontier in Artificial Intelligence and Applications), IOS Press.
5. Dean Allemang and James Hendler(2011), “Semantic Web for the Working Ontologist: Effective Modeling in RDFS and OWL, Second Edition, Morgan Kaufmann..
6. Karin Breitman, Marco Antonio Casanova and Walt Truszkowski,(2010), “Semantic Web: Concepts, Technologies and Applications (NASA Monographs in Systems and Software Engineering)”, Springer.

SEMESTER-V

16CAP505B TAXATION PRACTICES 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: **40** External: **60 Total: 100**
End Semester Exam: 3Hours

COURSE OBJECTIVES

Enable the student

- To learn the concept of various taxation practices
- To understand Excise duty, VAT, Service tax etc. and tax planning for reducing tax liability legally.
- To understand the procedures of collection and recovery of tax
- To learn the central sales calculation in India
- To understand the wealth tax
- To define the various tax

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Analyze the procedures in Assessing firms and associations
2. Analyze the need for assessing the undivided families
3. Apply the advance payment procedures in the taxation practices
4. Apply the procedure for registration and cancellation in central sales taxation
5. Learn various components related to the theme of tax liability determination
6. Analyze the wealth tax

UNIT I
Assessment of undivided families: Meaning. Basic conditions. Taxable income. Partitions. Tax planning. Assessment of firms and associations: Scheme of taxation, types, treatment of losses. Tax planning.

UNIT II
Assessment of companies: Types, profits, depreciation, tax planning, Section 80. Bonus issues, dividend policy. Return of income and assessment procedure: Types of assessment. Time limits. Reassessment. Cooperatives.

UNIT III
Collection and recovery of tax: Deduction at source, rates, advance payment. Modes of recovery. Refund. Appeals and revision. Penalties.

UNIT IV

Wealth Tax: Chargeability, valuation, return, appeals, revisions, payment and recovery, gift tax: chargeability, rebate, assessment, appeals, revisions, payment and recovery.

UNIT V

Central sales tax: Concept of sale and purchase. Inter-state trade. Inter-state export and import trade. State sale tax: Assessing authority. Single, multiple point tax. Procedure for registration and cancellation. Returns, payment, appeals and revisions.

SUGGESTED READINGS

1. Central and State tax acts.
2. Singhania, VK.(1996), **"Taxman Direct** Taxes", Taxman, New Delhi.

SEMESTER-V

16CAP511 PHP5/MYSQL -PRACTICAL 5H - 2C

Instruction Hours / week: L: 0 T: 0 P: 5 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

To help the students

- To get hands-on experience in scripting, debugging, testing.
- To establish a working environment for PHP web page development
- To learn to create dynamic interactive pages with PHP.
- To learn to manipulate files with PHP.
- To learn to use SQL to output reports with MySQL
- To write pseudo code for an application

Course Outcomes (Cos)

Upon completion of this course, student will be able to

1. Implement regular expressions in PHP programming including modifiers, operators, and meta characters.
2. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
3. Analyze and solve various database tasks using the PHP language.
4. Create server side web applications using PHP and MySQL.
5. Analyze the structure of an E-Mail message
6. Develop the files and directories management operation

List of Practical

1. Design an online loan application form.
2. Design a form to submit your resume in net.
3. Design an application for Library Management System
4. Design form for online reservation in air ways.
5. Design form for online shopping
6. Design an application for creating an online Advertisement.
7. Design an application for student Information System.

8. Design an application to display cookies information.
9. Write a program for display environment variables in MySQL.
10. Write a program to count web page hits.
11. Design an email form that validates the inputs, produces errors when inputs are typed incorrectly, and send an email to you when submitted.
12. Design an application to upload multiple files

SUGGESTED READINGS

1. Dave W.Mercer, Allan Kent, Steven D.Nowicki, Davd Mercer, Dan Squie, Wankyu Choi.(2009), Beginning PHP5. Wiley India (P) Ltd, New Delhi
2. Luke welling, Laura Thomson (2010), PHP and MySQL Web Development, 4th Edition, Pearson Education.
3. Julie Meloni (2012), Sams Teach Yourself PHP, MySQL and Apache All in One, 5th Edition, Pearson Education India.
4. Paul Dubois (2006), MySQL, 1st Edition, Tech Media, New Delhi.
5. Tim Converse & Joyce Park with Clark Morgan (2006), PHP5 & MySQL Bible, 1st Edition, John Wily, India.
6. Baron Schwartz, Peter Zaitsev, Vadim Tkachenko (2012), High Performance MySQL: Optimization, Backups, 3rd Edition, O'REILLY.

SEMESTER-V

16CAP512 .NET PROGRAMMING - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

Enable the student

- Create windows forms using arrays and flow control statements.
- Learn to use the classes and namespaces in the .NET Framework class library.
- Develop Web Applications using Microsoft ASP.NET programming.
- Learn to use Basic windows controls using Visual Basic.Net
- Understand the concept of Multiple Document Interface
- Learn the architecture of .NET

Course Outcomes (Cos)

Upon completion of the course, students will be able to

1. Develop Windows based applications using Visual Basic.Net
2. Implement ADO.Net concept in VB.Net and ASP.Net applications
3. Create server side web applications using ASP.NET
4. Analyze the concept of data sources and data bound controls in VB.NET and ASP.NET
5. Demonstrate the working of ADO.Net controls for developing ASP.Net web applications
6. Design the application using ASP.NET Web Server Control

List of Practical
VB.Net

1. Write a Program to perform various string manipulation functions.
2. Using windows application form, create a form, place controls and manipulate data.
3. Write a program to create inventory control using class library.
4. Write a program to create Web Services Using Vb.Net.
5. Write a program to create a screen saver using controls
6. Create an ActiveX program with simple example.
7. Using windows Application: Design Employee Details, use Sql Server as back end and also use checked list box.

ASP.Net

1. Write a program to create an on-line quiz using content page holder.
2. Write a program to retrieve Cookies information.
3. Write a program to count web page hits.
4. Write program to retrieve environment variables browser capability information.
5. Write a program for database connectivity to retrieve student information

SUGGESTED READINGS

1. Evangelos Petroutsos, Mastering Visual Basic.Net, BPB Publications, New Delhi.
2. Bill Evjen, Scott Hanselman, Devin Rader, Farhan Muhammad and S.Srinivasa Sivakumar (2006), Professional ASP.net 2.0, Special Edition.
3. Dave Mercer, ASP.Net Beginner's Gudie (2003), 2nd Edition McGraw Hill, New Delhi.
4. Duncan Mackenzie Kent Sharkey (2006), Sams Teach yourself Visual Basic.JNet, 1st Edtion, McGraw Hill, NewDelhi.
5. Shirish Chavan. (2007), Visual Basic.Net, 1st Edition, Pearson Education, New Delhi.

SEMESTER-V

16CAP513D DATA MINING - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives

Enable the student

- To gain the knowledge of the concepts and techniques in data mining
- To understand the data mining functionalities and pattern classification.
- To understand the cleaning and clustering process of data mining.
- To gain the knowledge of data warehouse architecture in data mining process
- To know about the Multimedia database
- To know about data warehouse

Course Outcomes (Cos)

Upon completion of this course, student will be able to :

1. To understand the data mining process of voluminous data using OLAP
2. To implement the preprocessing concept in data mining applications
3. To apply the data mining algorithms on big data to extract useful data
4. To implement data mining techniques for complex data types
5. To implement Decision Support System concept in data mining for developing intelligence business applications
6. To apply the web data mining

List of Practical

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). For test options, first choose "Use training set", then choose "Percentage Split" using default 66% percentage split. Report model percent error rate

2. Using iris dataset preprocess and classify it with J4.8 and Naïve Bayes Classifier. examine the tree in the Classifier output panel

3. Using the datasets *ReutersCorn-Train* and *ReutersGrain-Train*. Classify articles using binary attributes and word count attributes.

4. Apply any two association rule based algorithm for the supermarket analysis

5. Using weka Experimenter perform comparison analysis of J48, oneR and ID3 for vote dataset

6. Using Weka Experimenter perform comparison analysis of Naïve Bayes with different datasets

7. Apply ZeroR, OneR, and J48, to classify the Iris data in an experiment using 10 train and test runs, with 66% of the data used for training and 34% used for testing.

8. Using Weka Knowledge flow Sett up a flow to load an ARFF file (batch mode) and perform a cross-validation using J48 (WEKA’s C4.5 implementation).

9. Draw multiple ROC curves in the same plot window, using J48 and RandomForest as classifiers.

10. Use any three clustering algorithm on Vehicle data set and find best among them

11. Perform Preprocessing, feature selection and apply any one of the algorithm each from clustering, Association and classification to find their performance

12. Examine the performance of different filters for the breast cancer dataset

SUGGESTED READINGS:

1. Jiawei Han and Micheline Kamber.(2011), Data Mining Concepts and Techniques, 3rd Edition, Elsivier,India (Unit I, III, IV, V)
2. G.K.Gupta (2006), Introduction to Data Mining with Case Studies, Prentice Hall India, New Delhi (Unit – IV)
3. Soman.K.P, Shyam Divakar and V. Ajay. (2008), Insight to Data Mining- Theory and Practical, Prentice Hall India, New Delhi. (Unit – II).
4. Gupta.G.K. (2006), Introduction to Data Mining with Case Studies, Prentice Hall India, New Delhi .
5. Kantardzic, Mining Concepts, Models, Methods and Algorithms, IEEE Press – A John Wiley & Sons.
6. Paulraj Ponniah. (2008), Data Warehousing Fundamentals: A Comprehensive Guide for IT Professionals, John Wiley & Sons, New Delhi.

SEMESTER-V

16CAP513N NETWORK SIMULATOR - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives
Enable the student

- Understand the concepts and terminology associated with SNMP and TMN
- Understand the working of routing protocol in complex computer networks
- Gain knowledge the internal architecture of routers
- Understand the fundamentals and requirements for packet routing in computer communication network.
- Analyze the security mechanism in Computer routing process
- Understand the design metrics

Course Outcomes (Cos)
Upon completion of this course, student will be able :

1. To solve the problems in computer network system management
2. To analyze the challenges in the implementation of ATM networks
3. To implement SNMP Model in the management of computer networks
4. To configure routers using computer network software tools
5. To implement service level agreement in Computer Network management systems
6. To know the Network Management Tools and Systems

List of Practical
1. Simple router configuration.
2. Access and utilize the router to set basic parameters.
3. Connect, configure, and verify operation status of a device interface.
4. Implement static and dynamic addressing services for hosts in a LAN environment.
5. Identify and correct common problems associated with IP addressing and host configurations.
6. Describe basic routing concepts (including: packet forwarding, router lookup process).
7. Configure, verify, and troubleshoot RIPv2.
8. Perform and verify routing configuration tasks for a static or default route given.
9. Configure, verify and troubleshoot DHCP and DNS operation on a router.
10. Configure and verify a PPP connection between routers.

SUGGESTED READINGS

1. James D. Mc CABE. (2010), Network Analysis, Architecture and Design, 3rd Edition, Morgan Kaufmann Publishers.
2. Mani Subramanian. (2012), Network Management Principles and Practice, 2nd Edition, Pearson Education Asia Pvt. Ltd.,.
3. William Stallings. (2002), SNMP, SNMPv2, SNMPv3 and RMON 1 and 2, 3rd Edition, Pearson Education Asia Pvt. Ltd.

SEMESTER-V

16CAP513S SOFTWARE DEVELOPMENT PRACTICAL USING MOODLE 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

Enable the student

- To design, select and apply the most appropriate software engineering process for developing any software project
- To implement planning for a software project and identify the risks in software planning.
- To analyze the software requirements for developing any software.
- To understand the importance of negotiation, effective work habits, leadership in the software development process.
- To identify the risks involved in software project management
- To know the organization structure to develop the software project

Course Outcomes (Cos)

Upon Completion of this course, the student Will be able to

1. Implement the concept of software effort estimation in developing software project.
2. Develop a responsible attitude towards the use of computer as well as the technology.
3. Evaluate the risks during the development of software projects
4. Understand the organization behavior in software project management.
5. Implement team management process in developing quality software
6. Monitor the software project management in various ways such as cost control, performance control, etc.,

List of Practical

Prepare a more detailed, organized and easy-to-read documentation, for any application software, which should describe the following using Moodle tool:

1. User Requirement Documentation (USD)
2. Requirement Analysis Documentation. (RAD)
3. User Interfaces Specification. (UIS)
4. Object Oriented Design (OOD) or Low Level Design (LLD)
5. Code Documentation (CD)
6. Testing Documentation (TD)
7. User's Guide (UG)

SUGGESTED READINGS

1. Bob Hughes and Mike Cotterell (2011), Software Project Management, 5^{th} Edition, New Delhi: Tata McGraw Hill
2. Royce.(2000), Software Project Management, 1st Edition, New Delhi: Addisions Wesley.
3. Kelkar (2012), “Software Project Management”, 3^{rd} edition, Prentice Hall India,2012

SEMESTER-V

16CAP513W RUBY ON RAILS (PRACTICAL) 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- Develop server-side Ruby scripts for publishing on the Web
- Employ control structures, methods, procs, arrays and hashes to create Ruby programs
- Distinguish and use various Ruby datatypes
- Master the use of arrays and hashes
- Use the extensive pre bundled classes
- Implement the web application using exception handling, thread, etc.,

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Use the I/O facilities of Ruby to read and write binary and text files
2. Master the use of Iterators to loop through various data structures
3. Use Exceptions in handling various run time errors
4. Create Ruby modules
5. Use the wide variety of Ruby Modules that come with the Ruby distribution
6. Use object-oriented programming conventions to develop dynamic interactive Ruby applications

List of Practical

1. Write a ruby program to perform basic array and hash operations
2. Write a code to choose random numbers and find the behaviour of the number
3. Develop a program which gets raised when you handle an exception
4. Write a ruby code to display grade sheet of students using case.
5. Write a ruby program to evaluate polynomial.
6. Write a ruby program to draw box and fill with special characters.
7. Write a program to copy each line from input file to output file.
8. Write a program to create a button and fill the button with colors.
9. Write a program to create different color balls and make it bounce on window.
10. Write ruby program to display notebook widget.

11. Develop a ruby program to manipulate text with font color and images.
12. Write ruby program to create a main thread and execute multiple process through the main thread.
13. Write a ruby code to display color pallet and open dialog with the help of tk controls.
14. Design an application form using tk classes and validate all fields on Rails framework.

SUGGESTED READINGS:

1. Dave Thomas, Andrew Hunt (2013), Programming Ruby 1.9 & 2.0: The Pragmatic Programmers Guide, 2nd Edition, The Pragmatic Bookshelf.
2. David Flanagan, (2008), "The Ruby Programming Language", 1st Edition, O'Reilly Media.
3. Eldon Alameda (2011), "Practical Rails Projects" Apress, Berkeley, CA, USA.
4. David Black, (2006), "Ruby for Rails", Manning Publications.

SEMESTER-V

16CAP513B MIS - PRACTICAL 4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

Enable the student

- To build knowledge about decision support system (DSS) which is a computer program application
- To analyze business data and presents it so that they can make business decisions more easily
- To help the students to distinguish it from an "operational application" that collects the data in the course of normal business operation
- To know about expert system in management
- To identify Group Decision in Support Systems (GDSS) and Decision Conferencing.
- To manage the organization in an efficient way

COURSE OUTCOMES (COs)

Upon completion of this course, student will be able to :

1. Discuss today's turbulent business environment and describe how organizations survive and even excel in such an environment.
2. Discuss the need for computerized support of managerial decision making.
3. Describe the conceptual foundation of the decision support system (DSS)
4. Describe the business intelligence (BI) methodology and relate them each other.
5. List the major tools of computerized decision support and major issues in implementing computerized decision support systems.
6. Define the conceptual foundations of decision making.

List of Practical

1. Create a set of slides with sound and animation using power point and to select various styles of slides from slide template.

2. Prepare an organization chart for a company and a college using power point.

3. To perform comparative study of your UG degree subject marks and create a various styles of graph using excel.

4. To perform student and hostel fee particulars in a worksheet. Analysis the results using excel.

5. To create a word document for salary preparation and access the calculation, graph from excel using OLE.

6. Apply the mail merge concept using word.
7. Design organizational hierarchy chart
8. Design power point Presentation to market a product
9. Create Tables for Inventory Control
10. Design Animation power point Presentation with audio and video to advertise a product.

SUGGESTED READINGS

1. L.M. Applegate, R.D. Austin and F.W. McFarlan.(2007), Corporate Information Strategy and Management: Text and Cases ,7th Edition, McGraw Hill.
2. P. Bocij, A. Greasley and S. Hickie(2008), Business Information Systems: Technology, Development and Management for the E-Business ,4th Edition, Prentice Hall.
3. D. Boddy, A. Boonstra and G. Kennedy(2008), Managing Information Systems: Strategy and Organisation ,3rd Edition, Prentice Hall.
4. K.C. Laudon and J.P. Laudon.(2007), Management Information Systems: Managing the Digital Firm ,10th Edition, Prentice Hall.
5. W. Robson(1997), Strategic Management and Information Systems: An Integrated Approach ,2nd Edition, Financial Times,
6. R.M. Stair and G. Reynolds (2007),Principles of Information Systems: A Managerial Approach ,International Edition, Delmar Cengage Learning.

B.Sc. COMPUTER SCIENCE

CHOICE BASED CREDIT SYSTEM (CBCS)

Curriculum and Syllabus
Regular (2016 – 2017)

DEPARTMENT OF COMPUTER SCIENCE

FACULTY OF ARTS, SCIENCE AND HUMANITIES

KARPAGAM ACADEMY OF HIGHER EDUCATION
(Deemed to be University)
(Established Under Section 3 of UGC Act, 1956)
Eachanari (Post), Coimbatore – 641 021.
Tamilnadu, India

Phone No. 0422-2980011 - 15 Fax No: 0422-2980022-23
E mail ID: info@karpagam.com
Web: www.kahedu.edu.in

PROGRAM OUTCOMES (POs): The program must enable students to attain by the time of graduation

a) An ability to apply knowledge of computing and mathematics appropriate to the program's student outcomes and to the discipline
b) An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution
c) An ability to design, implement and evaluate a computer-based system, process, component or program to meet desired needs.
d) An ability to function effectively on teams to accomplish a common goal
e) An understanding of professional, ethical, legal, security and social issues and responsibilities
f) An ability to communicate effectively with a range of audiences
g) An ability to use current techniques, skills and tools necessary for computing practice
h) An ability to use and apply current technical concepts and practices in the core information technologies of human computer interaction, information management, programming, networking and web systems and technologies
i) An ability to effectively integrate IT-based solutions into the user environment
j) An understanding of best practices and standards and their application

PROGRAM SPECIFIC OUTCOME (PSOs)

k) Understand analyze and develop computer programs in the areas related to Database systems and Big data Analytics, cloud computing, soft computing, IoT, Image processing, Green computing, web designing, mobile computing and networking for efficient design of computer based system of varying complexity.
l) Apply standard software Engineering practices and strategies in software project development using open-source programming environment to deliver a quality for business success.
m) Be acquainted with the contemporary issues, latest trends in technological development and thereby innovate new ideas and solutions to existing problems.
n) An ability to produce cost effective, quality and maintainable software products and solutions (services) meeting the global standards and requirements with the knowledge acquired and using the emerging techniques, tools and software engineering methodologies and principles and able to comprehend and write effective project reports in multidisciplinary environment in the context of changing technologies.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO I : To be a working Information Technology (IT) professional with core competencies that can be used on multi-disciplinary projects

PEO II : To understand the importance of relationship building within the IT industry

PEO III : To understand the need for lifelong learning in the exploration and journey in IT

PEO IV : To understand, evaluate and practice ethical behavior within the IT industry

PEO V : To be cognizant of security issues and their impacts on industry

MAPPING of PEOs and POs

POs	a	b	C	d	e	f	f	h	i	j	k	l	m	n

தமிழ்த்துறை

பகுதி - I தமிழ்ப்பாடத்திட்டம் (2016 - 2017)

முதல்பருவம்

(இளநிலை அறிவியல் பட்டவகுப்புகளுக்குரியது)

(For I-UG Science Degree Classes) 16LSU101

பாடத்திட்டப்பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கைமேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப்பயன்விளைவு

- இந்தியகுடியுரிமைப்பணிமுதலானபோட்டித்தேர்வுகளில், விருப்பப்பாடமாகஇடம்பெறுகின்ற, 'தமிழ்இலக்கியவரலாறு' குறித்தமுழுமையானஅறிமுகம்பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல்மற்றும்தொல்லியல்சார்ந்தஆவணத்தேடலுக்குரியஆய்வுமனப்பான்மையுடன், இலக்கியங்களைஅணுகுதல்.
- தமிழின்வளர்ச்சித்துறையாகிய, 'அறிவியல்தமிழ்' ; 'இணையதமிழ்' குறித்தபன்நோக்குஅணுகுமுறையிலானஆய்வுச்சிந்தனைமேம்பாடு.
- வேலைவாய்ப்புக்குரியசுயதிறன்மேம்பாட்டுடன், படைப்பாக்கத்திறன்மேம்பாடும்பெற்றிருத்தல் .
- சமுதாயமற்றும்வாழ்வியல்மதிப்புகளைப்பேணுவதற்குக்கருவியாகஇலக்கியங்களைநாடுகின்றமனப்பான்மைவளர்ச்சி.
- மொழிபெயப்புத்துறைசார்ந்தவேலைவாய்புத்திறன்பெற்றிருத்தல்

16LAU101 : **தமிழ் முதல் தாள்** 4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது**)**

அலகு – I : இக்கால இலக்கியம்: **(10 மணிநேரம்)**

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.
இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை – ஒற்றுமையே உயிர்நிலை.
மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் –மலையாளக் காற்று.
சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.
பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்: **(10 மணிநேரம்)**

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்பம் – 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: **(10 மணிநேரம்)**

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை: **(10 மணிநேரம்)**

1. **உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்**
2. **கட்டிடக்கலை** - அ. இராசமாணிக்கனார்
3. **வாழ்க்கை** - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: **(8 மணிநேரம்)**

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Semester – I

16CSU101 PROGRAMMING FUNDAMENTALS USING C / C++ 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C and C++ Languages
- To enable effective usage of arrays, structures, functions
- To learn effective usage of pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to do the following:

1. Develop programs using the basic elements like control statements, Arrays and Strings .
2. understand about the dynamic memory allocation using pointers which is essential for utilizing memory
3. Understand about the code reusability with the help of user defined functions.
4. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems.
5. Use the characteristics of an object-oriented programming language in a program.
6. Use the basic object-oriented design principles in computer problem solving.

UNIT-I

Introduction to C and C++:

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++. **Data Types, Variables, Constants, Operators and Basic I/O:** Declaring, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Using Comments in programs, Character I/O (getc, getchar, putc, putcharetc), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.hetc).**Expressions, Conditional Statements and Iterative Statements:**Simple Expressions in C++ (including Unary Operator Expressions, Binary Operator Expressions), Understanding Operators Precedence in Expressions, Conditional Statements (if construct, switch-case construct), Understanding syntax and utility of Iterative Statements (while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

UNIT-II

Functions and Arrays: Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays (Declaring and Defining an Array, Initializing an Array, Accessing individual elements in an Array, Manipulating array elements using loops), Use Various types of arrays (integer, float and character arrays / Strings) Two-dimensional Arrays (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional arrays.

UNIT-III

Derived Data Types (Structures and Unions): Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members. **Pointers and References in C++:** Understanding a Pointer Variable, Simple use of Pointers (Declaring and Dereferencing Pointers to simple variables), Pointers to Pointers, Pointers to structures, Problems with Pointers, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions. Pointers vs. References, Declaring and initializing references, using references as function arguments and function return values

UNIT-IV

Memory Allocation in C++: Differentiating between static and dynamic memory allocation, use of malloc, calloc and free functions, use of new and delete operators, storage of variables in static and dynamic memory allocation.**File I/O, Preprocessor Directives:** Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random aCSUess in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifdef, #ifndef and #undef), Macros.

UNIT-V

Using Classes in C++: Principles of Object-Oriented Programming, Defining & Using Classes, Class Constructors, Constructor Overloading, Function overloading in classes, Class Variables &Functions, Objects as parameters, Specifying the Protected and

Private Access, Copy Constructors, Overview of Template classes and their use. **Overview of Function Overloading and Operator Overloading:** Need of Overloading functions and operators, Overloading functions by number and type of arguments, Looking at an operator as a function call, Overloading Operators (including assignment operators, unary operators) **Inheritance, Polymorphism and Exception Handling:** Introduction to Inheritance (Multi-Level Inheritance, Multiple Inheritance), Polymorphism (Virtual Functions, Pure Virtual Functions), Basics Exceptional Handling (using catch and throw, multiple catch statements), Catching all exceptions, Restricting exceptions, Rethrowing exceptions.

16CSU102	**COMPUTER SYSTEM ARCHITECTURE**	**Semester – I** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

1. Students will acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

UNIT -I Introduction

Logic gates, Boolean algebra, circuit simplification, combinational circuits: Adders and Subtractors –Multiplexers and De multiplexers – Encoders and Decoders- sequential circuits: Flip Flop's, registers, counters and memory units.

UNIT -II Data Representation and Basic Computer Arithmetic

Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

UNIT –III Basic Computer Organization and Design

Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

UNIT-IV Central Processing Unit

Register organization, arithmetic and logical micro-operations, stack organization, micro programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining and parallel architecture.

UNIT –V Memory and Input-Output Organization

Cache memory, Associative memory, mapping Input / Output: External Devices, I/O Modules , Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels.

Suggested Readings:

2. Stallings, W. (2010). Computer Organization and Architecture Designing for Performance (8th ed.) New Delhi: Prentice Hall of India,
3. Mano, M.M. (2013). Digital Design, New Delhi: Pearson Education Asia.
4. Carl Hamacher. (2012). Computer Organization (5th ed.). New Delhi: McGrawHill.

16CSU103	COMPUTER FUNDAMENTALS	Semester – I 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To identify types of computers, how they process information and how individual computers interact with other computing systems and devices.
- To identify the function of computer hardware components.
- To identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.
- To identify fundamental concepts relating to database applications.
- To manipulate and control the Windows desktop, files and disks.
- To understand the emerging technologies and their uses.

Course Outcomes (COs)

1. Understand the meaning and basic components of a computer system,
2. Gain knowledge about five generations and classification of computer system,
3. Explain the functions of a computer,
4. Identify and discuss the functional units of a computer system,
5. Identify the various input and output units and explain their purposes
6. Understand the emerging technologies and their uses.

UNIT-I

Introduction: Introduction to computer system, uses, types. **Data Representation:** Number systems and character representation, binary arithmetic. **Human Computer Interface:** Types of software, Operating system as user interface, utility programs.

UNIT-II

Devices: Input and output devices (with connections and practical demo), keyboard, mouse, joystick, scanner, OCR, OMR, bar code reader, web camera, monitor, printer, plotter.

UNIT-III

Memory: Primary, secondary, auxiliary memory, RAM, ROM, cache memory, hard disks, optical disks.

UNIT-IV

Computer Organisation and Architecture: C.P.U., registers, system bus, main memory unit, cache memory, Inside a computer, SMPS, Motherboard, Ports and Interfaces, expansion cards, ribbon cables, memory chips, processors.

UNIT-V

Overview of Emerging Technologies: Bluetooth, cloud computing, big data, data mining, mobile computing and embedded systems.

Suggested Readings:

1. Goel, A. (2010). Computer Fundamentals. New Delhi: Pearson Education.
2. Aksoy, P., & DeNardis, L. (2006).Introduction to Information Technology. New Delhi: Cengage Learning
3. Sinha, P. K., & Sinha, P. (2007). Fundamentals of Computers. New Delhi: BPB Publishers.

Semester – I

16CSU111 PROGRAMMING FUNDAMENTALS USING C / C++ - PRACTICAL **3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C and C++ Languages
- To enable effective usage of arrays, structures, functions
- To learn effective usage of pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to do the following:

1. Develop programs using the basic elements like control statements, Arrays and Strings .
2. understand about the dynamic memory allocation using pointers which is essential for utilizing memory
3. Understand about the code reusability with the help of user defined functions.
4. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems.
5. Use the characteristics of an object-oriented programming language in a program.
6. Use the basic object-oriented design principles in computer problem solving.

List of Programs

1. WAP to print the sum and product of digits of an integer.

2. WAP to reverse a number.

3. WAP to compute the sum of the first n terms of the following series S = 1+1/2+1/3+1/4+……

4. WAP to compute the sum of the first n terms of the following series S =1-2+3-4+5…………….

5. Write a function that checks whether a given string is Palindrome or not. Use this function to find whether the string entered by user is Palindrome or not.

6. Write a function to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.

7.WAP to compute the factors of a given number.

8. Write a macro that swaps two numbers. WAP to use it.

9. WAP to print a triangle of stars as follows (take number of lines from user):

```
*
***
*****
*******
*********
```

10. WAP to perform following actions on an array entered by the user:
i) Print the even-valued elements

ii) Print the odd-valued elements

iii) Calculate and print the sum and average of the elements of array

iv) Print the maximum and minimum element of array

v) Remove the duplicates from the array

vi) Print the array in reverse order

The program should present a menu to the user and ask for one of the options. The menu should also include options to re-enter array and to quit the program.

11. WAP that prints a table indicating the number of occurrences of each alphabet in the text entered as command line arguments.
12. Write a program that swaps two numbers using pointers.

13. Write a program in which a function is passed address of two variables and then alter its contents.

14. Write a program which takes the radius of a circle as input from the user, passes it to another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.

15. Write a program to find sum of n elements entered by the user. To write this program, allocate memory dynamically using malloc() / calloc() functions or new operator.

16. Write a menu driven program to perform following operations on strings:
a) Show address of each character in string

b) Concatenate two strings without using strcat function.

c) Concatenate two strings using strcat function.

d) Compare two strings

e) Calculate length of the string (use pointers)

f) Convert all lowercase characters to uppercase

g) Convert all uppercase characters to lowercase

h) Calculate number of vowels

i) Reverse the string

17. Given two ordered arrays of integers, write a program to merge the two-arrays to get an ordered array.

18. WAP to display Fibonacci series (i)using recursion, (ii) using iteration

19. WAP to calculate Factorial of a number (i)using recursion, (ii) using iteration

20. WAP to calculate GCD of two numbers (i) with recursion (ii) without recursion.

21. Create Matrix class using templates. Write a menu-driven program to perform following Matrix operations (2-D array implementation):
a) Sum b) Difference c) Product d) Transpose

22. Create the Person class. Create some objects of this class (by taking information from the user). Inherit the class Person to create two classes Teacher and Student class. Maintain the respective information in the classes and create, display and delete objects of these two classes (Use Runtime Polymorphism).

23. Create a class Triangle. Include overloaded functions for calculating area. Overload assignment operator and equality operator.

24. Create a class Box containing length, breath and height. Include following methods in it:
a) Calculate surface Area
b) Calculate Volume
c) Increment, Overload ++ operator (both prefix & postfix)
d) Decrement, Overload -- operator (both prefix & postfix)
e) Overload operator == (to check equality of two boxes), as a friend function
f) Overload Assignment operator
g) Check if it is a Cube or cuboid
Write a program which takes input from the user for length, breath and height to test the above class.

25. Create a structure Student containing fields for Roll No., Name, Class, Year and Total Marks. Create 10 students and store them in a file.

26. Write a program to retrieve the student information from file created in previous question and print it in following format:

Roll No. Name Marks

27. Copy the contents of one text file to another file, after removing all whitespaces.

28. Write a function that reverses the elements of an array in place. The function must accept only one pointer value and return void.

29. Write a program that will read 10 integers from user and store them in an array. Implement array using pointers. The program will print the array elements in ascending and descending order.

Semester – I

16CSU112 COMPUTER SYSTEM ARCHITECTURE - PRACTICAL **3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

1. Students will acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

List of Experiments

(Any 8 Experiments)

1. Verification of Logic Gates
2. Code converters
3. Realization of Multiplexer using basic gates
4. Encoder and Decoder
5. Realization Half and Full adders
6. Realization of Subtractor
7. Realization of Parity generator

8. Flip-Flop Circuits
9. Digital to analog Converters
10. Demonstrate a Basic Arithmetic Computing operations

Semester – I

16CSU113 COMPUTER FUNDAMENTALS - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- Create a document in Microsoft Word with formatting options.
- Create, edit, save, and print documents to include documents with lists and tables.
- Add a header and footer to a document and add a graphic to a document.
- .Write functions in Microsoft Excel to perform basic calculations and to convert number to text and text to number.
- Construct formulas, including the use of built-in functions, and relative and absolute references.
- Create and modify charts.

Course Outcomes (COs)

1. Modify text using various formatting options from the editing tools under the Home tab
2. Set up section breaks to create different headers and footers for the odd and even pages within the document sections.
3. Demonstrate the mechanics and uses of Word tables to organize and present data.
4. Demonstrate working knowledge of using Word's themes and clip art to create a variety of visual effects.
5. Create and design a spreadsheet for general office use.
6. Demonstrate the use of basic functions and formulas in Excel

Practical exercises based on MS Office/ Open Office tools using document preparation and spreadsheet handling packages.

MS Word

1. Prepare **a grocery list** having four columns (Serial number, The name of the product, quantity and price) for the month of April, 06.

• Font specifications for Title (Grocery List): 14-point Arial font in bold and italics.

• The headings of the columns should be in 12-point and bold.

- The rest of the document should be in 10-point Times New Roman.
- Leave a gap of 12-points after the title.

2. Create a **telephone directory**.
    - The heading should be 16-point Arial Font in bold
    - The rest of the document should use 10-point font size
    - Other headings should use 10-point Courier New Font.
    - The footer should show the page number as well as the date last updated.

3. Design a **time-table form** for your college.

    - The first line should mention the name of the college in 16-point Arial Font and should be bold.
    - The second line should give the course name/teacher‘s name and the department in 14-point Arial.
    - Leave a gap of 12-points.
    - The rest of the document should use 10-point Times New Roman font.
    - The footer should contain your specifications as the designer and date of creation.

4. BPB Publications plans to release a new book designed as per your syllabus. Design the **first page of the book** as per the given specifications.
    - The title of the book should appear in bold using 20-point Arial font.
    - The name of the author and his qualifications should be in the center of the page in 16-point Arial font.
    - At the bottom of the document should be the name of the publisher and address in 16-point Times New Roman.
    - The details of the offices of the publisher (only location) should appear in the footer.

5. Create the following one page documents.
    a. Compose a note inviting friends to a get-together at your house, Including a list of things to bring with them.
    b. Design a certificate in landscape orientation with a border around the document.
    c. Design a Garage Sale sign.
    d. Make a sign outlining your rules for your bedroom at home, using a numbered list.

6. Create the following documents:
    (a) A newsletter with a headline and 2 columns in portrait orientation, including at least one image surrounded by text.
    (b) Use a newsletter format to promote upcoming projects or events in your classroom or college.

7. Convert following text to a table, using comma as delimiter

Type the following as shown (do not bold).
Color, Style, Item
Blue, A980, Van
Red, X023, Car
Green, YL724, Truck
Name, Age, Sex
Bob, 23, M
Linda, 46, F
Tom, 29, M

8. Enter the following data into a table given on the next page.

Salesperson	**Dolls**	**Trucks**	**Puzzles**
Kennedy, Sally	1327	1423	1193
White, Pete	1421	3863	2934
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067

Add a column Region (values: S, N, N,S,S,S) between the Salesperson and Dolls columns to the given table Sort your table data by Region and within Region by Salesperson in ascending order:
In this exercise, you will add a new row to your table, place the word Total at the bottom of the Salesperson column, and sum the Dolls, Trucks, and Puzzles columns.

9. Wrapping of text around the image.

10. Following features of menu option must be covered

FILE Complete menu
EDIT Complete menu
VIEW Complete menu
INSERT Complete menu
FORMAT Complete menu
TABLE Complete menu
WINDOW Complete menu
HELP Complete menu
TOOLS All options except Online collaboration, Tools on Macro, Templates

MS Excel

1. Enter the Following data in Excel Sheet

REGIONAL SALES PROJECTION						
State	**Qtr1**	**Qtr2**	**Qtr3**	**QTR4**	**Qtr Total**	**Rate Amount**
Delhi	2020	2400	2100	3000	15	
Punjab	1100	1300	1500	1400	20	
U.P.	3000	3200	2600	2800	17	
Haryana	1800	2000	2200	2700	15	
Rajasthan	2100	2000	1800	2200	20	

TOTAL
AVERAGE

(a) Apply Formatting as follow:

i. Title in TIMES NEW ROMAN

ii. Font Size - 14

iii. Remaining text - ARIAL, Font Size -10

iv. State names and Qtr. Heading Bold, Italic with Gray Fill Color.

v. Numbers in two decimal places.

vi. Qtr. Heading in center Alignment.

vii. Apply Border to whole data.

(b) Calculate State and Qtr. Total

(c) Calculate Average for each quarter

(d) Calculate Amount = Rate * Total .

2. Given the following worksheet

	A	**B**	**C**	**D**
1	Roll No.	Name	Marks	Grade
2	1001	Sachin	99	
3	1002	Sehwag	65	
4	1003	Rahul	41	
5	1004	Sourav	89	
6	1005	Har Bhajan	56	

Calculate the grade of these students on the basis of following guidelines:

If Marks	Then Grade
>= 80	A+
>= 60 < 80	A
>= 50 < 60	B
< 50	F

3. Given the following worksheet

	A	**B**	**C**	**D**	**E**	**F**	
1	**Salesman**			**Sales in (Rs.)**			
2	No.	Qtr1	Qtr2	Qtr3	Qtr4	Total	Commission
3	S001	5000	8500	12000	9000		
4	S002	7000	4000	7500	11000		
5	S003	4000	9000	6500	8200		
6	S004	5500	6900	4500	10500		
7	S005	7400	8500	9200	8300		
8	S006	5300	7600	9800	6100		

Calculate the commission earned by the salesmen on the basis of following Candidates:

If Total Sales	**Commission**
< 20000	0% of sales
> 20000 and < 25000	4% of sales
> 25000 and < 30000	5.5% of sales
> 30000 and < 35000	8% of sales
>= 35000	11% of sales

The total sales is sum of sales of all the four quarters.

4. A company XYZ Ltd. pays a monthly salary to its employees which consists of basic salary, allowances & deductions. The details of allowances and deductions are as follows:

Allowances

- HRA Dependent on Basic
  - 30% of Basic if Basic <=1000
  - 25% of Basic if Basic>1000 & Basic<=3000
  - 20% of Basic if Basic >3000
- DA Fixed for all employees, 30% of Basic
- Conveyance Allowance Rs. 50/- if Basic is <=1000

Rs. 75/- if Basic >1000 & Basic<=2000
Rs. 100 if Basic >2000

- Entertainment Allowance NIL if Basic is

<=1000 Rs. 100/- if Basic > 1000

Deductions

- Provident Fund 6% of Basic
- Group Insurance Premium Rs. 40/- if Basic is <=1500
  Rs. 60/- if Basic > 1500 & Basic<=3000
  Rs. 80/- if Basic >3000

Calculate the following:
Gross Salary = Basic + HRA + DA + Conveyance + Entertainment
Total deduction = Provident Fund + Group Insurance Premium
Net Salary = Gross Salary – Total Deduction.

5. Create Payment Table for a fixed Principal amount, variable rate of interests and time in the format below:

No. of Installments	**5%**	**6%**	**7%**	**8%**	**9%**
3	XX	XX	XX	XX	XX
4	XX	XX	XX	XX	XX
5	XX	XX	XX	XX	XX
6	XX	XX	XX	XX	XX

6. Use an array formula to calculate Simple Interest for given principal amounts given the rate o

Rate of Interest	8%
Time	5 Years
Principal	Simple Interest
1000	?
18000	?
5200	?

7. The following table gives year wise sale figure of five salesmen in Rs.

Salesman	2000	2001	2002	2003
S1	10000	12000	20000	50000
S2	15000	18000	50000	60000
S3	20000	22000	70000	70000
S4	30000	30000	100000	80000
S5	40000	45000	125000	90000

(*a*) Calculate total sale year wise.
(*b*) Calculate the net sale made by each salesman
(*c*) Calculate the maximum sale made by the salesman
(d) Calculate the commission for each salesman under the condition.
(*i*) If total sales >4,00,000 give 5% commission on total sale made by the salesman.
(*ii*) Otherwise give 2% commission.
(*e*) Draw a bar graph representing the sale made by each salesman.

(*f*) Draw a pie graph representing the sale made by salesman in 2000.

8. Enter the following data in Excel Sheet

PERSONAL BUDGET FOR FIRST QUARTER

Monthly Income (Net): 1,475

EXPENSES	**JAN**	**FEB**	**MARCH**	**QUARTER TOTAL**	**QUARTER AVERAGE**
Rent	600.00	600.00	600.00		
Telephone	48.25	43.50	60.00		
Utilities	67.27	110.00	70.00		
Credit Card	200.00	110.00	70.00		
Oil	100.00	150.00	90.00		
AV to Insurance	150.00				
Cable TV	40.75	40.75	40.75		
Monthly Total					

Calculate Quarter total and Quarter average.

(a) Calculate Monthly total.

(b) Surplus = Monthly income - Monthly total.

(c) What would be total surplus if monthly income is 1500.

(d) How much does telephone expense for March differ from quarter average.

(e) Create a 3D column graph for telephone and utilities. (f) Create a pie chart for monthly expenses.

9. Enter the following data in Excel Sheet

TOTAL REVENUE EARNED FOR SAM'S BOOKSTALL

Publisher name	**1997**	**1998**	**1999**	**2000**	**total**
A	Rs.1000.00	Rs.1100.00	Rs.1300.00	Rs.800.00	
B	Rs.1500.00	Rs.700.00	Rs.1000.00	Rs.2000.00	
C	Rs.700.00	Rs.900.00	Rs.1500.00	Rs.600.00	
D	Rs.1200.00	Rs.500.00	Rs.200.00	Rs.1100.00	
E	Rs.800.00	Rs.1000.00	Rs.3000.00	Rs.560.00	

(a) Compute the total revenue earned.

(b) Plot the line chart to compare the revenue of all publisher for 4 years.

(c) Chart Title should be _Total Revenue of sam's Bookstall (1997-2000)'

(d) Give appropriate categories and value axis title.

10. Generate 25 random numbers between 0 & 100 and find their sum, average and count. How many no. are in range 50-60.

		Semester – I
16AEC101	**ENVIRONMENTAL STUDIES**	**4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **100** Total: **100**

Course Objectives

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Course Outcomes (COs)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT-I: Environment Definition, scope and importance, components, ECOsystem Definition, Concept, Scope, importance, Structure and functions of eCOsystem. Energy flow, Ecological succession Food chains and food webs. Classification of eCOsystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III: Biodiversity and Its Conservation: Introduction, definition: genetic, species and eCOsystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution , Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear aCSUidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

கற்பகம்உயர்கல்விகலைக்கழகம்

தமிழ்த்துறை

பகுதி - I தமிழ்ப்பாடத்திட்டம் (2016 - 2017)

இரண்டாம்பருவம்

(இளநிலை அறிவியல் பட்டவகுப்புகளுக்குரியது)

(For I-UG Science Degree Classes) 16LSU201

பாடத்திட்டப்பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கைமேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப்பயன்விளைவு

- இந்தியகுடியுரிமைப்பணிமுதலானபோட்டித்தேர்வுகளில், விருப்பப்பாடமாகஇந்தியகுடியுரிமைப்பணிமுதலானபோட்டித்தேர்வுகளில், விருப்பப்பாடமாகஇடம்பெறுகின்ற, 'தமிழ்இலக்கியவரலாறு' குறித்தமுழுமையானஅறிமுகம்பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல்மற்றும்தொல்லியல்சார்ந்தஆவணத்தேடலுக்குரியஆய்வுமனப்பான்மை யுடன், இலக்கியங்களைஅணுகுதல்.
- தமிழின்வளர்ச்சித்துறையாகிய, 'அறிவியல்தமிழ்' ; 'இணையதமிழ்' குறித்தபன்நோக்குஅணுகுமுறையிலானஆய்வுச்சிந்தனைமேம்பாடு.
- வேலைவாய்ப்புக்குரியசுயதிறன்மேம்பாட்டுடன், படைப்பாக்கத்திறன்மேம்பாடும்பெற்றிருத்தல் .
- சமுதாயமற்றும்வாழ்வியல்மதிப்புகளைப்பேணுவதற்குக்கருவியாகஇலக்கியங்களைநாடுகின்றமனப்பான்மைவளர்ச்சி.

- மொழிபெயப்புத்துறைசார்ந்தவேலைவாய்புத்திறன்பெற்றிருத்தல்

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)

பகுதி – I, தமிழ் — பருவம் II

16LAU201 : **தமிழ்** இரண்டாம் **தாள்** 4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

அலகு – I : பக்தி **இலக்கியம்** **(10 மணிநேரம்)**

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு.

1. **சைவம் -** பெரியபுராணம் - திருமூலநாயனார் புராணம்.
2. **வைணவம் -** பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு – II : சங்க இலக்கியம் : **(15 மணிநேரம்)**

சங்க இலக்கியங்கள் அறிமுகம்

அ). **எட்டுத்தொகை**

நற்றிணை : பிரசம் கலந்த – பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை – குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு –

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்த்தொடீ கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் –பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் – 'சிறுதினை மலரொடு' என்பதிலிருந்துதொடங்கி, 'அறிந்தவாறே' என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – 'தெய்வம் சான்ற' என்பதிலிருந்து தொடங்கி, 'நல்குமதி' என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம் (6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: **(21-29) –** கண்ணகியின் சிறப்பு:

'நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி,

'கண்ணகி என்பாண் மன்னோ' என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: **(207-234) -** சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: 'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: **(482-485) -** செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: 'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை (10 மணிநேரம்)

1. **குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்**
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. **நகரம் – சுஜாதா**

அலகு- V : மொழிப்பயிற்சி **(7 மணிநேரம்)**

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

16ENU201	**ENGLISH – 1**	**Semester – II** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

(For all undergraduate students admitted from 2016 onwards)

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman **–** Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Preposition, Voice- Active and Passive

UNIT V

Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitution
Grammar: Question, Pronunciation

16CSU201	**PROGRAMMING IN JAVA**	**Semester – II** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

UNIT-I

Introduction to Java Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods),

UNIT-II

Arrays, Strings and I/O Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and files. **Object-Oriented Programming Overview** Principles of Object-Oriented

Programming, Defining & Using Classes, Controlling Access to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

UNIT-III

Inheritance, Interfaces, Packages, Enumerations, Autoboxing and Metadata

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

UNIT-IV

Exception Handling, Threading, Networking and Database Connectivity Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

UNIT-V

Java Applets: Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

Semester – II

16CSU202 **DISCRETE STRUCTURES** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

This course enables the students to

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

UNIT I

Sets: Introduction, Sets , finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations, counting , Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

UNIT II

Growth of Functions: Asymptotic Notations, Summation formulas and properties,Bounding Summations, approximation byIntegrals

UNIT III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution, Substitution Method, recurrence trees, Master theorem.

UNIT IV

Graph Theory : Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

UNIT V

Prepositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

16CSU203	**MULTIMEDIA AND APPLICATIONS**	**Semester – II** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To learn and understand technical aspect of Multimedia Systems.
- To understand the standards available for different audio, video and text applications.
- To Design and develop various Multimedia Systems applicable in real time.
- To learn various multimedia authoring systems.
- To understand various networking aspects used for multimedia applications.
- To develop multimedia application and analyze the performance of the same.

Course Outcomes (COs)

1. Developed understanding of technical aspect of Multimedia Systems.
2. Understand various file formats for audio, video and text media.
3. Develop various Multimedia Systems applicable in real time.
4. Design interactive multimedia software.
5. Apply various networking protocols for multimedia applications.
6. To evaluate multimedia application for its optimum performance.

UNIT-I

Multimedia: Introduction to multimedia, components, uses of multimedia, multimedia applications, virtual reality. **Text:** Fonts & Faces, Using Text in Multimedia, Font Editing & Design Tools, Hypermedia & Hypertext.

UNIT-II

Images: Still Images – bitmaps, vector drawing, 3D drawing & rendering, natural light & colors, computerized colors, color palettes, image file formats. **Sound:** Digital Audio, MIDI Audio, MIDI vs Digital Audio, Audio File Formats.

UNIT-III

Video: How video works, analog video, digital video, video file formats, video shooting and editing. **Animation:** Principle of animations, animation techniques,

UNIT-IV

Animation: animation file formats. **Internet and Multimedia**: www and HTML, multimedia on the web – web servers, web browsers, web page makers and site builders.

UNIT-V

Making Multimedia: Stages of a multimedia project, Requirements to make good multimedia, Multimedia Hardware - Macintosh and Windows production Platforms, Hardware peripherals - Connections, Memory and storage devices, Multimedia software and Authoring tools.

6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

List of Programs

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of .lenth in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBufferclasss like setCharAt(, setLength(), append(), insert(), concat()and equals().

9. Write a program to create a ―distance‖ class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer
10. Modify the ―distance‖ class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions(from lower to higher data type)
12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate Fibonacci series, where the function to generate fibonacii series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program ―DivideByZero‖ that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the openConnection() method and then use it examine the different components of the URLand content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scrolls the message in the banner from left to right across the applet‘s window.
26. Write a program to get the URL/location of code (i.e. java code) and document(i.e. html file).

27. Write a program to demonstrate different mouse handling events like mouseClicked(), mouseEntered(), mouseExited(), mousePressed, mouseReleased() and mouseDragged().
28. Write a program to demonstrate different keyboard handling events.
29. Write a program to generate a window without an applet window using main() function.
30. Write a program to demonstrate the use of push buttons.

Semester – II

16CSU212 **DISCRETE STRUCTURES - PRACTICAL** **3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

This course enables the students to

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

List of programs

1. Write a C Program to find the number of subsets of a set contains n elements.
2. Write a C Program to find transitive closure of a relation.
3. Write a C Program to prove
$1/(1*2) + 1/(2*3) \dots\dots\dots + 1/(n(n+1)) = n/(n+1)$

4. Write a C Program to to perform the sum = $1+ (1+2) + (1+2+3) + \dots + (1+2\dots+n)$
5. Write a C program to print Fibonacci series till Nth term using recursion
6. Write a Cprogram in c to calculate factorial of a number using recursion
7. Write a C Program to find a minimum spanning tree using Prim's algorithm

8. Write a C program to find the shortest path with the lower COst in a graph using Dijkstra's Algorithm
9. Write a C Program to construct the truth table for the following formula.
(i) $P\wedge Q\wedge \neg R$ (ii) $P\wedge \neg Q\wedge R$ (iii) $P\wedge Q\wedge \neg R$

10. Write a C Program to prove De – Morgan's law.

Semester – II

16CSU213 MULTIMEDIA AND APPLICATIONS - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To learn and understand technical aspect of Multimedia Systems.
- To understand the standards available for different audio, video and text applications.
- To Design and develop various Multimedia Systems applicable in real time.
- To learn various multimedia authoring systems.
- To understand various networking aspects used for multimedia applications.
- To develop multimedia application and analyze the performance of the same.

Course Outcomes (COs)

1. Developed understanding of technical aspect of Multimedia Systems.
2. Understand various file formats for audio, video and text media.
3. Develop various Multimedia Systems applicable in real time.
4. Design interactive multimedia software.
5. To evaluate multimedia application for its optimum performance.
6. Design different application in M.M and use different tools like Adobe Photoshop and flash.

Practical exercises based on concepts listed in theory using Flash/ GIMP/ PhotoShop/ Animation Tools/ Image Editors/ Video Editors.

Implement the followings using Flash-

1. Create an animation using the tools panel and the properties panel to draw the following – Line, pe , oval, circle, rectangle , square, pencil , brush , lasso tool.
2. Create an animation using text tool to set the font, size, color etc.
3. Create an animation using **Free transform tool** that should use followings- Move Objects Skew Objects Stretch Objects Rotate Objects Stretch Objects while maintaining proportion Rotate Objects after relocating the center dot.
4. Create an animation using layers having following features-Insert layer, Delete layer, guide layer, Mask layer.
5. Modify the document (changing background color etc.)using the following tools Eraser tool, Hand tool, Ink bottle tool ,Zoom tool ,Paint Bucket tool ,Eyedropper tool.
6. Create an animation for bus car race in which both starts from the same point and car wins the race.
7. Create an animation in which text Hello gets converted into GoodBye (using motion/shape tweening).
8. Create an animation having five images having fade-in fade-out effect.
9. Create an scene to show the sunrise (using multiple layers and motion tweening) .
10. Create an animation to show the ripple effect.

11. Create an animation (using Shape tweening and shape hints) for transforming one shape into another.
12. Create an animation for bouncing ball (you may use motion guide layer).

16CSU301	**DATA STRUCTURES**	**Semester – III** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand and apply sorting, searching algorithms
- To know about hashing algorithms
- To develop application using data structures

Course Outcomes (COs)

Upon completion of this course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Apply searching algorithms over various data structures.

UNIT-I

Arrays-Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation).Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

UNIT-II

Linked Lists Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

UNIT-III

Trees - Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion , Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

UNIT-IV

Searching and Sorting,Linear Search, Binary Search, Comparison of Linear and Binary Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting Techniques

UNIT-V

Hashing - Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collusion by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function

16CSU302	OPERATING SYSTEMS	Semester – III 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- To provide experience on MS Windows and LINUX environment.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Work in MS Windows and LINUX environment.

UNIT-I

Introduction to Operating System: Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems-Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

UNIT-II

Operating System Organization: Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources-Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication-Deadlocks.

UNIT-III

Memory Management: Physical and Virtual address space-Memory Allocation strategies –Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

UNIT-IV

File and I/O Management: Directory structure-File operations-File Allocation methods-Device management.

UNIT-V

Protection and Security: Policy mechanism-Authentication-Internal aCSUess Authorization.

16CSU303	**COMPUTER NETWORKS**	**Semester – III** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To master the fundamentals of data communications networks by gaining a working knowledge of data transmission concepts.
- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the functions of each layer in OSI and TCP/IP model.
2. Explain the multiplexing, switching concept and types of transmission media with real time examples.
3. Understand the error detection and correction methods and can implement the data link layer protocols
4. Understand channel error detection and correction, MAC protocols, Ethernet and WLAN.
5. Learn different medium access method to avoid collision and to learn about routing table.
6. Learn basic functionalities of transport layer and application layer.

Unit I

Introduction to Computer Networks : Network definition; network topologies; network classifications; network protocol; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques**: Analog and digital signal; data-ratelimits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission;

Unit – II

(cont..)digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media.

Networks Switching Techniques and Access mechanisms: Circuit switching; packetswitching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

Unit – III

Data Link Layer Functions and Protocol: Error detection and error correction techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

Unit – IV

Multiple Access Protocol and Networks: CSMA/CD protocols; Ethernet LANS; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways; **Networks Layer Functions and Protocols**: Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit V

Transport Layer Functions and Protocols: Transport services- error and flow control, Connection establishment and release- three way handshake; **Overview of Application layer protocol**: Overview of DNS protocol; overview of WWW &HTTP protocol.

16CSU304A	**ANDROID PROGRAMMING**	**Semester – III** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To compare the differences between Android and other mobile development environments.
- To learn the Object-oriented features of Kotlin and APIs for Android Development.
- To describe the working of Android applications, life cycle, manifest, and Intents
- To demonstrate the implementation of Form widgets for Android App development.
- To learn the SQLite database connectivity and database operations with android
- To design, create, deploy, and test applications for the Android mobile phone platform.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design and develop useful Android applications with compelling user interfaces by using, extending, and creating your own layouts and Views and using Menus.
2. Analyze the Architecture and features of Android with another Mobile Operating System.
3. Evaluate the standard of Kotlin language for developing Android Applications
4. Apply knowledge for creating user Interface and develop activity for Android App.
5. Evaluate the user interface architecture of Android for developing Android Apps
6. Understand the implementation of SQLite database operations with Android.

UNIT-I:

Introduction: History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture.

UNIT-II:

Overview of object oriented programming using Java: OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine.

UNIT-III:

Development Tools: Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device.

UNIT-IV

User Interface Architecture: Application context, intents, Activity life cycle, multiple screen sizes. **User Interface Design:** Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes),Images, Menu, Dialog.

UNIT-V

Database: Understanding of SQLite database, connecting with the database.

16CSU304B	**PROGRAMMING IN MATLAB**	**Semester – III** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the need for simulation/implementation for the verification of mathematical functions.
- To understand the main features of the MATLAB program development environment to enable their usage in the higher learning.
- To implement simple mathematical functions/equations in numerical computing environment such as MATLAB.
- To interpret and visualize simple mathematical functions and operations thereon using plots/display.
- To analyze the program for correctness and determine/estimate/predict the output and verify it under simulation environment using MATLAB tools.
- To apply MATLAB tools for implementation/simulation and visualization of basic mathematical functions

Course Outcomes (COs)

On successful completion of the course, the students should be able to

1. Understand the need for simulation/implementation for the verification of mathematical functions.
2. Understand the main features of the MATLAB program development environment to enable their usage in the higher learning.
3. Implement simple mathematical functions/equations in numerical computing environment such as MATLAB.
4. Interpret and visualize simple mathematical functions and operations thereon using plots/display.
5. Analyze the program for correctness and determine/estimate/predict the output and verify it under simulation environment using MATLAB tools.
6. Apply MATLAB tools for implementation/simulation and visualization of basic mathematical functions

UNIT-I

Introduction to Programming: Components of a computer, working with numbers, Machine code, Software hierarchy.

UNIT-II

Programming Environment: MATLAB Windows, A First Program, Expressions, Constants, Variables and assignment statement, Arrays.

UNIT-III

Graph Plots: Basic plotting, Built in functions, Generating waveforms, Sound replay, load and save. Procedures and Functions: Arguments and return values, M-files, Formatted console input-output , String handling,

UNIT-IV

Control Statements: Conditional statements: If, Else, Else-if, Repetition statements: While, for loop

UNIT-V

Manipulating Text: Writing to a text file, Reading from a text file, Randomising and sorting a list, searching a list. **GUI Interface**: Attaching buttons to actions, Getting Input, Setting Output

2. Moler, C.B. (2004). Numerical Computing with MATLAB. New Delhi: SIAM.

16CSU311	**DATA STRUCTURES - PRACTICAL**	**Semester – III** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand and apply sorting, searching algorithms
- To know about hashing algorithms
- To develop application using data structures

Course Outcomes (COs)

Upon completion of this course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Apply searching algorithms over various data structures.

List of programs

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.
2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.
3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).
4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
6. Perform Stack operations using Linked List implementation.
7. Perform Stack operations using Array implementation. Use Templates.
8. Perform Queues operations using Circular Array implementation. Use Templates.
9. Create and perform different operations on Double-ended Queues using Linked List implementation.
10. WAP to scan a polynomial using linked list and add two polynomial.
11. WAP to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration
12. (ii) WAP to display Fibonacci series (i)using recursion, (ii) using iteration
13. WAP to calculate GCD of 2 number (i) with recursion (ii) without recursion

14. WAP to create a Binary Search Tree and include following operations in tree: (a) Insertion (Recursive and Iterative Implementation)
(b) Deletion by copying
(c) Deletion by Merging
(d) Search a no. in BST
(e) Display its preorder, postorder and inorder traversals Recursively
(f) Display its preorder, postorder and inorder traversals Iteratively
(g) Display its level-by-level traversals
(h) Count the non-leaf nodes and leaf nodes
(i) Display height of tree
(j) Create a mirror image of tree
(k) Check whether two BSTs are equal or not
15. WAP to convert the Sparse Matrix into non-zero form and vice-versa.
16. WAP to reverse the order of the elements in the stack using additional stack.
17. WAP to reverse the order of the elements in the stack using additional Queue.
18. WAP to implement Diagonal Matrix using one-dimensional array.
19. WAP to implement Lower Triangular Matrix using one-dimensional array.
20. WAP to implement Upper Triangular Matrix using one-dimensional array.
21. WAP to implement Symmetric Matrix using one-dimensional array.
22. WAP to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the successor / predecessor of an element, insert an element, inorder traversal.
23. WAP to implement various operations on AVL Tree.

Semester – III

16CSU312 OPERATING SYSTEMS - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- To provide experience on MS Windows and LINUX environment.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Work in MS Windows and LINUX environment.

List of programs

1. Write a program (using *fork()* and/or *exec()* commands) where parent and child execute:
   a) same program, same code.
   b) same program, different code.
   c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behaviour of Linux kernel including kernel version, CPU type and model. (CPU information)
3. Write a program to report behaviour of Linux kernel including information on configured memory, amount of free and used memory. (memory information)
4. Write a program to print file details including owner access permissions, file access time, where file name is given as argument.
5. Write a program to copy files using system calls.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using *thread* library.
13. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

16CSU313	COMPUTER NETWORKS - PRACTICAL	Semester – III 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To master the fundamentals of data communications networks by gaining a working knowledge of data transmission concepts.
- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the functions of each layer in OSI and TCP/IP model.
2. Explain the multiplexing, switching concept and types of transmission media with real time examples.
3. Understand the error detection and correction methods and can implement the data link layer protocols
4. Understand channel error detection and correction, MAC protocols, Ethernet and WLAN.
5. Learn different medium access method to avoid collision and to learn about routing table.
6. Learn basic functionalities of transport layer and application layer.

List of Programs

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Semester – III

16CSU314A ANDROID PROGRAMMING - PRACTICAL **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To compare the differences between Android and other mobile development environments.
- To learn the Object-oriented features of Kotlin and APIs for Android Development.
- To describe the working of Android applications, life cycle, manifest, and Intents
- To demonstrate the implementation of Form widgets for Android App development.
- To learn the SQLite database connectivity and database operations with android
- To design, create, deploy, and test applications for the Android mobile phone platform.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design and develop useful Android applications with compelling user interfaces by using, extending, and creating your own layouts and Views and using Menus.
2. Analyze the Architecture and features of Android with another Mobile Operating System.
3. Evaluate the standard of Kotlin language for developing Android Applications
4. Apply knowledge for creating user Interface and develop activity for Android App.
5. Evaluate the user interface architecture of Android for developing Android Apps
6. Understand the implementation of SQLite database operations with Android.

List of Programs

1. Create ―Hello World‖ application. That will display ―Hello World‖ in the middle of the screen in the emulator. Also display ―Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

Semester – III

16CSU314B PROGRAMMING IN MATLAB - PRACTICAL **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the need for simulation/implementation for the verification of mathematical functions.
- To understand the main features of the MATLAB program development environment to enable their usage in the higher learning.
- To implement simple mathematical functions/equations in numerical computing environment such as MATLAB.
- To interpret and visualize simple mathematical functions and operations thereon using plots/display.
- To analyze the program for correctness and determine/estimate/predict the output and verify it under simulation environment using MATLAB tools.
- To apply MATLAB tools for implementation/simulation and visualization of basic mathematical functions

Course Outcomes (COs)

On successful completion of the course, the students should be able to

1. Understand the need for simulation/implementation for the verification of mathematical functions.
2. Understand the main features of the MATLAB program development environment to enable their usage in the higher learning.
3. Implement simple mathematical functions/equations in numerical computing environment such as MATLAB.
4. Interpret and visualize simple mathematical functions and operations thereon using plots/display.
5. Analyze the program for correctness and determine/estimate/predict the output and verify it under simulation environment using MATLAB tools.
6. Apply MATLAB tools for implementation/simulation and visualization of basic mathematical functions

List of programs

1. Write a program to assign the following expressions to a variable A and then to print out the value of A.

a. (3+4)/(5+6)

b. $2\Pi^2$

c. √2

d. (0.0000123 + 5.67×10-3) × 0.4567×10-4

2. Celsius temperatures can be converted to Fahrenheit by multiplying by 9, dividing by 5, and adding 32. Assign a variable called C the value 37, and implement this formula to assign a variable F the Fahrenheit equivalent of 37 Celsius.

3. Set up a vector called N with five elements having the values: 1, 2, 3, 4, 5. Using N, create assignment statements for a vector X which will result in X having these values:
a. 2, 4, 6, 8, 10
b. 1/2, 1, 3/2, 2, 5/2
c. 1, 1/2, 1/3, 1/4, 1/5
d. 1, 1/4, 1/9, 1/16, 1/25

4. A supermarket conveyor belt holds an array of groceries. The price of each product (in pounds) is [0.6, 1.2 ,0.5, 1.3] ; while the numbers of each product are [3, 2 ,1 ,5]. Use MATLAB to calculate the total bill.

5. The sortrows(x) function will sort a vector or matrix X into increasing row order. Use this function to sort a list of names into alphabetical order.

6. The ―identity‖ matrix is a square matrix that has ones on the diagonal and zeros elsewhere. You can generate one with the eye() function in MATLAB. Use MATLAB to find a matrix B, such that when multiplied by matrix A=[1 2; -1 0] the identity matrix I=[1 0; 0 1] is generated. That is A*B=I.

7. Create an array of N numbers. Now find a single MATLAB statement that picks out from that array the 1,4,9,16,…,√Nth entries, i.e. those numbers which have indices that are square numbers.

8. Draw a graph that joins the points (0,1), (4,3), (2,0) and (5,-2).

9. The seeds on a sunflower are distributed according to the formula below. Plot a small circle at each of the first 1000 co-ordinates :

$$r_n = \sqrt{n}$$

$$\theta_n = \frac{137.51}{180}\pi n$$

10. Calculate 10 approximate points from the function y=2x by using the formulae:
   i. xn = n
   ii. yn = 2n + rand - 0.5

Fit a line of best fit to these points using the function polyfit() with degree=1, and generate co-ordinates from the line of best fit using polyval(). Use the on-line help to find out how to use these functions. Plot the raw data and the line of best fit.

11. Calculate and replay 1 second of a sinewave at 500Hz with a sampling rate of 11025Hz. Save the sound to a file called ex35.wav. Plot the first 100 samples.

12. Calculate and replay a 2 second chirp. That is, a sinusoid that steadily increases in frequency with time, from say 250Hz at the start to 1000Hz at the end.

13. Build a square wave by adding together 10 odd harmonics: 1f, 3f, 5f, etc. The amplitude of the nth harmonic should be 1/n. Display a graph of one cycle of the result superimposed on the individual harmonics.

14. Write a function called FtoC (ftoc.m) to convert Fahrenheit temperatures into Celsius. Make sure the program has a title comment and a help page. Test from the command window with:
i. FtoC(96)
ii. lookfor Fahrenheit
iii. help FtoC

15. Write a program to input 2 strings from the user and to print out (i) the concatenation of the two strings with a space between them, (ii) a line of asterisks the same length as the concatenated strings, and (iii) the reversed concatenation. For example:
i. Enter string 1: Mark
ii. Enter string 2: Huckvale
iii. Mark Huckvale
iv. *************
v. elavkcuH kraM

16CSU401	**DESIGN AND ANALYSIS OF ALGORITHMS**	**Semester – IV** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To learn mathematical background for analysis of algorithm
- To learn various advanced data structures.
- To understand the concept of designing an algorithm.
- To learn dynamic programming and greedy method.
- To understand the concept of pattern matching
- To learn advanced tree and graph applications

Course Outcomes(COs)

1. Learn to choose appropriate advanced data structure for given problem
2. Knowledge to calculate complexity.
3. Select appropriate design techniques to solve real world problems.
4. Apply the dynamic programming technique to solve the problems.
5. Apply the greedy programming technique to solve the problems.
6. Select a proper pattern matching algorithm for given problem

UNIT-I

Introduction: Basic Design and Analysis techniques of Algorithms, Correctness of Algorithm.

Algorithm Design Techniques: Iterative techniques, Divide and Conquer, Dynamic Programming, Greedy Algorithms.

UNIT-II

Sorting and Searching Techniques: Elementary sorting techniques–Bubble Sort, Insertion Sort, Merge Sort, Advanced Sorting techniques - Heap Sort, Quick Sort, Sorting in Linear Time - Bucket Sort, Radix Sort and Count Sort, Searching Techniques, Medians & Order Statistics, complexity analysis;

UNIT-III

Lower Bounding Techniques: Decision Trees **Balanced Trees:** Red-Black Trees

UNIT-IV

Advanced Analysis Technique: Amortized analysis **Graphs:** Graph Algorithms–Breadth First Search, Depth First Search and its Applications, Minimum Spanning Trees.

UNIT-V

String Processing: String Matching, KMP Technique.

Suggested Readings

2. Sarabasse., Gelder, A.V. (1999). Computer Algorithm – Introduction to Design and Analysis (3rd ed.). New Delhi: Pearson

16CSU402	SOFTWARE ENGINEERING	Semester – IV 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
- To Work effectively as leader/member of a development team to deliver quality software artifacts.
- To Analyze, specify and document software requirements for a software system.
- To Implement a given software design using sound development practices.
- To Verify, validate, assess and assure the quality of software artifacts.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its COst and time.

Course Outcomes(COs)

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its COst and time.

UNIT-I

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

UNIT-II:

Requirement Analysis; Initiating Requirement EngineeringProcess- Requirement Analysis and Modeling Techniques- FlowOriented Modeling- Need for SRS- Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

UNIT-III:

Risk Management: Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, **Quality Management-** Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

UNIT-IV:

Design Engineering-Design Concepts, Architectural Design Elements, Software Architecture,Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

UNIT-V

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

Semester – IV

16CSU403 DATA BASE MANAGEMENT SYSTEMS **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To retrieve any type of information from a data base by formulating complex queries in SQL.
- To analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Retrieve any type of information from a data base by formulating complex queries in SQL.
6. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

UNIT-I

Introduction: Characteristics of database approach, data models, database system architecture and data independence. **Entity Relationship(ER) Modeling:** Entity types, relationships, constraints.

UNIT-II

Relation data model: Relational model concepts, relational constraints, relational algebra.

UNIT-III

Relation data model: SQLqueries **Database design:** Mapping ER/EER model to relational database, functional dependencies, Lossless decomposition.

UNIT-IV

Database design: Normal forms (upto BCNF).**Transaction Processing :** ACID properties, concurrency control

UNIT-V

File Structure and Indexing (8 Lectures) Operations on files, File of Unordered and ordered records, overview of File organizations, Indexing structures for files(Primary index, secondary index, clustering index), Multilevel indexing using B and B+ trees.

16CSU404A	**HTML PROGRAMMING**	**Semester – IV** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Understand the fundamentals of HTML and use different formatting options
- To Create tables and frames
- To insert a graphic and links within a web page.
- To insert ordered and unordered lists within a web page.
- To use cascading style sheets.
- To validate and publish a web page.

Course Outcomes (COs)

1. Understand the fundamentals of HTML and use different formatting options
2. Create tables and frames
3. Insert a graphic and links within a web page.
4. Insert ordered and unordered lists within a web page.
5. Use cascading style sheets.
6. Validate and publish a web page.

Unit-I:
Introduction The Basics: The Head, the Body, Colors, Attributes, Lists, ordered and unordered

Unit-II
Links Introduction: Relative Links, Absolute Links ,Link Attributes ,Using the ID Attribute to Link Within a Document

Unit-III:
Images: Putting an Image on a Page ,Using Images as Links, Putting an Image in the Background

Unit IV:
Tables: Creating a Table, Table Headers, Captions, Spanning Multiple Columns ,Styling Table

Unit V :
Forms : Basic Input and Attributes ,Other Kinds of Inputs ,Styling forms with CSS ,Where To Go From Here

16CSU404B	XML PROGRAMMING	Semester – IV 3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objective

- To learn rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
- To Construct Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
- To develop dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
- To create valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
- To learn to display XML documents using CSS.
- To construct of complex queries over XML documents using XPath and XQuery.

Course Outcomes(COs)

1. Learning rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
2. Constructing Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
3. Developing dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
4. Creating valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
5. Learning to display XML documents using CSS.
6. Construction of complex queries over XML documents using XPath and XQuery.

UNIT-I

Introduction: Understanding Mark-up Languages, Introduction to XML and its Goals.

UNIT-II

XML Basics: XML Structure and Syntax, Document classes and Rules.

UNIT-III

Other XML Concepts: Scripting XML

UNIT-IV

Other XML Concepts: XML as Data, Linking with XML

UNIT-V

XML with Style: XSL –Style Sheet Basics, XSL basics, XSL style sheets.

Suggested Readings

1. William, J. Pardi. XML in action web technology.

16CSU411 DESIGN AND ANALYSIS OF ALGORITHMS - PRACTICAL

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To learn mathematical background for analysis of algorithm
- To learn various advanced data structures.
- To understand the concept of designing an algorithm.
- To learn dynamic programming and greedy method.
- To understand the concept of pattern matching
- To learn advanced tree and graph applications

Course Outcomes(COs)

1. Learn to choose appropriate advanced data structure for given problem
2. Knowledge to calculate complexity.
3. Select appropriate design techniques to solve real world problems.
4. Apply the dynamic programming technique to solve the problems.
5. Apply the greedy programming technique to solve the problems.
6. Select a proper pattern matching algorithm for given problem

List of Programs

1. Implement Insertion Sort (The program should report the number of comparisons) ii. Implement Merge Sort(The program should report the number of comparisons)
2. Implement Heap Sort(The program should report the number of comparisons)
3. Implement Randomized Quick sort (The program should report the number of comparisons)
4. Implement Radix Sort
5. Create a Red-Black Tree and perform following operations on it: i. Insert a node
ii. Delete a node
iii. Search for a number & also report the color of the node containing this number.
6. Write a program to determine the LCS of two given sequences
7. Implement Breadth-First Search in a graph
8. Implement Depth-First Search in a graph
9. Write a program to determine the minimum spanning tree of a graph

For the algorithms at S.No 1 to 3 test run the algorithm on 100 different inputs of sizes varying from 30 to 1000. Count the number of comparisons and draw the graph. Compare it with a graph of nlogn.

16CSU412	**SOFTWARE ENGINEERING - PRACTICAL**	**Semester – IV** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
- To Work effectively as leader/member of a development team to deliver quality software artifacts.
- To Analyze, specify and document software requirements for a software system.
- To Implement a given software design using sound development practices.
- To Verify, validate, assess and assure the quality of software artifacts.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its COst and time.

Course Outcomes(COs)

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its COst and time.

S. No	Practical Title
1.	• Problem Statement • Process Model
2.	Requirement Analysis: • Creating a Data Flow • Data Dictionary, Use Cases
3.	Project Management: • Computing FP • Effort • Schedule, Risk Table, Timeline chart
4.	Design Engineering: • Architectural Design • Data Design, Component Level Design
5.	Testing: • Basis Path Testing

Sample Projects:

1. **Criminal Record Management**: Implement a criminal record management system for jailers, police officers and CBI officers
2. **DTC Route Information**: Online information about the bus routes and their frequency and fares
3. **Car Pooling**: To maintain a web based intranet application that enables the corporate employees within an organization to avail the facility of carpooling effectively.
4. Patient Appointment and Prescription Management System
5. Organized Retail Shopping Management Software
6. Online Hotel Reservation Service System
7. Examination and Result computation system
8. Automatic Internal Assessment System
9. Parking Allocation System
10. Wholesale Management System

Semester – IV

16CSU413 DATA BASE MANAGEMENT SYSTEMS - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To retrieve any type of information from a data base by formulating complex queries in SQL.
- To analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Retrieve any type of information from a data base by formulating complex queries in SQL.
6. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

1.Create and use the following database schema to answer the given queries.

EMPLOYEE Schema

Field	Type	NULL	KEY	DEFAULT
Eno	Char(3)	NO	PRI	NIL
Ename	Varchar(50)	NO		NIL
Job_type	Varchar(50)	NO		NIL
Manager	Char(3)	Yes	FK	NIL
Hire_date	Date	NO		NIL
Dno	Integer	YES	FK	NIL
Commission	Decimal(10,2)	YES		NIL
Salary	Decimal(7,2)	NO		NIL

DEPARTMENT Schema

Field	Type	NULL	KEY	DEFAULT
Dno	Integer	No	PRI	NULL
Dname	Varchar(50)	Yes		NULL
Location	Varchar(50)	Yes		New Delhi

Query List

1. Query to display Employee Name, Job, Hire Date, Employee Number; for each employee with the Employee Number appearing first.
2. Query to display unique Jobs from the Employee Table.
3. Query to display the Employee Name concatenated by a Job separated by a comma.
4. Query to display all the data from the Employee Table. Separate each Column by a comma and name the said column as THE_OUTPUT.
5. Query to display the Employee Name and Salary of all the employees earning more than $2850.
6. Query to display Employee Name and Department Number for the Employee No= 7900.
7. Query to display Employee Name and Salary for all employees whose salary is not in the range of $1500 and $2850.
8. Query to display Employee Name and Department No. of all the employees in Dept 10 and Dept 30 in the alphabetical order by name.
9. Query to display Name and Hire Date of every Employee who was hired in 1981.
10. Query to display Name and Job of all employees who don‘t have a current Manager.
11. Query to display the Name, Salary and Commission for all the employees who earn commission.
12. Sort the data in descending order of Salary and Commission.
13. Query to display Name of all the employees where the third letter of their name is _A‘.
14. Query to display Name of all employees either have two _R‘s or have two _A‘s in their name and are either in Dept No = 30 or their Manger‘s Employee No = 7788.
15. Query to display Name, Salary and Commission for all employees whose Commission Amount is 14 greater than their Salary increased by 5%.
16. Query to display the Current Date.
17. Query to display Name, Hire Date and Salary Review Date which is the 1st Monday after six months of employment.
18. Query to display Name and calculate the number of months between today and the date each employee was hired.
19. Query to display the following for each employee <E-Name> earns < Salary> monthly but wants < 3 * Current Salary >. Label the Column as Dream Salary.
20. Query to display Name with the 1st letter capitalized and all other letter lower case and length of their name of all the employees whose name starts with _J‘, ‘A‘ and _M‘.
21. Query to display Name, Hire Date and Day of the week on which the employee started.
22. Query to display Name, Department Name and Department No for all the employees.
23. Query to display Unique Listing of all Jobs that are in Department # 30.
24. Query to display Name, Dept Name of all employees who have an _A‘ in their name.

25. Query to display Name, Job, Department No. And Department Name for all the employees working at the Dallas location.
26. Query to display Name and Employee no. Along with their Manger‘s Name and the Manager‘s employee no; along with the Employees‘ Name who do not have a Manager.
27. Query to display Name, Dept No. And Salary of any employee whose department No. and salary matches both the department no. And the salary of any employee who earns a commission.
28. Query to display Name and Salaries represented by asterisks, where each asterisk (*) signifies $100.
29. Query to display the Highest, Lowest, Sum and Average Salaries of all the employees
30. Query to display the number of employees performing the same Job type functions.
31. Query to display the no. of managers without listing their names.
32. Query to display the Department Name, Location Name, No. of Employees and the average salary for all employees in that department.
33. Query to display Name and Hire Date for all employees in the same dept. as Blake.
34. Query to display the Employee No. And Name for all employees who earn more than the average salary.
35. Query to display Employee Number and Name for all employees who work in a department with any employee whose name contains a ‗T‘.
36. Query to display the names and salaries of all employees who report to King.
37. Query to display the department no, name and job for all employees in the Sales department.

16CSU414A HTML PROGRAMMING - PRACTICAL **Semester – IV**
3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Understand the fundamentals of HTML and use different formatting options
- To Create tables and frames
- To insert a graphic and links within a web page.
- To insert ordered and unordered lists within a web page.
- To use cascading style sheets.
- To validate and publish a web page.

Course Outcomes (COs)

1. Understand the fundamentals of HTML and use different formatting options
2. Create tables and frames
3. Insert a graphic and links within a web page.
4. Insert ordered and unordered lists within a web page.
5. Use cascading style sheets.
6. Validate and publish a web page.

List of Programs

1. Create an HTML document with the following formatting options:
I. Bold
II. Italics
III.Underline
IV. Headings (Using H1 to H6 heading styles)
V. Font (Type, Size and Color)
VI. Background (Colored background/Image in background)
VII. Paragraph
VIII. Line Break
IX. Horizontal Rule
X. Pre tag

2. Create an HTML document which consists of:
I. Ordered List
II. Unordered List
III. Nested List
IV. Image

3 Create an HTML document which implements Internal linking as well as External linking.

4 Create a table using HTML which consists of columns for Roll No., Student‘s name and grade.

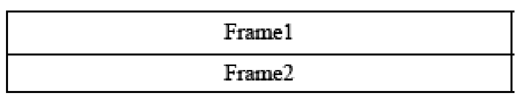
Result		
Roll No.	Name	Grade

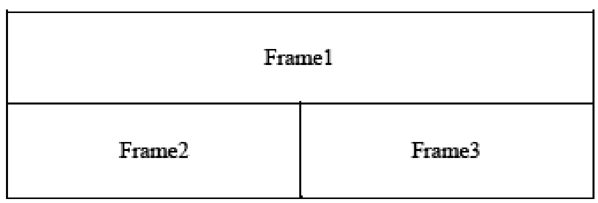
5 Create a Table with the following view:

6 Create a form using HTML which has the following types of controls:

I. Text Box
II. Option/radio buttons
III. Check boxes
IV. Reset and Submit buttons

Q.7 Create HTML documents (having multiple frames) in the following three formats:





Semester – IV

16CSU414B XML PROGRAMMING - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objective

- To learn rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
- To Construct Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
- To develop dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
- To create valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
- To learn to display XML documents using CSS.
- To construct of complex queries over XML documents using XPath and XQuery.

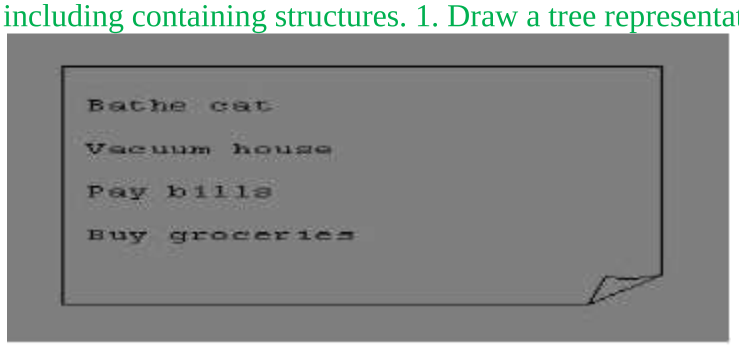
Course Outcomes(COs)

1. Learning rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
2. Constructing Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
3. Developing dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
4. Creating valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
5. Learning to display XML documents using CSS.
6. Construction of complex queries over XML documents using XPath and XQuery.

List of Programs

Exercise #1 – Information Structure

In this exercise, student will practice identifying the structure of an information object. For the sample document provided below: Label the information structures you see, including containing structures. 1. Draw a tree representation of the structure.



Exercise 2# Deconstructing an XML Document

In this exercise, student will practice identifying the explicit structure within an XML document. In a sense, this is the reverse of what you did in Exercise #1. For the sample

XML markup below, create a document-like representation (or a simple drawing) for the content contained within the XML tags:
<book>
<coverInfo>
<title>The XML Handbook</title>
<author>Charles F. Goldfarb</author>
<author>Paul Prescod</author>
<edition>Second</edition>
<description>The definitive XML resource: applications, products, and technologies. Revised and expanded—over 600 new pages. </description>
</coverInfo> </book>

Exercise #3 – Creating XML Markup
In this exercise, create some XML markup based on the tree representation from Exercise #1 above, and the content from the original sample document.

Exercise #4 – Well-Formedness
This exercise checks your understanding of the constraints for well-formedness. Are the following document instances well-formed? Explain any NO answers.
<list><title>The first list</title><item>An item</list>
<item>An item</item><item>Another item</item>
<para>Bathing a cat is a <emph>relatively</emph> easy task as long as the cat is willing.</para>
<bibl><title>How to Bathe a Cat<author></title>Merlin Bauer<author></bibl>

Exercise #5-Well Formedness
This exercise is a bit more challenging than the previous example. Here is a fragment of an XML document instance. Identify all the places where it fails to match the constraints for well-formedness.
<PROCEDURE><TITLEHow to Bathe a Cat</TITLE>
<OVERVIEW> This procedure tells you how to bathe a cat.
<WARNING></OVERVIEW>Cats don't like to take baths. You could get hurt doing this. Be sure to obtain all the required protective gear before you start.
</WARNING><EQUIPEMENT><ITEM>Hockey Mask <ITEM>Padded Full-body Kevlar Armor</ITEM><ITEM>Tub full of warm water</ITEM><ITEM>Towels </ITEM><ITEM>First Aid kit</ITEM><ITEM>Cat Shampoo</ITEM>
<EQUIPMENT><INSTRUCTIONS> <STEP> Locate the cat, who by now is hiding under the bed.</STEP><STEP>Place the cat in the tub of water.</STEP> <ITEM>Using the First Aid kit, repair the damage to your head and arms.</STEP> <STEP>Place the cat back in the tub and hold it down.</STEP> <STEP>Wash it really fast, then make an effort to dry it with the towels.</STEP> <STEP>Decide not to do this again. </STEP>
</INSTRUCTIONS>

Semester – V

16CSU501A **INFORMATION SECURITY** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To provides an overview of Information Security and Assurance.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- To explain concepts related to applied cryptography including the techniques for crypto-analysis symmetric and asymmetric cryptography.
- To understand the concepts of digital signature, message authentication code, hash functions and modes of encryption operations.
- To explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
- To understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. Explore the working principles and utilities of various cryptographic algorithms including secret key cryptography, hashes and message digests, and public key algorithms
2. State the basic concepts in information security
3. Explain concepts related to applied cryptography including the techniques for crypto-analysis symmetric and asymmetric cryptography.
4. Use digital signature, message authentication code, hash functions and modes of encryption operations.
5. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
6. Understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications

Unit I

Introduction : Security, Attacks, Computer Criminals, Security Services, Security Mechanisms.

Cryptography : Substitution ciphers, Transpositions Cipher, Confusion, diffusion.

Unit – II

Symmetric, Asymmetric Encryption. DES Modes of DES, Uses of Encryption, Hash function, key exchange, Digital Signatures, Digital Certificates

Unit – III

Program Security: Secure programs, Non malicious Program errors, Malicious codes virus, Trap doors, Salami attacks, Covert channels, Control against program. **Threats:**

Protection in OS: Memory and Address Protection, ACSUess control, File Protection, User Authentication**.**

Unit – IV

Database Security: Requirements, Reliability, Integrity, Sensitive data, Inference, Multilevel Security**. Security in Networks :** Threats in Networks, Security Controls, firewalls, Intrusion detection systems, Secure e-mails

Unit V

Administrating Security

Security Planning, Risk Analysis, Organisational Security Policy, Physical Security. Ethical issues in Security: Protecting Programs and data. Information and law.

Suggested Readings

1. Pfleeger, C. P., & Pfleeger, S. L.(2006). Security in Computing. New Delhi: Prentice Hall of India
2. Stallings, W. (2010). Network Security Essentials: Applications and Standards(4th ed.).

Semester – IV

16CSU501B **NETWORK PROGRAMMING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To describe the fundamental concepts of networks
- To demonstrate mastery of main protocols comprising the Internet.
- To develop skills in network programming techniques.
- To implement network services that communicate through the Internet.
- To apply the client - server model in networking applications.
- To practice networking commands available through the operating systems

Course Outcomes(COs)

Having successfully completed this course, the student will be able to:

1. Understand the fundamental concepts of networks
2. Demonstrate mastery of main protocols comprising the Internet.
3. Develop skills in network programming techniques.
4. Implement network services that communicate through the Internet.
5. Apply the client - server model in networking applications.
6. Practice networking commands available through the operating systems

UNIT-I

Transport Layer Protocols: TCP, UDP, SCTP protocol.

UNIT-II

Socket Programming: Socket Introduction; TCP Sockets; TCP Client/Server Example ; signal handling

UNIT-III

I/O multiplexing using sockets; Socket Options; UDP Sockets; UDP client server example; Address lookup using sockets.

UNIT-IV

Network Applications: Remote logging; Email; WWW and HTTP.

UNIT-V

LAN administration: Linux and TCP/IP networking: Network Management and Debugging.

Suggested Readings

1. Richard Stevens, W., Bill Fenner., & Andrew, M. Rudoff. (2003). Unix Network Programming, The sockets Networking API, Vol. 1(3rd ed.). New Delhi: PHI.

2. Forouzan, B. A. (2003). Data Communications and Networking(4th ed.). New Delhi: THM Publishing Company Ltd.,
3. Nemeth Synder., & Hein. (2010). Linux Administration Handbook (2nd ed.), New Delhi: Pearson Education.
4. Steven, R. (1990). Unix Network Programming (2nd ed.). New Delhi: PHI.

Semester – V

16CSU502A **MICROPROCESSOR** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To apply the fundamentals of assembly level programming of microprocessors.
- To build a program on a microprocessor using arithmetic & logical instruction set of 8086.
- To develop the assembly level programming using 8086 loop instruction set.
- To write programs based on string and procedure for 8086 microprocessor.
- To analyze abstract problems and apply a combination of hardware and software to address the problem
- To make use of standard test and measurement equipment to evaluate digital interfaces

Course Outcomes(COs)

1. Apply the fundamentals of assembly level programming of microprocessors.
2. Build a program on a microprocessor using arithmetic & logical instruction set of 8086.
3. Develop the assembly level programming using 8086 loop instruction set.
4. Write programs based on string and procedure for 8086 microprocessor.
5. Analyze abstract problems and apply a combination of hardware and software to address the problem
6. Make use of standard test and measurement equipment to evaluate digital interfaces

Unit – I- Introduction to Microprocessor

Introduction to 8085 – Pin Diagram – Microprocessor architecture and its operations– Demultiplexing the Bus – Generation of Control Signals – Fetching, Decoding and Execution of Instruction – Instruction Timing and Status Flag.

Unit – II – Addressing Modes

Instruction Set – Addressing Modes – Instruction Format – Simple Program – Memory and Machine Cycle – Memory Units Machine Cycle.

Unit – III – Interfacing Concepts

Peripheral I/O Instructions – Device Selection and Data Transfer – Types of Data Transfer – Input Interfacing – Input Interfacing using Decoders – Output Interfacing – LED and 7 Segment Display – Interfacing Memory.

Unit – IV - Peripheral Devices

Introduction to Programmable Peripheral Interface 8255 – Pin Diagram – Architecture – Modes of Operation: I/O and BSR – Architecture and Operation of 8251 (USART) – Architecture and Operation of Programmable Interrupt Controller (8259) – Architecture of 254(8253) Programmable Interval Timer/ Counter – DMA Controller(8259).

Unit – V - Applications

Delay Program – Traffic Light Control System – Water Level Controller – Stepper Motor Control – Interfacing DAC – Interfacing ADC – Temperature Measurement.

2..Gupta, M.K. (2006). Microprocessor Microcomputer, Microcontroller and Interfacing (First ed.). New Delhi: Paragon International Publisher.

3. Walter, A Triebel., & Avtar Singh.(2005). The 8088 and 8086 Microprocessors Programming, Interfacing, Software, Hardware, and Applications (4th ed.). New Delhi: PHI.

4. Ramesh, S.Gaonkar. (2000). Microprocessor Architecture, Programming and Application with 8085(4th ed.). New Delhi: Penram International Publishing.

Semester – V

16CSU502B **DIGITAL IMAGE PROCESSING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the fundamental concepts of a digital image processing system.
- To understand concepts of image enhancement techniques.
- To apply various Image Transforms.
- To analyze various Compression techniques and Morphological concepts
- To know various segmentation techniques, and object descriptors.
- To apply color models and various applications of image processing

Course Outcomes (COs)

1. Remember the fundamental concepts of image processing.
2. Explain different Image enhancement techniques
3. Understand and review image transforms
4. Analyze the basic algorithms used for image processing &image compression with morphological image processing.
5. Contrast Image Segmentation and Representation
6. Design & Synthesize Color image processing and its real world applications

UNIT-I

Introduction: Light, Brightness adaption and discrimination, Pixels, coordinate conventions, Imaging Geometry, Perspective Projection, Spatial Domain Filtering, sampling and quantization. Spatial Domain Filtering: Intensity transformations, contrast stretching, histogram equalization, Correlation and convolution, Smoothing filters, sharpening filters, gradient and Laplacian.

UNIT-II

Hotelling Transform, Fourier Transforms and properties, FFT (Decimation in Frequency and Decimation in Time Techniques), Convolution, Correlation, 2-D sampling, Discrete COsine Transform, Frequency domain filtering.

UNIT-III:

Image Restoration, Basic Framework, Interactive Restoration, Image deformation and geometric transformations, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Adaptive filters, Linear, Position invariant degradations, Estimation of Degradation functions, Restoration from projections, Image Compression-Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Entropy of an information source, Shannon's 1st Theorem, Huffman Coding, Arithmetic Coding, Golomb Coding, LZW coding, Transform Coding, Sub-image size selection, blocking artifacts, DCT implementation using FFT, Run length coding.

UNIT – IV

FAX compression (CSUITT Group-3 and Group-4), Symbol-based coding, JBIG-2, Bit-plane encoding, Bit-allocation, Zonal Coding, Threshold Coding, JPEG, Lossless predictive coding, Lossy predictive coding, Motion Compensation

Wavelet based Image Compression: Expansion of functions, Multi-resolution analysis, Scaling functions, MRA refinement equation, Wavelet series expansion, Discrete Wavelet Transform (DWT),Continuous Wavelet Transform, Fast Wavelet Transform, 2-D wavelet Transform, JPEG-2000 encoding, Digital Image Watermarking

UNIT-V

Morphological Image Processing: Basics, SE, Erosion, Dilation, Opening, Closing, Hit-or-Miss Transform, Boundary Detection, Hole filling, Connected components, convex hull, thinning, thickening, skeletons,pruning, Geodesic Dilation, Erosion, Reconstruction by dilation and erosion. Image Segmentation: Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding, Iterative thresholding,Otsu's method, Moving averages, Multivariable thresholding, Region-based segmentation, Watershed algorithm, Use of motion in segmentation

Suggested Readings

Semester – V

16CSU503A **MACHINE LEARNING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To introduce students to the basic concepts and techniques of Machine Learning.
- To develop skills of using recent machine learning software for solving practical problems.
- To gain experience of doing independent study and research**.**
- To recognize the characteristics of machine learning that make it useful to real-world problems.
- To characterize machine learning algorithms as supervised, semi-supervised, and unsupervised.
- To effectively use machine learning toolboxes.

Course Outcomes(COs)
On successful completion of the course the student should be

1. Remember the basic concepts and techniques of Machine Learning.
2. Develop skills of using recent machine learning software for solving practical problems.
3. of doing independent study and research**.**
4. To recognize the characteristics of machine learning that make it useful to real-world problems.
5. To characterize machine learning algorithms as supervised, semi-supervised, and unsupervised.
6. To effectively use machine learning toolboxes.

UNIT-I
Introduction: Concept of Machine Learning, Applications of Machine Learning, Key elements of Machine Learning, Supervised vs. Unsupervised Learning, Statistical Learning: Bayesian Method, The Naive Bayes Classifier

UNIT-II

Softwares for Machine Learning and Linear Algebra Overview : Plotting of Data, Vectorization, Matrices and Vectors: Addition, Multiplication, Transpose and Inverse using available tool such as MATLAB.

UNIT-III
Linear Regression: Prediction using Linear Regression, Gradient Descent, Linear Regression with one variable, Linear Regression with multiple variables, Polynomial Regression, Feature Scaling/Selection.

Logistic Regression: Classification using Logistic Regression, Logistic Regression vs. Linear Regression, Logistic Regression with one variable and with multiple variables.

UNIT-IV

Regularization: Regularization and its utility: The problem of Overfitting, Application of Regularization in Linear and Logistic Regression, Regularization and Bias/Variance.

UNIT-V

Neural Networks: Introduction, Model Representation, Gradient Descent vs. Perceptron Training, Stochastic Gradient Descent, Multilayer Perceptrons, Multiclass Representation, Backpropagation Algorithm.

Suggested Readings

Semester – V

16CSU503B **INTRODUCTION TO DATA SCIENCES** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objective

- To provide an overview of a new language R used for data science.
- To introduce students to the R programming environment and related eco-system and thus provide them with an in-demand skill-set, in both the research and business environments
- To introduce the extended R eCOsystem of libraries and packages
- To demonstrate usage of as standard Programming Language.
- To familiarize students with how various statistics like mean median etc. can be collected for data exploration in R
- To enable students to use R to conduct analytics on large real life datasets.

Course Outcomes (COs)

1. Install and use R for simple programming tasks.
2. Extend the functionality of R by using add-on packages
3. Extract data from files and other sources and perform various data manipulation tasks on them.
4. Code statistical functions in R.
5. Use R Graphics and Tables to visualize results of various statistical operations on data.
6. Apply the knowledge of R gained to data Analytics for real life applications.

UNIT- I

Data Scientist's Tool Box: Turning data into actionable knowledge, introduction to the tools that will be used in building data analysis software: version control, markdown, git, GitHub, R, and RStudio.

UNIT-II

R Programming Basics: Overview of R, R data types and objects, reading and writing data, Control structures, functions, scoping rules, dates and times, Loop functions, debugging tools, Simulation, code profiling

UNIT-III

Getting and Cleaning Data: Obtaining data from the web, from APIs, from databases and from colleagues in various formats. basics of data cleaning and making data ―tidy.

UNIT-IV

Exploratory Data Analysis: Essential exploratory techniques for summarizing data, applied before formal modeling commences, eliminating or sharpening potential hypotheses about the world that can be addressed by the data, common multivariate statistical techniques used to visualize high-dimensional data.

UNIT-V

Reproducible Research: Concepts and tools behind reporting modern data analyses in a reproducible manner, To write a document using R markdown, integrate live R code into a literate statistical program, compile R markdown documents using knitr and related tools, and organize a data analysis so that it is reproducible and accessible to others.

16CSU504A	**Oracle (SQL/PL-SQL)**	**Semester – V** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0   **Marks:** Int : **40** Ext : **60**   Total: **100**

Course Objectives

- To gain knowledge about using ORACLE software for developing databases and using them.
- To know the SQL *plus interface and its commands.
- To create, alter tables, views, indexes ,synonyms and constraints using DDL statements.
- To Query the database using DML statements and write complex queries for information retrieval.
- To gain knowledge about transaction control in Oracle
- To write procedures and functions using PL/SQL.

Course Outcomes(COs)

1. Understand the ORACLE software for developing databases and using them.
2. Using the SQL *plus interface and its commands.
3. creating, altering tables, views, indexes ,synonyms and constraints using DDL statements.
4. Querying the database using DML statements and write complex queries for information retrieval.
5. Apply transaction controls statements in Oracle
6. Write procedures and functions using PL/SQL.

UNIT-I

Introduction to Oracle as RDBMS SQL Vs. SQL * Plus: SQL Commands and Data types, Operators and Expressions, Introduction to SQL * Plus.

UNIT-II

Managing Tables and Data: Creating and Altering Tables (Including constraints) ,Data Manipulation Command like Insert, update, delete, SELECT statement with WHERE, GROUP BY and HAVING, ORDER BY, DISTINCT, Special operator like IN, ANY, ALL BETWEEN, EXISTS, LIKE, Join, Built in functions

UNIT-III

Other Database Objects - View, Synonyms, Index

UNIT-IV

Transaction Control Statements - Commit, Rollback, Savepoint

UNIT-V

Introduction to PL/SQL SQL v/s PL/SQL, PL/SQL Block Structure, Language construct of PL/SQL (Variables, Basic and Composite Data type, Conditions looping etc.) TYPE and % ROWTYPE , Using Cursor (Implicit, Explicit)

Suggested Readings

1. Ivan Bayross. (2010). SQL, PL/SQL the Programming Language of Oracle. New Delhi: BPB Publications.

5. Michael Mclaughlin. (2008). Oracle Database 11g PL/SQL Programming. Oracle Press.
6. John Watson.,& Roopesh Ramklass. (2008). OCA Oracle Database11g SQL Fundamentals I Exam Guide. Oracle Press.

Semester – V

16CSU504B **PROGRAMMING IN PYTHON** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Learn Syntax and Semantics of Python
- To create Functions in Python.
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications

Course Outcomes (COs)

Upon completion of this the course students will be able to:

1. Develop algorithmic solutions to simple computational problems
2. Structure simple Python programs for solving problems.
3. Learn to use logical constructs in Python
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs.

UNIT-I

Planning the Computer Program: Concept of problem solving-Problem definition-Program design-Debugging-Types of errors in programming-Documentation.

UNIT-II

Techniques of Problem Solving: Flowcharting-decision table-algorithms-Structured programming concepts-Programming methodologies: top-down and bottom-up Programming.

UNIT-III

Overview of Programming: Structure of a Python Program-Elements of Python.

UNIT-IV

Introduction to Python: Python Interpreter-Using Python as calculator-Python shell-Indentation. Atoms-Identifiers and keywords-Literals-Strings-Operators(Arithmetic operator, Relational operator, Logical or Boolean operator, Assignment, Operator, Ternary operator, Bit wise operator, Increment or Decrement operator).

UNIT-V

Creating Python Programs: Input and Output Statements-Control statements(Branching, Looping, Conditional Statement, Exit function, Difference between break, continue and pass.). Defining Functions-Default arguments.

Suggested Readings

6. http://www.ibiblio.org/g2swap/byteofpython/read/.

		Semester – V
16CSU511A	**INFORMATION SECURITY - PRACTICAL**	**4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To provides an overview of Information Security and Assurance.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- To explain concepts related to applied cryptography including the techniques for crypto-analysis symmetric and asymmetric cryptography.
- To understand the concepts of digital signature, message authentication code, hash functions and modes of encryption operations.
- To explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
- To understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. Explore the working principles and utilities of various cryptographic algorithms including secret key cryptography, hashes and message digests, and public key algorithms
2. State the basic concepts in information security
3. Explain concepts related to applied cryptography including the techniques for crypto-analysis symmetric and asymmetric cryptography.
4. Use digital signature, message authentication code, hash functions and modes of encryption operations.
5. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
6. Understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications

List of programs

1. Demonstrate the use of Network tools: ping, ipconfig, ifconfig, tracert, arp, netstat, whois
2. Use of Password cracking tools : John the Ripper, Ophcrack. Verify the trength of passwords using these tools.
3. Perform encryption and decryption of Caesar cipher. Write a script for performing these operations.
4. Perform encryption and decryption of a Rail fence cipher. Write a script for performing these operations.
5. Use nmap/zenmap to analyse a remote machine.
6. Use Burp proxy to capture and modify the message.
7. Demonstrate sending of a protected word document.

8. Demonstrate sending of a digitally signed document.
9. Demonstrate sending of a protected worksheet.
10. Demonstrate use of steganography tools.
11. Demonstrate use of gpg utility for signing and encrypting purposes.

Semester – V

16CSU511B NETWORK PROGRAMMING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To describe the fundamental concepts of networks
- To demonstrate mastery of main protocols comprising the Internet.
- To develop skills in network programming techniques.
- To implement network services that communicate through the Internet.
- To apply the client - server model in networking applications.
- To practice networking commands available through the operating systems

Course Outcomes(COs)

Having successfully completed this course, the student will be able to:

1. Understand the fundamental concepts of networks
2. Demonstrate mastery of main protocols comprising the Internet.
3. Develop skills in network programming techniques.
4. Implement network services that communicate through the Internet.
5. Apply the client - server model in networking applications.
6. Practice networking commands available through the operating systems

List of programs

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Semester – V

16CSU512A MICROPROCESSOR - PRACTICAL **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To apply the fundamentals of assembly level programming of microprocessors.
- To build a program on a microprocessor using arithmetic & logical instruction set of 8086.
- To develop the assembly level programming using 8086 loop instruction set.
- To write programs based on string and procedure for 8086 microprocessor.
- To analyze abstract problems and apply a combination of hardware and software to address the problem
- To make use of standard test and measurement equipment to evaluate digital interfaces

Course Outcomes(COs)

1. Apply the fundamentals of assembly level programming of microprocessors.
2. Build a program on a microprocessor using arithmetic & logical instruction set of 8086.
3. Develop the assembly level programming using 8086 loop instruction set.
4. Write programs based on string and procedure for 8086 microprocessor.
5. Analyze abstract problems and apply a combination of hardware and software to address the problem
6. Make use of standard test and measurement equipment to evaluate digital interfaces

Assembly Language Programming

1. Addition of 8/16 bit and array of Data
2. Subtraction of 8/16 bit and array of Data
3. Multiplication of 8-bit Number
4. Division of 8-bit Number Write a program for 32-bit binary division and multiplication
5. Fill and Transfer an Array of Data
6. Ascending and Descending of an array
7. Data Transfer using Parallel Ports
8. Stepper Motor Interface
9. Traffic Light Interface
10. A/D and D/A Converter

Semester – V

16CSU512B DIGITAL IMAGE PROCESSING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the fundamental concepts of a digital image processing system.
- To understand concepts of image enhancement techniques.
- To apply various Image Transforms.
- To analyze various Compression techniques and Morphological concepts
- To know various segmentation techniques, and object descriptors.
- To apply color models and various applications of image processing

Course Outcomes (COs)

1. Remember the fundamental concepts of image processing.
2. Explain different Image enhancement techniques
3. Understand and review image transforms
4. Analyze the basic algorithms used for image processing &image compression with morphological image processing.
5. Contrast Image Segmentation and Representation
6. Design & Synthesize Color image processing and its real world applications

List of Programs

1. Write program to read and display digital image using MATLAB or SCILAB
   a. Become familiar with SCILAB/MATLAB Basic commands
   b. Read and display image in SCILAB/MATLAB
   c. Resize given image
   d. Convert given color image into gray-scale image
   e. Convert given color/gray-scale image into black & white image
   f. Draw image profile
   g. Separate color image in three R G & B planes
   h. Create color image using R, G and B three separate planes
   i. Flow control and LOOP in SCILAB
   j. Write given 2-D data in image file
2. To write and execute image processing programs using point processing method
   a. Obtain Negative image   b. Obtain Flip image
   b. Thresholding   d. Contrast stretching
3. To write and execute programs for image arithmetic operations
   a. Addition of two images
   b. Subtract one image from other image
   c. Calculate mean value of image
   d. Different Brightness by changing mean value
4. To write and execute programs for image logical operations
   a. AND operation between two images

b. OR operation between two images
c. Calculate intersection of two images
d. Water Marking using EX-OR operation
e. NOT operation (Negative image)

5. To write a program for histogram calculation and equalization using
    a. Standard MATLAB function
    b. Program without using standard MATLAB functions
    c. C Program
6. To write and execute program for geometric transformation of image
    a. Translation
    b. Scaling
    c. Rotation
    d. Shrinking
    e. Zooming
7. To understand various image noise models and to write programs for
    a. image restoration
    b. Remove Salt and Pepper Noise
    c. Minimize Gaussian noise
    d. Median filter and Weiner filter
8. Write and execute programs to remove noise using spatial filters
    a. Understand 1-D and 2-D convolution process
    b. Use 3x3 Mask for low pass filter and high pass filter
9. Write and execute programs for image frequency domain filtering
    a. Apply FFT on given image
    b. Perform low pass and high pass filtering in frequency domain
    c. Apply IFFT to reconstruct image
10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask
11. Write and execute program for image morphological operations erosion and dilation.
12. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.

16CSU513A	**MACHINE LEARNING - PRACTICAL**	**Semester – V** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To introduce students to the basic concepts and techniques of Machine Learning.
- To develop skills of using recent machine learning software for solving practical problems.
- To gain experience of doing independent study and research**.**
- To recognize the characteristics of machine learning that make it useful to real-world problems.
- To characterize machine learning algorithms as supervised, semi-supervised, and unsupervised.
- To effectively use machine learning toolboxes.

Course Outcomes(COs)
On successful completion of the course the student should be

1. Remember the basic concepts and techniques of Machine Learning.
2. Develop skills of using recent machine learning software for solving practical problems.
3. of doing independent study and research**.**
4. To recognize the characteristics of machine learning that make it useful to real-world problems.
5. To characterize machine learning algorithms as supervised, semi-supervised, and unsupervised.
6. To effectively use machine learning toolboxes.

List of programs

1. Perform elementary mathematical operations in Octave/MATLAB like addition, multiplication, division and exponentiation.

2. Perform elementary logical operations in Octave/MATLAB (like OR, AND, Checking for Equality, NOT, XOR).

3. Create, initialize and display simple variables and simple strings and use simple formatting for variable.

4. Create/Define single dimension / multi-dimension arrays, and arrays with specific values like array of all ones, all zeros, array with random values within a range, or a diagonal matrix.

5. Use command to compute the size of a matrix, size/length of a particular row/column, load data from a text file, store matrix data to a text file, finding out variables and their features in the current scope.

6. Perform basic operations on matrices (like addition, subtraction, multiplication) and display specific rows or columns of the matrix.

7. Perform other matrix operations like converting matrix data to absolute values, taking the negative of matrix values, additing/removing rows/columns from a matrix, finding the maximum or minimum values in a matrix or in a row/column, and finding the sum of some/all elements in a matrix.

8. Create various type of plots/charts like histograms, plot based on sine/COsine function based on data from a matrix. Further label different axes in a plot and data in a plot.

9. Generate different subplots from a given plot and color plot data.

10. Use conditional statements and different type of loops based on simple example/s.

11. Perform vectorized implementation of simple matrix operation like finding the transpose of a matrix, adding, subtracting or multiplying two matrices.

12. Implement Linear Regression problem. For example, based on a dataset comprising of existing set of prices and area/size of the houses, predict the estimated price of a given house.

13. Based on multiple features/variables perform Linear Regression. For example, based on a number of additional features like number of bedrooms, servant room, number of balconies, number of houses of years a house has been built – predict the price of a house.

14. Implement a classification/ logistic regression problem. For example based on different features of students data, classify, whether a student is suitable for a particular activity. Based on the available dataset, a student can also implement another classification problem like checking whether an email is spam or not.

15. Use some function for regularization of dataset based on problem 14.

16. Use some function for neural networks, like Stochastic Gradient Descent or back propagation - algorithm to predict the value of a variable based on the dataset of problem

16CSU513B **INTRODUCTION TO DATA SCIENCES – PRACTICAL** **Semester – V**
4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objective

- To provide an overview of a new language R used for data science.
- To introduce students to the R programming environment and related eco-system and thus provide them with an in-demand skill-set, in both the research and business environments
- To introduce the extended R eCOsystem of libraries and packages
- To demonstrate usage of as standard Programming Language.
- To familiarize students with how various statistics like mean median etc. can be collected for data exploration in R
- To enable students to use R to conduct analytics on large real life datasets.

Course Outcomes (COs)

1. Install and use R for simple programming tasks.
2. Extend the functionality of R by using add-on packages
3. Extract data from files and other sources and perform various data manipulation tasks on them.
4. Code statistical functions in R.
5. Use R Graphics and Tables to visualize results of various statistical operations on data.
6. Apply the knowledge of R gained to data Analytics for real life applications.

List of Programs

1. Write a program that prints _hello World to the screen.
2. Write a program that asks the user for a number n and prints the sum of the numbers 1 to n
3. Write a program that prints a multiplication table for numbers up to 12.
4. Write a function that returns the largest element in a list.
5. Write a function that computes the running total of a list.
6. Write a function that tests whether a string is a palindrome.
7. Implement linear search.
8. Implement binary search.
9. Implement matrices addition , subtraction and Multiplication
10. Fifteen students were enrolled in a course.
    There ages were: 20 20 20 20 20 21 21 21
    22 22 22 22 23 23 23
    i. Find the median age of all
    students under 22 years ii. Find
    the median age of all students

iii. Find the mean
age of all students iv.
Find the modal age
for all students

v. Two more students enter the class. The age of both students is 23. What is now mean, mode and median ?

11. Following table gives a frequency distribution of systolic blood pressure. Compute all the measures of dispersion.

Midpoint	95.5	105.5	115.5	125.5	135.5	145.5	155.5	165.5	175.5
Number	5	8	22	27	17	9	5	5	2

12. Obtain probability distribution of , where X is number of spots showing when a six-sided symmetric die (i.e. all six faces of the die are equally likely) is rolled. Simulate random samples of sizes 40, 70 and 100 respectively and verify the frequency interpretation of probability.
13. Make visual representations of data using the base, lattice, and ggplot2 plotting systems in R, apply basic principles of data graphics to create rich analytic graphics from available datasets.
14. Use Git / Github software to create Github account. Also, create a repo using Github.

Semester – V

16CSU514A Oracle (SQL/PL-SQL) LAB - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To gain knowledge about using ORACLE software for developing databases and using them.
- To know the SQL *plus interface and its commands.
- To create, alter tables, views, indexes ,synonyms and constraints using DDL statements.
- To Query the database using DML statements and write complex queries for information retrieval.
- To gain knowledge about transaction control in Oracle
- To write procedures and functions using PL/SQL.

Course Outcomes(COs)

1. Understand the ORACLE software for developing databases and using them.
2. Using the SQL *plus interface and its commands.
3. creating, altering tables, views, indexes ,synonyms and constraints using DDL statements.
4. Querying the database using DML statements and write complex queries for information retrieval.
5. Apply transaction controls statements in Oracle
6. Write procedures and functions using PL/SQL.

[SQL COMMANDS]

1) SQL* formatting commands
2) To create a table, alter and drop table.
3) To perform select, update, insert and delete operation in a table.
4) To make use of different clauses viz where, group by, having, order by, union and intersection,
5) To study different constraints.

[SQL FUNCTION]

6) To use oracle function viz aggregate, numeric, conversion, string function.
7) To understand use and working with joins.
8) To make use of transaction control statement viz rollback, commit and save point.
9) To make views of a table.
10) To make indexes of a table.

[PL/SQL]

11) To understand working with PL/SQL
12) To implement Cursor on a table.
13) To implement trigger on a table

Semester – V

16CSU514B PROGRAMMING IN PYTHON - PRACTICAL **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Learn Syntax and Semantics of Python
- To create Functions in Python.
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications

Course Outcomes (COs)

Upon completion of this the course students will be able to:

1. Develop algorithmic solutions to simple computational problems
2. Structure simple Python programs for solving problems.
3. Learn to use logical constructs in Python
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs.

List of Programs

1. Write a menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.
2. WAP to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades according to the following criteria :
   Grade A: Percentage >=80
   Grade B: Percentage>=70 and <80
   Grade C: Percentage>=60 and <70
   Grade D: Percentage>=40 and <60
   Grade E: Percentage<40
3. Write a menu-driven program, using user-defined functions to find the area of rectangle, square, circle and triangle by accepting suitable input parameters from user.
4. WAP to display the first n terms of Fibonacci series.
5. WAP to find factorial of the given number.
6. WAP to find sum of the following series for n terms: 1 – 2/2! + 3/3! - - - - - n/n!
7. WAP to calculate the sum and product of two compatible matrices.

16CSU601A	**CLOUD COMPUTING**	**Semester – VI** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Provide a good understanding of the concepts, standards in Cloud computing
- To make the student understand about the cloud service providers and their usage.
- To learn how to secure the data in cloud depending.
- To understand the various service level agreements.
- To understand the cloud using various case studies.
- to portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.
2. Know the architecture of the cloud and the usage of clouds.
3. Secure their data from the security issues.
4. Make the students to work based on the various service level agreements.
5. Work with the traditional cloud and Microsoft azure, etc.
6. Provide a good understanding of the concepts, standards and protocols in Cloud computing

UNIT-I

Overview of Computing Paradigm: Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing.**Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

UNIT-II

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

UNIT-III

Case Studies: Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2 , Eucalyptus.

UNIT-IV

Service Management in Cloud Computing: Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

UNIT-V

Cloud Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

16CSU601B	**SYSTEM PROGRAMMING**	**Semester – VI** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
- To describe the various concepts of assemblers and macroprocessors.
- To understand how linker and loader create an executable program from an object module created by assembler and compiler.

Course Outcomes(COs)

1. Understand different components of system software.
2. This course enables for good understanding of the role of system programming and the scope of duties and tasks of a system programmer.
3. This course enables to learn the concepts and principles of developing system-level software (e.g., compiler, and networking software)
4. Understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
5. Describe the various concepts of assemblers and macroprocessors.
6. Understand how linker and loader create an executable program from an object module created by assembler and compiler.

UNIT-I

Assemblers & Loaders, Linkers: One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

UNIT-II

Lexical Analysis:

Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

UNIT-III

Parsing:

Bottom up parsing- LR parser, yaccess. **Intermediate representations: Three** address code generation, syntax directed translation, translation of types, control Statements.

UNIT-IV

Storage organization: Activation records stack allocation.

UNIT-V

Code Generation: Object code generation

16CSU602A	**DATA MINING**	**Semester – VI** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To introduce students to the basic concepts and techniques of Data Mining.
- To understand data mining fundamentals and characterize the kinds of patterns that can be discovered by association rule mining
- To compare and evaluate different data mining techniques like classification, prediction, etc.
- To cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To design data warehouse with dimensional modelling and apply OLAP operations.

Course Outcomes (COs)

Upon completion of this course students will be able to:

1. Understand the basic concepts and techniques of Data Mining
2. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
3. Design and deploy appropriate classification techniques
4. Understand the concept of clustering and its real time applications
5. Explore recent trends in data mining such as web mining, spatial-temporal mining
6. Analyze the basic concepts of data warehouse and OLAP operations

UNIT-I

Overview: Predictive and descriptive data mining techniques

UNIT-II

Supervised and unsupervised learning techniques

UNIT-III

Process of knowledge discovery in databases, pre-processing methods

UNIT-IV

Data Mining Techniques: Association Rule Mining, classification and regression techniques, clustering

UNIT-V

Scalability and data management issues in data mining algorithms, measures of interestingness.

16CSU602B	**COMPUTER GRAPHICS**	**Semester – VI** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To describe characteristics and functioning of common graphics input/output devices
- To learn the basic principles of 3- dimensional computer graphics
- To Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition
- To Provide an understanding of mapping from a world coordinates to device coordinates and projections.
- To extract scene with different clipping methods and its transformation to graphics display device.
- To explore projections and visible surface detection techniques for display of 3D scene on 2D screen

Course Outcomes(COs)

1. Understand the basics of computer graphics, different graphics systems and applications of computer graphics.
2. Discuss various algorithms for scan conversion and filling of basic objects and their comparative analysis.
3. Use of geometric transformations on graphics objects and their application in composite form.
4. Extract scene with different clipping methods and its transformation to graphics display device.
5. Explore projections and visible surface detection techniques for display of 3D scene on 2D screen.
6. Render projected objects to naturalize the scene in 2D view and use of illumination models for this..

UNIT-I

Introduction : Basic elements of Computer graphics, Applications of Computer Graphics.

UNIT-II

Graphics Hardware : Architecture of Raster and Random scan display devices, input/output devices.

UNIT-III

Fundamental Techniques in Graphics : Raster scan line, circle and ellipse drawing, thick primitives, Polygon filling, line and polygon clipping algorithms, 2D and 3D Geometric Transformations, 2D and 3D Viewing Transformations (Projections- Parallel and Perspective), Vanishing points.

UNIT-IV

Geometric Modeling : Representing curves & Surfaces.

UNIT V

Visible Surface determination : Hidden surface elimination. **Surface rendering :** Illumination and shading models. Basic color models and Computer Animation.

Suggested Readings

2. Hearn D. Baker. (2008). Computer Graphics. New Delhi: Prentice Hall of India.

3. Rogers, D.F. (1997). Procedural Elements for Computer Graphics. McGraw Hill.

4. Rogers, D.F. Adams. (1989). Mathematical Elements for Computer Graphics(2nd ed.). McGraw Hill.

16CSU603A	**PHP PROGRAMMING**	**Semester – VI** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn array data structure using PHP scripts.
- To work with open source applications that deal with database and website development.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create PHP scripts using array.
6. Develop dynamic web pages.

UNIT-I

Introduction to PHP:

- PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.)
- PHP with other technologies, scope of PHP
- Basic Syntax, PHP variables and constants
- Types of data in PHP , Expressions, scopes of a variable (local, global)
- PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwis , ternary and MOD operator.
- PHP operator Precedence and associativity

UNIT-II

Handling HTML form with PHP:

- Capturing Form Data
- GET and POST form methods
- Dealing with multi value fields
- Redirecting a form after submission

PHP conditional events and Loops:

- PHP IF Else conditional statements (Nested IF and Else)
- Switch case, while ,For and Do While Loop
- Goto , Break ,Continue and exit

UNIT-III

PHP Functions:

- Function, Need of Function , declaration and calling of a function
- PHP Function with arguments, Default Arguments in Function
- Function argument with call by value, call by reference
- Scope of Function Global and Local

UNIT-IV

String Manipulation and Regular Expression:

- Creating and accessing String , Searching & Replacing String
- Formatting, joining and splitting String , String Related Library functions
- Use and advantage of regular expression over inbuilt function
- Use of preg_match(), preg_replace(), preg_split() functions in regular expression

UNIT-V

Array:

- Anatomy of an Array ,Creating index based and Associative array ,Accessing array
- Looping with Index based array, with associative array using each() and foreach()
- Some useful Library function

16CSU603B **UNIX / LINUX PROGRAMMING** **Semester – VI**
3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objective

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques like scheduling or time management, space management and principles and how they can be implemented.
- To know about the issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.

Course Outcomes(COs)

1. This course teaches the student the concepts and principles that underlie modern operating systems, and a practice component to relate theoretical principles with operating system implementation.
2. Implement operating system abstractions in the development of application programs
3. Apply the principles of concurrency and synchronization to write correct concurrent programs/software
4. Implement basic resource management techniques like scheduling or time management, space management
5. Learn about processes and processor management, memory management schemes, file system and secondary storage management.
6. Learn about issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection

UNIT-I

Introduction What is Linux/Unix Operating systems, Difference between linux/unix and other operating systems , Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process

UNIT-II

System processes (an overview), External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

UNIT-III

User Management and the File System Types of Users, Creating users, Granting rights

User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

UNIT-IV

Shell introduction and Shell Scripting What is shell and various type of shell, Various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script , Shell variable (user defined and system variables)

UNIT-V

System calls, Using system calls Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell
Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

Suggested Readings

16CSU611A **CLOUD COMPUTING -PRACTICAL** **Semester – VI**
4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Provide a good understanding of the concepts, standards in Cloud computing
- To make the student understand about the cloud service providers and their usage.
- To learn how to secure the data in cloud depending.
- To understand the various service level agreements.
- To understand the cloud using various case studies.
- to portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.
2. Know the architecture of the cloud and the usage of clouds.
3. Secure their data from the security issues.
4. Make the students to work based on the various service level agreements.
5. Work with the traditional cloud and Microsoft azure, etc.
6. Provide a good understanding of the concepts, standards and protocols in Cloud computing

List of programs

1. Create virtual machines that access different programs on same platform.

2. Create virtual machines that access different programs on different platforms.

3. Working on tools used in cloud computing online-

   a) Storage

   b) Sharing of data

   c) Manage your calendar, to-do lists,

   d) A document editing tool

4. Exploring Google cloud

5. Exploring Microsoft cloud

6. Exploring Amazon cloud

16CSU611B	**SYSTEM PROGRAMMING - PRACTICAL**	**Semester – VI** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
- To describe the various concepts of assemblers and macroprocessors.
- To understand how linker and loader create an executable program from an object module created by assembler and compiler.

Course Outcomes(COs)

1. Understand different components of system software.
2. This course enables for good understanding of the role of system programming and the scope of duties and tasks of a system programmer.
3. This course enables to learn the concepts and principles of developing system-level software (e.g., compiler, and networking software)
4. Understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
5. Describe the various concepts of assemblers and macroprocessors.
6. Understand how linker and loader create an executable program from an object module created by assembler and compiler.

List of Programs

1. To implement an assembler for a hypothetical language.
2. To get familiar with lex: write a program to recognize numbers, identifiers.
3. To get familiar with yacc: write a desk calculator.

16CSU612A **DATA MINING - PRACTICAL** **Semester – VI** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To introduce students to the basic concepts and techniques of Data Mining.
- To understand data mining fundamentals and characterize the kinds of patterns that can be discovered by association rule mining
- To compare and evaluate different data mining techniques like classification, prediction, etc.
- To cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To design data warehouse with dimensional modelling and apply OLAP operations.

Course Outcomes (COs)

Upon completion of this course students will be able to:

1. Understand the basic concepts and techniques of Data Mining
2. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
3. Design and deploy appropriate classification techniques
4. Understand the concept of clustering and its real time applications
5. Explore recent trends in data mining such as web mining, spatial-temporal mining
6. Analyze the basic concepts of data warehouse and OLAP operations

Practical exercises based on concepts listed in theory.

16CSU612B	**COMPUTER GRAPHICS - PRACTICAL**	**Semester – VI** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To describe characteristics and functioning of common graphics input/output devices
- To learn the basic principles of 3- dimensional computer graphics
- To Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition
- To Provide an understanding of mapping from a world coordinates to device coordinates and projections.
- To extract scene with different clipping methods and its transformation to graphics display device.
- To explore projections and visible surface detection techniques for display of 3D scene on 2D screen

Course Outcomes(COs)

1. Understand the basics of computer graphics, different graphics systems and applications of computer graphics.
2. Discuss various algorithms for scan conversion and filling of basic objects and their comparative analysis.
3. Use of geometric transformations on graphics objects and their application in composite form.
4. Extract scene with different clipping methods and its transformation to graphics display device.
5. Explore projections and visible surface detection techniques for display of 3D scene on 2D screen.
6. Render projected objects to naturalize the scene in 2D view and use of illumination models for this..

List of Programs

1. Write a program to implement Bresenham‘s line drawing algorithm.
2. Write a program to implement mid-point circle drawing algorithm.
3. Write a program to clip a line using Cohen and Sutherland line clipping algorithm.
4. Write a program to clip a polygon using Sutherland Hodgeman algorithm.
5. Write a program to apply various 2D transformations on a 2D object (use homogenous coordinates).
6. Write a program to apply various 3D transformations on a 3D object and then apply parallel and perspective projection on it.
7. Write a program to draw Hermite/Bezier curve.

16CSU613A	**PHP PROGRAMMING - PRACTICAL**	**Semester – V** **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn array data structure using PHP scripts.
- To work with open source applications that deal with database and website development.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create PHP scripts using array.
6. Develop dynamic web pages.

List of programs

1. Create a PHP page using functions for comparing three integers and print the largest number.

2. Write a function to calculate the factorial of a number (non-negative integer). The function aCSUept the number as an argument.

3. WAP to check whether the given number is prime or not.

4. Create a PHP page which aCSUepts string from user. After submission that page displays the reverse of provided string.

5. Write a PHP function that checks if a string is all lower case.

6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)

7. WAP to sort an array.

8. Write a PHP script that removes the whitespaces from a string.
Sample string : 'The quick   brown fox' Expected Output : Thequickbrownfox

9. Write a PHP script that finds out the sum of first n odd numbers.

10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.

11. Write a PHP script that checks if a string contains another string.

12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.

13. Create a script to construct the following pattern, using nested for loop.

```
*
* *
* * *
* * * *
* * * * *
```

14. Write a simple PHP program to check that emails are valid.

15. WAP to print first n even numbers.

16. $color = array('white', 'green', 'red'')

Write a PHP script which will display the colors in the following way : Output :
white, green, red,
• green • red
• white

17. Using switch case and dropdown list display a ―Hello‖ message depending on the language selected in drop down list.

18. Write a PHP program to print FibonaCSUi series using recursion.

19. Write a PHP script to replace the first 'the' of the following string with 'That'.

Sample : 'the quick brown fox jumps over the lazy dog.'
Expected Result : That quick brown fox jumps over the lazy dog.

Semester – V

16CSU613B UNIX / LINUX PROGRAMMING - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objective

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques like scheduling or time management, space management and principles and how they can be implemented.
- To know about the issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.

Course Outcomes(COs)

1. This course teaches the student the concepts and principles that underlie modern operating systems, and a practice component to relate theoretical principles with operating system implementation.
2. Implement operating system abstractions in the development of application programs
3. Apply the principles of concurrency and synchronization to write correct concurrent programs/software
4. Implement basic resource management techniques like scheduling or time management, space management
5. Learn about processes and processor management, memory management schemes, file system and secondary storage management.
6. Learn about issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection

List of programs

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify ―call command to display calendars of the specified months.
3. Write a shell script to modify ―call command to display calendars of the specified range of months.
4. Write a shell script to accept a login name. If not a valid login name display message –―Entered login name is invalid.
5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of ―who command along with the total number of users .

7. Write a shell script to display the multiplication table any number,
8. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.
11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.
13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient C(n , x).
15. Write a shell script to find the permutation P(n,x).
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

Semester – VI

16CSU604 BIG DATA ANALYTICS 4H- 4C

Instruction Hours / week: L: 4T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

Course Objectives

- To provide an overview of an exciting growing field of Big Data analytics.
- To discuss the challenges traditional data mining algorithms face when analyzing Big Data.
- To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To introduce to the students several types of big data like social media, web graphs and data streams.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support

Course Outcomes(COs)

1. Explain the motivation for big data systems and identify the main sources of Big Data in the real world.
2. Demonstrate an ability to use frameworks like Hadoop, NOSQL to efficiently store retrieve and process Big Data for Analytics.
3. Implement several Data Intensive tasks using the Map Reduce Paradigm
4. Apply several newer algorithms for Clustering Classifying and finding associations in Big Data
5. Design algorithms to analyze Big dat a like streams, Web Graphs and Social Media data.
6. Design and implement successful Recommendation engines for enterprises.

UNIT-I

Fundamentals of Big Data - The Evolution of Data Management Understanding the Waves of Managing Data- Defining Big Data - Big Data Management Architecture- The Big Data Journey -Big Data Types-Defining Structured Data-Defining Unstructured Data-Putting Big Data Together.

UNIT-II

Big Data Stack- Basics of Virtualization - The importance of virtualization to big data - Server virtualization - Application virtualization - Network virtualization -Processor and memory virtualization - Data and storage virtualization-Abstraction and Virtualization-Implementing Virtualization to Work with Big Data.

UNIT-III

Hadoop - Hadoop Distributed File System - Hadoop MapReduce- The Hadoop foundation and ECOsystem.

UNIT-IV

Big Data Analytics-Text Analytics and Big Data-Customized Approaches for Analysis of Big Data

UNIT-V

Integrating Data Sources-Real-Time Data Streams and Complex Event Processing-Operationalizing Big Data.

Suggested Readings :

16CSU614 BIG DATA ANALYTICS - PRACTICAL **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To provide an overview of an exciting growing field of Big Data analytics.
- To discuss the challenges traditional data mining algorithms face when analyzing Big Data.
- To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To introduce to the students several types of big data like social media, web graphs and data streams.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support

Course Outcomes(COs)

1. Explain the motivation for big data systems and identify the main sources of Big Data in the real world.
2. Demonstrate an ability to use frameworks like Hadoop, NOSQL to efficiently store retrieve and process Big Data for Analytics.
3. Implement several Data Intensive tasks using the Map Reduce Paradigm
4. Apply several newer algorithms for Clustering Classifying and finding associations in Big Data
5. Design algorithms to analyze Big dat a like streams, Web Graphs and Social Media data.
6. Design and implement successful Recommendation engines for enterprises.

List of Programs

1. Implement a quicksort using scala.
2. Implement a auction service using scala.
3. Write a scala function to perform any 10 arithmetic operations.
4. Write a program to find the factorial of a given number using recursion.
5. Write a program for string manipulations.
6. Write a program for alphabetic order arrangement of a set of names.
7. Write a program for student records using scala list.
8. Implement any 5 map methods for maintaining customer details.
9. Implement employee records using Files
10. Write a program to copy the files using command line arguments.

Semester-I

16CSP101 WEB TECHNOLOGY 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the fundamentals of JavaScript and use different objects
- To know the basics of ASP.NET, its objects and web forms
- To relate SQL Server and ASP.NET through database components
- To develop web application that deals with database and website development.
- To understand XML , Namespace and W3C XML Schema
- To get Familiar with Document Object Model for XML

Course Outcomes(COs)

1. Create a client side scripting web application using forms and Java Script
2. Understand the server side scripting of ASP.NET, its objects and web forms
3. Relate SQL Server and ASP.NET through database components
4. Develop web application that deals with database and website development.
5. Understand XML , Namespace and W3C XML Schema
6. Understand the Document Object Model for XML and JavaScript.

UNIT-I

JavaScript: Introduction to JavaScript – Programming fundamentals – Functions and objects – Navigator object model. Form and form elements – Scripting frames and multiple windows – Event object.

UNIT-II

ASP.NET: **ASP & ASP.NET**: An Overview – Programming ASP.NET with VB.NET: ASP Data types – operators- Request Object- Response Object – Server object - Web forms and ASP.NET: Web forms

.

UNIT-III

ASP.NET: ASP.NET Configuration Scope and State: Configuration – state- application – session object- ASP.NET Objects & Components: Scripting object models- ASP components and controls- ASP.NET and SQL server-Using SQL server using database in ASP.NET applications ActiveX data objects

UNIT-IV

Creating Mark up with XML: Introduction – Parsers and well formed XML Documents – Parsing an XML Document - Characters – Mark up – CDATA Sections – XML Namespaces. Document Type Definition – Parsers Well formed and valid XML documents – Element type declarations – Attribute declarations- Attributes Types. Schemas – Schemas VS DTD’s – W3C XML Schema

UNIT-V

Document Object Model: DOM implementations – DOM with JavaScript – Components- Creating nodes – Traversing the DOM. Simple API for XML: DOM vs SAX – SAX based Parsers. XLink XPointer XInclude and XBase

16CSP102 CRYPTOGRAPHY AND NETWORK SECURITY 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

This course will provide students with a theoretical knowledge to understand the fundamental principles of access control models and techniques and,

- To understand theory of fundamental cryptography, encryption and decryption algorithms
- To know about various encryption techniques.
- To understand various Block Ciphers, DES and AES algorithms
- To understand the concept of Public key cryptography.
- To study about message authentication and hash functions
- To impart knowledge on web security, electronic mail security, firewalls

Course Outcomes (COs)

On successful completion of the course the student should be able to:

1. Classify the symmetric encryption techniques
2. Illustrate various Public key cryptographic techniques
3. Evaluate the authentication and hash algorithms.
4. Summarize the intrusion detection and its solutions to overcome the attacks.
5. Understand basic concepts of system level security
6. Build secure authentication systems by use of message authentication techniques.

UNIT -I

Introduction – Security Trends - The OSI Security Architecture – Security Attacks – Security Services – Security Mechanisms – A Model for Network Security. Classical Encryption Techniques – Symmetric Cipher Model – Substitution Techniques - Transposition Techniques – Rotor Machines - Steganography.

UNIT -II

Block Ciphers and Data Encryption Standard –Block Cipher Principles – The Data Encryption Standard - The Strength of DES –Advanced Encryption Standard (AES) – Evaluation Criteria for AES – The AES Cipher – Multiple Encryption and Triple DES – Block Cipher Modes of Operation – Stream Ciphers and RC4- modular Arithmetic and Euclidean Algorithm.

UNIT-III

Confidentiality using Symmetric Encryption – Placement of Encryption Function – Traffic Confidentiality – Key Distribution – Public key Cryptography and RSA – Principles of Public Key Cryptosystems – The RSA Algorithm- Basic prime numbers and Discrete Logarithms **-**Key Management – Diffie Hellman Key Exchange.

UNIT-IV

Message Authentication and hash functions – Authentication Functions – Message Authentication Codes (MAC's) Functions – Security of Hash Functions and MAC's Digital Signatures and Authentication Protocols – Digital Signatures – Digital Signature Standard

UNIT-V

Network Security Applications - Authentication Applications – KERBEROS – X.509 Authentication Service – Public Key Infrastructure – Electronic Mail Security – Pretty Good Privacy – S/MIME – IP Security.

Semester-I

16CSP103 DATA MINING AND WAREHOUSING 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To identify the scope and essentiality of Data Warehousing and Mining.
- To analyze data, choose relevant models and algorithms for respective applications.
- To study spatial and web data mining.
- To develop research interest towards advances in data mining.
- To introduce students to the basic concepts and techniques of Data Mining.
- To develop skills of using recent data mining software for solving practical problems.

Course Outcomes (COs)

1. Understand Data Warehouse fundamentals, Data Mining Principles
2. Design data warehouse with dimensional modelling and apply OLAP operations.
3. Identify appropriate data mining algorithms to solve real world problems
4. Compare and evaluate different data mining techniques like classification, prediction, clustering and association rule mining
5. Describe complex data types with respect to spatial and web mining.
6. Benefit the user experiences towards research and innovation integration.

UNIT-I

Introduction: Fundamentals of data mining - Data Mining Functionalities - Classification of Data Mining systems - Major issues in Data Mining.

Data Warehouse and OLAP Technology: An Overview - Data Warehouse - Multidimensional Data Model - Data Warehouse Architecture - Data Warehouse Implementation - From Data Warehousing to Data Mining.

