Unit II: Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III: Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife

conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

கற்பகம் உயர்கல்விகலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப்பாடத்திட்டம் (2017 - 2018)
இரண்டாம்பருவம்
(இளநிலை அறிவியல் பட்டவகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 17LSU201

பாடத்திட்டப்பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கைமேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப்பயன்விளைவு

- இந்தியகுடியுரிமைப்பணிமுதலானபோட்டித்தேர்வுகளில், விருப்பப்பாடமாகஇடம்பெறுகின்ற, 'தமிழ்இலக்கியவரலாறு' குறித்தமுழுமையானஅறிமுகம்பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல்மற்றும்தொல்லியல்சார்ந்தஆவணத்தேடலுக்குரியஆய்வுமனப்பான்மையுடன், இலக்கியங்களைஅணுகுதல்.
- தமிழின்வளர்ச்சித்துறையாகிய, 'அறிவியல்தமிழ்' ; 'இணையதமிழ்' குறித்தபன்னோக்குஅணுகுமுறையிலானஆய்வுச்சிந்தனைமேம்பாடு.
- வேலைவாய்ப்புக்குரியசுயதிறன்மேம்பாட்டுடன், படைப்பாக்கத்திறன்மேம்பாடும்பெற்றிருத்தல் .
- சமுதாயமற்றும்வாழ்வியல்மதிப்புகளைப்பேணுவதற்குக்கருவியாகஇலக்கியங்களைநாடுகின்றமனப்பான்மைவளர்ச்சி.
- மொழிபெயப்புத்துறைசார்ந்தவேலைவாய்புத்திறன்பெற்றிருத்தல்

பருவம் II

17LSU201 :

தமிழ் இரண்டாம் தாள் 4-H,4-C
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

அலகு - I : பக்தி இலக்கியம்

(10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு.

1. சைவம் - பெரியபுராணம் - திருமூலநாயனார் புராணம்.

2. வைணவம் - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு - II : சங்க இலக்கியம்

:

(15 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). எட்டுத்தொகை

நற்றிணை : பிரசம் கலந்த - பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை - குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு -

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு

இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்தொட கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் -பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் - 'சிறுதினை மலரொடு' என்பதிலிருந்துதொடங்கி,

'அறிந்தவாறே' என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் - 'தெய்வம் சான்ற' என்பதிலிருந்து தொடங்கி,

'நல்குமதி' என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம்

(6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – கண்ணகியின் சிறப்பு:

நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி,

'கண்ணகி என்பாண் மன்னோ' என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில்

எடுத்தல்: 'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி

காட்சியளித்தல்: 'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை

(10 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி

(7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)

மொழிபெயர்ப்பு [[

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

(For all undergraduate students admitted from 2016 onwards)

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcomes:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us - Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. A River - A.K. Ramanujan
3. The Sailor - Safaa Fathy

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Romance of a Busy Broker - O.Henry
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV

- GRAMMAR :**
1. Tenses
 2. Auxiliaries (Primary and Modal)
 3. Articles
 4. Tag Questions

UNIT - V

FUNCTIONAL ENGLISH

1. Filling the blanks with the suitable form of verb in a conditional sentence.
2. Dialogue Writing
3. Changing positive to negative without altering the meaning
4. Fill in the blank with suitable modal
5. Framing a question to a statement
6. Rewrite the sentences changing the underlined word as directed

Prescribed Text: Reminisce, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading: Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

UNIT-I

Introduction to Java Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods),

UNIT-II

Arrays, Strings and I/O Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and

files. **Object-Oriented Programming Overview** Principles of Object-Oriented Programming, Defining & Using Classes, Controlling Access to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

UNIT-III

Inheritance, Interfaces, Packages, Enumerations, Autoboxing and Metadata

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

UNIT-IV

Exception Handling, Threading, Networking and Database Connectivity Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

UNIT-V

Java Applets: Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

3. www.java.net/

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

This course enables the students to

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

UNIT I

Sets: Introduction, Sets , finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations, counting , Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

UNIT II

Growth of Functions: Asymptotic Notations, Summation formulas and properties, Bounding Summations, approximation by Integrals

UNIT III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution, Substitution Method, recurrence trees, Master theorem.

UNIT IV

Graph Theory : Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

UNIT V

Propositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To learn and understand technical aspect of Multimedia Systems.
- To understand the standards available for different audio, video and text applications.
- To Design and develop various Multimedia Systems applicable in real time.
- To learn various multimedia authoring systems.
- To understand various networking aspects used for multimedia applications.
- To develop multimedia application and analyze the performance of the same.

Course Outcomes (COs)

1. Developed understanding of technical aspect of Multimedia Systems.
2. Understand various file formats for audio, video and text media.
3. Develop various Multimedia Systems applicable in real time.
4. Design interactive multimedia software.
5. Apply various networking protocols for multimedia applications.
6. To evaluate multimedia application for its optimum performance.

UNIT-I

Multimedia: Introduction to multimedia, components, uses of multimedia, multimedia applications, virtual reality. **Text:** Fonts & Faces, Using Text in Multimedia, Font Editing & Design Tools, Hypermedia & Hypertext.

UNIT-II

Images: Still Images – bitmaps, vector drawing, 3D drawing & rendering, natural light & colors, computerized colors, color palettes, image file formats. **Sound:** Digital Audio, MIDI Audio, MIDI vs Digital Audio, Audio File Formats.

UNIT-III

Video: How video works, analog video, digital video, video file formats, video shooting and editing. **Animation:** Principle of animations, animation techniques,

UNIT-IV

Animation: animation file formats. **Internet and Multimedia:** www and HTML, multimedia on the web – web servers, web browsers, web page makers and site builders.

UNIT-V

Making Multimedia: Stages of a multimedia project, Requirements to make good multimedia, Multimedia Hardware - Macintosh and Windows production Platforms, Hardware peripherals - Connections, Memory and storage devices, Multimedia software and Authoring tools.

List of Programs

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of .length in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBuffer class like setCharAt(), setLength(), append(), insert(), concat() and equals().

9. Write a program to create a —distance class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer
10. Modify the —distance class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions(from lower to higher data type)
12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate Fibonacci series, where the function to generate fibonacci series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program —DivideByZero that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the openConnection() method and then use it examine the different components of the URL and content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scrolls the message in the banner from left to right across the applet's window.
26. Write a program to get the URL/location of code (i.e. java code) and document(i.e. html file).

27. Write a program to demonstrate different mouse handling events like `mouseClicked()`, `mouseEntered()`, `mouseExited()`, `mousePressed`, `mouseReleased()` and `mouseDragged()`.
28. Write a program to demonstrate different keyboard handling events.
29. Write a program to generate a window without an applet window using `main()` function.
30. Write a program to demonstrate the use of push buttons.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives**

This course enables the students to

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

List of programs

1. Write a C Program to find the number of subsets of a set contains n elements.
2. Write a C Program to find transitive closure of a relation.
3. Write a C Program to prove
 $1/(1*2) + 1/(2*3) + \dots + 1/(n(n+1)) = n/(n+1)$
4. Write a C Program to perform the sum $= 1 + (1+2) + (1+2+3) + \dots + (1+2+\dots+n)$
5. Write a C program to print Fibonacci series till Nth term using recursion
6. Write a C program in c to calculate factorial of a number using recursion
7. Write a C Program to find a minimum spanning tree using Prim's algorithm
8. Write a C program to find the shortest path with the lower cost in a graph using Dijkstra's Algorithm
9. Write a C Program to construct the truth table for the following formula.
(i) $P \wedge Q \wedge \neg R$ (ii) $P \wedge \neg Q \wedge R$ (iii) $P \wedge Q \wedge \neg R$
10. Write a C Program to prove De – Morgan's law.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To learn and understand technical aspect of Multimedia Systems.
- To understand the standards available for different audio, video and text applications.
- To Design and develop various Multimedia Systems applicable in real time.
- To learn various multimedia authoring systems.
- To understand various networking aspects used for multimedia applications.
- To develop multimedia application and analyze the performance of the same.

Course Outcomes (COs)

1. Developed understanding of technical aspect of Multimedia Systems.
2. Understand various file formats for audio, video and text media.
3. Develop various Multimedia Systems applicable in real time.
4. Design interactive multimedia software.
5. To evaluate multimedia application for its optimum performance.
6. Design different application in M.M and use different tools like Adobe Photoshop and flash.

Practical exercises based on concepts listed in theory using Flash/ GIMP/ PhotoShop/ Animation Tools/ Image Editors/ Video Editors.

Implement the followings using Flash-

1. Create an animation using the tools panel and the properties panel to draw the following – Line, pe , oval, circle, rectangle , square, pencil , brush , lasso tool.
2. Create an animation using text tool to set the font, size, color etc.
3. Create an animation using **Free transform tool** that should use followings- Move Objects Skew Objects Stretch Objects Rotate Objects Stretch Objects while maintaining proportion Rotate Objects after relocating the center dot.
4. Create an animation using layers having following features-Insert layer, Delete layer, guide layer, Mask layer.
5. Modify the document (changing background color etc.)using the following tools Eraser tool, Hand tool, Ink bottle tool ,Zoom tool ,Paint Bucket tool ,Eyedropper tool.
6. Create an animation for bus car race in which both starts from the same point and car wins the race.

7. Create an animation in which text Hello gets converted into GoodBye (using motion/shape tweening).
8. Create an animation having five images having fade-in fade-out effect.
9. Create an scene to show the sunrise (using multiple layers and motion tweening) .
10. Create an animation to show the ripple effect.
11. Create an animation (using Shape tweening and shape hints) for transforming one shape into another.
12. Create an animation for bouncing ball (you may use motion guide layer).

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand and apply sorting, searching algorithms
- To know about hashing algorithms
- To develop application using data structures

Course Outcomes (COs)

Upon completion of this course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Apply searching algorithms over various data structures.

UNIT-I

Arrays-Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation).Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

UNIT-II

Linked Lists Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

UNIT-III

Trees - Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion , Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

UNIT-IV

Searching and Sorting,Linear Search, Binary Search, Comparison of Linear and Binary Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting Techniques

UNIT-V

Hashing - Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collision by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- To provide experience on MS Windows and LINUX environment.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Work in MS Windows and LINUX environment.

UNIT-I

Introduction to Operating System: Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems-Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

UNIT-II

Operating System Organization: Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources-Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication-Deadlocks.

UNIT-III

Memory Management: Physical and Virtual address space-Memory Allocation strategies –Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

UNIT-IV

File and I/O Management: Directory structure-File operations-File Allocation methods-Device management.

UNIT-V

Protection and Security: Policy mechanism-Authentication-Internal aCSUess
Authorization.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To master the fundamentals of data communications networks by gaining a working knowledge of data transmission concepts.
- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the functions of each layer in OSI and TCP/IP model.
2. Explain the multiplexing, switching concept and types of transmission media with real time examples.
3. Understand the error detection and correction methods and can implement the data link layer protocols
4. Understand channel error detection and correction, MAC protocols, Ethernet and WLAN.
5. Learn different medium access method to avoid collision and to learn about routing table.
6. Learn basic functionalities of transport layer and application layer.

Unit I

Introduction to Computer Networks : Network definition; network topologies; network classifications; network protocol; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques:** Analog and digital signal; data-rate limits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission;

Unit – II

(cont..)digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media.

Networks Switching Techniques and Access mechanisms: Circuit switching; packet switching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

Unit – III

Data Link Layer Functions and Protocol: Error detection and error correction

techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

Unit – IV

Multiple Access Protocol and Networks: CSMA/CD protocols; Ethernet LANS; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways; **Networks Layer Functions and Protocols:** Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit V

Transport Layer Functions and Protocols: Transport services- error and flow control, Connection establishment and release- three way handshake; **Overview of Application layer protocol:** Overview of DNS protocol; overview of WWW &HTTP protocol.

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : 40 Ext : 60 Total: 100**Course Objectives**

- To compare the differences between Android and other mobile development environments.
- To learn the Object-oriented features of Kotlin and APIs for Android Development.
- To describe the working of Android applications, life cycle, manifest, and Intents
- To demonstrate the implementation of Form widgets for Android App development.
- To learn the SQLite database connectivity and database operations with android
- To design, create, deploy, and test applications for the Android mobile phone platform.

Course Outcomes (Cos)

Upon completion of this course the students will be able to:

1. Design and develop useful Android applications with compelling user interfaces by using, extending, and creating your own layouts and Views and using Menus.
2. Analyze the Architecture and features of Android with another Mobile Operating System.
3. Evaluate the standard of Kotlin language for developing Android Applications
4. Apply knowledge for creating user Interface and develop activity for Android App.
5. Evaluate the user interface architecture of Android for developing Android Apps
6. Understand the implementation of SQLite database operations with Android.

UNIT-I:

Introduction: History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture.

UNIT-II:

Overview of object oriented programming using Java: OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine.

UNIT-III:

Development Tools: Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device.

UNIT-IV

User Interface Architecture: Application context, intents, Activity life cycle, multiple screen sizes. **User Interface Design:** Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes), Images, Menu, Dialog.

UNIT-V

Database: Understanding of SQLite database, connecting with the database.

Course Objectives

- To understand the need for simulation/implementation for the verification of mathematical functions.
- To understand the main features of the MATLAB program development environment to enable their usage in the higher learning.
- To implement simple mathematical functions/equations in numerical computing environment such as MATLAB.
- To interpret and visualize simple mathematical functions and operations thereon using plots/display.
- To analyze the program for correctness and determine/estimate/predict the output and verify it under simulation environment using MATLAB tools.
- To apply MATLAB tools for implementation/simulation and visualization of basic mathematical functions

Course Outcomes (Cos)

On successful completion of the course, the students should be able to

1. Understand the need for simulation/implementation for the verification of mathematical functions.
2. Understand the main features of the MATLAB program development environment to enable their usage in the higher learning.
3. Implement simple mathematical functions/equations in numerical computing environment such as MATLAB.
4. Interpret and visualize simple mathematical functions and operations thereon using plots/display.
5. Analyze the program for correctness and determine/estimate/predict the output and verify it under simulation environment using MATLAB tools.
6. Apply MATLAB tools for implementation/simulation and visualization of basic mathematical functions

UNIT-I

Introduction to Programming: Components of a computer, working with numbers, Machine code, Software hierarchy.

UNIT-II

Programming Environment: MATLAB Windows, A First Program, Expressions, Constants, Variables and assignment statement, Arrays.

UNIT-III

Graph Plots: Basic plotting, Built in functions, Generating waveforms, Sound replay, load and save. **Procedures and Functions:** Arguments and return values, M-files, Formatted console input-output , String handling,

UNIT-IV

Control Statements: Conditional statements: If, Else, Else-if, Repetition statements: While, for loop

UNIT-V

Manipulating Text: Writing to a text file, Reading from a text file, Randomising and sorting a list, searching a list. **GUI Interface:** Attaching buttons to actions, Getting Input, Setting Output

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives**

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand and apply sorting, searching algorithms
- To know about hashing algorithms
- To develop application using data structures

Course Outcomes (COs)

Upon completion of this course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Apply searching algorithms over various data structures.

List of programs

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.
2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.
3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).
4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
6. Perform Stack operations using Linked List implementation.
7. Perform Stack operations using Array implementation. Use Templates.
8. Perform Queues operations using Circular Array implementation. Use Templates.
9. Create and perform different operations on Double-ended Queues using Linked List implementation.
10. WAP to scan a polynomial using linked list and add two polynomial.
11. WAP to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration
12. (ii) WAP to display Fibonacci series (i)using recursion, (ii) using iteration
13. WAP to calculate GCD of 2 number (i) with recursion (ii) without recursion

14. WAP to create a Binary Search Tree and include following operations in tree: (a) Insertion (Recursive and Iterative Implementation)
(b) Deletion by copying
(c) Deletion by Merging
(d) Search a no. in BST
(e) Display its preorder, postorder and inorder traversals Recursively
(f) Display its preorder, postorder and inorder traversals Iteratively
(g) Display its level-by-level traversals
(h) Count the non-leaf nodes and leaf nodes
(i) Display height of tree
(j) Create a mirror image of tree
(k) Check whether two BSTs are equal or not
15. WAP to convert the Sparse Matrix into non-zero form and vice-versa.
16. WAP to reverse the order of the elements in the stack using additional stack.
17. WAP to reverse the order of the elements in the stack using additional Queue.
18. WAP to implement Diagonal Matrix using one-dimensional array.
19. WAP to implement Lower Triangular Matrix using one-dimensional array.
20. WAP to implement Upper Triangular Matrix using one-dimensional array.
21. WAP to implement Symmetric Matrix using one-dimensional array.
22. WAP to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the successor / predecessor of an element, insert an element, inorder traversal.
23. WAP to implement various operations on AVL Tree.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- To provide experience on MS Windows and LINUX environment.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Work in MS Windows and LINUX environment.

List of programs

1. Write a program (using *fork()* and/or *exec()* commands) where parent and child execute:
 - a) same program, same code.
 - b) same program, different code.
 - c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behaviour of Linux kernel including kernel version, CPU type and model. (CPU information)
3. Write a program to report behaviour of Linux kernel including information on configured memory, amount of free and used memory. (memory information)
4. Write a program to print file details including owner access permissions, file access time, where file name is given as argument.
5. Write a program to copy files using system calls.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using *thread* library.
13. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives**

- To master the fundamentals of data communications networks by gaining a working knowledge of data transmission concepts.
- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the functions of each layer in OSI and TCP/IP model.
2. Explain the multiplexing, switching concept and types of transmission media with real time examples.
3. Understand the error detection and correction methods and can implement the data link layer protocols
4. Understand channel error detection and correction, MAC protocols, Ethernet and WLAN.
5. Learn different medium access method to avoid collision and to learn about routing table.
6. Learn basic functionalities of transport layer and application layer.

List of Programs

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives**

Upon completion of this course the students will be able to:

1. Design and develop useful Android applications with compelling user interfaces by using, extending, and creating your own layouts and Views and using Menus.
2. Analyze the Architecture and features of Android with another Mobile Operating System.
3. Evaluate the standard of Kotlin language for developing Android Applications
4. Apply knowledge for creating user Interface and develop activity for Android App.
5. Evaluate the user interface architecture of Android for developing Android Apps
6. Understand the implementation of SQLite database operations with Android.

List of Programs

1. Create —Hello World application. That will display —Hello World in the middle of the screen in the emulator. Also display —Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives

- To understand the need for simulation/implementation for the verification of mathematical functions.
- To understand the main features of the MATLAB program development environment to enable their usage in the higher learning.
- To implement simple mathematical functions/equations in numerical computing environment such as MATLAB.
- To interpret and visualize simple mathematical functions and operations thereon using plots/display.
- To analyze the program for correctness and determine/estimate/predict the output and verify it under simulation environment using MATLAB tools.
- To apply MATLAB tools for implementation/simulation and visualization of basic mathematical functions

Course Outcomes (Cos)

On successful completion of the course, the students should be able to

1. Understand the need for simulation/implementation for the verification of mathematical functions.
2. Understand the main features of the MATLAB program development environment to enable their usage in the higher learning.
3. Implement simple mathematical functions/equations in numerical computing environment such as MATLAB.
4. Interpret and visualize simple mathematical functions and operations thereon using plots/display.
5. Analyze the program for correctness and determine/estimate/predict the output and verify it under simulation environment using MATLAB tools.
6. Apply MATLAB tools for implementation/simulation and visualization of basic mathematical functions

List of programs

1. Write a program to assign the following expressions to a variable A and then to print out the value of A.
 - a. $(3+4)/(5+6)$
 - b. $2\pi^2$
 - c. $\sqrt{2}$
 - d. $(0.0000123 + 5.67 \times 10^{-3}) \times 0.4567 \times 10^{-4}$

2. Celsius temperatures can be converted to Fahrenheit by multiplying by 9, dividing by 5, and adding 32. Assign a variable called C the value 37, and implement this formula to assign a variable F the Fahrenheit equivalent of 37 Celsius.
3. Set up a vector called N with five elements having the values: 1, 2, 3, 4, 5. Using N, create assignment statements for a vector X which will result in X having these values:
 - a. 2, 4, 6, 8, 10
 - b. 1/2, 1, 3/2, 2, 5/2
 - c. 1, 1/2, 1/3, 1/4, 1/5
 - d. 1, 1/4, 1/9, 1/16, 1/25
4. A supermarket conveyor belt holds an array of groceries. The price of each product (in pounds) is [0.6, 1.2 ,0.5, 1.3] ; while the numbers of each product are [3, 2 ,1 ,5]. Use MATLAB to calculate the total bill.
5. The sortrows(x) function will sort a vector or matrix X into increasing row order. Use this function to sort a list of names into alphabetical order.
6. The —identityl matrix is a square matrix that has ones on the diagonal and zeros elsewhere. You can generate one with the eye() function in MATLAB. Use MATLAB to find a matrix B, such that when multiplied by matrix A=[1 2; -1 0] the identity matrix I=[1 0; 0 1] is generated. That is A*B=I.
7. Create an array of N numbers. Now find a single MATLAB statement that picks out from that array the 1,4,9,16,...,√Nth entries, i.e. those numbers which have indices that are square numbers.
8. Draw a graph that joins the points (0,1), (4,3), (2,0) and (5,-2).
9. The seeds on a sunflower are distributed according to the formula below. Plot a small circle at each of the first 1000 co-ordinates :

$$r_n = \sqrt{n}$$

$$\theta_n = \frac{137.51}{180} \pi n$$
10. Calculate 10 approximate points from the function $y=2x$ by using the formulae:
 - i. $x_n = n$
 - ii. $y_n = 2n + \text{rand} - 0.5$
 Fit a line of best fit to these points using the function polyfit() with degree=1, and generate co-ordinates from the line of best fit using polyval(). Use the on-line help to find out how to use these functions. Plot the raw data and the line of best fit.
11. Calculate and replay 1 second of a sinewave at 500Hz with a sampling rate of 11025Hz. Save the sound to a file called ex35.wav. Plot the first 100 samples.
12. Calculate and replay a 2 second chirp. That is, a sinusoid that steadily increases in frequency with time, from say 250Hz at the start to 1000Hz at the end.

13. Build a square wave by adding together 10 odd harmonics: 1f, 3f, 5f, etc. The amplitude of the nth harmonic should be 1/n. Display a graph of one cycle of the result superimposed on the individual harmonics.

14. Write a function called FtoC (ftoc.m) to convert Fahrenheit temperatures into Celsius. Make sure the program has a title comment and a help page. Test from the command window with:

- i. FtoC(96)
- ii. lookfor Fahrenheit
- iii. help FtoC

15. Write a program to input 2 strings from the user and to print out (i) the concatenation of the two strings with a space between them, (ii) a line of asterisks the same length as the concatenated strings, and (iii) the reversed concatenation. For example:

- i. Enter string 1: Mark
- ii. Enter string 2: Huckvale
- iii. Mark Huckvale
- iv. *****
- v. elavkcuH kraM

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To learn mathematical background for analysis of algorithm
- To learn various advanced data structures.
- To understand the concept of designing an algorithm.
- To learn dynamic programming and greedy method.
- To understand the concept of pattern matching
- To learn advanced tree and graph applications

Course Outcomes(COs)

1. Learn to choose appropriate advanced data structure for given problem
2. Knowledge to calculate complexity.
3. Select appropriate design techniques to solve real world problems.
4. Apply the dynamic programming technique to solve the problems.
5. Apply the greedy programming technique to solve the problems.
6. Select a proper pattern matching algorithm for given problem

UNIT-I

Introduction: Basic Design and Analysis techniques of Algorithms, Correctness of Algorithm.

Algorithm Design Techniques: Iterative techniques, Divide and Conquer, Dynamic Programming, Greedy Algorithms.

UNIT-II

Sorting and Searching Techniques: Elementary sorting techniques–Bubble Sort, Insertion Sort, Merge Sort, Advanced Sorting techniques - Heap Sort, Quick Sort, Sorting in Linear Time - Bucket Sort, Radix Sort and Count Sort, Searching Techniques, Medians & Order Statistics, complexity analysis;

UNIT-III

Lower Bounding Techniques: Decision Trees **Balanced Trees:** Red-Black Trees

UNIT-IV

Advanced Analysis Technique: Amortized analysis **Graphs:** Graph Algorithms– Breadth First Search, Depth First Search and its Applications, Minimum Spanning Trees.

UNIT-V

String Processing: String Matching, KMP Technique.

Suggested Readings

1. Cormen, T.H., Charles, E. Leiserson., Ronald, L. Rivest. (2009). Clifford Stein Introduction to Algorithms(3rd ed.). New Delhi: PHI.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
- To Work effectively as leader/member of a development team to deliver quality software artifacts.
- To Analyze, specify and document software requirements for a software system.
- To Implement a given software design using sound development practices.
- To Verify, validate, assess and assure the quality of software artifacts.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.

Course Outcomes(COs)

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.

UNIT-I

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

UNIT-II:

Requirement Analysis; Initiating Requirement Engineering Process- Requirement Analysis and Modeling Techniques- Flow Oriented Modeling- Need for SRS- Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

UNIT-III:

Risk Management: Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, **Quality Management-** Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

UNIT-IV:

Design Engineering-Design Concepts, Architectural Design Elements, Software Architecture, Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

UNIT-V

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To retrieve any type of information from a data base by formulating complex queries in SQL.
- To analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Retrieve any type of information from a data base by formulating complex queries in SQL.
6. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

UNIT-I

Introduction: Characteristics of database approach, data models, database system architecture and data independence. **Entity Relationship(ER) Modeling:** Entity types, relationships, constraints.

UNIT-II

Relation data model: Relational model concepts, relational constraints, relational algebra.

UNIT-III

Relation data model: SQLqueries **Database design:** Mapping ER/EER model to relational database, functional dependencies, Lossless decomposition.

UNIT-IV

Database design: Normal forms (upto BCNF). **Transaction Processing :** ACID properties, concurrency control

UNIT-V

File Structure and Indexing (8 Lectures) Operations on files, File of Unordered and ordered records, overview of File organizations, Indexing structures for files(Primary index, secondary index, clustering index), Multilevel indexing using B and B+ trees.

Instruction Hours / week: L: 3 T: 0 P: 0

Marks: Int : 40 Ext : 60

Total: 100

Course Objectives

- To Understand the fundamentals of HTML and use different formatting options
- To Create tables and frames
- To insert a graphic and links within a web page.
- To insert ordered and unordered lists within a web page.
- To use cascading style sheets.
- To validate and publish a web page.

Course Outcomes (COs)

1. Understand the fundamentals of HTML and use different formatting options
2. Create tables and frames
3. Insert a graphic and links within a web page.
4. Insert ordered and unordered lists within a web page.
5. Use cascading style sheets.
6. Validate and publish a web page.

Unit-I:

Introduction The Basics: The Head, the Body, Colors, Attributes, Lists, ordered and unordered

Unit-II

Links Introduction: Relative Links, Absolute Links ,Link Attributes ,Using the ID Attribute to Link Within a Document

Unit-III:

Images: Putting an Image on a Page ,Using Images as Links, Putting an Image in the Background

Unit IV:

Tables: Creating a Table, Table Headers, Captions, Spanning Multiple Columns ,Styling Table

Unit V :

Forms :Basic Input and Attributes ,Other Kinds of Inputs ,Styling forms with CSS ,Where To Go From Here

Instruction Hours / week: L: 3 T: 0 P: 0

Marks: Int : 40 Ext : 60

Total: 100

Course Objective

- To learn rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
- To Construct Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
- To develop dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
- To create valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
- To learn to display XML documents using CSS.
- To construct of complex queries over XML documents using XPath and XQuery.

Course Outcomes(COs)

1. Learning rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
2. Constructing Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
3. Developing dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
4. Creating valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
5. Learning to display XML documents using CSS.
6. Construction of complex queries over XML documents using XPath and XQuery.

UNIT-I**Introduction:** Understanding Mark-up Languages, Introduction to XML and its Goals.**UNIT-II****XML Basics:** XML Structure and Syntax, Document classes and Rules.**UNIT-III****Other XML Concepts:** Scripting XML**UNIT-IV****Other XML Concepts:** XML as Data, Linking with XML**UNIT-V****XML with Style:** XSL –Style Sheet Basics, XSL basics, XSL style sheets.

Suggested Readings

1. William, J. Pardi. XML in action web technology.
2. Michael, J. Young. Step by Step XML.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives

- To learn mathematical background for analysis of algorithm
- To learn various advanced data structures.
- To understand the concept of designing an algorithm.
- To learn dynamic programming and greedy method.
- To understand the concept of pattern matching
- To learn advanced tree and graph applications

Course Outcomes(COs)

1. Learn to choose appropriate advanced data structure for given problem
2. Knowledge to calculate complexity.
3. Select appropriate design techniques to solve real world problems.
4. Apply the dynamic programming technique to solve the problems.
5. Apply the greedy programming technique to solve the problems.
6. Select a proper pattern matching algorithm for given problem

List of Programs

1. Implement Insertion Sort (The program should report the number of comparisons) ii. Implement Merge Sort(The program should report the number of comparisons)
2. Implement Heap Sort(The program should report the number of comparisons)
3. Implement Randomized Quick sort (The program should report the number of comparisons)
4. Implement Radix Sort
5. Create a Red-Black Tree and perform following operations on it: i. Insert a node
ii. Delete a node
iii. Search for a number & also report the color of the node containing this number.
6. Write a program to determine the LCS of two given sequences
7. Implement Breadth-First Search in a graph
8. Implement Depth-First Search in a graph
9. Write a program to determine the minimum spanning tree of a graph

For the algorithms at S.No 1 to 3 test run the algorithm on 100 different inputs of sizes varying from 30 to 1000. Count the number of comparisons and draw the graph. Compare it with a graph of $n \log n$.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives**

- To Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
- To Work effectively as leader/member of a development team to deliver quality software artifacts.
- To Analyze, specify and document software requirements for a software system.
- To Implement a given software design using sound development practices.
- To Verify, validate, assess and assure the quality of software artifacts.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.

Course Outcomes(COs)

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.

S. No	Practical Title
1.	<ul style="list-style-type: none"> • Problem Statement • Process Model
2.	Requirement Analysis: <ul style="list-style-type: none"> • Creating a Data Flow • Data Dictionary, Use Cases
3.	Project Management: <ul style="list-style-type: none"> • Computing FP • Effort • Schedule, Risk Table, Timeline chart
4.	Design Engineering: <ul style="list-style-type: none"> • Architectural Design • Data Design, Component Level Design
5.	Testing: <ul style="list-style-type: none"> • Basis Path Testing

Sample Projects:

1. **Criminal Record Management:** Implement a criminal record management system for jailers, police officers and CBI officers
2. **DTC Route Information:** Online information about the bus routes and their frequency and fares
3. **Car Pooling:** To maintain a web based intranet application that enables the corporate employees within an organization to avail the facility of carpooling effectively.
4. Patient Appointment and Prescription Management System
5. Organized Retail Shopping Management Software
6. Online Hotel Reservation Service System
7. Examination and Result computation system
8. Automatic Internal Assessment System
9. Parking Allocation System
10. Wholesale Management System

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To retrieve any type of information from a data base by formulating complex queries in SQL.
- To analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Retrieve any type of information from a data base by formulating complex queries in SQL.
6. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

1. Create and use the following database schema to answer the given queries.

EMPLOYEE Schema

Field	Type	NULL	KEY	DEFAULT
Eno	Char(3)	NO	PRI	NIL
Ename	Varchar(50)	NO		NIL
Job_type	Varchar(50)	NO		NIL
Manager	Char(3)	Yes	FK	NIL
Hire_date	Date	NO		NIL
Dno	Integer	YES	FK	NIL
Commission	Decimal(10,2)	YES		NIL
Salary	Decimal(7,2)	NO		NIL

DEPARTMENT Schema

Field	Type	NULL	KEY	DEFAULT
Dno	Integer	No	PRI	NULL
Dname	Varchar(50)	Yes		NULL
Location	Varchar(50)	Yes		New Delhi

Query List

1. Query to display Employee Name, Job, Hire Date, Employee Number; for each employee with the Employee Number appearing first.
2. Query to display unique Jobs from the Employee Table.
3. Query to display the Employee Name concatenated by a Job separated by a comma.
4. Query to display all the data from the Employee Table. Separate each Column by a comma and name the said column as THE_OUTPUT.
5. Query to display the Employee Name and Salary of all the employees earning more than \$2850.
6. Query to display Employee Name and Department Number for the Employee No=7900.
7. Query to display Employee Name and Salary for all employees whose salary is not in the range of \$1500 and \$2850.
8. Query to display Employee Name and Department No. of all the employees in Dept 10 and Dept 30 in the alphabetical order by name.
9. Query to display Name and Hire Date of every Employee who was hired in 1981.
10. Query to display Name and Job of all employees who don't have a current Manager.
11. Query to display the Name, Salary and Commission for all the employees who earn commission.
12. Sort the data in descending order of Salary and Commission.
13. Query to display Name of all the employees where the third letter of their name is _A'.
14. Query to display Name of all employees either have two _R's or have two _A's in their name and are either in Dept No = 30 or their Manger's Employee No = 7788.
15. Query to display Name, Salary and Commission for all employees whose Commission Amount is 14 greater than their Salary increased by 5%.
16. Query to display the Current Date.
17. Query to display Name, Hire Date and Salary Review Date which is the 1st Monday after six months of employment.
18. Query to display Name and calculate the number of months between today and the date each employee was hired.
19. Query to display the following for each employee <E-Name> earns < Salary> monthly but wants < 3 * Current Salary >. Label the Column as Dream Salary.
20. Query to display Name with the 1st letter capitalized and all other letter lower case and length of their name of all the employees whose name starts with _J', 'A' and _M'.
21. Query to display Name, Hire Date and Day of the week on which the employee started.
22. Query to display Name, Department Name and Department No for all the employees.
23. Query to display Unique Listing of all Jobs that are in Department # 30.
24. Query to display Name, Dept Name of all employees who have an _A' in their name.

25. Query to display Name, Job, Department No. And Department Name for all the employees working at the Dallas location.
26. Query to display Name and Employee no. Along with their Manager's Name and the Manager's employee no; along with the Employees' Name who do not have a Manager.
27. Query to display Name, Dept No. And Salary of any employee whose department No. and salary matches both the department no. And the salary of any employee who earns a commission.
28. Query to display Name and Salaries represented by asterisks, where each asterisk (*) signifies \$100.
29. Query to display the Highest, Lowest, Sum and Average Salaries of all the employees
30. Query to display the number of employees performing the same Job type functions.
31. Query to display the no. of managers without listing their names.
32. Query to display the Department Name, Location Name, No. of Employees and the average salary for all employees in that department.
33. Query to display Name and Hire Date for all employees in the same dept. as Blake.
34. Query to display the Employee No. And Name for all employees who earn more than the average salary.
35. Query to display Employee Number and Name for all employees who work in a department with any employee whose name contains a 'T'.
36. Query to display the names and salaries of all employees who report to King.
37. Query to display the department no, name and job for all employees in the Sales department.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives**

- To Understand the fundamentals of HTML and use different formatting options
- To Create tables and frames
- To insert a graphic and links within a web page.
- To insert ordered and unordered lists within a web page.
- To use cascading style sheets.
- To validate and publish a web page.

Course Outcomes (COs)

1. Understand the fundamentals of HTML and use different formatting options
2. Create tables and frames
3. Insert a graphic and links within a web page.
4. Insert ordered and unordered lists within a web page.
5. Use cascading style sheets.
6. Validate and publish a web page.

List of Programs

1. Create an HTML document with the following formatting options:

I. Bold

II. Italics

III. Underline

IV. Headings (Using H1 to H6 heading styles)

V. Font (Type, Size and Color)

VI. Background (Colored background/Image in background)

VII. Paragraph

VIII. Line Break

IX. Horizontal Rule

X. Pre tag

2. Create an HTML document which consists of:

I. Ordered List

II. Unordered List

III. Nested List

IV. Image

3 Create an HTML document which implements Internal linking as well as External linking.

4 Create a table using HTML which consists of columns for Roll No., Student's name and grade.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60**Total: 100****Course Objective**

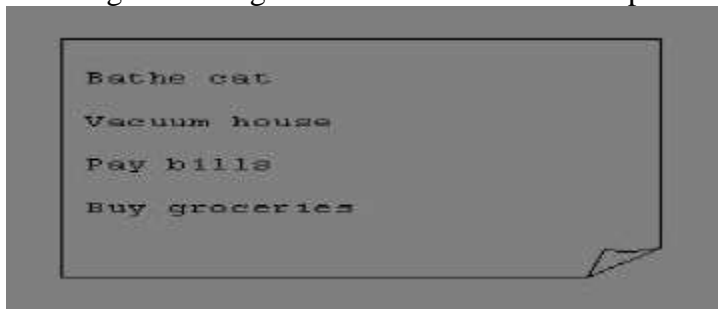

- To learn rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
- To Construct Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
- To develop dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
- To create valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
- To learn to display XML documents using CSS.
- To construct of complex queries over XML documents using XPath and XQuery.

Course Outcomes(COs)

1. Learning rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
2. Constructing Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
3. Developing dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
4. Creating valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
5. Learning to display XML documents using CSS.
6. Construction of complex queries over XML documents using XPath and XQuery.

List of Programs**Exercise #1 – Information Structure**

In this exercise, student will practice identifying the structure of an information object. For the sample document provided below: Label the information structures you see, including containing structures. 1. Draw a tree representation of the structure.

**Exercise 2# Deconstructing an XML Document**

In this exercise, student will practice identifying the explicit structure within an XML document. In a sense, this is the reverse of what you did in Exercise #1. For the sample

XML markup below, create a document-like representation (or a simple drawing) for the content contained within the XML tags:

```
<book>
<coverInfo>
<title>The XML Handbook</title>
<author>Charles F. Goldfarb</author>
<author>Paul Prescod</author>
<edition>Second</edition>
<description>The definitive XML resource: applications, products, and technologies.
Revised and expanded—over 600 new pages. </description>
</coverInfo> </book>
```

Exercise #3 – Creating XML Markup

In this exercise, create some XML markup based on the tree representation from Exercise #1 above, and the content from the original sample document.

Exercise #4 – Well-Formedness

This exercise checks your understanding of the constraints for well-formedness. Are the following document instances well-formed? Explain any NO answers.

```
<list><title>The first list</title><item>An item</list>
<item>An item</item><item>Another item</item>
<para>Bathing a cat is a <emph>relatively</emph> easy task as long as the cat is
willing.</para>
<bibl><title>How to Bathe a Cat<author></title>Merlin Bauer<author></bibl>
```

Exercise #5-Well Formedness

This exercise is a bit more challenging than the previous example. Here is a fragment of an XML document instance. Identify all the places where it fails to match the constraints for well-formedness.

```
<PROCEDURE><TITLE>How to Bathe a Cat</TITLE>
<OVERVIEW> This procedure tells you how to bathe a cat.
<WARNING></OVERVIEW>Cats don't like to take baths. You could get hurt doing this.
Be sure to obtain all the required protective gear before you start.
</WARNING><EQUIPEMENT><ITEM>Hockey Mask <ITEM>Padded Full-body
Kevlar Armor</ITEM><ITEM>Tub full of warm water</ITEM><ITEM>Towels
</ITEM><ITEM>First Aid kit</ITEM><ITEM>Cat Shampoo</ITEM>
<EQUIPMENT><INSTRUCTIONS> <STEP> Locate the cat, who by now is hiding
under the bed.</STEP><STEP>Place the cat in the tub of water.</STEP> <ITEM>Using
the First Aid kit, repair the damage to your head and arms.</STEP> <STEP>Place the cat
back in the tub and hold it down.</STEP> <STEP>Wash it really fast, then make an
effort to dry it with the towels.</STEP> <STEP>Decide not to do this again. </STEP>
</INSTRUCTIONS>
```

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To provides an overview of Information Security and Assurance.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- To explain concepts related to applied cryptography including the techniques for crypto-analysis symmetric and asymmetric cryptography.
- To understand the concepts of digital signature, message authentication code, hash functions and modes of encryption operations.
- To explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
- To understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. Explore the working principles and utilities of various cryptographic algorithms including secret key cryptography, hashes and message digests, and public key algorithms
2. State the basic concepts in information security
3. Explain concepts related to applied cryptography including the techniques for crypto-analysis symmetric and asymmetric cryptography.
4. Use digital signature, message authentication code, hash functions and modes of encryption operations.
5. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
6. Understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications

Unit I

Introduction : Security, Attacks, Computer Criminals, Security Services, Security Mechanisms.

Cryptography : Substitution ciphers, Transpositions Cipher, Confusion, diffusion.

Unit – II

Symmetric, Asymmetric Encryption. DES Modes of DES, Uses of Encryption, Hash function, key exchange, Digital Signatures, Digital Certificates

Unit – III

Program Security: Secure programs, Non malicious Program errors, Malicious codes virus, Trap doors, Salami attacks, Covert channels, Control against program. **Threats:**

Protection in OS: Memory and Address Protection, ACSUess control, File Protection, User Authentication.

Unit – IV

Database Security: Requirements, Reliability, Integrity, Sensitive data, Inference, Multilevel Security. **Security in Networks :** Threats in Networks, Security Controls, firewalls, Intrusion detection systems, Secure e-mails

Unit V

Administrating Security

Security Planning, Risk Analysis, Organisational Security Policy, Physical Security. Ethical issues in Security: Protecting Programs and data. Information and law.

Suggested Readings

1. Pfleeger, C. P., & Pfleeger, S. L.(2006). Security in Computing. New Delhi: Prentice Hall of India
2. Stallings, W. (2010). Network Security Essentials: Applications and Standards(4th ed.).

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To describe the fundamental concepts of networks
- To demonstrate mastery of main protocols comprising the Internet.
- To develop skills in network programming techniques.
- To implement network services that communicate through the Internet.
- To apply the client - server model in networking applications.
- To practice networking commands available through the operating systems

Course Outcomes(COs)

Having successfully completed this course, the student will be able to:

1. Understand the fundamental concepts of networks
2. Demonstrate mastery of main protocols comprising the Internet.
3. Develop skills in network programming techniques.
4. Implement network services that communicate through the Internet.
5. Apply the client - server model in networking applications.
6. Practice networking commands available through the operating systems

UNIT-I

Transport Layer Protocols: TCP, UDP, SCTP protocol.

UNIT-II

Socket Programming: Socket Introduction; TCP Sockets; TCP Client/Server Example ; signal handling

UNIT-III

I/O multiplexing using sockets; Socket Options; UDP Sockets; UDP client server example; Address lookup using sockets.

UNIT-IV

Network Applications: Remote logging; Email; WWW and HTTP.

UNIT-V

LAN administration: Linux and TCP/IP networking: Network Management and Debugging.

Suggested Readings

4. Steven, R. (1990). Unix Network Programming (2nd ed.). New Delhi: PHI.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To apply the fundamentals of assembly level programming of microprocessors.
- To build a program on a microprocessor using arithmetic & logical instruction set of 8086.
- To develop the assembly level programming using 8086 loop instruction set.
- To write programs based on string and procedure for 8086 microprocessor.
- To analyze abstract problems and apply a combination of hardware and software to address the problem
- To make use of standard test and measurement equipment to evaluate digital interfaces

Course Outcomes(COs)

1. Apply the fundamentals of assembly level programming of microprocessors.
2. Build a program on a microprocessor using arithmetic & logical instruction set of 8086.
3. Develop the assembly level programming using 8086 loop instruction set.
4. Write programs based on string and procedure for 8086 microprocessor.
5. Analyze abstract problems and apply a combination of hardware and software to address the problem
6. Make use of standard test and measurement equipment to evaluate digital interfaces

Unit – I- Introduction to Microprocessor

Introduction to 8085 – Pin Diagram – Microprocessor architecture and its operations– Demultiplexing the Bus – Generation of Control Signals – Fetching, Decoding and Execution of Instruction – Instruction Timing and Status Flag.

Unit – II – Addressing Modes

Instruction Set – Addressing Modes – Instruction Format – Simple Program – Memory and Machine Cycle – Memory Units Machine Cycle.

Unit – III – Interfacing Concepts

Peripheral I/O Instructions – Device Selection and Data Transfer – Types of Data Transfer – Input Interfacing – Input Interfacing using Decoders – Output Interfacing – LED and 7 Segment Display – Interfacing Memory.

Unit – IV - Peripheral Devices

Introduction to Programmable Peripheral Interface 8255 – Pin Diagram – Architecture – Modes of Operation: I/O and BSR – Architecture and Operation of 8251 (USART) – Architecture and Operation of Programmable Interrupt Controller (8259) – Architecture of 254(8253) Programmable Interval Timer/ Counter – DMA Controller(8259).

Unit – V - Applications

Delay Program – Traffic Light Control System – Water Level Controller – Stepper Motor Control – Interfacing DAC – Interfacing ADC – Temperature Measurement.

3. Walter, A Triebel., & Avtar Singh.(2005). The 8088 and 8086 Microprocessors Programming, Interfacing, Software, Hardware, and Applications (4th ed.). New Delhi: PHI.
4. Ramesh, S.Gaonkar. (2000). Microprocessor Architecture, Programming and Application with 8085(4th ed.). New Delhi: Penram International Publishing.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives**

- To understand the fundamental concepts of a digital image processing system.
- To understand concepts of image enhancement techniques.
- To apply various Image Transforms.
- To analyze various Compression techniques and Morphological concepts
- To know various segmentation techniques, and object descriptors.
- To apply color models and various applications of image processing

Course Outcomes (COs)

1. Remember the fundamental concepts of image processing.
2. Explain different Image enhancement techniques
3. Understand and review image transforms
4. Analyze the basic algorithms used for image processing & image compression with morphological image processing.
5. Contrast Image Segmentation and Representation
6. Design & Synthesize Color image processing and its real world applications

UNIT-I

Introduction: Light, Brightness adaption and discrimination, Pixels, coordinate conventions, Imaging Geometry, Perspective Projection, Spatial Domain Filtering, sampling and quantization. Spatial Domain Filtering: Intensity transformations, contrast stretching, histogram equalization, Correlation and convolution, Smoothing filters, sharpening filters, gradient and Laplacian.

UNIT-II

Hotelling Transform, Fourier Transforms and properties, FFT (Decimation in Frequency and Decimation in Time Techniques), Convolution, Correlation, 2-D sampling, Discrete Cosine Transform, Frequency domain filtering.

UNIT-III:

Image Restoration, Basic Framework, Interactive Restoration, Image deformation and geometric transformations, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Adaptive filters, Linear, Position invariant degradations, Estimation of Degradation functions, Restoration from projections, Image Compression-Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Entropy of an information source, Shannon's 1st Theorem, Huffman Coding, Arithmetic Coding, Golomb Coding, LZW coding, Transform Coding, Sub-image size selection, blocking artifacts, DCT implementation using FFT, Run length coding.

UNIT – IV

FAX compression (CSUITT Group-3 and Group-4), Symbol-based coding, JBIG-2, Bit-plane encoding, Bit-allocation, Zonal Coding, Threshold Coding, JPEG, Lossless predictive coding, Lossy predictive coding, Motion Compensation

Wavelet based Image Compression: Expansion of functions, Multi-resolution analysis, Scaling functions, MRA refinement equation, Wavelet series expansion, Discrete Wavelet Transform (DWT), Continuous Wavelet Transform, Fast Wavelet Transform, 2-D wavelet Transform, JPEG-2000 encoding, Digital Image Watermarking

UNIT-V

Morphological Image Processing: Basics, SE, Erosion, Dilation, Opening, Closing, Hit-or-Miss Transform, Boundary Detection, Hole filling, Connected components, convex hull, thinning, thickening, skeletons, pruning, Geodesic Dilation, Erosion, Reconstruction by dilation and erosion. Image Segmentation: Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding, Iterative thresholding, Otsu's method, Moving averages, Multivariable thresholding, Region-based segmentation, Watershed algorithm, Use of motion in segmentation

2. Jain, A. K. (1989). Fundamentals of Digital image Processing. New Delhi: Prentice Hall of India.
3. Castleman, K. R. (1996). Digital Image Processing. New Delhi: Pearson Education.
4. Schalkoff. (1989). Digital Image Processing and Computer Vision. New York: John Wiley and Sons.
5. Rafael, C. Gonzalez., Richard, E. Woods., & Steven Eddins. (2004). Digital Image Processing using MATLAB. New Delhi: Pearson Education.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To introduce students to the basic concepts and techniques of Machine Learning.
- To develop skills of using recent machine learning software for solving practical problems.
- To gain experience of doing independent study and research.
- To recognize the characteristics of machine learning that make it useful to real-world problems.
- To characterize machine learning algorithms as supervised, semi-supervised, and unsupervised.
- To effectively use machine learning toolboxes.

Course Outcomes(COs)

On successful completion of the course the student should be

1. Remember the basic concepts and techniques of Machine Learning.
2. Develop skills of using recent machine learning software for solving practical problems.
3. of doing independent study and research.
4. To recognize the characteristics of machine learning that make it useful to real-world problems.
5. To characterize machine learning algorithms as supervised, semi-supervised, and unsupervised.
6. To effectively use machine learning toolboxes.

UNIT-I

Introduction: Concept of Machine Learning, Applications of Machine Learning, Key elements of Machine Learning, Supervised vs. Unsupervised Learning, Statistical Learning: Bayesian Method, The Naive Bayes Classifier

UNIT-II

Softwares for Machine Learning and Linear Algebra Overview : Plotting of Data, Vectorization, Matrices and Vectors: Addition, Multiplication, Transpose and Inverse using available tool such as MATLAB.

UNIT-III

Linear Regression: Prediction using Linear Regression, Gradient Descent, Linear Regression with one variable, Linear Regression with multiple variables, Polynomial Regression, Feature Scaling/Selection.

Logistic Regression: Classification using Logistic Regression, Logistic Regression vs. Linear Regression, Logistic Regression with one variable and with multiple variables.

UNIT-IV

Regularization: Regularization and its utility: The problem of Overfitting, Application of Regularization in Linear and Logistic Regression, Regularization and Bias/Variance.

UNIT-V

Neural Networks: Introduction, Model Representation, Gradient Descent vs. Perceptron Training, Stochastic Gradient Descent, Multilayer Perceptrons, Multiclass Representation, Backpropagation Algorithm.

Suggested Readings

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objective

- To provide an overview of a new language R used for data science.
- To introduce students to the R programming environment and related eco-system and thus provide them with an in-demand skill-set, in both the research and business environments
- To introduce the extended R ecosystem of libraries and packages
- To demonstrate usage of as standard Programming Language.
- To familiarize students with how various statistics like mean median etc. can be collected for data exploration in R
- To enable students to use R to conduct analytics on large real life datasets.

Course Outcomes (COs)

1. Install and use R for simple programming tasks.
2. Extend the functionality of R by using add-on packages
3. Extract data from files and other sources and perform various data manipulation tasks on them.
4. Code statistical functions in R.
5. Use R Graphics and Tables to visualize results of various statistical operations on data.
6. Apply the knowledge of R gained to data Analytics for real life applications.

UNIT- I

Data Scientist's Tool Box: Turning data into actionable knowledge, introduction to the tools that will be used in building data analysis software: version control, markdown, git, GitHub, R, and RStudio.

UNIT-II

R Programming Basics: Overview of R, R data types and objects, reading and writing data, Control structures, functions, scoping rules, dates and times, Loop functions, debugging tools, Simulation, code profiling

UNIT-III

Getting and Cleaning Data: Obtaining data from the web, from APIs, from databases and from colleagues in various formats. basics of data cleaning and making data —tidy.

UNIT-IV

Exploratory Data Analysis: Essential exploratory techniques for summarizing data, applied before formal modeling commences, eliminating or sharpening potential hypotheses about the world that can be addressed by the data, common multivariate statistical techniques used to visualize high-dimensional data.

UNIT-V

Reproducible Research: Concepts and tools behind reporting modern data analyses in a reproducible manner, To write a document using R markdown, integrate live R code into a literate statistical program, compile R markdown documents using knitr and related tools, and organize a data analysis so that it is reproducible and accessible to others.

Instruction Hours / week: L: 3 T: 0 P: 0 **Marks:** Int : 40 Ext : 60 Total: 100

Course Objectives

- To gain knowledge about using ORACLE software for developing databases and using them.
- To know the SQL *plus interface and its commands.
- To create, alter tables, views, indexes ,synonyms and constraints using DDL statements.
- To Query the database using DML statements and write complex queries for information retrieval.
- To gain knowledge about transaction control in Oracle
- To write procedures and functions using PL/SQL.

Course Outcomes(COs)

1. Understand the ORACLE software for developing databases and using them.
2. Using the SQL *plus interface and its commands.
3. creating, altering tables, views, indexes ,synonyms and constraints using DDL statements.
4. Querying the database using DML statements and write complex queries for information retrieval.
5. Apply transaction controls statements in Oracle
6. Write procedures and functions using PL/SQL.

UNIT-I

Introduction to Oracle as RDBMS SQL Vs. SQL * Plus: SQL Commands and Data types, Operators and Expressions, Introduction to SQL * Plus.

UNIT-II

Managing Tables and Data: Creating and Altering Tables (Including constraints) ,Data Manipulation Command like Insert, update, delete, SELECT statement with WHERE, GROUP BY and HAVING, ORDER BY, DISTINCT, Special operator like IN, ANY, ALL BETWEEN, EXISTS, LIKE, Join, Built in functions

UNIT-III

Other Database Objects - View, Synonyms, Index

UNIT-IV

Transaction Control Statements - Commit, Rollback, Savepoint

UNIT-V

Introduction to PL/SQL SQL v/s PL/SQL, PL/SQL Block Structure, Language construct of PL/SQL (Variables, Basic and Composite Data type, Conditions looping etc.) TYPE and % ROWTYPE , Using Cursor (Implicit, Explicit)

Suggested Readings

Total: 100

Course Objectives

- To Learn Syntax and Semantics of Python
- To create Functions in Python.
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications

Course Outcomes (COs)

Upon completion of this the course students will be able to:

1. Develop algorithmic solutions to simple computational problems
2. Structure simple Python programs for solving problems.
3. Learn to use logical constructs in Python
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs.

UNIT-I**Planning the Computer Program:** Concept of problem solving-Problem definition-Program design-Debugging-Types of errors in programming-Documentation.**UNIT-II****Techniques of Problem Solving:** Flowcharting-decision table-algorithms-Structured programming concepts-Programming methodologies: top-down and bottom-up Programming.**UNIT-III****Overview of Programming:** Structure of a Python Program-Elements of Python.**UNIT-IV****Introduction to Python:** Python Interpreter-Using Python as calculator-Python shell-Indentation. Atoms-Identifiers and keywords-Literals-Strings-Operators(Arithmetic operator, Relational operator, Logical or Boolean operator, Assignment, Operator, Ternary operator, Bit wise operator, Increment or Decrement operator).**UNIT-V****Creating Python Programs:** Input and Output Statements-Control statements(Branching, Looping, Conditional Statement, Exit function, Difference between break, continue and pass.). Defining Functions-Default arguments.

Course Objectives

- To provide an overview of Information Security and Assurance.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- To explain concepts related to applied cryptography including the techniques for crypto-analysis symmetric and asymmetric cryptography.
- To understand the concepts of digital signature, message authentication code, hash functions and modes of encryption operations.
- To explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
- To understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. Explore the working principles and utilities of various cryptographic algorithms including secret key cryptography, hashes and message digests, and public key algorithms
2. State the basic concepts in information security
3. Explain concepts related to applied cryptography including the techniques for crypto-analysis symmetric and asymmetric cryptography.
4. Use digital signature, message authentication code, hash functions and modes of encryption operations.
5. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
6. Understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications

List of programs

1. Demonstrate the use of Network tools: ping, ipconfig, ifconfig, tracert, arp, netstat, whois
2. Use of Password cracking tools : John the Ripper, Ophcrack. Verify the strength of passwords using these tools.
3. Perform encryption and decryption of Caesar cipher. Write a script for performing these operations.
4. Perform encryption and decryption of a Rail fence cipher. Write a script for performing these operations.
5. Use nmap/zenmap to analyse a remote machine.
6. Use Burp proxy to capture and modify the message.
7. Demonstrate sending of a protected word document.

8. Demonstrate sending of a digitally signed document.
9. Demonstrate sending of a protected worksheet.
10. Demonstrate use of steganography tools.
11. Demonstrate use of gpg utility for signing and encrypting purposes.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives**

- To describe the fundamental concepts of networks
- To demonstrate mastery of main protocols comprising the Internet.
- To develop skills in network programming techniques.
- To implement network services that communicate through the Internet.
- To apply the client - server model in networking applications.
- To practice networking commands available through the operating systems

Course Outcomes(COs)

Having successfully completed this course, the student will be able to:

1. Understand the fundamental concepts of networks
2. Demonstrate mastery of main protocols comprising the Internet.
3. Develop skills in network programming techniques.
4. Implement network services that communicate through the Internet.
5. Apply the client - server model in networking applications.
6. Practice networking commands available through the operating systems

List of programs

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives

- To apply the fundamentals of assembly level programming of microprocessors.
- To build a program on a microprocessor using arithmetic & logical instruction set of 8086.
- To develop the assembly level programming using 8086 loop instruction set.
- To write programs based on string and procedure for 8086 microprocessor.
- To analyze abstract problems and apply a combination of hardware and software to address the problem
- To make use of standard test and measurement equipment to evaluate digital interfaces

Course Outcomes(COs)

1. Apply the fundamentals of assembly level programming of microprocessors.
2. Build a program on a microprocessor using arithmetic & logical instruction set of 8086.
3. Develop the assembly level programming using 8086 loop instruction set.
4. Write programs based on string and procedure for 8086 microprocessor.
5. Analyze abstract problems and apply a combination of hardware and software to address the problem
6. Make use of standard test and measurement equipment to evaluate digital interfaces

Assembly Language Programming

1. Addition of 8/16 bit and array of Data
2. Subtraction of 8/16 bit and array of Data
3. Multiplication of 8-bit Number
4. Division of 8-bit Number Write a program for 32-bit binary division and multiplication
5. Fill and Transfer an Array of Data
6. Ascending and Descending of an array
7. Data Transfer using Parallel Ports
8. Stepper Motor Interface
9. Traffic Light Interface
10. A/D and D/A Converter

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To understand the fundamental concepts of a digital image processing system.
- To understand concepts of image enhancement techniques.
- To apply various Image Transforms.
- To analyze various Compression techniques and Morphological concepts
- To know various segmentation techniques, and object descriptors.
- To apply color models and various applications of image processing

Course Outcomes (COs)

1. Remember the fundamental concepts of image processing.
2. Explain different Image enhancement techniques
3. Understand and review image transforms
4. Analyze the basic algorithms used for image processing & image compression with morphological image processing.
5. Contrast Image Segmentation and Representation
6. Design & Synthesize Color image processing and its real world applications

List of Programs

1. Write program to read and display digital image using MATLAB or SCILAB
 - a. Become familiar with SCILAB/MATLAB Basic commands
 - b. Read and display image in SCILAB/MATLAB
 - c. Resize given image
 - d. Convert given color image into gray-scale image
 - e. Convert given color/gray-scale image into black & white image
 - f. Draw image profile
 - g. Separate color image in three R G & B planes
 - h. Create color image using R, G and B three separate planes
 - i. Flow control and LOOP in SCILAB
 - j. Write given 2-D data in image file
2. To write and execute image processing programs using point processing method
 - a. Obtain Negative image b. Obtain Flip image
 - b. Thresholding d. Contrast stretching
3. To write and execute programs for image arithmetic operations
 - a. Addition of two images
 - b. Subtract one image from other image
 - c. Calculate mean value of image
 - d. Different Brightness by changing mean value
4. To write and execute programs for image logical operations
 - a. AND operation between two images

- b. OR operation between two images
 - c. Calculate intersection of two images
 - d. Water Marking using EX-OR operation
 - e. NOT operation (Negative image)
5. To write a program for histogram calculation and equalization using
 - a. Standard MATLAB function
 - b. Program without using standard MATLAB functions
 - c. C Program
 6. To write and execute program for geometric transformation of image
 - a. Translation
 - b. Scaling
 - c. Rotation
 - d. Shrinking
 - e. Zooming
 7. To understand various image noise models and to write programs for
 - a. image restoration
 - b. Remove Salt and Pepper Noise
 - c. Minimize Gaussian noise
 - d. Median filter and Weiner filter
 8. Write and execute programs to remove noise using spatial filters
 - a. Understand 1-D and 2-D convolution process
 - b. Use 3x3 Mask for low pass filter and high pass filter
 9. Write and execute programs for image frequency domain filtering
 - a. Apply FFT on given image
 - b. Perform low pass and high pass filtering in frequency domain
 - c. Apply IFFT to reconstruct image
 10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask
 11. Write and execute program for image morphological operations erosion and dilation.
 12. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.

Course Objectives

- To introduce students to the basic concepts and techniques of Machine Learning.
- To develop skills of using recent machine learning software for solving practical problems.
- To gain experience of doing independent study and research.
- To recognize the characteristics of machine learning that make it useful to real-world problems.
- To characterize machine learning algorithms as supervised, semi-supervised, and unsupervised.
- To effectively use machine learning toolboxes.

Course Outcomes(COs)

On successful completion of the course the student should be

1. Remember the basic concepts and techniques of Machine Learning.
2. Develop skills of using recent machine learning software for solving practical problems.
3. of doing independent study and research.
4. To recognize the characteristics of machine learning that make it useful to real-world problems.
5. To characterize machine learning algorithms as supervised, semi-supervised, and unsupervised.
6. To effectively use machine learning toolboxes.

List of programs

1. Perform elementary mathematical operations in Octave/MATLAB like addition, multiplication, division and exponentiation.
2. Perform elementary logical operations in Octave/MATLAB (like OR, AND, Checking for Equality, NOT, XOR).
3. Create, initialize and display simple variables and simple strings and use simple formatting for variable.
4. Create/Define single dimension / multi-dimension arrays, and arrays with specific values like array of all ones, all zeros, array with random values within a range, or a diagonal matrix.

5. Use command to compute the size of a matrix, size/length of a particular row/column, load data from a text file, store matrix data to a text file, finding out variables and their features in the current scope.
6. Perform basic operations on matrices (like addition, subtraction, multiplication) and display specific rows or columns of the matrix.
7. Perform other matrix operations like converting matrix data to absolute values, taking the negative of matrix values, adding/removing rows/columns from a matrix, finding the maximum or minimum values in a matrix or in a row/column, and finding the sum of some/all elements in a matrix.
8. Create various type of plots/charts like histograms, plot based on sine/cosine function based on data from a matrix. Further label different axes in a plot and data in a plot.
9. Generate different subplots from a given plot and color plot data.
10. Use conditional statements and different type of loops based on simple example/s.
11. Perform vectorized implementation of simple matrix operation like finding the transpose of a matrix, adding, subtracting or multiplying two matrices.
12. Implement Linear Regression problem. For example, based on a dataset comprising of existing set of prices and area/size of the houses, predict the estimated price of a given house.
13. Based on multiple features/variables perform Linear Regression. For example, based on a number of additional features like number of bedrooms, servant room, number of balconies, number of houses of years a house has been built – predict the price of a house.
14. Implement a classification/ logistic regression problem. For example based on different features of students data, classify, whether a student is suitable for a particular activity. Based on the available dataset, a student can also implement another classification problem like checking whether an email is spam or not.
15. Use some function for regularization of dataset based on problem 14.
16. Use some function for neural networks, like Stochastic Gradient Descent or back propagation - algorithm to predict the value of a variable based on the dataset of problem

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objective**

- To provide an overview of a new language R used for data science.
- To introduce students to the R programming environment and related eco-system and thus provide them with an in-demand skill-set, in both the research and business environments
- To introduce the extended R ecosystem of libraries and packages
- To demonstrate usage of as standard Programming Language.
- To familiarize students with how various statistics like mean median etc. can be collected for data exploration in R
- To enable students to use R to conduct analytics on large real life datasets.

Course Outcomes (COs)

1. Install and use R for simple programming tasks.
2. Extend the functionality of R by using add-on packages
3. Extract data from files and other sources and perform various data manipulation tasks on them.
4. Code statistical functions in R.
5. Use R Graphics and Tables to visualize results of various statistical operations on data.
6. Apply the knowledge of R gained to data Analytics for real life applications.

List of Programs

1. Write a program that prints _hello World to the screen.
2. Write a program that asks the user for a number n and prints the sum of the numbers 1 to n
3. Write a program that prints a multiplication table for numbers up to 12.
4. Write a function that returns the largest element in a list.
5. Write a function that computes the running total of a list.
6. Write a function that tests whether a string is a palindrome.
7. Implement linear search.
8. Implement binary search.
9. Implement matrices addition , subtraction and Multiplication
10. Fifteen students were enrolled in a course.
There ages were: 20 20 20 20 20 21 21 21
22 22 22 22 23 23 23
i. Find the median age of all
students under 22 years ii. Find
the median age of all students

iii. Find the mean
age of all students iv.
Find the modal age
for all students

v. Two more students enter the class. The age of both students is
23. What is now mean, mode and median ?

11. Following table gives a frequency distribution of systolic blood pressure.
Compute all the measures of dispersion.

Midpoint	95.5	105.5	115.5	125.5	135.5	145.5	155.5	165.5	175.5
Number	5	8	22	27	17	9	5	5	2

12. Obtain probability distribution of , where X is number of spots showing when a six-sided symmetric die (i.e. all six faces of the die are equally likely) is rolled. Simulate random samples of sizes 40, 70 and 100 respectively and verify the frequency interpretation of probability.
13. Make visual representations of data using the base, lattice, and ggplot2 plotting systems in R, apply basic principles of data graphics to create rich analytic graphics from available datasets.
14. Use Git / Github software to create Github account. Also, create a repo using Github.

Course Objectives

- To gain knowledge about using ORACLE software for developing databases and using them.
- To know the SQL *plus interface and its commands.
- To create, alter tables, views, indexes ,synonyms and constraints using DDL statements.
- To Query the database using DML statements and write complex queries for information retrieval.
- To gain knowledge about transaction control in Oracle
- To write procedures and functions using PL/SQL.

Course Outcomes(COs)

1. Understand the ORACLE software for developing databases and using them.
2. Using the SQL *plus interface and its commands.
3. creating, altering tables, views, indexes ,synonyms and constraints using DDL statements.
4. Querying the database using DML statements and write complex queries for information retrieval.
5. Apply transaction controls statements in Oracle
6. Write procedures and functions using PL/SQL.

[SQL COMMANDS]

- 1) SQL* formatting commands
- 2) To create a table, alter and drop table.
- 3) To perform select, update, insert and delete operation in a table.
- 4) To make use of different clauses viz where, group by, having, order by, union and intersection,
- 5) To study different constraints.

[SQL FUNCTION]

- 6) To use oracle function viz aggregate, numeric, conversion, string function.
- 7) To understand use and working with joins.
- 8) To make use of transaction control statement viz rollback, commit and save point.
- 9) To make views of a table.
- 10) To make indexes of a table.

[PL/SQL]

- 11) To understand working with PL/SQL
- 12) To implement Cursor on a table.
- 13) To implement trigger on a table

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives

- To Learn Syntax and Semantics of Python
- To create Functions in Python.
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications

Course Outcomes (COs)

Upon completion of this the course students will be able to:

1. Develop algorithmic solutions to simple computational problems
2. Structure simple Python programs for solving problems.
3. Learn to use logical constructs in Python
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs.

List of Programs

1. Write a menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.
2. WAP to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades according to the following criteria :
Grade A: Percentage ≥ 80
Grade B: Percentage ≥ 70 and < 80
Grade C: Percentage ≥ 60 and < 70
Grade D: Percentage ≥ 40 and < 60
Grade E: Percentage < 40
3. Write a menu-driven program, using user-defined functions to find the area of rectangle, square, circle and triangle by accepting suitable input parameters from user.
4. WAP to display the first n terms of Fibonacci series.
5. WAP to find factorial of the given number.
6. WAP to find sum of the following series for n terms: $1 - 2/2! + 3/3! - \dots - n/n!$
7. WAP to calculate the sum and product of two compatible matrices.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To Provide a good understanding of the concepts, standards in Cloud computing
- To make the student understand about the cloud service providers and their usage.
- To learn how to secure the data in cloud depending.
- To understand the various service level agreements.
- To understand the cloud using various case studies.
- to portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.
2. Know the architecture of the cloud and the usage of clouds.
3. Secure their data from the security issues.
4. Make the students to work based on the various service level agreements.
5. Work with the traditional cloud and Microsoft azure, etc.
6. Provide a good understanding of the concepts, standards and protocols in Cloud computing

UNIT-I

Overview of Computing Paradigm: Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing.**Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

UNIT-II

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

UNIT-III

Case Studies: Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2 , Eucalyptus.

UNIT-IV

Service Management in Cloud Computing: Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

UNIT-V

Cloud Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
- To describe the various concepts of assemblers and macroprocessors.
- To understand how linker and loader create an executable program from an object module created by assembler and compiler.

Course Outcomes(COs)

1. Understand different components of system software.
2. This course enables for good understanding of the role of system programming and the scope of duties and tasks of a system programmer.
3. This course enables to learn the concepts and principles of developing system-level software (e.g., compiler, and networking software)
4. Understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
5. Describe the various concepts of assemblers and macroprocessors.
6. Understand how linker and loader create an executable program from an object module created by assembler and compiler.

UNIT-I

Assemblers & Loaders, Linkers: One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

UNIT-II**Lexical Analysis:**

Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

UNIT-III**Parsing:**

Bottom up parsing- LR parser, yacc. **Intermediate representations:** Three address code generation, syntax directed translation, translation of types, control Statements.

UNIT-IV

Storage organization: Activation records stack allocation.

UNIT-V

Code Generation: Object code generation

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To introduce students to the basic concepts and techniques of Data Mining.
- To understand data mining fundamentals and characterize the kinds of patterns that can be discovered by association rule mining
- To compare and evaluate different data mining techniques like classification, prediction, etc.
- To cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To design data warehouse with dimensional modelling and apply OLAP operations.

Course Outcomes (COs)

Upon completion of this course students will be able to:

1. Understand the basic concepts and techniques of Data Mining
2. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
3. Design and deploy appropriate classification techniques
4. Understand the concept of clustering and its real time applications
5. Explore recent trends in data mining such as web mining, spatial-temporal mining
6. Analyze the basic concepts of data warehouse and OLAP operations

UNIT-I

Overview: Predictive and descriptive data mining techniques

UNIT-II

Supervised and unsupervised learning techniques

UNIT-III

Process of knowledge discovery in databases, pre-processing methods

UNIT-IV

Data Mining Techniques: Association Rule Mining, classification and regression techniques, clustering

UNIT-V

Scalability and data management issues in data mining algorithms, measures of interestingness.

Course Objectives

- To describe characteristics and functioning of common graphics input/output devices
- To learn the basic principles of 3- dimensional computer graphics
- To Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition
- To Provide an understanding of mapping from a world coordinates to device coordinates and projections.
- To extract scene with different clipping methods and its transformation to graphics display device.
- To explore projections and visible surface detection techniques for display of 3D scene on 2D screen

Course Outcomes(COs)

1. Understand the basics of computer graphics, different graphics systems and applications of computer graphics.
2. Discuss various algorithms for scan conversion and filling of basic objects and their comparative analysis.
3. Use of geometric transformations on graphics objects and their application in composite form.
4. Extract scene with different clipping methods and its transformation to graphics display device.
5. Explore projections and visible surface detection techniques for display of 3D scene on 2D screen.
6. Render projected objects to naturalize the scene in 2D view and use of illumination models for this..

UNIT-I

Introduction : Basic elements of Computer graphics, Applications of Computer Graphics.

UNIT-II

Graphics Hardware : Architecture of Raster and Random scan display devices, input/output devices.

UNIT-III

Fundamental Techniques in Graphics : Raster scan line, circle and ellipse drawing, thick primitives, Polygon filling, line and polygon clipping algorithms, 2D and 3D Geometric Transformations, 2D and 3D Viewing Transformations (Projections- Parallel and Perspective), Vanishing points.

UNIT-IV

Geometric Modeling : Representing curves & Surfaces.

UNIT V

Visible Surface determination : Hidden surface elimination. **Surface rendering :** Illumination and shading models. Basic color models and Computer Animation.

Suggested Readings

3. Rogers, D.F. (1997). Procedural Elements for Computer Graphics. McGraw Hill.
4. Rogers, D.F. Adams. (1989). Mathematical Elements for Computer Graphics (2nd ed.). McGraw Hill.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn array data structure using PHP scripts.
- To work with open source applications that deal with database and website development.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create PHP scripts using array.
6. Develop dynamic web pages.

UNIT-I**Introduction to PHP:**

- PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.)
- PHP with other technologies, scope of PHP
- Basic Syntax, PHP variables and constants
- Types of data in PHP , Expressions, scopes of a variable (local, global)
- PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwise , ternary and MOD operator.
- PHP operator Precedence and associativity

UNIT-II**Handling HTML form with PHP:**

- Capturing Form Data
- GET and POST form methods
- Dealing with multi value fields
- Redirecting a form after submission

PHP conditional events and Loops:

- PHP IF Else conditional statements (Nested IF and Else)
- Switch case, while ,For and Do While Loop
- Goto , Break ,Continue and exit

UNIT-III

PHP Functions:

- Function, Need of Function , declaration and calling of a function
- PHP Function with arguments, Default Arguments in Function
- Function argument with call by value, call by reference
- Scope of Function Global and Local

UNIT-IV

String Manipulation and Regular Expression:

- Creating and accessing String , Searching & Replacing String
- Formatting, joining and splitting String , String Related Library functions
- Use and advantage of regular expression over inbuilt function
- Use of preg_match(), preg_replace(), preg_split() functions in regular expression

UNIT-V

Array:

- Anatomy of an Array ,Creating index based and Associative array ,Accessing array
- Looping with Index based array, with associative array using each() and foreach()
- Some useful Library function

5. David Sklar., & Adam Trachtenberg. PHP Cookbook: Solutions & Examples for PHP.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Objective**

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques like scheduling or time management, space management and principles and how they can be implemented.
- To know about the issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.

Course Outcomes(COs)

1. This course teaches the student the concepts and principles that underlie modern operating systems, and a practice component to relate theoretical principles with operating system implementation.
2. Implement operating system abstractions in the development of application programs
3. Apply the principles of concurrency and synchronization to write correct concurrent programs/software
4. Implement basic resource management techniques like scheduling or time management, space management
5. Learn about processes and processor management, memory management schemes, file system and secondary storage management.
6. Learn about issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection

UNIT-I

Introduction What is Linux/Unix Operating systems, Difference between linux/unix and other operating systems , Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process

UNIT-II

System processes (an overview), External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

UNIT-III

User Management and the File System Types of Users, Creating users, Granting rights

User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

UNIT-IV

Shell introduction and Shell Scripting What is shell and various type of shell, Various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script , Shell variable (user defined and system variables)

UNIT-V

System calls, Using system calls Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

Suggested Readings

4. Richard Stevens, W. Bill Fenner., & Andrew, M. Rudoff. (2014). Unix Network Programming, The sockets Networking API, Vol. 1, (3rd ed.).

Course Objectives

- To Provide a good understanding of the concepts, standards in Cloud computing
- To make the student understand about the cloud service providers and their usage.
- To learn how to secure the data in cloud depending.
- To understand the various service level agreements.
- To understand the cloud using various case studies.
- to portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.
2. Know the architecture of the cloud and the usage of clouds.
3. Secure their data from the security issues.
4. Make the students to work based on the various service level agreements.
5. Work with the traditional cloud and Microsoft azure, etc.
6. Provide a good understanding of the concepts, standards and protocols in Cloud computing

List of programs

1. Create virtual machines that access different programs on same platform.
2. Create virtual machines that access different programs on different platforms.
3. Working on tools used in cloud computing online-
 - a) Storage
 - b) Sharing of data
 - c) Manage your calendar, to-do lists,
 - d) A document editing tool
4. Exploring Google cloud
5. Exploring Microsoft cloud
6. Exploring Amazon cloud

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives**

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
- To describe the various concepts of assemblers and macroprocessors.
- To understand how linker and loader create an executable program from an object module created by assembler and compiler.

Course Outcomes(COs)

1. Understand different components of system software.
2. This course enables for good understanding of the role of system programming and the scope of duties and tasks of a system programmer.
3. This course enables to learn the concepts and principles of developing system-level software (e.g., compiler, and networking software)
4. Understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
5. Describe the various concepts of assemblers and macroprocessors.
6. Understand how linker and loader create an executable program from an object module created by assembler and compiler.

List of Programs

1. To implement an assembler for a hypothetical language.
2. To get familiar with lex: write a program to recognize numbers, identifiers.
3. To get familiar with yacc: write a desk calculator.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To introduce students to the basic concepts and techniques of Data Mining.
- To understand data mining fundamentals and characterize the kinds of patterns that can be discovered by association rule mining
- To compare and evaluate different data mining techniques like classification, prediction, etc.
- To cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To design data warehouse with dimensional modelling and apply OLAP operations.

Course Outcomes (COs)

Upon completion of this course students will be able to:

7. Understand the basic concepts and techniques of Data Mining
8. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
9. Design and deploy appropriate classification techniques
10. Understand the concept of clustering and its real time applications
11. Explore recent trends in data mining such as web mining, spatial-temporal mining
12. Analyze the basic concepts of data warehouse and OLAP operations

Practical exercises based on concepts listed in theory.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives**

- To describe characteristics and functioning of common graphics input/output devices
- To learn the basic principles of 3- dimensional computer graphics

- To Provide an understanding of mapping from a world coordinates to device coordinates and projections.
- To extract scene with different clipping methods and its transformation to graphics display device.
- To explore projections and visible surface detection techniques for display of 3D scene on 2D screen

Course Outcomes(COs)

1. Understand the basics of computer graphics, different graphics systems and applications of computer graphics.
2. Discuss various algorithms for scan conversion and filling of basic objects and their comparative analysis.
3. Use of geometric transformations on graphics objects and their application in composite form.
4. Extract scene with different clipping methods and its transformation to graphics display device.
5. Explore projections and visible surface detection techniques for display of 3D scene on 2D screen.
6. Render projected objects to naturalize the scene in 2D view and use of illumination models for this..

List of Programs

1. Write a program to implement Bresenham's line drawing algorithm.
2. Write a program to implement mid-point circle drawing algorithm.
3. Write a program to clip a line using Cohen and Sutherland line clipping algorithm.
4. Write a program to clip a polygon using Sutherland Hodgeman algorithm.
5. Write a program to apply various 2D transformations on a 2D object (use homogenous coordinates).
6. Write a program to apply various 3D transformations on a 3D object and then apply parallel and perspective projection on it.
7. Write a program to draw Hermite/Bezier curve.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn array data structure using PHP scripts.
- To work with open source applications that deal with database and website development.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create PHP scripts using array.
6. Develop dynamic web pages.

List of programs

1. Create a PHP page using functions for comparing three integers and print the largest number.
2. Write a function to calculate the factorial of a number (non-negative integer). The function aCSUept the number as an argument.
3. WAP to check whether the given number is prime or not.
4. Create a PHP page which aCSUepts string from user. After submission that page displays the reverse of provided string.
5. Write a PHP function that checks if a string is all lower case.
6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)
7. WAP to sort an array.
8. Write a PHP script that removes the whitespaces from a string.
Sample string : 'The quick brown fox' Expected Output : Thequickbrownfox

9. Write a PHP script that finds out the sum of first n odd numbers.
10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.
11. Write a PHP script that checks if a string contains another string.
12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.
13. Create a script to construct the following pattern, using nested for loop.

```
*
* *
* * *
* * * *
* * * * *
```

14. Write a simple PHP program to check that emails are valid.
15. WAP to print first n even numbers.
16. \$color = array('white', 'green', 'red')

Write a PHP script which will display the colors in the following way : Output :

```
white, green, red,
• green • red
• white
```

17. Using switch case and dropdown list display a —Hello! message depending on the language selected in drop down list.
18. Write a PHP program to print Fibonacci series using recursion.
19. Write a PHP script to replace the first 'the' of the following string with 'That'.

Sample : 'the quick brown fox jumps over the lazy dog.'

Expected Result : That quick brown fox jumps over the lazy dog.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objective

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques like scheduling or time management, space management and principles and how they can be implemented.
- To know about the issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.

Course Outcomes(COs)

1. This course teaches the student the concepts and principles that underlie modern operating systems, and a practice component to relate theoretical principles with operating system implementation.
2. Implement operating system abstractions in the development of application programs
3. Apply the principles of concurrency and synchronization to write correct concurrent programs/software
4. Implement basic resource management techniques like scheduling or time management, space management
5. Learn about processes and processor management, memory management schemes, file system and secondary storage management.
6. Learn about issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection

List of programs

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify —call command to display calendars of the specified months.
3. Write a shell script to modify —call command to display calendars of the specified range of months.
4. Write a shell script to accept a login name. If not a valid login name display message —Entered login name is invalid.
5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of —who command along with the total number of users .

7. Write a shell script to display the multiplication table any number,
8. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.
11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.
13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient $C(n, x)$.
15. Write a shell script to find the permutation $P(n, x)$.
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

Course Objectives

- To provide an overview of an exciting growing field of Big Data analytics.
- To discuss the challenges traditional data mining algorithms face when analyzing Big Data.
- To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To introduce to the students several types of big data like social media, web graphs and data streams.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support

Course Outcomes(COs)

1. Explain the motivation for big data systems and identify the main sources of Big Data in the real world.
2. Demonstrate an ability to use frameworks like Hadoop, NOSQL to efficiently store retrieve and process Big Data for Analytics.
3. Implement several Data Intensive tasks using the Map Reduce Paradigm
4. Apply several newer algorithms for Clustering Classifying and finding associations in Big Data
5. Design algorithms to analyze Big dat a like streams, Web Graphs and Social Media data.
6. Design and implement successful Recommendation engines for enterprises.

UNIT-I

Fundamentals of Big Data - The Evolution of Data Management Understanding the Waves of Managing Data- Defining Big Data - Big Data Management Architecture- The Big Data Journey -Big Data Types-Defining Structured Data-Defining Unstructured Data-Putting Big Data Together.

UNIT-II

Big Data Stack- Basics of Virtualization - The importance of virtualization to big data - Server virtualization - Application virtualization - Network virtualization -Processor and memory virtualization - Data and storage virtualization-Abstraction and Virtualization-Implementing Virtualization to Work with Big Data.

UNIT-III

Hadoop - Hadoop Distributed File System - Hadoop MapReduce- The Hadoop foundation and Ecosystem.

UNIT-IV

Big Data Analytics-Text Analytics and Big Data-Customized Approaches for Analysis of Big Data

UNIT-V

Integrating Data Sources-Real-Time Data Streams and Complex Event Processing-Operationalizing Big Data.

- To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To introduce to the students several types of big data like social media, web graphs and data streams.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support

Course Outcomes(COs)

1. Explain the motivation for big data systems and identify the main sources of Big Data in the real world.
2. Demonstrate an ability to use frameworks like Hadoop, NOSQL to efficiently store retrieve and process Big Data for Analytics.
3. Implement several Data Intensive tasks using the Map Reduce Paradigm
4. Apply several newer algorithms for Clustering Classifying and finding associations in Big Data
5. Design algorithms to analyze Big dat a like streams, Web Graphs and Social Media data.
6. Design and implement successful Recommendation engines for enterprises.

List of Programs

1. Implement a quicksort using scala.
2. Implement a auction service using scala.
3. Write a scala function to perform any 10 arithmetic operations.
4. Write a program to find the factorial of a given number using recursion.
5. Write a program for string manipulations.
6. Write a program for alphabetic order arrangement of a set of names.
7. Write a program for student records using scala list.
8. Implement any 5 map methods for maintaining customer details.
9. Implement employee records using Files
10. Write a program to copy the files using command line arguments.

M.Sc. COMPUTER SCIENCE CHOICE BASED CREDIT SYSTEM (CBCS)

Syllabus Regular (2017 – 2018)

DEPARTMENT OF COMPUTER SCIENCE

FACULTY OF ARTS, SCIENCE AND HUMANITIES

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)

(Established Under Section 3 of UGC Act, 1956)

Eachanari(Post), Coimbatore – 641 021.

Tamilnadu, India

Phone No. 0422-2980011 - 15

Fax No: 0422-2980022-23

E mail ID: info@karpagam.com

Web: www.kahedu.edu.in

Course Objectives

- To understand the fundamentals of JavaScript and use different objects
- To know the basics of ASP.NET, its objects and web forms
- To relate SQL Server and ASP.NET through database components
- To develop web application that deals with database and website development.
- To understand XML , Namespace and W3C XML Schema
- To get Familiar with Document Object Model for XML

Course Outcomes(COs)

1. Create a client side scripting web application using forms and Java Script
2. Understand the server side scripting of ASP.NET, its objects and web forms
3. Relate SQL Server and ASP.NET through database components
4. Develop web application that deals with database and website development.
5. Understand XML , Namespace and W3C XML Schema
6. Understand the Document Object Model for XML and JavaScript.

UNIT-I

JavaScript: Introduction to JavaScript – Programming fundamentals – Functions and objects – Navigator object model. Form and form elements – Scripting frames and multiple windows – Event object.

UNIT-II

ASP.NET: ASP & ASP.NET: An Overview – Programming ASP.NET with VB.NET: ASP Data types – operators- Request Object- Response Object – Server object - Web forms and ASP.NET: Web forms

UNIT-III

ASP.NET: ASP.NET Configuration Scope and State: Configuration – state- application – session object- ASP.NET Objects & Components: Scripting object models- ASP components and controls- ASP.NET and SQL server-Using SQL server using database in ASP.NET applications ActiveX data objects

UNIT-IV

Creating Mark up with XML: Introduction – Parsers and well formed XML Documents – Parsing an XML Document - Characters – Mark up – CDATA Sections – XML Namespaces. Document Type Definition – Parsers Well formed and valid XML documents – Element type declarations – Attribute declarations- Attributes Types. Schemas – Schemas VS DTD's – W3C XML Schema

UNIT-V

Document Object Model: DOM implementations – DOM with JavaScript – Components- Creating nodes – Traversing the DOM. Simple API for XML: DOM vs SAX – SAX based Parsers. XLink XPointer XInclude and XBase

Course Objectives

This course will provide students with a theoretical knowledge to understand the fundamental principles of access control models and techniques and,

- To understand theory of fundamental cryptography, encryption and decryption algorithms
- To know about various encryption techniques.
- To understand various Block Ciphers, DES and AES algorithms
- To understand the concept of Public key cryptography.
- To study about message authentication and hash functions
- To impart knowledge on web security, electronic mail security, firewalls

Course Outcomes (COs)

On successful completion of the course the student should be able to:

1. Classify the symmetric encryption techniques
2. Illustrate various Public key cryptographic techniques
3. Evaluate the authentication and hash algorithms.
4. Summarize the intrusion detection and its solutions to overcome the attacks.
5. Understand basic concepts of system level security
6. Build secure authentication systems by use of message authentication techniques.

UNIT -I

Introduction – Security Trends - The OSI Security Architecture – Security Attacks – Security Services – Security Mechanisms – A Model for Network Security. Classical Encryption Techniques – Symmetric Cipher Model – Substitution Techniques - Transposition Techniques – Rotor Machines - Steganography.

UNIT -II

Block Ciphers and Data Encryption Standard –Block Cipher Principles – The Data Encryption Standard - The Strength of DES –Advanced Encryption Standard (AES) – Evaluation Criteria for AES – The AES Cipher – Multiple Encryption and Triple DES – Block Cipher Modes of Operation – Stream Ciphers and RC4- modular Arithmetic and Euclidean Algorithm.

UNIT-III

Confidentiality using Symmetric Encryption – Placement of Encryption Function – Traffic Confidentiality – Key Distribution – Public key Cryptography and RSA – Principles of Public Key Cryptosystems – The RSA Algorithm- Basic prime numbers and Discrete Logarithms •Key Management – Diffie Hellman Key Exchange.

UNIT-IV

Message Authentication and hash functions – Authentication Functions – Message Authentication Codes (MAC's) Functions – Security of Hash Functions and MAC's

Digital Signatures and Authentication Protocols – Digital Signatures – Digital Signature Standard

UNIT-V

Network Security Applications - Authentication Applications – KERBEROS – X.509 Authentication Service – Public Key Infrastructure – Electronic Mail Security – Pretty Good Privacy – S/MIME – IP Security.

Course Objectives

- To identify the scope and essentiality of Data Warehousing and Mining.
- To analyze data, choose relevant models and algorithms for respective applications.
- To study spatial and web data mining.
- To develop research interest towards advances in data mining.
- To introduce students to the basic concepts and techniques of Data Mining.
- To develop skills of using recent data mining software for solving practical problems.

Course Outcomes (COs)

1. Understand Data Warehouse fundamentals, Data Mining Principles
2. Design data warehouse with dimensional modelling and apply OLAP operations.
3. Identify appropriate data mining algorithms to solve real world problems
4. Compare and evaluate different data mining techniques like classification, prediction, clustering and association rule mining
5. Describe complex data types with respect to spatial and web mining.
6. Benefit the user experiences towards research and innovation integration.

UNIT-I

Introduction: Fundamentals of data mining - Data Mining Functionalities - Classification of Data Mining systems - Major issues in Data Mining.

Data Warehouse and OLAP Technology: An Overview - Data Warehouse - Multidimensional Data Model - Data Warehouse Architecture - Data Warehouse Implementation - From Data Warehousing to Data Mining.

UNIT-II

Data Preprocessing: Needs Preprocessing the Data - Data Cleaning - Data Integration and Transformation - Data Reduction - Discretization and Concept Hierarchy Generation - Online Data Storage.

UNIT-III

Mining Frequent Patterns Associations and Correlations: Basic Concepts - Efficient and Scalable Frequent item set Mining Methods - Mining various kinds of Association rules – From Association Mining to Correlation Analysis - Constraint-Based Association Mining.

UNIT-IV

Classification and Prediction: Issues Regarding Classification and Prediction - Classification by Decision Tree Induction - Rule-based Classification – Prediction - Accuracy and Error Measures - Evaluating the Accuracy of a classifier or Predictor - Ensemble Methods - improves the Accuracy - Model Selection.

UNIT-V

Cluster Analysis Introduction :Types of Data in Cluster Analysis - A Categorization of Major Clustering Methods - Partitioning Methods - Hierarchical Methods – Density-Based Methods Grid-Based Methods - Model-Based Clustering Methods - Clustering High-Dimensional Data – Constraint-Based Cluster Analysis - Outlier Analysis.

Applications and Trends in Data mining: Text Mining - Web Mining - Multimedia Mining-Spatial Mining - Visual data mining.

Course Objectives

- To Provide a good understanding of the concepts, standards in Cloud computing
- To make the student understand about the cloud service providers and their usage.
- To learn how to secure the data in cloud depending.
- To understand the various service level agreements.
- To understand the cloud using various case studies.
- To portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.
2. Know the architecture of the cloud and the usage of clouds.
3. Secure their data from the security issues.
4. Make the students to work based on the various service level agreements.
5. Work with the traditional cloud and Microsoft azure, etc.
6. Provide a good understanding of the concepts, standards and protocols in Cloud computing

UNIT-I

Introduction to Cloud Computing -Characteristics of Cloud Computing -Paradigm shift - Benefits of cloud computing - Disadvantages of cloud computing- Role of Open Standards-Cloud Computing Architecture: Cloud computing stack-Public cloud -Private cloud -Hybrid cloud -Community cloud

UNIT –II

Infrastructure as a Service (IaaS) -Platform as a Service (PaaS) -Software as a Service (SaaS) -Identity as a Service (IDaaS) -Compliance as a Service (CaaS)- Cloud storage.

UNIT -III

Virtualization Technologies -Load Balancing and Virtualization -Advanced load balancing -The Google cloud - Hypervisors -Virtual machine types -VMware vSphere - Machine Imaging -Porting Applications -The Simple Cloud API - AppZero Virtual Application Appliance

UNIT-IV

Cloud Information Security Objectives -Confidentiality Integrity and Availability -Cloud Security Services - Relevant Cloud Security Design Principles -Cloud Computing Risk Issues -The CIA Triad

Privacy and Compliance Risks -Threats to Infrastructure Data and Access Control -Cloud Access Control Issues -Database Integrity Issues -Cloud Service Provider Risks Architectural Considerations
General Issues- Trusted Cloud Computing -Identity Management and Access Control

UNIT -V

Case Study on Open Source and Commercial Clouds: Microsoft Azure- Amazon EC2- Google Web services – Open Nebula.

Course Objectives

- To learn about the concepts and principles of mobile computing;
- To explore both theoretical and practical issues of mobile computing;
- To develop skills of finding solutions and building software for mobile computing applications.
- To identify the use of mobile wireless technologies
- To know the types of mobile wireless technologies that are currently being used
- To understand the working of mobile wireless technologies access to network resources.

Course Outcomes (COs)

1. Grasp the concepts and features of mobile computing technologies and applications
2. Have a good understanding of how the underlying wireless and mobile communication networks work, their technical features, and what kinds of applications they can support
3. Identify the important issues of developing mobile computing systems and applications
4. Organize the functionalities and components of mobile computing systems into different layers and apply various techniques for realizing the functionalities;
5. Develop mobile computing applications by analyzing their characteristics and requirements, selecting the appropriate computing models and software architectures, and applying standard programming languages and tools;
6. Organize and manage software built for deployment and demonstration.

UNIT-I

Mobile computing applications and Platforms - Introduction – Strengths and Weakness of Wireless – Applications – Platforms to support Mobile Computing Applications – Wireless Networks – Wireless Architecture Security and Management – Wireless Business

UNIT-II

Mobile Computing Applications - Key Characteristics of Mobile Applications – Messaging for users – Mobile Portals – Special Applications – Mobile agent applications

UNIT-III

Wireless Internet Mobile IP and Wireless Web - Internet and Web – How it works – Mobile IP – WWW for wireless – Mobile Web Services - **Mobile Computing Platforms** - Introduction – Wireless Middleware – Wireless Gateways and Mobile Application Servers – WAP – I-MODE Wireless JAVA MMIT and BREW – Voice communication

UNIT-IV

Wireless LANs - IEEE 802.11 – MANET – HiperLAN2 - **Wireless Personal Area Networks** - IEEE 802.15 – Home Networks – Blue tooth LANs – Sensor Networks - **Cellular Networks** - Principles – First Generation(1G) Cellular – Paging networks – Second Generation(2G) Cellular – Data over Cellular Networks – Third Generation Cellular (3G) Networks – Beyond 3G

UNIT-V

WML: Formatting Output – Variables – Input Operations – WML Script – WML Libraries.

Course Objective:

- To study fundamental concepts in software testing, including software testing objectives, process, criteria, strategies, and methods.
- To discuss various software testing issues and solutions in software unit test; integration, regression, and system testing.
- To learn how to planning a test project, design test cases and data, conduct testing operations, manage software problems and defects, generate a testing report.
- To expose the advanced software testing topics, such as object-oriented software testing methods, and component-based software testing issues, challenges, and solutions.
- To gain software testing experience by applying software testing knowledge and methods to practice-oriented software testing projects.
- To gain the techniques and skills on how to use modern software testing tools to support software testing projects

Course Outcomes(COs)

1. Have the ability to understand the fundamental concepts in software testing, including software testing objectives, process, criteria, strategies, and methods
2. Have an ability to design and conduct a software test process for a software testing project.
3. Have an ability to identify the needs of software test automation, and define and develop a test tool to support test automation.
4. Have an ability understand and identify various software testing problems, and solve these problems by designing and selecting software test models, criteria, strategies, and methods.
5. Have an ability to use various communication methods and skills to communicate with their teammates to conduct their practice-oriented software testing projects.
6. Have an ability to use software testing methods and modern software testing tools for their testing projects.

UNIT-I

Introduction about testing Definition about software testing-Principles of testing-Phases of software project-Difference between QC and QA-Testing Verification and Validation. Life cycle models for Waterfall Spiral and V model.

UNIT-II

Types of testing-White box testing- Black box testing-Performance testing- Regression testing-Adhoc testing.

UNIT-III

Test planning-Test process-Test reporting-Best practices-Test planning check list-Test plan templates-Test case writing-Techniques for SRS document.

UNIT-IV

Software test automation-Skills needed for automation-What to automate-Scope of automation-Design and architecture for automation. Process model for automation-Selecting test tool.

UNIT-V

Test metrics – Types of metrics – Project metrics-progress metrics-productivity metrics. What is win runner-Methods of testing in win runner.

Course Objectives

- To understand the scope and evolution of soft computing
- To learn the various soft computing frame works
- To be familiar with design of various neural networks
- To be exposed to fuzzy sets and fuzzy logic
- To understand fuzzy measures and reasoning
- To learn genetic programming.

Course Outcomes(COs)

1. Understand the scope and evolution of soft computing
2. Learn the various soft computing frame works
3. Be familiar with design of various neural networks
4. Be exposed to fuzzy sets and fuzzy logic
5. Understand fuzzy measures and reasoning
6. Learn genetic programming.

UNIT-I

Introduction : Evolution of Computing - Soft Computing Constituents – From Conventional AI to Computational Intelligence – Neural Networks - Scope and Evolution– Models of Neural Networks – Feed forward Networks – Supervised Learning Neural Networks – Associative memory networks – Unsupervised learning networks – Special Networks.

UNIT-II

Fuzzy Sets and Fuzzy Logic : Fuzzy Sets – Operations on Fuzzy Sets – Fuzzy Relations - Fuzzy Rules Non – interactive fuzzy sets – Fuzzification– Intuition inference Rank ordering – Defuzzification – Max-membership principle centroid method center of sums center of largest area.