UNIT-II

Data Preprocessing: Needs Preprocessing the Data - Data Cleaning - Data Integration and Transformation - Data Reduction - Discretization and Concept Hierarchy Generation - Online Data Storage.

UNIT-III

Mining Frequent Patterns Associations and Correlations: Basic Concepts - Efficient and Scalable Frequent item set Mining Methods - Mining various kinds of Association rules – From Association Mining to Correlation Analysis - Constraint-Based Association Mining.

UNIT-IV

Classification and Prediction: Issues Regarding Classification and Prediction - Classification by Decision Tree Induction - Rule-based Classification – Prediction - Accuracy and Error Measures - Evaluating the Accuracy of a classifier or Predictor - Ensemble Methods - incrvveases the Accuracy - Model Selection.

UNIT-V

Cluster Analysis Introduction : Types of Data in Cluster Analysis - A Categorization of Major Clustering Methods - Partitioning Methods - Hierarchical Methods – Density-Based Methods Grid-Based Methods - Model-Based Clustering Methods - Clustering High-Dimensional Data – Constraint-Based Cluster Analysis - Outlier Analysis.

Applications and Trends in Data mining: Text Mining - Web Mining - Multimedia Mining-Spatial Mining - Visual data mining.

16CSP104 **CLOUD COMPUTING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Provide a good understanding of the concepts, standards in Cloud computing
- To make the student understand about the cloud service providers and their usage.
- To learn how to secure the data in cloud depending.
- To understand the various service level agreements.
- To understand the cloud using various case studies.
- To portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.
2. Know the architecture of the cloud and the usage of clouds.
3. Secure their data from the security issues.
4. Make the students to work based on the various service level agreements.
5. Work with the traditional cloud and Microsoft azure, etc.
6. Provide a good understanding of the concepts, standards and protocols in Cloud computing

UNIT-I

Introduction to Cloud Computing -Characteristics of Cloud Computing -Paradigm shift -Benefits of cloud computing - Disadvantages of cloud computing- Role of Open Standards-Cloud Computing Architecture: Cloud computing stack-Public cloud -Private cloud -Hybrid cloud -Community cloud

UNIT –II

Infrastructure as a Service (IaaS) -Platform as a Service (PaaS) -Software as a Service (SaaS) -Identity as a Service (IDaaS) -Compliance as a Service (CaaS)- Cloud storage.

UNIT -III

Virtualization Technologies -Load Balancing and Virtualization -Advanced load balancing -The Google cloud - Hypervisors -Virtual machine types -VMware vSphere -Machine Imaging -Porting Applications -The Simple Cloud API - AppZero Virtual Application Appliance

UNIT-IV

Cloud Information Security Objectives -Confidentiality Integrity and Availability -Cloud Security Services - Relevant Cloud Security Design Principles -Cloud Computing Risk Issues -The CIA Triad

Privacy and Compliance Risks -Threats to Infrastructure Data and Access Control -Cloud Access Control Issues -Database Integrity Issues -Cloud Service Provider Risks Architectural Considerations
General Issues- Trusted Cloud Computing -Identity Management and Access Control

UNIT -V
Case Study on Open Source and Commercial Clouds: Microsoft Azure- Amazon EC2- Google Web services – Open Nebula.

16CSP105A WIRELESS AND MOBILE COMPUTING 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To learn about the concepts and principles of mobile computing;
- To explore both theoretical and practical issues of mobile computing;
- To develop skills of finding solutions and building software for mobile computing applications.
- To identify the use of mobile wireless technologies
- To know the types of mobile wireless technologies that are currently being used
- To understand the working of mobile wireless technologies access to network resources.

Course Outcomes (COs)

1. Grasp the concepts and features of mobile computing technologies and applications
2. Have a good understanding of how the underlying wireless and mobile communication networks work, their technical features, and what kinds of applications they can support
3. Identify the important issues of developing mobile computing systems and applications
4. Organize the functionalities and components of mobile computing systems into different layers and apply various techniques for realizing the functionalities;
5. Develop mobile computing applications by analyzing their characteristics and requirements, selecting the appropriate computing models and software architectures, and applying standard programming languages and tools;
6. Organize and manage software built for deployment and demonstration.

UNIT-I

Mobile computing applications and Platforms - Introduction – Strengths and Weakness of Wireless – Applications – Platforms to support Mobile Computing Applications –Wireless Networks – Wireless Architecture Security and Management – Wireless Business

UNIT-II

Mobile Computing Applications - Key Characteristics of Mobile Applications – Messaging for users – Mobile Portals – Special Applications – Mobile agent applications

UNIT-III

Wireless Internet Mobile IP and Wireless Web - Internet and Web – How it works – Mobile IP – WWW for wireless – Mobile Web Services - **Mobile Computing Platforms** - Introduction – Wireless Middleware – Wireless Gateways and Mobile Application Servers – WAP – I-MODE Wireless JAVA MMIT and BREW – Voice communication

UNIT-IV

Wireless LANs - IEEE 802.11 – MANET – HiperLAN2 - **Wireless Personal Area Networks** - IEEE 802.15 – Home Networks – Blue tooth LANs – Sensor Networks - **Cellular Networks** - Principles – First Generation(1G) Cellular – Paging networks – Second Generation(2G) Cellular – Data over Cellular Networks – Third Generation Cellular (3G) Networks – Beyond 3G

UNIT-V

WML: Formatting Output – Variables – Input Operations – WML Script – WML Libraries.

Semester-I

16CSP105B **SOFTWARE TESTING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objective:

- To study fundamental concepts in software testing, including software testing objectives, process, criteria, strategies, and methods.
- To discuss various software testing issues and solutions in software unit test; integration, regression, and system testing.
- To learn how to planning a test project, design test cases and data, conduct testing operations, manage software problems and defects, generate a testing report.
- To expose the advanced software testing topics, such as object-oriented software testing methods, and component-based software testing issues, challenges, and solutions.
- To gain software testing experience by applying software testing knowledge and methods to practice-oriented software testing projects.
- To gain the techniques and skills on how to use modern software testing tools to support software testing projects

Course Outcomes(COs)

1. Have the ability to understand the fundamental concepts in software testing, including software testing objectives, process, criteria, strategies, and methods
2. Have an ability to design and conduct a software test process for a software testing project.
3. Have an ability to identify the needs of software test automation, and define and develop a test tool to support test automation.
4. Have an ability understand and identify various software testing problems, and solve these problems by designing and selecting software test models, criteria, strategies, and methods.
5. Have an ability to use various communication methods and skills to communicate with their teammates to conduct their practice-oriented software testing projects.
6. Have an ability to use software testing methods and modern software testing tools for their testing projects.

UNIT-I

Introduction about testing Definition about software testing-Principles of testing-Phases of software project-Difference between QC and QA-Testing Verification and Validation. Life cycle models for Waterfall Spiral and V model.

UNIT-II

Types of testing-White box testing- Black box testing-Performance testing- Regression testing-Adhoc testing.

UNIT-III
Test planning-Test process-Test reporting-Best practices-Test planning check list-Test plan templates-Test case writing-Techniques for SRS document.

UNIT-IV
Software test automation-Skills needed for automation-What to automate-Scope of automation-Design and architecture for automation. Process model for automation-Selecting test tool.

UNIT-V
Test metrics – Types of metrics – Project metrics-progress metrics-productivity metrics. What is win runner-Methods of testing in win runner.

Semester-I

16CSP105C **SOFT COMPUTING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the scope and evolution of soft computing
- To learn the various soft computing frame works
- To be familiar with design of various neural networks
- To be exposed to fuzzy sets and fuzzy logic
- To understand fuzzy measures and reasoning
- To learn genetic programming.

Course Outcomes(COs)

1. Understand the scope and evolution of soft computing
2. Learn the various soft computing frame works
3. Be familiar with design of various neural networks
4. Be exposed to fuzzy sets and fuzzy logic
5. Understand fuzzy measures and reasoning
6. Learn genetic programming.

UNIT-I

Introduction : Evolution of Computing - Soft Computing Constituents – From Conventional AI to Computational Intelligence – Neural Networks - Scope and Evolution– Models of Neural Networks – Feed forward Networks – Supervised Learning Neural Networks – Associative memory networks – Unsupervised learning networks – Special Networks.

UNIT-II

Fuzzy Sets and Fuzzy Logic : Fuzzy Sets – Operations on Fuzzy Sets – Fuzzy Relations - Fuzzy Rules Non – interactive fuzzy sets – Fuzzification– Intuition inference Rank ordering – Defuzzification – Max-membership principle centroid method center of sums center of largest area.

UNIT-III

Fuzzy Measures and Reasoning: Fuzzy arithmetic and measures – Fuzzy reasoning – approximate reasoning – categorical qualitative syllogistic dispositional – Fuzzy inference systems – fuzzy decision making – individual multiperson multi objective Bayesian – fuzzy logic control system – architecture model and application.

UNIT-IV

Machine Learning And Genetic Algorithm : Machine Learning Techniques – Machine Learning Using Neural Nets – Genetic Algorithms (GA) – Simple and General GA – Classification of Genetic Algorithm – Messy Adaptive Hybrid Parallel – Holland Classifier System.

UNIT-V

Application and Implementation Soft Computing: Genetic algorithms -. Traveling Salesperson Problem Internet Search Techniques – Fuzzy Controllers – Bayesian Belief networks for Rocket Engine Control – Neural Network Genetic algorithm and Fuzzy logic implementation in C++ and Matlab.

Semester-I

16CSP111 WEB TECHNOLOGY – PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the fundamentals of JavaScript and use different objects
- To know the basics of ASP.NET, its objects and web forms
- To relate SQL Server and ASP.NET through database components
- To develop web application that deals with database and website development.
- To understand XML , Namespace and W3C XML Schema
- To get Familiar with Document Object Model for XML

Course Outcomes(COs)

1. Create a client side scripting web application using forms and Java Script
2. Understand the server side scripting of ASP.NET, its objects and web forms
3. Relate SQL Server and ASP.NET through database components
4. Develop web application that deals with database and website development.
5. Understand XML , Namespace and W3C XML Schema
6. Understand the Document Object Model for XML and JavaScript.

List of Programs

1. Using Javascript change the font color on reloading a webpage.
2. Generate web page that represents clock-every 60 see the page updated with server current time Using JavaScript.
3. Design a form and validate it using JavaScript.
4. Write Database Access program using ASP.NET
5. Program to retrieve Cookies information using ASP.NET
6. Program to count web page hits using ASP.NET
7. Create a menu in XML.
8. Create a demo for XSLT.
9. Display XML information in Tree structure format.

Semester-I

16CSP112 DATA MINING LAB USING MATLAB– PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives

- To identify the scope and essentiality of Data Warehousing and Mining.
- To analyze data, choose relevant models and algorithms for respective applications.
- To study spatial and web data mining.
- To develop research interest towards advances in data mining.
- To introduce students to the basic concepts and techniques of Data Mining.
- To develop skills of using recent data mining software for solving practical problems.

Course Outcomes (COs)

1. Understand Data Warehouse fundamentals, Data Mining Principles
2. Design data warehouse with dimensional modelling and apply OLAP operations.
3. Identify appropriate data mining algorithms to solve real world problems
4. Compare and evaluate different data mining techniques like classification, prediction, clustering and association rule mining
5. Describe complex data types with respect to spatial and web mining.
6. Benefit the user experiences towards research and innovation integration.

List of Programs

1. Write a MATLAB program to do all basic matrix operations in MATLAB for a multidimensional array.

2. Write a MATLAB code to compares and contrasts some similarity and distance measures for the following .
(a) Compute the Hamming distance and the Jaccard similarity between the following two binary vectors.

x = 0101010001
y = 0100011000

3. a. Plot the graph of $f(x) = \exp(-2x^2 - 3y^2)$. Choose appropriate intervals for x and y.
b. Plot the graph of f (x) = cos(x) sin(y). Choose appropriate intervals for x and y.

4. The number of children for different patients in a database is given with a vector
c= {31027634-20010156}
. Find the outliers in the set C using standard statistical parameters mean and variance.
a. If the threshold value is changed from ±3 standard deviations to ±2 standard deviations what additional outliers are found?

5. For a given data set X of three-dimensional samples
X=[{120}{314}{215}{016}{243}{442}{521}{777}{000}{333}]

a) find the outliers using the distance-based technique if

i) the threshold distance is 4 and threshold fraction p for non-neighbor samples is 3.

ii) the threshold distance is 6 and threshold fraction p for non-neighbor samples is 2.

6. Given the data set X with three input features and one output feature representing the classification of samples

X:

I_1	I_2	I_3	O
2.5	1.6	5.9	0
7.2	4.3	2.1	1
3.4	5.8	1.6	1
5.6	3.6	6.8	0
4.8	7.2	3.1	1
8.1	4.9	8.3	0
6.3	4.8	2.4	1

Rank the features using a comparison of means and variances

7. A data set for analysis includes only one attribute X:

X={71251859131219712121334513876}

a) What is the mean of the data set X?

b) What is the median?

c) What is the mode and what is the modality of the data set X?

d) Find the standard deviation for X.

e) Give a graphical summarization of the data set X using a boxplot representation.

f) Find outliers in the data set X.

8. Given a data set with two dimensions X and Y.

X	Y
1	5
4	2.75
3	3
5	2.5

a) Use a linear-regression method to calculate the parameters α and β where y= α + βx.

b) Estimate the quality of the model obtained in a) Using the correlation coefficient r.

9. The following is the data set X:

X:

Year	A	B
1996	7	100
1997	5	150
1998	7	120
1999	9	150

2000	5	130
2001	7	150

Create 2D Presentations:

a) Show a bar chart for the variable A
b) Show a histogram for the variable B.
c) Show a line chart for the variable B
d) Show a pie chart for the variable A

10. Create a MATLAB function to count the number of lines in a text file.

11. Create a structure array for student mark details and print a plot for the marks of the students.

12. The test scores for the three students are given in the following table:

	RDBMS	**OracleDBA**	**WebDesigning**	**AI**
Smith	66	91	95	83
Sam	91	88	80	73
John	80	88	80	78

Find the best student using multifactorial evaluation if the weight factors for the subjects are given as the vector W= [0.3 0.2 0.1 0.4]

Semester-II

16CSP201 INTERNETWORKING WITH TCP/IP 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To get an architectural overview of the TCP/IP Protocol Suite
- To understand about subnets using IP classes
- To understand the key features and functions of ARP Protocol.
- To understand how basic routing protocol works.
- To understand about DNS and its applications
- To understand the concepts of Remote Login and VPN

Course Outcomes (COs)

At the completion of the course, students will:

1. Have the ability to analyze and differentiate networking protocols used in TCP/IP protocol suite.
2. Understand the routing IP datagrams and checksum.
3. Exposed to unicast and multicast routing.
4. Learn about host name resolution and the Domain Name System (DNS).
5. Learn about services and operations of DHCP Servers and Domain Name Servers
6. Understand about SMTP and SNMP.

UNIT-I

Introduction: WAN WAN technologies - Protocols and Standards - TCP/IP protocol suite - Internetworking Devices - Classful IP Addressing – Subnetting – Supernetting – Classless Addressing

UNIT-II

ARP & RARP – Proxy ARP – ARP over ATM – ARP and RARP Protocol Format. IP Datagram – Fragmentation – Options – IP Datagram Format – Routing IP Datagrams – Checksum. ICMP – Types of Messages - Message Format – Error Reporting – Query – Checksum.

UNIT-III

Unicast Routing Protocol: Intra Domain and Inter Domain Routing – Distance Vector Routing – RIP – Link State Routing – OSPF – Path Vector Routing – BGP – Multicast Routing – Multicast Routing Protocols. Group Management – IGMP Message – IGMP Operation – Process to Process Communication – UDP Operation – TCP Services - Flow Control.

UNIT-IV

BOOTP - DHCP – Address Discovery and Binding. DNS – Name Space – DNS in Internet – Resolution – Resource Records

UNIT-V

Remote Login - FTP – SMTP – SNMP. IP over ATM Wan – Cells – Routing the Cells – ATMARP – Logical IP Subnets. VPN

Semester-II

16CSP202 **CYBER SECURITY** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To state the basic concepts in information security, including security policies, security models, and security mechanisms.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- To understand principles of web security.
- To gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
- To understand key terms and concepts in cyber law, intellectual property and cybercrimes, trademarks and domain theft.
- To provide the learner will be able to examine secure software development practices.

Course Outcomes (COs)

A student who successfully completes this course should at a minimum be able to:

1. State the basic concepts in information security, including security policies, security models, and security mechanisms.
2. Explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
3. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
4. The learner will gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
5. The learner will understand key terms and concepts in cyber law, intellectual property and cybercrimes, trademarks and domain theft.
6. The learner will be able to examine secure software development practices.

UNIT-I

Introduction to cybercrime: Introduction-Cybercrime: Definition and Information Security-who are cybercriminals? - Classification of cybercrimes. Cybercrime: The legal perspectives- cybercrimes: An Indian Perspective - cybercrime and the Indian ITA2000: Hacking and the Indian law(s) - A Global Perspective on cybercrimes: cybercrime and the Extended Enterprise - cybercrime Era: Survival Mantra for the Netizens - Concluding Remarks and Way Forward to Further Chapters.

UNIT-II

Cyberoffenses: How Criminals Plan Them: Introduction: categories of Cybercrime -How criminals Plan the Attacks: Reconnaissance Passive Attacks Active Attacks Scanning and

Scrutinizing Gathered Information Attack(Gaining and Maintaining the system Access) - social Engineering: Classification of Social Engineering - Cyberstalking: Types of stalkers Cases Reported on Cyberstalking How stalking Works? real-life incident of Cyberstalking -Cybercafe and Cybercrimes - Botnets: The Fuel for cybercrime: Botnet - Attack Vector-Cloud Computing: Why cloud computing? Types of Services Cybercrime and Cloud Computing.

UNIT-III

Cybercrime: Mobile and wireless Devices-Introduction - Proliferation of Mobile and Wireless Devices - Trends in Mobility-Credit Card Frauds in Mobile and Wireless Computing Era: Types and Techniques of Credit Card Frauds - Security challenges Posed by Mobile Devices - Registry Settings for Mobile Devices - Authentication Service security: cryptographic security LDAP Security RAS Security Media Player Control Security Networking API Security - Attacks on Mobile/Cell Phones: Mobile Phone Theft Mobile Viruses Mishing Vishing Smishing Hacking Bluetooth.

UNIT-IV

Mobile Devices: Security Implication for Organizations – Managing Diversity and Proliferation of Hand-Held Devices Unconventional/ Steath Storage Devices Threats through Lost and Stolen Devices Protecting Data on lost devices Educating the Laptop Users - Organizational Measures for Handling Mobile devices - Related Security Issues: Encrypting Organization Databases Including Mobile Devices in Security Strategy - Organizational Security Policies and Measures in mobile Computing Era: Importance of Security polices relating to mobile Computing Devices Operating Guidelines for Implementing Mobile Devices Security Polices Organizational Policies for the Use of Mobile Hand - Held Devices - Laptops: Physical Security Countermeasures.

UNIT-V

Tools and Methods Used in Cybercrime: Introduction - Proxy Servers and Anonymizers - Phishing: How Phishing Works? - Password Cracking: Online Attacks Offline Attacks Strong Weak and Random Passwords Random passwords - Keyloggers and Spywares: Software Keyloggers Hardware Keyloggers AntiKeylogger Spywares - Virus and Worms: Types of Virus - Trojan Horses and Backdoors: backdoor How to protect from Trojan Horses and Backdoors - Steganography: Steganalysis - DoS and DDoS Attacks: DoS AttacksClassification of DoS Attacks Types or Levels of DoS Attacks Tools Used to Launch DoS Attacks DDoS Attacks How to Protect from DoS/DDoS Attacks – SQL Injection: Steps for SQL Injection Attacks How to Prevent SQL Injection Attacks - Buffer Overflow: Types of Buffer Overflow How to Minimize Buffer Overflow - Attacks on Wireless Networks: Traditional Techniques of Attacks on Wireless Networks Thef of Internet Hours and Wi-fi-based Frauds and Misuses How to Secure the Wireless Networks.

Semester-II

16CSP203 ORACLE 10G ADMINISTRATION 4H – 4C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the Oracle database architecture and how its components work and interact with one another.
- To use performance monitoring database security user management and backup/recovery techniques.
- To create an Operational Database
- To Administer users and manage data.
- To Transport data between databases.
- To Configure the network.

Course Outcomes(COs)

On successful completion of the course the student should be able to:

1. Install the Oracle Database.
2. Back up and recover data.
3. Administer users and manage data.
4. Transport data between databases.
5. Configure the network.
6. Create an Operational Database

UNIT-I

Oracle DBA'S**:** oracle DBA's role - DBA job classification - types of databases. Oracle database 10g architecture: database structures - processes - memory structures - database transaction. Creating an oracle databases**:** creating the database - creating the parameter file-creating a new database - using a server parameter file.

UNIT-II

Schema management**:** creating and managing table spaces – indexes - materialized views. Oracle transaction management: oracle transactions - transaction properties - transaction concurrency control - isolation levels - implementing oracle's concurrency control - using undo data to provide read consistency - transaction query - discrete transactions - autonomous transactions - resumable space allocation.

UNIT-III

Loading and transforming data**:** overview of extraction transformation and loading - using external tables to load data - transforming data.Using data pump export and import: introduction - performing exports and imports -monitoring - transportable table spaces.

Managing and monitoring operational databases: types of oracle performance statistics - server generated alerts - automatic workload repository - active session history - undo and MTTR advisors.

UNIT-IV

User management and database security: managing users - the database resource manager - controlling access to data - auditing database usage - authenticating users -enterprise user security - database security do’s and dont’s.Backing up databases: backing up oracle databases - the recovery manager - backing up control file - oracle back up tool – user managed backups - database corruption detection - enhanced data protection for disaster recovery. Database recovery: types of database failures - oracle recovery processes - performing recovery with RMAN - media recovery scenarios.

UNIT-V

Improving database performance**:** SQL query optimization - approach to oracle performance tuning - optimizing oracle query processing - oracle optimization and oracle cost based optimizer - writing efficient SQL - DBA’s role to improve SQL processing - SQL performance tuning tools - explain plan - SQL tuning advisor - simple approach to tuning SQL statement.Performance tuning: Tuning the instance - introduction to instance tuning - automatic performance tuning vs dynamic performance views - tuning oracle memory - evaluating system performance - measuring IO performance - measuring instance performance - simple approach to instance tuning.

16CSP204 INTRODUCTION TO SOFTWARE ARCHITECTURE 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To introduce basic concepts and principles about software design and software architecture.
- To understand design issues followed by coverage on design patterns.
- To get an overview of architectural structures and styles.
- to know practical approaches and methods for creating and analyzing software architecture are presented.
- To analyze the interaction between quality attributes and software architecture.
- To gain experiences with examples in design pattern application and case studies in software architecture.

Course Outcomes(COs)

A student who successfully completes this course should at the minimum be able to:

1. Design and motivate software architecture for large scale software systems
2. Recognize major software architectural styles design patterns and frameworks
3. Understand design issues followed by coverage on design patterns.
4. Generate architectural alternatives for a problem and select among them
5. Use well-understood paradigms for designing new systems
6. Identify and assess the quality attributes of a system at the architectural level

UNIT I

Introduction – Software Architecture – Software Design levels – An Engineering Discipline for Software – The status of Software Architecture – Architectural styles – Pipes and filters – Data Abstraction and Object-oriented organization – Event based implicit invocation – Layered systems – Repositories – Interpreters – Process Control – Other Familiar Architecture – Heterogeneous Architectures.

UNIT II

Case studies - Key word is Context – Instrumentation Software – Mobile Robotics – Cruise Control – Three Vignettes in Mixed Style

UNIT III

Shared Information Systems – Database Integration – Integration in Software Development Environments – Integration in the Design of Buildings – Architectural structures for shared Information Systems

UNIT IV

Guidance for User-Interface Architectures – The quantified Design Space – The value of Architectural formalism – Formalizing the Architecture of a specific system – Formalizing an Architectural Style – Formalizing an Architectural Design Space – Towards a Theory of Software Architecture – Z Notation

UNIT V

Requirements for Architecture – Description Languages – First class connectors – Adding Implicit Invocation to Traditional Programming Languages – Tools for Architectural Design – UniCon – Exploiting Style in Architectural Design Environments – Beyond definition/Use: Architectural Interconnection

Semester-II

16CSP205A OBJECT ORIENTED ANALYSIS AND DESIGN WITH UML 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- to use an object-oriented method for analysis and design
- To analyse information systems in real-world settings and to conduct methods such as interviews and observations
- To have a general understanding of a variety of approaches and perspectives of systems development, and to evaluate other is development methods and techniques
- To know techniques aimed to achieve the objective and expected results of a systems development process
- To know different types of prototyping
- To know how to use UML for notation.

Course Outcomes (COs)

Upon the completion of the course students will be able to :-

1. Understand the concepts and terms used in the object-oriented approach to systems analysis and design
2. Use Unified Modeling Language 2.2
3. Perform object-oriented analysis and design
4. Identify the characteristics of the UML and explain UML is relevant to the process development.
5. Draw class Diagrams, Object Diagram and Interaction Diagram.
6. Construct various UML models (including use case diagrams, class diagrams, interaction diagrams, statechart diagrams, activity diagrams, and implementation diagrams) using the appropriate notation.

UNIT-I

The Object Model: The evolution of the object model – Elements of the object model – Applying object model. **Classes and Objects:** The nature of an object – Relationships among objects.

UNIT-II

Classes and Objects: The nature of the class – Relationship among classes – The Interplay of Classes and Objects – On building quality classes and objects. **Classification:** The Importance of proper classification – Identifying proper classes and objects – Key abstraction mechanism.

UNIT-III

The notation: Elements of the notation – class diagrams –state transition diagrams – object diagrams.

UNIT-IV

The Process: First principles – The micro development process – The macro development process.

UNIT-V

UML Overview: UML History – Goals of UML – UML concept areas – Syntax of Expressions and Diagrams.

Nature and purpose of Models: A Model – Levels of Models – Meaning of Model. UML Walkthrough: UML views – Static views – use case view – interaction views – state machine view – activity view – physical view – model management view- extensibility constructs.

Semester-II

16CSP205B **GRID COMPUTING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To portray the recent trends in the field of Grid computing and creation and management of Internet-based utility computing infrastructure**.**
- To introduce the principles underlying the function of distributed systems and their extension to grid computing.
- To introduce students to the fundamental components of Grid environments, such as authentication, authorization, resource access, and resource discovery.
- To provide a good understanding of the concepts, standards and protocols in Grid computing
- To enable students to be able to justify the applicability, or non-applicability, of Grid technologies for a specific application.
- To perform analysis, design and implementation of ARC grid computing model.

Course Outcomes (COs)

After successful completion of this course, student will be able to

1. Understand and explain the basic concepts of Grid Computing.
2. Explain the principles underlying the function of distributed systems and their extension to grid computing
3. Explain the advantages of using Grid Computing within a given environment.
4. Identify fundamental components of Grid environments, such as authentication, authorization, resource access, and resource discovery.
5. Understand Data management and transfer in Grid environments.
6. Perform analysis, design and implementation of ARC grid computing model.

UNIT- I

Introduction: Cluster to Grid Computing – Cluster Computing Models – Grid Models – Mobile Grid Models – Applications. Parset: System-independent Parallel Programming on Distributed Systems –introduction – Semantics of the Parset Construct – Expressing Parallelism through Parsets – Implementing Parsets on a Loosely Coupled Distributed System

UNIT- II

Anonymous Remote Computing Model: Issues in Parallel Computing on Interconnected Workstations – Existing Distributed Programming Approaches – The ARC Model of Computation – The Two-tired ARC Language Constructs – Implementation. Integrating Task Parallelism with Data Parallelism: A Model for Integrating Task Parallelism into Data Parallel Programming Platforms – Integration of the Model into ARC – Design and Implementation – Applications - Performance Analysis

UNIT- III
Anonymous Remote Computing and Communication Model: Location – Independent Inter-task Communication with DP – DP Model of Iterative Grid Computations – Design and Implementation of Distributed Pipes. Parallel Programming Model on CORBA: Notion of Concurrency – System Support –Implementation and Performance

UNIT- IV
Sneha-Samuham Grid Computing Model: A Parallel Computing Model over Grids – Design and Implementation – Performance studies. Introducing Mobility into Anonymous Remote Computing and Communication Model – Issues in Mobile clusters and Parallel Computing on Mobile Clusters – Moset Overview – Computation Model – Implementation and Performance

UNIT- V
Distributed Simulated Annealing Algorithms for Job Shop Scheduling - Implementation. Parallel Simulated Annealing Algorithms - Simulated Annealing (SA) Technique – Clustering Algorithm for Simulated Annealing (SA) – Combination of Genetic Algorithm and Simulated Annealing (SA) Algorithm - Implementation. Epilogue : DOS Grid: Vision of Mobile Grids - Mobile Grid Monitoring System – Healthcare Application Scenario.

Semester-II

16CSP205C GEOGRAPHICAL INFORMATION SYSTEM 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To have a basic, practical understanding of GIS concepts, techniques and real world applications.
- To analyse the basic components of GIS
- To classify the maps, coordinate systems and projections
- To process spatial and attribute data and prepare thematic maps
- To identify and rectify mapping inaccuracies
- To formulate and solve geospatial problems

Course Outcomes (COs)

After successful completion of this course, student will be able to

1. Understand the basic concepts of geography necessary to efficiently and accurately use GIS technology.
2. Understand basic GIS data concepts.
3. Have an ability to perform basic GIS analysis of concepts.
4. Have demonstrated a practical application of GIS.
5. Have practical experience using basic GIS tools.
6. Have an understanding of GIS and its relationship to mapping software development.

Unit I

What is a Geographical Information Systems (GIS) – Geographically referenced data – GIS operations – Geographic Coordinate systems – Map Projections – Commonly used Map Projections – Projected Coordinate Systems – Working with Coordinate systems in GIS.

Unit II

Georelational Vector Data Model – Georelational data model – Representation of simple features – Topology – Nontopological Vector data – Data models for composite features.
Object based vector data model – Object based data model – The geodatabase data model – Interface – Topology rules – Advantages of Geodatabase model.

Unit III

Raster Data Model – Elements of Raster Data Model - Raster Data Structure – Data Compression – Data Conversion – Integration of Raster and Vector Data.
Data Input – Existing GIS data – Meta Data – Conversion of Existing Data – Creating New Data.

Unit IV

Geometric Transformation – Root Mean Square (RMS) Error – Interpretation of RMS errors Digitized Maps – Re sampling of Pixel Values.

Spatial Data Editing – Location Errors – Spatial Data Accuracy Standards – Topological Errors – Topological Editing – Nontopological Editing – Other Editing operations

Unit V

Data Display and Cryptography – Cartographic Symbolization – Types of Maps – Typography – Map Design – Map Production.
Data Exploration – Attribute and Data Query – Spatial Data Query – Raster Data Query – GIS Applications.

Semester-II

16CSP211 ROUTER CONFIGURATION – PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To get an architectural overview of the TCP/IP Protocol Suite
- To understand about subnets using IP classes
- To understand the key features and functions of ARP Protocol.
- To understand how basic routing protocol works.
- To understand about DNS and its applications
- To understand the concepts of Remote Login and VPN

Course Outcomes (COs)

At the completion of the course, students will:

1. Have the ability to analyze and differentiate networking protocols used in TCP/IP protocol suite.
2. Understand the routing IP datagrams and checksum.
3. Exposed to unicast and multicast routing.
4. Learn about host name resolution and the Domain Name System (DNS).
5. Learn about services and operations of DHCP Servers and Domain Name Servers
6. Understand about SMTP and SNMP.

List of programs

1. Simple router configuration.
2. Access and utilize the router to set basic parameters.
3. Connect configure and verify operation status of a device interface.
4. Implement static and dynamic addressing services for hosts in a LAN environment.
5. Identify and correct common problems associated with IP addressing and host configurations.
6. Configure verify and troubleshoot RIPv2.
7. Perform and verify routing configuration tasks for a static or default route given.
8. Configure verify and troubleshoot NAT operation on a router.
9. Configure and verify a PPP connection between routers.

Semester-II

16CSP212 ORACLE 10G ADMINISTRATION – PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the Oracle database architecture and how its components work and interact with one another.
- To use performance monitoring database security user management and backup/recovery techniques.
- To create an Operational Database
- To Administer users and manage data.
- To Transport data between databases.
- To Configure the network.

Course Outcomes(COs)

On successful completion of the course the student should be able to:

1. Install the Oracle Database.
2. Back up and recover data.
3. Administer users and manage data.
4. Transport data between databases.
5. Configure the network.
6. Create an Operational Database

List of Programs

1. Demo for globalization support.
2. Create database and do the manipulation.
3. Create users and grant the privileges.
4. Create table space.
5. Create different types of tables.
6. Create index and managing index tables.
7. Demo for flashback database and tables.
8. Export and import the tables.
9. Create back up for tables.
10. Re-sequence the rows using CTAS.
11. Change the initializing parameters.

Semester-III

16CSP301	**J2EE**	**4H – 4C**
Instruction Hours / week: L: 4 T: 0 P: 0	**Marks:** Int : **40** Ext : **60**	Total: **100**

Course Objectives

- To Understand the In-depth concepts of JEE
- To Understand the in-depth Life cycle of servlets and JSP.
- To Learn how to communicate with databases using Java.
- To Handle Errors and Exceptions in Web Applications
- To Use NetBeans IDE for creating J2EE Applications
- To impart expertise in Web Application Development using J2EE.

Course Outcomes(COs)

1. Understand the In-depth concepts of JEE
2. Understand the in-depth Life cycle of servlets and JSP.
3. Learn how to communicate with databases using Java.
4. Handle Errors and Exceptions in Web Applications
5. Use NetBeans IDE for creating J2EE Applications
6. Understand J2EE as an architecture and platform for building and deploying web-based, n-tier, transactional, component-based enterprise applications

UNIT-I

J2EE Overview: Beginning of Java – Java Byte code – Advantages of Java –J2EE and J2SE. J2EE Multi Tier Architecture – Distributive Systems – The Tier – Multi Tier Architecture – Client Tier Web Tier Enterprise Java Beans Tier Enterprise Information Systems Tier Implementation.

UNIT-II

J2EE Database Concepts: Data – Database – Database Schema. **JDBC Objects**: Driver Types – Packages – JDBC Process – Database Connection – Statement Objects – Result Set – Meta Data.

UNIT-III

Java Servlets: Benefits – Anatomy – Reading Data from Client –Reading HTTP Request Headers – Sending Data to client – Working with Cookies.

UNIT-IV

Enterprise Java Beans: Deployment Descriptors – Session Java Bean –Entity Java Bean Message Driven Bean.

UNIT-V

JSP: What is Java Server Pages? - Evolution of Dynamic Content Technologies – JSP & Java 2 Enterprise ed.).; **JSP Fundamentals**: Writing your first JSP- Tag conversions-

Running JSP. **Programming JSP Scripts**: Scripting Languages – JSP tags- JSP directives – Scripting elements – Flow of Control – comments;
Java Remote Method Invocation.

Semester-III

16CSP302 OPEN SOURCE TECHNOLOGIES 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the concepts and principles that underlies modern operating systems
- To practice component to relate theoretical principles with operating system implementation.
- To learn about processes and processor management
- To learn about concurrency and synchronization
- To understand memory management schemes, file system and secondary storage management security and protection etc.
- To use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.

Course Outcomes(COs)

At the end of the course the student will be in a position to –

1. Use basic fundamental utilities which are required again and again on daily basis to work on a modern operating system.
2. Write useful shell scripts which greatly and effectively enhance the usefulness of computers, from the point of view of programmers and application developers.
3. Understand basics of various OS related concepts, from programmer's point of view, like files, directories, kernel, inodes, APIs, system calls, processes, signals, etc.
4. Develop applications where several processes need to communicate with each other to complete a task.
5. Use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.
6. Write programs which employs advanced concepts like multithreading.

UNIT-I

History and Overview Of GNU/Linux And FOSS 3

Definition of FOSS & GNU History of GNU/Linux and the Free Software Movement Advantages of Free Software and GNU/Linux FOSS usage trends and potential—global and Indian.

UNIT-II

System Administration

GNU/Linux OS installation--detect hardware configure disk partitions & file systems and install a GNU/Linux distribution ; Basic shell commands -logging in listing files editing files copying/moving files viewing file contents changing file modes and permissions process management ; User and group management file ownerships and permissions PAM authentication ; Introduction to common system configuration files & log files ;

Configuring networking basics of TCP/IP networking and routing connecting to the Internet (through dialup DSL Ethernet leased line) ; Configuring additional hardware - sound cards displays & display cards network cards modems USB drives CD writers ; Understanding the OS boot up process ; Performing every day tasks using gnu/Linux -- accessing the Internet playing music editing documents and spreadsheets sending and receiving email copy files from disks and over the network playing games writing CDs ; X Window system configuration and utilities--configure X windows detect display devices ; Installing software from source code as well as using binary packages.

UNIT-III

Server Setup And Configuration

Setting up email servers--using postfix (SMTP services) courier (IMAP & POP3 services) squirrel mail (web mail services) ; Setting up web servers --using apache (HTTP services) php (server-side scripting) perl (CGI support) ; Setting up file services -- using samba (file and authentication services for windows networks) using NFS (file services for gnu/Linux / Unix networks) ; Setting up proxy services --using squid (http / ftp / https proxy services) ; Setting up printer services -using CUPS (print spooler) foomatic (printer database) ; Setting up a firewall -Using netfilter and iptables.

UNIT-IV

Programming Tools

Using the GNU Compiler Collection --GNU compiler tools ; the C preprocessor (cpp) the C compiler (gcc) and the C++ compiler (g++) assembler (gas) ; Understanding build systems --constructing make files and using make using autoconf and autogen to automatically generate make files tailored for different development environments ; Using source code versioning and management tools --using cvs to manage source code revisions patch & diff ; Understanding the GNU Libc libraries and linker –linking against object archives (.a libraries) and dynamic shared object libraries (.so libraries) generating statically linked binaries and libraries generating dynamically linked libraries.

Using the GNU debugging tools --gdb to debug programs graphical debuggers like ddd memory debugging / profiling libraries mpatrol and valgrind ; Review of common programming practicies and guidelines for GNU/Linux and FOSS ; Introduction to Bash sed & awk scripting.

UNIT-V

Application Programming

Basics of the X Windows server architecture ; Qt Programming ; Gtk+ Programming ; Python Programming ; Programming GUI applications with localisation support.

Semester-III

16CSP303 **DIGITAL IMAGE PROCESSING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To make the students learn the fundamental theories and techniques of digital image processing.
- To study the mathematical transforms necessary for image processing, image manipulation and a preliminary understanding of Computer Vision.
- To make students to understand the image degradation and enhancement.
- To understand the basic relationships between pixels in an image
- To know various segmentation techniques, and object descriptors.
- To implement pattern recognition to enhance an image.

Course Outcomes(COs)

1. Perform image manipulations and analysis in many different fields.
2. Apply knowledge of computing mathematics science and engineering to solve problems in multidisciplinary research.
3. Implement the understanding in sharpening the image.
4. Perform the image segmentation using the compression method.
5. Understand the image to represent in an region.
6. Analyze the basic algorithms used for image processing &image compression with morphological image processing.

UNIT-I

Introduction: Digital image processing – Origins of digital image processing- Examples of fields that use digital image processing-Fundamental steps in digital image processing-Components of an image processing system-Representing digital image.

UNIT-II

Some Basic relationships between Pixels-Basic gray level transformations- Histogram processing - Basic spatial filtering- Smoothing special filtering- Image Degradation/ Restoration process- Noise Models.

UNIT-III

Image Segmentation: Thresholding - Edge Based Segmentation – Region Based Segmentation – Matching. Image Compression: Error Criterion - Lossy Compression - Lossless Compression.

UNIT-IV

Shape Representation and Description: Region Identification - Contour Based Representation And Description – Region Based Shape Representation And Description

UNIT-V

Image Recognition: Introduction – Statistical Pattern Recognition - Neural Net- Syntactic Pattern Recognition - Graph Matching - Clustering

Semester-III

16CSP304 NETWORK ARCHITECTURE AND MANAGEMENT 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the various architecture models and routing strategies of networks.
- To understand the privacy and security needs of a network and formulate a plan.
- To analyze the various case studies of network architecture and management.
- To implement the SNMP protocol in various architectures.
- To use various network management tools and understand their modules.
- To design an architecture with all the network requirements of a client with felp of network management tools.

Course Outcomes(COs)

1. Understand the various architecture models and routing strategies of networks.
2. Understand the privacy and security needs of a network and formulate a plan.
3. Analyze the various case studies of network architecture and management.
4. Implement the SNMP protocol in various architectures.
5. Use various network management tools and understand their modules.
6. Design an architecture with all the network requirements of a client with felp of network management tools.

UNIT-I

Introduction: Objectives - Component architectures – Reference architecture – Architectural models; Addressing and Routing Architecture: Addressing mechanisms – Routing mechanisms – Addressing strategies – Routing strategies – Architectural considerations; Network Management Architecture: Defining Network Management – Network Management Mechanism - Architectural considerations; Performance Architecture; Developing goals – Performance mechanisms – Architectural considerations

UNIT- II

Security And Private Architecture: Developing a security and privacy plan – Security and privacy Administration & Mechanism - Architectural considerations; Selecting Technologies for the Network Design: Goals – Criteria for Technology Evaluation – Guidelines and constraints on Technology Evaluation – Choices for Network Design; Interconnecting Technologies Within The Network Design: Shared medium – Switching – Routing – Hybrid mechanism – Applying Interconnection Mechanism to the Design

UNIT- III

Case history of Networking and Management: Challenges of Information Technology Managers – Goals organization and functions – Network and System Management – Network Management System Platform; SNMP Broadband and TMN Management: Network Management Standards & Model – Organization Information and Communication Model – ASN.1 – Encoding structure – Macros – Functional model;

Organization and Information Model: Managed Networks – The History of Network Management – Internet Organization and standards – SNMP Model – The Organization and Information Model; Communication and Functional Model: The SNMP Communication Model – Functional Model.

UNIT- IV

SNMPv2 Management: Major changes – System architecture – Structure of Management Information – Management Information Base – SNMPv2 protocol – Compatibility; RMON: Remote monitoring – RMON1 – RMON2 – ATM remote monitoring; Broadband Network Management: ATM Networks - Network and Services – ATM Technology – ATM Network Management; Telecommunication Management Network: Operations systems – Conceptual model – Standards – Architecture – TMN Management service architecture – Integrated view of TMN – Implementation issues.

UNIT- V

Network Management Tools and Systems: Network management tools – Network statistics measurement system – Network Management Systems – System Management; Network Management Applications: Configuration Management - Fault Management - Performance Management – Security Management – Accounting Management – Report Management - Policy Based Management – Service Level Management.

Semester-III

16CSP305A	**DISTRIBUTED OPERATING SYSTEM**	**4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the hardware and software concepts of distributed operating systems, various design issues like transparency, flexilibity etc., and communication and synchronization in distributed operating systems.
- To understand scheduling in distributed operating systems, fault tolerance, real-time distributed systems, and designing of distributed file systems.
- To understand the concept of design and implementation in the context of distributed operating systems.
- To Design and Implement Distributed applications using Technologies like RPC, threads.
- To understand How Distributed Shared Memory is managed**.**
- To analyze security issues in network and distributed environments

Course Outcomes(COs)

1. Understand the different Distributed Systems and the challenges involved in Design of the Distributed Systems.
2. Understand how computing power is created and synchronized in Distributed systems
3. Design and Implement Distributed applications using Technologies like RPC, threads.
4. Learn how to store data in Distributed File System.
5. Understand How Distributed Shared Memory is managed**.**
6. Analyze security issues in network and distributed environments

UNIT-I

Fundamentals – message passing – Remote procedure calls : Introduction – the RPC model – transparency of RPC – Implementing RPC mechanism –stub generation – RPC messages – marshaling arguments and results – server management – parameter passing semantics – call semantics.

UNIT- II

Distributed shared memory : Introduction – general architecture of DSM systems – design and implementation of DSM – granularity – structure of shared memory space – replacement strategy – heterogeneous DSM – advantages of DSM.

UNIT- III

Synchronization: Introduction – clock synchronization – event ordering – mutual exclusion. Resource management: Introduction – desirable features of a good global scheduling algorithm – task management approach – load balancing approach – load sharing approach.

UNIT- IV

Distributed file system: Introduction – desirable features of a good distributed file system – file models – file accessing models.

Naming: Introduction – desirable features of a good naming system – fundamental terminologies and concepts.

UNIT- V

Security: Introduction – potential attacks to computer system – cryptography.

Semester-III

16CSP305B WIRELESS APPLICATION PROTOCOL 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To expose students to software and hardware capabilities of wireless applications.
- To provide an overview of Wireless Communication networks area and its applications in communication engineering.
- To appreciate the contribution of Wireless Communication networks to overall technological growth.
- To explain the various terminology, principles, devices, schemes, concepts, algorithms and different methodologies used in Wireless Communication Networks.
- To enable students to compare and contrast multiple division techniques, mobile communication systems, and existing wireless networks.
- To design a wireless application using WML

Course Outcomes(COs)

1. Understand software and hardware capabilities of wireless applications.
2. Analyze Wireless Communication networks area and its applications in communication engineering.
3. Appreciate the contribution of Wireless Communication networks to overall technological growth.
4. Explain the various terminology, principles, devices, schemes, concepts, algorithms and different methodologies used in Wireless Communication Networks.
5. Compare and contrast multiple division techniques, mobile communication systems, and existing wireless networks.
6. Design and Develop a wireless application using WML

UNIT-I

Mobile Data Introduction**:** The Rise of Mobile Data-Key Services for the Mobile Internet- Overview of the WAP-The origins of the WAP- WAP architecture-WAP Internal Structure-Components of the WAP Standards- WAP Gateways-Network Infrastructure Services Supporting WAP Clients-WAP Architecture Design Principles – Relationship with other standards.

UNIT-II

The Wireless Markup Language**:** Overview-The WML Document Model-WML Authoring-URLS Identity Content-Mark Up Basics- WML Basics-Basic Content-Events Tasks and Binding.

UNIT-III

Variables –Other Content you can include-Controls-Miscellaneous Markup- Sending Information-Application Security-Other Data**;** The Meta element- Document Type

Declarations- Errors and browsers Limitations-Content generation- WML Version Negotiation.

UNIT-IV

User Interface Design**:** Making Wireless Applications Easy to Use- Website Design- Computer Terminals Vs Mobile Terminals-Designing a usable WAP site-structured usability method-user interface design guidelines- Design guidelines for selected WML Elements.

UNIT-V

Wireless Telephony Applications**:** Overview of the WTA Architecture- WTA Client Frame Work –WTA Server and Security- Design Considerations- Application Creation Tool Box- Future of WTA Enhancements.
The Mobile Internet Future**:** Better Content- Easier Access-Beyond Browsing – Beyond Cellular- Mobile Data Unleashed.

Semester-III

16CSP305C WAN TECHNOLOGIES 4H – 4C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To describe common WAN protocols and interfaces like PPP.
- To demonstrate basic routing and network troubleshooting.
- To understand Frame delay and congestion control mechanisms
- To learn about ISDN and ISDN devices
- To analyze about VPN and its mechanisms
- To understand Asynchronous Transfer Mode (ATM) and VoIP standards and Devices

Course Outcomes(COs)

Upon successful completion of this course, the student will be able to:

1. Describe common WAN protocols and interfaces.
2. Demonstrate basic routing and network troubleshooting.
3. Understand Frame delay and congestion control mechanisms
4. Learn about ISDN and ISDN devices
5. Analyze about VPN and its mechanisms
6. Understand Asynchronous Transfer Mode (ATM) and VoIP standards and Devices

Unit I

Introduction to WAN Technologies: Point To Point Links – Circuit & Packet Switching – Virtual Circuits – Dialup Services – WAN Devices. Dialup Technology: Background – Dialup Connectivity – Dialup Methods – Benefits and Drawbacks.

Unit II

Point-To-Point Protocol: PPP Encapsulation – Link Operation – LCP Packet Formats – LCP Configuration Options. X.25: Devices and Protocol Operation – Protocol Suite – LAPB Frame Format – X.21 Address Format.

Unit III

Frame Relay: Frame Relay Devices – Virtual Circuits – Congestion Control Mechanisms – Local Management Interface – Frame Format. Integrated Services Digital Network: ISDN Devices – ISDN Channels – Services – ISDN Interfaces – ISDN Specification – Signaling System 7. Virtual Private Networks: Background – Layer 2 Tunneling Protocol – Operational Mechanisms – Adding More Security.

Unit IV

Asynchronous Transfer Mode: Standards – ATM Devices and the Network Environment – Cell Header Format – ATM Services – Switching Operations – Reference Model – Addressing – Connections – ATM and Multicasting – Quality of Service – Signaling and Connection Establishment – Connection Management Messages – PNNI – Integrated Local Management Interface – LAN Emulation – Multiprotocol Over ATM – Physical Layer Architecture. MPLS/Tag Switching: Operations – Switching Architecture –

Hierarchical Routing – Multicast Routing – Label Switching With ATM – Quality of Service and Traffic Engineering.

Unit V

Voice/Data Integration Technologies: Introduction – Advances in Applications – Voice Networking – Voice Over ATM – Voice Over Frame Relay – VOIP Standards – VOIP Technology and Future Communications – SGCP – The Simple Control Interface – Gateway Control Interface – Gateway Control Functions – Encoding of the Session Description – SGCP Transmission Over UDP – Security Requirements – Cash Flows – MGCP Overview – General SIP Tutorial. Digital Subscriber Line: ADSL Signaling and Modulation – DSL Technologies.

SUGGESTED READINGS

Text Books

1. Ed Taylor. (2000). Networking Handbook (1st ed.). New Delhi: Tata McGraw Hill (Chapter 56910)
2. CISCO Systems. (2001). Internetworking Technologies Handbook. New Delhi: Techmedia. (Chapter 31012 15171819 21 2728)

Reference Book

1. Behrouz, A. Forouzan. (2003). Data Communication and Networking (3rd ed.). New Delhi: Tata McGraw Hill.

Semester-III

16CSP311 **J2EE – PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To Understand the In-depth concepts of JEE
- To Understand the in-depth Life cycle of servlets and JSP.
- To Learn how to communicate with databases using Java.
- To Handle Errors and Exceptions in Web Applications
- To Use NetBeans IDE for creating J2EE Applications
- To impart expertise in Web Application Development using J2EE.

Course Outcomes(COs)

1. Understand the In-depth concepts of JEE
2. Understand the in-depth Life cycle of servlets and JSP.
3. Learn how to communicate with databases using Java.
4. Handle Errors and Exceptions in Web Applications
5. Use NetBeans IDE for creating J2EE Applications
6. Understand J2EE as an architecture and platform for building and deploying web-based, n-tier, transactional, component-based enterprise applications

List of Programs

1. Create a sign in form in servlets.
2. Write a servlet Program to lock a server.
3. Write a servlet program that returns list of information in table format.
4. Design a counter that counts number of times user has visited the site in current browsing session.
5. Write a program to retrieve cookies information
6. Build a JAVA Bean for opening an applet from JAR file.
7. Write a program to add controls in BEAN.
8. Design a counter in JAVA BEAN.
9. Write a program to stream contents of a file using JSP.
10. Write a program to insert an applet into JSP page.

Semester-III

16CSP312 **LINUX – PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives

- To understand the concepts and principles that underlies modern operating systems
- To practice component to relate theoretical principles with operating system implementation.
- To learn about processes and processor management
- To learn about concurrency and synchronization
- To understand memory management schemes, file system and secondary storage management security and protection etc.
- To use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.

Course Outcomes(COs)

At the end of the course the student will be in a position to –

1. Use basic fundamental utilities which are required again and again on daily basis to work on a modern operating system.
2. Write useful shell scripts which greatly and effectively enhance the usefulness of computers, from the point of view of programmers and application developers.
3. Understand basics of various OS related concepts, from programmer's point of view, like files, directories, kernel, inodes, APIs, system calls, processes, signals, etc.
4. Develop applications where several processes need to communicate with each other to complete a task.
5. Use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.
6. Write programs which employs advanced concepts like multithreading.

List of programs

1. To write a Linux program to display process deadlock state.
2. To write a program to display the allocated memory.
3. To write a program to simulate the DOS Command-Copy.
4. To write a program to implement signal handling.
5. To write a simple Linux program using thread.
6. To write a program to display the date & time using TCP Sockets.
7. To write a program to display the date & time using UDP Sockets.
8. To write a program to display the cpu scheduling
9. To write a Linux program to create a lock file.
10. To write a program to display the user information

2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: (8 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

16ECU101	BASIC CIRCUIT THEORY AND NETWORK ANALYSIS	Semester - I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To identify the main circuit elements and apply Kirchoff's Laws to calculate currents, voltages and powers in typical DC electric circuits using a variety of analytical methods.
- To reduce more complicated circuits into the Thevenin's and Norton's equivalent circuits.
- To know the electrical circuit connection according to a given circuit diagram.
- To make the students capable of analyzing any given electrical network.
- To make the students learn how to synthesize an electrical network from a given impedance/admittance function.
- To understand frequency response in electrical circuits

COURSE OUTCOMES

- Apply the knowledge of basic circuital law and simplify the network using reduction techniques
- Analyze the circuit using Kirchhoff's law and Network simplification theorems
- Evaluate transient response, Steady state response, network functions
- Obtain the maximum power transfer to the load and Analyze the series resonant and parallel resonant circuit
- Evaluate two-port network parameters, design attenuators and equalizers
- Synthesize one port network using Foster Forms

UNIT I - Basic Circuit Concepts

Voltage and Current Sources - Resistors: Fixed and Variable resistors - Construction and Characteristics - Color coding of resistors - Resistors in series and parallel - Inductors: Fixed and Variable inductors - Self and mutual inductance - Faraday's law and Lenz's law of electromagnetic induction - Energy stored in an inductor - Inductance in series and parallel - Testing of resistance and inductance using multimeter.

UNIT II - Circuit Analysis

Kirchoff's Current Law (KCL) - Kirchoff's Voltage Law (KVL) - Node Analysis - Mesh Analysis – Star - Delta Conversion - DC Transient Analysis: RC Circuit - Charging and discharging with initial charge - RL Circuit with Initial Current - Time Constant - RL and RC Circuits With Sources - DC Response of Series RLC Circuits.

UNIT III – AC Circuit Analysis

Sinusoidal Voltage and Current - Definition of Instantaneous – Peak - Peak to Peak - Root Mean Square and Average Values – Voltage - Current relationship in Resistor - Inductor and Capacitor – Phasor - Complex Impedance - Capacitors: Principles of capacitance - Parallel plate capacitor – Permittivity - Definition of Dielectric Constant - Dielectric strength - Energy stored in a capacitor - Air, Paper, Mica, Teflon, Ceramic, Plastic and Electrolytic capacitor - Construction and application - Capacitors in series and parallel - Factors governing the value of capacitors - Testing of capacitors using multimeter.

UNIT IV - Power in AC Circuits

Instantaneous Power - Average Power - Reactive Power - Power Factor -Sinusoidal Circuit Analysis for RL, RC and RLC Circuits - Resonance in Series and Parallel RLC

Circuits - Frequency Response of Series and Parallel RLC Circuits, Quality (Q) Factor and Bandwidth - Passive Filters: Low Pass - High Pass - Band Pass and Band Stop.

UNIT V - Network Theorems

Principal of Duality - Superposition Theorem - Thevenin's Theorem - Norton's Theorem - Reciprocity Theorem - Millman's Theorem - Maximum Power Transfer Theorem - AC circuit analysis using Network theorems - Two Port Networks: Impedance (Z) Parameters - Admittance (Y) Parameters - Transmission (ABCD) Parameters.

16ECU102	MATHEMATICS FOUNDATION FOR ELECTRONICS	Semester - I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVE

- This course provides a deep knowledge to the learners to understand the basic concepts of Matrices, Sequences, Complex Variable, Complex Function, First Order Ordinary Differential Equations, Power series method
- To provide students with mathematics fundamentals necessary to formulate, solve and analyses complex engineering problems.
- To prepare student to apply reasoning informed by the contextual knowledge to engineering practice.
- To build the strong foundation in Mathematics of students needed for the field of electronics and Telecommunication Engineering
- Linear differential equations of higher order using analytical methods and numerical methods applicable to Control systems and Network analysis.
- Vector differentiation and integration required in Electro-Magnetics and Wave theory.

COURSE OUTCOMES

- Able to solve qualitative problems based on vector analysis and matrix analysis such as linear independence and dependence of vectors, rank etc
- Understand the concepts of limit theory and nth order differential equations and their applications to our daily life
- Able to solve the problems of differentiation of functions of two variables and know about the maximization and minimization of functions of several variables
- Come to know the applications of double and triple integration in finding the area and volume
- Know about qualitative applications of Gauss , Stoke's and Green's theorem
- Use Vector differentiation and integration required in Electro-Magnetics and Wave theory

UNIT I - Matrices

Introduction to Matrices, System of Linear Algebraic Equations, Gaussian Elimination Method, Gauss-Seidel Method, LU decomposition, Solution of Linear System by LU decomposition. Eigen Values and Eigen Vectors, Linear Transformation, Properties of Eigen Values and Eigen Vectors, Cayley-Hamilton Theorem, Diagonalization, Powers of a Matrix. Real and Complex Matrices, Symmetric, Skew Symmetric, Orthogonal Quadratic Form, Hermitian, Skew Hermitian, Unitary Matrices.

UNIT II - Sequences and Series

Sequences, Limit of a sequence, Convergence, Divergence and Oscillation of a sequence, Infinite series, Necessary condition for Convergence, Cauchy's Integral Test, D'Alembert's Ratio Test, Cauchy's nth Root Test, Alternating Series, Leibnitz's Theorem, Absolute Convergence and Conditional Convergence, Power Series.

UNIT III - Complex Variables and Functions

Complex Variable, Complex Function, Continuity, Differentiability, Analyticity. Cauchy-Riemann (C-R) Equations, Harmonic and Conjugate Harmonic Functions, Exponential Function, Trigonometric Functions, Hyperbolic Functions. Line Integral in Complex Plane, Cauchy's Integral Theorem, Cauchy's Integral Formula, Derivative of Analytic Functions. Sequences, Series and Power Series, Taylor's Series, Laurent Series, Zeroes and Poles. Residue integration method, Residue integration of real Integrals.

UNIT IV - Ordinary Differential Equations

First Order Ordinary Differential Equations, Basic Concepts, Separable Ordinary Differential Equations, Exact Ordinary Differential Equations, Linear Ordinary Differential Equations. Second Order homogeneous and non-homogeneous Differential Equations.

UNIT V - Series solution of differential equations and special functions

Power series method, Legendre Polynomials, Frobenius Method, Bessel's equations and Bessel's functions of first and second kind. Error functions and gamma function.

16ECU103	SEMICONDUCTOR DEVICES	Semester - I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To learn the fundamentals of operation of the main semiconductor electronic devices.
- To understand the basic parameters of electronic devices, their performance, and limiting factors.
- To understand the basic principles of electronic device operation with emphasis on bipolar transistors, and unipolar microwave devices.
- Acquire the fundamental knowledge and expose to the field of semiconductor theory and devices and their applications.
- To give knowledge about semiconductor and discus working and applications of basic devices, including p-n junctions, BJTs and FETs
- Introduce students to the physics of semiconductors and the inner working of semiconductor devices.

COURSE OUTCOMES

- Apply the knowledge of basic circuital law and simplify the network using reduction techniques
- Apply the knowledge of semiconductors to illustrate the functioning of basic electronic devices.
- Demonstrate the switching and amplification application of the semiconductor devices.
- Demonstrate the control applications using semiconductor devices.
- Apply concepts of semiconductor devices to design and analyze circuits.
- Ability to understand and analyze the inner working of semiconductor p-n diodes

UNIT I - Semiconductor Basics

Introduction to Semiconductor Materials - Crystal Structure - Planes and Miller Indices - Energy Band in Solids - Concept of Effective Mass - Density of States - Carrier Concentration at Normal Equilibrium in Intrinsic Semiconductors - Derivation of Fermi Level for Intrinsic & Extrinsic Semiconductors – Donors – Acceptors - Dependence of Fermi Level on Temperature and Doping Concentration - Temperature Dependence of Carrier Concentrations - Carrier Transport Phenomena: Carrier Drift - Mobility – Resistivity - Hall Effect - Diffusion Process - Einstein Relation - Current Density Equation - Carrier Injection - Generation and Recombination Processes - Continuity Equation.

UNIT II - PN Junction Diode

Formation of Depletion Layer - Space Charge at a Junction - Derivation of Electrostatic Potential Difference at Thermal Equilibrium - Depletion Width and Depletion Capacitance of an Abrupt Junction - Concept of Linearly Graded Junction - Derivation of Diode Equation and I-V Characteristics - Zener and Avalanche Junction Breakdown Mechanism - Tunnel diode - Varactor diode - Solar cell: Circuit symbol – Characteristics - Applications.

Unit III - Bipolar Junction Transistors (BJT)

PNP and NPN Transistors - Basic Transistor Action - Emitter Efficiency - Base Transport Factor - Current Gain - Energy Band Diagram of Transistor in Thermal Equilibrium - Quantitative Analysis of Static Characteristics (Minority Carrier Distribution and Terminal Currents) – Base - Width Modulation - Modes of operation - Input and Output

Characteristics of CB – CE - CC Configurations - Metal Semiconductor Junctions: Ohmic and Rectifying Contacts.

UNIT IV - Field Effect Transistors

JFET – Construction - Idea of Channel Formation – Pinch - Off and Saturation Voltage – Current - Voltage Output Characteristics - MOSFET - Types of MOSFET - Circuit symbols - Working and Characteristic curves of Depletion type MOSFET (both N channel and P Channel) - Enhancement type MOSFET (both N channel and P channel) - Complimentary MOS (CMOS).

UNIT V - Power Devices

UJT - Basic construction and working - Equivalent circuit - Intrinsic Standoff Ratio - Characteristics and relaxation oscillator – Expression – SCR – Construction – Working – Characteristics – Triac – Diac – IGBT – MESFET - Circuit symbols - Basic constructional features – Operation - Applications.

16ECU111	BASIC CIRCUIT THEORY AND NETWORK ANALYSIS - PRACTICAL	Semester - I			
		L	T	P	C
		-	-	3	2

COURSE OBJECTIVES

- To give knowledge about semiconductor physics and discus working and applications of basic devices, including p-n junctions, BJTs and FETs
- Introduce students to the semiconductor devices and the inner working of semiconductor devices.
- Know the formation and properties of semiconductor materials
- Understand the operation of diode
- Know the usage of electronic equipments
- Know the testing of components

COURSE OUTCOMES

- Apply the knowledge of basic circuital law and simplify the network using reduction techniques
- Apply the knowledge of semiconductors to illustrate the functioning of basic electronic devices.
- Demonstrate the switching and amplification application of the semiconductor devices.
- Demonstrate the control applications using semiconductor devices.
- Apply concepts of semiconductor devices to design and analyze circuits.
- Ability to understand and analyze the inner working of semiconductor p-n diodes

(Any 8 Experiments)

1. Familiarization with

   a) Resistance in series, parallel and series – Parallel.

   b) Capacitors & Inductors in series & Parallel.

2. Measurement of Amplitude, Frequency & Phase difference using CRO.

3. Verification of Ohm's Law.

4. Verification of Kirchoff's Law.

5. Verification of Norton's theorem.

6. Verification of Thevenin's Theorem.

7. Verification of Superposition Theorem.

8. Verification of Maximum Power Transfer Theorem.

9. Verification of Millman's Theorem.

10. Study of the Frequency Response of a Series LCR Circuit and determination of its

    (a) Resonant Frequency (b) Impedance at Resonance (c) Quality Factor Q
    (d) Band Width

16ECU112	**MATHEMATICS FOUNDATION FOR ELECTRONICS - PRACTICAL**	**Semester - I**			
		L	**T**	**P**	**C**
		-	**-**	**3**	**2**

COURSE OBJECTIVES

- To give knowledge about semiconductor physics and discus working and applications of
- definite Integral, Improper integrals and some special integrals as Beta functions, Gamma Functions and Error functions
- Linear differential equations of higher order using analytical methods and numerical methods applicable to Control systems and Network analysis.
- Applications of the definite Integral to derive different important quantities as Arc Length, Area, Volume, Work and Moments
- Details of set theory which is basic of all sciences
- Different types of matrices and their properties.

COURSE OUTCOMES

- Understand the problems and solve them with correlation and regression analysis
- Find the nth derivatives of the function, evaluate its indeterminate forms and way to expand a function in series form
- Analytically and graphically understand the nature and forms of function
- Apply the principles of integral to solve a variety of practical problems
- Equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics
- Enhance and develop the ability of using the language of mathematics in analyzing the real world problems of sciences and engineering

(Any 8 Experiments)

(Sci(PRACTICAL/MAT(PRACTICAL/ any other Mathematical Simulation Software)

1. Solution of First Order Differential Equations
2. Solution of Second Order homogeneous Differential Equations
3. Solution of Second Order non-homogeneous Differential Equations
4. Convergence of a given series.
5. Divergence of a given series.
6. Solution of linear system of equations using Gauss Elimination method.
7. Solution of linear system of equations using Gauss – Seidel method.
8. Solution of linear system of equations using L-U decomposition method.
9. Solution of coupled differential equations.
10. Solution of Differential equation using Euler's method.

<table>
<tr><td rowspan="3">16ECU113</td><td rowspan="3">SEMICONDUCTOR DEVICES - PRACTICAL</td><td colspan="4">Semester - I</td></tr>
<tr><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>-</td><td>-</td><td>4</td><td>2</td></tr>

COURSE OBJECTIVES

- To give knowledge about semiconductor physics and discus working and applications of diodes.
- Know the formation and properties of semiconductor materials Understand the operation of diode
- Understand the formation and properties of semiconductor materials which forms the basis for the formation of PN diode, zener diode etc
- Explain the operation of transistor
- Know the need for biasing of transistor
- Know the operation of FET and MOSFET

COURSE OUTCOMES

- Know the characteristics of diodes and transistors
- Measure the characteristics of electronic circuits and present experimental results
- Understand the construction and operation of transistor and its usage in applications like amplifiers etc
- Know the need for biasing of transistor for the design of amplifier
- Designing electronic circuits
- Performance analysis of electronic circuits

(Any 10 Experiments)

1. VI Characteristics of PN Junction Diode
2. VI Characteristics of Zener Diode.
3. VI Characteristics of the Common Base Configuration of BJT and to obtain ri, ro, α.
4. VI Characteristics of the Common Collector Configuration of BJT and obtain voltage gain, ri, ro.
5. VI Characteristics of UJT.
6. VI Characteristics of SCR.
7. VI Characteristics of TRIAC
8. VI Characteristics of DIAC
9. VI Characteristics of JFET.
10. Study of Characteristics of Solar Cell.
11. Band Gap Energy of Silicon Diode
12. LDR Characteristics

16AEC101	ENVIRONMENTAL STUDIES	Semester - I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Creating the awareness about environmental problems among people.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and improvement.
- Recognize the interconnectedness of multiple factors in environmental challenges
- Engage constructively with diverse forms of knowledge and experience
- Recognize and apply methodological approaches of the social sciences, natural sciences, and humanities

COURSE OUTCOMES

- Understand key concepts in the life and physical sciences and will apply them to environmental issues
- Apply knowledge of the sciences within an interdisciplinary context in solving environmental issues such as environmental health, food and agriculture, energy, waste and pollution, and loss of biodiversity.
- Possess the intellectual flexibility necessary to view environmental questions from multiple perspectives, prepared to alter their understanding as they learn new ways of understanding.
- Solve problems systematically, creatively, and reflexively, ready to assemble knowledge and formulate strategy
- Identify, interpret, and apply basic measures (metrics and formulae) of social system variables to assess socio-environmental conditions.
- Analyze and evaluate ideological and philosophical approaches used to understand environmental relationships.

UNIT I - Environment

Environment Definition - Scope and importance - Components - Ecosystem Definition - Concept - Scope - Importance - Structure and functions of ecosystem - Energy flow - Ecological succession Food chains and food webs - Classification of ecosystem.

UNIT II - Natural Resources - Renewable and Non-renewable Resources

Natural resources and associated problems - Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources : Use and over-utilization – exploitation - Role of an individual in conservation of natural resources - Equitable use of resources for sustainable lifestyles - Ill-effects of fire works.

UNIT III - Biodiversity and Its Conservation

Introduction – Definition - Genetic - Species and ecosystem diversity - Biogeographical classification of India - Value of biodiversity: consumptive use - Productive use - Social - Ethical - Aesthetic and option values - Biodiversity at global - National and local levels - India as a mega - Diversity nation - Hot-spots of biodiversity - Threats to biodiversity: habitat loss - Poaching of wildlife - man-wildlife conflicts - Endangered and endemic species of India - Conservation of biodiversity - in-situ and ex-situ conservation of biodiversity.

UNIT IV - Environmental Pollution

Definition - Causes - Effects and control measures of Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - Solid waste management - Causes - Effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - Pollution case studies - Disaster management: Foods - Earthquake - Cyclone and landslides.

UNIT V - Social Issues and the Environment

From unsustainable to sustainable development - Urban problems related to energy - Water conservation - Rain water harvesting - Watershed management - Resettlement and rehabilitation of people - Its problems and concerns - Environmental ethics: Issues and possible solutions - Climate change - Global warming - Acid rain - Ozone layer depletion - Nuclear accidents and holocaust - Case studies - Wasteland reclamation - Consumerism and waste products Environment Protection Act - Air (Prevention and Control of Pollution) Act - Water (Prevention and Control of Pollution) Act - Wildlife Protection Act - Forest Conservation Act - Issues involved in enforcement of environmental legislation - Public awareness - Population growth - variation among nations - Population explosion - Family Welfare Programme - Environment and human health - Human rights - Value education - HIV/AIDS - Women and Child Welfare - Role of Information Technology in environment and human health.

அலகு – I : பக்தி இலக்கியம் (10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு.

1. **சைவம்** - பெரியபுராணம் - திருமூலநாயனார் புராணம்.
2. **வைணவம்** - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு – II : சங்க இலக்கியம் : (15 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). எட்டுத்தொகை

நற்றிணை : பிரசம் கலந்த – பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை – குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு –

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்தொடீ கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் –பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் – 'சிறுதினை மலரொடு' என்பதிலிருந்துதொடங்கி, 'அறிந்தவாறே' என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – 'தெய்வம் சான்ற' என்பதிலிருந்து தொடங்கி, 'நல்குமதி' என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம் **(6 மணிநேரம்)**

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – கண்ணகியின் சிறப்பு:

'நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி,

'கண்ணகி என்பாண் மன்னோ' என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: 'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: 'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை **(10 மணிநேரம்)**

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி **(7 மணிநேரம்)**

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

16ENU201	ENGLISH	Semester - II			
		L	T	P	C
		4	-	-	4

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

- Develop the four types of skills
- Reading and comprehending literary works
- Genres of literature to provide moral education
- Develop communication skills in business environment
- Interpersonal skills will be developed.
- Betterment of language competence

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman **–** Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan
One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Preposition, Voice- Active and Passive

UNIT V

Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitution
Grammar: Question, Pronunciation

Prescribed Text:

Rao, G. Chandralekha et al. *Spring* 2013**.** Emerald Publishers: Chennai.

Suggested Reading:

Shyamala, V. (2006). *English for Communication*. : Chennai, Emerald Publishers.

16ECU201	ELECTRONIC CIRCUITS	Semester - II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Ability to design different types of Electronic Circuits such as Amplifiers and Oscillators.
- To understand and implement the advanced electronic circuits such as amplifiers etc with the help of theoretical and practical problem solving.
- Ability to analyze the different types of configurations and applications of Transistor.
- Ability to determine the stability of feedback amplifiers and their steady state performance.
- To analyze the Circuits in time and frequency domain
- Calculation and measurement of parameters for electronic circuits, to introduce the students to the advanced concepts of electronics.

COURSE OUTCOMES

- Know the characteristics of diodes and transistors
- Design simple circuits and know the benefits of feedback in amplifier
- Apply their knowledge in analyzing Circuits by using network theorems.
- Measure the characteristics of electronic circuits and present experimental results
- Compare and classify oscillators
- Analyze electrical circuits and calculate the main parameters

UNIT I - Diode Circuits

Ideal diode - Piecewise linear equivalent circuit - DC load line analysis - Quiescent (Q) point. Clipping - Clamping circuits - Rectifiers: HWR, FWR (center tapped and bridge) - Circuit diagrams – Working – Waveforms - Ripple factor – Efficiency - Comparison. Filters: Types - Circuit diagram - Shunt Capacitor filter with waveforms - Zener diode regulator circuit diagram - Load and Line regulation - Disadvantages of Zener diode regulator.

UNIT II - Bipolar Junction Transistor

Review of CE - CB Characteristics - Regions of operation - Hybrid parameters - Transistor biasing - DC load line - Operating point - Thermal runaway – Stability - Stability factor - Fixed bias without and with RE - Collector to base bias - Voltage divider bias - Emitter bias (+VCC and –VEE bias) - Circuit diagrams – Working - Transistor as a switch - Circuit and working - Darlington pair and its applications - BJT amplifier (CE) - DC and AC load line analysis - Hybrid model of CE configuration - Quantitative study of the frequency response of a CE amplifier - Effect on gain and bandwidth for Cascaded CE amplifiers (RC coupled).

UNIT III - Feedback Amplifiers

Concept of feedback - Negative and positive feedback - Advantages and disadvantages of negative feedback - Voltage (series and shunt) - Current (series and shunt) feedback amplifiers - gain, input and output impedances Barkhausen criteria for oscillations, Study of phase shift oscillator, Colpitts oscillator and Hartley oscillator.

UNIT IV - MOSFET Circuits

Review of Depletion and Enhancement MOSFET - Biasing of MOSFETs - Small Signal Parameters - Common Source amplifier circuit analysis - CMOS circuits - MOSFET Current -Voltage characteristics - MOSFET scaling and small geometry effects - MOSFET capacitances

UNIT IV - Power Amplifiers

Difference between voltage and power amplifier - Classification of power amplifiers - Class A, Class B, Class C and their comparisons - Operation of a Class A single ended power amplifier - Operation of Transformer coupled Class A power amplifier - Overall efficiency - Circuit operation of complementary symmetry Class B push pull power amplifier - Crossover distortion - Heat sinks - Single tuned amplifiers: Circuit diagram - Working and Frequency Response - Limitations of single tuned amplifier - Applications of tuned amplifiers in communication circuits.

16ECU202	C PROGRAMMING AND DATA STRUCTURES	Semester - II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To understand various features in C
- To help students to understand the implementation of C language
- To prepare object-oriented design for small/medium scale problems
- To understand the fundamental algorithms such as searching, and sorting
- To understand the fundamental data structures such as lists, trees, and graphs
- Correctly determine the relative runtimes of different algorithms

COURSE OUTCOMES

- Analyze unstructured problems and design computer solutions
- Apply or a create suitable algorithm to solve a particular problem
- An ability to apply knowledge of computing and mathematics appropriate to the discipline
- An ability to analyze a problem and identify the computing requirements appropriate for its solution
- An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs, and use current techniques
- Able to design and analyze the time and space efficiency of the data structure

UNIT I - C Programming Language

Introduction: Importance of C - Character set – Tokens – Keywords – Identifier – Constants - Basic data types Variables: declaration & assigning values - Structure of C program Operators : Arithmetic operators - Relational operators - Logical operators - Assignment operators - Increment and decrement operators - Conditional operators - Bit wise operators - Expressions and evaluation of expressions - Type cast operator - Implicit conversions - Precedence of operators.

UNIT II - Decision Making, Branching & Looping

Decision making - Branching and looping: If - If-else - Else-if - Switch statement – Break - For loop - While loop and Do-loop - Functions: Defining functions - Function arguments and passing - Returning values from functions - Arrays: concepts – Declaration - Accessing elements - Storing elements - two-dimensional and multi-dimensional arrays - Input/output statement and library functions (math and string related functions).

UNIT III - Structures

Defining and declaring a structure variables - Accessing structure members - initializing a structure - Copying and comparing structure variables - Array of structures - Arrays within structures - Structures within structures - Structures – Functions – Pointers - Introduction to C++: Object oriented programming - Characteristics of an object -oriented language.

UNIT IV - Data Structures

Definition of stack - Array implementation of stack - Conversion of infix expression to prefix - Postfix expressions - Evaluation of postfix expression - Definition of Queue -

Circular queues - Array implementation of queues - Linked List and its implementation - Link list implementation of stack and queue - Circular and doubly linked list.

UNIT V - Searching and Sorting

Insertion sort - Selection sort - Bubble sort - Merge sort - linear Search - Binary search. Trees : Introduction to trees - Binary search tree - Insertion and searching in a BST - Preorder - Postorder - Inorder traversal (recursive)

Suggested Readings:

Text Books

4. S. Sahni and E. Horowitz, Data Structure, Galgotia Publications.
5. Tanenbaum, *Data Structures using C*, Pearson/PHI.
6. Ellis Horowitz & Sartaz Sahani, *Fundamentals of Computer Algorithms*, Computer Science Press.

16ECU203	COMMUNICATION ELECTRONICS	Semester - II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To learn the designing procedure and operation of circuits used for communication.
- To understand the basic concepts of AM, FM, and PM transmission and reception.
- To assess and evaluate different modulation and demodulation techniques.
- To evaluate the influence of noise on communications signals.
- To introduce students to various modulation and demodulation techniques of analog communication
- To analyze different parameters of analog communication techniques. 3. It also focuses on pulse modulation and demodulation

COURSE OUTCOMES

- Apply or a create suitable algorithm to solve a particular problem
- Understand and identify the fundamental concepts and various components of analog communication systems
- Explain signal to noise ratio, noise figure and noise temperature for single and cascaded stages in a communication system.
- Describe analog pulse modulation techniques and digital modulation technique
- Develop the ability to compare and contrast the strengths and weaknesses of various communication systems.
- Use of different modulation and demodulation techniques used in analog communication

UNIT I - Electronic communication

Block diagram of an electronic communication system - Electromagnetic spectrum - Band designations and applications - Need for modulation - Concept of channels – Baseband signals - Concept of Noise - Types of Noise - Signal to noise ratio - Noise Figure - Noise Temperature - Friss formula.

UNIT II – Amplitude Modulation

Amplitude Modulation - Modulation index - Frequency spectrum - Generation of AM, Amplitude Demodulation (diode detector) - Concept of Double side band suppressed carrier -Single side band suppressed carrier - Other forms of AM (Pilot Carrier Modulation - Vestigial Side Band modulation - Independent Side Band Modulation) - Block diagram of AM Transmitter - Receiver.

UNIT III - Angle modulation

Frequency and Phase modulation - Modulation index - Frequency spectrum - Equivalence between FM and PM - Generation of FM (direct and indirect methods) - FM detector (PLL) - Block diagram of FM Transmitter and Receiver - Comparison between AM, FM and PM.

UNIT IV - Pulse Analog Modulation

Channel capacity - Sampling theorem – PAM – PDM - PPM modulation and detection techniques – Multiplexing - TDM and FDM - Pulse Code Modulation: Need for digital transmission – Quantizing - Uniform and Non-uniform Quantization - Quantization Noise – Companding – Coding – Decoding - Regeneration.

UNIT V - Digital Carrier Modulation Techniques

Block diagram of digital transmission and reception - Information capacity - Bit Rate -Baud Rate and M-ary coding - Amplitude Shift Keying (ASK) - Frequency Shift Keying (FSK) - Phase Shift Keying (PSK) - Binary Phase Shift Keying (BPSK) - Quadrature Phase Shift Keying.

Suggested Readings:

Text Books

1. Kennedy and Davis, 2012, Electronic Communication Systems, Fifth Edition, Tata McGraw Hill.
2. Dennis Roddy and John Coolen, 2008, Electronic Communications, Pearson Education, Fourth Edition.

Reference Books

16ECU211	ELECTRONIC CIRCUITS - PRACTICAL	Semester - II			
		L	T	P	C
		-	-	3	2

COURSE OBJECTIVES

- To identify and test various electronic components
- To use DSO for various measurements
- To plot the characteristics of diode and transistor
- To design and implement feedback amplifier circuits
- To measure the frequency of oscillators.
- To design and test regulated power supplies

COURSE OUTCOMES

- Verify the rectifier circuits using diodes and implement them using hardware
- Design the biasing circuits like self biasing
- Understand the construction, operation and characteristics of FET which can be used in the design of amplifiers
- Design simple circuits
- Know the benefits of feedback in amplifier
- Compare and classify oscillators.

(Any 8 Experiments)

1. Half wave rectifier and Full wave rectifier
2. Capacitor, Inductor and Pi filters
3. Designing and testing of 5V/9V DC regulated power supply
4. Clipping and clamping circuit
5. RC coupled amplifier
6. Class A, B and C Power Amplifier
7. Colpitt’s Oscillator
8. Hartley’s Oscillator
9. Phase Shift Oscillator
10. Frequency response of Common Source FET amplifier

16ECU212	C PROGRAMMING AND DATA STRUCTURES - PRACTICAL	Semester - II			
		L	T	P	C
		-	-	3	2

COURSE OBJECTIVES

- To make the student learn a programming language and to understand various features in C
- To develop skills to design and analyze simple linear and non linear data structures
- To learn problem solving techniques.
- To write programs in C and to solve the problems.
- Gain knowledge in practical applications of data structures
- Analyze unstructured problems and design computer solutions

COURSE OUTCOMES

- Able to design and analyze the time and space efficiency of the data structure
- Be capable to identity the appropriate data structure for given problem
- Read, understand and trace the execution of programs written in C language
- Write the C code for a given algorithm
- Implement Programs with pointers and arrays, perform pointer arithmetic, and use the pre-processor.
- Write programs that perform operations using derived data types.

(Any 8 Experiments)

1. Generate the Fibonacci series up to the given limit N and also print the number of elements in the series.
2. Find minimum and maximum of N numbers.
3. Find the GCD of two integer numbers.
4. Calculate factorial of a given number.
5. Find all the roots of a quadratic equation Ax2 + Bx + C = 0 for non – zero coefficients A, B and C. Else report error.
6. Calculate the value of sin (x) and cos (x) using the series. Also print sin (x) and cos (x) value using library function.
7. Generate and print prime numbers up to an integer N.
8. Sort given N numbers in ascending order.
9. Find the sum & difference of two matrices of order MxN and PxQ.
10. Find the product of two matrices of order MxN and PxQ.

16ECU213	COMMUNICATION ELECTRONICS - PRACTICAL	Semester - II			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Convert analog signals to digital format and describe Pulse and digital Modulation techniques
- To introduce students to various modulation and demodulation techniques of analog communication.
- To analyze different parameters of analog communication techniques
- It also focuses on pulse modulation and demodulation
- To understand the concept in communication system to use it in solving the global complex problems.
- Evaluate the performance levels (Signal-to-Noise Ratio) of AM, FM and PM systems in the presence of additive white noise.

COURSE OUTCOMES

- Able to identify and describe different analog modulation techniques.
- Able to understand basic theories of Digital communication system in practical
- Able to design and implement different modulation and demodulation techniques
- Able to analyze digital modulation techniques by using various tools.
- Able to identify and describe different techniques in modern digital communications, in particular in source coding using various tools
- Implement different types of Amplitude, Frequency, Phase and Pulse modulation and demodulation schemes

(Any 10 Experiments)

1. Amplitude Modulation and Demodulation
2. Frequency Modulation and Demodulation
3. Pulse Amplitude Modulation
4. AM Transmitter/Receiver
5. FM Transmitter/Receiver
6. Time Division Multiplexing
7. Frequency Division Multiplexing
8. Function generator using IC 8038
9. Pulse Width Modulation
10. Pulse Position Modulation
11. Pulse Code Modulation
12. BPSK Modulation and Demodulation

16ECU301	DIGITAL ELECTRONICS AND VHDL	Semester - III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To enable the students to represent numerical values in various number systems and perform number conversions between different number systems.
- To analyze and design digital combinational circuits like decoders, encoders, multiplexers, and de-multiplexers including arithmetic circuits (half adder, full adder, multiplier).
- To design sequential digital circuits like flip-flops, registers and counters.
- To acquaint the students with the fundamental principles of two-valued logic and various devices used to implement logical operations on variables.
- To lay the foundation for further studies in areas such as communication, VLSI, computer, microprocessor.
- To understand number representation and conversion between different representation in digital electronic circuits.

COURSE OUTCOMES

- Use the basic logic gates and various reduction techniques of digital logic circuit in detail.
- Design combinational and sequential circuits.
- Design and implement hardware circuit to test performance and application.
- Implement combinational and sequential circuits using VHDL
- Classify different semiconductor memories
- Analyze, design and implement sequential logic circuits

UNIT I - Number System and Codes

Decimal - Binary - Hexadecimal and Octal number systems - Base conversions – Binary - Octal – Hexadecimal - Arithmetic (addition, subtraction by complement method, multiplication) - Representation of signed and unsigned numbers - Binary Coded Decimal code - Logic Gates - Boolean algebra - Introduction to Boolean Algebra and Boolean operators - Truth Tables of OR, AND, NOT - Basic postulates - Fundamental theorems of Boolean algebra - Truth tables – Construction - Symbolic representation of XOR, XNOR - Universal (NOR and NAND) gates - Digital Logic families: Fan-in - Fan out - Noise Margin - Power Dissipation - Figure of merit - Speed power product - TTL and CMOS families and their comparison.

UNIT II - Combinational Circuits

Standard representation of logic functions (SOP and POS) - Karnaugh map minimization - Encoder and Decoder - Multiplexers and Demultiplexers - Implementing logic functions with multiplexer - Binary Adder - Binary Subtractor - Parallel adder/subtractor.

UNIT III - Sequential Circuits

Latches and Flip flop - S-R Flip flop - J-K Flip flop – T - D type Flip flop - Clocked and edge triggered Flip flops - Master slave flip flop – Registers - Counters (synchronous and asynchronous and modulo-N) - State Table - State Diagrams - Counter design using excitation table and equations - Ring counter - Johnson counter - Analog to Digital Converter - Digital to Analog Converter.

UNIT IV - Introduction to Verilog

A Brief History of HDL-Structure of HDL Module - Comparison of VHDL and Verilog - Introduction to Simulation and Synthesis Tools - Test Benches - Verilog Modules – Delays - data flow style - Behavioral style - Structural style - Mixed design style -Simulating design - Introduction to Language Elements – Keywords – Identifiers -White Space Characters - Comments – Format – Integers – Reals – strings - Logic Values - Data Types - Net types - undeclared nets - Scalars and vector nets - Register type – Parameters – Expressions – Operand – Operators -Types of Expressions - Data flow Modeling -Behavioral Modeling.

UNIT V - Data flow Modeling

Continuous assignment - Net declaration assignments – Delays - Net delays - Behavioral Modeling - Procedural constructs - Timing controls - Block statement - Procedural assignments - conditional statement - Loop statement - Procedural continuous assignment - Gate level modeling – Introduction - Built in Primitive Gates - Multiple input gates - Tri-state gates - Pull gates - MOS switches - Bidirectional switches - Gate delay - Array instances - Implicit nets.

16ECU302	DIGITAL AND CELLULAR COMMUNICATION	Semester - III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To enable the students to learn the digital and cellular technology
- To identify the functions of different components
- Learn about theoretical bounds on the rates of digital communication system
- To represent a digital signal using several modulation methods
- Draw signal space diagrams compute spectra of modulated signals and apply redundancy for reliable communication.
- To make students familiar with fundamentals of mobile communication systems

COURSE OUTCOMES

- Understand the basics of information theory, source coding techniques and calculate Entropy of source
- To know the various types of noises in communication systems and reduction techniques
- Describe and determine the performance of line codes and methods to mitigate inter symbol interference
- Learn the generation and detection of base band system
- Understand the generation, detection signal space diagram, spectrum, bandwidth efficiency, and probability of error analysis of different band pass modulation techniques
- Describe and determine the performance of different error control coding schemes for the reliable transmission of digital representation of signals and information over the channel.

UNIT I - Data Transmission

Introduction – Representation of data signal – Parallel and serial data transmission – 20milli amps loop and line drivers – Transient noise – Data signal – Signal shaping and signaling speed – Noise and error analysis – Repeaters.

UNIT II - Communication System

Model of communication system – Elements of digital communication system: Information source - Source encoder/decoder - Communication channel - Modulator – Demodulator - Channel encoder/decoder - Other functional blocks – Analysis of communication system – Design of communication system.

UNIT III - Digital Carrier Modulation Schemes

Binary phase shift keying – Differential phase shift keying – Differentially encoded PSK – Quadrature phase shift keying – Base band signal receiver – Phase shift keying – Frequency shift keying – Non-coherent detection of FSK.

UNIT IV - Pulse Modulation And Quantization

Pulse amplitude modulation - Pulse width modulation - Pulse position modulation - Quantization of signals – Quantization error – Pulse code modulation – Electrical representation of Binary digits – PCM system – Companding – Multiplexing PCM signals – Differential PCM – Delta modulation – Adaptive delta modulation.

UNIT V - Digital Cellular Systems

GSM Architecture – Layer modeling – transmission – Data Service – Multiple Access Scheme – Channel Coding Inter leaving – Radio resource management – Mobility management – Communication management – Network management – TDMA Architecture – Transmission and Modulation – CDMA – Terms of CDMA Systems – Call Processing – Hand over Procedures

Suggested Readings:

16ECU303	INTERNET AND JAVA PROGRAMMING	Semester - III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To understand the basic concepts of Internet
- To know the java path setting and programming techniques
- To understand the fundamental of Packages and access modifiers and interface in java
- To know the basic java programming and Applet programming
- To program in the Java programming language
- Knowledge of object-oriented paradigm in the Java programming language,

COURSE OUTCOMES

- Understand the basics of information theory, source coding techniques and calculate Entropy of source se an integrated development environment to write, compile, run, and test simple object-oriented Java programs
- Read and make elementary modifications to Java programs that solve real-world problems
- Validate input in a Java program
- Identify and fix defects and common security issues in code
- Document a Java program using Javadoc
- Use a version control system to track source code in a project.

UNIT I - Internet

Introduction, Understanding the Internet, Internet Addressing, Hardware Requirements to Connect to the Internet.

UNIT II - Data types, Arrays, Operators, Flow control

Branching, Looping. Classes, New Operator, Dot Operator, Method Declaration and Calling, Constructors.

UNIT III - Inheritance

Inheritance, Super, Method Overriding Final, Finalize, Static, Package and Import Statement, Interface and Implements

UNIT IV - Exception Handling

Exception Types, Uncaught and Calling, Nested Try Statements, Java Thread Model, and Thread, Runnable, Thread Priorities, Synchronization, Deadlock

UNIT V - File

Input Stream, Output Stream, and File Stream. Applets-Tag, Order of Applet Initialization, Repainting, Sizing Graphics- Abstract Window Tool Kit Components

Suggested Readings:

16ECU304A	DESIGN AND FABRICATION OF PRINTED CIRCUIT BOARDS	Semester - III			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To make familiar with PCB design and various processes involved.
- To provide in-depth core knowledge in design, performance analysis and fabrication of Printed Circuit Boards.
- To gain knowledge on PCB fabrication process and factors affecting PCB performance
- Understand the need for PCB Design and steps involved in PCB Design and Fabrication process.
- Familiarize Schematic and layout design flow using Electronic Design Automation (EDA) Tools
- Recognize the technologies used in electronic industry through the practical experience gained in the course

COURSE OUTCOMES

- Students can explore different aspect of Printed Circuit Board Design and fabrication
- Students can learn various types of PCBs. Schematic Design. entry Rules for Schematic Entry, Component Layout methods
- Placement Rules, Routing Techniques for Single Sided Board.
- Post Processing of design and Fabrication documents.
- After completing this course students can design and fabricate their own PCB for their Project and can also work in PCB Designing and Fabrication area
- Understand the steps involved in schematic, layout, fabrication and assembly process of PCB design

UNIT I - PCB Fundamentals

PCB Advantages - Components of PCB - Electronic components - Microprocessors and Microcontrollers - IC's - Surface Mount Devices (SMD) - Classification of PCB - single, double, multilayer and flexible boards - Manufacturing of PCB - PCB standards.

UNIT II - Schematic & Layout Design

Schematic diagram – General - Mechanical and Electrical design considerations - Placing and Mounting of components - Conductor spacing – Routing guidelines - Heat sinks - Package density - Net list - Creating components for library – Tracks – Pads – Vias - Power plane - Grounding.

UNIT III - Technology of PCB

Design automation - Design Rule Checking - Exporting Drill and Gerber Files – Drills - Footprints and Libraries Adding and Editing Pins - Copper clad laminates materials of copper clad laminates - Properties of laminates (electrical & physical) - Types of laminates - Soldering techniques.

UNIT IV – Etching and Soldering

Introduction - Film master preparation - Image transfer - Photo printing - Screen Printing - Plating techniques etching techniques - Mechanical Machining operations - Lead cutting and Soldering Techniques - Testing and quality controls.

UNIT V – Design Rules and Automation

Reflection – Crosstalk – Ground and Supply line noise – Electromagnetic Interference from pulse type EM fields and Automation – Automated artwork drafting - CAD - Environmental concerns in PCB industry.

16ECU304B	ELECTRONIC INSTRUMENTATION	Semester - III			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To understand operation of different instruments
- To provide basic knowledge about the various sensors. and data acquisition systems applied in Wireless sensor network
- To provide fundamental concepts of control system.2 such as mathematical modeling, time response and frequency response
- To develop concepts of stability and its assessment.3 criteria.
- Explain basic concepts and definitions in measurement
- to find transfer functions for given system

COURSE OUTCOMES

- Able to understand operation of different instruments.
- Understand the principles of various types of transducers and sensors
- Able to calculate time domain and frequency domain parameter for given system
- Able to predict stability of given system using appropriate criteria
- Identify the various parameters that are measurable in electronic instrumentation
- Practice the construction of testing and measuring set up for electronic systems.

UNIT I - Measurements

Qualities of Measurement: Specifications of instruments - Static and dynamic characteristics - Error (Gross error, systematic error, absolute error and relative error) - Uncertainty analysis - Statistical analysis of data and curve fitting - Basic Measurement Instruments: PMMC instrument – Galvanometer - DC measurement – Ammeter – Voltmeter - Ohm meter - AC measurement - Digital voltmeter systems (integrating and non-integrating types) - Digital multimeters - Digital frequency meter system (different modes and universal counter). Connectors and Probes: low capacitance probes - High voltage probes - current probes - Identifying electronic connectors – audio and video - RF/Coaxial - USB etc.

UNIT II - Measurement of Resistance and Impedance

Low Resistance: Kelvin's double bridge method - Medium Resistance by Voltmeter Ammeter method - Wheatstone bridge method - High Resistance by Megger - A.C. bridges - Measurement of Self Inductance - Maxwell's bridge - Hay's bridge - Anderson's bridge - Measurement of Capacitance - Schering's bridge - DeSauty's bridge - Measurement of frequency - Wien's bridge. A-D and D-A Conversion: 4 bit binary weighted resistor type D-A conversion - Circuit and working - Circuit of R-2R ladder – A/D conversion characteristics - Successive approximation ADC.

UNIT III – Oscilloscopes

CRT - Wave form display and electrostatic focusing - Time base and sweep synchronization - Measurement of voltage - Frequency and phase by CRO - Oscilloscope probes - Dual trace oscilloscope - Sampling Oscilloscope - DSO and Powerscope: Block diagram - Principle and Working - Advantages and applications - CRO specifications (bandwidth, sensitivity, rise time). Signal Generators: Audio oscillator - Pulse Generator - Function generators.

UNIT IV - Transducers

Classification of transducers - Basic requirement/characteristics of transducers - Active & passive transducers - Resistive (Potentiometer - Strain gauge – Theory, types - temperature compensation and applications) - Capacitive (Variable Area Type – Variable Air Gap type – Variable Permittivity type) - Inductive (LVDT) - Piezoelectric transducers - Measurement of displacement - Velocity - Acceleration - Measurement of pressure - Measurement of temperature - Light transducers.

UNIT V – Digital Instruments

Performance characteristics of instruments – Digital Multimeter – Digital frequency meter – Digital measurement of time – Digital measurement of mains frequency – Digital tacometer – Digital phase meter – Digital capacitance meter.

16ECU311	DIGITAL ELECTRONICS AND VHDL - PRACTICAL	Semester - III			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Learn and understand the basics of digital electronics, Boolean algebra, and able to design the simple logic circuits and test/verify the functionality of the logic circuits
- Provide hands-on experience in digital circuits, which can be constructed by using standard integrated circuits (ICs)
- Investigate the operation of several digital circuits combinational and sequential
- To model complex digital systems at several level of abstractions; behavioral and structural, synthesis and rapid system prototyping.
- To develop and simulate register-level models of hierarchical digital systems
- To design and model complex digital system independently or in a team

COURSE OUTCOMES

- Identify the various digital ICs and understand their operation.
- Apply Boolean laws and K-map to simplify the digital circuits
- Understand the function of elementary digital circuits under real and simulated environment
- Describe and explain the operation of fundamental digital gates
- Analyze the operation of a flip-flop and examine relevant timing diagrams 4. Analyze the operation of counters and shift registers
- Design operate practical digital logic circuits

(Any 10 Experiments)

DIGITAL ELECTRONICS PRACTICAL

1. To verify and design AND, OR, NOT and XOR gates using universal gates.
2. Half Adder and Full Adder circuits
3. Comparator
4. Encoder and Decoder circuits
5. 4 X 1 Multiplexer using gates.
6. Counters

VHDL PRACTICAL

7. Design and Implementation of logic gates.
8. Design and Implementation of Half Subtractor and Full Subtractor
9. Design and Implementation of Up/Down Counter
10. Design and Implementation of flip-flop circuits
11. Design and Implementation of Multiplexer and Demultiplexer circuits.
12. Design and simulation of a 4 bit Adder.

16ECU312	DIGITAL AND CELLULAR COMMUNICATION - PRACTICAL	Semester - III			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To understand the building blocks of digital commutation system.
- To analyze error performance of a digital communication system in presence of noise and other interferences
- To understand information theoretic behavior of a communication system.
- To understand various source coding and channel coding techniques
- To develop to understand the concept of different types of coding.
- To understand Multiple Access and Spread Spectrum Techniques.

COURSE OUTCOMES

- Perform the time and frequency domain analysis of the signals in digital communication systems
- Design a suitable source and channel coding scheme for a communication system
- Analyze Performance of Multiple Access and Spread Spectrum Techniques
- Understand various spreading techniques and determine bit error performance of various digital communication systems
- determine the performance of different error control coding schemes for the reliable transmission of digital representation of signals and information over the channel
- Learn the generation and detection of base band system

(Any 10 Experiments)

1. Line Coding Schemes
2. Dibit Encoder
3. Delta modulation
4. Adaptive delta Modulation
5. Differential Pulse Code Modulation
6. Quadrature Phase Shift Keying
7. Time Division Multiplexing
8. Base Band Transceiver(Interpolation, Pairing)
9. Adaptive Linear Equalizer
10. Code Division Multiplexing
11. Direct Sequence Spread Spectrum (DSSS) CDMA
12. GSM Transmitter/Receiver

16ECU313	INTERNET AND JAVA PROGRAMMING - PRACTICAL	Semester-I			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To get familiar with basics of the Internet Programming.
- To gain ability to develop responsive web applications
- Gain knowledge about basic Java language syntax and semantics to write Java programs and use concepts such as variables, conditional and iterative execution methods etc.
- Concepts of inheritance, packages, interfaces and multithreading are introduced.
- Knowledge of object-oriented paradigm in the Java programming language
- The use of Java in a variety of technologies and on different platforms

COURSE OUTCOMES

- To understand the basic concepts of Internet
- Describe and differentiate different Web Extensions and Web Services
- Remember the fundamentals of Java programming language
- Understand the basics of Java programming, multi-threaded programs and Exception handling
- Analyze and use Java in a variety of applications
- Able to design, code and debug JAVA language programs

(Any 10 Experiments)

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of length in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBufferclasss like setCharAt(, setLength(), append(), insert(), concat()and equals().
9. Write a program to create a distance class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer
10. Modify the distance class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is

found, then java will apply automatic type conversions(from lower to higher data type)

12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword

16ECU314A	DESIGN AND FABRICATION OF PRINTED CIRCUIT BOARDS - PRACTICAL	Semester - III			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- Understand the need for PCB Design and steps involved in PCB Design and Fabrication process
- To gain knowledge on PCB fabrication process and factors affecting PCB performance
- Familiarize Schematic and layout design flow using Electronic Design Automation (EDA) Tools
- To make familiar with PCB design and various processes involved.
- To provide in-depth core knowledge in design, performance analysis and fabrication of Printed Circuit Boards
- Recognize the technologies used in electronic industry through the practical experience gained in the course

COURSE OUTCOMES

- Appreciate the necessity and evolution of PCB, types and classes of PCB.
- Understand the steps involved in schematic, layout, fabrication and assembly process of PCB design.
- Understand basic concepts of transmission line, crosstalk and thermal issues
- Students can explore different aspect of Printed Circuit Board Design and fabrication
- Students can learn various types of PCBs, Schematic Design, entry Rules for Schematic Entry and Component Layout methods
- Design (schematic and layout) PCB for analog circuits, digital circuits and mixed circuits

(Any 8 Experiments)

1. Fabrication of Electronic Components
2. Etching process in PCB.
3. Soldering practice in PCB.
4. PCB fabrication process of DMM and Power supply.
5. PCB Design software simulation.
6. Generation of CAM Files for single side PCB (Measuring voltage Drop)
7. Generation of CAM Files for single side PCB (Full wave Rectifier)
8. PCB Assembly and Testing (Measuring voltage Drop)
9. PCB Assembly and Testing (Full wave Rectifier)
10. Study of single side PCB Fabrication process.

16ECU314B	ELECTRONIC INSTRUMENTATION - PRACTICAL	Semester - III			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- To understand scientific measurement principles and concepts behind modern electronic instrumentation
- To understand the principle of various types of transducers
- To know the construction and working of frequently used equipment's like CRO, Signal generator, spectrum analyzer etc
- To know the fundamentals of measuring systems including the particular limitations and capabilities Of a number of measuring devices (pressure transducers, strain gages, thermocouples, etc.) and Equipment's (oscilloscope, spectrum analyzer, etc.)
- To provide fundamental concepts of control system such as mathematical modeling, time response and frequency response
- To develop concepts of stability and its assessment.

COURSE OUTCOMES

- Identify various errors in measurement system and correct them.
- Understand the principles of various types of transducers and sensors
- Able to understand operation of different instruments.
- Able to calculate time domain and frequency domain parameter for given system
- Identify the various parameters that are measurable in electronic instrumentation
- Practice the construction of testing and measuring set up for electronic systems

(Any 8 Experiments)

1. Design of multi range ammeter and voltmeter using galvanometer.
2. Measurement of resistance by Wheatstone bridge and measurement of bridge sensitivity.
3. Measurement of Capacitance by de'Sautys.
4. Measure of low resistance by Kelvin's double bridge.
5. To determine the Characteristics of resistance transducer - Strain Gauge (Measurement of Strain using half and full bridge.)
6. To determine the characteristics of LVDT.
7. To determine the characteristics of Thermistors and RTD.
8. Measurement of temperature by Thermocouples
9. To study the Characteristics of LDR, Photodiode, and Phototransistor
10. Characteristics of Solid State sensor/ Fiber optic sensor

16ECU401	OPERATIONAL AMPLIFIER AND IT'S APPLICATIONS	Semester - IV			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To develop an in-depth knowledge on IC fabrication technology
- To understand the basic concepts of operational amplifier and its various applications
- To understand the basics of PLL and its practical applications
- To know about analog multipliers
- To know about various analog switches and different A/D and D/A convertors
- To understand the concepts of switched capacitor filters,Voltage regulator and various• amplifiers

COURSE OUTCOMES

- Learn about the basic concepts for the circuit configuration for the design of linear integrated circuits and develops skill to solve engineering problems
- Develop skills to design simple circuits using OP-AMP
- Gain knowledge about various multiplier circuits, modulators and demodulators
- Gain knowledge about PL
- Learn about various techniques to develop A/D and D/A convertors
- Develop skills to develop simple filter circuits and various amplifiers and can solve problems related to it.

UNIT I - IC Fabrication Technology

Introduction to Integrated Circuit Fabrication – Classification – Integrated Circuit chip size and circuit complexity - Fundamentals of Monolithic Integrated Circuit technology –Basic planar process – Fabrication of a Typical circuit – Active and Passive Components Integrated Circuits - Thin and Thick film technology – Technology Trends.

UNIT II - Basic Operational Amplifier

Concept of differential amplifiers (Dual input balanced and unbalanced output) - Constant current bias - Current mirror - Cascaded differential amplifier stages with concept of level translator - Block diagram of an operational amplifier (IC 741) - Op-Amp parameters: Input offset voltage - Input offset current - Input bias current Differential input resistance - Input capacitance - Offset voltage adjustment range - Input voltage range - Common mode rejection ratio - Slew rate - Supply voltage rejection ratio.

UNIT III – Operational Amplifier Circuits

Open and closed loop configuration - Frequency response of an op-amp in open loop and closed loop configurations – Inverting - Non-inverting - Summing and difference amplifier – Integrator – Differentiator - Voltage to current converter - Current to voltage converter – Comparators.

UNIT IV – Comparator

Basic comparator - Level detector - Voltage limiters - Schmitt Trigger - Signal generators: Phase shift oscillator - Wein bridge oscillator - Square wave generator - Triangle wave generator - Saw tooth wave generator - Voltage controlled oscillator(IC 566) - Multivibrators (IC 555): Block diagram - Astable and monostable multivibrator circuit -

Applications of Monostable and Astable multivibrators.

UNIT V - Phase locked loops (PLL)

Block diagram - Phase detectors - IC565 - Fixed and variable IC regulators: IC 78xx and IC 79xx - Concepts only - IC LM317 - Output voltage equation - Signal Conditioning circuits: Sample and hold systems - Active filters: First order low pass and high pass butterworth filter - Second order filters - Band pass filter - Band reject filter - All pass filter - Log and antilog amplifiers.

16ECU402	MICROPROCESSOR AND MICROCONTROLLER	Semester - IV			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To know the fundamental concept of microprocessor 8085 and microcontroller architecture and to program in assembly language.
- To learn the interfacing of different peripherals for various typical applications
- To develop background knowledge and core expertise of microcontroller
- To know the importance of different peripheral devices and their interfacing to microcontrollers
- To know the design aspects of microcontrollers. 4. To write assembly language programs of microcontrollers for various applications.
- To provide a strong practical knowledge in the application areas.

COURSE OUTCOMES

- Apply basic concept of digital fundamentals to Microprocessor based personal computer system.
- Identify a detailed s/w & h/w structure of the Microprocessor.
- Illustrate how the different peripherals (8255, 8253 etc.) are interfaced with Microprocessor.
- Distinguish and analyze the properties of Microprocessors & Microcontrollers.
- Aanalyze the data transfer information through serial & parallel ports
- Train their practical knowledge through laboratory experiments.

UNIT I - Introduction to Microprocessor

Introduction – Applications - Basic block diagram – Speed - Word size - Memory capacity - Classification of microprocessors - Microprocessor 8085: Features - Architecture - Block diagram - General purpose registers - Register pairs – Flags - Stack pointer - Program counter - Types of buses - Multiplexed address and data bus - Generation of control signals - Pin description of microprocessor 8085 - Basic interfacing concepts - Memory mapped I/O and I/O mapped I/O.

UNIT II - 8085 Instruction Sets

Operation code - Operand and Mnemonics - Instruction set of 8085 - Instruction classification - Addressing modes - Instruction format - Data transfer instructions - Arithmetic instructions - Increment and decrement instructions - Logical instructions - Branch instructions - Machine control instructions - Assembly language programming examples.

UNIT III - Branch Instructions

Stack operations – Subroutine - Call and return instructions - Delay loops - Use of counters - Timing diagrams - Instruction cycle - Machine cycle - T- states - Time delay. Interrupt structure of 8085A microprocessor - Processing of vectored and non-vectored interrupts - Latency time and response time - Handling multiple interrupts - Microcontrollers: Introduction - different types of microcontrollers - Embedded microcontrollers - Processor architectures - Harvard vs. Princeton - CISC vs. RISC architectures - Microcontroller memory types - Microcontroller features – Clocking - I/O pins – Interrupts – Timers - Peripherals.

UNIT IV - PIC16F887 Microcontroller

Core features – Architecture - Pin diagram - Memory organization - Program and data memory organization - I/O Ports - Oscillator module - Timer modules - Comparator module - Analog-to-digital converter (ADC) module - Data EEPROM - Enhanced capture/compare/PWM module – EUSART - Master synchronous serial port (MSSP) module - Special features of the CPU - Interrupts - Addressing modes - Instruction set.

UNIT V - Interfacing to PIC16F887

LED – Switches - Solid State Relay - Seven Segment Display - 16x2 LCD display - 4x4 Matrix Keyboard – Traffic light controller - Digital to Analog Converter - Stepper Motor and DC Motor - Interfacing program examples using C language.

16ECU403	POWER ELECTRONICS	Semester - IV			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To know the fundamental concept of Power Electronics and its Applications
- To teach fundamental principles of thyristor family.
- To become familiar with power devices and their application in various fields
- Learners are expected to understand various controllers , converters , inverters and choppers
- To familiarize students to the principle of operation, design and synthesis of different power conversion circuits and their applications
- To provide strong foundation for further study of power electronic circuits and systems

COURSE OUTCOMES

- Apply basic concept of digital fundamentals to Microprocessor based personal computer system
- Demonstrate an understanding of fundamentals of thyristor family.
- Analyze the various applications and circuits based on thyristor .
- Build and test circuits using power devices such as SCR, IGBT and MOSFET.
- Analyze and design controlled rectifier, DC to DC converters, DC to AC
- Relate basic semiconductor physics to properties of power devices, and combine circuit mathematics and characteristics of linear and non-linear devices

UNIT I - Power Devices

Need for semiconductor power devices - Power diodes - Enhancement of reverse blocking capacity - Introduction to family of thyristors - Silicon Controlled Rectifier (SCR): Structure - I-V characteristics - Turn-On and Turn-Off characteristics – Ratings - Factors affecting the characteristics/ratings of SCR – Gate triggering circuits - Control circuits design and Protection circuits - Snubber circuit.

UNIT II – DIAC and TRIAC

Diac and Triac: Basic structure - Working and V-I characteristic of - Application of a Diac as a triggering device for a Triac - Insulated Gate Bipolar Transistors (IGBT): Basic structure - I-V Characteristics - Switching characteristics - Device limitations - Safe operating area (SOA).

Application of SCR: Static switch - Phase controlled rectification - Single phase half wave - Full wave and bridge rectifiers with inductive & non-inductive loads - AC voltage control using SCR - Triac as a switch - Power MOSFETs: operation modes - Switching characteristics - Power BJT - Second breakdown - Saturation and quasi-saturation state.

UNIT III - Power Inverters

Need for commutating circuits - Types - D.C. link invertors - Parallel capacitor commutated invertors with and without reactive feedback – Analysis - Series Invertor - Limitations – Bridge invertors.

UNIT IV - Choppers

Basic chopper circuit - Types of choppers – Step down chopper – Step up chopper - Operation of d.c. chopper circuits using self commutation - Cathode pulse turn-off chopper - Load sensitive cathode pulse turn-off chopper - Morgan's chopper.

UNIT V - Electromechanical Machines

DC Motors - Basic understanding of field and armature - Principle of operation - EMF equation - Back EMF - Factors controlling motor speed - Thyristor based speed control of dc motors - AC motor - Rotor and stator - Torque & speed of induction motor - Thyristor control of ac motors

16ECU404A	ELECTRICAL CIRCUITS AND NETWORK SKILLS	Semester -IV			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To get technically expertise in electrical machines and drive systems, and being able to apply the knowledge to practical industry systems and appliances.
- To understand the new technological development in the field of electrical drive, and being skillful in numerical calculation, technical writing, and presentation of electrical machine technology.
- To explain the basic concepts and laws of DC and AC electrical networks and solve them using mesh and nodal analysis techniques
- To analyze circuits in time and frequency domain
- To introduce open circuit, short circuit, transmission, hybrid parameters and their interrelationship
- To synthesize the network using passive elements.

COURSE OUTCOMES

- Apply concepts of electric network topology, nodes, branches, loops to solve circuit problems including the use of computer simulation
- Understand the basic concepts of graph and analyze the basic electrical circuits using graph theory
- Apply time and frequency concepts of analysis
- Understand various functions of network and also the stability of network
- Learn the various parameters and their interrelationship, able to solve numericals with series, cascade and parallel connections.
- Synthesize the network using passive elements.

UNIT I - Basic Electricity Principles

Voltage – Current – Resistance – Power - Ohm's law – Series-parallel and parallel-series combinations - AC and DC Electricity - Familiarization with multimeter - Voltmeter and Ammeter - Electrical Circuits: Basic electric circuit elements and their combination - Rules to analyze DC sourced electrical circuits - Current and voltage drop across the DC circuit elements - Single-phase - Three-phase alternating current sources - Rules to analyze AC sourced electrical circuits - Real-imaginary and complex power components of AC source - Power factor - Saving energy and money.

UNIT II - Electrical Drawing and Symbols

Drawing symbols – Blueprints - Reading: Schematics - Ladder diagrams - Electrical Schematics - Power circuits - Control circuits - Reading: of circuit schematics - Tracking the connections of elements and identify current flow and voltage drop.

UNIT III - Generators and Transformers

DC Power sources - AC/DC generators – Inductance – Capacitance – Impedance - Operation of transformers - Electric Motors: Single-phase - Three-phase - DC motors - Basic design - Interfacing DC or AC sources to control heaters and motors - Speed and power of ac motor.

UNIT IV - Solid-State Devices

Resistors - Inductors – Capacitors - Diode and rectifiers - Components in Series or in shunt - Response of inductors and capacitors with DC or AC sources - Electrical Protection: Relays - Fuses and disconnect switches - Circuit breakers - Overload devices - Ground-fault protection - Grounding and isolating - Phase reversal - Surge protection - Relay protection device.

UNIT V - Electrical Wiring

Different types of conductors and cables - Basics of wiring - Star and delta connection - Voltage drop and losses across cables and conductors - Instruments to measure current – Voltage - Power in DC and AC circuits – Insulation - Solid and stranded cable – Conduit - Cable trays - Splices: Wire-nuts – Crimps - Terminal blocks – Solder - Preparation of extension board.

16ECU404B	DIGITAL SYSTEM DESIGN	Semester - IV			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To provide strong knowledge on Programmable Logic Devices and its usage in industrial automation.
- To understand number representation and conversion between different representation in digital electronic circuits.
- To analyze logic processes and implement logical operations using combinational logic circuits.
- To understand concepts of sequential circuits and to analyze sequential systems in terms of state machines
- To understand concept of Programmable Devices, PLA, PAL, CPLD and FPGA and implement digital system using VHDL
- To implement combinational and sequential circuits using VHDL

COURSE OUTCOMES

- Develop a digital logic and apply it to solve circuit problems
- Analyze, design and implement combinational logic circuits
- Classify different semiconductor memories
- Analyze, design and implement sequential logic circuits
- Analyze digital system design using PLD
- Simulate and implement combinational and sequential circuits using VHDL systems

UNIT I - Sequential Logic Circuits

Introduction to Sequential Logic Circuits - Mealy Machine- Moore Machine - State Diagrams - State Table Minimization - Incompletely Specified Sequential Machines - State Assignments - Design of Synchronous and Asynchronous Sequential Logic Circuits - Working in Fundamental and Pulse Mode.

UNIT II - Synchronous Sequential Circuit Design

Introduction of Clocked Synchronous Sequential Networks (CSSN) - Modeling of CSSN - State Table Assignment and Reduction – Design of CSSN - ASM Chart - ASM Realization.

UNIT III - Asynchronous Sequential Circuit Design

Introduction of Asynchronous Sequential Circuits (ASC) - Flow Table Reduction - Races in ASC - State Assignment - Problem and the Transition Table - Design of ASC - Static and Dynamic Hazards - Mixed Operating Mode Asynchronous Circuits.

UNIT IV - Programmable Logic Devices

Basic Concepts - Programming Technologies - Programmable Logic Element(PLE), Programmable Logic Array(PLA) - Programmable Array Logic(PAL) - Complex PLD's(CPLD) -System Design using PLD's - Design of Combinational and Sequential Circuits using PLD's.

UNIT V - Study of FPGA and XILINX

Introduction to Field Programmable Gate Arrays - Types of FPGA – Xilinx XC3000 Series - Logic Cell Array (LCA) - Configurable Logic Blocks (CLB) - Input/Output Block (IOB) -Programmable Interconnect Point (PIP).

16ECU411	OPERATIONAL AMPLIFIER - PRACTICAL	Semester - IV			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To Gain the practical hands-on experience on 741 Op-Amp applications
- To understand the basic concepts of operational amplifier and its various applications
- To Gain the practical hands-on experience on 555 Timer applications.
- To Gain the practical hands-on experience on Voltage Regulator and Three terminal voltage regulators
- To know about various analog switches and different A/D and D/A convertors
- To understand the concepts of switched capacitor filters, Voltage regulator and various amplifiers

COURSE OUTCOMES

- Learn about the basic concepts for the circuit configuration for the design of linear integrated circuits and develops skill to solve engineering problems
- Develop skills to design simple circuits using OP-AMP
- Able to utilize items such as decibels, Bode plots, and negative feedback for circuit analysis.
- Gain knowledge about various multiplier circuits, modulators and demodulators
- Gain knowledge about PL
- Develop skills to develop simple filter circuits and various amplifiers and can solve problems related to it.

(Any 10 Experiments)

1. Study of op-amp characteristics: CMRR and Slew rate.
2. Inverting and non-inverting configuration using an opamp.
3. Adder and subtractor circuit.
4. Integrator using op-amp for a given specification and study its frequency response.
5. Differentiator using op-amp for a given specification and study its frequency response.
6. First Order low-pass and high-pass filters using op-amp.
7. Schmitt Trigger using Op-amp
8. RC Phase Shift Oscillator using op-amp.
9. IC 555 as an astable multivibrator.
10. IC 555 as monostable multivibrator.
11. Regulated power supply using IC 78 series and 79 series.
12. VCO using IC565.

<table>
<tr><td rowspan="3">16ECU412</td><td rowspan="3">MICROPROCESSOR AND MICROCONTROLLER - PRACTICAL</td><td colspan="4">Semester - IV</td></tr>
<tr><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>-</td><td>-</td><td>4</td><td>2</td></tr>
</table>

COURSE OBJECTIVES

- To expose students to the operation of typical microprocessor and microcontroller.
- To prepare the students to be able to solve different problems by developing different programs
- To develop the quality of assessing and analyzing the obtained data
- To illustrate the architecture of 8085 a microprocessors.
- To understand the interfacing circuits for various applications of 8051 microcontroller
- To introduce the architecture of advanced microprocessors and microcontrollers.

COURSE OUTCOMES

- Identify relevant information to supplement to the Microprocessor and Microcontroller course
- Set up programming strategies and select proper mnemonics and run their program on the training boards
- Practice different types of programming keeping in mind technical issues Develop testing and experimental procedures on Microprocessor and Microcontroller analyze their operation under different cases
- Prepare professional quality textual and computational results, incorporating accepted data analysis and synthesis methods, simulation software, and word-processing tools
- Illustrate the organization of registers and memory in microprocessors.

(Any 10 Experiments)

8085 Assembly language programs:

1. Program to transfer a block of data.
2. Program for multibyte addition and subtraction
3. Program to multiply and divide two 8-bit numbers.
4. Ascending and Descending numbers in an array.
5. Speed control of a DC motor.
6. Traffic light controller.

PIC Microcontroller Programming

Note: Programs to be written using C programming language

1. LED blinking with a delay of 1 second.
2. Interfacing of LCD (2X16).
3. Interfacing of stepper motor and Rotating stepper motor by N steps clockwise/anticlockwise with speed control.
4. Generate sine, square, saw tooth, triangular and staircase waveform using DAC interface.
5. Analog to digital conversion using internal ADC and display the result on LCD.
6. Digital clock.

16ECU413	POWER ELECTRONICS - PRACTICAL	Semester - IV			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To provide the students a deep insight in to the working of different switching devices with respect to their characteristics
- To analyze different converters and control with their applications
- To develop an overall approach for students from construction of control rectifier , inverter, choppers, study its specification, the functionality, design and practical applications
- To become familiar with power devices and their application in various fields
- To understand various controllers , converters , inverters and choppers
- To Know the advanced converters and switching techniques implemented in recent technology

COURSE OUTCOMES

- Express the design and control of rectifiers, inverters
- Design of power electronic converters in power control applications.
- Ability to express characteristics of SCR, BJT, MOSFET and IGBT
- Ability to express communication methods
- Ability design AC voltage controller and Cyclo Converter
- Ability to design Chopper circuits

(Any 10 Experiments)

1. SCR as a half wave and full wave rectifiers with R and RL loads
2. DC motor control using SCR.
3. Buck - Boost Regulator
4. AC voltage controller using TRIAC with UJT triggering.
5. Snubber circuit
6. Single phase inverter.
7. Fan control using TRIAC and DIAC.
8. Cyclo Converters
9. Automatic Battery Charger
10. Triac Flasher.
11. Thyristor Chopper
12. Burglar Alarm

16ECU414A	ELECTRICAL CIRCUITS AND NETWORK SKILLS - PRACTICAL	Semester - IV			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- To provide the students a deep insight in to the working of different switching devices with respect to their characteristics
- To get technically expertise in electrical machines and drive systems, and being able to apply the knowledge to practical industry systems and appliances.
- To understand the new technological development in the field of electrical drive, and being skillful in numerical calculation, technical writing, and presentation of electrical machine technology.
- To explain the basic concepts and laws of DC and AC electrical networks and solve them using mesh and nodal analysis techniques
- To analyze circuits in time and frequency domain
- To synthesize the network using passive elements

COURSE OUTCOMES

- Apply concepts of electric network topology, nodes, branches, loops to solve circuit problems including the use of computer simulation
- Understand the basic concepts of graph and analyze the basic electrical circuits using graph theory
- Apply time and frequency concepts of analysis
- Understand various functions of network and also the stability of network
- Able to solve numericals with series, cascade and parallel connections.
- Synthesize the network using passive elements.

(Any 8 Experiments)

1. Verification of KVL using Digital simulation
2. Verification of KCL using Digital simulation
3. Thevenin's Theorem using Digital simulation
4. Verification of Superposition theorem using Digital simulation
5. Verification of Reciprocity Theorem using Digital simulation
6. Maximum Power Transfer theorem using Digital simulation
7. Circuit Transients by Digital simulation
8. RLC Series Resonance by Digital simulation
9. Transient analysis of Series RL circuits
10. Transient analysis of Series RC circuits

16ECU414B	DIGITAL SYSTEM DESIGN - PRACTICAL	Semester - IV			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- To acquaint the students with the fundamental principles of two-valued logic and various devices used to implement logical operations on variables
- To lay the foundation for further studies in areas such as communication, VLSI, computer, microprocessor
- To analyze logic processes and implement logical operations using combinational logic circuits
- To understand concepts of sequential circuits and to analyze sequential systems in terms of state machines
- To understand concept of Programmable Devices, PLA, PAL, CPLD and FPGA and implement digital system using VHDL
- To implement combinational and sequential circuits using VHDL

COURSE OUTCOMES

- Analyze the operation of a flip-flop and examine relevant timing diagrams
- Design operate practical digital logic circuits
- Develop a digital logic and apply it to solve circuit problems
- Analyze, design and implement combinational logic circuits
- Classify different semiconductor memories
- Analyze, design and implement sequential logic circuits

(Any 8 Experiments)

Note: EDA Tools/VHDL/Verilog/Mentor Graphics/Cadence

1. To convert a Boolean expression into logic gate circuit and assemble it using logic gate IC's.
2. Design of parity generator and checker circuit.
3. Barrel shifter
4. Design a seven segment display driver.
5. Image capturing
6. Counters and Shift registers
7. IIR filters
8. FIR filters
9. Design and simulation of a 4 bit Adder.
10. Frequency synthesizer

16ECU501A	PROGRAMMABLE LOGIC CONTROLLER	Semester-VI			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To identify logical process control in automation
- To connect PLC peripherals with PLC for logical functioning.
- To get strong knowledge in the developing of basic PLC programs
- To understand the components of a PLC system To understand how PLCs are used
- To understand the H&S requirements of a PLC- controlled system
- To understand different methods of interfacing with a PLC

COURSE OUTCOMES

- Identify the main parts of programmable logic controller
- Develop logic gate circuits for Boolean expressions
- Able to state basic PLC Terminology
- Identify logical process control, in automation.
- Describe how a programmable logic controller is programmed.
- Describe switching elements on input/output modules

UNIT I - Introduction

Introduction - Programmable Logic structures - Programmable Logic Arrays (PLAs) - Programmable Array Logic (PALs) - Programmable Gate Arrays (PGAs) - Field Programmable Gate Arrays (FPGAs) - Sequential network design with Programmable Logic Devices (PLDs) - Design of sequential networks using ROMs and PLAs - Traffic light controller using PAL.

UNIT II - PLC Structure

Programmable Logic Controllers (PLCs) - Introduction - Parts of PLC - Principles of operation - PLC sizes - PLC hardware components - I/O section - Analog I/O section - Analog I/O modules - Digital I/O modules - CPU Processor - Memory module - Programming devices - Diagnostics of PLCs with Computers.

UNIT III - PLC programming

Simple instructions - Programming EXAMINE ON and EXAMINE OFF instructions - Electromagnetic control relays - Motor starters - Manually operated switches - Mechanically operated and Proximity switches - Output control devices - Latching relays - PLC ladder diagram - Converting simple relay ladder diagram into PLC relay ladder diagram.

UNIT IV - Timer instructions

Introduction to timer - ON DELAY timer - OFF DELAY timer - Counter instructions - Up/Down counters - Timer and Counter applications - Program control instructions - Data manipulating instructions - Math instructions.

UNIT V - Applications of PLC

Simple materials handling applications - Automatic control of warehouse door - Automatic lubricating oil supplier - Conveyor belt motor control - Automatic car washing machine - Bottle PRACTICALel detection - Process control application.

16ECU501B	NANO ELECTRONICS	Semester - V			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To discuss about the latest technology on nano systems based Nanoelectronics.
- To know the various methods to fabricate and measure Nanoscale features.
- To identify the critical parameters that one must evaluate when considering any new Nanoelectronics device.
- Know the types of nanotechnology, atomic structure, molecular technology and• preparation of nano materials
- Understand the fundamentals of nano electronics and its properties.
- Know the Silicon MOSFET's, QTD and carbon nano tubes

COURSE OUTCOMES

- Understand the fundamentals of Nano Electronics and its properties.
- Gain the concepts of quantum theory.
- Understand the latest technology on nano systems based Nano electronics
- Identify the various methods to fabricate and measure Nanoscale features.
- Evaluate the critical parameters when considering any new Nano electronics device.
- Understand the applications of Nano Electronics.

UNIT I - Introduction

Definition of Nano-Science and Nano Technology - Applications of Nano - Technology. Introduction to Physics of Solid State: Size dependence of properties - Bonding in atoms and giant molecular solids - Electronic conduction - Systems confined to one, two or three dimension and their effect on property.

UNIT II - Quantum Theory for Nano Science

Time dependent and time independent Schrodinger wave equations - Particle in a box - Potential step: Reflection and tunneling (Quantum leak) - Penetration of Barrier - Electron trapped in 2D plane (Nano sheet) - Quantum confinement effect in nano materials - Quantum Wells, Wires and Dots: Preparation of Quantum Nanostructure - Size and Dimensionality effect - Fermi gas - Potential wells - Partial confinement –Excitons - Single electron Tunneling - Infrared detectors - Quantum dot laser Superconductivity.

UNIT III - Growth Techniques of Nanomaterials

Synthetic aspects: bottom up and top down approaches - Lithograpahic and Nonlithograpahic techniques - Sputtering and film deposition in glow discharge - DC sputtering technique (p-CuAlO2 deposition) - Thermal evaporation technique - E-beam evaporation - Chemical Vapour deposition(CVD) - Synthesis of carbon nano-fibres - Multi-walled carbon nanotubes - Pulsed Laser Deposition - Molecular beam Epitaxy - Sol-Gel Technique (No chemistry required) - Synthesis of nanowires/rods - Electro deposition - Chemical bath deposition - Ion beam deposition system – Vapor Liquid –Solid (VLS) method of nanowire.

UNIT IV - Methods of Measuring Properties and Characterization techniques

Microscopy: Scanning Probe Microscopy (SPM) - Atomic Force Microscopy (AFM)

- Field Ion Microscopy - Scanning Electron Microscopy (SEM) - Transmission Electron Microscopy(TEM) including energy dispersive X-ray (EDX) analysis - Low energy electron diffraction (LEED) - Reflection high energy electron diffraction (RHEED) - Spectroscopy: Infra-red and Raman Spectroscopy - X-ray Spectroscopy - Magnetic resonance - Optical and Vibrational Spectroscopy Characterization.

UNIT V - Applications

Carbon nanotubes - Nano cuboids - Graphene - Carbon quantum dots: Fabrication - Structure - Electrical - Mechanical - Vibrational properties – Applications - Use of nano particles for biological application - Drug delivery and bio-imaging - Impact of nanotechnology on the environment.

16ECU502A	ADVANCED COMMUNICATION SYSTEMS	Semester - V			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Provides knowledge in understanding the characteristics of different multiple access techniques in mobile/wireless communication.
- To understand the need of coding, Channel models, Diversity, Equalization and Channel estimation techniques. Able to apply analytical and empirical models in the design of wireless links.
- To understand the Wireless communication systems and standards.
- Students can design an optimum Single and multi-carrier communication system under given power, spectral and error performance constraints
- Analyze the error performance of digital modulation techniques
- Explore M ary signaling

COURSE OUTCOMES

- Understand the need of coding, Channel models, Diversity, Equalization and Channel estimation techniques.
- Understand the Wireless communication systems and its standards
- Apply analytical and empirical models in the design of wireless links.
- Evaluate the characteristics of speech signals and their frequency limitations.
- Describe and evaluate the design and performance of digital and analog circuits.
- Ability to analyze and evaluate digital communication systems.

UNIT I -Wave Propagation

EM Waves – Free Space Propagation – Surface Wave Propagation – Sky Wave Propagation – Space Wave Propagation – Trophospheric Scatter Propagation – Structure of Atmosphere – Characteristics of Ionized Regions – Virtual Height – Maximum Usable Frequency - Lowest Usable Frequency – Skip Distance – Optimum Working Frequency – Ionospheric Abnormalities – Duct Propagation.

UNIT II -Antenna Theory

Electro Magnetic radiations – Elementary doublet – Current and Voltage Distribution – Resonant antennas, Radiation patterns and Length calculations – Non resonant antennas – Antenna gain and Effective radiated power – Antenna resistance – Bandwidth, Beam width and Polarization – Grounded and Ungrounded antennas – Impedance matching – Dipole Arrays - Yagi Uda antenna – Parabolic antenna – Horn and Lens antenna .

UNIT III - Satellite Communication

System Description – Telemetry, Tracking and Command – Communication Space Craft – Satellite Orbit – GEO – LEO – MEO – Satellite Position – Linkage – Frequencies – Inside the Satellite: Transponder – Antenna Systems – Power Packages – Station Keeping – Ground Station – Aligning the Satellite Dish.

UNIT IV - Optical Fiber Communication

Basic Fiber Optic System – Frequencies – Fiber Optic Cables – Refraction – Numerical Aperture – Graded Index Cables – Single Mode – Multimode – Cable Constructions – Cable Losses – Connecter – Light Sources – Light Detector - System

Components – Advantages And Disadvantages.

UNIT V – Microwave Communication

Introduction – Maxwell's equation – Amperes law – Faradays law – Gauss law – Wave equation – Types of wave guides –Microwave tubes: - Two cavity Klystron – Multi cavity Klystron – Reflex Klystron – Traveling wave tube (TWT) – Radar – Classification- Applications.

16ECU502B	CONTROL SYSTEMS	Semester - V			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To know the fundamental concept of signals and production for controlling equipment or machines.
- To learn the various closed loop control systems current output is taken into consideration and corrections are made based on feedback
- To introduce different types of system and identify a set of algebraic equations to represent and model a complicated system into a more simplified form to interpret different physical and mechanical systems in terms of electrical system to construct equivalent electrical models for analysis
- To employ time domain analysis to predict and diagnose transient performance parameters of the system for standard input functions
- Identify the needs of different types of controllers and compensator to ascertain the required dynamic response from the system
- Formulate different types of analysis in frequency domain to explain the nature of stability of the system

COURSE OUTCOMES

- Understand the concept of time response and frequency response of the system.
- Analyze feedback characteristics of linear control systems to reduced the disturbance.
- Analyze time response of first and second order control systems for different standard test signals.
- Perform frequency domain analysis of linear control system using nyquist stability criterion.
- Identify the needs of different types of controllers and compensator to ascertain the required dynamic response from the system.
- Employ time domain analysis to predict and diagnose transient performance parameters of the system for standard input functions.

UNIT I - Introduction to Control Systems

Open loop and Closed loop control systems - Mathematical modeling of physical systems (Electrical - Mechanical and Thermal) - Derivation of transfer function - Armature controlled and field controlled DC servomotors - AC servomotors - Block diagram representation and signal flow graph - Reduction Technique - Mason's Gain Formula - Effect of feedback on control systems.

UNIT II - Time Domain Analysis

Time domain performance criteria - Transient response of first, second and higher order systems - Steady state errors and static error constants - Performance indices. Concept of Stability: Asymptotic stability and conditional stability - Routh-Hurwitz criterion - Relative stability analysis - Root Locus plots and their applications.

UNIT III - Frequency Domain Analysis

Correlation between time and frequency response - Polar and inverse polar plots - Frequency domain specifications - Logarithmic plots (Bode Plots) - Gain and phase margins - Nyquist stability criterion - Relative stability using Nyquist criterion - Constant M and N circles.

UNIT IV - State Space Analysis

Definitions of state - State variables - State space - Representation of systems - Solution of time invariant - Homogeneous state equation - State transition matrix and its properties - Controllers and Compensation Techniques: Response with P, PI and PID Controllers - Concept of compensation - Lag - Lead and Lag-Lead networks.

UNIT V - Design of Digital Control System

Z Plane Specifications of Control System Design – Digital Compensator Design – Frequency Response Method - State Feedback – Pole Placement Design – State Observers – Digital Filter Properties – Frequency Response – Kalman's Filter.

16ECU503A	BIOMEDICAL INSTRUMENTATION	Semester - V			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To know the fundamental concept of origin of Bio-electric signals and recording it with highly precision equipment.
- To learn the various medical equipment used for diagnosis and therapeutic purpose.
- To provide a large number of quality trained Medical Electronics professionals for preventive and maintenance work needed to maintain hi-tech medical equipments in hospitals to ensure good health care.
- To explore the human body parameter measurements setups
- To give basic ideas about how multimedia evidences are useful in crime investigation.
- Understanding basic principles and phenomena in the area of medical diagnostic instrumentation, theoretical and practical preparation enabling students to maintain medical instrumentation.

COURSE OUTCOMES

- Understand the fundamental concept of origin of Bio-electric signals and recording it with highly precision equipment.
- Differentiate and analyze the biomedical signal sources.
- Identify common biomedical signals and distinguish characteristic features.
- Ability to study various transducers
- Identify common signal artifacts, their sources and formulate strategies for their suppression.
- Familiarize with patient safety issues related to biomedical instrumentation.

UNIT I - Biomedical signals & Physiological transducers

Source of biomedical signal - Origin of bioelectric signals - Recording electrodes - Electrodes for ECG - EMG & EEG - Physiological transducers Pressure - Temperature - Photoelectric & ultrasound Transducers - breathing mechanics Spiro meter - Respiratory therapy equipments Inhalators ventilators & Respirators - Humidifiers - Nebulizers Aspirators - Biomedical recorders ECG - EEG & EMG. MEMS based biosensors

UNIT II - Patient Monitoring systems and Audiometers

Cardiac monitor - Bedside patient monitor - Measurement of heart rate - Blood pressure - Temperature - Respiration rate - Arrhythmia monitor - Methods of monitoring fatal heart rate - Monitoring PRACTICALor activity - Audiometers Audiometers - Blood cell counters - Oximeter - Blood flow meter - Cardiac output measurement - Blood gas analyzers.

UNIT III - Modern Imaging systems

Introduction - Basic principle & Block diagram of x-ray machine - x-ray Computed Tomography (CT) - Magnetic resonance imaging system (NMR) - Ultrasonic imaging system - Eco-Cardiograph - Eco Encephalography - Ophthalmic scans - MRI - Therapeutic Equipments Cardiac pacemakers - Cardiac defibrillators - Hemodialysis machine - Surgical diathermy machine.