UNIT-III

Fuzzy Measures and Reasoning: Fuzzy arithmetic and measures – Fuzzy reasoning – approximate reasoning – categorical qualitative syllogistic dispositional – Fuzzy inference systems – fuzzy decision making – individual multiperson multi objective Bayesian – fuzzy logic control system – architecture model and application.

UNIT-IV

Machine Learning And Genetic Algorithm : Machine Learning Techniques – Machine Learning Using Neural Nets – Genetic Algorithms (GA) – Simple and General GA – Classification of Genetic Algorithm – Messy Adaptive Hybrid Parallel – Holland Classifier System.

UNIT-V

Application and Implementation Soft Computing: Genetic algorithms -. Traveling Salesperson Problem Internet Search Techniques – Fuzzy Controllers – Bayesian Belief networks for Rocket Engine Control – Neural Network Genetic algorithm and Fuzzy logic implementation in C++ and Matlab.

Course Objectives

- To understand the fundamentals of JavaScript and use different objects
- To know the basics of ASP.NET, its objects and web forms
- To relate SQL Server and ASP.NET through database components
- To develop web application that deals with database and website development.
- To understand XML , Namespace and W3C XML Schema
- To get Familiar with Document Object Model for XML

Course Outcomes(COs)

1. Create a client side scripting web application using forms and Java Script
2. Understand the server side scripting of ASP.NET, its objects and web forms
3. Relate SQL Server and ASP.NET through database components
4. Develop web application that deals with database and website development.
5. Understand XML , Namespace and W3C XML Schema
6. Understand the Document Object Model for XML and JavaScript.

List of Programs

1. Using JavaScript change the font color on reloading a webpage.
2. Generate web page that represents clock-every 60 see the page updated with server current time Using JavaScript.
3. Design a form and validate it using JavaScript.
4. Write Database Access program using ASP.NET
5. Program to retrieve Cookies information using ASP.NET
6. Program to count web page hits using ASP.NET
7. Create a menu in XML.
8. Create a demo for XSLT.
9. Display XML information in Tree structure format.

Course Objectives

- To identify the scope and essentiality of Data Warehousing and Mining.
- To analyze data, choose relevant models and algorithms for respective applications.
- To study spatial and web data mining.
- To develop research interest towards advances in data mining.
- To introduce students to the basic concepts and techniques of Data Mining.
- To develop skills of using recent data mining software for solving practical problems.

Course Outcomes (COs)

1. Understand Data Warehouse fundamentals, Data Mining Principles
2. Design data warehouse with dimensional modelling and apply OLAP operations.
3. Identify appropriate data mining algorithms to solve real world problems
4. Compare and evaluate different data mining techniques like classification, prediction, clustering and association rule mining
5. Describe complex data types with respect to spatial and web mining.
6. Benefit the user experiences towards research and innovation integration.

List of Programs

1. Write a MATLAB program to do all basic matrix operations in MATLAB for a multidimensional array.

2. Write a MATLAB code to compares and contrasts some similarity and distance measures for the following .

(a) Compute the Hamming distance and the Jaccard similarity between the following two binary vectors.

$$x = 0101010001$$

$$y = 0100011000$$

3. a. Plot the graph of $f(x) = \exp(-2x^2 - 3y^2)$. Choose appropriate intervals for x and y.

b. Plot the graph of $f(x) = \cos(x) \sin(y)$. Choose appropriate intervals for x and y.

4. The number of children for different patients in a database is given with a vector

$$c = \{31027634-20010156\}$$

. Find the outliers in the set C using standard statistical parameters mean and variance.

a. If the threshold value is changed from ± 3 standard deviations to ± 2 standard deviations what additional outliers are found?

5. For a given data set X of three-dimensional samples

$X = \{ \{120\} \{314\} \{215\} \{016\} \{243\} \{442\} \{521\} \{777\} \{000\} \{333\} \}$

a) find the outliers using the distance-based technique if

i) the threshold distance is 4 and threshold fraction p for non-neighbor samples is 3.

ii) the threshold distance is 6 and threshold fraction p for non-neighbor samples is 2.

6. Given the data set X with three input features and one output feature representing the classification of samples

X:	I₁	I₂	I₃	O
2.5	1.6	5.9	0	
7.2	4.3	2.1	1	
3.4	5.8	1.6	1	
5.6	3.6	6.8	0	
4.8	7.2	3.1	1	
8.1	4.9	8.3	0	
6.3	4.8	2.4	1	

Rank the features using a comparison of means and variances

7. A data set for analysis includes only one attribute X:

$X = \{71251859131219712121334513876\}$

a) What is the mean of the data set X?

b) What is the median?

c) What is the mode and what is the modality of the data set X?

d) Find the standard deviation for X.

e) Give a graphical summarization of the data set X using a boxplot representation.

f) Find outliers in the data set X.

8. Given a data set with two dimensions X and Y.

X	Y
1	5
4	2.75
3	3
5	2.5

a) Use a linear-regression method to calculate the parameters α and β where $y = \alpha + \beta x$.

b) Estimate the quality of the model obtained in a) Using the correlation coefficient r.

9. The following is the data set X:

X:	Year	A	B
	1996	7	100

1997	5	150
1998	7	120
1999	9	150
2000	5	130
2001	7	150

Create 2D Presentations:

- a) Show a bar chart for the variable A
 - b) Show a histogram for the variable B.
 - c) Show a line chart for the variable B
 - d) Show a pie chart for the variable A
10. Create a MATLAB function to count the number of lines in a text file.
11. Create a structure array for student mark details and print a plot for the marks of the students.
12. The test scores for the three students are given in the following table:

	RDBMS	OracleDBA	WebDesigning	AI
Smith	66	91	95	83
Sam	91	88	80	73
John	80	88	80	78

Find the best student using multifactorial evaluation if the weight factors for the subjects are given as the vector $W = [0.3 \ 0.2 \ 0.1 \ 0.4]$

Course Objectives

- To get an architectural overview of the TCP/IP Protocol Suite
- To understand about subnets using IP classes
- To understand the key features and functions of ARP Protocol.
- To understand how basic routing protocol works.
- To understand about DNS and its applications
- To understand the concepts of Remote Login and VPN

Course Outcomes (COs)

At the completion of the course, students will:

1. Have the ability to analyze and differentiate networking protocols used in TCP/IP protocol suite.
2. Understand the routing IP datagrams and checksum.
3. Exposed to unicast and multicast routing.
4. Learn about host name resolution and the Domain Name System (DNS).
5. Learn about services and operations of DHCP Servers and Domain Name Servers
6. Understand about SMTP and SNMP.

UNIT-I

Introduction: WAN WAN technologies - Protocols and Standards - TCP/IP protocol suite - Internetworking Devices - Classful IP Addressing – Subnetting – Supernetting – Classless Addressing

UNIT-II

ARP & RARP – Proxy ARP – ARP over ATM – ARP and RARP Protocol Format. IP Datagram – Fragmentation – Options – IP Datagram Format – Routing IP Datagrams – Checksum. ICMP – Types of Messages - Message Format – Error Reporting – Query – Checksum.

UNIT-III

Unicast Routing Protocol: Intra Domain and Inter Domain Routing – Distance Vector Routing – RIP – Link State Routing – OSPF – Path Vector Routing – BGP – Multicast Routing – Multicast Routing Protocols. Group Management – IGMP Message – IGMP Operation – Process to Process Communication – UDP Operation – TCP Services - Flow Control.

UNIT-IV

BOOTP - DHCP – Address Discovery and Binding. DNS – Name Space – DNS in Internet – Resolution – Resource Records

UNIT-V

Remote Login - FTP – SMTP – SNMP. IP over ATM Wan – Cells – Routing the Cells – ATMARP – Logical IP Subnets. VPN

Course Objectives

- To state the basic concepts in information security, including security policies, security models, and security mechanisms.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- To understand principles of web security.
- To gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
- To understand key terms and concepts in cyber law, intellectual property and cybercrimes, trademarks and domain theft.
- To provide the learner will be able to examine secure software development practices.

Course Outcomes (COs)

A student who successfully completes this course should at a minimum be able to:

1. State the basic concepts in information security, including security policies, security models, and security mechanisms.
2. Explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
3. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
4. The learner will gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
5. The learner will understand key terms and concepts in cyber law, intellectual property and cybercrimes, trademarks and domain theft.
6. The learner will be able to examine secure software development practices.

UNIT-I

Introduction to cybercrime: Introduction-Cybercrime: Definition and Information Security-who are cybercriminals? - Classification of cybercrimes. Cybercrime: The legal perspectives- cybercrimes: An Indian Perspective - cybercrime and the Indian ITA2000: Hacking and the Indian law(s) - A Global Perspective on cybercrimes: cybercrime and the Extended Enterprise - cybercrime Era: Survival Mantra for the Netizens - Concluding Remarks and Way Forward to Further Chapters.

UNIT-II

Cyberoffenses: How Criminals Plan Them: Introduction: categories of Cybercrime -How criminals Plan the Attacks: Reconnaissance Passive Attacks Active Attacks Scanning and

Scrutinizing Gathered Information Attack(Gaining and Maintaining the system Access) - social Engineering: Classification of Social Engineering - Cyberstalking: Types of stalkers Cases Reported on Cyberstalking How stalking Works? real-life incident of Cyberstalking -Cybercafe and Cybercrimes - Botnets: The Fuel for cybercrime: Botnet - Attack Vector-Cloud Computing: Why cloud computing? Types of Services Cybercrime and Cloud Computing.

UNIT-III

Cybercrime: Mobile and wireless Devices-Introduction - Proliferation of Mobile and Wireless Devices - Trends in Mobility-Credit Card Frauds in Mobile and Wireless Computing Era: Types and Techniques of Credit Card Frauds - Security challenges Posed by Mobile Devices - Registry Settings for Mobile Devices - Authentication Service security: cryptographic security LDAP Security RAS Security Media Player Control Security Networking API Security - Attacks on Mobile/Cell Phones: Mobile Phone Theft Mobile Viruses Mishing Vishing Smishing Hacking Bluetooth.

UNIT-IV

Mobile Devices: Security Implication for Organizations – Managing Diversity and Proliferation of Hand-Held Devices Unconventional/ Steath Storage Devices Threats through Lost and Stolen Devices Protecting Data on lost devices Educating the Laptop Users - Organizational Measures for Handling Mobile devices - Related Security Issues: Encrypting Organization Databases Including Mobile Devices in Security Strategy - Organizational Security Policies and Measures in mobile Computing Era: Importance of Security polices relating to mobile Computing Devices Operating Guidelines for Implementing Mobile Devices Security Polices Organizational Policies for the Use of Mobile Hand - Held Devices - Laptops: Physical Security Countermeasures.

UNIT-V

Tools and Methods Used in Cybercrime: Introduction - Proxy Servers and Anonymizers - Phishing: How Phishing Works? - Password Cracking: Online Attacks Offline Attacks Strong Weak and Random Passwords Random passwords - Keyloggers and Spywares: Software Keyloggers Hardware Keyloggers AntiKeylogger Spywares - Virus and Worms: Types of Virus - Trojan Horses and Backdoors: backdoor How to protect from Trojan Horses and Backdoors - Steganography: Steganalysis - DoS and DDoS Attacks: DoS AttacksClassification of DoS Attacks Types or Levels of DoS Attacks Tools Used to Launch DoS Attacks DDoS Attacks How to Protect from DoS/DDoS Attacks – SQL Injection: Steps for SQL Injection Attacks How to Prevent SQL Injection Attacks - Buffer Overflow: Types of Buffer Overflow How to Minimize Buffer Overflow - Attacks on Wireless Networks: Traditional Techniques of Attacks on Wireless Networks Theft of Internet Hours and Wi-fi-based Frauds and Misuses How to Secure the Wireless Networks.

Course Objectives

- To understand the Oracle database architecture and how its components work and interact with one another.
- To use performance monitoring database security user management and backup/recovery techniques.
- To create an Operational Database
- To Administer users and manage data.
- To Transport data between databases.
- To Configure the network.

Course Outcomes(COs)

On successful completion of the course the student should be able to:

1. Install the Oracle Database.
2. Back up and recover data.
3. Administer users and manage data.
4. Transport data between databases.
5. Configure the network.
6. Create an Operational Database

UNIT-I

Oracle DBA'S: oracle DBA's role - DBA job classification - types of databases. Oracle database 10g architecture: database structures - processes - memory structures - database transaction. Creating an oracle databases: creating the database - creating the parameter file-creating a new database - using a server parameter file.

UNIT-II

Schema management: creating and managing table spaces – indexes - materialized views. Oracle transaction management: oracle transactions - transaction properties - transaction concurrency control - isolation levels - implementing oracle's concurrency control - using undo data to provide read consistency - transaction query - discrete transactions - autonomous transactions - resumable space allocation.

UNIT-III

Loading and transforming data: overview of extraction transformation and loading - using external tables to load data - transforming data.Using data pump export and import: introduction - performing exports and imports -monitoring - transportable table spaces. Managing and monitoring operational databases: types of oracle performance statistics - server generated alerts - automatic workload repository - active session history - undo and MTTR advisors.

UNIT-IV

User management and database security: managing users - the database resource manager - controlling access to data - auditing database usage - authenticating users -enterprise user security - database security do's and don't's. Backing up databases: backing up oracle databases - the recovery manager - backing up control file - oracle back up tool – user managed backups - database corruption detection - enhanced data protection for disaster recovery. Database recovery: types of database failures - oracle recovery processes - performing recovery with RMAN - media recovery scenarios.

UNIT-V

Improving database performance: SQL query optimization - approach to oracle performance tuning - optimizing oracle query processing - oracle optimization and oracle cost based optimizer - writing efficient SQL - DBA's role to improve SQL processing - SQL performance tuning tools - explain plan - SQL tuning advisor - simple approach to tuning SQL statement. Performance tuning: Tuning the instance - introduction to instance tuning - automatic performance tuning vs dynamic performance views - tuning oracle memory - evaluating system performance - measuring IO performance - measuring instance performance - simple approach to instance tuning.

Course Objectives

- To introduce basic concepts and principles about software design and software architecture.
- To understand design issues followed by coverage on design patterns.
- To get an overview of architectural structures and styles.
- to know practical approaches and methods for creating and analyzing software architecture are presented.
- To analyze the interaction between quality attributes and software architecture.
- To gain experiences with examples in design pattern application and case studies in software architecture.

Course Outcomes(COs)

A student who successfully completes this course should at the minimum be able to:

1. Design and motivate software architecture for large scale software systems
2. Recognize major software architectural styles design patterns and frameworks
3. Understand design issues followed by coverage on design patterns.
4. Generate architectural alternatives for a problem and select among them
5. Use well-understood paradigms for designing new systems
6. Identify and assess the quality attributes of a system at the architectural level

UNIT I

Introduction – Software Architecture – Software Design levels – An Engineering Discipline for Software – The status of Software Architecture – Architectural styles – Pipes and filters – Data Abstraction and Object-oriented organization – Event based implicit invocation – Layered systems – Repositories – Interpreters – Process Control – Other Familiar Architecture – Heterogeneous Architectures.

UNIT II

Case studies - Key word is Context – Instrumentation Software – Mobile Robotics – Cruise Control – Three Vignettes in Mixed Style

UNIT III

Shared Information Systems – Database Integration – Integration in Software Development Environments – Integration in the Design of Buildings – Architectural structures for shared Information Systems

UNIT IV

Guidance for User-Interface Architectures – The quantified Design Space – The value of Architectural formalism – Formalizing the Architecture of a specific system – Formalizing an Architectural Style – Formalizing an Architectural Design Space – Towards a Theory of Software Architecture – Z Notation

UNIT V

Requirements for Architecture – Description Languages – First class connectors – Adding Implicit Invocation to Traditional Programming Languages – Tools for Architectural Design – UniCon – Exploiting Style in Architectural Design Environments – Beyond definition/Use: Architectural Interconnection

2. Taylor Nenad., Medvidovic Eric., Dashofy, V., & Richard, N. (2010). Software Architecture: Foundations Theory and Practice. New Delhi: Wiley India Pvt. Limited.

REFERENCES

Boris Beizer. (1990). Software Testing Techniques (2nd ed.). Van Nostrand Reinhold.

Course Objectives

- To use an object-oriented method for analysis and design
- To analyse information systems in real-world settings and to conduct methods such as interviews and observations
- To have a general understanding of a variety of approaches and perspectives of systems development, and to evaluate other is development methods and techniques
- To know techniques aimed to achieve the objective and expected results of a systems development process
- To know different types of prototyping
- To know how to use UML for notation.

Course Outcomes (COs)

Upon the completion of the course students will be able to :-

1. Understand the concepts and terms used in the object-oriented approach to systems analysis and design
2. Use Unified Modeling Language 2.2
3. Perform object-oriented analysis and design
4. Identify the characteristics of the UML and explain UML is relevant to the process development.
5. Draw class Diagrams, Object Diagram and Interaction Diagram.
6. Construct various UML models (including use case diagrams, class diagrams, interaction diagrams, statechart diagrams, activity diagrams, and implementation diagrams) using the appropriate notation.

UNIT-I

The Object Model: The evolution of the object model – Elements of the object model – Applying object model. **Classes and Objects:** The nature of an object – Relationships among objects.

UNIT-II

Classes and Objects: The nature of the class – Relationship among classes – The Interplay of Classes and Objects – On building quality classes and objects. **Classification:** The Importance of proper classification – Identifying proper classes and objects – Key abstraction mechanism.

UNIT-III

The notation: Elements of the notation – class diagrams –state transition diagrams – object diagrams.

UNIT-IV

The Process: First principles – The micro development process – The macro development process.

UNIT-V

UML Overview: UML History – Goals of UML – UML concept areas – Syntax of Expressions and Diagrams.

Nature and purpose of Models: A Model – Levels of Models – Meaning of Model. UML Walkthrough: UML views – Static views – use case view – interaction views – state machine view – activity view – physical view – model management view- extensibility constructs.

Course Objectives

- To portray the recent trends in the field of Grid computing and creation and management of Internet-based utility computing infrastructure.
- To introduce the principles underlying the function of distributed systems and their extension to grid computing.
- To introduce students to the fundamental components of Grid environments, such as authentication, authorization, resource access, and resource discovery.
- To provide a good understanding of the concepts, standards and protocols in Grid computing
- To enable students to be able to justify the applicability, or non-applicability, of Grid technologies for a specific application.
- To perform analysis, design and implementation of ARC grid computing model.

Course Outcomes (COs)

After successful completion of this course, student will be able to

1. Understand and explain the basic concepts of Grid Computing.
2. Explain the principles underlying the function of distributed systems and their extension to grid computing
3. Explain the advantages of using Grid Computing within a given environment.
4. Identify fundamental components of Grid environments, such as authentication, authorization, resource access, and resource discovery.
5. Understand Data management and transfer in Grid environments.
6. Perform analysis, design and implementation of ARC grid computing model.

UNIT- I

Introduction: Cluster to Grid Computing – Cluster Computing Models – Grid Models – Mobile Grid Models – Applications. Parset: System-independent Parallel Programming on Distributed Systems –introduction – Semantics of the Parset Construct – Expressing Parallelism through Parsets – Implementing Parsets on a Loosely Coupled Distributed System

UNIT- II

Anonymous Remote Computing Model: Issues in Parallel Computing on Interconnected Workstations – Existing Distributed Programming Approaches – The ARC Model of Computation – The Two-tiered ARC Language Constructs – Implementation. Integrating Task Parallelism with Data Parallelism: A Model for Integrating Task Parallelism into Data Parallel Programming Platforms – Integration of the Model into ARC – Design and Implementation – Applications - Performance Analysis

UNIT- III

Anonymous Remote Computing and Communication Model: Location – Independent Inter-task Communication with DP – DP Model of Iterative Grid Computations – Design and Implementation of Distributed Pipes. Parallel Programming Model on CORBA: Notion of Concurrency – System Support –Implementation and Performance

UNIT- IV

Sneha-Samuham Grid Computing Model: A Parallel Computing Model over Grids – Design and Implementation – Performance studies. Introducing Mobility into Anonymous Remote Computing and Communication Model – Issues in Mobile clusters and Parallel Computing on Mobile Clusters – Moset Overview – Computation Model – Implementation and Performance

UNIT- V

Distributed Simulated Annealing Algorithms for Job Shop Scheduling - Implementation. Parallel Simulated Annealing Algorithms - Simulated Annealing (SA) Technique – Clustering Algorithm for Simulated Annealing (SA) – Combination of Genetic Algorithm and Simulated Annealing (SA) Algorithm - Implementation. Epilogue : DOS Grid: Vision of Mobile Grids - Mobile Grid Monitoring System – Healthcare Application Scenario.

Course Objectives

- To have a basic, practical understanding of GIS concepts, techniques and real world applications.
- To analyze the basic components of GIS
- To classify the maps, coordinate systems and projections
- To process spatial and attribute data and prepare thematic maps
- To identify and rectify mapping inaccuracies
- To formulate and solve geospatial problems

Course Outcomes (COs)

After successful completion of this course, student will be able to

1. Understand the basic concepts of geography necessary to efficiently and accurately use GIS technology.
2. Understand basic GIS data concepts.
3. Have an ability to perform basic GIS analysis of concepts.
4. Have demonstrated a practical application of GIS.
5. Have practical experience using basic GIS tools.
6. Have an understanding of GIS and its relationship to mapping software development.

Unit I

What is a Geographical Information Systems (GIS) – Geographically referenced data – GIS operations – Geographic Coordinate systems – Map Projections – Commonly used Map Projections – Projected Coordinate Systems – Working with Coordinate systems in GIS.

Unit II

Georelational Vector Data Model – Georelational data model – Representation of simple features – Topology – Nontopological Vector data – Data models for composite features. Object based vector data model – Object based data model – The geodatabase data model – Interface – Topology rules – Advantages of Geodatabase model.

Unit III

Raster Data Model – Elements of Raster Data Model - Raster Data Structure – Data Compression – Data Conversion – Integration of Raster and Vector Data. Data Input – Existing GIS data – Meta Data – Conversion of Existing Data – Creating New Data.

Unit IV

Geometric Transformation – Root Mean Square (RMS) Error – Interpretation of RMS errors Digitized Maps – Re sampling of Pixel Values. Spatial Data Editing – Location Errors – Spatial Data Accuracy Standards – Topological Errors – Topological Editing – Nontopological Editing – Other Editing operations

Unit V

Data Display and Cryptography – Cartographic Symbolization – Types of Maps – Typography – Map Design – Map Production.

Data Exploration – Attribute and Data Query – Spatial Data Query – Raster Data Query – GIS Applications.

17CSP211	ROUTER CONFIGURATION – PRACTICAL	Semester-II
		4H – 2C
Instruction Hours / week: L: 0 T: 0 P: 4		Marks: Int : 40 Ext : 60
		Total: 100

Course Objectives

- To get an architectural overview of the TCP/IP Protocol Suite
- To understand about subnets using IP classes
- To understand the key features and functions of ARP Protocol.
- To understand how basic routing protocol works.
- To understand about DNS and its applications
- To understand the concepts of Remote Login and VPN

Course Outcomes (COs)

At the completion of the course, students will:

1. Have the ability to analyze and differentiate networking protocols used in TCP/IP protocol suite.
2. Understand the routing IP datagrams and checksum.
3. Exposed to unicast and multicast routing.
4. Learn about host name resolution and the Domain Name System (DNS).
5. Learn about services and operations of DHCP Servers and Domain Name Servers
6. Understand about SMTP and SNMP.

List of Programs

1. Simple router configuration.
2. Access and utilize the router to set basic parameters.
3. Connect configure and verify operation status of a device interface.
4. Implement static and dynamic addressing services for hosts in a LAN environment.
5. Identify and correct common problems associated with IP addressing and host configurations.
6. Configure verify and troubleshoot RIPv2.
7. Perform and verify routing configuration tasks for a static or default route given.
8. Configure verify and troubleshoot NAT operation on a router.
9. Configure and verify a PPP connection between routers.

Course Objectives

- To understand the Oracle database architecture and how its components work and interact with one another.
- To use performance monitoring database security user management and backup/recovery techniques.
- To create an Operational Database
- To Administer users and manage data.
- To Transport data between databases.
- To Configure the network.

Course Outcomes(COs)

On successful completion of the course the student should be able to:

1. Install the Oracle Database.
2. Back up and recover data.
3. Administer users and manage data.
4. Transport data between databases.
5. Configure the network.
6. Create an Operational Database

List of Programs

1. Demo for globalization support.
2. Create database and do the manipulation.
3. Create users and grant the privileges.
4. Create table space.
5. Create different types of tables.
6. Create index and managing index tables.
7. Demo for flashback database and tables.
8. Export and import the tables.
9. Create back up for tables.
10. Re-sequence the rows using CTAS.
11. Change the initializing parameters.

17CSP301**J2EE****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100****Course Objectives**

- To Understand the In-depth concepts of JEE
- To Understand the in-depth Life cycle of servlets and JSP.
- To Learn how to communicate with databases using Java.
- To Handle Errors and Exceptions in Web Applications
- To Use NetBeans IDE for creating J2EE Applications
- To impart expertise in Web Application Development using J2EE.

Course Outcomes(COs)

1. Understand the In-depth concepts of JEE
2. Understand the in-depth Life cycle of servlets and JSP.
3. Learn how to communicate with databases using Java.
4. Handle Errors and Exceptions in Web Applications
5. Use NetBeans IDE for creating J2EE Applications
6. Understand J2EE as an architecture and platform for building and deploying web-based, n-tier, transactional, component-based enterprise applications

UNIT-I

J2EE Overview: Beginning of Java – Java Byte code – Advantages of Java –J2EE and J2SE. J2EE Multi Tier Architecture – Distributive Systems – The Tier – Multi Tier Architecture – Client Tier Web Tier Enterprise Java Beans Tier Enterprise Information Systems Tier Implementation.

UNIT-II

J2EE Database Concepts: Data – Database – Database Schema. **JDBC Objects:** Driver Types – Packages – JDBC Process – Database Connection – Statement Objects – Result Set – Meta Data.

UNIT-III

Java Servlets: Benefits – Anatomy – Reading Data from Client –Reading HTTP Request Headers – Sending Data to client – Working with Cookies.

UNIT-IV

Enterprise Java Beans: Deployment Descriptors – Session Java Bean –Entity Java Bean Message Driven Bean.

UNIT-V

JSP: What is Java Server Pages? - Evolution of Dynamic Content Technologies – JSP & Java 2 Enterprise ed.); **JSP Fundamentals:** Writing your first JSP- Tag conversions-

Running JSP. **Programming JSP Scripts:** Scripting Languages – JSP tags- JSP directives – Scripting elements – Flow of Control – comments;
Java Remote Method Invocation.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To understand the concepts and principles that underlies modern operating systems
- To practice component to relate theoretical principles with operating system implementation.
- To learn about processes and processor management
- To learn about concurrency and synchronization
- To understand memory management schemes, file system and secondary storage management security and protection etc.
- To use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.

Course Outcomes(COs)

At the end of the course the student will be in a position to –

1. Use basic fundamental utilities which are required again and again on daily basis to work on a modern operating system.
2. Write useful shell scripts which greatly and effectively enhance the usefulness of computers, from the point of view of programmers and application developers.
3. Understand basics of various OS related concepts, from programmer's point of view, like files, directories, kernel, inodes, APIs, system calls, processes, signals, etc.
4. Develop applications where several processes need to communicate with each other to complete a task.
5. Use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.
6. Write programs which employs advanced concepts like multithreading.

UNIT-I**History and Overview Of GNU/Linux And FOSS 3**

Definition of FOSS & GNU History of GNU/Linux and the Free Software Movement
Advantages of Free Software and GNU/Linux FOSS usage trends and potential—global and Indian.

UNIT-II**System Administration**

GNU/Linux OS installation--detect hardware configure disk partitions & file systems and install a GNU/Linux distribution ; Basic shell commands -logging in listing files editing files copying/moving files viewing file contents changing file modes and permissions process management ; User and group management file ownerships and permissions PAM authentication ; Introduction to common system configuration files & log files ;

Configuring networking basics of TCP/IP networking and routing connecting to the Internet (through dialup DSL Ethernet leased line) ; Configuring additional hardware - sound cards displays & display cards network cards modems USB drives CD writers ; Understanding the OS boot up process ; Performing every day tasks using gnu/Linux -- accessing the Internet playing music editing documents and spreadsheets sending and receiving email copy files from disks and over the network playing games writing CDs ; X Window system configuration and utilities--configure X windows detect display devices ; Installing software from source code as well as using binary packages.

UNIT-III

Server Setup And Configuration

Setting up email servers--using postfix (SMTP services) courier (IMAP & POP3 services) squirrel mail (web mail services) ; Setting up web servers --using apache (HTTP services) php (server-side scripting) perl (CGI support) ; Setting up file services -- using samba (file and authentication services for windows networks) using NFS (file services for gnu/Linux / Unix networks) ; Setting up proxy services --using squid (http / ftp / https proxy services) ; Setting up printer services -using CUPS (print spooler) foomatic (printer database) ; Setting up a firewall -Using netfilter and iptables.

UNIT-IV

Programming Tools

Using the GNU Compiler Collection --GNU compiler tools ; the C preprocessor (cpp) the C compiler (gcc) and the C++ compiler (g++) assembler (gas) ; Understanding build systems --constructing make files and using make using autoconf and autogen to automatically generate make files tailored for different development environments ; Using source code versioning and management tools --using cvs to manage source code revisions patch & diff ; Understanding the GNU Libc libraries and linker --linking against object archives (.a libraries) and dynamic shared object libraries (.so libraries) generating statically linked binaries and libraries generating dynamically linked libraries.

Using the GNU debugging tools --gdb to debug programs graphical debuggers like ddd memory debugging / profiling libraries mpatrol and valgrind ; Review of common programming practices and guidelines for GNU/Linux and FOSS ; Introduction to Bash sed & awk scripting.

UNIT-V

Application Programming

Basics of the X Windows server architecture ; Qt Programming ; Gtk+ Programming ; Python Programming ; Programming GUI applications with localisation support.

Course Objectives

- To make the students learn the fundamental theories and techniques of digital image processing.
- To study the mathematical transforms necessary for image processing, image manipulation and a preliminary understanding of Computer Vision.
- To make students to understand the image degradation and enhancement.
- To understand the basic relationships between pixels in an image
- To know various segmentation techniques, and object descriptors.
- To implement pattern recognition to enhance an image.

Course Outcomes(COs)

1. Perform image manipulations and analysis in many different fields.
2. Apply knowledge of computing mathematics science and engineering to solve problems in multidisciplinary research.
3. Implement the understanding in sharpening the image.
4. Perform the image segmentation using the compression method.
5. Understand the image to represent in an region.
6. Analyze the basic algorithms used for image processing & image compression with morphological image processing.

UNIT-I

Introduction: Digital image processing – Origins of digital image processing- Examples of fields that use digital image processing-Fundamental steps in digital image processing- Components of an image processing system-Representing digital image.

UNIT-II

Some Basic relationships between Pixels-Basic gray level transformations- Histogram processing - Basic spatial filtering- Smoothing special filtering- Image Degradation/ Restoration process- Noise Models.

UNIT-III

Image Segmentation: Thresholding - Edge Based Segmentation – Region Based Segmentation – Matching. Image Compression: Error Criterion - Lossy Compression - Lossless Compression.

UNIT-IV

Shape Representation and Description: Region Identification - Contour Based Representation And Description – Region Based Shape Representation And Description

UNIT-V

Image Recognition: Introduction – Statistical Pattern Recognition - Neural Net-Syntactic Pattern Recognition - Graph Matching - Clustering

17CSP304 NETWORK ARCHITECTURE AND MANAGEMENT 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives

- To understand the various architecture models and routing strategies of networks.
- To understand the privacy and security needs of a network and formulate a plan.
- To analyze the various case studies of network architecture and management.
- To implement the SNMP protocol in various architectures.
- To use various network management tools and understand their modules.
- To design an architecture with all the network requirements of a client with help of network management tools.

Course Outcomes(COs)

1. Understand the various architecture models and routing strategies of networks.
2. Understand the privacy and security needs of a network and formulate a plan.
3. Analyze the various case studies of network architecture and management.
4. Implement the SNMP protocol in various architectures.
5. Use various network management tools and understand their modules.
6. Design an architecture with all the network requirements of a client with help of network management tools.

UNIT-I

Introduction: Objectives - Component architectures – Reference architecture – Architectural models; Addressing and Routing Architecture: Addressing mechanisms – Routing mechanisms – Addressing strategies – Routing strategies – Architectural considerations; Network Management Architecture: Defining Network Management – Network Management Mechanism - Architectural considerations; Performance Architecture; Developing goals – Performance mechanisms – Architectural considerations

UNIT- II

Security And Private Architecture: Developing a security and privacy plan – Security and privacy Administration & Mechanism - Architectural considerations; Selecting Technologies for the Network Design: Goals – Criteria for Technology Evaluation – Guidelines and constraints on Technology Evaluation – Choices for Network Design; Interconnecting Technologies Within The Network Design: Shared medium – Switching – Routing – Hybrid mechanism – Applying Interconnection Mechanism to the Design

UNIT- III

Case history of Networking and Management: Challenges of Information Technology Managers – Goals organization and functions – Network and System Management – Network Management System Platform; SNMP Broadband and TMN Management:

Network Management Standards & Model – Organization Information and Communication Model – ASN.1 – Encoding structure – Macros – Functional model; Organization and Information Model: Managed Networks – The History of Network Management – Internet Organization and standards – SNMP Model – The Organization and Information Model; Communication and Functional Model: The SNMP Communication Model – Functional Model.

UNIT- IV

SNMPv2 Management: Major changes – System architecture – Structure of Management Information – Management Information Base – SNMPv2 protocol – Compatibility; RMON: Remote monitoring – RMON1 – RMON2 – ATM remote monitoring; Broadband Network Management: ATM Networks - Network and Services – ATM Technology – ATM Network Management; Telecommunication Management Network: Operations systems – Conceptual model – Standards – Architecture – TMN Management service architecture – Integrated view of TMN – Implementation issues.

UNIT- V

Network Management Tools and Systems: Network management tools – Network statistics measurement system – Network Management Systems – System Management; Network Management Applications: Configuration Management - Fault Management - Performance Management – Security Management – Accounting Management – Report Management - Policy Based Management – Service Level Management.

3. <https://www.cs.columbia.edu/~smb/classes/s06-4118/126.pdf>

Course Objectives

- To understand the hardware and software concepts of distributed operating systems, various design issues like transparency, flexibility etc., and communication and synchronization in distributed operating systems.
- To understand scheduling in distributed operating systems, fault tolerance, real-time distributed systems, and designing of distributed file systems.
- To understand the concept of design and implementation in the context of distributed operating systems.
- To Design and Implement Distributed applications using Technologies like RPC, threads.
- To understand How Distributed Shared Memory is managed.
- To analyze security issues in network and distributed environments

Course Outcomes(COs)

1. Understand the different Distributed Systems and the challenges involved in Design of the Distributed Systems.
2. Understand how computing power is created and synchronized in Distributed systems
3. Design and Implement Distributed applications using Technologies like RPC, threads.
4. Learn how to store data in Distributed File System.
5. Understand How Distributed Shared Memory is managed.
6. Analyze security issues in network and distributed environments

UNIT-I

Fundamentals – message passing – Remote procedure calls : Introduction – the RPC model – transparency of RPC – Implementing RPC mechanism –stub generation – RPC messages – marshaling arguments and results – server management – parameter passing semantics – call semantics.

UNIT- II

Distributed shared memory : Introduction – general architecture of DSM systems – design and implementation of DSM – granularity – structure of shared memory space – replacement strategy – heterogeneous DSM – advantages of DSM.

UNIT- III

Synchronization: Introduction – clock synchronization – event ordering – mutual exclusion. Resource management: Introduction – desirable features of a good global scheduling algorithm – task management approach – load balancing approach – load sharing approach.

UNIT- IV

Distributed file system: Introduction – desirable features of a good distributed file system – file models – file accessing models.

Naming: Introduction – desirable features of a good naming system – fundamental terminologies and concepts.

UNIT- V

Security: Introduction – potential attacks to computer system – cryptography.

17CSP305B	WIRELESS APPLICATION PROTOCOL	Semester-III 4H – 4C
Instruction Hours / week: L: 4 T: 0 P: 0		Marks: Int : 40 Ext : 60
		Total: 100

Course Objectives

- To Expose students to software and hardware capabilities of wireless applications.
- To provide an overview of Wireless Communication networks area and its applications in communication engineering.
- To appreciate the contribution of Wireless Communication networks to overall technological growth.
- To explain the various terminology, principles, devices, schemes, concepts, algorithms and different methodologies used in Wireless Communication Networks.
- To enable students to compare and contrast multiple division techniques, mobile communication systems, and existing wireless networks.
- To design a wireless application using WML

Course Outcomes(COs)

1. Understand software and hardware capabilities of wireless applications.
2. Analyze Wireless Communication networks area and its applications in communication engineering.
3. Appreciate the contribution of Wireless Communication networks to overall technological growth.
4. Explain the various terminology, principles, devices, schemes, concepts, algorithms and different methodologies used in Wireless Communication Networks.
5. Compare and contrast multiple division techniques, mobile communication systems, and existing wireless networks.
6. Design and Develop a wireless application using WML

UNIT-I

Mobile Data Introduction: The Rise of Mobile Data-Key Services for the Mobile Internet- Overview of the WAP-The origins of the WAP- WAP architecture-WAP Internal Structure-Components of the WAP Standards- WAP Gateways-Network Infrastructure Services Supporting WAP Clients-WAP Architecture Design Principles – Relationship with other standards.

UNIT-II

The Wireless Markup Language: Overview-The WML Document Model-WML Authoring-URLS Identity Content-Mark Up Basics- WML Basics-Basic Content-Events Tasks and Binding.

UNIT-III

Variables –Other Content you can include-Controls-Miscellaneous Markup- Sending Information-Application Security-Other Data; The Meta element- Document Type

Declarations- Errors and browsers Limitations-Content generation- WML Version Negotiation.

UNIT-IV

User Interface Design: Making Wireless Applications Easy to Use- Website Design- Computer Terminals Vs Mobile Terminals-Designing a usable WAP site-structured usability method-user interface design guidelines- Design guidelines for selected WML Elements.

UNIT-V

Wireless Telephony Applications: Overview of the WTA Architecture- WTA Client Frame Work –WTA Server and Security- Design Considerations- Application Creation Tool Box- Future of WTA Enhancements.

The Mobile Internet Future: Better Content- Easier Access-Beyond Browsing – Beyond Cellular- Mobile Data Unleashed.

17CSP305C**WAN TECHNOLOGIES****4H – 4C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100****Course Objectives**

- To describe common WAN protocols and interfaces like PPP.
- To demonstrate basic routing and network troubleshooting.
- To understand Frame delay and congestion control mechanisms
- To learn about ISDN and ISDN devices
- To analyze about VPN and its mechanisms
- To understand Asynchronous Transfer Mode (ATM) and VoIP standards and Devices

Course Outcomes(COs)

Upon successful completion of this course, the student will be able to:

1. Describe common WAN protocols and interfaces.
2. Demonstrate basic routing and network troubleshooting.
3. Understand Frame delay and congestion control mechanisms
4. Learn about ISDN and ISDN devices
5. Analyze about VPN and its mechanisms
6. Understand Asynchronous Transfer Mode (ATM) and VoIP standards and Devices

Unit I

Introduction to WAN Technologies: Point To Point Links – Circuit & Packet Switching – Virtual Circuits – Dialup Services – WAN Devices. Dialup Technology: Background – Dialup Connectivity – Dialup Methods – Benefits and Drawbacks.

Unit II

Point-To-Point Protocol: PPP Encapsulation – Link Operation – LCP Packet Formats – LCP Configuration Options. X.25: Devices and Protocol Operation – Protocol Suite – LAPB Frame Format – X.21 Address Format.

Unit III

Frame Relay: Frame Relay Devices – Virtual Circuits – Congestion Control Mechanisms – Local Management Interface – Frame Format. Integrated Services Digital Network: ISDN Devices – ISDN Channels – Services – ISDN Interfaces – ISDN Specification – Signaling System 7. Virtual Private Networks: Background – Layer 2 Tunneling Protocol – Operational Mechanisms – Adding More Security.

Unit IV

Asynchronous Transfer Mode: Standards – ATM Devices and the Network Environment – Cell Header Format – ATM Services – Switching Operations – Reference Model – Addressing – Connections – ATM and Multicasting – Quality of Service – Signaling and

Connection Establishment – Connection Management Messages – PNNI – Integrated Local Management Interface – LAN Emulation – Multiprotocol Over ATM – Physical Layer Architecture. MPLS/Tag Switching: Operations – Switching Architecture – Hierarchical Routing – Multicast Routing – Label Switching With ATM – Quality of Service and Traffic Engineering.

Unit V

Voice/Data Integration Technologies: Introduction – Advances in Applications – Voice Networking – Voice Over ATM – Voice Over Frame Relay – VOIP Standards – VOIP Technology and Future Communications – SGCP – The Simple Control Interface – Gateway Control Interface – Gateway Control Functions – Encoding of the Session Description – SGCP Transmission Over UDP – Security Requirements – Cash Flows – MGCP Overview – General SIP Tutorial. Digital Subscriber Line: ADSL Signaling and Modulation – DSL Technologies.

17CSP311**J2EE – PRACTICAL****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100****Course Objectives**

- To Understand the In-depth concepts of JEE
- To Understand the in-depth Life cycle of servlets and JSP.
- To Learn how to communicate with databases using Java.
- To Handle Errors and Exceptions in Web Applications
- To Use NetBeans IDE for creating J2EE Applications
- To impart expertise in Web Application Development using J2EE.

Course Outcomes(COs)

7. Understand the In-depth concepts of JEE
8. Understand the in-depth Life cycle of servlets and JSP.
9. Learn how to communicate with databases using Java.
10. Handle Errors and Exceptions in Web Applications
11. Use NetBeans IDE for creating J2EE Applications
12. Understand J2EE as an architecture and platform for building and deploying web-based, n-tier, transactional, component-based enterprise applications

List of Programs

1. Create a sign in form in servlets.
2. Write a servlet Program to lock a server.
3. Write a servlet program that returns list of information in table format.
4. Design a counter that counts number of times user has visited the site in current browsing session.
5. Write a program to retrieve cookies information
6. Build a JAVA Bean for opening an applet from JAR file.
7. Write a program to add controls in BEAN.
8. Design a counter in JAVA BEAN.
9. Write a program to stream contents of a file using JSP.
10. Write a program to insert an applet into JSP page.

Course Objectives

- To understand the concepts and principles that underlies modern operating systems
- To practice component to relate theoretical principles with operating system implementation.
- To learn about processes and processor management
- To learn about concurrency and synchronization
- To understand memory management schemes, file system and secondary storage management security and protection etc.
- To use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.

Course Outcomes(COs)

At the end of the course the student will be in a position to –

1. Use basic fundamental utilities which are required again and again on daily basis to work on a modern operating system.
2. Write useful shell scripts which greatly and effectively enhance the usefulness of computers, from the point of view of programmers and application developers.
3. Understand basics of various OS related concepts, from programmer's point of view, like files, directories, kernel, inodes, APIs, system calls, processes, signals, etc.
4. Develop applications where several processes need to communicate with each other to complete a task.
5. Use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.
6. Write programs which employs advanced concepts like multithreading.

List of Programs

1. To write a Linux program to display process deadlock state.
2. To write a program to display the allocated memory.
3. To write a program to simulate the DOS Command-Copy.
4. To write a program to implement signal handling.
5. To write a simple Linux program using thread.
6. To write a program to display the date & time using TCP Sockets.
7. To write a program to display the date & time using UDP Sockets.
8. To write a program to display the cpu scheduling
9. To write a Linux program to create a lock file.
10. To write a program to display the user information

17ECU101	BASIC CIRCUIT THEORY AND NETWORK ANALYSIS	Semester - I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To identify the main circuit elements and apply Kirchoff's Laws to calculate currents, voltages and powers in typical DC electric circuits using a variety of analytical methods.
- To reduce more complicated circuits into the Thevenin's and Norton's equivalent circuits.
- To know the electrical circuit connection according to a given circuit diagram.
- To make the students capable of analyzing any given electrical network.
- To make the students learn how to synthesize an electrical network from a given impedance/admittance function.
- To understand frequency response in electrical circuits

COURSE OUTCOMES

- Apply the knowledge of basic circuit law and simplify the network using reduction techniques
- Analyze the circuit using Kirchhoff's law and Network simplification theorems
- Evaluate transient response, Steady state response, network functions
- Obtain the maximum power transfer to the load and Analyze the series resonant and parallel resonant circuit
- Evaluate two-port network parameters, design attenuators and equalizers
- Synthesize one port network using Foster Forms

UNIT I - Basic Circuit Concepts

Voltage and Current Sources - Resistors: Fixed and Variable resistors - Construction and Characteristics - Color coding of resistors - Resistors in series and parallel - Inductors: Fixed and Variable inductors - Self and mutual inductance - Faraday's law and Lenz's law of electromagnetic induction - Energy stored in an inductor - Inductance in series and parallel - Testing of resistance and inductance using multimeter.

UNIT II - Circuit Analysis

Kirchoff's Current Law (KCL) - Kirchoff's Voltage Law (KVL) - Node Analysis - Mesh Analysis - Star - Delta Conversion - DC Transient Analysis: RC Circuit - Charging and discharging with initial charge - RL Circuit with Initial Current - Time Constant - RL and RC Circuits With Sources - DC Response of Series RLC Circuits.

UNIT III – AC Circuit Analysis

Sinusoidal Voltage and Current - Definition of Instantaneous – Peak - Peak to Peak - Root Mean Square and Average Values – Voltage - Current relationship in Resistor - Inductor and Capacitor – Phasor - Complex Impedance - Capacitors: Principles of capacitance - Parallel plate capacitor – Permittivity - Definition of Dielectric Constant - Dielectric strength - Energy stored in a capacitor - Air, Paper, Mica, Teflon, Ceramic, Plastic and Electrolytic capacitor - Construction and application - Capacitors in series and parallel - Factors governing the value of capacitors - Testing of capacitors using multimeter.

UNIT IV - Power in AC Circuits

Instantaneous Power - Average Power - Reactive Power - Power Factor - Sinusoidal Circuit Analysis for RL, RC and RLC Circuits - Resonance in Series and Parallel RLC

Circuits - Frequency Response of Series and Parallel RLC Circuits, Quality (Q) Factor and Bandwidth - Passive Filters: Low Pass - High Pass - Band Pass and Band Stop.

UNIT V - Network Theorems

Principal of Duality - Superposition Theorem - Thevenin's Theorem - Norton's Theorem - Reciprocity Theorem - Millman's Theorem - Maximum Power Transfer Theorem - AC circuit analysis using Network theorems - Two Port Networks: Impedance (Z) Parameters - Admittance (Y) Parameters - Transmission (ABCD) Parameters.

17ECU102	MATHEMATICS FOUNDATION FOR ELECTRONICS	Semester - I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVE

- This course provides a deep knowledge to the learners to understand the basic concepts of Matrices, Sequences, Complex Variable, Complex Function, First Order Ordinary Differential Equations, Power series method
- To provide students with mathematics fundamentals necessary to formulate, solve and analyses complex engineering problems.
- To prepare student to apply reasoning informed by the contextual knowledge to engineering practice.
- To build the strong foundation in Mathematics of students needed for the field of electronics and Telecommunication Engineering
- Linear differential equations of higher order using analytical methods and numerical methods applicable to Control systems and Network analysis.
- Vector differentiation and integration required in Electro-Magnetics and Wave theory.

COURSE OUTCOMES

- Able to solve qualitative problems based on vector analysis and matrix analysis such as linear independence and dependence of vectors, rank etc
- Understand the concepts of limit theory and nth order differential equations and their applications to our daily life
- Able to solve the problems of differentiation of functions of two variables and know about the maximization and minimization of functions of several variables
- Come to know the applications of double and triple integration in finding the area and volume
- Know about qualitative applications of Gauss, Stoke's and Green's theorem
- Use Vector differentiation and integration required in Electro-Magnetics and Wave theory

UNIT I - Matrices

Introduction to Matrices, System of Linear Algebraic Equations, Gaussian Elimination Method, Gauss-Seidel Method, LU decomposition, Solution of Linear System by LU decomposition. Eigen Values and Eigen Vectors, Linear Transformation, Properties of Eigen Values and Eigen Vectors, Cayley-Hamilton Theorem, Diagonalization, Powers of a Matrix. Real and Complex Matrices, Symmetric, Skew Symmetric, Orthogonal Quadratic Form, Hermitian, Skew Hermitian, Unitary Matrices.

UNIT II - Sequences and Series

Sequences, Limit of a sequence, Convergence, Divergence and Oscillation of a sequence, Infinite series, Necessary condition for Convergence, Cauchy's Integral Test, D'Alembert's Ratio Test, Cauchy's nth Root Test, Alternating Series, Leibnitz's Theorem, Absolute Convergence and Conditional Convergence, Power Series.

UNIT III - Complex Variables and Functions

Complex Variable, Complex Function, Continuity, Differentiability, Analyticity. Cauchy-Riemann (C-R) Equations, Harmonic and Conjugate Harmonic Functions, Exponential Function, Trigonometric Functions, Hyperbolic Functions. Line Integral in Complex Plane, Cauchy's Integral Theorem, Cauchy's Integral Formula, Derivative of Analytic Functions. Sequences, Series and Power Series, Taylor's Series, Laurent Series,

Zeroes and Poles. Residue integration method, Residue integration of real Integrals.

UNIT IV - Ordinary Differential Equations

First Order Ordinary Differential Equations, Basic Concepts, Separable Ordinary Differential Equations, Exact Ordinary Differential Equations, Linear Ordinary Differential Equations. Second Order homogeneous and non-homogeneous Differential Equations.

UNIT V - Series solution of differential equations and special functions

Power series method, Legendre Polynomials, Frobenius Method, Bessel's equations and Bessel's functions of first and second kind. Error functions and gamma function.

17ECU103	SEMICONDUCTOR DEVICES	Semester - I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To learn the fundamentals of operation of the main semiconductor electronic devices.
- To understand the basic parameters of electronic devices, their performance, and limiting factors.
- To understand the basic principles of electronic device operation with emphasis on bipolar transistors, and unipolar microwave devices.
- Acquire the fundamental knowledge and expose to the field of semiconductor theory and devices and their applications.
- To give knowledge about semiconductor and discuss working and applications of basic devices, including p-n junctions, BJTs and FETs
- Introduce students to the physics of semiconductors and the inner working of semiconductor devices.

COURSE OUTCOMES

- Apply the knowledge of basic circuit law and simplify the network using reduction techniques
- Apply the knowledge of semiconductors to illustrate the functioning of basic electronic devices.
- Demonstrate the switching and amplification application of the semiconductor devices.
- Demonstrate the control applications using semiconductor devices.
- Apply concepts of semiconductor devices to design and analyze circuits.
- Ability to understand and analyze the inner working of semiconductor p-n diodes

UNIT I - Semiconductor Basics

Introduction to Semiconductor Materials - Crystal Structure - Planes and Miller Indices - Energy Band in Solids - Concept of Effective Mass - Density of States - Carrier Concentration at Normal Equilibrium in Intrinsic Semiconductors - Derivation of Fermi Level for Intrinsic & Extrinsic Semiconductors – Donors – Acceptors - Dependence of Fermi Level on Temperature and Doping Concentration - Temperature Dependence of Carrier Concentrations - Carrier Transport Phenomena: Carrier Drift - Mobility – Resistivity - Hall Effect - Diffusion Process - Einstein Relation - Current Density Equation - Carrier Injection - Generation and Recombination Processes - Continuity Equation.

UNIT II - PN Junction Diode

Formation of Depletion Layer - Space Charge at a Junction - Derivation of Electrostatic Potential Difference at Thermal Equilibrium - Depletion Width and Depletion Capacitance of an Abrupt Junction - Concept of Linearly Graded Junction - Derivation of Diode Equation and I-V Characteristics - Zener and Avalanche Junction Breakdown Mechanism - Tunnel diode - Varactor diode - Solar cell: Circuit symbol – Characteristics - Applications.

Unit III - Bipolar Junction Transistors (BJT)

PNP and NPN Transistors - Basic Transistor Action - Emitter Efficiency - Base Transport Factor - Current Gain - Energy Band Diagram of Transistor in Thermal Equilibrium - Quantitative Analysis of Static Characteristics (Minority Carrier Distribution and Terminal Currents) – Base - Width Modulation - Modes of operation - Input and Output

Characteristics of CB – CE - CC Configurations - Metal Semiconductor Junctions: Ohmic and Rectifying Contacts.

UNIT IV - Field Effect Transistors

JFET – Construction - Idea of Channel Formation – Pinch - Off and Saturation Voltage – Current - Voltage Output Characteristics - MOSFET - Types of MOSFET - Circuit symbols - Working and Characteristic curves of Depletion type MOSFET (both N channel and P Channel) - Enhancement type MOSFET (both N channel and P channel) - Complimentary MOS (CMOS).

UNIT V - Power Devices

UJT - Basic construction and working - Equivalent circuit - Intrinsic Standoff Ratio - Characteristics and relaxation oscillator – Expression – SCR – Construction – Working – Characteristics – Triac – Diac – IGBT – MESFET - Circuit symbols - Basic constructional features – Operation - Applications.

17ECU111	BASIC CIRCUIT THEORY AND NETWORK ANALYSIS - PRACTICAL	Semester - I			
		L	T	P	C
		-	-	3	2

COURSE OBJECTIVES

- To give knowledge about semiconductor physics and discuss working and applications of basic devices, including p-n junctions, BJTs and FETs
- Introduce students to the semiconductor devices and the inner working of semiconductor devices.
- Know the formation and properties of semiconductor materials
- Understand the operation of diode
- Know the usage of electronic equipments
- Know the testing of components

COURSE OUTCOMES

- Apply the knowledge of basic circuit law and simplify the network using reduction techniques
- Apply the knowledge of semiconductors to illustrate the functioning of basic electronic devices.
- Demonstrate the switching and amplification application of the semiconductor devices.
- Demonstrate the control applications using semiconductor devices.
- Apply concepts of semiconductor devices to design and analyze circuits.
- Ability to understand and analyze the inner working of semiconductor p-n diodes

(Any 8 Experiments)

1. Familiarization with
 - a) Resistance in series, parallel and series – Parallel.
 - b) Capacitors & Inductors in series & Parallel.
2. Measurement of Amplitude, Frequency & Phase difference using CRO.
3. Verification of Ohm's Law.
4. Verification of Kirchhoff's Law.
5. Verification of Norton's theorem.
6. Verification of Thevenin's Theorem.
7. Verification of Superposition Theorem.
8. Verification of Maximum Power Transfer Theorem.
9. Verification of Millman's Theorem.
10. Study of the Frequency Response of a Series LCR Circuit and determination of its
 - (a) Resonant Frequency (b) Impedance at Resonance (c) Quality Factor Q
 - (d) Band Width

17ECU112	MATHEMATICS FOUNDATION FOR ELECTRONICS - PRACTICAL	Semester - I			
		L	T	P	C
		-	-	3	2

COURSE OBJECTIVES

- To give knowledge about semiconductor physics and discuss working and applications of
- definite Integral, Improper integrals and some special integrals as Beta functions, Gamma Functions and Error functions
- Linear differential equations of higher order using analytical methods and numerical methods applicable to Control systems and Network analysis.
- Applications of the definite Integral to derive different important quantities as Arc Length, Area, Volume, Work and Moments
- Details of set theory which is basic of all sciences
- Different types of matrices and their properties.

COURSE OUTCOMES

- Understand the problems and solve them with correlation and regression analysis
- Find the nth derivatives of the function, evaluate its indeterminate forms and way to expand a function in series form
- Analytically and graphically understand the nature and forms of function
- Apply the principles of integral to solve a variety of practical problems
- Equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics
- Enhance and develop the ability of using the language of mathematics in analyzing the real world problems of sciences and engineering

(Any 8 Experiments)

(Sci(PRACTICAL/MAT(PRACTICAL/ any other Mathematical Simulation Software)

1. Solution of First Order Differential Equations
2. Solution of Second Order homogeneous Differential Equations
3. Solution of Second Order non-homogeneous Differential Equations
4. Convergence of a given series.
5. Divergence of a given series.
6. Solution of linear system of equations using Gauss Elimination method.
7. Solution of linear system of equations using Gauss – Seidel method.
8. Solution of linear system of equations using L-U decomposition method.
9. Solution of coupled differential equations.
10. Solution of Differential equation using Euler's method.

17ECU113	SEMICONDUCTOR DEVICES - PRACTICAL	Semester - I			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To give knowledge about semiconductor physics and discuss working and applications of diodes.
- Know the formation and properties of semiconductor materials Understand the operation of diode
- Understand the formation and properties of semiconductor materials which forms the basis for the formation of PN diode, zener diode etc
- Explain the operation of transistor
- Know the need for biasing of transistor
- Know the operation of FET and MOSFET

COURSE OUTCOMES

- Know the characteristics of diodes and transistors
- Measure the characteristics of electronic circuits and present experimental results
- Understand the construction and operation of transistor and its usage in applications like amplifiers etc
- Know the need for biasing of transistor for the design of amplifier
- Designing electronic circuits
- Performance analysis of electronic circuits

(Any 10 Experiments)

1. VI Characteristics of PN Junction Diode
2. VI Characteristics of Zener Diode.
3. VI Characteristics of the Common Base Configuration of BJT and to obtain r_i , r_o , α .
4. VI Characteristics of the Common Collector Configuration of BJT and obtain voltage gain, r_i , r_o .
5. VI Characteristics of UJT.
6. VI Characteristics of SCR.
7. VI Characteristics of TRIAC
8. VI Characteristics of DIAC
9. VI Characteristics of JFET.
10. Study of Characteristics of Solar Cell.
11. Band Gap Energy of Silicon Diode
12. LDR Characteristics

17AEC101	ENVIRONMENTAL STUDIES	Semester - I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Creating the awareness about environmental problems among people.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and improvement.
- Recognize the interconnectedness of multiple factors in environmental challenges
- Engage constructively with diverse forms of knowledge and experience
- Recognize and apply methodological approaches of the social sciences, natural sciences, and humanities

COURSE OUTCOMES

- Understand key concepts in the life and physical sciences and will apply them to environmental issues
- Apply knowledge of the sciences within an interdisciplinary context in solving environmental issues such as environmental health, food and agriculture, energy, waste and pollution, and loss of biodiversity.
- Possess the intellectual flexibility necessary to view environmental questions from multiple perspectives, prepared to alter their understanding as they learn new ways of understanding.
- Solve problems systematically, creatively, and reflexively, ready to assemble knowledge and formulate strategy
- Identify, interpret, and apply basic measures (metrics and formulae) of social system variables to assess socio-environmental conditions.
- Analyze and evaluate ideological and philosophical approaches used to understand environmental relationships.

UNIT I - Environment

Environment Definition - Scope and importance - Components - Ecosystem Definition - Concept - Scope - Importance - Structure and functions of ecosystem - Energy flow - Ecological succession Food chains and food webs - Classification of ecosystem.

UNIT II - Natural Resources - Renewable and Non-renewable Resources

Natural resources and associated problems - Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources : Use and over-utilization – exploitation - Role of an individual in conservation of natural resources - Equitable use of resources for sustainable lifestyles - Ill-effects of fire works.

UNIT III - Biodiversity and Its Conservation

Introduction – Definition - Genetic - Species and ecosystem diversity - Biogeographical classification of India - Value of biodiversity: consumptive use - Productive use - Social - Ethical - Aesthetic and option values - Biodiversity at global - National and local levels - India as a mega - Diversity nation - Hot-spots of biodiversity - Threats to biodiversity: habitat loss - Poaching of wildlife - man-wildlife conflicts - Endangered and endemic species of India - Conservation of biodiversity - in-situ and ex-situ conservation of biodiversity.

UNIT IV - Environmental Pollution

Definition - Causes - Effects and control measures of Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - Solid waste management - Causes - Effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - Pollution case studies - Disaster management: Floods - Earthquake - Cyclone and landslides.

UNIT V - Social Issues and the Environment

From unsustainable to sustainable development - Urban problems related to energy - Water conservation - Rain water harvesting - Watershed management - Resettlement and rehabilitation of people - Its problems and concerns - Environmental ethics: Issues and possible solutions - Climate change - Global warming - Acid rain - Ozone layer depletion - Nuclear accidents and holocaust - Case studies - Wasteland reclamation - Consumerism and waste products Environment Protection Act - Air (Prevention and Control of Pollution) Act - Water (Prevention and Control of Pollution) Act - Wildlife Protection Act - Forest Conservation Act - Issues involved in enforcement of environmental legislation - Public awareness - Population growth - variation among nations - Population explosion - Family Welfare Programme - Environment and human health - Human rights - Value education - HIV/AIDS - Women and Child Welfare - Role of Information Technology in environment and human health.

அலகு - I : பக்தி இலக்கியம்

(10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு.

1. சைவம் - பெரியபுராணம் - திருமூலநாயனார் புராணம்.
2. வைணவம் - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு - II : சங்க இலக்கியம் :

(15 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). எட்டுத்தொகை

நற்றிணை : பிரசம் கலந்த - பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை - குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு -

உலகம் ஒரு நிறையாத்தான்-6, மாயேன் கொப்பூழ்-7, செய்யாட்கு

இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்தொட கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் -பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் - 'சிறுதினை மலரொடு' என்பதிலிருந்துதொடங்கி,

'அறிந்தவாறே' என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் - 'தெய்வம் சான்ற' என்பதிலிருந்து தொடங்கி,

'நல்குமதி' என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம்

(6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – கண்ணகியின் சிறப்பு:

‘நாகநீள் நகரொடு’ என்பதிலிருந்து தொடங்கி,

‘கண்ணகி என்பாண் மன்னோ’ என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: ‘அருந்திறலரசர்’ என்பதிலிருந்து தொடங்கி, ‘மன்னவரேறென்’ என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி

காட்சியளித்தல்: ‘என்னே’ என்பதிலிருந்து தொடங்கி, ‘விசும்பில் தோன்றுமால்’ என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: ‘நீர்வார் கண்ணை’ என்பதிலிருந்து தொடங்கி, ‘புகாரென் பதியே’ என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: ‘வன்னி மரமும்’ என்பதிலிருந்து தொடங்கி, ‘பதிப்பிறந்தேன்’ என்பது வரையிலான தொடர்கள்.

அலகு - IV : சிறுகதை

(10 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி

(7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

17ENU201	ENGLISH	Semester - II			
		L	T	P	C
		4	-	-	4

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

- Develop the four types of skills
- Reading and comprehending literary works
- Genres of literature to provide moral education
- Develop communication skills in business environment
- Interpersonal skills will be developed.
- Betterment of language competence

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt

Poetry: The Blind Pedlar – Osbert Sitwell

Short Story: A Garden So Rich – Christie Craig

Vocabulary: Prefix, Antonyms, Sentence Completion

Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan

Poetry: An Old Woman – Arun Kolatkar

Vocabulary: Suffix, Analogies

Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry

Short Story: The Umbrella Man – Roald Dahl

One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan

Vocabulary: Synonyms, Euphemisms, Word Definitions

Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O' Henry

Vocabulary: Words Often Confused, Anagrams

Grammar: Preposition, Voice- Active and Passive

UNIT V

Short Story: The Bird – Amar Jalil

One-Act Play: The Cellphone Epidemic – Claudia I. Haas

Vocabulary: Portmanteau Words, One Word Substitution

Grammar: Question, Pronunciation

Suggested Reading:

Shyamala, V. (2006). *English for Communication*. : Chennai, Emerald Publishers.

17ECU201	ELECTRONIC CIRCUITS	Semester - II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Ability to design different types of Electronic Circuits such as Amplifiers and Oscillators.
- To understand and implement the advanced electronic circuits such as amplifiers etc with the help of theoretical and practical problem solving.
- Ability to analyze the different types of configurations and applications of Transistor.
- Ability to determine the stability of feedback amplifiers and their steady state performance.
- To analyze the Circuits in time and frequency domain
- Calculation and measurement of parameters for electronic circuits, to introduce the students to the advanced concepts of electronics.

COURSE OUTCOMES

- Know the characteristics of diodes and transistors
- Design simple circuits and know the benefits of feedback in amplifier
- Apply their knowledge in analyzing Circuits by using network theorems.
- Measure the characteristics of electronic circuits and present experimental results
- Compare and classify oscillators
- Analyze electrical circuits and calculate the main parameters

UNIT I - Diode Circuits

Ideal diode - Piecewise linear equivalent circuit - DC load line analysis - Quiescent (Q) point. Clipping - Clamping circuits - Rectifiers: HWR, FWR (center tapped and bridge) - Circuit diagrams – Working – Waveforms - Ripple factor – Efficiency - Comparison. Filters: Types - Circuit diagram - Shunt Capacitor filter with waveforms - Zener diode regulator circuit diagram - Load and Line regulation - Disadvantages of Zener diode regulator.

UNIT II - Bipolar Junction Transistor

Review of CE - CB Characteristics - Regions of operation - Hybrid parameters - Transistor biasing - DC load line - Operating point - Thermal runaway – Stability - Stability factor - Fixed bias without and with RE - Collector to base bias - Voltage divider bias - Emitter bias (+VCC and –VEE bias) - Circuit diagrams – Working - Transistor as a switch - Circuit and working - Darlington pair and its applications - BJT amplifier (CE) - DC and AC load line analysis - Hybrid model of CE configuration - Quantitative study of the frequency response of a CE amplifier - Effect on gain and bandwidth for Cascaded CE amplifiers (RC coupled).

UNIT III - Feedback Amplifiers

Concept of feedback - Negative and positive feedback - Advantages and disadvantages of negative feedback - Voltage (series and shunt) - Current (series and shunt) feedback amplifiers - gain, input and output impedances Barkhausen criteria for oscillations, Study of phase shift oscillator, Colpitts oscillator and Hartley oscillator.

UNIT IV - MOSFET Circuits

Review of Depletion and Enhancement MOSFET - Biasing of MOSFETs - Small Signal Parameters - Common Source amplifier circuit analysis - CMOS circuits - MOSFET Current -Voltage characteristics - MOSFET scaling and small geometry effects - MOSFET capacitances

UNIT IV - Power Amplifiers

Difference between voltage and power amplifier - Classification of power amplifiers - Class A, Class B, Class C and their comparisons - Operation of a Class A single ended power amplifier - Operation of Transformer coupled Class A power amplifier - Overall efficiency - Circuit operation of complementary symmetry Class B push pull power amplifier - Crossover distortion - Heat sinks - Single tuned amplifiers: Circuit diagram - Working and Frequency Response - Limitations of single tuned amplifier - Applications of tuned amplifiers in communication circuits.

17ECU202	C PROGRAMMING AND DATA STRUCTURES	Semester - II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To understand various features in C
- To help students to understand the implementation of C language
- To prepare object-oriented design for small/medium scale problems
- To understand the fundamental algorithms such as searching, and sorting
- To understand the fundamental data structures such as lists, trees, and graphs
- Correctly determine the relative runtimes of different algorithms

COURSE OUTCOMES

- Analyze unstructured problems and design computer solutions
- Apply or a create suitable algorithm to solve a particular problem
- An ability to apply knowledge of computing and mathematics appropriate to the discipline
- An ability to analyze a problem and identify the computing requirements appropriate for its solution
- An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs, and use current techniques
- Able to design and analyze the time and space efficiency of the data structure

UNIT I - C Programming Language

Introduction: Importance of C - Character set – Tokens – Keywords – Identifier – Constants - Basic data types Variables: declaration & assigning values - Structure of C program Operators : Arithmetic operators - Relational operators - Logical operators - Assignment operators - Increment and decrement operators - Conditional operators - Bit wise operators - Expressions and evaluation of expressions - Type cast operator - Implicit conversions - Precedence of operators.

UNIT II - Decision Making, Branching & Looping

Decision making - Branching and looping: If - If-else - Else-if - Switch statement – Break - For loop - While loop and Do-loop - Functions: Defining functions - Function arguments and passing - Returning values from functions - Arrays: concepts – Declaration - Accessing elements - Storing elements - two-dimensional and multi-dimensional arrays - Input/output statement and library functions (math and string related functions).

UNIT III - Structures

Defining and declaring a structure variables - Accessing structure members - initializing a structure - Copying and comparing structure variables - Array of structures - Arrays within structures - Structures within structures - Structures – Functions – Pointers - Introduction to C++: Object oriented programming - Characteristics of an object -oriented language.

UNIT IV - Data Structures

Definition of stack - Array implementation of stack - Conversion of infix expression to prefix - Postfix expressions - Evaluation of postfix expression - Definition of Queue -

Circular queues - Array implementation of queues - Linked List and its implementation - Link list implementation of stack and queue - Circular and doubly linked list.

UNIT V - Searching and Sorting

Insertion sort - Selection sort - Bubble sort - Merge sort - linear Search - Binary search. Trees : Introduction to trees - Binary search tree - Insertion and searching in a BST - Preorder - Postorder - Inorder traversal (recursive)

Suggested Readings:

17ECU203	COMMUNICATION ELECTRONICS	Semester - II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To learn the designing procedure and operation of circuits used for communication.
- To understand the basic concepts of AM, FM, and PM transmission and reception.
- To assess and evaluate different modulation and demodulation techniques.
- To evaluate the influence of noise on communications signals.
- To introduce students to various modulation and demodulation techniques of analog communication
- To analyze different parameters of analog communication techniques. 3. It also focuses on pulse modulation and demodulation

COURSE OUTCOMES

- Apply or a create suitable algorithm to solve a particular problem
- Understand and identify the fundamental concepts and various components of analog communication systems
- Explain signal to noise ratio, noise figure and noise temperature for single and cascaded stages in a communication system.
- Describe analog pulse modulation techniques and digital modulation technique
- Develop the ability to compare and contrast the strengths and weaknesses of various communication systems.
- Use of different modulation and demodulation techniques used in analog communication

UNIT I - Electronic communication

Block diagram of an electronic communication system - Electromagnetic spectrum - Band designations and applications - Need for modulation - Concept of channels – Baseband signals - Concept of Noise - Types of Noise - Signal to noise ratio - Noise Figure - Noise Temperature - Friss formula.

UNIT II – Amplitude Modulation

Amplitude Modulation - Modulation index - Frequency spectrum - Generation of AM, Amplitude Demodulation (diode detector) - Concept of Double side band suppressed carrier -Single side band suppressed carrier - Other forms of AM (Pilot Carrier Modulation - Vestigial Side Band modulation - Independent Side Band Modulation) - Block diagram of AM Transmitter - Receiver.

UNIT III - Angle modulation

Frequency and Phase modulation - Modulation index - Frequency spectrum - Equivalence between FM and PM - Generation of FM (direct and indirect methods) - FM detector (PLL) - Block diagram of FM Transmitter and Receiver - Comparison between AM, FM and PM.

UNIT IV - Pulse Analog Modulation

Channel capacity - Sampling theorem – PAM – PDM - PPM modulation and detection techniques – Multiplexing - TDM and FDM - Pulse Code Modulation: Need for digital transmission – Quantizing - Uniform and Non-uniform Quantization - Quantization Noise – Companding – Coding – Decoding - Regeneration.

UNIT V - Digital Carrier Modulation Techniques

Block diagram of digital transmission and reception - Information capacity - Bit Rate - Baud Rate and M-ary coding - Amplitude Shift Keying (ASK) - Frequency Shift Keying (FSK) - Phase Shift Keying (PSK) - Binary Phase Shift Keying (BPSK) - Quadrature Phase Shift Keying.

17ECU211	ELECTRONIC CIRCUITS - PRACTICAL	Semester - II			
		L	T	P	C
		-	-	3	2

COURSE OBJECTIVES

- To identify and test various electronic components
- To use DSO for various measurements
- To plot the characteristics of diode and transistor
- To design and implement feedback amplifier circuits
- To measure the frequency of oscillators.
- To design and test regulated power supplies

COURSE OUTCOMES

- Verify the rectifier circuits using diodes and implement them using hardware
- Design the biasing circuits like self biasing
- Understand the construction, operation and characteristics of FET which can be used in the design of amplifiers
- Design simple circuits
- Know the benefits of feedback in amplifier
- Compare and classify oscillators.

(Any 8 Experiments)

1. Half wave rectifier and Full wave rectifier
2. Capacitor, Inductor and Pi filters
3. Designing and testing of 5V/9V DC regulated power supply
4. Clipping and clamping circuit
5. RC coupled amplifier
6. Class A, B and C Power Amplifier
7. Colpitt's Oscillator
8. Hartley's Oscillator
9. Phase Shift Oscillator
10. Frequency response of Common Source FET amplifier

17ECU212	C PROGRAMMING AND DATA STRUCTURES - PRACTICAL	Semester - II			
		L	T	P	C
		-	-	3	2

COURSE OBJECTIVES

- To make the student learn a programming language and to understand various features in C
- To develop skills to design and analyze simple linear and non linear data structures
- To learn problem solving techniques.
- To write programs in C and to solve the problems.
- Gain knowledge in practical applications of data structures
- Analyze unstructured problems and design computer solutions

COURSE OUTCOMES

- Able to design and analyze the time and space efficiency of the data structure
- Be capable to identify the appropriate data structure for given problem
- Read, understand and trace the execution of programs written in C language
- Write the C code for a given algorithm
- Implement Programs with pointers and arrays, perform pointer arithmetic, and use the pre-processor.
- Write programs that perform operations using derived data types.

(Any 8 Experiments)

1. Generate the Fibonacci series up to the given limit N and also print the number of elements in the series.
2. Find minimum and maximum of N numbers.
3. Find the GCD of two integer numbers.
4. Calculate factorial of a given number.
5. Find all the roots of a quadratic equation $Ax^2 + Bx + C = 0$ for non – zero coefficients A, B and C. Else report error.
6. Calculate the value of $\sin(x)$ and $\cos(x)$ using the series. Also print $\sin(x)$ and $\cos(x)$ value using library function.
7. Generate and print prime numbers up to an integer N.
8. Sort given N numbers in ascending order.
9. Find the sum & difference of two matrices of order MxN and PxQ.
10. Find the product of two matrices of order MxN and PxQ.

17ECU213	COMMUNICATION ELECTRONICS - PRACTICAL	Semester - II			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Convert analog signals to digital format and describe Pulse and digital Modulation techniques
- To introduce students to various modulation and demodulation techniques of analog communication.
- To analyze different parameters of analog communication techniques
- It also focuses on pulse modulation and demodulation
- To understand the concept in communication system to use it in solving the global complex problems.
- Evaluate the performance levels (Signal-to-Noise Ratio) of AM, FM and PM systems in the presence of additive white noise.

COURSE OUTCOMES

- Able to identify and describe different analog modulation techniques.
- Able to understand basic theories of Digital communication system in practical
- Able to design and implement different modulation and demodulation techniques
- Able to analyze digital modulation techniques by using various tools.
- Able to identify and describe different techniques in modern digital communications, in particular in source coding using various tools
- Implement different types of Amplitude, Frequency, Phase and Pulse modulation and demodulation schemes

(Any 10 Experiments)

1. Amplitude Modulation and Demodulation
2. Frequency Modulation and Demodulation
3. Pulse Amplitude Modulation
4. AM Transmitter/Receiver
5. FM Transmitter/Receiver
6. Time Division Multiplexing
7. Frequency Division Multiplexing
8. Function generator using IC 8038
9. Pulse Width Modulation
10. Pulse Position Modulation
11. Pulse Code Modulation
12. BPSK Modulation and Demodulation

17ECU301	DIGITAL ELECTRONICS AND VHDL	Semester - III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To enable the students to represent numerical values in various number systems and perform number conversions between different number systems.
- To analyze and design digital combinational circuits like decoders, encoders, multiplexers, and de-multiplexers including arithmetic circuits (half adder, full adder, multiplier).
- To design sequential digital circuits like flip-flops, registers and counters.
- To acquaint the students with the fundamental principles of two-valued logic and various devices used to implement logical operations on variables.
- To lay the foundation for further studies in areas such as communication, VLSI, computer, microprocessor.
- To understand number representation and conversion between different representation in digital electronic circuits.

COURSE OUTCOMES

- Use the basic logic gates and various reduction techniques of digital logic circuit in detail.
- Design combinational and sequential circuits.
- Design and implement hardware circuit to test performance and application.
- Implement combinational and sequential circuits using VHDL
- Classify different semiconductor memories
- Analyze, design and implement sequential logic circuits

UNIT I - Number System and Codes

Decimal - Binary - Hexadecimal and Octal number systems - Base conversions – Binary - Octal – Hexadecimal - Arithmetic (addition, subtraction by complement method, multiplication) - Representation of signed and unsigned numbers - Binary Coded Decimal code - Logic Gates - Boolean algebra - Introduction to Boolean Algebra and Boolean operators - Truth Tables of OR, AND, NOT - Basic postulates - Fundamental theorems of Boolean algebra - Truth tables – Construction - Symbolic representation of XOR, XNOR - Universal (NOR and NAND) gates - Digital Logic families: Fan-in - Fan out - Noise Margin - Power Dissipation - Figure of merit - Speed power product - TTL and CMOS families and their comparison.

UNIT II - Combinational Circuits

Standard representation of logic functions (SOP and POS) - Karnaugh map minimization - Encoder and Decoder - Multiplexers and Demultiplexers - Implementing logic functions with multiplexer - Binary Adder - Binary Subtractor - Parallel adder/subtractor.

UNIT III - Sequential Circuits

Latches and Flip flop - S-R Flip flop - J-K Flip flop – T - D type Flip flop - Clocked and edge triggered Flip flops - Master slave flip flop – Registers - Counters (synchronous and asynchronous and modulo-N) - State Table - State Diagrams - Counter design using

excitation table and equations - Ring counter - Johnson counter - Analog to Digital Converter
- Digital to Analog Converter.

UNIT IV - Introduction to Verilog

A Brief History of HDL-Structure of HDL Module - Comparison of VHDL and Verilog - Introduction to Simulation and Synthesis Tools - Test Benches - Verilog Modules – Delays - data flow style - Behavioral style - Structural style - Mixed design style -Simulating design - Introduction to Language Elements – Keywords – Identifiers -White Space Characters - Comments – Format – Integers – Reals – strings - Logic Values - Data Types - Net types - undeclared nets - Scalars and vector nets - Register type – Parameters – Expressions – Operand – Operators -Types of Expressions - Data flow Modeling -Behavioral Modeling.

UNIT V - Data flow Modeling

Continuous assignment - Net declaration assignments – Delays - Net delays - Behavioral Modeling - Procedural constructs - Timing controls - Block statement - Procedural assignments - conditional statement - Loop statement - Procedural continuous assignment - Gate level modeling – Introduction - Built in Primitive Gates - Multiple input gates - Tri-state gates - Pull gates - MOS switches - Bidirectional switches - Gate delay - Array instances - Implicit nets.

17ECU302	DIGITAL AND CELLULAR COMMUNICATION	Semester - III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To enable the students to learn the digital and cellular technology
- To identify the functions of different components
- Learn about theoretical bounds on the rates of digital communication system
- To represent a digital signal using several modulation methods
- Draw signal space diagrams compute spectra of modulated signals and apply redundancy for reliable communication.
- To make students familiar with fundamentals of mobile communication systems

COURSE OUTCOMES

- Understand the basics of information theory, source coding techniques and calculate Entropy of source
- To know the various types of noises in communication systems and reduction techniques
- Describe and determine the performance of line codes and methods to mitigate inter symbol interference
- Learn the generation and detection of base band system
- Understand the generation, detection signal space diagram, spectrum, bandwidth efficiency, and probability of error analysis of different band pass modulation techniques
- Describe and determine the performance of different error control coding schemes for the reliable transmission of digital representation of signals and information over the channel.

UNIT I - Data Transmission

Introduction – Representation of data signal – Parallel and serial data transmission – 20milli amps loop and line drivers – Transient noise – Data signal – Signal shaping and signaling speed – Noise and error analysis – Repeaters.

UNIT II - Communication System

Model of communication system – Elements of digital communication system: Information source - Source encoder/decoder - Communication channel - Modulator – Demodulator - Channel encoder/decoder - Other functional blocks – Analysis of communication system – Design of communication system.

UNIT III - Digital Carrier Modulation Schemes

Binary phase shift keying – Differential phase shift keying – Differentially encoded PSK – Quadrature phase shift keying – Base band signal receiver – Phase shift keying – Frequency shift keying – Non-coherent detection of FSK.

UNIT IV - Pulse Modulation And Quantization

Pulse amplitude modulation - Pulse width modulation - Pulse position modulation - Quantization of signals – Quantization error – Pulse code modulation – Electrical representation of Binary digits – PCM system – Companding – Multiplexing PCM signals – Differential PCM – Delta modulation – Adaptive delta modulation.

UNIT V - Digital Cellular Systems

GSM Architecture – Layer modeling – transmission – Data Service – Multiple Access Scheme – Channel Coding Inter leaving – Radio resource management – Mobility management – Communication management – Network management – TDMA Architecture – Transmission and Modulation – CDMA – Terms of CDMA Systems – Call Processing – Hand over Procedures

17ECU303	INTERNET AND JAVA PROGRAMMING	Semester - III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To understand the basic concepts of Internet
- To know the java path setting and programming techniques
- To understand the fundamental of Packages and access modifiers and interface in java
- To know the basic java programming and Applet programming
- To program in the Java programming language
- Knowledge of object-oriented paradigm in the Java programming language,

COURSE OUTCOMES

- Understand the basics of information theory, source coding techniques and calculate Entropy of source se an integrated development environment to write, compile, run, and test simple object-oriented Java programs
- Read and make elementary modifications to Java programs that solve real-world problems
- Validate input in a Java program
- Identify and fix defects and common security issues in code
- Document a Java program using Javadoc
- Use a version control system to track source code in a project.

UNIT I - Internet

Introduction, Understanding the Internet, Internet Addressing, Hardware Requirements to Connect to the Internet.

UNIT II - Data types, Arrays, Operators, Flow control

Branching, Looping. Classes, New Operator, Dot Operator, Method Declaration and Calling, Constructors.

UNIT III - Inheritance

Inheritance, Super, Method Overriding Final, Finalize, Static, Package and Import Statement, Interface and Implements

UNIT IV - Exception Handling

Exception Types, Uncaught and Calling, Nested Try Statements, Java Thread Model, and Thread, Runnable, Thread Priorities, Synchronization, Deadlock

UNIT V - File

Input Stream, Output Stream, and File Stream. Applets-Tag, Order of Applet Initialization, Repainting, Sizing Graphics- Abstract Window Tool Kit Components

17ECU304A	DESIGN AND FABRICATION OF PRINTED CIRCUIT BOARDS	Semester - III			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To make familiar with PCB design and various processes involved.
- To provide in-depth core knowledge in design, performance analysis and fabrication of Printed Circuit Boards.
- To gain knowledge on PCB fabrication process and factors affecting PCB performance
- Understand the need for PCB Design and steps involved in PCB Design and Fabrication process.
- Familiarize Schematic and layout design flow using Electronic Design Automation (EDA) Tools
- Recognize the technologies used in electronic industry through the practical experience gained in the course

COURSE OUTCOMES

- Students can explore different aspect of Printed Circuit Board Design and fabrication
- Students can learn various types of PCBs. Schematic Design. entry Rules for Schematic Entry, Component Layout methods
- Placement Rules, Routing Techniques for Single Sided Board.
- Post Processing of design and Fabrication documents.
- After completing this course students can design and fabricate their own PCB for their Project and can also work in PCB Designing and Fabrication area
- Understand the steps involved in schematic, layout, fabrication and assembly process of PCB design

UNIT I - PCB Fundamentals

PCB Advantages - Components of PCB - Electronic components - Microprocessors and Microcontrollers - IC's - Surface Mount Devices (SMD) - Classification of PCB - single, double, multilayer and flexible boards - Manufacturing of PCB - PCB standards.

UNIT II - Schematic & Layout Design

Schematic diagram – General - Mechanical and Electrical design considerations - Placing and Mounting of components - Conductor spacing – Routing guidelines - Heat sinks - Package density - Net list - Creating components for library – Tracks – Pads – Vias - Power plane - Grounding.

UNIT III - Technology of PCB

Design automation - Design Rule Checking - Exporting Drill and Gerber Files – Drills - Footprints and Libraries Adding and Editing Pins - Copper clad laminates materials of copper clad laminates - Properties of laminates (electrical & physical) - Types of laminates - Soldering techniques.

UNIT IV – Etching and Soldering

Introduction - Film master preparation - Image transfer - Photo printing - Screen Printing - Plating techniques etching techniques - Mechanical Machining operations - Lead cutting and Soldering Techniques - Testing and quality controls.

UNIT V – Design Rules and Automation

Reflection – Crosstalk – Ground and Supply line noise – Electromagnetic Interference from pulse type EM fields and Automation – Automated artwork drafting - CAD - Environmental concerns in PCB industry.

17ECU304B	ELECTRONIC INSTRUMENTATION	Semester - III			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To understand operation of different instruments
- To provide basic knowledge about the various sensors. and data acquisition systems applied in Wireless sensor network
- To provide fundamental concepts of control system.2 such as mathematical modeling, time response and frequency response
- To develop concepts of stability and its assessment.3 criteria.
- Explain basic concepts and definitions in measurement
- to find transfer functions for given system

COURSE OUTCOMES

- Able to understand operation of different instruments.
- Understand the principles of various types of transducers and sensors
- Able to calculate time domain and frequency domain parameter for given system
- Able to predict stability of given system using appropriate criteria
- Identify the various parameters that are measurable in electronic instrumentation
- Practice the construction of testing and measuring set up for electronic systems.

UNIT I - Measurements

Qualities of Measurement: Specifications of instruments - Static and dynamic characteristics - Error (Gross error, systematic error, absolute error and relative error) - Uncertainty analysis - Statistical analysis of data and curve fitting - Basic Measurement Instruments: PMMC instrument – Galvanometer - DC measurement – Ammeter – Voltmeter - Ohm meter - AC measurement - Digital voltmeter systems (integrating and non-integrating types) - Digital multimeters - Digital frequency meter system (different modes and universal counter). Connectors and Probes: low capacitance probes - High voltage probes - current probes - Identifying electronic connectors – audio and video - RF/Coaxial - USB etc.

UNIT II - Measurement of Resistance and Impedance

Low Resistance: Kelvin's double bridge method - Medium Resistance by Voltmeter Ammeter method - Wheatstone bridge method - High Resistance by Megger - A.C. bridges - Measurement of Self Inductance - Maxwell's bridge - Hay's bridge - Anderson's bridge - Measurement of Capacitance - Schering's bridge - DeSauty's bridge - Measurement of frequency - Wien's bridge. A-D and D-A Conversion: 4 bit binary weighted resistor type D-A conversion - Circuit and working - Circuit of R-2R ladder – A/D conversion characteristics - Successive approximation ADC.

UNIT III – Oscilloscopes

CRT - Wave form display and electrostatic focusing - Time base and sweep synchronization - Measurement of voltage - Frequency and phase by CRO - Oscilloscope probes - Dual trace oscilloscope - Sampling Oscilloscope - DSO and Powerscope: Block diagram - Principle and Working - Advantages and applications - CRO specifications (bandwidth, sensitivity, rise time). Signal Generators: Audio oscillator - Pulse Generator - Function generators.

UNIT IV - Transducers

Classification of transducers - Basic requirement/characteristics of transducers - Active & passive transducers - Resistive (Potentiometer - Strain gauge – Theory, types - temperature compensation and applications) - Capacitive (Variable Area Type – Variable Air Gap type – Variable Permittivity type) - Inductive (LVDT) - Piezoelectric transducers - Measurement of displacement - Velocity - Acceleration - Measurement of pressure - Measurement of temperature - Light transducers.

UNIT V – Digital Instruments

Performance characteristics of instruments – Digital Multimeter – Digital frequency meter – Digital measurement of time – Digital measurement of mains frequency – Digital tacometer – Digital phase meter – Digital capacitance meter.

Suggested Readings:

17ECU311	DIGITAL ELECTRONICS AND VHDL - PRACTICAL	Semester - III			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Learn and understand the basics of digital electronics, Boolean algebra, and able to design the simple logic circuits and test/verify the functionality of the logic circuits
- Provide hands-on experience in digital circuits, which can be constructed by using standard integrated circuits (ICs)
- Investigate the operation of several digital circuits combinational and sequential
- To model complex digital systems at several level of abstractions; behavioral and structural, synthesis and rapid system prototyping.
- To develop and simulate register-level models of hierarchical digital systems
- To design and model complex digital system independently or in a team

COURSE OUTCOMES

- Identify the various digital ICs and understand their operation.
- Apply Boolean laws and K-map to simplify the digital circuits
- Understand the function of elementary digital circuits under real and simulated environment
- Describe and explain the operation of fundamental digital gates
- Analyze the operation of a flip-flop and examine relevant timing diagrams
- Design and operate practical digital logic circuits

(Any 10 Experiments)

DIGITAL ELECTRONICS PRACTICAL

1. To verify and design AND, OR, NOT and XOR gates using universal gates.
2. Half Adder and Full Adder circuits
3. Comparator
4. Encoder and Decoder circuits
5. 4 X 1 Multiplexer using gates.
6. Counters

VHDL PRACTICAL

7. Design and Implementation of logic gates.
8. Design and Implementation of Half Subtractor and Full Subtractor
9. Design and Implementation of Up/Down Counter
10. Design and Implementation of flip-flop circuits
11. Design and Implementation of Multiplexer and Demultiplexer circuits.
12. Design and simulation of a 4 bit Adder.

17ECU312	DIGITAL AND CELLULAR COMMUNICATION - PRACTICAL	Semester - III			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To understand the building blocks of digital commutation system.
- To analyze error performance of a digital communication system in presence of noise and other interferences
- To understand information theoretic behavior of a communication system.
- To understand various source coding and channel coding techniques
- To develop to understand the concept of different types of coding.
- To understand Multiple Access and Spread Spectrum Techniques.

COURSE OUTCOMES

- Perform the time and frequency domain analysis of the signals in digital communication systems
- Design a suitable source and channel coding scheme for a communication system
- Analyze Performance of Multiple Access and Spread Spectrum Techniques
- Understand various spreading techniques and determine bit error performance of various digital communication systems
- determine the performance of different error control coding schemes for the reliable transmission of digital representation of signals and information over the channel
- Learn the generation and detection of base band system

(Any 10 Experiments)

1. Line Coding Schemes
2. Dibit Encoder
3. Delta modulation
4. Adaptive delta Modulation
5. Differential Pulse Code Modulation
6. Quadrature Phase Shift Keying
7. Time Division Multiplexing
8. Base Band Transceiver(Interpolation, Pairing)
9. Adaptive Linear Equalizer
10. Code Division Multiplexing
11. Direct Sequence Spread Spectrum (DSSS) CDMA
12. GSM Transmitter/Receiver

17ECU313	INTERNET AND JAVA PROGRAMMING - PRACTICAL	Semester-I			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To get familiar with basics of the Internet Programming.
- To gain ability to develop responsive web applications
- Gain knowledge about basic Java language syntax and semantics to write Java programs and use concepts such as variables, conditional and iterative execution methods etc.
- Concepts of inheritance, packages, interfaces and multithreading are introduced.
- Knowledge of object-oriented paradigm in the Java programming language
- The use of Java in a variety of technologies and on different platforms

COURSE OUTCOMES

- To understand the basic concepts of Internet
- Describe and differentiate different Web Extensions and Web Services
- Remember the fundamentals of Java programming language
- Understand the basics of Java programming, multi-threaded programs and Exception handling
- Analyze and use Java in a variety of applications
- Able to design, code and debug JAVA language programs

(Any 10 Experiments)

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of length in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBufferclasss like setCharAt(), setLength(), append(), insert(), concat()and equals().
9. Write a program to create a distance class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer
10. Modify the distance class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is

found, then java will apply automatic type conversions(from lower to higher data type)

12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword

17ECU314A	DESIGN AND FABRICATION OF PRINTED CIRCUIT BOARDS - PRACTICAL	Semester - III			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- Understand the need for PCB Design and steps involved in PCB Design and Fabrication process
- To gain knowledge on PCB fabrication process and factors affecting PCB performance
- Familiarize Schematic and layout design flow using Electronic Design Automation (EDA) Tools
- To make familiar with PCB design and various processes involved.
- To provide in-depth core knowledge in design, performance analysis and fabrication of Printed Circuit Boards
- Recognize the technologies used in electronic industry through the practical experience gained in the course

COURSE OUTCOMES

- Appreciate the necessity and evolution of PCB, types and classes of PCB.
- Understand the steps involved in schematic, layout, fabrication and assembly process of PCB design.
- Understand basic concepts of transmission line, crosstalk and thermal issues
- Students can explore different aspect of Printed Circuit Board Design and fabrication
- Students can learn various types of PCBs, Schematic Design, entry Rules for Schematic Entry and Component Layout methods
- Design (schematic and layout) PCB for analog circuits, digital circuits and mixed circuits

(Any 8 Experiments)

1. Fabrication of Electronic Components
2. Etching process in PCB.
3. Soldering practice in PCB.
4. PCB fabrication process of DMM and Power supply.
5. PCB Design software simulation.
6. Generation of CAM Files for single side PCB (Measuring voltage Drop)
7. Generation of CAM Files for single side PCB (Full wave Rectifier)
8. PCB Assembly and Testing (Measuring voltage Drop)
9. PCB Assembly and Testing (Full wave Rectifier)
10. Study of single side PCB Fabrication process.

17ECU314B	ELECTRONIC INSTRUMENTATION - PRACTICAL	Semester - III			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- To understand scientific measurement principles and concepts behind modern electronic instrumentation
- To understand the principle of various types of transducers
- To know the construction and working of frequently used equipment's like CRO, Signal generator, spectrum analyzer etc
- To know the fundamentals of measuring systems including the particular limitations and capabilities Of a number of measuring devices (pressure transducers, strain gages, thermocouples, etc.) and Equipment's (oscilloscope, spectrum analyzer, etc.)
- To provide fundamental concepts of control system such as mathematical modeling, time response and frequency response
- To develop concepts of stability and its assessment.

COURSE OUTCOMES

- Identify various errors in measurement system and correct them.
- Understand the principles of various types of transducers and sensors
- Able to understand operation of different instruments.
- Able to calculate time domain and frequency domain parameter for given system
- Identify the various parameters that are measurable in electronic instrumentation
- Practice the construction of testing and measuring set up for electronic systems

(Any 8 Experiments)

1. Design of multi range ammeter and voltmeter using galvanometer.
2. Measurement of resistance by Wheatstone bridge and measurement of bridge sensitivity.
3. Measurement of Capacitance by de'Sautys.
4. Measure of low resistance by Kelvin's double bridge.
5. To determine the Characteristics of resistance transducer - Strain Gauge (Measurement of Strain using half and full bridge.)
6. To determine the characteristics of LVDT.
7. To determine the characteristics of Thermistors and RTD.
8. Measurement of temperature by Thermocouples
9. To study the Characteristics of LDR, Photodiode, and Phototransistor
10. Characteristics of Solid State sensor/ Fiber optic sensor

17ECU401	OPERATIONAL AMPLIFIER AND IT'S APPLICATIONS	Semester - IV			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To develop an in-depth knowledge on IC fabrication technology
- To understand the basic concepts of operational amplifier and its various applications
- To understand the basics of PLL and its practical applications
- To know about analog multipliers
- To know about various analog switches and different A/D and D/A convertors
- To understand the concepts of switched capacitor filters, Voltage regulator and various amplifiers

COURSE OUTCOMES

- Learn about the basic concepts for the circuit configuration for the design of linear integrated circuits and develops skill to solve engineering problems
- Develop skills to design simple circuits using OP-AMP
- Gain knowledge about various multiplier circuits, modulators and demodulators
- Gain knowledge about PL
- Learn about various techniques to develop A/D and D/A convertors
- Develop skills to develop simple filter circuits and various amplifiers and can solve problems related to it.

UNIT I - IC Fabrication Technology

Introduction to Integrated Circuit Fabrication – Classification – Integrated Circuit chip size and circuit complexity - Fundamentals of Monolithic Integrated Circuit technology – Basic planar process – Fabrication of a Typical circuit – Active and Passive Components Integrated Circuits - Thin and Thick film technology – Technology Trends.

UNIT II - Basic Operational Amplifier

Concept of differential amplifiers (Dual input balanced and unbalanced output) - Constant current bias - Current mirror - Cascaded differential amplifier stages with concept of level translator - Block diagram of an operational amplifier (IC 741) - Op-Amp parameters: Input offset voltage - Input offset current - Input bias current Differential input resistance - Input capacitance - Offset voltage adjustment range - Input voltage range - Common mode rejection ratio - Slew rate - Supply voltage rejection ratio.

UNIT III – Operational Amplifier Circuits

Open and closed loop configuration - Frequency response of an op-amp in open loop and closed loop configurations – Inverting - Non-inverting - Summing and difference amplifier – Integrator – Differentiator - Voltage to current converter - Current to voltage converter – Comparators.

UNIT IV – Comparator

Basic comparator - Level detector - Voltage limiters - Schmitt Trigger - Signal generators: Phase shift oscillator - Wein bridge oscillator - Square wave generator - Triangle wave generator - Saw tooth wave generator - Voltage controlled oscillator(IC 566) - Multivibrators (IC 555): Block diagram - Astable and monostable multivibrator circuit -

Applications of Monostable and Astable multivibrators.

UNIT V - Phase locked loops (PLL)

Block diagram - Phase detectors - IC565 - Fixed and variable IC regulators: IC 78xx and IC 79xx - Concepts only - IC LM317 - Output voltage equation - Signal Conditioning circuits: Sample and hold systems - Active filters: First order low pass and high pass butterworth filter - Second order filters - Band pass filter - Band reject filter - All pass filter - Log and antilog amplifiers.

17ECU402	MICROPROCESSOR AND MICROCONTROLLER	Semester - IV			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To know the fundamental concept of microprocessor 8085 and microcontroller architecture and to program in assembly language.
- To learn the interfacing of different peripherals for various typical applications
- To develop background knowledge and core expertise of microcontroller
- To know the importance of different peripheral devices and their interfacing to microcontrollers
- To know the design aspects of microcontrollers. 4. To write assembly language programs of microcontrollers for various applications.
- To provide a strong practical knowledge in the application areas.

COURSE OUTCOMES

- Apply basic concept of digital fundamentals to Microprocessor based personal computer system.
- Identify a detailed s/w & h/w structure of the Microprocessor.
- Illustrate how the different peripherals (8255, 8253 etc.) are interfaced with Microprocessor.
- Distinguish and analyze the properties of Microprocessors & Microcontrollers.
- Analyze the data transfer information through serial & parallel ports
- Train their practical knowledge through laboratory experiments.

UNIT I - Introduction to Microprocessor

Introduction – Applications - Basic block diagram – Speed - Word size - Memory capacity - Classification of microprocessors - Microprocessor 8085: Features - Architecture - Block diagram - General purpose registers - Register pairs – Flags - Stack pointer - Program counter - Types of buses - Multiplexed address and data bus - Generation of control signals - Pin description of microprocessor 8085 - Basic interfacing concepts - Memory mapped I/O and I/O mapped I/O.

UNIT II - 8085 Instruction Sets

Operation code - Operand and Mnemonics - Instruction set of 8085 - Instruction classification - Addressing modes - Instruction format - Data transfer instructions - Arithmetic instructions - Increment and decrement instructions - Logical instructions - Branch instructions - Machine control instructions - Assembly language programming examples.

UNIT III - Branch Instructions

Stack operations – Subroutine - Call and return instructions - Delay loops - Use of counters - Timing diagrams - Instruction cycle - Machine cycle - T- states - Time delay. Interrupt structure of 8085A microprocessor - Processing of vectored and non-vectored interrupts - Latency time and response time - Handling multiple interrupts - Microcontrollers: Introduction - different types of microcontrollers - Embedded microcontrollers - Processor architectures - Harvard vs. Princeton - CISC vs. RISC architectures - Microcontroller memory types - Microcontroller features – Clocking - I/O pins – Interrupts – Timers - Peripherals.

UNIT IV - PIC16F887 Microcontroller

Core features – Architecture - Pin diagram - Memory organization - Program and data memory organization - I/O Ports - Oscillator module - Timer modules - Comparator module - Analog-to-digital converter (ADC) module - Data EEPROM - Enhanced capture/compare/PWM module – EUSART - Master synchronous serial port (MSSP) module - Special features of the CPU - Interrupts - Addressing modes - Instruction set.

UNIT V - Interfacing to PIC16F887

LED – Switches - Solid State Relay - Seven Segment Display - 16x2 LCD display - 4x4 Matrix Keyboard – Traffic light controller - Digital to Analog Converter - Stepper Motor and DC Motor - Interfacing program examples using C language.

17ECU403	POWER ELECTRONICS	Semester - IV			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To know the fundamental concept of Power Electronics and its Applications
- To teach fundamental principles of thyristor family.
- To become familiar with power devices and their application in various fields
- Learners are expected to understand various controllers, converters, inverters and choppers
- To familiarize students to the principle of operation, design and synthesis of different power conversion circuits and their applications
- To provide strong foundation for further study of power electronic circuits and systems

COURSE OUTCOMES

- Apply basic concept of digital fundamentals to Microprocessor based personal computer system
- Demonstrate an understanding of fundamentals of thyristor family.
- Analyze the various applications and circuits based on thyristor.
- Build and test circuits using power devices such as SCR, IGBT and MOSFET.
- Analyze and design controlled rectifier, DC to DC converters, DC to AC
- Relate basic semiconductor physics to properties of power devices, and combine circuit mathematics and characteristics of linear and non-linear devices

UNIT I - Power Devices

Need for semiconductor power devices - Power diodes - Enhancement of reverse blocking capacity - Introduction to family of thyristors - Silicon Controlled Rectifier (SCR): Structure - I-V characteristics - Turn-On and Turn-Off characteristics – Ratings - Factors affecting the characteristics/ratings of SCR – Gate triggering circuits - Control circuits design and Protection circuits - Snubber circuit.

UNIT II – DIAC and TRIAC

Diac and Triac: Basic structure - Working and V-I characteristic of - Application of a Diac as a triggering device for a Triac - Insulated Gate Bipolar Transistors (IGBT): Basic structure - I-V Characteristics - Switching characteristics - Device limitations - Safe operating area (SOA).

Application of SCR: Static switch - Phase controlled rectification - Single phase half wave - Full wave and bridge rectifiers with inductive & non-inductive loads - AC voltage control using SCR - Triac as a switch - Power MOSFETs: operation modes - Switching characteristics - Power BJT - Second breakdown - Saturation and quasi-saturation state.

UNIT III - Power Inverters

Need for commutating circuits - Types - D.C. link invertors - Parallel capacitor commutated invertors with and without reactive feedback – Analysis - Series Invertor - Limitations – Bridge invertors.

UNIT IV - Choppers

Basic chopper circuit - Types of choppers – Step down chopper – Step up chopper - Operation of d.c. chopper circuits using self commutation - Cathode pulse turn-off chopper - Load sensitive cathode pulse turn-off chopper - Morgan's chopper.

UNIT V - Electromechanical Machines

DC Motors - Basic understanding of field and armature - Principle of operation - EMF equation - Back EMF - Factors controlling motor speed - Thyristor based speed control of dc motors - AC motor - Rotor and stator - Torque & speed of induction motor - Thyristor control of ac motors

17ECU404A	ELECTRICAL CIRCUITS AND NETWORK SKILLS	Semester -IV			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To get technically expertise in electrical machines and drive systems, and being able to apply the knowledge to practical industry systems and appliances.
- To understand the new technological development in the field of electrical drive, and being skillful in numerical calculation, technical writing, and presentation of electrical machine technology.
- To explain the basic concepts and laws of DC and AC electrical networks and solve them using mesh and nodal analysis techniques
- To analyze circuits in time and frequency domain
- To introduce open circuit, short circuit, transmission, hybrid parameters and their interrelationship
- To synthesize the network using passive elements.

COURSE OUTCOMES

- Apply concepts of electric network topology, nodes, branches, loops to solve circuit problems including the use of computer simulation
- Understand the basic concepts of graph and analyze the basic electrical circuits using graph theory
- Apply time and frequency concepts of analysis
- Understand various functions of network and also the stability of network
- Learn the various parameters and their interrelationship, able to solve numericals with series, cascade and parallel connections.
- Synthesize the network using passive elements.

UNIT I - Basic Electricity Principles

Voltage – Current – Resistance – Power - Ohm's law – Series-parallel and parallel-series combinations - AC and DC Electricity - Familiarization with multimeter - Voltmeter and Ammeter - Electrical Circuits: Basic electric circuit elements and their combination - Rules to analyze DC sourced electrical circuits - Current and voltage drop across the DC circuit elements - Single-phase - Three-phase alternating current sources - Rules to analyze AC sourced electrical circuits - Real-imaginary and complex power components of AC source - Power factor - Saving energy and money.

UNIT II - Electrical Drawing and Symbols

Drawing symbols – Blueprints - Reading: Schematics - Ladder diagrams - Electrical Schematics - Power circuits - Control circuits - Reading: of circuit schematics - Tracking the connections of elements and identify current flow and voltage drop.

UNIT III - Generators and Transformers

DC Power sources - AC/DC generators – Inductance – Capacitance – Impedance - Operation of transformers - Electric Motors: Single-phase - Three-phase - DC motors - Basic design - Interfacing DC or AC sources to control heaters and motors - Speed and power of ac motor.

UNIT IV - Solid-State Devices

Resistors - Inductors – Capacitors - Diode and rectifiers - Components in Series or in shunt - Response of inductors and capacitors with DC or AC sources - Electrical Protection: Relays - Fuses and disconnect switches - Circuit breakers - Overload devices - Ground-fault protection - Grounding and isolating - Phase reversal - Surge protection - Relay protection device.

UNIT V - Electrical Wiring

Different types of conductors and cables - Basics of wiring - Star and delta connection - Voltage drop and losses across cables and conductors - Instruments to measure current – Voltage - Power in DC and AC circuits – Insulation - Solid and stranded cable – Conduit - Cable trays - Splices: Wire-nuts – Crimps - Terminal blocks – Solder - Preparation of extension board.

17ECU404B	DIGITAL SYSTEM DESIGN	Semester - IV			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To provide strong knowledge on Programmable Logic Devices and its usage in industrial automation.
- To understand number representation and conversion between different representation in digital electronic circuits.
- To analyze logic processes and implement logical operations using combinational logic circuits.
- To understand concepts of sequential circuits and to analyze sequential systems in terms of state machines
- To understand concept of Programmable Devices, PLA, PAL, CPLD and FPGA and implement digital system using VHDL
- To implement combinational and sequential circuits using VHDL

COURSE OUTCOMES

- Develop a digital logic and apply it to solve circuit problems
- Analyze, design and implement combinational logic circuits
- Classify different semiconductor memories
- Analyze, design and implement sequential logic circuits
- Analyze digital system design using PLD
- Simulate and implement combinational and sequential circuits using VHDL systems

UNIT I - Sequential Logic Circuits

Introduction to Sequential Logic Circuits - Mealy Machine- Moore Machine - State Diagrams - State Table Minimization - Incompletely Specified Sequential Machines - State Assignments - Design of Synchronous and Asynchronous Sequential Logic Circuits - Working in Fundamental and Pulse Mode.

UNIT II - Synchronous Sequential Circuit Design

Introduction of Clocked Synchronous Sequential Networks (CSSN) - Modeling of CSSN - State Table Assignment and Reduction – Design of CSSN - ASM Chart - ASM Realization.

UNIT III - Asynchronous Sequential Circuit Design

Introduction of Asynchronous Sequential Circuits (ASC) - Flow Table Reduction - Races in ASC - State Assignment - Problem and the Transition Table - Design of ASC - Static and Dynamic Hazards - Mixed Operating Mode Asynchronous Circuits.

UNIT IV - Programmable Logic Devices

Basic Concepts - Programming Technologies - Programmable Logic Element(PLE), Programmable Logic Array(PLA) - Programmable Array Logic(PAL) - Complex PLD's(CPLD) -System Design using PLD's - Design of Combinational and Sequential Circuits using PLD's.

UNIT V - Study of FPGA and XILINX

Introduction to Field Programmable Gate Arrays - Types of FPGA – Xilinx XC3000 Series - Logic Cell Array (LCA) - Configurable Logic Blocks (CLB) - Input/Output Block (IOB) -Programmable Interconnect Point (PIP).

17ECU411	OPERATIONAL AMPLIFIER - PRACTICAL	Semester - IV			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To Gain the practical hands-on experience on 741 Op-Amp applications
- To understand the basic concepts of operational amplifier and its various applications
- To Gain the practical hands-on experience on 555 Timer applications.
- To Gain the practical hands-on experience on Voltage Regulator and Three terminal voltage regulators
- To know about various analog switches and different A/D and D/A convertors
- To understand the concepts of switched capacitor filters, Voltage regulator and various amplifiers

COURSE OUTCOMES

- Learn about the basic concepts for the circuit configuration for the design of linear integrated circuits and develops skill to solve engineering problems
- Develop skills to design simple circuits using OP-AMP
- Able to utilize items such as decibels, Bode plots, and negative feedback for circuit analysis.
- Gain knowledge about various multiplier circuits, modulators and demodulators
- Gain knowledge about PL
- Develop skills to develop simple filter circuits and various amplifiers and can solve problems related to it.

(Any 10 Experiments)

1. Study of op-amp characteristics: CMRR and Slew rate.
2. Inverting and non-inverting configuration using an opamp.
3. Adder and subtractor circuit.
4. Integrator using op-amp for a given specification and study its frequency response.
5. Differentiator using op-amp for a given specification and study its frequency response.
6. First Order low-pass and high-pass filters using op-amp.
7. Schmitt Trigger using Op-amp
8. RC Phase Shift Oscillator using op-amp.
9. IC 555 as an astable multivibrator.
10. IC 555 as monostable multivibrator.
11. Regulated power supply using IC 78 series and 79 series.
12. VCO using IC565.

17ECU412	MICROPROCESSOR AND MICROCONTROLLER - PRACTICAL	Semester - IV			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To expose students to the operation of typical microprocessor and microcontroller.
- To prepare the students to be able to solve different problems by developing different programs
- To develop the quality of assessing and analyzing the obtained data
- To illustrate the architecture of 8085 a microprocessors.
- To understand the interfacing circuits for various applications of 8051 microcontroller
- To introduce the architecture of advanced microprocessors and microcontrollers.]

COURSE OUTCOMES

- Identify relevant information to supplement to the Microprocessor and Microcontroller course
- Set up programming strategies and select proper mnemonics and run their program on the training boards
- Practice different types of programming keeping in mind technical issues Develop testing and experimental procedures on Microprocessor and Microcontroller analyze their operation under different cases
- Prepare professional quality textual and computational results, incorporating accepted data analysis and synthesis methods, simulation software, and word-processing tools
- Illustrate the organization of registers and memory in microprocessors.

(Any 10 Experiments)

8085 Assembly language programs:

1. Program to transfer a block of data.
2. Program for multibyte addition and subtraction
3. Program to multiply and divide two 8-bit numbers.
4. Ascending and Descending numbers in an array.
5. Speed control of a DC motor.
6. Traffic light controller.

PIC Microcontroller Programming

Note: Programs to be written using C programming language

1. LED blinking with a delay of 1 second.
2. Interfacing of LCD (2X16).
3. Interfacing of stepper motor and Rotating stepper motor by N steps clockwise/anticlockwise with speed control.
4. Generate sine, square, saw tooth, triangular and staircase waveform using DAC interface.
5. Analog to digital conversion using internal ADC and display the result on LCD.
6. Digital clock.

17ECU413	POWER ELECTRONICS - PRACTICAL	Semester - IV			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To provide the students a deep insight in to the working of different switching devices with respect to their characteristics
- To analyze different converters and control with their applications
- To develop an overall approach for students from construction of control rectifier , inverter, choppers, study its specification, the functionality, design and practical applications
- To become familiar with power devices and their application in various fields
- To understand various controllers , converters , inverters and choppers
- To Know the advanced converters and switching techniques implemented in recent technology

COURSE OUTCOMES

- Express the design and control of rectifiers, inverters
- Design of power electronic converters in power control applications.
- Ability to express characteristics of SCR, BJT, MOSFET and IGBT
- Ability to express communication methods
- Ability design AC voltage controller and Cyclo Converter
- Ability to design Chopper circuits

(Any 10 Experiments)

1. SCR as a half wave and full wave rectifiers with R and RL loads
2. DC motor control using SCR.
3. Buck - Boost Regulator
4. AC voltage controller using TRIAC with UJT triggering.
5. Snubber circuit
6. Single phase inverter.
7. Fan control using TRIAC and DIAC.
8. Cyclo Converters
9. Automatic Battery Charger
10. Triac Flasher.
11. Thyristor Chopper
12. Burglar Alarm

17ECU414A	ELECTRICAL CIRCUITS AND NETWORK SKILLS - PRACTICAL	Semester - IV			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- To provide the students a deep insight in to the working of different switching devices with respect to their characteristics
- To get technically expertise in electrical machines and drive systems, and being able to apply the knowledge to practical industry systems and appliances.
- To understand the new technological development in the field of electrical drive, and being skillful in numerical calculation, technical writing, and presentation of electrical machine technology.
- To explain the basic concepts and laws of DC and AC electrical networks and solve them using mesh and nodal analysis techniques
- To analyze circuits in time and frequency domain
- To synthesize the network using passive elements

COURSE OUTCOMES

- Apply concepts of electric network topology, nodes, branches, loops to solve circuit problems including the use of computer simulation
- Understand the basic concepts of graph and analyze the basic electrical circuits using graph theory
- Apply time and frequency concepts of analysis
- Understand various functions of network and also the stability of network
- Able to solve numericals with series, cascade and parallel connections.
- Synthesize the network using passive elements.

(Any 8 Experiments)

1. Verification of KVL using Digital simulation
2. Verification of KCL using Digital simulation
3. Thevenin's Theorem using Digital simulation
4. Verification of Superposition theorem using Digital simulation
5. Verification of Reciprocity Theorem using Digital simulation
6. Maximum Power Transfer theorem using Digital simulation
7. Circuit Transients by Digital simulation
8. RLC Series Resonance by Digital simulation
9. Transient analysis of Series RL circuits
10. Transient analysis of Series RC circuits

17ECU414B	DIGITAL SYSTEM DESIGN - PRACTICAL	Semester - IV			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- To acquaint the students with the fundamental principles of two-valued logic and various devices used to implement logical operations on variables
- To lay the foundation for further studies in areas such as communication, VLSI, computer, microprocessor
- To analyze logic processes and implement logical operations using combinational logic circuits
- To understand concepts of sequential circuits and to analyze sequential systems in terms of state machines
- To understand concept of Programmable Devices, PLA, PAL, CPLD and FPGA and implement digital system using VHDL
- To implement combinational and sequential circuits using VHDL

COURSE OUTCOMES

- Analyze the operation of a flip-flop and examine relevant timing diagrams
- Design operate practical digital logic circuits
- Develop a digital logic and apply it to solve circuit problems
- Analyze, design and implement combinational logic circuits
- Classify different semiconductor memories
- Analyze, design and implement sequential logic circuits

(Any 8 Experiments)

Note: EDA Tools/VHDL/Verilog/Mentor Graphics/Cadence

1. To convert a Boolean expression into logic gate circuit and assemble it using logic gate IC's.
2. Design of parity generator and checker circuit.
3. Barrel shifter
4. Design a seven segment display driver.
5. Image capturing
6. Counters and Shift registers
7. IIR filters
8. FIR filters
9. Design and simulation of a 4 bit Adder.
10. Frequency synthesizer

17ECU501A	PROGRAMMABLE LOGIC CONTROLLER	Semester-VI			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To identify logical process control in automation
- To connect PLC peripherals with PLC for logical functioning.
- To get strong knowledge in the developing of basic PLC programs
- To understand the components of a PLC system To understand how PLCs are used
- To understand the H&S requirements of a PLC- controlled system
- To understand different methods of interfacing with a PLC

COURSE OUTCOMES

- Identify the main parts of programmable logic controller
- Develop logic gate circuits for Boolean expressions
- Able to state basic PLC Terminology
- Identify logical process control, in automation.
- Describe how a programmable logic controller is programmed.
- Describe switching elements on input/output modules

UNIT I - Introduction

Introduction - Programmable Logic structures - Programmable Logic Arrays (PLAs) - Programmable Array Logic (PALs) - Programmable Gate Arrays (PGAs) - Field Programmable Gate Arrays (FPGAs) - Sequential network design with Programmable Logic Devices (PLDs) - Design of sequential networks using ROMs and PLAs - Traffic light controller using PAL.

UNIT II - PLC Structure

Programmable Logic Controllers (PLCs) - Introduction - Parts of PLC - Principles of operation - PLC sizes - PLC hardware components - I/O section - Analog I/O section - Analog I/O modules - Digital I/O modules - CPU Processor - Memory module - Programming devices - Diagnostics of PLCs with Computers.

UNIT III - PLC programming

Simple instructions - Programming EXAMINE ON and EXAMINE OFF instructions - Electromagnetic control relays - Motor starters - Manually operated switches - Mechanically operated and Proximity switches - Output control devices - Latching relays - PLC ladder diagram - Converting simple relay ladder diagram into PLC relay ladder diagram.

UNIT IV - Timer instructions

Introduction to timer - ON DELAY timer - OFF DELAY timer - Counter instructions - Up/Down counters - Timer and Counter applications - Program control instructions - Data manipulating instructions - Math instructions.

UNIT V - Applications of PLC

Simple materials handling applications - Automatic control of warehouse door - Automatic lubricating oil supplier - Conveyor belt motor control - Automatic car washing machine - Bottle PRACTICAL detection - Process control application.

17ECU501B	NANO ELECTRONICS	Semester - V			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To discuss about the latest technology on nano systems based Nanoelectronics.
- To know the various methods to fabricate and measure Nanoscale features.
- To identify the critical parameters that one must evaluate when considering any new Nanoelectronics device.
- Know the types of nanotechnology, atomic structure, molecular technology and• preparation of nano materials
- Understand the fundamentals of nano electronics and its properties.
- Know the Silicon MOSFET's, QTD and carbon nano tubes

COURSE OUTCOMES

- Understand the fundamentals of Nano Electronics and its properties.
- Gain the concepts of quantum theory.
- Understand the latest technology on nano systems based Nano electronics
- Identify the various methods to fabricate and measure Nanoscale features.
- Evaluate the critical parameters when considering any new Nano electronics device.
- Understand the applications of Nano Electronics.

UNIT I - Introduction

Definition of Nano-Science and Nano Technology - Applications of Nano - Technology. Introduction to Physics of Solid State: Size dependence of properties - Bonding in atoms and giant molecular solids - Electronic conduction - Systems confined to one, two or three dimension and their effect on property.

UNIT II - Quantum Theory for Nano Science

Time dependent and time independent Schrodinger wave equations - Particle in a box - Potential step: Reflection and tunneling (Quantum leak) - Penetration of Barrier - Electron trapped in 2D plane (Nano sheet) - Quantum confinement effect in nano materials - Quantum Wells, Wires and Dots: Preparation of Quantum Nanostructure - Size and Dimensionality effect - Fermi gas - Potential wells - Partial confinement –Excitons - Single electron Tunneling - Infrared detectors - Quantum dot laser Superconductivity.

UNIT III - Growth Techniques of Nanomaterials

Synthetic aspects: bottom up and top down approaches - Lithographic and Nonlithographic techniques - Sputtering and film deposition in glow discharge - DC sputtering technique (p-CuAlO₂ deposition) - Thermal evaporation technique - E-beam evaporation - Chemical Vapour deposition(CVD) - Synthesis of carbon nano-fibres - Multi-walled carbon nanotubes - Pulsed Laser Deposition - Molecular beam Epitaxy - Sol-Gel Technique (No chemistry required) - Synthesis of nanowires/rods - Electro deposition - Chemical bath deposition - Ion beam deposition system – Vapor Liquid –Solid (VLS) method of nanowire.

UNIT IV - Methods of Measuring Properties and Characterization techniques

Microscopy: Scanning Probe Microscopy (SPM) - Atomic Force Microscopy (AFM)

- Field Ion Microscopy - Scanning Electron Microscopy (SEM) - Transmission Electron Microscopy (TEM) including energy dispersive X-ray (EDX) analysis - Low energy electron diffraction (LEED) - Reflection high energy electron diffraction (RHEED) - Spectroscopy: Infra-red and Raman Spectroscopy - X-ray Spectroscopy - Magnetic resonance - Optical and Vibrational Spectroscopy Characterization.

UNIT V - Applications

Carbon nanotubes - Nano cuboids - Graphene - Carbon quantum dots: Fabrication - Structure - Electrical - Mechanical - Vibrational properties – Applications - Use of nano particles for biological application - Drug delivery and bio-imaging - Impact of nanotechnology on the environment.

17ECU502A	ADVANCED COMMUNICATION SYSTEMS	Semester - V			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Provides knowledge in understanding the characteristics of different multiple access techniques in mobile/wireless communication.
- To understand the need of coding, Channel models, Diversity, Equalization and Channel estimation techniques. Able to apply analytical and empirical models in the design of wireless links.
- To understand the Wireless communication systems and standards.
- Students can design an optimum Single and multi-carrier communication system under given power, spectral and error performance constraints
- Analyze the error performance of digital modulation techniques
- Explore M ary signaling

COURSE OUTCOMES

- Understand the need of coding, Channel models, Diversity, Equalization and Channel estimation techniques.
- Understand the Wireless communication systems and its standards
- Apply analytical and empirical models in the design of wireless links.
- Evaluate the characteristics of speech signals and their frequency limitations.
- Describe and evaluate the design and performance of digital and analog circuits.
- Ability to analyze and evaluate digital communication systems.

UNIT I -Wave Propagation

EM Waves – Free Space Propagation – Surface Wave Propagation – Sky Wave Propagation – Space Wave Propagation – Trophospheric Scatter Propagation – Structure of Atmosphere – Characteristics of Ionized Regions – Virtual Height – Maximum Usable Frequency - Lowest Usable Frequency – Skip Distance – Optimum Working Frequency – Ionospheric Abnormalities – Duct Propagation.

UNIT II -Antenna Theory

Electro Magnetic radiations – Elementary doublet – Current and Voltage Distribution – Resonant antennas, Radiation patterns and Length calculations – Non resonant antennas – Antenna gain and Effective radiated power – Antenna resistance – Bandwidth, Beam width and Polarization – Grounded and Ungrounded antennas – Impedance matching – Dipole Arrays - Yagi Uda antenna – Parabolic antenna – Horn and Lens antenna .

UNIT III - Satellite Communication

System Description – Telemetry, Tracking and Command – Communication Space Craft – Satellite Orbit – GEO – LEO – MEO – Satellite Position – Linkage – Frequencies – Inside the Satellite: Transponder – Antenna Systems – Power Packages – Station Keeping – Ground Station – Aligning the Satellite Dish.

UNIT IV - Optical Fiber Communication

Basic Fiber Optic System – Frequencies – Fiber Optic Cables – Refraction – Numerical Aperture – Graded Index Cables – Single Mode – Multimode – Cable Constructions – Cable Losses – Connector – Light Sources – Light Detector - System

Components – Advantages And Disadvantages.

UNIT V – Microwave Communication

Introduction – Maxwell's equation – Amperes law – Faradays law – Gauss law – Wave equation – Types of wave guides –Microwave tubes: - Two cavity Klystron – Multi cavity Klystron – Reflex Klystron – Traveling wave tube (TWT) – Radar – Classification- Applications.

17ECU502B	CONTROL SYSTEMS	Semester - V			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To know the fundamental concept of signals and production for controlling equipment or machines.
- To learn the various closed loop control systems current output is taken into consideration and corrections are made based on feedback
- To introduce different types of system and identify a set of algebraic equations to represent and model a complicated system into a more simplified form to interpret different physical and mechanical systems in terms of electrical system to construct equivalent electrical models for analysis
- To employ time domain analysis to predict and diagnose transient performance parameters of the system for standard input functions
- Identify the needs of different types of controllers and compensator to ascertain the required dynamic response from the system
- Formulate different types of analysis in frequency domain to explain the nature of stability of the system

COURSE OUTCOMES

- Understand the concept of time response and frequency response of the system.
- Analyze feedback characteristics of linear control systems to reduced the disturbance.
- Analyze time response of first and second order control systems for different standard test signals.
- Perform frequency domain analysis of linear control system using nyquist stability criterion.
- Identify the needs of different types of controllers and compensator to ascertain the required dynamic response from the system.
- Employ time domain analysis to predict and diagnose transient performance parameters of the system for standard input functions.

UNIT I - Introduction to Control Systems

Open loop and Closed loop control systems - Mathematical modeling of physical systems (Electrical - Mechanical and Thermal) - Derivation of transfer function - Armature controlled and field controlled DC servomotors - AC servomotors - Block diagram representation and signal flow graph - Reduction Technique - Mason's Gain Formula - Effect of feedback on control systems.

UNIT II - Time Domain Analysis

Time domain performance criteria - Transient response of first, second and higher order systems - Steady state errors and static error constants - Performance indices. Concept of Stability: Asymptotic stability and conditional stability - Routh-Hurwitz criterion - Relative stability analysis - Root Locus plots and their applications.

UNIT III - Frequency Domain Analysis

Correlation between time and frequency response - Polar and inverse polar plots - Frequency domain specifications - Logarithmic plots (Bode Plots) - Gain and phase margins - Nyquist stability criterion - Relative stability using Nyquist criterion - Constant M and N

circles.

UNIT IV - State Space Analysis

Definitions of state - State variables - State space - Representation of systems - Solution of time invariant - Homogeneous state equation - State transition matrix and its properties - Controllers and Compensation Techniques: Response with P, PI and PID Controllers - Concept of compensation - Lag - Lead and Lag-Lead networks.

UNIT V - Design of Digital Control System

Z Plane Specifications of Control System Design – Digital Compensator Design – Frequency Response Method - State Feedback – Pole Placement Design – State Observers – Digital Filter Properties – Frequency Response – Kalman's Filter.

17ECU503A	BIOMEDICAL INSTRUMENTATION	Semester - V			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To know the fundamental concept of origin of Bio-electric signals and recording it with highly precision equipment.
- To learn the various medical equipment used for diagnosis and therapeutic purpose.
- To provide a large number of quality trained Medical Electronics professionals for preventive and maintenance work needed to maintain hi-tech medical equipments in hospitals to ensure good health care.
- To explore the human body parameter measurements setups
- To give basic ideas about how multimedia evidences are useful in crime investigation.
- Understanding basic principles and phenomena in the area of medical diagnostic instrumentation, theoretical and practical preparation enabling students to maintain medical instrumentation.

COURSE OUTCOMES

- Understand the fundamental concept of origin of Bio-electric signals and recording it with highly precision equipment.
- Differentiate and analyze the biomedical signal sources.
- Identify common biomedical signals and distinguish characteristic features.
- Ability to study various transducers
- Identify common signal artifacts, their sources and formulate strategies for their suppression.
- Familiarize with patient safety issues related to biomedical instrumentation.

UNIT I - Biomedical signals & Physiological transducers

Source of biomedical signal - Origin of bioelectric signals - Recording electrodes - Electrodes for ECG - EMG & EEG - Physiological transducers Pressure - Temperature - Photoelectric & ultrasound Transducers - breathing mechanics Spiro meter - Respiratory therapy equipments Inhalators ventilators & Respirators - Humidifiers - Nebulizers Aspirators - Biomedical recorders ECG - EEG & EMG. MEMS based biosensors

UNIT II - Patient Monitoring systems and Audiometers

Cardiac monitor - Bedside patient monitor - Measurement of heart rate - Blood pressure - Temperature - Respiration rate - Arrhythmia monitor - Methods of monitoring fatal heart rate - Monitoring PRACTICAL activity - Audiometers Audiometers - Blood cell counters - Oximeter - Blood flow meter - Cardiac output measurement - Blood gas analyzers.

UNIT III - Modern Imaging systems

Introduction - Basic principle & Block diagram of x-ray machine - x-ray Computed Tomography (CT) - Magnetic resonance imaging system (NMR) - Ultrasonic imaging system - Eco-Cardiograph - Eco Encephalography - Ophthalmic scans - MRI - Therapeutic Equipments Cardiac pacemakers - Cardiac defibrillators - Hemodialysis machine - Surgical diathermy machine.

UNIT IV - Patients safety & Computer Applications in Biomedical field

Precaution - Safety codes for electro medical equipment - Electric safety analyzer -

Testing of biomedical equipment - Use of microprocessors in medical instruments.

UNIT V - PC based medical instruments

Computerized Critical care units - Planning & designing a computerized critical care unit - Physiotherapy Software Diathermy - Microwave diathermy - Ultrasound therapy unit. Electrotherapy Equipments - Ventilators.

17ECU503B	SIGNALS AND SYSTEMS	Semester-V			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To understand the process of convolution between signals and able to solve differential equation using Laplace transform techniques.
- To understand the intuitive meaning of frequency domain and the importance of analyzing and processing signals in the frequency domain.
- Able to compute the Fourier series or Fourier transform Z-transform
- To introduce students the concept and theory of signals and systems needed in electronics and telecommunication engineering fields
- Knowledge about basic signal and system modeling concept and definitions
- Knowledge about the application and use of mathematical transforms and state-variables in order to solve electrical engineering problems

COURSE OUTCOMES

- Understand about various types of signals and systems, classify them, analyze them and perform various operations.
- Understand the use of transform to analysis of signals and systems in continuous and discrete time domain
- Implement the concept and theory of signals and systems in electronics and communication field.
- Ability to have idea of signal and system analysis and its characterization in time and frequency domain.
- Students can perform mathematical and graphical convolution of signals and systems.
- Compute the Fourier series or Fourier transform Z-transform

UNIT I - Signals and Systems

Continuous and discrete time signals - Transformation of the independent variable - Exponential and sinusoidal signals - Impulse and UNIT step functions - Continuous-Time and Discrete -Time Systems - Basic System Properties.

UNIT II - Linear Time -Invariant Systems (LTI)

Discrete time LTI systems - Convolution Sum - Continuous time LTI systems - Convolution integral - Properties of LTI systems - Commutative - Distributive - Associative - LTI systems with and without memory - Invariability - Causality - Stability - UNIT Step response - Differential and Difference equation formulation - Block diagram representation of first order systems.

UNIT III - Fourier Series Representation of Periodic Signals

Continuous - Time periodic signals - Convergence of the Fourier series - Properties of continuous - Time Fourier series - Discrete-Time periodic signals - Properties of Discrete - Time Fourier series - Frequency-Selective filters - Simple RC highpass and lowpass filters.

UNIT IV - Fourier Transform

Periodic signals - Properties of Continuous time Fourier transform - Convolution and Multiplication Properties - Properties of Fourier transform - Basic Fourier transform Pairs.

UNIT V - Laplace Transform

Laplace Transform - Inverse Laplace Transform - Properties of the Laplace Transform - Laplace Transform Pairs - Laplace Transform for signals - Laplace Transform Methods and Circuit Analysis - Impulse and Step response of RL - RC and RLC circuits

17ECU504A	ROBOTICS	Semester - V			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To learn the basic configuration of Robotics
- To understand the various types of Robots.
- To get an exposure in Robot control systems
- To acquire the knowledge on advanced algebraic tools for the description of motion
- To develop the ability to analyze and design the motion for articulated systems.
- To develop an ability to use software tools for analysis and design of robotic systems

COURSE OUTCOMES

- Understand the relationship between mechanical structures of industrial robots and their operational workspace characteristics.
- Illustrate the kinematics and dynamics of robotics.
- Implementation of related instrumentation and control in robotics
- Ability to solve inverse kinematics of simple robot manipulators
- Able to do the path planning for a robotic system
- Identify a Robot for a specific application.

UNIT I - Programming Environments

Integrated Development Environment (IDE) for AVR microcontrollers - Free IDEs like AVR Studio - WIN AVR - Installing and configuring for Robot programming - In System Programmer (ISP) - Loading programmes on Robot.

UNIT II - Actuators

DC Motors - Gearing and Efficiency - Servo Motors - Stepper motors - Motor Control - Implementations and techniques.

UNIT III - Sensors

White line sensors - IR range sensor of different range - Analog IR proximity sensors - Analog directional light intensity sensors - Position encoders - Servo mounted sensor pod/Camera Pod - Wireless colour camera - Ultrasound scanner - Gyroscope and Accelerometer – Magnetometer - GPS receiver - Battery voltage sensing - Current Sensing

UNIT IV – Interfacing Concepts

LCD interfacing with robot (2 x 16 Characters LCD) - Other indicators: Indicator LEDs - Buzzer - Timer / Counter operations - PWM generation - Motor velocity control - Servo control - Velocity calculation - Motor position Control - Event scheduling.

UNIT V - Communication

Wired RS232 (serial) Communication - Wireless ZigBee Communication - USB Communication - Simplex infrared Communication (IR remote to robot).

17ECU504B	MOBILE APPLICATIONS DEVELOPMENT	Semester - V			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To understand system requirements for mobile applications.
- To generate suitable design using specific mobile development framework.
- To apply analytical and empirical models in the design of wireless links
- Utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces,
- Program mobile applications for the Android operating system that use basic and advanced phone features, and
- Deploy applications to the Android marketplace for distribution

COURSE OUTCOMES

- Understand system requirements for mobile applications.
- Generate suitable design using specific mobile development framework.
- Apply analytical and empirical models in the design of wireless links.
- Develop user interfaces for the android platform.
- Identify the interaction between user interface and underlying application infrastructure.
- Configure android application development tools

UNIT I - Introduction

Mobile Application Programming - Different Platforms - Architecture and working of Android - iOS and Windows phone 8 operating system - Comparison of Android - iOS - Windows phone 8.

Android Development Environment: Android - Advantages and Future of Android - Tools and about Android SDK - Installing Java – Eclipse – Android - Android Software Development Kit for Eclipse - Android Development Tool: Android Tools for Eclipse - AVDs: Smartphone Emulators - Image Editing

UNIT II - Android Software Development Platform

Understanding Java SE and the Dalvik Virtual Machine - Directory Structure of an Android Project - Common Default Resources Folders - The Values Folder - Leveraging Android XML - Screen Sizes - Launching Your Application: The Android Manifest.xml File - Creating Your First Android Application.

UNIT III - Android Framework Overview

The Foundation of OOP - The APK File - Android Application Components - Android Activities: Defining the User Interface - Android Services: Processing in the Background - Broadcast Receivers: Announcements and Notifications - Content Providers: Data Management - Android Intent Objects: Messaging for Components - Android Manifest XML: Declaring Your Components.

UNIT IV - Views and Layouts in Android

Buttons – Menus – Dialogs - Graphics Resources: Introducing the Drawables - Implementing Images - Core Drawable Subclasses - Using Bitmap – PNG - JPEG - GIF Images in Android - Creating Animation in Android Handling User Interface(UI) Events: An Overview of UI Events in Android - Listening for and Handling Events - Handling UI Events via the View Class - Event Callback Methods - Handling Click Events - Touchscreen Events - Keyboard Events - Context Menus - Controlling the Focus.

UNIT V - Content Providers

An Overview of Android Content Providers - Defining a Content Provider - Working with a Database - Intents and Intent Filters: Intent - Implicit Intents - Explicit Intents - Intents with Activities - Intents with Broadcast Receivers - Advanced Android: New Features in Android 4.4 - iOS Development Environment: Overview of iOS - iOS Layers - Introduction to iOS application development - Windows phone Environment: Overview of windows phone and its platform - Building windows phone application.

17ECU511A	PROGRAMMABLE LOGIC CONTROLLER - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To acquaint the students with the fundamental principles of two-valued logic and various devices used
- To connect PLC peripherals with PLC for logical functioning
- To get strong knowledge in the developing of basic PLC programs
- To understand the components of a PLC system To understand how PLCs are used
- To understand the H&S requirements of a PLC- controlled system
- To understand different methods of interfacing with a PLC

COURSE OUTCOMES

- Able to describe typical components of a Programmable Logic Controller
- apply the concept of electrical ladder logic, its history, and its relationship to programmed PLC instruction
- Able to use timer, counter, and other intermediate programming functions
- Able to design and program a small, automated industrial production line.
- Develop ladder logics for a particular design
- Simplify designs with Boolean algebra

(Any 10 Experiments)

1. Different applications of Push buttons.
2. Working of different types of Timers.
3. Working of different types of Counters.
4. Sequential operation of ON/OFF of a set of lights.
5. Latching and Unlatching of a Motor.
6. Automatic indication of water tank level.
7. Traffic lights indication.
8. Logic Gates
9. Latching and Unlatching
10. Interlocking
11. Sequential operation of ON/OFF of a set of lights
12. Counters

17ECU511B	NANO ELECTRONICS - PRACTICAL	Semester -V			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Make them understand various advanced concepts in nanoelectronics
- Explore the fundamentals on QED, SED, Molecular electronics and spintronics
- Train the students on state-of-the-art computational tools for modeling and simulation of nanoelectronics devices
- To identify the critical parameters that one must evaluate when considering any new Nanoelectronics device
- Know the types of nanotechnology, atomic structure, molecular technology and• preparation of nano materials
- Understand the fundamentals of nano electronics and its properties.

COURSE OUTCOMES

- Able to describe typical components of a Programmable Logic Controller
- Gain the concepts of nanoelectronics such as ballistic transport and quantum confinement.
- Identify the various methods to fabricate and measure Nanoscale features.
- Evaluate the critical parameters when considering any new Nano electronics device.
- Understand the latest technology on nano systems based Nano electronics
- Design and simulate various advanced nanoelectronic devices

(Any 10 Experiments)

1. Synthesis of at least two different sizes of Nickel Oxide Nano Particles Using Sol-Gel Method.
2. Synthesis of at least two different sizes of Copper Oxide Nano Particles Using Sol-Gel Method.
3. Synthesis of at least two different sizes of Zinc Oxide Nano Particles Using Sol-Gel Method.
4. Polymer synthesis by suspension method / emulsion method B-H loop of nanomaterials.
5. Magnetoresistance of thin films and nanocomposite, I-V characteristics and transient response.
6. Particle size determination by X-ray diffraction (XRD) and XRD analysis of the given XRD spectra.
7. Determination of the particle size of the given materials using He-Ne LASER.
8. Selective area electron diffraction: Software based structural analysis based on TEM based experimental data from published literature.

9. Surface area and pore volume measurements of nanoparticles.
10. Spectroscopic characterization of metallic, semiconducting and insulating Nano-particles.
11. Developing a lead free solder using copper nanoparticles.
12. Deposition of Nano crystals on plastic sheets.

17ECU512A	ADVANCED COMMUNICATION SYSTEMS - PRACTICAL	Semester - V			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Understand radio-frequency systems and their applications
- Analyze the performance parameters of radio frequency circuits
- Analyze the performance parameters of radio frequency circuits
- Identify design trade-off of radio frequency communication systems.
- To analyze error performance of a digital communication system in presence of noise and other interference
- To understand various source coding and channel coding techniques

COURSE OUTCOMES

- To focus the fundamental concepts on TDM, Pulse modulations, digital modulation techniques
- To enhance the knowledge of source coding techniques and Error-control coding techniques.
- To understand the basic concept of digital communication system
- To understand Multiple Access and Spread Spectrum Techniques for mobile and cellular communication system.
- Estimate various losses in optical fiber
- Design fiber optic communication link

(Any 10 Experiments)

1. Performance analysis of Half wave dipole antenna
2. Performance analysis of Loop antenna
3. Performance analysis of Yagi Uda antenna
4. Performance analysis of Log periodic antenna
5. Radio wave propagation path loss calculations
6. Tunnel Diode Oscillator and Gunn Diode Oscillator
7. Analog fiber optic transmitter & receiver
8. Digital fiber optic transmitter & receiver
9. Radiation Pattern by Horn antenna
10. Reflex Klystron characteristics using microwave bench
11. Gunn Diode oscillator
12. Impedance and power measurement by Smith chart

17ECU512B	CONTROL SYSTEMS - PRACTICAL	Semester-V			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To know the concept of time response and frequency response of the system
- To introduce different types of system and identify a set of algebraic equations to represent and model a complicated system into a more simplified form
- To interpret different physical and mechanical systems in terms of electrical system to construct equivalent electrical models for analysis
- To employ time domain analysis to predict and diagnose transient performance parameters of the system for standard input functions
- Identify the needs of different types of controllers and compensator to ascertain the required dynamic response from the system
- Formulate different types of analysis in frequency domain to explain the nature of stability of the system

COURSE OUTCOMES

- Represent the mathematical model of a system
- Determine the response of different order systems for various step inputs 3. Analyze the stability of the system
- Ability to formulate transfer function for the given control system problem
- Ability to find time response of the given control system model
- Ability to design Lead, Lag, Lead-Lag system in control system.
- Ability to design PID controllers for the given control system model.

(Any 10 Experiments)

1. Characteristics of synchro transmitter receiver
2. Characteristics of synchro as an error detector
3. Position control of DC motor
4. Speed control of DC motor
5. Characteristics of AC servo motor
6. Time response of type 0,1 and 2 systems
7. Frequency response of first and second order systems
8. Time response characteristics of a second order system.
9. Effect of damping factor on performance of second order system
10. Frequency response of Lead networks.
11. Frequency response of Lag networks.
12. Study of P, PI and PID controller.

17ECU513A	BIOMEDICAL INSTRUMENTATION - PRACTICAL	Semester-V			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To introduce an fundamentals of transducers as applicable to physiology • To explore the human body parameter measurements setups
- To make the students understand the basic concepts of forensic techniques. With widespread use and requirements of medical instruments
- Gives knowledge of the principle of operation and design of biomedical instruments
- To provide a large number of quality trained Medical Electronics professionals for preventive and maintenance work needed to maintain hi-tech medical equipments in hospitals to ensure good health care.
- To explore the human body parameter measurements setups
- To give basic ideas about how multimedia evidences are useful in crime investigation.

COURSE OUTCOMES

- Understand the physiology of biomedical system
- Measure biomedical and physiological information
- Discuss the application of Electronics in diagnostics and therapeutic area
- Develop a thorough understanding on basics of biomedical amplifiers
- Develop a thorough understanding on principles of medical instrumentations
- Develop a thorough understanding on clinical applications of medical instrumentation systems

(Any 10 Experiments)

1. Characterization of bio potential amplifier for ECG signals.
2. Study on ECG simulator
3. Measurement of heart sound using electronic stethoscope. Study on ECG heart rate monitor /simulator
4. Study of pulse rate monitor with alarm system
5. Determination pulmonary function using spirometer.
6. Measurement of respiration rate using thermister /other electrodes.
7. Respiration Rate monitor/ apnea monitor
8. Ultrasound transducers based on medical system
9. Study of a Pacemaker.
10. Measurement of pulse rate using photoelectric transducer & pulse counting for known period.
11. To study fingertip oximeter and analysis of various parameters.
12. Display the frequency spectrum of a signal using MatPRACTICAL/PRACTICALview.

17ECU513B	SIGNALS AND SYSTEMS - PRACTICAL	SEMESTER-V			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To introduce an fundamentals of transducers as applicable to physiology
- Understanding signals and systems in terms of both the time and transform domains, taking advantage of the complementary insights and tools that these different perspectives provide
- Able to compute the Fourier series or Fourier transform Z-transform
- Knowledge about basic signal and system modeling concept and definitions
- Knowledge about the application and use of mathematical transforms and state-variables
- Development of the mathematical skills to solve problems involving convolution, filtering, modulation and sampling.

COURSE OUTCOMES

- Apply the knowledge of linear algebra topics like vector space, basis, dimension, inner product, norm and orthogonal basis to signals.
- Analyse the spectral characteristics of continuous-time periodic and a periodic signals using Fourier analysis.
- Classify systems based on their properties and determine the response of LSI system using convolution.
- Analyze system properties based on impulse response and Fourier analysis.

Apply the Laplace transform and Z- transform for analyze of continuous-time and discrete-time signals and systems

(Any 10 Experiments)

1. Generation of Signals: continuous time
2. Generation of Signals: discrete time
3. Time shifting of signals.
4. Time scaling of signals.
5. Convolution of Signals
6. Solution of Difference equations.
7. Fourier series representation of continuous time signals.
8. Fourier transform of continuous time signals.
9. Laplace transform of continuous time signals.
10. Introduction to Xcos/similar function and calculation of output of systems represented by block diagrams
11. Sampling and signal reconstruction and Spectral Analysis using DFT.
12. Correlation of signals.

17ECU514A	ROBOTICS - PRACTICAL	Semester - V			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- To learn the basic configuration of Robotics
- To understand the various types of Robots.
- To get an exposure in Robot control systems
- To acquire the knowledge on advanced algebraic tools for the description of motion
- To develop the ability to analyze and design the motion for articulated systems.
- To develop an ability to use software tools for analysis and design of robotic systems

COURSE OUTCOMES

- Understand the relationship between mechanical structures of industrial robots and their operational workspace characteristics.
- Illustrate the kinematics and dynamics of robotics.
- Implementation of related instrumentation and control in robotics
- Ability to solve inverse kinematics of simple robot manipulators
- Able to do the path planning for a robotic system
- Identify a Robot for a specific application.

(Any 8 Experiments)

1. Study of different types of Robots based on configuration and application
2. Study of different types of links and joints used in Robots
3. Study of components of Robots with drive system and end effectors
4. Determination of maximum and minimum position of links
5. Verification of transformation (position and orientation) with respect to gripper and world coordinate system
6. Estimation of accuracy, repeatability and resolution
7. Robot programming exercises
8. Design, modeling and analysis of two different types of grippers.
9. Study of sensor integration.
10. Study of robotic system design.

17ECU514B	MOBILE APPLICATIONS DEVELOPMENT - PRACTICAL	Semester - V			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- Understand aspects of mobile programming that make it unique from programming for other platforms,
- Utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces,
- Program mobile applications for the Android operating system that use basic and advanced phone features, and
- Deploy applications to the Android marketplace for distribution
- Program mobile applications for the Android operating system that use basic and advanced phone features, and
- Deploy applications to the Android marketplace for distribution

COURSE OUTCOMES

- Understand system requirements for mobile applications.
- Generate suitable design using specific mobile development framework.
- Apply analytical and empirical models in the design of wireless links.
- Develop user interfaces for the android platform.
- Identify the interaction between user interface and underlying application infrastructure.
- Configure android application development tools

(Any 8 Experiments)

1. Develop an application that uses GUI components, Font and Colours.
2. Develop an application that uses Layout Managers and event listeners.
3. Develop a native calculator application.
4. Write an application that draws basic graphical primitives on the screen.
5. Develop an application that makes use of database.
6. Develop an application that makes use of RSS Feed.
7. Implement an application that implements Multi threading:
8. Develop a native application that uses GPS location information.
9. Implement an application that writes data to the SD card.
10. Implement an application that creates an alert upon receiving a message.

17ECU601A	EMBEDDED SYSTEMS	Semester-VI			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Ability to design an Embedded System, component or process to meet desired needs within realistic constraints.
- To develop the next generation technologies, methods and tools for modeling, design, implementation and operation of hardware/software systems embedded in intelligent devices
- To provide a broad overview of both theoretical and practical aspects of a design flow for To understand the need and applications of Microcontrollers n embedded system.
- To understand architecture and features of typical Microcontroller.
- Learn interfacing of real world input and output devices
- To study various hardware and software tools for developing applications embedded systems

COURSE OUTCOMES

- Understand hardware and software design requirements of embedded systems.
- Acquire knowledge about embedded processors and their applications
- Analyze the embedded systems specification and develop software programs.
- Ability to design an Embedded System, component or process to meet desired needs within realistic constraint
- Evaluate the requirements of programming embedded systems and tool chain for embedded systems.
- Explore the features of the microcontroller and provide solutions for embedded applications

UNIT I - Introduction to Embedded Systems

Overview of Embedded Systems - Features - Requirements and Applications - Recent Trends in the Embedded System Design - Common architectures for the Embedded System Design - Embedded Software design issues.

UNIT II - Embedded Design Process

Embedded Design Life Cycle – Product Specification – Hardware / Software Partitioning – Detailed Hardware and Software Design – Integration – Product Testing – Selection Processes – Microprocessor Vs Micro Controller – Performance Tools – Bench Marking – RTOS Micro Controller Tool Chain Availability – Other Issues in Selection Processes.

UNIT III - Introduction to microcontrollers

Overview of Harvard architecture and Von Neumann architecture - RISC and CISC microcontrollers - AVR RISC Microcontrollers: Introduction to AVR RISC Microcontrollers - Architecture overview - Status register - General purpose register file.

UNIT IV - Interrupts and Timer

Memories - Instruction set - Data Transfer Instructions - Arithmetic and Logic Instructions Branch Instructions - Bit and Bit-test Instructions - MCU Control Instructions - Simple programs in Assembly Language / C Language - Introduction to System Clock -

Reset sources.

UNIT V – Peripherals

Introduction to interrupts - External interrupts - IO Ports - 8-bit and 16-bit Timers - Introduction to different modes - Input Capture and Compare Match Analog Comparator - Analog-to-Digital Converter - Serial Peripheral Interface (SPI) - The Universal Synchronous and Asynchronous serial Receiver and Transmitter (USART) - Two Wire Interface (TWI) / I2C bus.

17ECU601B	BASIC VLSI DESIGN	Semester-VI			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To enable the students to model, simulate and test the Electronics and Instrumentation based design.
- To provide a design flexibility using graphical programming language
- To provide a platform for the students to do multidisciplinary projects
- To facilitate the conduct of short term and continuous learning programmes
- To provide knowledge on design of process control by using virtual instrumentation techniques
- To provide knowledge in process analysis by VI tools
- To develop basic VI programs using loops, case structures etc. including its applications in image, signal processing and motion control.

COURSE OUTCOMES

- Understand basics of acquisition techniques and its interface.
- Recognize the components of virtual instrumentations and measurement.
- Get adequate knowledge in VI Tool sets.
- Use Lab view software for instrument control, measurement and data acquisition.
- Understand VI Programming techniques.
- Ability to use state machines to solve complex problems.

UNIT I - Metal Oxide Semiconductor (MOS)

Introduction to basic principle of MOS transistor - Large signal MOS models (long channel) for digital design - SPICE model - MOS device layout.

UNIT II - MOS Inverter

Transistor layout - Inverter layout - CMOS digital circuit layout - Inverter principle - Depletion and enhancement load inverters - Basic CMOS inverter - Transfer characteristics - Logic threshold - Noise margins - Dynamic behavior.

UNIT III - Combinational MOS Logic Design

Propagation Delay and Power Consumption - Static MOS design - Pass Transistor logic - Complex logic circuits - Sequential MOS Logic Design - Static latches - Flip flops & Registers.

UNIT IV - Memory Design

Dynamic Latches & Registers - CMOS Schmitt trigger - Monostable sequential Circuits - Astable Circuits - ROM & RAM cells design - Dynamic MOS design - Dynamic logic families and performances - Interconnect & Clock Distribution - Interconnect delays - Cross Talks - Clock Distribution.

UNIT V – Power Estimation

Power Estimation Techniques – Logic level Power Estimation – Simulation Power Analysis – Probabilistic Power Analysis.

17ECU602A	DIGITAL SIGNAL PROCESSING	Semester-VI			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To understand the fundamental concepts and theory of Discrete Fourier Series and Discrete Fourier Transform.
- To get an exposure on Discrete Fourier Transforms (DFT), its applications and implementation by FFT techniques.
- To apply design technique for FIR type digital filters
- Understand fundamentals of Digital Signal Processing
- Analyze & compare different signal processing strategies.
- Become aware of some applications of DSP.

COURSE OUTCOMES

- Understand the fundamental concepts and theory of Discrete Fourier Series and Discrete Fourier Transform
- Ability to compute various transform analysis of Linear Time Invariant Systems.
- Implement problem solving strategies to DSP Problems.
- Able to test signal processing algorithms for various applications
- Ability to understand Various applications of DSP such as signal processing and telecommunication.
- Apply design techniques for FIR type digital filters

UNIT I - Discrete Time systems

Discrete sequences - Linear coefficient difference equation - Representation of DTS - LSI Systems - Stability and causality - Frequency domain - Representations and Fourier transform of DT sequences.

UNIT II - Z-Transform

Definition – Properties - Inverse Z Transform and stability - Parsevals Theorem - Applications - System Function: Signal flow graph - Representation and analysis of Discrete Time Systems -Techniques of representations - Matrix generation - Solution for DTS evaluations.

UNIT III - Discrete Fourier Transform

DFT assumptions - Inverse DFT - Matrix relations - Relationship with FT and its inverse - Circular convolution - DFT theorems – DCT – Computation of DFT - FFT Algorithms and processing gain – Discrimination - Interpolation and extrapolation - Gibbs Phenomena - FFT of real functions - Interleaving - Resolution improvement - Word length effects.

UNIT IV - Digital Filters

Analog filter review - System function for IIR and FIR filters - Network representation -Canonical and decomposition networks - IIR filter realization methods – Limitations - FIR filter realization techniques - Discrete correlation and convolution - Properties - Limitations.

UNIT V - TMS 320 C 6713

Introduction – TMS320C6713 Overview – Key Features – Architectural Overview – Functional Block Diagram - Internal Memory Organization – CALU – System Control – PLU – Interrupts – Addressing Modes – Instruction Set.

17ECU602B	VIRTUAL INSTRUMENTATION	Semester-VI			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To enable the students to model, simulate and test the Electronics and Instrumentation based design.
- To provide a design flexibility using graphical programming language
- To provide a platform for the students to do multidisciplinary projects
- To facilitate the conduct of short term and continuous learning programmes
- To provide knowledge on design of process control by using virtual instrumentation techniques
- To provide knowledge in process analysis by VI tools
- To develop basic VI programs using loops, case structures etc. including its applications in image, signal processing and motion control.

COURSE OUTCOMES

- Understand basics of acquisition techniques and its interface.
- Recognize the components of virtual instrumentations and measurement.
- Get adequate knowledge in VI Tool sets.
- Use Lab view software for instrument control, measurement and data acquisition.
- Understand VI Programming techniques.
- Ability to use state machines to solve complex problems.

UNIT I - Introduction

General functional description of a digital instrument - Block diagram of a Virtual Instrument - Physical quantities and Analog interfaces - Hardware and Software - User interfaces - Advantages of Virtual instruments over conventional instruments - Architecture of a Virtual instrument and its relation to the operating system.

UNIT II - Software Overview

LABVIEW - Graphical user interfaces - Controls and Indicators - 'G' programming - labels and Text - Shape, Size and Color - Owned and free labels - Data type, Format, Precision and representation - Data types - Data flow programming - Editing - Debugging and Running a Virtual instrument - Graphical programming palettes and tools - Front panel objects - Functions and Libraries.

UNIT III - Programming Structure

FOR loops - WHILE loops - CASE structure - Formula nodes - Sequence structures - Arrays and Clusters - Array operations - Bundle - Bundle/Unbundle by name - Graphs and charts - String and file I/O - High level and Low level file I/O's - Attribute modes Local and Global variables. Operating System and Hardware Overview: PC architecture - Current trends - Operating system requirements - Drivers – Interface Buses – PCI Bus – Interface cards – Specification – Analog and Digital interfaces – Power - Speed and timing considerations.

UNIT IV - Hardware Aspects

Installing hardware - Installing drivers - Configuring the hardware - Addressing the hardware in LabVIEW - Digital and Analog I/O function - Data Acquisition - Buffered I/O - Real time Data Acquisition.

UNIT V - LabView Applications

IMAQ - Motion Control: General Applications - Feedback devices - Motor Drives - Instrument Connectivity – GPIB - Serial Communication – General - GPIB Hardware & Software specifications - PX1 / PC1: Controller and Chassis Configuration and Installation.

17ECU603A	PROGRAMMING WITH LABVIEW	Semester-VI			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To learn and to navigate LABVIEW and use the block diagram, front panel, and Functions and Controls palettes.
- To explore use of graphs and charts and build a user interface.
- To gain knowledge on the different data types and methods to organize and group data, controls, and indicators in LABVIEW.
- Understand basics of acquisition techniques and its interface.
- Recognize the components of virtual instrumentations and measurement
- To develop basic applications in the LabVIEW graphical programming environment

COURSE OUTCOMES

- Gain knowledge on the different data types and methods to organize and group data, controls, and indicators in LABVIEW
- Understand various functions available in Lab View for instrumentation applications.
- Ability to model complex system using Lab view.
- Ability to improve lab view programming skills
- Able to use graphical programming language.
- Ability to simulate and test behavior of system.

UNIT I - Introduction to Virtual Instrumentation

Computers in Instrumentation - Concept of Virtual Instrumentation (VI) - History of VI - LABVIEW and VI - Conventional and Graphical Programming - Distributed Systems.

UNIT II - Basics of LABVIEW

Components of LABVIEW - Owned and Free Labels - Tools and Other Palettes Arranging Objects - Pop-Up Menus -Colour Coding - Code Debugging - Creating Sub-VIs - For Loop - While Loop - Loop Behaviour and Interloop Communication - Local Variables - Global Variables - Shift Registers.

UNIT III - Programming Fundamentals

Feedback – Auto indexing - Loop Timing - Timed Loops Sequence Structures - Case Structure - Formula Node - Event Structure - Arrays - Clusters - Inter-Conversion of Arrays and Clusters - Waveform Chart - Resetting Plots - Waveform Graph – Use of Cursors - X-Y Graph - Introduction to a State Machine - Event Structures - Full State Machine - File Formats - File I/O Functions - Path Functions.

UNIT IV - Basics of Data Acquisition

Classification of Signals – Real World Signals - Analog Interfacing - Connecting the Signal to the Board - Practical vs Ideal Interfacing - Bridge Signal Sources.

UNIT V - Data Acquisition with LABVIEW

Measurement and Automation Explorer - Waveform DataType - Working in DAQmx -Working in NI-DAQ - Use of Simple analog and digital VIs -Continuous data acquisition - Acquisition of data in bursts - DAQ Assistant - Analysis Assistant - Instrument Assistant -

Instrument Interfacing and LABVIEW - Data Sockets.

17ECU603B	VERILOG AND FPGA BASED SYSTEM DESIGN	Semester-VI			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES

- To understand the fundamentals of Verilog and FPGA based system design.
- To appreciate the design process in FPGA through an application on the design of a system design
- Describe general FPGA architecture, internals and use cases
- Understanding of building blocks that are available to digital designers
- Apply design flow methodology for a given problem
- Implement and debug various digital designs

COURSE OUTCOMES

- Understand the fundamentals of Verilog and FPGA based system design.
- Design and optimize complex combinational and sequential digital circuits
- Apply design flow methodology for a given problem
- Solve time related problems
- Implement and debug various digital designs.
- Analyze a given design based on synthesis, implementation and timing reports

UNIT I - Digital logic design flow

Combinational circuits - Combinational building blocks: Multiplexors – Demultiplexers - Decoders - Encoders - Adder circuits - Sequential circuit elements: Flip-Flop - Latch – Register- Finite state machines: Mealy and Moore - Other sequential circuits: Shift registers – Counters - FSMD (Finite State Machine with Datapath): Design and analysis. Microprogrammed control - Memory basics and timing - Programmable Logic devices.

UNIT II - Evolution of Programmable logic devices

PAL - PLA – GAL - CPLD - FPGA architectures - Placement and routing - Logic cell structure - Programmable interconnects - Logic blocks - I/O Ports - Clock distribution in FPGA - Timing issues in FPGA design - Boundary scan.

UNIT III - Verilog HDL

Introduction to HDL - Verilog primitive operators - Structural Verilog - Behavioral Verilog - Design verification - Modeling of combinational and sequential circuits (including FSM and FSMD) with Verilog Design - Examples in Verilog.

UNIT IV – Basics of FPGA

Introduction - FPGA basics - FPGA Design - FPGA schematic connectivity - Wiring the design - schematic components - Processor cores - Peripheral Components - Generic components - Vendor macro and primitive libraries - Create a PWM.

UNIT V - Targeting and Running the design

Constraint files– Configurations - NanoBoard constraint files - Configuration Manager -Auto Configuring an FPGA project - Defining constraints manually - Editing a constraint file - Configuring MyPWM - Controlling the build process -

Understanding the build process - Button regions - Accessing stage reports / outputs - Build stages - Configuring a build stage.

17ECU611A	EMBEDDED SYSTEMS - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Demonstrate the sensing of different physical parameters
- Explain the calibration of parameters measured and displayed
- Evaluate the data transfer
- To understand the need and applications of Microcontrollers and ARM Processors in embedded system.
- To understand architecture and features of typical Microcontroller
- To learn interfacing of real world input and output devices

COURSE OUTCOMES

- Define the arithmetical and logical assembly language for microcontroller
- Know the downloading procedure on hardware into flash ROM and show the testing data on defined port with board
- Competent to evaluate the data transfer response
- Able to describe the microcontroller and ARM Processor Architecture and its Features
- Learn importance of microcontroller and ARM Processor in designing embedded applications
- Learn use of hardware and software tools. 4. Develop interfacing to real world devices.

(Any 10 Experiments)

1. Flash LED at an observable rate.
2. Hello LED – Flash LED at a rate such that the LED appears always on. Estimate the onset of the rate when the LED appears to stay on
3. Controlling ON/OFF of an LED using switch.
4. Toggle the LED every second using Timer interrupt.
5. Read the ADC value of the voltage divider involving the LDR. Print the value on the serial monitor.
6. Use the thermistor to estimate the temperature and print the raw value on the serial monitor.
7. Connect the LCD I/O Board and print 'Hello World' on the LCD. Scroll display from left to right.
8. Speed control of stepper motor.
9. Serial Communication Interface
10. I2C Interface
11. Programming using Interrupts.
12. Generation of Pulse Width Modulation

17ECU611B	BASIC VLSI DESIGN - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Introduced digital integrated circuits
- Introduce CMOS devices and manufacturing technology.
- Introduce CMOS logic gates and their layout.
- Ability to find Propagation delay, noise margins, and power dissipation in the digital VLSI circuits.
- Ability to design Combinational (e.g., arithmetic) and sequential circuit.
- Ability to design Memory in VLSI circuits.

COURSE OUTCOMES

- Analyze the CMOS layout levels, how the design layers are used in the process sequence, and resulting device structures (i.e. cross-sectional views).
- Implement digital logic designs of various types (i.e. combinational logic, multiplexers).
- Analyze performance issues and the inherent trade-offs involved in system design (i.e. power vs. speed).
- Complete a moderately complex design project involved with data path operators, data registers, serial/parallel conversion, clocking/timing details and feedback.
- Identify the interactions between process parameters, device structures, circuit performance, and system design.

(Any 10 Experiments)

1. Design and implementation of logic gates
2. Design and simulation of Real Time Clock
3. Design and implementation of Encoder and Decoder
4. To plot the (i) output characteristics & (ii) transfer characteristics of an n-channel MOSFET.
5. To plot the (i) output characteristics & (ii) transfer characteristics of an p-channel MOSFET.
6. To design and plot the static (VTC) and dynamic characteristics of a digital CMOS inverter.
7. To design and plot the output characteristics of a 3-inverter ring oscillator.
8. To design and plot the dynamic characteristics of 2-input NAND, NOR logic gates using CMOS technology.
9. To design and plot the dynamic characteristics of 2-input XOR and XNOR logic gates using CMOS technology.
10. To design and plot the characteristics of a 4x1 digital multiplexer using pass transistor logic.

11. To design and plot the characteristics of a positive and negative latch based on multiplexers.
12. To design and plot the characteristics of a master-slave positive and negative edge triggered registers based on multiplexers.

17ECU612A	DIGITAL SIGNAL PROCESSING - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To implement Linear and Circular Convolution
- To implement FIR and IIR filters
- Familiar with the most important methods in DSP, including digital filter design, transform-domain processing and importance of Signal Processors.
- Aware about implications of the properties of systems and signals
- To design FIR filters and IIR Filters
- Analyze discrete-time filter banks and multi-rate signal processing system

COURSE OUTCOMES

- Analyze the CMOS layout levels, how the design layers are used in the process sequence, and
- Understand the handling of discrete/digital signals using MATLAB
- Understand the basic operations of Signal processing
- Analyze the spectral parameter of window functions
- Design IIR, and FIR filters for band pass, band stop, low pass and high pass filters
- Design the signal processing algorithm using MATLAB & VLAB.

(Any 10 Experiments)

USING TMS320C5X/TMS320C54XX/TMS320C67XX/MATLAB

1. Study of addressing Modes of DSP using simple examples
2. Arithmetic operations
3. Generation of unit sample sequence, unit step, ramp function, discrete time sequence, real sinusoidal sequence.
4. Generate and plot sequences over an interval.
5. Given $x[n]$, write program to find $X[z]$.
6. Fourier Transform, Discrete Fourier Transform and Fast Fourier Transform
7. Design of a Butterworth analog filter for low pass and high pass.
8. Design of digital filters.
9. Correlation of two discrete signals
10. Quantization noise
11. Waveform generation
12. Discrete Cosine Transform

17ECU612B	VIRTUAL INSTRUMENTATION - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To enable the students to model, simulate and test the Electronics and Instrumentation based design.
- To provide a design flexibility using graphical programming language
- To provide a platform for the students to do multidisciplinary projects
- To facilitate the conduct of short term and continuous learning programmes
- To provide knowledge on design of process control by using virtual instrumentation techniques
- To provide knowledge in process analysis by VI tools
- To develop basic VI programs using loops, case structures etc. including its applications in image, signal processing and motion control.

COURSE OUTCOMES

- Understand basics of acquisition techniques and its interface.
- Recognize the components of virtual instrumentations and measurement.
- Get adequate knowledge in VI Tool sets.
- Use Lab view software for instrument control, measurement and data acquisition.
- Understand VI Programming techniques.
- Ability to use state machines to solve complex problems

(Any 10 Experiments)

1. Creating a simple VI to place a Digital Control.
2. Navigation and Editing.
3. VI to make a Degree C to Degree F Converter.
4. Converting VI in to Sub VI.
5. Write a program to count Modulus 32 and display the values in decimal, octal decimal and Binary.
6. Built a VI using while loop that displays random numbers in to three wave form charts.
(Strip, scope & Sweep)
7. Data Acquisition using LABVIEW.
8. Development of Temperature Measurement using LABVIEW.
9. Development of Virtual Instrument for Function Generator using LABVIEW.
10. Development of Virtual Instrument for Audio Signal Spectrum Analyser using LABVIEW.
11. Design of V-F and F-V converter.
12. Instrumentation amplifier.

17ECU613A	PROGRAMMING WITH LABVIEW - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- Know about dataflow and Graphical Programming Language
- Describe and utilize the NI example finder.
- Describe what is meant by 'data acquisition'.
- Describe the function of the 'General Purpose Interface Bus (GPIB)'.
- Design and implement various front panel controls and indicators.
- Connect and manipulate nodes and wires in the block diagram

COURSE OUTCOMES

- Execute save and load dialogs.
- Demonstrate the use of the revert function.
- Troubleshoot broken VIs.
- Single-Step through a VI.
- Implement execution highlighting and setting break points.
- Create SubVIs

(Any 8 Experiments)

1. Set up a while loop to execute EXACTLY the predefined number of iterations.
2. Write a program to invert the state of a Boolean indicator twice a second, until the program is stopped by the user. The Boolean should initially be TRUE. Solve the problem using two different methods: Shift Register, and Local Variables.
3. Write a program to count Modulus 32 and display the values in decimal, Hexadecimal, octal and binary. Use a STOP button to stop your code programmatically. Use local variables to stop a while loop and reset the Stop button. The action of the switch should be set to Switch When Pressed or Switch When Released.
4. Set up a temperature simulator as follows. Allow for a user defined a set point (you may place it inside the while loop). In the while loop add an error amounting to a maximum of $\pm 10^{\circ}\text{C}$ to the set point. Set up over- and undertemperature LEDs to light up whenever the deviation is $> 5^{\circ}\text{C}$. The loop should operate once every second.
5. Build a VI using the while loop that displays random numbers (0-5) into three Waveform Charts (strip, scope, sweep). Incorporate appropriate switching and delays.
6. Set up an 8-bit Binary counter and display your results graphically. The graph should have 8-traces corresponding to bits 0-7. For this you may like to the Following:
Number to Boolean Array, Boolean to (0,1).

7. Write a simple program to generate a Voltage at Analog Output 0 using a knob to select the voltage. Verify using a Multimeter.
8. Read the status of NI Instrument simulator by using its different commands.
9. Converting Voltage to Resistance.
10. Converting Resistance to Temperature.

17ECU613B	VERILOG AND FPGA BASED SYSTEM DESIGN - PRACTICAL	Semester-VI			
		L	T	P	C
		-	-	3	1

COURSE OBJECTIVES

- To understand the fundamentals of Verilog and FPGA based system design.
- To appreciate the design process in FPGA through an application on the design of a system design
- Describe general FPGA architecture, internals and use cases
- Understanding of building blocks that are available to digital designers
- Apply design flow methodology for a given problem
- Implement and debug various digital designs

COURSE OUTCOMES

- Understand the fundamentals of Verilog and FPGA based system design.
- Design and optimize complex combinational and sequential digital circuits
- Apply design flow methodology for a given problem
- Solve time related problems
- Implement and debug various digital designs.
- Analyze a given design based on synthesis, implementation and timing reports

(Any 8 Experiments)

1. Write code to realize basic and derived logic gates.
2. Half adder, Full Adder using basic and derived gates.
3. Half subtractor and Full Subtractor using basic and derived gates.
4. Design and simulation of a 4 bit Adder.
5. Multiplexer (4x1) and Demultiplexer using logic gates.
6. Decoder and Encoder using logic gates.
7. Clocked D, JK and T Flip flops (with Reset inputs)
8. 3-bit Ripple counter
9. To design and study switching circuits (LED blink shift)
10. To design traffic light controller.

17ECP101	ADVANCED ELECTRONIC CIRCUIT THEORY	Semester-I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Ability to design different types of Electronic Circuits such as Amplifiers and Oscillators.
- To understand and implement the advanced electronic circuits such as amplifiers etc with the help of theoretical and practical problem solving.
- Ability to analyze the different types of configurations and applications of Transistor.
- Ability to determine the stability of feedback amplifiers and their steady state performance.
- To analyze the Circuits in time and frequency domain
- Calculation and measurement of parameters for electronic circuits, to introduce the students to the advanced concepts of electronics.

COURSE OUTCOMES

- Know the characteristics of diodes and transistors
- Design simple circuits and know the benefits of feedback in amplifier
- Apply their knowledge in analyzing Circuits by using network theorems.
- Measure the characteristics of electronic circuits and present experimental results
- Compare and classify oscillators
- Analyze electrical circuits and calculate the main parameters

UNIT I - Semiconductor Devices

Conductor – Semiconductor – Intrinsic Semiconductor – Extrinsic Semiconductor – P Type and N Type Semiconductor – PN Junction Diode – V-I Characteristics - Zener Diode – V-I Characteristics Construction of NPN and PNP Transistors – Operation of NPN, PNP Transistors – Characteristics of CE and CB Transistor Configurations

UNIT II - Circuit Analysis

Mesh Analysis - Mesh Equation by Inspection Method - Nodal Analysis – Source Transformation Technique – Star to Delta Transformation. Network Theorems: Superposition Theorem - Thevenis's Theorem - Norton's Theorem – Reciprocity Theorem – Maximum Power Transfer Theorem – Millman's Theorem.

UNIT III - Analog Electronics

Detailed Analysis of BJT and FET Biasing Circuits - Stability Considerations - Analysis of Single and Multistage Amplifiers - Amplifier with Different types of Feedbacks - Power Amplifiers - Tuned Amplifiers and Oscillators - Linear Integrated Circuits - Process Technology - Differential Amplifiers and Current Mirrors - Op-Amp Details. Op-Amp Circuits and Applications - Active Filters - Functional Amplifiers.

UNIT IV - Thyristors and Special diodes

SCR - Construction – Characteristics – Two Transistor Version – Thyristor ratings -LASER – TRIAC – DIAC - Zener Diode - Avalanche Break Down – Zener Breakdown – Application of Zener -

Varactor Diode – Schottky Diode - Tunnel Diode - Gunn Diode – IMPATT Diode - PIN Diode – LASER Diode.

UNIT V - AC Fundamentals

Electrical Sources - AC Waveforms - Frequency, Phase, Amplitude, Peak, RMS, Calculation of Power, Response of Passive Components on AC Waveforms – Impedance in RLC Circuit - Transient Analysis of Electric Circuits - Steady State Analysis of Circuits - Network Theorems(Ac Circuits) - Two Port Networks – Resonance.

SUGGESTED READINGS

1. Electronic Devices and Circuits, David.A. Bell, Oxford University Press Sixth Edition, 2010.
2. Circuit Theory : Analysis and Synthesis, Abhijit Chakrabarti, Dhanpat Rai & Co. Sixth Edition, 2014
3. Electronic Devices and Circuits, S.Salivahanan, N.Suresh Kumar & A.Vallavaraj, Tata Mc Graw-Hill publishing Company Limited, Fourth Edition, 2013.

17ECP102	MODERN COMMUNICATION SYSTEMS	Semester-I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To learn the designing procedure and operation of circuits used for communication.
- To understand the basic concepts of AM, FM, and PM transmission and reception.
- To assess and evaluate different modulation and demodulation techniques.
- To evaluate the influence of noise on communications signals.
- To introduce students to various modulation and demodulation techniques of analog communication
- To analyze different parameters of analog communication techniques.

COURSE OUTCOMES

- Apply or a create suitable algorithm to solve a particular problem
- Understand and identify the fundamental concepts and various components of analog communication systems
- Explain signal to noise ratio, noise figure and noise temperature for single and cascaded stages in a communication system.
- Describe analog pulse modulation techniques and digital modulation technique
- Develop the ability to compare and contrast the strengths and weaknesses of various communication systems.
- Use of different modulation and demodulation techniques used in analog communication

UNIT I -Wave Propagation

EM Waves – Free Space Propagation – Surface Wave Propagation – Sky Wave Propagation – Space Wave Propagation – Tropospheric Scatter Propagation – Structure of Atmosphere – Characteristics of Ionized Regions – Virtual Height – Maximum Usable Frequency - Lowest Usable Frequency – Skip Distance – Optimum Working Frequency – Ionospheric Abnormalities – Duct Propagation.

UNIT II - Satellite Communication

System Description – Telemetry, Tracking and Command – Communication Space Craft – Satellite Orbit – GEO – LEO – MEO – Satellite Position – Linkage – Frequencies – Inside the Satellite: Transponder – Antenna Systems – Power Packages – Station Keeping – Ground Station – Aligning the Satellite Dish.

UNIT III - Optical Fiber Communication

Basic Fiber Optic System – Frequencies – Fiber Optic Cables – Refraction – Numerical Aperture – Graded Index Cables – Single Mode – Multimode – Cable Constructions – Cable Losses – Connector – Light Sources – Light Detector - System Components – Advantages And Disadvantages.

UNIT IV - Digital Cellular Systems

GSM Architecture – Layer Modeling – Transmission – Data Service – Multiple Access Scheme – Channel Coding Interleaving – Radio Resource Management – Mobility Management – Communication Management – Network Management – TDMA Architecture – Transmission and

Modulation – CDMA – Terms of CDMA Systems – Call Processing – Handover Procedures.

UNIT V - Intelligent Network for Wireless Communication

Intelligent Cell Concept – Intelligent Micro Cell Operation – Applications – Advanced Intelligent Network (AIN): Evaluation – Architecture – ISDN for AIN – AIN for Mobile – Asynchronous Transfer Mode (ATM) Technology: TM Network Concept – Applications – Wireless Information Super Highway.

SUGGESTED READINGS

1. Electronic Communication Systems, Kennedy and Davis, Tata McGraw Hill, Fifth Edition, 2012.
2. Mobile Cellular Telecommunications, Willian C.Y.Lee, McGraw Hill, Second Edition, 2012
3. Electronic Communications Modulation and Transmission, Robert J Schoenbeck, PHI, Second Edition, 2011.

17ECP103	EMBEDDED SYSTEMS	Semester-I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Ability to design an Embedded System, component or process to meet desired needs within realistic constraints.
- To develop the next generation technologies, methods and tools for modeling, design, implementation and operation of hardware/software systems embedded in intelligent devices
- To understand the need and applications of Microcontrollers in embedded system.
- To understand architecture and features of typical Microcontroller.
- Learn interfacing of real world input and output devices
- To study various hardware and software tools for developing applications embedded systems

COURSE OUTCOMES

- Understand hardware and software design requirements of embedded systems.
- Acquire knowledge about embedded processors and their applications
- Analyze the embedded systems specification and develop software programs.
- Ability to design an Embedded System, component or process to meet desired needs within realistic constraint
- Evaluate the requirements of programming embedded systems and tool chain for embedded systems.
- Explore the features of the microcontroller and provide solutions for embedded applications

UNIT I- Embedded Design Process

Embedded Design Life Cycle – Product Specification – Hardware / Software Partitioning – Detailed Hardware and Software Design – Integration – Product Testing – Selection Processes – Microprocessor Vs Micro Controller – Performance Tools – Bench Marking –RTOS Micro Controller Tool Chain Availability – Other Issues in Selection Processes.

UNIT II - PIC 18F Microcontroller

Introduction to Microcontroller: Brief History of The PIC Microcontroller – PIC18 Features and Block Diagram – PIC18 Architecture - Addressing Modes – Instruction Set – PIC I/O Port Programming.

UNIT III – Embedded C Programming

Introduction to C Programming: Data Types in C - I/O Port Programming in C - Bit-Addressable I/O Programming - Logic Operations in C - Data Conversion Programs in C.

UNIT IV - PIC Peripherals and Interfacing

Introduction to PIC Peripherals and Interfacing: PIC18 Timer Programming in Assembly and C - Serial Port Programming in Assembly and C - Interrupt Programming in Assembly and C - ADC and DAC Interfacing - CCP and ECCP Programming - DC Motor Interfacing and PWM.

UNIT V - Introduction to Embedded Systems

Introduction to Embedded Systems Characteristics of Embedded Systems - Software Embedded into a Systems - Device Drivers and Interrupt Servicing Mechanisms - Inter-Process Communication and Synchronization of Process - Tasks and Threads: Multiple Processes in an Application – Data Sharing by Multiple Tasks and Routines – Inter Process Communication.

SUGGESTED READINGS

1. Programming and Customizing the PIC Microcontroller, Myke Predko, Tata McGraw - Hill Education, Third Edition, 2010.
2. Embedded Systems Architecture Programming and Design, Rajkamal, Tata McGraw Hill Publications. Third Edition, 2014.
3. PIC Microcontroller and Embedded Systems using assembly and C for PIC18 –Muhammad Ali Mazidi, Roind D. Mckinay, Danny Causey, Pearson Education, First Edition, 2010.

17ECP104	ADVANCED DIGITAL SYSTEM DESIGN	Semester-I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To provide strong knowledge on Programmable Logic Devices and its usage in industrial automation.
- To understand number representation and conversion between different representation in digital electronic circuits.
- To analyze logic processes and implement logical operations using combinational logic circuits.
- To understand concepts of sequential circuits and to analyze sequential systems in terms of state machines
- To understand concept of Programmable Devices, PLA, PAL, CPLD and FPGA and implement digital system using VHDL
- To implement combinational and sequential circuits using VHDL

COURSE OUTCOMES

- Develop a digital logic and apply it to solve circuit problems
- Analyze, design and implement combinational logic circuits
- Classify different semiconductor memories
- Analyze, design and implement sequential logic circuits
- Analyze digital system design using PLD
- Simulate and implement combinational and sequential circuits using VHDL systems

UNIT I - Sequential Logic Circuits

Introduction to Sequential Logic Circuits - Mealy Machine- Moore Machine - State Diagrams - State Table Minimization - Incompletely Specified Sequential Machines - State Assignments - Design of Synchronous and Asynchronous Sequential Logic Circuits - Working in Fundamental and Pulse Mode.

UNIT II - Synchronous Sequential Circuit Design

Introduction of Clocked Synchronous Sequential Networks (CSSN) - Modeling of CSSN - State Table Assignment and Reduction – Design of CSSN - ASM Chart - ASM Realization.

UNIT III - Asynchronous Sequential Circuit Design

Introduction of Asynchronous Sequential Circuits (ASC)-Flow Table Reduction - Races in ASC - State Assignment - Problem and the Transition Table - Design of ASC - Static and Dynamic Hazards -Mixed Operating Mode Asynchronous Circuits.

UNIT IV - Programmable Logic Devices

Basic Concepts - Programming Technologies - Programmable Logic Element(PLE), Programmable Logic Array(PLA) - Programmable Array Logic(PAL) - Complex PLD's(CPLD) - System Design using PLD's - Design of Combinational and Sequential Circuits using PLD's.

UNIT V - Study of FPGA and XILINX

Introduction to Field Programmable Gate Arrays - Types of FPGA – Xilinx XC3000 Series - Logic Cell Array (LCA) - Configurable Logic Blocks (CLB) - Input/Output Block (IOB) - Programmable Interconnect Point (PIP).

SUGGESTED READINGS

1. Digital Principles and Design, Donald G.Givone, Tata McGraw Hill, First Edition, 2012.
2. Digital Systems: Principles and Applications, Gregory L. Moss, Ronald J. Tocci, Neal S. Widmer, Pearson Education, Tenth Edition, 2013
3. Logic Design Theory, Nripendra N Biswas Prentice Hall of India, First Edition.2013.

17ECP105A	MEMS AND CONTROL ENGINEERING	Semester-II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To learn the various micro fabrication technologies for MEMS
- To understand unique requirements for MEMS fabrication
- To know about the current trends and future technology for MEMS
- To employ time domain analysis to predict and diagnose transient performance parameters of the system for standard input functions
- Identify the needs of different types of controllers and compensator to ascertain the required dynamic response from the system
- Formulate different types of analysis in frequency domain to explain the nature of stability of the system

COURSE OUTCOMES

- Ability to describe MEMS fabrication technologies
- Apply fundamental concepts of MEMS to solve real life engineering problems
- Identify problems and suggest suitable MEMS material/ Devices/Process to get the Requisite Solution for a given application
- Apply advanced MEMS techniques to solve future engineering problems. Capability to critically analyze microsystems technology for technical feasibility as well as practicality Understand the concept of time response and frequency response of the system.
- Analyze feedback characteristics of linear control systems to reduced the disturbance
- Perform frequency domain analysis of linear control system using nyquist stability criterion

UNIT I - Overview and Working Principles of MEMS

MEMS and Microsystems – Typical MEMS and Microsystems Products – Microsystems and Microelectronics – Miniaturization – Applications of Microsystems – Micro Sensors, Micro Actuation, Micro Grippers, Micro Motors, Micro Accelerometer.

UNIT II - Fabrication and Microsystems Design

Ions and Ionization – Doping – Diffusion Process – Scaling Laws For Electrical Design – Substrate and Wafers – Silicon as a Substrate – Silicon Compounds – Piezo Resistors – Piezo Crystals - Photolithography – Ion Implantation – Diffusion – Oxidation – PVD – Etching – Surface Micro Matching – LIGA Process – Micro System Design Considerations

UNIT III - Concepts of Control System

Introduction – Open and Closed Loop Systems – Examples – Elements of Closed Loop Systems – Linear and Nonlinear System - Effect of Feedback on Overall Gain, Stability, Sensitivity and Noise – Transfer Function of Closed Loop System – Block Diagram Algebra and Reduction – Mason's Gain Formula.

UNIT IV -Time Response Analysis and Stability in Time and Frequency Domain

First Order System: Impulse and Step Input Analysis – Second Order System Analysis – Steady State Error – Stability Analysis: Routh Hurwitz Criterion – Root Locus Method – Construction

and Application - Nyquist Stability Criterion – Bode Diagrams – Polar Plot.

UNIT V - Design of Digital Control System

Z Plane Specifications of Control System Design – Digital Compensator Design – Frequency Response Method - State Feedback – Pole Placement Design – State Observers – Digital Filter Properties – Frequency Response – Kalman's Filter.

SUGGESTED READINGS

1. MEMS & Microsystems Design & Manufacture and Nano Scale Engineering, Tai-Ran Hsu, Wiley Publications, Second Edition, 2011.
2. Control Systems Engineering, R. Ananada Natrajan, P. Ramesh Babu, SCITECH Publications, Fifth Edition, 2012
3. Digital Control Engineering, M. Gopal, New age International (p) Ltd, Fifth Edition, 2012

17ECP105 B	ARDUINO AND ITS APPLICATIONS	Semester-II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Ability to design an Embedded System, component or process to meet desired needs within realistic constraints.
- To develop the next generation technologies, methods and tools for modeling, design, implementation and operation of hardware/software systems embedded in intelligent devices.
- To provide a broad overview of both theoretical and practical aspects of a design flow for embedded systems.
- To learn the basics of electronics, including reading schematics (electronics diagrams)
- To learn how to prototype circuits with a breadboard
- To learn the Arduino programming language and IDE

COURSE OUTCOMES

- Program the Arduino microcontroller to make the circuits work
- Understand the value and importance of learning a coding language
- Transform a physical input into a digital input and analyze it
- Connect the Arduino microcontroller to a serial terminal
- To understand communication and stand-alone use Program basic Arduino examples
- Explore the provided example code and online resources for extending knowledge about the capabilities of the Arduino microcontroller

UNIT I - Introduction to Embedded System

Definition of Embedded System – Features of Embedded System – Introduction to Arduino Microcontroller-Architecture of ATmega 328 Microcontroller- Features- Memory- ports

UNIT II - Embedded C basics, Timer and Interrupts

Embedded C Basics : Operators – Functions – Header files -Timer/Counter – Program for Time Delay and Counter –Interrupts

UNIT III - Interfacing Concepts

PWM generation - ADC Interfacing - Program for Temperature Sensor LM 35 Interface – DAC Interfacing Output - RTC Interfacing – Program for displaying the Time in LCD Display.

UNIT IV – Communication Protocols

Serial Communication Interface – USART – SPI – TWI – I2C- Bluetooth Interface.

UNIT V – Applications

LED Interfacing – Key Interfacing – DC Motor Interfacing – Stepper Motor Interfacing – LCD Interfacing – GPS interfacing.

SUGGESTED READINGS

1. Arduino Microcontroller: Processing for Everyone, Steven F. Barrett,Morgan & Clay Pool Publishers, Second Edition 2014

2. 30 Arduino Projects for the Evil Genius, Simon Monk, McGraw Hill Publishing Company Limited, Second Edition, 2013.

17ECP105 C	REAL TIME OPERATING SYSTEMS	Semester-II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To know the Fundamental elements of real-time multitasking embedded application software design and development. Processor and operating system concepts
- To provides a broad introduction to real time systems and their programming.
- To make the students to understand the fundamental problems, concepts, and approaches in the design and analysis of real-time systems
- To provides a broad introduction to real time systems and their programming.
- To make the students to understand the fundamental problems, concepts, and approaches in the design and analysis of real-time systems.
- To study issues related to the design and analysis of systems with real-time constraints.

COURSE OUTCOMES

- Program the Arduino microcontroller to make the circuits work
- Compare different scheduling algorithms and the schedulability criteria.
- Determine schedulability of a set of periodic tasks given a scheduling algorithm.
- Develop algorithms to decide the admission criterion of sporadic jobs
- To know the schedule of aperiodic jobs.
- Integrate resource access mechanisms with the scheduling techniques and develop integrated schedulability criteria.
- Enumerate the need and the challenges in the design of hard and soft real time systems.

UNIT I - Introduction

Real-Time Computation – Structure of A Real-Time System – Task Classes – Performance Measures For Real-Time Systems – Estimating Program Run Times – Task Assignment and Scheduling – Classical UniProcessor Scheduling Algorithms – Uniprocessor Scheduling of IRIS Tasks – Task Assignment – Mode Changes – Fault Tolerant Scheduling

UNIT II - Real-Time Models

Event-Based, Process-Based and Graph-Based Models – Pertinent Models –Real-Time Languages – System Performance Analysis – Optimization of Time Loading and Memory Loading Models of Multiprocessor Systems and Distributed Systems – Task Assignment – End to End Tasks in Heterogeneous Systems – Temporal Distance Constraints – Resource Contention – Resource Access Control – Priority Ceiling – Multiple Unit Resource Access.

UNIT III - RTOS Concepts

Foreground and Background Process – Resources – Tasks–Multitasking – Priorities – Schedulers – Kernel – Exclusion – Inter-Task Communication – Interrupts – Clock Tick – Micro C/OS II Kernel Structure – Micro C/OS II Initialization – Starting Micro C/OS II

UNIT IV - RTOS Functions

Task Management – Time Management – Semaphore Management – Mutual Exclusion - Semaphore – Event Management – Message Management – Memory Management – Porting Micro C/OS II

UNIT V - Real-Time Kernel and RTOS Applications

Principles – Design Issues – Polled Loop Systems – RTOS Porting to a Target – Comparison and Study of QNX, Vx works and PSOS – RTOS for Image Processing – Embedded RTOS for VOIP – RTOS for Fault - Tolerant Applications .

SUGGESTED READINGS

1. Real-Time Systems, Krishna, and Kang Shin, McGraw Hill, Second Edition , 2013.
2. Real-Time Systems: Theory and Practice, Rajib Mall, Pearson Education, First Edition, 2009.
3. Real-Time Design and Analysis – An Engineer’s Handbook, Philip Laplante, John Wiley Publications, 2003
4. Micro C/OS II - The Real-Time Kernel, Jean Labrosse, CMP Books, Second Edition, 2011.

17ECP111	ADVANCED ELECTRONIC CIRCUITS AND COMMUNICATION - PRACTICAL	Semester-I			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To identify and test various electronic components
- To use DSO for various measurements
- To plot the characteristics of diode and transistor
- To design and implement feedback amplifier circuits
- To measure the frequency of oscillators.
- To design and test regulated power supplies

COURSE OUTCOMES

- Verify the rectifier circuits using diodes and implement them using hardware
- Design the biasing circuits like self biasing
- Understand the construction, operation and characteristics of FET which can be used in the design of amplifiers
- Design simple circuits
- Know the benefits of feedback in amplifier
- Compare and classify oscillators.

(Any 10 Experiments)

1. Design of Double stage RC coupled amplifier
2. Design of Common Source FET Amplifier
3. Design of Feedback amplifier
4. Design of Wein bridge oscillator
5. Design of Phase shift oscillator
6. Design of Colpitts and Hartley oscillator
7. Design of Schmitt trigger
8. Design of AM Modulation
9. Design of FM Modulation
10. Design of PAM Modulation
11. Design of PPM Modulation
12. Design of PWM Modulation

17ECP112	EMBEDDED SYSTEMS - PRACTICAL	Semester-I			
		L	T	P	C
			-	4	2

COURSE OBJECTIVES

- Demonstrate the sensing of different physical parameters
- Explain the calibration of parameters measured and displayed
- Evaluate the data transfer
- To understand the need and applications of Microcontrollers and ARM Processors in embedded system.
- To understand architecture and features of typical Microcontroller
- To learn interfacing of real world input and output devices

COURSE OUTCOMES

- Define the arithmetical and logical assembly language for microcontroller
- Know the downloading procedure on hardware into flash ROM and show the testing data on defined port wish board
- Competent to evaluate the data transfer response
- Able to describe the microcontroller and ARM Processor Architecture and its Features
- Learn importance of microcontroller and ARM Processor in designing embedded applications
- Learn use of hardware and software tools.

(Any 10 Experiments)

1. LED interfacing
2. Data transfer program with parallel port and External Memory Interfacing
3. Key interfacing and Seven segment display interface
4. Stepper motor controller interface
5. Speed control of DC motor
6. PWM generation
7. Temperature monitoring and control
8. A/D converter interface
9. D/A converter
10. LCD interface
11. Bluetooth Interface
12. GSM/GPS interface

17ECP201	VHDL PROGRAMMING	Semester-II			
		L	T	P	C
			-	-	4

COURSE OBJECTIVES

- To learn the basics of language elements.
- To provide a strong knowledge about the VHDL Modeling.
- To introduce a hardware description language (HDL) for the specification, simulation, synthesis
- Implementation of digital logic systems.
- Design practice sessions and implementing digital logic systems with commercial electronic design (EDA) tools
- To know the features of programming and simulation techniques.

COURSE OUTCOMES

- Building simulation module as per system specification for e.g. VHDL model for ASIC design
- Understanding types of design such as high level design, operative part design, control part design, memory design etc
- Functioning and specifying the tools used for design as per requirement
- Creation of code, verification, testing software
- Testing various examples on the system
- Understanding the synthesis and simulation process of code

UNIT I - Introduction and Basic Concepts of VHDL

History of VHDL – Capabilities of VHDL – Hardware Abstraction – Basic Terminology – Entity Declaration - Architecture Body Declaration – Basic Language Elements – Identifiers – Data Objects – Data Type Operators.

UNIT II - Behavioral Modeling Techniques of VHDL

Behavioral Modeling: Entity Declaration – Architecture Declaration – Process Statements Variable Assignment Statements – Signal Assignments Statements – Wait Statement – IF Statement – Case Statement – Null Statement – Loop Statement – Exit Statement – Next Statement – Assertion Statement – Report Statements – More On Signal Assignment Statement – Multiple Process – Postponed Process.

UNIT III - Data Flow Modeling Techniques of VHDL

Data Flow Style of Modeling: Concurrent Signal Assignment Statement versus Signal Assignment – Delta Delay Revisited – Multiple Drivers – Conditional Signal Assignment Statement – Selected Signal Assignment Statement – Unaffected Value – Block Statement - Concurrent Assertion Statement.

UNIT IV - Structural Modeling

Component Declaration – Component Instantiation – Resolving Signal Value – Examples – Half Adder – Full Adder – Four to One Multiplexers – Decoders and Encoders.

UNIT V - Advanced Features in VHDL

Generics – Configuration – Configuration Specification – Configuration Declaration – Default

Rules – Conversion Functions – Direct Instantiation – Incremental Binding – Sub Programs – Sub Program Overloading - Operator Overloading – Signatures.

SUGGESTED READINGS

1. A VHDL Primer, J. Bhasker, Pearson Education. Third Edition, 2015.
2. VHDL: Programming by Examples, Douglas.P.Perry,Mc Graw Hill Publications, Fourth Edition,2014.
3. HDL Programming VHDL and Verilog, Nazeih M. Botros, Wiley India Pvt. Ltd, First Edition, 2012
4. Introductory VHDL: From Simulation to Synthesis, Yalamanchili, 1st Edition, 2011.

17ECP202	ARM MICROCONTROLLER	Semester-II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- Demonstrate the sensing of different physical parameters
- Explain the calibration of parameters measured and displayed
- Evaluate the data transfer
- To understand the need and applications of Microcontrollers and ARM Processors in embedded system.
- To understand architecture and features of typical Microcontroller
- To learn interfacing of real world input and output devices

COURSE OUTCOMES

- Define the arithmetical and logical assembly language for microcontroller
- Know the downloading procedure on hardware into flash ROM and show the testing data on defined port wish board
- Able to describe the microcontroller and ARM Processor Architecture and its Features
- Learn importance of microcontroller and ARM Processor in designing embedded applications
- Learn use of hardware and software tools.
- Develop interfacing to real world devices.