UNIT IV - Patients safety & Computer Applications in Biomedical field

Precaution - Safety codes for electro medical equipment - Electric safety analyzer -

Testing of biomedical equipment - Use of microprocessors in medical instruments.

UNIT V - PC based medical instruments

Computerized Critical care units - Planning & designing a computerized critical care unit - Physiotherapy Software Diathermy - Microwave diathermy - Ultrasound therapy unit. Electrotherapy Equipments - Ventilators.

16ECU503B	SIGNALS AND SYSTEMS	Semester-V			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To understand the process of convolution between signals and able to solve differential equation using Laplace transform techniques.
- To understand the intuitive meaning of frequency domain and the importance of analyzing and processing signals in the frequency domain.
- Able to compute the Fourier series or Fourier transform Z-transform
- To introduce students the concept and theory of signals and systems needed in electronics and telecommunication engineering fields
- Knowledge about basic signal and system modeling concept and definitions
- Knowledge about the application and use of mathematical transforms and state-variables in order to solve electrical engineering problems

COURSE OUTCOMES

- Understand about various types of signals and systems, classify them, analyze them and perform various operations.
- Understand the use of transform to analysis of signals and systems in continuous and discrete time domain
- Implement the concept and theory of signals and systems in electronics and communication field.
- Ability to have idea of signal and system analysis and its characterization in time and frequency domain.
- Students can perform mathematical and graphical convolution of signals and systems.
- Compute the Fourier series or Fourier transform Z-transform

UNIT I - Signals and Systems

Continuous and discrete time signals - Transformation of the independent variable - Exponential and sinusoidal signals - Impulse and UNIT step functions - Continuous-Time and Discrete -Time Systems - Basic System Properties.

UNIT II - Linear Time -Invariant Systems (LTI)

Discrete time LTI systems - Convolution Sum - Continuous time LTI systems - Convolution integral - Properties of LTI systems - Commutative - Distributive - Associative - LTI systems with and without memory - Invariability - Causality - Stability - UNIT Step response - Differential and Difference equation formulation - Block diagram representation of first order systems.

UNIT III - Fourier Series Representation of Periodic Signals

Continuous - Time periodic signals - Convergence of the Fourier series - Properties of continuous - Time Fourier series - Discrete-Time periodic signals - Properties of Discrete - Time Fourier series - Frequency-Selective filters - Simple RC highpass and lowpass filters.

UNIT IV - Fourier Transform

Periodic signals - Properties of Continuous time Fourier transform - Convolution and Multiplication Properties - Properties of Fourier transform - Basic Fourier transform Pairs.

UNIT V - Laplace Transform

Laplace Transform - Inverse Laplace Transform - Properties of the Laplace Transform - Laplace Transform Pairs - Laplace Transform for signals - Laplace Transform Methods and Circuit Analysis - Impulse and Step response of RL - RC and RLC circuits

16ECU504A	ROBOTICS	Semester - V			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To learn the basic configuration of Robotics
- To understand the various types of Robots.
- To get an exposure in Robot control systems
- To acquire the knowledge on advanced algebraic tools for the description of motion
- To develop the ability to analyze and design the motion for articulated systems.
- To develop an ability to use software tools for analysis and design of robotic systems

COURSE OUTCOMES

- Understand the relationship between mechanical structures of industrial robots and their operational workspace characteristics.
- Illustrate the kinematics and dynamics of robotics.
- Implementation of related instrumentation and control in robotics
- Ability to solve inverse kinematics of simple robot manipulators
- Able to do the path planning for a robotic system
- Identify a Robot for a specific application.

UNIT I - Programming Environments

Integrated Development Environment (IDE) for AVR microcontrollers - Free IDEs like AVR Studio - WIN AVR - Installing and configuring for Robot programming - In System Programmer (ISP) - Loading programmes on Robot.

UNIT II - Actuators

DC Motors - Gearing and Efficiency - Servo Motors - Stepper motors - Motor Control - Implementations and techniques.

UNIT III - Sensors

White line sensors - IR range sensor of different range - Analog IR proximity sensors - Analog directional light intensity sensors - Position encoders - Servo mounted sensor pod/Camera Pod - Wireless colour camera - Ultrasound scanner - Gyroscope and Accelerometer – Magnetometer - GPS receiver - Battery voltage sensing - Current Sensing

UNIT IV – Interfacing Concepts

LCD interfacing with robot (2 x 16 Characters LCD) - Other indicators: Indicator LEDs - Buzzer - Timer / Counter operations - PWM generation - Motor velocity control - Servo control - Velocity calculation - Motor position Control - Event scheduling.

UNIT V - Communication

Wired RS232 (serial) Communication - Wireless ZigBee Communication - USB Communication - Simplex infrared Communication (IR remote to robot).

16ECU504B	MOBILE APPLICATIONS DEVELOPMENT	Semester - V			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To understand system requirements for mobile applications.
- To generate suitable design using specific mobile development framework.
- To apply analytical and empirical models in the design of wireless links
- Utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces,
- Program mobile applications for the Android operating system that use basic and advanced phone features, and
- Deploy applications to the Android marketplace for distribution

COURSE OUTCOMES

- Understand system requirements for mobile applications.
- Generate suitable design using specific mobile development framework.
- Apply analytical and empirical models in the design of wireless links.
- Develop user interfaces for the android platform.
- Identify the interaction between user interface and underlying application infrastructure.
- Configure android application development tools

UNIT I - Introduction

Mobile Application Programming - Different Platforms - Architecture and working of Android - iOS and Windows phone 8operating system - Comparison of Android - iOS - Windows phone 8.

Android Development Environment: Android - Advantages and Future of Android - Tools and about Android SDK - Installing Java – Eclipse – Android - Android Software Development Kit for Eclipse - Android Development Tool: Android Tools for Eclipse - AVDs: Smartphone Emulators - Image Editing

UNIT II - Android Software Development Platform

Understanding Java SE and the Dalvik Virtual Machine - Directory Structure of an Android Project - Common Default Resources Folders - The Values Folder - Leveraging Android XML - Screen Sizes - Launching Your Application: TheAndroid Manifest.xml File - Creating Your First Android Application.

UNIT III - Android Framework Overview

The Foundation of OOP - The APK File - Android Application Components - Android Activities: Defining the User Interface - Android Services: Processing in the Background - Broadcast Receivers: Announcements and Notifications - Content Providers: Data Management - Android Intent Objects: Messaging for Components - Android Manifest XML: Declaring Your Components.

UNIT IV - Views and Layouts in Android

Buttons – Menus – Dialogs - Graphics Resources: Introducing the Drawables - Implementing Images - Core Drawable Subclasses - Using Bitmap – PNG - JPEG - GIF Images in Android - Creating Animation in Android Handling User Interface(UI) Events: An Overview of UI Events in Android - Listening for and Handling Events - Handling UI Events via the View Class - Event Callback Methods - Handling Click Events - Touchscreen Events - Keyboard Events - Context Menus - Controlling the Focus.

UNIT V - Content Providers

An Overview of Android Content Providers - Defining a Content Provider - Working with a Database - Intents and Intent Filters: Intent - Implicit Intents - Explicit Intents - Intents with Activities - Intents with Broadcast Receivers - Advanced Android: New Features in Android 4.4 - iOS Development Environment: Overview of iOS - iOS Layers - Introduction to iOS application development - Windows phone Environment: Overview of windows phone and its platform - Building windows phone application.

<table>
<tr><td rowspan="3">16ECU511A</td><td rowspan="3">PROGRAMMABLE LOGIC CONTROLLER - PRACTICAL</td><td colspan="4">Semester-VI</td></tr>
<tr><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>-</td><td>-</td><td>4</td><td>2</td></tr>
</table>

COURSE OBJECTIVES

- To acquaint the students with the fundamental principles of two-valued logic and various devices used
- To connect PLC peripherals with PLC for logical functioning
- To get strong knowledge in the developing of basic PLC programs
- To understand the components of a PLC system To understand how PLCs are used
- To understand the H&S requirements of a PLC- controlled system
- To understand different methods of interfacing with a PLC

COURSE OUTCOMES

- Able to describe typical components of a Programmable Logic Controller
- apply the concept of electrical ladder logic, its history, and its relationship to programmed PLC instruction
- Able to use timer, counter, and other intermediate programming functions
- Able to design and program a small, automated industrial production line.
- Develop ladder logics for a particular design
- Simplify designs with Boolean algebra

(Any 10 Experiments)

1. Different applications of Push buttons.
2. Working of different types of Timers.
3. Working of different types of Counters.
4. Sequential operation of ON/OFF of a set of lights.
5. Latching and Unlatching of a Motor.
6. Automatic indication of water tank level.
7. Traffic lights indication.
8. Logic Gates
9. Latching and Unlatching
10. Interlocking
11. Sequential operation of ON/OFF of a set of lights
12. Counters

16ECU511B	NANO ELECTRONICS - PRACTICAL	Semester -V			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Make them understand various advanced concepts in nanoelectronics
- Explore the fundamentals on QED, SED, Molecular electronics and spintronics
- Train the students on state-of-the-art computational tools for modeling and simulation of nanoelectronics devices
- To identify the critical parameters that one must evaluate when considering any new Nanoelectronics device
- Know the types of nanotechnology, atomic structure, molecular technology and• preparation of nano materials
- Understand the fundamentals of nano electronics and its properties.

COURSE OUTCOMES

- Able to describe typical components of a Programmable Logic Controller
- Gain the concepts of nanoelectronics such as ballistic transport and quantum confinement.
- Identify the various methods to fabricate and measure Nanoscale features.
- Evaluate the critical parameters when considering any new Nano electronics device.
- Understand the latest technology on nano systems based Nano electronics
- Design and simulate various advanced nanoelectronic devices

(Any 10 Experiments)

1. Synthesis of at least two different sizes of Nickel Oxide Nano Particles Using Sol-Gel Method.
2. Synthesis of at least two different sizes of Copper Oxide Nano Particles Using Sol-Gel Method.
3. Synthesis of at least two different sizes of Zinc Oxide Nano Particles Using Sol-Gel Method.
4. Polymer synthesis by suspension method / emulsion method B-H loop of nanomaterials.
5. Magnetoresistance of thin films and nanocomposite, I-V characteristics and transient response.
6. Particle size determination by X-ray diffraction (XRD) and XRD analysis of the given XRD spectra.
7. Determination of the particle size of the given materials using He-Ne LASER.
8. Selective area electron diffraction: Software based structural analysis based on TEM based experimental data from published literature.

9. Surface area and pore volume measurements of nanoparticles.
10. Spectroscopic characterization of metallic, semiconducting and insulating Nano-particles.
11. Developing a lead free solder using copper nanoparticles.
12. Deposition of Nano crystals on plastic sheets.

16ECU512A	**ADVANCED COMMUNICATION SYSTEMS - PRACTICAL**	**Semester - V**

L	T	P	C
-	-	4	2

COURSE OBJECTIVES

- Understand radio-frequency systems and their applications
- Analyze the performance parameters of radio frequency circuits
- Analyze the performance parameters of radio frequency circuits
- Identify design trade-off of radio frequency communication systems.
- To analyze error performance of a digital communication system in presence of noise and other interference
- To understand various source coding and channel coding techniques

COURSE OUTCOMES

- To focuses the fundamental concepts on TDM, Pulse modulations, digital modulation techniques
- To enhance the knowledge of source coding techniquesand Error-control coding techniques.
- To understand the basic concept of digital commutation system
- To understand Multiple Access and Spread Spectrum Techniques for mobile and cellular communication system.
- Estimate various losses in optical fiber
- Design fiber optic communication link

(Any 10 Experiments)

1. Performance analysis of Half wave dipole antenna
2. Performance analysis of Loop antenna
3. Performance analysis of Yagi Uda antenna
4. Performance analysis of Log periodic antenna
5. Radio wave propagation path loss calculations
6. Tunnel Diode Oscillator and Gunn Diode Oscillator
7. Analog fiber optic transmitter & receiver
8. Digital fiber optic transmitter & receiver
9. Radiation Pattern by Horn antenna
10. Reflex Klystron characteristics using microwave bench
11. Gunn Diode oscillator
12. Impedance and power measurement by Smith chart

16ECU512B	CONTROL SYSTEMS - PRACTICAL	Semester-V			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To know the concept of time response and frequency response of the system
- To introduce different types of system and identify a set of algebraic equations to represent and model a complicated system into a more simplified form
- To interpret different physical and mechanical systems in terms of electrical system to construct equivalent electrical models for analysis
- To employ time domain analysis to predict and diagnose transient performance parameters of the system for standard input functions
- Identify the needs of different types of controllers and compensator to ascertain the required dynamic response from the system
- Formulate different types of analysis in frequency domain to explain the nature of stability of the system

COURSE OUTCOMES

- Represent the mathematical model of a system
- Determine the response of different order systems for various step inputs 3. Analyze the stability of the system
- Ability to formulate transfer function for the given control system problem
- Ability to find time response of the given control system model
- Ability to design Lead, Lag, Lead-Lag system in control system.
- Ability to design PID controllers for the given control system model.

(Any 10 Experiments)

1. Characteristics of synchro transmitter receiver
2. Characteristics of synchro as an error detector
3. Position control of DC motor
4. Speed control of DC motor
5. Characteristics of AC servo motor
6. Time response of type 0,1 and 2 systems
7. Frequency response of first and second order systems
8. Time response characteristics of a second order system.
9. Effect of damping factor on performance of second order system
10. Frequency response of Lead networks.
11. Frequency response of Lag networks.
12. Study of P, PI and PID controller.

16ECU513A	BIOMEDICAL INSTRUMENTATION - PRACTICAL	Semester-V			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To introduce an fundamentals of transducers as applicable to physiology ● To explore the human body parameter measurements setups
- To make the students understand the basic concepts of forensic techniques. With widespread use and requirements of medical instruments
- Gives knowledge of the principle of operation and design of biomedical instruments
- To provide a large number of quality trained Medical Electronics professionals for preventive and maintenance work needed to maintain hi-tech medical equipments in hospitals to ensure good health care.
- To explore the human body parameter measurements setups
- To give basic ideas about how multimedia evidences are useful in crime investigation.

COURSE OUTCOMES

- Understand the physiology of biomedical system
- Measure biomedical and physiological information
- Discuss the application of Electronics in diagnostics and therapeutic area
- Develop a thorough understanding on basics of biomedical amplifiers
- Develop a thorough understanding on principles of medical instrumentations
- Develop a thorough understanding on clinical applications of medical instrumentation systems

(Any 10 Experiments)

1. Characterization of bio potential amplifier for ECG signals.
2. Study on ECG simulator
3. Measurement of heart sound using electronic stethoscope. Study on ECG heart rate monitor /simulator
4. Study of pulse rate monitor with alarm system
5. Determination pulmonary function using spirometer.
6. Measurement of respiration rate using thermister /other electrodes.
7. Respiration Rate monitor/ apnea monitor
8. Ultrasound transducers based on medical system
9. Study of a Pacemaker.
10. Measurement of pulse rate using photoelectric transducer & pulse counting for known period.
11. To study fingertip oximeter and analysis of various parameters.
12. Display the frequency spectrum of a signal using MatPRACTICAL/PRACTICALview.

16ECU513B	SIGNALS AND SYSTEMS - PRACTICAL	SEMESTER-V			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To introduce an fundamentals of transducers as applicable to physiology
- Understanding signals and systems in terms of both the time and transform domains, taking advantage of the complementary insights and tools that these different perspectives provide
- Able to compute the Fourier series or Fourier transform Z-transform
- Knowledge about basic signal and system modeling concept and definitions
- Knowledge about the application and use of mathematical transforms and state-variables
- Development of the mathematical skills to solve problems involving convolution, filtering, modulation and sampling.

COURSE OUTCOMES

- Apply the knowledge of linear algebra topics like vector space, basis, dimension, inner product, norm and orthogonal basis to signals.
- Analyse the spectral characteristics of continuous-time periodic and a periodic signals using Fourier analysis.
- Classify systems based on their properties and determine the response of LSI system using convolution.
- Analyze system properties based on impulse response and Fourier analysis.

Apply the Laplace transform and Z- transform for analyze of continuous-time and discrete-time signals and systems

(Any 10 Experiments)

1. Generation of Signals: continuous time
2. Generation of Signals: discrete time
3. Time shifting of signals.
4. Time scaling of signals.
5. Convolution of Signals
6. Solution of Difference equations.
7. Fourier series representation of continuous time signals.
8. Fourier transform of continuous time signals.
9. Laplace transform of continuous time signals.
10. Introduction to Xcos/similar function and calculation of output of systems represented by block diagrams
11. Sampling and signal reconstruction and Spectral Analysis using DFT.
12. Correlation of signals.

16ECU514A	ROBOTICS - PRACTICAL	Semester - V			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- To learn the basic configuration of Robotics
- To understand the various types of Robots.
- To get an exposure in Robot control systems
- To acquire the knowledge on advanced algebraic tools for the description of motion
- To develop the ability to analyze and design the motion for articulated systems.
- To develop an ability to use software tools for analysis and design of robotic systems

COURSE OUTCOMES

- Understand the relationship between mechanical structures of industrial robots and their operational workspace characteristics.
- Illustrate the kinematics and dynamics of robotics.
- Implementation of related instrumentation and control in robotics
- Ability to solve inverse kinematics of simple robot manipulators
- Able to do the path planning for a robotic system
- Identify a Robot for a specific application.

(Any 8 Experiments)

1. Study of different types of Robots based on configuration and application
2. Study of different types of links and joints used in Robots
3. Study of components of Robots with drive system and end effectors
4. Determination of maximum and minimum position of links
5. Verification of transformation (position and orientation) with respect to gripper and world coordinate system
6. Estimation of accuracy, repeatability and resolution
7. Robot programming exercises
8. Design, modeling and analysis of two different types of grippers.
9. Study of sensor integration.
10. Study of robotic system design.

16ECU514B	MOBILE APPLICATIONS DEVELOPMENT - PRACTICAL	Semester - V			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- Understand aspects of mobile programming that make it unique from programming for other platforms,
- Utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces,
- Program mobile applications for the Android operating system that use basic and advanced phone features, and
- Deploy applications to the Android marketplace for distribution
- Program mobile applications for the Android operating system that use basic and advanced phone features, and
- Deploy applications to the Android marketplace for distribution

COURSE OUTCOMES

- Understand system requirements for mobile applications.
- Generate suitable design using specific mobile development framework.
- Apply analytical and empirical models in the design of wireless links.
- Develop user interfaces for the android platform.
- Identify the interaction between user interface and underlying application infrastructure.
- Configure android application development tools

(Any 8 Experiments)

1. Develop an application that uses GUI components, Font and Colours.
2. Develop an application that uses Layout Managers and event listeners.
3. Develop a native calculator application.
4. Write an application that draws basic graphical primitives on the screen.
5. Develop an application that makes use of database.
6. Develop an application that makes use of RSS Feed.
7. Implement an application that implements Multi threading:
8. Develop a native application that uses GPS location information.
9. Implement an application that writes data to the SD card.
10. Implement an application that creates an alert upon receiving a message.

16ECU601A	EMBEDDED SYSTEMS	Semester-VI			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Ability to design an Embedded System, component or process to meet desired needs within realistic constraints.
- To develop the next generation technologies, methods and tools for modeling, design, implementation and operation of hardware/software systems embedded in intelligent devices
- To provide a broad overview of both theoretical and practical aspects of a design flow for To understand the need and applications of Microcontrollers n embedded system.
- To understand architecture and features of typical Microcontroller.
- Learn interfacing of real world input and output devices
- To study various hardware and software tools for developing applications embedded systems

COURSE OUTCOMES

- Understand hardware and software design requirements of embedded systems.
- Acquire knowledge about embedded processors and their applications
- Analyze the embedded systems specification and develop software programs.
- Ability to design an Embedded System, component or process to meet desired needs within realistic constraint
- Evaluate the requirements of programming embedded systems and tool chain for embedded systems.
- Explore the features of the microcontroller and provide solutions for embedded applications

UNIT I - Introduction to Embedded Systems

Overview of Embedded Systems - Features - Requirements and Applications - Recent Trends in the Embedded System Design - Common architectures for the Embedded System Design - Embedded Software design issues.

UNIT II - Embedded Design Process

Embedded Design Life Cycle – Product Specification – Hardware / Software Partitioning – Detailed Hardware and Software Design – Integration – Product Testing – Selection Processes – Microprocessor Vs Micro Controller – Performance Tools – Bench Marking – RTOS Micro Controller Tool Chain AvaiPRACTICALility – Other Issues in Selection Processes.

UNIT III - Introduction to microcontrollers

Overview of Harvard architecture and Von Neumann architecture - RISC and CISC microcontrollers - AVR RISC Microcontrollers: Introduction to AVR RISC Microcontrollers - Architecture overview - Status register - General purpose register file.

UNIT IV - Interrupts and Timer

Memories - Instruction set - Data Transfer Instructions - Arithmetic and Logic Instructions Branch Instructions - Bit and Bit-test Instructions - MCU Control Instructions - Simple programs in Assembly Language / C Language - Introduction to System Clock -

Reset sources.

UNIT V – Peripherals

Introduction to interrupts - External interrupts - IO Ports - 8-bit and 16-bit Timers - Introduction to different modes - Input Capture and Compare Match Analog Comparator - Analog-to-Digital Converter - Serial Peripheral Interface (SPI) - The Universal Synchronous and Asynchronous serial Receiver and Transmitter (USART) - Two Wire Interface (TWI) / I2C bus.

16ECU601B	BASIC VLSI DESIGN	Semester-VI			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To enable the students to model, simulate and test the Electronics and Instrumentation based design.
- To provide a design flexibility using graphical programming language
- To provide a platform for the students to do multidisciplinary projects
- To facilitate the conduct of short term and continuous learning programmes
- To provide knowledge on design of process control by using virtual instrumentation techniques To provide knowledge in process analysis by VI tools
- To develop basic VI programs using loops, case structures etc. including its applications in image, signal processing and motion control.

COURSE OUTCOMES

- Understand basics of acquisition techniques and its interface.
- Recognize the components of virtual instrumentations and measurement.
- Get adequate knowledge in VI Tool sets.
- Use Lab view software for instrument control, measurement and data acquisition.
- Understand VI Programming techniques.
- Ability to use state machines to solve complex problems.

UNIT I - Metal Oxide Semiconductor (MOS)

Introduction to basic principle of MOS transistor - Large signal MOS models (long channel) for digital design - SPICE model - MOS device layout.

UNIT II - MOS Inverter

Transistor layout - Inverter layout - CMOS digital circuit layout - Inverter principle - Depletion and enhancement load inverters - Basic CMOS inverter - Transfer characteristics - Logic threshold - Noise margins - Dynamic behavior.

UNIT III - Combinational MOS Logic Design

Propagation Delay and Power Consumption - Static MOS design - Pass Transistor logic - Complex logic circuits - Sequential MOS Logic Design - Static latches - Flip flops & Registers.

UNIT IV - Memory Design

Dynamic Latches & Registers - CMOS Schmitt trigger - Monostable sequential Circuits - Astable Circuits - ROM & RAM cells design - Dynamic MOS design - Dynamic logic families and performances - Interconnect & Clock Distribution - Interconnect delays - Cross Talks - Clock Distribution.

UNIT V – Power Estimation

Power Estimation Techniques – Logic level Power Estimation – Simulation Power Analysis – Probabilistic Power Analysis.

16ECU602A	DIGITAL SIGNAL PROCESSING	Semester-VI			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To understand the fundamental concepts and theory of Discrete Fourier Series and Discrete Fourier Transform.
- To get an exposure on Discrete Fourier Transforms (DFT), its applications and implementation by FFT techniques.
- To apply design technique for FIR type digital filters
- Understand fundamentals of Digital Signal Processing
- Analyze & compare different signal processing strategies.
- Become aware of some applications of DSP.

COURSE OUTCOMES

- Understand the fundamental concepts and theory of Discrete Fourier Series and Discrete Fourier Transform
- Ability to compute various transform analysis of Linear Time Invariant Systems.
- Implement problem solving strategies to DSP Problems.
- Able to test signal processing algorithms for various applications
- Ability to understand Various applications of DSP such as signal processing and telecommunication.
- Apply design techniques for FIR type digital filters

UNIT I - Discrete Time systems

Discrete sequences - Linear coefficient difference equation - Representation of DTS - LSI Systems - Stability and causality - Frequency domain - Representations and Fourier transform of DT sequences.

UNIT II - Z-Transform

Definition – Properties - Inverse Z Transform and stability - Parsevals Theorem - Applications - System Function: Signal flow graph - Representation and analysis of Discrete Time Systems -Techniques of representations - Matrix generation - Solution for DTS evaluations.

UNIT III - Discrete Fourier Transform

DFT assumptions - Inverse DFT - Matrix relations - Relationship with FT and its inverse - Circular convolution - DFT theorems – DCT – Computation of DFT - FFT Algorithms and processing gain – Discrimination - Interpolation and extrapolation - Gibbs Phenomena - FFT of real functions - Interleaving - Resolution improvement - Word length effects.

UNIT IV - Digital Filters

Analog filter review - System function for IIR and FIR filters - Network representation -Canonical and decomposition networks - IIR filter realization methods – Limitations - FIR filter realization techniques - Discrete correlation and convolution - Properties - Limitations.

UNIT V - TMS 320 C 6713

Introduction – TMS320C6713 Overview – Key Features – Architectural Overview – Functional Block Diagram - Internal Memory Organization – CALU – System Control – PLU – Interrupts – Addressing Modes – Instruction Set.

16ECU602B	VIRTUAL INSTRUMENTATION	Semester-VI			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To enable the students to model, simulate and test the Electronics and Instrumentation based design.
- To provide a design flexibility using graphical programming language
- To provide a platform for the students to do multidisciplinary projects
- To facilitate the conduct of short term and continuous learning programmes
- To provide knowledge on design of process control by using virtual instrumentation techniques To provide knowledge in process analysis by VI tools
- To develop basic VI programs using loops, case structures etc. including its applications in image, signal processing and motion control.

COURSE OUTCOMES

- Understand basics of acquisition techniques and its interface.
- Recognize the components of virtual instrumentations and measurement.
- Get adequate knowledge in VI Tool sets.
- Use Lab view software for instrument control, measurement and data acquisition.
- Understand VI Programming techniques.
- Ability to use state machines to solve complex problems.

UNIT I - Introduction

General functional description of a digital instrument - Block diagram of a Virtual Instrument - Physical quantities and Analog interfaces - Hardware and Software - User interfaces - Advantages of Virtual instruments over conventional instruments - Architecture of a Virtual instrument and its relation to the operating system.

UNIT II - Software Overview

LABVIEW - Graphical user interfaces - Controls and Indicators - 'G' programming - labels and Text - Shape, Size and Color - Owned and free labels - Data type, Format, Precision and representation - Data types - Data flow programming - Editing - Debugging and Running a Virtual instrument - Graphical programming palettes and tools - Front panel objects - Functions and Libraries.

UNIT III - Programming Structure

FOR loops - WHILE loops - CASE structure - Formula nodes - Sequence structures - Arrays and Clusters - Array operations - Bundle - Bundle/Unbundle by name - Graphs and charts - String and file I/O - High level and Low level file I/O's - Attribute modes Local and Global variables. Operating System and Hardware Overview: PC architecture - Current trends - Operating system requirements - Drivers – Interface Buses – PCI Bus – Interface cards – Specification – Analog and Digital interfaces – Power - Speed and timing considerations.

UNIT IV - Hardware Aspects

Installing hardware - Installing drivers - Configuring the hardware - Addressing the hardware in LabVIEW - Digital and Analog I/O function - Data Acquisition - Buffered I/O - Real time Data Acquisition.

UNIT V - LabView Applications

IMAQ - Motion Control: General Applications - Feedback devices - Motor Drives - Instrument Connectivity – GPIB - Serial Communication – General - GPIB Hardware & Software specifications - PX1 / PC1: Controller and Chassis Configuration and Installation.

16ECU603A	PROGRAMMING WITH LABVIEW	Semester-VI			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To learn and to navigate LABVIEW and use the block diagram, front panel, and Functions and Controls palettes.
- To explore use of graphs and charts and build a user interface.
- To gain knowledge on the different data types and methods to organize and group data, controls, and indicators in LABVIEW.
- Understand basics of acquisition techniques and its interface.
- Recognize the components of virtual instrumentations and measurement
- To develop basic applications in the LabVIEW graphical programming environment

COURSE OUTCOMES

- Gain knowledge on the different data types and methods to organize and group data, controls, and indicators in LABVIEW
- Understand various functions available in Lab View for instrumentation applications.
- Ability to model complex system using Lab view.
- Ability to improve lab view programming skills
- Able to use graphical programming language.
- Ability to simulate and test behavior of system.

UNIT I - Introduction to Virtual Instrumentation

Computers in Instrumentation - Concept of Virtual Instrumentation (VI) - History of VI - LABVIEW and VI - Conventional and Graphical Programming - Distributed Systems.

UNIT II - Basics of LABVIEW

Components of LABVIEW - Owned and Free Labels - Tools and Other Palettes Arranging Objects - Pop-Up Menus -Colour Coding - Code Debugging - Creating Sub-VIs - For Loop - While Loop - Loop Behaviour and Interloop Communication - Local Variables - Global Variables - Shift Registers.

UNIT III - Programming Fundamentals

Feedback – Auto indexing - Loop Timing - Timed Loops Sequence Structures - Case Structure - Formula Node - Event Structure - Arrays - Clusters - Inter-Conversion of Arrays and Clusters - Waveform Chart - Resetting Plots - Waveform Graph – Use of Cursors - X-Y Graph - Introduction to a State Machine - Event Structures - Full State Machine - File Formats - File I/O Functions - Path Functions.

UNIT IV - Basics of Data Acquisition

Classification of Signals – Real World Signals - Analog Interfacing - Connecting the Signal to the Board - Practical vs Ideal Interfacing - Bridge Signal Sources.

UNIT V - Data Acquisition with LABVIEW

Measurement and Automation Explorer - Waveform DataType - Working in DAQmx -Working in NI-DAQ - Use of Simple analog and digital VIs -Continuous data acquisition - Acquisition of data in bursts - DAQ Assistant - Analysis Assistant - Instrument Assistant -

Instrument Interfacing and LABVIEW - Data Sockets.

16ECU603B	VERILOG AND FPGA BASED SYSTEM DESIGN	Semester-VI			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To understand the fundamentals of Verilog and FPGA based system design.
- To appreciate the design process in FPGA through an application on the design of a system design
- Describe general FPGA architecture, internals and use cases
- Understanding of building blocks that are available to digital designers
- Apply design flow methodology for a given problem
- Implement and debug various digital designs

COURSE OUTCOMES

- Understand the fundamentals of Verilog and FPGA based system design.
- Design and optimize complex combinational and sequential digital circuits
- Apply design flow methodology for a given problem
- Solve time related problems
- Implement and debug various digital designs.
- Analyze a given design based on synthesis, implementation and timing reports

UNIT I - Digital logic design flow

Combinational circuits - Combinational building blocks: Multiplexors – Demultiplexers - Decoders - Encoders - Adder circuits - Sequential circuit elements: Flip-Flop - Latch – Register- Finite state machines: Mealy and Moore - Other sequential circuits: Shift registers – Counters - FSMD (Finite State Machine with Datapath): Design and analysis. Microprogrammed control - Memory basics and timing - Programmable Logic devices.

UNIT II - Evolution of Programmable logic devices

PAL - PLA – GAL - CPLD - FPGA architectures - Placement and routing - Logic cell structure - Programmable interconnects - Logic blocks - I/O Ports - Clock distribution in FPGA - Timing issues in FPGA design - Boundary scan.

UNIT III - Verilog HDL

Introduction to HDL - Verilog primitive operators - Structural Verilog - Behavioral Verilog - Design verification - Modeling of combinational and sequential circuits (including FSM and FSMD) with Verilog Design - Examples in Verilog.

UNIT IV – Basics of FPGA

Introduction - FPGA basics - FPGA Design - FPGA schematic connectivity - Wiring the design - schematic components - Processor cores - Peripheral Components - Generic components - Vendor macro and primitive libraries - Create a PWM.

UNIT V - Targeting and Running the design

Constraint files– Configurations - NanoBoard constraint files - Configuration Manager -Auto Configuring an FPGA project - Defining constraints manually - Editing a constraint file - Configuring MyPWM - Controlling the build process -

Understanding the build process - Button regions - Accessing stage reports / outputs - Build stages - Configuring a build stage.

16ECU611A	EMBEDDED SYSTEMS - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Demonstrate the sensing of different physical parameters
- Explain the calibration of parameters measured and displayed
- Evaluate the data transfer
- To understand the need and applications of Microcontrollers and ARM Processors in embedded system.
- To understand architecture and features of typical Microcontroller
- To learn interfacing of real world input and output devices

COURSE OUTCOMES

- Define the arithmetical and logical assembly language for microcontroller
- Know the downloading procedure on hardware into flash ROM and show the testing data on defined port wish board
- Competent to evaluate the data transfer response
- Able to describe the microcontroller and ARM Processor Architecture and its Features
- Learn importance of microcontroller and ARM Processor in designing embedded applications
- Learn use of hardware and software tools. 4. Develop interfacing to real world devices.

(Any 10 Experiments)

1. Flash LED at an observable rate.
2. Hello LED – Flash LED at a rate such that the LED appears always on. Estimate the onset of the rate when the LED appears to stay on
3. Controlling ON/OFF of an LED using switch.
4. Toggle the LED every second using Timer interrupt.
5. Read the ADC value of the voltage divider involving the LDR. Print the value on the serial monitor.
6. Use the thermistor to estimate the temperature and print the raw value on the serial monitor.
7. Connect the LCD I/O Board and print 'Hello World' on the LCD. Scroll display from left to right.
8. Speed control of stepper motor.
9. Serial Communication Interface
10. I2C Interface
11. Programming using Interrupts.
12. Generation of Pulse Width Modulation

16ECU611B	BASIC VLSI DESIGN - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Introduced digital integrated circuits
- Introduce CMOS devices and manufacturing technology.
- Introduce CMOS logic gates and their layout.
- Ability to find Propagation delay, noise margins, and power dissipation in the digital VLSI circuits.
- Ability to design Combinational (e.g., arithmetic) and sequential circuit.
- Ability to design Memory in VLSI circuits.

COURSE OUTCOMES

- Analyze the CMOS layout levels, how the design layers are used in the process sequence, and resulting device structures (i.e. cross-sectional views).
- Implement digital logic designs of various types (i.e. combinational logic, multiplexers).
- Analyze performance issues and the inherent trade-offs involved in system design (i.e. power vs. speed).
- Complete a moderately complex design project involved with data path operators, data registers, serial/parallel conversion, clocking/timing details and feedback.
- Identify the interactions between process parameters, device structures, circuit performance, and system design.

(Any 10 Experiments)

1. Design and implementation of logic gates
2. Design and simulation of Real Time Clock
3. Design and implementation of Encoder and Decoder
4. To plot the (i) output characteristics & (ii) transfer characteristics of an n-channel MOSFET.
5. To plot the (i) output characteristics & (ii) transfer characteristics of an p-channel MOSFET.
6. To design and plot the static (VTC) and dynamic characteristics of a digital CMOS inverter.
7. To design and plot the output characteristics of a 3-inverter ring oscillator.
8. To design and plot the dynamic characteristics of 2-input NAND, NOR logic gates using CMOS technology.
9. To design and plot the dynamic characteristics of 2-input XOR and XNOR logic gates using CMOS technology.
10. To design and plot the characteristics of a 4x1 digital multiplexer using pass transistor logic.

11. To design and plot the characteristics of a positive and negative latch based on multiplexers.
12. To design and plot the characteristics of a master-slave positive and negative edge triggered registers based on multiplexers.

16ECU612A	DIGITAL SIGNAL PROCESSING - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To implement Linear and Circular Convolution
- To implement FIR and IIR filters
- Familiar with the most important methods in DSP, including digital filter design, transform-domain processing and importance of Signal Processors.
- Aware about implications of the properties of systems and signals
- To design FIR filters and IIR Filters
- Analyze discrete-time filter banks and multi-rate signal processing system

COURSE OUTCOMES

- Analyze the CMOS layout levels, how the design layers are used in the process sequence, and
- Understand the handling of discrete/digital signals using MATLAB
- Understand the basic operations of Signal processing
- Analyze the spectral parameter of window functions
- Design IIR, and FIR filters for band pass, band stop, low pass and high pass filters
- Design the signal processing algorithm using MATLAB & VLAB.

(Any 10 Experiments)

USING TMS320C5X/TMS320C54XX/TMS320C67XX/MATLAB

1. Study of addressing Modes of DSP using simple examples
2. Arithmetic operations
3. Generation of unit sample sequence, unit step, ramp function, discrete time sequence, real sinusoidal sequence.
4. Generate and plot sequences over an interval.
5. Given x[n], write program to find X[z].
6. Fourier Transform, Discrete Fourier Transform and Fast Fourier Transform
7. Design of a Butterworth analog filter for low pass and high pass.
8. Design of digital filters.
9. Correlation of two discrete signals
10. Quantization noise
11. Waveform generation
12. Discrete Cosine Transform

16ECU612B	VIRTUAL INSTRUMENTATION - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To enable the students to model, simulate and test the Electronics and Instrumentation based design.
- To provide a design flexibility using graphical programming language
- To provide a platform for the students to do multidisciplinary projects
- To facilitate the conduct of short term and continuous learning programmes
- To provide knowledge on design of process control by using virtual instrumentation techniques To provide knowledge in process analysis by VI tools
- To develop basic VI programs using loops, case structures etc. including its applications in image, signal processing and motion control.

COURSE OUTCOMES

- Understand basics of acquisition techniques and its interface.
- Recognize the components of virtual instrumentations and measurement.
- Get adequate knowledge in VI Tool sets.
- Use Lab view software for instrument control, measurement and data acquisition.
- Understand VI Programming techniques.
- Ability to use state machines to solve complex problems

(Any 10 Experiments)

1. Creating a simple VI to place a Digital Control.
2. Navigation and Editing.
3. VI to make a Degree C to Degree F Converter.
4. Converting VI in to Sub VI.
5. Write a program to count Modulus 32 and display the values in decimal, octal decimal and Binary.
6. Built a VI using while loop that displays random numbers in to three wave form charts. (Strip, scope & Sweep)
7. Data Acquisition using LABVIEW.
8. Development of Temperature Measurement using LABVIEW.
9. Development of Virtual Instrument for Function Generator using LABVIEW.
10. Development of Virtual Instrument for Audio Signal Spectrum Analyser using LABVIEW.
11. Design of V-F and F-V converter.
12. Instrumentation amplifier.

16ECU613A	PROGRAMMING WITH LABVIEW - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- Know about dataflow and Graphical Programming Language
- Describe and utilize the NI example finder.
- Describe what is meant by 'data acquisition'.
- Describe the function of the 'General Purpose Interface Bus (GPIB)'.
- Design and implement various front panel controls and indicators.
- Connect and manipulate nodes and wires in the block diagram

COURSE OUTCOMES

- Execute save and load dialogs.
- Demonstrate the use of the revert function.
- Troubleshoot broken VIs.
- Single-Step through a VI.
- Implement execution highlighting and setting break points.
- Create SubVIs

(Any 8 Experiments)

1. Set up a while loop to execute EXACTLY the predefined number of iterations.
2. Write a program to invert the state of a Boolean indicator twice a second, until the program is stopped by the user. The Boolean should initially be TRUE. Solve the problem using two different methods: Shift Register, and Local Variables.
3. Write a program to count Modulus 32 and display the values in decimal, Hexadecimal, octal and binary. Use a STOP button to stop your code programmatically. Use local variables to stop a while loop and reset the Stop button. The action of the switch should be set to Switch When Pressed or Switch When Released.
4. Set up a temperature simulator as follows. Allow for a user defined a set point (you may place it inside the while loop). In the while loop add an error amounting to a maximum of ±10°C to the set point. Set up over- and undertemperature LEDs to light up whenever the deviation is >5°C. The loop should operate once every second.
5. Build a VI using the while loop that displays random numbers (0-5) into three Waveform Charts (strip, scope, sweep). Incorporate appropriate switching and delays.
6. Set up an 8-bit Binary counter and display your results graphically. The graph should have 8-traces corresponding to bits 0-7. For this you may like to the Following: Number to Boolean Array, Boolean to (0,1).

7. Write a simple program to generate a Voltage at Analog Output 0 using a knob to select the voltage. Verify using a Multimeter.
8. Read the status of NI Instrument simulator by using its different commands.
9. Converting Voltage to Resistance.
10. Converting Resistance to Temperature.

16ECU613B	VERILOG AND FPGA BASED SYSTEM DESIGN - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- To understand the fundamentals of Verilog and FPGA based system design.
- To appreciate the design process in FPGA through an application on the design of a system design
- Describe general FPGA architecture, internals and use cases
- Understanding of building blocks that are available to digital designers
- Apply design flow methodology for a given problem
- Implement and debug various digital designs

COURSE OUTCOMES

- Understand the fundamentals of Verilog and FPGA based system design.
- Design and optimize complex combinational and sequential digital circuits
- Apply design flow methodology for a given problem
- Solve time related problems
- Implement and debug various digital designs.
- Analyze a given design based on synthesis, implementation and timing reports

(Any 8 Experiments)

1. Write code to realize basic and derived logic gates.
2. Half adder, Full Adder using basic and derived gates.
3. Half subtractor and Full Subtractor using basic and derived gates.
4. Design and simulation of a 4 bit Adder.
5. Multiplexer (4x1) and Demultiplexer using logic gates.
6. Decoder and Encoder using logic gates.
7. Clocked D, JK and T Flip flops (with Reset inputs)
8. 3-bit Ripple counter
9. To design and study switching circuits (LED blink shift)
10. To design traffic light controller.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)
முதல்பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 16LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016-2017)

பகுதி – I, தமிழ் பருவம் I

16LAU101 : **தமிழ் முதல் தாள்** 4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது**)**

அலகு – I : இக்கால இலக்கியம்: **(10 மணிநேரம்)**

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.
இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை – ஒற்றுமையே உயிர்நிலை.
மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் –மலையாளக் காற்று.
சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.
பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்: **(10 மணிநேரம்)**

கொன்றை வேந்தன்: 1-50 பாடல்கள்
திருக்குறள்: பண்புடைமை, வினைத்திட்பம் – 20 குறள்கள்
பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: **(10 மணிநேரம்)**

மூவருலா: 1-26 கண்ணிகள்
திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்
கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை: **(10 மணிநேரம்)**

1. **உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்**
2. **கட்டிடக்கலை** - அ. இராசமாணிக்கனார்
3. **வாழ்க்கை** - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: **(8 மணிநேரம்)**

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Semester – I

16AEC101 ENVIRONMENTAL STUDIES 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **100** Total: **100**

Course Objectives (CO)

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT-I: Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III: Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution , Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Semester-I

16CTU101 Programming Fundamentals Using C / C++ 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int:**40** Ext : **60** Total: **100**

Course Objectives (CO)

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program.

UNIT-I

Introduction to C and C++:

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++.

Data Types, Variables, Constants, Operators and Basic I/O: Declaration, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators, Using Comments in programs, Character I/O, Formatted and Console I/O, Using Basic Header Files.

Expressions, Conditional Statements and Iterative Statements: Simple Expressions in C++, Understanding Operators Precedence in Expressions, Conditional Statements, Understanding syntax and utility of Iterative Statements, Use of break and continue in Loops, Using Nested Statements.

UNIT-II

Functions and Arrays: Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays, Use Various types of arrays, Two-dimensional Arrays, Introduction to Multi-dimensional arrays.

UNIT-III

Derived Data Types (Structures and Unions): Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members.

Pointers and References in C++: Understanding a Pointer Variable, Simple use of Pointers, Pointers to Pointers, Pointers to structures, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions.

UNIT-IV

File I/O, Preprocessor Directives: Opening and closing a file, Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives, Macros.

UNIT-V

Using Classes in C++: Principles of Object-Oriented Programming, Defining & Using Classes, Constructors, Constructor Overloading, Function overloading and Operator overloading in classes, Class Variables & Functions, Access specifiers, Overview of Template classes and their use.

Inheritance, Polymorphism and Exception Handling: Introduction to Inheritance, Polymorphism, Basics Exceptional Handling.

Semester – I

16CTU102 COMPUTER SYSTEM ARCHITECTURE 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

UNIT -I Introduction

Logic gates, Boolean algebra, circuit simplification, combinational circuits: Adders and Subtractors –Multiplexers and De multiplexers – Encoders and Decoders- sequential circuits: Flip Flop's, registers, counters and memory units.

UNIT -II Data Representation and Basic Computer Arithmetic

Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

UNIT –III Basic Computer Organization and Design

Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

UNIT-IV Central Processing Unit

Register organization, arithmetic and logical micro-operations, stack organization, micro programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining and parallel architecture.

UNIT –V Memory and Input-Output Organization

Cache memory, Associative memory, mapping Input / Output: External Devices, I/O Modules, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels.

Suggested Readings:

2. Stallings, W. (2010). Computer Organization and Architecture Designing for Performance (8th ed.) New Delhi: Prentice Hall of India,
3. Mano, M.M. (2013). Digital Design, New Delhi: Pearson Education Asia.
4. Carl Hamacher. (2012). Computer Organization (5th ed.). New Delhi: McGrawHill.

16CTU103	**DEVELOPING PROGRAMMING LOGIC AND TECHNIQUES**	**Semester – I** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To develop a basic understanding of many areas of information technology and how they are used
- To understand the basic structure of a program including sequence, decisions and looping
- To understand how to design a program to solve a simple program
- To introduce the basics of several programming language and understand the commonality and differences in languages
- To lay a basic foundation involving hardware, software, navigation, the Internet for future development
- To understand what a database is and how to design a working model

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of high-level structured programming logic and algorithm development.
2. Demonstrate knowledge of structured program design and modularity.
3. Demonstrate knowledge of file-based input/output operations, file manipulation and maintenance, extract reporting, and report writing.
4. Demonstrate knowledge of records, data types and structures, storage classes, addressable memory locations.
5. Demonstrate knowledge of table utilization, arrays and subscripts.
6. Demonstrate knowledge of arithmetic expressions, control structures, iteration techniques.

UNIT – I

Language Evolution Machine Language, Assembly Language, High Level Language. Translators: compiler, Interpreter and Assembler. The Compilation Process, Linker, Loader, Study of HLL, Characteristics of Good Language, Generation of Languages, Study of Programming Languages (Function Oriented, Object Oriented, Event-Based).

UNIT – II

Programming Construction Tools Problem Analysis, Process Analysis, Conceptual Development of Solution. Development Tools: Algorithm: Types of Algorithm, Algorithm of Analysis, Advantage and Disadvantage of Algorithm, Complexity of Algorithm, Big-O Notation.

UNIT – III

Flowcharts: Types of Flowcharts, Advantage and Disadvantage of Flowchart. Pseudocode: Definition and Its Characteristics Control Statements Basics of Programming Language: Usage of Character Set, Meaning of Keywords and Identifiers, Role of Data Types, Constants and Variables.

UNIT – IV

Importance of Casting, Different Types of Operators and their Precedence, Expressions, Conditional Statements (One-Way, Two-Way and Multi-Way Conditional), Looping Statements (For, While, do-while), Usage of Exit, continue, Break and Goto Statement.

UNIT – V

Arrays: Arrays, One dimensional array, Various operatio on Array (Inserting of Elements, Deleting of Element, Rotating List, Sorting, Searching, Merging Etc) and Two dimensional arrays (Matrix Addition, Transpose of Matrix, Matrix Multiplication), Modular programming and its features.

Suggested Readings:

1. 1.Anil V.Chouduri. The Art of Programming through Flowchart and Algorithms. Laxmi Publication.
2. Maureen Sprankle (2009). Problem Solving Programming Concepts (7th ed.). Pearson Education.
3. Behrouz Forouzan. Basic of Computer Science. Cengage Learning
4. Donald Knuth. The Art of Computer Programming Vol-I,II, III, Pearson.
5. Horowitz, Sahani. Fundamental of Computer Algorithm. Orient Longman.

Semester – I

16CTU111 PROGRAMMING FUNDAMENTALS USING C / C++ - PRACTICAL **3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program.

List of Programs

1. WAP to display Fibonacci series (i)using recursion, (ii) using iteration

2. WAP to compute the sum of the first n terms of the following series
S = 1+1/2+1/3+1/4+……

3. Write a program to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.

4. WAP to print the sum and product of digits of an integer.

5. WAP to reverse a number.

6. Write a program that checks whether a given string is Palindrome or not.

7. WAP to print a triangle of stars as follows (take number of lines from user):

```
*
***
*****
*******
*********
```

8. WAP to perform following actions on an array entered by the user:

i) Calculate and print the sum and average of the elements of array

ii) Print the maximum and minimum element of array

9. Write a program that swaps two numbers using pointers.

10. Write a program which takes the radius of a circle as input from the user, passes it to another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.

11. Write a program to perform operations on strings.

12. Write a program to perform following Matrix operations (2-D array implementation): a) Sum b) Difference c) Product

13. Create a structure Student containing fields for Roll No., Name, Class, Year and Total Marks. Create 10 students and store them in a file.

14. Create the Person class. Create some objects of this class (by taking information from the user). Inherit the class Person to create two classes Teacher and Student class. Maintain the respective information in the classes and create, display and delete objects of these two classes (Use Runtime Polymorphism).

15.Copy the contents of one text file to another file using command line argument.

Semester – I

16CTU112 COMPUTER SYSTEM ARCHITECTURE- PRACTICAL 3H – 2C

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

List of Experiments

1. Verification of Logic Gates
2. Code converters
3. Realization of Multiplexer using basic gates
4. Encoder and Decoder
5. Realization Half and Full adders
6. Realization of Subtractor
7. Realization of Parity generator
8. Flip-Flop Circuits
9. Digital to analog Converters
10. Demonstrate a Basic Arithmetic Computing operations

Semester – I

16CTU113 OFFICE AUTOMATION - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To create a document in Microsoft Word with formatting options, edit, save, and print documents to include documents with lists and tables, Format text and to use styles, add a header and footer to a document, add a graphic to a document.
- To write functions in Microsoft Excel to perform basic calculations and to convert number to text and text to number.
- To indicate the names and functions of the Excel interface components.
- To enter and edit data, Format data and cells.
- Construct formulas, including the use of built-in functions, and relative and absolute references.
- Create and modify charts.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Modify text using various formatting options from the editing tools under the Home tab, Set up section breaks to create different headers and footers for the odd and even pages within the document sections.
2. Demonstrate the mechanics and uses of Word tables to organize and present data, Demonstrate working knowledge of using Word's themes and clip art to create a variety of visual effects.
3. Demonstrate working knowledge of Word's advanced formatting techniques and presentation styles,
4. Demonstrate applicable knowledge and uses of accepted business style formatting conventions.
5. Create and design a spreadsheet for general office use, demonstrate the basic mechanics and navigation of an Excel spreadsheet.
6. Demonstrate formatting techniques and presentation styles, demonstrate the use of basic functions and formulas

List of Programs

Practical exercises based on MS Office/ Open Office tools using document preparation and spreadsheet handling packages.

MS Word

1. Prepare **a grocery list** having four columns (Serial number, The name of the product, quantity and price) for the month of April, 06.

- Font specifications for Title (Grocery List): 14-point Arial font in bold and italics.
- The headings of the columns should be in 12-point and bold.
- The rest of the document should be in 10-point Times New Roman.

- Leave a gap of 12-points after the title.

2. Create a **telephone directory**.

- The heading should be 16-point Arial Font in bold
- The rest of the document should use 10-point font size
- Other headings should use 10-point Courier New Font.
- The footer should show the page number as well as the date last updated.

3. Design a **time-table form** for your college.

- The first line should mention the name of the college in 16-point Arial Font and should be bold.
- The second line should give the course name/teacher‟s name and the department in 14-point Arial.
- Leave a gap of 12-points.
- The rest of the document should use 10-point Times New Roman font.
- The footer should contain your specifications as the designer and date of creation.

4. BPB Publications plans to release a new book designed as per your syllabus. Design the **first page of the book** as per the given specifications.

- The title of the book should appear in bold using 20-point Arial font.
- The name of the author and his qualifications should be in the center of the page in 16-point Arial font.
- At the bottom of the document should be the name of the publisher and address in 16-point Times New Roman.
- The details of the offices of the publisher (only location) should appear in the footer.

5. Create the following one page documents.
    a. Compose a note inviting friends to a get-together at your house, Including a list of things to bring with them.
    b. Design a certificate in landscape orientation with a border around the document.
    c. Design a Garage Sale sign.
    d. Make a sign outlining your rules for your bedroom at home, using a numbered list.

6. Create the following documents:
    (a) A newsletter with a headline and 2 columns in portrait orientation, including at least one image surrounded by text.
    (b) Use a newsletter format to promote upcoming projects or events in your classroom or college.

7. Convert following text to a table, using comma as delimiter

Type the following as shown (do not bold).
Color, Style, Item
Blue, A980, Van
Red, X023, Car
Green, YL724, Truck
Name, Age, Sex
Bob, 23, M
Linda, 46, F
Tom, 29, M

8. Enter the following data into a table given on the next page.

Salesperson	**Dolls**	**Trucks**	**Puzzles**
Kennedy, Sally	1327	1423	1193
White, Pete	1421	3863	2934
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067

Add a column Region (values: S, N, N,S,S,S) between the Salesperson and Dolls columns to the given table Sort your table data by Region and within Region by Salesperson in ascending order:
In this exercise, you will add a new row to your table, place the word Total at the bottom of the Salesperson column, and sum the Dolls, Trucks, and Puzzles columns.

9. Wrapping of text around the image.

10. Following features of menu option must be covered

FILE Complete menu
EDIT Complete menu
VIEW Complete menu
INSERT Complete menu
FORMAT Complete menu
TABLE Complete menu
WINDOW Complete menu
HELP Complete menu
TOOLS All options except Online collaboration, Tools on Macro, Templates

MS Excel

1. Enter the Following data in Excel Sheet

REGIONAL SALES PROJECTION

State	Qtr1	Qtr2	Qtr3	QTR4	Qtr Total	Rate Amount
Delhi	2020	2400	2100	3000	15	
Punjab	1100	1300	1500	1400	20	
U.P.	3000	3200	2600	2800	17	
Haryana	1800	2000	2200	2700	15	
Rajasthan	2100	2000	1800	2200	20	

TOTAL
AVERAGE

(a) Apply Formatting as follow:

i. Title in TIMES NEW ROMAN

ii. Font Size - 14

iii. Remaining text - ARIAL, Font Size -10

iv. State names and Qtr. Heading Bold, Italic with Gray Fill Color.

v. Numbers in two decimal places.

vi. Qtr. Heading in center Alignment.

vii. Apply Border to whole data.

(b) Calculate State and Qtr. Total
(c) Calculate Average for each quarter
(d) Calculate Amount = Rate * Total .

2. Given the following worksheet

	A	B	C	D
1	Roll No.	Name	Marks	Grade
2	1001	Sachin	99	
3	1002	Sehwag	65	
4	1003	Rahul	41	
5	1004	Sourav	89	
6	1005	Har Bhajan	56	

Calculate the grade of these students on the basis of following guidelines:

If Marks	Then Grade
>= 80	A+
>= 60 < 80	A

>= 50 < 60	B
< 50	F

3. Given the following worksheet

	A	B	C	D	E	F	
1	**Salesman**			**Sales in (Rs.)**			
2	No.	Qtr1	Qtr2	Qtr3	Qtr4	Total	Commission
3	S001	5000	8500	12000	9000		
4	S002	7000	4000	7500	11000		
5	S003	4000	9000	6500	8200		
6	S004	5500	6900	4500	10500		
7	S005	7400	8500	9200	8300		
8	S006	5300	7600	9800	6100		

Calculate the commission earned by the salesmen on the basis of following Candidates:

If Total Sales	**Commission**
< 20000	0% of sales
> 20000 and < 25000	4% of sales
> 25000 and < 30000	5.5% of sales
> 30000 and < 35000	8% of sales
>= 35000	11% of sales

The total sales is sum of sales of all the four quarters.

4. A company XYZ Ltd. pays a monthly salary to its employees which consists of basic salary, allowances & deductions. The details of allowances and deductions are as follows:

Allowances

- HRA Dependent on Basic
  30% of Basic if Basic <=1000
  25% of Basic if Basic>1000 & Basic<=3000
  20% of Basic if Basic >3000
- DA Fixed for all employees, 30% of Basic
- Conveyance Allowance Rs. 50/- if Basic is <=1000
  Rs. 75/- if Basic >1000 & Basic<=2000
  Rs. 100 if Basic >2000
- Entertainment Allowance NIL if Basic is
  <=1000 Rs. 100/- if Basic > 1000

Deductions

- Provident Fund 6% of Basic
- Group Insurance Premium Rs. 40/- if Basic is <=1500
  Rs. 60/- if Basic > 1500 & Basic<=3000
  Rs. 80/- if Basic >3000

Calculate the following:

Gross Salary = Basic + HRA + DA + Conveyance + Entertainment
Total deduction = Provident Fund + Group Insurance Premium
Net Salary = Gross Salary – Total Deduction.

5. Create Payment Table for a fixed Principal amount, variable rate of interests and time in the format below:

No. of Installments	**5%**	**6%**	**7%**	**8%**	**9%**
3	XX	XX	XX	XX	XX
4	XX	XX	XX	XX	XX
5	XX	XX	XX	XX	XX
6	XX	XX	XX	XX	XX

6. Use an array formula to calculate Simple Interest for given principal amounts given the rate o

6. Use an array formula to calculate Simple Interest for given principal amount.Given the Rate of Interest and time.

Rate of Interest	8%
Time	5 Years
Principal	Simple Interest
1000	?
18000	?
5200	?

7. The following table gives year wise sale figure of five salesmen in Rs.

Salesman	2000	2001	2002	2003
S1	10000	12000	20000	50000
S2	15000	18000	50000	60000
S3	20000	22000	70000	70000
S4	30000	30000	100000	80000
S5	40000	45000	125000	90000

(a) Calculate total sale year wise.
(b) Calculate the net sale made by each salesman
(c) Calculate the maximum sale made by the salesman
(d) Calculate the commission for each salesman under the condition.
(i) If total sales >4,00,000 give 5% commission on total sale made by the salesman.
(ii) Otherwise give 2% commission.
(e) Draw a bar graph representing the sale made by each salesman.
(f) Draw a pie graph representing the sale made by salesman in 2000.

8. Enter the following data in Excel Sheet

PERSONAL BUDGET FOR FIRST QUARTER

Monthly Income (Net): 1,475

EXPENSES	JAN	FEB	MARCH	QUARTER TOTAL	QUARTER AVERAGE
Rent	600.00	600.00	600.00		
Telephone	48.25	43.50	60.00		
Utilities	67.27	110.00	70.00		
Credit Card	200.00	110.00	70.00		
Oil	100.00	150.00	90.00		
AV to Insurance	150.00				
Cable TV	40.75	40.75	40.75		

Monthly Total

Calculate Quarter total and Quarter average.

(a) Calculate Monthly total.

(b) Surplus = Monthly income - Monthly total.

(c) What would be total surplus if monthly income is 1500.

(d) How much does telephone expense for March differ from quarter average.

(e) Create a 3D column graph for telephone and utilities. (f) Create a pie chart for monthly expenses.

9. Enter the following data in Excel Sheet

TOTAL REVENUE EARNED FOR SAM'S BOOKSTALL

Publisher name	1997	1998	1999	2000	total
A	Rs.1000.00	Rs.1100.00	Rs.1300.00	Rs.800.00	
B	Rs.1500.00	Rs.700.00	Rs.1000.00	Rs.2000.00	
C	Rs.700.00	Rs.900.00	Rs.1500.00	Rs.600.00	
D	Rs.1200.00	Rs.500.00	Rs.200.00	Rs.1100.00	
E	Rs.800.00	Rs.1000.00	Rs.3000.00	Rs.560.00	

(a) Compute the total revenue earned.

(b) Plot the line chart to compare the revenue of all publisher for 4 years.

(c) Chart Title should be _Total Revenue of sam's Bookstall (1997-2000)'

(d) Give appropriate categories and value axis title.

10. Generate 25 random numbers between 0 & 100 and find their sum, average and count. How many no. are in range 50-60.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 16LSU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, ‘தமிழ் இலக்கிய வரலாறு’ குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, ‘அறிவியல் தமிழ்’ ; ‘இணைய தமிழ்’ குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)

பகுதி – I, தமிழ் பருவம் II

16LAU201 : **தமிழ்** இரண்டாம் **தாள்** 4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது**)**

அலகு – I : பக்தி **இலக்கியம்** **(10 மணிநேரம்)**

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு.

1. சைவம் - பெரியபுராணம் - திருமூலநாயனார் புராணம்.

2. வைணவம் - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு – II : சங்க இலக்கியம் : **(15 மணிநேரம்)**

சங்க இலக்கியங்கள் அறிமுகம்

அ**). எட்டுத்தொகை**

நற்றிணை : பிரசம் கலந்த – பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை – குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு –

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்த்தொடீ கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் –பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் – 'சிறுதினை மலரொடு' என்பதிலிருந்துதொடங்கி, 'அறிந்தவாறே' என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – 'தெய்வம் சான்ற' என்பதிலிருந்து தொடங்கி, 'நல்குமதி' என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம் (6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: **(21-29) –** கண்ணகியின் சிறப்பு:

'நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி,

'கண்ணகி என்பாண் மன்னோ' என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: **(207-234) -** சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: 'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: **(482-485) -** செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: 'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை (10 மணிநேரம்)

1. **குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்**
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. **நகரம் – சுஜாதா**

அலகு- V : மொழிப்பயிற்சி (7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Semester – II

16CTU201 **PROGRAMMING IN JAVA** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

UNIT-I

Introduction to Java Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods),

UNIT-II

Arrays, Strings and I/O Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and files. **Object-Oriented Programming Overview** Principles of Object-Oriented

Programming, Defining & Using Classes, Controlling AITUess to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

UNIT-III

Inheritance, Interfaces, Packages, Enumerations, Autoboxing and Metadata

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

UNIT-IV

Exception Handling, Threading, Networking and Database Connectivity Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

UNIT-V

Java Applets: Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

Suggested Readings:

1. Ken Arnold., James Gosling., & David Homes. (2005). The Java Programming Language (4th ed.).

16CTU202 **DISCRETE STRUCTURES** **Semester – II** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

UNIT I

Sets: Introduction, Sets , finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations, counting , Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

UNIT II

Growth of Functions: Asymptotic Notations, Summation formulas and properties,Bounding Summations, approximation byIntegrals

UNIT III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution, Substitution Method, recurrence trees, Master theorem.

UNIT IV

Graph Theory: Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

UNIT V

Prepositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

Semester – III

16CTU203 DATABASE PROGRAMMING WITH ORACLE (SQL AND PL/SQL) **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the application development environment.
- To gain programming Skills and Database Creation in RDBMS.
- To understand SQL for storing and retrieving data from the RDBMS.
- To arrive at a normalized design of tables and other database objects in RDBMS.
- To investigate techniques for tuning your PL/SQL code
- To design modular applications using packages

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Develop efficient PL/SQL programs to access Oracle databases
2. Use some of the Oracle supplied PL/SQL packages to generate screen and file outputs
3. Invoke native dynamic SQL to build runtime SQL statements
4. Manage data retrieval with cursors and cursor variables
5. Manage dependency issues and collect PL/Scope data
6. Create triggers to solve business challenges and enforce business rules

UNIT - I Understanding Database Fundamentals

Origin of database – database elements – design concepts – components ofDBMS – Advantages and disadvantages of DBMS. Database Models: flat file – hierarchical model – network model – relational model – object oriented model – Features of Object oriented Database Management system – Features of distributed DBMS – Comparison of DBMS & DDBMS – Object relational model. ER-model: entities – relationships - ERD symbols – cardinalities – sample ERD.

Unit - II Entities and Entity Relationships

Relational model: Introduction – Relational database: attributes and domain – Tuples – Relation and their schemes – Relation representation – keys – relationships – relational operations – Integrity rules. Relational algebra: Basic operations – Additional relational algebraic operations – some relational algebra queries. Functional Dependency: Reasoning about FD's – closure of set of FD's – Attribute closure.

Unit - III Objects

Relational database manipulation: Introduction – SQL: Data definition – Data manipulation: Basic data retrieval – condition specification – Arithmetic and aggregate operations. SQL joins – set manipulation – categorization – updates – views – index. Data Control language : grant, revoke – simple privileges.

Unit - IV Overview of PL/SQL

Declaration section – executable command section : conditional logic, loops, CASE statements – exception handling section: predefined and user defined exceptions. Triggers : definition – types : row level, statement level, before and after, instead of – syntax – enabling and disabling triggers - replacing and dropping triggers. Cursors – definition – open – fetch – close – cursor attributes- select for update – types : implicit, explicit. Procedures, Functions: Local and global – procedures vs functions – stored procedures, functions – create procedure syntax - create function syntax – calling procedures, functions. Replacing and dropping procedures, functions.

Unit - V Packages and Normalization

Package header – package body – calling package members - Replacing and dropping package. Overview of Normalization : advantages - disadvantages. Normal forms: first normal form – second normal form – third normal form – boyce codd normal form – Introduction to fourth, fifth and sixth normal forms – denormalization. Parallel Databases: Introduction – Design of Parallel Databases – Advantages and Disadvantages of Parallel Database.

Semester – I

16CTU211 PROGRAMMING IN JAVA - PRACTICAL 3H – 2C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

List of Programs

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of .lenth in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBufferclasss like setCharAt(, setLength(), append(), insert(), concat()and equals().
9. Write a program to create a ―distance‖ class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer

10. Modify the ―distance‖ class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions(from lower to higher data type)
12. Write a program to show the difference between public and private aITUess specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate FibonaITUi series, where the function to generate fibonacii series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program ―DivideByZero‖ that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the openConnection() method and then use it examine the different components of the URLand content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scrolls the message in the banner from left to right across the applet‘s window.
26. Write a program to get the URL/location of code (i.e. java code) and document(i.e. html file).
27. Write a program to demonstrate different mouse handling events like mouseClicked(), mouseEntered(), mouseExited(), mousePressed, mouseReleased() and mouseDragged().
28. Write a program to demonstrate different keyboard handling events.

29. Write a program to generate a window without an applet window using main() function.
30. Write a program to demonstrate the use of push buttons.

		Semester – I
16CTU212	**DISCRETE STRUCTURES - PRACTICAL**	**3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

List of Programs

1. Write a C Program to find the number of subsets of a set contains n elements.

2. Write a C Program to find transitive closure of a relation.

3. Write a C Program to prove
   $1/(1*2) + 1/(2*3) \ldots\ldots\ldots +1/(n(n+1)) = n/(n+1)$

4. Write a C Program to to perform the sum = 1+ (1+2) + (1+2+3) + … + (1+2…+n)

5. Write a C program to print Fibonacci series till Nth term using recursion

6. Write a program in c to calculate factorial of a number using recursion

7. Write a C Program to find a minimum spanning tree using Prim's algorithm

8. Write a C program to find the shortest path with the lower cost in a graph using Dijkstra's Algorithm

9. Write a C Program to construct the truth table for the following formula.

(i) $P \wedge Q \wedge \rceil R$ (ii) $P \wedge \rceil Q \wedge R$ (iii) $P \wedge Q \wedge \rceil R$

10. Write a C Program to prove De – Morgan's law.

		Semester – III
16CTU213	**DATABASE PROGRAMMING WITH ORACLE (SQL AND PL/SQL) - PRACTICAL**	**4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the application development environment.
- To gain programming Skills and Database Creation in RDBMS.
- To understand SQL for storing and retrieving data from the RDBMS.
- To arrive at a normalized design of tables and other database objects in RDBMS.
- To investigate techniques for tuning your PL/SQL code
- To design modular applications using packages

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Develop efficient PL/SQL programs to access Oracle databases
2. Use some of the Oracle supplied PL/SQL packages to generate screen and file outputs
3. Invoke native dynamic SQL to build runtime SQL statements
4. Manage data retrieval with cursors and cursor variables
5. Manage dependency issues and collect PL/Scope data
6. Create triggers to solve business challenges and enforce business rules

List of Programs

Create and use the following database schema to answer the given queries.

EMPLOYEE Schema

Field	**Type**	**NULL**	**KEY**	**DEFAULT**
Eno	Char(3)	NO	PRI	NIL
Ename	Varchar(50)	NO		NIL
Job_type	Varchar(50)	NO		NIL
Manager	Char(3)	Yes		NIL
Hire_date	Date	NO		NIL
Dno	Integer	Yes	FK	NIL
Commission	Decimal(10,2)	Yes		NIL
Salary	Decimal(7,2)	NO		NIL

DEPARTMENT Schema

Field	Type	NULL	KEY	DEFAULT
Dno	Integer	NO	PRI	NULL
Dname	Varchar(50)	Yes		NULL
Location	Varchar(50)	Yes		New Delhi

Query List

1. Query to display Employee Name, Hire Date, Employee Number; for each employee with the Employee number appearing first.
2. Query to display unique jobs from the Employe table
3. Query to display Employee Name concatenated by a job seperated by a comma.
4. Query to display Employee Name and salary of all the employees earning more than $2850.
5. Query to display Employee Name and department number for the employee no=7900.
6. Query to display Employee Name and salary for all employees whose salary is not in the range of $1500 and $2850
7. Query to display Employee Name and department no. of all the employees in dept 10 and Dept 30 in the alphabetical order by name.
8. Query to display Name and Hire date of every employee who was hired in 1981
9. Query to display Name and job of all employees who don’t have a current manager.
10. Query to display Name, salary and commission for all the employees who earn commission
11. Sort the data in descending order of salary and commission
12. Query to display Name of all the employees where the third letter of their name is A.
13. Query to display Name, salary and commission for all employees whose commission is 14 greater than their salary increased by 5%.
14. Query to display the current date
15. Query to display Name, hire date and salary review date which is the first Monday after 6 months of employment.
16. Query to display Name and calculate the number of months between today and the date each employee was hired.
17. Query to display the following for each employee <E-Name> earns <Salalry> monthly but wants <3 * current salary>. Label the column as Dream salary
18. Query to display Name with the 1st letter capitalized and all other letter lower case and length of their name of all employees whose name starts with _J’, ‘A’ and ‘M’.
19. Query to display unique listing of all jobs that are in dept #30.
20. Query to display Name, dept no. and salary of any employee whose department no. and salary matches both the department no. and the salary of any employee who earns a commission.
21. Query to display the department name, location name, number of employees and the average salary for all the employees in that department.
22. Query to display employee no. and name for all employees who earn more than the average salary.

PL/SQL

1. Write the PL/SQL program to find the factorial and fibonacci series of given numbers.

2.(i) Write the   PL/SQL program to check whether the string is Palindrome.
  (ii) Write the   PL/SQL program to reverse a number
  (iii) Write the   PL/SQL program to check whether the number is Armstrong

3. Write a PL/SQL block to create and handle user defined exception

clientmaster

Field name	Constraint	Type	Size
Client_id		Number	6
Client_name		Varchar2	30
Address		Varchar2	50
Phone		Number	10
Balance		Number	10,2

4. Create table with following fields:

Product table:

Field name	Constraint	Type	Size
Product_code	Primary key	Varchar2	7
Product_name		Varchar2	30
Price		Number	6,2
Quantity		Number	4

Vendor table:

Field name	Constraint	Type	Size
Vendor_name		Varchar2	30
Vendor address		Varchar2	30
Product_code	Foreign Key	Varchar2	7

Create a trigger to fire when the Record is deleted and inserted.

5. Create a table to store the salary details of the employees in a company. Declare the cursor id to contain empno, employee name and net salary. Use cursor to update the employee details.

Salary:

Field name	Constraint	Type	Size
Emp_no	Primary key	Number	4
Emp_name		Varchar2	30
Designation		Varchar2	25
Dept		Varchar2	30
Basic		Number	5

6. Create a table stock contains the itemcode varchar2(10), itemname varchar2(50), current_stock number(5), date_of_last_purchase date. Write a stored procedure to seek for an item using itemcode and delete it, if the date of last purchase is before 1 year from the current date. If not, update the curent stock.

7. Create a table to contain phone_number, user_name, address. Write a function to search for address using phone_number.

Semester – II

16ENU201	**ENGLISH – 1**	**4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

(For all undergraduate students admitted from 2016 onwards)

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman – Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan
One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Preposition, Voice- Active and Passive

UNIT V
Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitution
Grammar: Question, Pronunciation

16CTU301	**DATA STRUCTURES**	**Semester – III** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

UNIT-I

Arrays-Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation).Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

UNIT-II

Linked Lists Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

UNIT-III

Trees - Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion , Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

UNIT-IV

Searching and Sorting,Linear Search, Binary Search, Comparison of Linear and Binary Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting

Techniques

UNIT-V

Hashing - Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collusion by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function.

16CTU302 PROGRAMMING WITH VISUAL BASIC **Semester – III** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- Understand the benefits of using Microsoft Visual Basic 6.0 for Windows as an application tool.
- Understand the Visual Basic event-driven programming concepts, terminology, and available tools.
- Learn the fundamentals of designing, implementing, and distributing a Visual Basic application.
- Learn to use the Visual Basic toolbox. Learn to modify object properties. Learn object methods.
- Use the menu design window. Understand proper debugging and error-handling procedures.
- Gain a basic understanding of database access and management using data bound controls. Obtain an introduction to ActiveX controls and the Windows Application Programming Interface (API).

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
2. Develop a Graphical User Interface (GUI) based on problem description
3. Develop an Event Planning Chart based on problem description so as to define the processing that is to occur based on specific events
4. Develop an Algorithm to verify processing is accurate
5. Develop and debug applications using Visual Basic 2010 (or version required for the course) that runs under Windows operating system
6. Develop programs that retrieve input from a file as opposed to input only provided by user

UNIT I

Beginning Visual Basic: Introduction to Visual Basic: Introduction Graphics User Interface (GUI), Programming Language (Procedural, Object oreinted, event driven), The Visual Basic environment IDE, Introduction to VB Controls: Textboxes, Frames, check boxes, options buttons, setting a border and style, the shape control, the line control, working with multiple controls and their properties, designing the user interface, keyboard access, tab controls. Default & controls property, coding for Controls, list box and combo box and their properties, filling the list box using property window/add item method, picture/image box and their properties.

UNIT II

Dealing with data: Operators-Variables-declaring variables- types of variables – data types – constants – arrays – declaring arrays – specifying arrays – Multidimensional arrays – dynamic arrays – arrays of arrays. Val function, Arithmetic operations, formatting data. Error functions and types. Introducing to Menu editor.

UNIT III
Writing Code: Control flow statements – If – Then – If-then-else – Nested control statements – Select case – Loop statements – Do-loop – For-Next – While Wend – Exit statement . Displaying message in Message box, testing whether input is valid or not. Collections – procedures – Subroutines – Functions – Calling procedures – Object Browser – Creating classes and Objects – I/O statements

UNIT IV
Working with forms and procedures: Introducing to forms and types of forms and setting form properties, creating, adding, removing forms in project, hide, show method, load, unload, statement, Me keywords, Referring to objects on a different forms. Creating an application using controls: What is on the toolbar – Textbox control – Picture box – Image box – Label box – Frame – List box – Option button – Combo box – Command Button – check box – The Drive, Directory, File list controls – Teh Line & Shape control – Scroll Box – Data – Timer.

UNIT V
Multiple Document Interface & Menus: Why MDI Forms – Features of an MDI forms – Loading MDI forms & child forms – creating a simple MDI forms –Accessing MDI froms – creating MENUS – POP-UP MENUS.
Data access controls: JET database Engine – ADODC – DAO Data control – ODBC Data Source Administrator – DATA REPORT.

16CTU303 **COMPUTER NETWORKS** **Semester – IV**
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of osi model and tcp/ip model.
- To acquire knowledge of application layer and presentation layer paradigms and protocols.
- To study session layer design issues, transport layer services, and protocols.
- To gain core knowledge of network layer routing protocols and ip addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

UNIT I

Introduction to Computer Networks : Network definition; network topologies; network classifications; network protocol; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques**: Analog and digital signal; data-ratelimits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission;

UNIT – II

Digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media. **Networks Switching Techniques and Access mechanisms:** Circuit switching; packetswitching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

UNIT – III

Data Link Layer Functions and Protocol: Error detection and error correction techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

UNIT – IV

Multiple Access Protocol and Networks: CSMA/CD protocols; Ethernet LANS; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways; **Networks Layer Functions and Protocols**: Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit V

Transport Layer Functions and Protocols: Transport services- error and flow control, Connection establishment and release- three way handshake; **Overview of Application layer protocol**: Overview of DNS protocol; overview of WWW &HTTP protocol.

Suggested Readings

16CTU304A ANDROID PROGRAMMING **Semester – III**
3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

UNIT-I

Introduction: History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture.

UNIT-II

Overview of object oriented programming using Java: OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine.

UNIT-III

Development Tools: Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device.

UNIT-IV

User Interface Architecture: Application context, intents, Activity life cycle, multiple screen size s.

User Interface Design: Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes),Images, Menu, Dialog.

UNIT-V

Database:Understanding of SQLite database, connecting with the database.

Suggested Readings

1. James, C. Sheusi.(2013). Android application development for java programmers. Cengage Learning.

Semester – III

16CTU304B **PROGRAMMING IN MATLAB** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To familiarize of the syntax, semantics, data-types and library functions of numerical computing languages such as MATLAB and/or SCILAB
- To reinforce a structured, top-down approach to formulate and solve problems.
- To introduce common approaches, structures, and conventions for creating and evaluating computer programs, primarily in a procedural paradigm, but with a brief introduction to object-oriented concepts and terminology.
- To understand a variety of common numeric techniques to solve and visualize engineering-related computational problems.
- To introduce the MATLAB software environment.
- To implement/simulate and visualization of basic mathematical functions relevant to electronics applications.

Course Outcomes (Cos)

By the end of this course, students should be able to

1. Use MATLAB effectively to analyze and visualize data.
2. Apply numeric techniques and computer simulations to solve engineering-related problems.
3. Apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objectives.
4. Design and document computer programs and analyses in a careful and complete manner so as to effectively communicate results, to facilitate evaluation and debugging by another programmer, and to anticipate and resolve user errors.
5. Demonstrate understanding and use of fundamental data structures (classes).
6. Create and control simple plot and user-interface graphics objects in MATLAB.

UNIT-I

Introduction to Programming: Components of a computer, working with numbers, Machine code, Software hierarchy.

UNIT-II

Programming Environment: MATLAB Windows, A First Program, Expressions, Constants, Variables and assignment statement, Arrays.

UNIT-III

Graph Plots: Basic plotting, Built in functions, Generating waveforms, Sound replay, load and save. Procedures and Functions: Arguments and return values, M-files, Formatted console input-output , String handling,

UNIT-IV

Control Statements: Conditional statements: If, Else, Else-if, Repetition statements: While, for loop

UNIT-V

Manipulating Text: Writing to a text file, Reading from a text file, Randomising and sorting a list, searching a list. **GUI Interface**: Attaching buttons to actions, Getting Input, Setting Output

Suggested Readings

2. C.B. Moler (2004). Numerical Computing with MATLAB. SIAM.

16CTU311	**DATA STRUCTURES - PRACTICAL**	**Semester – III** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

List of Programs

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.

2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.

3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).

4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.

5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.

6. Perform Stack operations using Linked List implementation.

7. Perform Stack operations using Array implementation. Use Templates.

8. Perform Queues operations using Circular Array implementation. Use Templates.

9. Create and perform different operations on Double-ended Queues using Linked List implementation.

10. WAP to scan a polynomial using linked list and add two polynomial.

11. WAP to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration

12. (ii) WAP to display fibonaITUi series (i)using recursion, (ii) using iteration

13. WAP to calculate GCD of 2 number (i) with recursion (ii) without recursion

14. WAP to create a Binary Search Tree and include following operations in tree: (a) Insertion (Recursive and Iterative Implementation)

(b) Deletion by copying

(c) Deletion by Merging

(d) Search a no. in BST

(e) Display its preorder, postorder and inorder traversals Recursively

(f) Display its preorder, postorder and inorder traversals Iteratively

(g) Display its level-by-level traversals

(h) Count the non-leaf nodes and leaf nodes

(i) Display height of tree

(j) Create a mirror image of tree

(k) Check whether two BSTs are equal or not

15. WAP to convert the Sparse Matrix into non-zero form and vice-versa.

16. WAP to reverse the order of the elements in the stack using additional stack.

17. WAP to reverse the order of the elements in the stack using additional Queue.

18. WAP to implement Diagonal Matrix using one-dimensional array.

19. WAP to implement Lower Triangular Matrix using one-dimensional array.

20. WAP to implement Upper Triangular Matrix using one-dimensional array.

21. WAP to implement Symmetric Matrix using one-dimensional array.

22. WAP to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the suITUessor / predecessor of an element, insert an element, inorder traversal.

23. WAP to implement various operations on AVL Tree.

Semester – III

16CTU312 PROGRAMMING WITH VISUAL BASIC - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- Understand the benefits of using Microsoft Visual Basic 6.0 for Windows as an application tool.
- Understand the Visual Basic event-driven programming concepts, terminology, and available tools.
- Learn the fundamentals of designing, implementing, and distributing a Visual Basic application.
- Learn to use the Visual Basic toolbox. Learn to modify object properties. Learn object methods.
- Use the menu design window. Understand proper debugging and error-handling procedures.
- Gain a basic understanding of database access and management using data bound controls. Obtain an introduction to ActiveX controls and the Windows Application Programming Interface (API).

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
2. Develop a Graphical User Interface (GUI) based on problem description
3. Develop an Event Planning Chart based on problem description so as to define the processing that is to occur based on specific events
4. Develop an Algorithm to verify processing is accurate
5. Develop and debug applications using Visual Basic 2010 (or version required for the course) that runs under Windows operating system
6. Develop programs that retrieve input from a file as opposed to input only provided by user

List of Programs

Implement the following projects using Visual Basic Language

1. To calculate the Simple interest and compound interest
2. To perform the following string functions
   a. Upper to lower
   b. String concatenation
   c. String length

   d. String compare
   e. Bold, Italic and Underline
   f. Rtrim and Ltrim
   g. Change the backround of form

3. To draw different shapes and fill with different colors using MDI form
4. To implement a simple calculator
5. To create an ActiveX Control
6. To animate the picture using timer control
7. To convert text to voice
8. To simulate web browser
9. Develop a project for Railway Reservation System
10. Develop a project for Employee Payroll system
11. Develop a project for Student Information system. Generate data report for Student marklist
12. Develop a project to generate Barcode for Library applications

16CTU313	**COMPUTER NETWORKS - PRACTICAL**	**Semester – IV** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of Application layer and Presentation layer paradigms and protocols.
- To study Session layer design issues, Transport layer services, and protocols.
- To gain core knowledge of Network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

List of Programs

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Semester – III

16CTU314A ANDROID PROGRAMMING - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

List of Programs

1. Create ―Hello World‖ application. That will display ―Hello World‖ in the middle of the screen in the emulator. Also display ―Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

16CTU314B	**PROGRAMMING IN MATLAB - PRACTICAL**	**Semester – III** **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

- To familiarize of the syntax, semantics, data-types and library functions of numerical computing languages such as MATLAB and/or SCILAB
- To reinforce a structured, top-down approach to formulate and solve problems.
- To introduce common approaches, structures, and conventions for creating and evaluating computer programs, primarily in a procedural paradigm, but with a brief introduction to object-oriented concepts and terminology.
- To understand a variety of common numeric techniques to solve and visualize engineering-related computational problems.
- To introduce the MATLAB software environment.
- To implement/simulate and visualization of basic mathematical functions relevant to electronics applications.

Course Outcomes (Cos)

By the end of this course, students should be able to

1. Use MATLAB effectively to analyze and visualize data.
2. Apply numeric techniques and computer simulations to solve engineering-related problems.
3. Apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objectives.
4. Design and document computer programs and analyses in a careful and complete manner so as to effectively communicate results, to facilitate evaluation and debugging by another programmer, and to anticipate and resolve user errors.
5. Demonstrate understanding and use of fundamental data structures (classes).
6. Create and control simple plot and user-interface graphics objects in MATLAB.

List of Programs

1. Write a program to assign the following expressions to a variable A and then to print out the value of A.

    a. (3+4)/(5+6)
    b. $2\Pi^2$
    c. $\sqrt{2}$
    d. (0.0000123 + 5.67×10-3) × 0.4567×10-4

2. Celsius temperatures can be converted to Fahrenheit by multiplying by 9, dividing by 5, and adding 32. Assign a variable called C the value 37, and implement this formula to assign a variable F the Fahrenheit equivalent of 37 Celsius.

3. Set up a vector called N with five elements having the values: 1, 2, 3, 4, 5. Using N, create assignment statements for a vector X which will result in X having these values:

    a. 2, 4, 6, 8, 10
    b. 1/2, 1, 3/2, 2, 5/2

c. 1, 1/2, 1/3, 1/4, 1/5
d. 1, 1/4, 1/9, 1/16, 1/25

4. A supermarket conveyor belt holds an array of groceries. The price of each product (in pounds) is [0.6, 1.2 ,0.5, 1.3] ; while the numbers of each product are [3, 2 ,1 ,5]. Use MATLAB to calculate the total bill.

5. The sortrows(x) function will sort a vector or matrix X into increasing row order. Use this function to sort a list of names into alphabetical order.

6. The ―identity‖ matrix is a square matrix that has ones on the diagonal and zeros elsewhere. You can generate one with the eye() function in MATLAB. Use MATLAB to find a matrix B, such that when multiplied by matrix A=[1 2; -1 0] the identity matrix I=[1 0; 0 1] is generated. That is A*B=I.

7. Create an array of N numbers. Now find a single MATLAB statement that picks out from that array the 1,4,9,16,…,√Nth entries, i.e. those numbers which have indices that are square numbers.

8. Draw a graph that joins the points (0,1), (4,3), (2,0) and (5,-2).

9. The seeds on a sunflower are distributed according to the formula below. Plot a small circle at each of the first 1000 co-ordinates :

$$r_n = \sqrt{n}$$

$$\theta_n = \frac{137.51}{180}\pi n$$

10. Calculate 10 approximate points from the function y=2x by using the formulae:
i. xn = n
ii. yn = 2n + rand - 0.5

Fit a line of best fit to these points using the function polyfit() with degree=1, and generate co-ordinates from the line of best fit using polyval(). Use the on-line help to find out how to use these functions. Plot the raw data and the line of best fit.

11. Calculate and replay 1 second of a sinewave at 500Hz with a sampling rate of 11025Hz. Save the sound to a file called ex35.wav. Plot the first 100 samples.

12. Calculate and replay a 2 second chirp. That is, a sinusoid that steadily increases in frequency with time, from say 250Hz at the start to 1000Hz at the end.

13. Build a square wave by adding together 10 odd harmonics: 1f, 3f, 5f, etc. The amplitude of the nth harmonic should be 1/n. Display a graph of one cycle of the result superimposed on the individual harmonics.

14. Write a function called FtoC (ftoc.m) to convert Fahrenheit temperatures into Celsius. Make sure the program has a title comment and a help page. Test from the command window with:

i. FtoC(96)
ii. lookfor Fahrenheit
iii. help FtoC

15. Write a program to input 2 strings from the user and to print out (i) the concatenation of the two strings with a space between them, (ii) a line of asterisks the same length as the concatenated strings, and (iii) the reversed concatenation. For example:

i. Enter string 1: Mark
ii. Enter string 2: Huckvale
iii. Mark Huckvale
iv. *************
v. elavkcuH kraM

Semester – III

16CTU401 **OPERATING SYSTEMS** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To understand the structure and organization of the file system

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

.

UNIT-I

Introduction to Operating System: Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems-Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

UNIT-II

Operating System Organization: Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources-Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication-Deadlocks.

UNIT-III

Memory Management: Physical and Virtual address space-Memory Allocation strategies –Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

UNIT-IV

File and I/O Management: Directory structure-File operations-File Allocation methods-Device management.

UNIT-V

Protection and Security: Policy mechanism-Authentication-Internal aITUess Authorization.

		Semester – IV
16CTU402	**SOFTWARE ENGINEERING**	**4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectivesand risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

UNIT-I

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

UNIT-II

Requirement Analysis; Initiating Requirement EngineeringProcess- Requirement Analysis and Modeling Techniques- FlowOriented Modeling- Need for SRS-Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

UNIT-III

Risk Management: Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, **Quality Management-** Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

UNIT-IV

Design Engineering-Design Concepts, Architectural Design Elements, Software Architecture,Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

UNIT-V

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

16CTU403 INTERNETWORKING WITH TCP/IP **Semester – IV 4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

SCOPE

Build and understanding of the fundamental concepts of computer networking. Allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.

OBJECTIVES

- Familiarize the student with the basic taxonomy and terminology of the computer networking area.
- Introduce the student to advanced networking concepts, preparting the student for entry advanced courses in computer networking.
- Understand various transmission media, their comparitive study, fiber optics and wireless media.

UNIT I

Introduction: History of Internet – Interconnecting devices – protocols and standards – TCP/IP protocol suite – internetworking devices – routing concept – classfull IP addressing – subnetting – supernetting – classless addressing.

UNIT II

ARP & RARP – Proxy ARP – ARP over ATM – ARP and RAPP protocol format. IP datagram – Fragmentation – Options – IP datagram format – Routing IP datagrams – Cheksum. ICMP – types of messages – message format – Error reporting – Query – Cheksum.

UNIT III

Group management – IGMP message – IGMP operation – process to process communication – UDP operation – TCP services – Flow control.

UNIT IV

BOOTP – DHCP – Address discovery and Binding. DNS – Name Space – DNS in Internet – Resolution – Resource Records.

UNIT V

Remote Login- FTP – SMTP – SNMP . IP over ATM Wan – Cells – Routing the Cells – ATMARP – Logical IP SUBNETS – VPN.%

16CTU404A	HTML PROGRAMMING	Semester – IV 3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectivesand risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

UNIT – I

Introduction the basics: The Head, the Body,Colors, Attributes, Lists, ordered and unordered.

UNIT – II

Links Introduction: Relative links, absolute links, Link attributes, Using the ID attribute to Link within a Document.

UNIT – III

Images: Putting an image on a page, Using images as Links, Putting an image in the background.

UNIT – IV

Tables: Creating a table, Table headers, Captions, Spanning Multiple columns, styling Table.

UNIT – V

Forms: Basic input and attributes, other kinds of inputs, styling forms with CSS, Where to Go from Here.

Suggested Readings

1. Virginia DeBolt (2006). Integrated HTML and CSS A Smarter, Faster way to learn Wiley/Sybex.
2. Cassidy Williams, Camryn Williams (2015). Introduction to HTML and CSS, O'Reilly.

Semester – IV

16CTU404B **XML PROGRAMMING** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

UNIT-I

Introduction: Understanding Mark-up Languages, Introduction to XML and its Goals.

UNIT-II

XML Basics: XML Structure and Syntax, Document classes and Rules.

UNIT-III

Other XML Concepts: Scripting XML

UNIT-IV

Other XML Concepts: XML as Data, Linking with XML

UNIT-V

XML with Style: XSL –Style Sheet Basics, XSL basics, XSL style sheets.

Suggested Readings

1. William, J. Pardi. XML in action web technology.
2. Michael, J. Young. Step by Step XML.

16CTU411	**OPERATING SYSTEMS - PRACTICAL**	**Semester – III** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To provide necessary skills for developing and debugging programs in UNIX environment.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify, use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

List of Programs

1. Write a program (using fork() and/or exec() commands) where parent and child execute:
    a) same program, same code.
    b) same program, different code.
    c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behaviour of Linux kernel including kernel version, CPU type and model. (CPU information)
3. Write a program to report behaviour of Linux kernel including information on configured memory, amount of free and used memory. (memory information)

4. Write a program to print file details including owner access permissions, file access time, where file name is given as argument.
5. Write a program to copy files using system calls.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using thread library.
13. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

Semester – IV

16CTU412 SOFTWARE ENGINEERING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- To analyze, specify and document software requirements for a software system.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Implement a given software design using sound development practices.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectivesand risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

List of Programs

S. No	**Practical Title**
1.	• Problem Statement • Process Model
2.	Requirement Analysis: • Creating a Data Flow • Data Dictionary, Use Cases

3.	Project Management: • Computing FP • Effort • Schedule, Risk Table, Timeline chart
4.	Design Engineering: • Architectural Design • Data Design, Component Level Design
5.	Testing: • Basis Path Testing

Sample Projects:

1. **Criminal Record Management**: Implement a criminal record management system for jailers, police officers and CBI officers

2. **DTC Route Information**: Online information about the bus routes and their frequency and fares

3. **Car Pooling**: To maintain a web based intranet application that enables the corporate employees within an organization to avail the facility of carpooling effectively.

4. Patient Appointment and Prescription Management System

5. Organized Retail Shopping Management Software

6. Online Hotel Reservation Service System

7. Examination and Result computation system

8. Automatic Internal Assessment System

9. Parking Allocation System

10. Wholesale Management System

Semester – IV

16CTU413 **TCP/IP - PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of Application layer and Presentation layer paradigms and protocols.
- To study Session layer design issues, Transport layer services, and protocols.
- To gain core knowledge of Network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

After successful completion the student will be able to:

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

Implement the following Program

1. Simple router configuration
2. Access and utilize the router to set basic parameters.
3. Connect, configure, and verify operation status of a device interface.
4. Implement static and dynamic addressing services for hosts in a LAN environment.
5. Identify and correct common problems associated with IP addressing and host configurations.
6. Describe basic routing concepts (including: packet forwarding, router lookup process).
7. Configure, verify and troubleshoot RIPv2.
8. Perform and verify routing configuration tasks for a static or default route given
9. Configure, verify and troubleshoot DHCP and DNS operation on a router.
10. Configure and verify a PPP connection between routers.

16CTU414A	HTML PROGRAMMING - PRACTICAL	Semester – IV 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- Understand the principles of creating an effective web page, including an in-depth consideration of information architecture.
- Become familiar with graphic design principles that relate to web design and learn how to implement theories into practice.
- Develop skills in analyzing the usability of a web site.
- Understand how to plan and conduct user research related to web usability.
- Learn the language of the web: HTML and CSS.
- Develop basic programming skills using Javascript

Course Outcomes (Cos)

The students will be able to:

1. Analyze a web page and identify its elements and attributes.
2. Design a basic web site using HTML5 and CSS3 to demonstrate responsive web design
3. Implement dynamic web pages with validation using JavaScript objects by applying different event handling mechanism.
4. Create web pages using XHTML and Cascading Style Sheets.
5. Build dynamic web pages using JavaScript (Client side programming).
6. Create XML documents and Schemas

List of Programs

1. Create an HTML document with the following formatting options
   I. Bold
   II. Italics
   III. Underline
   IV. Headings (Using H1 to H6 heading styles)
   V. Font (Type, Sixe and Color)
   VI. Background (Colored background/Image in background)
   VII. Paragraph
   VIII. Line Break
   IX. Horizontal Rule
   X. Pre tag

2. Create an HTML document which consists of:
   I. Ordered List
   II. Unordered List
   III. Nested List
   IV. Image

3. Create an HTML document which implements Internal linkings as well as External linking
4. Create a table using HTML which consists of columns for Roll No., Student's name and grade

<table>
<tr><td colspan="3">Result</td></tr>
<tr><td>Roll No.</td><td>Name</td><td>Grade</td></tr>
<tr><td></td><td></td><td></td></tr>
<tr><td></td><td></td><td></td></tr>
<tr><td></td><td></td><td></td></tr>
<tr><td></td><td></td><td></td></tr>
</table>

5. Create a table with the following view

<table>
<tr><td></td><td></td><td></td><td></td><td></td><td></td></tr>
<tr><td colspan="4"></td><td colspan="2" rowspan="2">Place an image here</td></tr>
<tr><td colspan="4"></td></tr>
</table>

6. Create a form using HTML which as the following types of controls:
   I. Text Box
   II. Option/radio buttons
   III. Check boxes
   IV. Reset and Submit buttons

7. Create HTML documents (having multiple frames) in the following three formats

<table>
<tr><td>Frame 1</td></tr>
<tr><td>Frame 2</td></tr>
</table>

<table>
<tr><td colspan="2">Frame 1</td></tr>
<tr><td>Frame2</td><td>Frame3</td></tr>
</table>

16CTU414B	**XML PROGRAMMING - PRACTICAL**	**Semester – IV** **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

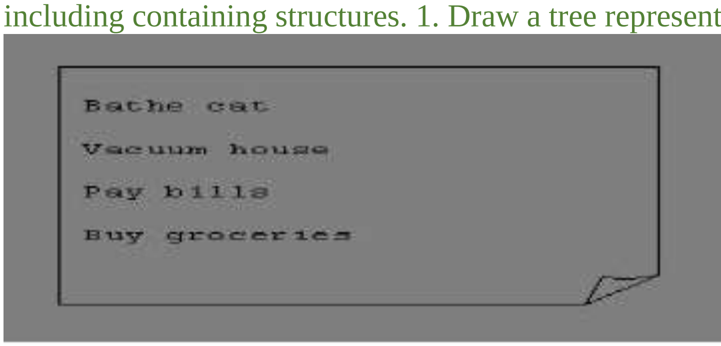
Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

1. Information Structure

In this exercise, student will practice identifying the structure of an information object. For the sample document provided below: Label the information structures you see, including containing structures. 1. Draw a tree representation of the structure.



2. Deconstructing an XML Document

In this exercise, student will practice identifying the explicit structure within an XML document. In a sense, this is the reverse of what you did in Exercise #1. For the sample

XML markup below, create a document-like representation (or a simple drawing) for the content contained within the XML tags:
<book>
<coverInfo>
<title>The XML Handbook</title>
<author>Charles F. Goldfarb</author>
<author>Paul Prescod</author>
<edition>Second</edition>
<description>The definitive XML resource: applications, products, and technologies. Revised and expanded—over 600 new pages. </description>
</coverInfo> </book>

3. Creating XML Markup
In this exercise, create some XML markup based on the tree representation from Exercise #1 above, and the content from the original sample document.

4. Well-Formedness
This exercise checks your understanding of the constraints for well-formedness. Are the following document instances well-formed? Explain any NO answers.
<list><title>The first list</title><item>An item</list>
<item>An item</item><item>Another item</item>
<para>Bathing a cat is a <emph>relatively</emph> easy task as long as the cat is willing.</para>
<bibl><title>How to Bathe a Cat<author></title>Merlin Bauer<author></bibl>

5. Well Formedness
This exercise is a bit more challenging than the previous example. Here is a fragment of an XML document instance. Identify all the places where it fails to match the constraints for well-formedness.
<PROCEDURE><TITLEHow to Bathe a Cat</TITLE>
<OVERVIEW> This procedure tells you how to bathe a cat.
<WARNING></OVERVIEW>Cats don't like to take baths. You could get hurt doing this. Be sure to obtain all the required protective gear before you start.
</WARNING><EQUIPEMENT><ITEM>Hockey Mask <ITEM>Padded Full-body Kevlar Armor</ITEM><ITEM>Tub full of warm water</ITEM><ITEM>Towels </ITEM><ITEM>First Aid kit</ITEM><ITEM>Cat Shampoo</ITEM>
<EQUIPMENT><INSTRUCTIONS> <STEP> Locate the cat, who by now is hiding under the bed.</STEP><STEP>Place the cat in the tub of water.</STEP> <ITEM>Using the First Aid kit, repair the damage to your head and arms.</STEP> <STEP>Place the cat back in the tub and hold it down.</STEP> <STEP>Wash it really fast, then make an effort to dry it with the towels.</STEP> <STEP>Decide not to do this again. </STEP>
</INSTRUCTIONS>

Semester – V

16CTU501A CRYPTOGRAPHY AND NETWORK SECURITY 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand basics of Cryptography and Network Security.
- To know about various encryption techniques.
- To understand the concept of Public key cryptography.
- To study about message authentication and hash functions
- To impart knowledge on Network security
- To understand various protocols for network security to protect against the threats in the networks.

Course Outcomes (COs)

After successful completion of the course, the learners would be able to:

1. Illustrate various Public key cryptographic techniques
2. Evaluate the authentication and hash algorithms
3. Provide security of the data over the network.
4. Do research in the emerging areas of cryptography and network security.
5. Implement various networking protocols.
6. Protect any network from the threats in the world

UNIT-I

Introduction to Cryptography – security attacks – Security services- security Algorithm – Stream cipher and Block cipher – Symmetric and Asymmetric – key cryptosystems; Symmetric key algorithms: Introduction – DES – Triple DES – AES – IDEA – Blowfish – RC5.

UNIT-II

Public key Cryptosystem: Introduction to Number Theory – RSA Algorithm – key management – Diffie-Hellman key exchange – Introduction to elliptic curve cryptography; message authentication and hash function – hash and MAC algorithm – digital signatures and authentication protocol.

UNIT-III

Network security practice: Authentication applications – kerberos – X.509 authentication services and encryption techniques:;E-mail security – PGP – S/MIME – IP security

UNIT-IV

Web security – secure socket layer – secure electronic transaction; System security – Intruders and viruses – Firewalls – Password security.

UNIT V

Case study : Implementation of Cryptographic algorithms – RSA – DSA – ECC (C/JAVA programming). Network forensic -Security audit; Other security mechanism:

Introduction to stegnography – quantum cryptography – Water marking – DNA cryptography.

Suggested Readings

1. William Stallings (2013). Cryptography and Network Security (6th ed.). Pearson education, New delhi.

2. Bruce Schneir (2016). Applied cryptography (2nd ed.). CRC Press, New delhi.
3. A.Menezes, P.Van Oorschot and S.Vanstone (2010). Handbook of applied cryptography (2nd ed.). CRC Press New delhi.
4. Ankit Fadia (2010). Network security (2nd ed.). McMillan India Ltd., New Delhi.

Websites

3. www.flipkart.com/search-books/cryptography+and+network+security+William+stallings+ebook

Semester – V

16CTU501B **SOFTWARE TESTING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To learn the basic software debugging methods.
- To understand the White box and Black Box testing methods and techniques
- To design test plans.
- To discuss various software testing issues and solutions in software unit test, integration and system testing
- To learn the different testing tools (familiar with open source tools)
- To understand Quality Assurance models.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Investigate the reason for bugs and analyze the principles in software testing to prevent and remove bugs.
2. Implement various test processes for quality improvement
3. Design test planning.
4. Manage the test process
5. Apply the software testing techniques in commercial environment
6. Use practical knowledge of a variety of ways to test software and an understanding of some of the tradeoffs between testing techniques.

UNIT – I Testing Fundamentals

Examining the Specification: Getting started – Performing a high-level review of the specification – Low-level specification test techniques. Testing the software with blinders on: Dynamic Black-Box Testing- Test-to-Pass and Test-to-Fail- Equivalence Partitioning- Data testing – State testing – Other Black-box test techniques.

UNIT – II Examining the code

Static White-Box testing- Formal reviews – Coding Standards and Guidelines- Generic Code Review Checklist. Testing the software with X-Ray glasses: Dynamic White-Box testing- Dynamic White-Box testing versus Debugging-Testing the Pieces- Data Coverage- Code Coverage.

Flowgraphs and Path Testing

Path-testing Basics – Predicates, Path Predicates and Achievable Paths-Path sensitizing-Path Instrumentation-Implementation and Application of Path Testing

UNIT – III Transaction-Flow Testing and Data-Flow Testing

Transaction Flows-Transaction Flow Testing Techniques. Data-Flow Testing Basics-Data-Flow Testing Strategies-Application, Tools, Effectiveness

UNIT – IV Domain Testing
Domains and Paths-Domain Testing-Domains and Interface Testing-Domains and Testability

UNIT – V Logic-Based Testing and State Graphs
Motivational Overview-Decision Tables-Path Expressions Again-KV Charts-Specifications
State Graphs-Good State Graphs and Bad-State Testing

Suggested Readings

1. Boris Beizer (2009), Software Testing Techniques (2^{nd} ed.). New Delhi Dreamtech Press
2. Ron Patton (2002) Software Testing (2^{nd} ed.). New Delhi: Pearson Education
3. Dorothy Graham, Erik Van Veenendaal, Isabel Evans, Rex Black (2007). Foundations of Software Testing, ISTQB Certification.
4. Brian Hambling, Peter Morgan, Angelina Samaroo, Geoff Thompson (2010). Software Testing , (2^{nd} ed.). An ISEB Foundation, BCS
5. Renu Rajani, Pradeep Oak (2004). Software Testing- Effective Methods, Tools and Techniques, Tata McGraw Hill, New Delhi

Semester – V

16CTU502A **. NET PROGRAMMING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
2. Choose the architecture based on the problem to be solved.
3. Differentiate between the types of applications supported by .Net
4. Build, compile and execute a VB .Net program
5. Apply techniques to develop error-free software
6. To build integrated VB.NET solutions using files and structures with printing capabilities. Translate general requirements into data-related solutions using database concepts

UNIT I

Introduction to .NET: .NET framework features & architecture, CLR, common Type system, MSIL, Assemblies and class libraries. Introduction to visual studio, Project basics, types of project in .Net, IDE of VB .Net – Menu bar, Tool bar, Solution Explorer, Toolbox, Properties Window, Form Designer, Output Window, Object browser. The environment:Editor tab, format tab, general tab, docking tab. Visual development & event driven programming – Methods and events.

UNIT II

The VB .Net Language: The VB .Net Language – Variabls- decalring variables, Data type of variables, forcing variables declarations, scope & lifetime of a variable, constants, arrays, types of arrays, control array, Structure programming – Modularity – Information hiding – abstraction – events – subroutines and functions – message box – input box. Control flow statement: conditional statement, loop statement.

UNIT III

Working with WPF: Introduction:Understanding Windows Graphics – WPF: A Higher Level API – The architecture of WPF. XAML:Basics, properties and events in XAML – loading and compiling – Layout. Classic controls: The Control class – content controls – text controls – list controls – Range based controls.

UNIT IV

Objects and Collections: Understanding objects, properties, methods. Understanding collections. Files: Introduction – classification of files – processing files – handling files and folder using class – directory class – file class.

UNIT V

Database programming with ADO .Net: overview of ADO, from ADO to ADO .Net, accessing data using server explorer. Creating connection, command, data adapter and data set with OLEDB and SQLDB. Display data on data bound controls, display data on a data grid. Generate reports using CrystalReportViewer.

Semester – V

16CTU502B NETWORK PROGRAMMING 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
4. Details of IP operations in the INTERNET and associated routing principles
5. Understand the key protocols which support the Internet
6. reate applications using techniques such as multiplexing, forking, multithreading

UNIT-I

Transport Layer Protocols: TCP, UDP, SCTP protocol.

UNIT-II

Socket Programming: Socket Introduction; TCP Sockets; TCP Client/Server Example ; signal handling

UNIT-III

I/O multiplexing using sockets; Socket Options; UDP Sockets; UDP client server example; Address lookup using sockets.

UNIT-IV

Network Applications: Remote logging; Email; WWW and HTTP.

UNIT-V

LAN administration: Linux and TCP/IP networking: Network Management and Debugging.

Suggested Readings

2. Forouzan, B. A. (2003). Data Communications and Networking(4th ed.). New Delhi: THM Publishing Company Ltd.,
3. Nemeth Synder., & Hein. (2010). Linux Administration Handbook (2nd ed.), New Delhi: Pearson Education.
4. Steven, R. (1990). Unix Network Programming (2nd ed.). New Delhi: PHI.

Semester – V

16CTU503A INTRODUCTION TO DATA SCIENCE 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To practice statistical and programming best practices
- To develop professional skills: clear communication, creative thinking, critical thinking, self-directed learning, and effective teamwork
- To understand data analysis techniques and an interest in improving their ability to tackle data-rich problems in a systematic, principled way.
- To understand the basic concepts of big data, methodologies for analyzing structured and unstructured data with emphasis on the relationship between the Data Scientist and the business needs.
- To develop the skills required by organizations to support these functions has been grouped under the term "Data Sciences"

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Understand the problems solvable with data science and an ability to attack them from a statistical perspective.
2. Understand when to use supervised and unsupervised statistical learning methods on labeled and unlabeled data-rich problems.
3. Create data analytical pipelines and applications in Python.
4. Familiar data science ecosystem and the various tools needed to continue developing as a data scientist.
5. Develop the mindset to work like a data scientist, and follow a methodology to tackle different types of data science problems
6. Describe what data science and machine learning are, their applications & use cases, and various types of tasks performed by data scientists

UNIT-I

Data Scientist's Tool box: Turning data into actionable knowledge, introduction to the tools that will be used in buliding data analysis software; version control, markdown, git, GitHub, R and R-Studio.

UNIT-II

R Programming basics: Overview of R, R datatypes and Objects, reading and writing data, control structures, functions, scoping rules, dates and tiems, loop functions, dubugging tools, simualtion, code profiling.

UNIT-III

Getting and cleaning data: Obtaining data from the web, from API's , from database, and from colleagues in various formats. Basics of data cleaning and making data –tidy.

UNIT-IV

Exploratory data analysis: Essential exploratory techniques for summarzing data, applied before formal modelling commences, eliminating or sharpening potential hypotheses about the world that can be addresses by the data, common multivariate statistical techniques used to visualize high-dimensional data.

UNIT-V

Reproducible Research: Concepts and tools behind reporting modern data analysis in a reproducible manner, To write a document using R markdown, integrate live R code into a literate statistical program, compile R markdown documents using knitr and related tools, and organize a data analysis so that it is reproducible and accessible to others.

3. John. W. Foreman (2013). Data Smart: Using Data science to transform inforamtion into insight. John Wiley and Sons.
4. Ian Ayres (2007). Super Crunchers: Why Thinking – By – Numbers is the New way to Be Smart (1st ed.). Bantam
5. Eric Seigel (2013). Predictive Analytics: The Power of Predict who will click, Buy Lie or Die (1st ed.). Wiley.
6. Matthew A.Russel (2013). Mining the social webL: Datamining Facebook, Twitter, LinkedIn, Google+, GitHub, and More (2nd ed.). O'Reilly Media

Semester – V

16CTU503B **DATA MINING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

UNIT-I

Overview: Predictive and descriptive data mining techniques

UNIT-II

Supervised and unsupervised learning techniques

UNIT-III

Process of knowledge discovery in databases, pre-processing methods

UNIT-IV

Data Mining Techniques: Association Rule Mining, classification and regression techniques, clustering

UNIT-V

Scalability and data management issues in data mining algorithms, measures of interestingness.

16CTU504A **DIGITAL IMAGE PROCESSING** **3H – 3C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

UNIT-I

Introduction: Light, Brightness adaption and discrimination, Pixels, coordinate conventions, Imaging Geometry, Perspective Projection, Spatial Domain Filtering, sampling and quantization. Spatial Domain Filtering: Intensity transformations, contrast stretching, histogram equalization, Correlation and convolution, Smoothing filters, sharpening filters, gradient and Laplacian.

UNIT-II

Hotelling Transform, Fourier Transforms and properties, FFT (Decimation in Frequency and Decimation in Time Techniques), Convolution, Correlation, 2-D sampling, Discrete Cosine Transform, Frequency domain filtering.

UNIT-III:

Image Restoration, Basic Framework, Interactive Restoration, Image deformation and geometric transformations, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Adaptive filters, Linear, Position invariant degradations, Estimation of Degradation functions, Restoration from projections, Image Compression-Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Entropy of an information source, Shannon's 1st Theorem, Huffman Coding, Arithmetic Coding, Golomb Coding, LZW coding, Transform Coding, Sub-image size selection, blocking artifacts, DCT implementation using FFT, Run length coding.

UNIT – IV

FAX compression (CCITT Group-3 and Group-4), Symbol-based coding, JBIG-2, Bit-plane encoding, Bit-allocation, Zonal Coding, Threshold Coding, JPEG, Lossless predictive coding, Lossy predictive coding, Motion Compensation

Wavelet based Image Compression: Expansion of functions, Multi-resolution analysis, Scaling functions, MRA refinement equation, Wavelet series expansion, Discrete Wavelet Transform (DWT),Continuous Wavelet Transform, Fast Wavelet Transform, 2-D wavelet Transform, JPEG-2000 encoding, Digital Image Watermarking

UNIT-V

Morphological Image Processing: Basics, SE, Erosion, Dilation, Opening, Closing, Hit-or-Miss Transform, Boundary Detection, Hole filling, Connected components, convex hull, thinning, thickening, skeletons,pruning, Geodesic Dilation, Erosion, Reconstruction by dilation and erosion. Image Segmentation: Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding, Iterative thresholding,Otsu's method, Moving averages, Multivariable thresholding, Region-based segmentation, Watershed algorithm, Use of motion in segmentation

16CTU504B MULTIMEDIA AND ITS APPLICATIONS

Semester – V
3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

UNIT I

Multimedia – An overview: Introduction – Multimedia presentation and production – Characteristics of Multimedia presentation – Hardware and Software requirements – Uses of Multimedia. Text: Types of text – Font- Text file formats. Image: Image data representation – Image file formats – image processing software. Graphics: Advantages of graphics – Uses – Component of a graphics system.

UNIT II

Audio: Sound waves – types and properties of sound – components of audio system – Digital audio – Musical Instrument Digital Interface (MIDI) – Audio file formats – Audio processing software. Video: Motion video – Television systems – Video file formats – video processing software. Animation: Uses of animation – computer based animation - Animation file formats – Animation software.

UNIT III

Introducing photoshop elements: About elements – welcome screen – create mode – menu bar – toolbox – options bar – panels. Organizing images: Obtaining images -

tagging images – searching for images – opening and saving images. Selecting areas – Layers – Text and drawing tools.

UNIT IV

Understanding flash: Understanding flash basic elements – creating a simple animation. Learning Flash toolbox: Learning the toolbox – using tools. Learning flash panels: Understanding the panels. Using timeline and layers: Understanding how timeline works – Understanding layers. Drawing objects: Drawing lines and fills – using colors – Rotating, skewing and scaling – grouping objects. Creating animation – How animation works – creating motion tweens – creating shape tweens. Understanding masks – creating masks.

UNIT V

Creating symbols and using the library: Learning about symbols – creating symbols – using libraries. Learning Basic Actionscript concepts: Actionscript basics – data type basics. Learning basic actionscript programming: Applying Actionscript – Using Actionscript to control actions – Using Actionscript to control properties – Understanding Actions and Event Handlers.

Suggested Readings

1. Ranjan Parekh (2013). Principles of Multimedia (2nd ed.). TataMcGraw Hill.
2. Nick Vandome (2011). Photoshop Elements 9. TataMcGraw Hill.
3. Brian Underdahl (2002). Macromedia Flash MX – A Beginners Guide. Dreamtech Press.
4. Tay Vaughan (2002). Fundamentals of Multimedia (5th ed.). TataMcGraw Hill.
5. Bill Sanders (2001). Flash 5 Actionscript (1st ed.). New Delhi DreamTech Press.

Semester – V

16CTU511A **CRYPTOGRAPHY AND NETWORK SECURITY - PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand basics of Cryptography and Network Security.
- To know about various encryption techniques.
- To understand the concept of Public key cryptography.
- To study about message authentication and hash functions
- To impart knowledge on Network security
- To understand various protocols for network security to protect against the threats in the networks.

Course Outcomes (COs)

After successful completion of the course, the learners would be able to:

1. Illustrate various Public key cryptographic techniques
2. Evaluate the authentication and hash algorithms
3. Provide security of the data over the network.
4. Do research in the emerging areas of cryptography and network security.
5. Implement various networking protocols.
6. Protect any network from the threats in the world

List of Programs

1. Write a program to convert your college name from plain text to cipher text using transposition cipher method of encryption
2. Write a program to convertyour name from plain text to cipher text using the One Time Pads method of encryption
3. Write a program to encrypt a paragraph using the data encryption standard algorithm
4. Write a program to encrypt yopur bio-data using the advanced encryption standard algorithm
5. Write a program to decrypt the “Network Security” theory syllabus using the RSA Algorithm.
6. Write a program that takes a binary file as input and performs bit stuffing and cyclic redundancy check computation.
7. Write a program to simulate the working of Sliding-window protocol
8. Write a program to find the shortest path in a network using Dijkstra’s Algorithm
9. Write a program to implement the token bucket algorithm for congestion control.
10. Write a program for the following chat applictions:

    One to One: Open a Socket connection and display what is written by one to another.

    Many to Many: Each client opens a socket connection to the client server and writes to the Socket. Whatever is written by one can be seen by all. Implement symmetric key cryptography.

Semester – V

16CTU511B **SOFTWARE TESTING - PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

List of Programs

1. Write a program that take three inputs (a,b and c) that represents the sides of a triangle and the output is one of the below four.
   a) Not a triangle
   b) Scalene triangle
   c) Isoceles triangle
   d) Equilateral triangle
   1.1 Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
   1.2 Generate test cases using basis path testing
   1.3 Run code coverage tool

2. Write a program that determines the nature of roots of a quadratic equation. Output should be one of the following
    - Not a quadratic equation
    - Complex roots
    - Real roots
    - Single roots

    1.1 Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing

    1.2 Generate test cases using basis path testing

    1.3 Run code coverage tool
3. Write a program that checks whether the number is even or odd. Run code coverage tools and find the amount of code being covered.
4. Write a program that dynamically allocates memory to 10 integers using malloc() or calloc() and do not free memory leading to memory leaks. Verify the same using Valgrind. Now, free memory using free() at the end of the program to avoid memeory leaks. Verify the same using Valgring().
5. Using Selenium IDE, write a test suite containing minimum 4 test cases.
6. Conduct a test suite fro any two websites.
7. Write and test a program to login a specific webpage

Semester – V

16CTU512A .NET PROGRAMMING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
2. Choose the architecture based on the problem to be solved.
3. Differentiate between the types of applications supported by .Net
4. Build, compile and execute a VB .Net program
5. Apply techniques to develop error-free software
6. To build integrated VB.NET solutions using files and structures with printing capabilities. Translate general requirements into data-related solutions using database concepts

1. Write a VB .Net program to calculate simple interest and compound interest.
2. Write a VB .Net program to implement Calcolator.
3. Write a VB.Net program to implement Notepad
4. Write a VB.Net program to draw several shaps and fill with color.
5. Write a VB .Net program to perform the following in list box
    a) Add an item
    b) Delete an item
    c) List count
    d) Clear the list
6. Write a program to calculate the total marks of the student and print the grades.
7. Write a VB .Net program to implement employee payroll system
8. Write a VB .Net program to create and manipulate a file.
9. Write a program to implement a web browser

10. Write a program to maintain the details of doctors in a hospital with their specializations
11. Write a program to animate the picture using timer control.
12. Write a program to move the object from one location to another. Change the color and size of object at different time interval.
13. Write a program to place 10 pictures in the listbox. Using timer control the take the picture from listbox and change the form background after specific time interval.
14. Write a program to implement speaking program. Get the text input from the user and convert into voice.
15. Write a program to implement chatting

Semester – V

16CTU512B NETWORK PROGRAMMING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
4. Details of IP operations in the INTERNET and associated routing principles
5. Understand the key protocols which support the Internet
6. Create applications using techniques such as multiplexing, forking, multithreading

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Semester – V

16CTU513A INTRODUCTION TO DATA SCIENCE – PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To practice statistical and programming best practices
- To develop professional skills: clear communication, creative thinking, critical thinking, self-directed learning, and effective teamwork
- To understand data analysis techniques and an interest in improving their ability to tackle data-rich problems in a systematic, principled way.
- To understand the basic concepts of big data, methodologies for analyzing structured and unstructured data with emphasis on the relationship between the Data Scientist and the business needs.
- To develop the skills required by organizations to support these functions has been grouped under the term "Data Sciences"

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

7. Understand the problems solvable with data science and an ability to attack them from a statistical perspective.
8. Understand when to use supervised and unsupervised statistical learning methods on labeled and unlabeled data-rich problems.
9. Create data analytical pipelines and applications in Python.
10. Familiar data science ecosystem and the various tools needed to continue developing as a data scientist.
11. Develop the mindset to work like a data scientist, and follow a methodology to tackle different types of data science problems
12. Describe what data science and machine learning are, their applications & use cases, and various types of tasks performed by data scientists

List of Progrms

1. Write a program that prints 'Hello World' to the screen
2. Write a program that asks the user for a number n and prints the sum of the numbers 1 to n.
3. Write a program that prints multiplication table for numbers upto 12.
4. Write a function that returns the largest element in a list
5. Write a function that computes the running total of a list
6. Write a function that tests whether string is a palindrome.
7. Implement linear search
8. Implement binary search
9. Impelment matrix addition, subtraction and multiplication
10. Fifteen students were enrolled in a course
    There ages were : 20 20 20 20 20 21 21 21
    22 22 22 22 23 23 23
    i. Find the median age of all students under 22 years.

ii. find the median age of all students

iii. Find the mean age of all students

iv. Find the modal age of all students

v. Two more students enter tha class. The age of both students is 23. What is now mean, mode and median.

11. Following table gives frequency distribution of systolic blood pressure. Compute all the measures of dispersion.

Midpoint	95.5	105.5	115.5	125.5	135.5	145.5	155.5	165.5	175.5
Number	5	8	22	27	17	9	5	5	2

12. Obtain probability distribution of, where X is number of spots showing when a six-sided symmetric die (i.e. all six faces of the die are equally likely) is rolled.
    Simulate random samples of sizes 40,70 and 100 respectively and verify the frequency interpretation of probability.
13. Make visual representations of dats using the base, lattice abd ggplot2 plotting ssytems in R, apply basic principles of data graphics to create rich analytic graphics from available datasets.
14. Use Git/GitHub software to create Github Account. Also, create a repo using Github.

16CTU513B	**DATA MINING - PRACTICAL**	**Semester – V** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

List of Programs

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). for test options, first choose "Use training set", then choose "Percentage split" using default 66% percentage split. Report model percent error rate.
2. Use iris dataset preprocess and classifyu it with j4.8 and Naive Bayes classifier. Examine the tree in the classifier output panel.
3. Using the dataset ReutersCorn – Train and ReutersGrain – Train. Classify articles using binary attributes and word count attributes.
4. Apply any two association rule based algorithm for the supermarket analysis.
5. Using weka experimenter perfrom comparison analysis of j4.8, oneR and ID3 for vote dataset.
6. Using weka experimenter perfrom comparison analysis of Naive Bayes with different datasets.
7. Apply ZeroR, OneR and j4.8, to classify the iris data in an experiment using 10 train and test runs, with 66% of the data used for 34% used for testing.
8. Using Weka Knowledge flow set up a flow to load an ARFF file (batch mode) and perform a cross-validation using j4.8 (WEKS's C4.5 implementation).

9. Draw multiple ROC curves in the same plot window, using j4.8 and RandomForest as classifiers.
10. Use any three clustering algorithm on Vehicle data set and find best among them.

Semester – V

16CTU514A DIGITAL IMAGE PROCESSING - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.
7.

List of Programs

1. Write program to read and display digital image using MATLAB or SCILAB
   a. Become familiar with SCILAB/MATLAB Basic commands
   b. Read and display image in SCILAB/MATLAB
   c. Resize given image
   d. Convert given color image into gray-scale image
   e. Convert given color/gray-scale image into black & white image
   f. Draw image profile
   g. Separate color image in three R G & B planes
   h. Create color image using R, G and B three separate planes
   i. Flow control and LOOP in SCILAB
   j. Write given 2-D data in image file

2. To write and execute image processing programs using point processing method
   a. Obtain Negative image b. Obtain Flip image
   b. Thresholding d. Contrast stretching

3. To write and execute programs for image arithmetic operations
   a. Addition of two images
   b. Subtract one image from other image

c. Calculate mean value of image
d. Different Brightness by changing mean value

4. To write and execute programs for image logical operations
   a. AND operation between two images
   b. OR operation between two images
   c. Calculate intersection of two images
   d. Water Marking using EX-OR operation
   e. NOT operation (Negative image)

5. To write a program for histogram calculation and equalization using
   a. Standard MATLAB function
   b. Program without using standard MATLAB functions
   c. C Program

6. To write and execute program for geometric transformation of image
   a. Translation
   b. Scaling
   c. Rotation
   d. Shrinking
   e. Zooming

7. To understand various image noise models and to write programs for
   a. image restoration
   b. Remove Salt and Pepper Noise
   c. Minimize Gaussian noise
   d. Median filter and Weiner filter

8. Write and execute programs to remove noise using spatial filters
   a. Understand 1-D and 2-D convolution process
   b. Use 3x3 Mask for low pass filter and high pass filter

9. Write and execute programs for image frequency domain filtering
   a. Apply FFT on given image
   b. Perform low pass and high pass filtering in frequency domain
   c. Apply IFFT to reconstruct image

10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask

11. Write and execute program for image morphological operations erosion and dilation.

12. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.

Semester – V

16CTU514B MULTIMEDIA AND ITS APPLICATIONS – PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

List of Programs

1. Change a Shape to Another Shape. (Shape Animation)
2. Create a Man to walk with the help of Key Frame Animation.
3. Change the Colors of an object with the help of Animation.
4. Draw a Bird with Flash tools and make it fly with key Frame Animation.
5. Create a Shining Stones with the help of Movie Clip.
6. Create an animation to represent a growing moon using frame by frame animation
7. Create an animation to bounce a ball on steps.
8. Simulate movement of a cloud.
9. Create Morphing between two images.
10. Create an Action script to execute for an event in an application.
11. Create Water Drops using Photoshop.

12. Animate Plane Flying with the Clouds.
13. Create Plastic Surgery for Nose.
14. Create a Web Page using Photoshop
15. Given a picture of a flower with a background. Extract the flower and organize on a different background.
16. Display the given picture through your name using mask.

Semester – VI

16CTU601A PHP PROGRAMMING 4H – 4C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

UNIT-I

Introduction to PHP:

PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.) -PHP with other technologies, scope of PHP Basic Syntax, PHP variables and constants-Types of data in PHP , Expressions, scopes of a variable (local, global)-PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwis , ternary and MOD operator.-PHP operator Precedence and associativity

UNIT-II

Handling HTML form with PHP:

Capturing Form Data -GETand POST form methods- Dealing with multi value fields -Redirecting a form after submission **-PHP conditional events and Loops:** PHP IF Else conditional statements (Nested IF and Else) -Switch case, while ,For and Do While Loop -Goto , Break ,Continue and exit

UNIT-III

PHP Functions:

Function, Need of Function , declaration and calling of a function-PHP Function with arguments, Default Arguments in Function-Function argument with call by value, call by reference-Scope of Function Global and Local

UNIT-IV

String Manipulation and Regular Expression: (3L)

- Creating and accessing String , Searching & Replacing String
- Formatting, joining and splitting String , String Related Library functions
- Use and advantage of regular expression over inbuilt function
- Use of preg_match(), preg_replace(), preg_split() functions in regular expression.

UNIT-V

Array:

- Anatomy of an Array ,Creating index based and Associative array ,Accessing array
- Looping with Index based array, with associative array using each() and foreach()
- Some useful Library function

Suggested Readings

1. Steven Holzner. (2007). PHP: The Complete Reference. New Delhi: McGraw Hill Education (India).
2. Timothy Boronczyk., & Martin, E. Psinas. (2008). PHP and MYSQL (Create-Modify-Reuse). New Delhi: Wiley India Private Limited.
3. Robin Nixon. (2014). Learning PHP, MySQL, JavaScript, CSS & HTML5 (3rd ed.). O'reilly.
4. Luke Welling.,& Laura Thompson.(2008). PHP and MySQL Web Development (4th ed.). Addition Paperback, Addison-Wesley Professsional.
5. David Sklar., & Adam Trachtenberg. PHP Cookbook: Solutions & Examples for PHP.

Semester – VI

16CTU601B UNIX / LINUX PROGRAMMING 4H – 4C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

UNIT-I

Introduction What is Linux/Unix Operating systems, Difference between linux/unix and other operating systems , Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process.

UNIT-II

System processes (an overview), External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

UNIT-III

User Management and the File System Types of Users, Creating users, Granting rights User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

UNIT-IV

Shell introduction and Shell Scripting What is shell and various type of shell, Various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script , Shell variable (user defined and system variables)

UNIT-V

System calls, Using system calls Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell.
Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

Suggested Readings

1. Sumitabha, Das.(2006). Unix Concepts And Applications. New Delhi: Tata McGraw-Hill Education.
2. Michael Jang. (2011). RHCSA/ RHCE Red Hat Linux Certification: Exams (Ex200 & Ex300). Certification Press.
3. Nemeth Synder., & Hein.(2010). Linux Administration Handbook (2nd ed.). Pearson Education.
4. Richard Stevens, W. Bill Fenner., & Andrew, M. Rudoff. (2014). Unix Network Programming, The sockets Networking API, Vol. 1, (3rd ed.).

Semester – VI

16CTU602A E-COMMERCE TECHNOLOGIES 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service

UNIT I -An Introduction to Electronic commerce

What is E-Commerce (Introduction And Definition), Main activities E-Commerce, Goals of E-Commerce, Technical Components of E-Commerce, Functions of E-Commerce, Advantages and disadvantages of E-Commerce, Scope of E-Commerce,Electronic Commerce Applications, Electronic Commerce and Electronic Business (C2C) (C2G, G2G, B2G, B2P, B2A, P2P, B2A, C2A, B2B, B2C)

UNIT II -The Internet and WWW

Evolution of Internet, Domain Names and Internet - Organization (.edu, .com, .mil, .gov, .net etc), Types of Network, Internet Service Provider, World Wide Web, Internet & Extranet, Role of Internet in B2B Application, building own website, cost, time, reach, registering a domain name, web promotion, Target email, Banner, Exchange, Shopping Bots.

UNIT III: Electronic data

Electronic data exchange introduction, concepts of EDI and Limitation, Apllication of eDI, Disadvantgaes of eDI, EDI model, Electronic Payment System: Introduction, Types of Electronic Payment system, Payment types, Value exchange system, credit card system electronic fund transfer, Paperless bill, modern payment cash, Electronic cash.

UNIT IV: Planning for Electronic Commerce

Palnnign Electronic commerce initiates, linking objectives to business strategies, measuring cost objectives, comparing benefits to Costs, strategies for developing electronic commerce web sites.

UNIT V : Internet marketing

The PROS and CONS of online shopping, the CONS of online shopping, Justify an internet business, Internet marketing techniques, The E-Cycle of Internet marketing, personalization e-commerce.

Suggested Readings

16CTU602B	**CLOUD COMPUTING**	**Semester – VI** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with it's vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. CO4: Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

UNIT-I

Overview of Computing Paradigm: Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing.**Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

UNIT-II

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

UNIT-III

Case Studies: Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2 , Eucalyptus.

UNIT-IV

Service Management in Cloud Computing: Service Level Agreements (SLAs), Billing & AITUounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

UNIT-V

Cloud Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

16CTU603A	**SOFT COMPUTING**	**Semester – VI** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To familiarize with soft computing concepts.
- To introduce the fuzzy logic concepts, fuzzy principles and relations.
- To Basics of ANN and Learning Algorithms.
- Develop the skills to gain a basic understanding of neural network theory and fuzzy logic theory.
- Genetic Algorithm and its applications to soft computing.
- Hybrid system usage, application and optimization

Course Outcomes (COs)

Upon completion of the course, the student will be able to :

1. List the facts and outline the different process carried out in fuzzy logic, ANN and Genetic Algorithms.
2. Explain the concepts and meta-cognitive of soft computing.
3. Apply Soft computing techniques the solve character recognition, pattern classification, regression and similar problems.
4. Outline facts to identify process/procedures to handle real world problems using soft computing.
5. Evaluate various techniques of soft computing to defend the best working solutions.
6. Design hybrid system to revise the principles of soft computing in various applications.

UNIT I

Neural Networks – 1 (Introduction a Architecture)

Neuron, Nerve structure and synapse, Artificial Neuron and its model, activation functions, Neural network architecture: single layer and multilayer feed forward networks, recurrent metworks. Various learning techniques; perception and convergence rule, Auto associative and hetro-associative memory.

UNIT II

Neural Networks – II (Back propagation networks) architecture: perceptron model, solution, single layer artificial neural network, multilayer perception model, back propagation learning methods, effect of learning rule co-efficient; back propagation algorithm, factors affecting back propagation training, applications.

UNIT III

Fuzzy Logic – 1 (Introduction)

Basic concepts of fuzzy logic, Fuzzy sets and Crisp sets, Fuzzy set theory and operations, Properties of fuzzy sets, Fuzzy and Crisp realtions, Fuzzy to Crisp conversion

UNIT IV

Fuzzy Logic II (Fuzzy membership, Rules) Membership functions, interference in fuzzy logic, fuzzy if-then rules, Fuzzy implications and Fuzzy algorithms, Fuzzyfications & Defuzzifications, Fuzzy Controller, Industrial applications.

UNIT V

Genetic Algorithm (GA)

Basic concepts, working principle, procedures of GA, flowchart of GA, Genetic representations, (encoding) Initialization and selection, genetic operators, Mutation, Generational Cycle, applications

Suggested Readings

2. N.P.Padhy. Artificial Intelligence and Intelligent Systems. Oxford University Press.
3. Siman Haykin. Neural Networks. Prentice Hall of India
4. Timothy J.Ross. Fuzzy Logic with Engineering Applications. Wiley India.
5. Kumar Satish. Neural Networks. Tata McGraw Hill.

16CTU603B **SYSTEM PROGRAMMING** **Semester – VI**
3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer‘s requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

UNIT-I

Assemblers & Loaders, Linkers: One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

UNIT-II

Lexical Analysis:

Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

UNIT-III

Parsing:

Bottom up parsing- LR parser, yaITU. **Intermediate representations: Three** address code generation, syntax directed translation, translation of types, control Statements.

UNIT-IV

Storage organization: Activation records stack allocation.

UNIT-V

Code Generation: Object code generation

Semester – V

16CTU611A PHP PROGRAMMING - PRACTICAL 4H –2C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

List of Programs

1. Create a PHP page using functions for comparing three integers and print the largest number.

2. Write a function to calculate the factorial of a number (non-negative integer). The function accept the number as an argument.

3. WAP to check whether the given number is prime or not.

4. Create a PHP page which accepts string from user. After submission that page displays the reverse of provided string.

5. Write a PHP function that checks if a string is all lower case.

6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)

7. WAP to sort an array.

8. Write a PHP script that removes the whitespaces from a string.
Sample string : 'The quick   brown fox' Expected Output : Thequickbrownfox

9. Write a PHP script that finds out the sum of first n odd numbers.

10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.

11. Write a PHP script that checks if a string contains another string.

12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.

13. Create a script to construct the following pattern, using nested for loop.

*
* *
* * *
* * * *
* * * * *

14. Write a simple PHP program to check that emails are valid.

15. WAP to print first n even numbers.

16. $color = array('white', 'green', 'red")

Write a PHP script which will display the colors in the following way : Output :
white, green, red,
• green • red
• white

17. Using switch case and dropdown list display a ―Hello‖ message depending on the language selected in drop down list.

18. Write a PHP program to print Fibonacci series using recursion.

19. Write a PHP script to replace the first 'the' of the following string with 'That'.

Sample : 'the quick brown fox jumps over the lazy dog.'
Expected Result : That quick brown fox jumps over the lazy dog.

Semester – VI

16CTU611B UNIX / LINUX PROGRAMMING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

List of Programs

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify ―call command to display calendars of the specified months.
3. Write a shell script to modify ―call command to display calendars of the specified range of months.
4. Write a shell script to aITUept a login name. If not a valid login name display message – ―Entered login name is invalid.
5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of ―who command along with the total number of users .
7. Write a shell script to display the multiplication table any number,
8. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.

11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.
13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient C(n , x).
15. Write a shell script to find the permutation P(n,x).
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

Semester – VI

16CTU612A E-COMMERCE TECHNOLOGIES- PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service.

List of Programs

1. Write a HTML program to implement the use of Image map.
2. Write a CSS to implement selectors in HTML
3. Write a CSS to implement pesudo – classes with in-line styles
4. Write a Javascript program to validate a web form
5. Write a Javascript program to allow visitors to see history of visiting your page
6. Write a Javascript program to change random color each 5 seconds

7. Write a pearl program to read a list of n strings (from STDIN) into an array and print a random string from the list (Use srand;rand(@array))

8. Write a pearl program to read a list of n numeric's from STDIN and find the max, min, range, median and mode. Input size of the list n interactively.