UNIT I - Introduction to Embedded System and LPC 2148 ARM Controller

Definition of Embedded System – Features of Embedded System – Types of Embedded System - LPC 2148 ARM Controller – Block Diagram – Memory and On Chip Peripheral Devices – ARM 7 TDMI - S CPU Registers – Modes of Operation – PSW.

UNIT II - Embedded C basics, GPIO (Slow), Timer and Interrupts

Embedded C Basics – GPIO (Slow) Register Map - Pin Connect Block - 8 Bit LED'S – 8 Bit Switches – Buzzer – Relay – Stepper Motor Interfaces -Timer/Counter – Block Diagram – Register Map – Program for Time Delay and Counter Operation - Register Map – External Interrupts - Timer/Counter based Interrupt.

UNIT III - PWM, ADC, DAC and RTC

PWM Features – Block Diagram – Register Map – Program for Generating Single Ended PWM - ADC Feature – Block Diagram – Register Map – Program for ADC and Temperature Sensor LM 35 Interface - DAC Feature – Block Diagram – Register Map – Program for Generating Analog Output - RTC Feature – Block Diagram – Register Map – Program for displaying the Time in LCD Display.

UNIT IV - Serial and Parallel Communication

UART Feature – UART0 Block Diagram – Register Map – Transmission and Reception of Messages for PC – SSP Feature – Register Map.

UNIT V - I2C

Introduction to I2C – I2C Feature in LPC 2148 – Block Diagram – Register Map – I2C Master

Mode Operation – Interfacing I2C based I/O Expander PCF 8574 – Interfacing LED – 7 Segment Display – Interfacing I2C based EEPROM – Programs.

SUGGESTED READINGS

1. ARM Microcontroller Interfacing: Hardware and Software, Warwick A. Smith, Gazelle Books Services, Second Edition, 2010.
2. ARM Microcontroller, B. Shantha Kumar Naik, Sapna Books House, First Edition, 2013.

17ECP203	TELECOMMUNICATION SYSTEMS	Semester-II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To learn the designing procedure and operation of circuits used for communication.
- To understand the basic concepts of AM, FM, and PM transmission and reception.
- To assess and evaluate different modulation and demodulation techniques.
- To evaluate the influence of noise on communications signals.
- To introduce students to various modulation and demodulation techniques of analog communication
- To analyze different parameters of analog communication techniques.

COURSE OUTCOMES

- Apply or a create suitable algorithm to solve a particular problem
- Understand and identify the fundamental concepts and various components of analog communication systems
- Explain signal to noise ratio, noise figure and noise temperature for single and cascaded stages in a communication system.
- Describe analog pulse modulation techniques and digital modulation technique
- Develop the ability to compare and contrast the strengths and weaknesses of various communication systems.
- Use of different modulation and demodulation techniques used in analog communication

UNIT I - Overview of Telecommunication

Introduction-History of Telecommunication-Telecommunication Network Internet - Classification of Data Network-Telecommunication Standards.

UNIT II - Electronics for Telecommunication

Introduction - Communication System Parameters - FDM – TDM - WDM. Transmission Media: Introduction – Fiber Optic Cables - Cabling Architecture.

UNIT III - Voice Communication

Introduction - Public Telephone Network - Telephone Types - Circuit – Out Going – Incoming Calls - Line Signaling – Intelligent Network Services - Business Telephone Systems.

UNIT IV - Wide Area Network and Broad Band Technologies

Introduction – Packet Switching Network - X.25 Frame Relay – SMDS – ISDN – SONET – ATM – POS – DTM - DSL – CM's - PON.

UNIT V - Network Management

Introduction - Policy Management - Evolution of Network Hardware and Software - Network Administration and Maintenance - Network Security Configuration Management – Telecommunication Management Network.

SUGGESTED READINGS

1. Introduction to Telecommunication, Gokhale, Delmar Publications, First Edition, 2011.
2. Telecommunication Switching, Traffic Networks, JE Flood, Pearson Education, Tenth Edition, 2011.
3. Telecommunication Switching Systems and Networks, Thiyagarajan Viswanath, Prentice Hall of India, Second Edition, 2010.

17ECP204	SIGNALS AND SYSTEMS	Semester-I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To understand the process of convolution between signals and able to solve differential equation using Laplace transform techniques.
- To understand the intuitive meaning of frequency domain and the importance of analyzing and processing signals in the frequency domain.
- Able to compute the Fourier series or Fourier transform Z-transform
- To introduce students the concept and theory of signals and systems needed in electronics and telecommunication engineering fields
- Knowledge about basic signal and system modeling concept and definitions
- Knowledge about the application and use of mathematical transforms and state-variables in order to solve electrical engineering problems

COURSE OUTCOMES

- Understand about various types of signals and systems, classify them, analyze them and perform various operations.
- Understand the use of transform to analysis of signals and systems in continuous and discrete time domain
- Implement the concept and theory of signals and systems in electronics and communication field.
- Ability to have idea of signal and system analysis and its characterization in time and frequency domain
- Students can perform mathematical and graphical convolution of signals and systems.
- Compute the Fourier series or Fourier transform Z-transform

UNIT I - Signals and systems

Introduction - CT and DT Signals – Transformation of the Independent Variable – CT and DT Systems – Basic System Properties. LTI System: - Introduction – DT LTI Systems – CT LTI Systems – Properties of LTI System.

UNIT II - Fourier series representation of Periodic signals

Introduction – Fourier Series Representation of CT Periodic Signals – Properties of CT Fourier Series – Fourier Series Representation of DT Periodic Signals – Properties of DT Fourier Series – Fourier Series and LTI System – Filtering.

UNIT III - CT and DT Fourier Transform

Introduction – Representation of Periodic Signals in Continues Time Fourier Transform – Fourier Transforms for Periodic Signals - Properties of the CT Fourier Transform – Convolution Property – Multiplication Property - Discrete Time Fourier Transform - Introduction – Representation of Periodic Signals in DT Fourier Transform – Fourier Transform for Period Signals – Properties of Discrete Time Fourier Transform - Convolution Property – Multiplication Property – Duality.

UNIT IV - Sampling

Introduction - Sampling Theorem – Reconstruction of a Signal From its Samples using Interpolation – Aliasing – DT Processing of a CT Signals – Sampling of DT Signals.

UNIT V - Laplace and Z transform

Introduction – Laplace Transform – Region of Convergence For LT – Inverse Laplace Transform – Properties of Laplace Transform - Z-Transform:- Introduction – Z-Transform – Region of Convergence for Z-Transform – Inverse Z-Transform – Properties of Z-Transform.

SUGGESTED READINGS

1. Signals and Systems, Alen V. Oppenheim Alan S. Wilsky and Hamid Nawab S, PHI, Second Edition, 2012.
2. Signals and Systems, Simon Haykin and Barry Van Veen, John Wiley & sons Inc. Second Edition, 2012
3. Signals and Systems, Anand Kumar.A, PHI Learning Press, Third Edition, 2013.

17ECP205 A	HIGH PERFORMANCE COMMUNICATION NETWORKS	Semester-III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To develop a comprehensive understanding of multimedia networking.
- To know the various types of Networks.
- To provide strong knowledge in ultra wideband networks and other types of UWB.
- To have knowledge on broadband networks, ATM networks and high performance networks.
- Understand the overview of Communication Networks, Network Services and layered Architecture.
- Understand the ATM and Wireless Networks.

COURSE OUTCOMES

- Know the communication networks principles and future networks.
- Know the network services and layered architectures.
- Explain the wireless networks, Internet and different protocols.
- Understand the circuit switched networks and ATM.
- Apply the concepts of Random Process to the design of Communication systems
- Gain knowledge in sampling and quantization

UNIT I - Introduction

Networking Principles - Digitalization Service and Layered Architecture - Traffic Characterization and QOS - Network Services - Network Elements - Network Monitoring - Network Control-Network Mechanisms - Network Element Management

UNIT II - Broadband Networks

Introduction – Multi-hop Wireless Broadband Networks-Mesh Networks - Importance of Routing Protocols - Routing Metrics - Packet Scheduling-Admission Control - Classification of Routing - Protocols - MANET Routing Protocols .

UNIT III - IP Networks

Technology Trends in IP Networks- Internet Protocol- IP Packet Communications in Mobile Communication Networks -TCP and VDP- Performance of TCP/IP Networks- Circuits Switched Networks- SONET-DWDM-DSL-Intelligent Network (IN) Scheme-Comparison with Conventional Systems -Merits of the IN Scheme -CATV.

UNIT IV - ATM Networks

Introduction to ATM- Reference Model - ATM Layer- ATM Adaptation Layer (AAL) - AAL1 - AAL2 - AAL3/4 - AAL5 -Traffic Classes - Traffic Management and Quality of Service - Traffic Descriptor - Traffic Shaping-ABR and Traffic Congestion -Network Management - Layer Management- ATM Signaling-ATM Addressing Format-Connection Establishment - IP/ATM Internetworking - IP Multicast over ATM

UNIT V - High Performance Networking With WIMAX and Ultra Wideband (WPAN)

Introduction - WIMAX Overview - Competing Technologies - Overview of The Physical Layer - PMP Mode - Mesh Mode -Multihop Relay Mode- Introduction- Time-Hopping Ultra wideband - Direct Sequence Ultra wideband – Multiband- Other Types Of UWB.

SUGGESTED READINGS

1. High Performance Communication Networks, Jean warland and Pravin Varaiya, , Morgan Kanffman Publishers, London, 2nd Edition ,2010.
2. ATM Networks, Sumit Kasera and Pankaj Sethi, Tata McGraw Hill Publications, Second Edition, 2006.

17ECP205 B	NANO ELECTRONICS	Semester-III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To discuss about the latest technology on nano systems based Nanoelectronics.
- To know the various methods to fabricate and measure Nanoscale features.
- To identify the critical parameters that one must evaluate when considering any new Nanoelectronics device.
- Know the types of nanotechnology, atomic structure, molecular technology and • preparation of nano materials
- Understand the fundamentals of nano electronics and its properties.
- Know the Silicon MOSFET's, QTD and carbon nano tubes

COURSE OUTCOMES

- Understand the fundamentals of Nano Electronics and its properties.
- Gain the concepts of quantum theory.
- Understand the latest technology on nano systems based Nano electronics
- Identify the various methods to fabricate and measure Nanoscale features.
- Evaluate the critical parameters when considering any new Nano electronics device.
- Understand the applications of Nano Electronics

UNIT I - Introduction

The Development of Microelectronics – The Region of Nanoelectronics - The Complexity Problem – The Challenge Initiated by Nanoelectronics. Basics of Nanoelectronics: Electromagnetic Fields and Photons – Quantization of Action, Charge, and Flux – Electrons Behaving as Waves – Electrons in Potential Wells – Diffusion Process.

UNIT II - Biochemical and Quantum-Mechanical Computers

DNA Computer – Information Processing with Chemical Reactions – Nanomachines – Parallel Processing - Quantum Computers – Bit and Q bit – Coherence and Entanglement – Quantum Parallelism.

UNIT III - Parallel Architectures for Nanosystems

Mono and Multiprocessor Systems – Some Considerations to Parallel Processing – Influence of Delay Time – Power Dissipation - Architecture for Processing in Nanosystems: Classic Systolic Arrays – Processor with Large Memory – Processor Array with SIMD and PIP Architectures.

UNIT IV - Soft Computing and Nanoelectronics

Methods of Soft Computing – Fuzzy Systems – Evolutionary Algorithms – Connectionist Systems – Computationally Intelligent Systems – Characteristics of Neural Networks in Nanoelectronics - Local Processing – Distributed and Fault-Tolerant Storage – Self-Organization.

UNIT V - Nanosystems as Information Processing Machines

Nanosystems as Functional Machines – Information Processing as Information Modification – System Design and its Interfaces – Requirements of Nanosystems - Uncertainties: Removal of

Uncertainties by Nanomachines – Uncertainties in Nanosystems – Uncertainties in the development of Nanoelectronics.

SUGGESTED READINGS

1. Basics of Nano Electronics, G. P. Singh, Animol Publications Pvt. Ltd., First Edition, 2011
2. Nanoelectronics and Nanosystems: From Transistors to Molecular and Quantum devices, Karl Goser Springer, New Delhi, First Edition Reprint, 2013.

17ECP205 C	BIOMEDICAL INSTRUMENTATION	Semester-III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To know the fundamental concept of origin of Bio-electric signals and recording it with highly precision equipment.
- To learn the various medical equipment used for diagnosis and therapeutic purpose.
- To provide a large number of quality trained Medical Electronics professionals for preventive and maintenance work needed to maintain hi-tech medical equipments in hospitals to ensure good health care.
- To explore the human body parameter measurements setups
- To give basic ideas about how multimedia evidences are useful in crime investigation.
- Understanding basic principles and phenomena in the area of medical diagnostic instrumentation, theoretical and practical preparation enabling students to maintain medical instrumentation.

COURSE OUTCOMES

- Understand the fundamental concept of origin of Bio-electric signals and recording it with highly precision equipment.
- Differentiate and analyze the biomedical signal sources.
- Identify common biomedical signals and distinguish characteristic features.
- Ability to study various transducers
- Identify common signal artifacts, their sources and formulate strategies for their suppression.
- Familiarize with patient safety issues related to biomedical instrumentation.

UNIT I - Human Body and Bio Sensors

The cell - Body Fluids - Musculoskeletal System - Respiratory System – Gastrointestinal System - Nerves System -Endocrine System - Circulatory system - The Body as a Control System- Electrodes for Biophysical Sensing - Medical Surface Electrodes - Micro Electrodes-Bioelectric amplifiers - Basic Amplifiers Configuration -Multiple Input Circuits Differential Amplifiers-Isolation Amplifiers.

UNIT II – Electrocardiography

The Heart as Potential Source - ECG waveform - Standard Lead System – Other ECG Signals - ECG Preamplifier - ECG Readout Devices ECG Machine Maintenance and Troubleshooting - Blood Pressure Measurements - Blood Flow Measurement Phonocardiography – Defibrillator Circuit - Pacemaker

UNIT III - Brain Function Measurement

Brain Scan - Electro Encephalograph - ECG Block Diagram - Preamplifier and ECG System Specifications

UNIT IV - Medical Laboratory Instruments

Blood - Blood Tests - Colorimeter - Flame photometer- Blood Cell Counter -PH/ Blood gas Analyzer - Chromatography - Hem Dialysis and Machine

UNIT V - Medical Ultra Sonography

What is ultra sound -- Physics of Sound and Waves - Reflection - Refraction, Diffraction and Scattering - Diffuse Reflection and Scattering - Ultra Sound Transducers -Absorption and Attenuation of Ultrasound Energy - Scan Modes and Scanning Systems -Electronically Scan Phase Array Transducers.

SUGGESTED READINGS

1. Introduction to Biomedical Instrumentation, Mandeep Singh, PHI Learning Private Limited, 2010.
2. Electronics and Medicine and Biomedical Instrumentation, Nandini.K.Jog, Prentice Hall of India, Private Limited, 1st Edition, 2013
3. Biomedical Instrumentation and Measurements, Leslie Cromwell, Fred. J. Weibell, Erich A. P. Feiffer, Prentice Hall of India, 2nd Edition, 2010

17ECP211	VLSI - PRACTICAL	Semester-II			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Introduced digital integrated circuits
- Introduce CMOS devices and manufacturing technology.
- Introduce CMOS logic gates and their layout.
- Ability to find Propagation delay, noise margins, and power dissipation in the digital VLSI circuits.
- Ability to design Combinational (e.g., arithmetic) and sequential circuit.
- Ability to design Memory in VLSI circuits.

COURSE OUTCOMES

- Analyze the CMOS layout levels, how the design layers are used in the process sequence, and resulting device structures (i.e. cross-sectional views).
- Implement digital logic designs of various types (i.e. combinational logic, multiplexers).
- Analyze performance issues and the inherent trade-offs involved in system design (i.e. power vs. speed).
- Complete a moderately complex design project involved with data path operators, data registers, serial/parallel conversion, clocking/timing details and feedback.
- Identify the interactions between process parameters, device structures, circuit performance, and system design.

(Any 10 Experiments)

1. Design and implementation of logic gates
2. Design and implementation of half adder & full adder
3. Design and implementation of half Subtractor & full Subtractor
4. Design and implementation of Encoder & decoder
5. Design and implementation of 4 bit & 8 bit multiplexer
6. Design and implementation of flip flops
7. Design and implementation of up/down counters
8. Design and implementation of shift register
9. Design and implementation of ALU
10. Design and simulation of Programmable Logic Array
11. Design and simulation of Traffic light Controller
12. Design and simulation of Real time clock

17ECP212	ARM MICROCONTROLLER - PRACTICAL	Semester-II			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- Demonstrate the sensing of different physical parameters
- Explain the calibration of parameters measured and displayed
- Evaluate the data transfer
- To understand the need and applications of Microcontrollers and ARM Processors in embedded system.
- To understand architecture and features of typical Microcontroller
- To learn interfacing of real world input and output devices

COURSE OUTCOMES

- Define the arithmetical and logical assembly language for microcontroller
- Know the downloading procedure on hardware into flash ROM and show the testing data on defined port with board
- Able to describe the microcontroller and ARM Processor Architecture and its Features
- Learn importance of microcontroller and ARM Processor in designing embedded applications
- Learn use of hardware and software tools.
- Develop interfacing to real world devices.

(Any 10 Experiments)

1. LED Interfacing
2. LCD Interfacing.
3. Stepper Motor Interfacing.
4. PWM generation.
5. ADC interface.
6. DAC interface
7. Digital Clock
8. LCD Interfacing
9. A/D converter interface
10. Interfacing PWM
11. Interfacing serial port
12. I² C Interface.

17ECP301	DIGITAL SIGNAL PROCESSING	Semester-III			
		L	T	P	C
		4		-	4

COURSE OBJECTIVES

- To understand the fundamental concepts and theory of Discrete Fourier Series and Discrete Fourier Transform.
- To get an exposure on Discrete Fourier Transforms (DFT), its applications and implementation by FFT techniques.
- To apply design technique for FIR type digital filters
- Understand fundamentals of Digital Signal Processing
- Analyze & compare different signal processing strategies.
- Become aware of some applications of DSP.

COURSE OUTCOMES

- Understand the fundamental concepts and theory of Discrete Fourier Series and Discrete Fourier Transform
- Ability to compute various transform analysis of Linear Time Invariant Systems.
- Implement problem solving strategies to DSP Problems.
- Able to test signal processing algorithms for various applications
- Ability to understand Various applications of DSP such as signal processing and telecommunication.
- Apply design techniques for FIR type digital filters

UNIT I - Structures For Discrete Time Systems

Introduction – Block Diagram and Signal Flow Graph Representation of Linear Co-Efficient Difference Equation – Basic Structures for IIR Systems – Basic Network Structures for FIR Systems – Lattice Structures – Zero Input Cycles in Fixed Point Realization of IIR Digital Filters.

UNIT II - Filter Design Techniques

Introduction – Design of Discrete Time IIR Filters from Continuous Time Filters – Frequency Transformation of Low Pass IIR Filters – Design of FIR Filters by Windowing - Comments on IIR and FIR Digital Filters.

UNIT III - Computation of Discrete Fourier Transform

Introduction – Efficient Computation of DFT – Decimation in Time FFT Algorithms – Decimation in Frequency Algorithms – Implementations of FFT Algorithms – FFT Algorithms for Composite N.

UNIT IV - TMS 320 C 6713 Overview

Introduction – TMS320C6713 Overview – Key Features – Architectural Overview – Functional Block Diagram - Internal Memory Organization – CALU – System Control – PLU – Interrupts – Addressing Modes – Instruction Set.

UNIT V - Introduction to MATLAB

Introduction To M-Files – Inline Functions – Control Flow – Relations & Logical Operators – Strings – Cell Arrays – Functions – MATLAB Graphics: - 2d Graphics – 3d Graphics – Animations.

SUGGESTED READINGS

1. Discrete Time Signal Processing, Oppenheim A.V and Schaffer RW, Buck .C, Prentice Hall India, Second Edition, 2013.
2. Digital Signal Processing – A computer Based Approach, Sanjith K.Mitra, McGraw Hill, Fourth Edition, 2013.
3. Digital Signal Processing, Nagoor Kani.A, Tata McGraw Hill Pvt Ltd, Second Edition, 2012.

17ECP302	DIGITAL IMAGE PROCESSING	Semester-III			
		L	T	P	C
		4		-	4

COURSE OBJECTIVES

- To get an exposure on Discrete Fourier Transforms (DFT), its applications and implementation by FFT techniques.
- To understand the fundamental concepts and theory of Discrete Fourier Series and Discrete Fourier Transform.
- To acquire the fundamental concepts of a digital image processing system
- To identify and exploit analogies between the mathematical tools.
- To design and implement with MATLAB algorithms for digital image process.
- Discuss techniques specific to 2D system

COURSE OUTCOMES

- Understand the need for image transforms different types of image transforms and their properties.
- Develop any image processing application.
- Learn different techniques employed for the enhancement of images.
- Learn different causes for image degradation and overview of image restoration techniques.
- Understand the need for image compression and to learn the spatial and frequency
- Apply design techniques for FIR type digital filters

UNIT I - Digital Image Fundamentals

Introduction to Elements of A Digital Image Processing System – Structure of the Human Eye – Image Formation and Contrast Sensitivity – Sampling and Quantization – Neighbors of Pixel – Distance Measure – Photographic Film Structure and Exposure – Film Characteristics – Image Processing Applications.

UNIT II - Image Transforms

Introduction to Fourier Transform – DFT – Properties of Two-Dimensional FT – Separability, Translation, Periodicity, Rotation, Average Value – FFT Algorithm – Walsh Transform – Hadamard Transform – Discrete Cosine Transform.

UNIT III - Image Enhancement

Definition – Spatial Domain Methods – Frequency Domain Methods – Histogram – Modification Techniques – Neighborhood Averaging – Median Filtering – Low Pass Filtering – Averaging of Multiple Images – Image Sharpening by Differentiation and High Pass Filtering.

UNIT IV - Image Encoding

Introduction to Image Encoding - Objective and Subjective Fidelity Criteria – Basic Encoding Process – Mapping – Quantizer – Coder – Encoding – Contour Encoding – Run Length Encoding - Image Encoding – Relative to Fidelity Criterion – Differential Pulse Code Modulation.

UNIT V - Application of Image Processing

Introduction to Image Classification – Image Recognition – Image Understanding – Image Fusion – Image Compression - Colour Image Processing.

SUGGESTED READINGS

1. Digital Image Processing, Rafael C. Gonzalez, Richard E Woods, Pearson Education, Third Edition, 2014.
2. Fundamentals of Digital Image Processing, Anil K.Jain, Pearson Education, Second Edition, 2010.
3. Digital Image Processing, S. Sridhar, Oxford University Press, First Edition, 2011

17ECP303	PROGRAMMABLE LOGIC CONTROLLER	Semester-III			
		L	T	P	C
		4		-	4

COURSE OBJECTIVES

- To identify logical process control in automation
- To connect PLC peripherals with PLC for logical functioning.
- To get strong knowledge in the developing of basic PLC programs
- To understand the components of a PLC system To understand how PLCs are used
- To understand the H&S requirements of a PLC- controlled system
- To understand different methods of interfacing with a PLC

COURSE OUTCOMES

- Identify the main parts of programmable logic controller
- Develop logic gate circuits for Boolean expressions
- Able to state basic PLC Terminology
- Identify logical process control, in automation.
- Describe how a programmable logic controller is programmed.
- Describe switching elements on input/output modules.

UNIT I - Introduction to Programmable Logic Controller

PLC Evolution – Hardwire Control System Compared with PLC System - Advantages of PLC's – Criteria for Selection of Suitable PLC - Block Diagram of PLC – Principle of Operation – CPU – Memory Organization – I/O Modules – Input Types – Logic, Analog – Pulse Train – Expansion Modules – Power Supplies to PLC – Modular PLC's .

UNIT II - Input Modules

Discrete Input Module – AC Input Module – DC Input Module – Sinking and Sourcing – Sensor Input – Special Input Modules – Sensors – Limit Switch, Reed Switch, Photo Electric Sensor, and Inductive Proximity Sensor – Input Addressing Scheme in Important Commercial PLC's.

Output Modules Discrete Output Module – TTL Output Module – Relay Output – Isolated Output Module – Surge Suppression in Output – Analog Outputs – Open Collector Output.

UNIT III - PLC Programming

Symbols Used – Relays and Logic Functions – OR, AND, Comparator - Programming Devices – Programming Methods – STL and CSF, FBD and Ladder Methods – Simple Instructions – Programming NC and NO Contacts - EXAMINE ON and EXAMINE OFF Instructions - Online, Offline Methods – Latch and Unlatch Outputs – Pulse Edge Evaluation – Timer Instructions – ON Delay and OFF-Delay Timer-Counter Instructions – UP / DOWN Counters – Timer and Counter Applications- Program Control Instructions – Data Manipulating Instructions – Math Instructions - Converting Simple Relay Ladder Diagram into PLC Relay Ladder Diagram – PID and PWM Functions.

UNIT IV - Networking

Levels of Industrial Control – Types of Networking – Network Communications – Principles – Transmission Media – Field Bus – Introduction, Concepts, International Field Bus Standards – Networking with TCP / IP Protocol – Network Architecture – Physical Addressing – LAN Technologies – Ethernet – Token Ring – Sub-Netting – Subnet Mask – Transport Layer – Ports – Sockets Network Services – File Transfer Protocol.

UNIT V - Data Acquisition Systems

Computers in Process Control – Data Loggers – Data Acquisition Systems (DAS) – Alarms – Direct Digital Control (DDC) - Characteristics of Digital Data – Controller Software – Computer Process Interface for Data Acquisition and Control –Supervisory Digital Control (SCADA) - Introduction and Brief History of SCADA – SCADA Hardware and Software.

SUGGESTED READINGS

1. Introduction to Programmable Logic Controllers, Gary Dunning, Thomson Delmar Learning, Third Edition, 2007.
2. Programmable Logic Controllers: Principles and Applications, Webb John W , A, Prentice Hall of India, Fifth Edition, 2009

17ECP304	MOBILE COMPUTING	Semester-III			
		L	T	P	C
		4		-	4

COURSE OBJECTIVES

- To build knowledge on various Mobile Computing algorithms.
- To provide application skills in working with Wireless Application Protocols to develop mobile content applications.
- To explore the characteristics of different types of mobile networks on the performance of a pervasive computing system
- To develop applications that are mobile-device specific and demonstrate current practice in mobile computing
- To have knowledge in the comprehension and appreciation of the design and development of context-aware solutions for mobile devices.
- To enable students to compare and contrast multiple division techniques, mobile communication systems, and existing wireless networks.

COURSE OUTCOMES

- Understand fundamentals of wireless communications.
- Know the various terminology, principles, devices, schemes, concepts, algorithms and different methodologies used in Wireless Communication Networks.
- Analyze security, energy efficiency, mobility, scalability, and their unique characteristics in wireless networks.
- Demonstrate basic skills for cellular networks design.
- Apply knowledge of TCP/IP extensions for mobile and wireless networking.
- Analyze different parameters of wireless communication techniques

UNIT I -Wireless Communication

Introduction – Wireless transmission – Frequencies for radio transmission – Signals – Antennas – Signal Propagation – Multiplexing – Modulations – Cellular Wireless Networks.

UNIT II - Satellite Systems and Broadcast Systems

Introduction – Applications – Basics –Routing –Localization – Handover – Examples – Cyclic repetition of data - Digital audio broadcasting - Digital video broadcasting - Convergence of Broadcasting and mobile

UNIT III - Wireless LAN

Infrared vs. Radio Transmission - Infrastructure and Adhoc Network – IEEE 802.11 – HYPERLAN – Bluetooth.

UNIT IV - Mobile Network Layer

Mobile Network layer - Mobile IP – Dynamic Host Configuration Protocol – Mobile Adhoc Networks.

UNIT V - Mobile Transport Layer

Traditional TCP - Classical TCP Improvements – TCP over 2.5/3G Wireless Networks -3G NETWORKS: Introduction-Principles of WCDMA - UMTS Network Architecture and Protocols.

SUGGESTED READINGS

1. Mobile Computing, Hasan Ahmed , Roopa Yavagal , Asoke K, McGraw Hill Education (India) Private Limited, 2nd Edition, 2011
2. Mobile communications, Jochen Schiller, Pearson Education, New Delhi, Second Edition, 2008.
3. 3G Networks, Architecture, Protocols and Procedures, SumitKasera and NishitNarang, Tata McGraw Hill Professional networks Series, New Delhi, 2008.

17ECP305A	CRYPTOGRAPHY AND NETWORK SECURITY	Semester-III			
		L	T	P	C
		4		-	4

COURSE OBJECTIVES

- To describe and analyze existing authentication protocols.
- To analyze key agreement algorithms to identify their weakness
- To develop knowledge on system level security and misuse of computer security
- Acquire background on well known network security protocols
- Learn fundamentals of cryptography and its application to network security
- Acquire background on hash functions; authentication; firewalls; intrusion• detection techniques

COURSE OUTCOMES

- Understand various Cryptographic Techniques
- Apply various public key cryptography techniques
- Implement Hashing and Digital Signature techniques
- Understand the various Security Applications
- Implement system level security applications
- Understand network security threats, security services, and countermeasures

UNIT II - Public Key Cryptography

Key Management – Diffie-Hellman Key Exchange – Elliptic Curve Architecture and Cryptography - Introduction To Number Theory – Confidentiality Using Symmetric Encryption – Public Key Cryptography and RSA.

UNIT III - Authentication and Hash Function

Authentication Requirements – Authentication Functions – Message Authentication Code - Hash Functions – Security of Hash Functions and MAC's – MD5 Message Digest Algorithm - Secure Hash Algorithm – RIPEMD – HMAC Digital Signatures – Authentication Protocols.

UNIT IV - Network Security

Authentication Applications: Kerberos – X.509 Authentication Service – Electronic Mail Security – PGP – S/MIME - IP Security – Web Security.

UNIT V - System Level Security

Intrusion Detection – Password Management – Viruses and Related Threats – Virus Counter Measures – Firewall Design Principles – Trusted Systems.

SUGGESTED READINGS

1. Cryptography and Network Security – Principles and Practices, William Stallings, Pearson Education, Sixth Edition, 2013
2. Cryptography and Network Security, Behrouz A. Foruzan, Tata McGraw-Hill Publications, Second Edition, 2011.
3. Applied Cryptography, Bruce Schneier, John Wiley & Sons Inc, Second Edition, 2010.

17ECP305B	PRINCIPLES OF ROBOTICS	Semester-III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To learn the basic configuration of Robotics
- To understand the various types of Robots.
- To get an exposure in Robot control systems
- To acquire the knowledge on advanced algebraic tools for the description of motion
- To develop the ability to analyze and design the motion for articulated systems.
- To develop an ability to use software tools for analysis and design of robotic systems

COURSE OUTCOMES

- Understand the relationship between mechanical structures of industrial robots and their operational workspace characteristics.
- Illustrate the kinematics and dynamics of robotics.
- Implementation of related instrumentation and control in robotics
- Ability to solve inverse kinematics of simple robot manipulators
- Able to do the path planning for a robotic system
- Identify a Robot for a specific application

UNIT I - Introduction and Terminologies

Definition-Classification- History - Robots Components - Degrees of Freedom-Robot Joints- Coordinates- Reference Frames-Workspace-Robot Languages-Actuators-Sensors- Position, Velocity and Acceleration Sensors-Torque Sensors-Tactile and Touch Sensors-Proximity and Range Sensors-Social Issues

UNIT II - Kinematics

Mechanism - Matrix Representation - Homogenous Transformation - Inverse Kinematics-Solution and Programming - Degeneracy and Dexterity

UNIT III - Differential Motion & Velocities

Jacobian - Differential Motion of Frames - Interpretation - Calculation of Jacobian - Inverse Jacobian – Design - Lagrangian Mechanics - Dynamic Equations - Static Force Analysis

UNIT IV - Robot Control System

Sensor Characteristics- Hydraulic, Pneumatic and Electric Actuators - Trajectory Planning-Decentralized PID Control - Non-Linear Decoupling Control

UNIT V - Image Processing & Vision Systems

Two and Three Dimensional Images - Spatial and Frequency Domain Representation - Noise and Edges - Convolution Masks - Processing Techniques – Thersholding - Noise Reduction - Edge Detection-Segmentation - Image Analysis and Object Recognition

SUGGESTED READINGS

1. Introduction to Robotics: Analysis, Control, Applications, Saeed B. Niku, Wiley India Pvt Ltd, Second Edition, 2012.
2. Introduction to Robotics Mechanics and Control, John J. Craig, Tata McGraw Hill Publishing Company Limited. Third Edition, 2008.
3. Industrial Robotics: Technology, Programming, and Applications, Mikell P Groover, Tata McGraw Hill Publishing Company Limited, Second Edition, 2012.

17ECP305C	MATLAB AND SIMULINK PROGRAMMING	Semester-III			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES

- To introduce the MATLAB for numerical computations to know the basic concepts.
- To familiarize basic commands through the Command window and output through the Graph window
- Introduce the MATLAB software environment
- Apply a variety of common numeric techniques to solve and visualize engineering-related computational problems
- To program scripts and functions using the Matlab development environment.
- To use basic flow controls (if-else, for, while).

COURSE OUTCOMES

- Understand the concept of time response and frequency response of the system
- Use MATLAB effectively to analyze and visualize data
- Apply numeric techniques and computer simulations to solve engineering-related problems
- Apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objectives
- Design and document computer programs and analyses in a careful and complete manner so as to effectively communicate results,
- Demonstrate understanding and use of fundamental data structures (classes). 6. Create and control simple plot and user-interface graphics objects in MATLAB.

UNIT I

MATLAB Basics – Variables - Arrays - Multidimensional Sub Arrays - Special Values - Displaying Output Data-Data Files- Scalar and Array Operations - Hierarchy of Operations -Built-In MATLAB Functions- Introduction to Plotting- Debugging MATLAB Programs.

UNIT II

Branching Statements - Logical Data type - Vectorization.

UNIT III

User-Defined & I/O Functions-Introduction to MATLAB Functions- Variable Passing in MATLAB-Three Optional Arguments- Sharing Data Using Global Memory- Preserving Data Between Calls to a Function- Sub Functions-Private Functions-Nested Functions- Complex Data- String Functions-Text Read Function-Load And Save Commands- MATLAB File Processing-File Opening and Closing- Binary I/O Functions-Formatted I/O Functions- Comparing Formatted and Binary I/O Function- File Positioning and Status Functions.

UNIT IV

Handle Graphics & GUI - Graphics System-Object Handles-Examining and Changing Object Properties- User-Defined Data- Finding Objects- Selecting Objects -Object Properties-Graphical User Interface Components-Dialog Boxes- Menus.

UNIT V

Simulink Basics: Introduction-Simulink Modeling-Solvers- Simulating Model Using Variables from MATLAB-Data Import/Export - State – Space Modeling & Simulation- Creation of Subsystems-Mass Subsystem.

SUGGESTED READING

1. MATLAB programming for Engineers, Stephen J. Chapman, Cengage Learning Fourth Edition, 2014.
2. MATLAB & its Application in Engineering, Rajkumar Bansal, Ashokkumar Good, Manoj kumar Sharma, Person Education. First Edition, 2010.
3. MATLAB and Simulink – Introduction to Applications, Partha S.Mallick, Scitech Publications, Fourth Edition, 2011.

17ECP311	DIGITAL SIGNAL PROCESSING - PRACTICAL	Semester-III			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To implement Linear and Circular Convolution
- To implement FIR and IIR filters
- Familiar with the most important methods in DSP, including digital filter design, transform-domain processing and importance of Signal Processors.
- Aware about implications of the properties of systems and signals
- To design FIR filters and IIR Filters
- Analyze discrete-time filter banks and multi-rate signal processing system

COURSE OUTCOMES

- Analyze the CMOS layout levels, how the design layers are used in the process sequence, and
- Understand the handling of discrete/digital signals using MATLAB
- Understand the basic operations of Signal processing
- Analyze the spectral parameter of window functions
- Design IIR, and FIR filters for band pass, band stop, low pass and high pass filters
- Design the signal processing algorithm using MATLAB

(Any 10 Experiments)

USING TMS320C5X/TMS320C54XX/TMS320C67XX/MATLAB

1. Study of addressing Modes of DSP using simple examples
2. Arithmetic operations
3. DFT computations
4. FFT Computations
5. Convolution of two discrete signals
6. Correlation of two discrete signals
7. Quantization noise
8. Waveform generation
9. FIR Filter design
10. IIR filter design
11. Discrete Cosine Transform
12. Kalman filter

17ECP312	DIGITAL IMAGE PROCESSING - PRACTICAL	Semester-III			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES

- To get an exposure on Discrete Fourier Transforms (DFT), its applications and implementation by FFT techniques.
- To understand the fundamental concepts and theory of Discrete Fourier Series and Discrete Fourier Transform.
- To acquire the fundamental concepts of a digital image processing system
- To identify and exploit analogies between the mathematical tools.
- To design and implement with MATLAB algorithms for digital image process.
- To treat the 2D systems as an extension of 1D system design
- Discuss techniques specific to 2D system

COURSE OUTCOMES

- Understand the need for image transforms different types of image transforms and their properties.
- Develop any image processing application.
- Learn different techniques employed for the enhancement of images.
- Learn different causes for image degradation and overview of image restoration techniques.
- Understand the need for image compression and to learn the spatial and frequency
- Apply design techniques for FIR type digital filters

(Any 10 Experiments)

1. Generation of Signals
2. Amplitude Modulation & FFT response
3. Image Sampling – Zooming & Shrinking Operations
4. Basic Gray Level Transformations: Image Negative, Power law and log transforms
5. 2-D Discrete Fourier Transform
6. Walsh Transform
7. Image Contrast Enhancement by Histogram Equalization Technique
8. Spatial Image Filtering: Low pass and high pass filtering
9. 2-D Wavelet Transform
10. Image Compression.
11. Segmentation using watershed transform
12. Edge detection using Operators

17ECP491	Project and Viva-voce	Semester-VI			
		L	T	P	C
		-	-	-	15

The students are expected to do project in one of the thrust areas of Electronics like Embedded Systems, VLSI, Power Electronics, and Communication Systems. The topic can be chosen in the concerned area in consultation with the guide. The work can be carried out either in the department itself, or in some reputed institutions of the country. The work must be related to leading research areas in Electronics. A detailed report of the work done and the results and analysis must be submitted to Head of the Department. The report should contain an introduction regarding the work, the importance and application of the work and the contribution of the student, in detail.

Those who are doing project outside the University must send report of the progress of the work at least once in a week by e-mail, to the guide. They have to report to the college physically at least once in a month and present the progress of the work. At the end of the semester, the student has to give a presentation (with the help of OHP or LCD projector) for 20 to 40 minutes in the department, in addition to the external viva voce.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2017 - 2018)
முதல்பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 17LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016-2017)

பகுதி - I, தமிழ்

பருவம் I

16LAU101 :

தமிழ் முதல் தாள்

4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

அலகு - I : இக்கால இலக்கியம்:

(10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் - சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை -

ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் -மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் - புதையுண்ட வாழ்க்கை.

அலகு - II : அற இலக்கியம்:

(10 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் - 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்:

(10 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு - IV : கட்டுரை:

(10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்

2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்

3. வாழ்க்கை - இளவழகனார்

4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்

5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:

(8 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)

2. மொழிபெயர்ப்பு

3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

17CTU101**Programming Fundamentals Using C / C++****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Int:40 Ext : 60****Total: 100****Course Objectives (CO)**

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program.

UNIT-I**Introduction to C and C++:**

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++.

Data Types, Variables, Constants, Operators and Basic I/O: Declaration, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators, Using Comments in programs, Character I/O, Formatted and Console I/O, Using Basic Header Files.

Expressions, Conditional Statements and Iterative Statements: Simple Expressions in C++, Understanding Operators Precedence in Expressions, Conditional Statements, Understanding syntax and utility of Iterative Statements, Use of break and continue in Loops, Using Nested Statements.

UNIT-II

Functions and Arrays: Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays, Use Various types of arrays, Two-dimensional Arrays, Introduction to Multi-dimensional arrays.

UNIT-III

Derived Data Types (Structures and Unions): Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members.

Pointers and References in C++: Understanding a Pointer Variable, Simple use of Pointers, Pointers to Pointers, Pointers to structures, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions.

UNIT-IV

File I/O, Preprocessor Directives: Opening and closing a file, Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives, Macros.

UNIT-V

Using Classes in C++: Principles of Object-Oriented Programming, Defining & Using Classes, Constructors, Constructor Overloading, Function overloading and Operator overloading in classes, Class Variables & Functions, Access specifiers, Overview of Template classes and their use.

Inheritance, Polymorphism and Exception Handling: Introduction to Inheritance, Polymorphism, Basics Exceptional Handling.

Suggested Readings:

1. BjarneStroustrup, "Programming -- Principles and Practice using C++", 2nd Edition, Addison-Wesley 2014.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

UNIT -I Introduction

Logic gates, Boolean algebra, circuit simplification, combinational circuits: Adders and Subtractors –Multiplexers and De multiplexers – Encoders and Decoders- sequential circuits: Flip Flop's, registers, counters and memory units.

UNIT -II Data Representation and Basic Computer Arithmetic

Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

UNIT –III Basic Computer Organization and Design

Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

UNIT-IV Central Processing Unit

Register organization, arithmetic and logical micro-operations, stack organization, micro programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining and parallel architecture.

UNIT –V Memory and Input-Output Organization

Cache memory, Associative memory, mapping Input / Output: External Devices, I/O Modules, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels.

Suggested Readings:

1. Dos Reis, A. J. (2009). Assembly Language and Computer Architecture using C++ and JAVA. Course Technology
2. Stallings, W. (2010). Computer Organization and Architecture Designing for Performance (8th ed.) New Delhi: Prentice Hall of India,
3. Mano, M.M. (2013). Digital Design, New Delhi: Pearson Education Asia.
4. Carl Hamacher. (2012). Computer Organization (5th ed.). New Delhi: McGrawHill.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To develop a basic understanding of many areas of information technology and how they are used
- To understand the basic structure of a program including sequence, decisions and looping
- To understand how to design a program to solve a simple program
- To introduce the basics of several programming language and understand the commonality and differences in languages
- To lay a basic foundation involving hardware, software, navigation, the Internet for future development
- To understand what a database is and how to design a working model

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of high-level structured programming logic and algorithm development.
2. Demonstrate knowledge of structured program design and modularity.
3. Demonstrate knowledge of file-based input/output operations, file manipulation and maintenance, extract reporting, and report writing.
4. Demonstrate knowledge of records, data types and structures, storage classes, addressable memory locations.
5. Demonstrate knowledge of table utilization, arrays and subscripts.
6. Demonstrate knowledge of arithmetic expressions, control structures, iteration techniques.

UNIT – I

Language Evolution Machine Language, Assembly Language, High Level Language. Translators: compiler, Interpreter and Assembler. The Compilation Process, Linker, Loader, Study of HLL, Characteristics of Good Language, Generation of Languages, Study of Programming Languages (Function Oriented, Object Oriented, Event-Based).

UNIT – II

Programming Construction Tools Problem Analysis, Process Analysis, Conceptual Development of Solution. Development Tools: Algorithm: Types of Algorithm, Algorithm of Analysis, Advantage and Disadvantage of Algorithm, Complexity of Algorithm, Big-O Notation.

UNIT – III

Flowcharts: Types of Flowcharts, Advantage and Disadvantage of Flowchart.
Pseudocode: Definition and Its Characteristics Control Statements Basics of
Programming Language: Usage of Character Set, Meaning of Keywords and Identifiers,
Role of Data Types, Constants and Variables.

UNIT – IV

Importance of Casting, Different Types of Operators and their Precedence, Expressions,
Conditional Statements (One-Way, Two-Way and Multi-Way Conditional), Looping
Statements (For, While, do-while), Usage of Exit, continue, Break and Goto Statement.

UNIT – V

Arrays: Arrays, One dimensional array, Various operation on Array (Inserting of Elements,
Deleting of Element, Rotating List, Sorting, Searching, Merging Etc) and Two
dimensional arrays (Matrix Addition, Transpose of Matrix, Matrix Multiplication),
Modular programming and its features.

Suggested Readings:

1. Anil V.Chouduri. The Art of Programming through Flowchart and Algorithms. Laxmi Publication.
2. Maureen Sprankle (2009). Problem Solving Programming Concepts (7th ed.). Pearson Education.
3. Behrouz Forouzan. Basic of Computer Science. Cengage Learning
4. Donald Knuth. The Art of Computer Programming Vol-I,II, III, Pearson.
5. Horowitz, Sahani. Fundamental of Computer Algorithm. Orient Longman.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program.

List of Programs

1. WAP to display Fibonacci series (i)using recursion, (ii) using iteration
2. WAP to compute the sum of the first n terms of the following series
 $S = 1 + 1/2 + 1/3 + 1/4 + \dots$
3. Write a program to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.

4. WAP to print the sum and product of digits of an integer.
5. WAP to reverse a number.
6. Write a program that checks whether a given string is Palindrome or not.
7. WAP to print a triangle of stars as follows (take number of lines from user):

```
*  
***  
*****  
*****  
*****
```

8. WAP to perform following actions on an array entered by the user:
 - i) Calculate and print the sum and average of the elements of array
 - ii) Print the maximum and minimum element of array
9. Write a program that swaps two numbers using pointers.
10. Write a program which takes the radius of a circle as input from the user, passes it to another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.
11. Write a program to perform operations on strings.
12. Write a program to perform following Matrix operations (2-D array implementation):
 - a) Sum b) Difference c) Product
13. Create a structure Student containing fields for Roll No., Name, Class, Year and Total Marks. Create 10 students and store them in a file.
14. Create the Person class. Create some objects of this class (by taking information from the user). Inherit the class Person to create two classes Teacher and Student class. Maintain the respective information in the classes and create, display and delete objects of these two classes (Use Runtime Polymorphism).
15. Copy the contents of one text file to another file using command line argument.

17CTU112 COMPUTER SYSTEM ARCHITECTURE- PRACTICAL 3H – 2C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

List of Experiments

1. Verification of Logic Gates
2. Code converters
3. Realization of Multiplexer using basic gates
4. Encoder and Decoder
5. Realization Half and Full adders
6. Realization of Subtractor
7. Realization of Parity generator
8. Flip-Flop Circuits
9. Digital to analog Converters
10. Demonstrate a Basic Arithmetic Computing operations

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives (CO)

- To create a document in Microsoft Word with formatting options, edit, save, and print documents to include documents with lists and tables, Format text and to use styles, add a header and footer to a document, add a graphic to a document.
- To write functions in Microsoft Excel to perform basic calculations and to convert number to text and text to number.
- To indicate the names and functions of the Excel interface components.
- To enter and edit data, Format data and cells.
- Construct formulas, including the use of built-in functions, and relative and absolute references.
- Create and modify charts.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Modify text using various formatting options from the editing tools under the Home tab, Set up section breaks to create different headers and footers for the odd and even pages within the document sections.
2. Demonstrate the mechanics and uses of Word tables to organize and present data, Demonstrate working knowledge of using Word's themes and clip art to create a variety of visual effects.
3. Demonstrate working knowledge of Word's advanced formatting techniques and presentation styles,
4. Demonstrate applicable knowledge and uses of accepted business style formatting conventions.
5. Create and design a spreadsheet for general office use, demonstrate the basic mechanics and navigation of an Excel spreadsheet.
6. Demonstrate formatting techniques and presentation styles, demonstrate the use of basic functions and formulas

List of Programs

Practical exercises based on MS Office/ Open Office tools using document preparation and spreadsheet handling packages.

MS Word

1. Prepare **a grocery list** having four columns (Serial number, The name of the product, quantity and price) for the month of April, 06.

- Font specifications for Title (Grocery List): 14-point Arial font in bold and italics.
- The headings of the columns should be in 12-point and bold.
- The rest of the document should be in 10-point Times New Roman.

- Leave a gap of 12-points after the title.

2. Create a **telephone directory**.

- The heading should be 16-point Arial Font in bold
- The rest of the document should use 10-point font size
- Other headings should use 10-point Courier New Font.
- The footer should show the page number as well as the date last updated.

3. Design a **time-table form** for your college.

- The first line should mention the name of the college in 16-point Arial Font and should be bold.
- The second line should give the course name/teacher's name and the department in 14-point Arial.
- Leave a gap of 12-points.
- The rest of the document should use 10-point Times New Roman font.
- The footer should contain your specifications as the designer and date of creation.

4. BPB Publications plans to release a new book designed as per your syllabus. Design the **first page of the book** as per the given specifications.

- The title of the book should appear in bold using 20-point Arial font.
- The name of the author and his qualifications should be in the center of the page in 16-point Arial font.
- At the bottom of the document should be the name of the publisher and address in 16-point Times New Roman.
- The details of the offices of the publisher (only location) should appear in the footer.

5. Create the following one page documents.

- Compose a note inviting friends to a get-together at your house, Including a list of things to bring with them.
- Design a certificate in landscape orientation with a border around the document.
- Design a Garage Sale sign.
- Make a sign outlining your rules for your bedroom at home, using a numbered list.

6. Create the following documents:

- A newsletter with a headline and 2 columns in portrait orientation, including at least one image surrounded by text.
- Use a newsletter format to promote upcoming projects or events in your classroom or college.

7. Convert following text to a table, using comma as delimiter

Type the following as shown (do not bold).

Color, Style, Item

Blue, A980, Van

Red, X023, Car

Green, YL724, Truck

Name, Age, Sex

Bob, 23, M

Linda, 46, F

Tom, 29, M

8. Enter the following data into a table given on the next page.

Salesperson	Dolls	Trucks	Puzzles
Kennedy, Sally	1327	1423	1193
White, Pete	1421	3863	2934
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067

Add a column Region (values: S, N, N,S,S,S) between the Salesperson and Dolls columns to the given table Sort your table data by Region and within Region by Salesperson in ascending order:

In this exercise, you will add a new row to your table, place the word Total at the bottom of the Salesperson column, and sum the Dolls, Trucks, and Puzzles columns.

9. Wrapping of text around the image.

10. Following features of menu option must be covered

FILE Complete menu

EDIT Complete menu

VIEW Complete menu

INSERT Complete menu

FORMAT Complete menu

TABLE Complete menu

WINDOW Complete menu

HELP Complete menu

TOOLS All options except Online collaboration, Tools on Macro, Templates

MS Excel

1. Enter the Following data in Excel Sheet

REGIONAL SALES PROJECTION

State	Qtr1	Qtr2	Qtr3	QTR4	Qtr Total	Rate Amount
Delhi	2020	2400	2100	3000	15	
Punjab	1100	1300	1500	1400	20	
U.P.	3000	3200	2600	2800	17	
Haryana	1800	2000	2200	2700	15	
Rajasthan	2100	2000	1800	2200	20	

TOTAL AVERAGE

(a) Apply Formatting as follow:

- Title in TIMES NEW ROMAN
- Font Size - 14
- Remaining text - ARIAL, Font Size -10
- State names and Qtr. Heading Bold, Italic with Gray Fill Color.
- Numbers in two decimal places.
- Qtr. Heading in center Alignment.
- Apply Border to whole data.

(b) Calculate State and Qtr. Total

(c) Calculate Average for each quarter

(d) Calculate Amount = Rate * Total .

2. Given the following worksheet

	A	B	C	D
1	Roll No.	Name	Marks	Grade
2	1001	Sachin	99	
3	1002	Sehwag	65	
4	1003	Rahul	41	
5	1004	Sourav	89	
6	1005	Har Bhajan	56	

Calculate the grade of these students on the basis of following guidelines:

If Marks	Then Grade
>= 80	A+
>= 60 < 80	A

>= 50 < 60	B
< 50	F

3. Given the following worksheet

	A	B	C	D	E	F
1	Salesman			Sales in (Rs.)		
2	No.	Qtr1	Qtr2	Qtr3	Qtr4	Total
3	S001	5000	8500	12000	9000	
4	S002	7000	4000	7500	11000	
5	S003	4000	9000	6500	8200	
6	S004	5500	6900	4500	10500	
7	S005	7400	8500	9200	8300	
8	S006	5300	7600	9800	6100	

Calculate the commission earned by the salesmen on the basis of following Candidates:

If Total Sales	Commission
< 20000	0% of sales
> 20000 and < 25000	4% of sales
> 25000 and < 30000	5.5% of sales
> 30000 and < 35000	8% of sales
>= 35000	11% of sales

The total sales is sum of sales of all the four quarters.

4. A company XYZ Ltd. pays a monthly salary to its employees which consists of basic salary, allowances & deductions. The details of allowances and deductions are as follows:

Allowances

- HRA Dependent on Basic
 - 30% of Basic if Basic <=1000
 - 25% of Basic if Basic>1000 & Basic<=3000
 - 20% of Basic if Basic >3000
- DA Fixed for all employees, 30% of Basic
- Conveyance Allowance Rs. 50/- if Basic is <=1000
Rs. 75/- if Basic >1000 & Basic<=2000
Rs. 100 if Basic >2000
- Entertainment Allowance NIL if Basic is <=1000 Rs. 100/- if Basic > 1000

Deductions

- Provident Fund 6% of Basic
- Group Insurance Premium Rs. 40/- if Basic is <=1500
Rs. 60/- if Basic > 1500 & Basic<=3000
Rs. 80/- if Basic >3000

Calculate the following:

Gross Salary = Basic + HRA + DA + Conveyance + Entertainment
 Total deduction = Provident Fund + Group Insurance Premium
 Net Salary = Gross Salary – Total Deduction.

5. Create Payment Table for a fixed Principal amount, variable rate of interests and time in the format below:

No. of Installments	5%	6%	7%	8%	9%
3	XX	XX	XX	XX	XX
4	XX	XX	XX	XX	XX
5	XX	XX	XX	XX	XX
6	XX	XX	XX	XX	XX

6. Use an array formula to calculate Simple Interest for given principal amount. Given the Rate of Interest and time.

Rate of Interest	8%
Time	5 Years
Principal	Simple Interest
1000	?
18000	?
5200	?

7. The following table gives year wise sale figure of five salesmen in Rs.

Salesman	2000	2001	2002	2003
S1	10000	12000	20000	50000
S2	15000	18000	50000	60000
S3	20000	22000	70000	70000
S4	30000	30000	100000	80000
S5	40000	45000	125000	90000

- Calculate total sale year wise.
- Calculate the net sale made by each salesman
- Calculate the maximum sale made by the salesman
- Calculate the commission for each salesman under the condition.
 - If total sales >4,00,000 give 5% commission on total sale made by the salesman.
 - Otherwise give 2% commission.
- Draw a bar graph representing the sale made by each salesman.
- Draw a pie graph representing the sale made by salesman in 2000.

8. Enter the following data in Excel Sheet

PERSONAL BUDGET FOR FIRST QUARTER

Monthly Income (Net): 1,475

EXPENSES	JAN	FEB	MARCH	QUARTER TOTAL	QUARTER AVERAGE
Rent	600.00	600.00	600.00		
Telephone	48.25	43.50	60.00		
Utilities	67.27	110.00	70.00		
Credit Card	200.00	110.00	70.00		
Oil	100.00	150.00	90.00		
AV to					
Insurance	150.00				
Cable TV	40.75	40.75	40.75		

Monthly Total

Calculate Quarter total and Quarter average.

- Calculate Monthly total.
- Surplus = Monthly income - Monthly total.
- What would be total surplus if monthly income is 1500.
- How much does telephone expense for March differ from quarter average.
- Create a 3D column graph for telephone and utilities. (f) Create a pie chart for monthly expenses.

9. Enter the following data in Excel Sheet

TOTAL REVENUE EARNED FOR SAM'S BOOKSTALL

Publisher name	1997	1998	1999	2000	total
A	Rs.1000.00	Rs.1100.00	Rs.1300.00	Rs.800.00	
B	Rs.1500.00	Rs.700.00	Rs.1000.00	Rs.2000.00	
C	Rs.700.00	Rs.900.00	Rs.1500.00	Rs.600.00	
D	Rs.1200.00	Rs.500.00	Rs.200.00	Rs.1100.00	
E	Rs.800.00	Rs.1000.00	Rs.3000.00	Rs.560.00	

- Compute the total revenue earned.
- Plot the line chart to compare the revenue of all publisher for 4 years.
- Chart Title should be Total Revenue of sam's Bookstall (1997-2000)
- Give appropriate categories and value axis title.

10. Generate 25 random numbers between 0 & 100 and find their sum, average and count. How many no. are in range 50-60.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 100 Total: 100

Course Objectives (CO)

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Course Outcomes (COs)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT-I: Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. III-effects of fire works.

Unit III: Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of

biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2017 - 2018)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 17LSU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)

பகுதி - I, தமிழ்

பருவம் II

16LAU201 :

தமிழ் இரண்டாம் தாள்

4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

அலகு - I : பக்தி இலக்கியம்

(10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம், வளர்ச்சி, வரலாறு.

1. சைவம் - பெரியபுராணம் - திருமூலநாயனார் புராணம்.
2. வைணவம் - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு - II : சங்க இலக்கியம் :

(15 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). எட்டுத்தொகை

நற்றிணை : பிரசம் கலந்த - பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை - குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகாச்சிறப்பு -

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு

இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடாத்தொட கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் -பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை = பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் – ‘சிறுதினை மலரொடு’ என்பதிலிருந்துதொடங்கி,

‘அறிந்தவாறே’ என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – ‘தெய்வம் சான்ற’ என்பதிலிருந்து தொடங்கி,

‘நல்குமதி’ என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம்

(6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – கண்ணகியின் சிறப்பு:

‘நாகநீள் நகரொடு’ என்பதிலிருந்து தொடங்கி,

‘கண்ணகி என்பாண் மன்னோ’ என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: ‘அருந்திறலரசர்’ என்பதிலிருந்து தொடங்கி, ‘மன்னவரேறென்’ என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி

காட்சியளித்தல்: ‘என்னே’ என்பதிலிருந்து தொடங்கி, ‘விசும்பில் தோன்றுமால்’ என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: ‘நீர்வார் கண்ணை’ என்பதிலிருந்து தொடங்கி, ‘புகாரென் பதியே’ என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: ‘வன்னி மரமும்’ என்பதிலிருந்து தொடங்கி, ‘பதிப்பிறந்தேன்’ என்பது வரையிலான தொடர்கள்.

அலகு - IV : சிறுகதை

(10 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி

(7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

(For all undergraduate students admitted from 2016 onwards)

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcomes:

- Develop the four types of skills
- Reading and comprehending literary works
- Genres of literature to provide moral education
- Develop communication skills in business environment
- Interpersonal skills will be developed.
- Betterment of language competence

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us - Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. A River - A.K. Ramanujan
3. The Sailor - Safaa Fathy

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Romance of a Busy Broker - O.Henry
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV

- GRAMMAR :**
1. Tenses
 2. Auxiliaries (Primary and Modal)
 3. Articles
 4. Tag Questions

UNIT - V

FUNCTIONAL ENGLISH

1. Filling the blanks with the suitable form of verb in a conditional sentence.
2. Dialogue Writing
3. Changing positive to negative without altering the meaning
4. Fill in the blank with suitable modal
5. Framing a question to a statement
6. Rewrite the sentences changing the underlined word as directed

Prescribed Text: Reminisce, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading: Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

UNIT-I

Introduction to Java Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods),

UNIT-II

Arrays, Strings and I/O Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and files. **Object-Oriented Programming Overview** Principles of Object-Oriented

Programming, Defining & Using Classes, Controlling Access to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

UNIT-III

Inheritance, Interfaces, Packages, Enumerations, Autoboxing and Metadata

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

UNIT-IV

Exception Handling, Threading, Networking and Database Connectivity Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

UNIT-V

Java Applets: Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

UNIT I

Sets: Introduction, Sets , finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations, counting , Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

UNIT II

Growth of Functions: Asymptotic Notations, Summation formulas and properties, Bounding Summations, approximation by Integrals

UNIT III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution, Substitution Method, recurrence trees, Master theorem.

UNIT IV

Graph Theory: Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

UNIT V

Propositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

Suggested Readings

5. J. L.Hein (2009). Discrete Structures, Logic, and Computability(3rd ed.). Jones and Bartlett Publishers.
6. D.J.Hunter (2008). Essentials of Discrete Mathematics. Jones and Bartlett Publishers.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the application development environment.
- To gain programming Skills and Database Creation in RDBMS.
- To understand SQL for storing and retrieving data from the RDBMS.
- To arrive at a normalized design of tables and other database objects in RDBMS.
- To investigate techniques for tuning your PL/SQL code
- To design modular applications using packages

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Develop efficient PL/SQL programs to access Oracle databases
2. Use some of the Oracle supplied PL/SQL packages to generate screen and file outputs
3. Invoke native dynamic SQL to build runtime SQL statements
4. Manage data retrieval with cursors and cursor variables
5. Manage dependency issues and collect PL/Scope data
6. Create triggers to solve business challenges and enforce business rules

UNIT - I Understanding Database Fundamentals

Origin of database – database elements – design concepts – components of DBMS – Advantages and disadvantages of DBMS. Database Models: flat file – hierarchical model – network model – relational model – object oriented model – Features of Object oriented Database Management system – Features of distributed DBMS – Comparison of DBMS & DDBMS – Object relational model. ER-model: entities – relationships - ERD symbols – cardinalities – sample ERD.

Unit - II Entities and Entity Relationships

Relational model: Introduction – Relational database: attributes and domain – Tuples – Relation and their schemes – Relation representation – keys – relationships – relational operations – Integrity rules. Relational algebra: Basic operations – Additional relational algebraic operations – some relational algebra queries. Functional Dependency: Reasoning about FD's – closure of set of FD's – Attribute closure.

Unit - III Objects

Relational database manipulation: Introduction – SQL: Data definition – Data manipulation: Basic data retrieval – condition specification – Arithmetic and aggregate operations. SQL joins – set manipulation – categorization – updates – views – index. Data Control language : grant, revoke – simple privileges.

Unit - IV Overview of PL/SQL

Declaration section – executable command section : conditional logic, loops, CASE statements – exception handling section: predefined and user defined exceptions. Triggers : definition – types : row level, statement level, before and after, instead of – syntax – enabling and disabling triggers - replacing and dropping triggers. Cursors – definition – open – fetch – close – cursor attributes- select for update – types : implicit, explicit. Procedures, Functions: Local and global – procedures vs functions – stored procedures, functions – create procedure syntax - create function syntax – calling procedures, functions. Replacing and dropping procedures, functions.

Unit - V Packages and Normalization

Package header – package body – calling package members - Replacing and dropping package. Overview of Normalization : advantages - disadvantages. Normal forms: first normal form – second normal form – third normal form – boyce codd normal form – Introduction to fourth, fifth and sixth normal forms – denormalization. Parallel Databases: Introduction – Design of Parallel Databases – Advantages and Disadvantages of Parallel Database.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

List of Programs

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of .length in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBuffer class like setCharAt(), setLength(), append(), insert(), concat() and equals().
9. Write a program to create a Distance class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer

10. Modify the `Distance` class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions (from lower to higher data type)
12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate Fibonacci series, where the function to generate fibonacci series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program `DivideByZero` that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the `openConnection()` method and then use it to examine the different components of the URL and content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scroll the message in the banner from left to right across the applet's window.
26. Write a program to get the URL/location of code (i.e. java code) and document (i.e. html file).
27. Write a program to demonstrate different mouse handling events like `mouseClicked()`, `mouseEntered()`, `mouseExited()`, `mousePressed()`, `mouseReleased()` and `mouseDragged()`.
28. Write a program to demonstrate different keyboard handling events.

29. Write a program to generate a window without an applet window using main() function.
30. Write a program to demonstrate the use of push buttons.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

List of Programs

1. Write a C Program to find the number of subsets of a set contains n elements.
2. Write a C Program to find transitive closure of a relation.
3. Write a C Program to prove

$$1/(1*2) + 1/(2*3) + \dots + 1/(n(n+1)) = n/(n+1)$$
4. Write a C Program to perform the sum = $1 + (1+2) + (1+2+3) + \dots + (1+2+\dots+n)$
5. Write a C program to print Fibonacci series till Nth term using recursion
6. Write a program in c to calculate factorial of a number using recursion
7. Write a C Program to find a minimum spanning tree using Prim's algorithm
8. Write a C program to find the shortest path with the lower cost in a graph using
Dijkstra's Algorithm
9. Write a C Program to construct the truth table for the following formula.
(i) $P \wedge Q \wedge \neg R$ (ii) $P \wedge \neg Q \wedge R$ (iii) $P \wedge Q \wedge \neg R$
10. Write a C Program to prove De – Morgan's law.

**17CTU213 DATABASE PROGRAMMING WITH ORACLE
(SQL AND PL/SQL) - PRACTICAL**

**Semester – III
4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the application development environment.
- To gain programming Skills and Database Creation in RDBMS.
- To understand SQL for storing and retrieving data from the RDBMS.
- To arrive at a normalized design of tables and other database objects in RDBMS.
- To investigate techniques for tuning your PL/SQL code
- To design modular applications using packages

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Develop efficient PL/SQL programs to access Oracle databases
2. Use some of the Oracle supplied PL/SQL packages to generate screen and file outputs
3. Invoke native dynamic SQL to build runtime SQL statements
4. Manage data retrieval with cursors and cursor variables
5. Manage dependency issues and collect PL/Scope data
6. Create triggers to solve business challenges and enforce business rules

List of Programs

Create and use the following database schema to answer the given queries.

EMPLOYEE Schema

Field	Type	NULL	KEY	DEFAULT
Eno	Char(3)	NO	PRI	NIL
Ename	Varchar(50)	NO		NIL
Job_type	Varchar(50)	NO		NIL
Manager	Char(3)	Yes		NIL
Hire_date	Date	NO		NIL
Dno	Integer	Yes	FK	NIL
Commission	Decimal(10,2)	Yes		NIL
Salary	Decimal(7,2)	NO		NIL

DEPARTMENT Schema

Field	Type	NULL	KEY	DEFAULT
Dno	Integer	NO	PRI	NULL
Dname	Varchar(50)	Yes		NULL
Location	Varchar(50)	Yes		New Delhi

Query List

1. Query to display Employee Name, Hire Date, Employee Number; for each employee with the Employee number appearing first.
2. Query to display unique jobs from the Employee table
3. Query to display Employee Name concatenated by a job separated by a comma.
4. Query to display Employee Name and salary of all the employees earning more than \$2850.
5. Query to display Employee Name and department number for the employee no=7900.
6. Query to display Employee Name and salary for all employees whose salary is not in the range of \$1500 and \$2850
7. Query to display Employee Name and department no. of all the employees in dept 10 and Dept 30 in the alphabetical order by name.
8. Query to display Name and Hire date of every employee who was hired in 1981
9. Query to display Name and job of all employees who don't have a current manager.
10. Query to display Name, salary and commission for all the employees who earn commission
11. Sort the data in descending order of salary and commission
12. Query to display Name of all the employees where the third letter of their name is A.
13. Query to display Name, salary and commission for all employees whose commission is 14 greater than their salary increased by 5%.
14. Query to display the current date
15. Query to display Name, hire date and salary review date which is the first Monday after 6 months of employment.
16. Query to display Name and calculate the number of months between today and the date each employee was hired.
17. Query to display the following for each employee <E-Name> earns <Salary> monthly but wants <3 * current salary>. Label the column as Dream salary
18. Query to display Name with the 1st letter capitalized and all other letter lower case and length of their name of all employees whose name starts with 'J', 'A' and 'M'.
19. Query to display unique listing of all jobs that are in dept #30.
20. Query to display Name, dept no. and salary of any employee whose department no. and salary matches both the department no. and the salary of any employee who earns a commission.
21. Query to display the department name, location name, number of employees and the average salary for all the employees in that department.
22. Query to display employee no. and name for all employees who earn more than the average salary.

PL/SQL

1. Write the PL/SQL program to find the factorial and fibonacci series of given numbers.
- 2.(i) Write the PL/SQL program to check whether the string is Palindrome.
(ii) Write the PL/SQL program to reverse a number
(iii) Write the PL/SQL program to check whether the number is Armstrong

3. Write a PL/SQL block to create and handle user defined exception
clientmaster

Field name	Constraint	Type	Size
Client_id		Number	6
Client_name		Varchar2	30
Address		Varchar2	50
Phone		Number	10
Balance		Number	10,2

4. Create table with following fields:

Product table:

Field name	Constraint	Type	Size
Product_code	Primary key	Varchar2	7
Product_name		Varchar2	30
Price		Number	6,2
Quantity		Number	4

Vendor table:

Field name	Constraint	Type	Size
Vendor_name		Varchar2	30
Vendor address		Varchar2	30
Product_code	Foreign Key	Varchar2	7

Create a trigger to fire when the Record is deleted and inserted.

5. Create a table to store the salary details of the employees in a company. Declare the cursor id to contain empno, employee name and net salary. Use cursor to update the employee details.

Salary:

Field name	Constraint	Type	Size
Emp_no	Primary key	Number	4
Emp_name		Varchar2	30
Designation		Varchar2	25
Dept		Varchar2	30
Basic		Number	5

6. Create a table stock contains the itemcode varchar2(10), itemname varchar2(50), current_stock number(5), date_of_last_purchase date. Write a stored procedure to seek for an item using itemcode and delete it, if the date of last purchase is before 1 year from the current date. If not, update the current stock.

7. Create a table to contain phone_number, user_name, address. Write a function to search for address using phone_number.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

UNIT-I

Arrays-Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation).Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

UNIT-II

Linked Lists Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

UNIT-III

Trees - Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion , Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

UNIT-IV

Searching and Sorting,Linear Search, Binary Search, Comparison of Linear and Binary

Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting Techniques

UNIT-V

Hashing - Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collision by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- Understand the benefits of using Microsoft Visual Basic 6.0 for Windows as an application tool.
- Understand the Visual Basic event-driven programming concepts, terminology, and available tools.
- Learn the fundamentals of designing, implementing, and distributing a Visual Basic application.
- Learn to use the Visual Basic toolbox. Learn to modify object properties. Learn object methods.
- Use the menu design window. Understand proper debugging and error-handling procedures.
- Gain a basic understanding of database access and management using data bound controls. Obtain an introduction to ActiveX controls and the Windows Application Programming Interface (API).

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
2. Develop a Graphical User Interface (GUI) based on problem description
3. Develop an Event Planning Chart based on problem description so as to define the processing that is to occur based on specific events
4. Develop an Algorithm to verify processing is accurate
5. Develop and debug applications using Visual Basic 2010 (or version required for the course) that runs under Windows operating system
6. Develop programs that retrieve input from a file as opposed to input only provided by user

UNIT I

Beginning Visual Basic: Introduction to Visual Basic: Introduction Graphics User Interface (GUI), Programming Language (Procedural, Object oriented, event driven), The Visual Basic environment IDE, Introduction to VB Controls: Textboxes, Frames, check boxes, options buttons, setting a border and style, the shape control, the line control, working with multiple controls and their properties, designing the user interface, keyboard access, tab controls. Default & controls property, coding for Controls, list box and combo box and their properties, filling the list box using property window/add item method, picture/image box and their properties.

UNIT II

Dealing with data: Operators-Variables-declaring variables- types of variables – data types – constants – arrays – declaring arrays – specifying arrays – Multidimensional arrays – dynamic arrays – arrays of arrays. Val function, Arithmetic operations, formatting data. Error functions and types. Introducing to Menu editor.

UNIT III

Writing Code: Control flow statements – If – Then – If-then-else – Nested control statements – Select case – Loop statements – Do-loop – For-Next – While Wend – Exit statement . Displaying message in Message box, testing whether input is valid or not. Collections – procedures – Subroutines – Functions – Calling procedures – Object Browser – Creating classes and Objects – I/O statements

UNIT IV

Working with forms and procedures: Introducing to forms and types of forms and setting form properties, creating, adding, removing forms in project, hide, show method, load, unload, statement, Me keywords, Referring to objects on a different forms. Creating an application using controls: What is on the toolbar – Textbox control – Picture box – Image box – Label box – Frame – List box – Option button – Combo box – Command Button – check box – The Drive, Directory, File list controls – The Line & Shape control – Scroll Box – Data – Timer.

UNIT V

Multiple Document Interface & Menus: Why MDI Forms – Features of an MDI forms – Loading MDI forms & child forms – creating a simple MDI forms –Accessing MDI forms – creating MENUS – POP-UP MENUS.

Data access controls: JET database Engine – ADODC – DAO Data control – ODBC Data Source Administrator – DATA REPORT.

2. Mohammed Azam. Programming with VB 6.0. Vikas Publishing.
3. Peter Wrights (1999). Beginning VB 6.0 (4th ed.). New York:Springer-Verlag Incorporated.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of application layer and presentation layer paradigms and protocols.
- To study session layer design issues, transport layer services, and protocols.
- To gain core knowledge of network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

UNIT I

Introduction to Computer Networks : Network definition; network topologies; network classifications; network protocol; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques:** Analog and digital signal; data-rate limits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission;

UNIT – II

Digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media. **Networks Switching Techniques and Access mechanisms:** Circuit switching; packet switching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

UNIT – III

Data Link Layer Functions and Protocol: Error detection and error correction techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

UNIT – IV

Multiple Access Protocol and Networks: CSMA/CD protocols; Ethernet LANS; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways; **Networks Layer Functions and Protocols:** Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit V

Transport Layer Functions and Protocols: Transport services- error and flow control, Connection establishment and release- three way handshake; **Overview of Application layer protocol:** Overview of DNS protocol; overview of WWW &HTTP protocol.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

UNIT-I

Introduction: History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture.

UNIT-II

Overview of object oriented programming using Java: OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine.

UNIT-III

Development Tools: Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device.

UNIT-IV

User Interface Architecture: Application context, intents, Activity life cycle, multiple screen size s.

User Interface Design: Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes),Images, Menu, Dialog.

UNIT-V

Database: Understanding of SQLite database, connecting with the database.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To familiarize of the syntax, semantics, data-types and library functions of numerical computing languages such as MATLAB and/or SCILAB
- To reinforce a structured, top-down approach to formulate and solve problems.
- To introduce common approaches, structures, and conventions for creating and evaluating computer programs, primarily in a procedural paradigm, but with a brief introduction to object-oriented concepts and terminology.
- To understand a variety of common numeric techniques to solve and visualize engineering-related computational problems.
- To introduce the MATLAB software environment.
- To implement/simulate and visualization of basic mathematical functions relevant to electronics applications.

Course Outcomes (Cos)

By the end of this course, students should be able to

1. Use MATLAB effectively to analyze and visualize data.
2. Apply numeric techniques and computer simulations to solve engineering-related problems.
3. Apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objectives.
4. Design and document computer programs and analyses in a careful and complete manner so as to effectively communicate results, to facilitate evaluation and debugging by another programmer, and to anticipate and resolve user errors.
5. Demonstrate understanding and use of fundamental data structures (classes).
6. Create and control simple plot and user-interface graphics objects in MATLAB.

UNIT-I

Introduction to Programming: Components of a computer, working with numbers, Machine code, Software hierarchy.

UNIT-II

Programming Environment: MATLAB Windows, A First Program, Expressions, Constants, Variables and assignment statement, Arrays.

UNIT-III

Graph Plots: Basic plotting, Built in functions, Generating waveforms, Sound replay, load and save. Procedures and Functions: Arguments and return values, M-files, Formatted console input-output, String handling,

UNIT-IV

Control Statements: Conditional statements: If, Else, Else-if, Repetition statements: While, for loop

UNIT-V

Manipulating Text: Writing to a text file, Reading from a text file, Randomising and sorting a list, searching a list. **GUI Interface:** Attaching buttons to actions, Getting Input, Setting Output

Course Objectives (CO)

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

List of Programs

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.
2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.
3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).
4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
6. Perform Stack operations using Linked List implementation.
7. Perform Stack operations using Array implementation. Use Templates.

8. Perform Queues operations using Circular Array implementation. Use Templates.
9. Create and perform different operations on Double-ended Queues using Linked List implementation.
10. WAP to scan a polynomial using linked list and add two polynomial.
11. WAP to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration
12. (ii) WAP to display fibonaITUi series (i)using recursion, (ii) using iteration
13. WAP to calculate GCD of 2 number (i) with recursion (ii) without recursion
14. WAP to create a Binary Search Tree and include following operations in tree: (a) Insertion (Recursive and Iterative Implementation)
(b) Deletion by copying
(c) Deletion by Merging
(d) Search a no. in BST
(e) Display its preorder, postorder and inorder traversals Recursively
(f) Display its preorder, postorder and inorder traversals Iteratively
(g) Display its level-by-level traversals
(h) Count the non-leaf nodes and leaf nodes
(i) Display height of tree
(j) Create a mirror image of tree
(k) Check whether two BSTs are equal or not
15. WAP to convert the Sparse Matrix into non-zero form and vice-versa.
16. WAP to reverse the order of the elements in the stack using additional stack.
17. WAP to reverse the order of the elements in the stack using additional Queue.
18. WAP to implement Diagonal Matrix using one-dimensional array.
19. WAP to implement Lower Triangular Matrix using one-dimensional array.
20. WAP to implement Upper Triangular Matrix using one-dimensional array.
21. WAP to implement Symmetric Matrix using one-dimensional array.
22. WAP to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the suITUessor / predecessor of an element, insert an element, inorder traversal.
23. WAP to implement various operations on AVL Tree.

17CTU312 PROGRAMMING WITH VISUAL BASIC - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- Understand the benefits of using Microsoft Visual Basic 6.0 for Windows as an application tool.
- Understand the Visual Basic event-driven programming concepts, terminology, and available tools.
- Learn the fundamentals of designing, implementing, and distributing a Visual Basic application.
- Learn to use the Visual Basic toolbox. Learn to modify object properties. Learn object methods.
- Use the menu design window. Understand proper debugging and error-handling procedures.
- Gain a basic understanding of database access and management using data bound controls. Obtain an introduction to ActiveX controls and the Windows Application Programming Interface (API).

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
2. Develop a Graphical User Interface (GUI) based on problem description
3. Develop an Event Planning Chart based on problem description so as to define the processing that is to occur based on specific events
4. Develop an Algorithm to verify processing is accurate
5. Develop and debug applications using Visual Basic 2010 (or version required for the course) that runs under Windows operating system
6. Develop programs that retrieve input from a file as opposed to input only provided by user

List of Programs

Implement the following projects using Visual Basic Language

1. To calculate the Simple interest and compound interest
2. To perform the following string functions
 - a. Upper to lower
 - b. String concatenation
 - c. String length

- d. String compare
 - e. Bold, Italic and Underline
 - f. Rtrim and Ltrim
 - g. Change the background of form
3. To draw different shapes and fill with different colors using MDI form
 4. To implement a simple calculator
 5. To create an ActiveX Control
 6. To animate the picture using timer control
 7. To convert text to voice
 8. To simulate web browser
 9. Develop a project for Railway Reservation System
 10. Develop a project for Employee Payroll system
 11. Develop a project for Student Information system. Generate data report for Student marklist
 12. Develop a project to generate Barcode for Library applications

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of Application layer and Presentation layer paradigms and protocols.
- To study Session layer design issues, Transport layer services, and protocols.
- To gain core knowledge of Network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

List of Programs

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

List of Programs

1. Create —Hello World application. That will display —Hello World in the middle of the screen in the emulator. Also display —Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

- To familiarize of the syntax, semantics, data-types and library functions of numerical computing languages such as MATLAB and/or SCILAB
- To reinforce a structured, top-down approach to formulate and solve problems.
- To introduce common approaches, structures, and conventions for creating and evaluating computer programs, primarily in a procedural paradigm, but with a brief introduction to object-oriented concepts and terminology.
- To understand a variety of common numeric techniques to solve and visualize engineering-related computational problems.
- To introduce the MATLAB software environment.
- To implement/simulate and visualization of basic mathematical functions relevant to electronics applications.

Course Outcomes (Cos)

By the end of this course, students should be able to

1. Use MATLAB effectively to analyze and visualize data.
2. Apply numeric techniques and computer simulations to solve engineering-related problems.
3. Apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objectives.
4. Design and document computer programs and analyses in a careful and complete manner so as to effectively communicate results, to facilitate evaluation and debugging by another programmer, and to anticipate and resolve user errors.
5. Demonstrate understanding and use of fundamental data structures (classes).
6. Create and control simple plot and user-interface graphics objects in MATLAB.

List of Programs

1. Write a program to assign the following expressions to a variable A and then to print out the value of A.
 - a. $(3+4)/(5+6)$
 - b. $2\pi^2$
 - c. $\sqrt{2}$
 - d. $(0.0000123 + 5.67 \times 10^{-3}) \times 0.4567 \times 10^{-4}$
2. Celsius temperatures can be converted to Fahrenheit by multiplying by 9, dividing by 5, and adding 32. Assign a variable called C the value 37, and implement this formula to assign a variable F the Fahrenheit equivalent of 37 Celsius.
3. Set up a vector called N with five elements having the values: 1, 2, 3, 4, 5. Using N, create assignment statements for a vector X which will result in X having these values:
 - a. 2, 4, 6, 8, 10
 - b. $1/2$, 1, $3/2$, 2, $5/2$

- c. 1, 1/2, 1/3, 1/4, 1/5
d. 1, 1/4, 1/9, 1/16, 1/25
4. A supermarket conveyor belt holds an array of groceries. The price of each product (in pounds) is [0.6, 1.2 ,0.5, 1.3] ; while the numbers of each product are [3, 2 ,1 ,5]. Use MATLAB to calculate the total bill.
5. The `sortrows(x)` function will sort a vector or matrix X into increasing row order. Use this function to sort a list of names into alphabetical order.
6. The —identity matrix is a square matrix that has ones on the diagonal and zeros elsewhere. You can generate one with the `eye()` function in MATLAB. Use MATLAB to find a matrix B, such that when multiplied by matrix $A = \begin{bmatrix} 1 & 2 \\ -1 & 0 \end{bmatrix}$ the identity matrix $I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$ is generated. That is $A*B = I$.
7. Create an array of N numbers. Now find a single MATLAB statement that picks out from that array the 1,4,9,16,...,√Nth entries, i.e. those numbers which have indices that are square numbers.
8. Draw a graph that joins the points (0,1), (4,3), (2,0) and (5,-2).
9. The seeds on a sunflower are distributed according to the formula below. Plot a small circle at each of the first 1000 co-ordinates :
- $$r_n = \sqrt{n}$$
- $$\theta_n = \frac{137.51}{180} \pi n$$
10. Calculate 10 approximate points from the function $y=2x$ by using the formulae:
i. $x_n = n$
ii. $y_n = 2n + \text{rand} - 0.5$
Fit a line of best fit to these points using the function `polyfit()` with `degree=1`, and generate co-ordinates from the line of best fit using `polyval()`. Use the on-line help to find out how to use these functions. Plot the raw data and the line of best fit.
11. Calculate and replay 1 second of a sinewave at 500Hz with a sampling rate of 11025Hz. Save the sound to a file called `ex35.wav`. Plot the first 100 samples.
12. Calculate and replay a 2 second chirp. That is, a sinusoid that steadily increases in frequency with time, from say 250Hz at the start to 1000Hz at the end.
13. Build a square wave by adding together 10 odd harmonics: 1f, 3f, 5f, etc. The amplitude of the nth harmonic should be 1/n. Display a graph of one cycle of the result superimposed on the individual harmonics.
14. Write a function called `FtoC` (`ftoc.m`) to convert Fahrenheit temperatures into Celsius. Make sure the program has a title comment and a help page. Test from the command window with:

- i. FtoC(96)
- ii. lookfor Fahrenheit
- iii. help FtoC

15. Write a program to input 2 strings from the user and to print out (i) the concatenation of the two strings with a space between them, (ii) a line of asterisks the same length as the concatenated strings, and (iii) the reversed concatenation. For example:

- i. Enter string 1: Mark
- ii. Enter string 2: Huckvale
- iii. Mark Huckvale
- iv. *****
- v. elavkcuH kraM

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To understand the structure and organization of the file system

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

UNIT-I

Introduction to Operating System: Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems-Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

UNIT-II

Operating System Organization: Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources-Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication-Deadlocks.

UNIT-III

Memory Management: Physical and Virtual address space-Memory Allocation strategies –Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

UNIT-IV

File and I/O Management: Directory structure-File operations-File Allocation methods-Device management.

UNIT-V

Protection and Security: Policy mechanism-Authentication-Internal aITUess Authorization.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectives and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

UNIT-I

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

UNIT-II

Requirement Analysis; Initiating Requirement Engineering Process- Requirement Analysis and Modeling Techniques- Flow Oriented Modeling- Need for SRS- Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

UNIT-III

Risk Management: Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, **Quality Management-** Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

UNIT-IV

Design Engineering-Design Concepts, Architectural Design Elements, Software Architecture, Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

UNIT-V

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

SCOPE

Build and understanding of the fundamental concepts of computer networking. Allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.

OBJECTIVES

- Familiarize the student with the basic taxonomy and terminology of the computer networking area.
- Introduce the student to advanced networking concepts, preparing the student for entry advanced courses in computer networking.
- Understand various transmission media, their comparative study, fiber optics and wireless media.

UNIT I

Introduction: History of Internet – Interconnecting devices – protocols and standards – TCP/IP protocol suite – internetworking devices – routing concept – classfull IP addressing – subnetting – supernetting – classless addressing.

UNIT II

ARP & RARP – Proxy ARP – ARP over ATM – ARP and RAPP protocol format. IP datagram – Fragmentation – Options – IP datagram format – Routing IP datagrams – Cheksum. ICMP – types of messages – message format – Error reporting – Query – Cheksum.

UNIT III

Group management – IGMP message – IGMP operation – process to process communication – UDP operation – TCP services – Flow control.

UNIT IV

BOOTP – DHCP – Address discovery and Binding. DNS – Name Space – DNS in Internet – Resolution – Resource Records.

UNIT V

Remote Login- FTP – SMTP – SNMP . IP over ATM Wan – Cells – Routing the Cells – ATMARF – Logical IP SUBNETS – VPN.%

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectives and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

UNIT – I

Introduction the basics: The Head, the Body, Colors, Attributes, Lists, ordered and unordered.

UNIT – II

Links Introduction: Relative links, absolute links, Link attributes, Using the ID attribute to Link within a Document.

UNIT – III

Images: Putting an image on a page, Using images as Links, Putting an image in the background.

UNIT – IV

Tables: Creating a table, Table headers, Captions, Spanning Multiple columns, styling Table.

UNIT – V

Forms: Basic input and attributes, other kinds of inputs, styling forms with CSS, Where to Go from Here.

Course Objectives (CO)

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

UNIT-I

Introduction: Understanding Mark-up Languages, Introduction to XML and its Goals.

UNIT-II

XML Basics: XML Structure and Syntax, Document classes and Rules.

UNIT-III

Other XML Concepts: Scripting XML

UNIT-IV

Other XML Concepts: XML as Data, Linking with XML

UNIT-V

XML with Style: XSL –Style Sheet Basics, XSL basics, XSL style sheets.

Suggested Readings

1. William, J. Pardi. XML in action web technology.
2. Michael, J. Young. Step by Step XML.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60Total: 100

Course Objectives (CO)

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To provide necessary skills for developing and debugging programs in UNIX environment.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify, use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

List of Programs

1. Write a program (using fork() and/or exec() commands) where parent and child execute:
 - a) same program, same code.
 - b) same program, different code.
 - c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behaviour of Linux kernel including kernel version, CPU type and model. (CPU information)
3. Write a program to report behaviour of Linux kernel including information on configured memory, amount of free and used memory. (memory information)

4. Write a program to print file details including owner access permissions, file access time, where file name is given as argument.
5. Write a program to copy files using system calls.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using thread library.
13. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100
Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- To analyze, specify and document software requirements for a software system.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Implement a given software design using sound development practices.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectives and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

List of Programs

S. No	Practical Title
1.	<ul style="list-style-type: none"> • Problem Statement • Process Model
2.	Requirement Analysis: <ul style="list-style-type: none"> • Creating a Data Flow • Data Dictionary, Use Cases

3.	Project Management: <ul style="list-style-type: none"> • Computing FP • Effort • Schedule, Risk Table, Timeline chart
4.	Design Engineering: <ul style="list-style-type: none"> • Architectural Design • Data Design, Component Level Design
5.	Testing: <ul style="list-style-type: none"> • Basis Path Testing

Sample Projects:

- 1. Criminal Record Management:** Implement a criminal record management system for jailers, police officers and CBI officers
- 2. DTC Route Information:** Online information about the bus routes and their frequency and fares
- 3. Car Pooling:** To maintain a web based intranet application that enables the corporate employees within an organization to avail the facility of carpooling effectively.
4. Patient Appointment and Prescription Management System
5. Organized Retail Shopping Management Software
6. Online Hotel Reservation Service System
7. Examination and Result computation system
8. Automatic Internal Assessment System
9. Parking Allocation System
10. Wholesale Management System

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of Application layer and Presentation layer paradigms and protocols.
- To study Session layer design issues, Transport layer services, and protocols.
- To gain core knowledge of Network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

After successful completion the student will be able to:

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

Implement the following Program

1. Simple router configuration
2. Access and utilize the router to set basic parameters.
3. Connect, configure, and verify operation status of a device interface.
4. Implement static and dynamic addressing services for hosts in a LAN environment.
5. Identify and correct common problems associated with IP addressing and host configurations.
6. Describe basic routing concepts (including: packet forwarding, router lookup process).
7. Configure, verify and troubleshoot RIPv2.
8. Perform and verify routing configuration tasks for a static or default route given
9. Configure, verify and troubleshoot DHCP and DNS operation on a router.
10. Configure and verify a PPP connection between routers.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- Understand the principles of creating an effective web page, including an in-depth consideration of information architecture.
- Become familiar with graphic design principles that relate to web design and learn how to implement theories into practice.
- Develop skills in analyzing the usability of a web site.
- Understand how to plan and conduct user research related to web usability.
- Learn the language of the web: HTML and CSS.
- Develop basic programming skills using Javascript

Course Outcomes (Cos)

The students will be able to:

1. Analyze a web page and identify its elements and attributes.
2. Design a basic web site using HTML5 and CSS3 to demonstrate responsive web design
3. Implement dynamic web pages with validation using JavaScript objects by applying different event handling mechanism.
4. Create web pages using XHTML and Cascading Style Sheets.
5. Build dynamic web pages using JavaScript (Client side programming).
6. Create XML documents and Schemas

List of Programs

1. Create an HTML document with the following formatting options
 - I. Bold
 - II. Italics
 - III. Underline
 - IV. Headings (Using H1 to H6 heading styles)
 - V. Font (Type, Size and Color)
 - VI. Background (Colored background/Image in background)
 - VII. Paragraph
 - VIII. Line Break
 - IX. Horizontal Rule
 - X. Pre tag
2. Create an HTML document which consists of:
 - I. Ordered List
 - II. Unordered List
 - III. Nested List
 - IV. Image

3. Create an HTML document which implements Internal linkings as well as External linking
4. Create a table using HTML which consists of columns for Roll No., Student's name and grade

Result		
Roll No.	Name	Grade

5. Create a table with the following view

				Place an image here	

6. Create a form using HTML which as the following types of controls:
 - I. Text Box
 - II. Option/radio buttons
 - III. Check boxes
 - IV. Reset and Submit buttons
7. Create HTML documents (having multiple frames) in the following three formats

Frame 1
Frame 2

Frame 1	
Frame2	Frame3

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives (CO)

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

Course Outcomes (COs)

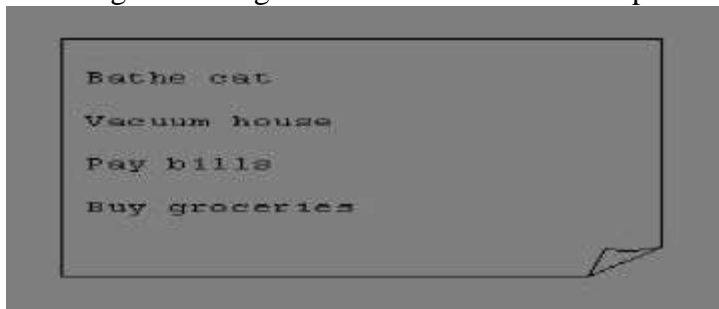

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

1. Information Structure

In this exercise, student will practice identifying the structure of an information object.

For the sample document provided below: Label the information structures you see, including containing structures. 1. Draw a tree representation of the structure.

**2. Deconstructing an XML Document**

In this exercise, student will practice identifying the explicit structure within an XML document. In a sense, this is the reverse of what you did in Exercise #1. For the sample

Bachelor of Science Information Technology, 2016. Karpagam University, Coimbatore, India – 641 021.

XML markup below, create a document-like representation (or a simple drawing) for the content contained within the XML tags:

```
<book>
<coverInfo>
<title>The XML Handbook</title>
<author>Charles F. Goldfarb</author>
<author>Paul Prescod</author>
<edition>Second</edition>
<description>The definitive XML resource: applications, products, and technologies.
Revised and expanded—over 600 new pages. </description>
</coverInfo> </book>
```

3. Creating XML Markup

In this exercise, create some XML markup based on the tree representation from Exercise #1 above, and the content from the original sample document.

4. Well-Formedness

This exercise checks your understanding of the constraints for well-formedness. Are the following document instances well-formed? Explain any NO answers.

```
<list><title>The first list</title><item>An item</list>
<item>An item</item><item>Another item</item>
<para>Bathing a cat is a <emph>relatively</emph> easy task as long as the cat is
willing.</para>
<bibl><title>How to Bathe a Cat<author></title>Merlin Bauer<author></bibl>
```

5. Well Formedness

This exercise is a bit more challenging than the previous example. Here is a fragment of an XML document instance. Identify all the places where it fails to match the constraints for well-formedness.

```
<PROCEDURE><TITLE>How to Bathe a Cat</TITLE>
<OVERVIEW> This procedure tells you how to bathe a cat.
<WARNING></OVERVIEW>Cats don't like to take baths. You could get hurt doing
this. Be sure to obtain all the required protective gear before you start.
</WARNING><EQUIPEMENT><ITEM>Hockey Mask <ITEM>Padded Full-body
Kevlar Armor</ITEM><ITEM>Tub full of warm water</ITEM><ITEM>Towels
</ITEM><ITEM>First Aid kit</ITEM><ITEM>Cat Shampoo</ITEM>
<EQUIPMENT><INSTRUCTIONS> <STEP> Locate the cat, who by now is hiding
under the bed.</STEP><STEP>Place the cat in the tub of water.</STEP> <ITEM>Using
the First Aid kit, repair the damage to your head and arms.</STEP> <STEP>Place the cat
back in the tub and hold it down.</STEP> <STEP>Wash it really fast, then make an
effort to dry it with the towels.</STEP> <STEP>Decide not to do this again. </STEP>
</INSTRUCTIONS>
```

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To understand basics of Cryptography and Network Security.
- To know about various encryption techniques.
- To understand the concept of Public key cryptography.
- To study about message authentication and hash functions
- To impart knowledge on Network security
- To understand various protocols for network security to protect against the threats in the networks.

Course Outcomes (COs)

After successful completion of the course, the learners would be able to:

1. Illustrate various Public key cryptographic techniques
2. Evaluate the authentication and hash algorithms
3. Provide security of the data over the network.
4. Do research in the emerging areas of cryptography and network security.
5. Implement various networking protocols.
6. Protect any network from the threats in the world

UNIT-I

Introduction to Cryptography – security attacks – Security services- security Algorithm – Stream cipher and Block cipher – Symmetric and Asymmetric – key cryptosystems; Symmetric key algorithms: Introduction – DES – Triple DES – AES – IDEA – Blowfish – RC5.

UNIT-II

Public key Cryptosystem: Introduction to Number Theory – RSA Algorithm – key management – Diffie-Hellman key exchange – Introduction to elliptic curve cryptography; message authentication and hash function – hash and MAC algorithm – digital signatures and authentication protocol.

UNIT-III

Network security practice: Authentication applications – kerberos – X.509 authentication services and encryption techniques;;E-mail security – PGP – S/MIME – IP security

UNIT-IV

Web security – secure socket layer – secure electronic transaction; System security – Intruders and viruses – Firewalls – Password security.

UNIT V

Case study : Implementation of Cryptographic algorithms – RSA – DSA – ECC (C/JAVA programming). Network forensic -Security audit; Other security mechanism:

Introduction to steganography – quantum cryptography – Water marking – DNA cryptography.

Suggested Readings

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To learn the basic software debugging methods.
- To understand the White box and Black Box testing methods and techniques
- To design test plans.
- To discuss various software testing issues and solutions in software unit test, integration and system testing
- To learn the different testing tools (familiar with open source tools)
- To understand Quality Assurance models.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Investigate the reason for bugs and analyze the principles in software testing to prevent and remove bugs.
2. Implement various test processes for quality improvement
3. Design test planning.
4. Manage the test process
5. Apply the software testing techniques in commercial environment
6. Use practical knowledge of a variety of ways to test software and an understanding of some of the tradeoffs between testing techniques.

UNIT – I Testing Fundamentals

Examining the Specification: Getting started – Performing a high-level review of the specification – Low-level specification test techniques. Testing the software with blinders on: Dynamic Black-Box Testing- Test-to-Pass and Test-to-Fail- Equivalence Partitioning- Data testing – State testing – Other Black-box test techniques.

UNIT – II Examining the code

Static White-Box testing- Formal reviews – Coding Standards and Guidelines- Generic Code Review Checklist. Testing the software with X-Ray glasses: Dynamic White-Box testing- Dynamic White-Box testing versus Debugging-Testing the Pieces- Data Coverage- Code Coverage.

Flowgraphs and Path Testing

Path-testing Basics – Predicates, Path Predicates and Achievable Paths-Path sensitizing- Path Instrumentation-Implementation and Application of Path Testing

UNIT – III Transaction-Flow Testing and Data-Flow Testing

Transaction Flows-Transaction Flow Testing Techniques. Data-Flow Testing Basics- Data-Flow Testing Strategies-Application, Tools, Effectiveness

UNIT – IV Domain Testing

Domains and Paths-Domain Testing-Domains and Interface Testing-Domains and Testability

UNIT – V Logic-Based Testing and State Graphs

Motivational Overview-Decision Tables-Path Expressions Again-KV Charts-Specifications

State Graphs-Good State Graphs and Bad-State Testing

Suggested Readings

1. Boris Beizer (2009), Software Testing Techniques (2nd ed.). New Delhi Dreamtech Press
2. Ron Patton (2002) Software Testing (2nd ed.). New Delhi: Pearson Education
3. Dorothy Graham, Erik Van Veenendaal, Isabel Evans, Rex Black (2007). Foundations of Software Testing, ISTQB Certification.
4. Brian Hambling, Peter Morgan, Angelina Samaroo, Geoff Thompson (2010). Software Testing , (2nd ed.). An ISEB Foundation, BCS
5. Renu Rajani, Pradeep Oak (2004). Software Testing- Effective Methods, Tools and Techniques, Tata McGraw Hill, New Delhi

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
2. Choose the architecture based on the problem to be solved.
3. Differentiate between the types of applications supported by .Net
4. Build, compile and execute a VB .Net program
5. Apply techniques to develop error-free software
6. To build integrated VB.NET solutions using files and structures with printing capabilities. Translate general requirements into data-related solutions using database concepts

UNIT I

Introduction to .NET: .NET framework features & architecture, CLR, common Type system, MSIL, Assemblies and class libraries. Introduction to visual studio, Project basics, types of project in .Net, IDE of VB .Net – Menu bar, Tool bar, Solution Explorer, Toolbox, Properties Window, Form Designer, Output Window, Object browser. The environment: Editor tab, format tab, general tab, docking tab. Visual development & event driven programming – Methods and events.

UNIT II

The VB .Net Language: The VB .Net Language – Variables- declaring variables, Data type of variables, forcing variables declarations, scope & lifetime of a variable, constants, arrays, types of arrays, control array, Structure programming – Modularity – Information hiding – abstraction – events – subroutines and functions – message box – input box. Control flow statement: conditional statement, loop statement.

UNIT III

Working with WPF: Introduction: Understanding Windows Graphics – WPF: A Higher Level API – The architecture of WPF. XAML: Basics, properties and events in XAML – loading and compiling – Layout. Classic controls: The Control class – content controls – text controls – list controls – Range based controls.

UNIT IV

Objects and Collections: Understanding objects, properties, methods. Understanding collections. Files: Introduction – classification of files – processing files – handling files and folder using class – directory class – file class.

UNIT V

Database programming with ADO .Net: overview of ADO, from ADO to ADO .Net, accessing data using server explorer. Creating connection, command, data adapter and data set with OLEDB and SQLDB. Display data on data bound controls, display data on a data grid. Generate reports using CrystalReportViewer.

Suggested Readings

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
4. Details of IP operations in the INTERNET and associated routing principles
5. Understand the key protocols which support the Internet
6. reate applications using techniques such as multiplexing, forking, multithreading

UNIT-I

Transport Layer Protocols: TCP, UDP, SCTP protocol.

UNIT-II

Socket Programming: Socket Introduction; TCP Sockets; TCP Client/Server Example ; signal handling

UNIT-III

I/O multiplexing using sockets; Socket Options; UDP Sockets; UDP client server example; Address lookup using sockets.

UNIT-IV

Network Applications: Remote logging; Email; WWW and HTTP.

UNIT-V

LAN administration: Linux and TCP/IP networking: Network Management and Debugging.

Suggested Readings

1. Richard Stevens, W., Bill Fenner., & Andrew, M. Rudoff. (2003). Unix Network Programming, The sockets Networking API, Vol. 1(3rd ed.). New Delhi: PHI.
2. Forouzan, B. A. (2003). Data Communications and Networking(4th ed.). New Delhi: THM Publishing Company Ltd.,
3. Nemeth Synder., & Hein. (2010). Linux Administration Handbook (2nd ed.), New Delhi: Pearson Education.
4. Steven, R. (1990). Unix Network Programming (2nd ed.). New Delhi: PHI.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To practice statistical and programming best practices
- To develop professional skills: clear communication, creative thinking, critical thinking, self-directed learning, and effective teamwork
- To understand data analysis techniques and an interest in improving their ability to tackle data-rich problems in a systematic, principled way.
- To understand the basic concepts of big data, methodologies for analyzing structured and unstructured data with emphasis on the relationship between the Data Scientist and the business needs.
- To develop the skills required by organizations to support these functions has been grouped under the term “Data Sciences”

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Understand the problems solvable with data science and an ability to attack them from a statistical perspective.
2. Understand when to use supervised and unsupervised statistical learning methods on labeled and unlabeled data-rich problems.
3. Create data analytical pipelines and applications in Python.
4. Familiar data science ecosystem and the various tools needed to continue developing as a data scientist.
5. Develop the mindset to work like a data scientist, and follow a methodology to tackle different types of data science problems
6. Describe what data science and machine learning are, their applications & use cases, and various types of tasks performed by data scientists

UNIT-I

Data Scientist’s Tool box: Turning data into actionable knowledge, introduction to the tools that will be used in building data analysis software; version control, markdown, git, GitHub, R and R-Studio.

UNIT-II

R Programming basics: Overview of R, R datatypes and Objects, reading and writing data, control structures, functions, scoping rules, dates and times, loop functions, debugging tools, simulation, code profiling.

UNIT-III

Getting and cleaning data: Obtaining data from the web, from API’s, from database, and from colleagues in various formats. Basics of data cleaning and making data –tidy.

UNIT-IV

Exploratory data analysis: Essential exploratory techniques for summarizing data, applied before formal modelling commences, eliminating or sharpening potential hypotheses about the world that can be addressed by the data, common multivariate statistical techniques used to visualize high-dimensional data.

UNIT-V

Reproducible Research: Concepts and tools behind reporting modern data analysis in a reproducible manner, To write a document using R markdown, integrate live R code into a literate statistical program, compile R markdown documents using knitr and related tools, and organize a data analysis so that it is reproducible and accessible to others.

Suggested Readings

2. Foster Provost, Tom Fawcett (2013). Data science for Business – What you need to know about Datamining and Data Analytic Thinking. O’Reilly
3. John. W. Foreman (2013). Data Smart: Using Data science to transform information into insight. John Wiley and Sons.
4. Ian Ayres (2007). Super Crunchers: Why Thinking – By – Numbers is the New way to Be Smart (1st ed.). Bantam
5. Eric Seigel (2013). Predictive Analytics: The Power of Predict who will click, Buy Lie or Die (1st ed.). Wiley.
6. Matthew A.Russel (2013). Mining the social webL: Datamining Facebook, Twitter, LinkedIn, Google+, GitHub, and More (2nd ed.). O’Reilly Media

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

UNIT-I

Overview: Predictive and descriptive data mining techniques

UNIT-II

Supervised and unsupervised learning techniques

UNIT-III

Process of knowledge discovery in databases, pre-processing methods

UNIT-IV

Data Mining Techniques: Association Rule Mining, classification and regression techniques, clustering

UNIT-V

Scalability and data management issues in data mining algorithms, measures of interestingness.

Suggested Readings

4. Eruditionhome.Com

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

UNIT-I

Introduction: Light, Brightness adaption and discrimination, Pixels, coordinate conventions, Imaging Geometry, Perspective Projection, Spatial Domain Filtering, sampling and quantization. Spatial Domain Filtering: Intensity transformations, contrast stretching, histogram equalization, Correlation and convolution, Smoothing filters, sharpening filters, gradient and Laplacian.

UNIT-II

Hotelling Transform, Fourier Transforms and properties, FFT (Decimation in Frequency and Decimation in Time Techniques), Convolution, Correlation, 2-D sampling, Discrete Cosine Transform, Frequency domain filtering.

UNIT-III:

Image Restoration, Basic Framework, Interactive Restoration, Image deformation and geometric transformations, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Adaptive filters, Linear, Position invariant degradations, Estimation of Degradation functions, Restoration from projections, Image Compression-Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Entropy of an information source, Shannon's 1st Theorem, Huffman Coding, Arithmetic Coding, Golomb Coding, LZW coding, Transform Coding, Sub-image size selection, blocking artifacts, DCT implementation using FFT, Run length coding.

UNIT – IV

FAX compression (CCITT Group-3 and Group-4), Symbol-based coding, JBIG-2, Bit-plane encoding, Bit-allocation, Zonal Coding, Threshold Coding, JPEG, Lossless predictive coding, Lossy predictive coding, Motion Compensation

Wavelet based Image Compression: Expansion of functions, Multi-resolution analysis, Scaling functions, MRA refinement equation, Wavelet series expansion, Discrete Wavelet Transform (DWT), Continuous Wavelet Transform, Fast Wavelet Transform, 2-D wavelet Transform, JPEG-2000 encoding, Digital Image Watermarking

UNIT-V

Morphological Image Processing: Basics, SE, Erosion, Dilation, Opening, Closing, Hit-or-Miss Transform, Boundary Detection, Hole filling, Connected components, convex hull, thinning, thickening, skeletons, pruning, Geodesic Dilation, Erosion, Reconstruction by dilation and erosion. Image Segmentation: Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding, Iterative thresholding, Otsu's method, Moving averages, Multivariable thresholding, Region-based segmentation, Watershed algorithm, Use of motion in segmentation

Suggested Readings

2. Jain, A. K. (1989). Fundamentals of Digital image Processing. New Delhi: Prentice Hall of India.
3. Castleman, K. R. (1996). Digital Image Processing. New Delhi: Pearson Education.
4. Schalkoff. (1989). Digital Image Processing and Computer Vision. New York: John Wiley and Sons.
5. Rafael, C. Gonzalez., Richard, E. Woods., & Steven Eddins. (2004). Digital Image Processing using MATLAB. New Delhi: Pearson Education.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

UNIT I

Multimedia – An overview: Introduction – Multimedia presentation and production – Characteristics of Multimedia presentation – Hardware and Software requirements – Uses of Multimedia. Text: Types of text – Font- Text file formats. Image: Image data representation – Image file formats – image processing software. Graphics: Advantages of graphics – Uses – Component of a graphics system.

UNIT II

Audio: Sound waves – types and properties of sound – components of audio system – Digital audio – Musical Instrument Digital Interface (MIDI) – Audio file formats – Audio processing software. Video: Motion video – Television systems – Video file formats – video processing software. Animation: Uses of animation – computer based animation - Animation file formats – Animation software.

UNIT III

Introducing photoshop elements: About elements – welcome screen – create mode – menu bar – toolbox – options bar – panels. Organizing images: Obtaining images -

tagging images – searching for images – opening and saving images. Selecting areas – Layers – Text and drawing tools.

UNIT IV

Understanding flash: Understanding flash basic elements – creating a simple animation. Learning Flash toolbox: Learning the toolbox – using tools. Learning flash panels: Understanding the panels. Using timeline and layers: Understanding how timeline works – Understanding layers. Drawing objects: Drawing lines and fills – using colors – Rotating, skewing and scaling – grouping objects. Creating animation – How animation works – creating motion tweens – creating shape tweens. Understanding masks – creating masks.

UNIT V

Creating symbols and using the library: Learning about symbols – creating symbols – using libraries. Learning Basic Actionscript concepts: Actionscript basics – data type basics. Learning basic actionscript programming: Applying Actionscript – Using Actionscript to control actions – Using Actionscript to control properties – Understanding Actions and Event Handlers.

Suggested Readings

3. www.nextwavemultimedia.com/

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives (CO)**

- To understand basics of Cryptography and Network Security.
- To know about various encryption techniques.
- To understand the concept of Public key cryptography.
- To study about message authentication and hash functions
- To impart knowledge on Network security
- To understand various protocols for network security to protect against the threats in the networks.

Course Outcomes (COs)

After successful completion of the course, the learners would be able to:

1. Illustrate various Public key cryptographic techniques
2. Evaluate the authentication and hash algorithms
3. Provide security of the data over the network.
4. Do research in the emerging areas of cryptography and network security.
5. Implement various networking protocols.
6. Protect any network from the threats in the world

List of Programs

1. Write a program to convert your college name from plain text to cipher text using transposition cipher method of encryption
2. Write a program to convert your name from plain text to cipher text using the One Time Pads method of encryption
3. Write a program to encrypt a paragraph using the data encryption standard algorithm
4. Write a program to encrypt your bio-data using the advanced encryption standard algorithm
5. Write a program to decrypt the “Network Security” theory syllabus using the RSA Algorithm.
6. Write a program that takes a binary file as input and performs bit stuffing and cyclic redundancy check computation.
7. Write a program to simulate the working of Sliding-window protocol
8. Write a program to find the shortest path in a network using Dijkstra’s Algorithm
9. Write a program to implement the token bucket algorithm for congestion control.
10. Write a program for the following chat applications:

One to One: Open a Socket connection and display what is written by one to another.

Many to Many: Each client opens a socket connection to the client server and writes to the Socket. Whatever is written by one can be seen by all. Implement symmetric key cryptography.

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

List of Programs

1. Write a program that take three inputs (a,b and c) that represents the sides of a triangle and the output is one of the below four.
 - a) Not a triangle
 - b) Scalene triangle
 - c) Isoceles triangle
 - d) Equilateral triangle
 - 1.1 Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
 - 1.2 Generate test cases using basis path testing
 - 1.3 Run code coverage tool

2. Write a program that determines the nature of roots of a quadratic equation.
Output should be one of the following
 - Not a quadratic equation
 - Complex roots
 - Real roots
 - Single roots
 - 1.1 Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
 - 1.2 Generate test cases using basis path testing
 - 1.3 Run code coverage tool
3. Write a program that checks whether the number is even or odd. Run code coverage tools and find the amount of code being covered.
4. Write a program that dynamically allocates memory to 10 integers using malloc() or calloc() and do not free memory leading to memory leaks. Verify the same using Valgrind. Now, free memory using free() at the end of the program to avoid memory leaks. Verify the same using Valgrind().
5. Using Selenium IDE, write a test suite containing minimum 4 test cases.
6. Conduct a test suite for any two websites.
7. Write and test a program to login a specific webpage

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives (CO)**

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
 2. Choose the architecture based on the problem to be solved.
 3. Differentiate between the types of applications supported by .Net
 4. Build, compile and execute a VB .Net program
 5. Apply techniques to develop error-free software
 6. To build integrated VB.NET solutions using files and structures with printing capabilities. Translate general requirements into data-related solutions using database concepts
-
1. Write a VB .Net program to calculate simple interest and compound interest.
 2. Write a VB .Net program to implement Calculator.
 3. Write a VB.Net program to implement Notepad
 4. Write a VB.Net program to draw several shapes and fill with color.
 5. Write a VB .Net program to perform the following in list box
 - a) Add an item
 - b) Delete an item
 - c) List count
 - d) Clear the list
 6. Write a program to calculate the total marks of the student and print the grades.
 7. Write a VB .Net program to implement employee payroll system
 8. Write a VB .Net program to create and manipulate a file.
 9. Write a program to implement a web browser

10. Write a program to maintain the details of doctors in a hospital with their specializations
11. Write a program to animate the picture using timer control.
12. Write a program to move the object from one location to another. Change the color and size of object at different time interval.
13. Write a program to place 10 pictures in the listbox. Using timer control the take the picture from listbox and change the form background after specific time interval.
14. Write a program to implement speaking program. Get the text input from the user and convert into voice.
15. Write a program to implement chatting

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
 2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
 3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
 4. Details of IP operations in the INTERNET and associated routing principles
 5. Understand the key protocols which support the Internet
 6. Create applications using techniques such as multiplexing, forking, multithreading
-
1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
 2. Simulate and implement stop and wait protocol for noisy channel.
 3. Simulate and implement go back n sliding window protocol.
 4. Simulate and implement selective repeat sliding window protocol.
 5. Simulate and implement distance vector routing algorithm
 6. Simulate and implement Dijkstra algorithm for shortest path routing.

17CTU513A INTRODUCTION TO DATA SCIENCE – PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To practice statistical and programming best practices
- To develop professional skills: clear communication, creative thinking, critical thinking, self-directed learning, and effective teamwork
- To understand data analysis techniques and an interest in improving their ability to tackle data-rich problems in a systematic, principled way.
- To understand the basic concepts of big data, methodologies for analyzing structured and unstructured data with emphasis on the relationship between the Data Scientist and the business needs.
- To develop the skills required by organizations to support these functions has been grouped under the term “Data Sciences”

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Understand the problems solvable with data science and an ability to attack them from a statistical perspective.
2. Understand when to use supervised and unsupervised statistical learning methods on labeled and unlabeled data-rich problems.
3. Create data analytical pipelines and applications in Python.
4. Familiar data science ecosystem and the various tools needed to continue developing as a data scientist.
5. Develop the mindset to work like a data scientist, and follow a methodology to tackle different types of data science problems
6. Describe what data science and machine learning are, their applications & use cases, and various types of tasks performed by data scientists

List of Progrms

1. Write a program that prints ‘Hello World’ to the screen
2. Write a program that asks the user for a number n and prints the sum of the numbers 1 to n.
3. Write a program that prints multiplication table for numbers upto 12.
4. Write a function that returns the largest element in a list
5. Write a function that computes the running total of a list
6. Write a function that tests whether string is a palindrome.
7. Implement linear search
8. Implement binary search
9. Impelment matrix addition, subtraction and multiplication
10. Fifteen students were enrolled in a course
There ages were : 20 20 20 20 20 21 21 21
22 22 22 22 23 23 23
i. Find the median age of all students under 22 years.

- ii. find the median age of all students
- iii. Find the mean age of all students
- iv. Find the modal age of all students
- v. Two more students enter the class. The age of both students is 23. What is now mean, mode and median.

11. Following table gives frequency distribution of systolic blood pressure. Compute all the measures of dispersion.

Midpoint	95.5	105.5	115.5	125.5	135.5	145.5	155.5	165.5	175.5
Number	5	8	22	27	17	9	5	5	2

- 12. Obtain probability distribution of, where X is number of spots showing when a six-sided symmetric die (i.e. all six faces of the die are equally likely) is rolled. Simulate random samples of sizes 40, 70 and 100 respectively and verify the frequency interpretation of probability.
- 13. Make visual representations of data using the base, lattice and ggplot2 plotting systems in R, apply basic principles of data graphics to create rich analytic graphics from available datasets.
- 14. Use Git/GitHub software to create Github Account. Also, create a repo using Github.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives (CO)**

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

List of Programs

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). for test options, first choose “Use training set”, then choose “Percentage split” using default 66% percentage split. Report model percent error rate.
2. Use iris dataset preprocess and classify it with j4.8 and Naive Bayes classifier. Examine the tree in the classifier output panel.
3. Using the dataset ReutersCorn – Train and ReutersGrain – Train. Classify articles using binary attributes and word count attributes.
4. Apply any two association rule based algorithm for the supermarket analysis.
5. Using weka experimenter perform comparison analysis of j4.8, oneR and ID3 for vote dataset.
6. Using weka experimenter perform comparison analysis of Naive Bayes with different datasets.
7. Apply ZeroR, OneR and j4.8, to classify the iris data in an experiment using 10 train and test runs, with 66% of the data used for 34% used for testing.
8. Using Weka Knowledge flow set up a flow to load an ARFF file (batch mode) and perform a cross-validation using j4.8 (WEKS’s C4.5 implementation).

9. Draw multiple ROC curves in the same plot window, using j4.8 and RandomForest as classifiers.
10. Use any three clustering algorithm on Vehicle data set and find best among them.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

List of Programs

1. Write program to read and display digital image using MATLAB or SCILAB
 - a. Become familiar with SCILAB/MATLAB Basic commands
 - b. Read and display image in SCILAB/MATLAB
 - c. Resize given image
 - d. Convert given color image into gray-scale image
 - e. Convert given color/gray-scale image into black & white image
 - f. Draw image profile
 - g. Separate color image in three R G & B planes
 - h. Create color image using R, G and B three separate planes
 - i. Flow control and LOOP in SCILAB
 - j. Write given 2-D data in image file
2. To write and execute image processing programs using point processing method
 - a. Obtain Negative image b. Obtain Flip image
 - b. Thresholding d. Contrast stretching
3. To write and execute programs for image arithmetic operations
 - a. Addition of two images
 - b. Subtract one image from other image

- c. Calculate mean value of image
 - d. Different Brightness by changing mean value
4. To write and execute programs for image logical operations
 - a. AND operation between two images
 - b. OR operation between two images
 - c. Calculate intersection of two images
 - d. Water Marking using EX-OR operation
 - e. NOT operation (Negative image)
 5. To write a program for histogram calculation and equalization using
 - a. Standard MATLAB function
 - b. Program without using standard MATLAB functions
 - c. C Program
 6. To write and execute program for geometric transformation of image
 - a. Translation
 - b. Scaling
 - c. Rotation
 - d. Shrinking
 - e. Zooming
 7. To understand various image noise models and to write programs for
 - a. image restoration
 - b. Remove Salt and Pepper Noise
 - c. Minimize Gaussian noise
 - d. Median filter and Weiner filter
 8. Write and execute programs to remove noise using spatial filters
 - a. Understand 1-D and 2-D convolution process
 - b. Use 3x3 Mask for low pass filter and high pass filter
 9. Write and execute programs for image frequency domain filtering
 - a. Apply FFT on given image
 - b. Perform low pass and high pass filtering in frequency domain
 - c. Apply IFFT to reconstruct image
 10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask
 11. Write and execute program for image morphological operations erosion and dilation.
 12. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

List of Programs

1. Change a Shape to Another Shape. (Shape Animation)
2. Create a Man to walk with the help of Key Frame Animation.
3. Change the Colors of an object with the help of Animation.
4. Draw a Bird with Flash tools and make it fly with key Frame Animation.
5. Create a Shining Stones with the help of Movie Clip.
6. Create an animation to represent a growing moon using frame by frame animation
7. Create an animation to bounce a ball on steps.
8. Simulate movement of a cloud.
9. Create Morphing between two images.
10. Create an Action script to execute for an event in an application.
11. Create Water Drops using Photoshop.

12. Animate Plane Flying with the Clouds.
13. Create Plastic Surgery for Nose.
14. Create a Web Page using Photoshop
15. Given a picture of a flower with a background. Extract the flower and organize on a different background.
16. Display the given picture through your name using mask.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

UNIT-I**Introduction to PHP:**

PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.) -PHP with other technologies, scope of PHP Basic Syntax, PHP variables and constants-Types of data in PHP , Expressions, scopes of a variable (local, global)-PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwise , ternary and MOD operator.-PHP operator Precedence and associativity

UNIT-II**Handling HTML form with PHP:**

Capturing Form Data -GET and POST form methods- Dealing with multi value fields - Redirecting a form after submission -**PHP conditional events and Loops:** PHP IF Else conditional statements (Nested IF and Else) -Switch case, while ,For and Do While Loop -Goto , Break ,Continue and exit

UNIT-III**PHP Functions:**

Function, Need of Function , declaration and calling of a function-PHP Function with arguments, Default Arguments in Function-Function argument with call by value, call by reference-Scope of Function Global and Local

UNIT-IV

String Manipulation and Regular Expression: (3L)

- Creating and accessing String , Searching & Replacing String
- Formatting, joining and splitting String , String Related Library functions
- Use and advantage of regular expression over inbuilt function
- Use of preg_match(), preg_replace(), preg_split() functions in regular expression.

UNIT-V

Array:

- Anatomy of an Array ,Creating index based and Associative array ,Accessing array
- Looping with Index based array, with associative array using each() and foreach()
- Some useful Library function

Suggested Readings

1. Steven Holzner. (2007). PHP: The Complete Reference. New Delhi: McGraw Hill Education (India).
2. Timothy Boronczyk., & Martin, E. Psinas. (2008). PHP and MYSQL (Create-Modify-Reuse). New Delhi: Wiley India Private Limited.
3. Robin Nixon. (2014). Learning PHP, MySQL, JavaScript, CSS & HTML5 (3rd ed.). O'reilly.
4. Luke Welling.,& Laura Thompson.(2008). PHP and MySQL Web Development (4th ed.). Addition Paperback, Addison-Wesley Professional.
5. David Sklar., & Adam Trachtenberg. PHP Cookbook: Solutions & Examples for PHP.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

UNIT-I

Introduction What is Linux/Unix Operating systems, Difference between linux/unix and other operating systems , Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process.

UNIT-II

System processes (an overview), External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

UNIT-III

User Management and the File System Types of Users, Creating users, Granting rights User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

UNIT-IV

Shell introduction and Shell Scripting What is shell and various type of shell, Various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script , Shell variable (user defined and system variables)

UNIT-V

System calls, Using system calls Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell.
Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

Suggested Readings

2. Michael Jang. (2011). RHCSA/ RHCE Red Hat Linux Certification: Exams (Ex200 & Ex300). Certification Press.
3. Nemeth Synder., & Hein.(2010). Linux Administration Handbook (2nd ed.). Pearson Education.
4. Richard Stevens, W. Bill Fenner., & Andrew, M. Rudoff. (2014). Unix Network Programming, The sockets Networking API, Vol. 1, (3rd ed.).

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service

UNIT I -An Introduction to Electronic commerce

What is E-Commerce (Introduction And Definition), Main activities E-Commerce, Goals of E-Commerce, Technical Components of E-Commerce, Functions of E-Commerce, Advantages and disadvantages of E-Commerce, Scope of E-Commerce, Electronic Commerce Applications, Electronic Commerce and Electronic Business (C2C) (C2G, G2G, B2G, B2P, B2A, P2P, B2A, C2A, B2B, B2C)

UNIT II -The Internet and WWW

Evolution of Internet, Domain Names and Internet - Organization (.edu, .com, .mil, .gov, .net etc), Types of Network, Internet Service Provider, World Wide Web, Internet & Extranet, Role of Internet in B2B Application, building own website, cost, time, reach, registering a domain name, web promotion, Target email, Banner, Exchange, Shopping Bots.

UNIT III: Electronic data

Electronic data exchange introduction, concepts of EDI and Limitation, Application of eDI, Disadvantages of eDI, EDI model, Electronic Payment System: Introduction, Types of Electronic Payment system, Payment types, Value exchange system, credit card system electronic fund transfer, Paperless bill, modern payment cash, Electronic cash.

UNIT IV: Planning for Electronic Commerce

Planning Electronic commerce initiatives, linking objectives to business strategies, measuring cost objectives, comparing benefits to Costs, strategies for developing electronic commerce web sites.

UNIT V : Internet marketing

The PROS and CONS of online shopping, the CONS of online shopping, Justify an internet business, Internet marketing techniques, The E-Cycle of Internet marketing, personalization e-commerce.

Suggested Readings

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with its vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. CO4: Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

UNIT-I

Overview of Computing Paradigm: Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing.**Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

UNIT-II

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

UNIT-III

Case Studies: Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2 , Eucalyptus.

UNIT-IV

Service Management in Cloud Computing: Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

UNIT-V

Cloud Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To familiarize with soft computing concepts.
- To introduce the fuzzy logic concepts, fuzzy principles and relations.
- To Basics of ANN and Learning Algorithms.
- Develop the skills to gain a basic understanding of neural network theory and fuzzy logic theory.
- Genetic Algorithm and its applications to soft computing.
- Hybrid system usage, application and optimization

Course Outcomes (COs)

Upon completion of the course, the student will be able to :

1. List the facts and outline the different process carried out in fuzzy logic, ANN and Genetic Algorithms.
2. Explain the concepts and meta-cognitive of soft computing.
3. Apply Soft computing techniques the solve character recognition, pattern classification, regression and similar problems.
4. Outline facts to identify process/procedures to handle real world problems using soft computing.
5. Evaluate various techniques of soft computing to defend the best working solutions.
6. Design hybrid system to revise the principles of soft computing in various applications.

UNIT I**Neural Networks – 1 (Introduction a Architecture)**

Neuron, Nerve structure and synapse, Artificial Neuron and its model, activation functions, Neural network architecture: single layer and multilayer feed forward networks, recurrent networks. Various learning techniques; perception and convergence rule, Auto associative and hetro-associative memory.

UNIT II

Neural Networks – II (Back propagation networks) architecture: perceptron model, solution, single layer artificial neural network, multilayer perceptron model, back propagation learning methods, effect of learning rule co-efficient; back propagation algorithm, factors affecting back propagation training, applications.

UNIT III**Fuzzy Logic – 1 (Introduction)**

Basic concepts of fuzzy logic, Fuzzy sets and Crisp sets, Fuzzy set theory and operations, Properties of fuzzy sets, Fuzzy and Crisp realtions, Fuzzy to Crisp conversion

UNIT IV

Fuzzy Logic II (Fuzzy membership, Rules) Membership functions, interference in fuzzy logic, fuzzy if-then rules, Fuzzy implications and Fuzzy algorithms, Fuzzyfications & Defuzzifications, Fuzzy Controller, Industrial applications.

UNIT V

Genetic Algorithm (GA)

Basic concepts, working principle, procedures of GA, flowchart of GA, Genetic representations, (encoding) Initialization and selection, genetic operators, Mutation, Generational Cycle, applications

Suggested Readings

1. S.Rajasekaran & G.A. Vijayalakshmi Pai. Neural Networks, Fuzzy Logic and Genetic Algorithm: Synthesis and Applications. Prentice Hall of India.
2. N.P.Padhy. Artificial Intelligence and Intelligent Systems. Oxford University Press.
3. Siman Haykin. Neural Networks. Prentice Hall of India
4. Timothy J.Ross. Fuzzy Logic with Engineering Applications. Wiley India.
5. Kumar Satish. Neural Networks. Tata McGraw Hill.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer's requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

UNIT-I

Assemblers & Loaders, Linkers: One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

UNIT-II**Lexical Analysis:**

Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

UNIT-III**Parsing:**

Bottom up parsing- LR parser, yaITU. **Intermediate representations: Three address**

code generation, syntax directed translation, translation of types, control Statements.

UNIT-IV

Storage organization: Activation records stack allocation.

UNIT-V

Code Generation: Object code generation

Suggested Readings

2. Alfred, V. Aho., Monica, S. Lam., Ravi Sethi., & Jeffrey, D. Ullman. (2006). Compilers: Principles, Techniques, and Tools (2nd ed.). New Delhi: Prentice Hall.
3. Dhamdhere, D. M. (2011). Systems Programming. New Delhi: Tata McGraw Hill.
4. Leland Beck., & Manjula, D. (2008). System Software: An Introduction to System Programming (3rd ed.). New Delhi: Pearson Education.
5. Grune, D., Van Reeuwijk, K., Bal, H. E., Jacobs, C. J. H., & Langendoen, K. (2012). Modern Compiler Design (2nd ed.). Springer.

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

List of Programs

1. Create a PHP page using functions for comparing three integers and print the largest number.
2. Write a function to calculate the factorial of a number (non-negative integer). The function accept the number as an argument.
3. WAP to check whether the given number is prime or not.
4. Create a PHP page which accepts string from user. After submission that page displays the reverse of provided string.
5. Write a PHP function that checks if a string is all lower case.
6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)
7. WAP to sort an array.

8. Write a PHP script that removes the whitespaces from a string.
Sample string : 'The quick brown fox' Expected Output : Thequickbrownfox
9. Write a PHP script that finds out the sum of first n odd numbers.
10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.
11. Write a PHP script that checks if a string contains another string.
12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.
13. Create a script to construct the following pattern, using nested for loop.

```
*  
* *  
* * *  
* * * *  
* * * * *
```

14. Write a simple PHP program to check that emails are valid.
15. WAP to print first n even numbers.
16. \$color = array('white', 'green', 'red')

Write a PHP script which will display the colors in the following way : Output :
white, green, red,
• green • red
• white

17. Using switch case and dropdown list display a —Hello! message depending on the language selected in drop down list.
18. Write a PHP program to print Fibonacci series using recursion.
19. Write a PHP script to replace the first 'the' of the following string with 'That'.

Sample : 'the quick brown fox jumps over the lazy dog.'

Expected Result : That quick brown fox jumps over the lazy dog.

17CTU611B UNIX / LINUX PROGRAMMING - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

List of Programs

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify —call command to display calendars of the specified months.
3. Write a shell script to modify —call command to display calendars of the specified range of months.
4. Write a shell script to aITUept a login name. If not a valid login name display message – —Entered login name is invalid.
5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of —who command along with the total number of users .
7. Write a shell script to display the multiplication table any number,
8. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.

11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.
13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient $C(n, x)$.
15. Write a shell script to find the permutation $P(n, x)$.
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service.

List of Programs

1. Write a HTML program to implement the use of Image map.
2. Write a CSS to implement selectors in HTML
3. Write a CSS to implement pseudo – classes with in-line styles
4. Write a Javascript program to validate a web form
5. Write a Javascript program to allow visitors to see history of visiting your page
6. Write a Javascript program to change random color each 5 seconds

7. Write a perl program to read a list of n strings (from STDIN) into an array and print a random string from the list (Use srand;rand(@array))
8. Write a perl program to read a list of n numeric's from STDIN and find the max, min, range, median and mode. Input size of the list n interactively.
9. Write a perl program to read a file of words and replaces all words in the file with their uppercase equivalent (hint: use tr/a-z/A-Z/)
10. Write VBScript program to print Fibonacci series using Do..while loop and For loop.
11. Write VBScript program to generate date and time in defferent format
12. Write VBScript program to print student marklist
13. Develop an ASP code to retrieve information from forms
14. Develop an ASP code to reading and writing cookies information
15. Develop an ASP code using response object methods

Course Objectives (CO)

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with it's vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

List of Programs

1. Create virtual machines that access different programs on same platform.
2. Create virtual machines that aITUess different programs on different platforms.
3. Working on tools used in cloud computing online-
 - a) Storage
 - b) Sharing of data
 - c) Manage your calendar, to-do lists,
 - d) A document editing tool
4. Exploring Google cloud
5. Exploring Microsoft cloud
6. Exploring Amazon cloud

Course Objectives (CO)

- To familiarize with soft computing concepts.
- To introduce the fuzzy logic concepts, fuzzy principles and relations.
- To Basics of ANN and Learning Algorithms.
- Develop the skills to gain a basic understanding of neural network theory and fuzzy logic theory.
- Genetic Algorithm and its applications to soft computing.
- Hybrid system usage, application and optimization

Course Outcomes (COs)

Upon completion of the course, the student will be able to :

1. List the facts and outline the different process carried out in fuzzy logic, ANN and Genetic Algorithms.
2. Explain the concepts and meta-cognitive of soft computing.
3. Apply Soft computing techniques the solve character recognition, pattern classification, regression and similar problems.
4. Outline facts to identify process/procedures to handle real world problems using soft computing.
5. Evaluate various techniques of soft computing to defend the best working solutions.
6. Design hybrid system to revise the principles of soft computing in various applications.

List of Programs

1. Implement OR, AND using Perceptron in C
2. Implement OR,AND using Perceptron in MATLAB Command-line Argument
3. Implement OR,AND using Perceptron in MATLAB GUI
4. Implement OR,AND, X-OR gate, using back propagation algorithm in MATLAB using Command-line Argument as well as GUI
5. Solve a given problem – 1 (Operatons) using Fuzzy Ligic in MATLAB
6. Solve a given problem – 1 (Max-Min Composition) using Fuzzy Ligic in MATLAB
7. To find the solution of the function Maximize, given the constraints using GA approach in C.
8. Solve a given problem – 1 using Fuzzy Logic in MATLAB GUI
9. Study GA tool in MATLAB.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives (CO)

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer's requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

List of Programs

1. To implement an assembler for a hypothetical language.
2. To get familiar with lex: write a program to recognize numbers, identifiers.
3. To get familiar with yacc: write a desk calculator.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2017 - 2018)
முதல்பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 17LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016-2017)

பகுதி - I, தமிழ்

16LAU101 :

தமிழ் முதல் தாள்

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

பருவம் I

4-H,4-C

அலகு - I : இக்கால இலக்கியம்:

(10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் - சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை -

ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் - மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் - புதையுண்ட வாழ்க்கை.

அலகு - II : அற இலக்கியம்:

(10 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் - 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்:

(10 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு - IV : கட்டுரை:

(10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:

(8 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

17ITU101**Programming Fundamentals Using C / C++****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Int:40 Ext : 60****Total: 100****Course Objectives (CO)**

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program.

UNIT-I**Introduction to C and C++:**

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++.

Data Types, Variables, Constants, Operators and Basic I/O: Declaration, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators, Using Comments in programs, Character I/O, Formatted and Console I/O, Using Basic Header Files.

Expressions, Conditional Statements and Iterative Statements: Simple Expressions in C++, Understanding Operators Precedence in Expressions, Conditional Statements, Understanding syntax and utility of Iterative Statements, Use of break and continue in Loops, Using Nested Statements.

UNIT-II

Functions and Arrays: Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays, Use Various types of arrays, Two-dimensional Arrays, Introduction to Multi-dimensional arrays.

UNIT-III

Derived Data Types (Structures and Unions): Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members.

Pointers and References in C++: Understanding a Pointer Variable, Simple use of Pointers, Pointers to Pointers, Pointers to structures, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions.

UNIT-IV

File I/O, Preprocessor Directives: Opening and closing a file, Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives, Macros.

UNIT-V

Using Classes in C++: Principles of Object-Oriented Programming, Defining & Using Classes, Constructors, Constructor Overloading, Function overloading and Operator overloading in classes, Class Variables & Functions, Access specifiers, Overview of Template classes and their use.

Inheritance, Polymorphism and Exception Handling: Introduction to Inheritance, Polymorphism, Basics Exceptional Handling.

Suggested Readings:

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

UNIT -I Introduction

Logic gates, Boolean algebra, circuit simplification, combinational circuits: Adders and Subtractors – Multiplexers and De multiplexers – Encoders and Decoders- sequential circuits: Flip Flop's, registers, counters and memory units.

UNIT -II Data Representation and Basic Computer Arithmetic

Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

UNIT –III Basic Computer Organization and Design

Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

UNIT-IV Central Processing Unit

Register organization, arithmetic and logical micro-operations, stack organization, micro programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining and parallel architecture.

UNIT –V Memory and Input-Output Organization

Cache memory, Associative memory, mapping Input / Output: External Devices, I/O Modules, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels.

Suggested Readings:

1. Dos Reis, A. J. (2009). Assembly Language and Computer Architecture using C++ and JAVA. Course Technology
2. Stallings, W. (2010). Computer Organization and Architecture Designing for Performance (8th ed.) New Delhi: Prentice Hall of India,
3. Mano, M.M. (2013). Digital Design, New Delhi: Pearson Education Asia.
4. Carl Hamacher. (2012). Computer Organization (5th ed.). New Delhi: McGrawHill.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To develop a basic understanding of many areas of information technology and how they are used
- To understand the basic structure of a program including sequence, decisions and looping
- To understand how to design a program to solve a simple program
- To introduce the basics of several programming language and understand the commonality and differences in languages
- To lay a basic foundation involving hardware, software, navigation, the Internet for future development
- To understand what a database is and how to design a working model

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of high-level structured programming logic and algorithm development.
2. Demonstrate knowledge of structured program design and modularity.
3. Demonstrate knowledge of file-based input/output operations, file manipulation and maintenance, extract reporting, and report writing.
4. Demonstrate knowledge of records, data types and structures, storage classes, addressable memory locations.
5. Demonstrate knowledge of table utilization, arrays and subscripts.
6. Demonstrate knowledge of arithmetic expressions, control structures, iteration techniques.

UNIT – I

Language Evolution Machine Language, Assembly Language, High Level Language. Translators: compiler, Interpreter and Assembler. The Compilation Process, Linker, Loader, Study of HLL, Characteristics of Good Language, Generation of Languages, Study of Programming Languages (Function Oriented, Object Oriented, Event-Based).

UNIT – II

Programming Construction Tools Problem Analysis, Process Analysis, Conceptual Development of Solution. Development Tools: Algorithm: Types of Algorithm, Algorithm of Analysis, Advantage and Disadvantage of Algorithm, Complexity of Algorithm, Big-O Notation.

UNIT – III

Flowcharts: Types of Flowcharts, Advantage and Disadvantage of Flowchart.
Pseudocode: Definition and Its Characteristics Control Statements Basics of
Programming Language: Usage of Character Set, Meaning of Keywords and Identifiers,
Role of Data Types, Constants and Variables.

UNIT – IV

Importance of Casting, Different Types of Operators and their Precedence, Expressions,
Conditional Statements (One-Way, Two-Way and Multi-Way Conditional), Looping
Statements (For, While, do-while), Usage of Exit, continue, Break and Goto Statement.

UNIT – V

Arrays: Arrays, One dimensional array, Various operation on Array (Inserting of Elements,
Deleting of Element, Rotating List, Sorting, Searching, Merging Etc) and Two
dimensional arrays (Matrix Addition, Transpose of Matrix, Matrix Multiplication),
Modular programming and its features.

Suggested Readings:

1. Anil V.Chouduri. The Art of Programming through Flowchart and Algorithms. Laxmi Publication.
2. Maureen Sprankle (2009). Problem Solving Programming Concepts (7th ed.). Pearson Education.
3. Behrouz Forouzan. Basic of Computer Science. Cengage Learning
4. Donald Knuth. The Art of Computer Programming Vol-I,II, III, Pearson.
5. Horowitz, Sahani. Fundamental of Computer Algorithm. Orient Longman.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program

List of Programs

1. WAP to display Fibonacci series (i)using recursion, (ii) using iteration
2. WAP to compute the sum of the first n terms of the following series
 $S = 1 + 1/2 + 1/3 + 1/4 + \dots$
3. Write a program to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.

4. WAP to print the sum and product of digits of an integer.
5. WAP to reverse a number.
6. Write a program that checks whether a given string is Palindrome or not.
7. WAP to print a triangle of stars as follows (take number of lines from user):

```
*  
***  
*****  
*****  
*****
```

8. WAP to perform following actions on an array entered by the user:
 - i) Calculate and print the sum and average of the elements of array
 - ii) Print the maximum and minimum element of array
9. Write a program that swaps two numbers using pointers.
10. Write a program which takes the radius of a circle as input from the user, passes it to another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.
11. Write a program to perform operations on strings.

12. Write a program to perform following Matrix operations (2-D array implementation):
a) Sum b) Difference c) Product

13. Create a structure Student containing fields for Roll No., Name, Class, Year and Total Marks. Create 10 students and store them in a file.

14. Create the Person class. Create some objects of this class (by taking information from the user). Inherit the class Person to create two classes Teacher and Student class. Maintain the respective information in the classes and create, display and delete objects of these two classes (Use Runtime Polymorphism).

15. Copy the contents of one text file to another file using command line argument.

17ITU112 COMPUTER SYSTEM ARCHITECTURE - PRACTICAL 3H – 2C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

List of Experiments

1. Verification of Logic Gates
2. Code converters
3. Realization of Multiplexer using basic gates
4. Encoder and Decoder
5. Realization Half and Full adders
6. Realization of Subtractor
7. Realization of Parity generator
8. Flip-Flop Circuits
9. Digital to analog Converters
10. Demonstrate a Basic Arithmetic Computing operations

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To identify types of computers, how they process information and how individual computers interact with other computing systems and devices.
- To identify the function of computer hardware components.
- To identify the factors that goes into an individual or organizational decision on how to purchase computer equipment.
- To identify how to maintain computer equipment and solve common problems relating to computer hardware.
- To identify how software and hardware work together to perform computing tasks and how software is developed and upgraded.
- To identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Understand the meaning and basic components of a computer system,
2. Define and distinguish Hardware and Software components of computer system,
3. Explain and identify different computing machines during the evolution of computer system, gain knowledge about five generations of computer system,
4. Identify and discuss the functional Units of a computer system, identify the various input and output Units and explain their purposes
5. Understand the role of CPU and its components, understand the concept and need of primary and secondary memory, discuss the advantages, limitations and applications of computers.
6. Understand the classification of computers, distinguish the computers on the basis of purpose, technology and size

List of Programs

Practical exercises based on MS Office/ Open Office tools using document preparation and spreadsheet handling packages.

MS Word

1. Prepare a **grocery list** having four columns (Serial number, The name of the product, quantity and price) for the month of April, 06.

- Font specifications for Title (Grocery List): 14-point Arial font in bold and italics.
- The headings of the columns should be in 12-point and bold.
- The rest of the document should be in 10-point Times New Roman.
- Leave a gap of 12-points after the title.

2. Create a **telephone directory**.

- The heading should be 16-point Arial Font in bold
- The rest of the document should use 10-point font size
- Other headings should use 10-point Courier New Font.
- The footer should show the page number as well as the date last updated.

3. Design a **time-table form** for your college.

- The first line should mention the name of the college in 16-point Arial Font and should be bold.
- The second line should give the course name/teacher's name and the department in 14-point Arial.
- Leave a gap of 12-points.
- The rest of the document should use 10-point Times New Roman font.
- The footer should contain your specifications as the designer and date of creation.

4. BPB Publications plans to release a new book designed as per your syllabus. Design the **first page of the book** as per the given specifications.

- The title of the book should appear in bold using 20-point Arial font.
- The name of the author and his qualifications should be in the center of the page in 16-point Arial font.
- At the bottom of the document should be the name of the publisher and address in 16-point Times New Roman.
- The details of the offices of the publisher (only location) should appear in the footer.

5. Create the following one page documents.

- a. Compose a note inviting friends to a get-together at your house, Including a list of things to bring with them.
- b. Design a certificate in landscape orientation with a border around the document.
- c. Design a Garage Sale sign.
- d. Make a sign outlining your rules for your bedroom at home, using a numbered list.

6. Create the following documents:
- A newsletter with a headline and 2 columns in portrait orientation, including at least one image surrounded by text.
 - Use a newsletter format to promote upcoming projects or events in your classroom or college.

7. Convert following text to a table, using comma as delimiter
Type the following as shown (do not bold).

Color, Style, Item

Blue, A980, Van

Red, X023, Car

Green, YL724, Truck

Name, Age, Sex

Bob, 23, M

Linda, 46, F

Tom, 29, M

8. Enter the following data into a table given on the next page.

Salesperson	Dolls	Trucks	Puzzles
Kennedy, Sally	1327	1423	1193
White, Pete	1421	3863	2934
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067

Add a column Region (values: S, N, N,S,S,S) between the Salesperson and Dolls columns to the given table Sort your table data by Region and within Region by Salesperson in ascending order:

In this exercise, you will add a new row to your table, place the word Total at the bottom of the Salesperson column, and sum the Dolls, Trucks, and Puzzles columns.

MS Excel

1. Enter the Following data in Excel Sheet

REGIONAL SALES PROJECTION						
State	Qtr1	Qtr2	Qtr3	QTR4	Qtr Total	Rate Amount
Delhi	2020	2400	2100	3000	15	
Punjab	1100	1300	1500	1400	20	
U.P.	3000	3200	2600	2800	17	
Haryana	1800	2000	2200	2700	15	
Rajasthan	2100	2000	1800	2200	20	

TOTAL AVERAGE

(a) Apply Formatting as follow:

- i. Title in TIMES NEW ROMAN
- ii. Font Size - 14
- iii. Remaining text - ARIAL, Font Size -10
- iv. State names and Qtr. Heading Bold, Italic with Gray Fill Color.
- v. Numbers in two decimal places.
- vi. Qtr. Heading in center Alignment.
- vii. Apply Border to whole data.

(b) Calculate State and Qtr. Total

(c) Calculate Average for each quarter

(d) Calculate Amount = Rate * Total .

2. Given the following worksheet

	A	B	C	D
1	Roll	Name	Marks	Grade

	No.			
2	1001	Sachin	99	
3	1002	Sehwag	65	
4	1003	Rahul	41	
5	1004	Sourav	89	
6	1005	Har Bhajan	56	

Calculate the grade of these students on the basis of following guidelines:

If Marks	Then Grade
≥ 80	A+
$\geq 60 < 80$	A
$\geq 50 < 60$	B
< 50	F

3. Given the following worksheet

	A	B	C	D	E	F	
1	Salesman			Sales in (Rs.)			
2	No.	Qtr1	Qtr2	Qtr3	Qtr4	Total	Commission
3	S001	5000	8500	12000	9000		
4	S002	7000	4000	7500	11000		
5	S003	4000	9000	6500	8200		
6	S004	5500	6900	4500	10500		
7	S005	7400	8500	9200	8300		
8	S006	5300	7600	9800	6100		

Calculate the commission earned by the salesmen on the basis of following Candidates:

If Total Sales	Commission
< 20000	0% of sales
> 20000 and < 25000	4% of sales
> 25000 and < 30000	5.5% of sales
> 30000 and < 35000	8% of sales
≥ 35000	11% of sales

The total sales is sum of sales of all the four quarters.

4. A company XYZ Ltd. pays a monthly salary to its employees which consists of basic salary, allowances & deductions. The details of allowances and deductions are as follows:

Allowances

- HRA Dependent on Basic
30% of Basic if Basic ≤ 1000

25% of Basic if Basic > 1000 & Basic ≤ 3000

20% of Basic if Basic > 3000

- DA Fixed for all employees, 30% of Basic
- Conveyance Allowance Rs. 50/- if Basic is ≤ 1000
Rs. 75/- if Basic > 1000 & Basic ≤ 2000
Rs. 100 if Basic > 2000
- Entertainment Allowance NIL if Basic is ≤ 1000 Rs. 100/- if Basic > 1000

Deductions

- Provident Fund 6% of Basic
- Group Insurance Premium Rs. 40/- if Basic is ≤ 1500
Rs. 60/- if Basic > 1500 & Basic ≤ 3000
Rs. 80/- if Basic > 3000

Calculate the following:

Gross Salary = Basic + HRA + DA + Conveyance + Entertainment

Total deduction = Provident Fund + Group Insurance Premium

Net Salary = Gross Salary – Total Deduction.

5. Create Payment Table for a fixed Principal amount, variable rate of interests and time in the format below:

No. of Installments	5%	6%	7%	8%	9%
3	XX	XX	XX	XX	XX
4	XX	XX	XX	XX	XX
5	XX	XX	XX	XX	XX
6	XX	XX	XX	XX	XX

6. Use an array formula to calculate Simple Interest for given principal amounts given the rate of interest and time.

Rate of Interest 8%
Time 5 Years
Principal Simple Interest
1000 ?
18000 ?
5200 ?

7. The following table gives year wise sale figure of five salesmen in Rs.

Salesman	2000	2001	2002	2003
S1	10000	12000	20000	50000
S2	15000	18000	50000	60000
S3	20000	22000	70000	70000
S4	30000	30000	100000	80000
S5	40000	45000	125000	90000

(a) Calculate total sale year wise.

- (b) Calculate the net sale made by each salesman
- (c) Calculate the maximum sale made by the salesman
- (d) Calculate the commission for each salesman under the condition.
 - (i) If total sales >4,00,000 give 5% commission on total sale made by the salesman.
 - (ii) Otherwise give 2% commission.
- (e) Draw a bar graph representing the sale made by each salesman.
- (f) Draw a pie graph representing the sale made by salesman in 2000.

8. Enter the following data in Excel Sheet

PERSONAL BUDGET FOR FIRST QUARTER

Monthly Income (Net): 1,475

EXPENSES	JAN	FEB	MARCH	QUARTER TOTAL	QUARTER AVERAGE
Rent	600.00	600.00	600.00		
Telephone	48.25	43.50	60.00		
Utilities	67.27	110.00	70.00		
Credit Card	200.00	110.00	70.00		
Oil	100.00	150.00	90.00		
AV to					
Insurance	150.00				
Cable TV	40.75	40.75	40.75		

Monthly Total

Calculate Quarter total and Quarter average.

- (a) Calculate Monthly total.
- (b) Surplus = Monthly income - Monthly total.
- (c) What would be total surplus if monthly income is 1500.
- (d) How much does telephone expense for March differ from quarter average.
- (e) Create a 3D column graph for telephone and utilities. (f) Create a pie chart for monthly expenses.

9. Enter the following data in Excel Sheet

TOTAL REVENUE EARNED FOR SAM'S BOOKSTALL

Publisher name	1997	1998	1999	2000	total
A	Rs.1000.00	Rs.1100.00	Rs.1300.00	Rs.800.00	
B	Rs.1500.00	Rs.700.00	Rs.1000.00	Rs.2000.00	
C	Rs.700.00	Rs.900.00	Rs.1500.00	Rs.600.00	
D	Rs.1200.00	Rs.500.00	Rs.200.00	Rs.1100.00	
E	Rs.800.00	Rs.1000.00	Rs.3000.00	Rs.560.00	

- (a) Compute the total revenue earned.

- (b) Plot the line chart to compare the revenue of all publisher for 4 years.
- (c) Chart Title should be _Total Revenue of sam's Bookstall (1997-2000)‘
- (d) Give appropriate categories and value axis title.

10. Generate 25 random numbers between 0 & 100 and find their sum, average and count. How many no. are in range 50-60.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 100 Total: 100

Course Objectives (CO)

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Course Outcomes (COs)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT-I: Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III: Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife

conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2017 - 2018)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 17LSU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- □□□□□□□□□□ □□□□□□□□□□ □□□□□□□□□□ □□□□□
□□□□□□□□□□ □□□□□□□□□□ □□□□□□□□□□ □□□□□

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2016 - 2017)

பகுதி - I, தமிழ்

பருவம் II

16LAU201 :

தமிழ் இரண்டாம் தாள்

4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

அலகு - I : பக்தி இலக்கியம்

(10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம், வளர்ச்சி, வரலாறு.

1. சைவம் - பெரியபுராணம் - திருமூலநாயனார் புராணம்.
2. வைணவம் - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு - II : சங்க இலக்கியம் :

(15 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). எட்டுத்தொகை

நற்றிணை : பிரசம் கலந்த - பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை - குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகாச்சிறப்பு -

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு

இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடாத்தொட கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் -பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை = பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் – ‘சிறுதினை மலரொடு’ என்பதிலிருந்துதொடங்கி,

‘அறிந்தவாறே’ என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – ‘தெய்வம் சான்ற’ என்பதிலிருந்து தொடங்கி,

‘நல்குமதி’ என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம்

(6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – கண்ணகியின் சிறப்பு:

‘நாகநீள் நகரொடு’ என்பதிலிருந்து தொடங்கி,

‘கண்ணகி என்பாண் மன்னோ’ என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில்

எடுத்தல்: ‘அருந்திறலரசர்’ என்பதிலிருந்து தொடங்கி, ‘மன்னவரேறென்’ என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி

காட்சியளித்தல்: ‘என்னே’ என்பதிலிருந்து தொடங்கி, ‘விசும்பில் தோன்றுமால்’ என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: ‘நீர்வார் கண்ணை’ என்பதிலிருந்து தொடங்கி, ‘புகாரென் பதியே’ என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: ‘வன்னி மரமும்’ என்பதிலிருந்து தொடங்கி, ‘பதிப்பிறந்தேன்’ என்பது வரையிலான தொடர்கள்.

அலகு - IV : சிறுகதை

(10 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.க.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி

(7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

(For all undergraduate students admitted from 2017 onwards)

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcomes:

- Develop the four types of skills
- Reading and comprehending literary works
- Genres of literature to provide moral education
- Develop communication skills in business environment
- Interpersonal skills will be developed.
- Betterment of language competence

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us - Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. A River - A.K. Ramanujan
3. The Sailor - Safaa Fathy

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Romance of a Busy Broker - O.Henry
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV

- GRAMMAR :**
1. Tenses
 2. Auxiliaries (Primary and Modal)

3. Articles
4. Tag Questions

UNIT - V

FUNCTIONAL ENGLISH

1. Filling the blanks with the suitable form of verb in a conditional sentence.
2. Dialogue Writing
3. Changing positive to negative without altering the meaning
4. Fill in the blank with suitable modal
5. Framing a question to a statement
6. Rewrite the sentences changing the underlined word as directed

Prescribed Text: Reminisce, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading: Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems.

UNIT-I

Introduction to Java Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods),

UNIT-II

Arrays, Strings and I/O Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and files. **Object-Oriented Programming Overview** Principles of Object-Oriented Programming, Defining & Using Classes, Controlling Access to Class Members, Class

Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

UNIT-III

Inheritance, Interfaces, Packages, Enumerations, Autoboxing and Metadata

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

UNIT-IV

Exception Handling, Threading, Networking and Database Connectivity Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

UNIT-V

Java Applets: Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

3. www.java.net/

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

UNIT I

Sets: Introduction, Sets , finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations, counting , Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

UNIT II

Growth of Functions: Asymptotic Notations, Summation formulas and properties, Bounding Summations, approximation by Integrals

UNIT III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution, Substitution Method, recurrence trees, Master theorem.

UNIT IV

Graph Theory: Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

UNIT V

Propositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

6. D.J.Hunter (2008). Essentials of Discrete Mathematics. Jones and Bartlett Publishers.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- Understand the principles of creating an effective web page, including an in-depth consideration of information architecture.
- Become familiar with graphic design principles that relate to web design and learn how to implement theories into practice.
- Develop skills in analyzing the usability of a web site.
- Understand how to plan and conduct user research related to web usability.
- Learn the language of the web: HTML and CSS.
- Develop basic programming skills using Javascript

Course Outcomes (Cos)

The students will be able to:

1. Analyze a web page and identify its elements and attributes.
2. Design a basic web site using HTML5 and CSS3 to demonstrate responsive web design
3. Implement dynamic web pages with validation using JavaScript objects by applying different event handling mechanism.
4. Create web pages using XHTML and Cascading Style Sheets.
5. Build dynamic web pages using JavaScript (Client side programming).
6. Create XML documents and Schemas

Unit – I: Introduction to Web Technology

Introduction to Internet, Basic Internet Terms in Internet Addressing, Internet Tools, Services of Internet, Introduction to World Wide Web, Components of Web, Types of Websites, Role of Web Browser and Web server, Types of Web Browsers, Types of Web Server, Flow of Web Information, Objective of the Website, Basic Interface design, Various Types of URLs, Process of Web Publishing.

Unit- II: Creating Static Web Pages and Lists in HTML

Introduction to HTML, Features of HTML, Advantages and Disadvantages of HTML, Features of Static and Dynamic Web Page. Creating a Simple Static Web Page: Creating Web page using HTML, structure of HTML document, HTML Tags, tags attributes, Basic Elements: <html>, <head>, <title>, <p>,
, <h1> to <h6>, <pre>, <marquee>, <hr>,
, <center>, Text formatting tags, Using colors for the web, Physical and Logical Tags, Special Characters.

Lists in HTML: Ordered List, Unordered List, Definition List and Nested List.

Unit-III: Adding Links, Images, Background and table

Tables: Components of a table, basic table tags and their related attributes. Paths: Relative Path and Absolute path, Linking HTML Pages: Link Tag <a href...>, kinds of linking, linking to URLs.

Unit-IV: Adding Images and Image Maps

Adding images to HTML pages: Image formats for Internet and HTML, Image tag and their related attributes, Inline images, Links to (external) images, images as hyperlinks, using images as background. Image Maps: What are image maps, tags used for image mapping, Client-side and server-side Image maps.

Unit-V: Forms, Frames and Embedding Multimedia

Frames: Introduction to Frame, <Frameset> and <frame> tag with its attributes, creating frames, linking frames, <noframes> tag, complex frameset, floating and inline frame. Forms: <Form> tag and its attributes, <input> tag and its attributes, Form controls: Text controls, password fields, radio buttons, checkboxes, reset and submit buttons, Form control selection, Option processing and Text Area, Hidden fields. Embedding Multimedia: Introduction, Embedding Multimedia, inserting Sound/Audio Formats, Inserting video file formats.

[Jmarshall.com/easy](http://jmarshall.com/easy)

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

List of Programs

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of .length in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBuffer classes like setCharAt(), setLength(), append(), insert(), concat() and equals().

9. Write a program to create a `Distance` class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer
10. Modify the `Distance` class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions (from lower to higher data type)
12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate Fibonacci series, where the function to generate fibonacci series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program `DivideByZero` that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the `URLConnection()` method and then use it to examine the different components of the URL and content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scroll the message in the banner from left to right across the applet's window.
26. Write a program to get the URL/location of code (i.e. java code) and document (i.e. html file).

27. Write a program to demonstrate different mouse handling events like `mouseClicked()`, `mouseEntered()`, `mouseExited()`, `mousePressed`, `mouseReleased()` and `mouseDragged()`.
28. Write a program to demonstrate different keyboard handling events.
29. Write a program to generate a window without an applet window using `main()` function.
30. Write a program to demonstrate the use of push buttons.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

List of Programs

1. Write a C Program to find the number of subsets of a set contains n elements.
2. Write a C Program to find transitive closure of a relation.
3. Write a C Program to prove

$$1/(1*2) + 1/(2*3) + \dots + 1/(n(n+1)) = n/(n+1)$$
4. Write a C Program to perform the sum = $1 + (1+2) + (1+2+3) + \dots + (1+2+\dots+n)$
5. Write a C program to print Fibonacci series till Nth term using recursion
6. Write a C program to calculate factorial of a number using recursion
7. Write a C Program to find a minimum spanning tree using Prim's algorithm
8. Write a C program to find the shortest path with the lower cost in a graph using Dijkstra's
 Algorithm
9. Write a C Program to construct the truth table for the following formula.
 (i) $P \wedge Q \wedge \neg R$ (ii) $P \wedge \neg Q \wedge R$ (iii) $P \wedge Q \wedge \neg R$
10. Write a C Program to prove De – Morgan's law.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives (CO)

- Understand the principles of creating an effective web page, including an in-depth consideration of information architecture.
- Become familiar with graphic design principles that relate to web design and learn how to implement theories into practice.
- Develop skills in analyzing the usability of a web site.
- Understand how to plan and conduct user research related to web usability.
- Learn the language of the web: HTML and CSS.
- Develop basic programming skills using Javascript

Course Outcomes (Cos)

The students will be able to:

1. Analyze a web page and identify its elements and attributes.
2. Design a basic web site using HTML5 and CSS3 to demonstrate responsive web design
3. Implement dynamic web pages with validation using JavaScript objects by applying different event handling mechanism.
4. Create web pages using XHTML and Cascading Style Sheets.
5. Build dynamic web pages using JavaScript (Client side programming).
6. Create XML documents and Schemas

List of Programs

1. Create a simple HTML document about yourself or a topic of your choice using the basic tags such as Bold, Italic, Heading, images, horizontal rule and images.
2. Create a HTML document which includes an unordered list, ordered list, definition list to your document and create a link to Yahoo.
3. Develop static pages (using only HTML) of an online Book store. The pages should resemble: www.amazon.com. The website should consist of the following pages.
 - Home page
 - Registration and user login
 - User profile page
 - Items catalog
 - Shopping cart
 - Payment by credit card
 - Order confirmation
4. Create a table in HTML document with the following formats
 - Table with no borders
 - Display table headers
 - To handle cells that have no content

- Table cells that span more than one row or one column

- Adding background image to a table
- Design a web page using CSS (Cascading Style Sheets) which includes the following:
 - Use different font, styles: In the style definition you define how each selector should work (font, color etc.). Then, in the body of your pages, you refer to these selectors to activate the styles.
 - Set a background image for both the page and single elements on the page.
 - Control the repetition of the image with the background-repeat property. As background-repeat:repeat Tiles the image until the entire page is filled, just like an ordinary background image in plain HTML.
 - Define styles for links as
 - A:link
 - A:visited
 - A:active
 - A:hover
 - Work with layers
 - Add a customized cursor: Selector {cursor:value}
 - Create and save an XML document at the server, which contains 10 users information. Write a program, which takes User Id as an input and returns the user details by taking the user information from the XML document.
 - Creation of a XML document of 20 students of III IT. Add their roll numbers, marks obtained in 5 subjects, total and percentage and save this XML document at the server. Write a program that takes students' roll number as an input and returns the students marks, total and percentage by taking the students' information from the XML document.
 - Write an XML file which will display the Book information which includes the following:
 - Title of the book
 - Author Name
 - ISBN number
 - Publisher name
 - Edition
 - Price

Write a Document Type Definition (DTD) to validate the above XML file.

- Develop a web page using Java script to perform the following information
 - Input student information
 - Display student results for a given roll number.
- Develop a web page for online exam using Javascript

11. Add validations to the 3rd program of registration, user login, user profile and payment by credit card using JavaScript
12. Write a JavaScript for selection sort
13. Create a web page using two image files which switch between one another as the mouse pointer moves over the image. Use the On Mouse Over and On Mouse event handler
14. Using VBScript to create a calculator
15. Create a HTML form that has number of text boxes when the form runs in the browser fill the textboxes with data. Write a JavaScript that verifies that all text boxes have been filled, if a text box has been left empty pop up an alert message indicating which box has been left empty. When Alerts OK button is clicked, set focus to that specific text box. If all the text boxes are filled, display thank you.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

UNIT-I

Arrays-Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation).Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

UNIT-II

Linked Lists Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

UNIT-III

Trees - Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion , Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

UNIT-IV

Searching and Sorting,Linear Search, Binary Search, Comparison of Linear and Binary

Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting Techniques

UNIT-V

Hashing - Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collision by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To understand the structure and organization of the file system

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

UNIT-I

Introduction to Operating System: Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems-Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

UNIT-II

Operating System Organization: Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources-Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication-Deadlocks.

UNIT-III

Memory Management: Physical and Virtual address space-Memory Allocation strategies –Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

UNIT-IV

File and I/O Management: Directory structure-File operations-File Allocation methods-Device management.

UNIT-V

Protection and Security: Policy mechanism-Authentication-Internal aITUess Authorization.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Outcomes (COs)**

- To describe a sound introduction to the discipline of database management systems.
- To give a good formal foundation on the relational model of data and usage of Relational Algebra.
- To introduce the concepts of basic SQL as a universal Database language.
- To enhance knowledge to advanced SQL topics like embedded SQL, procedures connectivity through JDBC.
- To demonstrate the principles behind systematic database design approaches by covering conceptual design, logical design through normalization.
- To provide an overview of physical design of a database system, by discussing Database indexing techniques and storage techniques.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Explain the features of database management systems and Relational database.
2. Design conceptual models of a database using ER modeling for real life applications and also construct queries in Relational Algebra.
3. Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
4. Retrieve any type of information from a data base by formulating complex queries in SQL.
5. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
6. Build indexing mechanisms for efficient retrieval of information from a database

UNIT - I Understanding Database Fundamentals

Origin of database – database elements – design concepts – components of DBMS – Advantages and disadvantages of DBMS. Database Models: flat file – hierarchical model – network model – relational model – object oriented model – Features of Object oriented Database Management system – Features of distributed DBMS – Comparison of DBMS & DDBMS – Object relational model. ER-model: entities – relationships - ERD symbols – cardinalities – sample ERD.

Unit - II Entities and Entity Relationships

Relational model: Introduction – Relational database: attributes and domain – Tuples – Relation and their schemes – Relation representation – keys – relationships – relational operations – Integrity rules. Relational algebra: Basic operations – Additional relational algebraic operations – some relational algebra queries. Functional Dependency: Reasoning about FD's – closure of set of FD's – Attribute closure.

Unit - III Objects

Relational database manipulation: Introduction – SQL: Data definition – Data manipulation: Basic data retrieval – condition specification – Arithmetic and aggregate operations. SQL joins – set manipulation – categorization – updates – views – index. Data Control language : grant, revoke – simple privileges.

Unit - IV Overview of PL/SQL

Declaration section – executable command section : conditional logic, loops, CASE statements – exception handling section: predefined and user defined exceptions. Triggers : definition – types : row level, statement level, before and after, instead of – syntax – enabling and disabling triggers - replacing and dropping triggers. Cursors – definition – open – fetch – close – cursor attributes- select for update – types : implicit, explicit. Procedures, Functions: Local and global – procedures vs functions – stored procedures, functions – create procedure syntax - create function syntax – calling procedures, functions. Replacing and dropping procedures, functions.

Unit - V Packages and Normalization

Package header – package body – calling package members - Replacing and dropping package. Overview of Normalization : advantages - disadvantages. Normal forms: first normal form – second normal form – third normal form – boyce codd normal form – Introduction to fourth, fifth and sixth normal forms – denormalization. Parallel Databases: Introduction – Design of Parallel Databases – Advantages and Disadvantages of Parallel Database.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

UNIT-I

Introduction: History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture.

UNIT-II

Overview of object oriented programming using Java: OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine.

UNIT-III

Development Tools: Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device.

UNIT-IV

User Interface Architecture: Application context, intents, Activity life cycle, multiple screen size s.

User Interface Design: Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes),Images, Menu, Dialog.

UNIT-V

Database: Understanding of SQLite database, connecting with the database.

Course Objectives (CO)

- To familiarize of the syntax, semantics, data-types and library functions of numerical computing languages such as MATLAB and/or SCILAB
- To reinforce a structured, top-down approach to formulate and solve problems.
- To introduce common approaches, structures, and conventions for creating and evaluating computer programs, primarily in a procedural paradigm, but with a brief introduction to object-oriented concepts and terminology.
- To understand a variety of common numeric techniques to solve and visualize engineering-related computational problems.
- To introduce the MATLAB software environment.
- To implement/simulate and visualization of basic mathematical functions relevant to electronics applications.

Course Outcomes (Cos)

By the end of this course, students should be able to

1. Use MATLAB effectively to analyze and visualize data.
2. Apply numeric techniques and computer simulations to solve engineering-related problems.
3. Apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objectives.
4. Design and document computer programs and analyses in a careful and complete manner so as to effectively communicate results, to facilitate evaluation and debugging by another programmer, and to anticipate and resolve user errors.
5. Demonstrate understanding and use of fundamental data structures (classes).
6. Create and control simple plot and user-interface graphics objects in MATLAB.

UNIT-I

Introduction to Programming: Components of a computer, working with numbers, Machine code, Software hierarchy.

UNIT-II

Programming Environment: MATLAB Windows, A First Program, Expressions, Constants, Variables and assignment statement, Arrays.

UNIT-III

Graph Plots: Basic plotting, Built in functions, Generating waveforms, Sound replay, load and save. Procedures and Functions: Arguments and return values, M-files, Formatted console input-output, String handling,

UNIT-IV

Control Statements: Conditional statements: If, Else, Else-if, Repetition statements: While, for loop

UNIT-V

Manipulating Text: Writing to a text file, Reading from a text file, Randomising and sorting a list, searching a list. **GUI Interface:** Attaching buttons to actions, Getting Input, Setting Output

Total: 100

Course Objectives (CO)

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

List of Programs

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.
2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.
3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).
4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
6. Perform Stack operations using Linked List implementation.
7. Perform Stack operations using Array implementation. Use Templates.

8. Perform Queues operations using Circular Array implementation. Use Templates.
9. Create and perform different operations on Double-ended Queues using Linked List implementation.
10. WAP to scan a polynomial using linked list and add two polynomial.
11. WAP to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration
12. (ii) WAP to display fibonaITUi series (i)using recursion, (ii) using iteration
13. WAP to calculate GCD of 2 number (i) with recursion (ii) without recursion
14. WAP to create a Binary Search Tree and include following operations in tree: (a) Insertion (Recursive and Iterative Implementation)
(b) Deletion by copying
(c) Deletion by Merging
(d) Search a no. in BST
(e) Display its preorder, postorder and inorder traversals Recursively
(f) Display its preorder, postorder and inorder traversals Iteratively
(g) Display its level-by-level traversals
(h) Count the non-leaf nodes and leaf nodes
(i) Display height of tree
(j) Create a mirror image of tree
(k) Check whether two BSTs are equal or not
15. WAP to convert the Sparse Matrix into non-zero form and vice-versa.
16. WAP to reverse the order of the elements in the stack using additional stack.
17. WAP to reverse the order of the elements in the stack using additional Queue.
18. WAP to implement Diagonal Matrix using one-dimensional array.
19. WAP to implement Lower Triangular Matrix using one-dimensional array.
20. WAP to implement Upper Triangular Matrix using one-dimensional array.
21. WAP to implement Symmetric Matrix using one-dimensional array.
22. WAP to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the suITUessor / predecessor of an element, insert an element, inorder traversal.
23. WAP to implement various operations on AVL Tree.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To provide necessary skills for developing and debugging programs in UNIX environment.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify, use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

List of Programs

1. Write a program (using *fork()* and/or *exec()* commands) where parent and child execute:
 - a) same program, same code.
 - b) same program, different code.
 - c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behaviour of Linux kernel including kernel version, CPU type and model. (CPU information)
3. Write a program to report behaviour of Linux kernel including information on configured memory, amount of free and used memory. (memory information)

4. Write a program to print file details including owner access permissions, file access time, where file name is given as argument.
5. Write a program to copy files using system calls.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using *thread* library.
13. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100**Course Outcomes (COs)**

- To describe a sound introduction to the discipline of database management systems.
- To give a good formal foundation on the relational model of data and usage of Relational Algebra.
- To introduce the concepts of basic SQL as a universal Database language.
- To enhance knowledge to advanced SQL topics like embedded SQL, procedures connectivity through JDBC.
- To demonstrate the principles behind systematic database design approaches by covering conceptual design, logical design through normalization.
- To provide an overview of physical design of a database system, by discussing Database indexing techniques and storage techniques.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Explain the features of database management systems and Relational database.
2. Design conceptual models of a database using ER modeling for real life applications and also construct queries in Relational Algebra.
3. Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
4. Retrieve any type of information from a data base by formulating complex queries in SQL.
5. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
6. Build indexing mechanisms for efficient retrieval of information from a database

List of Programs

1. Create a table with following fields:

Employee table:

Field name	Constraint	Type	Size
Employee_no	Primary key	Character	6
Employee_name		Character	30
Address		Character	25
Designation		Character	15
Dob		Date	
Gender	Check	Character	1
Doj		Date	

Salary		Number	10,2
--------	--	--------	------

Queries:

- Display name of the employees whose salary is greater than “10,000”.
 - Display the details of employees in ascending order according to Employee Code
 - Display the details of employees earning the highest salary
 - Display the names of employees who earn more than “Ravi”.
2. Create table named Student with following fields and insert the values:

Field name	field type	field size
Student Name	Character	15
Gender	Character	6
Roll No.	Character	10
Department Name	Character	15
Address	Character	25
Percentage of marks	Number	4,2

Queries:

- Calculate tge average mark percentage of the students
- Display the names of teh students whose percentage marks are grater than 80%
- Display the details of the students who got the highest percentage of marks
- Display the details of the students whose mark percentage between 50 and 70
- Display the details of the students whose mark percentage is greater the the mark percentage of Roll No=12CA01

3. Create a table with following fields:

Staff table:

Field name	Constraint	Type	Size
Staff_no	Primary key	Character	6
Staff_name		Character	30
Dob		Date	
Dept_code	Foreign key	Character	4
Designation		Character	15
Basic		Number	7,2

Department table:

Field name	constraint	Type	Size
Dept_code	Primary key	Character	4
Dept_name		Character	30

Execute the following queries:

- To list the staff who joined 2 years back.
- To list the staff in computer science dept.
- To list the staff_name and the dept_name in which he/she works.
- To list the maximum and minimum salary in each dept.

5. To list the dept along with the total amount spent on salary
6. To list the name of the employees who draw the salary more than the average salary.

4. Create a table with the following fields:

Book table:

Field name	Constraint	Type	Size
Access_no	Primary key	Character	6
Title		Character	30
Author		Character	30
Publisher		Character	30
Subject		Character	10
Price		Number	6,2

Execute the following queries:

1. The title of C and C++ books.
 2. The books written by a particular author.
 3. The books which costs between Rs.300/- and Rs.500/-
 4. The number of books available in each subject.
 5. The books in the decreasing order of the cost.
5. Create two tables course and batch with following fields
 COURSE: coursecodeno number(5), course name varchar(20), syllabus varchar(20)
 BATCH: bcode number(5), coursecode number(5), starting_date date, duration number(3), coursefee number(10,2)

Perform the following queries

- Insert the details for course and batch tables with 10 records
- Show the description of the two tables
- Select all the fields from course & batch tables
- Select all the fields from course & batch tables where coursecode=10
- Select all the fields from batch table where starting date=march 10th
- Select batch code from batch table where net income>50000
- Select coursename, batch code & starting date from batch and course tables where course code of batch table and course code of course table are equal
- Select a syllabus from course wher coursecode=5

6. Create a table with the following fields:

Account table:

Field name	Constraint	Type	Size
Acc_no	Primary key	Number	4
Cust_name		Varchar2	30
Branch_name		Varchar2	30
Cust_city		Varchar2	30

Borrower table:

Field name	Constraint	Type	Size
Acc_no	Foreign key	Number	30
Branch_name		Varchar2	30
Amount		Number	8,2

Write queries to perform different types of join.

7. Write the PL/SQL program to find the factorial and fibonacci series of given numbers.

8.(i) Write the PL/SQL program to check whether the string is Palindrome.

(ii) Write the PL/SQL program to reverse a number

(iii) Write the PL/SQL program to check whether the number is Armstrong

9. Write a PL/SQL block to create and handle user defined exception

clientmaster

Field name	Constraint	Type	Size
Client_id		Number	6
Client_name		Varchar2	30
Address		Varchar2	50
Phone		Number	10
Balance		Number	10,2

10. Create table with following fields:

Product table:

Field name	Constraint	Type	Size
Product_code	Primary key	Varchar2	7
Product_name		Varchar2	30
Price		Number	6,2
Quantity		Number	4

Vendor table:

Field name	Constraint	Type	Size
Vendor_name		Varchar2	30
Vendor address		Varchar2	30
Product_code	Foreign Key	Varchar2	7

Create a trigger to fire when the Record is deleted and inserted.

11. Write a PL/SQL trigger to update the records while deleting the one record in another table.

Voters_master:

Field name	Constraint	Type	Size
Voterid	Primary key	Number	5
Name		Varchar2	30
Ward_no	Primary Key	Number	4
Dob		Date	
Address		Varchar2	150

New_list

Field name	Constraint	Type	Size
Voterid		Number	5
Ward_no		Number	4

Name		Varchar2	30
Description		Character	50

12. Create a table to store the salary details of the employees in a company. Declare the cursor id to contain empno, employee name and net salary. Use cursor to update the employee details.

Salary:

Field name	Constraint	Type	Size
Emp_no	Primary key	Number	4
Emp_name		Varchar2	30
Designation		Varchar2	25
Dept		Varchar2	30
Basic		Number	5

13. Create a table stock contains the itemcode varchar2(10), itemname varchar2(50), current_stock number(5), date_of_last_purchase date. Write a stored procedure to seek for an item using itemcode and delete it, if the date of last purchase is before 1 year from the current date. If not, update the current stock.

14. Create a table to contain phone_number, user_name, address. Write a function to search for address using phone_number.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

List of Programs

1. Create —Hello World application. That will display —Hello World in the middle of the screen in the emulator. Also display —Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.

8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To familiarize of the syntax, semantics, data-types and library functions of numerical computing languages such as MATLAB and/or SCILAB
- To reinforce a structured, top-down approach to formulate and solve problems.
- To introduce common approaches, structures, and conventions for creating and evaluating computer programs, primarily in a procedural paradigm, but with a brief introduction to object-oriented concepts and terminology.
- To understand a variety of common numeric techniques to solve and visualize engineering-related computational problems.
- To introduce the MATLAB software environment.
- To implement/simulate and visualization of basic mathematical functions relevant to electronics applications.

Course Outcomes (Cos)

By the end of this course, students should be able to

1. Use MATLAB effectively to analyze and visualize data.
2. Apply numeric techniques and computer simulations to solve engineering-related problems.
3. Apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objectives.
4. Design and document computer programs and analyses in a careful and complete manner so as to effectively communicate results, to facilitate evaluation and debugging by another programmer, and to anticipate and resolve user errors.
5. Demonstrate understanding and use of fundamental data structures (classes).
6. Create and control simple plot and user-interface graphics objects in MATLAB.

List of Programs

1. Write a program to assign the following expressions to a variable A and then to print out the value of A.
 - a. $(3+4)/(5+6)$
 - b. $2\pi^2$
 - c. $\sqrt{2}$
 - d. $(0.0000123 + 5.67 \times 10^{-3}) \times 0.4567 \times 10^{-4}$
2. Celsius temperatures can be converted to Fahrenheit by multiplying by 9, dividing by 5, and adding 32. Assign a variable called C the value 37, and implement this formula to assign a variable F the Fahrenheit equivalent of 37 Celsius.
3. Set up a vector called N with five elements having the values: 1, 2, 3, 4, 5. Using N, create assignment statements for a vector X which will result in X having these values:
 - a. 2, 4, 6, 8, 10

- b. $1/2, 1, 3/2, 2, 5/2$
 c. $1, 1/2, 1/3, 1/4, 1/5$
 d. $1, 1/4, 1/9, 1/16, 1/25$
4. A supermarket conveyor belt holds an array of groceries. The price of each product (in pounds) is [0.6, 1.2 ,0.5, 1.3] ; while the numbers of each product are [3, 2 ,1 ,5]. Use MATLAB to calculate the total bill.
5. The `sortrows(x)` function will sort a vector or matrix X into increasing row order. Use this function to sort a list of names into alphabetical order.
6. The —identity matrix is a square matrix that has ones on the diagonal and zeros elsewhere. You can generate one with the `eye()` function in MATLAB. Use MATLAB to find a matrix B, such that when multiplied by matrix $A = \begin{bmatrix} 1 & 2 \\ -1 & 0 \end{bmatrix}$ the identity matrix $I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$ is generated. That is $A*B=I$.
7. Create an array of N numbers. Now find a single MATLAB statement that picks out from that array the 1,4,9,16,...,Nth entries, i.e. those numbers which have indices that are square numbers.
8. Draw a graph that joins the points (0,1), (4,3), (2,0) and (5,-2).
9. The seeds on a sunflower are distributed according to the formula below. Plot a small circle at each of the first 1000 co-ordinates :
- $$r_n = \sqrt{n}$$
- $$\theta_n = \frac{137.51}{180} \pi n$$
10. Calculate 10 approximate points from the function $y=2x$ by using the formulae:
 i. $x_n = n$
 ii. $y_n = 2n + \text{rand} - 0.5$
 Fit a line of best fit to these points using the function `polyfit()` with `degree=1`, and generate co-ordinates from the line of best fit using `polyval()`. Use the on-line help to find out how to use these functions. Plot the raw data and the line of best fit.
11. Calculate and replay 1 second of a sinewave at 500Hz with a sampling rate of 11025Hz. Save the sound to a file called `ex35.wav`. Plot the first 100 samples.
12. Calculate and replay a 2 second chirp. That is, a sinusoid that steadily increases in frequency with time, from say 250Hz at the start to 1000Hz at the end.
13. Build a square wave by adding together 10 odd harmonics: 1f, 3f, 5f, etc. The amplitude of the nth harmonic should be $1/n$. Display a graph of one cycle of the result superimposed on the individual harmonics.

14. Write a function called FtoC (ftoc.m) to convert Fahrenheit temperatures into Celsius. Make sure the program has a title comment and a help page. Test from the command window with:

- i. FtoC(96)
- ii. lookfor Fahrenheit
- iii. help FtoC

15. Write a program to input 2 strings from the user and to print out (i) the concatenation of the two strings with a space between them, (ii) a line of asterisks the same length as the concatenated strings, and (iii) the reversed concatenation. For example:

- i. Enter string 1: Mark
- ii. Enter string 2: Huckvale
- iii. Mark Huckvale
- iv. *****
- v. elavkcuH kraM

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of application layer and presentation layer paradigms and protocols.
- To study session layer design issues, transport layer services, and protocols.
- To gain core knowledge of network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

1. Students will be able to:
2. Describe the functions of each layer in OSI and TCP/IP model.
3. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
4. Describe the Session layer design issues and Transport layer services.
5. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
6. Describe the functions of data link layer and explain the protocols.
7. Explain the types of transmission media with real time applications

UNIT I

Introduction to Computer Networks : Network definition; network topologies; network classifications; network protocol; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques:** Analog and digital signal; data-rate limits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission;

UNIT – II

Digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media. **Networks Switching Techniques and Access mechanisms:** Circuit switching; packet switching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

UNIT – III

Data Link Layer Functions and Protocol: Error detection and error correction techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

UNIT – IV

Multiple Access Protocol and Networks: CSMA/CD protocols; Ethernet LANS; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways; **Networks Layer Functions and Protocols:** Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit V

Transport Layer Functions and Protocols: Transport services- error and flow control, Connection establishment and release- three way handshake; **Overview of Application layer protocol:** Overview of DNS protocol; overview of WWW &HTTP protocol.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectives and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

UNIT-I

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

UNIT-II

Requirement Analysis; Initiating Requirement Engineering Process- Requirement Analysis and Modeling Techniques- Flow Oriented Modeling- Need for SRS- Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

UNIT-III

Risk Management: Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, **Quality Management-** Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

UNIT-IV

Design Engineering-Design Concepts, Architectural Design Elements, Software Architecture, Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

UNIT-V

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- Understand the benefits of using Microsoft Visual Basic 6.0 for Windows as an application tool.
- Understand the Visual Basic event-driven programming concepts, terminology, and available tools.
- Learn the fundamentals of designing, implementing, and distributing a Visual Basic application.
- Learn to use the Visual Basic toolbox. Learn to modify object properties. Learn object methods.
- Use the menu design window. Understand proper debugging and error-handling procedures.
- Gain a basic understanding of database access and management using data bound controls. Obtain an introduction to ActiveX controls and the Windows Application Programming Interface (API).

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
2. Develop a Graphical User Interface (GUI) based on problem description
3. Develop an Event Planning Chart based on problem description so as to define the processing that is to occur based on specific events
4. Develop an Algorithm to verify processing is accurate
5. Develop and debug applications using Visual Basic 2010 (or version required for the course) that runs under Windows operating system
6. Develop programs that retrieve input from a file as opposed to input only provided by user

UNIT I

Beginning Visual Basic: Introduction to Visual Basic: Introduction Graphics User Interface (GUI), Programming Language (Procedural, Object oriented, event driven), The Visual Basic environment IDE, Introduction to VB Controls: Textboxes, Frames, check boxes, options buttons, setting a border and style, the shape control, the line control, working with multiple controls and their properties, designing the user interface, keyboard access, tab controls. Default & controls property, coding for Controls, list box and combo box and their properties, filling the list box using property window/add item method, picture/image box and their properties.

UNIT II

Dealing with data: Operators-Variables-declaring variables- types of variables – data types – constants – arrays – declaring arrays – specifying arrays – Multidimensional

arrays – dynamic arrays – arrays of arrays. Val function, Arithmetic operations, formatting data. Error functions and types. Introducing to Menu editor.

UNIT III

Writing Code: Control flow statements – If – Then – If-then-else – Nested control statements – Select case – Loop statements – Do-loop – For-Next – While Wend – Exit statement . Displaying message in Message box, testing whether input is valid or not. Collections – procedures – Subroutines – Functions – Calling procedures – Object Browser – Creating classes and Objects – I/O statements

UNIT IV

Working with forms and procedures: Introducing to forms and types of forms and setting form properties, creating, adding, removing forms in project, hide, show method, load, unload, statement, Me keywords, Referring to objects on a different forms. Creating an application using controls: What is on the toolbar – Textbox control – Picture box – Image box – Label box – Frame – List box – Option button – Combo box – Command Button – check box – The Drive, Directory, File list controls – Teh Line & Shape control – Scroll Box – Data – Timer.

UNIT V

Multiple Document Interface & Menus: Why MDI Forms – Features of an MDI forms – Loading MDI forms & child forms – creating a simple MDI forms –Accessing MDI froms – creating MENUS – POP-UP MENUS.

Data access controls: JET database Engine – ADODC – DAO Data control – ODBC Data Source Administrator – DATA REPORT.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To define terms related to the Internet.
- To describe how the Internet is changing the world.
- To understand how computers are connected to the Internet.
- To understand the principles of Internet services such as Listserv Mailing Lists, Usenet Newsgroups, and Instant Messaging.
- To understand methods for citing Internet resources.
- To understand how Web pages are designed and created

Course Outcomes (COs)

Upon successful completion of the course, the student should be able to:

1. Demonstrate the ability to use the World Wide Web, Understand and apply Internet Etiquette.
2. Demonstrate an understanding of and the ability to use electronic mail.
3. Understand and use common types of files found on the internet.
4. Demonstrate the ability to download a variety of resources from the internet.
5. Demonstrate an ability to create basic Web pages with HTML.
6. Understand societal issues and emerging technologies.

UNIT – I

Java: Use of Objects, Array and ArrayList class JavaScript: Datatypes, operators, functions, control structures, events and event handling.

UNIT – II

JDBC: JDBC fundamentals, Establishing Connectivity and working with connection interface, working with statements, creating and executing SQL statements, working with ResultSet objects.

UNIT – III

JSP: Introduction to JavaServerPages, HTTP and Servlet Basics, The Problem with Servlets, The Anatomy of a JSP Page, JSP Processing, JSP Application Design with MVC, Setting Up the JSP Environment.

UNIT – IV

JSP: Implicit Objects, conditional processing, displaying values, Using an expression to Set an Attribute, declaring variables and methods, error handling and debugging, sharing data between JSP pages, Requests, and Users, Database Access.

UNIT – V

Java beans: Java Beans Fundamentals, JAR Files, Introspection, Developing a simple Bean, Connecting to DB.

Suggested Readings

1. Ivan Bayross (2009). Web Enabled Commercial Application Development Using Html, Dhtml, Javascript, Perl Cgi. BPB Publications.
2. Cay Hortstmann (2009). BIG Java (3rd ed.). Wiley Publication
3. Herbert Schildt (2009). Java 7 The Complete Reference (8th ed.).
4. Jim Keogh (2002). The Complete Reference J2EE. TMH.
5. Hans Bergsten (2003). Java ServerPages (3rd ed.). O'Reilly.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

UNIT-I

Introduction: Understanding Mark-up Languages, Introduction to XML and its Goals.

UNIT-II

XML Basics: XML Structure and Syntax, Document classes and Rules.

UNIT-III

Other XML Concepts: Scripting XML

UNIT-IV

Other XML Concepts: XML as Data, Linking with XML

UNIT-V

XML with Style: XSL –Style Sheet Basics, XSL basics, XSL style sheets.

Suggested Readings

1. William, J. Pardi. XML in action web technology.
2. Michael, J. Young. Step by Step XML.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of Application layer and Presentation layer paradigms and protocols.
- To study Session layer design issues, Transport layer services, and protocols.
- To gain core knowledge of Network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

1. Describe the functions of each layer in OSI and TCP/IP model.
 2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
 3. Describe the Session layer design issues and Transport layer services.
 4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
 5. Describe the functions of data link layer and explain the protocols.
 6. Explain the types of transmission media with real time applications
-
1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
 2. Simulate and implement stop and wait protocol for noisy channel.
 3. Simulate and implement go back n sliding window protocol.
 4. Simulate and implement selective repeat sliding window protocol.
 5. Simulate and implement distance vector routing algorithm
 6. Simulate and implement Dijkstra algorithm for shortest path routing.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- To analyze, specify and document software requirements for a software system.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Implement a given software design using sound development practices.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectives and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

S. No	Practical Title
1.	<ul style="list-style-type: none"> • Problem Statement • Process Model
2.	Requirement Analysis: <ul style="list-style-type: none"> • Creating a Data Flow • Data Dictionary, Use Cases
3.	Project Management:

	<ul style="list-style-type: none"> • Computing FP • Effort • Schedule, Risk Table, Timeline chart
4.	Design Engineering: <ul style="list-style-type: none"> • Architectural Design • Data Design, Component Level Design
5.	Testing: <ul style="list-style-type: none"> • Basis Path Testing

Sample Projects:

1. **Criminal Record Management:** Implement a criminal record management system for jailers, police officers and CBI officers
2. **DTC Route Information:** Online information about the bus routes and their frequency and fares
3. **Car Pooling:** To maintain a web based intranet application that enables the corporate employees within an organization to avail the facility of carpooling effectively.
4. Patient Appointment and Prescription Management System
5. Organized Retail Shopping Management Software
6. Online Hotel Reservation Service System
7. Examination and Result computation system
8. Automatic Internal Assessment System
9. Parking Allocation System
10. Wholesale Management System

17ITU413 PROGRAMMING WITH VISUAL BASIC - PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- Understand the benefits of using Microsoft Visual Basic 6.0 for Windows as an application tool.
- Understand the Visual Basic event-driven programming concepts, terminology, and available tools.
- Learn the fundamentals of designing, implementing, and distributing a Visual Basic application.
- Learn to use the Visual Basic toolbox. Learn to modify object properties. Learn object methods.
- Use the menu design window. Understand proper debugging and error-handling procedures.
- Gain a basic understanding of database access and management using data bound controls. Obtain an introduction to ActiveX controls and the Windows Application Programming Interface (API).

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
2. Develop a Graphical User Interface (GUI) based on problem description
3. Develop an Event Planning Chart based on problem description so as to define the processing that is to occur based on specific events
4. Develop an Algorithm to verify processing is accurate
5. Develop and debug applications using Visual Basic 2010 (or version required for the course) that runs under Windows operating system
6. Develop programs that retrieve input from a file as opposed to input only provided by user

Implement the following projects using Visual Basic Language

1. To calculate the Simple interest and compound interest
2. To perform the following string functions
 - a. Upper to lower
 - b. String concatenation
 - c. String length
 - d. String compare

- e. Bold, Italic and Underline
 - f. Rtrim and Ltrim
 - g. Change the background of form
3. To draw different shapes and fill with different colors using MDI form
 4. To implement a simple calculator
 5. To create an ActiveX Control
 6. To animate the picture using timer control
 7. To convert text to voice
 8. To simulate web browser
 9. Develop a project for Railway Reservation System
 10. Develop a project for Employee Payroll system
 11. Develop a project for Student Information system. Generate data report for Student marklist
 12. Develop a project to generate Barcode for Library applications

Course Objectives (CO)

- To define terms related to the Internet.
- To describe how the Internet is changing the world.
- To understand how computers are connected to the Internet.
- To understand the principles of Internet services such as Listserv Mailing Lists, Usenet Newsgroups, and Instant Messaging.
- To understand methods for citing Internet resources.
- To understand how Web pages are designed and created

Course Outcomes (COs)

Upon successful completion of the course, the student should be able to:

1. Demonstrate the ability to use the World Wide Web, Understand and apply Internet Etiquette.
2. Demonstrate an understanding of and the ability to use electronic mail.
3. Understand and use common types of files found on the internet.
4. Demonstrate the ability to download a variety of resources from the internet.
5. Demonstrate an ability to create basic Web pages with HTML.
6. Understand societal issues and emerging technologies.

Create event driven program for the following:

1. Print a table of numbers from 5 to 15 and their squares and cubes using alert.
2. Print the largest of three numbers
3. Find the factorial of a number n
4. Enter a list of positive numbers terminated by Zero. Find the sum and average of these numbers.
5. A person deposits Rs.1000 in a fixed account yielding 5% interest. Compute the amount in the account at the end of each year for n years.
6. Read n numbers. Count the number of negative numbers, positive numbers and zeroes in the list.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives (CO)

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

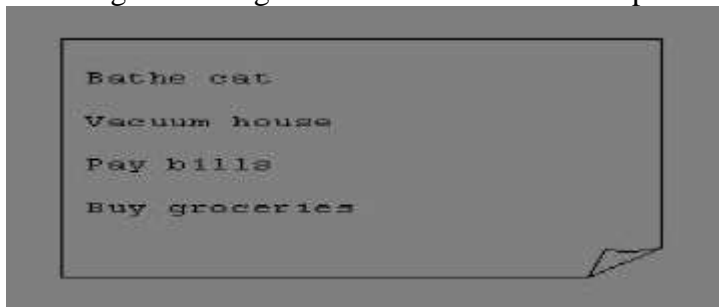

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

1. Information Structure

In this exercise, student will practice identifying the structure of an information object. For the sample document provided below: Label the information structures you see, including containing structures. 1. Draw a tree representation of the structure.

**2. Deconstructing an XML Document**

In this exercise, student will practice identifying the explicit structure within an XML document. In a sense, this is the reverse of what you did in Exercise #1. For the sample XML markup below, create a document-like representation (or a simple drawing) for the content contained within the XML tags:

```
<book>
<coverInfo>
<title>The XML Handbook</title>
<author>Charles F. Goldfarb</author>
<author>Paul Prescod</author>
<edition>Second</edition>
<description>The definitive XML resource: applications, products, and technologies.
Revised and expanded—over 600 new pages. </description>
</coverInfo> </book>
```

3. Creating XML Markup

In this exercise, create some XML markup based on the tree representation from Exercise #1 above, and the content from the original sample document.