9. Write a pearl program to read a file of words and replaces all words in the file with their uppercase equivalent (hint: use tr/a-z/A-Z/)

10. Write VBScript program to print Fibonacci series using Do..while loop and For loop.

11. Write VBScript program to generate date and time in defferent format

12. Write VBScript program to print student marklist

13. Develop an ASP code to retrieve information from forms

14. Develop an ASP code to reading and writing cookies information

15. Develop an ASP code using response object methods

Semester – VI

16CTU612B CLOUD COMPUTING -PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with it's vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

List of Programs

1. Create virtual machines that access different programs on same platform.

2. Create virtual machines that aITUess different programs on different platforms.

3. Working on tools used in cloud computing online-

    a) Storage
    b) Sharing of data
    c) Manage your calendar, to-do lists,
    d) A document editing tool

4. Exploring Google cloud

5. Exploring Microsoft cloud

6. Exploring Amazon cloud

Semester – VI

16CTU613A SOFT COMPUTING - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To familiarize with soft computing concepts.
- To introduce the fuzzy logic concepts, fuzzy principles and relations.
- To Basics of ANN and Learning Algorithms.
- Develop the skills to gain a basic understanding of neural network theory and fuzzy logic theory.
- Genetic Algorithm and its applications to soft computing.
- Hybrid system usage, application and optimization

Course Outcomes (COs)

Upon completion of the course, the student will be able to :

1. List the facts and outline the different process carried out in fuzzy logic, ANN and Genetic Algorithms.
2. Explain the concepts and meta-cognitive of soft computing.
3. Apply Soft computing techniques the solve character recognition, pattern classification, regression and similar problems.
4. Outline facts to identify process/procedures to handle real world problems using soft computing.
5. Evaluate various techniques of soft computing to defend the best working solutions.
6. Design hybrid system to revise the principles of soft computing in various applications.

List of Programs

1. Implement OR, AND using Perceptron in C
2. Implement OR,AND using Perceptron in MATLAB Command-line Argument
3. Implement OR,AND using Perceptron in MATLAB GUI
4. Implement OR,AND, X-OR gate, using back propagation algorithm in MATLAB using Command-line Argument as well as GUI
5. Solve a given problem – 1 (Operatons) using Fuzzy Ligic in MATLAB
6. Solve a given problem – 1 (Max-Min Composition) using Fuzzy Ligic in MATLAB
7. To find the solution of the function Maximize, given the constraints using GA approach in C.
8. Solve a given problem – 1 using Fuzzy Logic in MATLAB GUI
9. Study GA tool in MATLAB.

Semester – VI

16CTU613B SYSTEM PROGRAMMING - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer‛s requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

List of Programs

1. To implement an assembler for a hypothetical language.
2. To get familiar with lex: write a program to recognize numbers, identifiers.
3. To get familiar with yacc: write a desk calculator.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)
முதல்பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 16LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016-2017)

பகுதி – I, தமிழ் **பருவம் I**

16LAU101 : **தமிழ் முதல் தாள்** 4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது**)**

அலகு – I : இக்கால இலக்கியம்: **(10 மணிநேரம்)**

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.
இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை – ஒற்றுமையே உயிர்நிலை.
மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் –மலையாளக் காற்று.
சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.
பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்: **(10 மணிநேரம்)**

கொன்றை வேந்தன்: 1-50 பாடல்கள்
திருக்குறள்: பண்புடைமை, வினைத்திட்பம் – 20 குறள்கள்
பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: **(10 மணிநேரம்)**

மூவருலா: 1-26 கண்ணிகள்
திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்
கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை: **(10 மணிநேரம்)**

1. **உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்**
2. **கட்டிடக்கலை** - அ. இராசமாணிக்கனார்
3. **வாழ்க்கை** - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: **(8 மணிநேரம்)**

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Semester – I

16AEC101 ENVIRONMENTAL STUDIES 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **100** Total: **100**

Course Objectives (CO)

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT-I: Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III: Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution , Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Semester-I

16ITU101 Programming Fundamentals Using C / C++ 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int:**40** Ext : **60** Total: **100**

Course Objectives (CO)

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program.

UNIT-I

Introduction to C and C++:

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++.

Data Types, Variables, Constants, Operators and Basic I/O: Declaration, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators, Using Comments in programs, Character I/O, Formatted and Console I/O, Using Basic Header Files.

Expressions, Conditional Statements and Iterative Statements: Simple Expressions in C++, Understanding Operators Precedence in Expressions, Conditional Statements, Understanding syntax and utility of Iterative Statements, Use of break and continue in Loops, Using Nested Statements.

UNIT-II

Functions and Arrays: Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays, Use Various types of arrays, Two-dimensional Arrays, Introduction to Multi-dimensional arrays.

UNIT-III

Derived Data Types (Structures and Unions): Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members.

Pointers and References in C++: Understanding a Pointer Variable, Simple use of Pointers, Pointers to Pointers, Pointers to structures, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions.

UNIT-IV

File I/O, Preprocessor Directives: Opening and closing a file, Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives, Macros.

UNIT-V

Using Classes in C++: Principles of Object-Oriented Programming, Defining & Using Classes, Constructors, Constructor Overloading, Function overloading and Operator overloading in classes, Class Variables & Functions, Access specifiers, Overview of Template classes and their use.

Inheritance, Polymorphism and Exception Handling: Introduction to Inheritance, Polymorphism, Basics Exceptional Handling.

Suggested Readings:

Semester – I

16ITU102 COMPUTER SYSTEM ARCHITECTURE 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

UNIT -I Introduction

Logic gates, Boolean algebra, circuit simplification, combinational circuits: Adders and Subtractors –Multiplexers and De multiplexers – Encoders and Decoders- sequential circuits: Flip Flop’s, registers, counters and memory units.

UNIT -II Data Representation and Basic Computer Arithmetic

Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

UNIT –III Basic Computer Organization and Design

Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

UNIT-IV Central Processing Unit

Register organization, arithmetic and logical micro-operations, stack organization, micro programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining and parallel architecture.

UNIT –V Memory and Input-Output Organization

Cache memory, Associative memory, mapping Input / Output: External Devices, I/O Modules, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels.

Suggested Readings:

1. Dos Reis, A. J. (2009). Assembly Language and Computer Architecture using C++ and JAVA. Course Technology
2. Stallings, W. (2010). Computer Organization and Architecture Designing for Performance (8th ed.) New Delhi: Prentice Hall of India,
3. Mano, M.M. (2013). Digital Design, New Delhi: Pearson Education Asia.
4. Carl Hamacher. (2012). Computer Organization (5th ed.). New Delhi: McGrawHill.

Semester – I

16ITU103 **DEVELOPING PROGRAMMING LOGIC AND TECHNIQUES** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To develop a basic understanding of many areas of information technology and how they are used
- To understand the basic structure of a program including sequence, decisions and looping
- To understand how to design a program to solve a simple program
- To introduce the basics of several programming language and understand the commonality and differences in languages
- To lay a basic foundation involving hardware, software, navigation, the Internet for future development
- To understand what a database is and how to design a working model

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of high-level structured programming logic and algorithm development.
2. Demonstrate knowledge of structured program design and modularity.
3. Demonstrate knowledge of file-based input/output operations, file manipulation and maintenance, extract reporting, and report writing.
4. Demonstrate knowledge of records, data types and structures, storage classes, addressable memory locations.
5. Demonstrate knowledge of table utilization, arrays and subscripts.
6. Demonstrate knowledge of arithmetic expressions, control structures, iteration techniques.

UNIT – I

Language Evolution Machine Language, Assembly Language, High Level Language. Translators: compiler, Interpreter and Assembler. The Compilation Process, Linker, Loader, Study of HLL, Characteristics of Good Language, Generation of Languages, Study of Programming Languages (Function Oriented, Object Oriented, Event-Based).

UNIT – II

Programming Construction Tools Problem Analysis, Process Analysis, Conceptual Development of Solution. Development Tools: Algorithm: Types of Algorithm, Algorithm of Analysis, Advantage and Disadvantage of Algorithm, Complexity of Algorithm, Big-O Notation.

UNIT – III

Flowcharts: Types of Flowcharts, Advantage and Disadvantage of Flowchart. Pseudocode: Definition and Its Characteristics Control Statements Basics of Programming Language: Usage of Character Set, Meaning of Keywords and Identifiers, Role of Data Types, Constants and Variables.

UNIT – IV

Importance of Casting, Different Types of Operators and their Precedence, Expressions, Conditional Statements (One-Way, Two-Way and Multi-Way Conditional), Looping Statements (For, While, do-while), Usage of Exit, continue, Break and Goto Statement.

UNIT – V

Arrays: Arrays, One dimensional array, Various operatio on Array (Inserting of Elements, Deleting of Element, Rotating List, Sorting, Searching, Merging Etc) and Two dimensional arrays (Matrix Addition, Transpose of Matrix, Matrix Multiplication), Modular programming and its features.

Suggested Readings:

1. 1.Anil V.Chouduri. The Art of Programming through Flowchart and Algorithms. Laxmi Publication.
2. Maureen Sprankle (2009). Problem Solving Programming Concepts (7th ed.). Pearson Education.
3. Behrouz Forouzan. Basic of Computer Science. Cengage Learning
4. Donald Knuth. The Art of Computer Programming Vol-I,II, III, Pearson.
5. Horowitz, Sahani. Fundamental of Computer Algorithm. Orient Longman.

Semester – I

16ITU111 PROGRAMMING FUNDAMENTALS USING C / C++ - PRACTICAL **3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program

List of Programs

1. WAP to display Fibonacci series (i)using recursion, (ii) using iteration

2. WAP to compute the sum of the first n terms of the following series
S = 1+1/2+1/3+1/4+……

3. Write a program to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.

4. WAP to print the sum and product of digits of an integer.

5. WAP to reverse a number.

6. Write a program that checks whether a given string is Palindrome or not.

7. WAP to print a triangle of stars as follows (take number of lines from user):

```
*
***
*****
*******
*********
```

8. WAP to perform following actions on an array entered by the user:

i) Calculate and print the sum and average of the elements of array

ii) Print the maximum and minimum element of array

9. Write a program that swaps two numbers using pointers.

10. Write a program which takes the radius of a circle as input from the user, passes it to another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.

11. Write a program to perform operations on strings.

12. Write a program to perform following Matrix operations (2-D array implementation):
a) Sum b) Difference c) Product

13. Create a structure Student containing fields for Roll No., Name, Class, Year and Total Marks. Create 10 students and store them in a file.

14. Create the Person class. Create some objects of this class (by taking information from the user). Inherit the class Person to create two classes Teacher and Student class. Maintain the respective information in the classes and create, display and delete objects of these two classes (Use Runtime Polymorphism).

15.Copy the contents of one text file to another file using command line argument.

Semester – I

16ITU112 COMPUTER SYSTEM ARCHITECTURE - PRACTICAL 3H – 2C

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

List of Experiments

1. Verification of Logic Gates
2. Code converters
3. Realization of Multiplexer using basic gates
4. Encoder and Decoder
5. Realization Half and Full adders
6. Realization of Subtractor
7. Realization of Parity generator
8. Flip-Flop Circuits
9. Digital to analog Converters
10. Demonstrate a Basic Arithmetic Computing operations

Semester – I

16ITU113 OFFICE AUTOMATION - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To identify types of computers, how they process information and how individual computers interact with other computing systems and devices.
- To identify the function of computer hardware components.
- To identify the factors that goes into an individual or organizational decision on how to purchase computer equipment.
- To identify how to maintain computer equipment and solve common problems relating to computer hardware.
- To identify how software and hardware work together to perform computing tasks and how software is developed and upgraded.
- To identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Understand the meaning and basic components of a computer system,
2. Define and distinguish Hardware and Software components of computer system,
3. Explain and identify different computing machines during the evolution of computer system, gain knowledge about five generations of computer system,
4. Identify and discuss the functional Units of a computer system, identify the various input and output Units and explain their purposes
5. Understand the role of CPU and its components, understand the concept and need of primary and secondary memory, discuss the advantages, limitations and applications of computers.
6. Understand the classification of computers, distinguish the computers on the basis of purpose, technology and size

List of Programs

Practical exercises based on MS Office/ Open Office tools using document preparation and spreadsheet handling packages.

<u>MS Word</u>

1. Prepare **a grocery list** having four columns (Serial number, The name of the product, quantity and price) for the month of April, 06.

- Font specifications for Title (Grocery List): 14-point Arial font in bold and italics.
- The headings of the columns should be in 12-point and bold.
- The rest of the document should be in 10-point Times New Roman.
- Leave a gap of 12-points after the title.

2. Create a **telephone directory**.

- The heading should be 16-point Arial Font in bold
- The rest of the document should use 10-point font size
- Other headings should use 10-point Courier New Font.
- The footer should show the page number as well as the date last updated.

3. Design a **time-table form** for your college.

- The first line should mention the name of the college in 16-point Arial Font and should be bold.
- The second line should give the course name/teacher‘s name and the department in 14-point Arial.
- Leave a gap of 12-points.
- The rest of the document should use 10-point Times New Roman font.
- The footer should contain your specifications as the designer and date of creation.

4. BPB Publications plans to release a new book designed as per your syllabus. Design the **first page of the book** as per the given specifications.

- The title of the book should appear in bold using 20-point Arial font.
- The name of the author and his qualifications should be in the center of the page in 16-point Arial font.
- At the bottom of the document should be the name of the publisher and address in 16-point Times New Roman.
- The details of the offices of the publisher (only location) should appear in the footer.

5. Create the following one page documents.
   a. Compose a note inviting friends to a get-together at your house, Including a list of things to bring with them.
   b. Design a certificate in landscape orientation with a border around the document.
   c. Design a Garage Sale sign.
   d. Make a sign outlining your rules for your bedroom at home, using a numbered list.

6. Create the following documents:
   (a) A newsletter with a headline and 2 columns in portrait orientation, including at least one image surrounded by text.
   (b) Use a newsletter format to promote upcoming projects or events in your classroom or college.

7. Convert following text to a table, using comma as delimiter
   Type the following as shown (do not bold).
   Color, Style, Item
   Blue, A980, Van
   Red, X023, Car
   Green, YL724, Truck
   Name, Age, Sex
   Bob, 23, M
   Linda, 46, F
   Tom, 29, M

8. Enter the following data into a table given on the next page.

Salesperson	**Dolls**	**Trucks**	**Puzzles**
Kennedy, Sally	1327	1423	1193
White, Pete	1421	3863	2934
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067

Add a column Region (values: S, N, N,S,S,S) between the Salesperson and Dolls columns to the given table Sort your table data by Region and within Region by Salesperson in ascending order:
In this exercise, you will add a new row to your table, place the word Total at the bottom of the Salesperson column, and sum the Dolls, Trucks, and Puzzles columns.

9. Wrapping of text around the image.

10. Following features of menu option must be covered

   FILE Complete menu
   EDIT Complete menu
   VIEW Complete menu
   INSERT Complete menu
   FORMAT Complete menu
   TABLE Complete menu

WINDOW Complete menu

MS Excel

1. Enter the Following data in Excel Sheet

REGIONAL SALES PROJECTION						
State	**Qtr1**	**Qtr2**	**Qtr3**	**QTR4**	**Qtr Total**	**Rate Amount**
Delhi	2020	2400	2100	3000	15	
Punjab	1100	1300	1500	1400	20	
U.P.	3000	3200	2600	2800	17	
Haryana	1800	2000	2200	2700	15	
Rajasthan	2100	2000	1800	2200	20	

TOTAL
AVERAGE

(a) Apply Formatting as follow:

i. Title in TIMES NEW ROMAN

ii. Font Size - 14

iii. Remaining text - ARIAL, Font Size -10

iv. State names and Qtr. Heading Bold, Italic with Gray Fill Color.

v. Numbers in two decimal places.

vi. Qtr. Heading in center Alignment.

vii. Apply Border to whole data.

(b) Calculate State and Qtr. Total

(c) Calculate Average for each quarter

(d) Calculate Amount = Rate * Total .

2. Given the following worksheet

	A	**B**	**C**	**D**
1	Roll	Name	Marks	Grade

	No.			
2	1001	Sachin	99	
3	1002	Sehwag	65	
4	1003	Rahul	41	
5	1004	Sourav	89	
6	1005	Har Bhajan	56	

Calculate the grade of these students on the basis of following guidelines:

If Marks	Then Grade
>= 80	A+
>= 60 < 80	A
>= 50 < 60	B
< 50	F

3. Given the following worksheet

	A	**B**	**C**	**D**	**E**	**F**	
1	**Salesman**			**Sales in (Rs.)**			
2	No.	Qtr1	Qtr2	Qtr3	Qtr4	Total	Commission
3	S001	5000	8500	12000	9000		
4	S002	7000	4000	7500	11000		
5	S003	4000	9000	6500	8200		
6	S004	5500	6900	4500	10500		
7	S005	7400	8500	9200	8300		
8	S006	5300	7600	9800	6100		

Calculate the commission earned by the salesmen on the basis of following Candidates:

If Total Sales	**Commission**
< 20000	0% of sales
> 20000 and < 25000	4% of sales
> 25000 and < 30000	5.5% of sales
> 30000 and < 35000	8% of sales
>= 35000	11% of sales

The total sales is sum of sales of all the four quarters.

4. A company XYZ Ltd. pays a monthly salary to its employees which consists of basic salary, allowances & deductions. The details of allowances and deductions are as follows:

Allowances

• HRA Dependent on Basic

30% of Basic if Basic <=1000

25% of Basic if Basic>1000 & Basic<=3000
20% of Basic if Basic >3000

- DA Fixed for all employees, 30% of Basic
- Conveyance Allowance Rs. 50/- if Basic is <=1000
Rs. 75/- if Basic >1000 & Basic<=2000
Rs. 100 if Basic >2000
- Entertainment Allowance NIL if Basic is
<=1000 Rs. 100/- if Basic > 1000

Deductions

- Provident Fund 6% of Basic
- Group Insurance Premium Rs. 40/- if Basic is <=1500
Rs. 60/- if Basic > 1500 & Basic<=3000
Rs. 80/- if Basic >3000

Calculate the following:
Gross Salary = Basic + HRA + DA + Conveyance + Entertainment
Total deduction = Provident Fund + Group Insurance Premium
Net Salary = Gross Salary – Total Deduction.

5. Create Payment Table for a fixed Principal amount, variable rate of interests and time in the format below:

No. of Installments	**5%**	**6%**	**7%**	**8%**	**9%**
3	XX	XX	XX	XX	XX
4	XX	XX	XX	XX	XX
5	XX	XX	XX	XX	XX
6	XX	XX	XX	XX	XX

~~6. Use an array formula to calculate Simple Interest~~ for given principal amounts given the rate o

6. Use an array formula to calculate Simple Interest for given principal amount.Given the Rate of Interest and time.

Rate of Interest	8%
Time	5 Years
Principal	Simple Interest
1000	?
18000	?
5200	?

7. The following table gives year wise sale figure of five salesmen in Rs.

Salesman	2000	2001	2002	2003
S1	10000	12000	20000	50000
S2	15000	18000	50000	60000
S3	20000	22000	70000	70000
S4	30000	30000	100000	80000
S5	40000	45000	125000	90000

(a) Calculate total sale year wise.

(b) Calculate the net sale made by each salesman
(c) Calculate the maximum sale made by the salesman
(d) Calculate the commission for each salesman under the condition.
(i) If total sales >4,00,000 give 5% commission on total sale made by the salesman.
(ii) Otherwise give 2% commission.
(e) Draw a bar graph representing the sale made by each salesman.
(f) Draw a pie graph representing the sale made by salesman in 2000.

8. Enter the following data in Excel Sheet

PERSONAL BUDGET FOR FIRST QUARTER

Monthly Income (Net): 1,475

EXPENSES	**JAN**	**FEB**	**MARCH**	**QUARTER TOTAL**	**QUARTER AVERAGE**
Rent	600.00	600.00	600.00		
Telephone	48.25	43.50	60.00		
Utilities	67.27	110.00	70.00		
Credit Card	200.00	110.00	70.00		
Oil	100.00	150.00	90.00		
AV to Insurance	150.00				
Cable TV	40.75	40.75	40.75		
Monthly Total					

Calculate Quarter total and Quarter average.
(a) Calculate Monthly total.
(b) Surplus = Monthly income - Monthly total.
(c) What would be total surplus if monthly income is 1500.
(d) How much does telephone expense for March differ from quarter average.
(e) Create a 3D column graph for telephone and utilities. (f) Create a pie chart for monthly expenses.

9. Enter the following data in Excel Sheet

TOTAL REVENUE EARNED FOR SAM'S BOOKSTALL

Publisher name	**1997**	**1998**	**1999**	**2000**	**total**
A	Rs.1000.00	Rs.1100.00	Rs.1300.00	Rs.800.00	
B	Rs.1500.00	Rs.700.00	Rs.1000.00	Rs.2000.00	
C	Rs.700.00	Rs.900.00	Rs.1500.00	Rs.600.00	
D	Rs.1200.00	Rs.500.00	Rs.200.00	Rs.1100.00	
E	Rs.800.00	Rs.1000.00	Rs.3000.00	Rs.560.00	

(a) Compute the total revenue earned.

(b) Plot the line chart to compare the revenue of all publisher for 4 years.
(c) Chart Title should be ‗Total Revenue of sam‘s Bookstall (1997-2000)‘
(d) Give appropriate categories and value axis title.

10. Generate 25 random numbers between 0 & 100 and find their sum, average and count. How many no. are in range 50-60.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 16LSU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)

பகுதி – I, தமிழ் | பருவம் II

16LAU201 : **தமிழ்** இரண்டாம் **தாள்** 4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

அலகு – I : பக்தி **இலக்கியம்** **(10 மணிநேரம்)**

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு.

1. **சைவம் -** பெரியபுராணம் - திருமூலநாயனார் புராணம்.
2. **வைணவம் -** பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு – II : சங்க இலக்கியம் : **(15 மணிநேரம்)**

சங்க இலக்கியங்கள் அறிமுகம்

அ). **எட்டுத்தொகை**

நற்றிணை : பிரசம் கலந்த – பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை – குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகா°ச்சிறப்பு –

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடா°தொடீ கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் –பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் – 'சிறுதினை மலரொடு' என்பதிலிருந்துதொடங்கி, 'அறிந்தவாறே' என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – 'தெய்வம் சான்ற' என்பதிலிருந்து தொடங்கி, 'நல்குமதி' என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம் (6 மணிநேரம்)

சிலப்பதிகாரம்;

மங்கல வாழ்த்துப் பாடல்; **(21-29) –** கண்ணகியின் சிறப்பு;

'நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி,

'கண்ணகி என்பாண் மன்னோ' என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: **(207-234) -** சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: 'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: **(482-485) -** செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: 'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை (10 மணிநேரம்)

1. **குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்**
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. **நகரம் – சுஜாதா**

அலகு- V : மொழிப்பயிற்சி (7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)

மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

16ITU201 PROGRAMMING IN JAVA **Semester – II** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems.

UNIT-I

Introduction to Java Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods),

UNIT-II

Arrays, Strings and I/O Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and files. **Object-Oriented Programming Overview** Principles of Object-Oriented Programming, Defining & Using Classes, Controlling AITUess to Class Members, Class

Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

UNIT-III

Inheritance, Interfaces, Packages, Enumerations, Autoboxing and Metadata

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

UNIT-IV

Exception Handling, Threading, Networking and Database Connectivity Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

UNIT-V

Java Applets: Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

Semester – II

16ITU202 **DISCRETE STRUCTURES** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

UNIT I

Sets: Introduction, Sets , finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations, counting , Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

UNIT II

Growth of Functions: Asymptotic Notations, Summation formulas and properties,Bounding Summations, approximation byIntegrals

UNIT III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution, Substitution Method, recurrence trees, Master theorem.

UNIT IV

Graph Theory: Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

UNIT V

Prepositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

Suggested Readings

1. Kenneth Rosen. (2006). Discrete Mathematics and Its Applications (6th ed.). New Delhi: McGraw Hill.
2. J.P.Tremblay & R.Manohar (1997). Discrete Mathematical Structures with Applications to Computer Science. New Delhi: McGraw-Hill Book Company.
3. T.H.Coremen, C.E. Leiserson, R. L. Rivest. (2009). Introduction to algorithms, (3rd ed.). Prentice Hall on India.
4. M.O. Albertson, and J.P.Hutchinson (1988). Discrete Mathematics with Algorithms . John wiley Publication.
5. J. L.Hein (2009). Discrete Structures, Logic, and Computability(3rd ed.). Jones and Bartlett Publishers.
6. D.J.Hunter (2008). Essentials of Discrete Mathematics. Jones and Bartlett Publishers.

Semester – II

16ITU203 FUNDAMENTALS OF WEB DESIGNING AND INTERNET 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- Understand the principles of creating an effective web page, including an in-depth consideration of information architecture.
- Become familiar with graphic design principles that relate to web design and learn how to implement theories into practice.
- Develop skills in analyzing the usability of a web site.
- Understand how to plan and conduct user research related to web usability.
- Learn the language of the web: HTML and CSS.
- Develop basic programming skills using Javascript

Course Outcomes (Cos)

The students will be able to:

1. Analyze a web page and identify its elements and attributes.
2. Design a basic web site using HTML5 and CSS3 to demonstrate responsive web design
3. Implement dynamic web pages with validation using JavaScript objects by applying different event handling mechanism.
4. Create web pages using XHTML and Cascading Style Sheets.
5. Build dynamic web pages using JavaScript (Client side programming).
6. Create XML documents and Schemas

Unit – I: Introduction to Web Technology

Introduction to Internet, Basic Internet Terms in Internet Addressing, Internet Tools, Services of Internet, Introduction to Worl Wide Web, Components of Web, Types of Websites, Role of Web Browser and Web server, Types of Web Browsers, Types of Web Server, Flow of Web Inforamtion, Objective of the Website, Basic Interface design, Various Types of URLs, Process of Web Publishing.

Unit- II: Creating Static Web Pages and Lists in HTML

Introduction to HTML, Features of HTML, Advantages and Disadvantages of HTML, Features of Static and Dynamic Web Page. Creating a Simple Static Web Page: Creating Web page using HTML, structure of HTML document, HTML Tags, tags attributes, Basic Elements: <html>, <head>, <title>, <p>, <br>, <h1> to <h6>, <pre>, <marquee>, <hr>, <br>,<center>, Text formatting tags, Using colors for the web, Physical and Logical Tags, Special Characters.

Lists in HTML: Ordered List, Unordered List, Definition List and Nested List.

Unit-III: Adding Links, Images, Background and table

Tables: Components of a tabls, basic table tags and their related attributes. Paths: Relative Path and Absolute path, Linking HTML Pages: Link Tag <a href...>, kinds of linking, linking to URLs.

Unit-IV: Adding Images and Image Maps

Adding images to HTL pages: Image formats for Internet and HTML, Image tag and theri related attributes, Inline images, Links to (external) images, images as hyperlinks, using images as background. Image Maps: What are image maps, tags used for image mapping, Client-side and server-side Image maps.

Unit-V: Forms, Frames and Embedding Multimedia

Frames: Introduction to Frame, <Frameset> and <frame> tag with its attributes, creating frames, linking frames, <noframes> tag, complex frameset, floating and inline frame. Forms: <Form> tag and its attributes,, <input> tag and its attributes, Form controls: Text controls, password fields, radio buttons, checkboxes, reset and submit buttons, Form control selection, Option processing and Text Area, Hidden fields. Embedding Multimedia: Introduction, Embedding Multimedia, inserting Sound/Audio Formats, Inserting video file formats.

Semester – I

16ITU211 PROGRAMMING IN JAVA - PRACTICAL 3H – 2C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

List of Programs

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of .lenth in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBufferclasss like setCharAt(, setLength(), append(), insert(), concat()and equals().

9. Write a program to create a ―distance‖ class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer
10. Modify the ―distance‖ class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions(from lower to higher data type)
12. Write a program to show the difference between public and private aITUess specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate FibonaITUi series, where the function to generate fibonacii series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program ―DivideByZero‖ that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the openConnection() method and then use it examine the different components of the URLand content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scrolls the message in the banner from left to right across the applet‘s window.
26. Write a program to get the URL/location of code (i.e. java code) and document(i.e. html file).

27. Write a program to demonstrate different mouse handling events like mouseClicked(), mouseEntered(), mouseExited(), mousePressed, mouseReleased() and mouseDragged().
28. Write a program to demonstrate different keyboard handling events.
29. Write a program to generate a window without an applet window using main() function.
30. Write a program to demonstrate the use of push buttons.

16ITU212 DISCRETE STRUCTURES - PRACTICAL **Semester – I 3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

List of Programs

1. Write a C Program to find the number of subsets of a set contains n elements.

2. Write a C Program to find transitive closure of a relation.

3. Write a C Program to prove
1/ (1*2) + 1/(2*3) ………+1/(n(n+1)) = n/(n+1)

4. Write a C Program to to perform the sum = 1+ (1+2) + (1+2+3) + … + (1+2…+n)

5. Write a C program to print Fibonacci series till Nth term using recursion

6. Write a Cprogram to calculate factorial of a number using recursion

7. Write a C Program to find a minimum spanning tree using Prim's algorithm

8. Write a C program to find the shortest path with the lower cost in a graph using Dijkstra's
Algorithm

9. Write a C Program to construct the truth table for the following formula.

(i) $P \wedge Q \wedge \urcorner R$ (ii) $P \wedge \urcorner Q \wedge R$ (iii) $P \wedge Q \wedge \urcorner R$

10. Write a C Program to prove De – Morgan’s law.

		Semester – I
16ITU213	**WEB DESIGNING - PRACTICAL**	**3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- Understand the principles of creating an effective web page, including an in-depth consideration of information architecture.
- Become familiar with graphic design principles that relate to web design and learn how to implement theories into practice.
- Develop skills in analyzing the usability of a web site.
- Understand how to plan and conduct user research related to web usability.
- Learn the language of the web: HTML and CSS.
- Develop basic programming skills using Javascript

Course Outcomes (Cos)

The students will be able to:

1. Analyze a web page and identify its elements and attributes.
2. Design a basic web site using HTML5 and CSS3 to demonstrate responsive web design
3. Implement dynamic web pages with validation using JavaScript objects by applying different event handling mechanism.
4. Create web pages using XHTML and Cascading Style Sheets.
5. Build dynamic web pages using JavaScript (Client side programming).
6. Create XML documents and Schemas

List of Programs

1. Create a simple HTML document about yourself or a topic of your choice using the basic tags such as Bold, Italic, Heading, images, horizontal rule and images.
2. Create a HTML document which includes an unordered list, ordered list, definition list to your document and create a link to Yahoo.
3. Develop static pages (using only HTML) of an online Book store. The pages should resemble: www.amazon.com. The website should consist of the following pages.
    - Home page
    - Registration and user login
    - User profile page
    - Items catalog
    - Shopping cart
    - Payment by credit card
    - Order confirmation
4. Create a table in HTML document with the following formats

- Table with no borders
- Display table headers
- To handle cells that have no content
- Table cells that span more than one row or one column

<table>
<tr><td></td><td></td></tr>
<tr><td rowspan="3"></td><td></td></tr>
<tr><td></td></tr>
<tr><td></td></tr>
</table>

- Adding background image to a table

5. Design a web page using CSS (Cascading Style Sheets) which includes the following:
   - Use different font, styles: In the style definition you define how each selector should work (font, color etc.). Then, in the body of your pages, you refer to these selectors to activate the styles.
   - Set a background image for both the page and single elements on the page.
   - Control the repetition of the image with the background-repeat property. As background-repeat:repeat Tiles the image until the entire page is filled, just like an ordinary background image in plain HTML.
   - Define styles for links as
     A:link
     A:visited
     A:active
     A:hover
   - Work with layers
   - Add a customized cursor: Selector {cursor:value}

6. Create and save an XML document at the server, which contains 10 users information. Write a program, which takes User Id as an input and returns the user details by taking the user information from the XML document.
7. Creation of a XML document of 20 students of III IT. Add their roll numbers, marks obtained in 5 subjects, total and percentage and save this XML document at the server. Write a program that takes students' roll number as an input and returns the students marks, total and percentage by taking the students' information from the XML document.
8. Write an XML file which will display the Book information which includes the following:
   - Title of the book
   - Author Name
   - ISBN number
   - Publisher name
   - Edition
   - Price

   Write a Document Type Definition (DTD) to validate the above XML file.
9. Develop a web page using Java script to perform the following information

- Input student information
- Display student results for a given roll number.

10. Develop a web page for online exam using Javascript
11. Add validations to the 3rd program of registration, user login, user profile and payment by creditr card using Java Scriot
12. Write a Java Script for selection sort
13. Create a web page using two image file which switch between one another as the mouse pointer moves over the image. Use the On Mouse Over and On Mouse event handler
14. Using VBScript to create a calculator
15. Create a HTML form that has number of text boxes when the form runs in the browser fill the textboxes with data. Write a Java script that verifies that all text boxes have been filled, if a text box has been left empty pop up an alert message indicating which box has been left empty. When Alerts OK button is clicked, set focus to that specific text box. If all the text boxes are filled, display thank you.

Semester – II

16ENU201 **ENGLISH – 1** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

(For all undergraduate students admitted from 2016 onwards)

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

- Develop the four types of skills
- Reading and comprehending literary works
- Genres of literature to provide moral education
- Develop communication skills in business environment
- Interpersonal skills will be developed.

Betterment of language competence

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman – Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Preposition, Voice- Active and Passive

UNIT V
Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitution
Grammar: Question, Pronunciation

16ITU301	**DATA STRUCTURES**	**Semester – III** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

UNIT-I

Arrays-Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation).Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

UNIT-II

Linked Lists Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

UNIT-III

Trees - Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion , Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

UNIT-IV

Searching and Sorting,Linear Search, Binary Search, Comparison of Linear and Binary Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting

Techniques

UNIT-V

Hashing - Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collusion by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function

Semester – III

16ITU302 OPERATING SYSTEMS 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To understand the structure and organization of the file system

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

UNIT-I

Introduction to Operating System: Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems-Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

UNIT-II

Operating System Organization: Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources-Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication-Deadlocks.

UNIT-III

Memory Management: Physical and Virtual address space-Memory Allocation strategies –Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

UNIT-IV

File and I/O Management: Directory structure-File operations-File Allocation methods-Device management.

UNIT-V

Protection and Security: Policy mechanism-Authentication-Internal aITUess Authorization.

		Semester – III
16ITU303	**RELATIONAL DATABASE MANAGEMENT SYSTEM**	**4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Outcomes (COs)

- To describe a sound introduction to the discipline of database management systems.
- To give a good formal foundation on the relational model of data and usage of Relational Algebra.
- To introduce the concepts of basic SQL as a universal Database language.
- To enhance knowledge to advanced SQL topics like embedded SQL, procedures connectivity through JDBC.
- To demonstrate the principles behind systematic database design approaches by covering conceptual design, logical design through normalization.
- To provide an overview of physical design of a database system, by discussing Database indexing techniques and storage techniques.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Explain the features of database management systems and Relational database.
2. Design conceptual models of a database using ER modeling for real life applications and also construct queries in Relational Algebra.
3. Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
4. Retrieve any type of information from a data base by formulating complex queries in SQL.
5. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
6. Build indexing mechanisms for efficient retrieval of information from a database

UNIT - I Understanding Database Fundamentals

Origin of database – database elements – design concepts – components ofDBMS – Advantages and disadvantages of DBMS. Database Models: flat file – hierarchical model – network model – relational model – object oriented model – Features of Object oriented Database Management system – Features of distributed DBMS – Comparison of DBMS & DDBMS – Object relational model. ER-model: entities – relationships - ERD symbols – cardinalities – sample ERD.

Unit - II Entities and Entity Relationships

Relational model: Introduction – Relational database: attributes and domain – Tuples – Relation and their schemes – Relation representation – keys – relationships – relational operations – Integrity rules. Relational algebra: Basic operations – Additional relational algebraic operations – some relational algebra queries. Functional Dependency: Reasoning about FD's – closure of set of FD's – Attribute closure.

Unit - III Objects

Relational database manipulation: Introduction – SQL: Data definition – Data manipulation: Basic data retrieval – condition specification – Arithmetic and aggregate operations. SQL joins – set manipulation – categorization – updates – views – index. Data Control language : grant, revoke – simple privileges.

Unit - IV Overview of PL/SQL

Declaration section – executable command section : conditional logic, loops, CASE statements – exception handling section: predefined and user defined exceptions. Triggers : definition – types : row level, statement level, before and after, instead of – syntax – enabling and disabling triggers - replacing and dropping triggers. Cursors – definition – open – fetch – close – cursor attributes- select for update – types : implicit, explicit. Procedures, Functions: Local and global – procedures vs functions – stored procedures, functions – create procedure syntax - create function syntax – calling procedures, functions. Replacing and dropping procedures, functions.

Unit - V Packages and Normalization

Package header – package body – calling package members - Replacing and dropping package. Overview of Normalization : advantages - disadvantages. Normal forms: first normal form – second normal form – third normal form – boyce codd normal form – Introduction to fourth, fifth and sixth normal forms – denormalization. Parallel Databases: Introduction – Design of Parallel Databases – Advantages and Disadvantages of Parallel Database.

16ITU304A	**ANDROID PROGRAMMING**	**Semester – III** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

UNIT-I

Introduction: History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture.

UNIT-II

Overview of object oriented programming using Java: OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine.

UNIT-III

Development Tools: Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device.

UNIT-IV

User Interface Architecture: Application context, intents, Activity life cycle, multiple screen size s.

User Interface Design: Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes),Images, Menu, Dialog.

UNIT-V

Database:Understanding of SQLite database, connecting with the database.

Semester – III

16ITU304B PROGRAMMING IN MATLAB 3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To familiarize of the syntax, semantics, data-types and library functions of numerical computing languages such as MATLAB and/or SCILAB
- To reinforce a structured, top-down approach to formulate and solve problems.
- To introduce common approaches, structures, and conventions for creating and evaluating computer programs, primarily in a procedural paradigm, but with a brief introduction to object-oriented concepts and terminology.
- To understand a variety of common numeric techniques to solve and visualize engineering-related computational problems.
- To introduce the MATLAB software environment.
- To implement/simulate and visualization of basic mathematical functions relevant to electronics applications.

Course Outcomes (Cos)

By the end of this course, students should be able to

1. Use MATLAB effectively to analyze and visualize data.
2. Apply numeric techniques and computer simulations to solve engineering-related problems.
3. Apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objectives.
4. Design and document computer programs and analyses in a careful and complete manner so as to effectively communicate results, to facilitate evaluation and debugging by another programmer, and to anticipate and resolve user errors.
5. Demonstrate understanding and use of fundamental data structures (classes).
6. Create and control simple plot and user-interface graphics objects in MATLAB.

UNIT-I

Introduction to Programming: Components of a computer, working with numbers, Machine code, Software hierarchy.

UNIT-II

Programming Environment: MATLAB Windows, A First Program, Expressions, Constants, Variables and assignment statement, Arrays.

UNIT-III

Graph Plots: Basic plotting, Built in functions, Generating waveforms, Sound replay, load and save. Procedures and Functions: Arguments and return values, M-files, Formatted console input-output , String handling,

UNIT-IV

Control Statements: Conditional statements: If, Else, Else-if, Repetition statements: While, for loop

UNIT-V

Manipulating Text: Writing to a text file, Reading from a text file, Randomising and sorting a list, searching a list. **GUI Interface**: Attaching buttons to actions, Getting Input, Setting Output

Suggested Readings

16ITU311	**DATA STRUCTURES - PRACTICAL**	**Semester – III** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

List of Programs

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.

2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.

3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).

4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.

5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.

6. Perform Stack operations using Linked List implementation.

7. Perform Stack operations using Array implementation. Use Templates.

8. Perform Queues operations using Circular Array implementation. Use Templates.

9. Create and perform different operations on Double-ended Queues using Linked List implementation.

10. WAP to scan a polynomial using linked list and add two polynomial.

11. WAP to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration

12. (ii) WAP to display fibonaITUi series (i)using recursion, (ii) using iteration

13. WAP to calculate GCD of 2 number (i) with recursion (ii) without recursion

14. WAP to create a Binary Search Tree and include following operations in tree: (a) Insertion (Recursive and Iterative Implementation)

(b) Deletion by copying

(c) Deletion by Merging

(d) Search a no. in BST

(e) Display its preorder, postorder and inorder traversals Recursively

(f) Display its preorder, postorder and inorder traversals Iteratively

(g) Display its level-by-level traversals

(h) Count the non-leaf nodes and leaf nodes

(i) Display height of tree

(j) Create a mirror image of tree

(k) Check whether two BSTs are equal or not

15. WAP to convert the Sparse Matrix into non-zero form and vice-versa.

16. WAP to reverse the order of the elements in the stack using additional stack.

17. WAP to reverse the order of the elements in the stack using additional Queue.

18. WAP to implement Diagonal Matrix using one-dimensional array.

19. WAP to implement Lower Triangular Matrix using one-dimensional array.

20. WAP to implement Upper Triangular Matrix using one-dimensional array.

21. WAP to implement Symmetric Matrix using one-dimensional array.

22. WAP to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the suITUessor / predecessor of an element, insert an element, inorder traversal.

23. WAP to implement various operations on AVL Tree.

Semester – III

16ITU312 OPERATING SYSTEMS - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To provide necessary skills for developing and debugging programs in UNIX environment.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify, use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

List of Programs

1. Write a program (using *fork()* and/or *exec()* commands) where parent and child execute:
   a) same program, same code.
   b) same program, different code.
   c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behaviour of Linux kernel including kernel version, CPU type and model. (CPU information)
3. Write a program to report behaviour of Linux kernel including information on configured memory, amount of free and used memory. (memory information)

4. Write a program to print file details including owner access permissions, file access time, where file name is given as argument.
5. Write a program to copy files using system calls.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using *thread* library.
13. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

16ITU313 **RDBMS - PRACTICAL** **Semester – III** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Outcomes (COs)

- To describe a sound introduction to the discipline of database management systems.
- To give a good formal foundation on the relational model of data and usage of Relational Algebra.
- To introduce the concepts of basic SQL as a universal Database language.
- To enhance knowledge to advanced SQL topics like embedded SQL, procedures connectivity through JDBC.
- To demonstrate the principles behind systematic database design approaches by covering conceptual design, logical design through normalization.
- To provide an overview of physical design of a database system, by discussing Database indexing techniques and storage techniques.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Explain the features of database management systems and Relational database.
2. Design conceptual models of a database using ER modeling for real life applications and also construct queries in Relational Algebra.
3. Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
4. Retrieve any type of information from a data base by formulating complex queries in SQL.
5. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
6. Build indexing mechanisms for efficient retrieval of information from a database

List of Programs

1. Create a table with following fields:

   Employee table:

Field name	Constraint	Type	Size
Employee_no	Primary key	Character	6
Employee_name		Character	30
Address		Character	25
Designation		Character	15
Dob		Date	
Gender	Check	Character	1
Doj		Date	

Salary		Number	10,2

Queries:

a) Display name of the employees whose salary is greater than “10,000”.
b) Display the details of employees in ascending order according to Employee Code
c) Display the details of employees earning the highest salary
d) Display the names of employees who earn more than “Ravi”.

2. Create table named Student with following fields and insert the values:

Field name	**field type**	**field size**
Student Name	**Character**	15
Gender	**Character**	6
Roll No.	**Character**	10
Department Name	**Character**	15
Address	**Character**	25
Percentage of marks	**Number**	4,2

Queries:

a) Calculate tge average mark percentage of the students
b) Display the names of teh students whose percentage marks are grater than 80%
c) Display the details of the students who got the highest percentage of marks
d) Display the details of the students whose mark percentage between 50 and 70
e) Display the details of the students whose mark percentage is greater the the mark percentage of Roll No=12CA01

3. Create a table with following fields:

Staff table:

Field name	Constraint	Type	Size
Staff_no	Primary key	Character	6
Staff_name		Character	30
Dob		Date	
Dept_code	Foreign key	Character	4
Designation		Character	15
Basic		Number	7,2

Department table:

Field name	constraint	Type	Size
Dept_code	Primary key	Character	4
Dept_name		Character	30

Execute the following queries:

1. To list the staff who joined 2 years back.
2. To list the staff in computer science dept.
3. To list the staff_name and the dept_name in which he/she works.
4. To list the maximum and minimum salary in each dept.

5. To list the dept along with the total amount spent on salary
6. To list the name of the employees who draw the salary more than the average salary.

4. Create a table with the following fields:

Book table:

Field name	Constraint	Type	Size
Access_no	Primary key	Character	6
Title		Character	30
Author		Character	30
Publisher		Character	30
Subject		Character	10
Price		Number	6,2

Execute the following queries:

1. The title of C and C++ books.
2. The books written by a particular author.
3. The books which costs between Rs.300/- and Rs.500/-
4. The number of books available in each subject.
5. The books in the decreasing order of the cost.

5. Create two tables course and batch with following fields

COURSE: coursecodeno number(5), course name varchar(20), syllabus varchar(20)

BATCH: bcode number(5), coursecode number(5), starting_date date, duration number(3), coursefee number(10,2)

Perform the following queries

- Insert the details for course and batch tables with 10 records
- Show the description of the two tables
- Select all the fields from course & batch tables
- Select all the fields from course & batch tables where coursecode=10
- Select all the fields from batch table where starting date=march 10th
- Select batch code from batch table where net income>50000
- Select coursename, batch code & starting date from batch and course tables where course code of batch table and course code of course table are equal
- Select a syllabus from course wher coursecode=5

6. Create a table with the following fields:

Account table:

Field name	Constraint	Type	Size
Acc_no	Primary key	Number	4
Cust_name		Varchar2	30
Branch_name		Varchar2	30
Cust_city		Varchar2	30

Borrower table:

Field name	Constraint	Type	Size
Acc_no	Foreign key	Number	30
Branch_name		Varchar2	30
Amount		Number	8,2

Write queries to perform different types of join.

7. Write the PL/SQL program to find the factorial and fibonacci series of given numbers.

8.(i) Write the PL/SQL program to check whether the string is Palindrome.
(ii) Write the PL/SQL program to reverse a number
(iii) Write the PL/SQL program to check whether the number is Armstrong

9. Write a PL/SQL block to create and handle user defined exception
clientmaster

Field name	Constraint	Type	Size
Client_id		Number	6
Client_name		Varchar2	30
Address		Varchar2	50
Phone		Number	10
Balance		Number	10,2

10. Create table with following fields:
Product table:

Field name	Constraint	Type	Size
Product_code	Primary key	Varchar2	7
Product_name		Varchar2	30
Price		Number	6,2
Quantity		Number	4

Vendor table:

Field name	Constraint	Type	Size
Vendor_name		Varchar2	30
Vendor address		Varchar2	30
Product_code	Foreign Key	Varchar2	7

Create a trigger to fire when the Record is deleted and inserted.

11. Write a PL/SQL trigger to update the records while deleting the one record in another table.
Voters_master:

Field name	Constraint	Type	Size
Voterid	Primary key	Number	5
Name		Varchar2	30
Ward_no	Primary Key	Number	4
Dob		Date	
Address		Varchar2	150

New_list

Field name	Constraint	Type	Size
Voterid		Number	5
Ward_no		Number	4

Name		Varchar2	30
Description		Character	50

12. Create a table to store the salary details of the employees in a company. Declare the cursor id to contain empno, employee name and net salary. Use cursor to update the employee details.

Salary:

Field name	Constraint	Type	Size
Emp_no	Primary key	Number	4
Emp_name		Varchar2	30
Designation		Varchar2	25
Dept		Varchar2	30
Basic		Number	5

13. Create a table stock contains the itemcode varchar2(10), itemname varchar2(50), current_stock number(5), date_of_last_purchase date. Write a stored procedure to seek for an item using itemcode and delete it, if the date of last purchase is before 1 year from the current date. If not, update the curent stock.

14. Create a table to contain phone_number, user_name, address. Write a function to search for address using phone_number.

Semester – III

16ITU314A ANDROID PROGRAMMING - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

List of Programs

1. Create ―Hello World‖ application. That will display ―Hello World‖ in the middle of the screen in the emulator. Also display ―Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

Semester – III

16ITU314B PROGRAMMING IN MATLAB - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To familiarize of the syntax, semantics, data-types and library functions of numerical computing languages such as MATLAB and/or SCILAB
- To reinforce a structured, top-down approach to formulate and solve problems.
- To introduce common approaches, structures, and conventions for creating and evaluating computer programs, primarily in a procedural paradigm, but with a brief introduction to object-oriented concepts and terminology.
- To understand a variety of common numeric techniques to solve and visualize engineering-related computational problems.
- To introduce the MATLAB software environment.
- To implement/simulate and visualization of basic mathematical functions relevant to electronics applications.

Course Outcomes (Cos)

By the end of this course, students should be able to

1. Use MATLAB effectively to analyze and visualize data.
2. Apply numeric techniques and computer simulations to solve engineering-related problems.
3. Apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objectives.
4. Design and document computer programs and analyses in a careful and complete manner so as to effectively communicate results, to facilitate evaluation and debugging by another programmer, and to anticipate and resolve user errors.
5. Demonstrate understanding and use of fundamental data structures (classes).
6. Create and control simple plot and user-interface graphics objects in MATLAB.

List of Programs

1. Write a program to assign the following expressions to a variable A and then to print out the value of A.

    a. (3+4)/(5+6)
    b. $2\Pi^2$
    c. $\sqrt{2}$
    d. (0.0000123 + 5.67×10-3) × 0.4567×10-4

2. Celsius temperatures can be converted to Fahrenheit by multiplying by 9, dividing by 5, and adding 32. Assign a variable called C the value 37, and implement this formula to assign a variable F the Fahrenheit equivalent of 37 Celsius.

3. Set up a vector called N with five elements having the values: 1, 2, 3, 4, 5. Using N, create assignment statements for a vector X which will result in X having these values:

    a. 2, 4, 6, 8, 10

b. 1/2, 1, 3/2, 2, 5/2
c. 1, 1/2, 1/3, 1/4, 1/5
d. 1, 1/4, 1/9, 1/16, 1/25

4. A supermarket conveyor belt holds an array of groceries. The price of each product (in pounds) is [0.6, 1.2 ,0.5, 1.3] ; while the numbers of each product are [3, 2 ,1 ,5]. Use MATLAB to calculate the total bill.

5. The sortrows(x) function will sort a vector or matrix X into increasing row order. Use this function to sort a list of names into alphabetical order.

6. The ―identity‖ matrix is a square matrix that has ones on the diagonal and zeros elsewhere. You can generate one with the eye() function in MATLAB. Use MATLAB to find a matrix B, such that when multiplied by matrix A=[1 2; -1 0] the identity matrix I=[1 0; 0 1] is generated. That is A*B=I.

7. Create an array of N numbers. Now find a single MATLAB statement that picks out from that array the 1,4,9,16,…,√Nth entries, i.e. those numbers which have indices that are square numbers.

8. Draw a graph that joins the points (0,1), (4,3), (2,0) and (5,-2).

9. The seeds on a sunflower are distributed according to the formula below. Plot a small circle at each of the first 1000 co-ordinates :

$$r_n = \sqrt{n}$$

$$\theta_n = \frac{137.51}{180}\pi n$$

10. Calculate 10 approximate points from the function y=2x by using the formulae:
i. xn = n
ii. yn = 2n + rand - 0.5

Fit a line of best fit to these points using the function polyfit() with degree=1, and generate co-ordinates from the line of best fit using polyval(). Use the on-line help to find out how to use these functions. Plot the raw data and the line of best fit.

11. Calculate and replay 1 second of a sinewave at 500Hz with a sampling rate of 11025Hz. Save the sound to a file called ex35.wav. Plot the first 100 samples.

12. Calculate and replay a 2 second chirp. That is, a sinusoid that steadily increases in frequency with time, from say 250Hz at the start to 1000Hz at the end.

13. Build a square wave by adding together 10 odd harmonics: 1f, 3f, 5f, etc. The amplitude of the nth harmonic should be 1/n. Display a graph of one cycle of the result superimposed on the individual harmonics.

14. Write a function called FtoC (ftoc.m) to convert Fahrenheit temperatures into Celsius. Make sure the program has a title comment and a help page. Test from the command window with:

i. FtoC(96)
ii. lookfor Fahrenheit
iii. help FtoC

15. Write a program to input 2 strings from the user and to print out (i) the concatenation of the two strings with a space between them, (ii) a line of asterisks the same length as the concatenated strings, and (iii) the reversed concatenation. For example:

i. Enter string 1: Mark
ii. Enter string 2: Huckvale
iii. Mark Huckvale
iv. *************
v. elavkcuH kraM

16ITU401	COMPUTER NETWORKS	Semester – IV 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of osi model and tcp/ip model.
- To acquire knowledge of application layer and presentation layer paradigms and protocols.
- To study session layer design issues, transport layer services, and protocols.
- To gain core knowledge of network layer routing protocols and ip addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

UNIT I

Introduction to Computer Networks : Network definition; network topologies; network classifications; network protocol; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques**: Analog and digital signal; data-ratelimits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission;

UNIT – II

Digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media. **Networks Switching Techniques and Access mechanisms:** Circuit switching; packetswitching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

UNIT – III

Data Link Layer Functions and Protocol: Error detection and error correction techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

UNIT – IV

Multiple Access Protocol and Networks: CSMA/CD protocols; Ethernet LANS; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways; **Networks Layer Functions and Protocols**: Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit V

Transport Layer Functions and Protocols: Transport services- error and flow control, Connection establishment and release- three way handshake; **Overview of Application layer protocol**: Overview of DNS protocol; overview of WWW &HTTP protocol.

		Semester – IV
16ITU402	**SOFTWARE ENGINEERING**	**4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectivesand risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

UNIT-I

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

UNIT-II

Requirement Analysis; Initiating Requirement EngineeringProcess- Requirement Analysis and Modeling Techniques- FlowOriented Modeling- Need for SRS-Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

UNIT-III

Risk Management: Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, **Quality Management-** Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

UNIT-IV

Design Engineering-Design Concepts, Architectural Design Elements, Software Architecture,Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

UNIT-V

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

Semester – IV

16ITU403 PROGRAMMING WITH VISUAL BASIC 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- Understand the benefits of using Microsoft Visual Basic 6.0 for Windows as an application tool.
- Understand the Visual Basic event-driven programming concepts, terminology, and available tools.
- Learn the fundamentals of designing, implementing, and distributing a Visual Basic application.
- Learn to use the Visual Basic toolbox. Learn to modify object properties. Learn object methods.
- Use the menu design window. Understand proper debugging and error-handling procedures.
- Gain a basic understanding of database access and management using data bound controls. Obtain an introduction to ActiveX controls and the Windows Application Programming Interface (API).

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
2. Develop a Graphical User Interface (GUI) based on problem description
3. Develop an Event Planning Chart based on problem description so as to define the processing that is to occur based on specific events
4. Develop an Algorithm to verify processing is accurate
5. Develop and debug applications using Visual Basic 2010 (or version required for the course) that runs under Windows operating system
6. Develop programs that retrieve input from a file as opposed to input only provided by user

UNIT I

Beginning Visual Basic: Introduction to Visual Basic: Introduction Graphics User Interface (GUI), Programming Language (Procedural, Object oreinted, event driven), The Visual Basic environment IDE, Introduction to VB Controls: Textboxes, Frames, check boxes, options buttons, setting a border and style, the shape control, the line control, working with multiple controls and their properties, designing the user interface, keyboard access, tab controls. Default & controls property, coding for Controls, list box and combo box and their properties, filling the list box using property window/add item method, picture/image box and their properties.

UNIT II

Dealing with data: Operators-Variables-declaring variables- types of variables – data types – constants – arrays – declaring arrays – specifying arrays – Multidimensional arrays – dynamic arrays – arrays of arrays. Val function, Arithmetic operations, formatting data. Error functions and types. Introducing to Menu editor.

UNIT III

Writing Code: Control flow statements – If – Then – If-then-else – Nested control statements – Select case – Loop statements – Do-loop – For-Next – While Wend – Exit statement . Displaying message in Message box, testing whether input is valid or not. Collections – procedures – Subroutines – Functions – Calling procedures – Object Browser – Creating classes and Objects – I/O statements

UNIT IV

Working with forms and procedures: Introducing to forms and types of forms and setting form properties, creating, adding, removing forms in project, hide, show method, load, unload, statement, Me keywords, Referring to objects on a different forms. Creating an application using controls: What is on the toolbar – Textbox control – Picture box – Image box – Label box – Frame – List box – Option button – Combo box – Command Button – check box – The Drive, Directory, File list controls – Teh Line & Shape control – Scroll Box – Data – Timer.

UNIT V

Multiple Document Interface & Menus: Why MDI Forms – Features of an MDI forms – Loading MDI forms & child forms – creating a simple MDI forms –Accessing MDI froms – creating MENUS – POP-UP MENUS.

Data access controls: JET database Engine – ADODC – DAO Data control – ODBC Data Source Administrator – DATA REPORT.

Suggested Readings

1. Noel Jerke (2008). Visual Basic 6.0: Teh Complete Reference. Tata McGraw Hill Publishing Company Ltd.
2. Mohammed Azam. Programming with VB 6.0. Vikas Publishing.
3. Peter Wrights (1999). Beginning VB 6.0 (4^{th} ed.). New York:Springer-Verlag Incorporated.

16ITU404A	**INTERNET TECHNOLOGIES**	**Semester – IV** **4H – 4C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To define terms related to the Internet.
- To describe how the Internet is changing the world.
- To understand how computers are connected to the Internet.
- To understand the principles of Internet services such as Listserv Mailing Lists, Usenet Newsgroups, and Instant Messaging.
- To understand methods for citing Internet resources.
- To understand how Web pages are designed and created

Course Outcomes (COs)

Upon successful completion of the course, the student should be able to:

1. Demonstrate the ability to use the World Wide Web, Understand and apply Internet Etiquette.
2. Demonstrate an understanding of and the ability to use electronic mail.
3. Understand and use common types of files found on the internet.
4. Demonstrate the ability to download a variety of resources from the internet.
5. Demonstrate an ability to create basic Web pages with HTML.
6. Understand societal issues and emerging technologies.

UNIT – I

Java: Use of Objects, Array and ArrayList class JavaScript: Datatypes, operators, functions, control structures, events and event handling.

UNIT – II

JDBC: JDBC fundamentals, Establishing Connectivity and working with connection interface, working with statements, creating and executing SQL statements, working with ResultSet objects.

UNIT – III

JSP: Introduction to JavaServerPages, HTTP and Servlet Basics, The Problem with Servlets, The Anatomy of a JSP Page, JSP Processing, JSP Application Design with MVC, Setting Up the JSP Environment.

UNIT – IV

JSP: Implicit Objects, conditional processing, displaying values, Using an expression to Set an Attribute, declaring variables and methods, error handling and debugging, sharing data between JSP pages, Requests, and Users, Database Access.

UNIT – V

Java beans: Jaba Beans Fundamentals, JAR Files, Introspection, Developing a simple Bean, Connecting to DB.

Suggested Readings

1. Ivan Bayross (2009). Web Enabled Commercial Application Development Using Html, Dhtml, Javascript, Perl Cgi. BPB Publications.
2. Cay Hortstmann (2009). BIG Java (3rd ed.). Wiley Publication
3. Herbert Schildt (2009). Java 7 The Complete Reference (8th ed.).
4. Jim Keogh (2002). The Complete Reference J2EE. TMH.
5. Hans Bergsten (2003). Java ServerPages (3rd ed.). O'Reilly.

Semester – IV

16ITU404B **XML PROGRAMMING** **3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

UNIT-I

Introduction: Understanding Mark-up Languages, Introduction to XML and its Goals.

UNIT-II

XML Basics: XML Structure and Syntax, Document classes and Rules.

UNIT-III

Other XML Concepts: Scripting XML

UNIT-IV

Other XML Concepts: XML as Data, Linking with XML

UNIT-V

XML with Style: XSL –Style Sheet Basics, XSL basics, XSL style sheets.

Suggested Readings

1. William, J. Pardi. XML in action web technology.
2. Michael, J. Young. Step by Step XML.

16ITU411	**COMPUTER NETWORKS - PRACTICAL**	**Semester – IV** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of Application layer and Presentation layer paradigms and protocols.
- To study Session layer design issues, Transport layer services, and protocols.
- To gain core knowledge of Network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

List of Programs

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Semester – IV

16ITU412 SOFTWARE ENGINEERING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- To analyze, specify and document software requirements for a software system.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Implement a given software design using sound development practices.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectivesand risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

List of Programs

S. No	Practical Title
1.	• Problem Statement • Process Model
2.	Requirement Analysis: • Creating a Data Flow • Data Dictionary, Use Cases

3.	Project Management: • Computing FP • Effort • Schedule, Risk Table, Timeline chart
4.	Design Engineering: • Architectural Design • Data Design, Component Level Design
5.	Testing: • Basis Path Testing

Sample Projects:

1. **Criminal Record Management**: Implement a criminal record management system for jailers, police officers and CBI officers

2. **DTC Route Information**: Online information about the bus routes and their frequency and fares

3. **Car Pooling**: To maintain a web based intranet application that enables the corporate employees within an organization to avail the facility of carpooling effectively.

4. Patient Appointment and Prescription Management System

5. Organized Retail Shopping Management Software

6. Online Hotel Reservation Service System

7. Examination and Result computation system

8. Automatic Internal Assessment System

9. Parking Allocation System

10. Wholesale Management System

Semester – IV

16ITU413 PROGRAMMING WITH VISUAL BASIC - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- Understand the benefits of using Microsoft Visual Basic 6.0 for Windows as an application tool.
- Understand the Visual Basic event-driven programming concepts, terminology, and available tools.
- Learn the fundamentals of designing, implementing, and distributing a Visual Basic application.
- Learn to use the Visual Basic toolbox. Learn to modify object properties. Learn object methods.
- Use the menu design window. Understand proper debugging and error-handling procedures.
- Gain a basic understanding of database access and management using data bound controls. Obtain an introduction to ActiveX controls and the Windows Application Programming Interface (API).

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
2. Develop a Graphical User Interface (GUI) based on problem description
3. Develop an Event Planning Chart based on problem description so as to define the processing that is to occur based on specific events
4. Develop an Algorithm to verify processing is accurate
5. Develop and debug applications using Visual Basic 2010 (or version required for the course) that runs under Windows operating system
6. Develop programs that retrieve input from a file as opposed to input only provided by user

Implement the following projects using Visual Basic Language

1. To calculate the Simple interest and compound interest
2. To perform the following string functions
   a. Upper to lower
   b. String concatenation
   c. String length
   d. String compare

   e. Bold, Italic and Underline
   f. Rtrim and Ltrim
   g. Change the backround of form
3. To draw different shapes and fill with different colors using MDI form
4. To implement a simple calculator
5. To create an ActiveX Control
6. To animate the picture using timer control
7. To convert text to voice
8. To simulate web browser
9. Develop a project for Railway Reservation System
10. Develop a project for Employee Payroll system
11. Develop a project for Student Information system. Generate data report for Student marklist
12. Develop a project to generate Barcode for Library applications

Semester – IV

16ITU414A INTERNET TECHNOLOGIES - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To define terms related to the Internet.
- To describe how the Internet is changing the world.
- To understand how computers are connected to the Internet.
- To understand the principles of Internet services such as Listserv Mailing Lists, Usenet Newsgroups, and Instant Messaging.
- To understand methods for citing Internet resources.
- To understand how Web pages are designed and created

Course Outcomes (COs)

Upon successful completion of the course, the student should be able to:

1. Demonstrate the ability to use the World Wide Web, Understand and apply Internet Etiquette.
2. Demonstrate an understanding of and the ability to use electronic mail.
3. Understand and use common types of files found on the internet.
4. Demonstrate the ability to download a variety of resources from the internet.
5. Demonstrate an ability to create basic Web pages with HTML.
6. Understand societal issues and emerging technologies.

Create event driven program for the following:

1. Print a table of numbers from 5 to 15 and their squares and cubes using alert.
2. Print the largest of three numbers
3. Find the fatorial of a number n
4. Enter a list of positive numbers terminated by Zero. Find the sum and average of these numbers.
5. A person deposits Rs.1000 in a fixed account yielding 5%interest. Compute the amount in the account at the end of each year for n years.
6. Read n numbers. Count the number of negative numbers, positive numbers and zeroes in the list.

16ITU414B	**XML PROGRAMMING - PRACTICAL**	**Semester – IV** **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

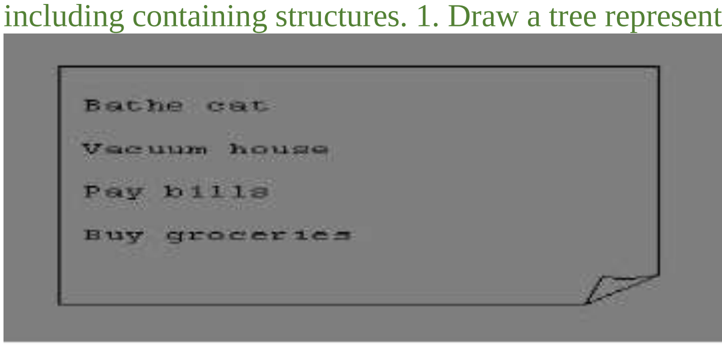
Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

1. Information Structure

In this exercise, student will practice identifying the structure of an information object. For the sample document provided below: Label the information structures you see, including containing structures. 1. Draw a tree representation of the structure.



2. Deconstructing an XML Document

In this exercise, student will practice identifying the explicit structure within an XML document. In a sense, this is the reverse of what you did in Exercise #1. For the sample XML markup below, create a document-like representation (or a simple drawing) for the content contained within the XML tags:

<book>
<coverInfo>
<title>The XML Handbook</title>
<author>Charles F. Goldfarb</author>
<author>Paul Prescod</author>
<edition>Second</edition>
<description>The definitive XML resource: applications, products, and technologies. Revised and expanded—over 600 new pages. </description>
</coverInfo> </book>

3. Creating XML Markup

In this exercise, create some XML markup based on the tree representation from Exercise #1 above, and the content from the original sample document.

4. Well-Formedness

This exercise checks your understanding of the constraints for well-formedness. Are the following document instances well-formed? Explain any NO answers.

<list><title>The first list</title><item>An item</list>
<item>An item</item><item>Another item</item>
<para>Bathing a cat is a <emph>relatively</emph> easy task as long as the cat is willing.</para>
<bibl><title>How to Bathe a Cat<author></title>Merlin Bauer<author></bibl>

5. Well Formedness

This exercise is a bit more challenging than the previous example. Here is a fragment of an XML document instance. Identify all the places where it fails to match the constraints for well-formedness.

<PROCEDURE><TITLEHow to Bathe a Cat</TITLE>
<OVERVIEW> This procedure tells you how to bathe a cat.
<WARNING></OVERVIEW>Cats don't like to take baths. You could get hurt doing this. Be sure to obtain all the required protective gear before you start.
</WARNING><EQUIPEMENT><ITEM>Hockey Mask <ITEM>Padded Full-body Kevlar Armor</ITEM><ITEM>Tub full of warm water</ITEM><ITEM>Towels </ITEM><ITEM>First Aid kit</ITEM><ITEM>Cat Shampoo</ITEM>
<EQUIPMENT><INSTRUCTIONS> <STEP> Locate the cat, who by now is hiding under the bed.</STEP><STEP>Place the cat in the tub of water.</STEP> <ITEM>Using the First Aid kit, repair the damage to your head and arms.</STEP> <STEP>Place the cat back in the tub and hold it down.</STEP> <STEP>Wash it really fast, then make an effort to dry it with the towels.</STEP> <STEP>Decide not to do this again. </STEP>
</INSTRUCTIONS>

		Semester – V
16ITU501A	**COMPUTER GRAPHICS**	**4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objecyives (CO)

- To introduce the use of the components of a graphics system and become familiar with building approach of graphics system components and algorithms related with them.
- To learn the basic principles of 3- dimensional computer graphics.
- Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition.
- Provide an understanding of mapping from a world coordinates to device coordinates, clipping, and projections.
- To be able to discuss the application of computer graphics concepts in the development of computer games, information visualization, and business applications.
- To comprehend and analyze the fundamentals of animation, virtual reality, underlying technologies, principles, and applications.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. List the basic concepts used in computer graphics.
2. Implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
3. Describe the importance of viewing and projections.
4. Define the fundamentals of animation, virtual reality and its related technologies,
5. Understand a typical graphics pipeline
6. Design an application with the principles of virtual reality

UNIT – I Testing Fundamentals

Examining the Specification: Getting started – Performing a high-level review of the specification – Low-level specification test techniques. Testing the software with blinders on: Dynamic Black-Box Testing- Test-to-Pass and Test-to-Fail- Equivalence Partitioning- Data testing – State testing – Other Black-box test techniques.

UNIT – II Examining the code

Static White-Box testing- Formal reviews – Coding Standards and Guidelines- Generic Code Review Checklist. Testing the software with X-Ray glasses: Dynamic White-Box testing- Dynamic White-Box testing versus Debugging-Testing the Pieces- Data Coverage- Code Coverage.

Flowgraphs and Path Testing

Path-testing Basics – Predicates, Path Predicates and Achievable Paths-Path sensitizing-Path Instrumentation-Implementation and Application of Path Testing

UNIT – III Transaction-Flow Testing and Data-Flow Testing

Transaction Flows-Transaction Flow Testing Techniques. Data-Flow Testing Basics-Data-Flow Testing Strategies-Application, Tools, Effectiveness

UNIT – IV Domain Testing

Domains and Paths-Domain Testing-Domains and Interface Testing-Domains and Testability

UNIT – V Logic-Based Testing and State Graphs

Motivational Overview-Decision Tables-Path Expressions Again-KV Charts-Specifications
State Graphs-Good State Graphs and Bad-State Testing

Suggested Readings

Semester – V

16ITU502A . NET PROGRAMMING 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
2. Choose the architecture based on the problem to be solved.
3. Differentiate between the types of applications supported by .Net
4. Build, compile and execute a VB .Net program
5. Apply techniques to develop error-free software
6. To build integrated VB.NET solutions using files and structures with printing capabilities. Translate general requirements into data-related solutions using database concepts

UNIT I

Introduction to .NET: .NET framework features & architecture, CLR, common Type system, MSIL, Assemblies and class libraries. Introduction to visual studio, Project basics, types of project in .Net, IDE of VB .Net – Menu bar, Tool bar, Solution Explorer, Toolbox, Properties Window, Form Designer, Output Window, Object browser. The environment:Editor tab, format tab, general tab, docking tab. Visual development & event driven programming – Methods and events.

UNIT II

The VB .Net Language: The VB .Net Language – Variabls- decalring variables, Data type of variables, forcing variables declarations, scope & lifetime of a variable, constants, arrays, types of arrays, control array, Structure programming – Modularity – Information hiding – abstraction – events – subroutines and functions – message box – input box. Control flow statement: conditional statement, loop statement.

UNIT III

Working with WPF: Introduction:Understanding Windows Graphics – WPF: A Higher Level API – The architecture of WPF. XAML:Basics, properties and events in XAML – loading and compiling – Layout. Classic controls: The Control class – content controls – text controls – list controls – Range based controls.

UNIT IV

Objects and Collections: Understanding objects, properties, methods. Understanding collections. Files: Introduction – classification of files – processing files – handling files and folder using class – directory class – file class.

UNIT V

Database programming with ADO .Net: overview of ADO, from ADO to ADO .Net, accessing data using server explorer. Creating connection, command, data adapter and data set with OLEDB and SQLDB. Display data on data bound controls, display data on a data grid. Generate reports using CrystalReportViewer.

Semester – V

16ITU502B **NETWORK PROGRAMMING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
4. Details of IP operations in the INTERNET and associated routing principles
5. Understand the key protocols which support the Internet
6. reate applications using techniques such as multiplexing, forking, multithreading

UNIT-I

Transport Layer Protocols: TCP, UDP, SCTP protocol.

UNIT-II

Socket Programming: Socket Introduction; TCP Sockets; TCP Client/Server Example ; signal handling

UNIT-III

I/O multiplexing using sockets; Socket Options; UDP Sockets; UDP client server example; Address lookup using sockets.

UNIT-IV

Network Applications: Remote logging; Email; WWW and HTTP.

UNIT-V

LAN administration: Linux and TCP/IP networking: Network Management and Debugging.

Suggested Readings

3. Nemeth Synder., & Hein. (2010). Linux Administration Handbook (2nd ed.), New Delhi: Pearson Education.
4. Steven, R. (1990). Unix Network Programming (2nd ed.). New Delhi: PHI.

Semester – V

16ITU503A **MACHINE LEARNING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To develop an appreciation for what is involved in learning from data.
- To understand a wide variety of learning algorithms.
- To understand how to perform evaluation of learning algorithms and model selection.
- To introduce students to the basic concepts and techniques of Machine Learning.
- To become familiar with regression methods, classification methods, clustering methods.
- To become familiar with Dimensionality reduction Techniques.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Have a broad understanding of machine learning algorithms and their use in data-driven knowledge discovery and program synthesis.
2. Design and implement several machine learning algorithms in Java.
3. Identify, formulate and solve machine learning problems that arise in practical applications.
4. Have knowledge of the strengths and weaknesses of different machine learning algorithms (relative to the characteristics of the application domain) and be able to adapt or combine some of the key elements of existing machine learning algorithms to design new algorithms as needed.
5. Identify machine learning techniques suitable for a given problem
6. Solve the problems using various machine learning techniques

UNIT-I

Introduction: Concept of Machine Learning, Applications of Machine Learning, Key elements of Machine Learning, Supervised vs. Unsupervised Learning, Statistical Learning: Bayesian Method, The Naive Bayes Classifier

UNIT-II

Softwares for Machine Learning and Linear Algebra Overview : Plotting of Data, Vectorization, Matrices and Vectors: Addition, Multiplication, Transpose and Inverse using available tool such as MATLAB.

UNIT-III

Linear Regression: Prediction using Linear Regression, Gradient Descent, Linear Regression with one variable, Linear Regression with multiple variables, Polynomial Regression, Feature Scaling/Selection. Logistic Regression: Classification using Logistic Regression, Logistic Regression vs. Linear Regression, Logistic Regression with one variable and with multiple variables.

UNIT-IV

Regularization: Regularization and its utility: The problem of Overfitting, Application of Regularization in Linear and Logistic Regression, Regularization and Bias/Variance.

UNIT-V

Neural Networks: Introduction, Model Representation, Gradient Descent vs. Perceptron Training, Stochastic Gradient Descent, Multilayer Perceptrons, Multiclass Representation, Backpropagation Algorithm.

5. Grune, D., Van Reeuwijk, K., Bal, H. E., Jacobs, C. J. H., & Langendoen, K.(2012). Modern Compiler Design (2nd ed.). Springer.

Semester – V

16ITU503B **DATA MINING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

UNIT-I

Overview: Predictive and descriptive data mining techniques

UNIT-II

Supervised and unsupervised learning techniques

UNIT-III

Process of knowledge discovery in databases, pre-processing methods

UNIT-IV

Data Mining Techniques: Association Rule Mining, classification and regression techniques, clustering

UNIT-V

Scalability and data management issues in data mining algorithms, measures of interestingness.

Semester – V

16ITU504A **DIGITAL IMAGE PROCESSING** **3H – 3C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

UNIT-I

Introduction: Light, Brightness adaption and discrimination, Pixels, coordinate conventions, Imaging Geometry, Perspective Projection, Spatial Domain Filtering, sampling and quantization. Spatial Domain Filtering: Intensity transformations, contrast stretching, histogram equalization, Correlation and convolution, Smoothing filters, sharpening filters, gradient and Laplacian.

UNIT-II

Hotelling Transform, Fourier Transforms and properties, FFT (Decimation in Frequency and Decimation in Time Techniques), Convolution, Correlation, 2-D sampling, Discrete Cosine Transform, Frequency domain filtering.

UNIT-III:

Image Restoration, Basic Framework, Interactive Restoration, Image deformation and geometric transformations, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Adaptive filters, Linear, Position invariant degradations, Estimation of Degradation functions, Restoration from projections, Image Compression-Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Entropy of an information source, Shannon's 1st Theorem, Huffman Coding, Arithmetic Coding, Golomb Coding, LZW coding, Transform Coding, Sub-image size selection, blocking artifacts, DCT implementation using FFT, Run length coding.

UNIT – IV

FAX compression (ITUITT Group-3 and Group-4), Symbol-based coding, JBIG-2, Bit-plane encoding, Bit-allocation, Zonal Coding, Threshold Coding, JPEG, Lossless predictive coding, Lossy predictive coding, Motion Compensation

Wavelet based Image Compression: Expansion of functions, Multi-resolution analysis, Scaling functions, MRA refinement equation, Wavelet series expansion, Discrete Wavelet Transform (DWT),Continuous Wavelet Transform, Fast Wavelet Transform, 2-D wavelet Transform, JPEG-2000 encoding, Digital Image Watermarking

UNIT-V

Morphological Image Processing: Basics, SE, Erosion, Dilation, Opening, Closing, Hit-or-Miss Transform, Boundary Detection, Hole filling, Connected components, convex hull, thinning, thickening, skeletons,pruning, Geodesic Dilation, Erosion, Reconstruction by dilation and erosion. Image Segmentation: Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding, Iterative thresholding,Otsu's method, Moving averages, Multivariable thresholding, Region-based segmentation, Watershed algorithm, Use of motion in segmentation

Semester – V

16ITU504B MULTIMEDIA AND ITS APPLICATIONS 3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

UNIT I

Multimedia – An overview: Introduction – Multimedia presentation and production – Characteristics of Multimedia presentation – Hardware and Software requirements – Uses of Multimedia. Text: Types of text – Font- Text file formats. Image: Image data representation – Image file formats – image processing software. Graphics: Advantages of graphics – Uses – Component of a graphics system.

UNIT II

Audio: Sound waves – types and properties of sound – components of audio system – Digital audio – Musical Instrument Digital Interface (MIDI) – Audio file formats – Audio processing software. Video: Motion video – Television systems – Video file formats – video processing software. Animation: Uses of animation – computer based animation - Animation file formats – Animation software.

UNIT III

Introducing photoshop elements: About elements – welcome screen – create mode – menu bar – toolbox – options bar – panels. Organizing images: Obtaining images - tagging images – searching for images – opening and saving images. Selecting areas – Layers – Text and drawing tools.

UNIT IV

Understanding flash: Understanding flash basic elements – creating a simple animation. Learning Flash toolbox: Learning the toolbox – using tools. Learning flash panels: Understanding the panels. Using timeline and layers: Understanding how timeline works – Understanding layers. Drawing objects: Drawing lines and fills – using colors – Rotating, skewing and scaling – grouping objects. Creating animation – How animation Works – creating motion tweens – creating shape tweens. Understanding masks – creating masks.

UNIT V

Creating symbols and using the library: Learning about symbols – creating symbols – using libraries. Learning Basic Actionscript concepts: Actionscript basics – data type basics. Learning basic actionscript programming: Applying Actionscript – Using Actionscript to control actions – Using Actionscript to control properties – Understanding Actions and Event Handlers.

Semester – V

16ITU511A COMPUTER GRAPHICS - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objecyives (CO)

- To introduce the use of the components of a graphics system and become familiar with building approach of graphics system components and algorithms related with them.
- To learn the basic principles of 3- dimensional computer graphics.
- Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition.
- Provide an understanding of mapping from a world coordinates to device coordinates, clipping, and projections.
- To be able to discuss the application of computer graphics concepts in the development of computer games, information visualization, and business applications.
- To comprehend and analyze the fundamentals of animation, virtual reality, underlying technologies, principles, and applications.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. List the basic concepts used in computer graphics.
2. Implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
3. Describe the importance of viewing and projections.
4. Define the fundamentals of animation, virtual reality and its related technologies,
5. Understand a typical graphics pipeline
6. Design an application with the principles of virtual reality

List of Programs

1. Write a program to implement Bresenham‘s line drawing algorithm.

2. Write a program to implement mid-point circle drawing algorithm.

3. Write a program to clip a line using Cohen and Sutherland line clipping algorithm.

4. Write a program to clip a polygon using Sutherland Hodgeman algorithm.

5. Write a program to apply various 2D transformations on a 2D object (use homogenous coordinates).

6. Write a program to apply various 3D transformations on a 3D object and then apply parallel and perspective projection on it.

7. Write a program to draw Hermite/Bezier curve.

Semester – V

16ITU511B SOFTWARE TESTING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

1. Write a program that take three inputs (a,b and c) that represents the sides of a triangle and the output is one of the below four.
   a) Not a triangle
   b) Scalene triangle
   c) Isoceles triangle
   d) Equilateral triangle
   a) Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
   b) Generate test cases using basis path testing
   c) Run code coverage tool

2. Write a program that determines the nature of roots of a quadratic equation. Output should be one of the following
   - Not a quadratic equation
   - Complex roots
   - Real roots
   - Single roots

   a) Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
   b) Generate test cases using basis path testing
   c) Run code coverage tool
3. Write a program that checks whether the number is even or odd. Run code coverage tools and find the amount of code being covered.
4. Write a program that dynamically allocates memory to 10 integers using malloc() or calloc() and do not free memory leading to memory leaks. Verify the same using Valgrind. Now, free memory using free() at the end of the program to avoid memeory leaks. Verify the same using Valgring().
5. Using Selenium IDE, write a test suite containing minimum 4 test cases.
6. Conduct a test suite fro any two websites.
7. Write and test a program to login a specific webpage

Semester – V

16ITU512A **.NET PROGRAMMING - PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
2. Choose the architecture based on the problem to be solved.
3. Differentiate between the types of applications supported by .Net
4. Build, compile and execute a VB .Net program
5. Apply techniques to develop error-free software
6. To build integrated VB.NET solutions using files and structures with printing capabilities. Translate general requirements into data-related solutions using database concepts

1. Write a VB .Net program to calculate simple interest and compound interest.
2. Write a VB .Net program to implement Calcolator.
3. Write a VB.Net program to implement Notepad
4. Write a VB.Net program to draw several shaps and fill with color.
5. Write a VB .Net program to perform the following in list box
    a) Add an item
    b) Delete an item
    c) List count
    d) Clear the list
6. Write a program to calculate the total marks of the student and print the grades.
7. Write a VB .Net program to implement employee payroll system
8. Write a VB .Net program to create and manipulate a file.
9. Write a program to implement a web browser

10. Write a program to maintain the details of doctors in a hospital with their specializations
11. Write a program to animate the picture using timer control.
12. Write a program to move the object from one location to another. Change the color and size of object at different time interval.
13. Write a program to place 10 pictures in the listbox. Using timer control the take the picture from listbox and change the form background after specific time interval.
14. Write a program to implement speaking program. Get the text input from the user and convert into voice.
15. Write a program to implement chatting

Semester – V

16ITU512B NETWORK PROGRAMMING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
4. Details of IP operations in the INTERNET and associated routing principles
5. Understand the key protocols which support the Internet
6. Create applications using techniques such as multiplexing, forking, multithreading

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Semester – V

16ITU513A MACHINE LEARNING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To develop an appreciation for what is involved in learning from data.
- To understand a wide variety of learning algorithms.
- To understand how to perform evaluation of learning algorithms and model selection.
- To introduce students to the basic concepts and techniques of Machine Learning.
- To become familiar with regression methods, classification methods, clustering methods.
- To become familiar with Dimensionality reduction Techniques.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Have a broad understanding of machine learning algorithms and their use in data-driven knowledge discovery and program synthesis.
2. Design and implement several machine learning algorithms in Java.
3. Identify, formulate and solve machine learning problems that arise in practical applications.
4. Have knowledge of the strengths and weaknesses of different machine learning algorithms (relative to the characteristics of the application domain) and be able to adapt or combine some of the key elements of existing machine learning algorithms to design new algorithms as needed.
5. Identify machine learning techniques suitable for a given problem
6. Solve the problems using various machine learning techniques

List of Programs

1. Perform elementary mathematical operations in Octave/MATLAB like addition, multiplication, division and exponentiation.

2. Perform elementary logical operations in Octave/MATLAB (like OR, AND, Checking for Equality, NOT, XOR).

3. Create, initialize and display simple variables and simple strings and use simple formatting for variable.

4. Create/Define single dimension / multi-dimension arrays, and arrays with specific values like array of all ones, all zeros, array with random values within a range, or a diagonal matrix.

5. Use command to compute the size of a matrix, size/length of a particular row/column, load data from a text file, store matrix data to a text file, finding out variables and their features in the current scope.

6. Perform basic operations on matrices (like addition, subtraction, multiplication) and display specific rows or columns of the matrix.

7. Perform other matrix operations like converting matrix data to absolute values, taking the negative of matrix values, additing/removing rows/columns from a matrix, finding the maximum or minimum values in a matrix or in a row/column, and finding the sum of some/all elements in a matrix.

8. Create various type of plots/charts like histograms, plot based on sine/cosine function based on data from a matrix. Further label different axes in a plot and data in a plot.

9. Generate different subplots from a given plot and color plot data.

10. Use conditional statements and different type of loops based on simple example/s.

11. Perform vectorized implementation of simple matrix operation like finding the transpose of a matrix, adding, subtracting or multiplying two matrices.

12. Implement Linear Regression problem. For example, based on a dataset comprising of existing set of prices and area/size of the houses, predict the estimated price of a given house.

13. Based on multiple features/variables perform Linear Regression. For example, based on a number of additional features like number of bedrooms, servant room, number of balconies, number of houses of years a house has been built – predict the price of a house.

14. Implement a classification/ logistic regression problem. For example based on different features of students data, classify, whether a student is suitable for a particular activity. Based on the available dataset, a student can also implement another classification problem like checking whether an email is spam or not.

15. Use some function for regularization of dataset based on problem 14.

16. Use some function for neural networks, like Stochastic Gradient Descent or back propagation - algorithm to predict the value of a variable based on the dataset of problem

16ITU513B	**DATA MINING - PRACTICAL**	**Semester – V** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

List of Programs

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). for test options, first choose "Use training set", then choose "Percentage split" using default 66% percentage split. Report model percent error rate.
2. Use iris dataset preprocess and classifyu it with j4.8 and Naive Bayes classifier. Examine the tree in the classifier output panel.
3. Using the dataset ReutersCorn – Train and ReutersGrain – Train. Classify articles using binary attributes and word count attributes.
4. Apply any two association rule based algorithm for the supermarket analysis.
5. Using weka experimenter perfrom comparison analysis of j4.8, oneR and ID3 for vote dataset.
6. Using weka experimenter perfrom comparison analysis of Naive Bayes with different datasets.
7. Apply ZeroR, OneR and j4.8, to classify the iris data in an experiment using 10 train and test runs, with 66% of the data used for 34% used for testing.
8. Using Weka Knowledge flow set up a flow to load an ARFF file (batch mode) and perform a cross-validation using j4.8 (WEKS's C4.5 implementation).

9. Draw multiple ROC curves in the same plot window, using j4.8 and RandomForest as classifiers.
10. Use any three clustering algorithm on Vehicle data set and find best among them.

Semester – V

16ITU514A DIGITAL IMAGE PROCESSING - PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

List of Programs

1. Write program to read and display digital image using MATLAB or SCILAB
    a. Become familiar with SCILAB/MATLAB Basic commands
    b. Read and display image in SCILAB/MATLAB
    c. Resize given image
    d. Convert given color image into gray-scale image
    e. Convert given color/gray-scale image into black & white image
    f. Draw image profile
    g. Separate color image in three R G & B planes
    h. Create color image using R, G and B three separate planes
    i. Flow control and LOOP in SCILAB
    j. Write given 2-D data in image file

2. To write and execute image processing programs using point processing method
    a. Obtain Negative image b. Obtain Flip image
    b. Thresholding d. Contrast stretching

3. To write and execute programs for image arithmetic operations
    a. Addition of two images
    b. Subtract one image from other image
    c. Calculate mean value of image

d. Different Brightness by changing mean value

4. To write and execute programs for image logical operations
   a. AND operation between two images
   b. OR operation between two images
   c. Calculate intersection of two images
   d. Water Marking using EX-OR operation
   e. NOT operation (Negative image)

5. To write a program for histogram calculation and equalization using
   a. Standard MATLAB function
   b. Program without using standard MATLAB functions
   c. C Program

6. To write and execute program for geometric transformation of image
   a. Translation
   b. Scaling
   c. Rotation
   d. Shrinking
   e. Zooming

7. To understand various image noise models and to write programs for
   a. image restoration
   b. Remove Salt and Pepper Noise
   c. Minimize Gaussian noise
   d. Median filter and Weiner filter

8. Write and execute programs to remove noise using spatial filters
   a. Understand 1-D and 2-D convolution process
   b. Use 3x3 Mask for low pass filter and high pass filter

9. Write and execute programs for image frequency domain filtering
   a. Apply FFT on given image
   b. Perform low pass and high pass filtering in frequency domain
   c. Apply IFFT to reconstruct image

10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask

11. Write and execute program for image morphological operations erosion and dilation.

12. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.

Semester – V

16ITU514B MULTIMEDIA AND ITS APPLICATIONS – PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

List of Programs

1. Change a Shape to Another Shape. (Shape Animation)
2. Create a Man to walk with the help of Key Frame Animation.
3. Change the Colors of an object with the help of Animation.
4. Draw a Bird with Flash tools and make it fly with key Frame Animation.
5. Create a Shining Stones with the help of Movie Clip.
6. Create an animation to represent a growing moon using frame by frame animation
7. Create an animation to bounce a ball on steps.
8. Simulate movement of a cloud.
9. Create Morphing between two images.
10. Create an Action script to execute for an event in an application.
11. Create Water Drops using Photoshop.

12. Animate Plane Flying with the Clouds.
13. Create Plastic Surgery for Nose.
14. Create a Web Page using Photoshop
15. Given a picture of a flower with a background. Extract the flower and organize on a different background.
16. Display the given picture through your name using mask.

Semester – VI

16ITU601A PHP PROGRAMMING 4H – 4C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

UNIT-I

Introduction to PHP:

PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.) -PHP with other technologies, scope of PHP Basic Syntax, PHP variables and constants-Types of data in PHP , Expressions, scopes of a variable (local, global)-PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwis , ternary and MOD operator.-PHP operator Precedence and associativity

UNIT-II

Handling HTML form with PHP:

Capturing Form Data -GETand POST form methods- Dealing with multi value fields - Redirecting a form after submission **-PHP conditional events and Loops:** PHP IF Else conditional statements (Nested IF and Else) -Switch case, while ,For and Do While Loop -Goto , Break ,Continue and exit

UNIT-III

PHP Functions:

Function, Need of Function , declaration and calling of a function-PHP Function with arguments, Default Arguments in Function-Function argument with call by value, call by reference-Scope of Function Global and Local

UNIT-IV

String Manipulation and Regular Expression: (3L) Creating and accessing String , Searching & Replacing String-Formatting, joining and splitting String , String Related Library functions -Use and advantage of regular expression over inbuilt function-Use of preg_match(), preg_replace(), preg_split() functions in regular expression.

UNIT-V

Array:

Anatomy of an Array ,Creating index based and Associative array ,Accessing array
-Looping with Index based array, with associative array using each() and foreach()
-Some useful Library function

Semester – VI

16ITU601B **UNIX / LINUX PROGRAMMING** **4H – 4C**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

UNIT-I

Introduction What is Linux/Unix Operating systems, Difference between linux/unix and other operating systems , Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process.

UNIT-II

System processes (an overview), External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

UNIT-III

User Management and the File System Types of Users, Creating users, Granting rights User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

UNIT-IV

Shell introduction and Shell Scripting What is shell and various type of shell, Various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script , Shell variable (user defined and system variables)

UNIT-V

System calls, Using system calls Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell.
Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

3. Nemeth Synder., & Hein.(2010). Linux Administration Handbook (2nd ed.). Pearson Education.
4. Richard Stevens, W. Bill Fenner., & Andrew, M. Rudoff. (2014). Unix Network Programming, The sockets Networking API, Vol. 1, (3rd ed.).

Semester – VI

16ITU602A E-COMMERCE TECHNOLOGIES 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service

UNIT I -An Introduction to Electronic commerce

What is E-Commerce (Introduction And Definition), Main activities E-Commerce, Goals of E-Commerce, Technical Components of E-Commerce, Functions of E-Commerce, Advantages and disadvantages of E-Commerce, Scope of E-Commerce,Electronic Commerce Applications, Electronic Commerce and Electronic Business (C2C) (C2G, G2G, B2G, B2P, B2A, P2P, B2A, C2A, B2B, B2C)

UNIT II -The Internet and WWW

Evolution of Internet, Domain Names and Internet - Organization (.edu, .com, .mil, .gov, .net etc), Types of Network, Internet Service Provider, World Wide Web, Internet & Extranet, Role of Internet in B2B Application, building own website, cost, time, reach, registering a domain name, web promotion, Target email, Banner, Exchange, Shopping Bots.

UNIT III: Electronic data

Electronic data exchange introduction, concepts of EDI and Limitation, Apllication of eDI, Disadvantgaes of eDI, EDI model, Electronic Payment System: Introduction, Types of Electronic Payment system, Payment types, Value exchange system, credit card system electronic fund transfer, Paperless bill, modern payment cash, Electronic cash.

UNIT IV: Planning for Electronic Commerce

Palnnign Electronic commerce initiates, linking objectives to business strategies, measuring cost objectives, comparing benefits to Costs, strategies for developing electronic commerce web sites.

UNIT V : Internet marketing

The PROS and CONS of online shopping, the CONS of online shopping, Justify an internet business, Internet marketing techniques, The E-Cycle of Internet marketing, personalization e-commerce.

16ITU602B	**CLOUD COMPUTING**	**Semester – VI** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with it's vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. CO4: Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

UNIT-I

Overview of Computing Paradigm: Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing.**Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

UNIT-II

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

UNIT-III

Case Studies: Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2 , Eucalyptus.

UNIT-IV

Service Management in Cloud Computing: Service Level Agreements (SLAs), Billing & AITUounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

UNIT-V

Cloud Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

16ITU603A	NUMERICAL METHODS	Semester – VI 3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

SCOPE

It exposes the students to study numerical techniques as powerful tools in scientific computing

OBJECTIVES

This course a deep knowledge to the learners to understand the basic concepts of numerical methods which utilize computers to solve Engineering problems that are not easily solved or even impossible to solve by analytical means.

UNIT I

Floating point representation and computer arithmetic – significant digits. Errors: round-off error – local truncation error – global truncation error – order of a method convergence and terminal conditions – efficient computations – bisection method – secant methods – Regula-Falsi method – Newton – Raphson method – Newton's method for solving non-linear systems.

UNIT II

Gauss elimination method (with row pivoting) and Gauss-Jordan method – Gauss thomas method for tridiagonal systems. Interative methods: Jacobi and Gauss-seidal interative methods.

UNIT III

Interpolation: Lagrange's form and Newton's form – Finite difference operators – Gregory Newton forward and backward differences inerpolation Piecewise polynomial interpolation: Linear interpolation – Cubic spline interpolation (only method).

UNIT IV

Numerical differentiation: First derivatives and second order derivates – Richardson extrapolation. Numerical integration: traphezoid rule – simpson's rule (only method) – newton – Cotes open formulas.

UNIT V

Extrapolation method : Romberg integration- Cosine quadrature. Ordinary differential equations: Euler's method modified Euler's methods – Heun method and mid-point method – Runge-kutta second methods – Heun method without iteration – mid-point method and Ralston's method – classical 4th order Runge-Kutta method.

Suggested Readings

2. M.K.Jain, S.R.K.Iyengar, R.K.Jain (2012). Numerical methods for scientific and engineering computation. New Age International Publisher.
3. Steven C. Chopra (2010). Applied Numerical methods with MATLAB for Engineers and Scientists. Tata McGraw Hill.

16ITU603B **SYSTEM PROGRAMMING** **Semester – VI**
3H – 3C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer‘s requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

UNIT-I

Assemblers & Loaders, Linkers: One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

UNIT-II

Lexical Analysis:

Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

UNIT-III

Parsing:

Bottom up parsing- LR parser, yaITU. **Intermediate representations: Three** address code generation, syntax directed translation, translation of types, control Statements.

UNIT-IV

Storage organization: Activation records stack allocation.

UNIT-V

Code Generation: Object code generation

Suggested Readings

Semester – V

16ITU611A PHP PROGRAMMING - PRACTICAL 4H –2C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

List of Programs

1. Create a PHP page using functions for comparing three integers and print the largest number.

2. Write a function to calculate the factorial of a number (non-negative integer). The function accept the number as an argument.

3. WAP to check whether the given number is prime or not.

4. Create a PHP page which accepts string from user. After submission that page displays the reverse of provided string.

5. Write a PHP function that checks if a string is all lower case.

6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)

7. WAP to sort an array.

8. Write a PHP script that removes the whitespaces from a string.
Sample string : 'The quick   brown fox' Expected Output : Thequickbrownfox

9. Write a PHP script that finds out the sum of first n odd numbers.

10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.

11. Write a PHP script that checks if a string contains another string.

12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.

13. Create a script to construct the following pattern, using nested for loop.

```
*
* *
* * *
* * * *
* * * * *
```

14. Write a simple PHP program to check that emails are valid.

15. WAP to print first n even numbers.

16. $color = array('white', 'green', 'red")

Write a PHP script which will display the colors in the following way : Output :
white, green, red,
• green • red
• white

17. Using switch case and dropdown list display a ―Hello‖ message depending on the language selected in drop down list.

18. Write a PHP program to print Fibonacci series using recursion.

19. Write a PHP script to replace the first 'the' of the following string with 'That'.

Sample : 'the quick brown fox jumps over the lazy dog.'
Expected Result : That quick brown fox jumps over the lazy dog.

		Semester – VI
16ITU611B	**UNIX / LINUX PROGRAMMING - PRACTICAL**	**4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

List of Programs

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify ―call command to display calendars of the specified months.
3. Write a shell script to modify ―call command to display calendars of the specified range of months.
4. Write a shell script to aITUept a login name. If not a valid login name display message – ―Entered login name is invalid.
5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of ―who command along with the total number of users .
7. Write a shell script to display the multiplication table any number,
8. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.

11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.
13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient C(n , x).
15. Write a shell script to find the permutation P(n,x).
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

Semester – VI

16ITU612A E-COMMERCE TECHNOLOGIES- PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service.

List of Programs

1. Write a HTML program to implement the use of Image map.
2. Write a CSS to implement selectors in HTML
3. Write a CSS to implement pesudo – classes with in-line styles
4. Write a Javascript program to validate a web form
5. Write a Javascript program to allow visitors to see history of visiting your page
6. Write a Javascript program to change random color each 5 seconds

7. Write a pearl program to read a list of n strings (from STDIN) into an array and print a random string from the list (Use srand;rand(@array))
8. Write a pearl program to read a list of n numeric's from STDIN and find the max, min, range, median and mode. Input size of the list n interactively.
9. Write a pearl program to read a file of words and replaces all words in the file with their uppercase equivalent (hint: use tr/a-z/A-Z/)
10. Write VBScript program to print Fibonacci series using Do..while loop and For loop.
11. Write VBScript program to generate date and time in defferent format
12. Write VBScript program to print student marklist
13. Develop an ASP code to retrieve information from forms
14. Develop an ASP code to reading and writing cookies information
15. Develop an ASP code using response object methods

Semester – VI

16ITU612B **CLOUD COMPUTING -PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with it's vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

List of Programs

1. Create virtual machines that access different programs on same platform.

2. Create virtual machines that aITUess different programs on different platforms.

3. Working on tools used in cloud computing online-

    a) Storage

    b) Sharing of data

    c) Manage your calendar, to-do lists,

    d) A document editing tool

4. Exploring Google cloud

5. Exploring Microsoft cloud

6. Exploring Amazon cloud

Semester – VI

16ITU613A **NUMERICAL METHODS-PRACTICAL** **3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Int : **40** Ext : **60** Total: **100**

1. Find the roots of the equation by bisection method
2. Find the roots of the equation by secant/Regula-Falsi method.
3. Find the roots of the equation by Newton's method
4. Find the solution of a system of nonlinear equation using Newton's method
5. Find the solution of tridiagonal system using Gauss Thomas method
6. Find the solution of system of equations using Jacobi/Gauss-Seidal method
7. Find the cubic spline interpolating function
8. Evaluate the approximate value of finite integrals using Gaussian/Romberg itegration
9. Solve the boundary value problem using Finite difference method

Note: Programming is to be done in any one of computer algebra systems: MATLAB/MATHEMATICA/MAPLE

16ITU613B **SYSTEM PROGRAMMING - PRACTICAL** **Semester – VI**
3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Int : **40** Ext : **60** Total: **100**

Course Objectives (CO)

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer‘s requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

List of Programs

1. To implement an assembler for a hypothetical language.
2. To get familiar with lex: write a program to recognize numbers, identifiers.
3. To get familiar with yacc: write a desk calculator.

கற்பகம் உயர்கல்வி கலைக்கழகம்

தமிழ்த்துறை

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)

முதல்பருவம்

(இளநிலை கலையியல் பட்ட வகுப்புகளுக்குரியது)

(For I-UG Arts Degree Classes) 16LAU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. **மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்**

காற்று**கவிஞர் தாமரை**– மழைக்குறிப்பு

சூழலியல்:கவிஞர் வைதீஸ்வரன் -விரல் மீட்டிய மழை

பெண்ணியம் :கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட

வாழ்க்கை**கவிஞர்** வைரமுத்து – அம்மா

வாழ்க்கை:கவிஞர் தருமுசிவராம்– வாழ்வுப் பாடல்

இயற்கை:பாவேந்தர்பாரதிதாசன் – அழகின்சிரிப்பு – வான்.

அலகு – II :அறஇலக்கியம்: (15 மணிநேரம்)

கொன்றை வேந்தன்: 1 - 50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்பம் -20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

வேதநாயகம்பிள்ளை நீதிநூல்: 74 -78 பாடல்கள்

பெருவாயின் முள்ளியார் ஆசாரக்கோவை: 5 பாடல்கள்

அலகு - III :சிற்றிலக்கியம்: (15 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

குற்றாலக்குறவஞ்சி: 5 பாடல்கள்

முக்கூடற்பள்ளு : 5 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது- 9 பாடல்கள்

அலகு – IV :கட்டுரை: (10 மணிநேரம்)

1. **உயர்தனிச் செம்மொழி- பரிதிமாற்கலைஞர்**
2. **கட்டிடக்கலை-** அ.இராசமாணிக்கனார்
3. **வாழ்க்கை-**இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஶ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V :மொழிப்பயிற்சி: (12 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. எழுத்து, சொல், பொருள் இலக்கணப் பயிற்சிகள்

Semester - I

16ENU101 **ENGLISH – I** **4H – 4C**

(For all undergraduate students admitted from 2016 onwards)

Instruction Hours / week L: 4 T: 0 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman – Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions

Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan
One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Preposition, Voice- Active and Passive

UNIT V

Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitution
Grammar: Question, Pronunciation

Semester - I

16BAU101	FUNDAMENTALS OF MANAGEMENT AND ORGANIZATIONAL BEHAVIOUR	L	T	P	C
		4	-	-	4

Instruction Hours / week L: 4 T: 0 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the student

- To demonstrate the concepts of management.
- To compose the knowledge in the functions of management.
- To identify human behaviour concepts
- To infer the knowledge on various factors involved in human behaviour
- To interpret about the organizational climate
- To analyze individual and group behavior in organizations

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate the concepts of management and the functions of management and organizational behavior.
2. Compose the managerial functions of planning, organizing and controlling in a variety of circumstances.
3. Assess the impact of the personality traits and their perception in day to day performance.
4. Exhibit the leadership skills whenever required and work in groups and teams by motivating and resolving conflict arising in groups and adapting to change.
5. Assess insight to the students regarding individual and group behaviour in organizations**.**
6. Understand and exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

UNIT I

Basic forms of Business Ownership - Special forms of ownership - Franchising -Licensing- Leasing- Choosing a form of Business ownership - Corporate Expansion -mergers and acquisitions -Diversification, forward and backward integration -Jointventures, Strategic alliance - Evolution of Management Theory - Managerial functions andRoles. Insights from Indian practices and ethos.

UNIT II

Overview of Planning - Types of Plans and The planning process - Decision making: Process - Types and Techniques - Control - Functions, Process and types of Control; Principles of organizing - Common organsational structures - Delegation and Decentralization- Factors affecting the extent of decentralization - Process and Principles of delegation- Line and Staff Function.

UNIT III

Importance of organizational Behaviour - Perception and Attribution - Concept, Nature, Process, Personality: Personality - Learning - Concept and Theories of Learning, Reinforcement, Motivation - Concepts and their application, Need, Content and Process Theories, Contemporary Leadership issues: Charismatic, Transformational Leadership. Emotional Intelligence.

UNIT IV

Groups and Teams - Definition, Difference between Groups and teams - Stages of Group Development - Group Cohesiveness - Types of teams - Analysis of Interpersonal Relationship: Transactional Analysis - Johari WindowOrganisational Power and Politics - Nature of organisational politics.

UNIT V

Conflict: Concept, Sources- Types, Stages of conflict - Management of conflict, Organisational Change: Concept, Resistance to change, Managing resistance to change, Implementing Change -Kurt Lewin Theory of Change - Managing Stress: Insights from Indian ethos.

Semester I

		L	T	P	C
16BAU102	**CORE –STATISTICS FOR BUSINESS DECISIONS**	**5**	**-**	**-**	**5**

Instruction Hours / week L: 5 T: 0 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES:
To make the students

- To understand the concept of statistics
- To acquire the knowledge of summary statistics
- To know the concepts of central tendency and dispersion
- To understand the correlation and regression concepts
- To be aware of the index numbers and trend analysis
- To be aware on time series analysis

COURSE OUTCOMES:
Learners should be able to

1. Utilize the concept of statistics to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. Exhibit the knowledge on Index and time series analysis

UNIT I

Measures of Central Value: Characteristics of an ideal measure; Measures of Central Tendency - mean, median, mode, harmonic mean and geometric mean. Merits, Limitations and Suitability of averages. Relationship between averages. Measures of Dispersion: Meaning and Significance. Absolute and Relative measures of dispersion - Range, Quartile Deviation, Mean Deviation, Standard Deviation, Coefficient of Variation, Moments, Skewness, Kurtosis.

UNIT II

Correlation Analysis: Meaning and significance. Correlation and Causation, Types of correlation. Methods of studying simple correlation - Scatter diagram, Karl Pearson’s coefficient of correlation, Spearman’s Rank correlation coefficient, Regression Analysis: Meaning and significance, Regression vs. Correlation. Linear Regression, Regression lines (X on Y, Y on X) and Standard error of estimate.

UNIT III

Analysis of Time Series: Meaning and significance. Utility, Components of time series, Models (Additive and Multiplicative), Measurement of trend: Method of least squares, Parabolic trend and logarithmic trend.

UNIT IV

Index Numbers: Meaning and significance, problems in construction of index numbers, methods of constructing index numbers-weighted and un weighted, Test of adequacy of index numbers, chain index numbers, base shifting, splicing and deflating index number.

UNIT V

Probability: Meaning and need. Theorems of addition and multiplication. Conditional probability. Bayes' theorem, Random Variable- discrete and continuous. Probability Distribution: Meaning, characteristics (Expectation and variance) of Binomial, Poisson, and Normal distribution. Central limit theorem.

16BAU111 **CORE - MS OFFICE (PRACTICAL)**

L	T	P	C
-	-	4	2

Instruction Hours / week L: 0 T: 0 P : 4 **Marks: Internal: 40 External: 60 Total: 100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To compose the knowledge in MS Office to manage the business.
- To identify the MS-Excel function and its application
- To be aware of the MS-Power point and its usage.
- To demonstrate the usage of MS-Access and its applications
- To develop skill in basic file management
- To Indicate the names and functions of the Word interface components

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate an insight into the basic knowledge on MS Office.
2. Preparation of word documents, excel sheet and power point presentation.
3. Exhibit the fundamentals of managing and administering business through the knowledge of MS office, so as to improve the effectiveness of managing organization.
4. Design the presentations for the business meetings
5. Store, retrieve data and make decisions based on the information
6. Exhibit the communication skills to convey the outputs produced.

WORD

1. Type Chairman's speech/ Auditor's report / Minutes/ Agenda and perform the following operations:
   Bold, Underline, Font Size, Style, Background color, Text color, Line spacing, Spell Check, Alignment, Header & Footer, Inserting pages and page numbers, Find and Replace.
2. Prepare an invitation for the college function using Text boxes and Clip Art.
3. Design an invoice and Account sales by using Drawing tool bar, Clip Art, Word Art, Symbols, Borders and Shading.
4. Prepare a Class Time Table and perform the following operations:
   Inserting the table, Data Entry, Alignment of Rows and Columns, Inserting and Deleting the Rows and Columns and Change of Table Format.
5. Prepare a Shareholders meeting letter for 10 members using mail merge operation.
6. Prepare Bio-Data by using Wizard/Templates.

MS EXCEL

1. Prepare a mark list of your class (minimum of 5 subjects) and perform the following operations:
   Data Entry, Total, Average, Result and Ranking by using arithmetic and logical functions and sorting.

2. Prepare Final Accounts (Trading Account, Statement of Profit & Loss and Balance Sheet) by using formula.
3. Draw the different type of charts (Line, Pie, Bar) to illustrate year-wise performance of sales, purchase, profit of a company by using chart wizard.
4. Prepare a statement of Bank customer's account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions.
5. Prepare a Product Life Cycle which should contain the following stages:
   Introduction, Growth, Maturity, Saturation, Decline.

MS POWERPOINT

1. Design presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, special features, price, special offer etc. Add voice if possible to explain the features of the product. The presentation should work in manual mode.
2. Design presentation slides for organization details for 5 levels of hierarchy of a company by using organization chart.
3. Design slides for the Headline News of a popular TV Channel. The Presentation Should contain the following transactions: Top down, Bottom up, Zoom in and Zoom out. - The presentation should work in custom mode.
4. Design presentation slides about an organization and perform frame movement by interesting clip arts to illustrate running of an image automatically.
5. Design presentation slides for the Seminar/Lecture Presentation using animation effects and perform the following operations: Creation of different slides, changing background color, font color using word art.

MS ACCESS

1. Prepare a payroll for employee database of an organization with the following Details:
   Employee id, Employee name, Date of Birth, Department and Designation, Date of appointment, Basic pay, Dearness Allowance, House Rent Allowance and other deductions if any. Perform queries for different categories.
2. Create mailing labels for student database which should include at least three Table must have at least two fields with the following details: Roll Number, Name, Course, Year, College Name, University, Address, Phone Number.
3. Gather price, quantity and other descriptions for five products and enter in the Access table and create an invoice in form design view.
4. Create forms for the simple table ASSETS.
5. Create report for the PRODUCT database.

LIST OF PRACTICAL

1. Introduction to SPSS Package
2. Working with windows of SPSS
3. Defining variables in variable view window in SPSS
4. Drawing of Simple and multiple bar diagrams in SPSS Package
5. Drawing of Histogram and Pie diagram
6. Calculation of Mean for individual, discrete series using SPSS Package.
7. Mean for continuous series using SPSS Package.
8. Median for individual and discrete series using SPSS Package..
9. Median for continuous series using SPSS Package..

10. Mode for individual and discrete series using SPSS Package..
11. Standard deviation for individual and discrete series using SPSS Package.
12. Coefficient of variation for individual and discrete series using SPSS Package.
13. Karl Pearson’s Correlation using SPSS Package.
14. Rank Correlation Coefficient using SPSS Package.

16AEC101	BUSINESS COMMUNICATION	L	T	P	C
		4	-	-	4

Instruction Hours / week L: 4 T: 0 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES :

To make the students

- To equip students effectively to acquire skills in reading, writing, comprehension and
- communication, as also to use electronic media for business communication.
- To acquire knowledge on the different business correspondence used in organization
- To build aware of the different types of reports prepared for the organization.
- To illustrate the importance of vocabulary in business communication
- Identify key principles in business communication
- 6.To put in use the basic mechanics of Grammar

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate and communicate effectively with the optimal mix of verbal and nonverbal communication mitigating the barriers.
2. Draft business correspondence for the organization requirement.
3. Draft the resume and develop skills to face the interview
4. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.
5. Prepare business reports for organization needs and use appropriate technology for business communication.
6. Assess the importance of ethical communication Ethics in Business communication

UNIT I

Nature of Communication: Process of Communication, Types of Communication (verbal & Non Verbal), Importance of Communication, Different forms of Communication; Barriers to

Communication Causes, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers

UNIT II

Business Correspondence: Letter Writing, presentation, Inviting quotations, Sending quotations, Placing orders, Inviting tenders, Sales letters, claim & adjustment letters and social correspondence, Memorandum, Inter -office Memo, Notices, Agenda, Minutes.

UNIT III

Report Writing: Business reports, Types, Characteristics, Importance, Elements of structure, Process of writing, Order of writing, the final draft, and check lists for reports.

UNIT IV

Application Letters – Preparation of Resume – Interview: Meaning – Objectives and Techniques of various types of interviews – public speech – Characteristics of a good Speech- Business Report Presentations.

UNIT V

Oral Presentation: Importance, Characteristics, Presentation Plan, Power point presentation, Visual aids.

கற்பகம் உயர்கல்வி கலைக்கழகம்

தமிழ்த்துறை

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)

இரண்டாம் பருவம்

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

(For I-UG Arts Degree Classes) 16LAU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, ‘தமிழ் இலக்கிய வரலாறு’ குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, ‘அறிவியல் தமிழ்’ ; ‘இணைய தமிழ்’ குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. **மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்**

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை,கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

Semester - II

Part II - English II

(For all undergraduate students admitted from 2016 onwards) 4H – 4C

Instruction Hours / week L: 4 T: 0 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

Course Objectives:

- To enable the learners to acquire English language skills.
- To familiarize them with English literature.
- To attain basic knowledge on Grammar .
- To help learners imbibe cultural values.
- To gain knowledge of making correct sentences.
- To reflect originality on the application of soft skills and express in writing their views.

Course Outcome:

1. Acquire to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. Develop the social values.
4. Recognize the importance of communication
5. Get sound knowledge in English
6. Communicate well for business purpose.

UNIT I

Prose: The Unexpected- Robert Lynd
Poetry: The Village Schoolmaster – Oliver Goldsmith
Short Story: The Lion's Share – Arnold Bennett
Vocabulary: Homonyms
Grammar: Irregular Verb

UNIT II

Prose: Travel by Train – J. B. Priestley
Poetry: The Gift of India – Sarojini Naidu
Grammar: Sentence pattern

UNIT III

Prose: Women's Education is Almost More Important than the Education of Boys and

Men – Indira Gandhi

Short Story: The Necklace – Guy De Maupassant

One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer

Vocabulary: Similes

Grammar: Discourse Markers

UNIT IV

Poetry: Ozymandias – P.B. Shelley

One-Act Play: The Pot of Broth- W.B. Yeats

Vocabulary: Collective Noun

Grammar: Correction of Sentences

UNIT V

Short Story: The Silver Butterfly– Pearl S. Buck

One-Act Play: The Bear – Anton Chekov

Vocabulary: Acronym

Grammar: Question Tag

- Equip the students with the knowledge of pricing under different market conditions
- Develop the students skills in managing capital and profit
- Impart students knowledge in national income analysis
- Integrate the basic concepts of economics with the tools of mathematics and statistics
- Give insight into how markets function.
- Develop the ability to apply the concepts, tools and techniques of economics .

COURSE OUTCOMES:

Learners should be able to

1. Apply the demand and supply concept in managerial decisions
2. Formulate the pricing strategies based on the market structure.
3. Demonstrate capabilities as problem-solving, critical thinking, and communication skills.
4. Gain familiarity on the macro level business components
5. Calculate the Cost, Revenue and breakeven point and apply it in decision making process.
6. Analyze operations of markets under varying competitive positions

UNIT I

Demand, Supply and Market equilibrium: Individual demand, Market demand -Individual supply -Market supply - Market equilibrium - Elasticities of demand and supply - Price elasticity of demand, income elasticity of demand, cross price elasticity of demand, elasticity of supply; Theory of consumer behavior: cardinal utility theory, ordinal utility theory(indifference curves, budget line, consumer choice, price effect, substitution effect, income effect for normal, inferior and giffen goods) - revealed preference theory.

UNIT II

Producer and optimal production choice: optimizing behavior in short run(Geometry of product curves, law of diminishing marginal productivity, three stages of production), Optimizing behavior in long run (isoquants, isocost line, optimal combination of resources) Costs and scale : Traditional theory of cost (short run and long run, geometry of cost curves, envelope curves) - Modern theory of cost (short run and long run) -Economies of scale - Economies of scope.

UNIT III

Theory of Firm and Market Organization : Perfect Competition (Basic features, short run equilibrium of firm/industry, long run equilibrium of firm/industry, effect of changes in demand, cost and imposition of taxes) - Monopoly (Basic features, short run equilibrium, long run equilibrium, effect of changes in demand, cost and imposition of taxes, comparison with perfect competition, welfare cost of monopoly) – Price discrimination, multi plant monopoly; Monopolistic Competition (Basic features, demand and cost, short run equilibrium, long run equilibrium, excess capacity) - Oligopoly(Cournot's model, kinked demand curve model, dominant price leadership model, prisoner's dilemma)

UNIT IV

Factor Market : Demand for a factor by a firm under marginal productivity theory(Perfect Competition in the product market, monopoly in the product market) -Market Demand for a factor - Supply of labour - Market supply of labour - Factor Market Equilibrium.

UNIT V

National Income Analysis - Theories of Income, Output and Employment - Classical - Keynesian theory - Theory of Trade Cycle-Concept and Causes of Trade Cycle -Measures to Control Trade Cycle - Macro Economic Policy - Monetary and Fiscal -Theories of Inflation-Causes and Control of Inflation.

16BAU202	CORE –BUSINESS ACCOUNTING	L	T	P	C
		4	-	-	4

Instruction Hours / week L: 4 T: 0 P : 0 **Marks: Internal: 40 External: 60 Total: 100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES :

To make the students

- Exhibit the concepts and conventions of accounting and basic accounting framework
- Expose the students to the fundamentals of accounting procedure
- To compose the inventory valuation techniques.
- To acquire the knowledge of the partnership accounting.
- To comprehend the difference between capital and revenue expenditure.
- To acquire knowledge on preparing the reconciliation statement

COURSE OUTCOMES:

Learners should be able to

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Prepare and Analysis the final accounts.
3. Calculate the asset depreciation using different methods
4. Evaluate the inventory value using different methods.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the accounting discipline.
6. Analyze and solve business problems and to take advantage of business opportunities

UNIT I

Accounting - Meaning - Definition - Concepts - Conventions - Accounting as an Information System- Importance -Scope- Limitations - Users of Accounting Information - Generally accepted Accounting Principles - Accounting Equation - Nature of Accounts - Rules of Debit and Credit - Recording Transactions in General Journal - Ledger - Trial balance- Subsidiary Books.

UNIT II

International Financial Reporting Standards (IFRS) – Understanding Accounting Standards issued by the ICAI related to Disclosure of Accounting Policies. Depreciation Accounting - Revenue Recognition - Methods of charging Depreciation-Straight-line Method - Written-down-value Method- Bank Reconciliation Statement.

UNIT III

Final Accounts - Preparing Trading Account, Statement of Profit and Loss and Balance Sheet for a Sole Proprietor - Understanding contents of Financial Statements of a Joint Stock Company as per Companies Act 2013 - Understanding the contents of a Corporate Annual Report.

UNIT IV

Analyzing Financial Statements - Objectives of Financial Statement Analysis - Sources of Information - Standards of Comparison - Techniques of Financial Statement Analysis - Horizontal Analysis - Vertical Analysis - Ratio Analysis - Meaning and Usefulness of Financial Ratios - Analysis of Financial Ratios from the perspective of different Stakeholders like Investors- Lenders - Short-term Creditors - Profitability Ratio -Solvency Ratio - Liquidity Ratio -Turnover Ratio - Limitations of Ratio Analysis.

UNIT V

Partnership Accounts: Past adjustments and guarantees- Basic concepts of Admission, Retirement and death of a partner including treatment of goodwill.

Note: Distribution of marks between problems and theory shall be 80% and 20%.

BBA		**2016 - 2017** **Semester – II**
16BAU211	**CORE –TALLY (PRACTICAL)**	**L T P C** **4 - - 2**

Instruction Hours / week L: 0 T: 0 P : 4 **Marks: Internal: 40 External: 60 Total: 100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES :

To make the students

- To infer the practical knowledge about the accounting package
- To acquire knowledge in computerization of accounts
- To interpret the inventory valuations methods available in the software
- To understand various financial statements that are built in the software
- Create vouchers by understanding the reason for posting under different heads
- Calculate valuation of assets using the software

COURSE OUTCOMES:

Learners should be able to

1.Compose the different knowledge of accounting package.

2. Create vouchers by understanding the reason for posting under different heads

3. Calculate valuation of assets using the software

4. Prepare and Analyse the financial statements and retrieve ratios

5. Apply the knowledge of quantitative tools & techniques in the interpretation of data for managerial decision making.

6. Develop computer skills of recording financial transactions, preparation of annual accounts and reports.

Practical List

1. Create a new company in integrate accounts mode and account with inventory mode
2. Create a primary and sub groups using single or multiple ledger mode

3. Create minimum 10 ledgers using single or multiple ledger, and alter and delete any 2 ledger
4. Enter the following voucher
    - Payment vouchers
    - Receipt
    - Purchase
    - Sales
    - Credit note
    - Debit note
    - Journals
    - Memo
    - Optional
5. Create stock, stock groups and enter the vouchers
6. Prepare inventory statements using (calculate inventory using all methods)
    - FIFO
    - LIFO
    - Simple Average Method
    - Weighted Average Method
7. Prepare the following ratio analysis
    - Financial ratio
    - Operating ratio
    - Investment ratio
8. Prepare the following
    - Cash flow statement
    - Fund flow statement
9. Preparation of reports for the following
    - Trial Balance
    - Profit & Loss A/c
    - Balance sheet
    - Bank reconciliation statement
    - Back up and restore the company information

		4	-	-	4

Instruction Hours / week L: 4 T: 0 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate the public to participate in environment protection and improvement.
- To be aware of the different pollution that affects the environment.
- To demonstrate the social issues prevailing in the environment.
- To understand and address complex environmental issues

COURSE OUTCOMES:
Learners should be able to

1. Understand the awareness among the people to know about various renewable and non renewable resources of the region, enables environmentally literate citizens.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Illustrate to prevent pollution in the environment
4. Assess to appropriate judgments and decisions for the protection and improvement of the earth.
5. Demonstrate an integrative approach to environmental issues with a focus on sustainability;
6. Understand and evaluate the global scale of environmental problems

UNIT-I: Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III: Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Bio geographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

16ENU301	**ENGLISH-III - COMMUNICATIVE ENGLISH**	**L T P C** **8 - - 6**

Instruction Hours / week L: 4 T: 0 P : 4 **Marks: Internal: 40 External: 60 Total: 100**

End Semester Exam: 3 Hours

Course Objectives:

- To develop confidence to respond in English during situations where the use of English is imperative.
- To develop fluency in actual conversation in the English language.
- To develop knowledge about business communication.
- To develop knowledge about business writing.
- To acquire knowledge on communication for different purpose.
- To get knowledge to communicate in day to affairs.

Course Outcome:

1. Students learnt the basics and purposes of listening skill.
2. Students will know the importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Acquired knowledge on effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.

UNIT I: Listening

Listening and its types, Basic Listening Lessons, Critical Listening Lessons, Advanced Listening Lessons, and Note Taking

UNIT II: Speaking

Basics of speaking, Regular English, Business English, Interview English, and Travel English

UNIT III: Reading

Reading and its purposes, Types of Reading, Reading Techniques, Reading Comprehension, Note Making

UNIT IV: Writing

Writing defined, Types of Writing, Components of Writing, Writing Contexts, Language and Style with accordance to the contexts

UNIT V: Vocabulary Enrichment

Synonyms, Antonyms, Homonyms, Phrasal Verbs, Idioms and Phrases, One Word Substitutes, and Affixes

Suggested Reading:

16BAU301	CORE –PRINCIPLES OF MARKETING	L	T	P	C
		8	-	-	6

Instruction Hours / week L: 6 T: 2 P : 0 **Marks: Internal: 40 External: 60 Total: 100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To compose knowledge in the concepts and functions of marketing
- To acquire knowledge in the strategies of marketing
- To exhibit knowledge on promotional steps in marketing
- To understand the 'Marketing mix' elements and the strategies
- To comprehend the knowledge of marketing process and segmentation
- To be aware on the brand and branding strategies

COURSE OUTCOMES:

Learners should be able to

1. Understand the Principles of Marketing represent the marketing environment, consumer behaviour and product life cycle.
2. Assess the results in developing best products in terms of goods and services that brings consumer satisfaction. This paper presents the marketing functions.
3. Demonstrate knowledge of the individual components of a marketing mix.
4. Identify the organisational processes involved in the planning, implementation and control of marketing activities.
5. Understand the marketing terminology and concepts.
6. Demonstrate knowledge of key business communication strategies within the marketing field.

UNIT I

Introduction: Nature, Scope and Importance of Marketing - Evolution of Marketing - Core marketing concepts - Company orientation - Production concept -Product concept - Selling concept - Marketing concept - Holistic marketing concept -Marketing Environment -Demographic- Economic- Political- Legal - Socio cultural -Technological Environment - Portfolio approach – Boston Consultative Group (BCG) matrix.

UNIT II

Segmentation - Targeting and Positioning - Levels of Market Segmentation -Basis for Segmenting Consumer Markets - Difference between Segmentation -Targeting and Positioning.

UNIT III

Product and Pricing Decisions - Concept of Product Life Cycle (PLC) – PLC marketing strategies - Product Classification - Product Line Decision - Product Mix Decision - Branding Decisions -

Packaging and Labeling - New Product Development -Pricing Decisions - Determinants of Price - Pricing Methods - Adapting Price.

UNIT IV

Promotion Mix - Factors determining promotion mix - Promotional Tools -Basics of Advertisement - Sales Promotion - Public Relations and Publicity and Personal Selling - Place (Marketing Channels) - Channel functions - Channel Levels - Types of Intermediaries - Types of Retailers - Types of Wholesalers.

UNIT V

Marketing of Services - Unique Characteristics of Services - Marketing strategies for service firms - 7Ps - Customer Relationship Management (CRM) - Consumer Protection Act -E- Marketing.

Instruction Hours / week L: 6 T: 2 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To acquire knowledge in the concepts of cost and management accounting
- To Impart the knowledge in financial statement analysis and budget preparations
- To examine the fund flow and cash flow statement
- To solve the problems and take decisions based on the result.
- To communicate orally and in written form the concepts and solutions.
- To Understan the preparation of financial statement for decision making

COURSE OUTCOMES:
Learners should be able to

1. Understand the nature and scope of management accounting, difference between cost and management accounting and various elements of cost.
2. Acquire the knowledge of marginal costing, budgetary control, cash flow and fund flow statement.
3. Comprehend on the contemporary issues relevant to accounting concepts.
4. Analyse the alternatives using appropriate tools and techniques.
5. Solve the problems and take decisions based on the result.
6. Communicate orally and in written form the concepts and solutions

UNIT I
Management Accounting - Meaning - Definition - Nature - Scope of Management Accounting - Comparison of Management Accounting with Cost Accounting and Financial Accounting. Cost concepts - Meaning - Scope - Objectives - Importance of Cost Accounting - Cost - Costing - Cost Control, and Cost Reduction - Elements of Cost -Components of total Cost - Classification of Costs - Fixed Variable -Semi Variable -Step Costs - Product - Period Costs - Direct - Indirect Costs- Preparation of Cost Sheet in Lieu with Cost Accounting Standard.

UNIT II

Cost Volume Profit Analysis - Contribution - Profit Volume Ratio - Margin of safety – Cost Break-even Point - Composite Break-even Point - Cash Break-even Point - Key Factor -Break-even Analysis - Relevant Costs - Decision Making - Pricing - Product Profitability -Make or Buy - Exploring new markets - Export Order - Sell or Process Further - Shut down Vs. Continue.

UNIT III

Budgets and Budgetary Control - Meaning - Types of Budgets - Steps in Budgetary Control -Fixed and Flexible Budgeting - Cash Budget - Responsibility Accounting- Concept -Significance - Different responsibility centers - Divisional performance – Financial measures - Transfer pricing.

UNIT IV

Standard Costing and Variance Analysis - Meaning of Standard Cost – Standard Costing, Advantages -Limitations and Applications - Material - Labour - Overhead and Sales variances. Introduction to Target Costing - Life Cycle Costing - Quality Costing - Activity Based Costing.

UNIT V

Funds Flow Statement - Schedule of Changes in Working Capital - Calculation of Funds from Operation - Sources and Applications of Funds. Cash Flow Statement - Cash from Operation - Inflow and Outflow of Funds.

Note: Distribution of marks between problems and theory shall be 80% and 20%.

16BAU303A SEC - 1 FINANCIAL MANAGEMENT

L	T	P	C
6	-	-	4

Instruction Hours / week L: 5 T: 1 P : 0 **Marks: Internal: 40 External: 60 Total: 100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To enable the students to acquire knowledge in financial management
- To Impart the knowledge in finance functions, cost of capital, capital structure, capital budgeting and leverage.
- To access the concept of cost of capital and capital structure.
- To understand the importance of financial data in preparing report
- To Provide an in-depth view of the process in financial management of the firm.
- To Develop knowledge on the allocation of resources.

COURSE OUTCOMES:

Learners should be able to

1. Understand the funds are managed and their reflections on the fundamental decisions to be taken by the corporate world.
2. Apply the basics of Finance functions and working capital management.
3. Demonstrate an understanding of the overall role and importance of the finance function.
4. Communicate effectively using standard business terminology.
5. Demonstrate basic finance management knowledge.
6. Observe and interpret financial markets to uncover potential opportunities

UNIT I

Financial Management - Finance and related disciplines - Scope of Financial Management - Functions of Finance -Traditional and Modern Approach in Finance Decisions, Investment Decision and Dividend Decision - Objectives of Financial Management - Profit Maximization - Wealth Maximization- Organisation of Finance Function - Concept of Time Value of Money - Present Value - Future value - annuity - Risk and Return - Historical return - Expected return - Absolute return - Holding period return -Annualized return - Arithmetic and Geometric return - Systematic Risk - Unsystematic risk - Sources and Measures.

UNIT II

Long term investment decisions: Capital Budgeting - Principles and Techniques – Nature and meaning of capital budgeting - Estimation of relevant cash flows and terminal value -Evaluation techniques - Accounting Rate of Return - Net Present Value - Internal Rate of Return and MIRR - Net Terminal Value -Profitability Index Method.

UNIT III

Cost of Capital - Explicit and Implicit costs – Measurement of cost of capital - Cost of debt - Cost of perpetual debt - Cost of Equity Share - Cost of Preference Share - Cost of Retained Earning - Computation of overall cost of capital based on Historical and Market weights.

UNIT IV

Capital Structure - Approaches to Capital Structure Theories - Net Income approach – Net Operating Income approach - Modigliani-Miller (MM) approach - Traditional approach -Capital Structure and Financial Distress - Trade-Off Theory - Dividend Policy Decision - Dividend and Capital - The Irrelevance of dividend - General, MM hypothesis - Relevance of dividend - Walter's Model - Gordon's Model -Leverage Analysis - Operating and Financial Leverage - EBIT /EPS analysis – Combined Leverage.

UNIT V

Working Capital Management -Determination of Working Capital - Management of Cash - Preparation of Cash Budgets-Cash management technique -Receivables Management -Objectives - Credit Policy - Cash Discount – Debtors Outstanding and Ageing Analysis - Costs - Collection Cost - Capital Cost - Default Cost -Delinquency Cost - Inventory Management -Techniques - ABC Analysis – Minimum Level - Maximum Level - Reorder Level - Safety Stock- EOQ.

BBA **2016 – 2017**
Semester - III

16BAU303B	**SEC - 1 MANAGEMENT INFORMATION SYSTEM**	**L**	**T**	**P**	**C**
		6	**-**	**-**	**4**

Instruction Hours / week L: 5 T: 1 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES :
To make the students

- To impart the management information systems and their applications in Management.
- To demonstrate the knowledge in telecommunication revolution
- To develop the applications of MIS in various fields
- To provide the theoretical models used in database management systems
- To describe the role of information technology and decision support systems in business.
- To Understand at how to use and manage information system

COURSE OUTCOMES:
Learners should be able to

1. An Exposure to the concepts, theories and practices in the field of MIS.
2. Acquire the relationship among and between information systems and management, analyze how technology can be used to synthesize complex data to make sound business decisions.
3. Critically analyse and evaluate the use of DSS, AI in supporting management decision
4. Communicate orally and in written form the understanding of the usage of information system in management decision.
5. Understand the security and ethical issues pertaining to use of information technology in management decision making.
6. Demonstrate Knowledge of Information Systems and Business

UNIT I
Introduction to Information Systems - Definition - Features - Steps in Implementation of MIS - Need for Information - Information System for Decision making- MIS as Competitive Advantages – MIS Structures.

UNIT II
MIS - Strategic Information System - MIS Support for Planning - Organising - controlling - MIS for Specific Functions - Personnel - Finance - Marketing Inventory Production Data Base Management System Models - Hierarchical - Network - Relational - Modular.

UNIT III
Computer Hardware - Description of Electronic Computers - CPU Operations - Classification of Computers - Main - Mini - Workstations - Micro Computers - Super Computers - Personal

Computers. Computer Software - Types of Software - Data Representation in Computers - Introduction to Client-Server.

UNIT IV

Input Devices - Mouse - Touch Screens - MICR - OCR - Keyboard - Pen Based Input - Digital Scanners - Voice Input Devices - Sensors. Output Devices - Impact Printers - Non-Impact Printers - Video Display Terminals - Plotters - Voice Output Devices. Secondary Storage Devices - Magnetic Disk, Floppy, Magnetic Tape, Optical Disk Storage - DROM

UNIT V

Telecommunication Revolution - Introduction to Email- Internet - Intranet - Teleconferencing - www Architecture - Introduction to E-Commerce - Models B_B, B_C, and EDI, EDI Applications in Business - Electronic Payment Cash - Smart Cards - Credit Cards - Fundamentals of ERP- Information Technology Act, 2000.

ENGLISH IV (THEORY & PRACTICAL)

(Communication Lab/BEC/IELT) EC-4

L	T	P	C
8	-	-	6

(For all undergraduate students admitted from 2016 onwards)

Instruction Hours / week L: 4 T: 0 P : 4 **Marks: Internal: 40 External: 60 Total: 100**

End Semester Exam: 3 Hours

Course Objectives:

- To train students in understanding the concepts of communication.
- To be familiar with the four basic skills of English.
- To train students in developing their written communication.
- To train students in developing their presentation skills.
- To acquire the skill of making grammatically correct sentences.
- To reflect originality on the application of soft skill views and express in writing their views.

Course Outcome:

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Developed the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Enhanced communication competency through LSRW skills.

UNIT I: Integrated Skills

Development of speaking, listening and grammar skills.

UNIT II: Advanced Reading Skills

Outcomes include improved reading speed, increased reading fluency and increased vocabulary.

UNIT III: Advanced Writing Skills

Planning and writing complex tasks

UNIT IV: News and World Affairs

Newspapers, magazines, the Internet, TV and radio are used to develop listening, reading and discussion skills.

UNIT V: Project Work

The class works together to write and produce a group project. This class is particularly useful for building confidence in using English and improving pronunciation.

Instruction Hours / week L: 6 T: 2 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To impart knowledge in the concept of research methodology.
- To exhibit in sampling techniques
- To impart student's knowledge in writing a good research report.
- To familiarize students with basic of research and the research process.
- To comprehend the knowledge of social research
- To familiarize the concept of report writing,

COURSE OUTCOMES:
Learners should be able to

1. Understand the concept of research process, research design, sampling techniques
2. Assess the various research tools and techniques in order to facilitate the research work
3. Calculate and apply the measure of central tendency and dispersion in decision making
4. Understand and Exhibit the statistical tools applied in research
5. Analyse the research problem and design the blue print to capture data and analyse the same using appropriate statistical techniques and apply the learning lifelong.
6. Design a report to communicate the findings and suggestion to make business decision

UNIT I
Research - Role of Research indecision making - Applications of Research – Types of Research – The Research process - Steps in the research process - the research proposal – Problem Formulation- Review of Literature - Management decision problem Vs. Marketing Research problem.

UNIT II

Research Design - Exploratory- Descriptive- Causal - Secondary Data Research - Advantages and Disadvantages of Secondary Data - Criteria for evaluating secondary sources - Secondary sources of data - Syndicated Research - Sampling - Sampling techniques - Determination of sample size.

UNIT III

Primary Data Collection - Survey Vs. Observations - Comparison of self administered -telephone - Mail - email techniques. Qualitative Research Tools – Depth Interviews focus groups and projective techniques - Measurement and Scaling – Primary scales of Measurement-Nominal - Ordinal - Interval and Ratio. Scaling techniques paired comparison - Rank order - constant sum - Semantic differential - Itemized rating -Likert Scale – Questionnaire.

UNIT IV

Hypothesis - Meaning - Sources Types - Formulation - Data Analysis -Z test (mean, diff. of mean, diff. of proportion) - t-test (mean) - Paired t-test - Chi square test -Introduction to theoretical concept of ANOVA - Factor Analysis and Discriminant Analysis.