4. Well-Formedness

This exercise checks your understanding of the constraints for well-formedness. Are the following document instances well-formed? Explain any NO answers.

```
<list><title>The first list</title><item>An item</list>
<item>An item</item><item>Another item</item>
<para>Bathing a cat is a <emph>relatively</emph> easy task as long as the cat is
willing.</para>
<bibl><title>How to Bathe a Cat<author></title>Merlin Bauer<author></bibl>
```

5. Well Formedness

This exercise is a bit more challenging than the previous example. Here is a fragment of an XML document instance. Identify all the places where it fails to match the constraints for well-formedness.

```
<PROCEDURE><TITLE>How to Bathe a Cat</TITLE>
<OVERVIEW> This procedure tells you how to bathe a cat.
<WARNING></OVERVIEW>Cats don't like to take baths. You could get hurt doing
this. Be sure to obtain all the required protective gear before you start.
</WARNING><EQUIPEMENT><ITEM>Hockey Mask <ITEM>Padded Full-body
Kevlar Armor</ITEM><ITEM>Tub full of warm water</ITEM><ITEM>Towels
</ITEM><ITEM>First Aid kit</ITEM><ITEM>Cat Shampoo</ITEM>
<EQUIPMENT><INSTRUCTIONS> <STEP> Locate the cat, who by now is hiding
under the bed.</STEP><STEP>Place the cat in the tub of water.</STEP> <ITEM>Using
the First Aid kit, repair the damage to your head and arms.</STEP> <STEP>Place the cat
back in the tub and hold it down.</STEP> <STEP>Wash it really fast, then make an
effort to dry it with the towels.</STEP> <STEP>Decide not to do this again. </STEP>
</INSTRUCTIONS>
```

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To introduce the use of the components of a graphics system and become familiar with building approach of graphics system components and algorithms related with them.
- To learn the basic principles of 3- dimensional computer graphics.
- Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition.
- Provide an understanding of mapping from a world coordinates to device coordinates, clipping, and projections.
- To be able to discuss the application of computer graphics concepts in the development of computer games, information visualization, and business applications.
- To comprehend and analyze the fundamentals of animation, virtual reality, underlying technologies, principles, and applications.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. List the basic concepts used in computer graphics.
2. Implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
3. Describe the importance of viewing and projections.
4. Define the fundamentals of animation, virtual reality and its related technologies,
5. Understand a typical graphics pipeline
6. Design an application with the principles of virtual reality

UNIT – I Testing Fundamentals

Examining the Specification: Getting started – Performing a high-level review of the specification – Low-level specification test techniques. Testing the software with blinders on: Dynamic Black-Box Testing- Test-to-Pass and Test-to-Fail- Equivalence Partitioning- Data testing – State testing – Other Black-box test techniques.

UNIT – II Examining the code

Static White-Box testing- Formal reviews – Coding Standards and Guidelines- Generic Code Review Checklist. Testing the software with X-Ray glasses: Dynamic White-Box testing- Dynamic White-Box testing versus Debugging-Testing the Pieces- Data Coverage- Code Coverage.

Flowgraphs and Path Testing

Path-testing Basics – Predicates, Path Predicates and Achievable Paths-Path sensitizing- Path Instrumentation-Implementation and Application of Path Testing

UNIT – III Transaction-Flow Testing and Data-Flow Testing

Transaction Flows-Transaction Flow Testing Techniques. Data-Flow Testing Basics-Data-Flow Testing Strategies-Application, Tools, Effectiveness

UNIT – IV Domain Testing

Domains and Paths-Domain Testing-Domains and Interface Testing-Domains and Testability

UNIT – V Logic-Based Testing and State Graphs

Motivational Overview-Decision Tables-Path Expressions Again-KV Charts-Specifications

State Graphs-Good State Graphs and Bad-State Testing

3. www.softwaretestinginstitute.com

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
2. Choose the architecture based on the problem to be solved.
3. Differentiate between the types of applications supported by .Net
4. Build, compile and execute a VB .Net program
5. Apply techniques to develop error-free software
6. To build integrated VB.NET solutions using files and structures with printing capabilities. Translate general requirements into data-related solutions using database concepts

UNIT I

Introduction to .NET: .NET framework features & architecture, CLR, common Type system, MSIL, Assemblies and class libraries. Introduction to visual studio, Project basics, types of project in .Net, IDE of VB .Net – Menu bar, Tool bar, Solution Explorer, Toolbox, Properties Window, Form Designer, Output Window, Object browser. The environment: Editor tab, format tab, general tab, docking tab. Visual development & event driven programming – Methods and events.

UNIT II

The VB .Net Language: The VB .Net Language – Variables- declaring variables, Data type of variables, forcing variables declarations, scope & lifetime of a variable, constants, arrays, types of arrays, control array, Structure programming – Modularity – Information hiding – abstraction – events – subroutines and functions – message box – input box. Control flow statement: conditional statement, loop statement.

UNIT III

Working with WPF: Introduction: Understanding Windows Graphics – WPF: A Higher Level API – The architecture of WPF. XAML: Basics, properties and events in XAML – loading and compiling – Layout. Classic controls: The Control class – content controls – text controls – list controls – Range based controls.

UNIT IV

Objects and Collections: Understanding objects, properties, methods. Understanding collections. Files: Introduction – classification of files – processing files – handling files and folder using class – directory class – file class.

UNIT V

Database programming with ADO .Net: overview of ADO, from ADO to ADO .Net, accessing data using server explorer. Creating connection, command, data adapter and data set with OLEDB and SQLDB. Display data on data bound controls, display data on a data grid. Generate reports using CrystalReportViewer.

5. <http://www.wdftutorial.net/HelloWPF.html>

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
4. Details of IP operations in the INTERNET and associated routing principles
5. Understand the key protocols which support the Internet
6. reate applications using techniques such as multiplexing, forking, multithreading

UNIT-I

Transport Layer Protocols: TCP, UDP, SCTP protocol.

UNIT-II

Socket Programming: Socket Introduction; TCP Sockets; TCP Client/Server Example ; signal handling

UNIT-III

I/O multiplexing using sockets; Socket Options; UDP Sockets; UDP client server example; Address lookup using sockets.

UNIT-IV

Network Applications: Remote logging; Email; WWW and HTTP.

UNIT-V

LAN administration: Linux and TCP/IP networking: Network Management and Debugging.

Suggested Readings

2. Forouzan, B. A. (2003). Data Communications and Networking(4th ed.). New Delhi: THM Publishing Company Ltd.,
3. Nemeth Synder., & Hein. (2010). Linux Administration Handbook (2nd ed.), New Delhi: Pearson Education.
4. Steven, R. (1990). Unix Network Programming (2nd ed.). New Delhi: PHI.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To develop an appreciation for what is involved in learning from data.
- To understand a wide variety of learning algorithms.
- To understand how to perform evaluation of learning algorithms and model selection.
- To introduce students to the basic concepts and techniques of Machine Learning.
- To become familiar with regression methods, classification methods, clustering methods.
- To become familiar with Dimensionality reduction Techniques.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Have a broad understanding of machine learning algorithms and their use in data-driven knowledge discovery and program synthesis.
2. Design and implement several machine learning algorithms in Java.
3. Identify, formulate and solve machine learning problems that arise in practical applications.
4. Have knowledge of the strengths and weaknesses of different machine learning algorithms (relative to the characteristics of the application domain) and be able to adapt or combine some of the key elements of existing machine learning algorithms to design new algorithms as needed.
5. Identify machine learning techniques suitable for a given problem
6. Solve the problems using various machine learning techniques

UNIT-I

Introduction: Concept of Machine Learning, Applications of Machine Learning, Key elements of Machine Learning, Supervised vs. Unsupervised Learning, Statistical Learning: Bayesian Method, The Naive Bayes Classifier

UNIT-II

Softwares for Machine Learning and Linear Algebra Overview : Plotting of Data, Vectorization, Matrices and Vectors: Addition, Multiplication, Transpose and Inverse using available tool such as MATLAB.

UNIT-III

Linear Regression: Prediction using Linear Regression, Gradient Descent, Linear Regression with one variable, Linear Regression with multiple variables, Polynomial Regression, Feature Scaling/Selection. Logistic Regression: Classification using Logistic Regression, Logistic Regression vs. Linear Regression, Logistic Regression with one variable and with multiple variables.

UNIT-IV

Regularization: Regularization and its utility: The problem of Overfitting, Application of Regularization in Linear and Logistic Regression, Regularization and Bias/Variance.

UNIT-V

Neural Networks: Introduction, Model Representation, Gradient Descent vs. Perceptron Training, Stochastic Gradient Descent, Multilayer Perceptrons, Multiclass Representation, Backpropagation Algorithm.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

UNIT-I

Overview: Predictive and descriptive data mining techniques

UNIT-II

Supervised and unsupervised learning techniques

UNIT-III

Process of knowledge discovery in databases, pre-processing methods

UNIT-IV

Data Mining Techniques: Association Rule Mining, classification and regression techniques, clustering

UNIT-V

Scalability and data management issues in data mining algorithms, measures of interestingness.

4. Eruditionhome.Com

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**Course Objectives (CO)**

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

UNIT-I

Introduction: Light, Brightness adaption and discrimination, Pixels, coordinate conventions, Imaging Geometry, Perspective Projection, Spatial Domain Filtering, sampling and quantization. Spatial Domain Filtering: Intensity transformations, contrast stretching, histogram equalization, Correlation and convolution, Smoothing filters, sharpening filters, gradient and Laplacian.

UNIT-II

Hotelling Transform, Fourier Transforms and properties, FFT (Decimation in Frequency and Decimation in Time Techniques), Convolution, Correlation, 2-D sampling, Discrete Cosine Transform, Frequency domain filtering.

UNIT-III:

Image Restoration, Basic Framework, Interactive Restoration, Image deformation and geometric transformations, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Adaptive filters, Linear, Position invariant degradations, Estimation of Degradation functions, Restoration from projections, Image Compression-Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Entropy of an information source, Shannon's 1st Theorem, Huffman Coding, Arithmetic Coding, Golomb Coding, LZW coding, Transform Coding, Sub-image size selection, blocking artifacts, DCT implementation using FFT, Run length coding.

UNIT – IV

FAX compression (ITU-T Group-3 and Group-4), Symbol-based coding, JBIG-2, Bit-plane encoding, Bit-allocation, Zonal Coding, Threshold Coding, JPEG, Lossless predictive coding, Lossy predictive coding, Motion Compensation

Wavelet based Image Compression: Expansion of functions, Multi-resolution analysis, Scaling functions, MRA refinement equation, Wavelet series expansion, Discrete Wavelet Transform (DWT), Continuous Wavelet Transform, Fast Wavelet Transform, 2-D wavelet Transform, JPEG-2000 encoding, Digital Image Watermarking

UNIT-V

Morphological Image Processing: Basics, SE, Erosion, Dilation, Opening, Closing, Hit-or-Miss Transform, Boundary Detection, Hole filling, Connected components, convex hull, thinning, thickening, skeletons, pruning, Geodesic Dilation, Erosion, Reconstruction by dilation and erosion. Image Segmentation: Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding, Iterative thresholding, Otsu's method, Moving averages, Multivariable thresholding, Region-based segmentation, Watershed algorithm, Use of motion in segmentation

Suggested Readings

2. Jain, A. K. (1989). Fundamentals of Digital image Processing. New Delhi: Prentice Hall of India.
3. Castleman, K. R. (1996). Digital Image Processing. New Delhi: Pearson Education.
4. Schalkoff. (1989). Digital Image Processing and Computer Vision. New York: John Wiley and Sons.
5. Rafael, C. Gonzalez., Richard, E. Woods., & Steven Eddins. (2004). Digital Image Processing using MATLAB. New Delhi: Pearson Education.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

UNIT I

Multimedia – An overview: Introduction – Multimedia presentation and production – Characteristics of Multimedia presentation – Hardware and Software requirements – Uses of Multimedia. Text: Types of text – Font- Text file formats. Image: Image data representation – Image file formats – image processing software. Graphics: Advantages of graphics – Uses – Component of a graphics system.

UNIT II

Audio: Sound waves – types and properties of sound – components of audio system – Digital audio – Musical Instrument Digital Interface (MIDI) – Audio file formats – Audio processing software. Video: Motion video – Television systems – Video file formats – video processing software. Animation: Uses of animation – computer based animation – Animation file formats – Animation software.

UNIT III

Introducing photoshop elements: About elements – welcome screen – create mode – menu bar – toolbox – options bar – panels. Organizing images: Obtaining images – tagging images – searching for images – opening and saving images. Selecting areas – Layers – Text and drawing tools.

UNIT IV

Understanding flash: Understanding flash basic elements – creating a simple animation. Learning Flash toolbox: Learning the toolbox – using tools. Learning flash panels: Understanding the panels. Using timeline and layers: Understanding how timeline works – Understanding layers. Drawing objects: Drawing lines and fills – using colors – Rotating, skewing and scaling – grouping objects. Creating animation – How animation Works – creating motion tweens – creating shape tweens. Understanding masks – creating masks.

UNIT V

Creating symbols and using the library: Learning about symbols – creating symbols – using libraries. Learning Basic Actionscript concepts: Actionscript basics – data type basics. Learning basic actionscript programming: Applying Actionscript – Using Actionscript to control actions – Using Actionscript to control properties – Understanding Actions and Event Handlers.

Suggested Readings

1. Ranjan Parekh (2013). Principles of Multimedia (2nd ed.). TataMcGraw Hill.
2. Nick Vandome (2011). Photoshop Elements 9. TataMcGraw Hill.
3. Brian Underdahl (2002). Macromedia Flash MX – A Beginners Guide. Dreamtech Press.
4. Tay Vaughan (2002). Fundamentals of Multimedia (5th ed.). TataMcGraw Hill.
5. Bill Sanders (2001). Flash 5 Actionscript (1st ed.). New Delhi DreamTech Press.

2. www.arena-multimedia.com/
3. www.nextwavemultimedia.com/

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To introduce the use of the components of a graphics system and become familiar with building approach of graphics system components and algorithms related with them.
- To learn the basic principles of 3- dimensional computer graphics.
- Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition.
- Provide an understanding of mapping from a world coordinates to device coordinates, clipping, and projections.
- To be able to discuss the application of computer graphics concepts in the development of computer games, information visualization, and business applications.
- To comprehend and analyze the fundamentals of animation, virtual reality, underlying technologies, principles, and applications.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. List the basic concepts used in computer graphics.
2. Implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
3. Describe the importance of viewing and projections.
4. Define the fundamentals of animation, virtual reality and its related technologies,
5. Understand a typical graphics pipeline
6. Design an application with the principles of virtual reality

List of Programs

1. Write a program to implement Bresenham's line drawing algorithm.
2. Write a program to implement mid-point circle drawing algorithm.
3. Write a program to clip a line using Cohen and Sutherland line clipping algorithm.
4. Write a program to clip a polygon using Sutherland Hodgeman algorithm.
5. Write a program to apply various 2D transformations on a 2D object (use homogenous coordinates).
6. Write a program to apply various 3D transformations on a 3D object and then apply parallel and perspective projection on it.
7. Write a program to draw Hermite/Bezier curve.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60
Total: 100**Course Objectives (CO)**

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
 2. Work effectively as leader/member of a development team to deliver quality software artifacts.
 3. Analyze, specify and document software requirements for a software system.
 4. Verify, validate, assess and assure the quality of software artifacts.
 5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
 6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.
-
1. Write a program that take three inputs (a,b and c) that represents the sides of a triangle and the output is one of the below four.
 - a) Not a triangle
 - b) Scalene triangle
 - c) Isocles triangle
 - d) Equilateral triangle
 - a) Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
 - b) Generate test cases using basis path testing
 - c) Run code coverage tool

2. Write a program that determines the nature of roots of a quadratic equation. Output should be one of the following
 - Not a quadratic equation
 - Complex roots
 - Real roots
 - Single roots
 - a) Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
 - b) Generate test cases using basis path testing
 - c) Run code coverage tool
3. Write a program that checks whether the number is even or odd. Run code coverage tools and find the amount of code being covered.
4. Write a program that dynamically allocates memory to 10 integers using malloc() or calloc() and do not free memory leading to memory leaks. Verify the same using Valgrind. Now, free memory using free() at the end of the program to avoid memory leaks. Verify the same using Valgrind().
5. Using Selenium IDE, write a test suite containing minimum 4 test cases.
6. Conduct a test suite for any two websites.
7. Write and test a program to login a specific webpage

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives (CO)**

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
 2. Choose the architecture based on the problem to be solved.
 3. Differentiate between the types of applications supported by .Net
 4. Build, compile and execute a VB .Net program
 5. Apply techniques to develop error-free software
 6. To build integrated VB.NET solutions using files and structures with printing capabilities. Translate general requirements into data-related solutions using database concepts
-
1. Write a VB .Net program to calculate simple interest and compound interest.
 2. Write a VB .Net program to implement Calculator.
 3. Write a VB.Net program to implement Notepad
 4. Write a VB.Net program to draw several shapes and fill with color.
 5. Write a VB .Net program to perform the following in list box
 - a) Add an item
 - b) Delete an item
 - c) List count
 - d) Clear the list
 6. Write a program to calculate the total marks of the student and print the grades.
 7. Write a VB .Net program to implement employee payroll system
 8. Write a VB .Net program to create and manipulate a file.
 9. Write a program to implement a web browser

10. Write a program to maintain the details of doctors in a hospital with their specializations
11. Write a program to animate the picture using timer control.
12. Write a program to move the object from one location to another. Change the color and size of object at different time interval.
13. Write a program to place 10 pictures in the listbox. Using timer control the take the picture from listbox and change the form background after specific time interval.
14. Write a program to implement speaking program. Get the text input from the user and convert into voice.
15. Write a program to implement chatting

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives (CO)**

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
 2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
 3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
 4. Details of IP operations in the INTERNET and associated routing principles
 5. Understand the key protocols which support the Internet
 6. Create applications using techniques such as multiplexing, forking, multithreading
-
1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
 2. Simulate and implement stop and wait protocol for noisy channel.
 3. Simulate and implement go back n sliding window protocol.
 4. Simulate and implement selective repeat sliding window protocol.
 5. Simulate and implement distance vector routing algorithm
 6. Simulate and implement Dijkstra algorithm for shortest path routing.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives (CO)**

- To develop an appreciation for what is involved in learning from data.
- To understand a wide variety of learning algorithms.
- To understand how to perform evaluation of learning algorithms and model selection.
- To introduce students to the basic concepts and techniques of Machine Learning.
- To become familiar with regression methods, classification methods, clustering methods.
- To become familiar with Dimensionality reduction Techniques.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Have a broad understanding of machine learning algorithms and their use in data-driven knowledge discovery and program synthesis.
2. Design and implement several machine learning algorithms in Java.
3. Identify, formulate and solve machine learning problems that arise in practical applications.
4. Have knowledge of the strengths and weaknesses of different machine learning algorithms (relative to the characteristics of the application domain) and be able to adapt or combine some of the key elements of existing machine learning algorithms to design new algorithms as needed.
5. Identify machine learning techniques suitable for a given problem
6. Solve the problems using various machine learning techniques

List of Programs

1. Perform elementary mathematical operations in Octave/MATLAB like addition, multiplication, division and exponentiation.
2. Perform elementary logical operations in Octave/MATLAB (like OR, AND, Checking for Equality, NOT, XOR).
3. Create, initialize and display simple variables and simple strings and use simple formatting for variable.
4. Create/Define single dimension / multi-dimension arrays, and arrays with specific values like array of all ones, all zeros, array with random values within a range, or a diagonal matrix.

5. Use command to compute the size of a matrix, size/length of a particular row/column, load data from a text file, store matrix data to a text file, finding out variables and their features in the current scope.
6. Perform basic operations on matrices (like addition, subtraction, multiplication) and display specific rows or columns of the matrix.
7. Perform other matrix operations like converting matrix data to absolute values, taking the negative of matrix values, adding/removing rows/columns from a matrix, finding the maximum or minimum values in a matrix or in a row/column, and finding the sum of some/all elements in a matrix.
8. Create various type of plots/charts like histograms, plot based on sine/cosine function based on data from a matrix. Further label different axes in a plot and data in a plot.
9. Generate different subplots from a given plot and color plot data.
10. Use conditional statements and different type of loops based on simple example/s.
11. Perform vectorized implementation of simple matrix operation like finding the transpose of a matrix, adding, subtracting or multiplying two matrices.
12. Implement Linear Regression problem. For example, based on a dataset comprising of existing set of prices and area/size of the houses, predict the estimated price of a given house.
13. Based on multiple features/variables perform Linear Regression. For example, based on a number of additional features like number of bedrooms, servant room, number of balconies, number of houses of years a house has been built – predict the price of a house.
14. Implement a classification/ logistic regression problem. For example based on different features of students data, classify, whether a student is suitable for a particular activity. Based on the available dataset, a student can also implement another classification problem like checking whether an email is spam or not.
15. Use some function for regularization of dataset based on problem 14.
16. Use some function for neural networks, like Stochastic Gradient Descent or back propagation - algorithm to predict the value of a variable based on the dataset of problem

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60Total: 100

Course Objectives (CO)

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

List of Programs

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). for test options, first choose “Use training set”, then choose “Percentage split” using default 66% percentage split. Report model percent error rate.
2. Use iris dataset preprocess and classify it with j4.8 and Naive Bayes classifier. Examine the tree in the classifier output panel.
3. Using the dataset ReutersCorn – Train and ReutersGrain – Train. Classify articles using binary attributes and word count attributes.
4. Apply any two association rule based algorithm for the supermarket analysis.
5. Using weka experimenter perform comparison analysis of j4.8, oneR and ID3 for vote dataset.
6. Using weka experimenter perform comparison analysis of Naive Bayes with different datasets.
7. Apply ZeroR, OneR and j4.8, to classify the iris data in an experiment using 10 train and test runs, with 66% of the data used for 34% used for testing.
8. Using Weka Knowledge flow set up a flow to load an ARFF file (batch mode) and perform a cross-validation using j4.8 (WEKS’s C4.5 implementation).

9. Draw multiple ROC curves in the same plot window, using j4.8 and RandomForest as classifiers.
10. Use any three clustering algorithm on Vehicle data set and find best among them.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

List of Programs

1. Write program to read and display digital image using MATLAB or SCILAB
 - a. Become familiar with SCILAB/MATLAB Basic commands
 - b. Read and display image in SCILAB/MATLAB
 - c. Resize given image
 - d. Convert given color image into gray-scale image
 - e. Convert given color/gray-scale image into black & white image
 - f. Draw image profile
 - g. Separate color image in three R G & B planes
 - h. Create color image using R, G and B three separate planes
 - i. Flow control and LOOP in SCILAB
 - j. Write given 2-D data in image file
2. To write and execute image processing programs using point processing method
 - a. Obtain Negative image
 - b. Obtain Flip image
 - b. Thresholding
 - d. Contrast stretching
3. To write and execute programs for image arithmetic operations
 - a. Addition of two images
 - b. Subtract one image from other image
 - c. Calculate mean value of image

- d. Different Brightness by changing mean value
- 4. To write and execute programs for image logical operations
 - a. AND operation between two images
 - b. OR operation between two images
 - c. Calculate intersection of two images
 - d. Water Marking using EX-OR operation
 - e. NOT operation (Negative image)
- 5. To write a program for histogram calculation and equalization using
 - a. Standard MATLAB function
 - b. Program without using standard MATLAB functions
 - c. C Program
- 6. To write and execute program for geometric transformation of image
 - a. Translation
 - b. Scaling
 - c. Rotation
 - d. Shrinking
 - e. Zooming
- 7. To understand various image noise models and to write programs for
 - a. image restoration
 - b. Remove Salt and Pepper Noise
 - c. Minimize Gaussian noise
 - d. Median filter and Weiner filter
- 8. Write and execute programs to remove noise using spatial filters
 - a. Understand 1-D and 2-D convolution process
 - b. Use 3x3 Mask for low pass filter and high pass filter
- 9. Write and execute programs for image frequency domain filtering
 - a. Apply FFT on given image
 - b. Perform low pass and high pass filtering in frequency domain
 - c. Apply IFFT to reconstruct image
- 10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask
- 11. Write and execute program for image morphological operations erosion and dilation.
- 12. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

List of Programs

1. Change a Shape to Another Shape. (Shape Animation)
2. Create a Man to walk with the help of Key Frame Animation.
3. Change the Colors of an object with the help of Animation.
4. Draw a Bird with Flash tools and make it fly with key Frame Animation.
5. Create a Shining Stones with the help of Movie Clip.
6. Create an animation to represent a growing moon using frame by frame animation
7. Create an animation to bounce a ball on steps.
8. Simulate movement of a cloud.
9. Create Morphing between two images.
10. Create an Action script to execute for an event in an application.
11. Create Water Drops using Photoshop.

12. Animate Plane Flying with the Clouds.
13. Create Plastic Surgery for Nose.
14. Create a Web Page using Photoshop
15. Given a picture of a flower with a background. Extract the flower and organize on a different background.
16. Display the given picture through your name using mask.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

UNIT-I**Introduction to PHP:**

PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.) -PHP with other technologies, scope of PHP Basic Syntax, PHP variables and constants-Types of data in PHP , Expressions, scopes of a variable (local, global)-PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwise , ternary and MOD operator.-PHP operator Precedence and associativity

UNIT-II**Handling HTML form with PHP:**

Capturing Form Data -GET and POST form methods- Dealing with multi value fields - Redirecting a form after submission -**PHP conditional events and Loops:** PHP IF Else conditional statements (Nested IF and Else) -Switch case, while ,For and Do While Loop -Goto , Break ,Continue and exit

UNIT-III**PHP Functions:**

Function, Need of Function , declaration and calling of a function-PHP Function with arguments, Default Arguments in Function-Function argument with call by value, call by reference-Scope of Function Global and Local

UNIT-IV

String Manipulation and Regular Expression: (3L) Creating and accessing String , Searching & Replacing String-Formatting, joining and splitting String , String Related Library functions -Use and advantage of regular expression over inbuilt function-Use of preg_match(), preg_replace(), preg_split() functions in regular expression.

UNIT-V

Array:

Anatomy of an Array ,Creating index based and Associative array ,Accessing array
-Looping with Index based array, with associative array using each() and foreach()
-Some useful Library function

Suggested Readings

2. Timothy Boronczyk., & Martin, E. Psinas. (2008). PHP and MYSQL (Create-Modify-Reuse). New Delhi: Wiley India Private Limited.
3. Robin Nixon. (2014). Learning PHP, MySQL, JavaScript, CSS & HTML5 (3rd ed.). O'reilly.
4. Luke Welling.,& Laura Thompson.(2008). PHP and MySQL Web Development (4th ed.). Addition Paperback, Addison-Wesley Professional.
5. David Sklar., & Adam Trachtenberg. PHP Cookbook: Solutions & Examples for PHP.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

UNIT-I

Introduction What is Linux/Unix Operating systems, Difference between linux/unix and other operating systems , Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process.

UNIT-II

System processes (an overview), External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

UNIT-III

User Management and the File System Types of Users, Creating users, Granting rights User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

UNIT-IV

Shell introduction and Shell Scripting What is shell and various type of shell, Various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script , Shell variable (user defined and system variables)

UNIT-V

System calls, Using system calls Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell.
Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

Suggested Readings

1. Sumitabha, Das.(2006). Unix Concepts And Applications. New Delhi: Tata McGraw-Hill Education.
2. Michael Jang. (2011). RHCSA/ RHCE Red Hat Linux Certification: Exams (Ex200 & Ex300). Certification Press.
3. Nemeth Synder., & Hein.(2010). Linux Administration Handbook (2nd ed.). Pearson Education.
4. Richard Stevens, W. Bill Fenner., & Andrew, M. Rudoff. (2014). Unix Network Programming, The sockets Networking API, Vol. 1, (3rd ed.).

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service

UNIT I -An Introduction to Electronic commerce

What is E-Commerce (Introduction And Definition), Main activities E-Commerce, Goals of E-Commerce, Technical Components of E-Commerce, Functions of E-Commerce, Advantages and disadvantages of E-Commerce, Scope of E-Commerce, Electronic Commerce Applications, Electronic Commerce and Electronic Business (C2C) (C2G, G2G, B2G, B2P, B2A, P2P, B2A, C2A, B2B, B2C)

UNIT II -The Internet and WWW

Evolution of Internet, Domain Names and Internet - Organization (.edu, .com, .mil, .gov, .net etc), Types of Network, Internet Service Provider, World Wide Web, Internet & Extranet, Role of Internet in B2B Application, building own website, cost, time, reach, registering a domain name, web promotion, Target email, Banner, Exchange, Shopping Bots.

UNIT III: Electronic data

Electronic data exchange introduction, concepts of EDI and Limitation, Application of eDI, Disadvantages of eDI, EDI model, Electronic Payment System: Introduction, Types of Electronic Payment system, Payment types, Value exchange system, credit card system electronic fund transfer, Paperless bill, modern payment cash, Electronic cash.

UNIT IV: Planning for Electronic Commerce

Planning Electronic commerce initiatives, linking objectives to business strategies, measuring cost objectives, comparing benefits to Costs, strategies for developing electronic commerce web sites.

UNIT V : Internet marketing

The PROS and CONS of online shopping, the CONS of online shopping, Justify an internet business, Internet marketing techniques, The E-Cycle of Internet marketing, personalization e-commerce.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with its vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. CO4: Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

UNIT-I

Overview of Computing Paradigm: Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing.**Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

UNIT-II

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

UNIT-III

Case Studies: Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2 , Eucalyptus.

UNIT-IV

Service Management in Cloud Computing: Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

UNIT-V

Cloud Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

SCOPE

It exposes the students to study numerical techniques as powerful tools in scientific computing

OBJECTIVES

This course a deep knowledge to the learners to understand the basic concepts of numerical methods which utilize computers to solve Engineering problems that are not easily solved or even impossible to solve by analytical means.

UNIT I

Floating point representation and computer arithmetic – significant digits. Errors: round-off error – local truncation error – global truncation error – order of a method convergence and terminal conditions – efficient computations – bisection method – secant methods – Regula-Falsi method – Newton – Raphson method – Newton's method for solving non-linear systems.

UNIT II

Gauss elimination method (with row pivoting) and Gauss-Jordan method – Gauss thomas method for tridiagonal systems. Iterative methods: Jacobi and Gauss-seidal iterative methods.

UNIT III

Interpolation: Lagrange's form and Newton's form – Finite difference operators – Gregory Newton forward and backward differences inerpolation Piecewise polynomial interpolation: Linear interpolation – Cubic spline interpolation (only method).

UNIT IV

Numerical differentiation: First derivatives and second order derivates – Richardson extrapolation. Numerical integration: traphezoid rule – simpson's rule (only method) – newton – Cotes open formulas.

UNIT V

Extrapolation method : Romberg integration- Cosine quadrature. Ordinary differential equations: Euler's method modified Euler's methods – Heun method and mid-point method – Runge-kutta second methods – Heun method without iteration – mid-point method and Ralston's method – classical 4th order Runge-Kutta method.

3. Steven C. Chopra (2010). Applied Numerical methods with MATLAB for Engineers and Scientists. Tata McGraw Hill.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer's requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

UNIT-I

Assemblers & Loaders, Linkers: One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

UNIT-II**Lexical Analysis:**

Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

UNIT-III

Parsing:

Bottom up parsing- LR parser, **Intermediate representations:** Three address code generation, syntax directed translation, translation of types, control Statements.

UNIT-IV

Storage organization: Activation records stack allocation.

UNIT-V

Code Generation: Object code generation

Suggested Readings

1. Santanu Chattopadhyaya. (2011). Systems Programming. New Delhi: PHI.
2. Alfred, V. Aho., Monica, S. Lam., Ravi Sethi., & Jeffrey, D. Ullman. (2006). Compilers: Principles, Techniques, and Tools (2nd ed.). New Delhi: Prentice Hall.
3. Dhamdhere, D. M. (2011). Systems Programming. New Delhi: Tata McGraw Hill.
4. Leland Beck., & Manjula, D. (2008). System Software: An Introduction to System Programming (3rd ed.). New Delhi: Pearson Education.
5. Grune, D., Van Reeuwijk, K., Bal, H. E., Jacobs, C. J. H., & Langendoen, K. (2012). Modern Compiler Design (2nd ed.). Springer.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60**Total: 100****Course Objectives (CO)**

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

List of Programs

1. Create a PHP page using functions for comparing three integers and print the largest number.
2. Write a function to calculate the factorial of a number (non-negative integer). The function accept the number as an argument.
3. WAP to check whether the given number is prime or not.
4. Create a PHP page which accepts string from user. After submission that page displays the reverse of provided string.
5. Write a PHP function that checks if a string is all lower case.
6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)
7. WAP to sort an array.

8. Write a PHP script that removes the whitespaces from a string.
Sample string : 'The quick brown fox' Expected Output : Thequickbrownfox
9. Write a PHP script that finds out the sum of first n odd numbers.
10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.
11. Write a PHP script that checks if a string contains another string.
12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.
13. Create a script to construct the following pattern, using nested for loop.

```
*  
* *  
* * *  
* * * *  
* * * * *
```

14. Write a simple PHP program to check that emails are valid.
15. WAP to print first n even numbers.
16. \$color = array('white', 'green', 'red')

Write a PHP script which will display the colors in the following way : Output :
white, green, red,
• green • red
• white

17. Using switch case and dropdown list display a —Hello! message depending on the language selected in drop down list.
18. Write a PHP program to print Fibonacci series using recursion.
19. Write a PHP script to replace the first 'the' of the following string with 'That'.

Sample : 'the quick brown fox jumps over the lazy dog.'

Expected Result : That quick brown fox jumps over the lazy dog.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

List of Programs

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify —call command to display calendars of the specified months.
3. Write a shell script to modify —call command to display calendars of the specified range of months.
4. Write a shell script to aITUept a login name. If not a valid login name display message – —Entered login name is invalid.
5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of —who command along with the total number of users .
7. Write a shell script to display the multiplication table any number,
8. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.

11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.
13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient $C(n, x)$.
15. Write a shell script to find the permutation $P(n, x)$.
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service.

List of Programs

1. Write a HTML program to implement the use of Image map.
2. Write a CSS to implement selectors in HTML
3. Write a CSS to implement pseudo – classes with in-line styles
4. Write a Javascript program to validate a web form
5. Write a Javascript program to allow visitors to see history of visiting your page
6. Write a Javascript program to change random color each 5 seconds

7. Write a perl program to read a list of n strings (from STDIN) into an array and print a random string from the list (Use srand;rand(@array))
8. Write a perl program to read a list of n numeric's from STDIN and find the max, min, range, median and mode. Input size of the list n interactively.
9. Write a perl program to read a file of words and replaces all words in the file with their uppercase equivalent (hint: use tr/a-z/A-Z/)
10. Write VBScript program to print Fibonacci series using Do..while loop and For loop.
11. Write VBScript program to generate date and time in defferent format
12. Write VBScript program to print student marklist
13. Develop an ASP code to retrieve information from forms
14. Develop an ASP code to reading and writing cookies information
15. Develop an ASP code using response object methods

Course Objectives (CO)

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with it's vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

List of Programs

1. Create virtual machines that access different programs on same platform.
2. Create virtual machines that aITUess different programs on different platforms.
3. Working on tools used in cloud computing online-
 - a) Storage
 - b) Sharing of data
 - c) Manage your calendar, to-do lists,
 - d) A document editing tool
4. Exploring Google cloud
5. Exploring Microsoft cloud
6. Exploring Amazon cloud

1. Find the roots of the equation by bisection method
2. Find the roots of the equation by secant/Regula-Falsi method.
3. Find the roots of the equation by Newton's method
4. Find the solution of a system of nonlinear equation using Newton's method
5. Find the solution of tridiagonal system using Gauss Thomas method
6. Find the solution of system of equations using Jacobi/Gauss-Seidal method
7. Find the cubic spline interpolating function
8. Evaluate the approximate value of finite integrals using Gaussian/Romberg itegration
9. Solve the boundary value problem using Finite difference method

Note: Programming is to be done in any one of computer algebra systems:

MATLAB/MATHEMATICA/MAPLE

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60

Total: 100

Course Objectives (CO)

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer's requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

List of Programs

1. To implement an assembler for a hypothetical language.
2. To get familiar with lex: write a program to recognize numbers, identifiers.
3. To get familiar with yacc: write a desk calculator.

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2017 - 2018)
முதல்பருவம்
(இளநிலை கலையியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Arts Degree Classes) 17LAU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு - I :இக்காலஇலக்கியம்:

(20 மணிநேரம்)

கல்வி: மகாகவிபாரதியார் - சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணிதேசிய விநாயகம் -ஒற்றுமையே உயிர்நிலை

: கவிஞர் அப்துல்ரகுமான் - கால வழி

மனிதநேயம்:கவிஞர்சிற்பிபாலசுப்பிரமணியன் - மலையாளக்

காற்றுகவிஞர் தாமரை- மழைக்குறிப்பு
சூழலியல்:கவிஞர் வைதீஸ்வரன் -விரல் மீட்டிய மழை
பெண்ணியம் :கவிஞர் சுசந்தி சுப்பிரமணியம் - புதையுண்ட
வாழ்க்கைகவிஞர் வைரமுத்து - அம்மா
வாழ்க்கை:கவிஞர் தருமசிவராம்- வாழ்வுப் பாடல்
இயற்கை:பாவேந்தர்பாரதிதாசன் - அழகின்சிரிப்பு - வான்.

அலகு - II :அறஇலக்கியம்: (15 மணிநேரம்)

கொன்றை வேந்தன்: 1 - 50 பாடல்கள்
திருக்குறள்: பண்புடைமை, வினைத்திட்டம் -20 குறள்கள்
பழமொழி நானூறு: 5 பாடல்கள்
வேதநாயகம்பிள்ளை நீதிநூல்: 74 -78 பாடல்கள்
பெருவாயின் முள்ளியார் ஆசாரக்கோவை: 5 பாடல்கள்

அலகு - III :சிறுநிலக்கியம்: (15 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்
திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்
குற்றாலக்குறவஞ்சி: 5 பாடல்கள்
முக்கூடற்பள்ளு : 5 பாடல்கள்
கலிங்கத்துப் பரணி: போர்பாடியது- 9 பாடல்கள்

அலகு - IV :கட்டுரை: (10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி- பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை- அ.இராசமாணிக்கனார்
3. வாழ்க்கை-இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V :மொழிப்பயிற்சி: (12 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. எழுத்து, சொல், பொருள் இலக்கணப் பயிற்சிகள்

BBA		2017 - 2018
17ENU101	ENGLISH – I (For all undergraduate students admitted from 2017 onwards)	Semester - I 4H – 4C

Instruction Hours / week L: 4 T: 0 P : 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT I

Prose: Google Guys (Extract) – Richard L Brandt
Poetry: The Blind Pedlar – Osbert Sitwell
Short Story: A Garden So Rich – Christie Craig
Vocabulary: Prefix, Antonyms, Sentence Completion
Grammar: Article, Adverb, Pronoun

UNIT II

Prose: Happiness 101 – Geeta Padmanabhan
Poetry: An Old Woman – Arun Kolatkar
Vocabulary: Suffix, Analogies
Grammar: Noun, Adjective

UNIT III

Prose: Structured Procrastination – John Perry
Short Story: The Umbrella Man – Roald Dahl

One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan

Vocabulary: Synonyms, Euphemisms, Word Definitions

Grammar: Verb, Conjunction and Interjection, Indirect/Reported Speech

UNIT IV

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O' Henry

Vocabulary: Words Often Confused, Anagrams

Grammar: Preposition, Voice- Active and Passive

UNIT V

Short Story: The Bird – Amar Jalil

One-Act Play: The Cellphone Epidemic – Claudia I. Haas

Vocabulary: Portmanteau Words, One Word Substitution

Grammar: Question, Pronunciation

Prescribed Text:

Rao, G. Chandralekha et al. *Spring* 2013. Emerald Publishers: Chennai.

Semester - I

17BAU101	FUNDAMENTALS OF MANAGEMENT AND ORGANIZATIONAL BEHAVIOUR	L 4	T -	P -	C 4
----------	--	--------	--------	--------	--------

Instruction Hours / week L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES:**

To make the student

- To demonstrate the concepts of management.
- To compose the knowledge in the functions of management.
- To identify human behaviour concepts
- To infer the knowledge on various factors involved in human behaviour
- To interpret about the organizational climate
- To analyze individual and group behavior in organizations

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate the concepts of management and the functions of management and organizational behavior.
2. Compose the managerial functions of planning, organizing and controlling in a variety of circumstances.
3. Assess the impact of the personality traits and their perception in day to day performance.
4. Exhibit the leadership skills whenever required and work in groups and teams by motivating and resolving conflict arising in groups and adapting to change.
5. Assess insight to the students regarding individual and group behaviour in organizations.
6. Understand and exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

UNIT I

Basic forms of Business Ownership - Special forms of ownership - Franchising -Licensing- Leasing- Choosing a form of Business ownership - Corporate Expansion -mergers and acquisitions -Diversification, forward and backward integration -Jointventures, Strategic alliance - Evolution of Management Theory - Managerial functions and Roles. Insights from Indian practices and ethos.

UNIT II

Overview of Planning - Types of Plans and The planning process - Decision making: Process - Types and Techniques - Control - Functions, Process and types of Control; Principles of organizing - Common organisational structures - Delegation and Decentralization- Factors affecting the extent of decentralization - Process and Principles of delegation- Line and Staff Function.

UNIT III

Importance of organizational Behaviour - Perception and Attribution - Concept, Nature, Process, Personality: Personality - Learning - Concept and Theories of Learning, Reinforcement, Motivation - Concepts and their application, Need, Content and Process Theories, Contemporary Leadership issues: Charismatic, Transformational Leadership. Emotional Intelligence.

UNIT IV

Groups and Teams - Definition, Difference between Groups and teams - Stages of Group Development - Group Cohesiveness - Types of teams - Analysis of Interpersonal Relationship: Transactional Analysis - Johari Window Organisational Power and Politics - Nature of organisational politics.

UNIT V

Conflict: Concept, Sources- Types, Stages of conflict - Management of conflict, Organisational Change: Concept, Resistance to change, Managing resistance to change, Implementing Change -Kurt Lewin Theory of Change - Managing Stress: Insights from Indian ethos.

BBA

2017 - 2018

Semester I

17BAU102	CORE –STATISTICS FOR BUSINESS DECISIONS	L	T	P	C
		5	-	-	5

Instruction Hours / week L: 5 T: 0 P : 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To understand the concept of statistics
- To acquire the knowledge of summary statistics
- To know the concepts of central tendency and dispersion
- To understand the correlation and regression concepts
- To be aware of the index numbers and trend analysis
- To be aware on time series analysis

COURSE OUTCOMES:

Learners should be able to

1. Utilize the concept of statistics to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. Exhibit the knowledge on Index and time series analysis

UNIT I

Measures of Central Value: Characteristics of an ideal measure; Measures of Central Tendency - mean, median, mode, harmonic mean and geometric mean. Merits, Limitations and Suitability of averages. Relationship between averages. Measures of Dispersion: Meaning and Significance. Absolute and Relative measures of dispersion - Range, Quartile Deviation, Mean Deviation, Standard Deviation, Coefficient of Variation, Moments, Skewness, Kurtosis.

UNIT II

Correlation Analysis: Meaning and significance. Correlation and Causation, Types of correlation. Methods of studying simple correlation - Scatter diagram, Karl Pearson's coefficient of correlation, Spearman's Rank correlation coefficient, Regression Analysis: Meaning and significance, Regression vs. Correlation. Linear Regression, Regression lines (X on Y, Y on X) and Standard error of estimate.

UNIT III

Analysis of Time Series: Meaning and significance. Utility, Components of time series, Models (Additive and Multiplicative), Measurement of trend: Method of least squares, Parabolic trend and logarithmic trend.

UNIT IV

Index Numbers: Meaning and significance, problems in construction of index numbers, methods of constructing index numbers-weighted and un weighted, Test of adequacy of index numbers, chain index numbers, base shifting, splicing and deflating index number.

UNIT V

Probability: Meaning and need. Theorems of addition and multiplication. Conditional probability. Bayes' theorem, Random Variable- discrete and continuous. Probability Distribution: Meaning, characteristics (Expectation and variance) of Binomial, Poisson, and Normal distribution. Central limit theorem.

17BAU111

CORE - MS OFFICE (PRACTICAL)

L	T	P	C
-	-	4	2

Instruction Hours / week L: 0 T: 0 P : 4

Marks:

Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

- To compose the knowledge in MS Office to manage the business.
- To identify the MS-Excel function and its application
- To be aware of the MS-Power point and its usage.
- To demonstrate the usage of MS-Access and its applications
- To develop skill in basic file management
- To Indicate the names and functions of the Word interface components

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate an insight into the basic knowledge on MS Office.
2. Preparation of word documents, excel sheet and power point presentation.
3. Exhibit the fundamentals of managing and administering business through the knowledge of MS office, so as to improve the effectiveness of managing organization.
4. Design the presentations for the business meetings
5. Store, retrieve data and make decisions based on the information
6. Exhibit the communication skills to convey the outputs produced.

WORD

1. Type Chairman's speech/ Auditor's report / Minutes/ Agenda and perform the following operations:
Bold, Underline, Font Size, Style, Background color, Text color, Line spacing, Spell Check, Alignment, Header & Footer, Inserting pages and page numbers, Find and Replace.
2. Prepare an invitation for the college function using Text boxes and Clip Art.
3. Design an invoice and Account sales by using Drawing tool bar, Clip Art, Word Art, Symbols, Borders and Shading.
4. Prepare a Class Time Table and perform the following operations:
Inserting the table, Data Entry, Alignment of Rows and Columns, Inserting and Deleting the Rows and Columns and Change of Table Format.
5. Prepare a Shareholders meeting letter for 10 members using mail merge operation.
6. Prepare Bio-Data by using Wizard/Templates.

MS EXCEL

1. Prepare a mark list of your class (minimum of 5 subjects) and perform the following operations:
Data Entry, Total, Average, Result and Ranking by using arithmetic and logical functions and sorting.

2. Prepare Final Accounts (Trading Account, Statement of Profit & Loss and Balance Sheet) by using formula.
3. Draw the different type of charts (Line, Pie, Bar) to illustrate year-wise performance of sales, purchase, profit of a company by using chart wizard.
4. Prepare a statement of Bank customer's account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions.
5. Prepare a Product Life Cycle which should contain the following stages:
Introduction, Growth, Maturity, Saturation, Decline.

MS POWERPOINT

1. Design presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, special features, price, special offer etc. Add voice if possible to explain the features of the product. The presentation should work in manual mode.
2. Design presentation slides for organization details for 5 levels of hierarchy of a company by using organization chart.
3. Design slides for the Headline News of a popular TV Channel. The Presentation Should contain the following transactions: Top down, Bottom up, Zoom in and Zoom out. - The presentation should work in custom mode.
4. Design presentation slides about an organization and perform frame movement by interesting clip arts to illustrate running of an image automatically.
5. Design presentation slides for the Seminar/Lecture Presentation using animation effects and perform the following operations: Creation of different slides, changing background color, font color using word art.

MS ACCESS

1. Prepare a payroll for employee database of an organization with the following Details:
Employee id, Employee name, Date of Birth, Department and Designation, Date of appointment, Basic pay, Dearness Allowance, House Rent Allowance and other deductions if any. Perform queries for different categories.
2. Create mailing labels for student database which should include at least three Table must have at least two fields with the following details: Roll Number, Name, Course, Year, College Name, University, Address, Phone Number.
3. Gather price, quantity and other descriptions for five products and enter in the Access table and create an invoice in form design view.
4. Create forms for the simple table ASSETS.
5. Create report for the PRODUCT database.

TEXT BOOKS

1. Taxali,R.K. (2010).*P.C.Software Made Simple*.New Delhi: Tata McGraw-Hill Publishing Company Ltd.

**17BAU112 CORE –STATISTICAL PACKAGE USING
SPSS(PRACTICAL)**

L	T	P	C
-	-	3	1

Instruction Hours / week L: 0 T: 0 P : 3

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

- To understand the concept of statistics
- To acquire the knowledge of summary statistics
- To know the concepts of central tendency and dispersion
- To understand the correlation and regression concepts
- To be aware of the index numbers and trend analysis
- To be aware on time series analysis

COURSE OUTCOMES:**Learners should be able to**

1. Utilize the concept of statistics to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. Exhibit the knowledge on Index and time series analysis

LIST OF PRACTICALS

1. Introduction to SPSS Package
2. Working with windows of SPSS
3. Defining variables in variable view window in SPSS
4. Drawing of Simple and multiple bar diagrams in SPSS Package
5. Drawing of Histogram and Pie diagram
6. Calculation of Mean for individual, discrete series using SPSS Package.
7. Mean for continuous series using SPSS Package.
8. Median for individual and discrete series using SPSS Package..
9. Median for continuous series using SPSS Package..

10. Mode for individual and discrete series using SPSS Package..
11. Standard deviation for individual and discrete series using SPSS Package.
12. Coefficient of variation for individual and discrete series using SPSS Package.
13. Karl Pearson's Correlation using SPSS Package.
14. Rank Correlation Coefficient using SPSS Package.

17AEC101	BUSINESS COMMUNICATION	L	T	P	C
		4	-	-	4

Instruction Hours / week L: 4 T: 0 P : 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES :****To make the students**

- To equip students effectively to acquire skills in reading, writing, comprehension and communication, as also to use electronic media for business communication.
- To acquire knowledge on the different business correspondence used in organization
- To build aware of the different types of reports prepared for the organization.
- To illustrate the importance of vocabulary in business communication
- Identify key principles in business communication
- 6.To put in use the basic mechanics of Grammar

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate and communicate effectively with the optimal mix of verbal and nonverbal communication mitigating the barriers.
2. Draft business correspondence for the organization requirement.
3. Draft the resume and develop skills to face the interview
4. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.
5. Prepare business reports for organization needs and use appropriate technology for business communication.
6. Assess the importance of ethical communication Ethics in Business communication

UNIT I

Nature of Communication: Process of Communication, Types of Communication (verbal & Non Verbal), Importance of Communication, Different forms of Communication; Barriers to Communication Causes, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers

UNIT II

Business Correspondence: Letter Writing, presentation, Inviting quotations, Sending quotations, Placing orders, Inviting tenders, Sales letters, claim & adjustment letters and social correspondence, Memorandum, Inter -office Memo, Notices, Agenda, Minutes.

UNIT III

Report Writing: Business reports, Types, Characteristics, Importance, Elements of structure, Process of writing, Order of writing, the final draft, and check lists for reports.

UNIT IV

Application Letters – Preparation of Resume – Interview: Meaning – Objectives and Techniques of various types of interviews – public speech – Characteristics of a good Speech- Business Report Presentations.

UNIT V

Oral Presentation: Importance, Characteristics, Presentation Plan, Power point presentation, Visual aids.

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2017 - 2018)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Arts Degree Classes) 17LAU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

(12 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29)- கண்ணகியின் சிறப்பு: 'நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி, 'கண்ணகி என்பாண் மன்னோ' என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234)- சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்:

'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485)- செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்:'என்னே'

என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை:பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து

தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

சூளாமணி: மந்திர சாலைச் சருக்கம் (தேர்ந்தெடுக்கப்பெற்ற 25 பாடல்கள்)

அலகு – IV : சிறுகதை (15 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா
5. எஸ்தர் – வண்ண நிலவன்
6. மரப்பாச்சி – உமா மகேஸ்வரி

அலகு- V : மொழிப்பயிற்சி (10 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

Part II - English II

(For all undergraduate students admitted from 2017 onwards)

4H – 4C

Instruction Hours / week L: 4 T: 0 P : 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives:**

- To enable the learners to acquire English language skills.
- To familiarize them with English literature.
- To attain basic knowledge on Grammar .
- To help learners imbibe cultural values.
- To gain knowledge of making correct sentences.
- To reflect originality on the application of soft skills and express in writing their views.

Course Outcome:

1. Acquire to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. Develop the social values.
4. Recognize the importance of communication
5. Get sound knowledge in English
6. Communicate well for business purpose.

UNIT I**Prose:** The Unexpected- Robert Lynd**Poetry:** The Village Schoolmaster – Oliver Goldsmith**Short Story:** The Lion's Share – Arnold Bennett**Vocabulary:** Homonyms**Grammar:** Irregular Verb**UNIT II****Prose:** Travel by Train – J. B. Priestley**Poetry:** The Gift of India – Sarojini Naidu**Grammar:** Sentence pattern**UNIT III****Prose:** Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi**Short Story:** The Necklace – Guy De Maupassant**One-Act Play:** The Referee – W.H. Andrews and Geoffrey Dearmer**Vocabulary:** Similes**Grammar:** Discourse Markers

UNIT IV

Poetry: Ozymandias – P.B. Shelley

One-Act Play: The Pot of Broth- W.B. Yeats

Vocabulary: Collective Noun

Grammar: Correction of Sentences

UNIT V

Short Story: The Silver Butterfly– Pearl S. Buck

One-Act Play: The Bear – Anton Chekov

Vocabulary: Acronym

Grammar: Question Tag

17BAU201	CORE –MANAGERIAL ECONOMICS	L	T	P	C
		8	-	-	6

Instruction Hours / week L: 6 T: 2 P : 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES :**To make the students**

- Develop the students skills in managing capital and profit
- Equip the students with the knowledge of pricing under different market conditions
- Impart students knowledge in national income analysis
- Integrate the basic concepts of economics with the tools of mathematics and statistics
- Give insight into how markets function.
- Develop the ability to apply the concepts, tools and techniques of economics .

COURSE OUTCOMES:**Learners should be able to**

1. Apply the demand and supply concept in managerial decisions
2. Formulate the pricing strategies based on the market structure.
3. Demonstrate capabilities as problem-solving, critical thinking, and communication skills.
4. Gain familiarity on the macro level business components
5. Calculate the Cost, Revenue and breakeven point and apply it in decision making process.
6. Analyze operations of markets under varying competitive positions

UNIT I

Demand, Supply and Market equilibrium: Individual demand, Market demand -Individual supply -Market supply - Market equilibrium - Elasticities of demand and supply - Price elasticity of demand, income elasticity of demand, cross price elasticity of demand, elasticity of supply; Theory of consumer behavior: cardinal utility theory, ordinal utility theory(indifference curves, budget line, consumer choice, price effect, substitution effect, income effect for normal, inferior and giffen goods) - revealed preference theory.

UNIT II

Producer and optimal production choice: optimizing behavior in short run(Geometry of product curves, law of diminishing marginal productivity, three stages of production), Optimizing

behavior in long run (isoquants, isocost line, optimal combination of resources) Costs and scale : Traditional theory of cost (short run and long run, geometry of cost curves, envelope curves) - Modern theory of cost (short run and long run) -Economies of scale - Economies of scope.

UNIT III

Theory of Firm and Market Organization : Perfect Competition (Basic features, short run equilibrium of firm/industry, long run equilibrium of firm/industry, effect of changes in demand, cost and imposition of taxes) - Monopoly (Basic features, short run equilibrium, long run equilibrium, effect of changes in demand, cost and imposition of taxes, comparison with perfect competition, welfare cost of monopoly) – Price discrimination, multi plant monopoly; Monopolistic Competition (Basic features, demand and cost, short run equilibrium, long run equilibrium, excess capacity) - Oligopoly(Cournot's model, kinked demand curve model, dominant price leadership model, prisoner's dilemma)

UNIT IV

Factor Market : Demand for a factor by a firm under marginal productivity theory(Perfect Competition in the product market, monopoly in the product market) -Market Demand for a factor - Supply of labour - Market supply of labour - Factor Market Equilibrium.

UNIT V

National Income Analysis - Theories of Income, Output and Employment - Classical - Keynesian theory - Theory of Trade Cycle-Concept and Causes of Trade Cycle -Measures to Control Trade Cycle - Macro Economic Policy - Monetary and Fiscal -Theories of Inflation- Causes and Control of Inflation.

17BAU202

CORE –BUSINESS ACCOUNTING

L	T	P	C
4	-	-	4

Instruction Hours / week L: 4 T: 0 P : 0

 Marks: Internal: 40 External: 60 Total: 100
 End Semester Exam: 3 Hours
COURSE OBJECTIVES :**To make the students**

- Exhibit the concepts and conventions of accounting and basic accounting framework
- Expose the students to the fundamentals of accounting procedure
- To compose the inventory valuation techniques.
- To acquire the knowledge of the partnership accounting.
- To comprehend the difference between capital and revenue expenditure.
- To acquire knowledge on preparing the reconciliation statement

COURSE OUTCOMES:

Learners should be able to

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Prepare and Analysis the final accounts.
3. Calculate the asset depreciation using different methods
4. Evaluate the inventory value using different methods.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the accounting discipline.
6. Analyze and solve business problems and to take advantage of business opportunities

UNIT I

Accounting - Meaning - Definition - Concepts - Conventions - Accounting as an Information System- Importance -Scope- Limitations - Users of Accounting Information - Generally accepted Accounting Principles - Accounting Equation - Nature of Accounts - Rules of Debit and Credit - Recording Transactions in General Journal - Ledger - Trial balance- Subsidiary Books.

UNIT II

International Financial Reporting Standards (IFRS) – Understanding Accounting Standards issued by the ICAI related to Disclosure of Accounting Policies. Depreciation Accounting -

Revenue Recognition - Methods of charging Depreciation-Straight-line Method - Written-down-value Method- Bank Reconciliation Statement.

UNIT III

Final Accounts - Preparing Trading Account, Statement of Profit and Loss and Balance Sheet for a Sole Proprietor - Understanding contents of Financial Statements of a Joint Stock Company as per Companies Act 2013 - Understanding the contents of a Corporate Annual Report.

UNIT IV

Analyzing Financial Statements - Objectives of Financial Statement Analysis - Sources of Information - Standards of Comparison - Techniques of Financial Statement Analysis - Horizontal Analysis - Vertical Analysis - Ratio Analysis - Meaning and Usefulness of Financial Ratios - Analysis of Financial Ratios from the perspective of different Stakeholders like Investors- Lenders - Short-term Creditors - Profitability Ratio -Solvency Ratio - Liquidity Ratio -Turnover Ratio - Limitations of Ratio Analysis.

UNIT V

Partnership Accounts: Past adjustments and guarantees- Basic concepts of Admission, Retirement and death of a partner including treatment of goodwill.

Note: Distribution of marks between problems and theory shall be 80% and 20%.

BBA		2017 - 2018 Semester – II			
17BAU211	CORE –TALLY (PRACTICAL)	L	T	P	C
		4	-	-	2
Instruction Hours / week L: 0 T: 0 P : 4		Marks: Internal: 40 External: 60 Total: 100 End Semester Exam: 3 Hours			

COURSE OBJECTIVES :

To make the students

- To infer the practical knowledge about the accounting package
- To acquire knowledge in computerization of accounts
- To interpret the inventory valuations methods available in the software
- To understand various financial statements that are built in the software
- Create vouchers by understanding the reason for posting under different heads
- Calculate valuation of assets using the software

COURSE OUTCOMES:

Learners should be able to

1. Compose the different knowledge of accounting package.
2. Create vouchers by understanding the reason for posting under different heads
3. Calculate valuation of assets using the software
4. Prepare and Analyse the financial statements and retrieve ratios
5. Apply the knowledge of quantitative tools & techniques in the interpretation of data for managerial decision making.
6. Develop computer skills of recording financial transactions, preparation of annual accounts and reports.

Practical List

1. Create a new company in integrate accounts mode and account with inventory mode
2. Create a primary and sub groups using single or multiple ledger mode
3. Create minimum 10 ledgers using single or multiple ledger, and alter and delete any 2 ledger

4. Enter the following voucher
 - Payment vouchers
 - Receipt
 - Purchase
 - Sales
 - Credit note
 - Debit note
 - Journals
 - Memo
 - Optional
5. Create stock, stock groups and enter the vouchers
6. Prepare inventory statements using (calculate inventory using all methods)
 - FIFO
 - LIFO
 - Simple Average Method
 - Weighted Average Method
7. Prepare the following ratio analysis
 - Financial ratio
 - Operating ratio
 - Investment ratio
8. Prepare the following
 - Cash flow statement
 - Fund flow statement
9. Preparation of reports for the following
 - Trial Balance
 - Profit & Loss A/c
 - Balance sheet
 - Bank reconciliation statement
 - Back up and restore the company information

ENVIRONMENTAL STUDIES

L	T	P	C
4	-	-	4

Instruction Hours / week L: 4 T: 0 P : 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate the public to participate in environment protection and improvement.
- To be aware of the different pollution that affects the environment.
- To demonstrate the social issues prevailing in the environment.
- To understand and address complex environmental issues

COURSE OUTCOMES:**Learners should be able to**

1. Understand the awareness among the people to know about various renewable and non renewable resources of the region, enables environmentally literate citizens.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Illustrate to prevent pollution in the environment
4. Assess to appropriate judgments and decisions for the protection and improvement of the earth.
5. Demonstrate an integrative approach to environmental issues with a focus on sustainability;
6. Understand and evaluate the global scale of environmental problems

UNIT-I: Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III: Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Bio geographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

ENGLISH-III - COMMUNICATIVE ENGLISH

L	T	P	C
8	-	-	6

Instruction Hours / week L: 4 T: 0 P : 4

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives:

- To develop confidence to respond in English during situations where the use of English is imperative.
- To develop fluency in actual conversation in the English language.
- To develop knowledge about business communication.
- To develop knowledge about business writing.
- To acquire knowledge on communication for different purpose.
- To get knowledge to communicate in day to affairs.

Course Outcome:

1. Students learnt the basics and purposes of listening skill.
2. Students will know the importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Acquired knowledge on effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.
6. Develop communication skills in business environment.

UNIT I: Listening

Listening and its types, Basic Listening Lessons, Critical Listening Lessons, Advanced Listening Lessons, and Note Taking

UNIT II: Speaking

Basics of speaking, Regular English, Business English, Interview English, and Travel English

UNIT III: Reading

Reading and its purposes, Types of Reading, Reading Techniques, Reading Comprehension, Note Making

UNIT IV: Writing

Writing defined, Types of Writing, Components of Writing, Writing Contexts, Language and Style with accordance to the contexts

UNIT V: Vocabulary Enrichment

Synonyms, Antonyms, Homonyms, Phrasal Verbs, Idioms and Phrases, One Word Substitutes, and Affixes

Suggested Reading:

17BAU301	CORE –PRINCIPLES OF MARKETING	L	T	P	C
		8	-	-	6

Instruction Hours / week L: 6 T: 2 P : 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

- To compose knowledge in the concepts and functions of marketing
- To acquire knowledge in the strategies of marketing
- To exhibit knowledge on promotional steps in marketing
- To understand the 'Marketing mix' elements and the strategies
- To comprehend the knowledge of marketing process and segmentation
- To be aware on the brand and branding strategies

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Principles of Marketing represent the marketing environment, consumer behaviour and product life cycle.
2. Assess the results in developing best products in terms of goods and services that brings consumer satisfaction. This paper presents the marketing functions.
3. Demonstrate knowledge of the individual components of a marketing mix.
4. Identify the organisational processes involved in the planning, implementation and control of marketing activities.
5. Understand the marketing terminology and concepts.
6. Demonstrate knowledge of key business communication strategies within the marketing field.

UNIT I

Introduction: Nature, Scope and Importance of Marketing - Evolution of Marketing - Core marketing concepts - Company orientation - Production concept -Product concept - Selling concept - Marketing concept - Holistic marketing concept -Marketing Environment -Demographic-Economic- Political- Legal - Socio cultural -Technological Environment - Portfolio approach – Boston Consultative Group (BCG) matrix.

UNIT II

Segmentation - Targeting and Positioning - Levels of Market Segmentation -Basis for Segmenting Consumer Markets - Difference between Segmentation -Targeting and Positioning.

UNIT III

Product and Pricing Decisions - Concept of Product Life Cycle (PLC) – PLC marketing strategies - Product Classification - Product Line Decision - Product Mix Decision - Branding Decisions -

Packaging and Labeling - New Product Development -Pricing Decisions - Determinants of Price - Pricing Methods - Adapting Price.

UNIT IV

Promotion Mix - Factors determining promotion mix - Promotional Tools -Basics of Advertisement - Sales Promotion - Public Relations and Publicity and Personal Selling - Place (Marketing Channels) - Channel functions - Channel Levels - Types of Intermediaries - Types of Retailers - Types of Wholesalers.

UNIT V

Marketing of Services - Unique Characteristics of Services - Marketing strategies for service firms - 7Ps - Customer Relationship Management (CRM) - Consumer Protection Act -E- Marketing.

CORE –MANAGEMENT ACCOUNTING

L	T	P	C
8	-	-	6

Instruction Hours / week L: 6 T: 2 P : 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

- To acquire knowledge in the concepts of cost and management accounting
- To Impart the knowledge in financial statement analysis and budget preparations
- To examine the fund flow and cash flow statement
- To solve the problems and take decisions based on the result.
- To communicate orally and in written form the concepts and solutions.
- To Understand the preparation of financial statement for decision making

COURSE OUTCOMES:**Learners should be able to**

1. Understand the nature and scope of management accounting, difference between cost and management accounting and various elements of cost.
2. Acquire the knowledge of marginal costing, budgetary control, cash flow and fund flow statement.
3. Comprehend on the contemporary issues relevant to accounting concepts.
4. Analyse the alternatives using appropriate tools and techniques.
5. Solve the problems and take decisions based on the result.
6. Communicate orally and in written form the concepts and solutions

UNIT I

Management Accounting - Meaning - Definition - Nature - Scope of Management Accounting - Comparison of Management Accounting with Cost Accounting and Financial Accounting. Cost concepts - Meaning - Scope - Objectives - Importance of Cost Accounting - Cost - Costing - Cost Control, and Cost Reduction - Elements of Cost -Components of total Cost - Classification of Costs - Fixed Variable -Semi Variable -Step Costs - Product - Period Costs - Direct - Indirect Costs-Preparation of Cost Sheet in Lieu with Cost Accounting Standard.

UNIT II

Cost Volume Profit Analysis - Contribution - Profit Volume Ratio - Margin of safety – Cost Break-even Point - Composite Break-even Point - Cash Break-even Point - Key Factor -Break-even

Analysis - Relevant Costs - Decision Making - Pricing - Product Profitability -Make or Buy - Exploring new markets - Export Order - Sell or Process Further - Shut down Vs. Continue.

UNIT III

Budgets and Budgetary Control - Meaning - Types of Budgets - Steps in Budgetary Control -Fixed and Flexible Budgeting - Cash Budget - Responsibility Accounting- Concept -Significance - Different responsibility centers - Divisional performance – Financial measures - Transfer pricing.

UNIT IV

Standard Costing and Variance Analysis - Meaning of Standard Cost – Standard Costing, Advantages -Limitations and Applications - Material - Labour - Overhead and Sales variances. Introduction to Target Costing - Life Cycle Costing - Quality Costing - Activity Based Costing.

UNIT V

Funds Flow Statement - Schedule of Changes in Working Capital - Calculation of Funds from Operation - Sources and Applications of Funds. Cash Flow Statement - Cash from Operation - Inflow and Outflow of Funds.

Note: Distribution of marks between problems and theory shall be 80% and 20%.

17BAU303B	SEC - 1 MANAGEMENT INFORMATION SYSTEM	L	T	P	C
		6	-	-	4

Instruction Hours / week L: 5 T: 1 P : 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES :****To make the students**

- To impart the management information systems and their applications in Management.
- To demonstrate the knowledge in telecommunication revolution
- To develop the applications of MIS in various fields
- To provide the theoretical models used in database management systems
- To describe the role of information technology and decision support systems in business.
- To Understand at how to use and manage information system

COURSE OUTCOMES:**Learners should be able to**

1. An Exposure to the concepts, theories and practices in the field of MIS.
2. Acquire the relationship among and between information systems and management, analyze how technology can be used to synthesize complex data to make sound business decisions.
3. Critically analyse and evaluate the use of DSS, AI in supporting management decision
4. Communicate orally and in written form the understanding of the usage of information system in management decision.
5. Understand the security and ethical issues pertaining to use of information technology in management decision making.
6. Demonstrate Knowledge of Information Systems and Business

UNIT I

Introduction to Information Systems - Definition - Features - Steps in Implementation of MIS - Need for Information - Information System for Decision making- MIS as Competitive Advantages – MIS Structures.

UNIT II

MIS - Strategic Information System - MIS Support for Planning - Organising - controlling - MIS for Specific Functions - Personnel - Finance - Marketing Inventory Production Data Base Management System Models - Hierarchical - Network - Relational - Modular.

UNIT III

Computer Hardware - Description of Electronic Computers - CPU Operations - Classification of Computers - Main - Mini - Workstations - Micro Computers - Super Computers - Personal Computers. Computer Software - Types of Software - Data Representation in Computers - Introduction to Client-Server.

UNIT IV

Input Devices - Mouse - Touch Screens - MICR - OCR - Keyboard - Pen Based Input - Digital Scanners - Voice Input Devices - Sensors. Output Devices - Impact Printers - Non-Impact Printers - Video Display Terminals - Plotters - Voice Output Devices. Secondary Storage Devices - Magnetic Disk, Floppy, Magnetic Tape, Optical Disk Storage - DROM

UNIT V

Telecommunication Revolution - Introduction to Email- Internet - Intranet - Teleconferencing - www Architecture - Introduction to E-Commerce - Models B_B, B_C, and EDI, EDI Applications in Business - Electronic Payment Cash - Smart Cards - Credit Cards - Fundamentals of ERP-Information Technology Act, 2000.

(Communication Lab/BEC/IELT) EC-4**(For all undergraduate students admitted from 2017 onwards)****Instruction Hours / week L: 4 T: 0 P : 4****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives:**

- To train students in understanding the concepts of communication.
- To be familiar with the four basic skills of English.
- To train students in developing their written communication.
- To train students in developing their presentation skills.
- To acquire the skill of making grammatically correct sentences.
- To reflect originality on the application of soft skill views and express in writing their views.

Course Outcome:

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Developed the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Enhanced communication competency through LSRW skills.

UNIT I: Integrated Skills

Development of speaking, listening and grammar skills.

UNIT II: Advanced Reading Skills

Outcomes include improved reading speed, increased reading fluency and increased vocabulary.

UNIT III: Advanced Writing Skills

Planning and writing complex tasks

UNIT IV: News and World Affairs

Newspapers, magazines, the Internet, TV and radio are used to develop listening, reading and discussion skills.

UNIT V: Project Work

The class works together to write and produce a group project. This class is particularly useful for building confidence in using English and improving pronunciation.

CORE - BUSINESS RESEARCH

L	T	P	C
8	-	-	6

Instruction Hours / week L: 6 T: 2 P : 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

- To impart knowledge in the concept of research methodology.
- To exhibit in sampling techniques
- To impart student's knowledge in writing a good research report.
- To familiarize students with basic of research and the research process.
- To comprehend the knowledge of social research
- To familiarize the concept of report writing,

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of research process, research design, sampling techniques
2. Assess the various research tools and techniques in order to facilitate the research work
3. Calculate and apply the measure of central tendency and dispersion in decision making
4. Understand and Exhibit the statistical tools applied in research
5. Analyse the research problem and design the blue print to capture data and analyse the same using appropriate statistical techniques and apply the learning lifelong.
6. Design a report to communicate the findings and suggestion to make business decision

UNIT I

Research - Role of Research indecision making - Applications of Research – Types of Research – The Research process - Steps in the research process - the research proposal – Problem Formulation- Review of Literature - Management decision problem Vs. Marketing Research problem.

UNIT II

Research Design - Exploratory- Descriptive- Causal - Secondary Data Research - Advantages and Disadvantages of Secondary Data - Criteria for evaluating secondary sources - Secondary sources of data - Syndicated Research - Sampling - Sampling techniques - Determination of sample size.

UNIT III

Primary Data Collection - Survey Vs. Observations - Comparison of self administered -telephone - Mail - email techniques. Qualitative Research Tools – Depth Interviews focus groups and projective techniques - Measurement and Scaling – Primary scales of Measurement-Nominal - Ordinal - Interval and Ratio. Scaling techniques paired comparison - Rank order - constant sum - Semantic differential - Itemized rating -Likert Scale – Questionnaire.

UNIT IV

Hypothesis - Meaning - Sources Types - Formulation - Data Analysis -Z test (mean, diff. of mean, diff. of proportion) - t-test (mean) - Paired t-test - Chi square test -Introduction to theoretical concept of ANOVA - Factor Analysis and Discriminant Analysis.

UNIT V

Interpretation - Meaning - Techniques of Interpretation - Report writing - Significance - Report Writing - Steps in Report Writing - Layout of report - Types of Reports - Oral Presentation - Executive Summary - Mechanics of Writing Research Report - Precautions for Writing Report - Norms for using Tables - Charts - and Diagrams - Appendix - Norms for using Index and Bibliography.

17BAU504B GE-1 PRODUCTION AND OPERATIONS MANAGEMENT

L	T	P	C
8	-	-	6

Instruction Hours / week L: 6 T: 2 P : 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours**COURSE OBJECTIVES****To make the students**

- To understand the concepts and functions of production and operations management
- To impart the knowledge in the concept of inventory
- To develop the knowledge in purchase procedure and quality control
- To be aware of technological **practices** and relevant social issues
- To gain knowledge of applying a quality management TQM tools to improve organizational effectiveness
- To acquire knowledge on methods of production and operations management

COURSE OUTCOMES**Learners should be able to**

1. Analyze the entire process of manufacturing a product or a service
2. Understand the concept of optimum utilization of resources and minimization of cost
3. Exhibit and Understand the materials management, concept of inventory and quality control.
4. Critically evaluate the project completion cycle using operation techniques and solve the problem.
5. formulate the production planning and control systems and ensure efficient scheduling for production
6. Obtain the knowledge of applying a quality management TQM tools to improve organizational effectiveness.

UNIT I

Introduction to Production and Operations Management – Definition - Need - Responsibilities -Key decisions of OM -Goods Vs. Services - Operations as a key functional area in an organization - Operation Strategies-Definition- Relevance - Strategy formulation process - Order qualifying and order winning attribute. Maintenance Management - Need of maintenance management - Equipment life cycle(Bathtub curve) - Measures for maintenance performance (MTBF, MTTR and availability) -Lean production - Definition of lean production - Lean Demand Pull logic - Waste in operations - Elements that address elimination of waste - 2 card Kanban Production Control system.

UNIT II

Forecasting - Definition - Types - Qualitative (grass roots, market research and Delphi method) and quantitative approach (simple moving average method, weighted moving average and single exponential smoothing method) - Forecast error - MAD -Scheduling - Operation scheduling - Goals of short term scheduling - Job sequencing (FCFS,SPT, EDD, LPT, CR) and Johnson's rule on two machines - Gantt charts.

UNIT III

Process Selection - Definition - Characteristics that influence the choice of alternative processes (volume and variety) - Type of processes - Job shop - Batch - Mass and Continuous -Product-Process Design Matrix and Services Design Matrix -Technology issues in process design - Flexible Manufacturing Systems (FMS) - Computer Integrated Manufacturing(CIM).

UNIT IV

Layout Decision - Layout planning - Benefits of good layout -Importance - Different types of layouts (Process, Product, Group technology and Fixed position layout). Assembly line balancing by using LOT rule - Location Decisions and Models - Facility Location -Objective - Factors that influence location decision -Location evaluation methods – Factor Rating Method. Capacity Planning - Definition - Measures of capacity (input and output) - Types of planning over time horizon - Decision Tree Analysis.

UNIT V

Aggregate Planning - Definition- Nature - Strategies of aggregate planning - Methods of aggregate planning - Statistical Quality control - Variations in process- Control charts - Total Quality Management - Total Productive Maintenance - KAIZEN Concept

DSE – 3: HRD: SYSTEMS AND STRATEGIES

L	T	P	C
8	-	-	6

Instruction Hours / week L: 6 T: 2 P : 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES****To make the students**

- To acquire the knowledge in the concepts and functions of HRD
- To identify the principles and practices of developing human resources
- To access the qualities of HR manager
- To gain knowledge of implementation of HR
- To be aware of International HRM
- To comprehend knowledge of HR Audit

COURSE OUTCOMES**To learn the students**

1. Exhibit the role of and effectiveness of HR
2. Understand the emerging trends in HRD
3. Analyze the HR experiences in India
4. Collaborate with others, in the development, implementation, and evaluation of organizational and health and safety policies and practices.
5. Research and analyze information needs and apply current and emerging information technologies to support the human resources function.
6. Develop, implement, and evaluate organizational development strategies aimed at promoting organizational effectiveness.

UNIT I

Human Resource Development (HRD) - Concept - Origin and Need -Relationship between human resource management and human resource development -HRD as a Total System - Activity Areas of HRD - Training - Education and Development -Roles and competencies of HRD professionals.

UNIT II

HRD Process - Assessing need for HRD - Designing and developing effective HRD programs - Implementing HRD programs - Evaluating HRD programs.

UNIT III

HRD Interventions - Integrated Human Resource Development Systems -Staffing for HRD - Physical and Financial Resources for HRD - HRD and diversity management - HRD Climate - HRD Audit.

UNIT IV

HRD Applications - Coaching and mentoring - Career management and development - Employee counselling - Competency mapping - High Performance Work Systems - Balanced Score Card - Appreciative inquiry - Integrating HRD with technology.

UNIT V

Evaluating the HRD Effort - Data Gathering - Analysis and Feedback -Industrial relations and HRD - HRD Experience in Indian Organizations – International HRD experience - Future of HRD.

PROJECT

L	T	P	C
8	-	-	6

Instruction Hours / week L: 0 T: 0 P : 8

COURSE OBJECTIVES:

To make the students

- To identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
- To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
- To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
- To apply the theoretical and practical learning of doing research into lifelong practice.
- To Communicate in oral and written form and prepare report
- To Work in team and exhibit leadership skills
- To utilize the IT application for analysis and preparation of report.

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills
7. Utilize the IT application for analysis and preparation of report.

The students should select a problem in Accounting, Finance, Marketing, Human Resource Management, international business or any other areas.

Report should contain

- Introduction
 - Introduction about the industry
 - Introduction about the Company
 - Review of literature – Minimum 10 papers from referred journal

- Need for the Study
 - Objectives
- Research Methodology
 - Research Design
 - Sampling Design
 - Sources of Data Collection
 - Tools used for analysis
 - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibliography (APA format)

MBA DEGREE PROGRAMME

REGULAR PROGRAMME

REGULATIONS 2017

CHOICE BASED CREDIT SYSTEM (CBCS)

The following Regulations are effective from the academic year 2017-2018 and are applicable to the students admitted in MBA programme in the Faculty of Arts, Science, and Humanities, Karpagam University from the academic year 2017 – 2018 onwards.

1. ELIGIBILITY FOR ADMISSION TO THE PROGRAM

Candidates who have passed the Undergraduate Degree Examination of this University or an examination of any other University recognized by the Karpagam University as equivalent thereto are eligible for admission to Post-Graduate degree in Management (**MBA**).

2. DURATION OF THE PROGRAM

The minimum duration of a regular MBA program is two years and its maximum duration is four years. Each academic year shall be divided into two semesters, the First and Third semesters from July to November and the Second and Fourth semester from December to April. Each semester shall have 90 working days (6 Hrs / Day) or 540 hours.

3. MEDIUM OF INSTRUCTION

The medium of instruction for all courses, examinations, seminars, presentations and project/reports shall be in English.

4. CREDITS

The prescribed credits required for the award of MBA degree shall be 104.

5. STRUCTURE OF THE PROGRAM

The program consist of Core, Elective, Summer Internship, Project (Major) and Industrial Visits/Field Visits/Out Bound Training.

a. Core

Core consists of thirteen theory courses and two practical courses.

b. Elective

- Specializations are offered in ten functional areas.
- They are Finance, Marketing, Human Resources, Systems, Entrepreneurship, Banking Management, Retail Management, International Business, Production Management and Insurance Management.
- A candidate has to select any two specialization of his/her choice.
- Each specialization consists of three electives each in third semester and fourth semester respectively.
- A candidate has to select two electives in the third and fourth semester.

c. Summer Internship

During second semester vacation each student shall undertake a Summer Internship for 30 Days. The summer internship may be a general study of all functional areas of a company or may be a functional focus on a specialized functional area of management in a company. The students shall bring the attendance certificate from the company. He /She shall also submit a detailed report for *Viva-voce* Examination.

d. Project Work (Major)

Candidates shall undergo for a Project work for a period of 25 working days during the IV semester. On completion of the project work he/she shall submit the report to the Head of the Department. The candidate shall bring the attendance certificate from the place of project work carried out. The Project Report prepared according to approved guidelines and duly signed by the supervisor(s) shall be submitted to HoD for *Viva Voce* Exam. The report should be well documented as per the following approved guidelines,

1. Cover & Title Page
2. Certificate, Company Certificate and Declaration
3. Acknowledgement
4. List of Contents, List of Tables and List of Charts
5. Introduction of the Study
6. Review of Literature
7. Research Methodology
8. Data Analysis and Interpretation
9. Findings, Suggestions & Conclusion
10. Bibliography and Appendix

e. Industrial Visits / Field Visits/Out Bound Training

The students shall undertake Industrial Visits / Field Visits/ Out Bound Training during First, Second and Third semesters respectively.

6. MAXIMUM MARKS

The maximum marks assigned to different courses shall be as follows:

Each of the theory and practical courses shall carry a maximum of 100 marks. Out of which 40 marks is for Continuous Internal Assessment (CIA) and 60 marks for End Semester Examinations (ESE).

7. REQUIREMENTS TO APPEAR FOR THE END SEMESTER EXAMINATION (ESE)

Attendance shall be considered semester wise pattern (Not annually).

a. Ideally every student is expected to attend all classes and secure 100% attendance. However, in order to allow for certain unavoidable circumstances, the student is expected to attend at least 75% of the classes and the conduct of the candidate has been satisfactory during the course.

b. A candidate who has secured attendance between 65% and 74% (both included), due to medical reasons (Hospitalization / Accident / Specific Illness) or due to participation in University / District / State / National / International level sports or due to participation in Seminar / Conference / Workshop / Training Programme / Voluntary Service / Extension activities or similar programmes with prior permission from the Registrar shall be given exemption from prescribed attendance requirements and shall be permitted to appear for the examination on the recommendation of the Head of the Department concerned and Dean to condone the lack of attendance. The Head of the Department has to verify and certify the genuineness of the case before recommending to the Dean. However, the candidate has to pay the prescribed condonation fee to the University.

c. However, a candidate who has secured attendance less than 64% in the current semester due to any reason shall not be permitted to appear for the current semester examinations. But he/she will be permitted to appear for his/her supplementary examinations, if any and he/she has to re-do the same semester with the approval of the “Students’ Affairs Committee” and Registrar.

8. FACULTY TUTOR

To help students in planning their course of study and for general advice on the academic program, the HoD shall allot a certain number of students to a faculty to whom they shall function as faculty tutor throughout their period of study. Faculty tutors shall advise the students and monitor their conduct of behavior and academics. Problems if any, they should be counseled periodically. The Faculty tutor is also responsible to inform the parents of their wards progress. Faculty tutor shall display the cumulative attendance particulars of his / her ward students’ periodically (once in 2 weeks) on the Notice Board to enable the students to know their attendance status and satisfy the **clause 7** of this regulation.

9. CLASS COMMITTEE

Every class shall have a class committee consisting of teachers of the class concerned, student representatives (Minimum 2 boys and 2 girls of various capabilities and Maximum of 6 members) and the concerned HoD / senior faculty as a Chairperson. The objective of the Class Committee Meeting is to improve the teaching – learning process. Class committee may be convened at least once in a month. The functions of the class committee include

- Analyzing and solving problems experienced by students in the class room and in the laboratories.
- Analyzing the performance of the students of the class after each test and finding the ways and means to improve the performance.
- The class committee of a particular class of any department is normally constituted by the HoD / Chairperson of the class committee. However, if the students of different departments are mixed in a class, the class committee is to be constituted by the respective Faculty Dean.
- The class committee shall be constituted within the first week of each semester.
- The HoD / Chairperson of the class committee may convene the meeting of the class committee.
- The respective Faculty Dean may participate in any class committee meeting.
- The Chairperson is required to prepare the minutes of every meeting, and submit the same to Dean within two days after having convened the meeting. Serious issues if any shall be brought to the notice of the Registrar by the HoD / Chairperson.

10. CONTINUOUS INTERNAL ASSESSMENT (CIA)

CIA: The performance of students in each course will be continuously assessed by the respective faculty as per the guidelines given below:

Theory Courses:

S. No.	Category	Maximum Marks
1.	Attendance	5
2.	Test – I (First 2 ½ units)	10
3.	Test – II (Last 2 ½ units)	10
4.	One Journal Paper Presentation*	15
Continuous Internal Assessment : Total		40

*The Journal Paper Presentation Evaluation comprises of Subject Matter = 5 marks, Presentation = 4 marks, Visual Aids = 2 marks, Question and Discussion = 4 Marks.

Pattern of CIA Question Paper:

Instruction	Remarks
Maximum Marks	50 Marks for all Courses.
Duration	2 hrs
Part - A	15 One mark Questions (15 x 1 = 15 Marks) Question No. 1 to 15 Multiple Choice Questions

Instruction	Remarks
Part- B	3 Eight mark Questions (3 x 8 = 24 Marks) Question No. 16 to 18 will be 'either-or' type, Question No. 16: either 16 (a) or 16 (b), Question No. 17: either 17 (a) or 17 (b), Question No. 18: either 18 (a) or 18 (b)
Part- C Compulsory	One Eleven mark Question (1 x 11 = 11 Marks) Question No.19: Case Study

Practical Courses:

S. No	Category	Maximum Marks
1.	Attendance	5
2.	Observation work	5
3.	Record work	5
4.	Model Examination	20
5.	Viva – voce Examination	5
Continuous Internal Assessment: Total		40

Mark Distribution for Attendance

S. No.	Attendance %	Maximum Marks
1	91 and above	5.0
2	86 - 90	4.0
3	81 - 85	3.0
4	75 - 80	2.0
5	Less than 75	0

11. **END**

SEMESTER

EXAMINATIONS (ESE)

ESE will be held at the end of each semester for each course. The question paper is for a maximum of 60 marks.

Pattern of ESE Question Paper:

Instruction	Remarks (with online)
Maximum Marks	60 Marks
Duration	½ Hr for Online & 2 ½ Hours ESE
Part - A	20 One mark Questions (20x 1 = 20 Marks) Question No. 1 to 20 Online Multiple Choice Questions
Part- B	5 Two mark Questions (5 x 2 =10 Marks) Question No. 21 to 25 will be compulsory questions, covering all five units of the syllabus; i.e., Question No. 21: Unit - I,

Instruction	Remarks (with online)
	Question No. 22: Unit - II, Question No. 23: Unit - III, Question No. 24: Unit - IV, Question No. 25: Unit – V.
Part- C	4 Five mark Questions (4 x 5 =20 Marks) Question No. 26 to 29 will be ‘ either-or ’ type, one Question each from any four units of the syllabus; i.e., Question No. 26: either 26 (a) or 26 (b), Question No. 27: either 27 (a) or 27 (b), Question No. 28: either 28 (a) or 28 (b), Question No. 29: either 29 (a) or 29 (b)
Part- D Compulsory	One Ten mark Question (1 x 10 = 10 Marks) Question No.30: Case Study from the remaining one unit

a. Practical

The practical examination shall be conducted at the end of each semester. There shall be combined valuation. The pattern of distribution of marks shall be as given below.

Experiments	:	40 Marks
Record	:	10 Marks
<i>Viva-voce</i>	:	10 Marks
Total	:	60 Marks

Record Notebooks for Practical Examination

Candidate taking the Practical Examination should submit Bonafide Record Notebook prescribed for the Practical Examination. Otherwise the candidate will not be permitted to take the Practical Examination.

In case of failures in Practical Examination, the marks awarded for the record at the time of first appearance of the Practical Examination should remain the same at the subsequent appearance by the candidate.

c. Summer Internship/Project

The marks awarded for project shall be as follows

Summer Internship: 100 marks (4 credits) comprising of Internal 40 and External 60.

Project: 200 marks (6 credits) comprising of Internal 80 and External 120.

The evaluation of the Summer Internship/Project will be based on the Summer Internship/project report submitted and a *Viva-Voce* Examination by a team consisting of the supervisor, who will be the Internal Examiner and an External Examiner who shall be appointed by the University. In

case anyone examiner is not available, the HoD/a Faculty nominated by the HoD shall act as an Examiner.

If a candidate fails to submit the Summer Internship/project report on or before the specified date, candidate is deemed to have failed in the Summer Internship/Project Work and shall re-appear for the same in a subsequent semester. Copy of the approved Summer Internship/project report after the successful completion of viva examinations shall be kept in the University library.

12. PASSING REQUIREMENTS

- a) Passing minimum:
 - CIA: 20 marks out of 40 marks.
 - ESE: 30 marks out of 60 marks.
- b) If a candidate fails to secure a pass in a particular course (either CIA or ESE or Both) as per clause 12.a, it is mandatory that the candidate has to register and reappear for the examination in that course during the subsequent semester when examination is conducted for the same till a pass is secured both in CIA and ESE (vide Clause 2).
- c) Candidate failed in CIA will be permitted to improve CIA marks in the subsequent semesters by writing tests and by submitting Assignments.
- d) CIA marks(if it is pass) obtained by the candidate in the first appearance shall be retained by the Office of the Controller of Examinations and considered valid for all subsequent attempts till the candidate secures a pass in ESE.
- e) A candidate who is absent in ESE in a Course / Practical / Project Work after having enrolled for the same shall be considered to have **failed** in that examination.

13. AWARD OF LETTER GRADES

All assessments of a course will be done on absolute marks basis. However, for the purpose of reporting the performance of a candidate, letter grades, each carrying certain number of points, will be awarded as per the range of total marks (out of 100) obtained by the candidate in each course as detailed below:

Letter grade	Marks Range	Grade Point	Description
O	91 - 100	10	OUTSTANDING
A+	81- 90	9	EXCELLENT
A	71-80	8	VERY GOOD
B+	66- 70	7	GOOD
B	61 – 65	6	ABOVE AVERAGE
C	55 - 60	5	AVERAGE

D	50 - 54	4	PASS
RA	<50	-	REAPPEARANCE
AB/AAA		-	ABSENT

14. GRADE SHEET

After the declaration of the results, Grade Sheets will be issued to each student which will contain the following details:

- i. The list of courses enrolled during the semester and the corresponding grade scored.
- i. The Grade Point Average (**GPA**) for the semester and
- iii. The Cumulative Grade Point Average (**CGPA**) of all courses enrolled from first semester onwards.

GPA of a Semester and CGPA of a program will be calculated as follows.

$$\text{GPA of a Semester} = \frac{\text{Sum of the product of the GP by the corresponding credits of the courses offered in that Semester}}{\text{Sum of the credits of the courses of that Semester}}$$

$$\text{i.e. GPA of a Semester} = \frac{\sum_i C_i G P_i}{\sum_i C_i}$$

$$\text{CGPA of the entire program} = \frac{\text{Sum of the product of the GPs by the corresponding credits of the courses offered for the entire program}}{\text{Sum of the credits of the courses of the entire program}}$$

$$\text{i.e. CGPA of the entire program} = \frac{\sum_n \sum_i C_{ni} G P_{ni}}{\sum_n \sum_i C_{ni}}$$

where,

C_i is the credit fixed for the course 'i' in any semester

$G P_i$ is the grade point obtained for the course 'i' in any semester

'n' refers to the Semester in which such courses are credited

Note: RA grade will be excluded for calculating GPA and CGPA.

15. REVALUATION

Candidate can apply for revaluation and re totaling of his / her semester examination answer script (**theory courses only**), within 2 weeks from the declaration of results, on payment of a prescribed fee. For the same, the prescribed application has to be sent to the Controller of Examinations through the HoD. **A candidate can apply for revaluation of answer scripts not exceeding 5 courses at a time.** The Controller of Examinations will arrange for the revaluation and the results will be intimated to the candidate through the concerned HoD. Revaluation is not permitted for supplementary theory courses.

16. TRANSPARENCY AND GRIEVANCE COMMITTEE

Revaluation and Re-totaling is allowed on representation (clause 15).

Student may get the Xerox copy of the answer script on payment of prescribed fee, if he / she wishes. The student may represent the grievance, if any, to the Grievance Committee, which consists of Dean of the Faculty, (if Dean is HoD, the Dean of another Faculty nominated by the University), HoD of the Department concerned, the faculty of the course and Dean from other discipline nominated by the University and the COE. If the Committee feels that the grievance is genuine, the script may be sent for external valuation; the marks awarded by the External examiner will be final. The student has to pay the prescribed fee for the same.

17. ELIGIBILITY FOR THE AWARD OF THE DEGREE

A student shall be declared to be eligible for the conferment of the Degree if he / she has successfully completed all the components in clause 5 and gained the required number of total credits as specified in the curriculum corresponding to his / her Program within the stipulated period.

- No disciplinary action is pending against him / her.
- The award of the degree must be approved by the Board of Management.

18. CLASSIFICATION OF THE DEGREE AWARDED

- a) Candidate who qualifies for the award of the Degree (vide clause 18) having passed the examination in all the courses in his / her first appearance, within the specified minimum number of semesters and securing a **CGPA not less than 8.0** shall be declared to have passed the examination in **First Class with Distinction**.
- b) Candidate who qualifies for the award of the Degree (vide clause 12) having passed the examination in all the courses within the specified maximum number of semesters (vide clause

2); securing a **CGPA not less than 6.5** shall be declared to have passed the examination in **First Class**.

- c) All other candidates (not covered in clauses 18.a and 18.b) who qualify for the award of the degree (vide Clause 17) shall be declared to have passed the examination in **Second Class**.

19. PROVISION FOR WITHDRAWAL FROM END-SEMESTER EXAMINATION

- a) A candidate, may for valid reasons and on prior application, be granted permission to withdraw from appearing for the examination of any one course or consecutive examinations of more than one course in a semester examination.
- b) Such withdrawal shall be permitted only once during the entire period of study of the degree program.
- c) Withdrawal of application is valid only if it is made within 10 days prior to the commencement of the examination in that course or courses and recommended by the HoD / Dean concerned and approved by the Registrar.
- d) Notwithstanding the requirement of mandatory TEN days notice, applications for withdrawal for special cases under extraordinary conditions will be considered on the merits of the case.
- e) Withdrawal shall not be construed as an appearance for the eligibility of a candidate for First Class with Distinction. This provision is not applicable to those who seek withdrawal during IV semester.
- f) Withdrawal from the End semester examination is **NOT** applicable to arrears subjects of previous semesters.
- g) The candidate shall reappear for the withdrawn courses during the examination conducted in the subsequent semester.

20. PROVISION FOR AUTHORIZED BREAK OF STUDY

- a) Break of Study shall be granted only once for valid reasons for a maximum of one year during the entire period of study of the degree program. However, in extraordinary situation the candidate may apply for additional break of study not exceeding another one year by paying prescribed fee for the break of study. If a candidate intends to temporarily discontinue the program in the middle of the semester for valid reasons, and to rejoin the program in a subsequent year, permission may be granted based on the merits of the case provided he / she applies to the Registrar, but not later than the last date for registering for the end semester examination of the semester in question, through the HoD stating the reasons therefore and the probable date of rejoining the program.

- b) The candidate thus permitted to rejoin the Program after the break shall be governed by the Curriculum and Regulations in force at the time of rejoining. Such candidates may have to do additional courses as per the Regulations in force at that period of time.
- c) The authorized break of study (for a maximum of one year) will not be counted for the duration specified for passing all the courses for the purpose of classification. (Vide Clause 18). However, additional break of study granted will be counted for the purpose of classification.
- d) The total period for completion of the Programme reckoned from, the commencement of the first semester to which the candidate was admitted shall not exceed the maximum period specified in clause 2 irrespective of the period of break of study (vide clause 20.c) in order that he/she may be eligible for the award of the degree.
- e) If any student is detained for want of requisite attendance, progress and good conduct, the period spent in that semester shall not be considered as permitted 'Break of Study' or 'Withdrawal' (Clause 19 and 20) is not applicable for this case.

21. RANKING

A candidate who qualifies for the PG Degree program passing all the Examinations in the first attempt, within the minimum period prescribed for the program of study from Semester I through Semester IV to the program shall be eligible for ranking. Such ranking will be confined to 10% of the total number of candidates qualified in that particular program of Study subject to a maximum of 10 ranks.

22. SUPPLEMENTARY EXAMINATION

Supplementary Examination will be conducted only for the final semester students within ten days from the date of publication of results for students who have failed in one theory course only. Such students shall apply with prescribed fee to the Controller of Examinations within the stipulated time.

23. DISCIPLINE

- a) Every student is required to observe disciplined and decorous behavior both inside and outside the campus and not to indulge in any activity which will tend to bring down the prestige of the University. The erring students will be referred to the disciplinary committee constituted by the University, to enquire into acts of indiscipline and recommend the University about the disciplinary action to be taken.
- b) If a student indulges in malpractice in any of the University / Internal Examination he / she shall be liable for punitive action as prescribed by the university from time to time.

24. REVISION OF REGULATIONS AND CURRICULUM

The university may revise, amend or change the Regulations and Scheme of Examination, if found necessary.

PREAMBLE

Karpagam University (earlier known as Karpagam Arts and Science College) was established in the year 1995 with an objective to impart students in the latest theories and technologies and mould the students into a complete citizen in order to face the outside world. The University is approved by the University Grants Commission, New Delhi as a Deemed University from the year 2008. It is blossomed into an institution at par of excellence in the education hub of Coimbatore. It is located in a congenial atmosphere, about 10 km away from Coimbatore city in a sprawling campus on the Coimbatore – Pollachi main road at Eachanari.