UNIT V

Interpretation - Meaning - Techniques of Interpretation - Report writing - Significance - Report Writing - Steps in Report Writing - Layout of report - Types of Reports - Oral Presentation - Executive Summary - Mechanics of Writing Research Report - Precautions for Writing Report - Norms for using Tables - Charts - and Diagrams - Appendix - Norms for using Index and Bibliography.

BBA **2016 - 2017**
Semester - IV

		L	T	P	C
16BAU402	**CORE -HUMAN RESOURCE MANAGEMENT**	**8**	**-**	**-**	**6**

Instruction Hours / week L: 6 T: 2 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To exhibit knowledge in the functions of personnel management
- To compose the wage and salary administration and trade union
- To realize the importance of groups and teamwork and managing of conflict between the members of the organization
- To apply the understanding of Human Resource Management, Human Resource Planning, Recruitment, performance appraisal and employee relations in lifelong practice.
- To understand and apply wage and salary principles and policies
- To gain knowledge on induction and training and Development

COURSE OUTCOMES:

Learners should be able to

1. Understand the roles and responsibilities of HR professionals, the primary functional aspect of the broader business strategy.
2. Gain familiarity on manpower planning, performance appraisal and industrial relations.
3. Analyse the case studies, HR process and apply the theoretical learning into lifelong practice.
4. Critically evaluate the appropriate alternatives methods for HR practices and select the best methods suiting the situation.
5. Communicate in oral and written form and prepare report
6. Exhibit the knowledge of Human Resource Strategy and Planning

UNIT I

Human Resource Management - Concept - Functions- Roles -Skills and competencies - HRD- Definition -Goals and challenges - The changing environment of HRM -Globalization - Cultural Environment - Technological advances - Workforce Diversity - Corporate Downsizing - Changing skill requirement - HRM support for improvement programs Work life balance - HR role in strategy formulation and gaining competitive advantage - HRM issues in Indian Organizations.

UNIT II
Human Resource Planning - Process - Forecasting demand and supply - Skill inventories Human Resource Information System (HRIS) succession planning - Job analysis - Uses, methods, Job description and Job specifications - HR accounting and Human Resource Development (HRD) audit concept. Recruitment, Selection and Orientation - Internal and External sources, E- recruitment - Selection process - Orientation process.

UNIT III
Training - Concept - Needs - Systematic approach to training - Methods of training -Management Development - Concept and Methods - Performance Management System -Performance Appraisal - Performance Management Methods -Factors that Distort appraisal - Appraisal Interview.

UNIT IV
Career Planning - Career Anchors - Career Life Stages -Compensation - Steps of determining compensation - Job evaluation -Components of pay structure - Factors influencing compensation levels - Wage differentials and incentives – Profit sharing -Gain sharing -Employees' stock option plans -Social Security -Health -Retirement - other benefits.

UNIT V
Industrial Relations - Introduction to Industrial Relations - Trade unions role -Types -Functions - Problems - Industrial dispute - Concept - Causes and Machinery for settlement of disputes - Grievance, Concepts, Causes and grievance redressal machinery – Discipline concept, aspect of discipline and disciplinary procedure, Collective Bargaining - Concept -Types, Process- Problems - Essentials of Effective Collective Bargaining.

Instruction Hours / week L: 3 T: 0 P : 0 **Marks: Internal: 40 External: 60 Total: 100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES :

To make the students

- To compose the knowledge in the fundamental concepts of E-Commerce
- To examine various concepts regarding Business-to-Business Model
- To realize the importance of CRM in E commerce
- To gain knowledge of various types of E commerce
- To aware the technological developments of Ecommerce
- To gain knowledge of E Retailing

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept of electronic commerce and B2B Model
2. Analyze the applications of intranet and extranet and electronic marketing.
3. The underlying used technologies with emphasis on Internet Technologies
4. Demonstrate the knowledge of different types of E commerce
5. Exhibit the knowledge of Internet marketing techniques
6. Apply the understanding of Business to Business e-commerce

UNIT I

Introduction to e-commerce - Meaning -Concept of e-commerce -e-commerce Vs e-business - Advantages and Disadvantages of e-commerce-Value chain in e-commerce -Porter's value chain model - Competitive advantage and competitive strategy –Different types of e-commerce like B2B - B2C - C2C - C2B -G2C.

UNIT II

Technology in e-commerce - An overview of the internet - Basic network architecture and the layered model -Internet architecture -Network hardware and software considerations -Intranets and extranets - The making of world wide web -Web system architecture - ISP -URL's and HTTP -Cookies.

UNIT III

Building and Hosting website - Choosing an ISP - Registering a domain name – Web promotion - Internet marketing techniques - e-cycle of internet marketing -Personalization -Mobile agents - Tracking customers - Customer service - CRM and E-value - Web page design using HTML and CSS - Overview of HTML -Basic structure of an HTML document -Basic text formatting- Links - Images- Tables - Frames - Form and introduction to CSS.

UNIT IV

Security Threats - Security in cyberspace - Kinds of threats and crimes - Client threat - Communication channel threat - Server threat - Other programming threats - Frauds and Scams Basic cryptography for enabling security in e-commerce -Encryption - Public and Private key encryption - Authentication and trust using digital signature and digital certificates -Internet security using VPN –Firewalls – SSL -Internet payment systems - Features of payment methods - 4C payment methods –Electronic money - ACID and ICES test - Payment gateway - SET protocol for credit card payment -Electronic payment media - e-cash and e-wallet - E-check, Credit card - Debit card - Smartcard - EFT and ACH

UNIT V

Business to Business e-commerce - Meaning - Benefits and opportunities in B2B, B2Bbuilding blocks and their relationship to supply chain management - Key B2B models and their main functions, EDI as a B2B tool -Consumer oriented e-commerce: traditional retailing and e-retailing - Benefits and key success factors for e-retailing - Models for e-retailing like specialized and generalized e-stores -e-mall - Direct selling by manufacturer -Supplementary distribution channel - e-broker and e-services like web-enabling services - Matchmaking services -Information selling on the web -Entertainment services and auction services -e-core values - ethical issues - Legal issues - Taxation issues and international issues.

BBA **2016 - 2017**
Semester - V

16BAU503A	**SEC – 3 TAXATION - I**	**L T P C** **6 - - 4**

Instruction Hours / week L: 5 T: 1 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES :

To make the students

- To interpret the knowledge in direct tax
- To familiarize the concept of Income tax law
- To infer the concepts of tax authorities
- To gain knowledge of GST
- To aware of income tax authorities
- To gain knowledge of procedures for collection of tax

COURSE OUTCOMES:

Learners should be able to

1. Understand the income tax laws in India and be able to do tax planning.
2. Interpret and exhibit the assessment procedure of individuals and computation of tax liability.
3. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee

4. Comprehend on the assessment of the GST
5. Communicate orally and in written form the income tax, GST and customs law and computations of IT.
6. Understand with the laws pertaining to the Income Tax and apply it lifelong.

UNIT I

Income Tax Act - Definition - Income - Agricultural Income - Assessee - Previous year - Assessment year - Residential status - Scope of Total Income - Exempted Incomes -Heads of income.

UNIT II

Computation of Income from Salaries - Allowances -Perquisites - Deductions out of gross salary - Income from House Property - Annual value - Net annual value.

UNIT III

Computation of Profits and Gains of Business or Profession - Capital Gain- Long term Capital Gain - Short term Capital Gain - Exempted Capital Gain.

UNIT IV

Computation of Income from other sources - Set-Off and Carry Forward of Losses - Deduction from Gross Total Income - Assessment of Individuals

UNIT V

Income Tax Authorities - Procedures for assessment - Collection of Tax

Note: Theory and problems shall be distributed at 40% and 60% respectively.

16BAU504B GE-1 PRODUCTION AND OPERATIONS MANAGEMENT

L	T	P	C
8	-	-	6

Instruction Hours / week L: 6 T: 2 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

To make the students

- To understand the concepts and functions of production and operations management
- To impart the knowledge in the concept of inventory
- To develop the knowledge in purchase procedure and quality control
- To be aware of technological **practices** and relevant social issues
- To gain knowledge of applying a quality management TQM tools to improve organizational effectiveness
- To acquire knowledge on methods of production and operations management

COURSE OUTCOMES

Learners should be able to

1. Analyze the entire process of manufacturing a product or a service
2. Understand the concept of optimum utilization of resources and minimization of cost
3. Exhibit and Understand the materials management, concept of inventory and quality control.
4. Critically evaluate the project completion cycle using operation techniques and solve the

problem.
5. formulate the production planning and control systems and ensure efficient scheduling for production
6. Obtain the knowledge of applying a quality management TQM tools to improve organizational effectiveness.

UNIT I

Introduction to Production and Operations Management – Definition - Need - Responsibilities -Key decisions of OM -Goods Vs. Services - Operations as a key functional area in an organization - Operation Strategies-Definition- Relevance - Strategy formulation process - Order qualifying and order winning attribute. Maintenance Management - Need of maintenance management - Equipment life cycle(Bathtub curve) - Measures for maintenance performance (MTBF, MTTR and availability) -Lean production - Definition of lean production - Lean Demand Pull logic - Waste in operations - Elements that address elimination of waste - 2 card Kanban Production Control system.

UNIT II

Forecasting - Definition - Types - Qualitative (grass roots, market research and Delphi method) and quantitative approach (simple moving average method, weighted moving average and single exponential smoothing method) - Forecast error - MAD -Scheduling - Operation scheduling - Goals of short term scheduling - Job sequencing (FCFS,SPT, EDD, LPT, CR) and Johnson's rule on two machines - Gantt charts.

UNIT III

Process Selection - Definition - Characteristics that influence the choice of alternative processes (volume and variety) - Type of processes - Job shop - Batch - Mass and Continuous -Product-Process Design Matrix and Services Design Matrix -Technology issues in process design - Flexible Manufacturing Systems (FMS) - Computer Integrated Manufacturing(CIM).

UNIT IV

Layout Decision - Layout planning - Benefits of good layout -Importance - Different types of layouts (Process, Product, Group technology and Fixed position layout). Assembly line balancing by using LOT rule - Location Decisions and Models - Facility Location -Objective - Factors that influence location decision -Location evaluation methods – Factor Rating Method. Capacity Planning - Definition - Measures of capacity (input and output) - Types of planning over time horizon - Decision Tree Analysis.

UNIT V

Aggregate Planning - Definition- Nature - Strategies of aggregate planning - Methods of aggregate planning - Statistical Quality control - Variations in process- Control charts - Total Quality Management - Total Productive Maintenance - KAIZEN Concept

Instruction Hours / week L: 6 T: 2 P : 0 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

To make the students

- To acquire the knowledge in the concepts and functions of HRD
- To identify the principles and practices of developing human resources
- To access the qualities of HR manager
- To gain knowledge of implementation of HR
- To be aware of International HRM
- To comprehend knowledge of HR Audit

COURSE OUTCOMES

To learn the students

1. Exhibit the role of and effectiveness of HR
2. Understand the emerging trends in HRD

3. Analyze the HR experiences in India
4. Collaborate with others, in the development, implementation, and evaluation of organizational and health and safety policies and practices.
5. Research and analyze information needs and apply current and emerging information technologies to support the human resources function.
6. Develop, implement, and evaluate organizational development strategies aimed at promoting organizational effectiveness.

UNIT I

Human Resource Development (HRD) - Concept - Origin and Need -Relationship between human resource management and human resource development -HRD as a Total System - Activity Areas of HRD - Training - Education and Development -Roles and competencies of HRD professionals.

UNIT II

HRD Process - Assessing need for HRD - Designing and developing effective HRD programs - Implementing HRD programs - Evaluating HRD programs.

UNIT III

HRD Interventions - Integrated Human Resource Development Systems -Staffing for HRD - Physical and Financial Resources for HRD - HRD and diversity management - HRD Climate - HRD Audit.

UNIT IV

HRD Applications - Coaching and mentoring - Career management and development - Employee counselling - Competency mapping - High Performance Work Systems - Balanced Score Card - Appreciative inquiry - Integrating HRD with technology.

UNIT V

Evaluating the HRD Effort - Data Gathering - Analysis and Feedback -Industrial relations and HRD - HRD Experience in Indian Organizations – International HRD experience - Future of HRD.

COURSE OBJECTIVES

To make the students

- To interpret the strategic principles and practice
- To impart knowledge in culture and strategic advantages
- To access the concept of core competency
- To be aware of Strategy formulation process and frameworks
- To demonstrate the knowledge and abilities in formulating strategies and strategic plans
- To gain knowledge of practical and integrative model of strategic management

COURSE OUTCOMES

Learners should be able to

1. Understand the strategic decisions that organisations make and have an ability to engage in strategic planning.
2. Exhibit the strategic management practices used by top management
3. Analyze the matrix in strategic management
4. Impart and implement strategic principles and practice
5. Exhibit the basic concepts, principles and practices associated with strategy formulation and implementation
5. Understand the principles of strategy. formulation, implementation and control in organizations.

UNIT I

Introduction-concept of Strategy - Need - Dimensions - Strategic Planning – Process- Benefits - McKinsey's 7S Model - Strategic vision - Corporate Mission - Objectives - Goals - Social Responsibility - Business ethics - Linking Strategies with ethics - Social audit.

UNIT II

Environmental analysis - Need - Scanning - Approaches - Forecasting - Techniques - Internal Analysis - Need - SWOT analysis - Value Chain - Functional Analysis - Grid approach - Criteria for evaluating internal capabilities.

UNIT III

Strategic Decision Framework - Developing alternatives - Strategy Options - Diversification strategies - Retrenchment Strategy - Factors Influencing Strategy - generic strategy - Cultural context of strategy - Comparing alternatives - BCG Model.

UNIT IV

Implementation - Role of top management - Process - Matching Structure of Strategy - Resource allocation - Planning and Controlling system. Evaluation - Criteria - Quantitative and Qualitative factors - Feedback and Information - Industry attractiveness - Application of 9 Cell Matrix.

UNIT V

Core Competencies - Building core competencies - Building Strategic Supportive Corporate Culture Strategic advantage - Managing Strategic Change - Strategic Change Process -Diagnosing change need.

COURSE OBJECTIVES:

- To make the students
- To identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
- To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
- To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
- To apply the theoretical and practical learning of doing research into lifelong practice.
- To Communicate in oral and written form and prepare report
- To Work in team and exhibit leadership skills
- To utilize the IT application for analysis and preparation of report.

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills
7. Utilize the IT application for analysis and preparation of report.

The students should select a problem in Accounting, Finance, Marketing, Human Resource Management, international business or any other areas.

Report should contain

- Introduction
  - Introduction about the industry
  - Introduction about the Company
  - Review of literature – Minimum 10 papers from referred journal
  - Need for the Study
  - Objectives
- Research Methodology
  - Research Design
  - Sampling Design
  - Sources of Data Collection
  - Tools used for analysis
  - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion

KARPAGAM UNIVERSITY

Karpagam Academy of Higher Education

(Deemed University Established under Section 3 of UGC Act, 1956)

Coimbatore - 641 021, INDIA

FACULTY OF ARTS, SCIENCE AND HUMANITIES

MBA DEGREE PROGRAMME

REGULAR PROGRAMME
REGULATIONS 2016
CHOICE BASED CREDIT SYSTEM (CBCS)

The following Regulations are effective from the academic year 2016-2017 and are applicable to the students admitted in MBA programme in the Faculty of Arts, Science, and Humanities, Karpagam University from the academic year 2016 – 2017 onwards.

1. ELIGIBILITY FOR ADMISSION TO THE PROGRAM

Candidates who have passed the Undergraduate Degree Examination of this University or an examination of any other University recognized by the Karpagam University as equivalent thereto are eligible for admission to Post-Graduate degree in Management (**MBA).**

2. DURATION OF THE PROGRAM

The minimum duration of a regular MBA program is two years and its maximum duration is four years. Each academic year shall be divided into two semesters, the First and Third semesters from July to November and the Second and Fourth semester from December to April. Each semester shall have 90 working days (6 Hrs / Day) or 540 hours.

3. MEDIUM OF INSTRUCTION

The medium of instruction for all courses, examinations, seminars, presentations and project/reports shall be in English.

4. CREDITS

The prescribed credits required for the award of MBA degree shall be 104.

5. STRUCTURE OF THE PROGRAM

The program consist of Core, Elective, Summer Internship, Project (Major) and Industrial Visits/Field Visits/Out Bound Training.

- **a. Core**

  Core consists of thirteen theory courses and two practical courses.

- **b. Elective**

- Specializations are offered in ten functional areas.
- They are Finance, Marketing, Human Resources, Systems, Entrepreneurship, Banking Management, Retail Management, International Business, Production Management and Insurance Management.
- A candidate has to select any two specialization of his/her choice.
- Each specialization consists of three electives each in third semester andfourth semester respectively.
- A candidate has to select two electives in the third and fourth semester.

c. Summer Internship

During second semester vacation each student shall undertake a Summer Internship for 30 Days. The summer internship may be a general study of all functional areas of a company or may be a functional focus on a specialized functional area of management in a company. The students shall bring the attendance certificate from the company. He /She shall also submit a detailed report for *Viva-voce* Examination.

d. Project Work (Major)

Candidates shall undergo for a Project work for a period of 25 working days during the IV semester. On completion of the project work he/she shall submit the report to the Head of the Department. The candidate shall bring the attendance certificate from the place of project work carried out. The Project Report prepared according to approved guidelinesand duly signed by the supervisor(s) shall be submitted to HoD for *Viva Voce* Exam. The report should be well documented as per the following approved guidelines,

1. Cover & Title Page
2. Certificate, Company Certificate and Declaration
3. Acknowledgement
4. List of Contents, List of Tables and List of Charts
5. Introduction of the Study
6. Review of Literature
7. Research Methodology
8. Data Analysis and Interpretation
9. Findings, Suggestions & Conclusion
10. Bibliography and Appendix

e. Industrial Visits / Field Visits/Out Bound Training

The students shall undertake Industrial Visits / Field Visits/ Out Bound Training duringFirst, Second and Third semesters respectively.

6. MAXIMUM MARKS

The maximummarks assigned to different courses shall be as follows:

Each of the theory and practical courses shall carry a maximum of 100 marks. Out of which 40 marks is for Continuous Internal Assessment (CIA) and 60 marks for End Semester Examinations (ESE).

7. REQUIREMENTS TO APPEAR FOR THE END SEMESTER EXAMINATION (ESE)

Attendance shall be considered semester wise pattern (Not annually).

a. Ideally every student is expected to attend all classes and secure 100% attendance. However, in order to allow for certain unavoidable circumstances, the student is expected to attend at least 75% of the classes and the conduct of the candidate has been satisfactory during the course.

b. A candidate who has secured attendance between 65% and 74% (both included), due to medical reasons (Hospitalization / Accident / Specific Illness) or due to participation in University / District / State / National / International level sports or due to participation in Seminar / Conference / Workshop /Training Programme / Voluntary Service / Extension activities or similar programmeswith prior permission from the Registrar shall be given exemption from prescribed attendance requirements and shall be permitted to appear for the examination on the recommendation of the Head of the Department concerned and Dean to condone the lack of attendance. The Head of the Department has to verify and certify the genuineness of the case before recommending to the Dean. However, the candidate has to pay the prescribed condonation fee to the University.

c. However, a candidate who has secured attendance less than 64% in the current semester due to any reason shall not be permitted to appear for the current semester examinations. But he/she will be permitted to appear for his/her supplementary examinations, if any and he/she has to re-do the same semester with the approval of the "Students' Affairs Committee" and Registrar.

8. FACULTY TUTOR

To help students in planning their course of study and for general advice on the academic program, the HoD shall allot a certain number of students to a faculty to whom they shall function as faculty tutor throughout their period of study. Faculty tutors shall advise the students and monitor their conduct of behavior and academics. Problems if any, they should be counseled periodically. The Faculty tutor is also responsible to inform the parents of their wards progress. Faculty tutor shall display the cumulative attendance particulars of his / her ward students' periodically (once in 2 weeks) on the Notice Board to enable the students to know their attendance status and satisfy the **clause 7** of this regulation.

9. CLASS COMMITTEE

Every class shall have a class committee consisting of teachers of the class concerned, student representatives (Minimum 2 boys and 2 girls of various capabilities and Maximum of 6 members) and the concerned HoD / senior faculty as a Chairperson. The objective of the Class Committee Meeting is to improve the teaching – learning process. Class committee may be convened at least once in a month. The functions of the class committee include

- Analyzing and solving problems experienced by students in the class room and in the laboratories.
- Analyzing the performance of the students of the class after each test and finding the ways and means to improve the performance.
- The class committee of a particular class of any department is normally constituted by the HoD / Chairperson of the class committee. However, if the students of different departments are mixed in a class, the class committee is to be constituted by the respective Faculty Dean.
- The class committee shall be constituted within the first week of each semester.
- The HoD/ Chairperson of the class committee may convene the meeting of the class committee.
- The respective Faculty Dean may participate in any class committee meeting.
- The Chairperson is required to prepare the minutes of every meeting, and submit the same to Dean within two days after having convened the meeting. Serious issues if any shall be brought to the notice of the Registrar by the HoD / Chairperson.

10. CONTINUOUS INTERNAL ASSESSMENT (CIA)

CIA: The performance of students in each course will be continuously assessed by the respective faculty as per the guidelines given below:

Theory Courses:

S. No.	Category	Maximum Marks
1.	Attendance	5
2.	Test – I (First 2 ½ units)	10

3.	Test – II (Last 2 ½ units)	10
4.	One Journal PaperPresentation*	15
Continuous Internal Assessment : Total		40

***TheJournal Paper Presentation Evaluation comprises of Subject Matter = 5 marks, Presentation = 4 marks, Visual Aids = 2 marks, Question and Discussion = 4 Marks.

Pattern of CIA Question Paper:

Instruction	**Remarks**
Maximum Marks	50 Marks for all Courses.
Duration	2 hrs
Part - A	15 One mark Questions (**15 x 1 = 15 Marks**) Question No. 1 to 15 Multiple Choice Questions
Part- B	3 Eight mark Questions **(3 x 8 = 24 Marks)** Question No. 16 to 18 will be **'either-or'** type, Question No. 16: either 16 (a) or 16 (b), Question No. 17: either 17 (a) or 17 (b), Question No. 18: either 18 (a) or 18 (b)
Part- C Compulsory	One Eleven mark Question **(1 x 11 = 11 Marks)** Question No.19: **Case Study**

Practical Courses:

S. No	**Category**	**Maximum Marks**
1.	Attendance	5
2.	Observation work	5
3.	Record work	5
4.	Model Examination	20
5.	Viva – voce Examination	5
Continuous Internal Assessment: Total		**40**

Mark Distribution for Attendance

S. No.	**Attendance %**	**Maximum Marks**
1	91 and above	5.0
2	86 – 90	4.0
3	81 – 85	3.0
4	75 - 80	2.0
5	Less than 75	0

11. END SEMESTER EXAMINATIONS (ESE)

ESE will be held at the end of each semester for each course. The question paper is for a maximum of 60 marks.

Pattern of ESE Question Paper:

Instruction	Remarks (with online)
Maximum Marks	60Marks
Duration	½ Hr for Online & 2 ½ Hours ESE
Part - A	20 One mark Questions (**20x 1 = 20 Marks**) Question No. 1 to 20 Online Multiple Choice Questions
Part- B	5 Two mark Questions **(5 x 2 =10 Marks)** Question No. 21 to 25 will be compulsory questions, covering all five units of the syllabus; i.e., Question No. 21: Unit - I, Question No. 22: Unit - II, Question No. 23: Unit - III, Question No. 24: Unit - IV, Question No. 25: Unit – V.
Part- C	4Five mark Questions **(4 x 5 =20 Marks)** Question No. 26 to 29 will be '**either-or'** type, one Question each from any four units of the syllabus; i.e., Question No. 26: either 26 (a) or 26 (b), Question No. 27: either 27 (a) or 27 (b), Question No. 28: either 28 (a) or 28 (b), Question No. 29: either 29 (a) or 29 (b)
Part- D Compulsory	One Ten mark Question **(1 x 10 = 10 Marks)** Question No.30: **Case Study**from the remaining one unit

a. Practical

The practical examination shall be conducted at the end of each semester. There shall be combined valuation. The pattern of distribution of marks shall be as given below.

Experiments	:	40 Marks
Record	:	10 Marks
Viva-voce	:	10 Marks
Total	**:**	60 Marks

Record Notebooks for Practical Examination

Candidate taking the Practical Examination should submit Bonafide Record Notebook prescribed for the Practical Examination. Otherwise the candidate will not be permitted to take the Practical Examination.

In case of failures in Practical Examination, the marks awarded for the record at the time of first appearance of the Practical Examination should remain the same at the subsequent appearance by the candidate.

c. Summer Internship/Project

The marks awarded for project shall be as follows

Summer Internship: 100 marks (4 credits) comprising of Internal 40 and External 60**.**

Project: 200 marks (6 credits) comprising of Internal 80and External120.

The evaluation of the Summer Internship/Project will be based on the Summer Internship/project report submitted and a *Viva-Voce* Examination by a team consisting of the supervisor, who will be the Internal Examiner and an External Examiner who shall be appointed by the University. In case anyone examiner is not available, the HoD/a Faculty nominated by the HoD shall act as an Examiner.

If a candidate fails to submit the Summer Internship/project report on or before the specified date, candidate is deemed to have failed in the Summer Internship/Project Work and shall re-appear for the same in a subsequent semester. Copy of the approved Summer Internship/project report after the successful completion of viva examinations shall be kept in the University library.

12. PASSING REQUIREMENTS

a) Passing minimum:

- CIA: 20 marks out of 40 marks.
- ESE: 30 marks out of 60 marks.

b) If a candidate fails to secure a pass in a particular course (either CIA or ESE or Both) as per clause 12.a, it is mandatory that the candidate has to register and reappear for the examination in that course during the subsequent semester when examination is conducted for the same till a pass is secured both in CIA and ESE (vide Clause 2).

c) Candidate failed in CIA will be permitted to improve CIA marks in the subsequent semesters by writing tests and by submitting Assignments.

d) CIA marks(if it is pass) obtained by the candidate in the first appearance shall be retained by the Office of the Controller of Examinations and considered valid for all subsequent attempts till the candidate secures a pass in ESE.

e) A candidate who is absent in ESE in a Course / Practical / Project Work after having enrolled for the same shall be considered to have**failed**in that examination.

13. AWARD OF LETTER GRADES

All assessments of a course will be done on absolute marks basis. However, for the purpose of reporting the performance of a candidate, letter grades, each carrying certain number of points, will be awarded as per the range of total marks (out of 100) obtained by the candidate in each course as detailed below:

Letter grade	Marks Range	Grade Point	Description
O	91 - 100	10	OUTSTANDING
A+	81- 90	9	EXCELLENT
A	71-80	8	VERY GOOD
B+	66- 70	7	GOOD
B	61 – 65	6	ABOVE AVERAGE
C	55 - 60	5	AVERAGE
D	50 - 54	4	PASS
RA	<50	-	REAPPEARANCE
AB/AAA		-	ABSENT

14. GRADE SHEET

After the declaration of the results, Grade Sheets will be issued to each student which will contain the following details:

i. The list of courses enrolled during the semester and the corresponding grade scored.

i. The Grade Point Average (**GPA**) for the semester and

iii. The Cumulative Grade Point Average (**CGPA**) of all courses enrolled from first semester onwards.

GPA of a Semester and CGPA of a program will be calculated as follows.

$$\textbf{GPA} \text{ of a Semester} = \frac{\text{Sum of the product of the GP by the corresponding credits of the courses offered in that Semester}}{\text{Sum of the credits of the courses of that Semester}}$$

$$\frac{\sum_i CiGPi}{\sum_i Ci}$$

i.e.**GPA** of a Semester=

CGPAof the entire program = $\dfrac{\text{Sum of the product of the GPs by the corresponding credits of the courses offered for the entire program}}{\text{Sum of the credits of the courses of the entire program}}$

i.e. **CGPA**of the entire program = $\dfrac{\sum_n \sum_i CniGPni}{\sum_n \sum_i Cni}$

where,

Ci is the credit fixed for the course 'i' in any semester
GPi is the grade point obtained for the course 'i' in any semester
'n' refers to the Semester in which such courses are credited

Note: RA grade will be excluded for calculating GPA and CGPA.

15. REVALUATION

Candidate can apply for revaluation and re totaling of his / her semester examination answer script (**theory courses only**), within 2 weeks from the declaration of results, on payment of a prescribed fee. For the same, the prescribed application has to be sent to the Controller of Examinations through the HoD. **A candidate can apply for revaluation of answer scripts not exceeding 5 courses at a time.** The Controller of Examinations will arrange for the revaluation and the results will be intimated to the candidate through the concerned HoD**.** Revaluation is not permitted for supplementary theory courses.

16. TRANSPARENCY AND GRIEVANCE COMMITTEE

Revaluation and Re-totaling is allowed on representation (clause 15).

Student may get the Xerox copy of the answer script on payment of prescribed fee, if he / she wishes. The student may represent the grievance, if any, to the Grievance Committee, which consists of Dean of the Faculty, (if Dean is HoD, the Dean of another Faculty nominated by the University), HoD of the Department concerned, the faculty of the course and Dean from other discipline nominated by the University and the COE. If the Committee feels that the grievance is genuine, the script may be sent for external valuation; the marks awarded by the External examiner will be final. The student has to pay the prescribed fee for the same.

17. ELIGIBILITY FOR THE AWARD OF THE DEGREE

A student shall be declared to be eligible for the conferment of the Degree if he / she hassuccessfully completed all the components in clause 5 and gained the required number of total credits as specified in the curriculum corresponding to his / her Program within the stipulated period.

- No disciplinary action is pending against him / her.
- The award of the degree must be approved by the Board of Management.

18. CLASSIFICATION OF THE DEGREE AWARDED

a) Candidate who qualifies for the award of the Degree (vide clause 18) having passed the examination in all the courses in his / her first appearance, within the specified minimum number of semesters and securing a **CGPA not less than 8.0** shall be declared to have passed the examination in **First Class with Distinction.**

b) Candidate who qualifies for the award of the Degree (vide clause 12) having passed the examination in all the courses within the specified maximum number of semesters (vide clause 2); securing a **CGPA not less than 6.5** shall be declared to have passed the examination in **First Class**.

c) All other candidates (not covered in clauses 18.a and 18.b) who qualify for the award of the degree (vide Clause 17) shall be declared to have passed the examination in **Second Class**.

19. PROVISION FOR WITHDRAWAL FROM END-SEMESTER EXAMINATION

a) A candidate, may for valid reasons and on prior application, be granted permission to withdraw from appearing for the examination of any one course or consecutive examinations of more than one course in a semester examination.

b) Such withdrawal shall be permitted only once during the entire period of study of the degree program.

c) Withdrawal of application is valid only if it is made within 10 days prior to the commencement of the examination in that course or courses and recommended by the HoD/ Dean concerned and approved by the Registrar.

d) Notwithstanding the requirement of mandatory TEN days notice, applications for withdrawal for special cases under extraordinary conditions will be considered on the merits of the case.

e) Withdrawal shall not be construed as an appearance for the eligibility of a candidate for First Class with Distinction. This provision is not applicable to those who seek withdrawal during IV semester.

f) Withdrawal from the End semester examination is **NOT** applicable to arrears subjects of previous semesters.

g) The candidate shall reappear for the withdrawn courses during the examination conducted in the subsequent semester.

20. PROVISION FOR AUTHORIZED BREAK OF STUDY

a)Break of Study shall be granted only once for valid reasons for a maximum of one year during the entire period of study of the degree program. However, in extraordinary situation the candidate may apply for additional break of study not exceeding another one year by paying prescribed fee for the break of study. If a candidate intends to temporarily discontinue the program in the middle of the semester for valid reasons, and to rejoin the program in a subsequent year, permission may be granted based on the merits of the case provided he / she applies to the Registrar, but not later than the last date for registering for the end semester examination of the semester in question, through the HoD stating the reasons therefore and the probable date of rejoining the program.

b) The candidate thus permitted to rejoin the Program after the break shall be governed by the Curriculum and Regulations in force at the time of rejoining. Such candidates may have to do additional courses as per the Regulations in force at that period of time.

c) The authorized break of study (for a maximum of one year) will not be counted for the duration specified for passing all the courses for the purpose of classification. (Vide Clause 18). However, additional break of study granted will be counted for the purpose of classification.

d) The total period for completion of the Programme reckoned from, the commencement of the first semester to which the candidate was admitted shall not exceed the maximum period specified in clause 2 irrespective of the period of break of study (vide clause 20.c) in order that he/she may be eligible for the award of the degree.

e) If any student is detained for want of requisite attendance, progress and good conduct, the period spent in that semester shall not be considered as permitted ‘Break of Study’ or ‘Withdrawal’ (Clause 19 and 20) is not applicable for this case.

21. RANKING

A candidate who qualifies for the PG Degree program passing all the Examinations in the first attempt, within the minimum period prescribed for the program of study from Semester I through Semester IV to the program shall be eligible for ranking. Such ranking will be confined to 10% of the total number of candidates qualified in that particular program of Study subject to a maximum of 10 ranks.

22. SUPPLEMENTARY EXAMINATION

Supplementary Examination will be conducted only for the final semester students within ten days from the date of publication of results for students who have failed in one theory course only. Such students shall apply with prescribed fee to the Controller of Examinations within the stipulated time.

23. DISCIPLINE

a) Every student is required to observe disciplined and decorous behavior both inside and outside the campus and not to indulge in any activity which will tend to bring down the prestige of the University. The erring students will be referred to the disciplinary committee constituted by the University, to enquire into acts of indiscipline and recommend the University about the disciplinary action to be taken.

b) If a student indulges in malpractice in any of the University / Internal Examination he / she shall be liable for punitive action as prescribed by the university from time to time.

24. REVISION OF REGULATIONS AND CURRICULUM

The university may revise, amend or change the Regulations and Scheme of Examination, if found necessary.

PREAMBLE

Karpagam University (earlier known as Karpagam Arts and Science College) was established in the year 1995 with an objective to impart students in the latest theories and technologies and mould the students into a complete citizen in order to face the outside world. The University is approved by the University Grants Commission, New Delhi as a Deemed University from the year 2008. It is blossomed into an institution at par of excellence in the education hub of Coimbatore. It is located in a congenial atmosphere, about 10 km away from Coimbatore city in a sprawling campus on the Coimbatore – Pollachi main road at Eachanari.

The Department of Management Studies and Research was the first Post –Graduate course started by the institution in the year 1996. It is offering two year full time MBA programme leading to a Master’s degree in Management Studies, along with M.Phil and Ph.Dprogrammes leading to a Research Degree. The Department has an exclusive facility which is endowed with excellent infrastructure and a dedicated team of faculty members in order to train the students to meet the growing needs of the society. The Department follows a Multidisciplinary approach to provide the necessary knowledge, skill and training to the students. The activities of the school are directed towards the all round development of the individual keeping in mind the expectations of the recruiters and the challenges of the environment.

OBJECTIVE OF THE PROGRAMME:

- To build in the skills necessary for the potential managers in all the functional areas of management and to create an exposure to the latest management concepts.
- To provide an integrated approach to problem solving and decision making.
- To mould the personality of the young minds.
- To inculcate good business practices
- To expose the students to the diverse knowledge in the business environment.
- To promote the spirit of entrepreneurship among the participants.

Today the demand for business managers and leaders who can lead the business to the forefront in the competitive environment is high. Our Department fosters the knowledge and skills of the students in preparing them to face the challenges of the competitive environment and succeed, which gives them the critical edge among competition. Our challenge is to inspire and motivate the students to enable them in achieving their goals both personal and professional.

* The internal evaluation for Management Practice and Communication Practice shall be as follows:

- Attendance = 5 marks
- Activity/Seminar = 45 marks (15 marks for Unit I, 15 Marks for Unit II and 15 Marks for Unit III. Activity/seminar will be conducted at end of each Unit)

**The internal evaluation for Article Re-presentation (Total 15 marks for each course) shall be as follows:

- Subject matter = 05 marks
- Presentation = 04 marks
- Visual aids = 02 marks
- Question & Discussions = 04 marks

+**Electives:** Students can opt for two specializations out of ten specializations and two elective courses out of three elective courses in each specialization.

*The internal evaluation of **Summer Internship& Viva voce** shall be as follows:

- Model Viva-voce = 10 marks
- Project Record = 10 marks
- Viva voce Examination (internal examiner) = 20 marks

*The internal evaluation of **Major Project & Viva voce** shall be as follows:

- Review 1 (PPT Presentation) = 15 marks
- Review 2 (PPT Presentation) = 15 marks
- Model Viva-voce = 20 marks
- Project Record = 10 marks
- Viva voce Examination (internal examiner) = 20 marks

KARPAGAM ACADEMY OF HIGHER EDUCATION
(Deemed to be University)
(Established under section 3 of UGC Act, 1956)

Programme Outcomes (POs)

Graduates of the MBA programme will be able to:

a. Understanding the management and domain concepts and apply them to achieve business environmental solutions.
b. Demonstrate the ability to apply multiple theoretical perspectives to address complex managerial issues required for effective problem solving and decision making in contemporary organizational environment.
c. Possess the skills required to work individually and lead effectively in a team-based environment.
d. Recognize the values and ways to identify and resolve ethical issues and apply them in organizational settings
e. Evaluate the implications of changing environmental factors on organizational choices within a global environment
f. Ability to effectively communicate, persuade and strategically engage diverse stakeholders within a business environment.

PROGRAMME SPECIFIC OUTCOMES (PSO)

g. Postgraduates will develop critical thinking and conceptualization of functional knowledge of management
h. Able to accept various responsibilities and exhibit high level of commitment to complete on time.
i. Ability to organize events individually / team and can show creativity and unique ideas in every business solutions

Programme Educational Objectives (PEOs)

I. To develop professional skills for life-long learning in areas of management and related fields.
II. To enable students to acquire proficiency, a sense of professionalism, integrity and team spirit to work in diverse environments.
III. To develop capabilities in students to independently conduct theoretical as well as applied research.
IV. To develop sound knowledge and skill to become an intrapreneur/entrepreneur and to inculcate creativity and innovation among students
V. To adapt to a rapidly changing environment with learned and applied new skills and become socially responsible and value driven citizens committed to sustainable development.

16MBAP101 MANAGEMENT PRINCIPLES & ORGANIZATIONAL BEHAVIOUR 4 0 0 4

Course Objectives:

- Familiar with basic concepts of management in an organizational context and application of these concepts to managerial problems
- Understand the manpower planning and motivation techniques used in organizations.
- To study the system and process of effective controlling in the organization.
- The focus of this course is to make students recognizes human behavior in an organizational context.
- To have critical understanding of organisational behaviour theories.
- It will provide an understanding of the concepts of organizational functioning and human behavior with an emphasis on the application of these concepts to managerial problems.

Course Outcomes (Cos):

1. It helps the students to classify how the managerial tasks of planning, organizing, and controlling can be executed in a variety of circumstances.
2. Determine the most effective action to solve specific situations.
3. Evaluate approaches to addressing issues of diversity.
4. The students will understand to communicate effectively in oral and written forms about organizational behavior theories.
5. To understand the application of OB using appropriate concepts, logic and rhetorical conventions.
6. To analysis functional issues and formulate best solutions

Unit I

Management Overview – Evolution of Management- Functions - Characteristics and importance of management - Management Vs Administration - Role of manager –Planning - Meaning- Steps in planning- objectives - Management by Objectives.

Unit II

Decision making: Meaning, process. Organization – Departmentalization - Manpower planning- Recruitment and selection process, Placement and Orientation- Directing – Motivation Theories.Control – Need, process, steps in control.

Unit III

Organization Behavior: Meaning and definition - Fundamental concepts of OB -Contributing disciplines to the OB- Learning – Theories of Learning - Personality – Determinants of personality- Theories of Personality - psycho-analytical, social learning, job-fit, and trait theories.

Unit IV

Perception – factors influencing perception– Attribution Theory – Frequently Used Shortcuts in Judging Others- Perceptual Process- Organization Errors of perception - Attitudes –Types of attitudes- Functions of Attitudes. Values – Types of Values- Value across Cultures –Groups - Stages of Group Development- Group Norms- Group Cohesiveness.

Unit V

Conflict – Meaning – Functional vs. Dysfunctional Conflict- Levels of Conflict – Conflict Management. Stress – Causes of stress – Effects of Occupational Stress- Coping Strategies for Stress. Organizational change - Forces for change - Resistance to change- Overcoming resistance to change.

16 MBAP102 MANAGERIAL ECONOMICS 4 0 0 4

Course Objectives:

- To illustrate the application of economic theory and methodology as an alternative in managerial decisions.
- To understand the demand behavior and estimate demand
- To gain knowledge on the production functions, economies of scale and cost functions
- To gain a rigorous understanding of competitive markets as well as alternative market structures.
- To understand the forces determining macroeconomic variables such as inflation, unemployment, interest rates, and the exchange rate.
- To obtain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payments.

Course Outcomes (Cos):

1. Apply the economic way of thinking to individual decisions and business decisions
2. Measure the responsiveness of consumers' demand to changes in the price of a goods or service, and understand how prices get determined in markets,
3. Evaluate the different costs of production and how they affect short and long run decisions and derive the equilibrium conditions for cost minimization and profit maximization
4. Design competition strategies, including cost, pricing, and market environment according to the structure of the markets.
5. Critically evaluate the consequences of basic macroeconomic policy options under differing economic conditions within a business cycle.
6. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run.

Unit I

Managerial Economics - meaning, nature and scope - Managerial Economics and business decision making – Role and responsibilities of Managerial Economist - Fundamental concepts in Managerial Economics. Objectives of Business Firms - Determinants and types of demand - Elasticity of demand - Demand Forecasting, Applications.

Unit II

Production and Costs Analysis : Production Function –Cobb-Douglas function - Law of Diminishing returns- Law of variable proportions - Isoquants, - Law of Supply and Elasticity of Supply, Economies and Diseconomies of scale – Cost – Concepts – Determinants - cost curves – Revenue – concepts – revenue functions - Break Even Analysis.

Unit III

Product markets - Market Structure - Pricing under different markets- Perfect competition, Monopoly, Duopoly, Monopolistic competition, Oligopoly - Pricing in Public Sector Undertakings.

Unit IV

Factor markets and Factors Prices - Pricing decisions – input pricing - wages, interest, rent and profit - Cost Benefit Analysis.

Unit V

Government and Business - Need for Government intervention in the market – Monetary and Fiscal policy- Prevention and control of monopoly - National Income – Methods - Trade Cycles- Economic Liberalization and Business Trends

16MBAP103 LEGAL ASPECTS OF BUSINESS 4 0 0 4

Course Objectives:

- To make the students understand the basics of legal concept and environment in which the present day business is carried.
- To provide an overview of important laws that have a bearing on the conduct of business in India
- To acquaint students with the functioning of negotiable instruments
- Understand the legal structure of factories act of business organizations and their impact on the employee
- To acquire knowledge of income tax act and GST and its applications in business
- To understand the existing law and practice relating to consumer protection act

Course Outcomes (Cos):

1. Analyze the nature of contract law, Company law and cyber laws and its application in business.
2. Appreciate the overall legal framework within which business activities are carried out.
3. Assess the legal forms of business organization and its modus operandi.
4. Recognize the application of factories act and wages act in business scenario.
5. Understand and apply the concept and laws pertaining to income tax, value added tax, and GST and evaluate its impact on business and social environment.
6. To illustrate the consumer legislations towards consumer protection and Environment protection

Unit 1:

Indian Contract Act – Contract – Offer and Acceptance – Capacity of Contract – Consideration - Free Consent – Performance and Discharge of Contract – Contract of Agency –Negotiable Instruments - Types of Negotiable Instruments.

Unit II:

Companies Act – Nature and Kinds of Companies Act – Memorandum of Association – Articles of Association – Prospectus – Types of Meetings – Winding Up of Company.

Unit III:

Industrial Law – Factories Act – Workmen Compensation Act – ESI Act – Payment of Wages Act – Trade Union Act.

Unit IV:

Income Tax Act - Overview of IT Act – Structure of IT Department –Corporate Tax Planning - Value Added Tax –GST.

Unit V:

Law Related To General Public-Consumer Protection Act -Information Technology Act - Right to Information Act – Environmental (Protection) Act.

Suggested Readings:

Text Books:

1. Kapoor, N.D. (2014). *Elements of Mercantile Law*. New Delhi: Sultan Chand & Sons.
2. Kubendran, V. (2014).*Legal Aspects of Business.* Bangalore: SciTech Publications.

References:

16MBAP104 ACCOUNTING FOR MANAGERS 4 1 0 4

Course Objectives:

- To understand the financial accounting standards, conventions and principles in preparation of financial reports
- To understand the tools and techniques used for analyzing the financial statements.
- To recognize the cost concepts and prepare cost sheets.
- Calculate and analyse the cash flow operations with available inputs.
- To know various tools from accounting this would facilitate the decision making
- To develop analytical abilities to face the business situations

Course Outcomes (Cos):

1. Student will be able to understand and apply the accounting process and fundamental accounting principles that underpin the development of financial statements.
2. Ability to read, compute, interpret and analyze financial statements; combine financial analysis with other information to assess the financial performance and determine the position of a company.
3. Evaluate the cost concepts to analyse business management decisions related to pricing and outsourcing
4. Demonstrate capabilities of problem-solving and critical thinking
5. Develop an awareness on ethical, social issues in addition to financial information, in the management decision making process
6. Develop group work and communication skills

Unit I

Introduction to Financial, Cost and Management Accounting- Generally accepted accounting principles, Conventions and Concepts– Journal – Ledger - Trial Balance -Balance sheet and related concepts- Profit and Loss account and related concepts.

Unit II

Final Accounts – Financial accounting Vs Management accounting-Objectives and functions of Management Accounting - Financial Statement Analysis – Objectives –Comparative Statements, Common-Size statement, Trend Percentages.

Unit III

Costing – Basic concepts – Elements of costing – types of costing - Preparation of Cost Sheet- Cost Accounting Systems: Job order costing - Process costing- Activity Based Costing- Target costing.

Unit IV

Analysis of Financial Statements - Ratio Analysis, Meaning, Nature, Uses, Limitations, Classification of Ratios-Liquidity, Solvency and Profitability ratios, Interpretation of Ratios; Funds Flow Statement, Meaning and Concept of Funds, Flow of Funds, Uses and Significance of Funds Flow Statement, Limitations of Funds Flow Statement, Statement of Schedule of Changes in Working Capital, Funds From Operation.

Unit V

Cash Flow Statement, Classification of Cash Flows, Comparison between Funds Flow Statement and Cash Flow Statement, Uses and significance of Cash Flow Statement, Computation of Cash Flow Statement and Cash from Operations.

Note: Problems 60 Marks and Theory 40 Marks.

Suggested Readings:

Text Books:

16MBAP105 QUANTITATIVE METHODS FOR MANAGEMENT 4 1 0 4

Course Objectives:

- To understand the classification and analysis of the data with statistical tools and techniques.
- To know the descriptive and inferential statistics, and apply them to examine business and economic data.
- To know the use of tools and techniques of correlation and regression
- To realize the applications of probability and distributions in the analytical decision making.
- To understand the mathematical formulation of transportation problem and assignment problem
- To understand the index number concepts and its applications.

Course Outcomes (Cos):

After successfully completing this course, students will be able to:

1. Understand the basic statistical tools and techniques and its application in business decision making.
2. Categorize and estimate the measures of central tendency
3. Develop an ability to analyse and interpret the collected data to provide meaningful information in making management decisions
4. Demonstrate capabilities of problem-solving, critical thinking, and communication skills related to the discipline of statistics.
5. Classify and evaluate the hypothesis to obtain reliable results.
6. Develop skills to design business model and Analytics projects

Unit I

Role of mathematics and statistics in business decisions - Statistics – meaning – Scope-Functions, limitations, uses and Misuse of statistics. Classification and Tabulation of data,Univariate data analysis: Mean and Standard deviation, Shape of distributions – skewness and kurtosis, Introduction to bivariate data analysis.

Unit II

Correlation: Types of Correlation, Correlation coefficient – degrees of correlation coefficient – methods of finding correlation coefficient -scatter diagram-Karl Pearson's co-efficient of correlation-Spearman's Rank correlation. Regression: regression lines -regression equations -regression co-efficients-methods of forming the Regression equations.

Unit III

Probability: Concepts, definitions-addition and multiplication rules (only statements)- business problems. Probability distributions: binomial distribution-Poisson distribution and normal distribution- business problems.

Unit IV

Transportation problem - Mathematical formulation of Transportation problem-Initial Basic Feasible solution - Optimum solution for non degeneracy and degeneracy models - Unbalanced Transportation problems and Maximization case in Transportation problem. The Assignment problem - Mathematical formulation of Assignment problem – Hungarian method –Unbalanced Assignment problem -Maximization case in Assignment problem.

Unit V

Queuing theory: Introduction – Characteristics of queuing system –Single server finite and infinite capacity models. Game Theory: Two Person-Zero-Sum Game- Saddle Point- Value of Game- Dominating Strategy- Mixed Strategy.

Note: Problems 60 Marks and Theory 40 Marks.

3. Hurlock, E.B. (2006). *Personality Development* (28th Reprint). New Delhi: Tata McGraw Hill.

16 MBAP107 COMMUNICATION PRACTICE I 2 0 0 1

Course Objectives:

- To impart students and enrich communication and non-verbal activity such that students will be good on their communication.
- To understand norms of business letters and prepare prompt business letters
- Make students to understand the value of face to face communication
- To learn the importance of postures and gestures
- The students acquire skills on conducting meetings, seminar and conferences.
- To gain practical knowledge on designing and developing clean and lucid writing skills.

Course Outcomes (Cos):

1. The student will able to get practice with Verbal communication and Non- Verbal communication.
2. Demonstrate the understanding of face to face Communication and appropriate ways to communicate to an audience
3. The students shall be familiar with conducting meetings, seminar and conferences.
4. Students attain competence in functional use of communication during both academic and non-academic life situations.
5. To draft effective business correspondence with brevity and clarity.
6. To stimulate their Critical thinking by designing and developing clean and lucid writing skills.

Unit I

Communication - Meaning and significance for management- Types of communication- media – Barriers to communication-Norms for Business letters - Letter for different kinds of situations. Personalized standard letter, enquiries, customer’s complaints, collection letters – sales promotional letters

Unit II

Report writing - formal & informal reports - writing research reports & technical reports- Principles of effective communication - Structuring the resume / report – Letter writing / E-mail communication

Unit III

Communication-Face to face communication – telephonic conversation..SPOKEN ENGLISH – Principles of pronunciation – Fluency and correctness - Confidence and skills in using English – Asking questions – Listening skills

16 MBAP111 COMPUTER LAB I: MS OFFICE & TALLY 0 0 4 2

Course Objectives:

- To provide insight on importance of technology for communication and decision making.
- To familiarize Students with basic to intermediate skills for using tally in the classroom vis-à-vis Business Applications
- To provide hands-on usage of MS-office to creating new word documents including features like tables, charts and references.
- To enable students to explore MS office
- To provide students hands on experience on tally Utilities
- To gain proficiency in creating solutions for Data Management and Reporting

Course Outcomes (Cos):

1. Develop the student to work efficiently in Ms Word, Ms Excel and Ms Power point.
2. Get familiarize with the shortcuts used in office tools.
3. Recognize effective use of charts, diagrams, and other graphics in business messages and identify potential sources for these visual aids
4. Evaluate and practice various techniques of analysis in excel tools
5. To design presentation using animation, special effects and graphics.
6. To facilitate the understanding of accounting package and its application

Unit I

Components of Computer – Introduction to MS Office- Word – Creating a new documents with templates and wizards- Using Key Board Short cuts – Symbols and Pictures – Text Management.

Unit II

Introduction to Excel – Working with work sheets – Calculation using formulas work sheet formatting – Types of Charts – Formatting and printing – Chart elements

Unit III

Introduction to Power Point – Creating New Presentations - Presentation using Graphics – Slide Transition and Adding Sounds Using action Buttons.

Unit IV

Internet and World Wide Web: Introduction to Internet – Internet access – Internet Addressing – Introduction and use of E-mail working of E-mail – E-mail names and address- Working in Blogs.

Unit V

Accounting Package Tally: Introduction to tally – create a company – creating groups & ledger accounts – Account Voucher creation – Statement of accounts – Inventory reports display

Suggested Readings:

Text book:

1. Rajaraman, V. (2009). *Fundamentals of Computer* (4th Edition). New Delhi: Prentice Hall of India Pvt Ltd.

Reference:

16 MBAP201 OPERATIONS MANAGEMENT 4 0 0 4

Course Objectives:

To make the students

- To understand the operations management concepts that yields a competitive advantage through operational excellence.
- Aware of various business combinations, location, layout, total quality management
- Learn about design, planning and control of an organization's processes.
- To know the Maximum utilisation of all kinds of resources needed.
- To understand Master Production Schedule, Material Requirement Planning and Total Quality Management
- To get acquainted with ISO Quality Certifications

Course Outcomes (Cos):

Learners should be able to

1. Classify and understand the core features of the operations and production management function
2. Evaluate and prepare the best plant and factory location and layout.
3. Obtain the knowledge of identifying and applying a quality management tools to improve organizational effectiveness.
4. Compare and combine various business locations, layouts, total quality management.
5. Define and list operations management concepts that yield a competitive advantage through operational excellence.
6. Discover, estimate and classify products & services to customers by improving process & supply chain performance.

Unit I

Operations Management – Meaning – Importance – historical contributions – Functions of OM – Differences between Production and Operations Management – Recent trends in Production and Operations - Types of Production Systems, Product Design and Process selection

Unit II

Facility Location – Facility Layout planning and Designing, Types of layout –Product Layout, Process Layout. Cellular, Lean and Agile manufacturing systems – Computer Integrated Manufacturing Systems -Assembly line balancing.

Unit III

Capacity Planning and Control –– functions - Determinants of Effective Capacity planning – Forecasting Demand for Capacity Planning- Capacity Control– Aggregate planning – Master Production Schedule (MPS) – Material Requirement Planning (MRP) – Bill Of Material (BOM) – Capacity Requirement Planning (CRP) –An Introduction to MRP II and Enterprise Resource Planning (ERP).

Unit IV

Materials Management – functions – material planning and budgeting – Value Analysis - purchase functions and procedure - inventory control – types of inventory – safety stock – order point –inventory control systems – perpetual – periodic – JIT – KANBAN.

Unit V

Total Quality Management Concept - Statistical Quality Control for Acceptance Sampling and Process Control –Quality movement – Quality circles –– ISO Quality Certifications and types – Quality assurance – Six Sigma concept.

Note: Problems 20 Marks and Theory 80 Marks

Suggested Readings:

Text Book:

16 MBAP202 MARKETING MANAGEMENT 4 0 0 4

Course objectives:

To make the students

- To understand the marketing environment and marketing functions
- Learn the importance of consumer buying motives and consumer behavior.
- To get familiarize in marketing mix
- To get an in-depth view on advertising and sales promotional tools
- To make aware of direct marketing and customer relation marketing
- To aware of the competitive strategy for leader, follower & nichers.

Course outcomes (Cos):

Learners should be able to

1. Apply the core concepts of marketing and the role of marketing in business and society.
2. Perform market analysis by formulating and identifying the best marketing mix.
3. Evaluate and support the latest trends in marketing and apply the ethical norms in marketing domain.
4. Effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to the team members.
5. Evaluate and relate the techniques involved in promoting and branding products
6. Analyze the importance of consumer buying motives & consumer behavior, Designing competitive strategies for Leaders.

Unit I

Marketing-definition – market-conceptual framework-Marketing Environment: Internal and External – Marketing Functions – E-Marketing, Green Marketing.

Unit II

Buyer behavior - process, Market segmentation – levels - bases, targeting – patterns, positioning and differentiation, Tools of product differentiation.

Unit III

Marketing mix-Product mix- New product development-product line – brand- Product life cycle, Packing, Price mix-methods and strategies

Unit IV

Place Mix-Channel System – Flows-Channel Design-Promotion Mix – Advertising – types – Media, Sales promotion – Tools, Public Relations - Tools -Direct Marketing.

Unit V

Customer relation marketing-Customer database, identifying and analyzing competitors - Designing competitive strategies for Leaders, Challengers, Followers and Niche's:–Attracting and retaining customers.

16MBAP203 HUMAN RESOURCE MANAGEMENT 4 0 0 4

Course objectives:

To make the students

- To understand the human resource management and human resource information system
- To increase knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
- To gain information on feedback systems
- To know about compensation and reward management and its practice in industry.
- To understand the concept of competency mapping and components of quality work life
- To get an in-depth knowledge of knowledge management and global HR practices

Course outcomes (Cos):

Learners should be able to

1. Analyze and assess the job analysis for a profile and understand its linkage with HR planning
2. Identify and evaluate the training needs and prepare a training programme.
3. Examine and outline the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Apply the appropriate employee relations measures and Recruitment process, Learning organization Auditing HR functions
5. Draft the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. To make any manager to identify various activities related to Human Resources, Job involved in HR, Training, and Compensation

Unit I

Human resource management - Importance, Objectives and Functions of HRMs; HR Planning – factors affecting HR Planning – Human resource information system(HRIS) - Changing environments of HRM - Using HRM to attain competitive advantage - Qualities and role of HR managers - Trends in HRM

Unit II

Job analysis and Design – Process of Job Analysis-Job description, Job specification, Job rotation, Job enrichment- Job enlargement - Recruitment and selection: Sources of recruitment, Recruitment process – Process of selection - Induction and Placement.

Unit III

Orientation – Socialisation – Process of socialization – strategies. Training – Training process - Performance appraisal- process – Traditional and Modern Methods - 360^{o} - 720^{o} feedback – Ethics of performance appraisal.

Unit IV

Job evaluation – Process – Wages and Salary administration- Concepts of different wages – Basic wage plan – Executive compensation – Wage differentials – Monetary and Non-monetary incentives - Competency mapping.

Unit V

Quality of Work life – Concepts – Methods to improve quality of work life – Benefits – Challenges. Knowledge management – Learning organization Auditing HR functions - Future of HRM function, International HRM – Global differences and similarities in HR Practices – Application of IT in various HRM functions

16MBAP204 FINANCIAL MANAGEMENT 4 1 0 4

Course objectives:

To make the students

- To understand the financial management concept and its importance and its applications in business
- To gain knowledge on the sources of finance and the role and functions of chief financial officer.
- To know the concept of time value of money and the rationale for using the time value of money concept in capital budgeting techniques for evaluations of business proposals.
- To recognize the availability of difference source of capital and computation of cost of capital.
- To recognize the importance of working capital its application in business.
- To comprehend on the importance of capital structure, the factors which influence the dividend policy.

Course outcomes (Cos):

Learners should be able to

1. Evaluate the various sources of capital and its impact on business
2. Demonstrate knowledge and compute value of money to evaluate the business proposal applying capital budgeting techniques
3. Compute the cost of capital to estimate the optimal capital structure.
4. Comprehend the knowledge of assessing the working of organization to assess the liquidity position of the firm.
5. Discover the knowledge on capital structure, and the determination of dividend policy
6. Develop analytical skills which facilitate the financial decision making in business situations

Unit I

Financial Management, Objectives, Functions, Role of Financial Management, Risk-Return Relationship, Sources of Long Term Finance, Capital Market in India.

Unit II

Time Value of Money, Capital Budgeting- Methods of Appraisal- Pay Back Method, Rate of Return, Net Present Value, Internal Rate of Return, Profitability Index.

Unit III

Cost of Capital, Determining component cost of capital, Specific cost of Capital, Overall Cost of Capital, Cost of Equity Capital, Cost of Preference Capital, Cost of Debt, Cost of Retained earnings and Weighted Average Cost of Capital.

Unit IV

Working Capital Management, Current asset and liability decision, Factors affecting working capital requirements, components of working capital, forecasting working capital requirements.

Unit V

Capital Structure, Optimum Capital Structure, EBIT - EPS Analysis -Leverages - Dividend Policy, Factors determining Dividend Policy.

Note: Mark distribution - Problems 40 marks and Theory 60 marks.

16MBAP205 BANKING AND INSURANCE MANAGEMENT 4 0 0 4

Course Objectives:

To make the students

- To identify and define the Principles and importance of Credit, documentation, monitoring and control.
- The student will be able to develop and demonstrate and understand basic concepts of banking and insurance and interpret career opportunities available after this course
- To have broad understanding of other functions associated with banking.
- Provide clear understanding of the factors contributing to the growth of Indian Banking industry and its impact on the GDP of Indian economy
- To have distinguished insight into marketing of banking services and banking technology.
- To develop efficient and up-to-date financial and insurance planners.

Course Outcomes (Cos):

1. Get acquainted with the concepts and practical dynamics of the Indian Financial System, Markets, Institution and Financial services
2. Design their own strategies in credit management and Securitizations
3. Evaluate the factors contributing to the growth of Indian Banking industry and its impact on the GDP of Indian economy
4. Classify various banking operations ,specially risk management in lending operations
5. Analyze and develop new insurance products to mitigate the various risks in business operations
6. Demonstrate a critical understanding of insurance market and develop strategies to strengthen the insurance dealings

Unit I

Indian Financial System: Introduction- Role of financial institutions & markets- Functions of financial markets- Instruments of financial markets- Recent developments in Indian Financial System. Indian Banking System: Evaluation of Banking Institutions-Different Banking Institutions in India- their role and functions- Regulatory framework of Banking in India; Functions of Commercial Banks.

Unit II

Loans and Advances: Principles of sound bank lending- Different types of loans- Credit appraisal techniques; Credit management and credit monitoring; Liquidity Management-Asset liability management- Securitizations- Incentives and benefits of Asset securitization; Bank Assurance: Benefits for banks and insurance companies; Mutual funds, their types; Electronic Banking.

Unit III

Risk Management: What are Risk- Perils and Hazards-types of risk-source of risk-method of handling risk; Career opportunity in Insurance Sector - Introduction of Insurance: nature of insurance-Purpose and need of insurance –how insurance works- insurance and economic development.

Unit IV

Insurance Market – Different types of life insurance plans - operations of insurance companies - specialist insurance companies – Provisions of IRDA Act 1999 - the role of regulators –New trends in Insurance Market.

Unit V

Principles of General Insurance: Utmost good faith-features-Breaches of utmost good faith-Insurable interest-meaning-features-how insurable interest is created-when insurance interest should exist-Indemnity-how indemnity is provided-measure of indemnity.

Suggested Readings:

16 MBAP206 RESEARCH METHODOLOGY FOR MANAGEMENT 4 0 0 4

Course objectives:

To make the students

- To understand the basic framework of research and research process and its important in business decision.
- To learn the research situations from the management perspective
- To develop an understanding of various research designs and sampling techniques and its application.
- To identify appropriate sources of information and methods of data collection for solving a business issue.
- To understand the selection of appropriate tools to analyse the quantitative and qualitative data.
- Disseminate the knowledge of research report and be familiar with the content to be included in the report.

Course outcomes (Cos):

Learners should be able to

1. Assess the best suitable research type and formulate the research objective for the business problem.
2. Identify and design a research process to solve the real time issues in the organizations
3. Formulate the suitable research designs and select appropriate sampling techniques for the research.
4. Practice the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
5. Evaluate the appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
6. Demonstrate capabilities of designing a suitable research report based on the principles of research.

Unit I

Research Methodology: Meaning – objectives - Scope and Significance- Types of research- Characteristics of good research-criteria for good research- objectivity in research - research process–Research in management decisions - Problems encountered by Researchers in India.

Unit II

Research Design: meaning- classification- features – importance- steps in research design-selection of research problem - Sample design- meaning- concepts- steps in sampling- criteria for good sample design – Types of sampling – Probability and Non probability sampling techniques.

Unit III

Data collection : Types of data - Methods of data collection –Collection of primary data – Sources of secondary data - constructing questionnaire - Pilot study - case study - Data processing: coding - editing - and tabulation of data - Measurement - meaning – need- Errors in measurement - scaling Techniques - meaning - Types of scales - scale construction techniques.

Unit IV

Data Analysis: Hypothesis – Meaning – Types – Procedure of testing hypothesis - Test of Significance - Assumptions about parametric and non-parametric tests. Parametric tests - Non-Parametric Tests: One sample run Test-Sign Test, Run test for randomness - Chi-Square Test, ANOVA, - Multivariate analysis - Factor analysis.

Unit V

Interpretation- Meaning – Techniques-Report Writing- Significance, Steps in report writing-Layout of report-mechanics of report writing- Precautions for Writing Report - Types of Reports- Oral Presentation- Executive Summary- Norms for Using Tables, Charts and Diagrams. Appendix: Norms for using index and bibliography- conventions relating to preparation of research reports.

Note: Problems 20 Marks (Unit – IV) and Theory 80 Marks

16 MBAP207 **MANAGEMENT PRACTICE II** **2 0 0 1**

Course Objectives:

To make the students

- To develop knowledge and demonstrate skills to manage various components of a management practice that includes organization, administration, communication, and managerial aspects.
- To develop and bring improvements in interpersonal Skills and Practice-Based Learning.
- To provide an insight to manage personality development.
- To improve critical thinking and problem solving skills
- To make them build self-confidence and be assertive in workplace
- To understand team building and team spirit in work environment

Course Outcomes (Cos):

Learners should be able to

1. Demonstrate punctuality and manage time in day to day activities
2. Develop new management techniques to carry out routine activities
3. Evaluate and gain leadership qualities and get organized
4. Ability to build good team and have positive spirit in workplace
5. Develop critical thinking and problem solving skills
6. Relate and gain Self-confidence and self-awareness to bring effective communication

Unit I

Time management – identifying time wasters – procrastination – delegation – time management tools – day to day time management techniques

Unit II

Leadership Techniques – Conflict resolution – Assertiveness – Team building – Team spirit – Interpersonal skills – Group interactive skills – Getting organized.

Unit III

Self confidence, positive attitude, communication, team player, critical thinking and problem solving, coping with pressure, flexibility, ability to accept constructive feedback, strong work ethic.

Suggested Readings:

References:

16 MBAP208 COMMUNICATION PRACTICE II 2 0 0 1

Course Objectives:

To make the students

- Familiar with Verbal communication and Non- Verbal communication. To make the students understand presentation skills and its importance.
- To learn and demonstrate different communication styles and get trained.
- To improve body language and facial expressions to have effective communication.
- To learn to make powerful and effective presentation
- To understand the feedback system prevailing in the organization
- To develop critical thinking and problem solving attitude

Course Outcomes (Cos):

Learners should be able to

1. Organize and participate in public meetings
2. Develop powerful and effective presentations
3. Gain confidence in giving and receiving feedbacks
4. Students attain competence in functional use of communication during both academic and non-academic life situations.
5. To draft effective business correspondence with brevity and clarity.
6. To stimulate their Critical thinking by designing and developing clean and lucid writing skills.

Unit I

Non-verbal communication - personal appearance - posture - body language - visual & audio visual aids for communication -Conducting Meetings: Procedure – preparing Agenda, minutes and Resolution

Unit II

Presentation Skills – Elements of an effective presentation – structure of a presentation-presentation tools – Voice Modulation – Audience analysis - developing and delivering powerful presentations

Unit III

Effective and ineffective communication - Free speech – Giving and receiving feedbacks – Identifying communication styles – accelerated learning – memory techniques – speed reading – mind mapping – relaxation techniques

Suggested Readings:

16 MBAP211 COMPUTER LAB - II: SPSS LAB 0 0 4 2

Course Objectives:

- The course has been introduced in order to make them use statistical package for their research
- Make the students to prepare data sheet and manipulate the data.
- Learn an organization's information systems and technology decision making processes.
- To gain in-depth knowledge on research situations from management perspectives
- To train them to access different statistical tools and interpret the results
- To gain data analytics skills to solve the business/Research problem.

Course Outcomes (Cos):

1. Effectively to apply the statistical package to analyze the research problem under study
2. Evaluate the usage of graphical presentation of data for dissemination of information to audience
3. To analyze the real time data by use of appropriate tools at any given situation in order to come with conclusion
4. Experts in handling data files and carry out basics statistical analysis
5. Get acquainted with advanced statistical tools and bring out appropriate solutions to business problems
6. Develop data analytics skills and meaningful interpretation to the data sets so as to solve the business/Research problem.

Unit I

SPSS – Meaning – scope- Limitation- Data view- Variable view- Data entry procedures

Unit II

Data editing- Missing- Frequencies Distribution – Diagram –Graphs.

U nit III

Descriptive statistics – Mean, Median, Mode, Skewness – kurtosis – Standard Deviation

Unit IV

T- Test for Independent sample and X test – ANOVA

Unit V

Correlation – Rank correlation – Regression – charts

Suggested Readings:

TextBook*:*

1. George, D. *SPSS for Windows step by step*.

16MBAP301 STRATEGIC BUSINESS MANAGEMENT 4 0 0 4

Course Objectives:

- To expose participants to various perspectives and concepts in the field of Strategic Management
- To get the knowledge on setting mission and vision for organization growth
- To help participants develop skills for analyzing business environment to the solution of business problems
- To carry out effective SWOT analysis and learn core competence of business
- To acquaint students with strategy formulation and implementation techniques
- To help students master the analytical tools of strategic management

Course Outcomes (Cos) :

1. Set the mission and vision in personal and organizational level
2. To analyze the environment in strategic planning and ability to take Strategic decisions
3. To be able to apply the basic concepts, principles and practices associated with strategy formulation and implementation.
4. To be able to analyze industry factors, and identify their impact on profitability and strategic positioning
5. To be able to assess the resources and constraints for strategy making in a business organization
6. Communicate effectively strategic evaluation and control techniques

Unit I

Strategic Management – Evolution, Elements in Strategic Management – Understanding Strategy - levels of strategy – strategic decision making – strategic management process – Mission – Vision – goals and objectives – strategic planning process - identifying critical success factors - Strategic management Practice in India. Competitive advantage of Nations and its implication on Indian Business

Unit II

Environment Analysis & Internal Analysis of Firm : Concept of Environment – Environmental sectors - General environment scanning – Industry analysis – Dynamics of internal environment - Assessing internal environment through functional approach and value chain–to identify the strength & weakness - to identify opportunities & threat – SWOT audit – core competence.

Unit III

Strategy Formulation: Generic Strategies – Grand Strategies – Strategies of leading Indian companies – the role of diversification – limits – means and forms. Strategic management for small organizations, non-profit organizations and large multi product and multiple market organizations

Unit IV

Strategy Implementation: Competitive cost dynamics – experience curve – BCG approach – cash flow implication – IA-BS Matrix – A.D. Little Life cycle approach to strategic planning – Business portfolio balancing – Assessment of economic contribution of strategy – strategic funds programming.

Unit V

Strategy Evaluation & Control: Various approach to implementation of strategy – Matching organization structure with strategy – 7S model – Strategic control process – Du Pont's control model and other Quantitative and Qualitative tools – Balanced score Card – M Porter's approach for Globalization – Future of Strategic Management.

BUSINESS ETHICS, CORPORATE GOVERNANCE& SOCIAL RESPONSIBILITY

Course Objectives:

To make the students

- To develop knowledge and understand about the theoretical perspectives and frameworks of corporate governance, ethical, environmental and social dimensions.
- To learn the theories of stakeholders and adopt the policies to protect their interests
- To assess and understand social responsibility of business and its impact.
- To provide clear understand of environment and ecology and measures to preserve them for future generation
- To understand issues related to business and good governance necessary for long term survival of business.
- To learn new trends in corporate social responsibility

Course Outcomes (Cos):

Learners should be able to

1. Inculcate the ethical practices in personal and organizational life
2. Protect the long term interest of the shareholders and create policies that adopt by laws.
3. Reduce damages, deaths, personal suffering and to reduce mortality and morbidity
4. Maintain sense of social responsibility
5. Analyze ethical issues related to business and good governance necessary for long term survival of business.
6. Evaluate the emerging Areas and Trends in Corporate Social Responsibility

Unit I

Business Ethics - Nature, Characteristics and Needs, Ethical Practices in Management-Indian Values and Ethics - Respect for Elders, Hierarchy and Status, Need for Security, Non - Violence, Cooperation, Simple Living high Thinking, Rights and Duties, Ethics in Work life, Attitudes and Beliefs.

Unit II

Introduction –meaning and overview of corporate governance, corporate board-attributes, duties, responsibilities, liabilities, shareholders – rights, responsibilities of share holders, minority share holders protection. Ethical aspects of corporate governance

Unit III

History of corporate governance-Issues in corporate governance –Corporate Governance concepts and theories-Stewardship theory, Agency theory, Stakeholder theory. Corporate Governance and performance. Role of the regulatory framework -Legislation - Financial reporting

Unit IV

Corporate Social Responsibility-Meaning - Definition and Scope - operationalizing Corporate Social Responsibility for sustainable development - Responsibility of various stakeholders, perspectives and initiatives, Environment and Ecology, Health and well being.

Unit V

Emerging Areas and Trends in Corporate Social Responsibility - Business, Social, Environmental and Regulatory - Globalization and Corporate Governance - Case Study in CSR and Corporate Governance

16MBAPF303A INTERNATIONAL FINANCIAL MANAGEMENT 4 0 0 4

Course Objectives:

- To make one to understand the global concepts used in financial management.
- To know the functions and its application in financial decision making.
- To get insights in the foreign exchange markets
- To gain knowledge on international financial decisions of various international financial institutions
- To get insights into the competencies required to become an effective financial manager
- To practice the students with the intricacies of international business in terms of investment with monetary systems.

Course Outcomes (Cos):

1. Identify the basis global trade and trade transaction mechanism
2. Analyze the foreign exchange rate and factors influencing fluctuations
3. Estimate the flow of Foreign Direct Investment and its impact on Indian economy
4. Ability to evaluate the functioning of international financial institutions
5. Assess the resources of Financing of foreign trade
6. To discover facts on foreign trade.

Unit I

International Trade – Meaning and Benefits –Basis of International Trade – Foreign Trade and Economic Growth – Balance of Trade –Balance of payment – Current Trends in India –Barriers to International Trade- World Trade Organization, Trends in world trade, International trade finance.

Unit II

Foreign Exchange Markets- Market Participants – Types of Transactions - Spot Prices and Forward Prices – Factors influencing Exchange rates – Determination of Foreign Exchange rate and Forecasting – Foreign Exchange Exposure - Measurement and Management.

Unit III

International investment decisions – Political risk - Foreign Direct Investment – Foreign Institutional Investors – International capital budgeting – International portfolio investment.

Unit IV

International financial decisions – Multilateral Development Banks – World Bank – International Finance Corporation – International banking – International financial market instruments- International Taxation and International Working Capital Management.

Unit V

Financing of foreign trade – Documentation - Mode of payment – Methods of trade financing – EXIM Bank, ECGC and its schemes - International taxation.

16 MBAPF303B STRATEGIC COST MANAGEMENT 4 0 0 4

Course Objectives:

- To understand the concept of costing and cost reduction methods.
- To make students to learn to manage total cost and production costing.
- To provide knowledge on the process of various costing methods and management.
- To understand the concept involved costing related to business decisions.
- Provide insight in strategic cost management
- To learn the techniques of cost management that are effective and ethical

Course Outcomes (Cos) :

1. Illustrate the cost sheet and cost reduction methods to improve organizational productivity.
2. Estimate the total cost and production cost to source competitive advantage
3. Evaluate cost control systems and various costing methods and management
4. To analyze the cost function in mathematical methods.
5. Analyze productive results on cost management and reduction
6. Interpret knowledge in Market Based and Cost Based Transfer Prices and Multinational Transfer Pricing.

Unit I

Costing- Purpose- Utility, Objectives-Elements of Cost- Cost Sheet –Methods of Costing – Problems - Cost Reduction and Productivity: Cost Reduction Value Analysis – Productivity- Value added concepts- Learning curves- Quality Circles.

Unit II

Total Cost Management- Managing Process Cost- Managing Production Costs- Managing Delivery Costs- Managing Structural Cost. Target Costing - Cost as a source of competitive advantage - Life Cycle Costing

Unit III

Activity Based Costing - Drawbacks of Conventional Costing- Methodology of ABC - Merits, demerits suitability of ABC - Implementation of ABC. Management Control Systems - Evaluating Management Control Systems - Responsibility Centers- Evaluation of the Performance of Different Responsibility Centers- Problems.

Unit IV

Linear Programming and Regression Analysis- Implications of Linear Programming for Cost Accountants - Guidelines for Regression Analysis- Applications of Regression Analysis in Cost Functions.

Unit V

Strategic Control Systems - Decentralization and Transfer Pricing - Choices about Responsibility Centers-Market Based and Cost Based Transfer Prices- Multinational Transfer Pricing

Suggested Readings:

16 MBAPF303C FINANCIAL SERVICES MANAGEMENT 4 0 0 4

Course Objectives:

- Understand the various ways of generating funds in to an organization and ways and means of investing surplus.
- To understand the regulation of merchant banking
- To know about mutual funds and the concept of factoring
- To learn the concepts of leasing and effective management of financial resources
- To provide knowledge on hire purchase and investment
- To understand the importance of various credit rating techniques

Course Outcomes (Cos):

Learners should be able to

1. To assess the regulation of merchant banking.
2. To estimate the benefits of mutual funds and the concept of factoring.
3. Classify the different factoring that helps in investment decision making
4. Develop skill to explore new avenues in business operations
5. Developing capabilities of evaluating leasing techniques
6. To manage hire purchase and investment.

Unit I

Nature and scope of Merchant Banking – Regulation of Merchant Banking – overview of Current Indian Merchant Banking Scenario – Procedural aspects of primary issue – Pre-issues Decision Making – Post Issue Management.

Unit II

Mutual Funds – Operation – Performance – SEBI guidance for Mutual Funds Securitization – concept, Securitization as a Funding Mechanism, Securitization of Residential Real Estate – Mortgages & Mortgage Investments.

Unit III

Concept of Factoring – Forms of Factoring Vs Bill Discounting – Factoring Vs Credit Financing – Factoring Vs Forfeiting – Evaluation of a Factor – Legal aspects of Factoring – Factoring Services in India – Bill of Exchange – Definition – Features.

Unit IV

Leasing – History & Development – Concept & Classification – Types – Advantages – Disadvantages- Legislative Framework – Supplier, Lessor, Lessee Relationship – Sub Lease – Default & Remedies – Lease Evaluation in Lessee's and Lessor's point of view.

Unit V

Hire Purchase – Concept & Characteristics – Rate of Interest – Legal aspects – Tax implication frame work for Financial Evaluation – Credit Rating – Concept – Types – Advantages & Disadvantages – Credit Rating Process – Credit Rating Agencies.

3. Gordon, E.(2000). *Financial Markets & Services*. New Delhi: Himalaya Publications.

16 MBAPM303A **SERVICES MARKETING** **4 0 0 4**

Course Objectives:

- Provide a theoretical and practical basis for assessing services in a simple and understanding level.
- To understand the positioning and differentiation strategies and quality of services
- To make awareness and get insight in Pricing and distribution of service industry
- To get exposure to marketing of hospitality and financial services
- To clarify the marketing of Non-Profit Organizatiions
- To provide insights to the challenges and opportunities in services marketing

Course Outcomes (Cos):

Learners should be able to

1. Infer knowledge on services marketing to serve better in new services avenues
2. Create avenues for relationship marketing
3. Analyze several facets in the area of services marketing essential for the success of a service sector firm.
4. Understanding and determine segmentation of Services marketing
5. Acquire thorough knowledge in different services areas
6. Effectively provide knowledge to develop skills in financial services

Unit I

Services Marketing – meaning – characteristics of services – Service Environment – dimensions – Service Blueprint - Relationship marketing – Service Recovery – Service Expectations – Service Encounters - Service Quality – SERVQUAL – Service Leadership – Service Strategy – process – Service Triangle - Interactive Marketing

Unit II

Marketing Mix decisions: Service Products – Branding services – New service development - Pricing - Promoting and distributing services – segmentation- bases of segmentation-Positioning and differentiation strategies - Quality of service industries – customer support service

Unit III

Marketing of hospitality: Perspectives of Tourism, Hotel and Travel services – Airlines, Railway–Information Technology- Real estate services-courier services

Unit IV

Marketing of Financial services: Concept – features of Banking, Insurance, Lease, Mutual Fund, Factoring, Portfolio and financial intermediary services- Negotiation &parties involved in negotiation

Unit V

Marketing of Non-Profit Organizations: NGOs – Services Offered by Trust/Societies – Educational service – Miscellaneous services – Power and Telecommunication- Hospital services.

Suggested Readings:

Text book:

16 MBAPM303B SALES AND PROMOTIONAL MANAGEMENT 4 0 0 4

Course Objectives:

- To give a broad understanding of Sales Management and its implications.
- Help students understand the Sales & Distribution functions as integral part of marketing functions in a business firm
- To make understand the key terms and concepts in sales force management.
- To learn the role of advertising and media management in business.
- To provide information on Sales Promotion and Public Relations
- To sharpen decision making skills of future sales and distribution managers

Course Outcomes (Cos) :

Learners should be able to

1. Provide an understanding of the concepts, attitudes, techniques and approaches required for effective decision making in the areas of Sales and Distribution.
2. Analyze and pay special emphasizes on the problems and dilemmas in sales force management.
3. Identify distinguished Knowledge on advertisement management that helps to develop business.
4. Develop critical skills for generating, evaluating and selecting sales, advertisement media and distribution strategies.
5. Develop critical skills for generating, evaluating and selecting sales and distribution strategies.
6. Classify the Trade promotional tools and sales person promotional tools

Unit I

Nature and process of personal selling - Sales Management – Importance – Role of Sales Manager – Setting Sales Objectives – Sales Forecasting – Methods of Sales Forecasting-Sales Quotas & Territory – Sales budgeting – Types of Budgets – Budgeting Procedure

Unit II

Sales Force Management – Types of Sales Organizations - Sales Force Recruitment –Sources – Training –designing a training programme – Motivating Sales Force – Sales incentives, contests and compensation – Evaluating Sales Performance.

Unit III

Advertising Management – Meaning – Objectives – Importance – Classification of Advertisement – Economic and Social Effects of Advertisement – Organization of advertising Department– Campaign Planning and Advertising Budget.

Unit IV

Advertising media management – Types – Print, TV, Outdoor and Other forms – Advantages, Limitations, Media Rates, Media Planning and Scheduling. Advertising Copywriting for Print and Broadcast Media

Unit V

Sales Promotion and Public Relations – Sales Promotion - Objectives, Tools, Planning Implementation and Control. Public Relations – Objectives –Tools

Suggested Readings:

Text Books:

16 MBAPM303C MARKETINGRESEARCH & CONSUMER BEHAVIOR 4 0 0 4

Course Objectives:

- To give the students an understanding of marketing research from both user's (management) and doer's (the researchers) perspective.
- To design and produce, evaluate a research proposal & understand the quality of research studies.
- To acquaint with the factors influencing the consumer behavior and concepts to marketing decisions
- To provide the relevance of consumer behaviour models
- To learn the basic skills to conduct professional marketing research.
- To understand the applications of business research tools in Marketing decision making

Course Outcomes (Cos) :

Learners should be able to

1. To be able to appreciate the different perspectives of marketing research from both user's and doer's perspective.
2. To be able to formulate research proposal and evaluate it.
3. To be able to conduct professional marketing research.
4. Apply business research tools in marketing decision making.
5. To generate new models of consumer behavior
6. Evaluate the effectiveness of marketing programmes on consumption decisions

Unit I

Marketing Research – Scope–Types & uses of marketing research-Marketing Research & decision making – Research Design – The Marketing Research process – Exploratory, descriptive and conclusive Research. Primary and Secondary methods of data collection – Construction of questionnaire

Unit II

Research Categories- Applications of Marketing Research – Product Research – Advertising Research – Market and Sales Analysis Research –Export Marketing Research - Motivation Research - Application of marketing research.

Unit III

Consumer Behaviour- Need to study Consumer Behavior – Applications of consumer behaviour principles to strategic marketing- Models of Consumer Behaviour – Market segmentation and Consumer Behaviour-Factors influencing Consumer Behaviour – Social, Economic, Psychographic, Group influences.

Unit IV

Elements of Consumer Behaviour - Product Perception – Learning, Attitude, Personality - New Product Purchase, Repeat Purchase, Consumer Spatial Behaviour – Consumption Analysis – Product Usage Rates – Expenditure Pattern – Howard-Seth Model of Buyer Behaviour – Organizational Behaviour of buyer.

Unit V

Consumer Decision Processes –Buying Pattern -Problem recognition – Search and Evaluation – Purchasing Processes– Post-purchase behaviour – Consumerism-Impact of consumerism on Marketing Practices – Industrial and Domestic consumer characteristics.

16 MBAPH303A HUMAN RESOURCE DEVELOPMENT 4 0 0 4

Course Objectives:

- Helps to recognize the dynamic relationship between strategy, people, technology, and the processes that drive organizations.
- To develop knowledge on analyzing individual and group behavior
- It helps students to understand the key HRD concepts and techniques that can be applied in everyday managerial decision-making.
- To make them understand the techniques of managing conflict and create better environment
- To gain insight in the HRD-OD approach to industrial relations
- To learn about cross cultural dimensions and its impact

Course Outcomes (Cos):

Learners should be able to

1. Recognize the dynamic relationship between strategy, people, technology, and the processes that drive organizations.
2. Acquire skills in analyzing individual behaviour and group behavior
3. Talent in managing conflict in personal and organizational level
4. Learn to evaluate work-life balance
5. Gain knowledge of culture which helps to integrate people
6. Analyze the cultural dimensions that helps to manage people in an individual, organization and society life

Unit I

Introduction to HRD – Meaning – Scope – Importance – Need for HRD – HRD and HRM – Role of HRD professionals – Key Performance Areas – HRD mechanism- Designing effective HRD programs- Framework of HRD process.

Unit II

Individual Behavior: Personality - Perception - Role – Fatigue - Goal Conflict - Frustration – Interpersonal relationship – Group Behavior – Group Dynamics - Group Cohesiveness – Elements for understanding group behavior - Teams – Characteristics.

Unit III

Potential Appraisal – Criteria – Career Planning - Career Development - Succession Planning - Altruism –Determinants - Organization Co-operation –factors – Competition - Benefits- Conflicts-Types/Levels – Consequences – Prevention - Management of conflict.

Unit IV

Quality of work life(QWL) – Scope - Ways to increase QWL – Quality Circle – Process - Organization Effectiveness –Concept – Kaizen – Benchmarking-Just-in Time – Downsizing – Outsourcing-Organizational Change-Change Process-Resistance to Change-Requisites for Successful Change.

Unit V

HRD Cross Cultural Dimensions - HRD Climate –HRD-OD Interface – HRD-OD Approach to Industrial Relations — HRD Experiences in India – Emerging Trends and Perspectives- HRD Scenario in Indian Organization-Problems and prospects- Challenges and Issues in HRD.

Suggested Readings:

16 MBAPH303B MANAGING INTERPERSONAL EFFECTIVENESS 4 0 0 4

Course Objectives:

- The course creates self awareness through Transactional analysis for the personal growth of the students.
- Understanding communication and its effectiveness.
- Understand the effect of behaviour has on oneself, other people and on the organisation
- To understand ego states and transaction analysis
- To enhance assertiveness in individual life.
- To overcome barriers through effective counseling.

Course Outcomes (Cos) :

Learners should be able to

1. Improve self awareness and enhance self motivation
2. Develop communication and language which increases confidence in personal and public life
3. Enhance individual assertiveness
4. Focus on benefits of transactional analysis
5. Demonstrate meeting skills as interpersonal skills
6. Formulate the counselling techniques which when applied helps to overcome problems efficiently.

Unit I

Self – Definition - Perception - Self-Schemes - Gaining Self-knowledge - Self-awareness - Self-Effectiveness - Self-Presentation - Motivation and Strategies - Self-monitoring - Impression management-Self esteem.

Unit II

Communication and language – Models- Oral – Qualities and Profile of Good Speakers - Written – Clarity, Responsibility, Simplicity, Style– Barriers - Ways of overcoming –Paralanguage, Eye contact, Facial Expression, Kinesics, Body Language, Deception

.

Unit III

Assertiveness – Nature - Importance & relevance to organizational life – Assertion and Aggression - Assertive writing - Preparing for Assertive Business Writing – Tools, Tips, Pitfalls - Persuasion - When to say Yes/No - Being Assertive with Oneself –cutting , Rewriting, editing - Enhance individual assertiveness.

Unit IV

Transaction Analysis - Ego states – Exclusion – Contamination – Strokes - Life position - Type of transactions - Time Structure – Withdrawal, Rituals, Pastimes, Activities, Games-types, Stamps, Racket and Sweat shirts, Scripts - Advantage and Disadvantage of TA.

Unit V

Counseling -Steps -Elements of counseling – Counseling as a helping strategy - Significant Predicating People's Problem - Journey in a Life Space – Anxiety - Counseling to develop organizations - Check list for counselors - Training for counseling

Suggested Readings:

16 MBAPH303C ORGANIZATIONAL DEVELOPMENT 4 0 0 4

Course Objectives:

- To understand the purpose, process and applications of human resource planning in the context of different organizational strategies.
- To make the students be aware of the need and ways of changes in organization as a whole.
- To develop the concepts of OD interventions at group and organisational level.
- To know the impact of group dynamics and its impact on organizational productivity
- The course intends to gain a thorough understanding of the organization's ability to assess its current functioning. to achieve goals
- The students gain ability to implement tools of intervention for effectively bringing change.

Course Outcomes (Cos):

Learners should be able to

1. Application of various organizational theories in designing the structure
2. Analyze the role of innovation, decision making process in building organizational culture and ethics.
3. Handle the challenges in bringing Change in Organizational performance
4. Gain ability to implement tools of intervention for effectively bringing change
5. Have practical awareness about the current trends in organizational development in companies.
6. Analyze the prospects of OD in Indian Organisations

Unit I

Introduction to Organizational Development: Concepts - Nature and Scope - Meaning and Definition –Characteristics of OD: Historical perspective of OD: Underlying Assumptions, Beliefs and Values in OD - Foundations of OD – Models and theories.

Unit II

Group Dynamics, Inter group Dynamics and Organization as System - Organizational Climate – The process of OD – Operational components of OD: Diagnostics, Action and process – Maintenance components.

Unit III

Introduction to OD Interventions: Classifications of OD interventions - Team Interventions: Inter-group and third party - peacemaking Interventions: Personnel, Interpersonal and group process interventions - Comprehensive Interventions: Structural Interventions and applicability of OD.

Unit IV

OD strategies at work - Implementation and assessment of OD - Failure and success in O.D efforts - Assessment of OD and Change in Organizational performance: The impact of OD.

Unit V

Key considerations and Issues in OD: Issues in consultant- Client relationship: Power, politics and OD – Research on OD –Ethical issues in OD-The future prospects of OD - Indian experience in OD.

16 MBAPS303A SYSTEM ANALYSIS AND DESIGN 4 0 0 4

Course objectives:

- Students understand the business system concepts and role of systems analyst
- Understand the processes of constructing the different types of information systems
- Provides knowledge on system planning and investigation
- To make the students to know the use of systems design techniques, methodologies, and tools
- Make students proficient in systems specializations.
- To make the students understand the system implementation and security aspects of system

Course Outcomes (Cos):

1. Effectively perform the role of system analyst
2. Construct a model to carry out the feasibility study and cost benefit analysis
3. Comprehend knowledge on system design and system security to improve the productivity of system management.
4. Implement code of ethics in system management
5. Provide a solid foundation of systems principles and an understanding of how business function is carried on
6. Gain expertise in system testing and quality assurance

Unit I

Overview: Introduction-Business Systems concepts, The system development life cycle –Life cycle models - Prototyping model, Incremental model, Spiral model, RAD model- Role of systems analyst.

Unit II

System Analysis: System planning and Initial Investigation-Information gathering-Tools of structured analysis-Feasibility study - Cost benefit analysis.

Unit III

System Design: The process and stages of system design-Major development activities-Input and output forms design-File organization and database design-Sequential -Logical and Physical views of data-Normalization.

Unit IV

System Implementation: System testing and quality assurance-The nature of test data-The test plan-Quality Assurance-Role of the data processing auditor-Implementation and software maintenance hardware/software selection.

Unit V

System Security: Introduction - Definition and Threats to system – Security - Control measures. Disaster/recovery planning: The plan - Ethics in system development - Ethical codes and standards of behavior.

Suggested Readings:

16 MBAPS303B EMERGING TRENDS IN TECHNOLOGY 4 0 0 4

Course Objectives:

- Disseminate knowledge to students on recent trends and developments in technology which covers e-Commerce e-Security, e-Logistics and knowledge management aspects.
- Learn about the physical components needed for information system in Nanotechnology.
- To acquaint with network security systems.
- To provide a clear understanding of e-learning models on e-logistics and supply chain management.
- To give better understanding of knowledge management
- To provide clear view on GIS Standards &Standardization process of GIS development

Course Outcomes (Cos) :

1. Familiarity with e-commerce simples the workload in personal and organizational system.
2. Develop skills on e-security which improves the efficiency in work.
3. Helps to develop network security in relevant areas
4. Design a e-learning models that provides a clear understanding on e-logistics and supply chain management.
5. Illustrate how current technologies and decision-support tools can be utilized to the advantage of business operations
6. Communicate effectively knowledge management techniques

Unit I

E-Business- Models of E-Commerce- Limitations and Advantages of E-commerce – Banking-Transactions: Inter-Banking, Intra Banking, Electronic Payments, (Payment-Gateway Example)-Securities in E-Banking-SSL, Digital Signatures, Service Provided- ATM Smart card, ECS-Electronic Clearing System- Telephone, Electricity Bills - E-commerce opportunities and challenges for Indian Industrialists.

Unit II

E-Security- Firewalls - Electronic Market - E-shop - Introduction to Security - Types of Securities, Security Tools, Network Security. CRM: Sales, Marketing and Service Management, BPO/BCP – Needs – Guidelines-Merits & Demerits, Call Center-Functioning, Ethics, Disaster Recovery Management.

Unit III

Content Management and Disseminations: E-learning-Models WBT, CBT, Virtual Campus, LMS&LCMS, Video conferencing, Chatting, Bulleting, Building Online community, Asynchronous and Synchronous Learning.

Unit IV

E-Logistics- Logistics and Supplier Chain Management, Warehousing management, Transportation/Distribution Management. E-Governance models- G2B, G2C, C2G, G2G-Challenges to E-Governance, Strategies and Tactics for implementation of E-Governance.

Unit V

Knowledge Management-Components- Types –models-Knowledge Management Cycle – tools-approaches.GIS/GPS-Nature of geographic data, Spatial objects & data models, Getting map on computers, GIS Standards &Standardization process of GIS development, Implementation and deployment Phases.

Suggested Readings:

16 MBAPS303C SOFTWARE DEVELOPMENT 4 0 0 4

Course Objectives:

- To make students understand the the impact of the implementation of new software, hardware, and networking technologies
- Provides knowledge on process models that can be utilized to the advantage of business operations
- To understand the process of software design and components
- To know about the life cycle process of the software testing and methods
- To know about the concept of quality in software development.
- To exhibit knowledge software configuration and management

Course Outcomes Cos) :

1. Design models to manage the data resources of organizations.
2. Expertise on software design creates career opportunities
3. Hands-on implementation of a data base in corporate environment
4. Gain knowledge in software design
5. Helps to bring new techniques in Software testing
6. Expertise in Software Configuration and Management

Unit I

Fundamentals - A Generic View of Process – Process Models – The Waterfall Model – Incremental Model – Evolutionary Model – Specialized Model – The Unified Process – Agile Process – Agile Models – Software Cost Estimation – Planning – Risk Analysis – Software Project Scheduling.

Unit II

Requirement Analysis -System Engineering Hierarchy – System Modeling – Requirements Engineering: Tasks – Initiating the Process – Eliciting Requirements – Developing Use Cases – Negotiating Requirements – Validating Requirements – Building the Analysis Models

Unit III

Software Design - Design Concepts – Design Models – Pattern Based Design – Architectural Design – Component Level Design – Component – Class Based and Conventional Components Design – User Interface – Analysis and Design.

Unit IV

Software Testing – Strategies: Conventional – Object Oriented – Validation Testing – Criteria – Alpha – Beta Testing – System Testing – Recovery – Security – Stress – Performance – Testing Tactics – Testing Fundamentals – Black Box Testing – While Box Testing – Basis Path – Control Structure.

Unit V

Software Configuration and Management – Features – SCM Process – Software Quality Concepts – Quality Assurance – Software Review – Technical Reviews – Formal Approach To Software Quality Assurance – Reliability – Quality Standards – Software Quality Assurance Plan.

16 MBAPE303A ENTREPRENEURIAL FINANCE 4 0 0 4

Course Objectives:

- To make the students understand the ways and means of finance for entrepreneurs.
- To get familiar with various sources of funds available for capital formation.
- To highlight the importance of various decision making areas of financial management
- Students get acquainted with the short term sources and cash management
- Knowledge on venture capital, hire purchase and leasing
- To train the students in project plan preparation.

Course Outcomes (Cos):

1. Estimate planning and capital expenditures related to project.
2. Developing the skills required to be a successful entrepreneur.
3. Evaluate the ways and means of raising funds to the business including forms of financing.
4. Develop competency in venture capital, hire purchase and leasing
5. To maintain ethical standards in individual and business life
6. The student will be able to apprehend different level of facilities available to run the business

Unit I

Capital Expenditures – Concepts - Phases of Capital Budgeting - Levels of Capital budgeting - Estimation of Project Cash flows - Time value of money. Payback Period - NPV - IRR - Cost of acquiring capital - Risk Analysis - Economic Risk - Industry Risk.

Unit II

Sources of Finance- Long Term Sources - Equity Shares, Preference Shares and Debentures - Kinds of Private Placements – IPO – SEBI – FDI - Institutional Finance - Banks - Merchant Banks in India - NBFC's in India - Small and Medium Business in India.

Unit III

Support from Banks and Financial Institutions - Bills Discounting - Factoring - Working Capital - Concepts - Importance – Cash Management.

Unit IV

Project Appraisal – Economic Analysis: Economies of Scale - Employment Generation - Social Cost Benefit Analysis - Contribution to Government Revenue - Political Stability - Priority and Evaluation of International Competitiveness. Project Monitoring – Post Sanction Supervision and Follow up –Warning Signals and Causes – Rehabilitation of a Sick Industrial Unit – Role of the Board for Industrial and Financial Reconstruction (BIFR)

Unit V

Business Ethics - Definition and Importance - Benefits of Business Ethics - Emerging Ethical issues in Business - Ethics as a Dimension of Social Responsibility

16 MBAPE303B ENTREPRENEURSHIP DEVELOPMENT 4 0 0 4

Course Objectives:

- Developing the entrepreneurial skill and promoting the qualities, traits, of entrepreneur and is taught in this course.
- To make them understand the value of entrepreneurial promotions and economic development.
- To provide an overview of the competences needed to become an entrepreneur
- To make them know the available international entrepreneurship opportunities
- Provides knowledge on steps for starting a small industry
- Gain understanding on the role of government in promoting entrepreneurship

Course Outcomes (Cos):

1. Students will gain awareness of entrepreneurial skills
2. Knowledge to setup new ventures and make profitable business
3. Capital Budget planning and carry out feasibility study
4. Generating innovative ideas and find ways to apply these ideas to solve issues and problems in different industries and settings.
5. Knowledge to appraise the environment and start new ventures
6. Analyze the role of government in business

Unit I

Entrepreneur - Meaning- Importance-Qualities, Nature, Types, Traits, Culture, Similarities and Economic differences between Entrepreneur and Intrapreneur. Entrepreneurship development- Its importance- Role of Entrepreneurship – Agencies of Entrepreneur.

Unit II

Business plan process - Sources of information - Internet, Government sources and Statistics - Offline research resources - Library - SBDC'S -Trade and Industries Associations - Sources of market research - Evaluating data- Benefits of market study -Coverage of market study - information sources.

Unit III

Creating and Starting the venture - Steps for Starting a Small Industry - Selection of types of organization - International entrepreneurship opportunities.

Unit IV

Managing, Growing and Ending the New Venture - Preparing for the New Venture - Early management decisions - Managing early growth of the New Venture - New Venture Expansion Strategies and Issues - Going public - Ending the venture.

Unit V

Role of Central Government and State Government in promoting Entrepreneurship - Introduction to various incentives, subsidies and grants - Export Oriented Units - Fiscal and Tax Concessions available. Women Entrepreneurs - Reasons for low / no women Entrepreneurs their Role, Problems and Prospects

16 MBAPE303C **PROJECT MANAGEMENT** **4 0 0 4**

Course Objectives

- To make students understand all aspects of Project Management covering project identification formulation, planning, scheduling & control.
- Enable students to acquire concepts, tools & techniques of project management.
- To sensitize the students to complexities of project management.
- To enhance the students of project financing and development banks
- To know the implementation of project and preparation of project report
- To evaluate the project performance and evaluation of costs.

Course Outcomes (Cos):

1. Inculcate in the students the expertise required for formulating project ideas and projecting cash flows as well as evaluation of project proposals.
2. To analyze project feasibility
3. To know the difficulties in project implementation and provide solutions
4. Analyze the learning and understand techniques for Project planning, scheduling and Execution Control.
5. Helps students to develop project models
6. Initiate students to carry out social and government projects

Unit I

Project Management – Concept of a Project – Categories of Project - Project life cycle-Definition of Project Management - The project as a Conversion Process - Project Environment - complexity of projects - Relationship between Project Management and Line Management - Current issues in project management- System approach to project management - Roles and responsibilities of project manager.

Unit II

Project feasibility study- Market Feasibility- Technical Feasibility-Financial Feasibility Economic Feasibility-Critical Success factors- Demand Forecasting Techniques.

Unit III

Project Implementation - Stages - Bottlenecks in Project Implementation -Guidelines for effective implementation - Management techniques for project management - Project monitoring

- Essentials - Roles - Tools and Techniques - Project Management environment - Management reporting - Report designing - Project evaluation - Project review.

Unit IV

Project Direction – Communication in Project – Project Coordination – Project Control – Scope / Progress in Control – Performance Control – Schedule Control – Cost Control.

Unit V

Government projects – Social projects – Import substitution projects – Incentives from State/ Central Government – Advanced management in projects – Strategic management in projects – Future challenges for project management.

16MBAPB303A FUNDAMENTALS OF COMMERCIAL BANK MANAGEMENT 4004

Course objectives:

- To understand the history and growth of banks and process of financial intermediation
- To understand the basic concepts of advances, deposits and Negotiable Instruments Act.
- To make the students understand the nuances of modern banking.
- To know the principles for lending services and other agency services of financial institutions
- To know the procedure for Opening of bank accounts, Types of deposit account: Savings account, Current account
- To provide the knowledge of e-banking and its impact of business operations

Course outcomes (Cos):

1. Analyze the banking services offered and recommendations of committees on banking process.
2. Categorize various Negotiable Instruments**,** Duties of paying and collecting banker
3. Create bank account and evaluate the bank rate for securities
4. Demonstrate knowledge of the liabilities of paying and collecting banks - bills of exchange and promissory notes.
5. To assess various services provided by the banks
6. Gain knowledge in e-banking ,m-banking and Cheque Transaction System

Unit I

Introduction to Banking: Role of banks, Brief History of banking in India, Structure of banking sector in India, Rationale of Banking Sector reforms, Basel Committee recommendations, Banker Customer relationship, RBI Act (Salient Features), Latest recommendations of Basel Committee.

Unit II

Negotiable Instruments – Cheques **-** Meaning, Characteristics, Crossing, Endorsement, Duties of paying banker, Duties of collecting banker, Bouncing of cheques - Liabilities of paying and collecting banks

Unit III

Deposits **-** Opening of bank accounts, Types of deposit accounts: Savings account, Current account, Fixed deposit, RECURRING deposit, Certificate of deposit, KYC Norms - Monthly income plan.

Unit IV

Advances - Principles of Sound Lending, Methods of granting advances, Types of securities, Modes of creating charges, Bank guarantees, Interest rates: Base rate, Fixed vs. Floating rates, Registration of charges with ROC - RBI norms on bank charges

Unit V

Other Services - ATM, EFT, e-banking, m-banking, Cheque Transaction System, Ancillary Services: DD, Safety deposit lockers, Credit cards, Debit cards, Smart cards, NEFT/RTGS, Call center.

16MBAPB303B RESOURCE MOBILIZATION – DEPOSITS 4 0 0 4

Course objectives:

- To know the banker customer relationship and KYC norms
- To understand the basics of low cost, no cost and high cost deposits.
- To study on importance of nomination and the rules governing non-resident accounts.
- To understand the various types of term deposits
- To understand use of decision tools for effective resources mobilization and management
- To study the Nomination facilities, Deceased accounts, Inoperative accounts, Accounts of non-residents

Course outcomes (Cos) :

1. Create bank deposits and aware of banking relationship
2. Infer knowledge of saving deposits and its process
3. Demonstrate the creation of current account and its process
4. The knowledge of Payment of interest and Service charges, Issue of cheque books, closing of accounts
5. Knowledge of opening accounts and building customer relationship
6. Illustrate the different types of deposits and nomination facilities available

Unit I

Opening of deposit accounts - Relationship with customers, Opening of accounts: Individuals, Illiterate persons, Minors, Blind persons, Firms, Associations and Limited Companies, HUF

Unit II

Savings deposits - Introduction, Savings Bank account rules, Passbooks/Statement of accounts, Payment of cheques, Collection of cheques, Payment of interest and Service charges, Issue of cheque books, Closing of accounts.

Unit III

Current Deposits - Introduction, Current account rules, Procedure of return of unpaid cheques, Minimum balance, Service charges, Statement of current accounts, Closing of accounts.

Unit IV

Term deposits - Introduction, Various types of term deposits: Fixed deposit, Monthly income plan, Recurring deposit, Payment of deposit: On due date, Pre-payment, Renewal of deposits, Advances against banks own deposit - Base rate

Unit - V

Other Aspects - Nomination facilities, Deceased accounts, Inoperative accounts, Accounts of non-residents: NRE, NRO and FCNR accounts - DICGCI (Deposit Insurance alone) – NRI.

16MBAPB303C RESOURCE DEPLOYMENT – SMALL LOANS 4 0 0 4

Course objectives:

- Understand the purpose of lending and the elements of income for banks.
- Understand the types of credit facilities and the procedure for granting various types of advances
- Understand the different types of securities and the methods of creating charges.
- To know the Agricultural Lending, Direct and Indirect Finance, and financing of Micro and Small enterprises
- To disseminate the knowledge of various financial bills
- To provide clear understanding of various credit available to customers and calculation of EMI

Course outcomes (Cos):

1. Create bank deposits and aware of banking relationship
2. Infer knowledge of saving deposits and its process
3. Demonstrate the creation of current account and its process
4. The knowledge of Payment of interest and Service charges, Issue of cheque books, closing of accounts
5. Knowledge of opening accounts and building customer relationship
6. Illustrate the different types of deposits and nomination facilities available

Unit I

Introduction to Advances – Lending - Profit maximization: Spread, Burden, Net Interest Income, Net Interest Margin, Net Interest expenses, Non Interest Expenses, Non-Interest income – Cost minimization.

Unit II

Credit facilities and Securities **-** Principles of Sound lending, Methods of granting advances, Types of Securities, Modes of creating charges, Floating charge, Consortium lending, Credit syndication - Pledge of shares

Unit III

Priority Sector advances **-** Rationale of Priority Sector advances, Targets and sub targets under priority sector advances, Agricultural Lending: Direct and Indirect Finance, Micro and Small enterprises, weaker sections – SIDBI

Unit IV

Bills Business **-** Introduction to Bills, Bills Purchased (clean bills), Bills purchased (Demand documentary bills), Bills discounting (Usance Bills) - Foreign bills

Unit V

Retail Lending **-** Home loans, Educational loans, Credit Cards, Consumer loans, other personal loans, Calculation of EMI: Effect of quantum of advance, repayment period and Interest rates on EMI. Impact of fixed and floating rates

16MBAPR303A **RETAIL ENVIRONMENT** **4 0 0 4**

Course Objectives:

- To have an exposure in retailing concept and consumer behavior in retail.
- To understand the retail marketing models and theories.
- To evaluate, plan and choose channels of retail distribution strategies.
- To get an insight in Foreign Direct Investment in retail sector
- To know the various retail models being applied in the market
- To know concepts of global retail and factors affecting the success of global retailing strategy.

Course Outcomes (Cos)

1. Apply marketing concepts in retailing and setting trends
2. Demonstrate retailing and its various concepts.
3. Construct business models in retail
4. Create strategies and tools for effective retailing
5. Evaluate marketing tools and techniques to interact with the customers.
6. To analyze the consumers decision making process and threats in global retailing.

Unit I

Retail: Meaning – Functions and special characteristics of a Retailer – Reasons forstudying Retailing Marketing-Retailer Equation – Marketing concepts Applied toRetailing – Retailing as a career – Trends in Retailing.

Unit II

Retail Model and Theories of Retail Development – Life Cycle and phase in growth ofretail markets – Business Models in Retail – Other Retail Models.

Unit III

Strategic Planning in Retailing: Situation Analysis – Objectives – Need for identifying consumer needs – Overall Strategy, Feedback and Control – Consumer decision-making process.

Unit IV

Retail in India: Evolution and Size of Retail in India – Drivers of Retail change in India –Foreign Direct Investment in Retail – Challenges to Retail Developments in India.

Unit V

Global Retail Markets: Strategic Planning Process for Global Retailing – Challenges facing Global Retailers – Challenges and Threats in Global Retailing – Factors affecting the success of Global Retailing Strategy.

16MBAPR303B RETAIL OPERATIONS, SYSTEMS AND INVENTORY 4 0 0 4

Course Objectives:

- To understand the store layout plan and inventory management in retailing
- To have an exposure in retailing concept and consumer behavior in retail.
- To acquire knowledge on store layout and effective retail space management
- To understand the store security, insurance and credit management
- To evaluate, plan and choose channels of retail distribution strategies.
- To get an insight in Space Mix and Effective Retail Space Management

Course Outcomes (Cos):

1. Analyze the factors influencing store location and locate stores.
2. Evaluating a Retail Operation, Store Operating Parameters and its various concepts.
3. Eliminate the difficulties in operating a retail business.
4. Applying the Strategic Resource Model in Retailing
5. To understand the Floor Space Management and Retail Method of Inventory Valuation.
6. Estimate the Return on Inventory Investments and Stock Turnover

Unit I

Choosing a Store Location: Importance of Location to a Retailer – Trading Area Analysis Regional Analysis – Characteristics of the Trading Areas

Unit II

Site selection: Actual Site Analysis and Selection – Choice of a General Location – Characteristics of the Available Site – Retail Store Layout – Circulation Plan – Space Mix and Effective Retail Space Management – Floor Space Management

Unit III

Operations Management: Operating a Retail Business – Operations Blueprint – Store Maintenance, Energy Management and Renovations – Inventory Management – Store Security – Insurance – Credit management – Computerization – Outsourcing – Crisis Management

Unit IV

Evaluating a Retail Operation: Store Operating Parameters – Using the Strategic Resource Model in Retailing – Designing a Performance Programme

Unit V

Retail Inventory: Inventory Planning – Return on Inventory Investments and Stock Turnover – Inventory Management – Physical and Perpetual Inventory Systems – Retail Method of Inventory Valuation

Suggested Readings:

16MBAPR303C MERCHANDISING MANAGEMENT 4 0 0 4

Course Objectives:

- To understand the basic concepts of merchandising, strategies and forecasting.
- To have an exposure on factors affecting merchandising function and functions of Merchandise Manager.
- To understand the Merchandise Buying and Promotional measures.
- To evaluate the sources, Branding Strategies, Category Management and the Components of category management strategies.
- To know the marketing tools used to gain customers in business
- To get an insight Visual Merchandising, Display Planning and Characteristics of effective display trends.

Course Outcomes (Cos) :

1. Demonstrate knowledge in merchandising and its various concepts and how it is done in global level.
2. To evaluate the factors of merchandising and formulate appropriate strategies
3. To formulate merchandise budgets to minimize costs
4. Analyze the ways that merchandising is used in marketing tools and techniques to interact with their customers.
5. To estimate pricing and analyze merchandise performance
6. Innovate visual merchandising to increase the sales volume

Unit I

Merchandising – Meaning – Concept – Factors affecting merchandising function – Merchandise Manager - Functions – Merchandise Hierarchy – Merchandise Mix – Components of Merchandise Management – Merchandise Strategies

Unit II

Merchandise planning - Steps involved – Merchandise control – Open to buy – Assortment Planning – Steps involved – Merchandising Stages - Merchandise Budgets and Forecasting

Unit III

Merchandise Buying – Types of buying – Sources of supply - Identifying and Contracting - Evaluating sources – Branding Strategies – Category Management – Components of category management – Category Management and Business Process.

Unit IV

Merchandise Performance – Retail pricing – Elements – Merchandise allocation – Analyzing merchandise performance – Methods – Integrating Dollar and Unit concept – Gross Margin Return on Investment – Mark Ups and Downs – Shrinkage in Retail Management

Unit V

Visual Merchandising — Display Planning – Characteristics of effective display – Selling power of Display – Methods of Display – Window Display and Interior Display-Space Management – Planning layout.

16MBAPI303A INTERNATIONAL MARKETING MANAGEMENT 4 0 0 4

Course Objectives:

- To have an exposure in international marketing management concept
- To understand the international marketing management and market segmentation.
- To know the process of promoting the product in the international market
- Acquire knowledge on pricing strategies and factors influencing pricing
- To provide better understanding on international distribution systems and strategy related to distribution channel
- To learn about marketing communication and promotion programmes

Course Outcomes (Cos):

1. Ability to analyze the scope of international marketing and International marketing management process
2. Demonstrate the International Market Segmentation and Positioning
3. Ability to determine product policies and pricing strategies and environment factors affecting international prices
4. Focuses on risk involved in multinational product planning and market communications.
5. Ability to understand structure of international distribution systems and Distribution channel strategy
6. Demonstrate capabilities in international marketing communication and promotion programme

Unit I

International Marketing: an overview - Nature, Importance and scope of International Marketing, Domestic marketing vs. International marketing, International marketing management process – International marketing environment, Scanning and monitoring global marketing environment; International Marketing Information System.

Unit II

International market segmentation, Positioning, Analysis of world market, Market analysis, International marketing research, Screening and selection of markets, International market entry: Export, Licensing , Franchise, Joint Venture, Multinational operations, Contract manufacturing

Unit III

International Product Policies – Major product decisions – Product features and quality, Product design, Labeling, Packaging, Branding and product support services; Strategies in multinational product planning, International product life cycle, New product development.

Unit IV

International Pricing Decisions – International Price determination, Price escalation, International pricing process and policies, Delivery terms and currency for export price quotations, International transfer pricing, Methods of determining transfer pricing, Differential Pricing

Unit V

International marketing communication – Communication with foreign buyers, Planning and preparing, International promotion programme, Media structure, Planning media strategy, Corporate advertising.

16MBAPI303B INTERNATIONAL LOGISTICS AND DOCUMENTATION 4 0 0 4

Course Objectives:

- To have an exposure to International Distribution system and Logistics
- To have an exposure in broad conceptual focus on documentation in exports and imports
- To understand the Logistics and International marketing channel decision.
- To acquire knowledge on the procedures to be followed to Export and Import License
- To get an insight on the international trade terms and legal framework involved in it.
- To understand the concept of export, EXIM strategies, custom clearance and Export incentive schemes.

Course Outcomes (Cos):

1. Demonstrate retailing and its various concepts.
2. Evaluate the value adding perspective of logistics and distribution system.
3. Analyze the linkage of logistics with operations, manufacturing and supply chain.
4. Analyze international terms of trade and trade contracts related to logistics
5. Prepare documents on the exports and imports of goods
6. Understand EDI and custom operations

1. .

Unit I

International Distribution system and Logistics – International marketing channel decision, Importance and scope of channel decisions, Channels between nations, international physical distribution decisions, nature of physical distribution

Unit II

Transportation – Importance of effective transportation system, service choices and their characteristics, cost characteristics and role fixation, In-company management vs. outsourcing, shipping structure – Sea borne trade, International shipping characteristics, Important international sea routes, Liner & tramp operations, Liner freighting, CFC and ICD, Indian shipping – Growth, Policy and Problems, Major Indian ports, International Air Transport, freight rates, India’s exports and imports by air – problems and prospects.

Unit III

Documentation - Naming the enterprise, Forms of ownership, Opening a bank account, Need for documentation, Process of obtaining Export and Import License:- General registrations, registrations with RBI, Registration with Licensing Authorities, Registration with appropriate EPC/Commodity Board’s. Main commercial documents: Statutory documents for exporting country, Statutory documents for importing country and documents for claiming export benefits.

Unit IV

International Trade Terms –Trade contract, Credit risk management and payment terms, LC & parties involved, Types of LC, UCPDC – Major clauses, Consignment sale, Transit risk management – Contract of cargo insurance parties, Insurance policy and certificate, Cargo loss clauses – Procedure and documentation

Unit V

Clearance – Excise duty – Definition, Types of duties, Legal framework – Central Excise Act and rules, Tariffs, Customs Act 1962, Customs Tariffs Act 1975, Foreign Trade Act 1992, Physical Examination of goods, EDI and custom operations.

16MBAPP303A BUSINESS PROCESS REENGINEERING 4 0 0 4

Course Objectives:

- Emphasize challenges and opportunities for Business Process Reengineering across the process life cycle.
- To understand the importance of business process reengineering and kaizen.
- To gain expertise in ISO standardization and its benefits
- To enable the students to understand the relevance of change management in business process reengineering.
- To familiarize the process of implementation of Business Process Engineering
- To understand the Change Management in Business Process Reengineering

Course Outcomes (Cos):

1. Analyze the Business Process Reengineering and Kaizen and its various concepts.
2. Categorize the benefits of ISO standards
3. Evaluate the Implementation of Business Process Reengineering
4. Get an insight the Pitfalls in organizational environment
5. Demonstrate Application of negotiation in BPR and Implementation of changes
6. Estimate the ways of Change Management in Business Process Reengineering and techniques to interact with their customers.

Unit I

Business Process Reengineering and Kaizen - BPR: Definition, Japanese Business strategy, Kaizen and Management, Characteristic features of Kaizen relevant to BPR - New developments in BPR

Unit II

Business Process Reengineering and other Management concepts - Issues in BPR, BPR and TQM - QFD - ISO standards - ERP - Benefits of ISO standards

Unit III

Implementation of Business Process Reengineering - Business vision and process objectives, Identification of processes to be reengineered - Measurement of processes - Design - Evaluation of process prototype.

Unit IV

Reengineering Structure and Pitfalls - BPR leader - Process owners - Reengineering teams - Pitfalls in organizational environment - Complacency management - Reengineered process - Appraisal system

Unit V

Change Management in Business Process Reengineering - Structure of change, Approaches to radical change, Management of change in BPR, Application of negotiation in BPR. Implementation of changes

16MBAPP303B ADVANCED MAINTENANCE MANAGEMENT 4 0 0 4

Course Objectives:

- To understand the advanced maintenance management that provides an insight into maintenance planning, analysis, system, cost and advanced techniques
- To aware the functions of maintenance.
- To gain insight in the concept of Reengineering Maintenance Process
- To familiarize the students with Total Productive Maintenance.
- To enable the students to understand the concept of optimum overhaul.
- To make them understand the Management Information system and Technical audit

Course Outcomes (Cos):

1. Analyze and define maintenance concepts and strategies
2. Determine the design for maintainability and preventive maintenance
3. To evaluate Design out maintenance, Total Productive Maintenance - Reduction of Maintenance Cost
4. To categorize Reengineering Maintenance Process
5. Analyze the Total Productive Maintenance and Reduction of Maintenance Cost
6. Develop knowledge on Maintenance Management Information System & Technical Audit

Unit I

Maintenance Concepts - Objectives and functions of maintenance – Types - Maintenance strategies - Organization for maintenance - Five Zero concept - New Developments in Maintenance

Unit II

Failure Data Analysis - MTBF, MTTF, Useful life, Survival curves, Repair time distribution, Break down time distributions, Poisson, Exponential and Normal distribution. Availability of repairable Systems - Maintainability prediction - Design for maintainability - Preventive Maintenance

Unit III

Maintenance Planning - Overhaul and repair: Meaning and difference, optimal overhaul / Repair / Replace maintenance policy - Re placement Decisions: Optimal Interval - Group Replacement

Unit IV

Maintenance Systems - Fixed time maintenance, Condition based maintenance, Operate to failure, Opportunity maintenance, Design out maintenance, Total Productive Maintenance - Reduction of Maintenance Cost

Unit V

Advanced Techniques - Reliability Centered Maintenance (RCM) – Total Productive Maintenance (TPM) - Philosophy and implementation, Signature analysis - Expert systems – Concept of Terro technology, Reengineering Maintenance Process, Concept of reliability, Reliability improvement, Concept of maintainability and maintainability improvement, Maintenance Management Information System & Technical Audit

16MBAPP303C **LEAN MANAGEMENT** **4 0 0 4**

Course Objectives:

- To gain knowledge on lean manufacturing system
- To enable the student to understand the Designing of 5S and Kanban Signaling
- To have an exposure in the integrated perspective of Lean thinking apart from covering all the basic tools needed.
- To enable the student to acquire the knowledge of Value Steam Mapping
- To get an insight with the implementation of various lean manufacturing techniques. ,
- To aware of Lean line optimization

Course Outcomes (Cos):

1. To analyze the lean manufacturing system in manufacturing industries
2. Define Lean Manufacturing System and its various concepts.
3. Demonstrate lean implementation in service
4. Practice Kanban Strategies and inventory management
5. Analyze the ways of Lean Implementation and Milestones tools and techniques to interact with the workers
6. Evaluate the customer demand and Customer response policy

Unit I

Benefits of Lean Manufacturing System - History and modern applications, MRP and their impact, Lean manufacturing model, Kanban Methodology, Continuing evaluation, Strategic Business Analysis. Internet and e-commerce applications & Reverse Auction

Unit II

Understanding Product, Process and Demand - Value Stream Mapping – Scope - Selecting parent parts - Lean line – Demand - Documenting process flow - Talk time - Process linking and Balancing - Imbalance Approach - Resource , Physical Layout, Designing 5S, Kanban Signaling

Unit III

Kanban Strategies – Process - Single and Multi Card system - Inventory Management, Advantages and Disadvantages - Team Establishment: Commitment, Physical facilitation, Management Structure - Transformation process & perpetual inventory

Unit IV

Lean Implementation and Milestones - Software requirement milestones - Understanding process, Product and Materials- Checking - Factory design - Line startup - Lean implementation in services

Unit V

Lean Line management - Matching customer demand - Customer response policy - Lean line optimization - Resistance to change - Flexibility and rewards.

16MBAPN303A GENERAL INSURANCE 4004

Course Objectives:

- To have an exposure in Insurance Products concept .
- The students to know about the constitutional provisions in areas and different types of general insurance.
- To understand the concepts, principles, practices and procedures adopted by insurers in underwriting all classes of non-life insurance
- To provide an in-depth knowledge on the international issues in insurance markets
- To improve the critical thinking and problem-solving skills
- To understand the evolution and growth of general insurance sector in India.

Course Outcomes (Cos)

1. Analyze the health insurance and its various products in India
2. Identify the various Investment products & health savings components.
3. Analyze the growth of insurance industry in India
4. Evaluate the International Issues in Insurance Markets
5. Differentiate the various types of insurance like motor, fire Insurance, medical and miscellaneous insurance.
6. Ability to communicate effectively the strategies for insurance packages

Unit I:

Types of Health Insurance Products in India – Hospitalization Indemnity product – Personal Accident products – Critical Illness product – Daily Hospital Cash benefit – Disease management covers – Outpatient covers – Investment products in health insurance & health savings components.

Unit II:

Fire Insurance-Meaning- Scope-Policy Drafting, Endorsements & Premium Computation: Proposal form – Risk Inspection Report Scope & Purpose – Premium – The Schedule – Drafting of Policy – Endorsements – Renewal Notice - The Standard Fire & Special Perils Policy: Preamble – Perils covered viz. Fire, Lightning, Explosion/Implosion, Aircraft Damage, Riot, Strike, and Malicious Damage.

Unit III:

Development of Engineering Insurance and Relevant Legislation: Historical background – Statutes & Regulations that affect conduct of business in India. Construction Phase insurances – Operational Phase insurances.

Unit IV:

Miscellaneous Insurance- Scope- Functions-Money Insurance: Introduction, Coverage, Special features, Exclusions, Conditions, Underwriting considerations, Rating Pattern, Claims Procedure. Bankers Indemnity and Jewellers Block Insurance– Coverage-Rating pattern – Claims procedure.

Unit V:

Motor Insurance- Motor Third Party Pool – Dysfunctional Motor Market – Motor Third Party Pool – Review of Pool – Knock for Knock Agreement – International Issues in Insurance Markets – International Translation of Driver's License – Some Market Practices.

Suggested Readings:

3. Frappoli, M. (2005). *General Insurance for Information Technology Professionals*

16MBAPN303B PRINCIPLES AND PRACTICE OF INSURANCE 4004

Course Objectives:

- To have an exposure in insurance mechanism concept
- To understand the Concept of Insurance its Evolution.
- An overview of major life insurance and general insurance products
- To evaluate the concept of insurance and cover of risk.
- To provide basic understanding of various types of reinsurance and methods of reinsurance
- To get an insight in Insurance contract and Importance of group insurance schemes

Course Outcomes (Cos)

1. Demonstrate the principles of insurance and its various concepts.
2. To understand the Concept of Insurance its Evolution.
3. Classify the Constituents of Insurance Market
4. Evaluate the different types of life insurance plans to interact with their customers.
5. Analyze the various types of reinsurance and Methods of reinsurance
6. Analyze the risk management and Risk evaluation in insurance segment

Unit 1:

Concept of Insurance its Evolution: Basics evolution of Insurance – Scope of Insurance - Classes of Insurance – Importance of Insurance – Management of risk by individuals – Management of risk by Insurers – Fixing of Premiums – Reinsurance and its importance.

Unit II:

Insurance Market: Constituents of Insurance Market – Operations of Insurance Companies - Operations of Intermediaries – Specialist Insurance Companies – Role of regulators – Other bodies connected with Insurance - Understanding Insurance Customers – Different customer needs – Importance of Customers.

Unit III:

Insurance Contract: Terms of Insurance contract – Principles which forms the foundation of insurance – Significance of the principle of Insurable Interest – Principle of Indemnity –

Principle of Subrogation – Principle of Contribution – disclosure of all Relevant Information – Principle of Utmost Good faith.

Unit IV:

Different types of life insurance plans – Term Plan – Endowment Plan – Money Back Insurance Plan – Whole-Life Insurance Plan – Unit Linked Insurance Plans (ULIPs) – Joint Life Insurance Plans – Child Insurance Plans – Rider benefits – Industrial life insurance – MWP Policies– Keyman insurance – Health insurance and its types.

Unit V:

Importance of group insurance schemes – Main features of group insurance schemes – Eligibility conditions in group insurance – Different types of group insurance schemes – Group Term Insurance Scheme – Group Gratuity Scheme – Group Superannuation scheme – Types of group superannuation schemes – Group Leave Encashment scheme - Risk Management – Types of reinsurance – Method of reinsurance - Insurer's role in risk management – Risk evaluation.

Suggested Readings:

16MBAPN303C ACTUARIAL ASPECTS OF PRODUCT DEVELOPMENT 4004

Course Objectives:

- To understand the various legal aspects of products
- The object of this course is to equip students with theoretical and practical knowledge of consumer grievance
- To help to evaluate, plan the insurance premium strategies.
- To get familiarize with the 'Group' and 'Group Policy/Scheme' and determination of interest rates
- To get an insight Financial Viability ,Profit Margin and Solvency Margin
- To have exposure on Reinsurance, Types of Reinsurance - Reinsurance Support ,terms and conditions of Treaty

Course Outcomes (Cos)

1. Analyze the types of Insurance Products and its various Legal Aspects of Product concepts.
2. Develop strategies to handle consumer grievances
3. Clear understanding of Price and Premium, Equation of Value – Components of Premium
4. Analyze the group insured schemes
5. Understand the Premium Bases and determine the best Premium bases
6. Evaluate the terms and conditions of reinsurance

Unit I:

Definition of Insurance Product – Scope of Insurance-Physical Form of Product – Utility of Product – Legal Aspects of Product – Insurable Interest – Rights of Nominees, Assignors, Heirs and Successors. Profitability – Design of Product – Health and other conditions – Maturity – Suppression of Information – Consumer Grievances – Regulators, Stakeholders.

Unit II:

Meaning of Price and Premium – Equation of Value – Components of Premium – Problems in Determination of Premium – Renewal Expenses – Long term Business – Life Insurance Business – Assurances – Pure Death Benefit Contracts –Annuities – Riders / Add-ons – Alterations – Profit Contracts –Types of Bonuses – Discount in Premium.

Unit III:

Types of Insurance Products – 'Group' and 'Group Policy/Scheme' – Insured Group Schemes – Experience rating – Profit Sharing –Interest Rate – Determination of Interest Rate.

Unit IV:

Premium Bases – How to determine this Premium bases - Use of Premium bases - Commission rates - Use of Commission Rates – Expense rates

Unit V:

Financial Viability – Profit Margin and Solvency Margin - Reinsurance – Terms and Conditions of Treaty, Inter Alia – Types of Reinsurance - Reinsurance Support.

16 MBAP304 MANAGEMENT PRACTICE III 2 1 0 1

Course Objectives:

- To understand the components of Personality Development
- To enhance the personal etiquette among students
- To equip students with the basic knowledge of building relationship with superiors and staff
- To develop students critical and innovative thinking
- To inculcate the knowledge of organizing seminars, conferences and conducting meetings
- To improve managerial skills and goal setting among students

Course Outcomes (Cos):

1. Demonstrate capabilities of lateral thinking and handling criticisms
2. Practice business etiquettes and aware cross-cultural etiquette
3. Demonstrate goal-setting and problem-solving
4. Develop proactive thinking
5. Ability to communicate effectively.
6. To gain professionalism in personal and organizational life

Unit I

Personality Development / Personal Branding for Career Success – SWOT Analysis – Knowing your personality – Emotional Quotient – Lateral thinking – Handling criticisms – Body language

Unit II

Personal etiquette - Good work practices, Dress code, Code of Good conduct, Handling ethical dilemmas – Business etiquettes — Behaviour at work - Awareness of Diversity, Respecting others' space, Greeting in business setting, Meeting people in business setting, developing relationship with superiors and staff - Dining Etiquette - Cross Cultural Etiquette

Unit III

Managerial Skills – Innovative planning – Conducting professional meetings and conferences – Customer retention and satisfaction – Goal setting and problem solving, handling contingent situation

Suggested Reading:

16 MBAP305 COMMUNICATION PRACTICE III 2 0 0 1

Course Objectives:

- To impart students and enrich communication and non-verbal activity such that students will be good on their communication.
- To understand the use of language in day-to-day business life
- To provide the skills in improving social communication
- Make students to understand the value of face to face communication
- To train them in group discussions and interviews
- The students shall be familiar with conducting meetings, seminar and conferences.

Course Outcomes (Cos):

1. The student will able to get practice with Verbal communication and Non- Verbal communication.
2. Demonstrate the understanding of face to face Communication.
3. The students shall be familiar with conducting meetings, seminar and conferences.
4. Students attain competence in functional use of communication during both academic and non-academic life situations.
5. To draft effective business correspondence with brevity and clarity.
6. To stimulate their Critical thinking by designing and developing clean and lucid writing skills.

Unit I

PERSONAL COMMUNICATION:

Day-to-day conversation with family members, neighbors, relatives, friends on various topics, context specific – agreeing/disagreeing, wishing, consoling, advising, persuading, expressing opinions and arguing.

Unit II

SOCIAL COMMUNICATION:

Telephone calls (official), colleagues in the work spot, discussing issues (social, political, cultural), clubs (any social gathering), answering questions, talking about films, books, news items, T.V. programmes, sharing jokes, Current issues.

Unit III

GROUP / MASS COMMUNICATION:

Group discussion (brainstorming), debate, panel discussion, anchoring / master of ceremony, welcome address, proposing vote of thanks, introducing speakers, conducting meetings, making announcements, Just-a-minute (JAM), Block and tackle, shipwreck, spoof, conducting quiz, negotiations, oral reports.

16 MBAP321 SUMMER INTERNSHIP & VIVA VOCE 4 0 0 4

Course Objectives:

- Internship is aimed to feed industry - institutional- orientation among the students
- To sensitize students to the nuances of corporate culture and familiarize them with the corporate code of behavior.
- To educate the graduates to acquire skills, knowledge, attitudes, and perceptions along with the experience needed to constitute a professional identity
- To give an insight into the working of the real organizations
- To inculcate the knowledge about business organizations in their totality
- To learn the opportunities available and plan their career

Course Outcomes Cos):

1. Demonstrate theoretical knowledge in solving real time problems.
2. Gain practical exposure of the core area of functioning in industry
3. Learn actual supervised professional experiences
4. Effectively communicate ideas and evaluate its impact on business environment.
5. Understand perspective about business organizations in their totality.
6. Discover career opportunities

During second semester vacation each student shall undertake a Summer Internship for 30 Days. The summer internship may be a general study of all functional areas of a company or may be a functional focus on a specialized functional area of management in a company. The report should be certified by the concerned organization where the student has undertaken the internship. He /She shall also submit a detailed report for Viva-voce Examination.

16MBAPF401A WORKING CAPITAL MANAGEMENT 4 0 0 4

Course objectives:

To make the students

- Being specialized in finance present day managers to be aware of short term movement of capital and problems related to working capital management
- To study about the importance of working capital.
- To learn the factors of cash management.
- To understand credit policy of receivable management.
- To learn the various techniques of inventory management.
- To provide clear view of committee's recommendation on working capital.

Course outcomes (Cos):

Learners should be able to

1. Estimate the requirements and manage the working capital required for the business
2. Analyze the different sources of capital and computation of cost of capital.
3. Develop cash management techniques
4. Evaluate the components of financial leverage, dividend policies and capital structure theories and its application in business.
5. Develop new techniques in managing and controlling inventory in organizations
6. Analyze the Committee recommendations on working capital financing

Unit I

Working Capital Management - an overview - Importance - Components of Working Capital – levels of working capital investment- Factors Influencing the Requirements of Working Capital, Issues and Practices of working capital management in India. Computation of Working Capital requirement (Problems).

Unit II

Cash Management – Facets of cash management – Motives of Holding cash – Factors influencing cash balance – Determining Optimum Cash Balance – Cash Planning – Managing cash collections and disbursement – Investing the Surplus in Marketable Securities. Cash Budget (Problems), Cash Management Practices in India.

Unit III

Receivables Management- Objectives - Credit Policies – Credit Terms - Nature and Goals of Credit Policy – Optimum Credit Policy - Credit Period - Collection Efforts - Credit Evaluation - Credit granting decision - Control of Receivables – Factoring – Definition and Mechanism – Advantages - Problems.

Unit IV

Inventory Management - Nature of Inventories – Objective of Inventory Management - Need to hold Inventories - Techniques for managing inventory - Inventory Control System – Problems

Unit V

Working capital financing**:** Working Capital Control and Banking policy - Committee recommendations on working capital - New system of assessment of working capital finance. Trade credit – Bank Credit – Commercial Papers – Certificate of Deposits– recent trends in working capital financing

Note: Problems 40 Marks and Theory 60 Marks.

Suggested Readings:

16 MBAPF401B SECURITY ANALYSIS & PORTFOLIO MANAGEMENT 4 0 0 4

Course objectives:

To make the students

- Understand the securities market and factors influencing risk
- To provide the knowledge of the structure and functioning of capital market
- To expose the concepts of investment Risks and Securities.
- To facilitate them to understand and exploit the tools available for analysis.
- To hassle the need of portfolio management and its application
- To understand the security analysis & portfolio management concept and its importance and its applications in business

Course outcomes (Cos):

Learners should be able to

1. Analyze the role of a financial manager, and their role in taking decisions professionally.
2. To clarify the structure and functioning of capital market.
3. Demonstrate knowledge and compute value of security analysis & portfolio management and apply the concept to Evaluate the business proposal applying capital budgeting techniques
4. Compute the security analysis & portfolio management
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to finance decisions
6. Gain insight in risk management techniques

Unit I

Investments – Concepts and features- Objectives – Constraints - Investment vs Speculation - Investment Process, Investment Planning - Investment Avenues – Securities Market – Participants – Securities – Indices - Factors Influencing Risk.

Unit II

Over view of capital market - Structure in Indian capital market- Major players - Role of stock exchanges - Trading and settlement procedures at NSE and BSE. Securities Contract Regulation Act - Securities and Exchange Board of India - Indian debt market- Stock Market Indices.

Unit III

Fundamental Analysis: Economic analysis – Economic Forecasting - Industrial Analysis - Industry life cycle – Analytical tools – SWOT – Porter's Five Force Model – Company Analysis.

Unit IV

Forecasting individual stock performance: Technical analysis – Charting methods – Market indicators, Trends –Trend reversals- Moving average – Oscillators - CAPM –APT theory Valuation of securities- Risk and return – Types - Factors affecting option price.

Unit V

Portfolio theory – Portfolio construction – Markowitz diversification model – Performance evaluation – Portfolio revision- Portfolio evaluation: Sharpe Index, TreynorIndex, Jensen's Model.

Suggested Readings:

16 MBAPF401C **4 0 0 4**

BONDS, DERIVATIVES AND COMMODITY MARKET MANAGEMENT

Course objectives:

To make the students

- To clarify the structure and functioning of concepts of Bonds, Derivatives, Futures
- To expose the concepts of futures and options
- To impart the structure and functioning of commodities market.
- To equip young managers with the knowledge of emerging commodities derivatives trading practices in India.
- To explain the regulatory framework of these markets and domestic and international historical developments in commodities market.
- To understand the settlement and risk management in commodity trading

Course outcomes (Cos) :

Learners should be able to

1. Understand the role of a financial manager, and their role in taking decisions professionally
2. Apply derivatives as risk management tools for hedging market risk exposure
3. Demonstrate knowledge and compute value of security analysis & portfolio management
4. Estimate the eligibility of stock for futures and options trading.
5. Compute the commodity trading: commodity derivates – commodity exchanges in India
6. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to finance decisions

Unit I

Bonds attributes – bond returns & prices – risk structure of bonds – forecasting interest rate bonds – the term structure of interest rates. Bond management strategies; - passive – semi active – active – passive and active strategies – new innovations in bonds - Bond portfolio management.

Unit II

Introduction to Derivatives: Definition – types – market index: types of index; introduction to futures and options; forward contract – limitations – features, futures Vs forward contract.

Introduction to options – Distinction between futures and options, pay off for derivative contracts.

Unit III

Futures and options , trading systems – basis of trading – eligibility of stock for futures and options trading – clearing and settlement; clearing entities – members – banks – mechanism – settlement mechanism – regularity framework-case studies in relevant topics.

Unit IV

Introduction to commodity trading: commodity derivates – commodity exchanges in India – types of instruments available for trading – pricing – commodity derivatives, hedging, speculation, arbitrage in commodity derivative markets. Case studies in relevant topics.

Unit V

Clearing, settlement and risk management in commodity trading, Calendar and settlement schedule – position determination – settlement mechanism - settlement price – margining – final statement – exception handling – regularity framework. Case studies in relevant topics.

16MBAPM401A **BRANDS AND BUSINESS** **4 0 0 4**

Course Objectives:

- To equip the students with the various dimensions of product management such as Brand Positioning and its Preference.
- To get familiarize with the portfolio management and competitior's analysis
- To develop familiarity and competence with the strategies
- To understand the tactics involved in building, leveraging and defending strong brands in different sectors.
- To equip the students with the various dimensions of product management such as Brand Positioning and its Preference.
- To possess knowledge on building brand equity

Course Outcomes (Cos):

1. Analyze the product concepts and new product development
2. Developing strategies for new product development using various models
3. Construct branding strategy considering social and political aspects of brands
4. Evaluate the failure of branding using new media
5. Create models for brand positioning
6. Evaluate brand equity and brand valuation for successful implementation of branding strategy.

Unit I

Products - Concepts - New Product Development – Strategies - Launching Strategies, Product Life Cycle - Portfolio Management -BCG, GE, Porter's Model, Competitor's Analysis, Customer Analysis, Market potential, Product Demand pattern and Trend Analysis.

Unit II

The Concept of Brands - The Economic Importance of Brands - The Social and Political Aspects of Brands - Difference between Marketing and Branding - Changing Rules of Marketing and Branding in India - Digital Dimension, Consumer Activism, Leveraging Technology

Unit III

Introduction to Brand Positioning: The 4Ps – An Inherently Futuristic Model - 4Ps in the IT Age

- Brand Positioning - Fundamentals of Brand Positioning - First Movers - Mistakes in Brand Positioning – Introspection - Gaining Brand Preference.

Unit IV

The Brand Relevance Model: The First Mover Advantage - Managing a New Category - The Different Levels of Innovation - Understanding Brand Relevance – Categorization - Creating New Categories or Subcategories — Four Tasks - How Categorization Affects Information Processing and Attitudes

Unit V

Packaging – Labeling - Brand Rejuvenation - Brand Success strategies - Brand Resilience - Brand Equity - Brand valuation - Building global brands - Branding failures.

16MBAPM401B **RETAIL MARKETING** **4 0 0 4**

Course Objectives:

- To have an exposure in retailing concept and consumer behavior in retail.
- To know the theories of retail management and classification of models
- To give a perspective of the Indian retailing scenario
- To understand the retail marketing mix and Promotional measures.
- To evaluate, plan and choose channels of retail distribution strategies.
- To get an insight in IT application and international retailing trends

Course Outcomes (Cos):

1. Adopt strategies to the challenges in retailing and gain competitive advantage
2. Construct models for direct marketing
3. Demonstrate knowledge of the various forms of Retail outlets and current trends in Retail
4. Analyze the retail marketing mix and draw plan for effective combination
5. Adopt information tools and techniques to interact with their customers.
6. Inculcate ethical values, enabling to set value standards and belief to have positive outcomes

Unit I

Retailing – Introduction – Importance – Challenges in retailing — Consumer behavior in retail context –demographic and socio-economic factors – strategic Retail Planning process – opportunities and Competitive advantage

Unit II

The Evolution of retail format –Theories in retail development- environmental, Cyclical and conflict theory – The concept of life cycle in retail - Retail Models – Classification – Store Based – Non store based – Direct Marketing – Franchising – Forms - Mall Management – Mall Designs.

Unit III

Retail Marketing Mix – Product decision – Nature, selection & delivery decision – Types of Pricing - Pricing decision- concepts - leader pricing - odd pricing - Promotion decision – advertising, sales promotion & publicity - channel & channel management

Unit IV

Application in retail - IT applications in retail – Database marketing, data mining and business intelligence – Electronic retailing – Developing decision support systems – Visual Merchandising – types of Visual Merchandising – Store location and Site location.

Unit V

Global retailing trends - Indian and International retailing trends – Indian Retailers in Jewellery - Textiles – Food - Music and Electronics – Ethics in retailing – Social responsibility & Consumerism, E-CRM.

16 MBAPM401C CUSTOMER RELATIONSHIP MANAGEMENT 4 0 0 4

Course objectives:

- To understand the need and importance of maintaining a good relationship with customers
- To expose to the various approaches of Customer Relationship Management
- To have an in-depth knowledge in CRM structures, planning and implementation
- To acquire acquaintance in Concepts and Context of relationship Management
- To gain familiarity by understanding Customers Behaviour and role of relation manager
- To identify Customer perception with the concepts and practical implications of customer relationship management

Course outcomes (Cos) :

1. Formulate tools for effective customer relation towards organization
2. Analyze the customer database and profile and serve to their expectations
3. Build CRM models based on customer psychology behind customer relationship
4. Estimate the Customer behavior in relationship perspectives
5. Recognize Data Ware housing and use the Data mining for CRM
6. Develop the CRM software packages

Unit I

Introduction - Definitions - Concepts and Context of relationship Management – Evolution - Transactional Vs Relationship Approach – CRM as a strategic marketing tool – CRM significance to the stakeholders.

Unit II

Understanding Customers - Customer information Database – Customer Profile Analysis - Customer perception, Expectations analysis – Customer behavior in relationship perspectives; individual and group customer’s - Customer life time value – Selection of Profitable customer segments.

Unit III

CRM structures - Elements of CRM – CRM Process – Strategies for Customer acquisition – Retention and Prevention of defection – Models of CRM – CRM road map for business applications.

Unit IV

CRM planning and implementation - Strategic CRM planning process – Implementation issues – CRM Tools - Analytical CRM – Operational CRM – Call center management – Role of CRM Managers.

Unit V

Trends in CRM – E-CRM Solutions – Data Warehousing – Data mining for CRM – an introduction to CRM software packages

16 MBAPH401B TRAINING & DEVELOPMENT 4 0 0 4

Course objectives:

- To know the role and functions of training and development in organization,
- To understand the theories, principles and their implications for the effectiveness of training programs.
- To elucidate on Implementation of Training – Physical arrangements – Classroom management – Trainer's skills and styles
- To understand Career Planning and Factors affecting Career Choices, Career Stages, Career anchors, Succession planning
- To realize the need of controlling in improving the performance of the organization.
- To enable students to synthesize related information and evaluate options for the most logical and optimal solution such that they would be able to predict and control human behaviour and improve results

Course outcomes (Cos):

1. Ability to train and develop employees to improve organizational efficiency.
2. Assess various key factors in designing training programme
3. Designing the training methods for employees as per the requirement of organization
4. Analyze the efficiency of employees and develop career planning
5. Gain knowledge in management development programmes
6. Evaluate the training programmes and prepare a report

Unit I

Training concepts - Features of Training and Development – Objectives – Benefits of Training and Development – Principles of Training, Scope of Training and Development, Historical development of Training and Development, applying to organizational effectiveness

Unit II

Concepts of Learning, Components of Learning – Principles of Learning – Learning Theories – E –Learning - Training Process – Key factors in designing training programme - Assessing Training needs – Methods of TNA – Training Design – Constraints in Training Design

Unit III

Implementation of Training – Physical arrangements – classroom management – Trainer's skills and styles – Transfer of Training - Evaluation of Training – need – types of instruments – Evaluation design – Models of Training evaluation.

Unit IV

Training Methods – On and Off the Job training Techniques - Lecture Methods, Programmed Learning – Discussion methods, case Methods, Role Play –, Business games, in-basket exercises, Field Training, Audio-Visual Aids, Static and Dynamic media – Computer based training, Training methods adopted by Successful Indian Organizations.

Unit V

Career Planning – need - Factors affecting Career Choices, Career Stages, Career anchors, Succession planning – steps- Career Development- Management Development – Need & Importance – Types of management development programmes - Management characteristics – skill acquisition – Training for Executive level management - Emerging Trends and Future Prospects in Training and Development.

16 MBAPH401C COMPENSATION MANAGEMENT 4 0 0 4

Course objectives:

- To make the students to be familiar with Wages, Salary, incentives, Compensation and pay scale systems
- To understand the Concept of Equity and Components of Compensation
- To understand the compensation designing and factors deciding compensation designing
- To know the basics of compensation, various incentives and fringe benefits applicable
- To understand the fundamentals of wages, salary, incentives, compensation and pay scale systems and apply lifelong
- To have relevant knowledge of social security laws for employees of the organization

Course outcomes (Cos):

1. Design the compensation plan suitable to their organization
2. Formulate incentives and retirement plans
3. Evaluate the existing fringe benefits and design new programmes for organization
4. Analyze the Internal and External Equity in Compensation Systems
5. Classify the Laws Relating to Workmen's Compensation, Employee's State Insurance, and Provident Fund
6. Evaluate the Compensation plans provided by Public sectors & Private Sectors

Unit I

Compensation: Concept and Nature – Concept of Equity & Compensation-Components of Compensation- Form of Compensation, Compensation Plans- Types of Compensation plans. Wage concepts – components- criteria of wage fixation, Types of Wages - Designing Wage, salary and Compensation Policies- Wage differentials.

Unit II

Compensation Designing –Factors affecting Compensation Designing. Incentives and Retirement plans: Basic Pay, Provisions for Dearness allowance – Calculation of total compensation package, various methods of compensating cost of living, Neutralization factors.

Unit III

Incentives and Fringe Benefits – Incentives – Definition, Types of Incentives: Individual incentives and Organization Wide incentives – Scanlon Plan, Kaiser Plan, Profit sharing, on-financial incentives, Fringe Benefits – Definition, Objectives, Types of Fringe Benefits.

Unit IV

Planning for Improved Competitiveness: Diagnosis and Bench Marking, Obtaining Commitment; Determination of Inter and Intra-industry Compensation Differentials, Internal and External Equity in Compensation Systems. Compensation provided by Public sectors & Private Sectors.

Unit V

Social Security Laws – Laws Relating to Workmen's Compensation, Employee's State Insurance, Provident Fund, Gratuity and Maternity Relief. 16 MBAPS401A E – COMMERCE TECHNOLOGY AND MANAGEMENT 4 0 0 4

Course Objectives:

- To understand the practices and technology to start an online business
- To analyse the technology requirements for Ecommerce
- To know the different business models available for running a e-business
- To study the different ways of payment and payment services available.
- To acquire knowledge on the E-supply chain management relating to e- business.
- To know about E-business models and Virtual Merchants

Course outcomes (Cos)

1. Ability to manage an e-business
2. Analyse the various market forces influencing the I-way
3. Assess the different technology for managing business online
4. Apprehend different level of applications available to run the business
5. Analyze the different marketing strategies
6. Apply the different E-supply chain management relating to e- business

Unit I

E-Commerce: What is E-Com – Need- Types of E-Com-E-Com framework - E-Com and media convergence - E-Com consumer applications – E-Com organization application. Business models for E-commerce: E-business models based on relationship of transaction parties.

Unit II

Market forces influence the I-way - components of the I-way - public policy issues shaping the I-way enabling technologies of the WWW- Case studies on I – way.

Unit III

E-business models - E-payment systems – Digital payment requirements, digital E-Token systems, properties of electronic cash, and cheque payment systems on the Internet, risk and E-Payment system, designing E-Payment system, digital signature.

Unit IV

E-marketing: Traditional Marketing, identifying Web presence goals, browsing behavior model, on-line marketing, E-Advertising, internet marketing trends, E-Branding, marketing Strategies. E-customer relationship management: Customer relationship management, typical business touch points.

Unit V

E-supply chain management: E-Supply chain -E-strategy: Information and strategy, the virtual value chain, seven dimensions of E-Commerce strategy, value chain and E-Strategy, planning the E-Commerce Project, Strategies for Web site development - Case study: mobile commerce

16MBAPS401B SOFTWARE PROJECT MANAGEMENT 4 0 0 4

Course Objectives

- To understand project management cycle in software development
- To study resources planning in software development
- To know about acquisition Process of Hardware, Software and Network
- To know the different ways of testing and quality models for software projects
- To apprehend different acquisition process and performance evaluation used
- To understand the risk management associated with implementation of software management

Course outcomes (Cos):

1. Able to identify the software models and software development process
2. Analyze the risk management in project finance
3. Design Resources Planning suitable for organization
4. Ability the undertake testing and develop quality models for software projects
5. Evaluate the acquisition process and its performance
6. Able to identify and managing risk in software

Unit I

Introduction - Software Project Management - An overview of Project planning - Stepwise planning- Overview of COCOMO Model, PERT/CPM, Rayleigh Curve - Project Organization - Risk Management - Project Finance - Procurement Management - Project Scheduling

Unit II

Software Project Management -Resources Planning and Estimation, Different Methods in brief-Function Point Analysis in some details - Use of CASE Tools - Introduction to MS Projects-Design and Development – Schedule - Resource Allocation - Progress Review

Unit III

Testing -Overview of Test Plan - Generation of Test Cases, Test Data - Types of Testing - Quality Concepts - ISO, CMM - Production / Implementation - User Acceptance Tests - Parallel Runs - Maintenance - Types - Adaptive, Corrective, Preventive Version Control and Configuration Management - Documentation Methods.

Unit IV

Acquisition Process - Hardware, Software, Network, Infrastructure -Requirement Planning-Sizing-Selection Methodology including Benchmarking - Documents involved IT HRM – Selection – Retention – Training - Career Path Planning - IT Operations – Scheduling - Performance Evaluation

Unit V

Risk management- Nature of risk - Managing risk - Evaluating risk - A software management process frame works - Life cycle phases - Software Maintenance and Configuration management - Maintenance characteristics - Maintenance task - Maintenance side effects

16MBAPS401C ENTERPRISE RESOURCE PLANNING 4 0 0 4

Course objectives

- This course aims to enhance the understanding of the students with respect to the conceptual framework and the technological infrastructure of Enterprise Resource Planning.
- It also aims to expose the students to the implementation issues and future trends associated with ERP.
- To know the future trends in ERP systems to have good relation with customers.
- To understand the concept of Enterprise Resource Planning, its implementation, future trends in ERP and apply the learning's lifelong.
- To evaluate the need of ERP for an organization, select the best vendor and implement the module that is appropriate for the organization need
- To apprehend different Sales and Distribution tools used

Course outcomes (Cos):

1. Determine the right choice of ERP systems curtailing the needs of organization
2. Gain insight in storage management database administrator
3. Evaluate the factors determining the success and failures of ERP
4. Illustrate how current technologies and decision-support tools can be utilized to the advantage of business operations
5. To analyze the future trends in ERP systems to have good relation with customers.
6. To apprehend the application of different Sales and Distribution tools for business.

Unit I

Introduction- purpose of database system – View of data - Data models - Database languages - Transaction Management - Storage Management - Database Administrator - Database Users-System Structure.

Unit II

Entity Relational Model: Basic concept – Key Entity Relationship Diagram, Weak Entity Sets, E-R features, Specialization, Generalization, Relational model - Structure of Relational Databases-Relational Algebra-Views.

Unit III

SQL – Background - Basic structures - Set operations - Aggregate functions - Null values - Nested – Sub queries - Derived relations - Views – Modification of the database - Joined relations - Data definition language - Embedded SQL features – Data warehousing - Concepts – architecture - Data transformation - User interface - Distributed database.

Unit IV

ERP concepts: Introduction to ERP system - Review of DBMS & Transaction processing concepts – Information models – Financial model – Financial Accounting, controlling - Issues in Customizing - ERP system for organization - Introduction to Business Information flows – Work flows.

Unit V

Sales and Distribution – Basic functions – Billing – Electronic Data Interchange – Transportation - Case studies – SAP R/3, People soft – Oracle financials – Development Tools – Administration tools – Reporting and Analysis Tools and Integration Tools – BPR , Implementation - Project Management – Meaning – Business benefits of ES

16 MBAPE401A **4 0 0 4**

TECHNOLOGY INNOVATION AND SUSTAINABLE ENTERPRISE FOR MANAGEMENT

Course Objectives

- The course focuses on different matters of importance related to Technology and Innovation Management.
- Provides clear understanding on the Technology Transfer and Joint Ventures
- Enable students to know web marketing and its strategies in marketing research.
- To know about Web Marketing strategies
- To understand E-Mail Marketing and Instant Market Research
- To study Enterprise Resource Planning from an entrepreneurial perspective

Course Outcomes (Cos):

1. Appreciate the role of technology in the modern business economy
2. Analyze the key aspects of Technology Transfer and Joint Ventures and implement in business
3. Assess and develop the necessary critical factors in the Web Marketing
4. Identify and evaluate opportunities for new technologies
5. Compare and contrast the different forms of intellectual property protection in terms of their key differences and similarities.
6. Students will be able to analyze the Enterprise Resource Planning and e-Business Blueprint Planning

Unit I

Innovation: - Need - Objectives of Innovation - Technology Innovation - Its importance - Knowledge Management- Need - Business strategies related to Knowledge Management - Knowledge Management Approaches - Transformation of an enterprise through Knowledge Management - Creating Knowledge Management System in Organization Establishing Knowledge Management through IT - Organizational culture for Knowledge Management - Future of Knowledge Management

Unit II

Technology Transfer and Joint Ventures - Policy, Procedure & Practices - India's Technology base and Capabilities - Preference of Indian Technology - Major Constraints and problems -

Operational constraints - Problems in Indian Business Environment, Problems in Finalization of Agreement - Major Problems in Technology Transfer Collaboration Agreements, R& D, Import Substitution, Scaling, Diagrams - Patterns and Intellectual Property rights.

Unit III

Web Marketing- Meaning - Benefits of Web Marketing-Myths and Facts in Web Marketing - Web Psychology: Understanding the Internet mind - The Internet and the Law: Copyright, Censorship, Privacy, Jurisdiction - Do's and Don'ts on Web.

Unit IV

Web Marketing strategies - Choosing the Strategy - Online Store Fronts - Target Marketing - Attracting Customers - Web Advertising - E-Mail Marketing - Instant Market Research - Securities Issues.

Unit V

Enterprise Resource Planning: Meaning - ERP decision - Enterprise Architecture Planning - ERP Implementation - The Future of ERP Applications – Procurement - e-Business Blueprint Planning.

16MBAPE401B BUSINESS PLAN AND ETHICS 4 0 0 4

Course Objectives:

- To know the fundamental parameters used to generate an idea for business plan
- To understand the business plan sources through trade and industries associations
- To study the industry analysis for applying skills and tools to manage and analyze the gap.
- Helps to understand the marketing plan and sales strategy
- To acquire knowledge on emerging ethical issues in business
- To develop the ethical decision making process

Course Outcomes (Cos):

1. Prepare a business plan considering the basic parameters of capital management and change
2. Critically analyse the sources of information for business plan
3. Identify the gap for applying expertise skills and tools.
4. Evaluate the emerging ethical issues in business.
5. Formulate the ethical decision making process
6. Analyze the Business Ethics in a Global Economy and emerging ethical issues in business

Unit I

Business Plan – Meaning - The why of business plan - Basic parameters - Timing of decision undertaken Project parameters - The common considerations - Factors of successful business - Capital management - Financial control - Anticipating change and adaptability.

Unit II

Business Plan Process - Sources of Information - Internet, Government sources and Statistics - Offline Research Resources - Library - SBDC'S - Trade and Industries Associations - Sources of Market Research - Evaluating data- Benefits of market study - Coverage of market study - Information sources.

Unit III

Business Plan components - The Executive Summary - Company description - Industry Analysis and trends - Target Market - Competition - Strategic position and Risk assessment - Marketing Plan and Sales strategy - Operations - Technology plan - Management and Organization

Unit IV

Business Ethics - Definition and Importance - Benefits of Business Ethics - Emerging Ethical Issues in Business - Ethics as a dimension of Social Responsibility.

Unit V

The Ethical Decision Making Process - Understanding ethical decision making and corporate governance - Individual factors - Organizational factors - Implementing and Auditing Ethics programs - Business Ethics in a Global Economy

16 MBAPE401C MANAGING DIVERSITY 4 0 0 4

Course Objectives:

- To understand entry of multinationals and innovation of new products
- To study cultural impacts and changes on business
- To study the international trade theories and strategies for managing global entry
- To get familiarize with the Import and Export Acts
- To gain knowledge on the strategic responses to changing environment
- To know the legal acts in India relating to Industry.

Course Outcomes (Cos):

1. Evaluate the modes of entry of multinationals and innovation of new products
2. Demonstrate the Social Responsibility of Business.
3. Critically analyse the cultural changes and its impact on business
4. Formulation of strategies to get profit from global business
5. Estimate the export and import acts for managing global entry.
6. The student will able to evaluate the legal acts in India relating to Industry and the role of cultural diversity in Business Environment.

Unit 1

Business - Concepts and Significance - Entry of Multinationals - New Changes in Business - Innovation of New Products - Technological Changes – Competition in Business - Social Responsibility of Business.

Unit II

Cultural Concept - Cultural Change - Culture and Workplace - Cross Culture - Culture and Competition - Differences in Culture - Cultural Theories - Impact of Culture on Business - Managing Cultural impacts and changes.

Unit III

Nature of Competition - Heckscher Ohlin Theory - The new trade Theory - National Competitive Advantage - Porter's Diamond - Impact of Competition - Managing Competition - Updating of new technology. Era of Globalization - Significance - Strategy and the firm - Profiting from Global Expansion - Pressures for cost reductions and Local responsiveness - Strategic Choice -

Entry mode - Liberalization of Indian economy - Export and Import Acts - Managing global entry.

Unit IV

Strategic Responses to changing environment - Portfolio Related, Process Related and Structure Related - Aligning HR Strategy - Strategic Changes - Planned Changes - Drawbacks- Unplanned Change - Steps in Planned Change - Changes and Amendments in Labors Laws - International Trade Unions and Business Associations

Unit V

Legal acts in India - Industrial Developmental Regulation Act (IDRA) - New Industrial Policy - New Economic Policy - Abolition of MRTP Act and introduction of Competitive Act - Consumer Protection Act - Imposing of MODVAT in India - Political Environment - Political uncertainty - Impact of Politics on Business- GATT - WTO- TRIPS –TRIMS - Consumer movements, Right to information.

16MBAPB401A EXPORT AND IMPORT FINANCING 4 0 0 4

Course Objectives:

- To understand documentary credits and letters of credit
- To apprehend to export finance and Pre-shipment finance
- To study the different types of post-shipment finance
- To understand the strategic rules governing import credit
- To know the Export and Import policy of India
- To provide knowledge on the various incentives given by the Government of India for exports

Course Outcomes (Cos):

1. Ability to file documentary credits and letters of credit
2. Critically analyse export finance related to Pre-shipment finance and documentation
3. Critically analyse the rules governing the post-shipment finance
4. Examine the strategic rules governing import credit
5. Evaluate the Export and Import policy of India and role of RBI in export finance
6. Evaluate the incentives given by the Government of India for exports

Unit I

Introduction to Documentary Credits **-** Documentary Credits, Letters of Credit, Parties to letters of credit, Types of letters of credit, Documents in Documentary Credit - FOB, CIF, C&F

Unit II

Export Finance – Pre-Shipment Advance **-** Pre-shipment finance, Types of Pre-shipment finance, Disbursements of packing credit advance, Overdue Packing Credit Advances and their follow up, Packing Credit in Foreign Currency (PCFC) - Transshipment

Unit III

Export Finance – Post-Shipment Advance – Post-shipment finance, Rules governing post-shipment finance, Types of post-shipment finance, Crystallization of overdue export bills and their follow up.-Forward cover procedure

Unit IV

Imports - Import letter of credit - Rules governing Import credit - Forward exchange contracts for imports, Payment for import of goods - Technology imports procedure

Unit V

ECGC and EXIM Bank - Export and Import policy of India, Incentives given by the Government of India for exports, Role of RBI in promoting export credit, ECGC – Types of policies, EXIM Bank – Its role and their promotional activities - Foreign Trade shows.

16MBAPR401A INTERNATIONAL RETAILING 4 0 0 4

Course Objectives:

- To have an exposure in international retailing segmentation
- To understand the trends in retail marketing and changing nature of boundaries.
- Students have basic understanding of Multi country Competition and Global Competition
- Acquire knowledge for entering and competing in foreign markets.
- To have clear insight of the Stages in development of International Operations
- Students learn about public relation and sales promotional strategies

Course Outcomes (Cos):

1. Analyze the international retailing and markets.
2. Discover the strategies and options for entering and competing in foreign markets.
3. Construct marketing tools and techniques to meet Multi country Competition and Global Competition
4. Access the retail operation through formulation of retail structure.
5. Gain knowledge on international retailing and markets.
6. Mapping Market Research and Sales Promotion Strategies

Unit I

International Trade – Barriers and Facilitators - Regional Economic/Political Integration - Cultural Influences on International Marketing - International Marketing Segmentation – Positioning - The Marketing Plan and Entry Mode Selection

Unit II

International Retailing - Definitions, Interpretations - Trends in the Internationalization of Retailing and Evolution of International Retailing - Motives for International Retailing - The changing nature of boundaries – Assessing the potential of Retail Markets - Methods of International Retailing - Accessing Retail Markets.

Unit III

Competing in Foreign Markets - Why Companies Expand into Foreign Markets - Cross Country Differences in Cultural, Demographic and Market Conditions - Concept of Multi country Competition and Global Competition - Strategy Options for Entering and Competing in Foreign Markets - Quest for competitive Advantage in Foreign Markets

Unit IV:

Retail Structure - Enterprise Density - Market Concentration - Developing markets - Stages in development of International Operations – Export Management Contracts - Franchising – Acquisition and Mergers – Organic Growth - Choice of Market Entry - Domestic Market - Retail Operations - Non Domestic market.

Unit V:

Market Research – Segmentation – Targeting - Positioning – The Market Mix - Image Product range – Format – Price – Location – Distribution – Promotion - Promotional Mix and Advertising – Publicity – Public Relations and Sales Promotion Strategies - Personal Selling and Sales Management.

16MBAPR401B **RETAIL PLANNING** **4 0 0 4**

Course Objectives:

- To understand the role of retailing and strategic business management in service sector
- To study the operations and financial aspects in retail planning
- To comprehend the human resources management in retailing
- To study the legal & compliances for a retail Store
- To know the procedures applicable for a Retail Store
- To emphasize on Mall management and its various forms.

Course outcomes (Cos):

1. Analyze the role of retailing and strategic business management in service sector
2. Know the retailing in banking and other financial services
3. Design the operations and financial aspects in retail planning
4. Comprehend the human resources management in retailing
5. Ability to resolve the legal and compliances for a retail Store
6. Discover strategies for mall management and its various forms.

Unit I

Marketing & Strategic Management: Retailing - Role, Relevance & Trends - Retail Customer - Retail market segmentation & franchising - Retailing in banking and other financial services - mutual funds and Insurance - Services marketing and management

Unit II

Operations & Finance in Retailing: Retail location strategy - Product and Merchandise management – Total Quality Management - Security measures - Footfalls / computerized methods & non computerized methods - Visual / display methods - Management of Obsolete goods

Unit III

Human Resources Management in Retailing: Retail organization - Laws involved in Human Resources - Motivation - Customer psychology - Training needs for employee - Top grading - Obstacles to Top grading - Coaching to fix weakness - Interviews guide

Unit IV

Legal & compliances for a Retail Store: License - Contracts & Recovery - Legal Process - PF/ESI& Exemptions - Food & Restaurants – PPF - IR Law - Shops & establishments - IPR Patents, Copyright & Trademarks - Inclusion of Service Mark - Procedure and Duration of Registration Collective Mark - Procedures applicable for a Retail Store .

Unit V

Mall Management: Types of Various Retail Formats - Concepts in Mall Design - Factors influencing Malls Establishments - Aspects in Finance - Aspects in Security / Accounting - Aspects in HR - Aspects in Quality Management

16MBAPR401C RETAIL COMMUNICATION 4 0 0 4

Course Objectives:

- To understand the basic concepts of personal and impersonal communication in retail
- Knowledge on communication programmes to develop brand images and building customer loyalty
- Students learn about planning, implementing and evaluating communication programs for retailing
- To know the ways of planning and allocating of communication budget
- Acquire knowledge on integrated marketing communications
- To learn the suitable technology for Integrated Marketing Communications

Course Outcomes (Cos):

1. Demonstrate capabilities concepts of personal and impersonal communication in retail
2. Organize communication programmes to develop brand images and building customer loyalty
3. Analyse the planning, implementing and evaluating communication programs for retailing
4. Apply the suitable technology for Integrated Marketing Communications
5. Apply the understanding of Retailing, Retail market segmentation, Retail location, merchandising, Retail operations and Retail Pricing in lifelong practice.
6. Demonstrate capabilities of analysing problems, team work and communication skills.

Unit I

Retail Communication – Methods of communicating with customers – Paid and Unpaid Communication – Personal and Impersonal Communications.

Unit II

Communication programmes to develop Brand Images and Building Customer Loyalty – Extending the brand name.

Unit III

Retail communication planning – Setting objectives – Communication budget – Allocation of the promotional budget – Planning and Implementing and Evaluating communication programs

Unit IV

Retail Communication Mix – Advertising – Sales promotion – Public Relations and Publicity Personal selling – Point of Purchase displays.

Unit V

Integrated Marketing Communications – E tailing – E-commerce – Applications of Technology – EDI, DBMS – Data Warehousing – Data Mining – RFID- Green Marketing- Strategies of Green Marketing.

Suggested Readings:

16MBAPI401A MULTILATERAL TRADE AGREEMENTS AND REGULATIONS 4004

Course Objectives:

- Attempt to appreciate the conceptual and practical aspects of trade agreements.
- Acquaint the students with environmental, procedural, institutional and decisional aspects of trade.
- To develop capabilities to understand the International Business Laws
- To understand the dispute settlement and issues related to intellectual property regime.
- To understand Implications for International business and progress made by WTO in the last one decade
- Students get familiarize on the formation of regional blocks and its impact on trade.

Course outcomes (Cos):

1. Students can able to link theoretical concepts of trade in business situations
2. Analyze the prevailing international business laws to outsource their business
3. Evaluate the value of trade of their economies and other economies
4. Understand various International Commercial Dispute Settlement
5. Compare and estimate the various trade agreements among nation
6. Ability to manage resources, identify and carry out specific goal oriented tasks

Unit I

Historical background of International Trade, Direction and Composition of International Trade.Terms of Trade, Trade as an engine of growth. Concept of Law - Types of law, Domestic and International and their jurisdiction. Regional Trade Agreements: Concept, Origin, Types - European Union, NAFTA, ASEAN, MERCOSUR – Their structure, Decision making, Funding, Implications on world trade.

Unit II

Law of WTO: Introduction, Objectives, Functions, Structure, Principles, Agreements – implications for International business, Progress made by WTO in the last one decade - Tariff and Non-tariff barriers - Implications for WTO members.

Unit III

International Business Law – International Sale of Goods, Laws governing International Sale of goods – Domestic laws, International Treaties, International Mercantile Customs and Usages – Inco terms, Rules on International Sale of Goods, International Commercial Dispute Settlement – Reconciliation, Arbitration etc.

Unit IV

Intellectual Property: Historical Background, IPR Administration – WIPO, WTO, Indian Patent Office, Patents, Copyrights, Trademarks, Geographical Indications, Industrial Designs, Layout Designs, Trade secrets.

Unit V

Selected Regional Blocks- NAFTA, EU, ASEAN, SAARC, SAPTA, Indo-Lanka Free trade, Indo -Singapore CECA Globalization vs. Regionalization

Suggested Readings:

16MBAPI401B **INTERNATIONAL ECONOMICS** **4004**

Course Objectives:

- To make students understand international trade and formation of economic integration
- To enhance knowledge on gains from trade and terms of trade
- To acquire knowledge on the determination of exchange rate, tariffs and quotas
- Students learn about the balance of payments and its consequences.
- To understand the concept and limitations of Foreign Trade Multiplier
- Familiarize the students with the knowledge of export promotion measures and growth of foreign trade

Course Outcomes (Cos):

1. Analyze the significance of Inter-regional and international trade for an economy
2. Gain insight on the regional integration of economies and multilateral arrangements
3. Analyze the impact of exchange rate fluctuation on home currencies
4. Students evaluate the policies pursued by various economic bodies in international trade
5. Analyze the balance of payments and its impact on business
6. Evaluate the benefits and schemes of government and other bodies for promotion of exports

Unit I

Introduction: International Economics- Meaning, Scope & Importance Inter-regional and international trade. Importance of International Trade. Theoretical Aspects of Economic Integration: Free Trade Area, Customs Union and Common Market - Theory of Customs Union - Trade Creation and Diversion effects.

Unit II

Theories of International Trade. Theory of Absolute Cost Advantage, Theory of Comparative Cost Advantage. Intra-Industry Trade. Gains from Trade, Measurement of gains, static and dynamic gains. Terms of trade – Importance & Types, Determinant’s of Terms of trade, Causes of unfavorable terms of trade to less developed countries.

Unit III

Trade policy & Exchange Rate, Free trade policy - Case for and against, Protections – Case for and against, Types of Tariffs and Quotas, Determination of Exchange rate, Fixed & Flexible Exchange Rate- Merits & Demerits.

Unit IV

Balance of Payments, Balance of trade and Balance of payments: Concepts and Components - Equilibrium and Disequilibrium in Balance of Payments; Causes and Consequences, Measures to correct deficit in the Balance of Payments. International Monetary System, Devaluation; Merits, Demerits and Limitations, Foreign Trade Multiplier; Concept and Limitations, IMF, World Bank – Objectives, Functions & Performance.

Unit V

Foreign Trade in India, Recent changes in the composition and direction of foreign trade - Causes and Effects of persistent deficit in the Balance of Payments - Measures adopted by the Government to correct the deficit after 1991 - WTO & India Export Promotion measures, Partial and Full convertibility of Indian Rupees, Export Promotion – Contribution of SEZ Foreign Trade policy 2009, Role of Multinational Corporations in India.

16MBAPI401C INTERNATIONAL LOGISTICS MANAGEMENT 4004

Course Objectives:

- To have an exposure to International Distribution system and Logistics
- To understand the code of conduct in Logistics and International marketing channel decisions.
- To acquire knowledge on the procedures and role of intermediaries in ocean transportation
- Detailed overview of the important sea routes and shipping ports and cost involved in consignments
- To provide knowledge with the consignment of goods trough air transport
- To get an insight on the inventory control and warehousing facilities

Course Outcomes (Cos):

1. Evaluate the significance of the value adding perspective of logistics and distribution system.
2. Analyze the freight structure and practices of shipping
3. Make Strategic and Operational logistics decisions in the context of different modes of shipping
4. Practice of planning for inventory control and warehousing facilities
5. Gain knowledge to analyze the significance of Logistics in Global scenario.
6. Analyze the liners and freight structures to plan for business outsourcing

Unit I

Marketing Logistics: Concept, Objectives and Scope; System elements - Relevance of logistics in International Marketing- International supply chain management and logistics - Transportation activity – Internal transportation, Inter-state goods movement - Concept of customer service.

Unit II

General Structure of Shipping: Characteristics, liner and tramp operations - Code of conduct for liner conferences - Freight structure and practices - Chartering principles and practices - UN convention on shipping.

Unit III

Developments in Ocean Transportation: Containerization - CFS and inland container depots - Dry ports - Multi-modal transportation and CONCOR - Role of intermediaries including freight booking, shipping agents, C&F agents, Ship owner and shipper consultation arrangements.

Unit IV

Air Transport: Air transportation – Total cost concept, advantages, freight structure and operations - Carrier consignee liabilities.

Unit V

Inventory Control and Warehousing: Inventory management – Concepts and application to international marketing - Significance and types of warehousing facilities - Total cost approach to logistics.

Suggested Readings:

Text book:

1. Lambert, D.M., & James, S.R, (2010). *Strategic Logistic Management*. New Delhi: Tata McGraw Hill.

References:

1.Alan, E. Branch. (2009). *Global Supply Chain Management and International Logistics*. New York: Routledge.

3. Sherlock, Jim. (1994). Principles *of International Physical Distribution.* New Delhi:Wiley India.

16MBAPP401A PURCHASING AND MATERIALS MANAGEMENT 4 0 0 4

Course Objectives:

- To understand the purchase functions and materials management.
- To study the vendor development and maintenance for purchasing of capital goods.
- To familiarize with materials planning and codification.
- To recognize the legal aspects of buying and asses the industry ethical practices in materials
- To familiarize the knowledge of warehousing management.
- To provide knowledge on the Materials Management Information system

Course Outcomes (Cos)

1. Demonstrate the concept vendor development and maintenance for purchasing of capital goods.
2. Able to manage and plan material flows and related information flows as part of the company's logistics process.
3. Examine the vendor’s development and maintenance for purchasing of capital goods.
4. Creating practical engineering solutions for materials planning and codification
5. Classify the functions of Materials Management Information System
6. Develop a model for warehousing management and import-export logistics management.

Unit I

Purchasing Functions - Relationship of purchasing Department with other departments, Procurement, Supply management activities, Purchasing objectives and policies, Operating procedures, Purchasing cycles, Objectives of materials management, Organization of material function.

Unit II

Supply Sources - Importance of source selection, Vendor development & maintenance, Vendor rating, Competitive bidding, selecting the source, Negotiation: Objectives, Process, Techniques, Price negotiation, Purchasing of capital goods, Seasonal commodities, Insurance spares. Contract management

Unit III

Materials Planning - Materials Codification: Evolution of codes, Classification, Methodology, Advantages, Standardization: Definition, Specification, Advantages, Techniques, Pricing Principles: Price analysis, Discounts, Economic consideration in determining the right price

Unit IV

Materials Management - Materials management, Legal aspects of buying, Buyer-Seller relationship and ethics Industry ethical practices in Materials

Unit V

Warehousing Management - Stores management, Incoming material Control, Stores documentation & accounting, Materials Management Information System (MMIS) - New developments in MMIS

Suggested Readings:

Text book:

1. Chatterjee, S. (2004). *Applied Materials Management.* New Delhi: Sage Publications.

References:

3. Datta, A.K. (2009). *Materials Management Procedures, Text and Cases.* New Delhi: Prentice Hall of India Pvt. Ltd.
4. Gopalakrishnan, P. (2001). *Purchasing and Materials Management.* New Delhi: Tata McGraw Hill Publishing Company Limited.

16MBAPP401B SUPPLY CHAIN AND LOGISTICS MANAGEMNT 4 0 0 4

Course Objectives

- To understand the concept of supply chain and logistics.
- To get familiarize with the key drivers of supply chain performance.
- To acquire knowledge of supply chain inventory
- To have clear understanding of supply chain network optimization models
- To provide basic concepts of freight management and ocean carrier management
- To enable the students to understand the international logistics and analytical tools necessary to solve supply chain problems.

Course Outcomes (Cos):

1. The students able to demonstrate the connection between company's internal materials management and the network in supply chain.
2. The students able to evaluate the material flow and related information flow as part of the company's logistics process.
3. Illustrate the engineering solutions to solve existing conflicts between good customer satisfaction and working capital.
4. The students will understand the importance of accurate planning and product data management as a part of Logistics Management.
5. Familiarize the key drivers of Logistics outsourcing.
6. Get an in-depth knowledge in Transactional Logistics

Unit I

Supply Chain - Fundamentals, Importance, Decision Phases, Process view, ‟Supplier-Manufacturer-Customer chain", Supply chain performance: Drivers, Structuring supply chain. Overview of supply chain models

Unit II

Overview of Demand forecasting in the supply chain - Aggregate planning, Managing predictable variability - Managing supply chain cycle inventory, Uncertainty, safety inventory, Determination of optimal level of product availability, Coordination in the Supply Chain

Unit III

Distribution Network Design - Role, factors influencing network, options, Value Addition. Models for facility location and capacity planning - Network design: Impact of uncertainty, decisions using decision trees - Distribution center location models - Supply chain network optimization models - New developments in network designs

Unit IV

Logistic System - Evolution, Infrastructure and Networks - Freight Management, Route Planning, Containerization - Modal Characteristics, Inter-modal operators and transport economies - Ocean carrier management, import-export logistics management. Logistics outsourcing, 3PL / 4PL, Importance of Insurance, Reverse logistics

Unit V

Transactional Logistics - Framework and role of supply chain in e- business and b2b practices. Supply Chain IT Framework - International supply chain, GPS, tracking system, Software Packages in Supply Chain

Suggested Readings:

Text book:

16MBAPP401C TOTAL QUALITY MANAGEMENT 4 0 0 4

Course Objectives:

- To make the students understand the basic concepts of total quality management and appreciate its importance in today's business environment.
- To understand the quality management practice and TQM tools and its application in improving the organizational performance.
- To provide an insight on the process approach to TQM
- To get exposure on tools and techniques of various quality tools.
- To know the ways of winning quality awards
- To familiarize the students about the Quality Management System.

Course Outcomes (Cos):

1. Demonstrate the knowledge of quality management to improve organizational effectiveness.
2. Student will able to practice various aspects on total quality management
3. Acquire required diagnostic skills on use of various quality tools.
4. Student will get exposure on tools and techniques of quality management
5. Student will familiarize about the Quality Management System.
6. Apply the Quality tools and techniques in improving the performance.

Unit I

Introduction - Introduction and basic concepts, Definition of quality, Dimensions of quality, Evolution of TQM, TQM frame work, Cost of Quality.

Unit II

TQM Implementation - Leadership for TQM, Deming's quality principle, TQM implementation, PDSA cycle, Quality Circles, Quality Council, Supplier Partnership.

Unit III

Process approach to TQM - Process approach, Juran's Trilogy, Taguchi's loss function, Kaizen, Quality by design, 5S, ESI (Early Supplier Involvement), 5M.

Unit IV

Tools and Techniques - 7 Old quality control tools, Total productive maintenance, Failure Mode and Effect Analysis, POKAYOKE, Six Sigma, Toyota and Six Sigma.

Unit V

Quality Management Systems - Management systems for TQM, ISO 9000 & 14000 Quality management systems, Auditing and certification Process, Quality Awards

Suggested Readings:

16MBAPN401A INSURANCE LAW AND REGULATION 4004

Course Objectives:

To make the students

- To understand the salient aspects of the life insurance contract, the rights and obligations of both parties to the contract
- To make the students to understand the basics and acts related to the insurance law.
- To understand the legal environment within which life insurance practice is carried out.
- To have an exposure in life insurance law, concept and regulations.
- To understand the Superannuation and Gratuity schemes , Key man and Property Insurance
- Understand the Formation of IRDA, Implications of Consumer Protection Act

Course Outcomes

Learners should be able to

1. Analyze the Elements of Contract and its various concepts.
2. Determine the effect of money laundering under the Prevention of Money Laundering Act.
3. Develop the procedures for settlement of claims of insurance
4. Design the System for Redressal of Complaints
5. Develop the knowledge of the Formation of IRDA and its functioning
6. Evaluate the implications of Consumer Protection Act

Unit I:

Law of Contract: Elements of Contract – Capacity of Parties to Contract – Consensus ad idem – Consideration and Legality of Object – Salient features of the Life Insurance Contract like the Principles of Indemnity, Insurable Interest and Utmost Good Faith.

Unit II:

Definition of Law - Statute Law and Common Law - Arbitration and Consumer Forums – Various Laws and Acts like Shops and Establishments Act – Prevention of Money Laundering Act.

Unit III:

Group Life Insurance – Superannuation and Gratuity schemes – Key man and Property Insurance - Life Insurance as Actionable Claim and Mortgage – Policy Loans – Stamp Act Provisions. Assignment, Nomination and MWP Act Provisions – Loss of Policies - Claims Settlement Process – Maturity Claims – Death Claims – Presumption of death for Missing Persons – Evidence of Title and Succession.

Unit IV:

Contract of Agency – Appointment of Agents – IRDA regulations for Licensing of Agents, Brokers and Corporate Agents – Authority of Agent – Rights and Responsibilities of Agents and Principal – Termination of Agency and Renewal / Hereditary Commission.

Unit V:

LIC Act 1956-System for Redressal of Complaints – Implications of Consumer Protection Act– Insurance Initiatives in India – Formation of Malhotra Committee on Reforms in Insurance Sector – Formation of IRDA - Provisions of IRDA Act 1999.

Suggested Readings:

Text Books:

16MBAPN401B **REINSURANCE** **4004**

Course Objectives:

To make the students

- To have an exposure in important role in supporting conduct of insurance business in reinsurance.
- To understand all aspects surrounding Reinsurance and Promotional measures.
- To make understand to plan and choose channels of insurance
- To get an insight in various types of claims and settlements in specific cases
- To understand the newly emerging concepts, trends and practices at Reinsurance
- To get familiarize with the conditions for different classes of termination of reinsurance

Course Outcomes(Cos)

Learners should be able to

1. Analyze the nature of Reinsurance and its various concepts.
2. Evaluate the various factors that influence the reinsurance and measures to control it
3. Identify the significance of Reinsurance to business executives and academics
4. To determine the claims and settlements in special incidents and cases
5. Evaluate the factors which influence retentions and techniques to interact Non-Proportional Reinsurance with their customers.
6. Analyze the special conditions for different classes of termination of reinsurance

Unit I:

Introduction to Reinsurance: Nature of reinsurance – Analysis of factors that influence results – Historical background – Reinsurance in India before & after nationalization and liberalization – GIC Re – Regional co-operation – Functions of reinsurance – Advantages.

Unit II:

Forms of Reinsurance: Facultative reinsurance – Treaty reinsurance – Facultative Obligatory Treaty – Considerations for facultative placements.

Unit III:

Methods of Reinsurance 1- Proportional Reinsurance: Surplus – Quota Share – Proportional Treaty – Bordereaux – Premiums – Ceding Commission – Claims – Quota Share Treaty – Quota Share & surplus combined – Specimen Treaty Slip.

Unit IV:

Methods of Reinsurance 2 – Non-Proportional Reinsurance: Excess of Loss – Working (Per Risk) XL - Catastrophe XL – Stop Loss XL – Aggregate XL – Non-proportional Treaty – Ultimate Net Loss – reinsured Retention – Premium – Burning Cost – Exposure Rating / Pareto Loss Distribution – Reinstatement – Claims – Inception & Termination – Specimen Treaty Slip.

Unit V:

Retentions: Setting Retentions – General Considerations – Factors influencing retentions – Types of retentions – Accumulations within and between branches – Retentions for Property insurance – Engineering insurance – Accident & Liability insurance – Marine Cargo & Hull insurance – Aviation insurance – Life insurance – Special factors for different classes of reinsurance.

Suggested Readings:

Text Books:

2. Reinsurance IC 85. (2013). Insurance *Institute of India* (11th edition). Mumbai.

Reference:

1. Edgar C. Werner. (2009). *Fundamentals of reinsurance*. New Delhi: Tata McGraw Hill Publication.

16MBAPN401C **RISK MANAGEMENT** **4004**

Course Objectives:

To make the students

- To have an exposure in Theoretical Aspects of Risk Management.
- To understand ways to role, functions and responsibilities of risk manager
- To make the students understand, analyze and reduce the risk of damage to physical assets, or injury to employees or customers.
- To understand the scope and objectives of Risk Management and formal system of risk threats.
- To provide knowledge on Risk financing & Transfer mechanisms
- To get an insight in Risk identification purpose and details

Course Outcomes

Learners should be able to

1. Classify the various aspects of Risk Management.
2. Defining role, functions and duties of a Risk manager
3. Develop the techniques for hazard identification & risk assessment
4. Identify the alternate risk management techniques and
5. To analyze risk control ways by Risk financing and & Transfer mechanisms
6. To evaluate and identify and analyze the loss exposures

Unit I:

Theoretical Aspects of Risk Management**:** Risk concepts & possibilities – Risk classification & categorization – Approaches & Philosophy – Cost of risk.

Unit II:

Scope and Objectives of Risk Management: Formal system of risk threats – Contributory factors – Measures for economic control – Basic components of the risk management system – Definitions – Process & administration – Possible contributions & Potential benefits of risk management to a business.

Unit III:

Building up an Effective Risk Management Programme: Deciding the programme objectives – Pre & post loss objectives – Defining role, functions and duties of a Risk manager – Risk management policy – Objectives & Implementation strategies – Risks profiling & risk audits.

Unit IV:

Identifying & analyzing loss exposures: Risk identification purpose & details – Types of risk identification techniques – Hazard identification & risk assessment – Statistical and other methods of assessing risk exposures – Prioritizing and mapping of risks.

Unit V:

Alternate risk management techniques: Risk control – Loss control management – Risk financing & Transfer mechanisms – Risk control – Risk financing & insurance – Risk retention & transfer strategy – Selecting the best technique – Managerial & technical decisions in implementation the selected technique.

Suggested Readings:

16 MBAP491 MAJOR PROJECT & VIVA-VOCE 17 0 0 6

Course Objectives:

- To understand the problems in the functional areas of business enterprises
- To instill a spirit of work behavior among the student participants.
- Internship is aimed to feed industry - institutional- orientation among the students
- To sensitize students to the nuances of corporate culture and familiarize them with the corporate code of behavior.
- Learn actual supervised professional experiences.
- To understand the working environment and functions of departments

Course Outcomes (Cos):

The students will be able

1. Develop the skills, knowledge, attitudes, and perceptions along with the experience needed to constitute a professional identity.
2. Gain actual supervised professional experiences.
3. Get insight in working of the real organizations
4. Analyze the work behavior of the specific functional areas.
5. Match linkages among different functions and departments.
6. Discover career opportunities to students in exploring in their areas of interest.

Every student has to undergo major project in a company for a period of 25 working days during the fourth semester. He / She have to submit a project report containing details of company, company profile, different functional area problems and prospects. The project should be done during the fourth semester. A research project may be based on primary / secondary data.

The report should be well documented and supported by –

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

அலகு – I : இக்கால இலக்கியம்: **(10 மணிநேரம்)**

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை – ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் –மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்: **(10 மணிநேரம்)**

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்பம் – 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: **(10 மணிநேரம்)**

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை: **(10 மணிநேரம்)**

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: **(8 மணிநேரம்)**

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்.

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Semester – I

		L	**T**	**P**	**C**
16ENU101	**ENGLISH- I**	**4**	**0**	**0**	**4**

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence.

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman **–** Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan
One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Preposition, Voice- Active and Passive

UNIT V

Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitution
Grammar: Question, Pronunciation

Semester – I

		L T P C
16MMU101	**CALCULUS**	**4 0 0 4**

Course Objectives

This course enables the students to learn

- The concepts of essentials of concavity, inflection points and its geometrical applications.
- The Higher order derivatives and its applications in business, economics and life sciences.
- The Leibniz rule and its applications in exponential and trigonometric.
- The concepts of volumes by slicing, disks and washers' methods, volumes by cylindrical shells, parametric equations and parameterizing a curve.
- The concepts of vector functions, operations with vector-valued functions, limits and continuity of vector functions.
- Recognize the appropriate tools of calculus to solve applied problems.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Understand the concepts of hyperbolic functions.
2. Explore the concept of reduction formula and calculate limits in indeterminate forms by a repeated use of L'Hospital rule.
3. Use single and multiple integration to calculate the arc length, area and volume.
4. Understand the techniques of sketching conics and properties of conics.
5. Know about the knowledge on application of vector functions.
6. Acquire the knowledge on application of Kepler's second law.

UNIT I

Hyperbolic functions, higher order derivatives, Leibniz rule and its applications to problems of type $e^{ax+b}\sin x$, $e^{ax+b}\cos x$, $(ax+b)^n\sin x$, $(ax+b)^n\cos x$,

UNIT II

Curve tracing in Cartesian coordinates, tracing in polar coordinates of standard curves, L'Hospital's rule, applications in business, economics and life sciences. Reduction formulae, derivations and illustrations of reduction formulae of the type $\int \sin nx\, dx$, $\int \cos nx\, dx$, $\int \tan nx\, dx$, $\int \sec nx\, dx$, $\int \log x^n\, dx$, $\int \sin^n x \sin^m x\, dx$.

UNIT III

Volumes by slicing, disks and washers methods, volumes by cylindrical shells, parametric equations, parameterizing a curve, arc length, arc length of parametric curves, area of surface of revolution.

UNIT IV

Techniques of sketching conics, reflection properties of conics, rotation of axes and second degree equations, classification into conics using the discriminant, polar equations of conics.

UNIT V

Triple product, introduction to vector functions, operations with vector-valued functions, limits and continuity of vector functions, differentiation and integration of vector functions, tangent and normal components of acceleration, modeling ballistics and planetary motion, Kepler's second law.

		Semester – I
		L T P C
16MMU102	**ALGEBRA**	**6 1 0 6**

Course Objectives

This course enables the students to learn

- The functions, relations, systems of linear equations and linear transformations.
- How to identify, evaluate and simplify algebraic expressions using the correct operations.
- The basic concepts of linear algebra.
- The concepts of principles of mathematical induction.
- The solution and application of linear systems.
- The application of matrix, inverse of matrix and system of linear equations.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Know about the basic concepts of set theory.
2. Describe the categories of functions.
3. Understand the algorithms on operation.
4. Use matrix operations to solve system of linear equations.
5. Learn how to find characteristic equation, eigen value and eigen vector for matrix.
6. Know about the applications of linear systems and linear independence.

UNIT I

Polar representation of complex numbers, nth roots of unity, De Moivre's theorem for rational Indices and its applications.

UNIT II

Equivalence relations, Functions, Composition of functions, Invertible functions, One to one Correspondence and cardinality of a set, Well-ordering property of positive integers.

UNIT III

Division algorithm, Divisibility and Euclidean algorithm, Congruence relation between integers, Principles of Mathematical Induction, Statement of Fundamental Theorem of Arithmetic.

UNIT IV

Systems of linear equations, row reduction and echelon forms, vector equations, the matrix equation Ax=b, solution sets of linear systems, applications of linear systems, linear independence.

UNIT V

Introduction to linear transformations, matrix of a linear transformation, inverse of a matrix, characterizations of invertible matrices. Subspaces of Rn, dimension of subspaces of Rn and rank of a matrix, Eigen values, Eigen Vectors and Characteristic Equation of a matrix.

Semester – I

		L	**T**	**P**	**C**
16MMU103	**REAL ANALYSIS**	**6**	**2**	**0**	**6**

Course Objectives

This course enables the students to learn

- The fundamental properties of the real numbers that underpin the formal development of real analysis
- About the extreme points, Root test, Ratio test.
- The alternating series, and series of functions.
- The concepts of real Sequence, Bounded sequence, Cauchy convergence criterion for sequences.
- The basic theorems on monotone sequences and their convergence.
- About the Power series and radius of convergence.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand about the categories of sets.
2. Acquire the knowledge on limits and convergence of sequences.
3. Know the types of test of convergence for series.
4. Familiarize about the basic theorems on monotone sequences.
5. Know about the integrability and differentiability of functions.
6. Understand the Power series and radius of convergence.

UNIT I

Finite and infinite sets, examples of countable and uncountable sets. Real line, bounded sets, suprema and infima, completeness property of R, Archimedean property of R, intervals. Concept of cluster points and statement of Bolzano -Weierstrass theorem.

UNIT II

Real Sequence, Bounded sequence, Cauchy convergence criterion for sequences. Cauchy's theorem on limits, order preservation and squeeze theorem, monotone sequences and their convergence (monotone convergence theorem without proof).

UNIT III

Infinite series. Cauchy convergence criterion for series, positive term series, geometric series, comparison test, convergence of p-series, Root test, Ratio test, alternating series, Leibnitz's test(Tests of Convergence without proof). Definition and examples of absolute and conditional convergence.

UNIT IV

Sequences, Bounded sequence, Convergent sequence, Limit of a sequence. Limit Theorems, Monotone Sequences, Monotone Convergence Theorem. Subsequences, Divergence Criteria, Monotone Subsequence Theorem (statement only), Bolzano Weierstrass Theorem for Sequences. Cauchy sequence, Cauchy's Convergence Criterion.

UNIT V

Series of functions, Pointwise and uniform convergence. Mn-test, M-test, Statements of the results about uniform convergence and integrability and differentiability of functions, Power series and radius of convergence.

Semester – I

16MMU111	CALCULUS (PRACTICAL)	L T P C 0 0 3 2

Course Objectives

This course enables the students to learn

- To demonstrate comprehension in relevant area of calculus
- Problem solving through (computer language) programming.
- The basic structure of the programme, declaration and usage of variables.
- The basic MATLAB (matrix laboratory) programme.
- The usage of MATLAB in order to facilitate understanding and visualization of mathematical problems
- The practical preparation knowledge to apply the acquired knowledge and skills.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Familiarize with the programming environment.
2. Acquire the problem solving skills through computer programming.
3. Understand to write diversified solutions using programming language.
4. Plot of graphs of functions (exponential, logarithmic, trigonometric).
5. Sketching parametric curves (Eg. Trochoid, cycloid, epicycloids, hypocycloid).
6. Deal with different input/output methods.

List of Practical (using MATLAB/Mathematica)

(Any 8 programs)

1. Plotting of graphs of function $e^{ax + b}$, log(ax + b), 1/(ax + b), sin(ax + b), cos(ax + b), |ax + b| and to illustrate the effect of a and b on the graph.

2. Plotting the graphs of polynomial of degree 4 and 5, the derivative graph, the second derivative graph and comparing them.

3. Sketching parametric curves (Eg. Trochoid, cycloid, epicycloids, hypocycloid).

4. Obtaining surface of revolution of curves.

5. Tracing of conics in cartesian coordinates/ polar coordinates.

6. Sketching ellipsoid, hyperboloid of one and two sheets, elliptic cone, elliptic, paraboloid, hyperbolic paraboloid using cartesian coordinates.

7. Matrix addition.

8. Matrix multiplication.

9. Inverse of a matrix.

10. Transpose of a matrix.

		Semester II
		L T P C
16MMU201	**DIFFERENTIAL EQUATIONS**	**4 0 0 4**

Course Objectives

This course enables the students to learn

- First order exact differential equations, linear homogeneous and non homogeneous equations of higher order with constant coefficients.
- The complete solution of a non-homogeneous differential equation with constant coefficients by the method of undetermined coefficients.
- The transform of a periodic function.
- The applications of the inverse Laplace transform.
- The Euler's equations, method of variation of parameters.
- The predatory-prey model and its analysis, epidemic model of influenza and its analysis.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the concepts of explicit, implicit and singular solutions of a differential equation.
2. Acquire knowledge on linear and bernoulli's equaitons.
3. Know the concepts of population model.
4. Understand the method of solving differential equation using variation of parameters. Identify the applications of differential equations.
5. Know about the concepts of Euler's equation, method of undetermined coefficients and method of variation of parameters.
6. Understand the predatory-prey model and its analysis, epidemic model of influenza and its analysis.

UNIT I

Differential equations and mathematical models. General, particular, explicit, implicit and singular solutions of a differential equation.

UNIT II

Exact differential equations and integrating factors, separable equations and equations reducible to this form, linear equation and Bernoulli equations, special integrating factors and transformations.

UNIT III

Introduction to compartmental model, exponential decay model, lake pollution model (case study of Lake Burley Griffin), drug assimilation into the blood (case of a single cold pill, case of a course of cold pills), exponential growth of population, limited growth of population, limited growth with harvesting.

UNIT IV

General solution of homogeneous equation of second order, principle of super position for homogeneous equation, Wronskian: its properties and applications, Linear homogeneous and non-homogeneous equations of higher order with constant coefficients, Euler's equation, method of undetermined coefficients, method of variation of parameters.

UNIT V

Equilibrium points, Interpretation of the phase plane, predatory-prey model and its analysis, epidemic model of influenza and its analysis, battle model and its analysis.

Semester – II

		L T P C
16MMU202	**THEORY OF REAL FUNCTIONS**	**6 1 0 6**

Course Objectives

This course enables the students to learn

- The solution of Reciprocal and Binomial Equations and properties of the derived functions.
- About the relations between the roots and coefficients**.**
- The concept of continuous functions and limits of functions.
- The Applications of mean value theorem to inequalities and approximation of polynomials.
- Taylor's series and Maclaurin's series expansions of exponential and trigonometric functions.
- The transformations of equations

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Learn about the Limits of functions and continuous functions.
2. Understand uniform continuity, non-uniform continuity criteria, uniform continuity theorem.
3. Know about the, algebra of differentiable functions.
4. Familiarize about the Mean value theorem and its applications.
5. Know about the Cauchy's mean value theorem.
6. Understand the Taylor's theorem with Cauchy's form of remainder.

UNIT I

Limits of functions, sequential criterion for limits, divergence criteria. Limit theorems, one sided limit. Infinite limits and limits at infinity. Continuous functions, sequential criterion for continuity and discontinuity.

UNIT II

Algebra of continuous functions. Continuous functions on an interval, intermediate value theorem, location of roots theorem, preservation of intervals theorem. Uniform continuity, non-uniform continuity criteria, uniform continuity theorem.

UNIT III

Differentiability of a function at a point and in an interval, Caratheodory's theorem, algebra of differentiable functions. Relative extrema, interior extremum theorem. Rolle's theorem.

UNIT IV

Mean value theorem, intermediate value property of derivatives, Darboux's theorem. Applications of mean value theorem to inequalities and approximation of polynomials, Taylor's theorem to inequalities.

UNIT V

Cauchy's mean value theorem. Taylor's theorem with Lagrange's form of remainder, Taylor's theorem with Cauchy's form of remainder, application of Taylor's theorem to convex functions, relative extrema. Taylor's series and Maclaurin's series expansions of exponential and trigonometric functions, ln(1 + x), 1/ax+b and (1 +x)n.

16MMU203	**GROUP THEORY I**	**6**	**2**	**0**	**6**

Course Objectives

This course enables the students to learn

- Group homomorphism, isomorphism, automorphism and its related properties.
- The concept of internal and external direct product.
- The properties of cyclic groups, permutations and cosets.
- The concepts Abelian groups, divisible and reduced groups and Torsion group.
- The extension of group structure to finite permutation groups.
- The basic concepts of group actions and their applications.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Expertise on fundamental of groups.
2. Know about Subgroups and its properties.
3. Understand the concept of cyclic groups and its properties.
4. Acquire the knowledge on basic concepts of external direct product of a finite number of groups.
5. Apply Cauchy's theorem for finite abelian groups.
6. Understand the concepts of Abelian groups, Torsion group, divisible and reduced groups.

UNIT I

Symmetries of a square, Dihedral groups, definition and examples of groups including permutation groups and quaternion groups (illustration through matrices), elementary properties of groups.

UNIT II

Subgroups and examples of subgroups, centralizer, normalizer, center of a group, product of two subgroups.

UNIT III

Properties of cyclic groups, classification of subgroups of cyclic groups. Cycle notation for permutations, properties of permutations, even and odd permutations, alternating group, properties of cosets, Lagrange's theorem and consequences including Fermat's Little theorem.

UNIT IV

External direct product of a finite number of groups, normal subgroups, factor groups, Cauchy's theorem for finite abelian groups.

UNIT V

Abelian groups, finitely generated abelian group, divisible and reduced groups, Torsion group,

Semester II

		L	T	P	C
16MMU211	**DIFFERENTIAL EQUATIONS(PRACTICAL)**	**0**	**0**	**3**	**2**

Course Objectives

This course enables the students to learn

- Problem-solving through programming.
- Hands-on training using lab components.
- Plotting of second order solution of differential equations and recursive sequences.
- Cauchy's root test and Ratio test by plotting the ratio.
- The exponential growth and decay, the population growth of species or the change in investment return over time.
- The usage of program to solve the differential equations.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Demonstrate comprehension in fundamental topics of computing, algorithms, computer organization and software systems.
2. Have applied knowledge of areas of computing to create solutions to challenging problems, including specify, design, implement and validate solutions for new problems.
3. Be aware of current research activity in computing through activities including reading papers, hearing research presentations.
4. Know about successfully planning and completing an individual research project in computing or its application.
5. Understand Cauchy's root test and Ratio test by plotting the ratio.
6. Acquire the knowledge on Growth model and Decay model.

List of Practical (using any software)

(Any 8 programs)

1. Plotting of second order solution family of differential equation.
2. Growth model (exponential case only).
3. Decay model (exponential case only).
4. Lake pollution model (with constant/seasonal flow and pollution concentration).
5. Case of single cold pill and a course of cold pills.
6. Limited growth of population (with and without harvesting).
7. Predatory-prey model (basic volterra model, with density dependence, effect of DDT, two prey one predator).
8. Plotting of recursive sequences.
9. Verify Bolzano-Weierstrass theorem through plotting of sequences and hence identify convergent subsequences from the plot.
10. Study the convergence/divergence of infinite series by plotting their sequences of partial sum.
11. Cauchy's root test by plotting nth roots.
12. Ratio test by plotting the ratio of nth and (n+1)th term.

		Semester – II
		L T P C
16AEC201	**ENVIRONMENTAL STUDIES**	**4 0 0 4**

Course Objectives

This course enables the students to learn

- The awareness about environmental problems among people.
- About various renewable and nonrenewable resources of the region.
- The appropriate judgments and decisions for the protection and improvement of the earth.
- The concept of Environmental Pollution, effects and control measures of urban and industrial wastes.
- About the concepts of Social Issues and the Environment.
- The causes and effects of Environmental pollution.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Create the awareness about environmental problems among people.
2. Motivate the public to participate in environment protection and improvement.
3. Know about the Role of Information Technology in environment and human health.
4. Develop an attitude of concern for the environment and biodiversity at global.
5. Investigate the Environmental Pollution, effects and control measures of urban and industrial wastes.
6. Solve Environment Protection Act, Wildlife Protection Act. Forest Conservation Act.

UNIT I

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II

Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fireworks.

UNIT III

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV

Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

UNIT V

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

		Semester - III
		L T P C
16MMU301	**NUMERICAL METHODS**	**4 0 0 4**

Course Objectives

This course enables the students to learn

- The basic concepts of numerical methods.
- The Numerical integration and differentiation, numerical solution of ordinary differential equations.
- The Engineering problems which are impossible to solve by analytical means.
- Numerical methods to solve linear system of equations**.**
- The numerical solution of initial value problems and boundary value problems**.**
- The appropriate numerical methods to solve algebraic and transcendental equations.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Study the concept of Newton's Method.
2. Realize the system of linear algebraic equtions along with specified methods.
3. Know about the basic concepts of Interpolation.
4. Understand the Gregory forward and backward difference interpolation.
5. Familiar with numerical integration and differentiation, numerical solution of ordinary differential equations.
6. Use the solutions of differential equations by Runge-Kutta methods.

UNIT I

High speed computation: Algorithms, Convergence, Errors: Relative, Absolute, Round off, Truncation. Transcendental and Polynomial equations: Bisection method - Newton's method - False Position method - Secant method - Rate of convergence of these methods.

UNIT II

System of linear algebraic equations: Gaussian Elimination - Gauss Jordan methods - Gauss Jacobi method - Gauss Seidel method and their convergence analysis – LU decomposition - Power method.

UNIT III

Interpolation: Lagrange and Newton's methods. Error bounds - Finite difference operators. Gregory forward and backward difference interpolation – Newton's divided difference – Central difference – Lagrange and inverse Lagrange interpolation formula.

UNIT IV

Numerical Differentiation and Integration: Gregory's Newton's forward and backward differentiation- Trapezoidal rule, Simpson's rule, Simpsons 3/8th rule, Boole's Rule. Midpoint rule, Composite Trapezoidal rule, Composite Simpson's rule.

UNIT V

Ordinary Differential Equations: Taylor's series - Euler's method – modified Euler's method - Runge-Kutta methods of orders two and four.

			L	T	P	C
16MMU302	**RING THEORY AND LINEAR ALGEBRA I**		**6**	**2**	**0**	**6**

Course Objectives
This course enables the students to learn

- Linear transformations, homomorphism, isomorphism and its properties.
- The basic definitions of Rings, subrings, vector spaces, subspaces, algebra of subspaces, isomorphism and its properties.
- The concept of ideals and maximal ideals
- Fundamental characteristics of vector spaces.
- Concepts of linear transformations and their role in modern mathematics.
- The concept of ring homomorphisms, properties of ring homomorphisms.

Course Outcomes (COs)
On successful completion of this course, the student will be able to:

1. Understand the concept of rings, subrings, vector spaces, subspaces, algebra of subspaces, isomorphism and its properties.
2. Understand the concept of ring homomorphisms, properties of ring homomorphisms.
3. Know about the Vector spaces and dimension.
4. Analyze Linear transformations and matrix representation of a linear transformation.
5. Study change of coordinate matrix and its properties.
6. Understand Isomorphism theorems I, II and III, field of quotients.

UNIT I
Definition and examples of rings, properties of rings, subrings, integral domains and fields, characteristic of a ring. Ideal, ideal generated by a subset of a ring, factor rings, operations on ideals, prime and maximal ideals.

UNIT II
Ring homomorphisms, properties of ring homomorphisms, Isomorphism theorems I, II and III, field of quotients.

UNIT III
Vector spaces, subspaces, algebra of subspaces, quotient spaces, linear combination of vectors, linear span, linear independence, basis and dimension, dimension of subspaces.

UNIT IV
Linear transformations, null space, range, rank and nullity of a linear transformation, matrix representation of a linear transformation, algebra of linear transformations.

UNIT V
Isomorphism: Isomorphism theorems, invertibility and isomorphisms, change of coordinate matrix.

		Semester – III
		L T P C
16MMU303	**MULTIVARIATE CALCULUS**	**6 2 0 6**

Course Objectives

This course enables the students to learn

- The basics concept of functions of several variables.
- Mastery in the skills of limit and continuity functions of two variables.
- Definition and compute partial derivatives, directional derivatives and differentials.
- Find local extreme values of functions of several variables, test for saddle points, examine the conditions for the existence of absolute extreme values.
- Differential, integral and double integral calculus for functions of more than one variable.
- The mathematical tools and methods are used extensively in the physical sciences, engineering and economics.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the functions of several variables.
2. Know about the Extrema of functions of two variables.
3. Use double, triple and its applications.
4. Know about the change of variables in double integrals and triple integrals
5. Synthesize the key concepts of line integrals and its applications.
6. Ability to apply the knowledge of Green's theorem and Stoke's theorem.

UNIT I

Functions of several variables: Limit and continuity of functions of two variables, partial differentiation, total differentiability and differentiability, sufficient condition for differentiability. Chain rule for one and two independent parameters, directional derivatives, the gradient, maximal and normal property of the gradient, tangent planes.

UNIT II

Extrema of functions of two variables: Method of Lagrange multipliers, constrained optimization problems, Definition of vector field, divergence and curl.

UNIT III

Double integration over rectangular region: Double integration over non-rectangular region, double integrals in polar co-ordinates, Triple integrals, Triple integral over a parallelepiped and solid regions. Volume by triple integrals, cylindrical and spherical co-ordinates. Change of variables in double integrals and triple integrals

UNIT IV

Line integrals: Applications of line integrals, Mass and Work. Fundamental theorem for line integrals, conservative vector fields, independence of path.

UNITV

Green’s theorem: Surface integrals, integrals over parametrically defined surfaces. Stoke’s theorem, The Divergence theorem.

Semester – III

			L	T	P	C
16MMU304A	**LOGIC AND SETS**		**4**	**2**	**0**	**4**

Course Objectives

This course enables the students to learn

- First-order formula of predicate logic is a tautology using a natural-deduction style formal system.
- The formal definitions of predicates, operations on sets and pertaining to relations.
- The concepts of Set operations and the laws of set theory and Venn diagrams.
- Composition of relations, Types of relations, Partitions, Partial ordering relations and n-ary relations.
- The enhancement of logical thinking and its application to computer science.
- The methods of mathematical logic.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Acquire the knowledge about propositions, conjunction, disjunction, logical equivalences and counting principle.
2. Identify between binding variables and negations.
3. Use the language of set theory, interpreting issues in different areas of mathematics.
4. Know the concepts Difference and Symmetric difference of two sets.
5. Mastery in the concepts of relations.
6. Study Composition of relations, Types of relations, Partitions, Partial ordering relations and n-ary relations.

UNIT I

Introduction, propositions, truth table, negation, conjunction and disjunction. Implications, biconditional propositions, converse, contra positive and inverse propositions and precedence of logical operators.

UNIT II

Propositional equivalence: Logical equivalences.

Predicates and quantifiers: Introduction, Quantifiers, Binding variables and Negations.

UNIT III

Sets: Subsets, Set operations and the laws of set theory and Venn diagrams. Examples of finite and infinite sets.

UNIT IV

Finite sets and counting principle. Empty set, properties of empty set. Standard set operations. Classes of sets. Power set of a set. Difference and Symmetric difference of two sets. Set identities, Generalized union and intersections.

UNIT V

Relation: Product set, Composition of relations, Types of relations, Partitions. Equivalence Relations with example of congruence modulo relation, Partial ordering relations, n-ary relations.

Semester – III

		L	T	P	C
16MMU304B	**PROGRAMMING WITH C AND C++**	**4**	**2**	**0**	**4**

Course Objectives

This course enables the students to learn

- The fundamentals of C and C++ programming language.
- The strength of C which provide programmers with the means of writing efficient, maintainable and portable code.
- Know the concept of a large problem into smaller parts, writing each part as a module or function
- Acquire the knowledge about a program in a high-level language being translated by a compiler into machine language program and then executed.
- The Memory Allocation and Using Classes in C++.
- Translate the computer algorithms to computer programs.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Know the basic concept of C and C++.
2. Understand the concept of functions and arrays.
3. Understand the concept structures and unions.
4. Understand pointers and references in C++.
5. Understand the concept of Differentiating between static and dynamic memory allocation.
6. Acquire the knowledge of translate the computer algorithms to computer programs.

UNIT I

Introduction to C and C++:

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main () function, Compiling and Executing Simple Programs in C++. **Data Types, Variables, Constants, Operators and Basic I/O:** Declaring, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Using Comments in programs, Character I/O (getc, getchar, putc, putcharetc), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.hetc).**Expressions, Conditional Statements and Iterative Statements:**Simple Expressions in C++ (including Unary Operator Expressions, Binary Operator Expressions), Understanding Operators Precedence in Expressions, Conditional Statements (if construct, switch-case construct), Understanding syntax and utility of Iterative Statements (while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

UNIT II

Functions and Arrays: Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays (Declaring and Defining an Array, Initializing an Array, ACSUessing individual elements in an Array, Manipulating array elements using loops), Use Various types of arrays (integer, float and character arrays / Strings) Two-dimensional Arrays (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional arrays.

UNIT III

Derived Data Types (Structures and Unions): Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members. **Pointers and References in C++:** Understanding a Pointer Variable, Simple use of Pointers (Declaring and Dereferencing Pointers to simple variables), Pointers to Pointers, Pointers to structures, Problems with Pointers, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions. Pointers vs. References, Declaring and initializing references, using references as function arguments and function return values

UNIT IV

Memory Allocation in C++: Differentiating between static and dynamic memory allocation, use of malloc, calloc and free functions, use of new and delete operators, storage of variables in static and dynamic memory allocation.**File I/O, Preprocessor Directives:** Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random aCSUess in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifdef, #ifndef and #undef), Macros.

UNIT V

Using Classes in C++: Principles of Object-Oriented Programming, Defining & Using Classes, Class Constructors, Constructor Overloading, Function overloading in classes, Class Variables &Functions, Objects as parameters, Specifying the Protected and Private ACS Uess, Copy Constructors, Overview of Template classes and their use. **Overview of Function Overloading and Operator Overloading:** Need of Overloading functions and operators, Overloading functions by number and type of arguments, Looking at an operator as a function call, Overloading Operators (including assignment operators, unary operators) **Inheritance, Polymorphism and Exception Handling:** Introduction to Inheritance (Multi-Level Inheritance, Multiple Inheritance), Polymorphism (Virtual Functions, Pure Virtual Functions), Basics Exceptional Handling (using catch and throw, multiple catch statements), Catching all exceptions, Restricting exceptions, Rethrowing exceptions.

Semester - III

		L	T	P	C
16MMU311	**NUMERICAL METHODS (PRACTICAL)**	**0**	**0**	**4**	**2**

Course Objectives

This course enables the students to learn

- Exercise user defined functions to solve real time problems.
- Illustrate flowchart and algorithm to the given problem.
- The basic structure of the programme, declaration and usage of variables.
- The basic MATLAB (matrix laboratory) programme.
- The usage of Matlab in order to facilitate understanding and visualization of mathematical problems
- Practical approach to apply the acquired knowledge and skills in professional and specialist courses.

Course outcomes (COs)

On successful completion of this course, the student will be able to

1. Acquire the basic knowledge of MATLAB and explore the structure of the numerical methods.
2. Use different memory allocation methods.
3. Deal with different input/output methods.
4. Use different data structures.
5. Express their ideas in terms of the syntax of the computer package MATLAB.
6. Apply the MATLAB programme in the real world situation involving numerical problems.

List of Practical (using MATLAB/Mathematica)
(Any 10 Programs)

1. Calculate the sum 1/1 + 1/2 + 1/3 + 1/4 + ----------+ 1/ N.
2. To find the absolute value of an integer.
3. Enter 100 integers into an array and sort them in an ascending order.
4. Bisection Method.
5. Newton Raphson Method.
6. Secant Method.
7. Regulai Falsi Method.
8. LU decomposition Method.
9. Gauss-Jacobi Method.
10. Gauss-Seidel Method.
11. Lagrange Interpolation or Newton Interpolation.
12. Simpson's rule.

Semester - IV

16MMU401	**GROUP THEORY II**	**L**	**T**	**P**	**C**
		6	**2**	**0**	**6**

Course Objectives

This course enables the students to learn

- Group homomorphism, isomorphism, automorphism and its related properties.
- Different types of groups such as normal subgroups, factor groups
- Familiar with various direct product of groups.
- Sylow's theorems, Cauchy's theorem and Index theorem.
- The concept of internal and external direct product.
- The applications of group actions and Generalized Cayley's theorem.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Expertise on fundamental theorems of isomorphism.
2. Know about automorphism and its developments.
3. Understand the concept of internal and external direct product.
4. Acquire the knowledge on basic concepts of group actions and their applications.
5. Apply Sylow's theorems to determine the structure of certain groups of small order.
6. Understand the applications of group actions and Generalized Cayley's theorem.

UNIT I

Group homomorphisms, properties of homomorphisms, Cayley's theorem, properties of isomorphisms, First, Second and Third isomorphism theorems.

UNIT II

Automorphism, inner automorphism, automorphism groups, automorphism groups of finite and infinite cyclic groups, applications of factor groups to automorphism groups, Characteristic subgroups, Commutator subgroup and its properties.

UNIT III

Properties of external direct products, the group of units modulo n as an external direct product, internal direct products, Fundamental Theorem of finite abelian groups.

UNIT IV

Group actions, stabilizers and kernels, permutation representation associated with a given group action, Applications of group actions: Generalized Cayley's theorem, Index theorem.

UNIT V

Groups acting on themselves by conjugation, class equation and consequences, conjugacy in Sn, *p*-groups, Sylow's theorems and consequences, Cauchy's theorem, Simplicity of An for $n \geq 5$, non-simplicity tests.

Semester – IV

		L	T	P	C
16MMU402	**METRIC SPACES AND COMPLEX ANALYSIS**	**6**	**2**	**0**	**6**

Course Objectives

This course enables the students to learn

- The theory of functions of a complex variable with examples.
- Metric spaces, Continuous mappings and Convergence of sequences and series.
- Techniques of complex analysis that make practical problems easy (e.g. graphical rotation and scaling as an example of complex multiplication)
- Subsets of a metric space are open, closed, connected, bounded, totally bounded and/or compact.
- Function on a Complex number, and differentiability on complex functions.
- The Cauchy's Theorem, Cauchy's integral formula, Liouville's Theorem and Laurent's expansion.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the various properties of metric spaces
2. Definite continuous mappings - sequential criterion.
3. Understand the basic concepts of Riemann equations, sufficient conditions for differentiability.
4. Explore various properties of Analytic functions.
5. Understand the Contour integrals and its examples.
6. Apply the concept Liouville's theorem and the fundamental theorem of algebra.

UNIT I

Metric spaces: definition and examples - Sequences in metric spaces - Cauchy sequences.
Complete Metric Spaces - Open and closed balls – neighbourhood - open set - interior of a set. Limit point of a set - closed set - diameter of a set - Cantor's theorem – Subspaces - dense sets – separable spaces.

UNIT II

Continuous mappings - sequential criterion and other characterizations of continuity – Uniform Continuity – Homeomorphism - Contraction mappings - Banach Fixed point Theorem - Connectedness - connected subsets of R.

UNIT III

Limits - Limits involving the point at infinity - continuity. Properties of complex numbers – regions in the complex plane - functions of complex variable - mappings. Derivatives, differentiation formulas - Cauchy-Riemann equations, sufficient conditions for differentiability.

UNIT IV

Analytic functions, examples of analytic functions, exponential function, Logarithmic function, trigonometric function, derivatives of functions, definite integrals of functions.
Contours: Contour integrals and its examples - upper bounds for moduli of contour integrals - Cauchy-Goursat theorem, Cauchy integral formula.

UNIT V

Liouville's theorem and the fundamental theorem of algebra. Convergence of sequences and series, Taylor series and its examples - Laurent series and its examples, absolute and uniform convergence of power series.

Semester – IV

16MMU403	RING THEORY AND LINEAR ALGEBRA II	L T P C 6 2 0 6

Course Objectives

This course enables the students to learn

- The behavior of polynomials and operators.
- The Rings and basic properties of rings and ideals.
- The concepts of unique factorization domains, Euclidean domains.
- The transpose of a linear transformation and its matrix in the dual basis.
- The Inner product spaces and norms, Gram-Schmidt orthogonalisation process.
- Least Squares Approximation and Spectral theorem.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Polynomial rings over commutative rings, dual spaces, dual basis, double dual, minimal solutions to systems of linear equations, normal and self-adjoint operators.
2. Understand the Divisibility in integral domains.
3. Study the transpose of a linear transformation and its matrix in the dual basis.
4. Know about the Inner product spaces and norms.
5. Study Least Squares Approximation, minimal solutions to systems of linear equations.
6. Know about the Orthogonal projections and Spectral theorem.

UNIT I

Polynomial rings over commutative rings, division algorithm and consequences, principal ideal domains, factorization of polynomials, reducibility tests, irreducibility tests, Eisenstein criterion, unique factorization in Z[x].

UNIT II

Divisibility in integral domains, irreducibles, primes, unique factorization domains, Euclidean domains.

UNIT III

Dual spaces, dual basis, double dual, transpose of a linear transformation and its matrix in the dual basis, annihilators, Eigen spaces of a linear operator, diagonalizability, invariant subspaces and Cayley-Hamilton theorem, the minimal polynomial for a linear operator.

UNIT IV

Inner product spaces and norms, Gram-Schmidt orthogonalisation process, orthogonal complements, Bessel's inequality, the adjoint of a linear operator.

UNIT V

Least Squares Approximation, minimal solutions to systems of linear equations, Normal and self-adjoint operators, Orthogonal projections and Spectral theorem.

Semester – IV

		L T P C
16MMU404A	**GRAPH THEORY**	**4 2 0 4**

Course Objectives

This course enables the students to learn

- Definitions and Basic properties of graphs.
- The fundamental concepts in graph theory.
- A blended method to prove theorems.
- The concept of Trees, spanning trees and its properties.
- Basic concepts in graph theory and a variety of different problems in Graph Theory.
- Gain the knowledge of various graphs algorithms will also be taught along with its analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Understand and Apply the fundamental concepts in graph theory.
2. Understand basic results related with Eulerian and Hamiltonian graphs.
3. Study about Chromatic polynomial, Matching and Covering.
4. Know about the fundamental concepts of trees.
5. Understand the Spanning trees, rank and nullity.
6. Mastery in Dijkstra's algorithm-Floyd- Warshall algorithm

UNIT I

Definition, examples and basic properties of graphs, Directed Graphs, Types of Directed Graphs , pseudo graphs, complete graphs, bi- partite graphs, isomorphism of graphs.

UNIT II

Paths and circuits, Strongly Connected Components , Eulerian circuits, Hamiltonian cycles Random graphs,Planar graphs,Networks.

UNIT III

The adjacency matrix, weighted graph, Incidence matrix, Submatrices, Circuit Matrix,Path Matrix ,Chromatic Number ,Chromatic polynomial, Matching , Covering ,Four Color Problem

UNIT IV

Trees: Trees and its properties, minimally connected graph ,Pendant vertices in a tree ,distance and centers in a tree, rooted and binary tree. Levels in binary tree , height of a tree, Spanning trees , rank and nullity.

UNIT V

Travelling salesman's problem, shortest path, Dijkstra's algorithm, Floyd- Warshall algorithm.

		Semester – IV
		L T P C
16MMU404B	**OPERATING SYSTEM: LINUX**	**4 2 0 4**

Course Objectives
This course enables the students to learn

- The main components of OS and their working.
- The memory allocation methods, page replacement algorithms, file allocation methods, multi-threading, process synchronization, and CPU scheduling.
- The basic components of a computer operating system, and the interactions among the various components.
- The capabilities and limitations of computer operating systems, process management, processor scheduling, deadlocks, memory management, secondary memory management, file management and I/O systems.
- Introduce the concepts of process and thread and their scheduling policies.
- Design the components of operating system.

Course Outcomes (COs)
On successful completion of this course, the student will be able to

1. Familiar with the memory allocation methods, page replacement algorithms, file allocation methods, multi-threading, process synchronization, and CPU scheduling.
2. Describe the main components of OS and their working.
3. Explain the concepts of process and thread and their scheduling policies.
4. Solve synchronization and deadlock issues.
5. Compare the different techniques for managing memory, I/O, disk and files.
6. Design components of operating system.

UNIT I
Introduction -Mainframe systems Desktop Systems – Multiprocessor systems – distributed systems – real time systems. Process: - Process concepts – Operation on process – cooperation process - Inter process Communication - Mutual Exclusion - Critical sections- primitives – Semaphores – Deadlock: System Model, Deadlock characterization, Deadlock prevention, avoidance, detection, recovery from deadlock.

UNIT II
Storage management: Memory Management - swapping- Contiguous memory allocation – paging, segmentation – segmentation with paging – Virtual memory :Virtual storage organization – Demand Paging, Process Creation – Page replacement – Thrashing.

UNIT III
Processor Scheduling : preemptive scheduling : - Scheduling Criteria – Scheduling Algorithms – FCFS-SJF- Priority – RoundRobin –Multilevel Queue – Multilevel Feedback Queue . Multiprocess schedule: Real time schedule, Algorithm evaluation: Deterministic Modeling, Queue Model, Simulation

UNIT IV

File systems: Introduction – File System Concepts – Access Methods – Directory structure – File Sharing – Allocation Methods – Free space management –Efficiency and performance – Recovery Disk Performance Optimization: Introduction – Disk structure – Disk scheduling – Disk management.

UNIT V

Linux-The Operating System: Linux History, Linux features, Linux distributions, Linux's relationship to Unix, Overview of Linux Architecture, Installation, Start up scripts, system process (an overview), Linux Security, The Ext2 and Ext3 File Systems: General characteristics of the Ext3 File System, File permissions, User Management: Types of users, the powers of Root, Managing users (adding and deleting) : using the command line and GUI Tools.

Resource Management in Linux: File and Directory management, system calls for files process management, Signals, IPC:Pipes, FIFOs, System V IPC, Message Queues, System calls for processes, Memory Management, Library and System calls for Memory.

Semester – V

		L T P C
16MMU501A	**PORTFOLIO OPTIMIZATION**	**6 2 0 6**

Course Objectives

This course enables the students to learn

- The changing domestic and global investment scenario in general and Indian capital market in particular with reference to availability of various financial products and operations of stock exchanges.
- The theory and practice of portfolio management.
- Important theories, techniques, regulations and certain advancements in theory of investment will be covered with an aim of helping the participants make sound investment decisions in the context of portfolio investment.
- The Risk-free assets and one fund theorem, efficient frontier.
- The various strategies followed by investment practitioners.
- The measure and the relationship between risk and return.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the various alternatives available for investment.
2. Learn to measure risk and return.
3. Find the relationship between risk and return.
4. Value the equities and bonds.
5. Gain knowledge of the various strategies followed by investment practitioners.
6. Study Index tracking optimization models.

UNIT I

Financial markets. Investment objectives. Measures of return and risk. Types of risks. Risk free assets. Mutual funds. Portfolio of assets.

UNIT II

Expected risk and return of portfolio. Diversification. Mean-variance portfolio optimization- the Markowitz model and the two-fund theorem.

UNIT III

Risk-free assets and one fund theorem, efficient frontier. Portfolios with short sales.

UNIT IV

Capital market theory.Capital assets pricing model- the capital market line, beta of an asset, beta of a portfolio, securitymarket line.

UNIT V

Index tracking optimization models. Portfolio performance evaluation measures.

Semester – V

			L	T	P	C
16MMU501B	**NUMBER THEORY**		**6**	**2**	**0**	**6**

Course Objectives

This course enables the students to learn

- Numbers, functions and its properties.
- Beauty and clarity of number theoretic functions.
- The challenging problems in number theory.
- How number theory is related to and used in cryptography.
- The concepts of divisibility, congruence, greatest common divisor, prime, and prime-factorization.
- The Law of Quadratic Reciprocity and other methods to classify numbers as primitive roots, quadratic residues, and quadratic non-residues.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the Linear Diophantine equation,
2. Know about the Fermat's Little theorem.
3. Mastery in the Mobius Inversion formula.
4. Familiar with the concepts of primitive roots
5. Acquire knowledge of the Legendre symbol and its properties.
6. Acquire concepts of Public key encryption, RSA encryption and decryption

UNIT I

Linear Diophantine equation, prime counting function, statement of prime number theorem, Goldbach conjecture, linear congruences, complete set of residues, Chinese Remainder theorem.

UNIT II

Fermat's Little theorem, Wilson's theorem. Number theoretic functions, sum and number of divisors, Totally multiplicative functions , Definition and properties of the Dirichlet product.

UNIT III

The Mobius Inversion formula, the greatest integer function, Euler's phi- function, Euler's theorem reduced set of residues-some properties of Euler's phi-function.

UNIT IV

Order of an integer modulo n, primitive roots for primes, composite numbers having primitive roots, Euler's criterion, the Legendre symbol and its properties.

UNIT V

Quadratic reciprocity-quadratic congruences with composite moduli. Public key encryption, RSA encryption and decryption, the equation $x^2 + y^2 = z^2$, Fermat's Last theorem.

Semester – V

		L T P C
16MMU502A	**INDUSTRIAL MATHEMATICS**	**6 2 0 6**

Course Objectives

This course enables the students to learn

- The basic facts about mathematics.
- Display the knowledge of conventions such annotations, terminology and recognize basic geometrical figures and graphical displays, state important facts resulting from their studies.
- A relational understanding of mathematical concepts and concerned structures, and should be able to follow the patterns involved with mathematical reasoning.
- Translate information presented verbally into mathematical form, select and use appropriate mathematical formulae or techniques in order to process the information and draw the relevant conclusion.
- Application of Fourier and inverse Fourier transforms.
- The concepts of Medical Imaging and Inverse Problems.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Get adequate exposure to global and local concerns so as to explore many aspects of Mathematical Sciences.
2. Apply their skills and knowledge, that is, translate information presented verbally into mathematical form, select and use appropriate mathematical formulae or techniques in order to process the information and draw the relevant conclusion.
3. Know about the X-ray: Introduction, X-ray behavior and Beers Law.
4. Aware of history of mathematics and hence of its past, present and future role as part of our culture.
5. Know the concept of Radon Transform.
6. Use the application of Fourier and inverse Fourier transforms.

UNIT I

Medical Imaging and Inverse Problems: The content is based on Mathematics of X-ray and CT scan based on the knowledge of calculus, elementary differential equations, complex numbers and matrices.

UNIT II

Inverse problems: Introduction , Illustration of Inverse problems through problems taught in Pre-Calculus, Calculus, Matrices and differential equations. Geological anomalies in Earth’s interior from measurements at its surface (Inverse problems for Natural disaster) and Tomography.

UNIT III

X-ray: Introduction, X-ray behavior and Beers Law (The fundament question of image construction) Lines in the place.

UNIT IV

Radon Transform: Definition and Examples, Linearity, Phantom (Shepp - Logan Phantom - Mathematical phantoms). Back Projection: Definition, properties and examples.

UNIT V
CT Scan: Revision of properties of Fourier and inverse Fourier transforms and applications of their properties in image reconstruction. Algorithms of CT scan machine. Algebraic reconstruction techniques abbreviated as ART with application to CT scan.

Semester – V

		L	**T**	**P**	**C**
16MMU502B	**BOOLEAN ALGEBRA AND AUTOMATA THEORY**	**6**	**2**	**0**	**6**

Course Objectives

This course enables the students to learn

- Lattice and algebraic system, Basic properties of algebraic systems
- Finite Automata and regular languages
- The foundations of computability theory
- A strong background in reasoning about finite state automata and formal languages.
- Mathematical arguments using logical connectives and quantifiers.
- The various categories of languages and grammars in the Chomsky hierarchy.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand how lattices and Boolean algebra are used as tools and mathematical models in the study of networks.
2. Define various categories of automata.
3. Context free grammars and pushdown automata.
4. Understand Turing machine as a model of computation.
5. Define the various categories of Undecidability.
6. Knowledge about Post Correspondence Problem.

UNIT I

Definition of ordered set with examples and basic properties of ordered sets, maps between ordered sets , duality principle, lattices as ordered sets- lattices as algebraic structures, sublattices, products and homomorphisms, modular and distributive lattices.

Boolean algebras: Boolean polynomials, minimal forms of Boolean polynomials, Quinn- McCluskey method, Karnaugh diagrams, switching circuits and applications of switching circuits.

UNIT II

The central concept of Automata: Alphabets, strings, and languages. Finite Automata and Regular Languages: deterministic and non-deterministic finite automata, regular expressions, regular languages and their relationship with finite automata, pumping lemma and closure properties of regular languages.

UNIT III

Context Free Grammars and Pushdown Automata: Context free grammars (CFG), parse trees, ambiguities in grammars and languages, pushdown automaton (PDA) and the language accepted by PDA, deterministic PDA, Non- deterministic PDA, properties of context free languages, normal forms, pumping lemma, closure properties, decision properties.

UNIT IV

Turing Machines: Turing machine as a model of computation, programming with a Turing machine, variants of Turing machine and their equivalence.

UNIT V

Undecidability: Recursively enumerable and recursive languages, undecidable problems about Turing machines: halting problem, Post Correspondence Problem, and undecidability problems About CFGs.

Semester – V

16MMU503 A	THEORY OF EQUATIONS	L T P C 6 2 0 6

Course Objectives

This course enables the students to learn

- The solution of Reciprocal and Binomial Equations and properties of the derived functions.
- About the properties of polynomials**.**
- The concepts of Relations between the roots and coefficients and applications of theorems.
- About algebraic Solution of the Cubic and Biquadratic and Properties of the Derived Functions.
- The algebraic solutions of cubic and biquadratic equations.
- The relation between coefficients of the equation and its roots.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Learn about the properties of polynomials.
2. Find positive, negative and imaginary roots using Descartes rule.
3. Identify the relation between coefficients of the equation and its roots.
4. Familiarize about the transformations of equations.
5. Know about the algebraic solutions of cubic and biquadratic equations.
6. Understand Algebraic Solution of the Cubic and Biquadratic.

UNIT I

General properties of polynomials: Theorem relating to polynomials when the variable receives large values, similar theorem when the variable receives small values.

Continuity of a rational integral function – Form of the quotient and remainder when a polynomial is divided by a Binomial – Tabulation of functions – Graphic representation of a polynomial – Maximum and minimum values of polynomials

UNIT II

General properties of equations: Theorems relating to the real roots of equations - Existence of a root in the general equation. Imaginary roots – Theorem determining the number of roots of an equation.

Descartes' rule of signs for positive roots – Descartes' rule of signs for negative roots – Use of Descartes' rule in proving the existence of imaginary roots – Theorem relating to the substitution of two given numbers for the variable

UNIT III

Relations between the roots and Coefficients-Theorem - Applications of the theorem - Depression of an equation when a relation exists between two of its roots - The cube roots of unity - Symmetric functions of the roots – Examples – Theorems relating to symmetric functions – Examples.

UNIT IV

Transformation of Equations: Transformation of equations - Roots with signs changed - Roots multiplied by a given quantity - Reciprocal roots and reciprocal equations - To increase or diminish the roots by a given quantity - Removal of terms - Binomial coefficients.

Solution of reciprocal and binomial equations: Reciprocal equations - Binomial equations. Propositions embracing their leading general Properties - The special roots of the equation – Solution of binomial equations by circular functions – Examples.

UNIT V
Algebraic Solution Of the Cubic and Biquadratic: On the algebraic solution of equations – The algebraic solution of the cubic equation - Application to numerical equations - Expression of the cubic as the difference of two cubes - Solution of the cubic by symmetric functions of the roots – Examples .

Properties of the Derived Functions: Graphic representation of the derived function - Theorem relating to the maxima and minima of a polynomial - Rolle's Theorem. Corollary - Constitution of the derived functions

L T P C

16MMU503B COMPUTER GRAPHICS 6 2 0 6

Course Objectives

This course enables the students to learn

- The scope of this course is to provide students with distinguished knowledge in the field of two- and three-dimensional computer graphics for Animation.
- Different hardware used for graphical requirement.
- How to display 3D objects in a 2D display devices using projection techniques.
- How to create realistic images using color and shading techniques.
- Computer Animation and Design of Animation Sequences.
- Designing and implementing practical graphic solutions to challenging problems in different application domains.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Transfer to the students the skills required for designing and implementing practical graphic solutions to challenging problems in different application domains and make them a competent product.
2. Understand different hardware used for graphical requirement.
3. Perform visual computations for geometrical drawings.
4. Display 3D objects in a 2D display devices using projection techniques.
5. Create realistic images using color and shading techniques.
6. Developed Computer Animation and Design of Animation Sequences.

UNIT I

A Survey of Computer Graphics - Video Display Devices - Refresh Cathode Ray Tubes -Raster Scan Displays - Random Scan Displays - Color CRT Monitors - Direct –View Storage Tubes - Flat Panel Displays - Three Dimensional Viewing Devices – Raster Scan and Random Scan graphic storages Displays processors and Character generators, color display techniques

UNIT II

Input Devices: Keyboards - Mouse –Track Ball and Space ball – Joysticks - Data Glove – Digitizers - Image Scanners - Touch Panels - Light Pens - Voice Systems. Hard Copy Devices: Printers and Plotters, Interactive input/output devices

Point, lines and Curves : Scan conversion, Line Drawing Algorithms: DDA Algorithm - Bresenhams Line Algorithm. Circle Generating Algorithms: Mid Point Circle Algorithm, Ellipse Generating Algorithm, Conic-section generation, polygon filling anti aliasing.

UNIT III

Two Dimensional Geometric Transformations: Basic Transformations: Translation –Rotation – Scaling - Composite Transformations: Translations – Rotations - Scalings. General Pivot Point Rotation - General Fixed Point Scaling. Two – Dimensional Viewing: The Viewing Pipeline - Window to viewport Transformation - Clipping Operations: Point Clipping - Line Clipping Algorithms- Cohen Sutherland Line Clipping - Polygon Clipping: Sutherland – Hodgeman Polygon Clipping Algorithm - Text Clipping.

UNIT IV
Three – Dimensional Display methods, Three – Dimensional Transformations : Translation –Rotation – Scaling, Three Dimensional viewing : Viewing pipeline - Viewing coordinates - Parallel Projection – . Perspective Projections.

UNIT V
Visible Surface Detection Methods: Classification of Visible Surface Detection Algorithms - Back Face Detection - Depth Buffer Method - Area Sub division Method.
Computer Animation : Design of Animation Sequences-General Computer Animation functions – Raster Animations – Computer animation Languages – Key Frame Systems – Motion Specifications

Semester – V

		L T P C
16MMU504A	**ANALYTICAL GEOMETRY**	**4 2 0 4**

Course Objectives

This course enables the students to learn

- Geometry and its applications in the real world
- Geometric ideas in the language of the mathematician.
- Parabola, Ellipse and Hyperbola.
- The relation between areas of a triangle and its projection, relation between areas of a polygon.
- The General Equations Tracing of Curves.
- The fundamental theorems of isomorphism.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Acquiring knowledge of straight lines and area of triangle..
2. Know about Reflection properties of parabola.
3. Acquire the knowledge on basic concepts of Hyperbola and their applications.
4. Study the angles between two directed lines, the projection of a segment.
5. Understand the General Equations Tracing of Curves.
6. Know about particular cases of Conic sections.

UNIT I

Coordinates, Lengths of straight lines and areas of triangle, polar coordinates. Locus, equation to a locus. Straight line: Equation of a straight line, angle between two straight line. Length of a perpendicular techniques for sketching parabola, ellipse and hyperbola. Reflection properties of parabola.

UNIT II

Parabola and Ellipse: Classification of quadratic equations representing lines. Parabola : Loci Connected with the parabola ,three normals passing through a given points , parabola referred to two tangent as axes. Ellipse: Auxiliary circle and eccentric angle, equation to a tangent , some properties of Ellipse , poles and polar , conjugate diameters , four normals through any points.

UNIT III

Hyperbola: Asymptotes – equations referred to the asymptotes an axes – one variables examples.
Spheres: The Equation of a sphere - Tangents and tangent plane to a sphere - The radical plane of two spheres Cylindrical surfaces. Illustrations of graphing standard quadric surfaces like cone, ellipsoid.

UNIT IV

The angles between two directed lines, the projection of a segment, relation between a segment and its projection, the projection of a broken line , the angle between two planes , relation between areas of a triangle and its projection , relation between areas of a polygon.

UNIT V

Polar equation to a conic: General Equations Tracing of Curves, particular cases of Conic sections, transformation of equations to center as origin, equations to asymptotes, tracing a parabola , tracing a central conic , eccentricity and foci of general conic.

		Semester – V
		L T P C
16MMU504B	**LINEAR PROGRAMMING**	**4 2 0 4**

Course Objectives

This course enables the students to learn

- Fundamental concepts of duality, economic interpretation of dual constraints and game theory.
- The simplex method to solve small linear programming models by hand, given a basic feasible point.
- Formulation of a given simplified description of a suitable real-world problem as a linear programming model.
- Revised Simplex Method, Parametric Linear Programming, Integer Linear Programming: Branch and Bound Method, Cutting Plane Method.
- Mathematical Formulation of LPP, Solution of LPP: Graphical Method with special cases, Simplex Method, Big-M Method, Two Phase method. Special cases in simplex method, Duality theory, Dual Simplex algorithm.
- Solution of Transportation problem and Assignment Problems.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Formulate a LPP and solve it by simplex and graphical method. Also do post optimal analysis of the formulated problem or other application areas.
2. Understand the concepts of Duality, Primal Dual relationship.
3. Solve a Transportation and its types.
4. Analysis Assignment problem and its models.
5. Know the concept of game theory.
6. Study the games with mixed strategies, graphical solution procedure, linear programming solution of games.

UNIT I

Introduction to Linear Programming Problem – Graphical Linear Programming Solution- Theory of Simplex Method-Optimality and unboundedness-the Simplex algorithm –Simplex method in tableau format- Introduction to artificial variables – two –phase method – Big –M method and their comparison.

UNIT II

Duality – Definition of the dual Problems-Formulation of the dual Problem-Primal Dual relationship: Review of simplex matrix Operations –Simplex tableau Layout-Optimal Dual Solution-Simplex Tableau computations. Economic interpretation of the dual: Economic Interpretation of Dual Variables-Economic Interpretation of Dual Constraints.

UNIT III

Transportation Problem: Definition of the Transportation model – Nontraditional Transportation model – The Transportation Algorithm: Determination of the Starting Solution-Northwest –corner method, Least – corner method, Vogel approximation method- Iterative Computations of the Transportation Algorithm.

UNIT IV

The Assignment Model: Introduction to Assignment model- Mathematical Formulation of Assignment model- Hungarian method for solving assignment problem –Simplex Explanation of the Hungarian method.

UNIT V

Game theory: Formulation of two person zero games – Solving two person zero sum games, games with mixed strategies, graphical solution procedure, linear programming solution of games.

Semester – VI

16MMU601A	MATHEMATICAL MODELING	L T P C 6 2 0 6

Course Objectives

This course enables the students to learn

- Mathematical models of real-world systems, analyze them and make predictions about behavior of these systems.
- The principles of mathematical modelling to solve a variety of practical problems in sciences and engineering.
- The behavior of a given physical system based on the analysis of its mathematical model.
- Modeling with a Differential Equations.
- Simulation Modeling – Discrete-Event Simulation, Continuous Simulation, Monte Carlo simulation.
- Analytic methods of model fitting.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Know about the power series solution of a differential equation.
2. Understand the basic concepts of Monte Carlo Simulation Modeling.
3. Study the basic concepts of Queueing theory.
4. Knowledge the applications of differential equations.
5. Study the applications to Traffic Flow
6. Understand the concepts of gravitational potential, conservation laws.

UNIT I

Power series solution of a differential equation about an ordinary point, solution about a regular singular point, Bessel's equation and Legendre's equation, Laplace transform and inverse transform, application to initial value problem up to second order.

UNIT II

Monte Carlo Simulation Modeling: simulating deterministic behavior (area under a curve, volume under a surface), Generating Random Numbers: middle square method, linear congruence.

UNIT III

Queuing Models: harbor system, morning rush hour, Overview of optimization modeling, Linear Programming Model: geometric solution algebraic solution, simplex method, sensitivity analysis.

UNIT IV

Applications of differential equations: the vibrations of a mass on a spring, mixture problem, free damped motion, forced motion, resonance phenomena, electric circuit problem, mechanics of simultaneous differential equations.

UNIT V

Applications to Traffic Flow. Vibrating string, vibrating membrane, conduction of heat in solids, gravitational potential, conservation laws.

Semester – VI

		L	T	P	C
16MMU601B	**MECHANICS**	**6**	**2**	**0**	**6**

Course Objectives

This course enables the students to learn

- How to use forces, frictions and their applications in real life.
- To solve dynamics problems such as conservation of energy and linear and angular momentum.
- Applications of differential equations in advanced mathematical problems.
- Motion in different curves under central forces.
- Classification of the Couple moment and Moment of a couple about a line.
- The problem of central forces and mechanical systems.

Course Outcomes (COs)

On successful completion of this course students will be able to

1. Understand the concept of the Moment of a force about a point and an axis.
2. Classify the Laws of Coulomb friction.
3. Solve the problems of Conservative force field and conservation for mechanical energy.
4. Solve the Problems of equilibrium under forces including friction.
5. Analyze the Velocity and acceleration of a particle along a curve.
6. Know about the basic concepts of Simple harmonic motion, Simple Pendulum, Projectile Motion.

UNIT I

Moment of a force about a point and an axis, couple and couple moment, Moment of a couple about a line, resultant of a force system, distributed force system, free body diagram, free body involving interior sections, general equations of equilibrium, two point equivalent loading, problems arising from structures, static indeterminacy.

UNIT II

Laws of Coulomb friction, application to simple and complex surface contact friction problems, transmission of power through belts, screw jack, wedge, first moment of an area and the centroid, other centers, Theorem of Pappus-Guldinus, second moments and the product of area of a plane area, transfer theorems, relation between second moments and products of area, polar moment of area, principal axes.

UNIT III

Conservative force field, conservation for mechanical energy, work energy equation, kinetic energy and work kinetic energy expression based on center of mass, moment of momentum equation for a single particle and a system of particles, translation and rotation of rigid bodies, Chasles' theorem, general relationship between time derivatives of a vector for different references, relationship between velocities of a particle for different references, acceleration of particle for different references.

UNIT IV

Conditions of equilibrium of a particle and of coplanar forces acting on a rigid Body, Laws of friction, Problems of equilibrium under forces including friction, Centre of gravity, Work and potential energy.

UNIT V
Velocity and acceleration of a particle along a curve: radial and transverse components (plane curve), tangential and normal components (space curve), Newton's Laws of motion, Simple harmonic motion, Simple Pendulum, Projectile Motion.

SEMESTER –VI

16MMU602A RIEMANN INTEGRATION AND SERIES OF FUNCTIONS

L	T	P	C
6	2	0	6

Course Objectives

This course enables the students to learn

- The Riemann integration, Point wise and uniform convergence of sequence of functions and Series of functions.
- The concept of continuous functions and their bounded variation property.
- Difference between Riemann Integration and Riemann Stieltjes Integration of functions.
- Fundamental theorems of Calculus and Improper integrals.
- The concept of cauchy criterion for uniform convergence and Weierstrass M-Test.
- About pointwise and uniform convergence of sequence of functions.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Understand Riemann sum and definition of Riemann integral.
2. Convergence of Beta and Gamma functions
3. Know about Pointwise and uniform convergence of sequence of functions
4. Theorems on the continuity and derivability of the sum function of a series of functions.
5. Understand Cauchy criterion for uniform convergence and Weierstrass M-Test.
6. Limit superior and Limit inferior and integration of power series.

UNIT I

Riemann integration - inequalities of upper and lower sums - Riemann conditions of integrability - Riemann sum and definition of Riemann integral through Riemann sums - equivalence of two definitions- Riemann integrability of monotone and continuous functions, Properties of the Riemann integral

UNIT II

Definition and integrability of piecewise continuous and monotone functions. - Intermediate Value theorem for Integrals - Fundamental theorems of Calculus - Improper integrals - Convergence of Beta and Gamma functions

UNIT III

Pointwise and uniform convergence of sequence of functions - Theorems on continuity - derivability and integrability of the limit function of a sequence of functions.

UNIT IV

Series of functions - Theorems on the continuity and derivability of the sum function of a series of functions - Cauchy criterion for uniform convergence and Weierstrass M-Test.

UNIT V

Limit superior and Limit inferior - Power series - radius of convergence - Cauchy Hadamard Theorem - Differentiation and integration of power series - Abel's Theorem - Weierstrass Approximation Theorem.

		Semester -VI
		L T P C
16MMU602B	**PDE AND SYSTEMS OF ODE**	**6 2 0 6**

Course Objectives

This course enables the students to learn

- The various methods of solving Differential equations which is very much used in the field of Engineering.
- The Method of Separation of Variables for solving first order partial differential equations.
- The basic concepts of Reduction of second order Linear Equations to canonical forms
- The Systems of linear differential equations and its applications.
- The concept of second order linear homogeneous, non-homogeneous differential equations with constant coefficients.
- The application of The Euler method-The modified – Euler method -The Runge-Kutta method.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Understand the basic concepts partial differential equations.
2. Gain knowledge about forming the differential equations method of separation of Variables, Initial Boundary Value Problems and method of successive approximations.
3. Know about the Reduction of second order Linear Equations to canonical forms.
4. Study the Method of separation of variables and Solving the Vibrating String.
5. Understand the Basic Theory of linear systems in normal form.
6. Use the Numerical methods to solve the real world problems.

UNIT I

Partial Differential Equations – Basic concepts and Definitions -Mathematical Problems.
First Order Equations: Classification - Construction and Geometrical Interpretation- Method of characteristics for obtaining General Solution of Quasi Linear Equations- Canonical Forms of First-order Linear Equations.

UNIT II

Method of Separation of Variables for solving first order partial differential equations.
Derivation of Heat equation -Wave equation and Laplace equation. - Classification of second order - linear equations as hyperbolic, parabolic or elliptic.

UNIT III

Reduction of second order Linear Equations to canonical forms- The Cauchy problem- The Cauchy-Kowaleewskaya theorem -Cauchy problem of an infinite string - Initial Boundary Value Problems - Semi-Infinite String with a fixed end - Semi-Infinite String with a Free end- Equations with non-homogeneous boundary conditions -Non- Homogeneous Wave Equation.

UNIT I V

Method of separation of variables - Solving the Vibrating String - Problems- Solving the Heat Conduction problem - Systems of linear differential equations - Types of linear systems differential operators - an operator method for linear systems with constant coefficients.

UNIT V

Basic Theory of linear systems in normal form : Homogeneous linear systems with constant coefficients -Two Equations in two unknown functions -The method of successive approximations -The Euler method-The modified – Euler method -The Runge-Kutta method.

Semester – VI

16MMU603A	PROBABILITY AND STATISTICS	L T P C
		4 2 0 4

Course Objective:

This course enables the students to learn

- Basic concepts in probability theory and statistical measures.
- Commonly used probability distributions (both discrete and continuous).
- Central Limit theorem and their applications in various disciplines.
- The nature of uncertainty and randomness and set up data collection methods that are free of bias.
- Appropriate methods to draw conclusions based on sample data by constructing and/or evaluating tables, graphs, and numerical measures of characteristics of data.
- The foundations of probabilistic and statistical analysis mostly used in varied applications in engineering and science.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the basic concepts of Measures of central tendency.
2. Know about the Probability Concepts and its properties.
3. Know about the Discrete distributions and its types.
4. Study the Continuous distributions and its types.
5. Understand the Basic Theory of Chebyshev's inequality.
6. Chapman-Kolmogorov equations, classification of states.

UNIT I

Meaning and definition of statistics, Measures of central tendency: Arithmetic Mean, Median, Mode. Measures of dispersion – Range, Coefficient of range, Quartile deviation, Coefficient of Quartile deviation, Standard deviation and Coefficient of variation.

UNIT II

Probability Concepts – trial, event, Sample space, mutually exclusive event, exclusive and exhaustive events, dependent and independent events, simple and compound events, Mathematical properties, permutation and combination, probability axioms, addition and multiplication theorem, real random variables (discrete and continuous), cumulative distribution function, probability density functions, mathematical expectation, moments, moment generating function, characteristic function.

UNIT III

Discrete distributions: uniform distribution, binomial distribution, Poisson distribution, and its properties, joint probability density functions, marginal and conditional distributions, expectation of function of two random variables, conditional expectations, independent random variables.

UNIT IV

Continuous distributions: uniform distribution, normal distribution, standard normal distribution, exponential distribution. Joint cumulative distribution function and its properties, joint probability density functions (No derivations) and simple problems. Bivariate distribution, correlation coefficient, joint moment generating function (jmgf) and calculation of covariance (from jmgf), linear regression for two variables.

UNIT V

Chebyshev's inequality, statement and interpretation of (weak) law of large numbers and strong law of large numbers, Central Limit theorem for independent and identically distributed random variables with finite variance, Markov Chains, Chapman-Kolmogorov equations, classification of states.

Semester – VI

16MMU603B	DIFFERENTIAL GEOMETRY	L T P C
		4 2 0 4

Course Objective:

This course enables the students to learn

- To get introduced to the concept of a regular parameterized curve in n
- To Understand the concept of curvature of a space curve and signed curvature of a plane curve.
- To be able to understand the fundamental theorem for plane curves.
- To get introduced to the notion of Serret-Frenet frame for space curves and the
- Involutes and evolutes of space curves with the help of examples. To be able to compute the curvature and torsion of space curves.
- The Parallel propagation of vectors, Covariant and intrinsic derivatives

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the theory of space curves with examples.
2. Study the concept of parametric curves on surfaces.
3. Know about the torsion of a geodesic and geodesic curvature.
4. Study the Tensors of different type, Algebra of tensors and contraction.
5. Know about the Parallel propagation of vectors.
6. Understand Laplacian operators in tensor form.

UNIT I

Theory of Space Curves: Space curves - Planer curves, Curvature, torsion and Serret-Frenet formulae - Osculating circles, Osculating circles and spheres - Existence of space curves - Evolutes and involutes of curves.

UNIT II

Theory of Surfaces: Parametric curves on surfaces - Direction coefficients -First and second Fundamental forms - Principal and Gaussian curvatures - Lines of curvature - Euler's theorem - Rodrigue's formula - Conjugate and Asymptotic lines.

UNIT III

Developables: Developable associated with space curves and curveson surfaces – Minimal surfaces. Geodesics: Canonical geodesic equations - Nature of geodesics on a surface of revolution -Clairaut's theorem. -Normal property of geodesics -Torsion of a geodesic - Geodesic curvature - Gauss-Bonnet theorem - Surfaces of constant curvature -Conformal mapping. Geodesic mapping-Tissot's theorem.

UNIT IV

Tensors: Summation convention and indicial notation - Coordinate transformation and Jacobian, Contra-variant and Covariant vectors - Tensors of different type - Algebra of tensors and contraction - Metric tensor and 3-index Christoffel symbols.

UNIT V

Parallel propagation of vectors, Covariant and intrinsic derivatives - Curvature tensor and its properties - Curl, Divergence and Laplacian operators in tensor form - Physical components.

		L T P C
16MMU691	**PROJECT**	**8 0 0 6**

16MMP101	ALGEBRA	Semester – I L T P C 4 0 0 4

Course Objectives
This course enables the students to learn

- The fundamental concepts of algebraic ring theory and fields.
- The basic central ideas of Polynomial ring.
- How to test if a polynomial is irreducible Finite Field (Galois Fields).
- How to convert the various matrix forms.
- Develop capabilities with an axiomatic treatment of transformation.
- Develop an understanding of the structure of sets with operations on them.

Course Outcomes (COs)
After successful completion of this course the students will be able to

1. Understand the concept and the properties of finite abelian groups.
2. Get pre-doctoral level knowledge in ring theory.
3. Attain good knowledge in field theory.
4. Define and study in details the properties of linear transformations.
5. Analyze the concept of trace and transpose.
6. Demonstrate capacity for mathematical reasoning through analyzing, proving and explaining concepts quadratic forms.

UNIT I
Another counting principle – application of theorems – Cauchy theorem – Sylow's theorem – Direct products – Finite Abelian groups.

UNIT II
Ring Theory- Basic definition- More ideals and quotient rings- Euclidean rings-A Particular Euclidean Rings –Polynomial Rings-Polynomial over the Rational Field.

UNIT III
Fields – Extension Fields-Finite Extension of F – Some basic Definitions and Theorem – Roots of a Polynomial – More about Roots – The elements of Galois theory .

UNIT IV
Linear Transformations-The Algebra Of Linear Transformation – Characteristic Root-Matrices-Canonical Forms –Triangular form-Nilpotent Transformations–Jordan form.

UNIT V
Trace and Transpose – Trace of T-Symmetric Matrix –Determinants–Hermitian Transformation, Unitary Transformation and Normal Transformation – Real quadratic forms.

		Semester – I
16MMP102	**REAL ANALYSIS**	**L T P C**
		4 0 0 4

Course Objectives

This course enables the students to learn

- The basic principles of Riemann – Stieltjes Integral.
- Apply mathematical concepts and principles to infinite series.
- How to identify sets with various properties such as convergence.
- Have the knowledge of Lebesgue integral of functions and their properties.
- Understand the importance of undefined terms, definitions, and axioms.
- Use a variety of proof techniques to prove theorems using axioms, definitions, and previous results.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Get specific skill in Riemann Stieltjes integral and Lebesgue integral.
2. Attain knowledge in infinite series.
3. Demonstrate an understanding of the uniform convergence and differentiation.
4. Enrich their knowledge of measure theory and extremum problems.
5. Solve given problems at a high level of abstraction based on Implicit function.
6. Describe the fundamental properties of the real numbers that underpin the formal development of real analysis.

UNIT I

The Riemann – Stieltjes Integral:

Introduction – Basic Definitions – Linear Properties – Integration by parts – Change of variable in a Riemann – Stieltjes Integral – Reduc tion to a Riemann Integral – Step functions as integrators – Reduction of a Riemann – Stieltjes Integral to a finite sum – Monotonically increasing – Additive and linear properties – Riemann condition – Comparison theorems – Integrators of bounded variation – Sufficient condition for Riemann Stieltjes integral.

UNIT II

Infinite series and infinite products:

Introduction – Basic definitions – Ratio test and root test – Dirichlet test and Able's test – Rearrangement of series – Riemann's theorem on conditionally convergent series – Sub series - Double sequences – Double series – Multiplication of series – Cesaro summability.

UNIT III

Sequences of functions:

Basic definitions – Uniform convergence and continuity - Uniform convergence of infinite series of functions – Uniform convergence and Riemann – Stieltjes integration – Non uniformly convergent sequence – Uniform convergence and differentiation – Sufficient condition for uniform convergence of a series.

UNIT IV

The Lebesgue integral:

Introduction- The class of Lebesgue – integrable functions on a general interval- Basic properties of the Lebesgue integral- Lebesgue integration and sets of measure zero- The Levi monotone

convergence theorem- The Lebesgue dominated convergence theorem-
Applications of Lebesgue dominated convergence theorem- Lebesgue integrals on unbounded intervals as limit of integrals on bounded intervals- Improper Riemann integrals- Measurable functions.

UNIT V
Implicit functions and extremum problems:
Introduction – Functions with non zero Jacobian determinant – Inverse function theorem – Implicit function theorem – Extrema of real valued functions of one variable and several variables.

		Semester – I
16MMP103	**NUMERICAL ANALYSIS**	**L T P C**
		4 0 0 4

Course Objectives

This course enables the students to learn

- To develop the working techniques on numerical differentiation and integration.
- To solve algebraic and transcendental equations.
- Appropriate numerical methods to solve differential equations.
- To provide suitable and effective methods for obtaining approximate representative numerical results of the problems.
- To solve complex mathematical problems using only simple arithmetic operations. The approach involves formulation of mathematical models of physical situations that can be solved with arithmetic operations.
- Provide a basic understanding of the derivation, analysis, and use of these numerical methods, along with a rudimentary understanding of finite precision arithmetic and the conditioning and stability of the various problems and methods.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Identify the concept of numerical differentiation and integration.
2. Provide information on methods of iteration.
3. Solve ordinary differential equations by using Euler and modified Euler method.
4. Study in detail the concept of boundary value problems.
5. Attain mastery in the numerical solution of partial differential equations.
6. Apply numerical methods to obtain approximate solutions to mathematical problems.

UNIT I

Solutions of Non Linear Equations: Newton's method-Convergence of Newton's method-Bairstow's method for quadratic factors. Numerical Differentiation and Integration:

Derivatives from difference tables – Higher order derivatives – divided difference. Trapezoidal rule – Romberg integration – Simpson's rules.

UNIT II

Solutions of system of Equations: The Elimination method: Gauss Elimination and Gauss Jordan Methods – LU decomposition method.

Methods of Iteration: Gauss Jacobi and Gauss Seidal iteration-Relaxation method.

UNIT III

Solutions of Ordinary Differential Equations: One step method: Euler and Modified Euler methods –Rungekutta methods. Multistep methods: Adams Moulton method – Milne's method

UNIT IV

Boundary Value Problem and Characteristic value problem: The shooting method: The linear shooting method – The shooting method for non-linear systems.

Characteristic value problems –Eigen values of a matrix by Iteration-The power method.

UNIT V

Numerical Solution of Partial Differential Equations: Classification of Partial Differential Equation of the second order – Elliptic Equations. Parabolic equations: Explicit method – The Crank Nicolson difference method. Hyperbolic equations – solving wave equation by Explicit Formula.

Semester – I

16MMP104 **ORDINARY DIFFERENTIAL EQUATIONS** **L T P C**
4 0 0 4

Course Objectives

This course enables the students to learn

- The formulation and solutions of second order ordinary differential equations and get exposed to physical problems with applications.
- The concept of solve the system of first order equations.
- Linear homogeneous and non homogeneous equations with constant coefficients.
- Understanding the elementary linear oscillations.
- Understand all of the concepts relating to the order and linearity of ordinary differential equations, analytic and computational solution methods for ordinary differential equations, and the real-world applications of ordinary differential equations.
- Apply your understanding of the concepts, formulas, and problem solving procedures to thoroughly investigate relevant physical models.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Model a simple physical system to obtain a first and second order differential equation.
2. Understand the basic notions of linearity, superposition, existence and uniqueness of solution to differential equations and use these concepts in solving linear differential equations.
3. Identify homogeneous equations, homogeneous equations with constant coefficients and exact linear differential equations**.**
4. Solve higher order and system of differential equations of Successive approximation.
5. Understand the difficulty of solving problems for elementary linear oscillations.
6. Identify, analyze and subsequently solve physical situations whose behavior can be described by ordinary differential equations.

UNIT I

Second order linear equations with ordinary points – Legendre equation and Legendre polynomial – Second order equations with regular singular points – Bessel equation.

UNIT II

System of first order equations – existence and uniqueness theorems – fundamental matrix.

UNIT III

Non homogeneous linear system – linear systems with constant coefficient – Linear systems with periodic coefficients.

UNIT IV

Successive approximation – Picard's theorem – Non uniqueness of solution – continuation and dependence on initial conditions – existence of solution in the large existence and uniqueness of solution in the system.

UNIT V
Fundamental results – Sturms comparison theorem – elementary linear oscillations – comparison theorem of Hille winter – Oscillations of $x'' + a(t)x = 0$ elementary non linear oscillations.

Semester – I

16MMP105A ADVANCED DISCRETE MATHEMATICS

L	T	P	C
4	0	0	4

Course Objectives

This course enables the students to learn

- The concept of algebraic structures, lattices and its special categories which plays an important role in the field of computers.
- The fundamental concepts in graph theory, with a sense of some its modern applications.
- Some fundamental mathematical concepts and terminology.
- Learn some different types of discrete structures.
- Introduce students to the techniques, algorithms, and reasoning processes involved in the study of discrete mathematical structures.
- Introduce students to set theory, inductive reasoning, elementary and advanced counting techniques, equivalence relations, recurrence relations, graphs, and trees.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Develop new algebraic structures.
2. Think critically and analytically by modeling problems form social and natural sciences with the help of theory of graphs.
3. Apply discrete mathematics in formal representation of various computing constructs
4. Work effectively in groups on a project that requires an understanding of graph theory.
5. Demonstrate different traversal methods for trees and graphs.
6. Recognize the importance of analytical problem-solving approach.

UNIT I

Algebraic Structures: Introduction- Algebraic Systems: Examples and General Properties: Definition and examples - Some Simple Algebraic Systems and General properties - Homomorphism and isomorphism - congruence relation - Semigroups and Monoids: Definitions and Examples - Homomorphism of Semigroups and Monoids.

UNIT II

Lattices: Lattices as Partially Ordered Sets: Definition and Examples - Principle of duality - Some Properties of Lattices - Lattices as Algebraic Systems – Sublattices - Direct product, and Homomorphism.

UNIT III

Some special Lattices - e.g. Complete, Complemented and Distributive Lattices - Boolean Algebra: Definition and Examples - Subalgebra - Direct product and Homomorphism - join irreducible - atoms and antiatoms.

UNIT IV

Graph Theory: Definition of a graph - applications, Incidence and degree - Isolated and pendant vertices - Null graph, Path and Circuits: Isomorphism - Subgraphs, Walks -Paths and circuits - Connected graphs, disconnected graphs – components - Euler graph.

UNIT V

Trees: Trees and its properties - minimally connected graph - Pendant vertices in a tree - distance and centers in a tree - rooted and binary tree. Levels in binary tree - height of a tree - Spanning trees - rank and nullity.

Semester – I

16MMP105B **NEURAL NETWORKS AND FUZZY LOGIC** **L T P C**
4 0 0 4

Course Objectives

This course enables the students to learn

- The introduction and different architectures of neural networks.
- The applications of neural networks.
- To cater the knowledge of Fuzzy Logic Control and use these for controlling real time systems.
- The fundamental concepts of fuzzy logic and artificial neural networks.
- The concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic control and other machine intelligence applications of fuzzy logic.
- The importance of tolerance of imprecision and uncertainty for design of robust & low cost intelligent machines.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Obtain the fundamentals and types of neural networks.
2. Have a broad knowledge in developing the different algorithms for neural networks in Topology.
3. Analyze recurrent neural networks.
4. Acquire a broad knowledge in fuzzy logic principles.
5. Expose the students to the concepts of Classical and fuzzy sets
6. Provide adequate knowledge about the Fuzzy controllers.

UNIT I

Evolution of neural networks; Artificial Neural Network: Basic model, Classification, Feed forward and Recurrent topologies, Activation functions; Learning algorithms: Supervised, Un-supervised and Reinforcement; Fundamentals of connectionist modeling: McCulloach – Pits model, Perceptron, Adaline, Madaline.

UNIT II

Topology of Multi-layer perceptron, Back propagation learning algorithm, limitations of Multi-layer perceptron. Radial Basis Function networks: Topology, learning algorithm, Kohenen's self-organizing network: Topology, learning algorithm; Bidirectional associative memory Topology, learning algorithm, Applications.

UNIT III

Recurrent neural networks: Basic concepts, Dynamics, Architecture and training algorithms, Applications; Hopfield network: Topology, learning algorithm, Applications; Industrial and commercial applications of Neural networks: Semiconductor manufacturing processes, Communication, Process monitoring and optimal control, Robotics, Decision fusion and pattern recognition.

UNIT IV

Classical and fuzzy sets: Introduction, Operations and Properties, Fuzzy Relations: Cardinality, Operations and Properties, Equivalence and tolerance relation, Value assignment: cosine amplitude and max-min method; Fuzzification: Membership value assignment- Inference, rank ordering, angular fuzzy sets. Defuzzification methods, Fuzzy measures, Fuzzy integrals, Fuzziness and fuzzy resolution; possibility theory and Fuzzy arithmetic; composition and inference; Considerations of fuzzy decision-making.

UNIT V

Basic structure and operation of Fuzzy logic control systems; Design methodology and stability analysis of fuzzy control systems; Applications of Fuzzy controllers. Applications of fuzzy theory.

		Semester – I
16MMP105 C	**MAGNETOHYDRODYNAMICS**	**L T P C**
		4 0 0 4

Course Objectives

This course enables the students to learn

- To understand fundamentals of magnetohydrodynamics which describes the dynamics of electrically conducting fluids
- To figure out the applications of magnetohydrodynamics to the various science and engineering fields
- Basics of electromagnetic theory and vector calculus.
- Able to understand the concept of flow and Stability.
- The basic properties of electrically-conducting fluids.
- The role of the Lorentz force and its relevance to plasma confinement, dynamo theory and the dynamics of magnetic waves.

Course Outcomes (COs)

On successful completion of this course the student will be able to:

1. Provide the details of the derivation of ideal and resistive MHD equations.
2. Demonstrate the basic properties of ideal MHD.
3. Describe electromagnetic boundary conditions.
4. Explain MHD waves.
5. Describe the derivation of fluid equations, energy equation.
6. Describe electromagnetic fields in the energy and momentum fluxes.

UNIT I

Review of equation of motions of viscous compressible fluid flow –Introduction of MHD-Electromagnetic field equations-Maxwell’s equations and their Physical significance- Maxwell’s equations in the moving frame of reference-Invariance under Galilean Transformation-Electromagnetic effects and the magnetic Reynolds number-induction equation –Alfven’s Theorem-Physical Significance-Consequence of Alfven’s Theorem-Ferraro’s Law of irritation-The magnetic Energy- the mechanical equations and the mechanical effects-Electromagnetic stresses.

UNIT II

Magneto hydrostatics and steady states-Hydro magnetic equilibrium and forces free magnetic fields-boundary conditions – Boundary conditions in the case of force free magnetic fields-free surface of an isolated fluid mass- Chandrasekhar’s theorem-General solution of force free magnetic field when is constant-some examples of force free fields.

UNIT III

Hydromagnetics of the laboratory- steady laminar motion-Hartmann flow (MHD Poiseuille’s flow)-Domination of viscous forces over magnetic forces and vice versa-physical significance- Important dimensionless of MHD and their physical significance-electromagnetic boundary conditions-tensor electrical conductivity, Hall current and ion slip – simple flow problems with tensor electrical conductivity.

UNIT IV

Magneto hydrodynamic waves- Waves in an infinite fluid of infinite electrical conductivity- Alfven waves in incompressible fluid in viscid fluid of infinite electrical conductivity-Waves of finite amplitude –propagation of velocity and current density with Alfven velocity-MHD waves in incompressible fluid- Alfven wave and two magneto acoustic waves- the limit of zero magnetic Prandtl number significance.

UNIT V

Stability of hydro magnetic systems- theory and applications-methods of investigation-small perturbations and instability-Energy principle-normal mode analysis-simple illustrative examples-the stability of Hartman layer-Squire's theorem-Orr-Summerfield equation-Instability of linear pinch-methods of stabilize- Flute Instability- A general criterion for satiability-Bernstein's method of small oscillations(normal mode analysis) for hydro magnetic stability-jeans criterion for Gravitational stability- Chandrasekhar's generalization for MHD and rotating fluids.

16MMP106 **FUZZY LOGIC** **Semester – I**
L T P C
4 0 0 4

Course Objectives
This course enables the students to learn

- The introduction and different architectures of fuzzy sets.
- The applications of fuzzy networks.
- To cater the knowledge of fuzzy Logic Control and use these for controlling real time systems.
- Solve problems that are appropriately solved by neural networks, fuzzy logic, and genetic algorithms.
- The concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic control and other machine intelligence applications of fuzzy logic.
- The importance of tolerance of imprecision and uncertainty for design of robust & low cost intelligent machines.

Course Outcomes (COs)
On successful completion of this course, students will be able to

1. Obtain the fundamentals and types of fuzzy networks.
2. Have a broad knowledge in developing the different algorithms for fuzzy Logic.
3. Analyze constructing Fuzzy sets and operations.
4. Acquire a broad knowledge in Fuzzy relation equation.
5. The basic mathematical elements of the theory of Fuzzy systems and neural networks.
6. Explain the concepts of neural networks, fuzzy logic, and genetic algorithms.

UNIT I
Classical logic: An overview-Multivalued logics-Fuzzy Propositions-Fuzzy quantifiers-linguistic hedges-Inference from conditional fuzzy propositions-Inference from conditional and qualified propositions-Inference from qualified propositions.

UNIT II
Uncertainty based in formations-Information and uncertainty-Non specificity of crisp sets- Non specificity of Fuzzy sets-Fuzziness of fuzzy sets- Uncertainty in evidence theory-Summary of Uncertainty measures-Principles of Uncertainty.

UNIT III
Constructing Fuzzy sets and operations - General discussion-Method of construction: An overview-Direct method with one expert- Direct method with multiple experts- Indirect method with one expert- Indirect method with multiple experts-Constructions from sample data.

UNIT IV
Fuzzy expert systems: An overview-Fuzzy implications-selection of Fuzzy implications-Multi conditional approximate reasoning-The role of Fuzzy relation equation-Interval-valued approximate reasoning.

UNIT V
Fuzzy systems-General discussion-Fuzzy controllers: An overview and examples-Fuzzy systems and

neural networks- Fuzzy neural networks- Fuzzy Automata-Fuzzy dynamic systems.