The Department of Management Studies and Research was the first Post –Graduate course started by the institution in the year 1996. It is offering two year full time MBA programme leading to a Master’s degree in Management Studies, along with M.Phil and Ph.D programmes leading to a Research Degree. The Department has an exclusive facility which is endowed with excellent infrastructure and a dedicated team of faculty members in order to train the students to meet the growing needs of the society. The Department follows a Multidisciplinary approach to provide the necessary knowledge, skill and training to the students. The activities of the school are directed towards the all round development of the individual keeping in mind the expectations of the recruiters and the challenges of the environment.

OBJECTIVE OF THE PROGRAMME:

- To build in the skills necessary for the potential managers in all the functional areas of management and to create an exposure to the latest management concepts.
- To provide an integrated approach to problem solving and decision making.
- To mould the personality of the young minds.
- To inculcate good business practices
- To expose the students to the diverse knowledge in the business environment.
- To promote the spirit of entrepreneurship among the participants.

Today the demand for business managers and leaders who can lead the business to the forefront in the competitive environment is high. Our Department fosters the knowledge and skills of the students in preparing them to face the challenges of the competitive environment and succeed, which gives

them the critical edge among competition. Our challenge is to inspire and motivate the students to enable them in achieving their goals both personal and professional.

* The internal evaluation for Management Practice and Communication Practice shall be as follows:

- Attendance = 5 marks
- Activity/Seminar = 45 marks (15 marks for Unit I, 15 Marks for Unit II and 15 Marks for Unit III. Activity/seminar will be conducted at end of each Unit)

**The internal evaluation for Article Re-presentation (Total 15 marks for each course) shall be as follows:

- Subject matter = 05 marks
- Presentation = 04 marks
- Visual aids = 02 marks
- Question & Discussions = 04 marks

+Electives: Students can opt for two specializations out of ten specializations and two elective courses out of three elective courses in each specialization.

*The internal evaluation of **Summer Internship & Viva voce** shall be as follows:

- Model Viva-voce = 10 marks
- Project Record = 10 marks
- Viva voce Examination (internal examiner) = 20 marks

*The internal evaluation of **Major Project & Viva voce** shall be as follows:

- Review 1 (PPT Presentation) = 15 marks
- Review 2 (PPT Presentation) = 15 marks
- Model Viva-voce = 20 marks
- Project Record = 10 marks
- Viva voce Examination (internal examiner) = 20 marks

KARPAGAM ACADEMY OF HIGHER EDUCATION
(Deemed to be University)
(Established under section 3 of UGC Act, 1956)

Programme Outcomes (POs)

Graduates of the MBA programme will be able to:

- Understanding the management and domain concepts and apply them to achieve business environmental solutions.
- Demonstrate the ability to apply multiple theoretical perspectives to address complex managerial issues required for effective problem solving and decision making in contemporary organizational environment.
- Possess the skills required to work individually and lead effectively in a team-based environment.

- d. Recognize the values and ways to identify and resolve ethical issues and apply them in organizational settings
- e. Evaluate the implications of changing environmental factors on organizational choices within a global environment
- f. Ability to effectively communicate, persuade and strategically engage diverse stakeholders within a business environment.

PROGRAMME SPECIFIC OUTCOMES (PSO)

- g. Postgraduates will develop critical thinking and conceptualization of functional knowledge of management
- h. Able to accept various responsibilities and exhibit high level of commitment to complete on time.
- i. Ability to organize events individually / team and can show creativity and unique ideas in every business solutions

Programme Educational Objectives (PEOs)

- I. To develop professional skills for life-long learning in areas of management and related fields.
- II. To enable students to acquire proficiency, a sense of professionalism, integrity and team spirit to work in diverse environments.
- III. To develop capabilities in students to independently conduct theoretical as well as applied research.
- IV. To develop sound knowledge and skill to become an intrapreneur/entrepreneur and to inculcate creativity and innovation among students
- V. To adapt to a rapidly changing environment with learned and applied new skills and become socially responsible and value driven citizens committed to sustainable development.

Program Educational Objectives	Program Outcomes								
	a	b	c	d	e	f	g	h	i
To develop professional skills for life-long learning in areas of management and related fields.	<input type="checkbox"/>	<input type="checkbox"/>					<input type="checkbox"/>		
To enable students to acquire proficiency, a sense of professionalism, integrity and team spirit to work in diverse environments.		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>				<input type="checkbox"/>
To develop capabilities in students to independently conduct theoretical as well as applied research.			<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	
To develop sound knowledge and skill to become an intrapreneur / entrepreneur and to inculcate creativity and innovation among students	<input type="checkbox"/>			<input type="checkbox"/>					<input type="checkbox"/>
To adapt to a rapidly changing environment with learned and applied new skills and become socially responsible and value driven citizens committed to sustainable development.			<input type="checkbox"/>			<input type="checkbox"/>		<input type="checkbox"/>	

COURSE OBJECTIVES:

- To make the students familiar with basic concepts of management and human behavior in an organizational context and application of these concepts to managerial problems
- To help the students to develop cognizance of the importance of human behaviour.
- To enable students to describe how people behave under different conditions and understand why people behave as they do.
- To provide the students to analyse specific strategic human resources demands for future action.
- To enable students to synthesize related information and evaluate options for the most logical and optimal solution such that they would be able to predict and control human behaviour and improve results.
- To make the students to understand the traditional management school of thoughts, roles, responsibilities, and skills required for modern managers

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate the applicability of the concept of organizational behavior to understand the behavior of people in the organization.
2. Demonstrate the applicability of analyzing the complexities associated with management of individual behavior in the organization.
3. Analyze the complexities associated with management of the group behavior in the organization.
4. Demonstrate how the organizational behavior can integrate in understanding the motivation (why) behind behavior of people in the organization.
5. Understand the application of OB using appropriate concepts, logic and rhetorical conventions.
6. Analysis functional issues and formulate best solutions

Unit I

Management Overview – Evolution of Management - Functions - Characteristics and importance of management - Role of manager – Planning - Meaning - Steps in planning - Objectives - Management by Objectives.

Unit II

Decision making: Meaning, process. Organization – Departmentalization - Manpower planning - Recruitment and selection process - Directing – Motivation Theories. Control – Need, process, steps in control.

Unit III

Organization Behavior: Meaning and definition - Fundamental concepts of OB - Contributing disciplines to the OB - Learning – Theories of Learning - Personality – Determinants of personality - Theories of Personality - Psycho-analytical, social learning, job-fit and trait theories.

Unit IV

Perception – Factors influencing perception – Selective perception - Attribution Theory – Frequently Used Shortcuts in Judging Others - Perceptual Process - Organization Errors of perception. Attitudes – Types, Functions. Values – Types. Groups - Stages of Group Development - Group Norms - Group Cohesiveness.

Unit V

Conflict – Meaning – Sources of conflict - Functional vs. Dysfunctional Conflict - Levels of Conflict – Conflict Management. Stress – Causes of stress – Effects of Occupational Stress - Coping Strategies for Stress. Organizational change - Forces for change - Resistance to change- Overcoming resistance to change.

COURSE OBJECTIVES:**To make the students**

- To provide knowledge to the students on the basic issues such as demand, supply, production efficiency and capacity utilization involved in the industrial growth and development.
- To integrate the basic concepts of economics with the tools of mathematics and statistics in order to analyze and make optimal business decisions.
- To Measure the responsiveness of consumers' demand to changes in the price of a good or service, the price of other goods and services, and income
- To Understand the different costs of production and how they affect short and long run decisions
- To Derive the equilibrium conditions for cost minimization and profit maximization
- To illustrate the application of economic theory and methodology as an alternative in managerial decisions.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the internal and external decisions to be made by managers
2. Analyze the demand and supply conditions and assess the position of a company
3. Design competition strategies, including costing, pricing, product differentiation, and market environment according to the natures of products and the structures of the markets.
4. Analyze real-world business problems with a systematic theoretical framework.
5. Make optimal business decisions by integrating the concepts of economics, mathematics and statistics.
6. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run.

Unit I

Managerial Economics - Meaning, nature and scope – Techniques of managerial economics - Managerial Economics and business decision making – Role and responsibilities of Managerial

Economist - Fundamental concepts in Managerial Economics. Objectives of Business Firms - Determinants and types of demand - Elasticity of demand - Demand Forecasting, Applications.

Unit II

Production and Costs Analysis : Production Function – Types of production function - Cobb-Douglas function - Law of Diminishing returns- Law of variable proportions - Isoquants, - Law of Supply and Elasticity of Supply, Economies and Diseconomies of scale – Cost – Concepts – Determinants - Cost curves – Revenue – Concepts – Revenue functions - Break Even Analysis.

Unit III

Product market - Market Structure - Pricing under different markets- Perfect competition, Monopoly, Duopoly, Monopolistic competition, Oligopoly - Pricing in Public Sector Undertakings.

Unit IV

Factor market and Factors Prices - Pricing decisions – Input pricing - Wages, interest, rent and profit - Cost Benefit Analysis.

Unit V

Government and Business - Need for Government intervention in the market – Monetary and Fiscal policy - Prevention and control of monopoly - National Income – Methods - Trade Cycles - Balance of trade – Balance of payments - Economic Liberalization and Business Trends.

COURSE OBJECTIVES:**To make the students**

- To understand the basics of legal concept and environment in which the present day business is carried.
- To provide an overview of important laws that have a bearing on the conduct of business in India
- To examine the various legal forms that a business entity can take and the relative advantages and disadvantages of each of these forms
- To understand various modes of dispute resolution in business transactions
- To Identify contract remedies
- To Understand the legal and fiscal structure of different forms of business organizations and their responsibilities as an employer.

COURSE OUTCOMES:**Learners should be able to**

1. Appreciate the importance of law and legal institutions in business
2. Understand the laws relating to contract, consumer protection, competition, companies and dispute resolution
3. Demonstrate recognition of the requirements of the contract agreement
4. Demonstrate understanding of contract consideration and capacity
5. Apply basic legal knowledge to business transactions.
6. Illustrate the consumer legislations towards consumer protection and Environment protection

Unit 1:

Indian Contract Act – Contract – Offer and Acceptance – Capacity of Contract – Consideration - Free Consent – Performance and Discharge of Contract – Contract of Agency –Negotiable Instruments - Types of Negotiable Instruments.

Unit II:

Companies Act – Nature and Kinds of Companies Act- Companies Act 2013 – Memorandum of Association – Articles of Association – Prospectus – Types of Meetings – Winding Up of Company.

Unit III:

Industrial Law – Factories Act – Workmen Compensation Act – ESI Act – Payment of Wages Act – Trade Union Act.

Unit IV:

Income Tax Act - Overview of IT Act – Structure of IT Department – Corporate Tax Planning - Value Added Tax – GST.

Unit V:

Law Related To General Public - Consumer Protection Act - Information Technology Act - Right to Information Act – Environmental (Protection) Act.

Suggested Readings:**Text Books:**

1. Kapoor, N.D. (2014). *Elements of Mercantile Law*. New Delhi: Sultan Chand and Sons.
2. Kubendran, V. (2014). *Legal Aspects of Business*. Bangalore: SciTech Publications.

References:

1. Sen., and Mitra. (2010). *Commercial and Industrial Law*. New Delhi: Taxman Publication.
2. Shukla, M.C. (2011). *Mercantile Law*. New Delhi: Sultan Chand and Sons.
3. Gulshan, S.S. (2012). *Business Law*. New Delhi: Excel Books.

COURSE OBJECTIVES:**To make the students**

- To acquire reasonable knowledge in principles of accounting.
- To analysis and evaluate financial statements for business decisions.
- To facilitate an understanding about accounting as an information system and also the language of the business.
- To familiarize the participants with various financial tools and techniques that will facilitate the participants— in enhancing their analytical power to make rational decisions related to business
- To be familiar with basic accounting issues related to the sole proprietorship and partnership forms of business organization.
- To know the cost-volume-profit techniques and its application to determine optimal managerial decisions

COURSE OUTCOMES:**Learners should be able to**

1. Analyze and Interpret the financial statements of a company as the course unfolds, participants will develop a skill in interpreting the financials of the company, and this ability of analyzing will enable the participants to deal more effectively with strategic options for their businesses.
2. Demonstrate an understanding of the difference between financial and management accounting as well as the relationship between the two.
3. Prepare and interpret special purpose management reports.
4. Identify and utilize relevant costing information for special decision-making.
5. Explain how financial transactions are processed through the accounting information system each accounting period.
6. Understand the concept of Cash Flow Statement and Cash from Operations

Unit I

Introduction to Financial, Cost and Management Accounting - Financial accounting Vs Management accounting - Objectives and functions of Management Accounting - Generally accepted accounting principles, Conventions and Concepts – Journal – Ledger - Trial Balance.

Unit II

Final Accounts – Trading Account - Profit and Loss account - Balance sheet - Financial Statement Analysis – Objectives – Comparative Statements, Common-size statement, Trend Percentages.

Unit III

Costing – Basic concepts – Elements of costing – Cost centre concepts – Types of costing – Cost concept for planning and control - Preparation of Cost Sheet- Cost Accounting Systems: Job costing - Process costing - Activity Based Costing- Target costing.

Unit IV

Analysis of Financial Statements - Ratio Analysis, Meaning, Nature, Uses, Limitations, Classification of Ratios - Liquidity, Solvency and Profitability ratios, Interpretation of Ratios; Funds Flow Statement, Meaning and Concept of Funds, Flow of Funds, Uses and Significance of Funds Flow Statement, Limitations of Funds Flow Statement, Statement of Schedule of Changes in Working Capital, Funds From Operation.

Unit V

Cash Flow Statement, Classification of Cash Flows, Comparison between Funds Flow Statement and Cash Flow Statement, Uses and significance of Cash Flow Statement, Computation of Cash Flow Statement and Cash from Operations.

Note: Problems 60 Marks and Theory 40 Marks.

Suggested Readings:**Text Book:**

6. Maheswari, S.N. (2009). *Management Accounting*. Sultan Chand and Sons, New Delhi.

COURSE OBJECTIVES:

To make the students

- To familiar with the statistical and mathematical techniques and their applications.
- To understand the principles and techniques of Operations Research and their applications
- To Understand why statistics are important for making business
- To Understand why statistics are important for making business decisions
- To apply quantitative techniques to solve a variety of business problems
- To conduct statistical estimation and hypothesis testing with statistical tools and techniques.

COURSE OUTCOMES:

Learners should be able to

1. Understand statistical inference in relation to international business decision-making
2. Analyse output from both specialist and general office software
3. Produce quantitative analysis using specialist software
4. Convey the results of quantitative analysis
5. Demonstrate their competence and confidence in using inferential statistics in general and to the use of significance testing in particular
6. Develop skills to design business model and Analytics projects

Unit I

Role of mathematics and statistics in business decisions - Statistics – Meaning – Scope - Functions, limitations, uses and Misuse of statistics. Classification and Tabulation of data, Univariate data

analysis: Mean and Standard deviation, Shape of distributions – Skewness and kurtosis, Introduction to bivariate data analysis.

Unit II

Correlation: Types of Correlation, Correlation coefficient – Degrees of correlation coefficient – Methods of finding correlation coefficient - Scatter diagram - Karl Pearson's co-efficient of correlation - Spearman's Rank correlation. Regression: Regression lines - Regression equations - regression co-efficient - Methods of forming the Regression equations.

Unit III

Probability: Concepts, definitions - Addition and multiplication rules (only statements) - Business problems. Probability distributions: Binomial distribution - Poisson distribution and normal distribution - Business problems.

Unit IV

Transportation problem - Mathematical formulation of Transportation problem - Initial Basic Feasible solution - Optimum solution for non degeneracy and degeneracy models - Unbalanced Transportation problems and Maximization case in Transportation problem. The Assignment problem - Mathematical formulation of Assignment problem – Hungarian method – Unbalanced Assignment problem - Maximization case in Assignment problem.

Unit V

Queuing theory: Introduction – Characteristics of queuing system – Single server finite and infinite capacity models. Game Theory: Two Person-Zero-Sum Game- Saddle Point- Value of Game- Dominating Strategy- Mixed Strategy.

Note: Problems 60 Marks and Theory 40 Marks.

COURSE OBJECTIVES:**To make the students**

- To develop knowledge and skills necessary to manage various components of a practice that includes organization, administration, communication, and managerial aspects.
- To bring improvements in Interpersonal Skills and Practice-Based Learning
- To Identify the key competencies needed to be an effective manager.
- To Provide the students with the capability to apply theoretical knowledge in simulated and real-life settings.
- To Develop the students' ability to work in teams.
- To Understand the major internal external features of a business system

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate critical thinking when presented with managerial problems and express their views and opinions on managerial issues in an articulate way.
2. Understand the major internal features of a business system and the environment in which it operates.
3. Identify and explain the importance of the management process and identify some of the key skills required for the contemporary management practice.
4. Conduct topic and case analysis to apply theoretical concepts.
5. Prepare and present structured presentations and reports.
6. Evaluate, classify, imagine and plan the successful management practices.

Unit I Interpersonal Skills

Decision Skills: Group decision making (strengths and weaknesses), Developing characteristics of charismatic and transformational leadership. Emotional intelligence and leadership effectiveness - Self awareness, self management, self motivation, empathy and social skills

Negotiation skills- Preparation and planning, definition of ground rules, clarification and justification, bargaining and problem solving, closure and implementation.

Unit II Conflict Management skills

Types of conflict (intrapersonal, Intra group and inter group conflicts), Basic concepts, cues, signals, symbols and secrets of body language, Significance of body language in communication and assertiveness training, Conflict stimulation and conflict resolution techniques for effective management.

Unit III Empowerment Skills

Stimulating innovation and change - Coping with —temporariness, Network culture, Power tactics and power in groups (coalitions), Managerial empowerment and entrepreneurship, Prevention of moral dwarfism especially terrorism, Altruism (pro-social behaviour/helping behaviour), Spirituality - Strong sense of purpose - Trust and respect- Humanistic practices - Toleration of fellow human beings expressions.

3. Hurlock, E.B. (2006). *Personality Development* (28th Reprint). New Delhi: Tata McGraw Hill.

COURSE OBJECTIVES:**To make the students**

- To Apply appropriate communication skills across settings, purposes, and audiences.
- To Demonstrate knowledge of communication theory and application.
- To Practice critical thinking to develop innovative and well-founded perspectives related to the students' emphases.
- To Build and maintain healthy and effective relationships.
- To Use technology to communicate effectively in various settings and contexts.
- To Demonstrate appropriate and professional ethical behavior.

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate critical and innovative thinking.
2. Display competence in oral, written, and visual communication.
3. Apply communication theories.
4. Show an understanding of opportunities in the field of communication.
5. Use current technology related to the communication field.
6. Respond effectively to cultural communication differences.
7. Communicate ethically.
8. Demonstrate positive group communication exchanges.

Unit I

Communication - Meaning and significance for management- Types of communication- Media – Barriers to communication - Norms for Business letters - Letter for different kinds of situations. Personalized standard letter, enquiries, customer's complaints, collection letters – Sales promotional letters.

Unit II

Report writing - Formal and informal reports - Writing research reports and technical reports- Principles of effective communication - Structuring the resume / report – Report writing / E-mail communication- Norms for e-mail.

Unit III

Communication - Face to face communication – Telephonic conversation - Spoken English – Principles of pronunciation – Fluency and correctness - Confidence and skills in using English – Asking questions – Listening skills.

Suggested Readings:

COURSE OBJECTIVES:**To make the students**

- To impart them with computer knowledge as well as to work on computers in order to complete the task in time, systematically and in a short period of time.
- To give students an in-depth understanding of why computers are essential components in business, education and society.
- To provide hands-on use of Microsoft Office applications Word, Excel, Access and PowerPoint. Completion of the assignments will result in MS Office applications knowledge and skills.
- To Provide foundational or “computer literacy” curriculum that prepares students for life-long learning of computer concepts and skills.
- To facilitate the understanding of accounting package and its application.
- To provide hands-on usage of MS-office to creating new word documents including features like tables, charts and references.

COURSE OUTCOMES:**Learners should be able to**

1. Describe the usage of computers and why computers are essential components in business and society.
2. Utilize the Internet Web resources and evaluate on-line e-business system.
3. Solve common business problems using appropriate Information Technology applications and systems.
4. Identify categories of programs, system software and applications. Organize and work with files and folders.

5. Describe various types of networks network standards and communication software.
6. Stimulate their Critical thinking by designing and developing clean and lucid writing skills.

Unit I

Components of Computer – Introduction to MS Office - Word – Creating a new documents with templates and wizards- Using Key Board Short cuts – Symbols and Pictures – Text Management.

Unit II

Introduction to Excel – Working with work sheets – Calculation using formulas work sheet formatting – Types of Charts – Formatting and printing – Chart elements.

Unit III

Introduction to Power Point – Creating New Presentations - Presentation using Graphics – Slide Transition and Adding Sounds Using action Buttons.

Unit IV

Internet and World Wide Web: Introduction to Internet – Internet access – Internet Addressing – Introduction and use of E-mail working of E-mail – E-mail names and address- Working in Blogs.

Unit V

Accounting Package Tally: Introduction to tally – Create a company – Creating groups and ledger accounts – Account Voucher creation – Statement of accounts – Inventory reports display.
Suggested Readings:

Text book:

1. Rajaraman, V. (2009). *Fundamentals of Computer* (4th edition). New Delhi: Prentice Hall of India Pvt Ltd.

Reference:

1. Sinha,P.K. (2008). *Fundamentals of Computer* (6th edition). New Delhi: BPB publication.

COURSE OBJECTIVES:**To make the students**

- To understand the Operations management and operation strategy concepts and its application in business.
- To recognize the importance factory location, plant location, Plant layout and facility layout.
- To formulate the production planning and control systems and ensure efficient scheduling for production.
- To understand the quality management practice and TQM tools and its application in improving the organizational performance.
- To understand the concept of Materials Management – functions – material planning and budgeting and Material Requirement planning
- To understand and apply the forecasting techniques in estimating the requirement of resources.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the core features of the operations and production management function
2. Evaluate and decide the best plant and factory location and layout.
3. Obtain the knowledge of applying a quality management tools to improve organizational effectiveness.
4. Overall idea of having this course is to make aware of various business combinations, location, layout, total quality management.
5. This course will provide critical understanding of operations management concepts that yield a competitive advantage through operational excellence.
6. Creating and delivering products & services to customers and improving process & supply chain performance.

Unit I

Operations Management – Meaning – Importance – Historical contributions – Functions of OM

– Differences between Production and Operations Management – Recent trends in Production and Operations - Types of Production Systems, Common manufacturing process - Product Design and Process selection.

Unit II

Facility Location – Facility Layout planning and Designing, Routing. Types of layout – Product Layout, Process Layout. Cellular, Lean and Agile manufacturing systems – Computer Integrated Manufacturing Systems - Assembly line balancing.

Unit III

Capacity Planning and Control — Functions - Determinants of Effective Capacity planning – Forecasting Demand for Capacity Planning, Capacity Control– Aggregate planning – Master Production Schedule (MPS) – Material Requirement Planning (MRP) – Period order quantity - Bill Of Material (BOM) – Capacity Requirement Planning (CRP) –An Introduction to MRP II and Enterprise Resource Planning (ERP).

Unit IV

Materials Management – Functions – Material planning and budgeting – Value Analysis - purchase functions and procedure - Inventory control – Types of inventory – Safety stock – Order point –Inventory control systems – Perpetual – Periodic – JIT – KANBAN.

Unit V

Total Quality Management Concept - Statistical Quality Control for Acceptance Sampling and Process Control – Quality movement – Quality circles — ISO Quality Certifications and types – Quality assurance – Six Sigma concept.

Note: Problems 20 Marks and Theory 80 Marks

COURSE OBJECTIVES:**To make the students**

- To understand the marketing concepts and conduct market analysis through environment scanning
- To recognize and apply market segmentation branding and New Product development concepts in real situations.
- To identify the importance of selecting the marketing channel and the pricing strategies and its applications.
- To recognize the role of advertising, sales promotion, public relations, and market research in the success of marketing a product.
- To understand the ethical issues related to marketing and the latest development in marketing.
- To analysis Customer relationship marketing, Customer database, identifying and analyzing competitors.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the core concepts of marketing and the role of marketing in business and society.
2. Perform market analysis by identifying the best marketing mix.
3. Understand the latest trends in marketing and apply the ethical norms in marketing domain.
4. Effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to the team members. to understand the techniques involved in promoting and branding products
5. To understand the evolution and principles of Marketing Management .To understand the competitive strategy for leader, follower & niche's.
6. Analyze the importance of consumer buying motives & consumer behavior, Designing competitive strategies for Leaders

Unit I

Marketing - Definition – Market - Conceptual framework - Marketing Environment: Internal and External – Marketing Functions – E-Marketing, Green Marketing.

Unit II

Buyer behavior - Factors influencing buyer behavior - Process, Market segmentation – Levels - bases, targeting – Patterns, positioning and differentiation, Tools of product differentiation.

Unit III

Marketing mix - Product mix – Levels of product - New product development - Product line – brand - Product life cycle, Packing, Price mix - Methods and strategies.

Unit IV

Place Mix - Channel System – Flows - Channel Design - Promotion Mix – Personal selling - Advertising – Types – Media, Sales promotion – Tools, Public Relations - Tools - Direct Marketing.

Unit V

Customer relationship marketing - Customer database, identifying and analyzing competitors - Designing competitive strategies for Leaders, Challengers, Followers and Niche's - Attracting and retaining customers.

4. Chandrasekar, K.S. (2010). *Marketing Management*. Tata McGraw Hill,

COURSE OBJECTIVES:**To make the students**

- To acquire knowledge in human resource management, HR audit, and HR analytics.
- To gain knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
- To understand the concepts and practical implications of performance management, Training methods and career planning.
- To know about compensation and reward management and its practice in industry.
- To be familiar with Employee relations and its application for the development of Human resources.
- To understand the methods to improve quality of work life.

COURSE OUTCOMES:**Learners should be able to**

1. Assess the job analysis for a profile and understand its linkage with HR planning
2. Evaluate the training needs and draft a training programme.
3. Understand the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Understand and apply the appropriate employee relations measures and Recruitment process, Learning organization Auditing HR functions
5. Understand the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. Make any manager to identify various activities related to Human Resources, Job involved in HR, Training, Compensation and Labour welfare practices

Unit I

Human resource management - Importance, Objectives and Functions of HRM; HR Planning – factors affecting HR Planning – Human Resource Information System (HRIS) - Changing

environments of HRM - Using HRM to attain competitive advantage - Qualities and role of HR managers - Trends in HRM.

Unit II

Job analysis and Design – Process of Job Analysis - Job description, Job specification, Job rotation, Job enrichment- Job enlargement – Job enhancement - Recruitment and selection: Sources of recruitment, Recruitment process – Process of selection - Induction and Placement.

Unit III

Orientation – Socialization – Process of socialization – Strategies. Training – Training process - Performance appraisal- Process – Traditional and Modern Methods - 360⁰ - 720⁰ feedback – Ethics of performance appraisal.

Unit IV

Job evaluation – Process – Wages and Salary administration- Concepts of different wages – Basic wage plan – Executive compensation, Components, Wage differentials – Monetary and Non-monetary incentives - Competency mapping – Importance and methods.

Unit V

Quality of Work life – Concepts – Methods to improve quality of work life – Benefits – Challenges. Knowledge management – Learning organization Auditing HR functions - Future of HRM function, International HRM – Global differences and similarities in HR Practices – Cross culture HR activities - Application of IT in various HRM functions.

COURSE OBJECTIVES:**To make the students**

- To understand the financial management concept and its importance and its applications in business, their relationship with the business environment and the role and functions of chief financial officer.
- To know the concept of time value of money and the rationale for using the time value of money concept in capital budgeting techniques for evaluations of business proposals.
- To recognize the availability of different source of capital and computation of cost of capital.
- To recognize the importance of financial leverage, dividend policies and capital structure theories and its application in business.
- To comprehend on the importance capital structure, the factors which influence the dividend policy
- To understand the factors affecting working capital requirements

COURSE OUTCOMES:**Learners should be able to**

1. Understand the role of a financial manager, and their role in taking decisions professionally.
2. Demonstrate knowledge and compute value of money over time and apply the concept to Evaluate the business proposal applying capital budgeting techniques
3. Compute the cost of capital and financial leverage to estimate the optimal capital structure.
4. Comprehend the knowledge of assessing the working of organization to assess the liquidity position of the firm.
5. Discover the knowledge on capital structure, and the determination of dividend policy
6. Develop analytical skills which facilitate the financial decision making in business situations

Unit I

Financial Management, Objectives, Functions, Role of Financial Management, Risk - Return Relationship, Sources of Long Term Finance, Capital Market in India.

Unit II

Time Value of Money, Capital Budgeting- Methods of Appraisal- Pay Back Method, Rate of Return, Net Present Value, Internal Rate of Return, Profitability Index.

Unit III

Cost of Capital, Determining component cost of capital, Specific cost of Capital, Overall Cost of Capital, Cost of Equity Capital, Cost of Preference Capital, Cost of Debt, Cost of Retained earnings and Weighted Average Cost of Capital.

Unit IV

Working Capital Management, Current asset and liability decision, Factors affecting working capital requirements, components of working capital, forecasting working capital requirements.

Unit V

Capital Structure, Optimum Capital Structure, EBIT - EPS Analysis - Leverage - Dividend Policy, Factors determining Dividend Policy.

Note: Mark distribution - Problems 40 marks and Theory 60 marks.

COURSE OBJECTIVES:**To make the students**

- To understand the various services offered and various risks faced by banks To make them aware of various banking innovations after nationalization
- To give them an overview about insurance market
- To gain a comprehensive knowledge on the procedural formalities in dealing with different types of customers.
- To develop a perfect understanding of the procedure and precautions to be adopted by bankers in dealing with different types of securities.
- To understand competent in creating different types of charges and documentation in respect of different types of borrowers against various types of securities.
- To apply the Concept of banking and insurance, its products in lifelong practice.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the commercial banking systems, structure, nationalization and banking sector reforms.
2. Develop better understanding on different types of deposits, their benefits as well as on advances
3. Know the procedural formalities in dealing with different types of customers viz., sole traders, partnership firms, joint stock companies etc.,
4. Develop a perfect theoretical knowledge on modes of creation of charges and documentation.
5. Develop an understanding of basic concepts of banking and insurance and career opportunities available after this course
6. Demonstrate a critical understanding of insurance market and develop strategies to strengthen the insurance dealings

Unit I

Indian Financial System: Introduction- Role of financial institutions and markets- Functions of financial markets- Instruments of financial markets- Recent developments in Indian Financial System. Indian Banking System: Evaluation of Banking Institutions - Different Banking Institutions in India- Role and functions- Regulatory framework of Banking in India; Functions of Commercial Banks.

Unit II

Loans and Advances: Principles of sound bank lending- Different types of loans- Credit appraisal techniques; Credit management and credit monitoring – Recent trends in credit management - Liquidity Management - Asset liability management- Securitizations- Incentives and benefits of Asset securitization; Bank Assurance: Banc assurance Models - Benefits for banks and insurance companies; Mutual funds, their types, Electronic Banking.

Unit III

Introduction of Insurance: Nature of insurance - Purpose and need of insurance – Classification of insurance - How insurance works- Insurance and economic development - Career opportunity in Insurance Sector. Risk Management: What are Risk- Perils and Hazards-Types of risk-Sources of risk - Method of handling risk.

Unit IV

Insurance Market – Different types of life insurance plans - Operations of insurance companies - Specialist insurance companies – Provisions of IRDA Act 1999 - Role of regulators – New trends in Insurance Market.

Unit V

Principles of General Insurance: Utmost good faith – Features - Breaches of utmost good faith - Insurable interest - Meaning – Features - How insurable interest is created - When insurance interest should exist - Indemnity - How indemnity is provided - Measure of indemnity.

COURSE OBJECTIVES:**To make the students**

- To understand the basic framework of research and research process and its important in business decision.
- To develop an understanding of various research designs and sampling techniques and its application.
- To identify appropriate sources of information and methods of data collection for solving a business issue.
- To understand the selection of appropriate tools to analyse the quantitative and qualitative data.
- To understand the ethical norms for research and select the best type of research report and be familiar with the content to be included in the report.
- To understand about Attitude Measurement and Scaling.

COURSE OUTCOMES:**Learners should be able to**

1. Assess the best suitable research type and formulate the research objective for the business problem.
2. Formulate the suitable research designs and select appropriate sampling techniques for the research.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.
6. Understand Norms for Using Tables, Charts and Diagrams.

Unit I

Research Methodology: Meaning – Objectives - Scope and Significance- Types of research- Characteristics of good research - Criteria for good research - Objectivity in research – Research strategies - Research process – Research in management decisions - Problems encountered by Researchers in India.

Unit II

Research Design: Meaning- Classification- Features – Importance - Steps in research design - Selection of research problem - Sample design - Meaning- Concepts - Steps in sampling - Criteria for good sample design – Types of sampling – Probability and Non probability sampling techniques – Sample size - Determination of sample size.

Unit III

Data collection : Types of data - Methods of data collection – Collection of primary data – Sources of secondary data - Constructing questionnaire - Pilot study - Case study - Data processing: Coding - Editing - and tabulation of data - Measurement - Meaning – Need- Errors in measurement - Scaling techniques - Meaning - Types of scales - Scale construction techniques.

Unit IV

Data Analysis: Hypothesis – Meaning – Types – Procedure of testing hypothesis - Test of Significance - Assumptions about parametric and non-parametric tests. Parametric tests - Non-Parametric Tests: One sample run Test - Sign Test, Run test for randomness - Chi-Square Test, ANOVA, - Multivariate analysis – Factor analysis – Cluster analysis – Discriminant analysis, and Multiple regression analysis.

Unit V

Interpretation- Meaning – Techniques - Report Writing- Significance, Steps in report writing- Layout of report - Mechanics of report writing- Precautions for Writing Report - Types of Reports - Oral Presentation- Executive Summary – Writing an abstract - Norms for Using Tables, Charts and Diagrams. Appendix: Norms for using index and bibliography- Conventions relating to preparation of research reports.

Note: Problems 20 Marks (Unit – IV) and Theory 80 Marks

COURSE OBJECTIVES:**To make the students**

- To develop knowledge and skills necessary to manage various components of a practice that includes organization, administration, communication, and managerial aspects.
- To bring improvements in Interpersonal Skills and Practice-Based Learning
- To Identify the key competencies needed to be an effective manager.
- To Provide the students with the capability to apply theoretical knowledge in simulated and real-life settings.
- To Develop the students' ability to work in teams.
- To familiarize the students about the Quality Management System.

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate critical thinking when presented with managerial problems and express their views and opinions on managerial issues in an articulate way.
2. Understand the major internal features of a business system and the environment in which it operates.
3. Identify and explain the importance of the management process and identify some of the key skills required for the contemporary management practice.
4. Conduct topic and case analysis to apply theoretical concepts.
5. Prepare and present structured presentations and reports.
6. Evaluate, classify, imagine and plan the successful management practices.

Unit I

Time management – Identifying time wasters – Procrastination – Delegation – Time management tools – Time structuring - Day to day time management techniques

Unit II

Leadership Techniques – Conflict resolution – Assertiveness – Team building – Team spirit – Interpersonal skills – Intrapersonal skills - Group interactive skills – Getting organized.

Unit III

Self confidence, positive attitude, identifying negative thoughts, communication, team player, critical thinking and problem solving, coping with pressure, flexibility, ability to accept constructive feedback, strong work ethic.

3. Hurlock, E.B. (2006) *.Personality Development*. New Delhi: Tata McGraw Hill.

COURSE OBJECTIVES:**To make the students**

- To familiar with Verbal communication and Non - Verbal communication.
- To understand presentation skills and its importance.
- To to be familiar with body language and facial expressions.
- To comprehend on the requirement of the industry like attitude, language, behaviour, body language, learning style etc.
- To train the student on corporate etiquettes, professional skills, English language.
- To equip the students to draft resume, face the Group discussion and interview.

COURSE OUTCOMES:**Learners should be able to**

1. Organize and participate in public meetings
2. Develop powerful and effective presentations
3. Gain confidence in giving and receiving feedbacks
4. Students attain competence in functional use of communication during both academic and non-academic life situations.
5. To draft effective business correspondence with brevity and clarity.
6. To stimulate their Critical thinking by designing and developing clean and lucid writing skills.

Unit I

Non-verbal communication - Personal appearance - Posture - Body language - Visual and audio visual aids for communication - Conducting Meetings: Procedure – Preparing Agenda, drafting minutes and resolution, letter writing.

Unit II

Presentation Skills – Elements of an effective presentation – Structure of a presentation- presentation tools – Voice Modulation – Audience analysis - Developing and delivering powerful presentations.

Unit III

Effective and ineffective communication - Free speech – Giving and receiving feedbacks – Identifying communication styles – Accelerated learning – Memory techniques – Speed reading – Mind mapping – Relaxation techniques.

COURSE OBJECTIVES:**To make the students**

- To understand the importance of SPSS to analyze the given data.
- To learn the data editing and derive required graphs.
- To understand and apply the statistical tools for testing the hypothesis.
- To know the univariate tools and its application
- To comprehend the application of Bivariate analysis
- To understand and compute the multivariate analysis using the package.

COURSE OUTCOMES:**Learners should be able to**

1. Create datasheet and enter the data
2. Facilitate the individual, Organization and government with tools to analyze the information and find solutions
3. Effectively use the available statistical packages
4. Test the hypothesis and interpret the results.
5. Get acquainted with advanced statistical tools and bring out appropriate solutions to business problems
6. Develop data analytics skills and meaningful interpretation to the data sets so as to solve the business/Research problem.

Unit I

SPSS – Meaning – Scope- Limitation- Data view- Variable view- Data entry procedures.

Unit II

Data editing- Missing- Frequencies Distribution – Diagram –Graphs.

Unit III

Descriptive statistics – Mean, Median, Mode, Skewness – Kurtosis – Standard Deviation.

Unit IV

T- Test for Independent sample and X test – ANOVA.

Unit V

Correlation – Rank correlation – Regression – charts.

Suggested Readings:**Text Book:**

1. George, D. (2011). *SPSS for Windows step by step*. (4th Edition). Allyn and Bacon Publishers.
2. Robert, H. Carver and Nash, Jane Gradwohl. (2010). *Data Analysis with SPSS Version 16. India Edition (IE)*. New Delhi: Cengage Learning.

COURSE OBJECTIVES:**To make the students**

- To expose Strategic Business Management.
- To understand the various components of corporate strategy.
- To analyze the business environment.
- To understand the strategic planning and implementation and developing the organization.
- To help students develop skills for applying these concepts to the solution of business problems
- To Understand the role of marketing strategic business in service sector

COURSE OUTCOMES:

Learners should be able to

1. Set the mission and vision in personal and organizational level
2. Analysis on environment scanning and SWOT
3. Knowledge on strategy development for different levels of business organizations
4. Make strategic implementation and their application using appropriate concepts, logic and theoretical conventions.
5. Communicate effectively strategic evaluation and control techniques
6. Understand the concept of Quantitative and Qualitative tools in Strategy Evaluation and Control.

Unit I

Strategic Management – Evolution, Elements in Strategic Management – Understanding Strategy - Levels of strategy – Strategic decision making – Strategic management process – Mission – Vision – Goals and Objectives – Strategic planning process - Identifying critical success factors - Strategic management Practice in India. Competitive advantage of Nations and its implication on Indian Business.

Unit II

Environment Analysis and Internal Analysis of Firm: Concept of Environment – Environmental sectors - General environment scanning – Industry analysis – Porter's approach. Porter's

competitive strategies - Dynamics of internal environment - Assessing internal environment through functional approach and value chain – SWOT analysis – Core competence.

Unit III

Strategy Formulation: Generic Strategies – Grand Strategies – Strategies of leading Indian companies – Role of diversification – Limits – Means and forms. Strategic management for small organizations, Non-profit organizations and large multi product and multiple market organizations.

Unit IV

Strategy Implementation: Competitive cost dynamics – Experience curve – BCG approach – Cash flow implication – IA-BS Matrix – A.D. Little Life cycle approach to strategic planning – Business portfolio balancing – Assessment of economic contribution of strategy – Strategic fund programming.

Unit V

Strategy Evaluation and Control: Various approach to implementation of strategy – Matching organization structure with strategy – 7S model – Strategic control process – Requirement of effective evaluation - Techniques of strategic evaluation and control - Du Pont's control model - Quantitative and Qualitative tools – Balanced score Card – M Porter's approach for Globalization – Future of Strategic Management.

BUSINESS ETHICS, CORPORATE GOVERNANCE & SOCIAL RESPONSIBILITY

COURSE OBJECTIVES:

To make the students

- To develop knowledge and understanding about the theoretical perspectives and frameworks of corporate governance, ethical, environmental and social dimensions.
- To focus on various natural and manmade hazards and its preparedness measures to come out of such calamities.
- To make students understand social responsibility of business and its impact.
- To gain an enhanced understanding of following ethical rules and ethical constraints
- To improve analytical problem solving and ethical decision-making skills.
- To analyze and resolve ethical dilemma

COURSE OUTCOMES:

Learners should be able to

1. Inculcate the ethical practices in personal and organizational life
2. Protect the long term interest of the shareholders and create policies that adopts bylaws.
3. Reduce damages, deaths, personal suffering and to reduce mortality and morbidity
4. Maintain sense of social responsibility
5. Understand ethical issues related to business and good governance necessary for long term survival of business.
6. Explain Emerging Areas and Trends in Corporate Social Responsibility

Unit I

Business Ethics - Nature, Characteristics and Needs, Ethical Practices in Management - Indian Values and Ethics - Respect for Elders, Hierarchy and Status, Need for Security, Non - Violence, Cooperation, Simple Living high Thinking, Rights and Duties, Ethics in Worklife, Attitudes and Beliefs.

Unit II

Introduction – Meaning and overview of corporate governance, corporate board - Attributes, duties, responsibilities, liabilities, shareholders – Rights, responsibilities of share holders, minority share holders protection. Ethical aspects of corporate governance.

Unit III

Corporate Governance concepts and theories - Stewardship theory, Agency theory, Stakeholder theory. Corporate Governance and performance, issues in corporate governance. Role of the regulatory framework - Legislation - Financial reporting.

Unit IV

Corporate Social Responsibility-Meaning - Definition and Scope - Operationalizing Corporate Social Responsibility for sustainable development - Responsibility of various stakeholders, perspectives and initiatives, Environment and Ecology, Health and well being of society.

Unit V

Emerging Areas and Trends in Corporate Social Responsibility - Business, Social, Environmental and Regulatory - Globalization and Corporate Governance - Case Study in CSR and Corporate Governance

COURSE OBJECTIVES:**To make the students**

- To learn the basic concepts of International Financial Management, its application in financial decision making.
- To publicize the students with the intricacies of international business in terms of investment with monetary systems.
- To understand the exchange determination of currencies.
- To provide basic knowledge on international financial institutions and foreign trade.
- To understand different approaches to management of organizational culture and for its success.
- To understand the factors affecting working capital requirements in international finance.

COURSE OUTCOMES:

Learners should be able to

1. Understand the global concepts used in financial management
2. Develop knowledge in financial areas create opportunities in banking sector
3. Understand the procedures in international investment
4. Develop knowledge on international financial institutions
5. Acquire knowledge on foreign trade.
6. Understand Financing of foreign trade and Documentation

Unit I

International Trade – Meaning and Benefits – Basis of International Trade – Foreign Trade and Economic Growth – Balance of Trade – Balance of payment – Current Trends in India – Barriers to International Trade, GATT - World Trade Organization, Trends in international trade, International trade finance.

Unit II

Foreign Exchange Markets - Market Participants – Types of Transactions - Spot Prices and Forward Prices – Factors influencing Exchange rates – Determination of Foreign Exchange rate and Forecasting – Foreign Exchange Exposure - Measurement and Management.

Unit III

International investment decisions – Political risk - Foreign Direct Investment – Foreign Institutional Investors – International capital budgeting – International portfolio investment.

Unit IV

International financial decisions – Multilateral Development Banks – World Bank – International Finance Corporation – International banking – International financial market instruments.

Unit V

Financing of foreign trade – Documentation - Mode of payment – Methods of trade financing, EXIM Bank - EXIM policy - ECGC and its schemes, International Taxation and International Working Capital Management.

Suggested Readings: Text**Book:**

COURSE OBJECTIVES:**To make the students**

- To understand the concept of costing and cost reduction methods.
- To gain basic knowledge on total cost management and to manage total cost and production costing.
- To know the process of various costing methods and management and learn about strategic control systems.
- To develop an understanding of strategic cost management concepts, frameworks, and applications.
- To begin developing the skills necessary to interpret complex financial and operational data that can drive recommendations to internal & external stakeholders
- To understand the evaluation of the Performance of Different Responsibility Centers

COURSE OUTCOMES:

Learners should be able to

1. Follow cost reduction techniques in personal and organizational system
2. understand the concepts of costing related to business decisions
3. Develop skills on cost management techniques
4. Knowledge on costing helps to evaluate cost control systems
5. Analyse productive results on cost management and reduction
6. Gain knowledge in Market Based and Cost Based Transfer Prices and Multinational Transfer Pricing.

Unit I

Costing - Purpose - Utility, Objectives - Elements of Cost - Cost Sheet – Methods of Costing – Problems - Cost Reduction and Productivity: Cost Reduction Value Analysis – Productivity - Value added concepts - Learning curves - Quality Circles.

Unit II

Total Cost Management - Managing Process Cost - Managing Production Costs - Managing Delivery Costs - Managing Structural Cost. Target Costing - Cost as a source of competitive advantage - Life Cycle Costing.

Unit III

Activity Based Costing - Drawbacks of Conventional Costing - Methodology of ABC - Merits, demerits suitability of ABC - Implementation of ABC. Management Control Systems - Evaluating Management Control Systems - Responsibility Centers - Evaluation of the Performance of Different Responsibility Centers.

Unit IV

Linear Programming and Regression Analysis - Implications of Linear Programming for Cost Accountants - Guidelines for Regression Analysis - Applications of Regression Analysis in Cost Functions.

Unit V

Strategic Control Systems - Decentralization and Transfer Pricing - Choices about Responsibility Centers - Market Based and Cost Based Transfer Prices - Multinational Transfer Pricing.

Note: Problems 20 Marks and Theory 80 Marks

Suggested Readings:

COURSE OBJECTIVES:**To make the students**

- To provide an overview of merchant banking and to know about mutual funds and mortgage.
- To understand the concept of factoring and manage hire purchase and investments.
- To gain knowledge about financial services in India as Indian Financial System, Financial Markets, Banking and Insurance Sector in India and Recent Trends in Accounting and Finance
- To acquainted with current financial practices
- To acquainted with Financial Markets
- To understand the procedural aspects of primary issue in merchant banking.

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate how the concepts of financial market and investment, merchant banking could integrate while identification and resolution of problems
2. Gain knowledge on mutual funds regulates the investments
3. Demonstrate the applicability of the concept of Financial Services to understand the managerial Decisions
4. Demonstrate techniques of leasing provides new avenues in business
5. Gain familiarity in hire purchase
6. Gain knowledge in Tax implication frame work for Financial Evaluation and Credit Rating

Unit I

Nature and scope of Merchant Banking – Regulation of Merchant Banking – Overview of Current Indian Merchant Banking Scenario – Problems faced by financial services sector in India

- Procedural aspects of primary issue – Pre-issue Decision Making – Post Issue Management.

Unit II

Mutual Funds – Operation – Performance of mutual funds in India – SEBI guidance for Mutual Funds Securitization – Concept, Securitization as a Funding Mechanism, Securitization of Residential Real Estate – Mortgages and Mortgage Investments.

Unit III

Factoring – Forms of Factoring Vs Bill Discounting – Factoring Vs Credit Financing – Factoring Vs Forfeiting – Forfeiting in Indian Scenario - Evaluation of a Factor – Legal aspects of Factoring – Factoring Services in India – Bill of Exchange – Definition – Features.

Unit IV

Leasing – History and Development – Concept and Classification – Types – Advantages – Disadvantages - Legislative Framework – Supplier, Lessor, Lessee Relationship – Sub Lease – Default and Remedies – Lease Evaluation in Lessee's and Lessor's point of view.

Unit V

Hire Purchase – Concept and Characteristics – Rate of Interest – Methods of reporting adopted for hire purchase transactions - Legal aspects – Tax implication frame work for Financial Evaluation – Credit Rating – Concept – Types – Advantages and Disadvantages – Process – Agencies.

3. Gordon, E. Natarajan. (2013). *Financial Markets & Services*. New Delhi: Himalaya Publications.

COURSE OBJECTIVES:**To make the students**

- To understand the concept of marketing strategy for service products requires a different sort of approach, which is different from the traditional goods marketing.
- To understand the uniqueness of the services characteristics and its marketing implications.
- To provide an in-depth appreciation and understanding of the unique challenges inherent in managing and delivering quality services.
- To promote a customer service-oriented mindset
- To identify critical issues in service design including the nature of service products and market
- To Understand the Services, marketing of services, marketing mix, pricing and segmentation for services marketing.

COURSE OUTCOMES:

Learners should be able to

1. Serve better in services marketing avenues
2. Analyze several facets in the area of services marketing essential for the success of a service sector firm.
3. Demonstrate an extended understanding of the similarities and differences in service-based and physical product based marketing activities
4. Demonstrate a knowledge of the extended marketing mix for services
5. Develop and justify marketing planning and control systems appropriate to service-based activities
6. Gain knowledge in Marketing of Financial services

Unit I

Services Marketing – Meaning – Characteristics of services – Service Environment – Dimensions – Service Blueprint - Relationship marketing – Service Recovery – Service Expectations – Service Encounters.

Unit II

Service Quality – SERVQUAL – Service Leadership – Service Strategy – Process – Service Triangle - Interactive Marketing. Marketing Mix decisions: Service Products – Branding services – New service development - Pricing - Promoting and distributing services.

Unit III

Segmentation - Bases of segmentation - Positioning and differentiation strategies - Quality of service industries – Customer support service.

Unit IV

Marketing of hospitality: Perspectives of Tourism, Hotel and Travel services – Airlines, Railway – Information Technology - Real estate services – Postal services - Courier services.

Unit V

Marketing of Financial services: Concepts of Banking, Insurance, Lease, Mutual Fund, Factoring, Portfolio and financial intermediary services. Marketing of Non-Profit Organizations: NGOs – Services Offered by Trust/Societies – Educational service – Power and Telecommunication - Hospital services.

COURSE OBJECTIVES:**To make the students**

- To give a broad understanding on Sales Management and its implications.
- To identify the role of sales force management in the organization.
- To create an awareness of various sales promotional tools used in the market.
- To learn the role of advertising and media management in business.
- To Examine the importance of market segmentation, position and action objectives to the development of an advertising and promotion program.
- To understand the basic Principles of selling and promotional management.

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate the concepts, attitudes, techniques and approaches required for effective decision making in the areas of Sales and Distribution.
2. Pay special emphasizes on the problems and dilemmas in sales force management.
3. Develop Knowledge on advertisement management helps to develop own business.
4. Develop the skills in selection of advertisement media to promote business.
5. Develop skills critical for generating, evaluating and selecting sales and distribution strategies.
6. Understand the concept of Trade promotional tools and sales person promotional tools

Unit I

Nature and process of personal selling - Sales Management – Importance – Role of Sales Manager – Qualities of sales professionals - Setting Sales Objectives – Sales Forecasting – Methods of Sales Forecasting - Sales Quotas and Territory – Sales budgeting – Types of Budgets – Budgeting Procedure.

Unit II

Sales Force Management – Types of Sales Organizations - Sales Force Recruitment – Sources – Selection process - Training – Motivating Sales Force – Sales incentives, contests and compensation – Evaluating Sales Performance.

Unit III

Advertising Management – Meaning – Objectives – Importance – Classification of Advertisement – Economic and Social Effects of Advertisement – Organization of advertising Department – Campaign Planning and Advertising Budget. Advertising agency – Functions of advertising agency.

Unit IV

Advertising media management – Types – Print, TV, Outdoor, Electronic media and Other forms – Advantages, Limitations, Media Rates, Media Planning and Scheduling. Advertising Copywriting for Print and Broadcast Media

Unit V

Direct Marketing – Sales Promotion - Objectives, Consumer promotional Tools – Trade promotional tools and sales person promotional tools. Public Relations – Objectives – Tools.

Suggested Readings:**Text Book:**

COURSE OBJECTIVES:**To make the students**

- To provide an insight into the marketing research area emphasizing the consumer's needs and solutions to it in a scientific approach.
- To understand consumer behaviour in an informed and systematic way.
- To analyse personal, socio-cultural, and environmental dimensions that influence consumer decisions making.
- To enable students in designing and evaluating the marketing strategies based on fundamentals of consumer buying behaviour.
- To give the students a perspective to understand the application of market research in framing effective marketing strategies.
- To know the application consumer behaviour concepts to access the changing behavior of the customers.

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate how knowledge of consumer behaviour can be applied to marketing.
2. Relate internal dynamics such as personality, perception, learning motivation and attitude to the choices consumers make.
3. Use appropriate research approaches including sampling, data collection and questionnaire design for specific marketing situations.
4. Understand about the various disciplines contribution in understanding buyer behaviour in a holistic manner familiar with the advances in consumer research
5. Acquire knowledge to analyze consumers behaviour and use them in designing marketing strategies
6. Understand about Industrial and Domestic consumer characteristics

Unit I

Marketing Research – Scope – Types and uses of marketing research - Marketing Research and decision making – Research Design – The Marketing Research process – Exploratory,

descriptive and conclusive Research. Primary and Secondary methods of data collection – Construction of questionnaire.

Unit II

Research Categories- Applications of Marketing Research – Product Research – Advertising Research – Market and Sales Analysis Research – Export Marketing Research - Motivation Research - Application of marketing research.

Unit III

Consumer Behaviour - Need to study Consumer Behavior – Applications of consumer behavior - Models of Consumer Behaviour – Market segmentation and Consumer Behaviour - Factors influencing Consumer Behaviour – Social, Economic, Psychographic, Group influences.

Unit IV

Elements of Consumer Behaviour - Product Perception – Learning, Attitude, Personality - New Product Purchase, Repeat Purchase, Consumer Spatial Behaviour – Consumption Analysis – Product Usage Rates – Expenditure Pattern – Howard-Seth Model of Buyer Behaviour – Organizational Behaviour of buyer.

Unit V

Consumer Decision Processes – Buying Pattern - Problem recognition – Search and Evaluation – Purchasing Processes – Post-purchase behaviour – Consumerism - Impact of consumerism on Marketing Practices – Industrial and Domestic consumer characteristics.

COURSE OBJECTIVES:**To make the students**

- To understand the HR Management and system at various levels in general and in certain specific industries or organizations.
- To make aware of the concepts, techniques and practices of human resource development
- To analyse the issues and strategies required to select and develop manpower resources
- To develop relevant skills necessary for application in HR related issues
- To integrate the understanding of various HR concepts along with the domain concept in order to take correct business decisions
- To Understand the transformation in the role of HRD functions from being a support function to strategic function and apply lifelong.

COURSE OUTCOMES:

Learners should be able to

1. Develop the understanding of the concept of human resource management and to understand its relevance in organizations.
2. Develop necessary skill set for application of various HR issues.
3. Analyse the strategic issues and strategies required to select and develop manpower resources.
4. Integrate the knowledge of HR concepts to take correct business decisions.
5. Recognize the dynamic relationship between strategy, people, technology, and the processes that drive organizations.
6. Gain knowledge in Emerging Trends and Perspectives in HRD Cross Cultural Dimensions

Unit I

Introduction to HRD – Meaning – Scope – Importance – Need for HRD – HRD and HRM – Role of HRD professionals – Key Performance Areas – HRD mechanism- Designing effective HRD programs- Framework of HRD process – HRD for service sector.

Unit II

Individual Behavior: Personality - Perception - Role – Fatigue - Goal Conflict - Frustration – Interpersonal relationship – Group Behavior – Group Dynamics - Group Cohesiveness – Elements for understanding group behavior - Teams – Characteristics.

Unit III

Potential Appraisal – Criteria – Career Planning - Career Development - Succession Planning - Altruism –Determinants - Organization Co-operation – factors – Competition - Benefits - Conflicts - Types/Levels – Consequences – Prevention - Management of conflict.

Unit IV

Quality of work life (QWL) – Scope - Ways to increase QWL – Quality Circle – Process - Organization Effectiveness – Concept – Kaizen – Benchmarking - Just-in Time – Downsizing – Outsourcing - Organizational Change - Change Process - Resistance to Change - Requisites for Successful Change.

Unit V

HRD Cross Cultural Dimensions - HRD Climate – HRD - OD Interface – HRD - OD Approach to Industrial Relations — HRD Experiences in India – Emerging Trends and Perspectives - HRD Scenario in Indian Organization - Problems and prospects - Challenges and Issues in HRD.

COURSE OBJECTIVES:**To make the students**

- To make the students aware, monitor and build self - efficiency.
- To help the students to overcome the barriers of communication and personality development.
- To make the students to focus on counseling interventions.
- To understand the role of communication in personal & professional success.
- To develop awareness of appropriate communication strategies and prepare and present messages with a specific intent.
- To understand Importance and relevance to organizational life

COURSE OUTCOMES:

Learners should be able to

1. Improves self awareness and enhance self motivation
2. Improves communication and language increases confidence in personal and public life
3. Enhance individual assertiveness
4. Understand how counselling techniques helps to overcome problems and be efficient.
5. Demonstrate meeting skills as interpersonal skills
6. Understand the concept of Counseling and development of organizations through Counseling

Unit I

Self – Definition - Perception - Self-Schemes - Gaining Self-knowledge - Self-awareness - Self-Effectiveness - Self-Presentation - Motivation and Strategies - Self-monitoring - Impression management

Unit II

Communication and language – Models - Oral – Qualities and Profile of Good Speakers - Written – Clarity, Responsibility, Simplicity, Style – Barriers - Ways of overcoming – Paralanguage, Eye contact, Facial Expression, Kinesics, Body Language, Deception.

Unit III

Assertiveness – Nature - Importance and relevance to organizational life – Assertion and Aggression - Assertive writing - Preparing for Assertive Business Writing, Effective letter writing and business mail – Tools, Tips, Pitfalls - Persuasion - When to say Yes/No - Being Assertive with Oneself – cutting , Rewriting, editing - Enhance individual assertiveness.

Unit IV

Transaction Analysis - Ego states – Exclusion – Contamination – Strokes - Life position - Type of transactions - Time Structure – Withdrawal, Rituals, Pastimes, Activities, Games-types, Stamps, Racket and Sweat shirts, Scripts - Advantage and Disadvantage of TA.

Unit V

Counseling - Steps - Elements of counseling – Counseling as a helping strategy - Significant Predicating People's Problem - Journey in a Life Space – Anxiety – Causes of anxiety - Counseling to develop organizations - Check list for counselors - Training for counseling

Suggested Readings:

Text book:

1. Venkatapathy, R. and Jackson, P.T. Aditya. (2009). *Managing Interpersonal Effectiveness*. New Delhi: Himalaya Publishing House.

References:

1. Thomas Haris. (2007). *I'm Okay You're okay*. New Delhi: Himalaya Publishing House.
2. Fisher Uray. (2009). *Getting to say Yes*. New Delhi: Himalaya Publishing House.
3. Albert and Emmonds, M. (2009). *Complete guide to Assertive Living*. New Delhi: Jaico Publishing house.

COURSE OBJECTIVES:**To make the students**

- To aware of the need and ways of changes in organization as a whole.
- To create a critical appreciation and knowledge of understanding the determinants of organizational development.
- To provide an in-depth under-standing of the role of organizational interventions.
- To evaluate the OD intervention and judge their usefulness against other tools and technology
- To identify the key roles and responsibilities of an OD consultant needed to develop and sustain long term OD interventions
- To understand and Critically examine the philosophies, values, assumptions associated with organizational paradigms from a change management perspective and to be able to apply organizational development as a meta theory

COURSE OUTCOMES:

Learners should be able to

1. Helps to assess the benefits and values of organizational development
2. Understand group dynamics helps to relate people
3. Gain ability to implement tools of intervention for effectively bringing change.
4. Aware about the current trends in organizational development in companies.
5. Assess current functioning and to become overall changes
6. Gain knowledge in Key considerations and Issues in OD

Unit I

Introduction to Organizational Development: Concepts - Nature and Scope - Meaning and Definition – Characteristics of OD: Historical perspective of OD: Underlying Assumptions, Beliefs and Values in OD - Foundations of OD – Models and theories.

Unit II

Group Dynamics, Inter group Dynamics and Organization as System - Organizational Climate – The process of OD – Operational components of OD: Diagnostics, Action and process – Maintenance components.

Unit III

Introduction to OD Interventions: Classifications of OD interventions - Team Interventions: Inter-group and third party - Peacemaking Interventions: Personnel, Interpersonal and group process interventions - Comprehensive Interventions: Structural Interventions and applicability of OD.

Unit IV

OD strategies at work - Implementation and assessment of OD - Failure and success in O.D efforts - Assessment of OD and Change in Organizational performance: The impact of OD.

Unit V

Key considerations and Issues in OD: Issues in consultant - Client relationship: Power, politics and OD – Research on OD – Ethical issues in OD - The future prospects of OD - Indian experience in OD.

COURSE OBJECTIVES:**To make the students**

- To proficient in systems specializations.
- To have the insight of the systems concept through the analysis and design.
- To understand the systems implementation and scheduling.
- To provides practical knowledge on security aspects of system.
- To describe the concepts of systems analysis and information systems development
- To Understand the principles, methods and techniques of systems development

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate Knowledge of feasibility study helps to evaluate opportunities
2. Provide a solid foundation of systems principles and an understanding of how business function is carried on
3. Demonstrate knowledge on systems security and ethics helps to create awareness among people
4. Analysis and development techniques required as a team member of a medium-scale information systems development project
5. Understand the ways in which an analyst's interaction with system sponsors and users play a part in information systems development
6. Gain knowledge in Ethics in system development and Ethical codes

Unit I

Overview: Introduction - Business Systems concepts, System development life cycle – Life cycle models - Prototyping model, Incremental model, Spiral model, RAD model - Role of systems analyst.

Unit II

System Analysis: System planning and Initial Investigation – Phases of system analysis - Information gathering - Tools of structured analysis - Feasibility study - Cost benefit analysis.

Unit III

System Design: The process and stages of system design - Major development activities - Input and output forms design - File organization and database design - Sequential - Logical and Physical views of data – Normalization – Different forms of normalization.

Unit IV

System Implementation: System testing and quality assurance – COCOMO model of testing - The nature of test data - The test plan-Quality Assurance - Role of the data processing auditor - Implementation and software maintenance hardware/software selection.

Unit V

System Security: Introduction - Definition and Threats to system – Security - Control measures – Recent trends in system security. Disaster/recovery planning: The plan - Ethics in system development - Ethical codes and standards of behavior.

Suggested Readings:

Text book:

1. Awad, E. M. (2010). *System analysis and design* (2nd edition). New Delhi: Galgotia publication.

References:

2. Senn. (2009). *Analysis and Design of Information System*. New Delhi: McGraw Hill.
3. Alli Baharami. (2010). *Object Oriented Systems Development* (1st edition). New Delhi: McGraw Hill.
4. Kenneth, E. Kendall.(2013). *System Analysis and Design* (9th edition). New Delhi: Pearson publications.

COURSE OBJECTIVES:**To make the students**

- To explore the wealth of online learning environment and adopt methods for system online implementation.
- To make students acquainted with the recent trends and developments in technology which covers e-Commerce e-Security, e-Logistics and knowledge management aspects.
- To understand the emerging issues in the field of management
- To know the emerging trends in various functional areas of management
- To understand how the emerging issues and challenges will shape business management in future
- To know about Transportation and Distribution Management

COURSE OUTCOMES:

Learners should be able to

1. Develop creative thinking in e-business
2. Helps to develop network security in relevant areas
3. Efficiently create online community
4. Conduct and present a project on a technologies analysis that incorporates audio, video, and images.
5. Communicate effectively knowledge management techniques
6. Understand GIS Standards and Standardization process of GIS development

Unit I

E-Business- Importance and scope of E-Commerce - Models of E-Commerce - Limitations and Advantages of E-commerce – Banking -Transactions: Inter-Banking, Intra Banking, Electronic Payments, (Payment-Gateway Example) - Securities in E-Banking - SSL, Digital Signatures, Service Provided - ATM Smart card, Electronic Clearing System - Telephone, Electricity Bills - E-commerce opportunities and challenges for Indian Industrialists.

Unit II

E-Security- Firewalls - Electronic Market - E-shop - Introduction to Security - Types of Securities, Security Tools, Network Security. CRM: Sales, Marketing and Service Management, BPO/BCP – Needs – Guidelines - Merits and Demerits, Call Center - Functioning, Ethics.

Unit III

Content Management and Disseminations: E-learning - Models WBT, CBT, Virtual Campus, LMS and LCMS, Video conferencing, Chatting, Bulleting, Building Online community, Dashboard Models - Asynchronous and Synchronous Learning.

Unit IV

E-Logistics - Logistics and Supplier Chain Management, Warehousing management, Transportation/Distribution Management. E-Governance models - G2B, G2C, C2G, G2G- Challenges to E-Governance, Strategies and Tactics for implementation of E-Governance - Disaster Recovery Management.

Unit V

Knowledge Management-Components - Types – models - Knowledge Management Cycle – tools - approaches. GIS/GPS - Nature of geographic data, Spatial objects and data models, Getting map on computers, GIS Standards and Standardization process of GIS development, Implementation and deployment Phases.

Suggested Readings:

Text Book:

1. Gaynor, G . H. (2009). *Handbook of Technology Management*. New Delhi: Tata McGraw Hill.

References

1. Agarwal , A. (2008). *Governance: Case Studies*. Hyderabad: India Universities Press .

3. Amrit Tiwana. (2010). *The Essential Guide to Knowledge Management*. (2nd edition). New Delhi: Prentice Hall

COURSE OBJECTIVES:**To make the students**

- To understand the fundamental process models for software development.
- To know the role of software engineering and use of test cases.
- To understand the process of software design and components.
- To know about the software testing methods.
- To know about the concept of quality in software development.
- To Understand the concept of software development, software project planning, estimation, scheduling, monitoring, quality assurance and apply learning lifelong.

COURSE OUTCOMES:

Learners should be able to

1. Design models to manage the data resources of organizations.
2. Hands-on implementation of a data base in corporate environment
3. Gain knowledge in software design
4. Helps to bring new techniques in Software testing
5. Expertise in Software Configuration and Management
6. Gain knowledge in Software Quality Assurance Plan and Quality Standards

Unit I

Fundamentals - A Generic View of Process – Process Models – The Waterfall Model – Incremental Model – Evolutionary Model – Specialized Model – The Unified Process – Agile Process – Agile Models – Software Cost Estimation – Planning – Risk Analysis – Software Project Scheduling.

Unit II

Requirement Analysis -System Engineering Hierarchy – System Modeling – Requirements Engineering: Tasks – Initiating the Process – Eliciting Requirements – Developing Use Cases – Negotiating Requirements – Validating Requirements – Building the Analysis Models

Unit III

Software Design - Design Concepts – Design Models – Pattern Based Design – Architectural Design – Component Level Design – Component – Class Based and Conventional Components Design – User Interface – Analysis and Design.

Unit IV

Software Testing – Strategies: Conventional – Object Oriented – Validation Testing – Criteria – Alpha – Beta Testing – System Testing – Recovery – Security – Stress – Performance – Testing Tactics – Testing Fundamentals – Black Box Testing – While Box Testing – Basis Path – Control Structure.

Unit V

Software Configuration and Management – Features – SCM Process – Software Quality Concepts – Quality Assurance – Software Review – Technical Reviews – Formal Approach to Software Quality Assurance – Reliability – Quality Standards – Software Quality Assurance Plan.

Suggested Readings:**Text Book:**

3. Sommerville. (2011). *Software Engineering* (7th edition). Addison Wesley.

COURSE OBJECTIVES:**To make the students**

- To familiarize students with evolutionary process and conceptual framework of entrepreneurs.
- To make the students understand the ways and means of finance for entrepreneurs.
- To get familiar with various sources of funds available.
- To train the students in business ethics
- To provide an in-depth discussion of performance appraisal including employment generation.
- To understand Priority and Evaluation of International Competitiveness.

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate the importance of the time value of money as a tool in both business planning and personal financial planning.
2. Develop the skills required to be a financial analyst.
3. Plan capital budgeting to various business proposals
4. Demonstrate knowledge on the ways and means of raising funds to the business
5. Apprehend different level of project appraisal to run the business
6. Maintain ethical standards in individual and business life

Unit I

Capital Expenditures – Concepts - Phases of Capital Budgeting - Levels of Capital budgeting - Estimation of Project Cash flows - Time value of money. Payback Period - NPV - IRR - Cost of acquiring capital - Risk Analysis - Economic Risk - Industry Risk – Company risk – Financial risk.

Unit II

Sources of Finance - Long Term Sources - Equity Shares, Preference Shares and Debentures - Kinds of Private Placements – IPO – SEBI – FDI - Institutional Finance - Banks - Merchant Banks in India - NBFC's in India - MSMED Act - Small and Medium Business in India.

Unit III

Support from Banks and Financial Institutions - Bills Discounting - Factoring – **Factoring in Indian scenario** - Working Capital - Concepts - Importance – Cash Management.

Unit IV

Project Appraisal – Economic Analysis: Economies of Scale - Employment Generation - Social Cost Benefit Analysis - Contribution to Government Revenue - Political Stability - Priority and Evaluation of International Competitiveness. Project Monitoring – Post Sanction Supervision and Follow up –Warning Signals and Causes – Rehabilitation of a Sick Industrial Unit – Role of the Board for Industrial and Financial Reconstruction (BIFR).

Unit V

Business Ethics - Definition and Importance - Benefits of Business Ethics - Emerging Ethical issues in Business - Ethics as a Dimension of Social Responsibility.

COURSE OBJECTIVES:**To make the students**

- To understand the value of entrepreneurial promotions and economic development.
- To develop the entrepreneurial skill and promoting the qualities, traits, of entrepreneur and role of government towards entrepreneurship is taught in this course.
- To Know the parameters to assess opportunities and constraints for new business ideas
- To design strategies for successful implementation of ideas
- To Understand the systematic process to select and screen a business idea
- To know the importance of budgeting Project Profile Preparation

COURSE OUTCOMES:

Learners should be able to

1. Gain awareness of entrepreneurial skills
2. Knowledge to setup new ventures and make profitable business
3. Demonstrate Capital Budget planning and carry out feasibility study
4. Generate innovative ideas and find ways to apply these ideas to solve issues and problems in different industries and settings.
5. Analyze the role of government in business
6. Understand Reasons for low / no women Entrepreneurs and their Role

Unit I

Entrepreneur - Meaning- Importance - Qualities, Nature, Types, Traits, Culture, Similarities and Economic differences between Entrepreneur and Intrapreneur. Entrepreneurship development - Its importance- Role of Entrepreneurship – Agencies of Entrepreneur.

Unit II

Creating and starting the venture - Steps for Starting a Small Industry - Selection of types of organization - International entrepreneurship opportunities.

Unit III

Sources of Product for Business - Prefeasibility Study - Criteria for Selection of Product - Ownership - Capital - Budgeting Project Profile Preparation – Matching Entrepreneur with the Project - Feasibility Report Preparation and Evaluation Criteria.

Unit IV

Managing, Growing and Ending the New Venture - Preparing for the New Venture - Early management decisions - Managing early growth of the New Venture - New Venture Expansion Strategies and Issues - Going public - Ending the venture.

Unit V

Role of Central Government and State Government in promoting Entrepreneurship - Introduction to various incentives, subsidies and grants - Export Oriented Units - Fiscal and Tax Concessions available. Women Entrepreneurs - Reasons for low / no women Entrepreneurs their Role, Problems and Prospects

4. Hisrich, R. D, Peters, M .P. (2013). *Entrepreneurship Development*. New Delhi: Tata McGraw Hill.

COURSE OBJECTIVES:**To make the students**

- To explore all aspects of Project Management covering project identification formulation, planning, scheduling & control.
- To acquire concepts, tools & techniques of project management.
- To make them understand the concepts of Project Management for planning to execution of projects.
- To make them capable to analyze, apply and appreciate contemporary project management tools and methodologies in Indian context.
- To make them understand the feasibility analysis in Project Management and network analysis tools for cost and time estimation.
- To Understand the fundamentals of projects, project appraisal, risk management and project management and apply life long

COURSE OUTCOMES:

Learners should be able to

1. Formulate project ideas and projecting cash flows as well as evaluation of project proposals.
2. Analyze project feasibility
3. Know the difficulties in project implementation and provide solutions
4. Develop social and government projects
5. Analyze the learning and understand techniques for Project planning, scheduling and Execution Control.
6. Gain knowledge in Government projects, Social projects and Import substitution projects

Unit I

Project Management – Concept of a Project – Categories of Project - Project life cycle- Definition of Project Management – Identification of project opportunities - The project as a Conversion Process - Project Environment - Complexity of projects - Relationship between Project Management and Line Management - Current issues in project management - System approach to project management - Roles and responsibilities of project manager.

Unit II

Project feasibility study - Market Feasibility- Technical Feasibility - Financial Feasibility
Economic Feasibility - Critical Success factors - Demand Forecasting Techniques.

Unit III

Project Implementation - Stages - Bottlenecks in Project Implementation - Guidelines for effective implementation - Management techniques for project management - Project monitoring
- Essentials - Roles - Tools and Techniques - Management reporting - Report designing - Project evaluation - Project review.

Unit IV

Project Direction – Communication in Project – Project Coordination – Project Control – Scope / Progress in Control – Performance Control – Schedule Control – Cost Control.

Unit V

Government projects – Social projects – Import substitution projects – Incentives from State/ Central Government – Advanced management in projects – Strategic management in projects, logistic management - Future challenges for project management.

17MBAPB303A FUNDAMENTALS OF COMMERCIAL BANK MANAGEMENT 4004

COURSE OBJECTIVES:**To make the students**

- To understand the process of financial intermediation.
- To understand the basic concepts of advances, deposits and Negotiable Instruments Act.
- To Describe the functions of commercial and thrift banking institutions as well as other financial service providers such as investment banking firms, security brokers and dealers, insurance companies and other non-depository organizations.
- To know the procedure for Opening of bank accounts, Types of deposit account: Savings account, Current account
- To analyze financial institutions in terms of risk identification, risk measurement and control and the effect of risk on profitability and growth.
- To know the importance of latest recommendations of Basel Committee

COURSE OUTCOMES:

Learners should be able to

1. Understand the history and growth of banks, process of transactions, lending advances and services offered to the general public is made to learn in course.
2. Understand the various negotiable instruments, duties of paying and collecting banker,
3. Demonstrate knowledge of the liabilities of paying and collecting banks - bills of exchange and promissory notes.
4. Understand the principles of sound lending, methods of granting advances
5. Understand why a balance must be achieved among liquidity, risk assumption, and profitability.
6. Gain knowledge in e-banking, m-banking and Cheque Transaction System

Unit I

Introduction to Banking: Role of banks, Brief History of banking in India, Structure of banking sector in India, Rationale of Banking Sector reforms, Basel Committee recommendations, Banker Customer relationship, RBI Act (Salient Features), Latest recommendations of Basel Committee.

Unit II

Negotiable Instruments — Cheques - Meaning, Characteristics, Crossing, Endorsement, Duties of paying banker, Duties of collecting banker, Bouncing of cheques - Liabilities of paying and collecting banks - Bills of exchange – Promissory notes.

Unit III

Deposits - Opening of bank accounts, Types of deposit account: Savings account, Current account, fixed deposit, Recurring deposit, Certificate of deposit, KYC Norms - Monthly income plan.

Unit IV

Advances - Principles of Sound Lending, Methods of granting advances, Types of securities, Modes of creating charges, Bank guarantees, Interest rates: Base rate, Fixed vs. Floating rates, Registration of charges with ROC - RBI norms on bank charges.

Unit V

Other Services - ATM, EFT, e-banking, m-banking, Cheque Transaction System, Ancillary Services: DD, Safety deposit lockers, Credit cards, Debit cards, Smart cards, NEFT/RTGS, Call center.

Suggested Readings: Text Book:

1. Gurusamy, S. (2009). *Banking Theory Law and Practice*. Uttar Pradesh: Tata McGraw Hill.

References:

1. Benton E. Gup., and James W. Kolari. (2005). *Commercial Banking: The Management of Risks*. New Delhi: Wiley India.

3. Narasa Reddy, B.P., and Himachalam Dasaraju. (2011). *Dynamics of Commercial Banks in India*. Florida: Associated Publishers.
4. Timothy W. Koch., and Scott Macdonald, S. (2009). *Bank Management*. Bangalore: Thomson South-Western.

COURSE OBJECTIVES:**To make the students**

- To know the banker customer relationship and KYC norms.
- To understand the basics of low cost, no cost and high cost deposits.
- To study on importance of nomination and the rules governing non-resident accounts.
- To understand the Various types of term deposits
- To study the Nomination facilities, Deceased accounts, Inoperative accounts, Accounts of non-residents
- To understand about banking services

COURSE OUTCOMES:

Learners should be able to

1. Understand that one of the main functions of Bank Management is to generate as much money as possible to have a successful banking business.
2. Having it in mind one should be taught with deposit mobilization, its various modes and types of deposits.
3. The knowledge of Payment of interest and Service charges, Issue of cheque books, closing of accounts
4. Knowledge of opening accounts and building customer relationship demonstrate knowledge and skills to effectively manage research resources towards the desired ends.
5. Manage research resources in an efficient and accountable manner
6. Understand Nomination facilities and Accounts of non-residents

Unit I

Opening of deposit accounts - Relationship with customers, Opening of accounts: Individuals, Illiterate persons, Minors, Blind persons, Firms, Associations and Limited Companies, HUF

Unit II

Savings deposits - Introduction, Savings Bank account rules, Passbooks/Statement of accounts, Payment of cheques, Collection of cheques, Payment of interest and Service charges, Issue of cheque books, Closing of accounts.

Unit III

Current Deposits - Introduction, Current account rules, Procedure of return of unpaid cheques, Minimum balance, Service charges, Statement of current accounts, Closing of accounts.

Unit IV

Term deposits - Introduction, Various types of term deposits: Fixed deposit, Monthly income plan, Recurring deposit, Payment of deposit: On due date, Pre-payment, Renewal of deposits, Advances against banks own deposit - Base rate.

Unit - V

Other Aspects - Nomination facilities, Deceased accounts, Inoperative accounts, Accounts of non-residents: NRE, NRO and FCNR accounts - DICGCI (Deposit Insurance alone) – NRI.

3. Reserve Bank of India. (2000). *Non – Resident Accounts*, Mumbai: Foreign Exchange Dealers Association of India.
4. Reserve Bank of India, (1992). *Non – Residents Accounts*, Mumbai: Foreign Exchange Dealers Association of India.

COURSE OBJECTIVES:**To make the students**

- To understand the purpose of lending and the elements of income for banks.
- To understand the types of credit facilities and the procedure for granting various types of advances
- To analyze the different types of securities and the methods of creating charges.
- To know the Agricultural Lending, Direct and Indirect Finance, Micro and Small enterprises,
- To know the rationale of Priority Sector advances
- To understand the concept of Agricultural Lending

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate knowledge in the area of resource deployment, ways and means of advances and sources of lending.
2. Understand about Direct and Indirect Finance, Micro and Small enterprises, weaker sections
3. Enhance the Effect of quantum of advance, repayment period and Interest rates on EMI and its impact of fixed and floating rates
4. Understand the Retail Lending - Home loans and Calculation of EMI
5. Understand Rationale of Priority Sector advances
6. Analyse Effect of quantum of advance, repayment period and Interest rates on EMI

Unit I

Introduction to Advances – Lending - Profit maximization: Spread, Burden, Net Interest Income, Net Interest Margin, Net Interest expenses, Non Interest Expenses, Non-Interest income - Cost minimization.

Unit II

Credit facilities and Securities - Principles of Sound lending, Methods of granting advances, Types of Securities, Modes of creating charges, Floating charge, Consortium lending, Credit syndication - Pledge of shares.

Unit III

Priority Sector advances - Rationale of Priority Sector advances, Targets and sub targets under priority sector advances, Agricultural Lending: Direct and Indirect Finance, Micro and Small enterprises, weaker sections – SIDBI.

Unit IV

Bills Business - Introduction to Bills, Bills Purchased (clean bills), Bills purchased (Demand documentary bills), Bills discounting (Usance Bills) - Foreign bills.

Unit V

Retail Lending - Home loans, Educational loans, Credit Cards, Consumer loans, other personal loans, Calculation of EMI: Effect of quantum of advance, repayment period and Interest rates on EMI. Impact of fixed and floating rates.

3. James C. Van Horne., & John M. Wachowicz, J.R. (2013). *Fundamentals of Financial Management* (13th Edition). New Delhi: PHI.

COURSE OBJECTIVES:**To make the students**

- To have an exposure in retailing concept and consumer behavior in retail.
- To understand the retail marketing mix and Promotional measures.
- To evaluate, plan and choose channels of retail distribution strategies.
- To get an insight in IT application and international retailing trends
- To know the various retail models being applied in the market.
- To Understand the Concept of Retailing, Retail market segmentation, Retail location, merchandising, Retail operations and Retail Pricing.

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate retailing and its various concepts.
2. Understand what retailing means to business executives and academics
3. Understand the ways that retailers use marketing tools and techniques to interact with their customers.
4. Understand the consumer's decision making process and threats in global retailing.
5. Explain the concept of strategic planning within the retail management decision process
6. Analyse Challenges and Threats in Global Retailing

Unit I

Retail: Meaning – Functions and special characteristics of a Retailer – Reasons for studying Retailing Marketing - Retailer Equation – Marketing concepts Applied to Retailing – Retailing as a career – Trends in Retailing.

Unit II

Retail Models – Store based retail models - Non-store based retail models. Theories of Retail Development – Life Cycle and phase in growth of retail markets.

Unit III

Strategic Planning in Retailing: Situation Analysis – Objectives – Need for identifying consumer needs – Overall Strategy, Feedback and Control.

Unit IV

Retail in India: Evolution and size of retail in India – Drivers of retail change in India – Foreign Direct Investment in Retail – Challenges to Retail Developments in India.

Unit V

Global Retail Markets: Strategic Planning Process for Global Retailing – Challenges facing Global Retailers – Challenges and Threats in Global Retailing – Factors affecting the success of Global Retailing Strategy.

3. Gibson G Vedamani. (2012). *Retail Management – Functional Principles and Practice* (2nd Edition). New Delhi: Jaico Publishing House.

COURSE OBJECTIVES:**To make the students**

- To have knowledge on store layout plan and inventory management in retailing
- To have an exposure in retailing concept and consumer behavior in retail.
- To understand the retail Store Location - Choosing a Store Location:
- To evaluate, plan and choose channels of retail distribution strategies.
- To get an insight in Space Mix and Effective Retail Space Management
- To know the various Retail Inventory Planning , Return on Inventory Investments and Stock Turnover

COURSE OUTCOMES:

Learners should be able to

1. Understand the basic concepts of store location.
2. Evaluate Retail Operation, Store Operating Parameters and its various concepts.
3. Understand the importance of Location to a Retailer.
4. Understand the Strategic Resource Model in Retailing and designing a performance Programme
5. Understand the concept Floor Space Management and Retail Method of Inventory Valuation.
6. Analyse Physical and Perpetual Inventory Systems

Unit I

Store Location - Choosing a Store Location: Importance of Location to a Retailer – Trading Area Analysis Regional Analysis – Characteristics of the Trading Areas.

Unit II

Site selection: Actual Site Analysis and Selection – Choice of a General Location – Characteristics of the Available Site – Retail Store Layout – Circulation Plan – Space Mix and Effective Retail Space Management – Floor Space Management.

Unit III

Operations Management: Operating a Retail Business – Operations Blueprint – Store Maintenance, Energy Management and Renovations – Inventory Management – Store Security – Insurance – Credit management – Computerization – Outsourcing – Crisis Management.

Unit IV

Evaluating a Retail Operation: Store Operating Parameters – Using the Strategic Resource Model in Retailing – Designing a Performance Programme.

Unit V

Retail Inventory: Inventory Planning – Return on Inventory Investments and Stock Turnover – Inventory Management – Physical and Perpetual Inventory Systems – Retail Method of Inventory Valuation.

COURSE OBJECTIVES:**To make the students**

- To understand the basic concepts of merchandising, strategies and forecasting.
- To have an exposure on factors affecting merchandising function and functions of Merchandise Manager.
- To understand the Merchandise Buying and Promotional measures.
- To evaluate the sources, Branding Strategies, Category Management and the Components of category management strategies.
- To know the functions and performance of merchandising.
- To communicate orally and in written form the understanding of Retailing, Retail market segmentation, Retail location, merchandising, Retail operations and Retail Pricing

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate knowledge in merchandising and its various concepts and how it is done in global level.
2. Understand what merchandising means to business executives and academics
3. Understand the ways that merchandising is used in marketing tools and techniques to interact with their customers.
4. Get an insight Visual Merchandising, Display Planning and Characteristics of effective display trends
5. Analyze merchandise performance
6. Understand about Space Management

Unit I

Merchandising – Meaning – Concept – Factors affecting merchandising function – Merchandise Manager - Functions – Merchandise Hierarchy – Merchandise Mix – Components of Merchandise Management – Merchandise Strategies.

Unit II

Merchandise planning - Steps involved – Merchandise control – Open to buy – Assortment Planning – Steps involved – Merchandising Stages - Merchandise Budgets and Forecasting.

Unit III

Merchandise Buying – Types of buying – Sources of supply - Identifying and Contracting - Evaluating sources – Branding Strategies – Category Management – Components of category management – Category Management and Business Process.

Unit IV

Merchandise Performance – Retail pricing – Elements – Merchandise allocation – Analyzing merchandise performance – Methods – Integrating Dollar and Unit concept – Gross Margin Return on Investment – Mark Ups and Downs – Shrinkage in Retail Management.

Unit V

Visual Merchandising — Display Planning – Characteristics of effective display – Selling power of Display – Methods of Display – Window Display and Interior Display- Space Management.

COURSE OBJECTIVES:**To make the students**

- To have an exposure in international marketing management concept
- To understand the international marketing management and market segmentation.
- To know the process of promoting the product in the international market
- To evaluate, plan and choose channels of retail distribution strategies.
- To get an insight in IT application and international retailing trends
- To formulate marketing strategies appropriate for international marketing of products and services.

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate international marketing management and its various concepts.
2. Understand what international marketing management means to business executives and academics
3. Focuses on Risk involved, market segmentations, product policies, pricing decisions, Strategies in multinational product planning and market communications.
4. Understand the ways marketing management use marketing tools and techniques to interact with their customers internationally.
5. Know the techniques and strategies necessary to incorporate the marketing concept into the framework of the world market place
6. Demonstrate Planning media strategy and Corporate advertising

Unit I

International Marketing: an overview - Nature, Importance and scope of International Marketing, Domestic marketing vs. International marketing, International marketing management process – International marketing environment, Scanning and monitoring global marketing environment; International Marketing Information System.

Unit II

International market segmentation, Positioning, Analysis of world market, Market analysis, International marketing research, Screening and selection of markets, International market entry:

Export, Licensing , Franchise, Joint Venture, Multinational operations, Contract manufacturing.

Unit III

International Product Policies – Major product decisions – Product features and quality, Product design, Labeling, Packaging, Branding and product support services; Strategies in multinational product planning, International product life cycle, New product development.

Unit IV

International Pricing Decisions – International Price determination, Price escalation, International pricing process and policies, Delivery terms and currency for export price quotations, International transfer pricing, Methods of determining transfer pricing, Differential Pricing.

Unit V

International marketing communication – Communication with foreign buyers, Planning and preparing, International promotion programme, Media structure, Planning media strategy, Corporate advertising.

Suggested Readings:

COURSE OBJECTIVES:**To make the students**

- To have an exposure in broad conceptual focus on documentation in exports and imports
- To Understand the concept of International Distribution system and Logistics
- To understand the Logistics and International marketing channel decision.
- To evaluate, plan and choose channels of retail distribution strategies.
- To get an insight on the need for documentation, Process of obtaining Export and Import License
- To Understand the Concept of Export, EXIM strategies, custom clearance and Export incentive schemes.

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate retailing and its various concepts.
2. Understand one should be aware of procedures to be followed while goods are moved to foreign countries
3. Evaluate various modes of transportation, documentations, international trade terms and legal framework involved in it.
4. Understand the procedures to be followed while goods are moved to foreign countries and various modes of transportation, documentations
5. Aware of international trade terms and legal framework involved in it.
6. Understand EDI and custom operations

Unit I

International Distribution system and Logistics – International marketing channel decision, Importance and scope of channel decisions, Channels between nations, international physical distribution decisions, nature of physical distribution

Unit II

Transportation – Importance of effective transportation system, service choices and their characteristics, cost characteristics and role fixation, In-company management vs. outsourcing,

shipping structure – Sea borne trade, International shipping characteristics, Important international sea routes, Liner and tramp operations, Liner freighting, CFC and ICD, Indian shipping – Growth, Policy and Problems, Major Indian ports, International Air Transport, freight rates, India's exports and imports by air – Problems and prospects.

Unit III

Documentation - Naming the enterprise, Forms of ownership, Opening a bank account, Need for documentation, Process of obtaining Export and Import License:- General registrations, registrations with RBI, Registration with Licensing Authorities, Registration with appropriate EPC/Commodity Board's. Main commercial documents: Statutory documents for exporting country, Statutory documents for importing country and documents for claiming export benefits.

Unit IV

International Trade Terms –Trade contract, Credit risk management and payment terms, LC and parties involved, Types of LC, UCPDC – Major clauses, Consignment sale, Transit risk management – Contract of cargo insurance parties, Insurance policy and certificate, Cargo loss clauses – Procedure and documentation.

Unit V

Clearance – Excise duty – Definition, Types of duties, Legal framework – Central Excise Act and rules, Tariffs, Customs Act 1962, Customs Tariffs Act 1975, Foreign Trade Act 1992, Physical Examination of goods, EDI and custom operations.

Suggested Readings:

COURSE OBJECTIVES:**To make the students**

- To gain knowledge in international culture and negotiation, where employability is made easy.
- To understand the framework of international business negotiations
- To have an exposure in the cultural aspects of International Business
- To aware of the ethics in Negotiations, retail marketing mix and Promotional measures.
- To evaluate negotiating strategies, Decision making methods Personality and negotiation skills primary or secondary data collection.
- To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate knowledge in International Business Negotiations and its various concepts.
2. Understand what Cultural aspects of International Business Negotiation
3. Understand the ways that Negotiating Strategies in International Sourcing to interact with their customers.
4. Get an insight in ethics in negotiations
5. Demonstrate knowledge in negotiating strategies, Decision making methods Personality and negotiation skills
6. Gain knowledge in Decision making methods

Unit I

International Business Negotiations: Framework and Nature - Background factors - Impact of national culture, organizational culture and personality on buyer-seller interaction – A model of the negotiation process with different strategies and planning – Distributive bargain and integrative negotiations.

Unit II

Cultural aspects of International Business Negotiation - Role of culture - Patterns of cross-culture behavior and communication - Importance of understanding the negotiating conventions and expectations between foreign counterparts - Comparative and inter-cultural studies of negotiating behavior.

Unit III

Inter-firm Negotiation studies: Buyers' Negotiating Strategies in International Sourcing - Negotiating sales, Export transaction and Agency agreements - Negotiating Licensing agreements - Negotiating International Joint Ventures projects - Cooperative negotiation for Mergers and Acquisitions.

Unit IV

Frameworks and support for International Business Negotiations: Multinational, Bilateral trade agreements, Government supported trade delegations, International trade fairs, International trading houses, Industry associations.

Unit V

Ethics in negotiations - Differences from an ethical perspective of the importance of relationship development - Negotiating strategies - Decision making methods - Contracting practices - Illicit behaviors such as bribery - Best practices in negotiations - Business etiquette - Personality and negotiation skills.

Suggested Readings:

COURSE OBJECTIVES:**To make the students**

- To emphasize challenges and opportunities for Business Process Reengineering across the process life cycle.
- To understand the importance of business process reengineering and kaizen.
- To understand the relevance of change management in business process reengineering.
- To familiarize the process of implementation of Business Process Engineering
- To understand application of negotiation in Business Process Engineering
- To know the characteristic features of Kaizen relevant to BPR

COURSE OUTCOMES:

Learners should be able to

1. Evaluate Business Process Reengineering and Kaizen and its various concepts.
2. Understanding how the Implementation of Business Process Reengineering
3. Understand the ways that Change Management in Business Process Reengineering and techniques to interact with their customers.
4. Identify change Management in Business Process Reengineering
5. Demonstrate Application of negotiation in BPR and Implementation of changes
6. Understand Complacency management

Unit I

Business Process Reengineering and Kaizen - BPR: Definition, Japanese Business strategy, Kaizen and Management, Characteristic features of Kaizen relevant to BPR - New developments in BPR

Unit II

Business Process Reengineering and other Management concepts - Issues in BPR, BPR and TQM - QFD - ISO standards - ERP - Benefits of ISO standards.

Unit III

Implementation of Business Process Reengineering - Business vision and process objectives, Identification of processes to be reengineered - Measurement of processes - Design - Evaluation of process prototype.

Unit IV

Reengineering Structure and Pitfalls - BPR leader - Process owners - Reengineering teams - Pitfalls in organizational environment - Complacency management - Reengineered process - Appraisal system

Unit V

Change Management in Business Process Reengineering - Structure of change, Approaches to radical change, Management of change in BPR, Application of negotiation in BPR. Implementation of changes

Suggested Readings:**Text book:**

4. H. Harrington, (2005), *Business Process Improvement: The Breakthrough Strategy for Total Quality, Productivity and Competitiveness*. New Delhi: Tata McGraw Hill.

COURSE OBJECTIVES:**To make the students**

- To provides an insight into maintenance planning, analysis, system, cost and advanced techniques
- To introduce the functions of maintenance.
- To familiarize the students with Total Productive Maintenance.
- To understand the concept of optimum overhaul.
- To understand the concept of maintainability and maintainability improvement
- To understand and apply the forecasting techniques in estimating the requirement of resources.

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate Maintenance Concepts, Objectives and functions of maintenance and its various concepts.
2. Understand what Maintenance Planning means to business executives and academics.
3. Understand Failure Data Analysis and Preventive Maintenance
4. Evaluate Design out maintenance, Total Productive Maintenance - Reduction of Maintenance Cost
5. Demonstrate knowledge in maintainability improvement
6. Understand Total Productive Maintenance (TPM)

Unit I

Maintenance Concepts - Objectives and functions of maintenance – Types - Maintenance strategies - Organization for maintenance - Five Zero concept - New Developments in Maintenance

Unit II

Failure Data Analysis - MTBF, MTTF, Useful life, Survival curves, Repair time distribution, Break down time distributions, Poisson, Exponential and Normal distribution. Availability of repairable Systems - Maintainability prediction - Design for maintainability - Preventive Maintenance

Unit III

Maintenance Planning - Overhaul and repair: Meaning and difference, optimal overhaul / Repair / Replace maintenance policy - Replacement Decisions: Optimal Interval - Group Replacement

Unit IV

Maintenance Systems - Fixed time maintenance, Condition based maintenance, Operate to failure, Opportunity maintenance, Design out maintenance, Total Productive Maintenance - Reduction of Maintenance Cost

Unit V

Advanced Techniques - Reliability Centered Maintenance (RCM) – Total Productive Maintenance (TPM) - Philosophy and implementation, Signature analysis - Expert systems – Concept of Terro technology, Reengineering Maintenance Process, Concept of reliability, Reliability improvement, Concept of maintainability and maintainability improvement, Maintenance Management Information System and Technical Audit

Suggested Readings:**Text Book:**

COURSE OBJECTIVES:**To make the students**

- To have an exposure in the integrated perspective of Lean thinking apart from covering all the basic tools needed.
- To understand the principles behind lean manufacturing philosophy.
- To enable the student to understand the concept of Value Stream Mapping (VSM)
- To get an insight with the implementation of various lean manufacturing techniques.
- To understand the concept of Lean line optimization
- To understand Lean Implementation and Milestones

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate relevant for those joining both manufacturing and service organizations
2. Demonstrate Lean Manufacturing System and its various concepts.
3. Understand what Kanban Strategies means to production
4. Understand the ways that Lean Implementation and Milestones tools and techniques to interact with the workers
5. Demonstrate lean implementation in service
6. Gain knowledge in Lean Line management

Unit I

Benefits of Lean Manufacturing System - History and modern applications, MRP and their impact, Lean manufacturing model, Kanban Methodology, Continuing evaluation, Strategic Business Analysis. Internet and e-commerce applications & Reverse Auction

Unit II

Understanding Product, Process and Demand - Value Stream Mapping – Scope - Selecting parent parts - Lean line – Demand - Documenting process flow - Talk time - Process linking and Balancing - Imbalance Approach - Resource , Physical Layout, Designing 5S, Kanban Signaling

Unit III

Kanban Strategies – Process - Single and Multi Card system - Inventory Management, Advantages and Disadvantages - Team Establishment: Commitment, Physical facilitation, Management Structure - Transformation process and perpetual inventory

Unit IV

Lean Implementation and Milestones - Software requirement milestones - Understanding process, Product and Materials - Checking - Factory design - Line startup - Lean implementation in services

Unit V

Lean Line management - Matching customer demand - Customer response policy - Lean line optimization - Resistance to change - Flexibility and rewards.