Semester – I

16MMP111 **NUMERICAL ANALYSIS- PRACTICAL I** **L T P C**
0 0 4 2

Course Objectives

This course enables the students to learn

- In-depth understanding of functional, logic, and programming paradigms.
- How to implement several programs in languages other than the one emphasized in the core curriculum.
- This course provides an introduction to the basic concepts and techniques of numerical solution of algebraic equation.
- This course is to provide students with an introduction to the field of numerical analysis.
- Develop and apply the appropriate numerical techniques for your problem, interpret the results, and assess accuracy.
- This module are to make the students familiarize with the ways of solving complicated mathematical problems numerically.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Know the concepts for problem solving.
2. Acquire new knowledge in computing, including the ability to learn about new ideas and advances, techniques, tools, and languages, and to use them effectively; and to be motivated to engage in life-long learning
3. Comprehend important issues related to the development of computer-based systems in a professional context using a well-defined process.
4. Be familiar with programming with numerical packages.
5. Be aware of the use of numerical methods in modern scientific computing.
6. To develop the mathematical skills of the students in the Euler method.

List of Practical:

1. Solution of non-linear equation-Bairstow’s method for quadratic factors.
2. Solution of simultaneous equations-Gauss Elimination.
3. Solution of simultaneous equations-Gauss Jordan.
4. Solution of simultaneous equations-Gauss Jacobi.
5. Solution of simultaneous equations-Gauss Seidal.
6. Solution of simultaneous equations-Triangularization.
7. Numerical integration-Trapezoidal rule.
8. Numerical integration-Simpson’s rules.
9. Solution for ordinary differential equation-Euler method.
10. Solution for ordinary differential equation- Runge Kutta Second order.

11. Solution for parabolic equation - Explicit method.
12. Solution for parabolic equation - The Crank Nicolson method.

16MMP201 **COMPLEX ANALYSIS** **Semester-II**
L T P C
4 0 0 4

Course Objectives
This course enables the students to learn

- To learn the concepts of Oriented circles and level curves.
- Fundamental concepts of complex integration.
- To know the concepts of harmonic function.
- To develop the skill of contour integration to evaluate complicated real integrals via residue calculus.
- The development of the complex variable in boundary behaviour.
- Contour integral using parametrization, fundamental theorem of calculus and Cauchy's integral formula.

Course Outcomes (COs)
On successful completion of this course, students will be able to

1. Explain the role of the Conformal mapping.
2. Evaluate complex contour integrals and some of their consequences.
3. Determine the Taylor series or the Laurent series of an analytic function in a given region
4. Describe the convergence properties of a power series.
5. Know the basic properties of singularities of analytic functions.
6. Demonstrate familiarity with a range of examples of these concepts of conformal mapping.

UNIT I
Conformal mapping-Linear transformations- cross ratio- symmetry- Oriented circles-families of circles-level curves.

UNIT II
Complex integration-rectifiable Arcs- Cauchy's theorem for Rectangle and disc-Cauchy's integral formula-higher derivatives.

UNIT III
Harmonic functions-mean value property-Poisson's formula-Schwarz theorem, Reflection principle-Weierstrass theorem- Taylor series and Laurent series.

UNIT IV
Partial Fractions- Infinite products – Canonical products-The gamma function – Stirling's Formula – Entire functions – Jensen's formula.

UNIT V
Riemann Mapping Theorem – Boundary behaviour – Use of Reflection Principle – Analytical arcs – Conformal mapping of polygons- The Schwartz - Christoffel formula.

16MMP202	TOPOLOGY	Semester – II L T P C 4 0 0 4

Course Objectives

This course enables the students to learn

- Topological properties of sets.
- The properties of compact spaces and connected spaces.
- To explore the foundations of linear subspace.
- The concepts of metric spaces and topological spaces.
- Metric spaces and metrizability of topological spaces; separation axioms.
- Interior, closure and boundary: applications to geographic information systems

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Know the concept of topological spaces.
2. Acquire knowledge about various types of topological spaces and their properties.
3. Formulate and analyze topological problems in connected space.
4. Know the result of Compactness problems and theorems.
5. Admire the deep mathematical results like Urysohn's lemma.
6. Create examples and counter examples in the fundamental concepts of separation space.

UNIT I

Topological spaces, Basis for a topologies, the order topology, the product topology X x Y, the subspace topology.

UNIT II

Closed set and limit points, continuous functions, the product topologies, the metric topologies.

UNIT III

Connected spaces, connected subspaces of the real line, components and local connectedness.

UNIT IV

Compact spaces, compact subspaces of the Real line, limit point compactness, local compactness.

UNIT V

The countability axioms, the separation axioms, normal spaces, The Urysohn lemma, The Urysohn metrization theorem, the Tietze Extension theorem.

		Semester – II
16MMP203	**OPTIMIZATION TECHNIQUES**	**L T P C**
		4 0 0 4

Course Objectives

This course enables the students to learn

- The basic concepts of integer linear programming.
- How to solve quadratic programming problems, dynamic programming problems and non-linear programming problems.
- Classical optimization techniques and numerical methods of optimization.
- Know the basics of different evolutionary algorithms.
- Explain Integer programming techniques and apply different optimization techniques to solve various models.
- Enumerate the fundamental knowledge of Linear Programming and Dynamic Programming problems.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Understand the concept of linear programming and integer programming.
2. Develop optimal decision policy skill.
3. Familiarize with real life applications of inventory models.
4. Skill in decision analysis.
5. Mastery in Beale's method and simplex method.
6. Use classical optimization techniques and numerical methods of optimization.

UNIT I

Integer Linear Programming: Types of Integer Linear Programming Problems - Concept of Cutting Plane - Gomory's All Integer Cutting Plane Method - Gomory's mixed Integer Cutting Plane method

Branch and Bound Method. - Zero-One Integer Programming – Real life application in Integer Linear Programming.

UNIT II

Dynamic Programming: Characteristics of Dynamic Programming Problem - Developing Optimal Decision Policy - Dynamic Programming under Certainty - DP approach to solve LPP.

UNIT III

Probabilistic Inventory Model: Real life application -Continuous review models- Probabilistic Economic order quantity (EOQ) Model. Single-period models – No setup model – setup model. Multi period model.

UNIT IV

Decision Analysis: Real life application - Decision making under certainty- Analytic hierarchy process. Decisions under Risk- Decision Trees-based expected value criterion, variations of the expected value criterion. Decisions under Uncertainty Real life application in Decision Analysis

UNIT V

Non-linear Programming Methods: Examples of NLPP - General NLPP - Graphical solution - Quadratic Programming - Wolfe's modified Simplex Methods - Beale's Method.

16MMP204	**PARTIAL DIFFERENTIAL EQUATIONS**	**Semester – II** **L T P C** **4 0 0 4**

Course Objectives

This course enables the students to learn

- The basic concepts of solution of PDE and its applications.
- About initial and boundary value problems for PDEs of first and second order which includes Laplace Equation, Diffusion Equation and Wave Equation.
- Introduce students to how to solve linear Partial Differential with different methods.
- Technique of separation of variables to solve PDEs and analyze the behavior of solutions in terms of eigen function expansions.
- Solutions of PDEs are determined by conditions at the boundary of the spatial domain and initial conditions at time zero.
- Basic questions concerning the existence and uniqueness of solutions, and continuous dependence of initial and boundary data.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Classify linear and Non linear first order differential equations with constant coefficients.
2. Describe the method of separable variables and integral transforms.
3. Solve the elementary Laplace equation with symmetry.
4. Acquire the knowledge of wave equation and vibrating membranes.
5. Enrich their knowledge about diffusion equations with sources.
6. Finding the solutions of differential equation with initial and boundary conditions.

UNIT I

First Order Partial Differential Equations:

Non linear partial differential equation of first order –Compatible systems of first order equations – Special type of first order equations- Partial differential equations of second order – The origin of second order equations – Linear partial differential equations with constant coefficient equations with variable coefficients.

UNIT II

Method of separation of variables –The method of integral transforms.

UNIT III

Laplace Equation:

Elementary solutions of Laplace equations- Families of Equi-potential surfaces - Boundary Value problems-separation of variables-problems with axial symmetry.

UNIT IV

Wave Equation:

Elementary solutions of one dimensional wave equation-Vibrating membranes - Applications of calculus of variations- Green’s functions for the wave equation.

UNIT V

Diffusion Equation:

The resolution of Boundary value problems for the Diffusion equation- Elementary solutions of diffusion equation - Separation of variables- use of Green's functions- Diffusion with Sources.

		Semester – II
16MMP205A	**GRAPH THEORY AND ITS APPLICATIONS**	**L T P C**
		4 0 0 4

Course Objectives

This course enables the students to learn

- The fundamental concepts in Graph Theory and some of its modern applications.
- The use of these methods in subsequent courses in the design and analysis of algorithms, computability theory, software engineering, and computer systems.
- Apply graph-theoretic terminology and notation.
- Analyze new networks using the main concepts of graph theory.
- Central theorems about trees, matching, connectivity, colouring and planar graphs.
- Describe and apply some basic algorithms for graphs.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Understanding the basic concepts of Euler graphs and Trees.
2. Determine whether graphs are Planer and/or non planer
3. Overview of properties of trees and a minimal spanning tree for a given weighted graph.
4. Identify induced subgraphs, cliques, matchings, covers in graphs.
5. Understand the concept of Directed Graphs.
6. Know the concept of domination in graphs.

UNIT I

Graphs – Introduction – Isomorphism – Sub graphs – Walks, Paths, Circuits – Connectedness – Components – Euler Graphs – Hamiltonian Paths and Circuits – Trees – Properties of trees – Distance and Centers in Tree – Rooted and Binary Trees - Spanning trees – Fundamental Circuits.

UNIT II

Spanning Trees in a Weighted Graph – Cut Sets – Properties of Cut Set – All Cut Sets – Fundamental Circuits and Cut Sets – Connectivity and separability – Network flows – 1-Isomorphism – 2-Isomorphism – Combinational versus Geometric Graphs – Planer Graphs – Different Representation of a Planer Graph.

UNIT III

Incidence matrix – Sub matrices – Circuit Matrix – Path Matrix – Adjacency Matrix – Chromatic Number – Chromatic partitioning – Chromatic polynomial - Matching - Covering – Four Color Problem.

UNIT IV

Directed Graphs – Types of Directed Graphs - Types of enumeration, counting labeled trees, counting unlabelled trees, Polya's counting theorem, graph enumeration with Polya's theorem.

UNIT V

Domination in graphs: Introduction – Terminology and concepts – Applications – Dominating set and domination number – Independent set and independence number – History of domination in graphs.

		Semester – II
16MMP205 B	**THEORY OF ELASTICITY**	**L T P C**
		4 0 0 4

Course Objectives

This course enables the students to learn

- The theoretical fundamentals of theory of elasticity.
- The ability to use the principles of theory of elasticity in engineering problems.
- To solve advanced solid mechanics problems using classical methods and to characterize materials with elastics constitutive relations.
- To make students understand the principle of strain energy function.
- Be proficient with basic concepts in continuum mechanics of solids, including of strain, internal force, stress and equilibrium in solids.
- Be able to characterize materials with elastic constitutive relations.

Course Outcomes (COs)

On successful completion of this course the student will be able to

1. Know the concept of Tensor Analysis.
2. Analyze solid mechanics problems using classical methods and energy methods.
3. Apply various failure criteria for general stress states at points.
4. Get advanced knowledge about stresses, strains.
5. Understand the theory of elasticity including strain/displacement and Hooke's law relationships.
6. Apply the concept of strain energy function.

UNIT I

Tensor Analysis:

Co-ordinate transformations-contravarient and covariant vectors and tensors-symmetric and anti-symmetric tensors- metric tensor – conjugate tensor-associated tensors –Christoffel's symbols and transformations laws – covariant derivative – permutation symbols and tensors – relative and absolute tensors.

UNIT II

Analysis of strain:

Deformation –Affine transformation – infinitesimal affine deformations – A geometrical interpretation of components of strain – strain quadric of Cauchy – Principal strains and invariants general infinitesimal deformation – examples of strain – saint-Venant's equations of compatibility – finite –deformations.

UNIT III

Analysis of Stress:

Body and surface forces – stress tensor – equations of equilibrium in Cartesian co-ordinates – transformation of co-ordinates –stress quadric of Cauchy principal stresses – invariants of stress tension – maximum normal and shear stresses- Mohr's diagram – examples of stress.

UNIT IV

Equation of elasticity

Generalized Hooke's law- homogeneous isotropic medium – elastic module for isotropic media –

simple tension – pure shear – hydrostatic pressure – equilibrium equations for an isotropic elastic solid – Beltrami- Michell compatibility equations.

UNIT V
Dynamical equations of isotropic elastic solid – strain energy function – uniqueness of solution – statement of saint – Senant's principle.

Semester – II

16MMP205 C FUNDAMENTALS OF ACTUARIAL MATHEMATICS

L	T	P	C
4	0	0	4

Course Objectives

This course enables the students to learn

- The fundamental theories of actuarial science as they apply in life insurance, general insurance and superannuation.
- How to assess the suitability of actuarial, financial and economic models in solving actuarial problems
- Interpretation and critically evaluating the articles in the actuarial research literature.
- About the concept of educational annuity plan.
- Understand the Premium Conversion tables for calculation of Policy values.
- The concept of Premiums for Annuity Plans.

Course Outcomes (COs)

On successful completion of this course the student will be able to

1. Explain the basic concepts of accounts and calculations of interest rates in banking / financial institution system.
2. Define Annuity and Summarize / calculate different values Annuities.
3. Leant about how to read Mortality Table and from that how to calculate the Probability of Survival and Death.
4. Describe about Premiums of Life Insurance and Endowment Assurance (Pure, Double and Marriage) and Educational Annuity plan.
5. Find the Annuity values for various Annuities.
6. Calculation of Net Premiums for Assurance Plans.

UNIT I

Accumulated Value – Present Value – Formula for present value- Annuities Certain- present Values-Amounts - Deferred Annuities –Perpetuities - Present Value of an Immediate Annuity Certain – Accumulated Value of Annuity – Relation between Sn and a_n – Present Value of Deferred Annuity Certain – Accumulated Value of a term of n years – Perpetuity – Present Value of an Immediate Perpetuity of 1p.a. – Present Value of a Perpetuity due of 1 p.a. – Deferred Perpetuity with Deferment Period of m years – Mortality Table – The Probabilities of Survival and Death.

UNIT II

Life Insurance Premiums – General considerations - Assurance Benefits – Pure Endowment Assurance – Endowment Assurance – Temporary Assurance or Term Assurance - Whole Life Assurance – Pure Endowment Assurance – Endowment Assurance – Double Endowment Assurance – Increasing Temporary Assurance – Increasing Whole Life Assurance – Commutation Functions Dx, Cx, Mx and Rx – Expressions for Present Values of Assurance Benefits in terms of Commutation Functions – Fixed Term (Marriage) Endowment – Educational Annuity Plan.

UNIT III

Life Annuities and Temporary Annuities – Commutation Functions Nx – To Find the Present Value of an Annuity Due of Re.1 p.a. for Life – Temporary Immediate Life Annuity – Expression for ax : n – Deferred Temporary Life Annuity – Variable Life Annuity – Increasing Life Annuity – Commutation Function Sx – Increasing Temporary Life Annuity – Tables of Life Annuity and Temporary Life Annuity – Variations in the Present Values of Annuities – Life Annuities Payable at Frequent Intervals.

UNIT IV

Net Premiums for Assurance Plans – Natural Premiums – Level Annual Premium – Symbols for Level Annual Premium under Various Assurance Plans – Mathematical Expressions for level Annual Premium under Level Annual Premium under Various Plans for Sum Assure of Re. 1 – Net Premiums – Consequences of charging level Premium – Consequences of withdrawals – Net Premiums for Annuity Plans – Immediate Annuities – Deferred Annuities.

UNIT V

Premium Conversion tables – Single Premium Conversion tables – Annual Premium Conversion Tables – Policy Values – Two kinds of Policy values – Policy value in symbols – Calculation of Policy Value for Unit Sum Assure – Numerical Example : Retrospective Method and Comparison with Prospective Value – Derivative of Theoretical Expressions for Policy Value, tVx by the Retrospective Method and Prospective Method – Other Expressions for Policy Value – Surrender Values – Paid up Policies – Alteration of Policy Contracts.

SUGGESTED READINGS:

TEXT BOOK

1.Mathematical Basis of Life Insurance - Insurance Institute of India

Semester – II
L T P C
16MMP206 **MECHANICS** **4 0 0 4**

Course Objectives
This course enables the students to learn
- How to use Newton's laws of motion to solve advanced problems involving the dynamic motion of classical mechanical systems.
- Applications of differential equations in advanced mathematical problems.
- To solve dynamics problems such as conservation of energy and linear and angular momentum.
- Parameters defining the motion of mechanical systems and their degrees of freedom.
- The components of a force in rectangular or nonrectangular coordinates. ÿ Determine the resultant of a system of forces.
- Complete and correct free-body diagrams and write the appropriate equilibrium equations from the free-body diagram.

Course Outcomes (COs)
On successful completion of this course students will be able to
1. Understand the concept of the D'Alembert's principle.
2. Derive the Lagrange's equation for holomonic and non holomonic constraints.
3. Classify Scleronomic and Rheonomic systems.
4. Solve the problems of Hamilton equations of motion.
5. Study of the canonical transformations.
6. Know the concept of Hamilton Jacobi Theory.

UNIT I
Survey of Elementary principles: Constraints - Generalized coordinates, Holonomic and non-holonomic systems, Scleronomic and Rheonomic systems. D'Alembert's principle and Lagrange's equations – Velocity – dependent potentials and the dissipation function – some applications of the Lagrange formulation.

UNIT II
Variation principles and Lagrange's equations: Hamilton's principle – Some techniques of calculus of variations – Derivation of Lagrange's Equations from Hamilton's principle – Extension of Hamilton's principle to non-holonomic systems – Conservation theorems and symmetry properties.

UNIT III
Hamilton Equations of motion: Legendre Transformations and the Hamilton Equations of motion-canonical equations of Hamilton – Cyclic coordinates and conservation theorems – Routh's procedure - Derivation of Hamilton's equations from a variational principle – The principle of least action.

UNIT IV
Canonical transformations: The equations of canonical transformation – Examples of Canonical transformations – Poission Brackets and other Canonical invariants – integral invariants of Poincare, Lagrange brackets.

UNIT V
Hamilton Jacobi Theory: Hamilton Jacobi equations for Hamilton's principle function – Harmonic oscillator problem - Hamilton Jacobi equation for Hamilton's characteristic function – Separation

of variables in the Hamilton-Jacobi equation.

Semester – II

		L	T	P	C
16MMP211	**OPTIMIZATION TECHNIQUES-PRACTICAL-II**	**0**	**0**	**4**	**2**

This course enables the students to learn

Course Objectives

- To provide the students an exposure to develop well-structured optimization techniques knowledge arising process in various level of science.
- The course aims at building capabilities in the students for analyzing different situations in the industrial/ business scenario involving limited resources and finding the optimal solution within constraints.
- This module aims to introduce students to use Probabilistic Model and techniques.
- The course aims at providing fundamental knowledge and exposure of the concepts, theories and practices in the field of management.
- Study the basic components of an optimization problem.
- Formulation of design problems as mathematical programming problems.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Use the object oriented concepts for implementation of Optimization Techniques.
2. Implement the data structure concepts for Optimization Techniques problems.
3. Acquire skills to solve various multivariable optimization problems
4. Solve of different optimization problems.
5. Identify and develop operational research models from the verbal description of the real system. Understand the mathematical tools that are needed to solve optimization problems.
6. Use mathematical software to solve the proposed models.

List of Practical:

1. Solution for a system of equations- Simplex method.
2. Decision Making with minimax criteria.
3. Decision Making under risk.
4. Travelling salesman problem to find the shortest path.
5. Write a C program to calculate the minimum cost using North West Corner Rule.
6. To calculate the EOQ for purchasing model without shortage using C program.
7. To calculate the EOQ for manufacturing model without shortage using C program.
8. To calculate the EOQ for manufacturing model with shortage using C program.
9. To calculate the EOQ for purchasing model with shortage using C program.
10. Probabilistic Model-EOQ.

Semester – III

16MMP301 **FUNCTIONAL ANALYSIS**

	L	T	P	C
	4	**0**	**0**	**4**

Course Objectives

This course enables the students to learn

- The concept of Banach spaces and related theorems
- The specific techniques for bounded operators over normed and Hilbert spaces.
- The demonstrate significant applications of the theory of functional analysis.
- The ideas and some of the fundamental theorems of functional analysis.
- Understand how to use the main properties of compact operators.
- Apply the spectral analysis of compact self-adjoint operators to the resolution of integral equations.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Develop Banach spaces from vector spaces.
2. Describe the open mapping theorem.
3. Discuss Hilbert spaces and its properties.
4. Study in detail about the adjoint of an operator.
5. Handle complex problems concerning topics within the area of Functional Analysis.
6. Understand and apply fundamental theorems from the theory of normed and Banach spaces.

UNIT I

Banach Spaces- Normed linear space – Definitions and Examples-Theorems. Continuous Linear Transformations – Some theorems- Problems. The Hahn- Banach Theorem –Lemma and Theorems. The Natural imbedding of N in N**-Definitions and Theorems.

UNIT II

The Open Mapping Theorem- Theorem and Examples –Problems. The closed graph theorem. The conjugate of an operation- The uniform boundedness theorem- Problems.

UNIT III

Hilbert Spaces- The Definition and Some Simple Properties – Examples and Problems. Orthogonal Complements - Some theorems .Ortho-normal sets – Definitions and Examples- Bessel's inequality- The conjugate space H*.

UNIT IV

The Adjoint of an operator – Definitions and Some Properties-Problems. Self- adjoint operators – Some Theorems and Problems. Normal and Unitary operators –theorems and problems. Projections - Theorems and Problems.

UNIT V

Banach algebras: The definition and some examples of Banach algebra – Regular and singular elements – Topological divisors of zero – The spectrum – The formula for the spectral radius.

		Semester – III
16MMP302	**FLUID DYNAMICS**	**L T P C**
		4 0 0 4

Course Objectives

This course enables the students to learn

- The concepts of fluid, its properties and behavior under various conditions of internal and external flows.
- The fundamentals of Fluid Dynamics, which is used in the applications of Aerodynamics, Hydraulics, Marine Engineering, Gas dynamics etc.
- To imbibe basic laws and equations used for analysis of static and dynamic fluids
- About the Two-Dimensional Motion of the fluid.
- Identify the fundamental kinematics of a fluid element.
- State the conservation principles of mass, linear momentum, and energy for fluid flow.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Classify and exploit fluids based on the physical properties of a fluid.
2. Compute correctly the kinematical properties of a fluid element.
3. Apply the concept of Bernoulli's theorem in steady motion.
4. Understand both flow physics and mathematical properties of governing Navier-Stokes equations and define proper boundary conditions for solution.
5. Provide the student with the basic mathematical background and tools to model fluid motion.
6. Develop a physical understanding of the important aspects that govern incompressible flow that can be observed in a variety of situations in everyday life.

UNIT I

Introductory Notions – Velocity – Stream Lines and Path Lines – Stream Tubes and Filaments – Fluid Body – Density – Pressure. Differentiation following the Fluid – Equation of continuity – Boundary conditions – Kinematical and physical – Rate of change of linear momentum – Equation of motion of an in viscid fluid.

UNIT II

Euler's momentum Theorem – Conservative forces – Bernoulli's theorem in steady motion – energy equation for in viscid fluid – circulation – Kelvin's theorem – vortex motion – Helmholtz equation.

UNIT III

Two Dimensional Motion – Two Dimensional Functions – Complex Potential – basic singularities – source – sink – Vortex – doublet – Circle theorem. Flow past a circular cylinder with circulation – Blasius Theorem – Lift force. (Magnus effect)

UNIT IV

Viscous flows – Navier-Stokes equations – Vorticity and circulation in a viscous fluid – Steady flow through an arbitrary cylinder under pressure – Staedy Couettc flow between cylinders in relative motion – Steady flow between parallel planes.

UNIT V

Laminar Boundary Layer in incompressible flow: Boundary Layer concept – Boundary Layer equations – Displacement thickness, Momentum thickness – Kinetic energy thickness – integral equation of boundary layer – flow parallel to semi infinite flat plate – Blasius equation and its solution in series.

Semester – III

16MMP303 **MATHEMATICAL MODELING** **L T P C**
4 0 0 4

Course Objectives

This course enables the students to learn

- Enrich the fundamental of mathematical modeling skills.
- The construction and analysis of mathematical models inspired by real life problems
- Several modeling techniques and the means to analyze the resulting systems.
- To analyze a model and to apply an appropriate method to calculate a solution in order to predict the behavior of the system.
- Assess and articulate what type of modeling techniques are appropriate for a given physical system.
- Make predictions of the behavior of a given physical system based on the analysis of its mathematical model.

Course Outcomes (COs)

On successful completion of this course the student will be able to

1. Solve problems involving dynamic models, and probabilistic models.
2. Understand the use of modern technology in solving real-world to Epidemic models.
3. Problems through ordinary differential equations, probability theory, graphs.
4. Formulate a mathematical model given a clear statement of the underlying scientific principles.
5. Solve basic linear difference equations and solve application problems.
6. Know the concept of mathematical modeling through Graphs.

UNIT I

Mathematical Modeling through Ordinary Differential Equations of First order: Linear Growth and Decay Models – Non-Linear Growth and Decay Models – Compartment Models – Dynamics problems – Geometrical problems.

UNIT II

Mathematical Modeling through Systems of Ordinary Differential Equations of First Order: Population Dynamics – Epidemics – Compartment Models – Economics – Medicine, Arms Race, Battles and International Trade – Dynamics.

UNIT III

Mathematical Modeling through Ordinary Differential Equations of Second Order: Planetary Motions – Circular Motion and Motion of Satellites – Mathematical Modelling through Linear Differential Equations of Second Order – Miscellaneous Mathematical Models.

UNIT IV

Mathematical Modeling through Difference Equations : Simple Models – Basic Theory of Linear Difference Equations with Constant Coefficients – Economics and Finance – Population Dynamics and Genetics – Probability Theory.

UNIT V

Mathematical Modeling through Graphs: Solutions that can be Modeled through Graphs – Mathematical Modeling in Terms of Directed Graphs, Signed Graphs, Weighted Digraphs and Un oriented Graphs.

16MMP304 **MATHEMATICAL STATISTICS** **Semester – III**
L T P C
4 0 0 4

Course Objectives

This course enables the students to learn

- To understand the basic concepts in probability generating functions, sample moments and their functions, sampling, significance tests and statistical measures
- Probability distributions, significance of testing hypothesis and its interpretation,
- Estimation, ANOVA and their applications in various disciplines.
- Understand the concept of estimation.
- The knowledge of fixed-sample and large-sample statistical properties of point and interval estimators.
- Understanding of how to design experiments and surveys for efficiency.

Course Outcomes (COs)

After successfully completed this module the students will be able to

1. Explain the concepts of probability, including conditional probability.
2. Explain the concepts of random variable, probability distribution, distribution function, expected value, variance and higher moments, and calculate expected values and probabilities associated with the distributions of random variables.
3. Summarize the main features of a data set and test statistical hypotheses.
4. Define basic discrete and continuous distributions, be able to apply them and simulate them in simple cases.
5. Explain the concepts of analysis of variance and use them to investigate factorial dependence.
6. Describe the main methods of estimation and the main properties of estimators, and apply them.

UNIT I

Probability: Random Events – Preliminary remarks – random events and operations performed on them – the system of axioms of the theory of probability – conditional probability – Bayes theorem – Independent Events – functions of random variables –Introduction to hypothesis testing, type of errors, standard errors, confidence interval, confidence limits. Significance level.

UNIT II

Sample moments and their functions: Notion of a sample and a statistic - Distribution functions of X, S^2 and (X , S^2) -Chi-square distribution -Student t-distribution -Fisher's Z-distribution -Snedecor's F -distribution - Distribution of sample mean from non-normal populations.

UNIT III

Significance test: Concept of a statistical test -Parametric tests for small samples and large samples Chi-square test -Kolmogorov Theorem-Smirnov Theorem-Tests of Kolmogorov and Smirnov type The Wald-Wolfovitz and Wilcoxon-Mann-Whitney tests -Independence Tests by contingency tables.

UNIT IV

Estimation: Preliminary notion -Consistency estimation -Unbiased estimates -Sufficiency - Efficiency - Asymptotically most efficient estimates -methods of finding estimates -confidence Interval.

UNIT V

Analysis of Variance: One way classification and two-way classification. Hypotheses Testing: Poser functions -OC function-Most Powerful test -Uniformly most powerful test -unbiased test.

Semester – III

16MMP305A FORMAL LANGUAGES AND AUTOMATA THEORY **L T P C 4 0 0 4**

Course Objectives

This course enables the students to learn

- The basic concepts in automata theory and theory of computation.
- To identify different formal language classes and their relationships.
- This course focuses on the basic theory of Computer Science and formal methods of computation like automata theory, formal languages, grammars.
- Design automata, regular expressions and context free grammars for accepting or generating a certain language.
- Design grammars and recognizers for different formal languages
- Determine the decidability and intractability of computational problems.

Course Outcomes (COs)

On successful completion of this course the students will be able to:

1. Understand the definition of Automata.
2. Know about the different concepts in automata theory and formal languages such as formal proofs, non-deterministic automata, regular expressions, regular languages context-free grammars, context-free languages.
3. Discuss the acceptability of a string by finite automation.
4. Applications of Pumping Lemma.
5. Design automata, regular expressions and context-free grammars accepting or generating certain languages.
6. Acquire concepts relating to the theory of computation and computational models including decidability and intractability.

UNIT I

Definition of an Automation - Description of Finite Automaton – Transition systems - Property of transition functions - Acceptability of a string by a finite Automaton - Non deterministic finite automaton - The equivalence of DFA and NDFA.

UNIT II

Formal Languages - Basic Definitions and examples - Chomsky classification of Languages - Languages and their relation - Recursive and Recursively Enumerable sets- Operations on Languages.

UNIT III

Regular expressions - Finite Automata and Regular expressions.

UNIT IV

Pumping Lemma for Regular sets - Applications of Pumping Lemma - Closure Property of Regular sets - Regular sets and Regular grammars.

UNIT V

Context free Languages and Derivation trees - Ambiguity in Context free grammars - Simplification of Context free grammars (examples only).

		Semester–III
16MMP305B	**COMBINATORICS**	**L T P C**
		4 0 0 4

Course Objectives
This course enables the students to learn

- Improve mathematical proof writing skills.
- Cater mathematical verbal communication skills.
- Afford problem-solving skills.
- Combinatorial proofs of identities and inequalities.
- Model and analyze computational processes using analytic and combinatorial methods.
- Structures to represent mathematical and applied questions, and they will become comfortable with the combinatorial tools commonly used to analyze such structures.

Course Outcomes (COs)
On successful completion of this course, students will be able to

1. Cognition in various combinatorial methods.
2. Solve recurrence relations through computational skills.
3. Apply the inclusion/exclusion principle.
4. Develop fundamental knowledge of combinatorics and Euler function.
5. Analyze combinatorial objects satisfying certain properties and answer questions related to Necklace problem.
6. Know the concept of Burnside's lemma.

UNIT I
Basic Combinatorial Numbers – Stirling numbers of the second kind – Recurrence formula for Pnm.

UNIT II
Generating functions – Recurrence relations- Bell's formula.

UNIT III
Multinomial – Multinomial theorem- Inclusion and Exclusion principle.

UNIT IV
Euler function –Permutations with forbidden positions –the Menage Problem.

UNIT V
Problem of Fibonacci –Necklace problem – Burnside's lemma.

Semester – III

16MMP305C **FUZZY TOPOLOGY** **L T P C**
4 0 0 4

Course Objectives:

This course enables the students to learn

- The basic concepts of fuzzy topological spaces
- Separation axioms in Fuzzy Topological spaces
- To study about Fuzzy relations
- To study α - connectedness and α - compactness.
- Understand the concept of fuzzy nonlinear simulation.
- The development of Fuzzy Arithmetic.

Course Outcomes (COs)

On successful completion of this course the student will be able to:

1. Able to learn fuzzy set theory.
2. Understand the concept of Operations on Fuzzy Sets
3. Mastery in fuzzy relations and fuzzy graphs
4. Attain in-depth knowledge in fuzzy relations.
5. Understand the knowledge of Fuzzy Logic.
6. Gain knowledge about the fundamental concepts of α - shading families.

UNIT I

Introduction: From classical Sets (crisp sets) to fuzzy sets, Basic definitions, basic operations on fuzzy sets, fuzzy sets induced by mappings, Types of fuzzy sets.

Fuzzy Sets Versus Crisp Sets: The α - cuts, strong α - cuts, properties of cuts,representation of fuzzy sets, decomposition theorems, Zadeh's extension principle.

UNIT II

Operations on Fuzzy Sets: Types of operations, fuzzy complements, fuzzy intersections, t – norms, fuzzy unions, t – conorms, combinations of operations, aggregation operations.

Fuzzy Arithmetic: Fuzzy numbers, Linguistic variables, arithmetic operations onintervals and fuzzy numbers, fuzzy equations.

UNIT III

Fuzzy Relations: Crisp and fuzzy relations, Projections and cylindric extensions, binary fuzzy relations, membership matrices and sagittal diagram, inverse and composition

of fuzzy relations, binary fuzzy relation on a single set, fuzzy equivalence relation, fuzzy ordering relation, fuzzy morphisms, sup and inf compositions.

UNIT IV

Fuzzy Logic: An overview of classical logic. Multivalued logics, fuzzy propositions, fuzzy quantifiers, Linguistic hedges, inferences from conditional fuzzy propositions,qualified fuzzy propositions and quantified fuzzy propositions.Fuzzy rule based systems and fuzzy nonlinear simulation.

UNIT V

Fuzzy Topology: Change's and Lowen's definition of fuzzy topology. Continuity,open and closed maps. α - shading families, α - connectedness and α - compactness.

Applications: Applications of fuzzy sets and fuzzy logic to various disciplines including Computer Science.

Semester – III

16MMP306 **INTEGRAL EQUATIONS AND TRANSFORMS** **L T P C**

4 0 0 4

Course Objectives

This course enables the students to learn

- Range of mathematics tools with emphasis on engineering applications.
- To think quantitatively and analyse problems critically.
- How to apply integral equations to the ordinary differential equation.
- Converting the IVPs and BVPs to the corresponding integral equations and Fredholm and Volterra integro-differential equations.
- Equip with the methods of finding Laplace transform and Fourier Transforms of different functions.
- Fundamental concepts of Fourier series, Fourier transforms and Laplace transforms and their applications to differential equations.

Course Outcomes (COs)

On successful completion of this course the students will be able to,

1. Calculate the Laplace equation in half plane of standard functions both from the definition and by using tables.
2. Equation with seperable kernel and Fredholm alternative approximation Method.
3. Select and combine the necessary Laplace transform techniques to solve second-order ordinary differential equations.
4. Calculate both real and complex forms of the Fourier series.
5. Calculate the Fourier transform of elementary functions from the definition.
6. Calculate the variational problem in parametric form.

UNIT I

Fourier transforms: Fourier Transforms – Definition of Inversion theorem –Fourier cosine transforms - Fourier sine transforms – Fourier transforms of derivatives -Fourier transforms of some simple functions - Fourier transforms of rational function.

UNIT II

The convolution integral – convolution theorem – Parseval‟s relation for Fourier transforms – solution of PDE by Fourier transform – Laplace's Equation in Half plane – Laplace's Equation in an infinite strip - The Linear diffusion equation on a semi-infinite line - The two-dimensional diffusion equation.

UNIT III

Integral equations: Types of Integral equations–Equation with separable kernel- Fredholm Alternative Approximate method – Volterra integral equations–Classical Fredholm theory – Fredholm's First, Second, Third theorems.

UNIT- IV

Application of Integral equation to ordinary differential equation – initial value problems – Boundary value problems – singular integral equations – Abel Integral equation .

UNIT V

Calculus of variations: Variation and its properties – Euler's equation – Functionals of the integral forms - Functional dependent on higher order derivatives – functionals dependent on the functions of several independent variables – variational problems in parametric form.

		Semester – III
16MMP311	**MATHEMATICAL STATISTICS-PRACTICAL III**	**L T P C**
		4 0 0 4

Course Objectives

This course enables the students to learn

- It is well recognized nowadays the importance of Statistics as an indispensable tool for obtaining and spreading information.
- Importance has been enhanced by the use of computational resources and particularly the software SPSS, that showed, during the last decades, to be an effective tool for treating and analyzing statistical data.
- Ability to use SPSS procedures in handling data files and performing statistical analysis, and to interpret the outputs provided by the program.
- Acquiring sensitivity and critical thinking towards arguments and conclusions based on statistical studies.
- Understanding the fundamental principles underlying descriptive and inferential statistical reasoning.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Describe and classify data using statistical terminology.
2. Use SPSS to conduct basic descriptive analyses and graphical presentations.
3. Define the null hypothesis and the alternative hypothesis and Interpret P values and confidence intervals.
4. Understand different measures of effect (e.g. mean difference).
5. Know when to use basic statistical hypothesis tests (t-tests, chi-squared tests, correlation) and how to carry out these tests using SPSS.
6. Appreciate how to present and interpret these results in scientific reports.

List of Practical:

1. Introduction to SPSS Package
2. Working with windows in SPSS
3. Defining variables in variable view window in SPSS
4. Drawing of graphs and diagrams in SPSS Package
5. Standard deviation for individual and discrete series using SPSS Package.
6. Standard deviation continuous series using SPSS Package.
7. Coefficient of variation for individual and discrete series using SPSS Package.
8. Calculation of Mean and variance for binomial distribution using SPSS Package.

9. Calculation of Mean and variance for Poisson distribution using SPSS Package.
10. Karl Pearson's Correlation using SPSS Package.
11. Rank Correlation Coefficient using SPSS Package.
12. Testing Hypothesis using t - test in SPSS Package.
13. Testing Hypothesis using Z - test in SPSS Package.
14. Testing Hypothesis using chi-square - test in SPSS Package.
15. Interpretation of results in the SPSS output viewer.

Semester –IV

16MMP401 **MEASURE THEORY** **L T P C**
4 0 0 4

Course Objectives
This course enables the students to learn

- Perspective on the broader impact of measure theory in ergodic theory.
- To apply the general principles of measure theory and integration.
- About the concept of Measurable spaces.
- To understand the basic concepts Riemann integral and Lebesgue integral.
- Basic knowledge of measure theory needed to understand probability theory, statistics and functional analysis.
- Develop the ideas of Lebesgue integration and its properties.

Course Outcomes (COs)
After successful completion of this course the students will be able to:

1. Get a clear view of the fundamentals of measure theory.
2. Acquaint with the proofs of the fundamental theorems underlying the theory of Lebesgue integration.
3. Identify the broader impact of measure theory in ergodic theory and ability to pursue further studies in this area.
4. Mastery in the measure spaces and its properties.
5. Apply the theorems of monotone and dominated convergence and Fatou's lemma.
6. Apply Lebesgue decomposition and the Radon-Nikodym theorem.

UNIT I
Lebesgue Measure: Introduction – Outer measure – Measurable sets and Lebesgue Measure – A non measurable set – Measurable set – Measurable functions – Litttlewood's three principles.

UNIT II
The Lebesgue Integral: The Riemann integral – The Lebesgue integral of a bounded function over a set finite measure – The integral of a non negative function – The general Lebesgue integral – Convergence in measure.

UNIT III
Differentiation of monotone function, Functions of bounded variation-differentiation of an integral-Absolute continuity.

UNIT IV
Measure spaces-Measurable functions-Integration-General convergence Theorems.

UNIT V
Signed measures-The Radon-Nikodym theorem-the L^P spaces.

		Semester – IV
16MMP402	**STOCHASTIC PROCESS**	**L T P C**
		4 0 0 4

Course Objectives

This course enables the students to learn

- The mathematical theory of random variables and random processes
- How queueing theory are used as tools and mathematical models in the study of networks.
- The theoretical concepts and techniques for solving problems that arises in practice
- Markov processes in discrete and continuous time.
- The essential mathematical tools for handling random processes.
- The familiarize the students with the stochastic simulation techniques.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Capable to expose the students to different types mathematical models with a view of random processes.
2. Understanding in the concept of birth and death process.
3. Solve the Kolmogrov equations problems.
4. Compute probabilities of transition between states and return to the initial state after long time intervals in Markov chains.
5. Identify classes of states in Markov chains and characterize the classes.
6. Stochastic Processes in Queuing Systems.

UNIT -I

Definition of Stochastic Processes – Markov chains: definition, order of a Markov Chain – Higher transition probabilities – classification of states and chains.

UNIT -II

Markov Process with discrete state space: Poisson process – and related distributions – properties of Poisson process, Generalizations of Poisson Processes – Birth and death
Processes – continuous time Markov Chains.

UNIT -III

Markov processes with continuous state space: Introduction, Brownian motion – Weiner Process and differential equations for Weiner process, Kolmogrov equations – first passage time distribution for Weiner process – Ornstein – Uhlenbech process.

UNIT -IV

Branching Processes: Introduction – properties of generating functions of Branching process– Distribution of the total number of progeny, Continuous- Time Markov Branching Process, Age dependent branching process: Bellman-Harris process.

UNIT -V

Stochastic Processes in Queuing Systems: Concepts – Queuing model M/M1 – transient behavior of M/M/1 model – Birth and death process in Queuing theory: M/M/1 – Model related distributions – M/M/1 - M/M/S/S – loss system - M/M/S/M – Non birth and death Queuing process: Bulk queues – M(x)/M/1.

Undergraduate Programme – B.Sc Microbiology Programme Outcomes

Programme Outcomes of UG Microbiology: Students of all undergraduate microbiology degree Programmes at the time of graduation will be able to

a. Scientific Knowledge: Microbiology majors able to make observations, develop hypotheses, and design and execute experiments using advanced methods. Able to discuss science and scientific methodology. They will have a good knowledge of Intellectual Property Rights.

b. Laboratory Skills: Microbiology students will master the following laboratory skills: aseptic culture techniques, microscopy, use of appropriate methods to identify microorganisms and to use high laboratory equipments. They are able to practice safe microbiology, using appropriate protective and emergency procedures.

c. Data analysis skills: Systematically collect, record, and analyze data, identify sources of error, interpret the results, and reach logical conclusions.

d. Problem-Solving Skills: Microbiology students will be able to analyze and interpret results from a variety of microbiological methods, and apply these methods to analogous situations. Use mathematical and graphing skills and reasoning to solve problems in microbiology.

e. Communication Skills: Microbiology majors will demonstrate competence in written and oral communication.

f. Cooperation/Social Responsibility: Microbiology majors able to understand and appreciate the value of cooperating and working effectively with peers and be able to demonstrate a commitment to the process of developing such skills.

g. Able to understand the importance of microorganisms in various industries such as pharmaceuticals, food, biofertilizers and biopesticidesetc, Students will have a major knowledge on concepts of immunology, biotechnology, molecular biology, biochemistry, genetics. Able to explain the beneficial and harmful role of microorganisms in environment.

Programme Specific Outcomes (PSOs)

h. Students will have a major knowledge on concepts of immunology, biotechnology, molecular biology, biochemistry, genetics. Able to explain the beneficial and harmful role of microorganisms in environment. Able to understand the importance of microorganisms in various industries such as pharmaceuticals, food, biofertilizers and biopesticides etc,

i Describe how microorganisms are used as *model systems* to study basic biology, genetics, metabolism and ecology.

j. Identify ways microorganisms play an *integral role* in disease, and microbial and immunological methodologies are used in disease treatment and prevention.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

Programme Educational Objectives of UG Microbiology: The major objectives of the undergraduate course is

PEO-I: To impart knowledge on basic concepts of microbiology. To understand the beneficial and harmful role of microorganisms in the environment.

PEO-II: To understand the fundamentals of physiological reactions including metabolic pathways and biochemical reactions in microorganisms.

PEO-III: To develop human resource and entrepreneurs in Microbiology with the ability to independently start their own ventures or small biotech units in the field of biotechnology.

PEO-IV: Understand modern microbiology - practices and approaches with an emphasis in technology application in pharmaceutical, medical, industrial, environmental and agricultural areas.

PEO-V: Become familiar with public policy, bio-safety, and intellectual property rights issues related to microbiology applications nationally and globally

PEO-VI: Gain experience with standard bioinstrumentations and molecular tools and approaches utilized: manipulate genes, gene products and organisms.

PEO-VII: To demonstrate the written and oral communication skill. To develop the problem solving and data interpretation skills.

தாள்கள் வரிசையும் தேர்வுச் செயல்திட்டமும் பகுதி-I தமிழ்

அலகு – I :இக்காலஇலக்கியம்: **(10 மணிநேரம்)**

கல்வி: மகாகவிபாரதியார் – சுயசரிதை – ஆங்கிலக்கல்வி.

இன்றையநிலை: கவிமணிதேசிகவிநாயகம்பிள்ளை–ஒற்றுமையேஉயிர்நிலை.

மனிதநேயம்:கவிஞர்சிற்பிபாலசுப்பிரமணியன் –மலையாளக்காற்று.

சூழலியல்:கவிஞர்வைதீஸ்வரன் - விரல்மீட்டியமழை.

பெண்ணியம்:கவிஞர்சுகந்திசுப்பிரமணியம் – புதையுண்டவாழ்க்கை.

அலகு – II :அறஇலக்கியம்: **(10 மணிநேரம்)**

கொன்றைவேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்பம் – 20 குறள்கள்

பழமொழிநானூறு: 5 பாடல்கள்

அலகு - III :சிற்றிலக்கியம்: **(10 மணிநேரம்)**

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர்முருகன்பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப்பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV :கட்டுரை: **(10 மணிநேரம்)**

1. **உயர்தனிச்செம்மொழி-பரிதிமாற்கலைஞர்**
2. **கட்டிடக்கலை**- அ. இராசமாணிக்கனார்
3. **வாழ்க்கை** - இளவழகனார்
4. ஆளுமைத்திறன்அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V :மொழிப்பயிற்சி: **(8 மணிநேரம்)**

1. படைப்பிலக்கியப்பயிற்சிகள் (கதை,கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப்பயிற்சிகள்

பாடநூல்:கற்பகச்சோலை – தமிழ்ஏடு.கற்பகம்பல்கலைக்கழகத்தமிழ்த்துறைவெளியீடு.

Semester – I

16ENU101 **ENGLISH** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar.

Course Outcome:

- Develop the four types of skills
- Reading and comprehending literary works
- Genres of literature to provide moral education
- Develop communication skills in business environment
- Interpersonal skills will be developed.
- Betterment of language competence

UNIT–I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT – II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman – Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT– III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT – IV

Poetry: No Sentence – Anjum Hassan
One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Preposition, Voice- Active and Passive

UNIT–V

Short Story: The Bird **–** Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitution
Grammar: Question, Pronunciation

PRESCRIBED TEXT

Semester – I

16MBU101 INTRODUCTION TO MICROBIOLOGY AND MICROBIAL DIVERSITY 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- It gives brief description on the microbial metabolism and its energetic
- It deals with the various aerobic and an aerobic process through which the organisms obtain and utilize the energy for their growth and to produce industrially important products that helps the students to become better entrepreneurs
- Explains photosynthesis and photosynthetic bacteria
- To study the structure, function, energy metabolism, growth and regulatory mechanisms of microorganisms.
- The students will learn about the metabolic diversity exhibited by microorganisms
- The students will learn about regulatory networks that support their survival and growth of the microorganism.

COURSE OUTCOME (CO'S)

- The students will be able to understand and predict the various metabolic reactions in microbial cell.
- This will make them predict the intermediate products which can be employed in industrial production processes.
- Students will understand the growth, nutrition and environmental factors
- Students able to assess the prokaryotes by observing the biochemical reaction
- This course will support them to interpret the fermentation using microbes
- Able to summarize the nutrients uptake system in the prokaryotes

Unit I – History and Development of Microbiology

Development of microbiology as a discipline, spontaneous generation Vs biogenesis. Contribution of Anton von Leewenhoek, Golden era of Microbiology Louis Pasteur, Robert Koch, Joseph Lister, Alexander Flemming. Role of microorganism in fermentation, Germ theory of disease, Establishment of fields of medical microbiology and immunology through the work of Paul Ehrlich, Ellie Metchnikoff, Edward Jenner. Microscopy Application in industries, Application in medicine, Application in agriculture, Application in biotechnology, Application in biology.

Unit II – Diversity of Microbial world

Bergey's Manual, Binomial Nomenclature and Universal Phylogenetic tree. Classification system: Phenetic and Phylogenetic, Whittaker's Five Kingdom and Carl Woese's three kingdom classification system and their utility. Difference between prokaryotic and eukaryotic microorganism.Major diversity of microbial life. Bacteriology

Unit III– Algae

General characteristics of algae including algal cell ultra-structure.Chlamydomonas, Volvox, Diatoms, red algae and brown algae.Application of Algae in agriculture, industry, environment and food.

Unit IV – Fungi and Actinomycetes

General characteristics of fungi including habitat, distribution, nutritional requirements, fungal cell ultra-structure. Economic importance of fungi with examples in agriculture, environment, industry, medicines, food, biodeterioration and mycotoxins. Alexopoulos classification.

Unit V – Protozoa and virus

General characteristics with special references with *Entameoba histolytica*, *Trichomonas*, *Giardia* and *Plasmodium*. Classification of viruses.

Semester – I

16MBU102 **BACTERIOLOGY** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40v**External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide a strong base in the fundamentals of bacteria that improves their chances in employability.
- To learn techniques and methods used in the cultivation and isolation of bacteria.
- To learn various physical and chemical means of sterilization
- To prepare the specimen and identify the morphology of the bacteria
- To know about the culture media
- To obtain with the knowledge about the habitat and characteristics of various physiological groups of bacteria and archaea in detail.

COURSE OUTCOME (CO'S)

After completion of this course candidate able to:

- Understand the basic microbial structure and function and this course provide an understanding of the concepts of bacteriology which is one of the basic requirements for their employability
- Understand the structural similarities and differences among various physiological groups of bacteria and archaea
- Demonstrate theory and practical skills in staining procedures
- Understand various Culture media and their applications
- Understand various physical and chemical means of sterilization
- Know General bacteriology and microbial techniques for isolation of pure culture of bacteria

Unit I – Cell organization

Cell shape and arrangement, glycocalyx, capsule, flagella, fimbriae and pili. Cell-wall: Composition and detailed structure of Gram-positive and Gram-negative cell walls, Archaebacterial cell wall, Gram and acid-fast staining mechanisms, sphaeroplasts, protoplasts, and L-forms. Effect of antibiotics and enzymes on the cell wall. Cell Membrane: Structure, function and chemical composition of bacterial and Archaeal cell membranes. Cytoplasm: Ribosomes, mesosomes, inclusion bodies, nucleoid, chromosome and plasmids. Endospore: Structure, formation, stages of sporulation.

Unit II – Bacteriological techniques

Observation of living microorganisms- Wet mount, motility. Stains and staining reactions - Simple and differential staining - Gram, Spore, Capsule, Acid fast and Hemocytometer. Pure culture isolation: Streaking, serial dilution and plating methods; cultivation, maintenance and preservation/stocking of pure cultures; cultivation of anaerobic bacteria, and methods to study non-culturable bacteria.

Unit III – Growth, nutrition and reproduction in bacteria

Culture media: components of media, natural and synthetic media, chemically defined media, complex media, selective, differential, indicator, enriched and enrichment media. Physical methods of microbial control: heat – below 100˚C, at 100˚C, above 100˚C, Autoclave, Tyndallization; filtration, desiccation, osmotic pressure, radiation. Chemical methods of microbial control: Antiseptics, disinfectants – types and mode of action. Asexual methods of reproduction, logarithmic representation of bacterial populations, phases of growth, calculation of generation time and specific growth rate

Unit IV – Bacterial Systematics

Aim and principles of classification, systematics and taxonomy, concept of species, taxa, strain; conventional, molecular and recent approaches to polyphasic bacterial taxonomy, evolutionary chronometers, rRNA oligonucleotide sequencing, signature sequences, and protein sequences. Differences between eubacteria and Archaebacteria.

Unit V – Important archaeal and eubacterial groups

Archaebacteria: General characteristics, phylogenetic overview, genera belonging to Nanoarchaeota (*Nanoarchaeum*), Crenarchaeota (*Sulfolobus*, *Thermoproteus*) and Euryarchaeota(*Methanobacterium*, *Methanocaldococcus*).Thermophiles (*Thermococcus*, *Pyrococcus*, *Thermoplasma*) and Halophiles (*Halobacterium*, *Halococcus*)]. Eubacteria: Morphology, metabolism, ecological significance and economic importance of following groups: Gram Negative:General characteristics with suitable examples of Alpha, Beta, Gamma, Delta, Epsilon, Zeta and Non-proteobacteria.Gram Positive:Low G+C (Firmicutes): General characteristics with suitable examples. High G+C (Actinobacteria): General characteristics with suitable examples. Cyanobacteria: An Introduction.

\

Semester – I

16MBU103 **BIOCHEMISTRY** **(4H – 4C)**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide the knowledge on basics of biochemistry and its applications and to highlight the technical skill.
- To describe the classification and functions of lipids.
- To summarize the structure and classification of enzymes
- To state the Structure and types of DNA
- To analyse the functions and properties of phosphoglycerides
- To understand about storage and structural polysaccharides.

COURSE OUTCOME (CO'S)

- Understand the structures of enzymes, proteins, carbohydrates and fats
- Understand the functions of biomolecules
- Analyze the process of metabolism
- Understand of nucleic acids and their importance to combine and analyses information.
- Structure and classification of enzymes, specificity of enzymes
- Summarize the protein structure and enzyme activity, unit and specificity

Unit I–Basics of Biochemistry

Atoms and molecules, cell structure, cell organelles, developing membrane structure, transport of molecules, Beer and Lambert's Law, Calorimeter,Anabolism and catabolism and standard for energy change.

Unit II – Carbohydrates

Families of monosaccharides: aldoses and ketoses, trioses, tetroses, pentoses, and hexoses.

Stereo isomerism of monosaccharides, epimers, Mutarotation and anomers of glucose. Furanose and pyranose forms of glucose and fructose, Haworth projection formulae for glucose; chair and boat forms of glucose, Sugar derivatives, glucosamine, galactosamine, muramic acid, N- acetyl neuraminic acid, Disaccharides; concept of reducing and non-reducing sugars, occurrence and Haworth projections of maltose, lactose, and sucrose, Polysaccharides, storage polysaccharides, starch and glycogen. Structural Polysaccharides, cellulose, peptidoglycan and chitin

Unit III – Lipids

Definition and major classes of storage and structural lipids.Storage lipids.Fatty acids structure and functions.Essential fatty acids. Triacyl glycerols structure, functions and properties. Saponification.Structural lipids. Phosphoglycerides: Building blocks, General structure, functions and properties. Structure of phosphatidylethanolamine and phosphatidylcholine, Sphingolipids: building blocks, structure of sphingosine, ceramide. Special mention of sphingomyelins, cerebrosides and gangliosides Lipid functions: cell signals, cofactors, prostaglandins, Introduction of lipid micelles, monolayers, bilayers

Unit IV – Proteins

Functions of proteins, Primary structures of proteins: Amino acids, the building blocks of proteins. General formula of amino acid and concept of zwitterion. Titration curve of amino acid and its Significance, Classification, biochemical structure and notation of standard protein amino acids Ninhydrin reaction.Natural modifications of amino acids in proteins hydrolysine, cystine and hydroxyproline, Non protein amino acids: Gramicidin, beta-alanine, D-alanine and D-glutamic acid Oligopeptides: Structure and functions of naturally occurring glutathione and insulin and synthetic aspartame, Secondary structure of proteins: Peptide unit and its salient features. The alpha helix, the beta pleated sheet and their occurrence in proteins, Tertiary and quaternary structures of proteins. Forces holding the polypeptide together. Human haemoglobin structure, Quaternary structures of proteins

Unit V – Enzymes and Vitamins

Structure of enzyme: Apoenzyme and cofactors, prosthetic group-TPP, coenzymeNAD,metal cofactors, Classification of enzymes, Mechanism of action of enzymes: active site, transition state complex and activation energy. Lock and key hypothesis, and Induced Fit hypothesis. Significance of hyperbolic, double reciprocal plots of enzyme activity, Km, and allosteric mechanism Definitions of terms – enzyme unit, specific activity and turnover number, Multienzyme complex : pyruvate dehydrogenase; isozyme: lactate dehydrogenase, Effect of pH and temperature on enzyme activity. Enzyme inhibition: competitive- sulfa drugs; non-competitive-heavy metal salts. Vitamins - Classification and characteristics with suitable examples, sources and importance.

16MBU111	BASIC MICROBIOLOGY -PRACTICAL	Semester – I (3H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 3 | **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To develop skills related to
- Isolation and culture techniques of bacteria
- The external feature of bacteria and colony characteristics. Various staining techniques
- Sterilization of heat sensitive materials
- Counting of microorganism in the environment
- Isolation of parasites from edible fruits.
- Good laboratory practice and Biosafety measures.

COURSE OUTCOME (CO'S)

- This practical paper will build the student to describe and distinguish the bacterial colonies.
- They also will create knowledge on preparing permanent temporary mounts for fungi, protozoan's and algae.
- Students will able to understand the parasites and its nature.
- They can able to handle the pathogens safely.
- Students able to describe the *Spirogyra, Chlamydomonas* and *Volvox*
- Students able to handle the instruments in the microbiology laboratory

EXPERIMENTS

1. Microbiology Good Laboratory Practices and Biosafety.
2. To study the principle and applications of important instruments (biological safety cabinets, autoclave, incubator, BOD incubator, hot air oven, microscope, pH meter) used in the microbiology laboratory.
3. Preparation of culture media for bacterial cultivation.
4. Sterilization of heat sensitive material by membrane filtration and assessment for sterility.
5. Demonstration of the presence of micro flora in the environment by exposing nutrient agar plates to air.
6. Temporary mounts Lacto phenol cotton blue mount – *Rhizopus, Penicillium, Aspergillus*.
7. Study of *Spirogyra* and *Chlamydomonas, Volvox* using temporary mounts.
8. Study of the following protozoans using permanent mounts/photographs: *Amoeba,Entamoeba,Paramecium* and *Plasmodium*

Semester – I

16MBU112 **BACTERIOLOGY -PRACTICAL** **(3H – 2C)**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide a strong base in the fundamentals of bacteria.
- To learn techniques and methods used in the cultivation and isolation of bacteria.
- To develop skills related to preservation of bacterial cultures.
- To learn about bacterial specialized structure using staining methods
- To learn the bacterial special structure capsule and spore
- To measure the bacterial size

COURSE OUTCOME (CO'S)

Theory and practical skills in staining procedures

- Various Culture media and their applications
- Various microbial culture techniques to obtain isolation of pure cultures of bacteria
- Bacterial endospore and capsule
- Able to analyze the Bacterial size
- Able explain the bacterial motility and flagella
- To know the staining procedure

EXPERIMENTS

1. Preparation of different media: synthetic media BG-11, Complex media - Nutrient agar, McConkey agar, EMB agar.
2. Micrometry.
3. Motility by hanging drop method.
4. Simple staining
5. Negative staining
6. Gram's staining
7. Acid fast staining – demonstration permanent slide only.
8. Capsule staining
9. Endospore staining.
10. Isolation of pure cultures of bacteria by streaking method - Quadrant, Continuous and T-streaking.
11. Preservation of bacterial cultures by various techniques - Agar slants and deeps - Mineral Oil,Glycerol stocks
12. Estimation of Colony Forming Unit (CFU) count by spread plate method/pour plate method.

Semester – I

16MBU113 BASIC BIOCHEMISTRY- PRACTICAL (3H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To familiarize the students with the basic cellular processes at molecular level
- To make students familiar with practical techniques used for studying biochemical structure and analysis of biochemical methods.
- To expertise in Qualitative/Quantitative tests of carbohydrates, reducing sugars, Protein and lipids
- To study the protein secondary and tertiary structures
- To study the effect of temperature, pH and heavy metals on enzyme activity.
- To gain the knowledge on vitamin estimation

COURSE OUTCOME

- The practical knowledge and the skills associated about various techniques used in Biochemistry.
- The skill in qualitative and quantity analysis of carbohydrates, protein and lipid
- An understanding in protein secondary and tertiary structures
- An insight in enzyme activity and its physical factors influence the activity
- Knowledge on vitamin estimation
- Cognitive skill and students able to solve the numerical problems

EXPERIMENTS

1. Properties of water, concept of pH and buffers, preparation of buffers and numerical problems to explain the concepts.
2. Numerical problems on calculations of standard free energy change and equilibrium constant.
3. Standard free energy change of coupled reactions.
4. Qualitative/Quantitative tests for carbohydrates, reducing sugars, and non-reducing sugars.
5. Qualitative/Quantitative tests for lipids and proteins.
6. Study of protein secondary and tertiary structures with the help of models.
7. Study of enzyme kinetics – calculation of Vmax, Km, Kcat values.
8. Study effect of temperature, pH and heavy metals on enzyme activity.
9. Estimation of any one vitamin.

Semester – II

16MBU201 **VIROLOGY** **(4H – 4C)**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Describe the structure and replication strategies of the individual viruses discussed, including the processes of entry into cells, control of gene transcription.
- Define the process of virus latency and describe in molecular terms control of the process and activation of viral genomes during reactivation.
- Describe the growth behavior differences between normal cells and cells transformed by oncogenic DNA and RNA viruses.
- To study general aspects of viral morphology and classification.
- Cultivation of viruses and various methods of propagation.
- To discuss the application of various immunological and molecular diagnostic tools.

COURSE OUTCOME (CO'S)

- Upon paper completion, students will have skill-based knowledge on structure of plants, animal, bacteria and viruses.
- This paper also enables the student on isolation, propagation of various viruses.
- It will help the students to understand the plant and animal viruses.
- Students can distinguish the viruses According to their characteristic features.
- It will explain the research activities involved in virology studies.
- Skill based viral analysis can be performed in medical research.

Unit I – Nature and Properties of Viruses

Introduction: Discovery of viruses, nature and definition of viruses, general properties, concept of viroids, virusoids, satellite viruses and Prions. Structure of Viruses: Capsid symmetry, enveloped and non-enveloped viruses. Isolation, purification and cultivation of viruses. Viral assay, Viral taxonomy: Classification and nomenclature of different groups of viruses

Unit II – Bacteriophages

Diversity, classification, one step multiplication curve, lytic and lysogenic phages (lambda phage) concept of early and late proteins, regulation of transcription in lambda phage

Unit III – Viral Transmission, salient features of viral nucleic acids & replication

Modes of viral transmission: Persistent, non-persistent, vertical and horizontal. Salient features of viral Nucleic acid: Unusual bases (TMV,T4 phage), overlapping genes (φX174, Hepatitis B virus), alternate splicing (HIV), terminal redundancy (T4 phage), terminal cohesive ends (lambda phage), partial double stranded genomes (Hepatitis B), long terminal repeats (retrovirus), segmented (Influenza virus), and non-segmented genomes (picornavirus), capping and tailing (TMV).

Unit IV – Viruses and Cancer, Prevention & control of viral diseases

Viral multiplication and replication strategies: Interaction of viruses with cellular receptors and entry of viruses. Replication strategies of viruses as per Baltimore classification (phi X 174, Retroviridae, Vaccinia, Picorna), Assembly, maturation and release of virions

Unit V – Applications of Virology

Introduction to oncogenic viruses. Types of oncogenic DNA and RNA viruses: Concepts of oncogenes and proto-oncogenes. Antiviral compounds and their mode of action. Interferon and their mode of action.General principles of viral vaccination. Immunization schedule. Use of viral vectors in cloning and expression, gene therapy and phage display

Semester – II

16MBU202 MICROBIAL PHYSIOLOGY AND METABOLISM (4H – 4C)

Instruction Hours / week:L: 4 T: 0 P: 0 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- It gives brief description on the microbial metabolism and its energetic
- It deals with the various aerobic and an aerobic process through which the organisms obtain and utilize the energy for their growth and to produce industrially important products that helps the students to become better entrepreneurs
- Explains photosynthesis and photosynthetic bacteria
- To study the structure, function, energy metabolism, growth and regulatory mechanisms of microorganisms.
- The students will learn about the metabolic diversity exhibited by microorganisms
- The students will learn about regulatory networks that support their survival and growth of the microorganism.

COURSE OUTCOME (CO'S)

- The students will be able to understand and predict the various metabolic reactions in microbial cell.
- This will make them predict the intermediate products which can be employed in industrial production processes.
- Students will understand the growth, nutrition and environmental factors
- Students able to assess the prokaryotes by observing the biochemical reaction
- This course will support them to interpret the fermentation using microbes
- Able to summarize the nutrients uptake system in the prokaryotes

Unit I – Microbial Growth & Effect of Environment on Microbial Growth

Definitions of growth, measurement of microbial growth, Batch culture, Continuous culture, generation time and specific growth rate, synchronous growth, diauxic growth curve. Microbial growth in response to environment -Temperature (psychrophiles, mesophiles, thermophiles, extremophiles, thermodurics, psychrotrophs), pH (acidophiles, alkaliphiles), solute and water activity (halophiles, xerophiles, osmophilic), Oxygen (aerobic, anaerobic, microaerophilic, facultative aerobe, facultative anaerobe),barophilic..

Unit II– Nutrient uptake and Transport

Microbial growth in response to nutrition and energy – Autotroph/Phototroph, heterotrophy, Chemolithoautotroph, Chemolithoheterotroph, Chemoheterotroph, Chemolithotroph, photolithoautotroph, Photoorganoheterotroph. Passive and facilitated diffusion.Primary and secondary active transport, concept of uniport, symport and antiport.Group translocation. Iron uptake

Unit III – Chemoheterotrophic Metabolism-Aerobic Respiration

Concept of aerobic respiration, anaerobic respiration and fermentation Sugar degradation pathways i.e. EMP, ED, Pentose phosphate pathway TCA cycle, Electron transport chain: components of respiratory chain, comparison of mitochondrial and bacterial ETC, electron transport phosphorylation, uncouplers and inhibitors.

Unit IV – Chemoheterotrophic Metabolism-Anaerobic respiration&fermentation

Anaerobic respiration with special reference to dissimilatory nitrate reduction (Denitrification; nitrate/nitrite and nitrate/ammonia respiration; fermentative nitrate reduction). Fermentation - Alcohol fermentation and Pasteur effect; Lactate fermentation (homofermentative and heterofermentative pathways), concept of linear and branched fermentation pathways

Unit V– Chemolithotrophic, Phototrophic and nitrogen Metabolism

Introduction to aerobic and anaerobic chemolithotrophy with an example each.Hydrogen oxidation (definition and reaction) and methanogenesis (definition and reaction). Introduction to phototrophic metabolism - groups of phototrophic microorganisms, anoxygenic *vs.* oxygenic photosynthesis with reference to photosynthesis in green bacteria, purple bacteria and cyanobacteria. Nitrogen Metabolism: An overview. Introduction to biological nitrogen fixation Ammonia assimilation. Assimilatory nitrate reduction, dissimilatory nitrate reduction, denitrification

SUGGESTED READINGS

		Semester – II
16MBU203	**MICROBIAL GENETICS**	**(4H – 4C)**

Instruction Hours / week:L: 4 T: 0 P: 0 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To focus on the basic principles of genetics incorporating the concepts of classical, molecular and population genetics.
- Compilation is required for recent advances in genetic principles for strong foundation in Biotechnology that improve their chances of employability in biotechnological industries
- To explain the mutagen and process of mutation
- To explain about DNA as a genetic material
- To paraphrase the genetic material structure and model
- To explain the concept of recombination, linkage mapping and elucidate the gene transfer mechanisms in prokaryotes and eukaryotes

COURSE OUTCOME (CO'S)

- This course provided candidates with basic knowledge and understanding of Molecular Biology with special reference to microbial genome.
- Students undertaking this course will be able to describe the nature of molecular world and its application in modern Microbiological sectors.
- Students able to understand the properties, structure and function of genes in microorganism at the molecular level
- Describe the importance of genetic code and operon concept
- Discuss the molecular mechanisms underlying mutations and repair mechanisms
- Able to summarize the concept of recombination, linkage mapping and elucidate the gene transfer mechanisms in prokaryotes and eukaryotes

Unit I – History of Genetics

Concept of Genetics, Mendel's model of genetics, proof of structure material, DNA structure, models of DNA, DNA replication, transcription, translation, RNA structure, types of RNA,

Unit II – Plasmids

Types of plasmids – F plasmid, R Plasmids, colicinogenic plasmids, Ti plasmids, linear plasmids, yeast- 2 µ plasmid, Plasmid replication and partitioning, Host range, plasmid-incompatibility, plasmid amplification, Regulation of copy number, curing of plasmids, Application of plasmids.

Unit III – Mechanisms of Genetic Exchange

Genetic code, Lac operon, Trp operon,Transformation - Discovery, mechanism of natural competence. Conjugation - Discovery, mechanism, Hfr and F' strains, Interrupted mating technique and time of entry mapping. Transduction - Generalized transduction, specialized transduction, LFT & HFT lysates, Mapping by recombination and co- transduction of markers Features of T4 genetics, Genetic basis of lytic *versus* lysogenic switch of phage lambda

Unit IV – Phage Genetics

Genome organization: *E. coli, Saccharomyces, Tetrahymena.* Mutations and mutagenesis: Definition and types of Mutations; Physical and chemical mutagens; Molecular basis of mutations; Functional mutants (loss and gain of function mutants); Uses of mutations. Reversion and suppression: True revertants; Intra- and inter-genic suppression; Ames test; Mutator genes.

Unit V – Transposable elements

Prokaryotic transposable elements – Insertion Sequences, composite and non-composite transposons, Replicative and Non replicative transposition, Mu transposon.Eukaryotic transposable elements - Yeast (Ty retrotransposon), Drosophila (P elements), Maize (Ac/Ds). Uses of transposons and transposition

Instruction Hours / week:L: 0 T: 0 P: 3 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- Describe the structure and replication strategies of the individual viruses discussed, including the processes of entry into cells, control of gene transcription.
- Define the process of virus latency and describe in molecular terms control of the process and activation of viral genomes during reactivation.
- Describe the growth behavior differences between normal cells and cells transformed by oncogenic DNA and RNA viruses.
- To study general aspects of viral morphology and classification.
- Cultivation of viruses and various methods of propagation.
- To discuss the application of various immunological and molecular diagnostic tools.

COURSE OUTCOME (CO'S)

- Upon paper completion, students will have skill-based knowledge on structure of plants, animal, bacteria and viruses.
- This paper also enables the student on isolation, propagation of various viruses.
- It will help the students to understand the plant and animal viruses.
- Students can distinguish the viruses According to their characteristic features.
- It will explain the research activities involved in virology studies.
- Skill based viral analysis can be performed in medical research.

EXPERIMENTS

1. Study of the structure of important animal viruses (rhabdo, influenza, paramyxo hepatitis B and retroviruses) using electron micrographs – Demonstration.
2. Study of the structure of important plant viruses (caulimo, Gemini, tobacco ring spot, cucumber mosaic and alpha-alpha mosaic viruses) using electron micrographs – Demonstration.
3. Study of the structure of important bacterial viruses (φX174, T4, λ) using electron micrograph – Demonstration.
4. Isolation and enumeration of bacteriophages (PFU) from water/sewage sample using double agar layer technique
5. Studying isolation and propagation of animal viruses by chick embryo technique
6. Study of cytopathic effects of viruses using photographs
7. Perform local lesion technique for assaying plant viruses.

Semester – II

16MBU212 MICROBIAL PHYSIOLOGY AND METABOLISM – PRACTICAL **(3H – 2C)**

Instruction Hours / week:L: 0 T: 0 P: 3 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To enhance the student's knowledge on various aspects of microbial physiology like growth, extremophiles studies and chemical characterization of microbes.
- To improve their skills in handing microorganisms
- To analyze the growth condition of the bacteria.
- To facilitate the students to deal with the bacterial strain
- To demonstrate the fermentation technique
- To demonstrate the generation time and thermal death time of bacteria

COURSE OUTCOME

- The students will be able to analyze the bacteria growth and growth condition
- Able to identify the various factors for optimal growth of *E.coli*.
- Understand the basic microbial structure and functions of various physiological groups of prokaryotes.
- Able to utilize the various Culture media in the proper physical condition for fermentation
- Able to explain the microbial metabolism – Autotrophy and heterotrophy modes of nutrition
- Students able to understand the physical and chemical growth requirements of bacteria and thermal death time of bacteria.

EXPERIMENTS

1. Study and plot the growth curve of *E. coli* by turbidometric and standard plate count methods.
2. Calculations of generation time and specific growth rate of bacteria from the graph plotted with the given data
3. Effect of temperature on growth of *E. coli*
4. Effect of pH on growth of *E. coli*
5. Effect of carbon and nitrogen sources on growth of *E.coli*
6. Effect of salt on growth of *E. coli*
7. Demonstration of alcoholic fermentation
8. Demonstration of the thermal death time and decimal reduction time of *E. coli.*

SUGGESTED READINGS

Semester – II

16MBU213 MICROBIAL GENETICS - PRACTICAL (3H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To focus on the basic principles of genetics incorporating the concepts of classical, molecular and population genetics.
- Compilation is required for recent advances in genetic principles for strong foundation in Biotechnology that improve their chances of employability in biotechnological industries
- To study the effect of chemical and physical mutagens on prokaryotic cell
- To isolate the extra chromosomal from bacteria
- To Interpret the DNA quantity and purity
- To identify the mutant strains using appropriate techniques

COURSE OUTCOME (CO'S)

- Students undertaking this practical shall be able to describe the key concept in the basic Microbial Genetics
- Effectively understand the implication of mutation and its characteristics.
- Further, the experiments would allow students to recall and relate the information gained from Microbial Genetics theory paper and skills associated with it
- Students able demonstrate the gene transfer techniques
- Students can estimate the genetic materials
- Able to distinguish the plasmid and Genomic DNA

EXPERIMENTS

1. Preparation of Master and Replica Plates.
2. Study the effect of chemical (HNO2) and physical (UV) mutagens on bacterial cells.
3. Study survival curve of bacteria after exposure to ultraviolet (UV) light.
4. Isolation of Plasmid DNA from *E.coli.*
5. Study different conformations of plasmid DNA through Agarose gel electrophoresis.
6. Demonstration of Bacterial Conjugation.
7. Demonstration of bacterial transformation and transduction.
8. Demonstration of AMES test.

		Semester – II
16AEC201	**ENVIRONMENTAL STUDIES**	**(4H – 4C)**

Instruction Hours / week:L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and/or practitioners.
- To create awareness among the students to know about various renewable and nonrenewable resources of the region, enables environmentally literate citizens (by knowing the environmental acts, rights, rules, legislation, etc.)
- To make appropriate judgments and decisions for the protection and skills associated with improvement of the earth.

COURSE OUTCOME

- Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
- Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
- Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
- Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Unit I–Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II – Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources.Equitable use of resources for sustainable lifestyles.Ill-effects of fireworks.

Unit III – Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Bio-geographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels.India as a mega-diversity nation.Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV– Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution , Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution.Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit V – Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.Wasteland reclamation.Consumerism and waste products.Environment Protection Act.Air (Prevention and Control of Pollution) Act.

Water (Prevention and Control of Pollution) Act.Wildlife Protection Act.Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness.Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health.Human rights.Value education.HIV/AIDS.Women and Child Welfare.Role of Information Technology in environment and human health.

SUGGESTED READINGS

Semester – III

16MBU301 ENVIRONMENTAL MICROBIOLOGY (4H – 4C)

Instruction Hours / week:L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To educate students about Environmental monitoring and environmental aspects of microbes.
- To impart a skilled knowledge on Microbes and environment and ecological importance.
- The main goal is to know and understand the role of microbes in biogeochemical processes in different ecosystems.
- The students will learn the basic microbiological principles, the methods in microbial ecology and their theoretical and practical use.
- The knowledge can give the base for understanding processes and changes in the environment.
- The students can get some skills to recognise the ecological problems and critical evaluation of the human impacts on pollution, climate changes and as well as environmental protection.

COURSE OUTCOME

- It provides a comprehensive overview of biogeochemical processes relevant to environmental scientists and engineers mediated by microorganisms.
- It will impart the student to develop their entrepreneurial knowledge on ecological behavior of microorganism.
- It will distinguish biogeochemical cycles
- This course will determine microbial role in nutrient cycling
- This course can able to determine water quality,
- It will explain the degradation of natural organic compounds and selected pollutants in the environment.

UnitI – Microorganism and their Habitats

Structure and function of ecosystems.Terrestrial Environment: Soil profile and soil microflora. Aquatic Environment: Microflora of fresh water and marine habitats. Atmosphere: Aeromicroflora and dispersal of microbes. Animal Environment: Microbes in/on human body (Microbiomics) & animal (ruminants) body. Extreme Habitats: Extremophiles: Microbes thriving at high & low temperatures, pH, high hydrostatic & osmotic pressures, salinity, & low nutrient levels. Microbial succession in decomposition of plant organic matter.

Unit II – Microbial Interactions

Microbe interactions: Mutualism, synergism, commensalism, competition, amensalism, parasitism, predation. Microbe-Plant interaction: Symbiotic and non-symbiotic interactions. Microbe-animal interaction: Microbes in ruminants, nematophagus fungi and symbiotic luminescent bacteria

Unit III – Biogeochemical Cycling

Carbon cycle: Microbial degradation of cellulose, hemicelluloses, lignin and chitin. Nitrogen cycle: Nitrogen fixation, ammonification, nitrification, denitrification and nitrate reduction. Phosphorus cycle: Phosphate immobilization and solubilisation. Sulphur cycle:Microbes involved in sulphur cycle. Other elemental cycles: Iron and manganese

Unit IV – Waste Management

Solid Waste management:Sources and types of solid waste, Methods of solid waste disposal (composting and sanitary landfill). Liquid waste management: Composition and strength of sewage (BOD and COD), Primary, secondary (oxidation ponds, trickling filter, activated sludge process and septic tank) and tertiary sewage treatment.

Unit V – Microbial Bioremediation and Water Potability

Principles and biodegradation of common pesticides, organic (hydrocarbons, oil spills) and inorganic (metals) matter, biosurfactants. Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) MPN test (b) Membrane filter technique.GMO and their impact.

Semester – III

16MBU302 FOOD AND DAIRY MICROBIOLOGY(4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To encode the employability importance of the role of microorganisms in food industries both in beneficial and harmful ways.
- This course aims to provide instruction in the general principles of food microbiology.
- Hands on practical complimented with an industry-based project, give a real-world perspective to microbiological challenges faced by the food industry.
- The course covers the microbiology of food preservation and food commodities; principles and methods for the microbiological examination of foods and microbiological quality control.
- To develop an understanding of the major principles of and current issues in the several topical areas that collectively constitute Food Microbiology
- It will helps the students to understand the dairy Technology.

COURSE OUTCOME

- Provides job-oriented information about the role of microorganisms in many food, and beverage industries both in production and spoilage processes.
- Develop job based output on industrial based technologies on Food microbiology.
- It will explain the interactions between microorganisms and the food environment, and factors influencing their growth and survival.
- Discuss the microbiology of different types of food commodities.
- Explain why microbiological quality control programmes are necessary in food production.
- It helps to start business.

Unit I – Foods as a substrate for microorganisms
Natural flora and source of contamination of foods in general. Intrinsic and extrinsic factors that affect growth and survival of microbes in foods. Microbial spoilage of various foods – Spoilage of vegetables, fruits, meat, eggs, milk and butter, bread, canned Foods

Unit II – Principles and methods of food preservation and sterilization
Principles of food preservation. Physical methods of food preservation: temperature (low, high, canning, and drying), irradiation, hydrostatic pressure, high voltage pulse, microwave processing and aseptic packaging. Chemical methods

of food preservation: salt, sugar, organic acids, SO_2, nitrite and nitrates, antibiotics and bacteriocins, sterilization of dry heat, moist heat, chemical, physical and radiation.

Unit III – Fermented foods

Fermented dairy products: yogurt, acidophilus milk, kumiss, kefir, dahi and cheese. Other fermented foods: dosa, sauerkraut, soy sauce and tampeh. Probiotics: Health benefits, types of microorganisms used, probiotic foods available in market.

Unit IV– Food borne diseases

Causative agents, foods involved, symptoms and preventive measures of the following diseases

Food intoxications:*Staphylococcus aureus*, *Clostridium botulinum* and mycotoxins. Food infections:*Bacillus cereus*, *Vibrio parahaemolyticus*, *Escherichia coli*, Salmonellosis, Shigellosis, *Yersinia enterocolitica*, *Listeria monocytogenes* and *Campylobacter jejuni*, fungal diseases, toxins

Unit V– Detection of food borne pathogens, food sanitation and control Cultural and rapid detection methods of food borne pathogens in foods and introduction to predictive microbiology. HACCP, FSSAI Indices of food sanitary quality and sanitizers.

Semester – III

16MBU303 INDUSTRIAL MICROBIOLOGY (4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To encompasses the employability use of microorganisms in the manufacture of food or industrial products.
- The aim of the course is to give the students broad theoretical and practical skills in industrial microbiology.
- This course covers the principles of various processes associated with the production and recovery of different bio-products derived from microorganisms.
- The students will be able to discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.
- It will make the students to explore their practical skills in entrepreneurial activities.
- It will deliver the large-scale production of microbial products techniques in advanced level.

COURSE OUTCOME

- Provides knowledge in the large scale production of industrial product, providing the trends to cater the needs of industry.
- This will help the students to enhance their employment knowledge on microbiology based commercial products.
- The aim of the course is to give the students broad theoretical and practical skills in industrial microbiology.
- This course covers the principles of various processes associated with the production and recovery of different bio-products derived from microorganisms.
- The students will be able to discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.
- Students will differentiate the types of fermentation processes

Unit I – Introduction to industrial microbiology

Brief history and developments in industrial microbiology. Sources of industrially important microbes and methods for their isolation, primary and secondary strain improvement.

Unit II – Isolation of industrially important microbes and fermentation media

Preservation and maintenance of industrial strains. Crude and synthetic media - molasses, corn- steep liquor, sulphite waste liquor, whey, yeast extract and protein hydrolysates.

Unit III – Types of fermentation processes, bio-reactors and measurement of fermentation parameters
Types of fermentation processes – Solid-state and liquid-state (stationary and submerged) fermentations; batch, fed-batch and continuous fermentations. Components of a typical bio-reactor, Types of bioreactors – Laboratory, pilot- scale and production fermenters, constantly stirred tank and air-lift fermenters. Measurement and control of fermentation parameters - pH, temperature, dissolved oxygen, foaming and aeration.

Unit IV – Down-stream processing and Enzyme immobilization
Separation of cells – filtration and centrifugation.Cell disruption – physical, chemical and enzymatic methods.Product separation – solvent extraction and precipitation.Lyophilization and spray drying. Methods of immobilization, advantages and applications of immobilization, large scale applications of immobilized enzymes (glucose isomerase and penicillin acylase).

Unit V –Microbial production of industrial products (micro-organisms involved, media, fermentation conditions, downstream processing and uses)
Citric acid, Ethanol, Penicillin, Glutamic acid, Vitamin B_{12}, Enzymes (amylase, protease, lipase) Wine, Beer.

SUGGESTED READINGS

Semester – III

16MBU304A **(3H – 3C)**

MICROBIALQUALITY CONTROL IN FOOD AND PHARMACEUTICAL INDUSTRIES

Instruction Hours / week:L: 3 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To make the students better to understand the aspects of skilled manufacturing practices, kinds of pathogenic microorganisms in food and quality control in food and pharmaceutical industries.
- Develop industry-oriented skills on developing drugs and food.
- To make the students to understand the food quality systems and advancement universally.
- It will explain the students about all kinds of bio safety levels in laboratories.
- To train the students to be competent working professionals in the food industry and pharmaceutical industry.
- To help the students to explain the production of quality food by imparting better nutritional, sanitation & hygiene concepts.

COURSE OUTCOME

- Imparts skilled knowledge on good manufacturing practices and food spoilage of different types of foods.
- Develop skills on Food and drug based microbiological analysis.
- To encourage students to the entrepreneurs and develop the capacity for setting up small scale enterprises with respect to food and pharmaceuticals within the country.
- To organize functions for creating awareness about the importance of safe processed nutritious food.
- To provide diagnostic analysis of food and pharmaceutical products.
- The students will be able to discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.

Unit I – Microbiological Laboratory and Safe Practices

Good laboratory practices – Good microbiological practices. Biosafety cabinets – Working of biosafety cabinets, using protective clothing, specification for BSL-1, BSL-2, BSL-3.Discarding biohazardous waste – Methodology of Disinfection, Autoclaving & Incineration.

Unit II – Determining Microbes in Food / Pharmaceutical Samples

Sampling procedures for food, water, and air. Culture and microscopic methods – Standard plate count, membrane filtration,most probable numbers, direct microscopic counts, Biochemical and immunological methods: Limulus lysate test for endotoxin, gel, lot agglutination precipitation, sterility testing for pharmaceutical products. Molecular methods – Nucleic acid probes, PCR based detection, biosensors.

Unit III – Enrichment culture technique

Enrichment culture technique, Detection of specific microorganisms – on XLD agar, Salmonella Shigella Agar, Mannitol salt agar, EMB agar, MacConkey Agar, Saboraud Agar.

Unit IV – Pathogenic Microorganisms of Importance in Food & Water

Ascertaining microbial quality of milk by MBRT, Rapid detection methods of microbiological quality of milk at milk collection centres (COB, 10 min Resazurin assay).

Unit V – HACCP for Food Safety and Microbial Standards

Hazard analysis of critical control point (HACCP) - Principles, flow diagrams, limitations.Microbial Standards for Different Foods and Water – BIS specifications for common foods and drinking water.

SUGGESTED READINGS

Semester – III

16MBU304B MICROBIAL DIAGNOSIS IN HEALTH CLINIC (3H – 3C)

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide an employment understanding of the natural history of infectious diseases in order to deal with the etiology, laboratory diagnosis, treatment and control of infections in the community.
- This course is aimed to Identify the species of pathogenic bacteria and fungi
- Determine the modes of transmission of infectious diseases and pathogenesis
- Know of the theoretical foundations for the differentiation of the major pathogenic groups
- To Determine the antimicrobials to be used in the sensitivity testing of different types of pathogens.
- Analyze and solve case studies involving bacterial and fungal agents

COURSE OUTCOME

- Provides employment knowledge to identify the common infectious agents with the help of laboratory procedures and use antimicrobial sensitivity tests to select suitable antimicrobial agents.
- It describes the basic mechanisms of pathogenesis of infectious diseases.
- It explains the basic principles of diagnosis, antimicrobial treatment, prevention and control of infectious diseases in the hospital and community.
- It helps the students to understand the host immune system and explain the host response to infection
- Understand and interpret basic laboratory tests for the diagnosis of infectious diseases.
- Apply the principles of molecular and immunological techniques for the diagnosis of infectious diseases.

Unit I– Importance of Diagnosis of Diseases

Bacterial, Viral, Fungal and Protozoan Diseases of various human body systems, Disease associated clinical samples for diagnosis.

Unit II – Collection of Clinical Samples

How to collect clinical samples (oral cavity, throat, skin, Blood, CSF, urine and faeces) and precautions required. Method of transport of clinical samples to laboratory and storage.

Unit III – Direct Microscopic Examination and Culture

Examination of sample by staining – Gram stain, Ziehl-Neelson staining for tuberculosis, Giemsa-stained thin blood film for malaria.Preparation and use of culture media - Blood agar, Chocolate agar, Lowenstein-Jensen medium, MacConkey agar, distinct colony properties of various bacterial pathogens.

Unit IV – Serological and Molecular Methods

Serological Methods - Agglutination, ELISA, immune fluorescence, Nucleic acid based methods – PCR, Nucleic acid probes, Typhoid, and HIV

Unit V – Testing for Antibiotic Sensitivity in Bacteria

Importance, Determination of resistance/sensitivity of bacteria using disc diffusion method (Kirby Bauer Method) Determination of minimal inhibitory concentration (MIC) of an antibiotic by broth dilution method.

Semester – III

16MBU311 ENVIRONMENTAL MICROBIOLOGY –PRACTICAL (3H – 2C)

Instruction Hours / week:L: 0 T: 0 P: 4Marks: Internal: **40** External: **60** Total: **100**
End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To educate students about skill oriented Environmental monitoring and environmental aspects of microbes.
- To impart a knowledge on Microbes and environment and ecological importance.
- To study the diversity of microorganism and microbial communities inhabiting a multitude of habitats and occupying a wide range of ecological habitats.
- Learn the occurrence, abundance and distribution of microorganism in the environment and their role in the environment and also learn different methods for their detection and characterization
- Competently explain various aspects of environmental microbiology and microbial ecology and to become familiar with current research in environmental microbiology.
- Understand various biogeochemical cycles – Carbon, Nitrogen, Phosphorus cycles etc. and microbes involved

COURSE OUTCOME

- Provides a comprehensive skilled overview of biogeochemical processes relevant to environmental scientists and engineers mediated by microorganisms.
- Understand various plant microbes interactions especially rhizosphere and their applications especially the biofertilizers and their production techniques
- Understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems – waste water treatment and bioremediation
- Know the Microorganisms responsible for water pollution especially Water-borne pathogenic microorganisms and their transmission
- Comprehend the various methods to determine the Sanitary quality of water and sewage treatment methods employed in waste water treatment
- Provide learning opportunities to critically evaluate research methodology and findings.

EXPERIMENTS

1. Analysisofsoil-pH,moisturecontent,waterholdingcapacity,percolation,capillaryaction.
2. Isolationofmicrobes(bacteria&fungi)fromsoil(28ºC&45ºC).
3. Isolationofmicrobes(bacteria&fungi)fromrhizosphereandrhizoplane.
4. Assessmentofmicrobiologicalqualityofwater.
5. DeterminationofBODofwastewatersample.
6. Studythepresenceofmicrobialactivitybydetecting(qualitatively)enzymes(dehydrogenase, amylaseand urease)insoil.
7. Isolationof*Rhizobium*fromrootnodules.

Semester – III

16MBU312 FOOD AND DAIRY MICROBIOLOGY– PRACTICAL (3H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4Marks: Internal: **40** External: **60** Total: **100**
End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To encode the importance of the role of microorganisms in food industries both in beneficial and harmful ways.
- To obtain a good entrepreneurial understanding of food and dairy products and become qualified as microbiologist in food and dairy industries.
- Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
- To know the spoilage mechanisms in foods and thus identify methods to control deterioration and spoilage
- Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods.
- To Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries.

COURSE OUTCOME

- Provides necessary entrepreneurial information on the food, dairy Microbiology in safety and quality perspective.
- It will help to study the importance in the prevention of contamination that might be caused by the microorganisms.
- To Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
- Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
- Students can able to understand of the basis of food safety regulations and Discuss the rationale for the use of standard methods and procedures for the microbiological analysis of food
- Acquire, discover, and apply the theories and principles of food microbiology in practical, real-world situations and problems.

EXPERIMENTS

1. MBRT of milk samples

2. Standard plate count of milk sample.
3. Alkaline phosphatase test to check the efficiency of pasteurization of milk.
4. Isolation of food borne bacteria from food products.
5. Isolation of spoilage microorganisms from spoiled vegetables/fruits.
6. Isolation of spoilage microorganisms from bread.
7. Preparation of yogurt.

SUGGESTED READINGS

Semester – III

16MBU313 INDUSTRIAL MICROBIOLOGY– PRACTICAL (3H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To encompasses the use of microorganisms in the manufacture of food or industrial products on the basis of employment.
- Get equipped with a theoretical and practical understanding of industrial microbiology
- Appreciate how microbiology is applied in manufacture of industrial products
- Know how to source for microorganisms of industrial importance from the environment
- Know about design of bioreactors, factors affecting growth and production, heat transfer, oxygen transfer
- Understand the rationale in medium formulation & design for microbial fermentation, sterilization of medium and air.

COURSE OUTCOME

- Provides knowledge in the large-scale production of industrial product, and teaches the modern employment trends to cater the needs of industry.
- Students will differentiate the types of fermentation processes
- Understand the biochemistry of various fermentations
- Identify techniques applicable for Improvement of microorganisms based on known biochemical pathways and regulatory mechanisms
- Comprehend the techniques and the underlying principles in downstream processing
- Students can able to explore the practical skills in research activities.

EXPERIMENTS

1. Study of different parts of fermenter
2. Microbial fermentation – Production and estimation (qualitative and quantitative) of
    a) Enzymes : Amylase and Protease
    b) Amino acid : Glutamic acid
    c) Organic acid : Citric acid
    d) Alcohol : Ethanol
3. A visit to any educational institute/industry to see an industrial fermenter, and other downstream processing operations.

SUGGESTED READINGS

1. Stanbury PF, Whitaker A and Hall SJ. (2006). Principles of Fermentation Technology. 2nd edition, Elsevier Science Ltd.
2. Crueger W and Crueger A. (2000). Biotechnology: A textbook of Industrial Microbiology. 2nd edition. Panima Publishing Co. New Delhi.

Semester – III

16MBU314A **(3H – 1C)**

MICROBIAL QUALITY CONTROL IN FOOD AND PHARMACEUTICAL INDUSTRIES– PRACTICAL

Instruction Hours / week:L: 0 T: 0 P: 3 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To make the students better to understand the aspects of skilled manufacturing practices, kinds of pathogenic microorganisms in food and quality control in food and pharmaceutical industries.
- Quality systems such as investigations, document management systems, Standard Operating Procedures (SOP), change management system, recall management and inspection management
- Food safety systems including hazard analysis critical control points and preventative control plans
- Principles of enumeration and identification of micro-organisms, using both traditional and rapid methods as well as the pharmacopoeial methods for the detection of specified organisms.
- To gain theoretical and practical knowledge on food and pharma industries.
- To encourage students to the entrepreneurs and develop the capacity for setting up small scale enterprises with respect to food within the country.

COURSE OUTCOME

- This paper imparts skilled knowledge on good manufacturing practices and food spoilage of different types of foods.
- Students can develop their entrepreneurial skills in food and pharma sectors.
- Good Manufacturing Practices (GMP) and associated guidelines for drugs, natural health products, cannabis and food
- Good documentation Practices (GDP) and Data Integrity (DI)
- Validation for equipment, methods, cleaning and process
- Quality systems such as investigations, document management systems, Standard Operating Procedures (SOP), change management system, recall management and inspection management.

EXPERIMENTS

1. Good manufacturing practices.
2. Most probable number test.

3. Isolation of pathogens from food samples.
4. Methylene blue reduction test.
5. Enumeration of microbial population from pharmaceutical samples.

SUGGESTED READINGS

1. Harrigan WF (1998) Laboratory Methods in Food Microbiology, 3rd edition, Academic Press.
2. Garg N, Garg KL and Mukerji KG (2010). Laboratory Manual of Food Microbiology I K International Publishing House Pvt. Ltd.
3. Jay JM, Loessner MJ, Golden DA (2005) Modern Food Microbiology, 7th edition. Springer.

Semester – III

16MBU314B (3H – 1C)

MICROBIAL DIAGNOSIS IN HEALTH CLINICS- PRACTICAL

Instruction Hours / week:L: 0 T: 0 P: 3 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide employment-oriented understanding of the natural history of infectious diseases in order to deal with the etiology, laboratory diagnosis, treatment and control of infections in the community.
- This course provides learning opportunities in the basic principles of medical microbiology and infectious disease.
- It covers mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.
- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.
- To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

COURSE OUTCOME

- Acquire knowledge to identify the common infectious agents with the help of laboratory procedures and use antimicrobial sensitivity tests to select suitable antimicrobial agents on the basis of employment.
- Helps to understand the use of lab animals in medical field.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Explain the methods of microorganism's control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.
- Demonstrate theory and practical skills in microscopy and their handling techniques and staining procedures.
- It will help the students to understand the general bacteriology and microbial techniques for isolation of pure cultures of Microorganisms.

EXPERIMENTS

1. Collection and processing of clinical specimen – Sputum.

2. Collection and processing of clinical specimen – Urine.
3. Collection and processing of clinical specimen – Blood.
4. Collection and processing of clinical specimen – Stool.
5. Antibiotic sensitivity testing by Kirby-Bauer method
6. Determination of minimal inhibitory concentration.

SUGGESTED READINGS

1. Brooks G.F., Carroll K.C., Butel J.S., Morse S.A. and Mietzner, T.A. (2013). Jawetz, Melnick and Adelberg's Medical Microbiology. 26th edition. McGraw Hill Publication.
2. Collee JG, Fraser, AG, Marmion, BP, Simmons A (2007) Mackie and Mccartney Practical Medical Microbiology, 14th edition, Elsevier.
3. Greenwood D, Slack R, Barer M, and Irving W. (2012). Medical Microbiology, 18th Edition. Churchill Livingstone.

Semester – IV

16MBU401 **IMMUNOLOGY** **(4H – 4C)**

Instruction Hours / week: L: 4 T: 0 P: 0Marks: Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To strengthen the knowledge of students in immunodiagnostics.
- To learn the latest trends in immunology.
- Rapid diagnosis and Immune reaction.
- To provide overview of immune system, antigen antibody structure and interactions.
- To develop understanding of innate and adaptive immunity along with major cells and molecules involved.
- To integrate immunology with health and enrich the knowledge for autoimmune disorders, hypersensitivity reaction

COURSE OUTCOME

- Introducing the employment aspect of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.
- Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity
- Develop understanding about immune system, antigen antibody interactions.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
- Students can able to perform basic immunological assays.
- It will distinguish fundamental knowledge on immunology and its advancement.

Unit I – Introduction, Immune Cells and Organs

Concept of Innate and Adaptive immunity; Contributions of following scientists to the development of field of immunology – Edward Jenner, Karl Landsteiner, Robert Koch, Paul Ehrlich, Elie Metchnikoff, Peter Medawar, MacFarlane Burnet, Neils K Jerne, Rodney Porter and Susumu Tonegawa. Structure, Functions and Properties of: Immune Cells – Stem cell, T cell, B cell, NK cell, Macrophage, Neutrophil, Eosinophil, Basophil, Mast cell, dendritic cell; and Immune Organs – Bone Marrow, Thymus, Lymph Node, Spleen, GALT, MALT, CALT.

Unit II – Antigens and Antibodies

Antigens – Characteristics of an antigen (Foreignness, Molecular size and Heterogeneity); Haptens; Epitopes (T & B cell epitopes); T-dependent and T-independent antigens; Adjuvants. Antibodies – Structure, Types, Functions and Properties of antibodies; Antigenic determinants on antibodies (Isotypic, allotypic, idiotypic); VDJ rearrangements; Monoclonal and Chimeric antibodies.

Unit III – Major Histocompatibility Complex, Complement System

MHC – Organization of MHC locus; Structure and Functions of MHC I & II molecules; Antigen processing and presentation (Cytosolic and Endocytic pathways). Complement system – Components of the Complement system; Activation pathways (Classical, Alternative and Lectin pathways); Biological consequences of complement Activation

Unit IV – Generation of Immune Response, Immunological Disorders and Tumor Immunity

Primary and Secondary Immune Response; Generation of Humoral Immune Response (Plasma and Memory cells); Generation of Cell Mediated Immune Response (Self MHC restriction, T cell activation, Co-stimulatory signals); Killing Mechanisms by CTL and NK cells, Introduction to tolerance. Types of Autoimmunity and Hypersensitivity with examples; Immunodeficiencies – Animal models (Nude and SCID mice), DiGeorge syndrome, Chediak-Higashi syndrome, Leukocyte adhesion deficiency, CGD; Transplation immunology, Graft versus host reaction Types of tumors, tumor Antigens, causes and therapy for cancers.

Unit V – Immunological Techniques

Principlesof precipitation, agglutination, complement fixation, Immunodiffusion, Immunoelectrophoresis, ELISA, ELISPOT, Western blotting, Immunofluoresence, Flow cytometry, Immunoelectron microscopy.

Semester – IV

16MBU402 MEDICAL MICROBIOLOGY (4H – 4C)

Instruction Hours / week:L: 4 T: 0 P: 0 **Marks:** Internal: **40 External**: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To strengthen the knowledge of students in immunodiagnostics.
- To learn the latest trends in immunology.
- Rapid diagnosis and Immune reaction.
- To provide overview of immune system, antigen antibody structure and interactions.
- To develop understanding of innate and adaptive immunity along with major cells and molecules involved.
- To integrate immunology with health and enrich the knowledge for autoimmune disorders, hypersensitivity reaction

COURSE OUTCOME

- Introducing the employment aspect of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.
- Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity
- Develop understanding about immune system, antigen antibody interactions.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
- Students can able to perform basic immunological assays.
- It will distinguish fundamental knowledge on immunology and its advancement.

Unit I – Normal micro flora of the human body and host pathogen interaction

Normal microflora of the human body: Importance of normal microflora, normal microflora of skin, throat, gastrointestinal tract, urogenital tract. Host pathogen interaction: Definitions – Infection, Invasion, Pathogen, Pathogenicity, Virulence, Toxigenicity, Carriers and their types, Opportunistic infections, Nosocomial infections. Transmission of infection, Pathophysiologic effects of LPS. Collection, transport and culturing of clinical samples – Sputum, Stool and Urine.

Unit II – Bacterial diseases

List of diseases of various organ systems and their causative agents.The following diseases in detail with symptoms, mode of transmission, prophylaxis and control.Respiratory

Diseases:*Streptococcus pyogenes, Haemophilus influenzae, Mycobacterium tuberculosis*. Gastrointestinal Diseases: *Escherichia coli, Salmonella typhi, Vibrio cholerae, Helicobacter pylori.* Others: *Staphylococcus aureus, Bacillus anthracis, Clostridium tetani, Treponema pallidum, Clostridium difficle.*

Unit III – Viral diseases

The detailed study of following diseases – Causative agents, Mode of transmissions, Pathogenicity, Symptoms and prophylaxis of Polio, Herpes, Hepatitis, Rabies, Dengue, AIDS, Influenza with brief description of swine flu, Ebola, Chikungunya, Japanese Encephalitis

Unit IV – Fungal and Protozoan diseases

Brief description of each of the following types of mycoses and one representative disease to be studied with respect to transmission, symptoms and prevention. Cutaneous mycoses: Tinea pedis (Athlete's foot). Systemic mycoses: Histoplasmosis. Opportunistic mycoses: Candidiasis. The detailed study of following diseases – Causative agents, Mode of transmissions, Pathogenicity, Symptoms and prophylaxis of Amoebiasis, Giardiasis, Elephanttiasis, Taeniasis, Malaria, Kala-azar.

Unit V – Antimicrobial agents: General characteristics and mode of action

Antibacterial agents: Five modes of action with one example each: Inhibitor of nucleic acid synthesis; Inhibitor of cell wall synthesis; Inhibitor of cell membrane function; Inhibitor of protein synthesis; Antibiotic resistance - MDR, XDR, MRSA, NDM-1 – resistance mechanisms. Antifungal agents: Mechanism of action of Amphotericin B, Griseofulvin. Antiviral agents:Mechanism of action of Amantadine, Acyclovir, Azidothymidine.

Semester – IV

16MBU403 RECOMBINANT DNA TECHNOLOGY (4H – 4C)

Instruction Hours / week:L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To learn the basic tools in recombinant technology
- To understand the various concepts of cloning vectors and cloning strategies
- To emphasize the knowledge in biotechnology and techniques.
- To familiarize the students to versatile tools and techniques employed in genetic engineering and recombinant DNA technology.
- A sound knowledge on procedural repertoire allows students to innovatively apply these in basic and applied fields of biological research.
- This course offers theoretical bases to properties and applications of versatile DNA modifying enzymes, cloning strategies, vector types, host genotype specificities for selection and screening of recombinants and/or recombinant transformants.

COURSE OUTCOME

- Imparts the entrepreneurial concepts of rDNA technology and their applications and Acquire knowledge on the applications of genetic engineering.
- Understand the difference between old biotechnology and modern biotechnology.
- Provide examples of current applications of biotechnology and advances in the different areas like medical, microbial, environmental, bioremediation, agricultural, plant, animal, and forensic sciences.
- Explain the general principles of generating transgenic plants, animals and microbes.
- Technical know-how on versatile techniques in recombinant DNA technology.
- An understanding on application of genetic engineering techniques in basic and applied experimental biology.

Unit I – Introduction to Genetic Engineering

Milestones in genetic engineering and Biotechnology cloning Tools; Restriction modification systems: Types I, II and III. Mode of action, nomenclature, applications of Type II restriction enzymes in genetic engineering. DNA modifying enzymes and their applications: DNA polymerases. Terminal deoxynucleotidyl transferase, kinases and phosphatases, and DNA ligases

Unit II – Molecular Cloning- Tools and Strategies

Cloning Vectors: Definition and Properties Plasmid vectors: pBR and pUC series Bacteriophage lambda and M13 based vectors Cosmids, BACs, YACs. Use of linkers and adaptors. Expression vectors: *E.coli* lac and T7 promoter-based vectors, yeast YIp, YEp and YCp vectors, Baculovirus based vectors, mammalian SV40-based expression vectors

Unit III– Methods in Molecular Cloning

Transformation of DNA: Chemical method, Electroporation. Gene delivery: Microinjection, electroporation, biolistic method (gene gun), liposome and viral- mediated delivery, *Agrobacterium* - mediated delivery DNA, RNA and Protein analysis: Agarose gel electrophoresis, Southern - and Northern - blotting techniques, dot blot, DNA microarray analysis, SDS-PAGE and Western blotting.

UnitIV – DNA Amplification and DNA sequencing

PCR: Basics of PCR, RT-PCR, Real-Time PCR. Sanger's method of DNA Sequencing: traditional and automated sequencing. Primer walking and shotgun sequencing

UnitV – Construction and Screening of Genomic and cDNA libraries. Applications of Recombinant DNA Technology

Genomic and cDNA libraries: Preparation and uses, Screening of libraries: Colony hybridization and colony PCR, Chromosome walking and chromosome jumping. Products of recombinant DNA technology: Products of human therapeutic interest - insulin, hGH, antisense molecules. Bt transgenic - cotton, brinjal, Gene therapy, recombinant vaccines, protein engineering and site directed mutagenesis.

Semester – IV

16MBU404A **BIOFERTILIZERS AND BIOPESTICIDES** **(3H – 3C)**

Instruction Hours / week:L: 3 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To demonstrate the techno-economic viability of the biofertilizers / biopesticides to farmers through field demonstration at farmer's field & by know-how training.
- To study about the biofertilizers in increasing soil fertility and usage of Biopesticides for plant disease.
- To prepare literature and promulgate in local language through booklets / documents etc. about; the benefits of biofertilizers for farming in villages through trained beneficiaries/ cultivators as multiplier impact.
- To demonstrate the effectiveness of biofertilizer cultural practices in the farmers fieldsfor enhanced crop productivity through bioreclamation of waste/ marginal land
- To raise the rural/tribal economy & living standard of the lowly of the lowest backward farming community especially SC & ST and marginal farmers.
- To create self employment opportunities to weaker underprivileged SC & ST and marginal farmers.

COURSE OUTCOME

- This course has been designed to provide the student knowledge about ecofriendly product which play a crucial role in determining its future use and applications in environmental management.
- Provides detailed entrepreneurial idea about biofertilizer production and plant disease.
- To produce and impart training of ecofriendly agricultural inputs so as to nullify the ill effects of chemical fertilizers.
- To demonstrate the know-how technology pertinent to microbiological and physico-chemical analyses of soil samples and their assessment.
- To demonstrate the low-cost media preparation and cultural practices in biofertilizer / biopesticide production.
- Students can able to develop fundamental aspects of to seed/seed material/seedlings/soil/waste matter/crop residues in order to increase the population

Unit I– Biofertilizers

General account of the microbes used as biofertilizers for various crop plants and their advantages over chemical fertilizers. Symbiotic N2 fixers:*Rhizobium* – Isolation, characteristics, types, inoculum production and field application, legume/pulses plants. *Frankia* – Isolation and characteristics, Alder, Casurina plants, non-leguminous crop symbiosis. Cyanobacteria, *Azolla* – Isolation, characterization, mass multiplication, their role in rice cultivation, crop response and field application.

Unit II – Non-Symbiotic Nitrogen Fixers

Free living *Azospirillum*, *Azotobacter* – isolation, characteristics, mass production and field application.

Unit III – Phosphate Solubilizers
Phosphate solubilizing microbes – Isolation, characterization, mass production, field application.

Unit IV – Mycorrhizal Biofertilizers
Importance of mycorrizal inoculum, types of mycorrhizae and associated plants, Mass production of VAM, field applications of Ectomycorrhizae and VAM.

Unit V– Biopesticides
General account of microbes used as bio-insecticides and their advantages over synthetic pesticides, *Bacillus thuringiensis*, production, Field applications, Viruses – cultivation and field applications.

SUGGESTED READINGS

Semester – IV

16MBU404B **PERSONAL HEALTH CARE** **(3H – 3C)**

Instruction Hours / week:L: 3 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To strengthen the knowledge of personal health care to students through a detailed study on vaccine and its schedule throughout the life time for all age group.
- Increase the focus on health promotion and prevention, screening and early intervention; and
- Improve quality, safety, performance and accountability.
- To provide health care services aimed at preventing health problems.
- To work with health care professionals
- To counsel and educate the patients and their families

COURSE OUTCOME

- Introducing the skilled basics about the health care and to study various types of vaccines to control the life time infectious disease.
- Demonstrate understanding of the role of health in the practice of health promotion
- Discuss the concepts of health, health education, health promotion and some related terms
- To develop Personal Health Knowledge to achieve societal benefits on health care system.
- Upon completion students will gain knowledge personal health care system.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.

Unit I

Vaccination: History –Types of vaccines –conventional and modern vaccines, Route of administrations – mechanisms of inducing immunity.

UnitII

Vaccination schedule for adults - Hepatitis B vaccines, MMR – Tetanus - Varicella vaccines.Vaccines for travelers.

UnitIII

Vaccines for 50 - year-old adult - types and routes.Vaccines for 65 – year - old adult - types and routes.Vaccines for healthcare workers.

UnitIV

Child health management - General health - Types of infection in child - Growth and development – Nutrition and fitness - Positive parenting.

UnitV

Vaccination schedule in children – New born - Child below 5yrs - Child below 10years Vaccines at adolescent age. Vaccine risks and safety.

Semester – IV

16MBU411 IMMUNOLOGY– PRACTICAL (3H – 2C)

Instruction Hours / week:L: 0 T: 0 P: 4 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To strengthen the knowledge of students in immunodiagnostics on skill basis.
- To learn the latest trends in immunology.
- Rapid diagnosis and Immune reaction.
- To provide overview of immune system, antigen antibody structure and interactions.
- To develop understanding of innate and adaptive immunity along with major cells and molecules involved.
- To integrate immunology with health and enrich the knowledge for autoimmune disorders, hypersensitivity reaction.

COURSE OUTCOME

- Introducing the science of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.
- Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity
- Develop understanding about immune system, antigen antibody interactions.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
- After course completion, students can apply the knowledge in further studies and higher education.
- Knows the concepts of advanced immunological assays.

EXPERIMENTS

1. Identification of human blood groups.
2. Perform Total Leukocyte Count of the given blood sample.
3. Perform Differential Leukocyte Count of the given blood sample.
4. Separate serum and plasma from the blood sample (demonstration).
5. Perform immunodiffusion by Ouchterlony method.
6. Perform DOT ELISA.
7. Perform immunoelectrophoresis.

Semester – IV

16MBU412 MEDICAL MICROBIOLOGY - PRACTICAL (3H – 2C)

Instruction Hours / week:L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To introduce the knowledge of the medically important microganisms, microbial morphology with the main focuses being the characterization, isolation and identification of different microorganism.
- The aim of Medical Microbiology course is to introduce basic principles and application relevance of clinical disease for students who are in preparation for physicians.
- The content of rigorous course includes many etiological agents responsible for global infectious diseases.
- It covers all biology of bacteria, viruses and other pathogens related with infectious diseases in humans.
- The course will provide the conceptual basis for understanding pathogenic microorganisms and particularly address the fundamental mechanisms of their pathogenicity.
- It will develops the basic skills on handling clinical pathogens.

COURSE OUTCOME

- It provides the entrepreneurial ability to characterize, isolate and identify different microbes.
- It includes a detailed study of characterization, etiology, pathogenicity, clinical systems, and laboratory diagnosis of disease-causing Microorganisms.
- It will also provide opportunities for a student to develop diagnostic skills in microbiology, including the practical application and interpretation of laboratory tests for the diagnosis of infectious diseases.
- Comprehend the various methods for identification of unknown microorganisms.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Demonstrate practical skills in fundamental microbiological techniques.

EXPERIMENTS

1. Identify bacteria (any three of *E. coli*, *Salmonella*, *Pseudomonas*, *Staphylococcus*, *Bacillus*) using laboratory strains on the basis of cultural, morphological and biochemical characteristics: IMViC, TSI, nitrate reduction, urease production and catalase tests.
2. Study of composition and use of important differential media for identification of bacteria: EMB Agar, MacConkey agar, Mannitol salt agar, Deoxycholate citrate agar, TCBS, Salmonella Shigella/BSA Agar.
3. Study of bacterial flora of skin by swab method.
4. Antibacterial sensitivity assay by Kirby-Bauer method.
5. Determination of minimal inhibitory concentration (MIC) of an antibiotic.

6. Study symptoms of the diseases with the help of photographs: Polio, anthrax, herpes, chicken pox, HPV warts, AIDS (candidiasis), dermatomycoses (ring worms).
7. Study of various stages of malarial parasite in RBCs using permanent mounts.

SUGGESTED READINGS

Semester – IV

16MBU413 RECOMBINANT DNA TECHNOLOGY – PRACTICAL (3H – 2C)

Instruction Hours / week:L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To learn the entrepreneurial basic tools in recombinant technology
- To understand the various concepts of cloning vectors and cloning strategies
- To emphasize the knowledge in biotechnology and techniques.
- Provide idea about DNA, protein purification from samples and quantification.
- To learn the techniques pertaining to amplification of biological molecules.
- To impart knowledge on basic microbial isolation and identification approaches

COURSE OUTCOME

- Imparts the concepts of rDNA technology and their applications and Acquire knowledge on the applications of genetic engineering.
- Students will develop understanding about isolation and enumeration of microorganisms from various samples.
- Microbial identification and characterization using a number of approaches will be well understood.
- Acquainted with molecular modification approaches that encompass extraction, purification, quantification and augmentation.
- To give basic understanding of microbial genetic manipulations
- To understand working of different laboratory equipments used in microbiological laboratories

EXPERIMENTS

1. Preparation of competent cells for transformation.
2. Demonstration of Bacterial Transformation and calculation of transformation efficiency.
3. Digestion of DNA using restriction enzymes and analysis by agarose gel electrophoresis
4. Ligation of DNA fragments.
5. Cloning of DNA insert and Blue white screening of recombinants.
6. Interpretation of sequencing gel electropherograms.
7. Designing of primers for DNA amplification.
8. Amplification of DNA by PCR.
9. Demonstration of Southern blotting.

Semester – IV

16MBU414A BIOFERTILIZERS AND BIOPESTICIDES- PRACTICAL (3H – 1C)

Instruction Hours / week:L: 0 T: 0 P: 3 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To study about the biofertilizers in increasing soil fertility and usage of Biopesticides for plant disease on the entrepreneurial basis.
- Appreciate the diversity of microorganism and microbial communities inhabiting a multitude of habitats and occupying a wide range of ecological habitats.
- Learn the occurrence, abundance and distribution of microorganism in the environment and their role in the environment and also learn different methods for their detection and characterization
- Competently explain various aspects of environmental microbiology and microbial ecology and to become familiar with current research in environmental microbiology.
- Understand various biogeochemical cycles – Carbon, Nitrogen, Phosphorus cycles etc. and microbes involved
- Understand various plant microbes interactions especially rhizosphere, phyllosphere and mycorrhizae and their applications especially the biofertilizers and their production techniques

COURSE OUTCOME

- Provide the student knowledge about eco friendly product which play a crucial role in determining its future use and applications in environmental management.
- Provides detailed idea about biofertilizer production and plant disease.
- Understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems
- waste water treatment and bioremediation
- Know the Microorganisms responsible for water pollution especially Water-borne pathogenic microorganisms and their transmission
- Comprehend the various methods to determine the Sanitary quality of water and sewage treatment methods employed in waste water treatment

EXPERIMENTS

1. Isolation and identification of *Rhizobium* spp. from root nodules – mass production and application.
2. Isolation and identification of *Azotobacter* spp. – mass production and application.
3. Isolation and identification of *Azospirillum* spp. – mass production and application.
4. Isolation and identification of phosphate solubilizing bacteria – mass production and application.
5. Isolation and identification of mycorrhizae.
6. Isolation and maintenance of *Azolla*.
7. Isolation and identification of *Anabena* and *Nostoc* – its mass cultivation.
8. Isolation, identification and maintenance of *Bacillus thuringiensis*.
9. Isolation and identification of *Trichoderma viridae* – its mass cultivation.
10. Isolation and identification of *Beauveria bassiana* – its mass cultivation.

Semester – IV

16MBU414B PERSONAL HEALTH CARE – PRACTICAL (3H – 1C)

Instruction Hours / week:L: 0 T: 0 P: 3 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To strengthen the skilled knowledge of personal health care to students through a detailed study on vaccine and its schedule throughout the life time for all age group.
- Demonstrate understanding of the role of health in the practice of health promotion
- Discuss the concepts of health, health education, health promotion and some related terms
- Identify social determinants of health
- List the levels of disease prevention
- To distinguish microbial concept on normal micro flora and pathogens.

COURSE OUTCOME

- Introducing the skilled basics about the health care and to study various types of vaccines to control the life time infectious disease.
- Personal Health and disease, influence of family and community
- Culture, beliefs, attitudes, and stigmatized illnesses
- To make the understanding on Leading causes of death, risk factors, and prevention
- To distinguish three levels of health promotion/disease prevention
- To build a consumer-focused integrated primary health care system.

EXPERIMENTS

1. Effect of hand-wash on microbial load.
2. Isolation of Various kinds of skin microflora.
3. Effectiveness of antimicrobial clothes
4. Normal flora and pathogen of mouth.
5. Evaluation of disinfectants and antiseptics.

16MBU501A MANAGEMENT OF HUMAN MICROBIAL DISEA SES (4H – 4C) Semester – V

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide a strong base in the fundamentals of pathogens.
- To learn techniques and methods used in the cultivation and isolation of pathogens.
- To obtain with the knowledge about the habitat and characteristics of pathogens in detail.
- Develop understanding about immune system, antigen antibody interactions.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
- Theoretical knowledge on techniques employed for culturing and detection of plant and animal viruses.

COURSE OUTCOME

- Develop employability skills for identification, classification, and characterization of various pathogens.
- To describe and practice the basic principles of chemotherapy and disinfection through laboratory exercises accompanied by case studies.
- Upon completion, students gained the knowledge of most common medically important organism and the infections they cause.
- Different approaches, techniques and tools used to identify pathogens and control them.
- Diagnostic approaches for microbial pathogens
- Developing efficient vaccines and new drugs

Unit I – Human Diseases

Infectious and non-infectious diseases, microbial and non-microbial diseases, Deficiency diseases, occupational diseases, Incubation period, mortality rate, nosocomial infections

Unit II – Microbial diseases

Respiratory microbial diseases, gastrointestinal microbial diseases, Nervous system diseases, skin diseases, eye diseases, urinary tract diseases, Sexually transmitted diseases: Types, route of infection, clinical systems and general prevention methods, study of recent outbreaks of human diseases (SARS/ Swine flu/Ebola) – causes, spread and control, Mosquito borne disease – Types and prevention.

Unit III – Therapeutics of microbial diseases

Treatment using antibiotics: beta lactam antibiotics (penicillin, cephalosporins), quinolones, polypeptides and aminoglycosides**.** Judicious use of antibiotics, importance of completing antibiotic regimen, Concept of DOTS, emergence of antibiotic resistance, current issues of MDR/XDR microbial strains. Treatment using antiviral agents: Amantadine, Acyclovir, Azidothymidine. Concept of HAART.

Unit IV – Prevention of microbial Diseases

General preventive measures, Importance of personal hygiene, environmental sanitation and methods to prevent the spread of infectious agents transmitted by direct contact, food, water and insect vectors.

Unit V – Vaccines and immune prophylaxis
Importance, types, vaccines available against microbial diseases, vaccination schedule (compulsory and preventive) in the Indian context.

SUGGESTED READINGS

Semester – V

16MBU501B MICROBIOLOGICAL ANALYSIS OF AIR AND WATER (4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To impart knowledge microflora of air and water, sample collection, analysis and control of diseases.
- This paper is designed with the objective to impart hand-on experience and laboratory skills to students in area of bioprocess.
- Learning the basic principles of environment microbiology and be able to apply these principles to understanding and solving problems in current environmental, air and water issues.
- The students will develop set of skills to recognize the ecological problems and critical evaluation of the human impacts on pollution, climate changes and as well as environmental protection.
- To reduce volume of sludge, to stabilize organic solids, and to recover resources. Typical Methods of Treatment: Thickening, chemical addition, centrifugation, filtration, digestion, incineration.
- Quality systems such as investigations, document management systems, Standard Operating Procedures (SOP), change management system, recall management and inspection management

COURSE OUTCOME

- Provides employability skills involved in the air and water analysis
- Characterization of microorganisms from water and air samples
- Students will get the basic knowledge how to prepare and perform sampling and microbial analyses to determine the abundance, growth rate and microbial community composition together with the basic environmental parameters.
- Validation for equipment, methods, cleaning and process
- Students can develop their entrepreneurial skills in analysis of air and water sample.
- Learning the basic principles of microbiological analysis of environmental sector.

Unit I – Aero microbiology

Bioaerosols, Air borne microorganisms (bacteria, viruses, fungi) and their impact on human health and environment, significance in food and pharma industries and operation theatres, allergens

Unit II – Air Sample Collection and Analysis

Bioaerosol sampling, air samplers, methods of analysis, CFU, culture media for bacteria and fungi, Identification characteristics

Unit III – Control Measures

Fate of bioaerosols, inactivation mechanisms – UV light, HEPA filters, desiccation, Incineration. Precipitation, chemical disinfection, filtration, high temperature, UV light

Unit IV – Water Microbiology

Water borne pathogens and water borne diseases

Unit V – Microbiological Analysis of Water

Sample Collection, Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) standard qualitative procedure: presumptive/MPN tests confirmed and completed tests for faecal coliforms (b) Membrane filter technique and (c) Presence/absence tests

SUGGESTED READINGS

4. Hurst CJ, Crawford RL, Garland JL, Lipson DA (2007). Manual of Environmental Microbiology, 3rd edition, ASM press.

Semester – V

16MBU502A BIOMATHEMATICS AND BIOSTATISTICS (4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

SCOPE

- This course has been intended to provide the learner insights into helpful areas of Statistics which plays an essential role in present, future use and applications of Biology.
- This course provides an introduction to a variety of statistical methods of use in describing and analyzing biological data.
- It includes a laboratory component in which biological data are analyzed using statistical software. No prior knowledge of the software will be assumed.
- Statisticians help to design data collection plans, analyze data appropriately and interpret and draw conclusions from those analyses.
- To develop students' skills in algebraic manipulation, the calculus of linear and non-linear differential equations, mathematical modelling, matrix algebra and statistical methods.
- To introduce students to the application of mathematical modeling in the analysis of biological systems including populations of molecules, cells and organisms.
- To show how mathematics, statistics and computing can be used in an integrated way to analyse biological systems.

OBJECTIVE

- Students get an idea about collection, interpretation and presentation of statistical data.
- Statistics, a branch of applied Mathematics, is regarded as mathematics applied to observational data.
- Conceivably everything dealing with the collection, processing, analysis and interpretation of numerical data belongs to the domain of statistics.
- To introduce students to the use of R for the analysis of biological processes and data, including simple computer programming.
- have an enhanced knowledge and understanding of mathematical modeling and statistical methods in the analysis of biological systems;
- be able to analyse data from experiments and draw sound conclusions about the underlying processes using their understanding of mathematics and statistics be better able to assess biological inferences that rest on mathematical and statistical arguments.

Unit I

Sets. Functions and their graphs : polynomial, sine, cosine, exponential and logarithmic functions. Motivation and illustration for these functions through projectile motion, simple pendulum, biological rhythms, cell division, muscular fibres etc. Simple observations about these functions like increasing, decreasing and, periodicity. Sequences to be introduced through the examples arising in Science beginning with finite sequences, followed by concepts of recursion and difference equations. For instance, the Fibonacci sequence arising from branching habit of trees and breeding habit of rabbits.

Unit II

Intuitive idea of algebraic relationships and convergence. Infinite Geometric Series. Series formulas for ex, log (1+x), sin x, cos x. Step function. Intuitive idea of discontinuity, continuity and limits. Differentiation. Conception to be motivated through simple concrete examples as given above from Biological and Physical Sciences. Use of methods of differentiation like Chain rule, Product rule and Quotient rule. Second order derivatives of above functions. Integration as reverse process of differentiation.Integrals of the functions introduced above. Differential Equations of first order, Linear Differential Equations. Points in plane and space and coordinate form. Examples of matrices arising in Biological Sciences and Biological networks. Sum and Produce of matrices upto order3.

Unit III

Measures of central tendency, Measures of dispersion; skewness, kurtosis; Elementary Probability and basic laws; Discrete and Continuous Random variable, Mathematical Expectation; Curve Fitting; Correlation and Regression. Emphasis on examples from Biological Sciences.

Unit IV

Mean and Variance of Discrete and Continuous Distributions namely Binomial, Poisson, Geometric, Weibull, Logistic and Normal distribution. Fitting of Distributions; Statistical methods: Scope of statistics: utility and misuse. Principles of statistical analysis of biological data.

Unit V

Sampling parameters. Difference between sample and Population, Sampling Errors, Censoring, difference between parametric and non-parametric statistics. Sampling Distributions, Standard Error, Testing of Hypothesis, Level of Significance and Degree ofFreedom; Large Sample Test based on Normal Distribution, Small sample test based on t-test, Z- test and F test; Confidence Interval; Distribution-free test - Chi-square test; Basic Introduction to Multivariate statistics, etc.

16MBU502B	**BIOINFORMATICS**	**Semester – V** **(4H – 4C)**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To detail the importance of computer in field of life sciences.
- To obtain good understanding about the interpretation of biological data base.
- To uptake knowledge in latest tools and technology.
- Aimed to provide an overview of various bioinformatics tools, databases available and sequence analysis
- Provide knowledge on database concept, management, retrieval along with utilization in gene and protein analysis.
- To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis.

COURSE OUTCOME

- Provides computational skill on search engines and various software tools involved in bioinformatics
- It will impart computational based techniques which includes genomics and proteomics in Bioinformatics.
- Retrieve information from available databases and use them for microbial identifications and drug designing
- Gain ability to modify gene and protein structures in simulated systems.
- Introduction to the basics of sequence alignment and analysis.
- Describe about the different types of Biological databases.

Unit I– Introduction to Computer Fundamentals
RDBMS - Definition of relational database. Mode of data transfer (FTP, SFTP, SCP), advantage of encrypted data transfer.

Unit II– Introduction to Bioinformatics and Biological Databases
Biological databases– nucleic acid, genome, protein sequence and structure, geneexpression databases, Database of metabolic pathways, Mode of data storage - File formats - FASTA, Genbank and Uniprot, Data submission & retrieval from NCBI, EMBL, DDBJ, Uniprot, PDB.

Unit III– Sequence Alignments, Phylogeny and Phylogenetic trees
Local and Global Sequence alignment, pairwise and multiple sequence alignment. Scoring an alignment, scoring matrices, PAM & BLOSUM series of matrices. Types of phylogenetic trees, Different approaches of phylogenetic tree construction - UPGMA,Neighbour joining, Maximum Parsomony, Maximum likelihood.

Unit IV– Genome organization and analysis
Diversity of Genomes: Viral, prokaryotic & eukaryotic genomesGenome, transcriptome, proteome, 2-D gel electrophoresis, Maldi Tof spectroscopy. Major features of completed genomes: *E.coli, S.cerevisiae, Arabidopsis*, Human.

Unit V – Protein Structure Predictions

Hierarchy of protein structure - primary, secondary and tertiary structures, modeling. Structural Classes, Motifs, Folds and Domains. Protein structure prediction in presenceand absence of structure template Energy minimizations and evaluation by Ramachandran plot Protein structure and rational drug design.

Semester – V

16MBU503A INSTRUCTION AND BIOTECHNIQUES **(4H – 4C)**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

To develop skills related to

- Understand the principles of various instruments used in the life sciences
- Ability to operate the instruments
- Data analysis and interpretations
- Introduce the basic concept of qualitative and quantitative analysis of a given sample
- Study various spectroscopic techniques and its instrumentation.
- Study the concept of separation science and its applications.
- To learn the fundamentals of research methodology, working principles and applications of instruments used in biology.

COURSE OUTCOME

- offers the students with an opportunity to develop skill on the bioinstrumentation and concepts of principles and applications.
- Define and explain various fundamentals of spectroscopy, qualitative and quantitative analysis
- and characterize functionalities of biomolecules by using spectroscopic techniques.
- Explain the various separation techniques and its instrumentation.
- Describe the principle and working of various radiation detectors.
- Evaluate the various types & applications of chromatography and electrophoresis.
- Appreciate the working principles and applications of Microscopy.

Unit I– Microscopy

Brightfield and darkfield microscopy, Fluorescence Microscopy, Phase contrast Microscopy, Confocal Microscopy, Electron Microscopy (Scanning and Transmission Electron Microscopy).

Unit II – Chromatography

Principles and applications of paper chromatography (including Descending and 2-D), Thin layer chromatography. Column Chromatography - packing types (IEC, AC, SEC), fraction collection. GLC and HPLC.

Unit III – Electrophoresis

Principle and applications of native polyacrylamide gel electrophoresis, SDS- polyacrylamide gel electrophoresis, 2D gel electrophoresis, Isoelectric focusing, Zymogram preparation and Agarose gel electrophoresis.

Unit IV – Spectrophotometry

Principle, Instrumentation and application of spectrophotometer, colorimeter and turdibometer.

Unit V – Centrifugation

Principles of centrifugations – RCF and sedimentation coefficient. Types of centrifuges – rotors - fixed angle and swinging bucket rotors. Types of Centrifugation – differential, density gradient and ultracentrifugation. Analytical centrifugation.

Semester – V

16MBU503B PLANT PATHOLOGY (4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

- This paper aims at introducing students to the basic and applied aspects of plant biotechnology.
- Introduce students to the basic principles and concepts of plant pathology.
- Introduce and illustrate the major groups of organisms that cause plant diseases.
- Enhance student's understanding of scientific research, especially as it applies to the science of plant pathology and the study of microorganisms.
- Provide a framework that students can use in their profession to best approach plant disease management.
- Prepare students for additional classes in Plant Pathology and related disciplines.

COURSE OUTCOME

- This will enable for learning the techniques to save endangered species which will be useful for mankind
- Describe the concepts of what constitutes disease in plants.
- Identify major principles of plant pathology.
- Recognize the etiological agents of disease.
- Employ methods to diagnose and manage a wide range of plant diseases.
- Describe aspects of integrated pest management.

Unit I – Introduction and History of plant pathology
Concept of plant disease- definitions of disease, disease cycle and pathogenicity, symptoms associated with microbial plant diseases, types of plant pathogens, economic losses and social impact of plant diseases. Significant landmarks in the field of plant pathology- Contributions of Anton DeBary, Millardet, Burrill, E. Smith, Adolph Mayer, Ivanowski, Diener, Stakman, H.H. Flor, Van Der Plank, molecular Koch's postulates. Contributions of eminent Indian plant pathologists.

Unit II – Stages in development of a disease
Infection, invasion, colonization, dissemination of pathogens and perennation. Concepts of monocyclic, polycyclic and polyetic diseases, disease triangle & disease pyramid, forecasting of plant diseases and its relevance in Indian context.

Unit III – Specific plant diseases
Study of some important plant diseases giving emphasis on its etiological agent, symptoms, epidemiology and control.

a. Important diseases caused by phytopathogenic bacteria: Angular leaf spot of cotton, bacterial leaf blight of rice, crown galls, bacterial cankers of citrus.
b. Important diseases caused by fungi: White rust of crucifers - *Albugo candida,* Downy mildew of onion – *Peronospora,* Powdery mildew of wheat - *Erysiphe graminis.*
c. Important diseases caused by viruses: Papaya ring spot, tomato yellow leaf curl, banana bunchy top, rice tungro.

Unit IV– Host Pathogen Interaction

a. Microbial Pathogenicity

Virulence factors of pathogens: enzymes, toxins (host specific and non specific) growth regulators, virulence factors in viruses (replicase, coat protein, silencing suppressors) in disease development. Effects of pathogens on host physiological processes (photosynthesis, respiration, cell membrane permeability, translocation of water and nutrients, plant growth and reproduction).

b. Genetics of Plant Diseases

Concept of resistance (R) gene and avirulence (avr) gene; gene for gene hypothesis, types of plant resistance: true resistance– horizontal & vertical, apparent resistance.

c. Defense Mechanisms in Plants

Concepts of constitutive defense mechanisms in plants, inducible structural defenses (histological- cork layer, abscission layer, tyloses, gums), inducible biochemical defenses [hypersensitive response (HR), systemic acquired resistance (SAR), phytoalexins, pathogenesis related (PR) proteins, plantibodies, phenolics, quinones, oxidative bursts].

Unit V– Control of Plant Diseases

Principles and practices involved in the management of plant diseases by different methods, *viz.* regulatory - quarantine, crop certification, avoidance of pathogen, use of pathogen free propagative material cultural - host eradication, crop rotation, sanitation, polyethylene traps and mulcheschemical - protectants and systemic fungicides, antibiotics, resistance of pathogens to chemicals. biological - suppressive soils, antagonistic microbes-bacteria and fungi, trap plantsgenetic engineering of disease resistant plants- with plant derived genes and pathogen derived genes.

SUGGESTED READINGS

1. Agrios GN. (2006). Plant Pathology. 5th edition. Academic press, San Diego.
2. Lucas JA. (1998). Plant Pathology and Plant Pathogens. 3rd edition. Blackwell Science, Oxford.

Semester – V

16MBU504A MICROBIAL BIOTECHNOLOGY (3H – 3C)

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: **40** External:**60**Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To make students understand the aspects of industrial, soil, environmental, agricultural microbiology.
- Gain knowledge about the Industrially important microorganisms &uritional requirements.
- Know about the Commercialization methods of Microbial products.
- To understand the industrially important microorganisms' commercial value and importance of patent and IPR.
- Describe about different sewage treatment methods employed in waste water treatment.
- know the microorganisms responsible for water pollution.

COURSE OUTCOME

- This paper imparts knowledge on applications of microorganisms in various fields and helps to gain employability in pharmaceutical industries
- Describe about different sewage treatment methods employed in waste water treatment.
- Learn about the global environmental problems.
- To provide a fundamental knowledge about the various scopes in environmental and industrial studies.
- Learn about the applications of microbes in biotransformations, therapeutic and industrial biotechnology
- Describe aspects of genetically engineered microbes for industrial application.

Unit I – Microbial Biotechnology and its Applications

Microbial biotechnology: Scope and its applications in human therapeutics, agriculture (Biofertilizers, PGPR, Mycorrhizae), environmental, and food technology. Use of prokaryotic and eukaryotic microorganisms in biotechnological applications. Genetically engineered microbes for industrial application: Bacteria and yeast

Unit II – Therapeutic and Industrial Biotechnology

Recombinant microbial production processes in pharmaceutical industries - Streptokinase, recombinant vaccines (Hepatitis B vaccine). Microbial polysaccharides and polyesters, Microbial production of bio-pesticides, bioplastics, Microbial biosensors

Unit III – Applications of Microbes in Biotransformations

Microbial based transformation of steroids and sterols. Bio-catalytic processes and their industrial applications: Production of high fructose syrup and production of cocoa butter substitute

Unit IV – Microbial Products and their Recovery and RNAi

Microbial product purification: filtration, ion exchange & affinity chromatography techniques Immobilization methods and their application: Whole cell immobilization. RNAi and its applications in silencing genes, drug resistance, therapeutics and host pathogen interactions.

Unit V – Microbes for Bio-energy and Environment, Intellectual Property Rights

Bio-ethanol and bio-diesel production: commercial production from lignocellulosic waste and algal biomass, Biogas production: Methane and hydrogen production using microbial culture. Microorganisms in bioremediation: Degradation of xenobiotics, mineral recovery, removal of heavy metals from aqueous effluents. Patents, patenting fundamental requirements- patent multicellular organisms, IPR, Copyrights, Trademarks

\

Semester – V

16MBU504B **INHERITANCE BIOLOGY** **(3H – 3C)**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To make students understand the principles of Genetics and inheritance biology.
- understand that genes are the units of inheritance for individual characteristics and also may contribute to susceptibility to certain diseases
- understand the number of chromosomes that make up the human genome and where they are located within the cell
- understand the role of the X and Y chromosomes in determining sex and how they are inherited.
- understand how gametes are produced by the process of meiosis and how the full complement of 46 chromosomes is restored at fertilisation
- To identify and describe the process and purposes of the cell cycle, meiosis, and mitosis, as well as predict the outcomes of these processes.

COURSE OUTCOME

- This paper imparts knowledge on the different aspects of genetics and pedigree analysis.
- Understand the central dogma of molecular biology and the genome of prokaryotic and eukaryotic microorganisms.
- To gain knowledge about the microbial genetics and central dogma of molecular biology
- Students will understand the cellular components underlying mitotic cell division.
- Students will apply their knowledge of cell biology to selected examples of changes or losses in cell function. These can include responses to environmental or physiological changes, or alterations of cell function brought about by mutation.
- To describe applications and techniques of modern genetic technology, as well as select the correct techniques to solve practical genetic problems.

Unit I – Introduction to Genetics
Historical developments: Model organisms in genetic analyses and experimentation: *Escherichia coli, Saccharomyces cerevisiae, Neurospora crassa, Caenorhabditis elegans Drosophila melanogaster, Arabidopsis thaliana.*

Unit II – Mendelian Principles
Mendel's Laws: Dominance, segregation, independent assortment, deviation from Mendelian inheritance, Rediscovery of Mendel's principles, Chromosome theory of inheritance: Allele, multiple alleles, pseudoallele, complementation tests, Extensions of Mendelian genetics: Allelic interactions, concept of dominance, recessiveness, Incomplete dominance and co-dominance, Multiple alleles, Epistasis, penetrance and expressivity.

Unit III – Linkage and Crossing over & Recombination

Linkage and recombination of genes, Cytological basis of crossing over, Crossing over at four-strand stage, Molecular mechanism of crossing over, mapping Homologous and non-homologous recombination, including transposition, site-specific recombination.

Unit IV – Extra-Chromosomal Inheritance & Human genetics

Rules of extra nuclear inheritance, Organelle heredity - Chloroplast mutations in *Chlamydomonas*, mitochondrial, mutations in *Saccharomyces*, Maternal effects – Shell coiling in *Limnaea peregra* Infectious heredity - Kappa particles in *Paramecium*.Pedigree analysis, lod score for linkage testing, karyotypes, genetic disorders.Polygenic inheritance, heritability and its measurements, QTL mapping.

Unit V – Characteristics of Chromosomes

Structural organization of chromosomes - centromeres, telomeres and repetitive DNA, Packaging DNA molecules into chromosomes, Concept of euchromatin and heterochromatin, Normal and abnormal karyotypes of human chromosomes, Chromosome banding, Giant chromosomes: Polytene and lampbrush chromosomes, Variations in chromosome structure: Deletion, duplication, inversion and translocation, Variation in chromosomal number and structural abnormalities -

Klinefelter syndrome, Turner syndrome, Down syndrome

Semester – V

16MBU511A MANAGEMENT OF HUMAN MICROBIAL DISEASES- PRACTICAL (4H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4Marks: Internal: **40**External: **60** Total: **100**

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To provide a strong base in the fundamentals of pathogens.
- To learn techniques and methods used in the cultivation and isolation of pathogens.
- To obtain with the knowledge about the habitat and characteristics of pathogens.
- Program aims to develop students' understanding of medical microbiology with hand on experience in the isolation of the bacteria from different sources.
- It gives the knowledge about the pathogenicity, understanding the biofilm formation in bacteria, role of biofilm in pathogenicity and their antibiotics resistance pattern of pathogenic bacteria which is useful for public awareness.
- The objective of this course is to instill awareness on basics of immune system where students will learn the components of immunity and various immune responses that work together to protect the host.

COURSE OUTCOME

- Involves the identification, classification, and characterization of pathogenic species.
- This paper imparts employability in hospital laboratories.
- Properly use aseptic techniques, including sterilization. Know General bacteriology and microbial techniques for isolation of pure cultures of bacteria.
- Basics in microbiology course is designed as an interdisciplinary course to acquaint the students of different streams with a very basic knowledge and understanding of
- microbes, pathogens and their control Learning methods for antimicrobial susceptibility testing
- In this course the students will observe and perform experiments related to clinical microbiology and virology which will enhance their laboratory skills, and scientific knowledge.

EXPERIMENTS

1. Diagnosis of respiratory tract disease.
2. Diagnosis of urinary tract disease.
3. Diagnosis of gastrointestinal tract disease.
4. Identification of dermatophytes

SUGGESTED READINGS

Semester – V

16MBU511B **(3H – 1C)**

MICROBIOLOGICAL ANALYSIS OF AIR AND WATER –PRACTICAL

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- Impart knowledge microflora of air and water, sample collection, analysis and control of diseases.
- Explain the significance of air Microflora and airborne diseases
- Gain knowledge about water pollution and waste water treatments.
- Learning the basic principles of environment microbiology and be able to apply these principles to understanding and solving problems in current environmental, air and water issues.
- Validation for equipment, methods, cleaning and process
- Students can develop their entrepreneurial skills in analysis of air and water sample.

COURSE OUTCOME

- This paper teaches different laboratory skills of analyzing air and water.
- Hand on training of the general equipment used in microbiology laboratory
- Develop capability to perform different gene transfer methods in microbes
- Characterization of microorganisms from water and air samples
- Enumeration of bacteria and fungi from air by membrane filtration technique
- Gain knowledge about water pollution and waste water treatments.

EXPERIMENTS

1. Enumeration of indoor and outdoor microflora of air (bacteria and fungi) by settle plate method.
2. Enumeration of bacteria and fungi from air by membrane filtration technique.
3. Microbicidal effect of UV light.
4. Evaluation of disinfectants – Phenol coefficient method.
5. MPN test.
6. Enumeration of bacteria and fungi from water by membrane filtration technique.

SUGGESTED READINGS

3. Maier RM, Pepper IL and Gerba CP. (2009). Environmental Microbiology. 2nd edition, Academic Press.
4. Hurst CJ, Crawford RL, Garland JL, Lipson DA (2007). Manual of Environmental Microbiology, 3rd edition, ASM press.

Semester – V

16MBU512A BIOMATHEMATICS AND BIOSTASTICS - PRACTICAL (4H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

SCOPE

- This course has been intended to provide the learner insights into helpful areas of Statistics which plays an essential role in present, future use and applications of Biology.
- Statisticians help to design data collection plans, analyze data appropriately and interpret and draw conclusions from those analyses.
- Statistics helps in the proper and efficient planning of a statistical inquiry in any field of study.
- Statistics helps in providing a better understanding and exact description of a phenomenon of nature.
- To develop students' skills in algebraic manipulation, the calculus of linear and non-linear differential equations, mathematical modelling, matrix algebra and statistical methods.
- To introduce students to the application of mathematical modeling in the analysis of biological systems including populations of molecules, cells and organisms.

OBJECTIVES

- Students get an idea about collection, interpretation and presentation of statistical data.
- Statistics help in providing data as well as tools to analyze the data.
- Some powerful techniques are index numbers, time series analysis, and also forecasting.
- Statistical knowledge helps you use the proper methods to collect the data, employ the correct analyses, and effectively present the results.
- To show how mathematics, statistics and computing can be used in an integrated way to analyse biological systems.
- Conceivably everything dealing with the collection, processing, analysis and interpretation of numerical data belongs to the domain of statistics.

Statistics helps in collecting appropriate quantitative data.

EXPERIMENTS

1. Word Problems based on Differential Equations
2. Mean, Median, Mode from grouped and ungrouped Data set
3. Standard Deviation and Coefficient of Variation
4. Skewness and Kurtosis
5. Curve fitting
6. Correlation
7. Regression
8. Finding area under the curve using normal probability
9. Testing of Hypothesis- Normal Distribution, t-test and Chi-Square-test
10. Confidence Interval

SUGGESTED READINGS

Semester – V

16MBU512B BIOINFORMATICS - PRACTICAL (4H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: **40** External:**60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Students get an idea about collection, interpretation and presentation of bioinformatics data.
- Develop competence to integrate biological information with computational softwares
- Impart basic understanding of bioinformatics approaches for bacterial/viral/fungal identifications and drug design
- Bioinformatics is the application of computer technology to get the information that's stored in certain types of biological data.
- Bioinformatics provides central, globally accessible databases that enable scientists to submit, search and analyse information.
- A sound knowledge on procedural repertoire allows students to innovatively apply these in basic
- and applied fields of biological research.

COURSE OUTCOME

- This course has been intended to provide the learner insights into helpful areas of Bioinformatics which plays an essential role in application-oriented biology.
- Provides computational skill on search engines and various software tools involved in bioinformatics
- Learning methods for designing primers and in-silico PCR
- Develop competence to retrieve information from biological databases and integrate this biological information with computational softwares.
- Design an experiment with step-by-step instructions to address a research problem
- Technical know-how on versatile techniques in bioinformatics techniques

EXPERIMENTS

1. Introduction to different operating systems - UNIX, LINUX and Windows
2. Introduction to bioinformatics databases (any three): NCBI/PDB/DDBJ, Uniprot, PDB
3. Sequence retrieval using BLAST
4. Sequence alignment & phylogenetic analysis using clustalW & phylip
5. Picking out a given gene from genomes using Genscan or other softwares (promoter region identification, repeat in genome, ORF prediction). Gene finding tools (Glimmer, GENSCAN), Primer designing, Genscan/Genetool
6. Protein structure prediction: primary structure analysis, secondary structure prediction using psi- pred, homology modeling using Swissmodel. Molecular visualization using jmol, Protein structure model evaluation (PROCHECK)
7. Prediction of different features of a functional gene.

SUGGESTED READINGDS

Semester – V

16MBU513A INSTRUMENTATION AND BIOTECHNIQUES –PRACTICAL (4H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

To develop skills related to

- Understand the principles of various instruments used in the life sciences.
- Ability to operate the instruments.
- Data analysis and interpretations.
- Appreciate the working principles and applications of Microscopy.
- Understand the mechanics of thesis writing
- To understand working of different laboratory equipment used in microbiological laboratories

COURSE OUTCOME

- Offers the students with an opportunity to gain practical skills on the bioinstrumentation and concepts of principles and applications.
- Evaluate the various types & applications of chromatography and electrophoresis.
- Evaluate the various types & phase contrast microscopy and Electron microscopy
- Explain the various separation techniques and its instrumentation.
- Hand on training of the general equipment used in microbiology laboratory
- Comprehend the major spectrophotometric and titrimetric approaches of quantification in biological and environmental samples.

EXPERIMENTS

1. Study of fluorescent micrographs to visualize bacterial cells – Demonstration
2. Ray diagrams of phase contrast microscopy and Electron microscopy – Demonstration
3. Separation of mixtures by paper / thin layer chromatography.
4. Demonstration of column packing in any form of column chromatography.
5. Separation of protein mixtures by any form of chromatography.
6. Separation of protein mixtures by Polyacrylamide Gel Electrophoresis (PAGE).
7. Determination of λ max for an unknown sample and calculation of extinction coefficient.
8. Separation of components of a given mixture using a laboratory scale centrifuge.
9. Understanding density gradient centrifugation with the help of pictures.

Semester – V

16MBU513B PLANT PATHOLOGY – PRACTICAL (4H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: **40**External:**60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- This paper aims at introducing students to the basic and applied aspects of plant biotechnology.
- Introduce students to the basic principles and concepts of plant pathology.
- Introduce and illustrate the major groups of organisms that cause plant diseases
- Provide a framework that students can use in their profession to best approach plant disease management.
- To study the importance of plant diseases and cutting sections of infected plant material
- To acquaint with different strategies for management of plant diseases

COURSE OUTCOME

- This will enable for learning the techniques to save endangered species which will be useful for mankind.
- Identify major principles of plant pathology.
- Demonstration of fungal, bacterial and viral plant pathogens.
- Recognize the etiological agents of disease.
- Employ methods to diagnose and manage a wide range of plant diseases.
- To teach the students about the different groups of insects that vector plant pathogens, vector-plant pathogen interaction, management of vectors for controlling diseases

EXPERIMENTS

1. Demonstration of Koch's postulates in fungal, bacterial and viral plant pathogens.
2. Study of important diseases of crop plants by cutting sections of infected plant material - *Albugo*, *Puccinia*, *Ustilago*, *Fusarium*, *Colletotrichum.*

SUGGESTED READINGS

Semester – V

16MBU514A MICROBIAL BIOTECHNOLOGY- PRACTICAL (3H – 1C)

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVE

- To make students understand the aspects of industrial, soil, environmental, agricultural microbiology.
- To understand the methods for Production of industrially important compounds from fungal source.
- This paper is designed to provide an exposure to the students about the potential of fungi as food and in field of biotechnology as source of different enzymes, secondary metabolites, vitamins, polysaccharides, polyhydric alcohols, pigments and lipids.
- Develop an understanding of various aspects of bioprocess technology.
- Evaluate nanotechnology and microbial production of therapeutic compounds
- The laboratory training in addition to theory is included so that the students will acquire the skills to qualify for a broad range of positions in research, industry, consultancy, education and public administration, or for further education in a doctoral program.

COURSE OUTCOME

- Impart knowledge on applications of microorganisms in various fields
- Provides skill development on microbial products.
- To study the immobilization techniques and fungal pigment production.
- Develop a xylanase and lipase production technology.
- Demonstration of algal single cell proteins.
- State of art knowledge about various methodological and analytic approaches that are used within the specialization.

EXPERIMENTS

1. Study yeast cell immobilization in calcium alginate gels.
2. Study enzyme immobilization by sodium alginate method.
3. Pigment production from fungi (*Trichoderma* / *Aspergillus* / *Penicillium*).
4. Isolation of xylanase or lipase producing bacteria.
5. Study of algal Single Cell Proteins.

SUGGESTED READINGS

1. Ratledge, C and Kristiansen, B. (2001). Basic Biotechnology, 2nd edition, Cambridge University Press.
2. Demain, A. L and Davies, J. E. (1999). Manual of Industrial Microbiology and Biotechnology, 2nd edition, ASM Press.

Semester – V

16MBU514B INHERITANCE BIOLOGY - PRACTICAL (3H – 1C)

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: **40** External:**60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVE

- To make students understand the principles of Genetics and inheritance biology.
- Students will learn the basic principles of inheritance at the molecular, cellular and organismal levels
- Students will test and deepen their mastery of genetics by applying this knowledge in a variety of problem-solving situations.
- Describe the principal cell types comprising each tissue system
- Identify location and function of apical meristems, and describe their general structure
- Explain DNA repair and recombination in terms of mutation and evolution
- The objective of the course is to make student understand about the structure and function of biologically important molecules.

COURSE OUTCOME

- Imparts knowledge on the different aspects of genetics and pedigree analysis.
- Students will understand the cellular components underlying mitotic cell division
- Students will apply their knowledge of cell biology to selected examples of changes or losses in cell function.
- Identify the organs and tissue systems of plants, and explain their respective function
- Understand how molecular cell biology forms the foundation of biotechnology
- Students will learn about DNA, RNA and the molecular events that govern cell functions

EXPERIMENTS

1. Mendelian deviations in dihybrid crosses
2. Studying Barr Body with the temporary mount of human cheek cells
3. Studying *Rhoeo* translocation with the help of photographs
4. Karyotyping with the help of photographs
5. Chi-Square Analysis
6. Study of polytene chromosomes using temporary mounts of salivary glands of *Chiromonas / Drosophila* larvae
7. Study of pedigree analysis
8. Analysis of a representative quantitative trait

SUGGESTED READINGS

1. Gardner EJ, Simmons MJ, Snustad DP (2008). Principles of Genetics. 8th Ed. Wiley-India.

Semester – VI

16MBU601A **MUSHROOM CULTIVATION** **(4H – 4C)**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To evaluate the biology and health benefits of mushrooms.
- To encode the importance of the role of microorganisms in food industries
- To obtain a good understanding of production and multiplication of spawn by different composting techniques.
- To obtain knowledge in harvest, storage, marketing and economic impacts on mushroom cultivation.
- To gain knowledge about nutritional profile and medicinal properties of mushroom.
- To obtain knowledge in depth the problem in mushroom cultivation.

COURSE OUTCOME

- Able to Know the architecture of mushrooms
- To know the methods used to cultivate mushroom.
- Students are able to predict where the mushroom placed in vegetable kingdom
- Able to cultivate mushrooms from agricultural waste.
- Have an idea about packaging and storing.
- Have understand nutritional value of mushrooms.

Unit I – Mushroom morphology and classification

Mushroom morphology: Different parts of a typical mushroom and variations in mushroom morphology. Key to differentiate edible from poisonous mushrooms. Mushroom Classification: Based on occurrence – Epigenous and hypogenous, Natural habitats – Humicolous, Lignicolous & Coprophilous, Color of spores – white, yellow, pink, purple brown and black. Ainsworth et al classification (8^{th} edition) and Bisby's 'Dictionary of Fungi'.

Unit II – Biology of mushrooms

Biology of Mushrooms: Vegetative characters, general morphology, spore germination and life cycle of button mushroom (*Agaricus bisporus*), milky mushroom (*Calocybe indica*), oyster mushroom (*Pleurotus sajorcaju*) and paddy straw mushroom (*Volvariella volvcea*).

Unit III – Mushroom technology

Equipment and sterilization techniques. Isolation and culture of spores, culture media preparation. Production of mother spawn, multiplication of spawn – Inoculation technique – Cultivation technology – Substrates, composting technology, bed, polythene bag preparation, spawning – casing – cropping – Mushroom production – harvest – packing, storage and marketing.

Unit IV – Health benefits of mushrooms

Nutritional profile of Mushrooms: protein, amino acids, calorific values, carbohydrates, fats, vitamins & minerals. Medicinal Properties of Mushrooms: Antibacterial, antifungal, antiviral, anti-tumour effect and hematological value. Cardiovascular and renal effect, in therapeutic diets, adolescence, for aged persons and diabetes mellitus. Mushroom nutriceuticals.

Unit V – Diseases of mushroom and mushroom economics

Problems in cultivation – diseases, pests and nematodes, weed moulds and their management strategies. Mushroom economics: economics of spawn and mushroom, cultivation, postharvest technologies. Processing and preservation of mushrooms. Mushroom research centres in India.

SUGGESTED READINGS

Semester – VI

16MBU601B FOOD FERMENTATION TECHNIQUES (4H – 4C)

Instruction Hours / week:L: 4 T: 0 P: 0 Marks: Internal: **40**External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To encode the importance of the role of microorganisms in food industries in beneficial ways.
- To Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
- To Know the spoilage mechanisms in foods and thus identify methods to control deterioration and spoilage
- To Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods.
- To Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
- To Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation

COURSE OUTCOME

- Students Imparts knowledge on various microorganisms involved in food fermentation and develops the skills on Fermented Foods and production process.
- Students able to Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
- Understand of the basis of food safety regulations and Discuss the rationale for the use of standard methods and procedures for the microbiological analysis of food
- Acquire, discover, and apply the theories and principles of food microbiology in practical, real-world situations and problems.
- Have knowledge in fermented products and the role of microorganisms.
- Able to discriminate pathogens and legatee.

Unit I – Fermented Foods and Probiotic Foods

Definition, types, advantages and health benefits

Unit II– Milk Based Fermented Foods

Curd, Yogurt, Buttermilk and cheese: Preparation of inoculums, types of microorganisms and production process

Unit III – Grain Based Fermented Foods

Soy sauce, Bread, Idli and Dosa: Microorganisms and production process

Unit IV – Vegetable Based Fermented Foods

Pickels, Saeurkraut: Microorganisms and production process

Unit V – Fermented Meat and Fish

Pickles, Fermented Meat and Fish, Types, microorganisms involved fermentation process.

SUGGESTED READINGS

1. Hui YH, Meunier-Goddik L, Josephsen J, Nip WK, Stanfield PS (2004) Handbook of food and fermentation technology, CRC Press.
2. Holzapfel W (2014) Advances in Fermented Foods and Beverages, Woodhead Publishing.
3. Yadav JS, Grover, S and Batish VK (1993) A comprehensive dairy microbiology, Metropolitan.
4. Jay JM, Loessner MJ, Golden DA (2005) Modern Food Microbiology, 7th edition. Springer.

Semester – VI

16MBU602A BIOSAFETY AND INTELLECTUAL PROPERTY RIGHTS (4H – 4C)

Instruction Hours / week:L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To learn the basic handling of microorganisms.
- To understand the various biological containments.
- To emphasize on IPR issues and need for knowledge in patents in biotechnology.
- The ethical and philosophical issues associated with international agreements.
- Various modes of presenting and disseminating patent licensing and agreements.
- Enable students to acquire expertise in the use and application of the methods of data collection and analysis.

COURSE OUTCOME

- Provides knowledge on safety aspects in biological laboratory and to create awareness on the Intellectual property rights and patenting of biotechnological processes.
- To gain knowledge on steps of a patenting process and the role of biosafety committee.
- To emphasize the components and design of laboratory.
- Provide learning opportunities to critically evaluate research methodology and findings
- Enable students to acquire expertise in the use and application of the methods of data collection and analysis.
- Enable students to be reflexive about their role and others' roles as researchers.

Unit I

Biosafety: Introduction; biosafety issues in biotechnology; Biological Safety Cabinets & their types; Primary Containment for Biohazards; Biosafety Levels of Specific Microorganisms.

Unit II

Biosafety Guidelines: Biosafety guidelines and regulations (National and International); GMOs/LMOs- Concerns and Challenges; Role of Institutional Biosafety Committees (IBSC), RCGM, GEAC etc. for GMO applications in food and agriculture; Environmental release of GMOs; Risk Analysis; Risk Assessment; Risk management and communication; Overview of International Agreements - Cartagena Protocol.

Unit III

AERB/RSD/RES guidelines for using radioisotopes in laboratories and precautions. Agreements and Treaties: GATT, TRIPS Agreements; Role of Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty on international recognition of the deposit of microorganisms; UPOV & Brene conventions; Patent Co-operation Treaty (PCT); Indian Patent Act 1970 & recent amendments.

Unit IV

Introduction to Intellectual Property: Patents, Types, Trademarks, Copyright & Related Rights, Industrial Design and Rights, Traditional Knowledge, Geographical Indications- importance of IPR – patentable and non patentables – patenting life – legal protection of biotechnological inventions – World Intellectual Property Rights Organization (WIPRO).

Unit V

Grant of Patent and Patenting Authorities: Types of patent applications: Ordinary, PCT, Conventional, Divisional and Patent of Addition; An introduction to Patent Filing Procedures; Patent licensing and agreement; Patent infringement- meaning, scope, litigation, case studies, Rights and Duties of patent owner.

SUGGESTED READINGS

1. Bare Act, (2007).Indian Patent Act 1970 Acts & Rules, Universal Law Publishing Co. Pvt. Ltd., New Delhi.
2. Kankanala C (2007). Genetic Patent Law & Strategy, 1st Edition, Manupatra Information Solution Pvt. Ltd. New Delhi.

Semester – VI

16MBU602B MICROBES IN SUSTAINABLE AGRICULTURE AND DEVELOPMENT (4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- The goal of sustainable agriculture is to meet society's food and textile needs in the present without compromising the ability of future generations to meet their own needs**.**
- Able to evaluate the application of ecological principles and concepts in sustainable agriculture system.
- To know the role of microbes which make crop output more and increase the fertility of crops.
- To know the basics and concepts of various biotechnological related terms
- To know the physiological processes that occur during plant growth and development of methodology involved in plant growth
- To make them to understand issues related to plant nutrition, quality improvement, environmental adaptation, transgenic crops and their use in agriculture.

COURSE OUTCOME

- Develops the programmatic activities in sustainable agriculture and food systems
- Able to relate their knowledge about ecology to its relevance in sustainable agriculture
- Provides detailed idea about biofertilizer production and develop entrepreneur skill related to agriculture field**.**
- Understand on soil characteristics and biogeochemical cycling.
- Students able to the uses of microorganisms as bio control agents.
- Understand transgenic crops and their use in agriculture.

Unit I– Soil Microbiology

Soil as Microbial Habitat, Soil profile and properties, Soil formation, Diversity and distribution of microorganisms in soil, Mineralization of cellulose, hemicelluloses, lignocelluloses, lignin and humus, phosphate, nitrate, silica, potassium

Unit II– Microbial Activity in Soil and Green House Gases

Carbon dioxide, methane, nitrous oxide, nitric oxide – production and control

Unit III– Microbial Control of Soil Borne Plant Pathogens

Biocontrol mechanisms and ways, Microorganisms used as biocontrol agents against Microbial plant pathogens, Insects, Weeds.

Unit IV– Biofertilization, Phytostimulation, Bioinsecticides

Plant growth promoting bateria, biofertilizers – symbiotic (*Bradyrhizobium, Rhizobium, Frankia*), Non Symbiotic (*Azospirillum, Azotobacter*, Mycorrhizae, MHBs, Phosphate solubilizers, algae), Novel combination of microbes as biofertilizers, PGPRs.

Unit V– Secondary Agriculture Biotechnology

Biotech feed, Silage, Biomanure, biogas, biofuels – advantages and processing parameters, Advantages, social and environmental aspects, Bt crops, golden rice, transgenic animals.

Semester – VI

16MBU603A **CELL BIOLOGY** **(3H – 3C)**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To study cell structure and functions of organelle.
- Exposure on transportations through cell membrane.
- To focus on different receptors and model of signaling.
- To introduce the concept of cell signaling.
- To obtain knowledge in cell death and cell renewal.
- To gain knowledge in structural aspects of cells.

COURSE OUTCOME

- Basic concept of cell structure, membrane, cellular functions of different types of cell, modes of cellular signaling and signal amplification.
- Students able to annotating cell organization of prokaryotic and Eukaryotic.
- Students able to paraphrase cell death and cell renewal.
- Able to bullet pointing protein sorting and transport
- Expertise in interpreting cell internal organelles.
- Knowledge in induced pleuripotent stem cells.

Unit I – Structure and organization of Cell

Cell Organization – Eukaryotic (Plant and animal cells) and prokaryotic. Plasma membrane: Structure and transport of small molecules. Cell Wall: Eukaryotic cell wall, Extra cellular matrix and cell matrix interactions, Cell-Cell Interactions - adhesion junctions, tight junctions, gap junctions, and plasmodesmata (only structural aspects). Mitochondria, chloroplasts and peroxisomes. Cytoskeleton: Structure and organization of actin filaments, association of actin filaments with plasma membrane, cell surface protrusions, intermediate filaments, microtubules.

Unit II – Nucleus

Nuclear envelope, nuclear pore complex and nuclear lamina. Chromatin – Molecular organization. Nucleolus.

Unit III – Protein Sorting and Transport

Ribosomes, Endoplasmic Reticulum – Structure, targeting and insertion of proteins in the ER, protein folding, processing and quality control in ER, smooth ER and lipid synthesis, export of proteins and lipids. Golgi Apparatus – Organization, protein glycosylation, protein sorting and export from Golgi Apparatus Lysosomes.

Unit IV– Cell Signalling

Signalling molecules and their receptors. Function of cell surface receptors. Pathways of intra-cellular receptors – Cyclic AMP pathway, cyclic GMP and MAP kinase pathway.

Unit V– Cell Cycle, Cell Death and Cell Renewal

Eukaryotic cell cycle and its regulation, Mitosis and Meiosis, Development of cancer, causes and types, Programmed cell death, Stem cells, Embryonic stem cell, induced pleuripotent stem cells.

SUGGESTED READING

2. Karp G. (2010) Cell and Molecular Biology: Concepts and Experiments. 6th edition. John Wiley & Sons. Inc.
3. De Robertis, EDP and De Robertis EMF. (2006). Cell and Molecular Biology. 8th edition. Lipincott Williams and Wilkins, Philadelphia.
4. Cooper, G.M. and Hausman, R.E. (2009). The Cell: A Molecular Approach. 5^{th} Edition. ASM Press & Sunderland, Washington, D.C.; Sinauer Associates, MA.

Semester – VI

16MBU603B **MOLECULAR BIOLOGY** **(3H – 3C)**

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To provide an experience for the students in an interdisciplinary research program connecting animal genomics with animal reproduction and biotechnology.
- To impart information on the historical developments in Molecular Biology
- An in-depth study on structure and organization of chromosome and mutagenesis.
- To expose the students on the basic understanding of various techniques used in molecular studies.
- To gather information to know mechanism of DNA replication.
- To gain the knowledge of translational machinery in prokaryotes and eukaryotes.

COURSE OUTCOME

- Explores technologies using molecular biology, embryo manipulation, cell and tissue culture.
- Manipulate the genomes of animals for ways to improve the live stock for food production and biomedical purpose.
- Develop the skills in molecular biology.
- Executing concept of RNA splicing and mRNA and its significance.
- Students able to inferring various model of DNA replication
- Students able to contrast translational machinery.

Unit I – Structures of DNA and RNA / Genetic Material

DNA Structure: Miescher to Watson and Crick- historic perspective, DNAStructure, Salient features of double helix, Types of DNA, Types of genetic material, denaturation and renaturation, cot curves. DNA topology - linking number, topoisomerases; Organization of DNA Prokaryotes,Viruses, Eukaryotes.RNA Structure, Organelle DNA -- mitochondria and chloroplast DNA.

Unit II – Replication of DNA (Prokaryotes and Eukaryotes)

Bidirectional and unidirectional replication, semi- conservative, semi- discontinuous replication Mechanism of DNA replication: Enzymes and proteins involved in DNA replication –DNA polymerases, DNA ligase, primase, telomerase – for replication of linear ends. Various models of DNA replication including rolling circle, D- loop (mitochondrial), (theta) mode of replication and other accessory protein, Mismatch and excision repair.

Unit III – Transcription in Prokaryotes and Eukaryotes & Post-Transcriptional Processing

Transcription: Definition, difference from replication, promoter - concept and strength of promoter RNA Polymerase and the transcription unit, Transcription in Eukaryotes: RNA polymerases, general Transcription factors. Split genes, concept of introns and exons, RNA splicing, spliceosome machinery**,** concept of alternative splicing, Polyadenylation and capping, Processing of rRNA, RNA interference: si RNA, miRNA and its significance

Unit IV – Translation (Prokaryotes and Eukaryotes)

Translational machinery, Charging of tRNA, aminoacyl tRNA synthetases, Mechanisms of initiation, elongation and termination of polypeptides in both prokaryotes and eukaryotes, Fidelity of translation, Inhibitors of protein synthesis in prokaryotes and eukaryote

Unit V – Regulation of gene Expression in Prokaryotes and Eukaryotes

Principles of transcriptional regulation, regulation at initiation with examples from *lac* and *trp* operons, Sporulation in *Bacillus*,Yeast mating type switching , Changes in Chromatin Structure - DNA methylation and Histone Acetylation mechanisms.

Semester – VI

16MBU611A MUSHROOM CULTIVATION - PRACTICAL (4H – 2C)

Instruction Hours / week:L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To teach on cultivation, diseases and health benefits of mushrooms.
- To provide practical knowledge of different sterilization procedures and learn handling of mushrooms.
- To enhance the student's knowledge and impress upon them the important aspects of mushroom.
- To understand to know pure culture techniques and methods of culturing preservation and maintenance of mushrooms.
- To make the students more knowledge on mushroom cultivation.
- To make the students to know the classification.

COURSE OUTCOME

- To impart knowledge on various mushrooms and its cultivation techniques to became an entrepreneur.
- Students able to predict classification of edible mushroom.
- Able to cultivate spawn from waste materials.
- Have a knowledge in sterilization and handling of mushroom.
- Students understand the application of mushroom biotechnology.
- Students understand the characteristics and importance of mushrooms.

EXPERIMENTS

1. Oyster cultivation and demonstration of Button mushroom cultivation
2. Tissue isolation and sub culturing
3. Spawn making using sorghum
4. Fruiting bags production – preparing beds (chopping and sterilization of straw)
5. Field trip to commercial mushroom farms and scientific institutions.

Semester – VI

16MBU611B FOOD FERMENTATION TECHNIQUES – PRACTICAL (4H – 2C)

Instruction Hours / week:L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To encode the importance of the role of microorganisms in food industries in beneficial ways.
- Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
- To learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
- To Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
- To Understand the use of standard methods and procedures for the microbiological analysis of food
- Acquire, discover, and apply the theories and principles of food microbiology in practical, real-world situations and problems.

COURSE OUTCOME

- To impart knowledge on various microorganisms involved in food fermentation.
- To nurture the student to gain employability in industrial area.
- Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods.
- Understand the beneficial role of microorganisms in fermented foods and in food processing and the microbiology of different types of fermented food products – dairy, pickles, Legume and cereal based food products
- Have an idea to isolate beneficial microorganisms from spoiled food.
- Identify methods to control deterioration and spoilage

EXPERIMENTS

1. Preparation of Yogurt.
2. Preparation of Sauerkraut.
3. Beer production.
4. Wine production.
5. Isolation of Microbes from spoiled Meet and Fish.

SUGGESTED READINGS

1. Hui YH, Meunier-Goddik L, Josephsen J, Nip WK, Stanfield PS (2004) Handbook of food and fermentation technology, CRC Press.

Semester – VI

16MBU612A BIOSAFETY AND INTELLECTUAL PROPERTY RIGHTS –PRACTICAL (4H-2C)

Instruction Hours / week:L: 0 T: 0 P: 4 **Marks:** Internal: **40**External: **60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To learn the basic handling of microorganisms.
- To understand the various biological containments.
- To emphasize on IPR issues and need for knowledge in patents in biotechnology.
- To gain knowledge on steps of a patenting process and the role of biosafety committee.
- To emphasize the components and design of laboratory.
- Provide learning opportunities to critically evaluate research methodology and findings

COURSE OUTCOME

- Able to understand safety aspects in biological laboratory.
- To create awareness on the Intellectual property rights and patenting of biotechnological processes.
- To equip students with a basic understanding of the underlying principles of quantitative and qualitative patenting methods.
- Provide students with in-depth training on the conduct and management of patent filing from inception
- Enable students to acquire expertise in the use and application of the methods of data collection and analysis.
- Enable students to be reflexive about their role and others' roles as researchers.

EXPERIMENTS

1. Study of components and design of a BSL-III laboratory
2. Filing applications for approval from biosafety committee
3. Filing primary applications for patents
4. Study on steps of a patenting process

SUGGESTED READINGS

1. Bare Act, 2007.Indian Patent Act 1970 Acts & Rules, Universal Law Publishing Co. Pvt. Ltd., New Delhi.
2. Kankanala C (2007). Genetic Patent Law & Strategy, 1st Edition, Manupatra Information Solution Pvt. Ltd. New Delhi.

Semester – VI

(4H – 2C)

16MBU612B MICROBES IN SUSTAINABLE AGRICULTURE AND DEVELOPMENT - PRACTICAL

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External:**60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- Able to relate their knowledge about ecology to its relevance in sustainable agriculture
- Able to evaluate the application of ecological principles and concepts in sustainable agriculture system.
- To know the role of microbes which make crop output more and increase the fertility of crops**.**
- To analyses the degrading microorganisms by various techniques.
- Able to design biogas plant.
- To obtain knowledge in entrepreneur in agricultural area.

COURSE OUTCOME

- Able to relate their knowledge about ecology to its relevance in sustainable agriculture
- Provides detailed idea about biofertilizer production and develop entrepreneur skill related to agriculture field**.**
- Able to device biogas plant
- Students will be annotate various zone in soil profile
- Students will be isolate various degrading microorganisms for agricultural use.
- Criticize the role of soil microbes in crop production.

EXPERIMENTS

1. Study soil profile
2. Study microflora of different types of soils
3. *Rhizobium* as soil inoculants characteristics and field application
4. *Azotobacter* as soil inoculants characteristics and field application
5. Design and functioning of a biogas plant
6. Isolation of cellulose degrading organisms

SUGGESTED READINGS

1. Agrios GN. (2006). Plant Pathology. 5th edition. Academic press, San Diego,
2. Singh RS. (1998). Plant Diseases Management. 7th edition. Oxford & IBH, New Delhi.

Semester – VI

16MBU613A **CELL BIOLOGY - PRACTICAL** **(3H – 1C)**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To study cell structure and functions of organelle.
- Exposure on transportations through cell membrane.
- To focus on different receptors and model of signaling.
- To introduce the concept of cell signaling.
- The course will facilitate in understanding of cell biology by examining common processes and principles in cells.
- Knowledge about detailed structure of cell organelles and electron micro graphs.

COURSE OUTCOME

- To understand the basic concept of cell structure, membrane, cellular functions of different types of cell
- Able to analyses modes of cellular signaling and signal amplification.
- Able to categorize cell internal organs.
- Able to retrieve polypoid stage in vegetables
- Able to predict cancer cells through photomicrograph
- Knowledge about detailed structure of cell organelles and electron micro graphs.

EXPERIMENTS

1. Study a representative plant and animal cell by microscopy.
2. Study of the structure of cell organelles through electron micrographs.
3. Cytochemical staining of DNA – Feulgen.
4. Demonstration of the presence of mitochondria in striated muscle cells/ cheek epithelial cell using vital stain Janus Green B.
5. Study of polyploidy in Onion root tip by colchicine treatment.
6. Identification and study of cancer cells by photomicrographs.
7. Study of different stages of Mitosis.
8. Study of different stages of Meiosis.

SUGGESTED READINGS

1. Hardin J, Bertoni G and Kleinsmith LJ. (2010). Becker's World of the Cell. 8th edition. Pearson.
2. Karp G. (2010) Cell and Molecular Biology: Concepts and Experiments. 6th edition. John Wiley & Sons. Inc.

Semester – VI

16MBU613B **MOLECULAR BIOLOGY - PRACTICAL** **(3H – 1C)**

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 6 Hours

COURSE OBJECTIVE

- To provide an experience for the students in an interdisciplinary research program connecting animal genomics with animal reproduction and biotechnology.
- The course will facilitate in understanding of molecular biology by examining common processes and principles in genes to illustrate complexity.
- To obtain knowledge in resolution and visualization of proteins
- To evaluate genetic material in different samples.
- The student will receive hands-on training in various culturing and molecular techniques for studying microbial diversity and microbial activity.
- To introduce the student to the advanced concepts in molecular biology.

COURSE OUTCOME

- Explores technologies using molecular biology, cell and tissue culture to manipulate the genomes of animals for ways.
- Develop the skills in molecular biology.
- Student capable of explaining process involved in genetic changes and mutations
- The identification of genetic regulatory mechanism and distinguishing different mechanism of gene regulation
- The design of different techniques based on utilizing the genetic mechanism of microbes.
- Hand on experience of different microbial genetic modification strategies.

EXPERIMENTS

1. Study of different types of DNA and RNA using micrographs and model / schematic representations.
2. Study of semi-conservative replication of DNA through micrographs / schematic representations.
3. Isolation of genomic DNA from *E. coli.*
4. Estimation of salmon sperm / calf thymus DNA using colorimeter (diphenylaminereagent) or UV spectrophotometer (A260 measurement).
5. Estimation of RNA using colorimeter (orcinol reagent) or UV spectrophotometer (A260 measurement).
6. Resolution and visualization of DNA by Agarose Gel Electrophoresis.
7. Resolution and visualization of proteins by Polyacrylamide Gel Electrophoresis (SDS-PAGE).

SUGGESTED READINGS

Postgraduate Programme – M.Sc

Microbiology Programme Outcomes

Programme Outcomes of PG Microbiology: Students of all postgraduate microbiology degree Programmes at the time of graduation will be able to

a. Science Observation: Microbiology majors able to discuss science and scientific methodology as a way of knowing. Microbiology majors will make observations, develop hypotheses and design and execute experiments using appropriate methods. They will be able to explain how the nature of science is applied to everyday problems.

b. Laboratory Skills: Microbiology students will master the following laboratory skills: aseptic pure culture techniques, preparation of and viewing samples for microscopy, use appropriate methods to identify microorganisms, estimate the number of microorganisms in a sample and use common lab equipment. They will be able to practice safe microbiology using appropriate protective and emergency procedures. Student able to gain the good knowledge of the development process and the planning process involved in the microbial products and enhance the entrepreneurship.

c. Data analysis skills: Microbiology majors will be able to systematically collect, record and analyze data, identify sources of error, interpret the result and reach logical conclusions. They will be able to appropriately format data into tables, graphs and charts for presentation and publication.

d. Critical Thinking Skills: Microbiology majors will be able to (1) differentiate between fact and opinion, (2) recognize and evaluate author bias and rhetoric, (3) develop inferential skill, (4) recognize logical fallacies and faulty reasoning and (5) make decisions and judgments by drawing logical conclusions using sound quantitative and statistically – basedreasoning.

e. Problem Solving Skills: Microbiology majors will be competent problem-solvers. They should be able to assess the elements of a problem and develop and test a solution based on logic and the best possible information. Microbiology students should be able to analyze and interpret results from a variety of microbiological methods and apply these methods to analogous situations. They will use mathematical and graphing skills and reasoning to solve problems in microbiology

Programme Specific Outcomes (PSOs)

f. Upon master graduation, Microbiology majors will mastered a set of advanced skills, which would be useful to function effectively as professionals and to their continued development and learning within the field of Microbiology.

g. Our candidates will be able to explain why microorganisms are ubiquitous in nature, inhabiting a multitude of habitats and occupying a wide range of ecological habitats.

h. Able to cite examples of the vital role of microorganisms in biotechnology, fermentation, medicine and other industries important to human well being.

i. Able to demonstrate that microorganisms have an indispensible role in the environment, including elemental cycles, biodegradation etc.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

Programme Educational Objectives of PG Microbiology: The major objectives of the postgraduate course is

PEO-I: To provide detailed knowledge of Microbiology (bacteriology, virology, parasitology and mycology) and their application fields (Medical, Agricultural and Marine Microbiology). To understand the beneficial and harmful role of microorganisms in the environment and in the industries.

PEO-II: To understand the fundamentals of physiological reactions including metabolic pathways and biochemical reactions in microorganisms. To understand the fundamental concepts of immunology, biochemistry, biotechnology and genetics etc.

PEO-III: To develop human resource and entrepreneurs in Microbiology with the ability to independently start their own ventures or small biotech units in the field of biotechnology.

PEO-IV: Understand modern microbiology - practices and approaches with an emphasis in technology application in pharmaceutical, medical, industrial, environmental and agricultural areas.

PEO-V: Gain experience with standard molecular tools and approaches utilized: manipulate genes, gene products and organisms. Become familiar with handling of Laboratory animals for the research purpose. Interpret differences in data distributions via visual displays.

PEO-VI: Become familiar with public policy, biosafety, bioinformatics and intellectual property rights issues related to microbiology applications.

Semester – I

16MBP101 FUNDAMENTALS OF MICROBIOLOGY AND CLASSIFICATION

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURE OBJECTIVES

- The course in designed to provide a basic understanding on the fundamental aspects of microbiology from historical development.
- To improve the proficiency and knowledge of the candidate on the study of microbial techniques for well exploitation of microorganisms.
- To comprehend the various methods for identification of unknown microorganisms
- This course enables the students to understand various physical and chemical means of sterilization and also learn various techniques for isolation of pure cultures.
- This course figures out them to know about culture collection and maintenance of microbial cultures.
- The beneficial and harmful manifestations of microorganisms especially of bacteria and their role in microbial mineralization and disease processes

COURSE OUTCOME (CO'S)

1. Understand the basic microbial structure and functions of various physiological groups of prokaryotes and eukaryotes.
2. Learn the theory and practical skills in microscopy handling and staining techniques know various culture media and their applications.
3. Study microbial nutritions- Autotrophy and heterotrophy modes of nutrition.
4. Identify the unknown organisms by using microbial tools.
5. Demonstrate electricity generation from the organic matter.
6. Understand the microbial transport systems and the modes and mechanisms of energy conservation in microbial metabolism – Autotrophy and heterotrophy

UNIT – I

History and scope of Microbiology. Microbial evolution and Diversity – Taxonomic ranks - Classification system – Phenetic and Phylogenetic Haeckel's three–kingdom concept, Whittaker's Five-kingdom concept, Three-domain concept of Carl Woese.

UNIT – II

Microscopy –Simple, Compound, Dark-field, Phase contrast, Fluorescent and Electron microscopes. (SEM and TEM), Confocal microscopy – Principles and their applications. Stains and Staining techniques: Simple and Differential staining methods.

UNIT – III

Classification of bacteria - Bergey's manual and its importance. Classification of algae Clamydomonas, volvox, diatoms, red and brown algae. Classification of virus – DNA, RNA viruses. Classification and taxonomy of fungi – Alexopolous. Economical importance of Fungi. Classification of protozoa – *Entamoeba histolytica*, *Giardia*, *Trichomonas*, *Plasmodium*.

UNIT – IV

Sterilization and disinfection, Culture methods: Auxenic and synchronous, aerobic and anaerobic, culture media and nutritional types, growth curve, generation time and growth kinetics. Factors influencing microbial growth. Preservation methods and quality control.

UNIT – V

Modern Microbiology: Molecular taxonomy, 16S/18S rRNAs and its importance in identification of microorganisms. Phylogenetic tree, Molecular tools in assessing microbial diversity, probiotics and their applications, microbial fuel cells.

Semester – I

16MBP102 MICROBIAL PHYSIOLOGY AND METABOLISM 4H–4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To gain the knowledge with the various inner and outer structures of prokaryotes and eukaryotes in detail.
- To provide information on sources of energy and its utilization by microorganisms. Microorganisms play important role in environment as producers, consumers and decomposers.
- To impart knowledge on metabolic function and biochemical reaction going on inside the microbial cell.
- To teach metabolic pathways, their regulation and engineering, and methods used in their elucidation.
- To teach students about cell cycle, growth and methods to determine microbial growth.
- Understand the microbial transport systems and the modes and mechanisms of energy conservation in microbial metabolism – Autotrophy and heterotrophy

COURSE OUTCOME (CO'S)

1. The students will be able to understand and predict the various metabolic reactions in microbial cell.
2. This will make them to predict the intermediate products which can be employed in industrial production processes.
3. The students will be able to know how bacterial and archaeal structure lead to function, how metabolic processes are regulated.
4. The course makes them to understand how microbes respond to environmental stressors, and how microbes can be manipulated to enhance their growth or the production of desired products.
5. Know the various Physical and Chemical growth requirements of bacteria and get equipped with various methods of bacterial growth measurement
6. The students will be able to understand how the organisms communicate to the population by using various mechanisms.

UNIT – I

Microbial Anatomy - Prokaryotic cell structure and organization - cell wall, plasma membrane, cytoplasmic matrix, inclusion bodies, ribosome, nucleiod, capsule, slime layers, S layers, pili, fimbriae, flagella and motility. Eukaryotic cell structure and its organelles. Lichens and microalgae: Structural organization and their properties. Mycoplasma. Basic structure of viruses.

UNIT – II

Formation of specialized structures: Structure of bacterial endospore, endospore formation in *Bacillus* spp. Exospore formation in *Streptomyces*. Sporulation in fungi: *Aspergillus* sp., *Penicillium* sp. Spore cycle, factors affecting spore formation. Biofilm and biosurfactant production in bacteria

UNIT – III

EMP, HMP and ED pathway, TCA cycle, Glyoxylate cycle. Aerobic respiration and anaerobic respiration. Generation of energy: Substrate level and oxidative phosphorylation – ATP generation.

UNIT – IV

Biosynthesis of fatty acids, nucleotides, amino acids, phospholipids. Archaeal lipids. Cell wall biosynthesis of Gram positive and Gram negative bacteria. Cell membrane synthesis and synthesis of secondary metabolites. Toxins – characterization, mechanism of action.

UNIT – V

Photosynthetic bacteria – Oxygenic (Cyanobacteria) and anoxygenic (Purple/green sulfur and non-sulfur bacteria). Bacterial photosynthetic pigments. Methanogenesis – assimilation of carbondioxide. Bioluminescence and Quorum sensing – mechanism, importance and applications.

Semester – I

16MBP103 MOLECULAR GENETICS 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- The course presents methods and experimental tools used in modern molecular genetics with emphasis on prokaryotes and eukaryotes.
- The theoretical grounds of methods and their applications in research will be discussed.
- The course also deals with the genome structure, stability, organization, and its expression.
- To provide molecular mechanisms underlying mutations, detection of mutations and DNA damage and repair mechanisms
- The course includes among others model systems, genetics behind complex diseases, identification of disease genes and different types of mutations.
- It helps the students to explore genetic engineering techniques.

COURSE OUTCOME (CO'S)

1. This course allows the candidate to recollect the basics of molecular genetics and apply a cognitive thinking on the application-oriented sectors of genetics.
2. Students would be able to practically apply this knowledge in different sectors with possibilities ranging from the treatment of human diseases to the development of novel medicines.
3. A thorough understanding of the process of translation and operons along with recombination of DNA.
4. An in-depth study of mutagenesis and genetic analysis with gene mapping.
5. Have a conceptual knowledge about DNA as a genetic material, enzymology, and replication strategies.
6. Full understanding of all aspects of all-important techniques used for the study of biomolecules.

UNIT – I

Genetics – historical introduction – Mendelian principles – nucleic acid as genetic material Experimental evidence. The duplex DNA – chemical and physical structure of DNA – circular and super helical DNA - different forms of DNA. DNA replication – enzymology of DNA replication – different modes, models and types of DNA replication – Eukaryotic DNA replication.

UNIT – II

Mutagen, mutagenesis and mutation. Luria Delbruck experiment and its significance. Molecular basis of mutation. Spontaneous and induced mutations. Different types of mutation, mutant detection, mutant selection and carcinogenicity testing. DNA damage – types of damage (deamination, oxidative damage, alkylation, Pyrimidine dimers) – DNA repair mechanism (base excision, nucleotide excision, recombination repair, SOS repair).

UNIT – III

Genetic code: DNA transcription in prokaryotes and eukaryotes. Trancriptional control and modification system – RNA translation in prokaryotes and eukaryotes. Polypeptide synthesis (maturation and processing of RNA) – Translational modification. Regulation of gene expression – Operon model (Lac, Trp, Ara) – Regulation of gene expression in eukaryotes.

UNIT – IV

Genetic recombination in bacteria – conjugation, transformation, transduction. Linkage and genetic mapping. Phage genetics (Replication cycle) – Phage T4 mutants (detection and isolation) –– Genetic map of T4 phage.

UNIT – V

Yeast genetics – Life cycle, metabolism, genome and extra chromosomal element. Genetic nomenclature in yeast. Tetrad analysis, Petite mutants (mutant isolation and complementation). Genetic mapping in yeast, *Neurospora* and *Drosophila*.

Semester – I

16MBP104 BIOINSTRUMENTATION 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: **40** External: **60** Total: **100**
End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Introduce the basic concept of qualitative and quantitative analysis of a given sample
- To Study various spectroscopic techniques and its instrumentation.
- To know the concept of separation science and its applications.
- To understand the basic laboratory skills that are essential for beginning-level employment in clinical, pharmaceutical, microbiology, biochemistry and biotechnology laboratories.
- To impart the concept of radiochemical analysis along with industrial analyzers
- To understand working of different laboratory equipment's used in microbiological laboratories

COURSE OUTCOME (CO'S)

1. This enables students to be able to explain bioinstrumentation techniques, design and application.
2. To know the concepts and operation of various lab instruments and related terms.
3. Acquire knowledge and lab skills to perform experiments in laboratory.
4. Connect the concepts of physics, chemistry and engineering principles in the instrumentation.
5. The students will be able to know all the basic principles, technology and applications of various instruments in life science.
6. Comprehend the techniques and the underlying principles in bioinstrumentation.

UNIT – I

Spectroscopy – properties of electromagnetic radiations. Instrumentation and applications of – UV-Visible spectrophotometer, spectrofluorimeter, atomic spectroscopy, FTIR, NMR spectroscopy, MALDI-TOF and flow cytometer.

UNIT – II

Centrifugation: principle and types of centrifuges. Principles and applications of analytical and preparative centrifuges. Relative molecular mass determination and sedimentation coefficient. Sub-cellular Fractionation of cellular components. Density gradient and ultra centrifugation.

UNIT – III

Chromatography & Microscopy – principle, instrumentation and applications of ion exchange, affinity, gel filtration, Low pressure liquid chromatography (LPLC) and high performance liquid chromatography (HPLC) and fast protein liquid chromatography (FPLC), gas liquid chromatography-mass spectroscopy (GC-MS). Microscopy SEM and TEM.

UNIT – IV

Electrophoresis - principle, instrumentation and applications of agarose gel electrophoresis, native PAGE, sodium dodecyl sulphate - polyacrylamide gel electrophoresis (SDS-PAGE), isoelectric focusing, immuno electrophoresis, pulse field gel electrophoresis, capillary electrophoresis, gel documentation – applications.

UNIT – V

Radioisotopic techniques – introduction, nature of radio activity, types and rate of radioactive decay, units of radio activity, detection and measurement of radio activity. Principle, instrumentation and applications of Geiger-Muller counter, solid and liquid scintillation counter and autoradiography. Biosafety methods in radioactive laboratory.

16MBP105A **MARINE MICROBIOLOGY** **Semester - I**
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide students with basic knowledge on the biology and ecology of marine microorganisms, and their ecological role.
- To know the basic biology of marine microorganisms and their activities
- To impart modern techniques for the characterization and study of marine microorganisms and microbial communities.
- To understanding the ecological role of marine microorganisms and marine microbial communities.
- To know the main techniques of modern use necessary for the characterization and study of marine microbes.
- To understand basic biological processes that occur in and between organisms in nature.

COURSE OUTCOME (CO'S)

1. Capable of describing and explaining both biological interaction processes and their importance to ecosystems.
2. To acquire knowledge of the most common research methods used to develop our knowledge of biological processes.
3. learn to work independently in collecting and analysing scientific data, both in the field and in the laboratory.
4. Understand the architecture of marine ecosystem and its essential role
5. Specify the biological significance of biomolecules in metabolism
6. To understand computer applications and Bioinformatics

UNIT – I
Marine microorganisms: collection, preservation, enumeration (total and viable counts), isolation of culture and identification based on morphological, physiological and biochemical characteristics. International and national collection centres.

UNIT – II
Extremophiles: Thermopiles, basophiles, halophiles, psychrophiles, acid – alkalinophiles, oligotroph, toxitolerant, xerotolerant, endolith – Extremophiles and their environment, biodiversity. Genomics of extremophiles, phylogeny of extremophiles, 16S RNA classification in mitochondrial DNA genome, RAPD, RFLP studies.

UNIT – III
Microbiology of degradation of xenobiotic environment: Ecological considerations, decay behaviour, degradative plasmids, hydrocarbons, oil pollution, surfactants, pesticides, Bioremediation:- Factors

affecting bioremediation – role of microbes in the marine nutrient cycles – diseases of marine organisms and its impact on marine biodiversity.

UNIT – IV

Brief account of photosynthetic and accessory pigments: Chlorophyll – bacterial chlorophyll – carotenoids – rhodopsin, phycobilliprotein, carbohydrates, anabolism – autotrophy – photosynthesis – autotrophic generation of ATP, fixation of CO_2 – Calvin cycle– C_3 and C_4 pathway.

UNIT – V

Bar coding of marine organisms: Genome sequencing and physical mapping of genome. Composting of domestic, agricultural and industrial wastes, vermicomposting. SCP production; Mushroom cultivation.

Semester - II

16MBP105B COMPUTER APPLICATIONS AND BIOINFORMATICS 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To detail the importance of computer in field of life sciences.
- To obtain good understanding about the interpretation of biological data base. To uptake knowledge in latest tools and technology.
- To describe the history, scope and importance of Bioinformatics and role of internet in Bioinformatics
- Provide an overview of the application areas of bioinformatics, with a focus on the topics that will be taught in the course
- To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis
- Classify different types of Biological Databases

COURSE OUTCOME (CO'S)

1. The students will have an understanding about the information on the search engines and various software tools involved in bioinformatics.
2. Additional knowledge on different operating systems would enable the candidate to work with versatility.
3. Provides computational skill on search engines and various software tools involved in bioinformatics
4. It will impart computational based techniques which includes genomics and proteomics in Bioinformatics.
5. Retrieve information from available databases and use them for microbial identifications and drug designing
6. Gain ability to modify gene and protein structures in simulated systems.

UNIT – I

Information networks-internet, web browsers, HTTP,HTML and URLs. EMBnet – NCBI, Virtual tourism. Introduction to Operating systems like Windows, UNIX & LINUX - Computer Viruses – Overview and prevention.

UNIT – II

Bioinformatics tools - Global Vs local alignment – Similarity searching –Pair wise alignment and multiple alignments – Biological Databases – Literature, Sequence and Structure – identification and retrieving data from databases.

UNIT – III

Protein information resources –primary sequence database, Composite protein sequence database, secondary database, and Composite protein structure database. Protein structure prediction - Proteomic tools at ExPASy server.

UNIT – IV

Protein structure comparison and classification – RNA structure analysis – Plasmid mapping and Primer designing– Structure visualization softwares – Phylogenetics – Tree types and construction methods.

UNIT – V

DNA sequencing –Specialized genomic resources. DNA microarray – principles and databases – Genomics and Proteomics – genes prediction, splices sites and regulatory regions – Drug designing and Commercial Bioinformatics.

Semester - III

16MBP105C **BIOCHEMISTRY** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide the knowledge on basics of biochemistry and its applications and to highlight the technical skill.
- To describe the classification and functions of lipids.
- To summarize the structure and classification of enzymes
- To state the Structure and types of DNA
- To analyse the functions and properties of phosphoglycerides
- To understand about storage and structural polysaccharides.

COURSEOUTCOME

1. Understand the structures of enzymes, proteins, carbohydrates and fats
2. Understand the functions of biomolecules
3. Analyze the process of metabolism
4. Understand of nucleic acids and their importance to combine and analyses information.
5. Explain the structure and mechanism of enzyme action
6. Summarize the DNA & RNA structure and base pairing schemes.

UNIT - I
Definition and scope of biochemistry, cellular basis of life, molecular composition of cells, elements and compounds of life Biochemical functions of cell organelles.

UNIT - II
Proteins- protein content of various type of cells, biological role of proteins; primary, secondary, tertiary, quaternary structure of proteins. Classification of proteins.

UNIT - III
Saccharides - Mono, oligo and polysaccharides; isomerism, chain and ring structure of carbohydrates, structure of starch, cellulose, glycogen and mucopolysaccarides.

UNIT - IV
Fatty acids- properties and nomenclature, essential and non-essential fatty acids. Classification of lipids and storage of lipids.

UNIT - V
DNA- Properties, structure, and importance. Prokaryotic and Eukaryotic cell differences. DNA as genetic material and genetic code

Semester – I

16MBP111 BASIC PRACTICAL – I 4H – 2C

Instruction Hours / week: L: 0 T: 0 P:4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- This course is put forward with the objectives of equipping the candidates with practical knowledge on basic techniques involved in the isolation, characterization and identification of different types of microorganism.
- Know various Culture media and their applications and also understand various physical and chemical means of sterilization.
- Know General bacteriology and microbial techniques for isolation of pure cultures.
- Master aseptic techniques and be able to perform routine culture handling tasks safely and effectively.
- Comprehend the various methods for identification of unknown microorganisms.
- Understand the microbial transport systems and the modes and mechanisms of energy conservation in microbial metabolis

COURSE OUTCOME

1. A student able to skillfully isolate and identify the microorganisms using different microbiological techniques needed in laboratory.
2. To enhance the ability of the student skills in medical laboratories and research sectors.
3. Demonstrate practical skills in the use of tools, technologies and methods common to microbiology.
4. To apply the scientific method and hypothesis testing in the design and execution of experiments
5. To develope theoretical and practical skills in the design and execution of experiments.
6. Know the various Physical and Chemical growth requirements of bacteria and get equipped with various methods of bacterial growth measurement.

EXPERIMENTS

1. Micrometry
2. Measurement of pH
3. Staining techniques: Simple, Gram, Negative and Endospore
4. Motility determination - Hanging drop and SIM inoculation

5. Cultivation of anaerobic microorganisms – Wrights tube – Mc Intosh anaerobic jar - roll tube methods.
6. Permanent slide preparation
7. Lactophenol cotton blue mounting of fungi - *Aspergillus* sp, *Mucor* sp, *Rhizopus* sp, *Fusarium* sp, *Penicillium* sp
8. Measurement of microbial growth – Viable count – Direct count – Turbidity methods
9. Biochemical characterization
   a) Indole
   b) MR
   c) VP
   d) Citrate utilization tests
   e) TSI test
   f) Catalase
   g) Oxidase
   h) Urease
   i) Nitrate
   j) Hydrogen sulphide production test
   k) Litmus milk reduction test
   l) Carbohydrate fermentation tests
   m) Amino acid utilization
   n) Hydrolysis of polymers- Starch, Lipid, Casein, Gelatin.

Semester – I

16MBP112 **BASIC PRACTICAL – II** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To acquire skill on the different molecular mechanism of gene transfer, mutations and separation of nucleic acids.
- This course is put forward with the objectives of equipping the candidates with practical knowledge on basic techniques.
- To impart skills of isolation, characterization and identification of different types of microorganism.
- Know various Culture media and their applications and also understand various physical and chemical means of sterilization.
- To make students understand the principles of Genetics
- Students will learn the basic principles of inheritance at the molecular, cellular and organismal levels.

COURSE OUTCOME

1. A student undertaking this course will be learning the principles behind the molecular techniques which would enable him to work in competent molecular biology based laboratories.
2. Imparts knowledge on the different aspects of genetics and pedigree analysis.
3. Students will apply their knowledge of to selected examples of changes or losses in cell function.
4. Identify the organs and tissue systems of plants,
5. and explain their respective function.
6. Impart knowledge on applications of microorganisms in various fields

EXPERIMENTS

1. Spontaneous Mutation – gradient plate technique
2. Induced Mutagenesis-chemical and physical - UV
3. Replica plating technique.
4. Transformation in Bacteria
5. Bacterial Conjugation
6. Induction of Lac operon
7. Measurement of growth-one step growth curve using a T even phage
8. Titration of phages (T4)
9. Nuclear staining for nucleic acid identification.
10. Spectrophotometric estimation of protein – BSA
11. Analysis of amino acid by Paper chromatography
12. Analysis of amino acid by Thin layer chromatography

13. Purification of proteins by column chromatography
14. Analysis of amino acid by HPLC – Demonstration

Semester – II

16MBP201 **VIROLOGY** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Virology, often considered a part of microbiology or of pathology, is the study of biological viruses and virus like agents.
- Viral structure, classification and evolution, their ways to infect and exploit cells of virus reproduction, the disease they cause.
- The techniques to isolate and culture them and their potential uses in research and therapy.
- To know how viruses are classified
- To understand the architecture of viruses
- To understand the interactions between viruses and the host immune system

COURSE OUTCOMES

1. Describe the structure and replication strategies of the viruses, the processes of entry into cells, control of gene transcription and where relevant translation and gene product stability, control of and mechanism of genome replication, virion assembly and egress from the cell.
2. Define the process of virus latency and describe in molecular terms control of the process and activation of viral genomes during reactivation.
3. Describe the growth behavior differences between normal cells and cells transformed by oncogenic DNA and RNA viruses.
4. Integrate experimental strategies learned in the context of viral systems into the design of experiments involving other systems.
5. Discern the replication strategies of representative viruses from the seven Baltimore classes
6. To understand the interactions between viruses and the host immune system

UNIT – I

Historical perspective of virology - Scope of virology -Viral classification and properties of viruses – Replication of viruses, cultivation of viruses (animal inoculation, Embroyanated egg and tissue culture) - properties of viroids and Prions.

UNIT – II

Animal viruses- DNA viruses - morphology, replication, pathogenesis and laboratory diagnosis of Pox virus, Adeno virus, Hepatitis viruses – type A,B and D. Herpes simplex viruses, oncogenic viruses- Papova virus,- oncogenes and Oncogenesis.

UNIT – III

Animal viruses - RNA viruses - morphology, replication, pathogenesis and laboratory diagnosis of Poliovirus. Rabies virus, Influenza virus, mumps virus, Measles virus and rubella virus, Retro virus - HIV virus. Dengue and Japanese Encephalitis, SARS, Swine Flu.

UNIT – IV

Plant viruses – RNA viruses – TMV, Cowpea mosaic virus, Bromomosaic viruses, Satellite viruses – Double stranded DNA viruses - CaMV – Single stranded DNA viruses – Gemini virus. Structure and replication of Bacteriophage (T4) – Filamentous phage (ΦX174).

UNIT – V

Common type of hospital infections – hospital waste disposal. Viral vaccines and interferons - Antiviral drugs - strategies to develop AIDS vaccines - Rabies vaccines preparation (animal and cell culture) and their immunization dosage.

5. Discern the replication strategies of representative viruses from the seven Baltimore classes
6. To understand the interactions between viruses and the host immune system

UNIT – I

Laboratory precaution and guidelines – Aseptic collection – transportation – handling and examination of pathological specimens – methods of isolation, identification and interpretation of pathogenic organisms – antibiotic susceptibility testing..

UNIT – II

Infections – types – methods – infectious disease cycle. Definitions of Epidemics, Endemics Pandemics and investigation of epidemics and control. Definition of pathogens, Saprophytes and Copmmensals. Quality control in microbiology lab.

UNIT – III

Gram positive organisms: Morphology, cultural characteristics, antigenic property, pathogenecity, laboratory diagnosis and treatment. *Staphylococcus* sp., *Streptococcus* sp., *Bacillus* sp., *Corynebacterium* sp., *Clostridium sp.* and *Mycobacterium* sp.

UNIT – IV

Gram negative organisms*:* Morphology, cultural characteristics, antigenic property, pathogenecity, laboratory diagnosis and treatment. *E.coli*, *Klebsiella* sp., *Proteus* sp., *Pseudomonas* sp., *Vibrio* sp., *Salmonella* sp., *Shigella* sp., *Treponema* sp., *Neisseria* sp. and *Haemophilus* sp.

UNIT – V

Nosocomial infection – Urinary tract infection, Respiratory tract infection, Sexually transmitted disease – Immunoprophylaxis – Vaccines and antibiotics.- Phage typing and bacteriocin typing.

Semester – II

16MBP203 MICROBIAL TECHNOLOGY AND INTELLECTUAL PROPERTY RIGHTS **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Microbial technology is concerned with the industrial processing of materials by microorganisms to provide desirable products or serve other useful purposes.
- This paper emphasizes the application of biological systems to the manufacturing and service industries or the use of biological processes within the framework of technical operations and industrial production.
- It creates awareness on the Intellectual property rights and patenting of biotechnological processes.
- This course will provide technical skill majorly deals with DNA.
- To familiarize the students, with the principles of bioethical concepts
- To emphasize on IPR issues and need for knowledge in patents in biotechnology.

COURSE OUTCOME (CO'S)

1. To learn the basic tools in recombinant technology
2. To understand the various concepts of cloning vectors
3. To learn the cloning strategies
4. To familiarize the students, with the principles of bioethical concepts
5. To emphasize on IPR issues and need for knowledge in patents in biotechnology.
6. To aware students with current research.

UNIT – I

Introduction to microbial technology, restriction enzymes – nomenclature – types – and its properties, isolation of DNA, plasmids and RNA. Handling and quantification of nucleic acids, radiolabelling and non radiolabelling of nucleic acids, gel electrophoresis - Blotting techniques – Southern, Northern and Western blotting techniques.

UNIT – II

Cloning vectors: Plasmid as cloning vectors - pBR322, Bacteriophage - □, M13; Cosmid, phagemids. Yeast vector. Expression vectors. Prokaryotic hosts: *E.coli*, Eukaryotic hosts: Yeast cell. Gene cloning - basic steps, cloning construction of cDNA, selection and screening method of recombinants. Biolabelling of genes and proteins.

UNIT – III

Trrangenic plants: Methodology, development of herbicide resistance plants, delayed fruit ripening, Biocontrol agents - Insecticidal toxin of BT, cry gene and baculovirus. Trangenic animals.

Methodology, development of transgenic mice – its application. DNA diagnostic in medical forensics. Biosafety and Bioethics.

UNIT – IV

Patenting – fundamental requirements – patenting multicellular organisms – patenting and fundamental research. Patenting of biological materials, Product patents, conditions for patenting, Patenting of liveforms, regulating recombinant technology, Food and food ingredients. Trade secrets. How do write a patent?

UNIT – V

Discrepancies in biotechnology / chemical patenting. IPR – historical perspective – recent developments – IPR in India, IPR and the rights of farmers in developing countries.

Semester – II

16MBP204 ENVIRONMENTAL AND AGRICULTURAL MICROBIOLOGY 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To educate the students about concepts of designs of water distribution systems, sewer networks, working principles and design of various physical, chemical and biological treatment systems of water and wastewater.
- To study about the biofertilizers, plant disease and increasing soil fertility.
- To impart a skilled knowledge on Microbes and environment and ecological importance.
- The main goal is to know and understand the role of microbes in biogeochemical processes in different ecosystems. The students will learn the basic microbiological principles, the methods in microbial ecology and their theoretical and practical use.
- The knowledge can give the base for understanding processes and changes in the environment.
- The students can get some skills to recognise the ecological problems and critical evaluation of the human impacts on pollution, climate changes and as well as environmental protection.

COURSE OUTCOME (CO'S)

1. This course will provide the student insights into these invaluable areas of Environmental microbiology, which play a crucial role in determining its future use and applications in environmental management.
2. Students able to know detailed idea about biofertilizer production and plant disease.
3. Students able to become Entrepreneur after understanding this process and product development.
4. This course will determine microbial role in nutrient cycling
5. This course can able to determine water quality.
6. It will explain the degradation of natural organic compounds and selected pollutants in the environment.

UNIT – I

Aquatic environment - microbiology of water - water pollution and water borne pathogens. Bacteriological examination of water, indicator organism. Microbiology of sewage. Chemical and biochemical characteristic of sewage. methods of sewage treatment - physical screening, chemical, biological (sludge digestion; activated sludge, aerating filters, oxidation pond).

UNIT – II

Microbiology of air - Microbial contaminants of air, sources of contamination, microbial indicators of air pollution. Enumeration of bacteria in air. Air samplers and Sampling techniques. Air sanitation.

UNIT – III

Bioremediation – contaminated soil, aquifers, marine pollutants, air pollutants, stimulation of oil spills degradation. Bioremediation of air pollutants. Bioleaching – recovery of metal from ores – oxidation of minerals – testing for biodegradability.

UNIT – IV

Biological nitrogen fixation - symbiotic and non-symbiotic microorganisms, root nodule formation, nitrogen fixers, hydrogenase, Nitrogenase, *Nif* gene regulation. Biochemistry of nitrogen fixation, Rhizosphere- R: S ratio, Interaction of microbes with plants. Bioconversion of agricultural wastes.

UNIT – V

Biofertilizer - Application of biofertilizers and biomanures – A combination of biofertilizer and manure applications with reference to soil, seed and leaf sprays. Laboratory and field application; Cost-benefit analysis of biofertilizer and biomanure production.

Semester - III

16MBP205A **CELL BIOLOGY** **4H - 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** External: **100** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To study cell structure, functions of organelle and gain exposure on transportations through cell membrane and to focus on different receptors and model of signaling.
- Students will understand the structures and purposes of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles.
- Students will understand how these cellular components are used to generate and utilize energy in cells.
- To gain the knowledge base in genetics, molecular biology and cell physiology.
- To engage the students in review of scientific literature in the areas of cell mediated biomedical studies.
- Conceptualize and describe protein structure, folding and sorting

COURSE OUTCOME

1. Students upon completion of this paper will have clear knowledge on various cellular functions such as transportation and signaling.
2. It will enable the students to enter into cellular function level research for their future.
3. Students will understand the cellular components underlying mitotic and meiotic cell division.
4. Students will apply their knowledge of cell biology to selected examples of changes or losses in cell function.
5. Students will get the knowledge of common and advanced laboratory practices 7in cell and molecular biology
6. Conceptual knowledge of properties, structure, function of enzymes, enzyme kinetics and their regulation, enzyme engineering, Application of enzymes in large scale industrial processes

UNIT – I

Cell- Definitions and properties, cell theory. Difference between prokaryotes and eukaryotes. Ultrastructure of eukaryotic cell - plant and animal. Bacterial cell wall structure and composition and their functions.

UNIT – II
Plasma membrane - structure and functions. Transportaion – types and methods. Role of microtubules and microfilaments.

UNIT – III
Cell organelles – Endoplasmic reticulum, Golgi complex, Mitochondria, Chloroplast, Ribosomes, Lysosomes, Peroxisomes, Nucleus and Vacuoles.

UNIT – IV
Mitosis – properties and significance, mitotic cell division and five phases of mitosis.

UNIT – V
Meiosis - properties and significance, Phases of meiosis and Cellular aging:

16MBP205B QUALITY ASSURANCE AND QUALITY CONTROL 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To inculcate the quality standards and the quality control practice followed in the industry.
- To bring awareness about biosafety and to enhance the entrepreneurship and employability.
- Knowledge of the principles and documentation of the quality system is a prerequisite for the course.
- Develop goal-oriented standards, policies, and procedures based on user-defined data quality requirements.
- Confirm that draft standards are acceptable to all users.
- Ensure that developed standards conform to the primary goals of the organization.

COURSE OUTCOME

1. Set up and Assess Food Quality Assurance Plans.
2. Create and Critically Evaluate quality specifications for raw materials, and associated final product and appropriate packaging.
3. Design and critically evaluate appropriate testing and recording procedures for raw materials and associated Final product.
4. Design, and evaluate processing documentation including Standard Operating procedures.
5. To realize the importance of significance of quality
6. Identify requirements of quality improvement programs

UNIT - I

An introduction to industrial microbiology. Definition of Quality assurance- roles and responsibilities of Quality assurance in industrial Microbiology. Roles and responsibilities of Quality control in industrial Microbiology.

UNIT - II

Antimicrobial agents – Definitions, properties, mode of action and applications. Antimicrobial agents for external usage - Chemical antimicrobial agents, synthetic antimicrobial agents, naturally antimicrobial agents.

UNIT - III

Sterilization – Types and methods of sterilization. Sterility testing and assessment of Microbial Contamination. Quality parameter to asses Natural products, Nutraceutical product, Pharmaceutical products.

UNIT - IV

Disinfection – Types and methods. Disinfection agents- properties and mode of action (Phenol, isopropyl alcohol and ethanol). Antibiotics and antimicrobial drug resistance, search for new antimicrobial agents.

UNIT - V

Quality assurance and Quality control – pharmacopeias, quality checking, routine examination and validation of industry. International disinfectant testing protocols, assessment of biocide effectiveness.

Semester - II

15MBP205C **BIOPROCESS ENGINEERING** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- This course encompasses the use of microorganisms in the manufacture of food or industrial products.
- The use of microorganisms for the production of food, either human or animal, the microorganisms used in bio processes may be natural isolates; laboratory selected mutants or genetically engineered organisms.
- To know the basics and concepts of various biotechnological related terms
- Elucidate the significance of transgenic plants as bioreactors for the production of enzymes.
- Address bioethical and biosafety issues related to plant transgenics
- Elucidate the molecular techniques involved in gene manipulation and rDNA technology

COURSE OUTCOME

1. This course will enable the students to design the various microbial fermentation products and their production, purification for various applications
2. To know the process protocol for the, synthesis and characterization of nanoparticles
3. Explain the gene transfer methods for the production of transgenic animals
4. Gain experimental knowledge to perform animal biotechnology related experiments
5. Explain the application of biotechnology in medical and its allied fields, gene therapy, genetic counseling
6. Address the bioethical issues & concerned linked to medical biotechnology

UNIT–I

Design of a basic fermenter, bioreactor configuration, design features, computer control of fermentation process, measurement and control of process. Reactors for specialized applications: Tube reactors, packed bed reactors, fluidized bed reactors, cyclone reactors, trickle flow reactors, their basic construction and types for distribution of gases.

UNIT – II

Transport phenomena in fermentation: Gas- liquid exchange and mass transfer, oxygen transfer, critical oxygen concentration, heat transfer, aeration/agitation, its importance. Sterilization of Bioreactors, nutrients, air supply, products and effluents, process variables and control, scale-up of bioreactors.

UNIT – III

Growth of cultures in the fermenter. Importance of media in fermentation, media formulation and modification. Kinetics of growth in batch culture, continuous culture with respect to substrate utilization, specific growth rate, steady state in a chemostat, fed-batch fermentation, yield of biomass, product, calculation for productivity. Storage of cultures for repeated fermentations, scaling up of process form shake flask to industrial fermentation.

UNIT – IV

Biomass separation by centrifugation, filtration, flocculation and other recent developments. Cell disintegration: Physical, chemical and enzymatic methods. Extraction: Solvent, two phase, liquid extraction, whole broth, aqueous multiphase extraction. Purification by different methods. Concentration by precipitation, ultra-filtration, reverse osmosis, Drying and crystallization, Column chromatography, HPLC and GC.

UNIT – V

Isolation, selection and improvement of microbial cultures. Strain improvement for the selected organism: Use of recombinant DNA technology, protoplast fusion techniques for strain improvement. Improvement of characters other than products and its application in the industry. Preservation of cultures after strain improvement programme.

Semester – II

16MBP211 **ADVANCED PRACTICAL – III** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To obtain outstanding practical skill in various techniques in Microbial Biotechnology and Agricultural Microbiology.
- The course provides the basics of microbiology to build a foundation for more advanced studies in microbiology and biotechnology
- In this course students will learn key methods of microbial production (e.g. fermentation, recombinant protein production and purification).
- Practice in research project planning, in different methods for biotechnology, and for conducting scientific research project.
- To develop an understanding of the major principles of and current issues in the several topical areas that collectively constitute Microbiology Techniques.
- It will distinguish the students to acquire practical skills on advanced laboratory analysis.

COURSE OUTCOME (CO'S)

1. This practical course renders a candidate the knowledge of advanced techniques involved in Microbial Biotechnology and Agricultural Microbiology.
2. Candidates would be able to understand and perform molecular techniques which forms an integral part of core Microbiology.
3. This practical course renders a candidate the knowledge of advanced techniques involved in microbial biotechnology.
4. He/she will be able to judge how microbes and enzymes could be applied in industry.
5. Candidates would be skilled enough to perform a molecular technique which forms an integral part of industrial microbiology.
6. Students can develop entrepreneur skills for applications in biotechnology based industries.

EXPERIMENTS

1. Isolation of plasmid DNA from Bacteria
2. Isolation of chromosomal DNA from Bacteria
3. Determination of molecular weight by SDS Polyacrylamide gel electrophoresis
4. Isolation of microbes from soil
5. Isolation of free-living N_2 fixation from soil - Azotobacter
6. Isolation of symbiotic nitrogen fixers from root odule - Rhizobium
7. Isolation of phosphate solublisers, ammonifiers and denitrifers
8. Study of Mycorrhizae, Cynobacteria and Azolla

9. Determination of Dissolved oxygen of water
10. Determination of BOD (Biochemical Oxygen Demand) of water
11. Determination of COD (Chemical Oxygen Demand) of water

REFERENCES

Semester - II

16MBP212 **ADVANCED PRACTICAL – IV** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To acquire practical knowledge in numerous diagnostic tests and procedures used in the microbiology laboratory.
- To understand the importance of diagnostic procedures and gain skills related to the laboratory experiments.
- To learn the techniques pertaining to amplification of biological molecules
- To provide hands-on experience to determine microorganisms in clinical samples
- To understand the importance of diagnostic procedures and gain skills related to the laboratory experiments.
- It helps the students to study the advanced laboratory diagnosis procedures.

COURSE OUTCOME (CO'S)

1. This course provides the current medical aspects on the clinical diagnosis of infection providing the combined treatment of bacteriology and virology.
2. It will also provide opportunities for a student to develop diagnostic skills in microbiology, including the practical application and interpretation of laboratory tests for the diagnosis of infectious diseases.
3. It will also provide opportunities for a student to develop diagnostic skills in microbiology, including the practical application and interpretation of laboratory tests for the diagnosis of infectious diseases.
4. The significance of bacterial genetic variation (in drug resistance, pathogenesis or virulence and variation, diagnosis, and vaccination), and manipulation of cloned DNA.
5. To know the Virulence of bacteria, bacterial virulence factors and their regulation.
6. To understand drug resistance, drug-bacteria relationship, clinical implications, and prevention

EXPERIMENTS

1. Laboratory diagnosis of pyogenic infections – tuberculosis – enteric fever – diarrhea – UTI – anaerobic infections
2. Isolation and identification of *Candida albicans*
3. Antibiotic sensitivity test disc preparation
4. Antibiotic sensitivity test – Kirby - Bauer, Stroke's method

5. MIC determination by Broth dilution technique, filter paper disc assay
6. Wet mount preparation of parasites- Saline, iodine
7. Identification of parasites-formal ether concentration, floatation methods
8. Morphological examination of fungi in tissues
9. Cultivation of viruses-Egg inoculation
10. Isolation of coli phage from sewage using membrane filter technique.
11. Examination of plant diseases: Wilt of potato, Citrus canker, Rice dwarf virus

Semester - III

16MBP301 **ADVANCED IMMUNOLOGY** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Imparting advanced technological knowledge through a detailed study of topics such as immunodiagnosis, assessment of cell mediated immunity and current trends in immunology of diseases.
- The students will be able to identify the cellular and molecular basis of immune responsiveness.
- The students will be able to describe the roles of the immune system in both maintaining health and contributing to disease.
- The students will be able to describe immunological response and how it is triggered and regulated.
- The students will be able to demonstrate a capacity for problem-solving about immune responsiveness.
- Students will be able to transfer knowledge of immunology into clinical decision-making through case studies presented in class.

COURSE OUTCOME (CO'S)

1. To strengthen the technical skill on the immune system, their structure and classification, genetic control of antibody production, Types, structure of antigens and immunodiagnostics.
2. To obtain knowledge of through Molecular immunology, hypersensitive immune reaction and Latest trends in immunology.
3. Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity.
4. Develop understanding about immune system, antigen antibody interactions.
5. Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
6. Introducing the employment aspect of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.

UNIT – I

Immunity – types. Cells of the immune system - lymphoid cells, mononuclear cells, granulocytic cells and mast cells. T & B – cell maturation, activation and differentiation. Organs of the immune system - primary and secondary lymphoid organs – cutaneous / mucosal - associated lymphoid tissues

UNIT – II

Antigens - factor influence immunogenicity - Epitopes - Haptens - study of antigenicity. Immunoglobulins – structure – types and biological activities. Antigenic determinants. Monoclonal antibodies.

UNIT – III

Hypersensitive reactions – Type. Complement system - classical, alternative and lectin pathways, biological consequences. T - cell receptor. Cytokines – Structure, functions and receptors. Major Histocompatibility complex, classes, structure and its functions.

UNIT – IV

Autoimmune diseases: Antigen processing and presentation - Transplantation immunology - Transplantation antigens, HLA typing. Tumor immunology - treatment of tumors. Immune response to infectious disease.

UNIT – V

Antigen - Antibody reactions: Agglutination and precipitation. Complement fixation test, Immunofluorescence, ELISA, RIA, Immuno electron microscopy. Forensic serology, Immunohaematology – ABO, RH incompatibility.

Semester - III

16MBP302 FOOD AND INDUSTRIAL MICROBIOLOGY 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To encompasses the employability use of microorganisms in the manufacture of food or industrial products.
- The aim of the course is to give the students broad theoretical and practical skills in food and industrial microbiology.
- This paper adds information about the role of microorganisms in many food, beverage and pharma industries both in production and spoilage processes.
- The students will be able to discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.
- It will make the students to explore their practical skills in entrepreneurial activities.
- It will deliver the large-scale production of microbial products techniques in advanced level.

COURSE OUTCOME (CO'S)

1. Provides knowledge in the large-scale production of industrial product, providing the trends to cater the needs of industry.
2. This will help the students to enhance their employment knowledge on microbiology based commercial products.
3. The aim of the course is to give the students broad theoretical and practical skills in industrial microbiology.
4. To encode the importance of the role of microorganisms in food industries both in beneficial and harmful ways.
5. To obtain a good understanding of industrial microbiology and become qualified as microbiologist in food and other industries and candidate able to become entrepreneur after understanding this entire course.
6. Explain why microbiological quality control programmes are necessary in food production.

UNIT – I

Food and microorganisms – Important microorganisms in food – Fungi, Bacteria; Intrinsic and extrinsic parameters of food affecting microbial growth – sources of contamination of food. Food sanitation – indicators of food safety – Coliform bacteria.

UNIT – II

Food preservation – principles – factors affecting preservation – food preservation using temperature – low temperature food preservation – characteristics of psychrotrophs – high temperature food preservation – characteristics of thermophiles – preservation of foods by drying chemicals and radiation – limitations – commercial application.

UNIT – III

Food borne diseases - food poisoning - food borne infection and intoxication- Food control agencies - microbiological criteria for food, microbial quality control and food laws, Hazard Analysis Critical Control Point (HACCP).

UNIT – IV

History and chronological development of industrial microbiology. Industrially important strains – isolation and preservation. Inoculum development for various fermentation processes - strain development – mutation, recombinant DNA technology and protoplast fusion. Fermentation – submerged, solid state, batch and continuous.

UNIT – V

Fermentor design – scale-up process. Types of fermentors - Tower, cylindroconical, airlift and Components of CSTR. Downstream process – intracellular and extracellular product separation column chromatography, affinity. Production of beverages – beer, vitamins - vitamin B12, Riboflavin, antibiotics.

Semester - III

16MBP303 MEDICAL MYCOLOGY AND PARASITOLOGY 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Medical Bacteriology introduces basic principles and then applies clinical relevance of many etiological agents responsible for infectious diseases.
- The infectious disease cycle of the pathogens enables to solve the epidemics.
- The territory covered by infections and the immune response
- We focus on pathogenic mechanisms in order to foster a student's ability to solve problems in their future clinical career and able to establish the medical laboratory.
- This course provides learning opportunities in the basic principles of medical microbiology and infectious disease
- It covers mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora

COURSE OUTCOMES

1. Demonstrate an understanding at an advanced level of microbial virulence mechanisms and host response toinfection.
2. Application of molecular techniques to medical microbiology; biochemical and genetic mechanisms of antimicrobial agent activity, microbial susceptibility and resistance to antimicrobialagents.
3. Demonstrate an understanding of skin and respiratory tract infections (microbial causes, pathogenesis, transmission of infection, diagnosis, prevention and treatment) by being able to identify a unknown organisms in clinical samples, and describe the pathogenesis of important pathogens.
4. It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.
5. To understand the importance of pathogenic bacteria in human disease with respect to infections of. the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue
6. Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.

UNIT – I

General Properties of Fungi - Isolation and identification of medically important fungi – diagnosis of fungal disease - routine mycological techniques - antifungal agents

UNIT – II

Superficial mycosis –Pityriasis versicolor, Tinea nigra, piedra. Cutaneous mycosis – Dermatophytes. Systemic mycosis –Opportunistic mycosis – Candidosis, Cryptococcosis, aspergillosis. Subcutaneous mycosis - Sporotrichosis, Chromoblastomycosis, Mycetoma

UNIT – III

Introduction to Parasitology - protozoa-amoebae – flagellates - Laboratory techniques in parasitology - Ova, cyst analysis direct and concentration methods. Blood smear examination - antiprotozoan therapy.

UNIT – IV

Protozoan infections - *Entamoeba histolytica, Plasmodium falciparum, Leishmania donovani - Giardia intestinalis Trichomonas vaginalis, Toxoplasma gondii, Pneumocystis carinii*

UNIT – V

Helminthic infections – *Taenia solium. Trematodes - Schistosoma haematobium*, Nematodes - *Trichuris trichiura - Ascaris lumbricoides, Ancylostoma duodenale, Wuchereria Bancrofti.*

Semester - III

16MBP304 BIOSTATISTICS AND RESEARCH METHODOLOGY 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- About collection, interpretation and presentation of statistical data
- The analytics of data, probability, and hypothesis testing of samples
- The essential role of statistics in present, future use and applications of Biology.
- To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.
- Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques
- The ethical and philosophical issues associated with research in education

COURSE OUTCOMES

1. Apply basic statistical concepts commonly used in health and medical sciences
2. Use basic analytical techniques to generate results
3. Interpret results of commonly used statistical analyses in written summaries.
4. Demonstrate statistical reasoning skills correctly and contextually.
5. Provide learning opportunities to critically evaluate research methodology and findings.
6. Enable students to be reflexive about their role and others' roles as researchers.

UNIT-I

Definitions-Scope of Biostatistics- Variables in biology, collection, classification and tabulation of data- Graphical and diagrammatic representation.

Measures of central tendency – Arithmetic mean, median and mode. Measures of dispersion-Range, standard deviation, Coefficient of variation.

UNIT – II

Correlation – Meaning and definition - Scatter diagram –Karl pearson's correlation coefficient. Rank correlation.

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

UNIT – III

Test of significance: Tests based on Means only-Both Large sample and Small sample tests - Chi square test - goodness of fit. Analysis of variance – one way and two way classification. CRD, RBD Designs.

UNIT – IV

Research: Scope and significance – Types of Research – Research Process – Characteristics of good research – Problems in Research – Identifying research problems. Research Designs – Features of good designs.

UNIT – V

Sampling Design: Meaning – Concepts – Steps in sampling – Criteria for good sample design. Scaling measurements – Techniques – Types of scale.

Semester - III

16MBP305A BIOFERTILIZER AND BIOMANURE TECHNOLOGY **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To study about the biofertilizers, plant disease and increasing soil fertility.
- To provide the knowledge on biomanure and biofertilizer and to become an entrepreneur in the field.
- To Provides detailed idea about biofertilizer production and plant disease.
- To provide the student knowledge about ecofriendly product which play a crucial role in determining its future use and applications in environmental management.
- The students will be able to make qualitative and quantitative description of the basic enzymatic phenomena and processes.
- To provide the student for entrepreneur.

COURSE OUTCOME (CO'S)

1. This course has been designed to provide the student knowledge about eco friendly product.
2. Product play a crucial role in determining its future use and applications in environmental management.
3. Provides detailed idea about biofertilizer production and plant disease.
4. To produce and impart training of ecofriendly agricultural inputs so as to nullify the ill effects of chemical fertilizers.
5. To demonstrate the know-how technology pertinent to microbiological and physico-chemical analyses of soil samples and their assessment.
6. Provides detailed entrepreneurial idea about biofertilizer production and plant disease.

UNIT – I
Fertilizer - importance and present status of types of fertilizers and application. Nitrogen; Carbon, phosphorus and sulphur cycles. Biogeocycles associated with microorganisms.

UNIT – II
Biofertilizers – Nostoc, Anabaena, Gloeocaps and Scytonema; Free living forms – Azatobacter, Azospirillum; Symbiotic forms – Rhizobium; Legume Association; *Pseudomonas*; Non-legume association.

UNIT – III
Mycorrhizal association - Vescicular arbuscular mycorrizal association (VAM) –Actimomycetes associations in biofertilizer.

UNIT – IV
Biomanures- Properties, production and applications; Composts – production and applications.Agro wastes – Poultry manure and saw-dust.

UNIT – V
Vermi composting– Properties, production and applications Types of compost pits and biodegradation. Application of biofertilizers and biomanures.

Semester - III

16MBP305B LABORATORY ANIMAL CARE 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Aimed to provide training on various methods of handling.
- Concerning the care and use of laboratory animals.
- Laboratory animal care provides the proper handling and care for various species of animals used in research, testing, and in education.
- It extensively deals with the amended act on the Animal Welfare and the concept, availability, and use of research or testing methods that limit the use of animals or minimize animal distress.
- It extensively deals with the amended act on the Animal Welfare and the concept, availability, and use of research or testing methods that limit the use of animals or minimize animal distress.
- To study the preclinical studies.

COURSE OUTCOME (CO'S)

1. Laboratory animal care provides the proper handling and care for various species of animals used in research, testing, and in education.
2. It extensively deals with the amended act on the Animal Welfare and the concept, availability, and use of research or testing methods that limit the use of animals or minimize animal distress.
3. This course content will enhance the employment in drug testing field.
4. Validation for equipment, methods, cleaning and process
5. Students can develop their entrepreneurial skills in analysis of pens design and environment.
6. Ethical knowledge for use of animals in research.

UNIT – I

Modern methods of care, management breeding and maintenance of Laboratory animals – rabbit.

UNIT - II

Modern methods of care, management breeding and maintenance of Laboratory animals – mice.

UNIT - III

Modern methods of care, management breeding and maintenance of Laboratory animals – rat.

UNIT – IV

Modern methods of care, management breeding and maintenance of Laboratory animals– guinea pig. Specific pathogen free animal – gnotobiotic animal

UNIT – V

Handling – various routes of inoculation and bleeding. Laboratory use of animals in microbiology - antibody production. Disposal of animal house wastes and carcasses.

Semester - II

16MBP305C BIO NANOTECHNOLOGY 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 **Marks:** Internal: **40** External: **60** Total: **100**

End Semester Exam: 3 Hours

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- This course has been intended to provide knowledge about the Bio nanomaterials synthesis and its advancement.
- To foundational knowledge of the Nanoscience and related fields.
- To make the students acquire an understanding the Nanoscience and Applications
- To help them understand in broad outline of Nanoscience and Nanotechnology.
- Understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment
- Apply their learned knowledge to develop Nanomaterial's.

COURSE OUTCOME (CO'S)

1. Students get an idea about application of nanotechnology in biology.
2. It provide analytical knowledge of trends and developments in the field of nanotechnology
3. Acquire knowledge in nanotechnology and how it will support the employment greatly.
4. Students able to construct hierarchy strategy in machine.
5. Able to describe self-application and machine phase biotechnology.
6. Students have an enhanced knowledge and understanding of chemical transformation and biomolecular sensing.

UNIT – I

Biotechnology to Bionanotechnology: Bionanomachines – Modern bionano materials – protein, nucleic acid, lipids used for carrying information – polysaccharides use in special structural roles – Present status of bionanotechnology.

UNIT – II

Molecular design for nanotechnology: Recombinant DNA technology – X-ray crystallography, NMR spectroscopy and electron microscopy, use in nanotechnology – Computer modeling to bionanomachines and computer assisted molecular design.

UNIT – III

Structural principles of Bionanotechnology: Natural bionanotechnology design for specific environment – Biomolecular structure as low materials – Hierarchical strategy in construction of nanomachines – protein folding – self organization – molecular recognition – flexibility.

UNIT – IV
Functional principles of Bionanotechnology: Information driven nano assembly – chemical transformation – biomolecular sensing – self application – machine phase bionanotechnology.

UNIT – V
Future of Bionanotechnology: Problems in bionanotechnology – Abide finger problem – Sticky finger problem – role of enzyme to solve these problems – Core studies – nomotuble synthesis, nanoscale assembler, nanozurveillance – ethical consideration – respect for life, potential dangers, fuel

Semester – III

16MBP311 APPLICATION ORIENTED PRACTICAL – V 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks:** Internal: **40** External: **60** Total: **100**
End Semester Exam: 9 Hours

COURSE OBJECTIVES

- The general objectives of the lab will be to introduce immunology and basic serological techniques.
- To develop the skill in health clinic
- To enhance knowledge in research.
- To give employment opportunities.
- Technical skill of immunology techniques.
- To understand disease mechanisms.

COURSE OUTCOME (CO'S)

1. This practical is to provide the student with a basic knowledge and technical skill of immunology and make them to understand the significance to human disease.
2. Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity
3. Develop understanding about immune system, antigen antibody interactions.
4. Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
5. After course completion, students can apply the knowledge in further studies and higher education.
6. Introducing the science of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.

EXPERIMENTS

1. Separation of serum / plasma
2. ABO Blood grouping - Rh typing and cross matching. Estimation of hemoglobin content of human blood.
3. Agglutination tests.
    - WIDAL - slide and tube test
    - RA test.
    - RPR test.
    - ASO test.
    - CRP test.
    - β -HCG test
4. ELISA- thyroid hormone analysis

5. Ouchterlony's Double Immunodiffusion test (ODD)
6. Counter immunoelectrophoresis (CIE)

(Established Under Section 3 of UGC Act 1956)

Eachanari Post, Coimbatore – 641 021

SEMESTER – I

16LSU101 **தமிழ் முதல் தாள்** **L T P C**
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது) **4 - - 4**

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

அலகு – I : இக்கால இலக்கியம்: (10 **மணிநேரம்**)

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை – ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் –மலையாளக் காற்று.

சூழலியல் : **கவிஞர்** வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : **கவிஞர்** சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்: (10 **மணிநேரம்**)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்பம் – 20 குறள்கள்
பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: **(10 மணிநேரம்)**

மூவருலா: 1-26 கண்ணிகள், திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்
கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை: **(10 மணிநேரம்)**

1. **உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்**
2. **கட்டிடக்கலை** - அ. இராசமாணிக்கனார்
3. **வாழ்க்கை** - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி: **(8 மணிநேரம்)**

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

	SEMESTER I	**L T P C**
16ENU101	**ENGLISH – 1**	**4 - - 4**

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman **–** Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl
One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan
Vocabulary: Synonyms, Euphemisms, Word Definitions
Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O' Henry

Vocabulary: Words Often Confused, Anagrams

Grammar: Preposition, Voice- Active and Passive

UNIT V

Short Story: The Bird **–** Amar Jalil

One-Act Play: The Cellphone Epidemic – Claudia I. Haas

Vocabulary: Portmanteau Words, One Word Substitution

Grammar: Question, Pronunciation

Prescribed Text:

Rao, G. Chandralekha et al. Spring 2013**.** Emerald Publishers: Chennai.

Suggested Reading:

Shyamala, V. English for Communication. 2006. Emerald Publishers: Chennai

	SEMESTER – I	**L T P C**
16PHU101	**MECHANICS**	**5 - - 5**

Course Objectives

- To know how to use Newton's laws of motion
- To solve advanced problems involving the dynamic motion of mechanical systems and other advanced mathematics in the solution of the problems.
- To find the use of conservation of energy and linear and angular momentum
- To solve dynamics problems.
- To understand the concept of oscillations.
- To gain the knowledge on elasticity.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand the basic concepts of mechanics
2. Understand the concepts of simple harmonic motion
3. Define the motion of mechanical systems and their degrees of freedom.
4. Study the interaction of forces between solids in mechanical systems.
5. Application of the vector theorems of mechanics and interpretation of their results.
6. Analyse the mechanics as a systematic tool for problem solving.

UNIT - I

Vectors: Vector algebra. Scalar and vector products. Derivatives of a vector with respect to a parameter. Ordinary Differential Equations: 1st order homogeneous differential equations. 2nd order homogeneous differential equations with constant coefficients.

UNIT - II

Laws of Motion: Frames of reference. Newton's Laws of motion. Dynamics of a system of particles. Centre of Mass. Momentum and Energy: Conservation of momentum. Work and energy. Conservation of energy. Motion of rockets. Rotational Motion: Angular velocity and angular momentum. Torque. Conservation of angular momentum.

UNIT - III

Gravitation: Newton's Law of Gravitation. Motion of a particle in a central force field (motion is in a plane, angular momentum is conserved, areal velocity is constant). Kepler's Laws (statement only). Satellite in circular orbit and applications. Special Theory of Relativity: Constancy of speed of light. Postulates of special theory of Relativity. Length contraction. Time dilation. Relativistic addition of velocities.

UNIT - IV

Oscillations: Simple harmonic motion. Differential equation of SHM and its solutions. Kinetic and Potential Energy, Total Energy and their time averages. Damped oscillations.

UNIT - V

Elasticity: Hooke's law- Stress-strain diagram - Elastic moduli-Relation between elastic constants- Poisson's Ratio-Expression for Poisson's ratio in terms of elastic constants- Work done in stretching & work done in twisting a wire- Twisting couple on a cylinder-Determination of Rigidity modulus by static torsion- Torsional pendulum-Determination of Rigidity modulus and moment of inertia - q, η & by Searles method.

4. D. S. Mathur "Elements of Properties of Matter" S. Chand & Co.
5. University Physics. FW Sears, MW Zemansky & HD Young 13/e, 1986.Addison-Wesley
6. Mechanics Berkeley Physics course, v.1:Charles Kittel, et.al. 2007, Tata McGraw-Hill
7. Engineering Mechanics, Basudeb Bhattacharya, 2nd edn., 2015, Oxford University Press
8. University Physics, Ronald Lane Reese, 2003, Thomson Brooks/Cole.
9. https://lecturenotes.in/notes/15822-note-for-mechanics-mech-by-amity-kumar

	SEMESTER – I	**L T P C**
16PHU102	**SOLID STATE PHYSICS**	**5 - - 5**

Course Objective:

- This course integrates theory of Solid State Physics with experimental demonstrations in the Physics Lab.
- The course will provide a valuable theoretical introduction and an overview of the fundamental applications of the physics of solids.
- It includes theoretical description of crystal and electronic structure, lattice dynamics, and optical properties of different materials (metals, semiconductors, dielectrics, magnetic materials and superconductors), based on the classical and quantum physics

principles.

- To calculate thermal and electrical properties in the free-electron model.
- To gain a basic knowledge of crystal systems and spatial symmetries.
- To know what phonons are, and be able to perform estimates of their dispersive and thermal properties.

Course Outcomes

After successful completion of the course, the student is expected to

1. Account for interatomic forces and bonds.
2. Have a basic knowledge of crystal systems and spatial symmetries.
3. Account for how crystalline materials are studied using diffraction, including concepts like form factor, structure factor, and scattering amplitude.
4. Know what phonons are, and be able to perform estimates of their dispersive and thermal properties.
5. Calculate thermal and electrical properties in the free-electron model.
6. Explain superconductivity using BCS theory
7. Outline the importance of solid state physics in the modern society.

UNIT - I

Crystal Structure: Solids: Amorphous and Crystalline Materials. Lattice Translation Vectors. Lattice with a Basis. Unit Cell. Miller Indices. Reciprocal Lattice. Types of Lattices. Brillouin Zones. Diffraction of X-rays by Crystals. Bragg's Law. Atomic and Geometrical Factor.

UNIT - II

Elementary Lattice Dynamics: Lattice Vibrations and Phonons: Linear Monoatomic and Diatomic Chains. Acoustical and Optical Phonons.Qualitative Description of the Phonon Spectrum in Solids.Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids (qualitative only). T^3 law

UNIT - III

Magnetic Properties of Matter: Dia-, Para-, Ferri- and Ferromagnetic Materials. Classical Langevin Theory of dia– and Paramagnetic Domains. Quantum Mechanical Treatment of Paramagnetism. Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains. Discussion of B-H Curve. Hysteresis and Energy Loss.

UNIT - IV

Dielectric Properties of Materials: Polarization. Local Electric Field at an Atom. Depolarization Field. Electric Susceptibility. Polarizability. Clausius Mosotti Equation. Classical Theory of Electric Polarizability. Normal and Anomalous Dispersion. Cauchy and Sellmeir relations. Langevin-Debye equation. Complex Dielectric Constant. Optical Phenomena. Application: Plasma Oscillations, Plasma Frequency, Plasmons.

UNIT - V

Elementary band theory: Kronig Penny model. Band Gaps. Conductors, Semiconductors and insulators. P and N type Semiconductors. Conductivity of Semiconductors, mobility, Hall Effect, Hall coefficient. Superconductivity: Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors.

Suggested Books:

1. Introduction to Solid State Physics, Charles Kittel, 8th Ed., 2004, Wiley India Pvt. Ltd.

	SEMESTER – I	L T P C
16PHU103	**MATHEMATICAL PHYSICS - I**	**4 - - 4**

Course Objectives

- To provide students with a repertoire of mathematical methods that are essential to the solution of advanced problems encountered in the fields of applied physics and engineering.
- In addition, intended to prepare the student with mathematical tools and techniques that are required in advanced courses offered in the applied physics
- To communicate mathematical and physical knowledge and ideas to the students.
- To learn the fundamentals and applications of Complex Variable, Analyticity, Cauchy-Riemann and Cauchy’s Integral.

- To contribute innovations and application of basic research.
- To get knowledge to find the relationship between observation and theory and their use in building the basic concepts of computing.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Communicate mathematical and physical knowledge and ideas to the students.
2. Get introduced to Special functions like Gamma function, Beta function, Delta function, Bessel functions and their recurrence relations
3. Learn the fundamentals and applications of Complex Variable, Analyticity, Cauchy-Riemann and Cauchy's Integral.
4. Build connections between mathematical development and conceptual understanding.
5. Understand the relationship between observation and theory and their use in building the basic concepts of computing.
6. Contribute innovations and application of basic research.

UNIT - I

Calculus of functions of more than one variable: Partial derivatives, exact and inexact differentials. Integrating factor, with simple illustration. Constrained Maximization using Lagrange Multipliers. Linear interpolation: Newton forward interpolation formula and backward interpolation formula - Bessel's Formula. Interpolation with unequal intervals: Lagrange's interpolation formula. Trapezoidal rule - Simpson's 1/3 rule and 3/8 rule- Bisection method - method of successive approximations - Regula Falsi method - Newton-Raphson method

UNIT - II

Fourier Series: Periodic functions. Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only).Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Even and odd functions and their Fourier expansions. Application. Summing of Infinite Series.

UNIT - III

Frobenius Method and Special Functions: Singular Points of Second Order Linear Differential Equations and their importance. Frobenius method and its applications to differential equations. Legendre, Bessel Differential Equations. Properties of Legendre Polynomials: Rodrigues Formula, Orthogonality. Simple recurrence relations.

UNIT - IV

Some Special Integrals: Beta and Gamma Functions and Relation between them. Expression of Integrals in terms of Gamma Functions. Partial Differential Equations: Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry.

UNIT - V

Complex Analysis: Brief revision of Complex numbers & their graphical representation.

Euler's formula, rk Method (II & IV), Roots of Complex Numbers. Functions of Complex Variables. Analyticity and Cauchy-Riemann Conditions. Examples of analytic functions. Singular functions: poles and branch points, order of singularity. Integration of a function of a complex variable. Cauchy's Integral formula.

SUGGESTED BOOKS:

1. Mathematical Methods for Physicists: Arfken, Weber, 2005, Harris, Elsevier. Fourier Analysis by M.R. Spiegel, 2004, Tata McGraw-Hill.
2. Mathematics for Physicists, Susan M. Lea, 2004, Thomson Brooks/Cole.
3. An Introduction to Ordinary Differential Equations, E.A Coddington, 1961, PHI Learning Differential Equations, George F. Simmons, 2006, Tata McGraw-Hill.
4. Essential Mathematical Methods, K.F.Riley and M.P.Hobson, 2011, Cambridge University Press.
5. https://nptel.ac.in/courses/115/103/115103036/

	SEMESTER – I	L T P C
16PHU111	**MECHANICS (PRACTICAL)**	**- - 2 1**

Course Objective

1. To impart knowledge on various types of Mechanisms and instruments
2. To impart skills to analyze the position, velocity and acceleration.
3. To understand basic laws governing mechanics of a system.
4. To determine the acceleration due to gravity using various methods.
5. To determine the Moment of Inertia using various methods.
6. To know forces their relationship to engineering applications

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand and analyze basic theory and principles of forces in mechanics
2. Know forces their relationship to engineering applications
3. Analyze motion, forces and motion, work and energy problems and their relationship to engineering applications
4. Understand basic laws governing mechanics of a system.
5. Determine the acceleration due to gravity using various methods.
6. Determine the Moment of Inertia using various methods.

ANY SIX EXPERIMENTS

1. Measurements of length (or diameter) using vernier caliper, screw gauge and travelling microscope.
2. To determine the Height of a Building using a Sextant.
3. To determine the Moment of Inertia of a Flywheel.
4. To determine the Young's Modulus of a Wire by Optical Lever Method.
5. To determine the Modulus of Rigidity of a Wire by Maxwell's needle.
6. To determine the Elastic Constants of a Wire by Searle's method.
7. To determine g by Bar Pendulum.
8. To determine g by Kater's Pendulum.
9. To determine g and velocity for a freely falling body using Digital Timing Technique.
10. To study the Motion of a Spring and calculate (a) Spring Constant (b) Value of g

Suggested Books

1. Advanced Practical Physics for students, B.L.Flint and H.T.Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. Engineering Practical Physics, S.Panigrahi & B.Mallick,2015, Cengage Learning India Pvt. Ltd.
4. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

SEMESTER – I **L T P C**

16PHU112 SOLID STATE PHYSICS (PRACTICAL) - - 2 1

Course Objectives:

- The course is to understand the basic knowledge on magnetic properties of materials.
- To understand the various parameters of the Hysteresis loop
- Acquire the knowledge of semiconducting and dielectric materials.
- To comprehend the concepts of superconductivity and magnetic properties of solids.
- To verify the dielectric constant of a material by experimentally.
- To understand the importance of new materials in modern technology.

Course Outcome:

After successful completion of the course, the student is expected to

1. Basic practical knowledge on magnetic materials.
2. Understand the basic idea about the dielectric Properties of Solids
3. Experience the behavior of Hysteresis loop of a crystal.
4. Measure the suceptability of magnetic materials.
5. Verify the dielectric constant of a material by experimentally.
6. Understand the importance of new materials in modern technology.

ANY SIX EXPERIMENTS

1. Measurement of susceptibility of paramagnetic solution (Quinck`s Tube Method)
2. To measure the Magnetic susceptibility of Solids.
3. To determine the Coupling Coefficient of a Piezoelectric crystal.
4. To measure the Dielectric Constant of a dielectric Materials with frequency
5. To determine the complex dielectric constant and plasma frequency of metal using Surface Plasmon resonance (SPR) technique.
6. To determine the refractive index of a dielectric layer using SPR technique.
7. To study the PE Hysteresis loop of a Ferroelectric Crystal.
8. To draw the BH curve of iron using a Solenoid and determine the energy loss from Hysteresis.
9. To measure the resistivity of a semiconductor (Ge) crystal with temperature (up to 150^{o}C) by four-probe method and to determine its band gap.
10. To determine the Hall coefficient of a semiconductor sample.

Suggested Books

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. Elements of Solid State Physics, J.P. Srivastava, 2nd Ed., 2006, Prentice-Hall of India

SEMESTER – I

16PHU113	**MATHEMATICAL PHYSICS – I (PRACTICAL)**	**L T P C**
		- - 4 2

Course Objectives

- To provide students with a repertoire of mathematical methods that are essential to the solution of advanced problems encountered in the fields of applied physics and engineering.
- In addition, intended to prepare the student with mathematical tools and techniques that are required in advanced courses offered in the applied physics
- To communicate mathematical and physical knowledge and ideas to the students.

- To demonstrate the utility and limitations of a variety of powerful calculational techniques and to provide a deeper understanding of the mathematics underpinning theoretical physics.
- To find the solution through programming languages.
- To write the coding for physical problems

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Communicate mathematical and physical knowledge and ideas to the students.
2. Demonstrate the utility and limitations of a variety of powerful calculational techniques and to provide a deeper understanding of the mathematics underpinning theoretical physics.
3. Evaluate the definite integrals using computer programming techniques
4. Find the solution through programming languages.
5. Write the coding for physical problems
6. Solve complex problems through modeling.

ANY SIX EXPERIMENTS

Topics	Descriptions with Applications
Introduction and Overview	Computer architecture and organization, memory and
	Input/output devices
Basics of scientific computing	Binary and decimal arithmetic, Floating point numbers,
algorithms, Sequence, Selection and	
	Repetition, single and double precision arithmetic,
	underflow and overflow - emphasize the importance
	of making equations in terms of dimensionless
	variables, Iterative methods
Errors and error Analysis	Truncation and roundoff errors, Absolute and relative
	errors, Floating point computations
	Introduction to Programming, constants, variables
	and data types, operators and Expressions, I/O
	statements, scanf and printf, cin and cout
Review of C & C++	,Manupulators for data formatting, Control
	statements (decision making and looping statements)
Programming	
	(if-statement, if-else statement, nested if statement,
fundamentals	
	else-if statement, ternary operator, goto statement,
	switch statement, unconditional and conditional
	looping, while and do while loop, for loop,nested
	loops, break and continue statements). Arrays (1D

	and 2D)and strings, user defined functions, Structures and Unions, Idea of classes and objects
Programs: using C/C++ language	Sum and average of a list of numbers, largest of a given list of numbers and its location in the list, sorting of numbers in ascending descending order, Binary search
Random number generation	Area of circle, area of square, volume of sphere, value of pi
Solution of Algebraic and Transcendental equations by Bisection, Newton Raphson and Secant methods	Solution of linear and quadratic equation, solving
Interpolation by Newton Gregory Forward and Backward difference formula, Error estimation of linear interpolation	Evaluation of trigonometric functions e.g. *sin* , *cos* , *tan* etc
Numerical differentiation (Forward and Backward difference formula) and Integration (Trapezoidal and Simpson rules), Monte Carlo method	Given Position with equidistant time data calculate velocity and acceleration and vice versa. Find the area of BH Hysteresis loop
Solution of Ordinary Differential Equations (ODE) First order Differential equation Euler, modified Euler and Runge-Kutta (RK) second and fourth order methods	First order differential equation Radioactive decay Current in RC, LC circuits with DC source Newton's law of cooling Classical equations of motion

Suggested Books

1. Introduction to Numerical Analysis, S.S. Sastry, 5th Edn., 2012, PHI Learning Pvt. Ltd. Schaum's Outline of Programming with C++. J.Hubbard, 2000, McGraw- Hill Pub.
2. Numerical Recipes in C++: The Art of Scientific Computing, W.H. Press et.al., 2nd Edn., 2013, Cambridge University Press.

3. A first course in Numerical Methods, U.M. Ascher & C. Greif, 2012, PHI Learning.
4. An Introduction to computational Physics,T.Pang,2nd Edn., 2006,CambridgeUniv. Press

SEMESTER – II

16LSU201 **தமிழ் இரண்டாம் தாள்** **L T P C**

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது) 4 - - 4

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்நோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

அலகு – I : பக்தி இலக்கியம் **(10 மணிநேரம்)**

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு.

1. **சைவம்** - பெரியபுராணம் - திருமூலநாயனார் புராணம்.

2. **வைணவம்** - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு – II : சங்க இலக்கியம் : (15 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). **எட்டுத்தொகை**

நற்றிணை : பிரசம் கலந்த – பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை – குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு – உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்தொடீ கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் –பொதுவியல்- 192

ஆ). **பத்துப்பாட்டு**

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு முருகன் இருப்பிடங்கள் – 'சிறுதினை மலரொடு' என்பதிலிருந்துதொடங்கி, 'அறிந்தவாறே' என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – 'தெய்வம் சான்ற' என்பதிலிருந்து தொடங்கி, 'நல்குமதி' என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம் (6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: **(21-29) – கண்ணகியின் சிறப்பு:** 'நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி,

‘கண்ணகி என்பாண் மன்னோ’ என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: ‘அருந்திறலரசர்’ என்பதிலிருந்து தொடங்கி, ‘மன்னவரேறென்’ என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: ‘என்னே’ என்பதிலிருந்து தொடங்கி, ‘விசும்பில் தோன்றுமால்’ என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: ‘நீர்வார் கண்ணை’ என்பதிலிருந்து தொடங்கி, ‘புகாரென் பதியே’ என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: ‘வன்னி மரமும்’ என்பதிலிருந்து தொடங்கி, ‘பதிப்பிறந்தேன்’ என்பது வரையிலான தொடர்கள்.

அலகு – IV : **சிறுகதை** (10 **மணிநேரம்**)

1. **குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்**
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. **நகரம் – சுஜாதா**

அலகு- V : **மொழிப்பயிற்சி** (7 **மணிநேரம்**)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை) மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

SEMESTER – II

		L T P C
16PHU201	**ELECTRICITY AND MAGNETISM**	**5 - - 5**

Course Objectives

- To establish grounding in electromagnetism in preparation for more advanced courses.
- The major concepts covered are: the abstraction from forces to fields using the examples of the gravitational, electric and magnetic fields, with some applications; the connection between conservative forces and potential energy; how charges move through electric circuits; the close connection between electricity and magnetism, leading to the discovery of electromagnetic waves.
- To use electromagnetic theory and principles in a wide range of applications.
- To understand the calculus along with physical principles
- To effectively solve problems encountered in everyday life, further study in science, and in the professional world.
- To gain confidence in their ability to apply mathematical methods to understand electromagnetic problems to real-life situations.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Apply knowledge of electricity and magnetism to explain natural physical processes and related technological advances.
2. Gain confidence in their ability to apply mathematical methods to understand electromagnetic problems to real-life situations.
3. Use an understanding of calculus along with physical principles to effectively solve problems encountered in everyday life, further study in science, and in the professional world.
4. Be able to use electromagnetic theory and principles in a wide range of applications.
5. Design experiments and acquire data in order to explore physical principles, effectively communicate results, and critically evaluate related scientific studies.
6. To develop an understanding of the principles of electricity and magnetism.

UNIT – I

Electrostatics: Electrostatic Field, electric flux, Gauss's theorem of electrostatics. Applications of Gauss theorem- Electric field due to point charge, infinite line of charge, uniformly charged spherical shell and solid sphere, plane charged sheet, charged conductor.

UNIT - II

Electric potential as line integral of electric field, potential due to a point charge, electric dipole, uniformly charged spherical shell and solid sphere. Calculation of electric field from potential. Capacitance of an isolated spherical conductor. Parallel plate, spherical and cylindrical condenser. Energy per unit volume in electrostatic field. Dielectric medium, Polarisation, Displacement vector. Gauss's theorem in dielectrics. Parallel plate capacitor completely filled with dielectric.

UNIT - III

Magnetostatics: Biot-Savart's law and its applications- straight conductor, circular coil, solenoid carrying current. Divergence and curl of magnetic field. Magnetic vector potential. Ampere's circuital law.

Magnetic properties of materials: Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Brief introduction of dia-, para- and ferro-magnetic materials.

UNIT – IV

Electromagnetic Induction: Faraday's laws of electromagnetic induction, Lenz's law, self and mutual inductance, L of single coil, M of two coils. Energy stored in magnetic field.

UNIT – V

Maxwell`s equations and Electromagnetic wave propagation: Equation of continuity of current, Displacement current, Maxwell's equations, Poynting vector, energy density in electromagnetic field, electromagnetic wave propagation through vacuum and isotropic dielectric medium, transverse nature of EM waves, polarization.

Suggested Books:

1. Electricity and Magnetism, Edward M. Purcell, 1986, McGraw-Hill Education. Electricity and Magnetism, D C Tayal, 1988, Himalaya Publishing House.
2. University Physics, Ronald Lane Reese, 2003, Thomson Brooks/Cole.
3. D.J.Griffiths, Introduction to Electrodynamics, 3rd Edn, 1998, Benjamin Cummings.
4. D Halliday, R Resnick and J Walker, Fundamentals of Physics (Extended) 6th ed., John Wiley, 2001.
5. https://ocw.mit.edu/courses/physics/8-02t-electricity-and-magnetism-spring-2005/lecture-notes/
6. https://cpb-us-e1.wpmucdn.com/cobblearning.net/dist/e/1364/files/2014/03/Magnets-webquest-answers-2jdthlu.pdf

SEMESTER II

16PHU202	ANALOG SYSTEMS AND APPLICATIONS	L T P C
		5 - - 5

Course Objectives

- The objective of this paper is to give information about different analog electronic circuits and their applications.
- To understand operation of semiconductor devices.
- To understand DC analysis and AC models of semiconductor devices.
- To implement mini projects based on concept of electronics circuit concepts.
- To apply concepts for the design of Regulators and Amplifiers.
- To verify the theoretical concepts through laboratory and simulation experiments.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Apply concepts for the design of Regulators and Amplifiers.
2. Acquire knowledge about how a semiconductor diode rectifies an input ac signal
3. Verify the theoretical concepts through laboratory and simulation experiments.
4. Be able to know about the Field Effect Transistors, their principles and applications
5. Learn how to construct a transistor amplifier and how its gain varies with frequency
6. To implement mini projects based on concept of electronics circuit concepts.

UNIT I

Semiconductor Diodes: P and N type semiconductors. Energy Level Diagram. Conductivity and Mobility, Concept of Drift velocity. PN Junction Fabrication (Simple Idea). Barrier Formation in PN Junction Diode. Static and Dynamic Resistance. Current Flow Mechanism in Forward and Reverse Biased Diode. Drift Velocity. Derivation for Barrier Potential, Barrier Width and Current for Step Junction. Current Flow Mechanism in Forward and Reverse Biased Diode.

UNIT II

Two-terminal Devices and their Applications: Rectifier Diode: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers, Calculation of Ripple Factor and Rectification Efficiency, C-filter, Zener Diode and Voltage Regulation. Principle and structure of LEDs, Photodiode and Solar Cell.

Bipolar Junction transistors: n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Current gains α and β Relations between α and β. Load Line analysis of Transistors. DC Load line and Q-point. Physical Mechanism of Current Flow. Active, Cutoff and Saturation Regions.

UNIT III

Amplifiers: Transistor Biasing and Stabilization Circuits. Fixed Bias and Voltage Divider Bias. Transistor as 2-port Network. h-parameter Equivalent Circuit. Analysis of a single-stage

CE amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains. Classification of Class A, B & C Amplifiers. Coupled Amplifier: Two stage RC-coupled amplifier and its frequency response.

Feedback in Amplifiers: Effects of Positive and Negative Feedback on Input Impedance, Output Impedance, Gain, Stability, Distortion and Noise.

UNIT IV

Sinusoidal Oscillators: Barkhausen's Criterion for self-sustained oscillations. RC Phase shift oscillator, determination of Frequency. Hartley & Colpitts oscillators.

Operational Amplifiers (Black Box approach): Characteristics of an Ideal and Practical Op-Amp. (IC 741) Open-loop and Closed-loop Gain. Frequency Response. CMRR. Slew Rate and concept of Virtual ground.

UNIT V

Applications of Op-Amps: Inverting and non-inverting amplifiers, Adder, Subtractor, Differentiator, Integrator, Log amplifier, Zero crossing detector, Wein bridge oscillator. **Conversion:** Resistive network (Weighted and R-2R Ladder). Accuracy and Resolution. A/D Conversion (successive approximation)

Suggested Books:

1. Integrated Electronics, J. Millman and C.C. Halkias, 1991, Tata Mc-Graw Hill.
2. Electronics: Fundamentals and Applications, J.D. Ryder, 2004, Prentice Hall.
3. Solid State Electronic Devices, B.G.Streetman & S.K.Banerjee, 6th Edn.,2009, PHI Learning

6. Microelectronic circuits, A.S. Sedra, K.C. Smith, A.N. Chandorkar, 2014, 6th Edn., Oxford University Press.
7. Electronic circuits: Handbook of design & applications, U.Tietze, C.Schenk,2008, Springer
8. Semiconductor Devices: Physics and Technology, S.M. Sze, 2nd Ed., 2002, Wiley India
9. Microelectronic Circuits, M.H. Rashid, 2nd Edition, Cengage Learning Electronic Devices, 7/e Thomas L. Floyd, 2008

	SEMESTER II	L T P C
16PHU203	MATHEMATICAL PHYSICS – II	4 - - 4

Course Objectives

- To provide students with a repertoire of mathematical methods that are essential to the solution of advanced problems encountered in the fields of applied physics and engineering.
- In addition, intended to prepare the student with mathematical tools and techniques that are required in advanced courses offered in the applied physics.
- To contribute innovations and application of basic research.
- To communicate mathematical and physical knowledge and ideas to the students.
- To build connections between mathematical development and conceptual understanding.
- To get introduced to Special functions like Gamma function, Beta function, Delta function, Bessel functions and their recurrence relations

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Communicate mathematical and physical knowledge and ideas to the students.
2. Get introduced to Special functions like Gamma function, Beta function, Delta function, Bessel functions and their recurrence relations
3. Learn the fundamentals and applications of Complex Variable, Analyticity, Cauchy-Riemann and Cauchy's Integral.
4. Build connections between mathematical development and conceptual understanding.
5. Understand the relationship between observation and theory and their use in building the basic concepts of computing.
6. Contribute innovations and application of basic research.

UNIT I

Fourier Series: Periodic functions. Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only). Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Complex representation of Fourier series. Expansion of functions with arbitrary period. Expansion of non-periodic functions over an interval. Even and odd functions and their Fourier expansions. Application. Summing of Infinite Series. Term-by-Term differentiation and integration of Fourier Series. Parseval Identity.

UNIT II

Special Functions: Legendre, Bessel, Hermite and Laguerre Differential Equations. Properties of Legendre Polynomials: Rodrigues Formula, Generating Function, Orthogonality. Simple recurrence relations. Expansion of function in a series of Legendre Polynomials.

UNIT III

Bessel Functions of the First Kind: Generating Function, simple recurrence relations. Zeros of Bessel Functions (Jo(x) and J1(x))and Orthogonality.

UNIT IV

Some Special Integrals: Beta and Gamma Functions and Relation between them. Expression of Integrals in terms of Gamma Functions. Error Function (Probability Integral).

Theory of Errors: Systematic and Random Errors. Propagation of Errors. Normal Law of Errors. Standard and Probable Error. Least-squares fit. Error on the slope and intercept of a fitted line.

UNIT V

Partial Differential Equations: Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry. Wave equation and its solution for vibrational modes of a stretched string, rectangular and circular membranes. Diffusion Equation.

Suggested Books:

1. Mathematical Methods for Physicists: Arfken, Weber, 2005, Harris, Elsevier.
2. Fourier Analysis by M.R. Spiegel, 2004, Tata McGraw-Hill.
3. Mathematics for Physicists, Susan M. Lea, 2004, Thomson Brooks/Cole.
4. Differential Equations, George F. Simmons, 2006, Tata McGraw-Hill.
5. Partial Differential Equations for Scientists & Engineers, S.J. Farlow, 1993, Dover Pub.
6. Engineering Mathematics, S.Pal and S.C. Bhunia, 2015, Oxford University Press
7. Mathematical methods for Scientists & Engineers, D.A. McQuarrie, 2003, Viva Books

SEMESTER – II **L T P C**

16PHU211 ELECTRICITY AND MAGNETISM (PRACTICAL) **- - 2 1**

Course Objectives

- To establish grounding in electromagnetism in preparation for more advanced courses.
- Assess the contributions of physics to our evolving understanding of global change and sustainability while placing the development of physics in its historical and cultural context.
- To gain practical knowledge on RC Circuit
- To develop skills in the basic concept of electric forces.
- To understand Gauss law and its applications.
- To gain practical knowledge on magnetic moment.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Gain practical knowledge on RC Circuit
2. Develop skills in the basic concept of electric forces.
3. Understand Gauss law and its applications.
4. Gain practical knowledge on magnetic moment.
5. Determine a Low Resistance by Carey Foster's Bridge
6. Compare capacitances using De'Sauty's bridge

ANY SIX EXPERIMENTS

1. To use a Multimeter for measuring (a) Resistances, (b) AC and DC Voltages, (c) DC Current, and (d) checking electrical fuses.
2. Ballistic Galvanometer:
   (i) Measurement of charge and current sensitivity
   (ii) Measurement of CDR
   (iii) Determine a high resistance by Leakage Method
   (iv) To determine Self Inductance of a Coil by Rayleigh's Method.
3. To compare capacitances using De'Sauty's bridge.
4. Measurement of field strength B & its variation in a Solenoid (Determine dB/dx).
5. To study the Characteristics of a Series RC Circuit.
6. To study a series LCR circuit and determine its (a) Resonant Frequency, (b) Quality Factor
7. To study a parallel LCR circuit and determine its (a) Anti-resonant frequency and (b)

Quality factor Q

8. To determine a Low Resistance by Carey Foster's Bridge.
9. To verify the Thevenin and Norton theorem
10. To verify the Superposition, and Maximum Power Transfer Theorem

Suggested Books

1. Advanced Practical Physics for students, B.L.Flint & H.T.Worsnop, 1971, Asia Publishing House.
2. Engineering Practical Physics, S.Panigrahi & B.Mallick,2015, Cengage Learning India Pvt. Ltd.
3. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

SEMESTER II

		L	T	P	C
16PHU212	ANALOG SYSTEMS AND APPLICATIONS (PRACTICAL)	-	-	2	1

Course Objectives

- The objective of this paper is to give information about different analog electronic circuits and their applications.
- To understand operation of semiconductor devices.
- To study the characteristics of a Bipolar Junction Transistor in CE configuration.
- To study the various biasing configurations of BJT for normal class A operation.
- To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.
- To design an inverting amplifier using Op-amp for dc voltage circuits

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand the basics of diode
2. Analyse the characteristics of Bipolar Junction Transistor
3. Perform the procedures for the working of RC-coupled transistor
4. Analyse the relationship between V-I & power curves
5. Understand the applications of Op-amp
6. Develop the ability to analyze and design analog electronic circuits using discrete components.
7. Acquire a basic knowledge in solid state electronics including diodes, MOSFET, BJT, and operational amplifier.

Any 6 experiments

1. To study V-I characteristics of PN junction diode, and Light emitting diode.
2. To study the V-I characteristics of a Zener diode and its use as voltage regulator.
3. Study of V-I & power curves of solar cells, and find maximum power point & efficiency.
4. To study the characteristics of a Bipolar Junction Transistor in CE configuration.
5. To study the various biasing configurations of BJT for normal class A operation.
6. To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.
7. To study the frequency response of voltage gain of a RC-coupled transistor amplifier.
8. To design a Wien bridge oscillator for given frequency using an op-amp.
9. To design a phase shift oscillator of given specifications using BJT.
10. To study the Colpitt`s oscillator.

11. To design a digital to analog converter (DAC) of given specifications.
12. To study the analog to digital convertor (ADC) IC.
13. To design an inverting amplifier using Op-amp (741,351) for dc voltage of given gain
14. To design inverting amplifier using Op-amp (741,351) and study its frequency response
15. To design non-inverting amplifier using Op-amp (741,351) & study its frequency response
16. To study the zero-crossing detector and comparator
17. To add two dc voltages using Op-amp in inverting and non-inverting mode
18. To design a precision Differential amplifier of given I/O specification using Op-amp.
19. To investigate the use of an op-amp as an Integrator.
20. To investigate the use of an op-amp as a Differentiator.
21. To design a circuit to simulate the solution of a $1^{st}/2^{nd}$ order differential equation.

Suggested Books:

1. Basic Electronics: A text lab manual, P.B. Zbar, A.P. Malvino, M.A. Miller, 1994, Mc-Graw Hill.
2. OP-Amps and Linear Integrated Circuit, R. A. Gayakwad, 4^{th} edition, 2000, Prentice Hall.
3. Electronic Principle, Albert Malvino, 2008, Tata Mc-Graw Hill.
4. Electronic Devices & circuit Theory, R.L. Boylestad & L.D. Nashelsky, 2009, Pearson

SEMESTER II

16PHU213 **MATHEMATICAL PHYSICS – II (PRACTICAL)**

L	T	P	C
-	-	4	2

Course Objectives

This course enables the students to learn

- To solve simultaneous linear algebraic equations using various methods.
- To evaluate definite integrals using numerical techniques.
- To problem-solving through (computer language) programming.
- To write the coding for physical problems
- To solve complex problems through modeling.
- To find the solution for given problems through computer programming.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Familiarize with the programming environment for numerical methods.
2. Develop proficiency in skills to solve the algebraic equations.
3. Evaluate the definite integrals using computer programming techniques
4. Find the solution through programming.
5. Write the coding for physical problems
6. Solve complex problems through modeling.

Introduction to Numerical computation software Scilab

Introduction to Scilab, Advantages and disadvantages, Scilab environment, Command window, Figure window, Edit window, Variables and arrays, Initialising, variables in Scilab, Multidimensional arrays, Subarray, Special values, Displaying output data, data file, Scalar, and array operations, Hierarchy of operations, Built in Scilab functions, Introduction to plotting, 2D and 3D plotting, Branching Statements and program design, Relational & logical operators, the while loop, for loop, details of loop operations, break & continue statements, nested loops, logical arrays and vectorization User defined functions, Introduction to Scilab functions, Variable passing in Scilab, optional arguments, preserving data between calls to a function, Complex and Character data, string function, Multidimensional arrays an introduction to Scilab file processing, file opening and closing, Binary I/o functions, comparing binary and formatted functions, Numerical methods and developing the skills of writing a program.

Curve fitting, Least square fit: Goodness Ohms law to calculate R, Hooke's law to calculate spring of fit, standard deviation constant

Solution of Linear system of equations Solution of mesh equations of electric circuits (3 meshes), by Gauss elimination method and Gauss, Seidal method. Diagonalization of Solution of coupled spring mass systems (3 masses matrices, Inverse of a matrix, Eigen vectors, eigen values problems

Generation of Special functions using User defined functions in Scilab
Generating and plotting Legendre Polynomials Generating and plotting Bessel function
Solution of ODE First order differential equation
First order Differential equation Euler, modified Euler and Runge-Kutta second order methods: Newton's law of cooling, Classical equations of motion
Second order differential equation, Fixed difference method: Second order Differential Equation Harmonic oscillator (no friction) Damped Harmonic oscillator Over damped, Critical damped, Oscillatory, Forced Harmonic oscillator, Transient and Steady state solution

Suggested Books:

1. Mathematical Methods for Physics and Engineers, K.F Riley, M.P. Hobson and S. J. Bence, 3rd ed., 2006, Cambridge University Press
2. Complex Variables, A.S. Fokas & M.J. Ablowitz, 8th Ed., 2011, Cambridge Univ. Press
3. First course in complex analysis with applications, D.G. Zill and P.D. Shanahan, 1940, Jones & Bartlett
4. Computational Physics, D.Walker, 1st Edn., 2015, Scientific International Pvt. Ltd.
5. A Guide to MATLAB, B.R. Hunt, R.L. Lipsman, J.M. Rosenberg, 2014, 3rd Edn., Cambridge University Press
6. Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications: A.V. Wouwer, P. Saucez, C.V. Fernández. 2014 Springer Scilab by example: M. Affouf 2012, ISBN: 978-1

	SEMESTER - II	L T P C
16AEF201	**ENVIRONMENTAL STUDIES**	**4 - - 4**

Course Objectives

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To gain knowledge on environmental issues.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
7. Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and / or practitioners.

UNIT-I

Environment: Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT -II

Natural Resources

Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Fire accidents and prevention.

UNIT -III

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT- IV

Environmental Pollution: Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Diaster management: Foods, earthquake, cyclone and landslides.

UNIT -V

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rahabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Suggested Books

2. Arvind Kumar . (2004). A Textbook of Environmental Science. New Delhi: APH Publishing Corporation.
3. Verma P.S., & .Agarwal. V.K. (2001). Environmental Biology :Principles of Ecology. New Delhi: S.Chand and Company Ltd.
4. Anubha Kaushik, C.P. & Kaushik, (2004). Perspectives in Environmental Studies. New Delhi: New Age International Pvt. Ltd. Publications.
5. Singh, M.P., Singh, B.S. & Soma S. Dey, (2004). Conservation of Biodiversity and Natural Resources. Delhi: Daya Publishing House.

6. Daniel B.Botkin & Edward A.Keller. (1995). Environmental Science. NewYork: John Wiley and Sons, Inc.
7. Uberoi, N.K., (2005). Environmental Studies, New Delhi, India: Excel Books Publications.

SEMESTER - III **L T P C**

16PHU301 **THERMAL PHYSICS & STATISTICAL MECHANICS** **4 - - 4**

Course Objectives

- The objective of this course is to give awareness on different laws of thermodynamics and its effect on different aspects in life.
- The aim of statistical mechanics is to give knowledge on the laws of classical thermodynamics for macroscopic systems using the properties of its atomic particles.
- To apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.
- To apply the concepts and laws of thermodynamics to solve problems in thermodynamic systems such as gases, heat engines and refrigerators etc.
- To give knowledge on the statistical mechanics and explain the applications of thermodynamics.
- To provide the correlation of thermodynamical problems with statistical concepts.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Identify and describe the statistical nature of concepts and laws in thermodynamics, in particular: entropy, temperature, chemical potential, Free energies, partition functions.
2. Realize the importance of thermo dynamical functions and their applications.
3. Statistical physics methods, such as Boltzmann distribution, Gibbs distribution, Fermi-Dirac and Bose-Einstein distributions to solve problems in some physical systems.
4. Become familiar with various thermodynamic process and work done in each of these process.
5. Apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.
6. Apply the concepts and laws of thermodynamics to solve problems in thermodynamic systems such as gases, heat engines and refrigerators etc.

UNIT - I

Laws of Thermodynamics: Thermodynamic Description of system: Zeroth Law of thermodynamics and temperature. First law and internal energy, conversion of heat into work, Various Thermodynamical Processes, Applications of First Law: General Relation between C_P and C_V, Work Done during Isothermal and Adiabatic Processes, Compressibility and Expansion Coefficient, Reversible and irreversible processes, Second law, Entropy, Carnot's cycle & theorem, Entropy changes in reversible and irreversible processes, Entropy-temperature diagrams, Third law of thermodynamics, Unattainability of absolute zero.

UNIT - II

Thermodynamic Potentials: Enthalpy, Gibbs, Helmholtz and Internal Energy functions, Maxwell's relations and applications - Joule-Thompson Effect, Clausius-Clapeyron Equation, Expression for ($C_P - C_V$), C_P/C_V, TdS equations.

UNIT - III