- To know the role and functions of training and development in organization,
- To understand the theories, principles and their implications for the effectiveness of training programs.
- To elucidate on Implementation of Training – Physical arrangements – Classroom management – Trainer's skills and styles
- To understand Career Planning and Factors affecting Career Choices, Career Stages, Career anchors, Succession planning
- To realize the need of controlling in improving the performance of the organization.
- To enable students to synthesize related information and evaluate options for the most logical and optimal solution such that they would be able to predict and control human behaviour and improve results

COURSE OUTCOME:**Learners should be able to**

1. Explain the concept of training and developing employees.
2. Gain knowledge in such a way that employees can be mould to the requirement for better productivity.
3. know the Steps involved in Career Development- Management Development
4. Gain knowledge on the types of management development programmes
5. Understand the Emerging Trends and Future Prospects in Training and Development.
6. Gain knowledge in Career Planning and management development programmes

Unit I

Training concepts – Features – Objectives – Benefits – Principles of Training, Scope, Historical development of Training and Development, applying to organizational effectiveness - Concepts of Learning, Components of Learning – Principles of Learning – Learning Theories – E –Learning.

Unit II

Training Process – Key factors in designing training programme - Assessing Training needs – Methods of TNA – Training Design – Constraints in Training Design

Unit III

Implementation of Training – Physical arrangements – Classroom management – Trainer's skills and styles – Transfer of Training - Evaluation of Training – Need – Types of instruments – Evaluation design – Models of Training evaluation.

Unit IV

Training Methods – On and Off- the-Job training Techniques - Lecture Methods, Programmed Learning – Discussion methods, case Methods, Role Play – Types, Business games, in-basket exercises, Field Training, Audio-Visual Aids, Static and Dynamic media – Computer based training, Training methods adopted by Successful Indian Organizations.

Unit V

Career Planning – need - Factors affecting Career Choices, Career Stages, Career anchors, Succession planning – Steps- Career Development- Management Development – Need and Importance – Types of management development programmes - Management characteristics – skill acquisition – Training for Executive level management - Emerging Trends and Future Prospects in Training and Development.

COURSE OBJECTIVES:**To make the students**

- To familiar with Wages, Salary, incentives, Compensation and pay scale systems
- To understand the Concept of Equity and Compensation-Components of Compensation-
- To understand the compensation designing ,incentives and retirement plans with wage concepts.
- To know the concepts of Basics of compensation, various incentives and benefits applicable
- To get knowledge of social security laws for employees of the organization
- To Understand the fundamentals of Wages, Salary, incentives, Compensation and pay scale systems and apply lifelong

COURSE OUTCOMES:**Learners should be able to**

1. Understand the form and Components of Compensation
2. Formulate the various methods of compensating cost of living
3. Implement the Individual, Organization Wide incentives – Scanlon and Kaiser Plans.
4. Understand the Compensation plans provided by Public sectors & Private Sectors
5. Gain knowledge of Laws Relating to Workmen's Compensation, Employee's State Insurance, Provident Fund
6. Get knowledge of Incentives and Retirement plans

Unit I

Compensation: Concept and Nature – Concept of Equity and Compensation-Components of Compensation- Form of Compensation, Compensation Plans- Types of Compensation plans. Wage concepts – Components- Criteria of wage fixation, Types of Wages - Designing Wage, salary and Compensation Policies- Wage differentials.

Unit II

Compensation Designing – Factors affecting Compensation Designing. Incentives and Retirement plans: Basic Pay, Provisions for Dearness allowance – Calculation of total compensation package, various methods of compensating cost of living, Neutralization factors.

Unit III

Incentives and Fringe Benefits – Incentives – Definition, Types of Incentives: Individual incentives and Organization Wide incentives – Scanlon Plan, Kaiser Plan, Profit sharing, on-financial incentives, Fringe Benefits – Definition, Objectives, Types of Fringe Benefits.

Unit IV

Planning for Improved Competitiveness: Diagnosis and Bench Marking, Obtaining Commitment; Determination of Inter and Intra-industry Compensation Differentials, Internal and External Equity in Compensation Systems. Compensation provided by Public sectors & Private Sectors.

Unit V

Social Security Laws – Laws Relating to Workmen's Compensation, Employee's State Insurance, Provident Fund, Gratuity and Maternity Relief. Wages and Bonus Laws – The Law of Minimum Wages, Payment of Wages, Payment of Bonus. Objectives and scope of Laws. The Impact of fifth pay scale on Central and State Government.

COURSE OBJECTIVE:**To make the students**

- To understand the practices and technology to start an online business
- To analyse the technology requirements for Ecommerce
- To know the different business models available for running a e-business
- To consider the different ways of payment and payment services available.
- To understand the E-supply chain management relating to e- business.
- To know about E-business models and Virtual Merchants

COURSE OUTCOMES**Learners should be able to**

1. Know how to build and manage an e-business
2. Know the different technology for managing business online
3. Apprehend different level of applications available to run the business
4. Realize different modes of payment options available
5. Apply the different E-supply chain management relating to e- business
6. Understand the Strategies for Web site development

Unit I

E-Commerce: What is E-Com – Need- Types of E-Com - E-Com framework - E-Com and media convergence - E-Com consumer applications – E-Com organization application. Business models for E-commerce: E-business models based on relationship of transaction parties.

Unit II

Market forces influence the I-way - components of the I-way - public policy issues shaping the I-way enabling technologies of WWW- Case studies on I – way- trends in I-way.

Unit III

E-business models – Virtual Merchants- E-payment systems – Digital payment requirements, digital E-Token systems, properties of electronic cash, and cheque payment systems on the Internet, risk and E-Payment system, designing E-Payment system, digital signature.

Unit IV

E-marketing: Traditional Marketing, identifying Web presence goals, browsing behavior model, on-line marketing, E-Advertising, internet marketing trends, E-Branding, marketing Strategies. E-customer relationship management: Customer relationship management, typical business touch points.

Unit V

E-supply chain management: E-Supply chain -E-strategy: Information and strategy, the virtual value chain, seven dimensions of E-Commerce strategy, value chain and E-Strategy, planning the E-Commerce Project, Strategies for Web site development – Technology solution to privacy Case study: mobile commerce

COURSE OBJECTIVE**To make the students**

- To understand project management cycle in software development
- To study resources planning in software development
- To know the different ways of testing and quality models for software projects
- To apprehend different acquisition process and performance evaluation used
- To understand the risk management
- To know about acquisition Process of Hardware, Software and Network

COURSE OUTCOMES**Learners should be able to**

1. Gain knowledge of software development process
2. Understand the concept of Resources Planning
3. Analyze quality models for software projects
4. Gain knowledge acquisition process and performance evaluation used
5. Managing risk in software
6. Understand Software Maintenance and Configuration management

Unit I

Introduction - Software Project Management - An overview of Project planning - Stepwise planning- Activities and characteristics of SPM - Overview of COCOMO Model, PERT/CPM, Rayleigh Curve - Project Organization - Risk Management - Project Finance - Procurement Management - Project Scheduling.

Unit II

Software Project Management -Resources Planning and Estimation, Different Methods in brief- Function Point Analysis in some details - Use of CASE Tools - Introduction to MS Projects- Design and Development – Schedule - Resource Allocation - Progress Review – Project implementation and execution of MS office.

Unit III

Testing - Overview of Test Plan - Generation of Test Cases, Test Data - Types of Testing - Quality Concepts - ISO, CMM - Production / Implementation - User Acceptance Tests - Parallel Runs - Maintenance - Types - Adaptive, Corrective, Preventive Version Control and Configuration Management - Documentation Methods.

Unit IV

Acquisition Process - Hardware, Software, Network, Infrastructure -Requirement Planning-Sizing-Selection Methodology including Benchmarking - Documents involved IT HRM – Selection – Retention – Training - Career Path Planning - IT Operations – Scheduling - Performance Evaluation

Unit V

Risk management- Nature and Types of risk - Managing risk - Evaluating risk - A software management process frame works - Life cycle phases - Software Maintenance and Configuration management - Maintenance characteristics - Maintenance task - Maintenance side effects

COURSE OBJECTIVE**To make the students**

- To enhance the understanding of the students with respect to the conceptual framework and the technological infrastructure of Enterprise Resource Planning.
- To expose the students to the implementation issues and future trends associated with ERP.
- To apprehend different Sales and Distribution tools used
- To know the future trends in ERP systems to have good relation with customers.
- To Understand the concept of Enterprise Resource Planning (ERP), ERP related technologies, its implementation, module structures of ERP, ERP vendors role, future trends in ERP and apply the learnings lifelong.
- To evaluate the need of ERP for an organization, select the best vendor and implement the module that is appropriate for the organization need

COURSE OUTCOMES**Learners should be able to**

1. Gain knowledge on planning evaluation and selection of ERP systems
2. Aware on success and failure factors of ERP
3. learn the application of ERP in Supply Chain Management
4. Apprehend application of different Sales and Distribution tools for business.
5. Know the Business benefits of ES
6. Understand the concept of Data definition language

Unit I

Introduction- Purpose of database system – View of data - Data models - Database languages - Transaction Management - Storage Management - Database Administrator - Database Users- System Structure.

Unit II

Entity Relational Model: Basic concept – Key Entity Relationship Diagram, Weak Entity Sets, E-R features, Specialization, Generalization, Relational model - Structure of Relational Databases- Relational Algebra-Views.

Unit III

SQL – Background - Basic structures - Set operations - Aggregate functions - Null values -Nested – Sub queries - Derived relations - Views – Modification of the database - Joined relations - Data definition language - Embedded SQL features – Data warehousing - Concepts – architecture - Data transformation - User interface - Distributed database.

Unit IV

ERP concepts: Introduction to ERP system - Review of DBMS and Transaction processing concepts – Information models – Financial model – Financial Accounting, controlling - Issues in Customizing - ERP system for organization - Introduction to Business Information flows – Work flows.

Unit V

Sales and Distribution – Basic functions – Billing – Electronic Data Interchange – Transportation - Case studies – SAP R/3, People soft – Oracle financials – Development Tools – Administration tools – Reporting and Analysis Tools and Integration Tools – BPR , Implementation - Project Management – Meaning – Business benefits of ES

TECHNOLOGY INNOVATION AND SUSTAINABLE ENTERPRISE FOR MANAGEMENT

COURSE OBJECTIVE

To make the students

- To focus on different matters of importance related to Technology and Innovation Management.
- To understand the Technology Transfer and Joint Ventures
- To develop web marketing and its strategies in marketing research.
- To Understand an entrepreneurial perspective, the objective is for students to analyse Enterprise Resource Planning
- To know about Web Marketing strategies
- To understand E-Mail Marketing and Instant Market Research

COURSE OUTCOMES

Learners should be able to

1. Appreciate the role of technology in the modern capitalist market economy
2. Understand the key aspects of Technology Transfer and Joint Ventures
3. Assess and develop the necessary critical factors in the Web Marketing
4. Identify and evaluate opportunities for new technologies
5. Understand the basics of the four primary forms of intellectual property rights.
6. Compare and contrast the different forms of intellectual property protection in terms of their key differences and similarities.
7. Analyze the Enterprise Resource Planning and e-Business Blueprint Planning

Unit I

Innovation: - Need - Objectives of Innovation - Technology Innovation - Its importance - Knowledge Management- Need - Business strategies related to Knowledge Management - Knowledge Management Approaches - Transformation of an enterprise through Knowledge Management - Creating Knowledge Management System in Organization Establishing Knowledge Management through IT - Organizational culture for Knowledge Management - Future of Knowledge Management

Unit II

Technology Transfer and Joint Ventures - Policy, Procedure and Practices - India's Technology base and Capabilities - Preference of Indian Technology - Major Constraints and problems - Operational constraints - Problems in Indian Business Environment, Problems in Finalization of Agreement - Major Problems in Technology Transfer Collaboration Agreements, Research and Development, Import Substitution, Scaling, Diagrams - Patterns and Intellectual Property rights.

Unit III

Web Marketing- Meaning - Benefits of Web Marketing-Myths and Facts in Web Marketing - Web Psychology: Understanding the Internet mind - The Internet and the Law: Copyright, Censorship, Privacy, Jurisdiction - Do's and Don'ts on Web.

Unit IV

Web Marketing strategies - Choosing the Strategy - Online Store Fronts - Target Marketing - Attracting Customers - Web Advertising - E-Mail Marketing - Instant Market Research - Securities Issues.

Unit V

Enterprise Resource Planning: Meaning - ERP decision - Enterprise Architecture Planning - ERP Implementation - The Future of ERP Applications – Procurement - e-Business Blueprint Planning.

4. Ravi Kalakota and Andrew B. Whinston. (2000). *Frontiers of Electronic Commerce*. New Delhi: Wiley India Pvt. Ltd.

COURSE OBJECTIVE:**To make the students**

- To know the fundamental parameters used to generate an idea for business plan
- To understand the business plan sources through trade and industries associations
- To study the industry analysis for applying skills and tools to manage and analyze the gap.
- To analyse the emerging ethical issues in business.
- To develop the ethical decision making process
- To understand emerging ethical Issues in Business and dimension of Social Responsibility

COURSE OUTCOME**Learners should be able to**

1. Gain knowledge on basic parameters used to generate an idea for business plan
2. Critically analyse the sources of business plan
3. Identify by the gap for applying expertise skills and tools.
4. Analyse the emerging ethical issues in business.
5. Develop the ethical decision-making process
6. Understand Business Ethics in a Global Economy and analyse emerging ethical issues in business

Unit I

Business Plan – Meaning - Why a business plan – Effectiveness - Basic parameters - Timing of decision undertaken Project parameters - The common considerations - Factors of successful business - Capital management - Financial control - Anticipating change and adaptability.

Unit II

Business Plan Process - Sources of Information - Internet, Government sources and Statistics - Offline Research Resources - Library - SBDC'S - Trade and Industries Associations - Sources of Market Research - Evaluating data - Benefits of market study - Coverage of market study - Information sources.

Unit III

Business Plan components - The Executive Summary - Company description - Industry Analysis and trends - Target Market, Risk analysis process - Competition - Strategic position and Risk assessment - Marketing Plan and Sales strategy - Operations - Technology plan - Management and Organization

Unit IV

Business Ethics - Definition and Importance - Benefits of Business Ethics - Emerging Ethical Issues in Business - Ethics as a dimension of Social Responsibility – CSR and its system of channel.

Unit V

The Ethical Decision Making Process - Understanding ethical decision making and corporate governance - Individual factors - Organizational factors - Implementing and Auditing Ethics programs, Social auditing - Business Ethics in a Global Economy

COURSE OBJECTIVE:**To make the students**

- To understand business concepts and innovation of new products
- To apprehend to managing cultural impacts and changes
- To study the export and import acts for managing global entry
- To analyse the strategic responses to changing environment
- To know the legal acts in India relating to Industry.
- To understand Pressures for cost reductions and Local responsiveness

COURSE OUTCOME**Learners should be able to**

1. Gain knowledge on business concepts and innovation of new products
2. Analyse the cultural impacts and changes
3. Gain knowledge on export and import acts for managing global entry.
4. Analyse the strategic responses to changing environment.
5. Evaluate the legal acts in India relating to Industry
6. Know the New Industrial Policy and legal acts in India

Unit 1

Business - Concepts and Significance - Entry of Multinationals – Types and impact of multinationals - New Changes in Business - Innovation of New Products - Technological Changes – Competition in Business - Social Responsibility of Business.

Unit II

Cultural Concept - Cultural Change - Culture and Workplace - Cross Culture - Culture and Competition - Differences in Culture - Cultural Theories – Impact of Culture on Business – Multicultural issues – Managing Cultural impacts and changes.

Unit III

Nature of Competition - Heckscher Ohlin Theory - The new trade Theory - National Competitive Advantage - Porter's Diamond - Impact of Competition - Managing Competition - Updating of new technology. Era of Globalization - Significance - Strategy and the firm - Profiting from Global

Expansion - Pressures for cost reductions and Local responsiveness - Strategic Choice - Liberalization of Indian economy - Export and Import Acts - Managing global entry.

Unit IV

Strategic Responses to changing environment - Portfolio Related, Process Related and Structure Related - Aligning HR Strategy - Strategic Changes - Planned Changes - Drawbacks- Unplanned Change - Steps in Planned Change - Changes and Amendments in Labors Laws - International Trade Unions and Business Associations

Unit V

Legal acts in India - Industrial Developmental Regulation Act (IDRA) - New Industrial Policy - New Economic Policy - Abolition of MRTP Act and introduction of Competitive Act - Consumer Protection Act - Imposing of MODVAT in India - Political Environment - Political uncertainty - Impact of Politics on Business- GATT - WTO- TRIPS –TRIMS - Consumer movements, Right to information.

COURSE OBJECTIVES:**To make the students**

- To understand documentary credits and letters of credit
- To apprehend to export finance and Pre-shipment finance
- To study the different types of post-shipment finance
- To analyse the strategic rules governing import credit
- To know the Export and Import policy of India.
- To understand Rules governing post-shipment finance

COURSE OUTCOMES**Learners should be able to**

1. Gain knowledge on documentary credits and letters of credit
2. Analyse export finance and Pre-shipment finance
3. Gain knowledge on types of post-shipment finance
4. Analyse strategic rules governing import credit
5. Evaluate the Export and Import policy of India.
6. Understand Incentives given by the Government of India for exports

Unit I

Introduction to Documentary Credits - Documentary Credits, Letters of Credit, Parties to letters of credit, Types of letters of credit, Documents in Documentary Credit - FOB, CIF, C and F.

Unit II

Export Finance – Pre-Shipment Advance - Pre-shipment finance, Types of Pre-shipment finance, Disbursements of packing credit advance, Overdue Packing Credit Advances and their follow up, Packing Credit in Foreign Currency (PCFC) – Transshipment.

Unit III

Export Finance – Post-Shipment Advance – Post-shipment finance, Rules governing post-shipment finance, Types of post-shipment finance, Crystallization of overdue export bills and their follow up.- Forward cover procedures.

Unit IV

Imports - Import letter of credit - Rules governing Import credit - Forward exchange contracts for imports, Payment for import of goods - Technology imports procedures.

Unit V

ECGC and EXIM Bank - Export and Import policy of India, Incentives given by the Government of India for exports, Role of RBI in promoting export credit, ECGC – Types of policies, EXIM Bank – Its role and their promotional activities - Foreign Trade shows.

Suggested Readings:

4. Thummuluri Siddaiah. (2010). *International Financial Management*. New Delhi: Pearson.

COURSE OBJECTIVES:

To make the students

- To aware of accumulation of NPA, rule regarding rehabilitation of sick units, recovery of dues is taught in this core course on banking.
- To know the procedure for classification of non-performing assets
- To study the concessions under Income Tax Act for mergers and unwillingness to pay and inability to pay
- To understand the process of recovery of advances and the role of Credit Guarantee Corporation.
- To know about provisioning to various Non- Performing assets and write – off of advances
- To understand Securitization and Reconstruction of Financial Assets and Securities Interest Act SARFASI

COURSE OUTCOMES:

Learners should be able to

1. know the impact of sickness on industries and ways & means of preventing sickness
2. Understand the procedure for classification of assets
3. Understand the concessions under Income Tax Act for mergers and unwillingness to pay and inability to pay
4. Discover the process of recovery of advances and the role of Credit Guarantee Corporation.
5. Understand the importance of Credit Guarantee Corporation
6. Know the procedure for Accounting Practices.

Unit I

Sickness and its Prevention - Causes and detection of sickness, Follow up of advances, Post- sanction inspection, ABC norms, Sick Industrial companies Act – BIFR - Risk averseness.

Unit II

Non-Performing Assets - Introduction to NPAs, Income Recognition, Asset classification: Standard, Sub-standard, Doubtful and loss assets, provisioning to various Non- Performing assets and write – off of advances - Gross NPA and Net NPA.

Unit III

Rehabilitation of sick units - Classification of units as viable and non-viable, Guidelines for drawing rehabilitation scheme, revival by Mergers and Amalgamations, Concessions under Income Tax Act for mergers - Unwillingness to pay and inability to pay.

Unit IV

Recovery of dues - Corporate Debt Restructuring, Civil suits, Debt Recovery Tribunal, Securitization and Reconstruction of Financial Assets and Securities Interest Act SARFASI, Asset Reconstruction Company, Compromise agreements CIBIL.

Unit V

Credit Guarantee Corporation - Objectives of Credit Guarantee Corporation, Small Loans Guarantee Scheme, Small Loans (SSI) Guarantee Scheme, Accounting practices - Crop insurance.

COURSE OBJECTIVES:**To make the students**

- To have an exposure in international retailing concept and consumer behavior.
- To understand the trends in retail marketing and changing nature of boundaries.
- To formulate the strategies and options for entering and competing in foreign markets.
- To study the concept of Multi country Competition and Global Competition
- To mapping retail structure and retail operation
- To know Public Relations and Sales Promotion Strategies

COURSE OUTCOMES**Learners should be able to**

1. Gain knowledge on international retailing and markets.
2. Understand the trends and changing nature of boundaries
3. Discover the strategies and options for entering and competing in foreign markets.
4. Understand the ways that retailers use marketing tools and techniques to meet Global Competition
5. Access the retail operation through formulation of retail structure.
6. Mapping Market Research and Sales Promotion Strategies

Unit I

International Trade – Barriers and Facilitators - Regional Economic/Political Integration - Cultural Influences on International Marketing - International Marketing Segmentation – Positioning - The Marketing Plan and Entry Mode Selection.

Unit II

International Retailing - Definitions, Interpretations - Trends in the Internationalization of Retailing and Evolution of International Retailing - Motives for International Retailing - The changing nature of boundaries – Assessing the potential of Retail Markets - Methods of International Retailing - Accessing Retail Markets.

Unit III

Competing in Foreign Markets - Why Companies Expand into Foreign Markets - Cross Country Differences in Cultural, Demographic and Market Conditions - Concept of Multi country

Competition and Global Competition - Strategy Options for Entering and Competing in Foreign Markets - Quest for competitive Advantage in Foreign Markets.

Unit IV:

Retail Structure - Enterprise Density - Market Concentration - Developing markets - Stages in development of International Operations – Export Management Contracts - Franchising – Acquisition and Mergers – Organic Growth - Choice of Market Entry - Domestic Market - Retail Operations - Non Domestic market.

Unit V:

Market Research – Segmentation – Targeting - Positioning – The Market Mix - Image Product range – Format – Price – Location – Distribution – Promotion - Promotional Mix and Advertising – Publicity – Public Relations and Sales Promotion Strategies - Personal Selling and Sales Management.

COURSE OBJECTIVES:**To make the students**

- To understand the role of retailing strategic business in service sector
- To study the operations and financial aspects in retail planning
- To comprehend the human resources management in retailing
- To study the legal & compliances for a retail Store
- To emphasize on Mall management and its various forms.
- To know the Aspects in Quality Management

COURSE OBJECTIVES:**Learners should be able to**

1. Understand the role of retailing strategic business in service sector
2. Gain knowledge on operations and financial aspects in retail planning
3. Comprehend the human resources management in retailing
4. Resolve the legal & compliances for a retail Store
5. Understand strategies for mall management and its various forms.
6. Understand the Concepts in Mall Design

Unit I

Marketing and Strategic Management: Retailing - Role, Relevance and Trends - Retail Customer - Retail market segmentation and franchising - Retailing in banking and other financial services - mutual funds and Insurance - Services marketing and management.

Unit II

Operations and Finance in Retailing: Retail location strategy - Product and Merchandise management – Total Quality Management - Security measures - Footfalls / computerized methods and non computerized methods - Visual / display methods - Management of Obsolete goods.

Unit III

Human Resources Management in Retailing: Retail organization - Laws involved in Human Resources - Motivation - Customer psychology - Training needs for employee - Top grading - Obstacles to Top grading - Coaching to fix weakness - Interviews guide.

Unit IV

Legal and compliances for a Retail Store: License - Contracts and Recovery - Legal Process - PF/ESI and Exemptions - Food and Restaurants – PPF - IR Law - Shops and establishments - IPR Patents, Copyright and Trademarks - Inclusion of Service Mark - Procedure and Duration of Registration Collective Mark - Procedures applicable for a Retail Store.

Unit V

Mall Management: Types of Various Retail Formats - Concepts in Mall Design - Factors influencing Malls Establishments - Aspects in Finance - Aspects in Security / Accounting - Aspects in HR - Aspects in Quality Management.

5. Akhileshwar Pathak. (2006). *Legal Aspects of Business. (5th edition)* New Delhi: Tata McGraw Hill Publishing Company Limited.

COURSE OBJECTIVES:**To make the students**

- To understand the basic concepts of personal and impersonal communication in retail
- To develop communication programmes to develop brand images and building customer loyalty
- To analyse the planning, implementing and evaluating communication programs for retailing
- To apply the suitable technology for Integrated Marketing Communications
- To know Planning, Implementing and Evaluating communication programs
- To understand Strategies of Green Marketing

COURSE OUTCOMES:**Learners should be able to**

1. Gain knowledge on the concepts of personal and impersonal communication in retail
2. Develop communication programmes to develop brand images and building customer loyalty
3. Analyse the planning, implementing and evaluating communication programs for retailing
4. Apply the suitable technology for Integrated Marketing Communications
5. Apply the understanding of Retailing, Retail market segmentation, Retail location, merchandising, Retail operations and Retail Pricing in lifelong practice.
6. Demonstrate capabilities of analysing problems, team work and communication skills.

Unit I

Retail Communication – Methods of communicating with customers – Paid and Unpaid Communication – Personal and Impersonal Communications.

Unit II

Communication programmes to develop Brand Images and Building Customer Loyalty – Extending the brand name.

Unit III

Retail communication planning – Setting objectives – Communication budget – Allocation of the promotional budget – Planning and Implementing and Evaluating communication programs.

Unit IV

Retail Communication Mix – Advertising – Sales promotion – Public Relations and Publicity
Personal selling – Point of Purchase displays.

Unit V

Integrated Marketing Communications – E tailing – E-commerce – Applications of Technology – EDI, DBMS – Data Warehousing – Data Mining – RFID- Green Marketing- Strategies of Green Marketing.

17MBAPI401A MULTILATERAL TRADE AGREEMENTS AND REGULATIONS 4004

COURSE OBJECTIVES:

To make the students

- To appreciate the conceptual and practical aspects of trade agreements.
- To acquaint the students with environmental, procedural, institutional and decisional aspects of trade.
- To develop capabilities to understand the International Business Laws, dispute settlement and issues related to intellectual property regime.
- To understand Implications for International business and progress made by WTO in the last one decade
- To know the International Commercial Dispute Settlement process
- To understand Historical Background of Intellectual Property and IPR Administration

COURSE OUTCOMES:

Learners should be able to

1. Students can able to link theoretical concepts of trade in business situations
2. Gain the knowledge on value of international trade relations to outsource their business
3. Students know about the value of trade of their economies and other economies
4. Students learn about the various trade agreements among nations
5. Helps students to manage resources, identify and carry out specific goal oriented tasks
6. Understand the concept of Globalization vs. Regionalization

Unit I

Historical background of International Trade, Direction and Composition of International Trade. Terms of Trade, Trade as an engine of growth. Concept of Law - Types of law, Domestic and International and their jurisdiction. Regional Trade Agreements: Concept, Origin, Types - European Union, NAFTA, ASEAN, MERCOSUR – Their structure, Decision making, Funding, Implications on world trade.

Unit II

World Trade Organisation: Introduction, Objectives, Functions, Structure, Principles, Agreements – Implications for International business, Progress made by WTO in the last one decade - Tariff and Non-tariff barriers - Implications for WTO members.

Unit III

International Business Law – International Sale of Goods, Laws governing International Sale of goods – Domestic laws, International Treaties, International Mercantile Customs and Usages – Inco terms, Rules on International Sale of Goods, International Commercial Dispute Settlement – Reconciliation, Arbitration etc.

Unit IV

Intellectual Property: Historical Background, IPR Administration – WIPO, WTO, Indian Patent Office, Patents, Copyrights, Trademarks, Geographical Indications, Industrial Designs, Layout Designs, Trade secrets.

Unit V

Selected Regional Blocks - NAFTA, EU, ASEAN, SAARC, SAPTA, Indo-Lanka Free trade, Indo-Singapore CECA Globalization vs. Regionalization

Suggested Readings:

Text books:

1. Richard E.Caves., Jeffery A. Frankel., and Ronald W.Jones. (2007). *World Trade and Payments* (10th edition). Pearson Education.
2. Cherunilam, Francis, *International Economics*. (5th edition).New Delhi: Tata McGraw Hill Publishing Company Ltd.

References:

1. Vinod V. Sople. (2014). *Managing Intellectual Property*. New Delhi: PHI Learning Private Limited
2. Palle Krishna Rao. (2008). *WTO Text and Cases*. New Delhi. Excel Books.

COURSE OBJECTIVES:**To make the students**

- To analyze the basic issues such as productivity, earnings and effective utilization of trade.
- To make students to take decisions on business planning and outsourcing.
- To familiarize the students with the knowledge of exchange rate and its impact.
- To students learn about the balance of payments and its consequences. Enable students to acquire concepts, techniques of foreign trade.
- To understand the concept of international economics, globalization, comparative advantage theories, international macroeconomic indicators like foreign exchange, national income, balance of payment and international macroeconomic policy.
- To apply the understanding of international economies concepts, international economic indicators and international monetary policy lifelong.

COURSE OUTCOMES:**Learners should be able to**

1. Gain the knowledge and analyze the emerging global trends in business environment.
2. Develop insight on exchange of exports and imports
3. Analyze the impact of exchange rate fluctuation on home currencies
4. Evaluate the policies pursued by various economic bodies in international trade
5. Get familiarize with the export promotion measures and their benefits to their business
6. Apply the understanding of international economies concepts, international economic indicators and international monetary policy lifelong.

Unit I

Introduction: International Economics- Meaning, Scope and Importance Inter-regional and international trade. Importance of International Trade. Theoretical Aspects of Economic

Integration: Free Trade Area, Customs Union and Common Market - Theory of Customs Union - Trade Creation and Diversion effects.

Unit II

Theories of International Trade. Theory of Absolute Cost Advantage, Theory of Comparative Cost Advantage. Intra-Industry Trade. Gains from Trade, Measurement of gains, static and dynamic gains. Terms of trade – Importance and Types, Determinant's of Terms of trade, Causes of unfavorable terms of trade to less developed countries.

Unit III

Trade policy and Exchange Rate, Free trade policy - Case for and against, Protections – Case for and against, Types of Tariffs and Quotas, Determination of Exchange rate, Fixed and Flexible Exchange Rate- Merits and Demerits.

Unit IV

Balance of Payments, Balance of trade and Balance of payments: Concepts and Components - Equilibrium and Disequilibrium in Balance of Payments; Causes and Consequences, Measures to correct deficit in the Balance of Payments. International Monetary System, Devaluation; Merits, Demerits and Limitations, Foreign Trade Multiplier; Concept and Limitations, IMF, World Bank – Objectives, Functions and Performance.

Unit V

Foreign Trade in India, Recent changes in the composition and direction of foreign trade - Causes and Effects of persistent deficit in the Balance of Payments - Measures adopted by the Government to correct the deficit after 1991 - WTO and India Export Promotion measures, Partial and Full convertibility of Indian Rupees, Export Promotion – Contribution of SEZ Foreign Trade policy 2009, Role of Multinational Corporations in India.

2. Paul Krugman., Maurice Obstfeld and Marc Melitz. (2011). *International Economics*. New Delhi: Pearson Education.

References:

1. Bo Sodersten and Geoferry Reed. (1999). *International Economics*. New Delhi: Macmillan Publication.

2. Salvatore. D. (2006). *International Economics*. (9th edition). Singapore: John Wiley and Sons.

COURSE OBJECTIVES:**To make the students**

- To gain knowledge with logistics planning and control, decision making for effective and efficient storage and flow of materials in manufacturing and service organization.
- Identify logistics strategies to minimize inventory cost
- Demonstrate the relationship between inventory cost, transportation cost, headway, capacity restrictions, shipment frequency and shipment size
- To introduce the Concept of Multimodal transportation, their legal classifications, Characteristics and the choice of transport.
- To understand the basic concepts of Containerisation and also focuses on Chartering.
- 6.To impart basic knowledge on Inventory management, Packaging and various kinds of packing.

COURSE OUTCOMES**Learners should be able to**

1. Gain knowledge to analyze the significance of Logistics in Global scenario.
2. Students learn about liners and freight structures to plan for business outsource
3. Knowledge to prepare required documentation on logistics
4. Make Strategic and Operational logistics decisions in the context of different, complex International environments
5. Demonstrate Knowledge to plan inventory and warehousing facilities
6. Identify warehousing facilities.

Unit I

Marketing Logistics: Concept, Objectives and Scope, System elements - Relevance of logistics in International Marketing- International supply chain management and logistics - Transportation activity – Internal transportation, Inter-state goods movement - Concept of customer service.

Unit II

General Structure of Shipping: Characteristics, liner and tramp operations - Code of conduct for liner conferences - Freight structure and practices - Chartering principles and practices - UN convention on shipping.

Unit III

Developments in Ocean Transportation: Containerization - CFS and inland container depots - Dry ports - Multi-modal transportation and CONCOR - Role of intermediaries including freight booking, shipping agents, C and F agents, Ship owner and shipper consultation arrangements.

Unit IV

Air Transport: Air transportation – Total cost concept, advantages, freight structure and operations - Carrier consignee liabilities.

Unit V

Inventory Control and Warehousing: Inventory management – Concepts and application to international marketing - Significance and types of warehousing facilities - Total cost approach to logistics.

Suggested Readings:

Text book:

2. Raghuram, G. (1998). *Shipping Management: Cases and Concepts*, New Delhi: Macmillan Publishers India Ltd.
3. Sherlock, Jim. (1994). *Principles of International Physical Distribution*. New Delhi: Wiley India.

COURSE OBJECTIVES:**To make the students**

- To understand the purchase functions and materials management.
- To study the vendor development and maintenance for purchasing of capital goods.
- To familiarize with materials planning and codification.
- To recognize the legal aspects of buying and assess the industry ethical practices in materials
- To familiarize the knowledge of warehousing management.
- To understand the concept of Materials Management – functions – material planning and budgeting and Material Requirement planning

COURSE OUTCOMES**Learners should be able to**

Understand the meaning of materials management and are able to manage and plan material flows and related information flows as part of the company's logistics process.

1. Demonstrate the concept vendor development and maintenance for purchasing of capital goods.
2. Find out practical engineering solutions for materials planning and codification
3. Gain knowledge of warehousing management and import-export logistics management.
4. Recognize the legal aspects in industry ethical practices in materials management.
5. Familiarize the Materials Codification.
6. Understand the functions of Materials Management Information System

Unit I

Purchasing Functions - Relationship of purchasing Department with other departments, Procurement, Supply management activities, Purchasing objectives and policies, Operating procedures, Purchasing cycles, Objectives of materials management, Organization of material function.

Unit II

Supply Sources - Importance of source selection, Vendor development and maintenance, Vendor rating, Competitive bidding, selecting the source, Negotiation: Objectives, Process, Techniques, Price negotiation, Purchasing of capital goods, Seasonal commodities, Insurance spares. Contract management

Unit III

Materials Planning - Materials Codification: Evolution of codes, Classification, Methodology, Advantages, Standardization: Definition, Specification, Advantages, Techniques, Pricing Principles: Price analysis, Discounts, Economic consideration in determining the right price

Unit IV

Materials Management - Materials management, Legal aspects of buying, Buyer-Seller relationship and ethics Industry ethical practices in Materials

Unit V

Warehousing Management - Stores management, Incoming material Control, Stores documentation and accounting, Materials Management Information System (MMIS) - New developments in MMIS

Suggested Readings:

Text book:

1. Chatterjee, S. (2004). *Applied Materials Management*. New Delhi: Sage Publications.

4. Gopalakrishnan, P. (2001). *Purchasing and Materials Management*. (1st edition) New Delhi: Tata McGraw Hill Publishing Company Limited.

COURSE OBJECTIVES**To make the students**

- To understand the concept of supply chain and logistics.
- To familiarize the key drivers of supply chain performance.
- To understand the analytical tools necessary to solve supply chain problems.
- To get an in-depth knowledge in International supply chain
- To understand the concept of supply chain, inventory management, supply contracts, supply chain integration and global logistics.
- To apply the understanding of supply chain, inventory management, supply contracts, supply chain integration and global logistics lifelong.

COURSE OUTCOMES**Learners should be able to**

1. Understand the connection between company's internal materials management and the network in supply chain.
2. Understand the meaning of materials management and are able to manage and plan material flows and related information flows as part of the company's logistics process.
3. Create practical engineering solutions to solve existing conflicts between good customer satisfaction and working capital.
4. Understand the importance of accurate planning and product data management as a part of Logistics Management.
5. Familiarize the key drivers of Logistics outsourcing.
6. Get an in-depth knowledge in Transactional Logistics

Unit I

Supply Chain - Fundamentals, Importance, Decision Phases, Process view, Supplier-Manufacturer-Customer chain, supply chain performance: Drivers, Structuring supply chain. Overview of supply chain models.

Unit II

Overview of Demand forecasting in the supply chain - Aggregate planning, Managing predictable variability - Managing supply chain cycle inventory, Uncertainty, safety inventory, Determination of optimal level of product availability, Coordination in the Supply Chain.

Unit III

Distribution Network Design - Role, factors influencing network, options, Value Addition. Models for facility location and capacity planning - Network design: Impact of uncertainty, decisions using decision trees - Distribution center location models - Supply chain network optimization models - New developments in network designs.

Unit IV

Logistic System - Evolution, Infrastructure and Networks - Freight Management, Route Planning, Containerization - Modal Characteristics, Inter-modal operators and transport economies - Ocean carrier management, import-export logistics management. Logistics outsourcing, 3PL / 4PL, Importance of Insurance, Reverse logistics.

Unit V

Transactional Logistics - Framework and role of supply chain in e- business and b2b practices. Supply Chain IT Framework - International supply chain, GPS, tracking system, Software Packages in Supply Chain.

COURSE OBJECTIVES:**To make the students**

- To understand the basic concepts of total quality management and appreciate its importance in today's business environment.
- To understand the quality management practice and TQM tools and its application in improving the organizational performance.
- To acquire required diagnostic skills and use various quality tools.
- To get exposure on tools and techniques like six sigma, 7 old quality control
- To familiarize the students about the Quality Management System.
- To Identify the key competencies needed to be an effective manager.

COURSE OUTCOMES:**Learners should be able to**

1. Obtain the knowledge of applying a quality management TQM tools to improve organizational effectiveness.
2. Acquire required diagnostic skills and use various quality tools.
3. Get exposure on tools and techniques like six sigma, 7 old quality control
4. Familiarize about the Quality Management System.
5. Apply the Quality tools and techniques in improving the performance.
6. Understand the concept of quality management(QM), QM Principles, tools and techniques and quality systems.

Unit I

Introduction - Introduction and basic concepts, Definition of quality, Dimensions of quality, Evolution of TQM, TQM frame work, Cost of Quality.

Unit II

TQM Implementation - Leadership for TQM, Deming's quality principle, TQM implementation, PDCA cycle, Quality Circles, Quality Council, Supplier Partnership.

Unit III

Process approach to TQM - Process approach, Juran's Trilogy, Taguchi's loss function, Kaizen, Quality by design, 5S, ESI (Early Supplier Involvement), 5M.

Unit IV

Tools and Techniques - 7 Old quality control tools, Total productive maintenance, Failure Mode and Effect Analysis, POKAYOKE, Six Sigma, Toyota and Six Sigma.

Unit V

Quality Management Systems - Management systems for TQM, ISO 9000 & 14000 Quality management systems, Auditing and certification Process, Quality Awards

COURSE OBJECTIVES:**To make the students**

- To understand the salient aspects of the life insurance contract, the rights and obligations of both parties to the contract
- To make the students to understand the basics and acts related to the insurance law.
- To understand the legal environment within which life insurance practice is carried out.
- To have an exposure in life insurance law , concept and regulations.
- To understand the Superannuation and Gratuity schemes , Key man and Property Insurance
- To evaluate, plan and choose Contract of Agency , Appointment of Agents , IRDA regulations for Licensing of Agents, Brokers and Corporate Agents.

COURSE OUTCOMES**Learners should be able to**

1. Define Law of Contract: Elements of Contract and its various concepts.
2. Understand the System for Redressal of Complaints, Consideration and Legality of Object, Salient features of the Life Insurance Contract
3. Understand the Formation of IRDA, Implications of Consumer Protection Act
4. Demonstrate Life Insurance as Actionable Claim and Mortgage.
5. Get an insight in Implications of Consumer Protection Act– Insurance Initiatives in India
6. Evaluate, plan and choose Contract of Agency , Appointment of Agents , IRDA regulations for Licensing of Agents, Brokers and Corporate Agents.

Unit I:

Law of Contract: Elements of Contract – Capacity of Parties to Contract – Consensus ad idem – Consideration and Legality of Object – Salient features of the Life Insurance Contract like the Principles of Indemnity, Insurable Interest and Utmost Good Faith.

Unit II:

Definition of Law - Statute Law and Common Law - Arbitration and Consumer Forums – Various Laws and Acts like Shops and Establishments Act – Prevention of Money Laundering Act.

Unit III:

Group Life Insurance – Superannuation and Gratuity schemes – Key man and Property Insurance - Life Insurance as Actionable Claim and Mortgage – Policy Loans – Stamp Act Provisions. Assignment, Nomination and MWP Act Provisions – Loss of Policies - Claims Settlement Process – Maturity Claims – Death Claims – Presumption of death for Missing Persons – Evidence of Title and Succession.

Unit IV:

Contract of Agency – Appointment of Agents – IRDA regulations for Licensing of Agents, Brokers and Corporate Agents – Authority of Agent – Rights and Responsibilities of Agents and Principal – Termination of Agency and Renewal / Hereditary Commission.

Unit V:

LIC Act 1956 - System for Redressal of Complaints – Implications of Consumer Protection Act– Insurance Initiatives in India – Formation of Malhotra Committee on Reforms in Insurance Sector – Formation of IRDA - Provisions of IRDA Act 1999.

Suggested Readings:

Text Books:

3. Dan Mays McGill. (2006). *Fundamentals of Private Pensions*. (9th edition). Oxford University Press

COURSE OBJECTIVES:**To make the students**

- To have an exposure in important role in supporting conduct of insurance business in reinsurance.
- To understand all aspects surrounding Reinsurance and Promotional measures.
- To evaluate, plan and choose channels of retail distribution strategies.
- To get an insight in IT application and international retailing trends
- To understand the newly emerging concepts, trends and practices at Reinsurance
- To know the concept of Retentions and Factors influencing retentions

COURSE OUTCOMES**Learners should be able to**

1. Explain Reinsurance and its various concepts.
2. Understand what Reinsurance means to business executives and academics
3. Understand the ways that insurers use those factors which influence retentions and techniques to interact Non-Proportional Reinsurance with their customers.
4. Demonstrate special factors for different classes of reinsurance
5. Analyze Special factors for different classes of reinsurance
6. Apply the Concept of banking and insurance, its products in lifelong practice.

Unit I:

Introduction to Reinsurance: Nature of reinsurance – Analysis of factors that influence results – Historical background – Reinsurance in India before and after nationalization and liberalization – GIC Re – Regional co-operation – Functions of reinsurance – Advantages.

Unit II:

Forms of Reinsurance: Facultative reinsurance – Treaty reinsurance – Facultative Obligatory Treaty – Considerations for facultative placements.

Unit III:

Methods of Reinsurance 1: Proportional Reinsurance: Surplus – Quota Share – Proportional Treaty – Bordereaux – Premiums – Ceding Commission – Claims – Quota Share Treaty – Quota Share and surplus combined – Specimen Treaty Slip.

Unit IV:

Methods of Reinsurance 2 : Non-Proportional Reinsurance: Excess of Loss – Working (Per Risk) XL - Catastrophe XL – Stop Loss XL – Aggregate XL – Non-proportional Treaty – Ultimate Net Loss – reinsured Retention – Premium – Burning Cost – Exposure Rating / Pareto Loss Distribution – Reinstatement – Claims – Inception and Termination – Specimen Treaty Slip.

Unit V:

Retentions: Setting Retentions – General Considerations – Factors influencing retentions – Types of retentions – Accumulations within and between branches – Retentions for Property insurance – Engineering insurance – Accident and Liability insurance – Marine Cargo and Hull insurance – Aviation insurance – Life insurance – Special factors for different classes of reinsurance.

COURSE OBJECTIVES:**To make the students**

- To have an exposure in Theoretical Aspects of Risk Management.
- To understand ways to achieve progress toward its goals and missions on a direct, efficient, and effective path.
- To make the students understand, analyze and reduce the risk of damage to physical assets, exposure to legal liability, or injury to employees or customers.
- To understand the Scope and Objectives of Risk Management and formal system of risk threats.
- To evaluate and identify and analyze the loss exposures
- To understand about alternate risk management techniques and its applications.

COURSE OUTCOMES:**Learners should be able to**

1. Explain Risk Management, and its Risk concepts.
2. Understand Defining role, functions and duties of a Risk manager – Risk management policy
3. Understand the Alternate risk management techniques: Risk control ways by Risk financing and insurance
4. Explain Risk identification purpose and details
5. Understand the fundamentals risk management and Alternate risk management techniques.
6. Demonstrate capabilities of critical thinking, Managerial and technical decisions.

Unit I:

Theoretical Aspects of Risk Management: Risk concepts and possibilities – Risk classification and categorization – Approaches and Philosophy – Cost of risk.

Unit II:

Scope and Objectives of Risk Management: Formal system of risk threats – Contributory factors – Measures for economic control – Basic components of the risk management system – Definitions – Process and administration – Possible contributions and Potential benefits of risk management to a business.

Unit III:

Building up an Effective Risk Management Programme: Deciding the programme objectives – Pre and post loss objectives – Defining role, functions and duties of a Risk manager – Risk management policy – Objectives and Implementation strategies – Risks profiling and risk audits.

Unit IV:

Identifying and analyzing loss exposures: Risk identification purpose and details – Types of risk identification techniques – Hazard identification and risk assessment – Statistical and other methods of assessing risk exposures – Prioritizing and mapping of risks.

Unit V:

Alternate risk management techniques: Risk control – Loss control management – Risk financing and Transfer mechanisms – Risk control – Risk financing and insurance – Risk retention and transfer strategy – Selecting the best technique – Managerial and technical decisions in implementation the selected technique.

Suggested Readings:

Text Books:

2. Insurance Institute of India. (2013). *Risk Management IC86*.

COURSE OBJECTIVE:**To make the students**

- To assess the overall knowledge of the student in the relevant field of Management
- Test the student's learning and understanding during the course of their programme
- To prepare the students to face interview both in the academic and the industrial sector
- To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
- To apply the theoretical and practical learning of doing research into lifelong practice.
- To enhance students knowledge in international culture and negotiation, where employability is made easy.

COURSE OUTCOME:**Learners should be able to**

1. Develop the skills, knowledge, attitudes, and perceptions along with the experience needed to constitute a professional identity.
2. Gain actual supervised professional experiences.
3. Get insight in working of the real organizations
4. Analyze the work behavior of the specific functional areas.
5. Match linkages among different functions and departments.
6. Discover career opportunities to students in exploring in their areas of interest.

Every student has to undergo major project in a company for a period of 25 working days during the fourth semester. He / She have to submit a project report containing details of company, company profile, different functional area problems and prospects. The project should be done during the fourth semester. A research project may be based on primary / secondary data.

The report should be well documented and supported by –

- Cover and Title Page
- Certificate, Company Certificate and Declaration
- Acknowledgement
- List of Contents, List of Tables and List of Charts
- Introduction of the Study
- Review of Literature
- Research Methodology
- Data Analysis and Interpretation
- Findings, Suggestions and Conclusion
- Bibliography
- Appendix

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு – I : இக்கால இலக்கியம்:

(10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை –
ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் –மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்:

(10 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் – 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்:

(10 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை:

(10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்

2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்

3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:

(8 மணிநேரம்)

1. பொருத்தமான தமிழ்ச் சொற்களைப் பயன்படுத்துதல்
2. செய்யுள் பொருளுணர் திறன்
3. மொழிபெயர்ப்புப் பயிற்சிகள்
4. கடிதங்கள் மற்றும் விண்ணப்பங்கள் எழுதுதல்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcome:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us - Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. A River - A.K. Ramanujan
3. The Sailor - Safaa Fathy

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Romance of a Busy Broker - O.Henry
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV : GRAMMAR

1. Tenses
2. Auxiliaries (Primary and Modal)
3. Articles
4. Tag Questions

UNIT - V : FUNCTIONAL ENGLISH

1. Filling the blanks with the suitable form of verb in a conditional sentence.
2. Dialogue Writing
3. Changing positive to negative without altering the meaning

4. Fill in the blank with suitable modal
5. Framing a question to a statement
6. Rewrite the sentences changing the underlined word as directed

Prescribed Text:

Reminisce, Published by the Department of English, Karpagam University.

Suggested Reading:

Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

Course Objectives

This course enables the students to learn

- The concepts of essentials of concavity, inflection points and its geometrical applications.
- The Higher order derivatives and its applications in business, economics and life sciences.
- The Leibniz rule and its applications in exponential and trigonometric.
- The concepts of volumes by slicing, disks and washers' methods, volumes by cylindrical shells, parametric equations and parameterizing a curve.
- The concepts of vector functions, operations with vector-valued functions, limits and continuity of vector functions.
- Recognize the appropriate tools of calculus to solve applied problems.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Understand the concepts of hyperbolic functions.
2. Explore the concept of reduction formula and calculate limits in indeterminate forms by a repeated use of L'Hospital rule.
3. Use single and multiple integration to calculate the arc length, area and volume.
4. Understand the techniques of sketching conics and properties of conics.
5. Know about the knowledge on application of vector functions.
6. Acquire the knowledge on application of Kepler's second law.

UNIT I

Hyperbolic functions, higher order derivatives, Leibniz rule and its applications to problems of type $e^{ax+b}\sin x$, $e^{ax+b}\cos x$, $(ax+b)^n\sin x$, $(ax+b)^n\cos x$.

UNIT II

Reduction formulae, derivations and illustrations of reduction formulae of the type $\int \sin nx \, dx$, $\int \cos nx \, dx$, $\int \tan nx \, dx$, $\int \sec nx \, dx$, $\int \log x^n \, dx$, $\int \sin^n x \cos^m x \, dx$. Curve tracing in Cartesian coordinates, tracing in polar coordinates of standard curves, L'Hospital's rule, applications in business, economics and life sciences.

UNIT III

Volumes by slicing, disks and washers methods, volumes by cylindrical shells, parametric equations, parameterizing a curve, arc length, arc length of parametric curves, area of surface of revolution.

UNIT IV

Concavity and Inflection points, asymptotes. Techniques of sketching conics, reflection properties of conics, rotation of axes and second degree equations, classification into conics using the discriminant, polar equations of conics.

UNIT V

Introduction to vector functions, operations with vector-valued functions, limits and continuity of vector functions, differentiation and integration of vector functions, tangent and normal components of acceleration, modeling ballistics and planetary motion, Kepler's second law.

SUGGESTED READINGS

TEXT BOOK

1. Strauss M.J., Bradley G.L., and Smith K. J., (2007). Calculus, Third Edition ,Dorling Kindersley (India) Pvt. Ltd. (Pearson Education), Delhi.

REFERENCES

1. Thomas G.B., and Finney R.L., (2005). Calculus, Ninth Edition, Pearson Education, Delhi.
2. Anton H., Bivens I., and Davis S.,(2002). Calculus, Seventh Edition, John Wiley and Sons (Asia) P. Ltd., Singapore.
3. Courant R., and John F., (2000). Introduction to Calculus and Analysis (Volumes I & II), Springer- Verlag, New York.

Course Objectives

This course enables the students to learn

- The functions, relations, systems of linear equations and linear transformations.
- How to identify, evaluate and simplify algebraic expressions using the correct operations.
- The basic concepts of linear algebra.
- The concepts of principles of mathematical induction.
- The solution and application of linear systems.
- The application of matrix, inverse of matrix and system of linear equations.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Know about the basic concepts of set theory.
2. Describe the categories of functions.
3. Understand the algorithms on operation.
4. Use matrix operations to solve system of linear equations.
5. Learn how to find characteristic equation, eigen value and eigen vector for matrix.
6. Know about the applications of linear systems and linear independence.

UNIT I

Polar representation of complex numbers, n th roots of unity, De Moivre's theorem for rational Indices and its applications. Sets –Finite and infinite sets-Equality sets-Subsets-Comparability -Proper subsets-Axiomatic development of set theory-Set operations.

UNIT II

Equivalence relations, Functions, Composition of functions, Invertible functions, One to one Correspondence and cardinality of a set, Well-ordering property of positive integers.

UNIT III

Division algorithm, Divisibility and Euclidean algorithm, Congruence relation between integers, Principles of Mathematical Induction, Statement of Fundamental Theorem of Arithmetic.

UNIT IV

Systems of linear equations, row reduction and echelon forms, vector equations, the matrix equation $Ax=b$, solution sets of linear systems, applications of linear systems, linear independence.

UNIT V

Introduction to linear transformations, matrix of a linear transformation, inverse of a matrix, characterizations of invertible matrices. Subspaces of R^n , dimension of subspaces of R^n and rank of a matrix, Eigen values, Eigen Vectors and Characteristic Equation of a matrix.

		Semester – I			
		L	T	P	C
17MMU103	LOGIC AND SETS	6	2	0	6

Course Objectives

This course enables the students to learn

- First-order formula of predicate logic is a tautology using a natural-deduction style formal system.
- The formal definitions of predicates, operations on sets and pertaining to relations.
- The concepts of Set operations and the laws of set theory and Venn diagrams.
- Composition of relations, Types of relations, Partitions, Partial ordering relations and n-ary relations.
- The enhancement of logical thinking and its application to computer science.
- The methods of mathematical logic.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Acquire the knowledge about propositions, conjunction, disjunction, logical equivalences and counting principle.
2. Identify between binding variables and negations.
3. Use the language of set theory, interpreting issues in different areas of mathematics.
4. Know the concepts Difference and Symmetric difference of two sets.
5. Mastery in the concepts of relations.
6. Study Composition of relations, Types of relations, Partitions, Partial ordering relations and n-ary relations.

UNIT I

Introduction, propositions, truth table, negation, conjunction and disjunction. Implications, biconditional propositions, converse, contra positive and inverse propositions and precedence of logical operators.

UNIT II

Propositional equivalence: Logical equivalences.

Predicates and quantifiers: Introduction, Quantifiers, Binding variables and Negations.

UNIT III

Sets: Subsets, Set operations and the laws of set theory and Venn diagrams. Examples of finite and infinite sets.

UNIT IV

Finite sets and counting principle. Empty set, properties of empty set. Standard set operations. Classes of sets. Power set of a set. Difference and Symmetric difference of two sets. Set identities, Generalized union and intersections.

UNIT V

Relation: Product set, Composition of relations, Types of relations, Partitions. Equivalence Relations with example of congruence modulo relation, Partial ordering relations, n-ary relations.

TEXT BOOK

1. Grimaldi R.P.,(2004). Discrete Mathematics and Combinatorial Mathematics, Pearson Education, Pvt.Ltd, Singapore.

REFERENCES

1. Bourbaki .N(2004),Theory of sets, Springer Pvt Ltd, Paris.
2. Halmos P.R.,(2011). Naive Set Theory, Springer Pvt Ltd, New Delhi.
3. Kamke E., (2010).Theory of Sets, Dover Publishers, New York.

Course Objectives

This course enables the students to learn

- To demonstrate comprehension in relevant area of calculus
- Problem solving through (computer language) programming.
- The basic structure of the programme, declaration and usage of variables.
- The basic MATLAB (matrix laboratory) programme.
- The usage of MATLAB in order to facilitate understanding and visualization of mathematical problems
- The practical preparation knowledge to apply the acquired knowledge and skills.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Familiarize with the programming environment.
2. Acquire the problem solving skills through computer programming.
3. Understand to write diversified solutions using programming language.
4. Plot of graphs of functions (exponential, logarithmic, trigonometric).
5. Sketching parametric curves (Eg. Trochoid, cycloid, epicycloids, hypocycloid).
6. Deal with different input/output methods.

List of Practical (using MATLAB)

(Any 8 programs)

1. Plotting of graphs of function e^{ax+b} , $\log(ax+b)$, $1/(ax+b)$, $\sin(ax+b)$, $\cos(ax+b)$, $|ax+b|$ and to illustrate the effect of a and b on the graph.
2. Plotting the graphs of polynomial of degree 4 and 5, the derivative graph, the second derivative graph and comparing them.
3. Sketching parametric curves (Eg. Trochoid, cycloid, epicycloids, hypocycloid).
4. Obtaining surface of revolution of curves.
5. Tracing of conics in cartesian coordinates/ polar coordinates.
6. Sketching ellipsoid, hyperboloid of one and two sheets, elliptic cone, elliptic, paraboloid, hyperbolic paraboloid using cartesian coordinates.
7. Matrix addition.
8. Matrix multiplication.
9. Inverse of a matrix.

பகுதி – I, தமிழ்

17LSU201 :

தமிழ் இரண்டாம் தாள்

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

பருவம் II

4-H,4-C

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

0. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
1. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
2. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
3. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
4. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
5. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு – I : பக்தி இலக்கியம்

(10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு.

1. சைவம் - பெரியபுராணம் - திருமூலநாயனார் புராணம்.
2. வைணவம் - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு – II : சங்க இலக்கியம் :

(15 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). எட்டுத்தொகை

நற்றிணை : பிரசம் கலந்த – பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை – குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு –

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்டு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்தொடி கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் –பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் – ‘சிறுதினை மலரொடு’ என்பதிலிருந்துதொடங்கி,

‘அறிந்தவாறே’ என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – ‘தெய்வம் சான்ற’ என்பதிலிருந்து தொடங்கி,

‘நல்குமதி’ என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம்

(6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – கண்ணகியின் சிறப்பு:

‘நாகநீள் நகரொடு’ என்பதிலிருந்து தொடங்கி,

‘கண்ணகி என்பாண் மன்னோ’ என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில்

எடுத்தல்: ‘அருந்திறலரசர்’ என்பதிலிருந்து தொடங்கி, ‘மன்னவரேறென்’ என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி

காட்சியளித்தல்: ‘என்னே’ என்பதிலிருந்து தொடங்கி, ‘விசும்பில் தோன்றுமால்’ என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: ‘நீர்வார் கண்ணை’ என்பதிலிருந்து தொடங்கி, ‘புகாரென் பதியே’ என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: ‘வன்னி மரமும்’ என்பதிலிருந்து தொடங்கி, ‘பதிப்பிறந்தேன்’ என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை

(10 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி

(7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Course Objectives

This course enables the students to learn

- First order exact differential equations, linear homogeneous and non homogeneous equations of higher order with constant coefficients.
- The complete solution of a non-homogeneous differential equation with constant coefficients by the method of undetermined coefficients.
- The transform of a periodic function.
- The applications of the inverse Laplace transform.
- The Euler's equations, method of variation of parameters.
- The predatory-prey model and its analysis, epidemic model of influenza and its analysis.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the concepts of explicit, implicit and singular solutions of a differential equation.
2. Acquire knowledge on linear and bernoulli's equaitons.
3. Know the concepts of population model.
4. Understand the method of solving differential equation using variation of parameters. Identify the applications of differential equations.
5. Know about the concepts of Euler's equation, method of undetermined coefficients and method of variation of parameters.
6. Understant the predatory-prey model and its analysis, epidemic model of influenza and its analysis.

UNIT I

Differential equations and mathematical models. General, particular, explicit, implicit and singular solutions of a differential equation.

UNIT II

Exact differential equations and integrating factors, separable equations and equations reducible to this form, linear equation and Bernoulli equations, special integrating factors and transformations.

UNIT III

Introduction to compartmental model, exponential decay model, lake pollution model (case study of Lake Burley Griffin), drug assimilation into the blood (case of a single cold pill, case of a course of cold pills), exponential growth of population, limited growth of population, limited growth with harvesting.

UNIT IV

General solution of homogeneous equation of second order, principle of super position for homogeneous equation, Wronskian: its properties and applications, Linear homogeneous and non-homogeneous equations of higher order with constant coefficients, Euler's equation, method of undetermined coefficients, method of variation of parameters.

UNIT V

Equilibrium points, Interpretation of the phase plane, predatory-prey model and its analysis, epidemic model of influenza and its analysis, battle model and its analysis.

SUGGESTED READINGS

TEXT BOOK

1. Ross S.L., (2004). Differential Equations, Third Edition, John Wiley and Sons, India.

REFERENCES

1. Martha L Abell., and James P Braselton., (2004). Differential Equations with MATHEMATICA, Third Edition, Elsevier Academic Press.
2. Sneddon I.,(2006). Elements of Partial Differential Equations, McGraw-Hill, International Edition, New Delhi.

Course Objectives

This course enables the students to learn

- The solution of Reciprocal and Binomial Equations and properties of the derived functions.
- About the properties of polynomials.
- The concepts of Relations between the roots and coefficients and applications of theorems.
- About algebraic Solution of the Cubic and Biquadratic and Properties of the Derived Functions.
- The algebraic solutions of cubic and biquadratic equations.
- The relation between coefficients of the equation and its roots.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Learn about the properties of polynomials.
2. Find positive, negative and imaginary roots using Descartes rule.
3. Identify the relation between coefficients of the equation and its roots.
4. Familiarize about the transformations of equations.
5. Know about the algebraic solutions of cubic and biquadratic equations.
6. Understand Algebraic Solution of the Cubic and Biquadratic.

UNIT I

General properties of polynomials: Theorem relating to polynomials when the variable receives large values, similar theorem when the variable receives small values.

Continuity of a rational integral function - Form of the quotient and remainder when a polynomial is divided by a Binomial - Tabulation of functions - Graphic representation of a polynomial - Maximum and minimum values of polynomials

UNIT II

General properties of equations: Theorems relating to the real roots of equations - Existence of a root in the general equation. Imaginary roots - Theorem determining the number of roots of an equation.

Descartes' rule of signs for positive roots - Descartes' rule of signs for negative roots - Use of Descartes' rule in proving the existence of imaginary roots - Theorem relating to the substitution of two given numbers for the variable

UNIT III

Relations between the roots and coefficients-Theorem - Applications of the theorem - Depression of an equation when a relation exists between two of its roots - The cube roots of unity - Symmetric functions of the roots – Examples - Theorems relating to symmetric functions - Examples.

UNIT IV

Transformation of Equations: Transformation of equations - Roots with signs changed - Roots multiplied by a given quantity - Reciprocal roots and reciprocal equations - To increase or diminish the roots by a given quantity - Removal of terms - Binomial coefficients.

Solution of reciprocal and binomial equations: Reciprocal equations - Binomial equations. Propositions embracing their leading general Properties - The special roots of the equation - Solution of binomial equations by circular functions – Examples.

UNIT V

Algebraic Solution Of the Cubic and Biquadratic: On the algebraic solution of equations - The algebraic solution of the cubic equation - Application to numerical equations - Expression of the cubic as the difference of two cubes - Solution of the cubic by symmetric functions of the roots – Examples .

Properties of the Derived Functions: Graphic representation of the derived function - Theorem relating to the maxima and minima of a polynomial - Rolle's Theorem. Corollary - Constitution of the derived functions

3. James Víctor Uspensky., (2005). Theory of Equations, McGraw-Hill Book Co, New York.
4. MacDuffee C.C., (1962). Theory of Equations, John Wiley & Sons Inc., New York.

Course Objectives

This course enables the students to learn

- The fundamental properties of the real numbers that underpin the formal development of real analysis
- About the extreme points, Root test, Ratio test.
- The alternating series, and series of functions.
- The concepts of real Sequence, Bounded sequence, Cauchy convergence criterion for sequences.
- The basic theorems on monotone sequences and their convergence.
- About the Power series and radius of convergence.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand about the categories of sets.
2. Acquire the knowledge on limits and convergence of sequences.
3. Know the types of test of convergence for series.
4. Familiarize about the basic theorems on monotone sequences.
5. Know about the integrability and differentiability of functions.
6. Understand the Power series and radius of convergence.

UNIT I

Finite and infinite sets, examples of countable and uncountable sets. Real line, bounded sets, suprema and infima, completeness property of \mathbb{R} , Archimedean property of \mathbb{R} , intervals.

UNIT II

Real Sequence, Bounded sequence, Cauchy convergence criterion for sequences. Limit of a sequence. Limit Theorems. Cauchy's theorem on limits, order preservation and squeeze theorem, monotone sequences and their convergence (monotone convergence theorem without proof).

UNIT III

Infinite series. Cauchy convergence criterion for series, positive term series, geometric series, comparison test, convergence of p-series, Root test, Ratio test, alternating series, Leibnitz's test (Tests of Convergence without proof). Definition and examples of absolute and conditional convergence.

UNIT IV

Monotone Sequences, Monotone Convergence Theorem. Subsequences, Divergence Criteria, Monotone Subsequence Theorem (statement only), **Bolzano Weierstrass Theorem for Sequences**. Cauchy sequence, Cauchy's Convergence Criterion. Concept of cluster points and statement of Bolzano-Weierstrass theorem.

UNIT V

Sequence of functions, Series of functions, Pointwise and uniform convergence. Mn-test, M-test, Statements of the results about uniform convergence and integrability and differentiability of functions, Power series and radius of convergence.

SUGGESTED READINGS

TEXT BOOK

1. Bartle R.G. and Sherbert D. R., 2000. Introduction to Real Analysis, John Wiley and Sons (Asia) Pvt. Ltd.

REFERENCES

1. Fischer E., (2012). Intermediate Real Analysis, Springer Verlag.
2. Ross K.A., (2003). Elementary Analysis- The Theory of Calculus Series - Undergraduate Texts in Mathematics, Springer Verlag.
3. Apostol T. M., (2002). Calculus (Vol.I), John Wiley and Sons (Asia) P. Ltd.

Course Objectives

This course enables the students to learn

- Problem-solving through programming.
- Hands-on training using lab components.
- Plotting of second order solution of differential equations and recursive sequences.
- Cauchy's root test and Ratio test by plotting the ratio.
- The exponential growth and decay, the population growth of species or the change in investment return over time.
- The usage of program to solve the differential equations.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Demonstrate comprehension in fundamental topics of computing, algorithms, computer organization and software systems.
2. Have applied knowledge of areas of computing to create solutions to challenging problems, including specify, design, implement and validate solutions for new problems.
3. Be aware of current research activity in computing through activities including reading papers, hearing research presentations.
4. Know about successfully planning and completing an individual research project in computing or its application.
5. Understand Cauchy's root test and Ratio test by plotting the ratio.
6. Acquire the knowledge on Growth model and Decay model.

List of Practical (using any software) (Any 8 programs)

1. Plotting of second order solution family of differential equation.
2. Growth model (exponential case only).
3. Decay model (exponential case only).
4. Lake pollution model (with constant/seasonal flow and pollution concentration).
5. Case of single cold pill and a course of cold pills.
6. Limited growth of population (with and without harvesting).
7. Predatory-prey model (basic volterra model, with density dependence, effect of DDT, two prey one predator).
8. Plotting of recursive sequences.
9. Verify Bolzano-Weierstrass theorem through plotting of sequences and hence identify

convergent subsequences from the plot.

10. Study the convergence/divergence of infinite series by plotting their sequences of partial sum.
11. Cauchy's root test by plotting n^{th} roots.
12. Ratio test by plotting the ratio of n^{th} and $(n+1)^{\text{th}}$ term.

Course Objectives

This course enables the students to learn

- The awareness about environmental problems among people.
- About various renewable and nonrenewable resources of the region.
- The appropriate judgments and decisions for the protection and improvement of the earth.
- The concept of Environmental Pollution, effects and control measures of urban and industrial wastes.
- About the concepts of Social Issues and the Environment.
- The causes and effects of Environmental pollution.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Create the awareness about environmental problems among people.
2. Motivate the public to participate in environment protection and improvement.
3. Know about the Role of Information Technology in environment and human health.
4. Develop an attitude of concern for the environment and biodiversity at global.
5. Investigate the Environmental Pollution, effects and control measures of urban and industrial wastes.
6. Solve Environment Protection Act, Wildlife Protection Act. Forest Conservation Act.

UNIT I

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II

Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

UNIT III

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV

Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste

management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

UNIT V

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Course Objectives

This course enables the students to learn

- The basic concepts of numerical methods.
- The Numerical integration and differentiation, numerical solution of ordinary differential equations.
- The Engineering problems which are impossible to solve by analytical means.
- Numerical methods to solve linear system of equations.
- The numerical solution of initial value problems and boundary value problems.
- The appropriate numerical methods to solve algebraic and transcendental equations.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Study the concept of Newton's Method.
2. Realize the system of linear algebraic equations along with specified methods.
3. Know about the basic concepts of Interpolation.
4. Understand the Gregory forward and backward difference interpolation.
5. Familiar with numerical integration and differentiation, numerical solution of ordinary differential equations.
6. Use the solutions of differential equations by Runge-Kutta methods.

UNIT I

Convergence, Errors: Relative, Absolute, Round off, Truncation. Transcendental and Polynomial equations: Bisection method - Newton's method - False Position method - Secant method - Rate of convergence of these methods.

UNIT II

System of linear algebraic equations: Gaussian Elimination - Gauss Jordan methods - Gauss Jacobi method - Gauss Seidel method and their convergence analysis – LU decomposition - Power method.

UNIT III

Interpolation: Lagrange and Newton's methods. Error bounds - Finite difference operators. Gregory forward and backward difference interpolation – Newton's divided difference – Central difference – Lagrange and inverse Lagrange interpolation formula.

UNIT IV

Numerical Differentiation and Integration: Gregory's Newton's forward and backward differentiation- Trapezoidal rule, Simpson's rule, Simpsons 3/8th rule, Boole's Rule. Midpoint rule, Composite Trapezoidal rule, Composite Simpson's rule.

UNIT V

Ordinary Differential Equations: Taylor's series - Euler's method – modified Euler's method - Runge-Kutta methods of orders two and four.

5. Sastry S.S., (2008). Introductory methods of Numerical Analysis, Fourth edition, Prentice Hall of India, New Delhi.

Course Objectives

This course enables the students to learn

- The solution of Reciprocal and Binomial Equations and properties of the derived functions.
- About the relations between the roots and coefficients.
- The concept of continuous functions and limits of functions.
- The Applications of mean value theorem to inequalities and approximation of polynomials.
- Taylor's series and Maclaurin's series expansions of exponential and trigonometric functions.
- The transformations of equations

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Learn about the Limits of functions and continuous functions.
2. Understand uniform continuity, non-uniform continuity criteria, uniform continuity theorem.
3. Know about the, algebra of differentiable functions.
4. Familiarize about the Mean value theorem and its applications.
5. Know about the Cauchy's mean value theorem.
6. Understand the Taylor's theorem with Cauchy's form of remainder.

UNIT I

Limits of functions, sequential criterion for limits, divergence criteria. Limit theorems, one sided limits. Infinite limits and limits at infinity. Continuous functions, sequential criterion for continuity and discontinuity.

UNIT II

Algebra of continuous functions. Continuous functions on an interval, intermediate value theorem, location of roots theorem, preservation of intervals theorem. Uniform continuity, non-uniform continuity criteria, uniform continuity theorem.

UNIT III

Differentiability of a function at a point and in an interval, Caratheodory's theorem, algebra of differentiable functions. Relative extrema, interior extremum theorem. Rolle's theorem.

UNIT IV

Mean value theorem, intermediate value property of derivatives, Darboux's theorem. Applications of mean value theorem to inequalities and approximation of polynomials, Taylor's theorem to inequalities.

UNIT V

Cauchy's mean value theorem. Taylor's theorem with Lagrange's form of remainder, Taylor's theorem with Cauchy's form of remainder, application of Taylor's theorem to convex functions, relative extrema. Taylor's series and Maclaurin's series expansions of exponential and trigonometric functions, $\ln(1+x)$, $1/ax+b$ and $(1+x)^n$.

3. Ross K.A., (2004). Elementary Analysis: The Theory of Calculus, Springer. New York.

Course Objectives

This course enables the students to learn

- Group homomorphism, isomorphism, automorphism and its related properties.
- The concept of internal and external direct product.
- The properties of cyclic groups, permutations and cosets.
- The concepts Abelian groups, divisible and reduced groups and Torsion group.
- The extension of group structure to finite permutation groups.
- The basic concepts of group actions and their applications.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Expertise on fundamental of groups.
2. Know about Subgroups and its properties.
3. Understand the concept of cyclic groups and its properties.
4. Acquire the knowledge on basic concepts of external direct product of a finite number of groups.
5. Apply Cauchy's theorem for finite abelian groups.
6. Understand the concepts of Abelian groups, Torsion group, divisible and reduced groups.

UNIT I

Symmetries of a square, Dihedral groups, definition and examples of groups including permutation groups and quaternion groups (illustration through matrices), elementary properties of groups.

UNIT II

Subgroups and examples of subgroups, centralizer, normalizer, center of a group, product of two subgroups.

UNIT III

Properties of cyclic groups, classification of subgroups of cyclic groups. Cycle notation for permutations, properties of permutations, even and odd permutations, alternating group, properties of cosets, Lagrange's theorem and consequences including Fermat's Little theorem.

UNIT IV

External direct product of a finite number of groups, normal subgroups, factor groups, Cauchy's theorem for finite abelian groups.

UNIT V

Abelian groups, finitely generated abelian group, divisible and reduced groups, Torsion group,

4. Joseph J. Rotman, (2001). An Introduction to the Theory of Groups, Fourth Edition, Springer Verlag.

Course Objectives

This course enables the students to learn

- The Riemann integration, Point wise and uniform convergence of sequence of functions and Series of functions.
- The concept of continuous functions and their bounded variation property.
- Difference between Riemann Integration and Riemann Stieltjes Integration of functions.
- Fundamental theorems of Calculus and Improper integrals.
- The concept of cauchy criterion for uniform convergence and Weierstrass M-Test.
- About pointwise and uniform convergence of sequence of functions.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Understand Riemann sum and definition of Riemann integral.
2. Convergence of Beta and Gamma functions
3. Know about Pointwise and uniform convergence of sequence of functions
4. Theorems on the continuity and derivability of the sum function of a series of functions.
5. Understand Cauchy criterion for uniform convergence and Weierstrass M-Test.
6. Limit superior and Limit inferior and integration of power series.

UNIT I

Riemann integration - inequalities of upper and lower sums - Riemann conditions of integrability - Riemann sum and definition of Riemann integral through Riemann sums - equivalence of two definitions- Riemann integrability of monotone and continuous functions, Properties of the Riemann integral

UNIT II

Definition and integrability of piecewise continuous and monotone functions. - Intermediate Value theorem for Integrals - Fundamental theorems of Calculus - Improper integrals - Convergence of Beta and Gamma functions

UNIT III

Pointwise and uniform convergence of sequence of functions - Theorems on continuity - derivability and integrability of the limit function of a sequence of functions.

UNIT IV

Series of functions - Theorems on the continuity and derivability of the sum function of a series of functions - Cauchy criterion for uniform convergence and Weierstrass M-Test.

UNIT V

Limit superior and Limit inferior - Power series - radius of convergence - Cauchy Hadamard Theorem - Differentiation and integration of power series - Abel's Theorem - Weierstrass Approximation Theorem.

2. Charles G. Denlinger, (2011). Elements of Real Analysis, Jones & Bartlett (Student Edition),

Course Objectives

This course enables the students to learn

- The fundamentals of C and C++ programming language.
- The strength of C which provide programmers with the means of writing efficient, maintainable and portable code.
- Know the concept of a large problem into smaller parts, writing each part as a module or function
- Acquire the knowledge about a program in a high-level language being translated by a compiler into machine language program and then executed.
- The Memory Allocation and Using Classes in C++.
- Translate the computer algorithms to computer programs.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Know the basic concept of C and C++.
2. Understand the concept of functions and arrays.
3. Understand the concept structures and unions.
4. Understand pointers and references in C++.
5. Understand the concept of Differentiating between static and dynamic memory allocation.
6. Acquire the knowledge of translate the computer algorithms to computer programs.

UNIT I

Introduction to C and C++:

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++. **Data Types, Variables, Constants, Operators and Basic I/O:** Declaring, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Using Comments in programs, Character I/O (getc, getchar, putc, putchar etc), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.h etc). **Expressions, Conditional Statements and Iterative Statements:** Simple Expressions in C++ (including Unary Operator Expressions, Binary Operator Expressions), Understanding Operators Precedence in Expressions, Conditional Statements (if construct, switch-case

construct), Understanding syntax and utility of Iterative Statements (while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

UNIT II

Functions and Arrays: Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays (Declaring and Defining an Array, Initializing an Array, Accessing individual elements in an Array, Manipulating array elements using loops), Use Various types of arrays (integer, float and character arrays / Strings) Two-dimensional Arrays (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional arrays.

UNIT III

Derived Data Types (Structures and Unions): Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members. **Pointers and References in C++:** Understanding a Pointer Variable, Simple use of Pointers (Declaring and Dereferencing Pointers to simple variables), Pointers to Pointers, Pointers to structures, Problems with Pointers, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions. Pointers vs. References, Declaring and initializing references, using references as function arguments and function return values

UNIT IV

Memory Allocation in C++: Differentiating between static and dynamic memory allocation, use of malloc, calloc and free functions, use of new and delete operators, storage of variables in static and dynamic memory allocation. **File I/O, Preprocessor Directives:** Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifdef, #ifndef and #undef), Macros.

UNIT V

Using Classes in C++: Principles of Object-Oriented Programming, Defining & Using Classes, Class Constructors, Constructor Overloading, Function overloading in classes, Class Variables & Functions, Objects as parameters, Specifying the Protected and Private Access, Copy Constructors,

of arguments, Looking at an operator as a function call, Overloading Operators (including assignment operators, unary operators) **Inheritance, Polymorphism and Exception Handling:** Introduction to Inheritance (Multi-Level Inheritance, Multiple Inheritance), Polymorphism (Virtual Functions, Pure Virtual Functions), Basics Exceptional Handling (using catch and throw, multiple catch statements), Catching all exceptions, Restricting exceptions, Rethrowing exceptions.

		Semester - III			
17MMU311	NUMERICAL METHODS (PRACTICAL)	L	T	P	C
		0	0	4	2

Course Objectives

This course enables the students to learn

- Exercise user defined functions to solve real time problems.
- Illustrate flowchart and algorithm to the given problem.
- The basic structure of the programme, declaration and usage of variables.
- The basic MATLAB (matrix laboratory) programme.
- The usage of Matlab in order to facilitate understanding and visualization of mathematical problems
- Practical approach to apply the acquired knowledge and skills in professional and specialist courses.

Course outcomes (COs)

On successful completion of this course, the student will be able to

1. Acquire the basic knowledge of MATLAB and explore the structure of the numerical methods.
2. Use different memory allocation methods.
3. Deal with different input/output methods.
4. Use different data structures.
5. Express their ideas in terms of the syntax of the computer package MATLAB.
6. Apply the MATLAB programme in the real world situation involving numerical problems.

List of Practical (using MATLAB/Mathematical/ SCILAB) (Any 10 Programs)

1. Calculate the sum $1/1 + 1/2 + 1/3 + 1/4 + \dots + 1/N$.
2. To find the absolute value of an integer.
3. Enter 100 integers into an array and sort them in an ascending order.
4. Bisection Method.
5. Newton Raphson Method.
6. Secant Method.
7. Regula Falsi Method.
8. LU decomposition Method.
9. Gauss-Jacobi Method.
10. Gauss-Seidel Method.
11. Lagrange Interpolation or Newton Interpolation.
12. Simpson's rule.

Course Objectives

This course enables the students to learn

- Geometry and its applications in the real world
- Geometric ideas in the language of the mathematician.
- Parabola, Ellipse and Hyperbola.
- The relation between areas of a triangle and its projection, relation between areas of a polygon.
- The General Equations Tracing of Curves.
- The fundamental theorems of isomorphism.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Acquiring knowledge of straight lines and area of triangle..
2. Know about Reflection properties of parabola.
3. Acquire the knowledge on basic concepts of Hyperbola and their applications.
4. Study the angles between two directed lines, the projection of a segment.
5. Understand the General Equations Tracing of Curves.
6. Know about particular cases of Conic sections.

UNIT I

Coordinates, Lengths of straight lines and areas of triangle, polar coordinates. Locus, equation to a locus. Straight line: Equation of a straight line, angle between two straight line. Length of a perpendicular techniques for sketching parabola, ellipse and hyperbola. Reflection properties of parabola.

UNIT II

Parabola and Ellipse: Classification of quadratic equations representing lines. Parabola : Loci Connected with the parabola ,three normals passing through a given points , parabola referred to two tangent as axes. Ellipse: Auxiliary circle and eccentric angle , equation to a tangent , some properties of Ellipse , poles and polar , conjugate diameters , four normals through any points.

UNIT III

Hyperbola: Asymptotes – equations referred to the asymptotes an axes – one variables examples. Spheres: The Equation of a sphere - Tangents and tangent plane to a sphere - The radical plane of two spheres Cylindrical surfaces. Illustrations of graphing standard quadric surfaces like cone, ellipsoid.

UNIT IV

The angles between two directed lines, the projection of a segment , relation between a segment and its projection , the projection of a broken line , the angle between two planes , relation between areas of a triangle and its projection , relation between areas of a polygon.

UNIT V

Polar equation to a conic: General Equations Tracing of Curves, particular cases of Conic sections, transformation of equations to center as origin, equations to asymptotes , tracing a parabola , tracing a central conic , eccentricity and foci of general conic.

SUGGESTED READINGS

TEXT BOOKS

1. Loney S.L.,(2005). The Elements of Coordinate Geometry, McMillan and Company, London.
(For Unit I , II, III & V)
2. Bill R.J.T., (1994). Elementary Treatise on Coordinate Geometry of Three Dimensions,
McMillan India Ltd. New Delhi. (For Unit IV)

REFERENCES

2. Thomas G.B., and Finney R.L., (2005). Calculus, Ninth Edition, Pearson Education, Delhi.
3. Fuller, Gordon.,(2000). Analytic Geometry, Addison Wesley Publishing Company Inc. Cambridge.

Course Objectives

This course enables the students to learn

- The various methods of solving Differential equations which is very much used in the field of Engineering.
- The Method of Separation of Variables for solving first order partial differential equations.
- The basic concepts of Reduction of second order Linear Equations to canonical forms
- The Systems of linear differential equations and its applications.
- The concept of second order linear homogeneous, non-homogeneous differential equations with constant coefficients.
- The application of The Euler method-The modified – Euler method -The Runge-Kutta method.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Understand the basic concepts partial differential equations.
2. Gain knowledge about forming the differential equations method of separation of Variables, Initial Boundary Value Problems and method of successive approximations.
3. Know about the Reduction of second order Linear Equations to canonical forms.
4. Study the Method of separation of variables and Solving the Vibrating String.
5. Understand the Basic Theory of linear systems in normal form.
6. Use the Numerical methods to solve the real world problems.

UNIT I

Partial Differential Equations – Basic concepts and Definitions -Mathematical Problems.

First Order Equations: Classification - Construction and Geometrical Interpretation- Method of characteristics for obtaining General Solution of Quasi Linear Equations- Canonical Forms of First-order Linear Equations.

UNIT II

Method of Separation of Variables for solving first order partial differential equations.

Derivation of Heat equation -Wave equation and Laplace equation. - Classification of second order - linear equations as hyperbolic, parabolic or elliptic.

UNIT III

Reduction of second order Linear Equations to canonical forms- The Cauchy problem- The Cauchy-Kowaleewskaya theorem -Cauchy problem of an infinite string - Initial Boundary Value Problems - Semi-Infinite String with a fixed end - Semi-Infinite String with a Free end- Equations with non-homogeneous boundary conditions -Non- Homogeneous Wave Equation.

UNIT I V

Method of separation of variables - Solving the Vibrating String - Problems- Solving the Heat Conduction problem - Systems of linear differential equations - Types of linear systems differential operators - an operator method for linear systems with constant coefficients.

UNIT V

Basic Theory of linear systems in normal form : Homogeneous linear systems with constant coefficients
-Two Equations in two unknown functions -The method of successive approximations -The Euler method-The modified – Euler method -The Runge-Kutta method.

SUGGESTED READINGS

TEXT BOOK

1. Tyn Myint-U and Lokenath Debnath., (2006). Linear Partial Differential Equations for Scientists and Engineers, 4th edition, Springer, Indian reprint.

REFERENCES

1. Ross S.L., (2004). Differential equations, Third Edition, John Wiley and Sons, India.
2. Martha L Abell., James P Braselton, (2004). Differential equations with MATHEMATICA, Third Edition Elsevier Academic Press.

Course Objectives

This course enables the students to learn

- Group homomorphism, isomorphism, automorphism and its related properties.
- Different types of groups such as normal subgroups, factor groups
- Familiar with various direct product of groups.
- Sylow's theorems, Cauchy's theorem and Index theorem.
- The concept of internal and external direct product.
- The applications of group actions and Generalized Cayley's theorem.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Expertise on fundamental theorems of isomorphism.
2. Know about automorphism and its developments.
3. Understand the concept of internal and external direct product.
4. Acquire the knowledge on basic concepts of group actions and their applications.
5. Apply Sylow's theorems to determine the structure of certain groups of small order.
6. Understand the applications of group actions and Generalized Cayley's theorem.

UNIT I

Group homomorphisms, properties of homomorphisms, Cayley's theorem, properties of isomorphisms, First, Second and Third isomorphism theorems.

UNIT II

Automorphism, inner automorphism, automorphism groups, automorphism groups of finite and infinite cyclic groups, applications of factor groups to automorphism groups, Characteristic subgroups, Commutator subgroup and its properties.

UNIT III

Properties of external direct products, the group of units modulo n as an external direct product, internal direct products, Fundamental Theorem of finite abelian groups.

UNIT IV

Group actions, stabilizers and kernels, permutation representation associated with a given group action, Applications of group actions: Generalized Cayley's theorem, Index theorem.

UNIT V

Groups acting on themselves by conjugation, class equation and consequences, conjugacy in S_n , p -groups, Sylow's theorems and consequences, Cauchy's theorem, Simplicity of A_n for $n \geq 5$, non-simplicity tests.

SUGGESTED READINGS**TEXT BOOK**

1. Fraleigh.J.B., (2004). A First Course in Abstract Algebra , Seventh edition , Pearson Education Ltd, Singapore.

REFERENCES

1. David S. Dummit and Richard M. Foote, (2004)., Abstract Algebra,. Third Edition., John Wiley and Sons (Asia) Pvt. Ltd., Singapore.

3. Joseph A. Gallian., (2001). Contemporary Abstract Algebra, Fourth Edition., Narosa Publishing House, New Delhi.
4. Artin.M., (2008). Algebra, Prentice - Hall of India, New Delhi.

Course Objectives

This course enables the students to learn

- Fundamental concepts of duality, economic interpretation of dual constraints and game theory.
- The simplex method to solve small linear programming models by hand, given a basic feasible point.
- Formulation of a given simplified description of a suitable real-world problem as a linear programming model.
- Revised Simplex Method, Parametric Linear Programming, Integer Linear Programming: Branch and Bound Method, Cutting Plane Method.
- Mathematical Formulation of LPP, Solution of LPP: Graphical Method with special cases, Simplex Method, Big-M Method, Two Phase method. Special cases in simplex method, Duality theory, Dual Simplex algorithm.
- Solution of Transportation problem and Assignment Problems.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Formulate a LPP and solve it by simplex and graphical method. Also do post optimal analysis of the formulated problem or other application areas.
2. Understand the concepts of Duality, Primal Dual relationship.
3. Solve a Transportation and its types.
4. Analysis Assignment problem and its models.
5. Know the concept of game theory.
6. Study the games with mixed strategies, graphical solution procedure, linear programming solution of games.

UNIT I

Introduction to Linear Programming Problem – Formulation of LPP – Graphical Linear Programming Solution- Theory of Simplex Method-Optimality and unboundedness-the Simplex algorithm –Simplex method in tableau format- Introduction to artificial variables – two –phase method – Big –M method and their comparison.

UNIT II

Duality – Definition of the dual Problems-Formulation of the dual Problem-Primal Dual relationship: Review of simplex matrix Operations –Simplex tableau Layout-Optimal Dual Solution-Simplex Tableau computations. Economic interpretation of the dual: Economic Interpretation of Dual Variables- Economic Interpretation of Dual Constraints.

UNIT III

Transportation Problem: Definition of the Transportation model – Nontraditional Transportation model – The Transportation Algorithm: Determination of the Starting Solution-Northwest –corner method, Least – corner method, Vogel approximation method- Iterative Computations of the Transportation Algorithm.

UNIT IV

The Assignment Model: Introduction to Assignment model- Mathematical Formulation of Assignment model- Hungarian method for solving assignment problem –Simplex Explanation of the Hungarian method.

UNIT V

Game theory: Formulation of two person zero games – Solving two person zero sum games, games with mixed strategies, graphical solution procedure, linear programming solution of games.

3. Hadley G.,(2002). Linear Programming, Narosa Publishing House, New Delhi.

Course Objectives

This course enables the students to learn

- The main components of OS and their working.
- The memory allocation methods, page replacement algorithms, file allocation methods, multi-threading, process synchronization, and CPU scheduling.
- The basic components of a computer operating system, and the interactions among the various components.
- The capabilities and limitations of computer operating systems, process management, processor scheduling, deadlocks, memory management, secondary memory management, file management and I/O systems.
- Introduce the concepts of process and thread and their scheduling policies.
- Design the components of operating system.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Familiar with the memory allocation methods, page replacement algorithms, file allocation methods, multi-threading, process synchronization, and CPU scheduling.
2. Describe the main components of OS and their working.
3. Explain the concepts of process and thread and their scheduling policies.
4. Solve synchronization and deadlock issues.
5. Compare the different techniques for managing memory, I/O, disk and files.
6. Design components of operating system.

UNIT I

Introduction -Mainframe systems Desktop Systems – Multiprocessor systems – distributed systems – real time systems. Process: - Process concepts – Operation on process – cooperation process - Inter process Communication - Mutual Exclusion - Critical sections- primitives – Semaphores – Deadlock: System Model, Deadlock characterization, Deadlock prevention, avoidance, detection, recovery from deadlock.

UNIT II

Storage management: Memory Management - swapping- Contiguous memory allocation – paging, segmentation – segmentation with paging – Virtual memory :Virtual storage organization – Demand Paging, Process Creation – Page replacement – Thrashing.

UNIT III

Processor Scheduling : preemptive scheduling : - Scheduling Criteria – Scheduling Algorithms – FCFS- SJF- Priority – RoundRobin –Multilevel Queue – Multilevel Feedback Queue . Multiprocess schedule: Real time schedule, Algorithm evaluation: Deterministic Modeling, Queue Model, Simulation

UNIT IV

File systems: Introduction – File System Concepts – Access Methods – Directory structure – File Sharing – Allocation Methods – Free space management –Efficiency and performance – Recovery Disk Performance Optimization: Introduction – Disk structure – Disk scheduling – Disk management.

UNIT V

Linux-The Operating System: Linux History, Linux features, Linux distributions, Linux's relationship to Unix, Overview of Linux Architecture, Installation, Start up scripts, system process (an overview), Linux Security, The Ext2 and Ext3 File Systems: General characteristics of the Ext3 File System, File permissions, User Management: Types of users, the powers of Root, Managing users (adding and deleting) : using the command line and GUI Tools.

Resource Management in Linux: File and Directory management, system calls for files process management, Signals, IPC:Pipes, FIFOs, System V IPC, Message Queues, System calls for processes, Memory Management, Library and System calls for Memory.

Course Objectives

This course enables the students to learn

- Linear transformations, homomorphism, isomorphism and its properties.
- The basic definitions of Rings, subrings, vector spaces, subspaces, algebra of subspaces, isomorphism and its properties.
- The concept of ideals and maximal ideals
- Fundamental characteristics of vector spaces.
- Concepts of linear transformations and their role in modern mathematics.
- The concept of ring homomorphisms, properties of ring homomorphisms.

Course Outcomes (COs)

On successful completion of this course, the student will be able to:

1. Understand the concept of rings, subrings, vector spaces, subspaces, algebra of subspaces, isomorphism and its properties.
2. Understand the concept of ring homomorphisms, properties of ring homomorphisms.
3. Know about the Vector spaces and dimension.
4. Analyze Linear transformations and matrix representation of a linear transformation.
5. Study change of coordinate matrix and its properties.
6. Understand Isomorphism theorems I, II and III, field of quotients.

UNIT I**RINGS**

Definition and examples of rings - Properties of rings - Subrings - Integral domains and fields - Characteristic of a ring. Ideal - Ideal generated by a subset of a ring - Factor rings - Operations on ideals - Prime and maximal ideals.

UNIT II**RING HOMOMORPHISMS**

Ring homomorphisms - Properties of ring homomorphisms - Isomorphism theorems I, II and III - Field of quotients.

UNIT III**VECTOR SPACES**

Vector spaces - Subspaces - Algebra of subspaces - Quotient spaces - Linear combination of vectors - Linear span - Linear independence - Basis and dimension - Dimension of subspaces.

UNIT IV**LINEAR TRANSFORMATIONS**

Linear transformations - Null space - Range - Rank and nullity of a linear transformation - Matrix representation of a linear transformation - Algebra of linear transformations.

UNIT V

ISOMORPHISM

Isomorphism theorems -Invertability and isomorphisms - change of coordinate matrix.

REFERENCES

1. Joseph A. Gallian., (2013). Contemporary Abstract Algebra, Fourth Edition, Narosa Publishing House, New Delhi.
2. Kumaresan S., (2000). Linear Algebra- A Geometric Approach, Prentice Hall of India, New Delhi.

Course Objectives

This course enables the students to learn

- The changing domestic and global investment scenario in general and Indian capital market in particular with reference to availability of various financial products and operations of stock exchanges.
- The theory and practice of portfolio management.
- Important theories, techniques, regulations and certain advancements in theory of investment will be covered with an aim of helping the participants make sound investment decisions in the context of portfolio investment.
- The Risk-free assets and one fund theorem, efficient frontier.
- The various strategies followed by investment practitioners.
- The measure and the relationship between risk and return.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the various alternatives available for investment.
2. Learn to measure risk and return.
3. Find the relationship between risk and return.
4. Value the equities and bonds.
5. Gain knowledge of the various strategies followed by investment practitioners.
6. Study Index tracking optimization models.

UNIT I

Financial markets. Investment objectives. Measures of return and risk. Types of risks. Risk free assets. Mutual funds. Portfolio of assets.

UNIT II

Expected risk and return of portfolio. Diversification. Mean-variance portfolio optimization- the Markowitz model and the two-fund theorem.

UNIT III

Risk-free assets and one fund theorem, efficient frontier. Portfolios with short sales.

UNIT IV

Capital market theory. Capital assets pricing model- the capital market line, beta of an asset, beta of a portfolio, security market line.

UNIT V

Index tracking optimization models, Portfolio performance evaluation measures.

2. M.J. Best., (2010). Portfolio Optimization, Chapman and Hall, CRC Press.
3. Luenberger, D.G., (2013). Investment Science, Second Edition., Oxford University Press.

Course Objective:

This course enables the students to learn

- Basic concepts in probability theory and statistical measures.
- Commonly used probability distributions (both discrete and continuous).
- Central Limit theorem and their applications in various disciplines.
- The nature of uncertainty and randomness and set up data collection methods that are free of bias.
- Appropriate methods to draw conclusions based on sample data by constructing and/or evaluating tables, graphs, and numerical measures of characteristics of data.
- The foundations of probabilistic and statistical analysis mostly used in varied applications in engineering and science.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the basic concepts of Measures of central tendency.
2. Know about the Probability Concepts and its properties.
3. Know about the Discrete distributions and its types.
4. Study the Continuous distributions and its types.
5. Understand the Basic Theory of Chebyshev's inequality.
6. Chapman-Kolmogorov equations, classification of states.

UNIT I**BASICS OF STATISTICS**

Meaning and definition of statistics - **Frequency Distribution**, Measures of central tendency: Arithmetic Mean, Median, Mode. Measures of dispersion – Range, Coefficient of range - Quartile deviation - Coefficient of Quartile deviation - Standard deviation and Coefficient of variation.

UNIT II**PROBABILITY CONCEPTS**

Trial, event - Sample space - Mutually exclusive event - Exclusive and exhaustive events - Dependent and independent events - Simple and compound events - Mathematical properties - Permutation and combination - Probability axioms - Addition and multiplication theorem - Real random variables (discrete and continuous) - Cumulative distribution function - Probability density functions - Mathematical expectation - Moments - Moment generating function - Characteristic function.

UNIT III**DISCRETE DISTRIBUTIONS**

Binomial distribution - Poisson distribution and its properties - Joint probability density functions - Marginal and conditional distributions - Expectation of function of two random variables - Conditional expectations - Independent random variables.

UNIT IV**CONTINUOUS DISTRIBUTIONS**

Uniform distribution - Normal distribution - Standard normal distribution - Exponential distribution. Joint cumulative distribution function and its properties - Joint probability density functions (No derivations) and simple problems. Bivariate distribution - Correlation coefficient - Joint moment generating function (jmgf) and calculation of covariance (from jmgf) - Linear regression for two variables.

UNIT V

LIMIT THEOREMS AND MARKOV CHAINS

Chebyshev's inequality - Statement and interpretation of (weak) law of large numbers and strong law of large numbers - Central Limit theorem for independent and identically distributed random variables with finite variance -Markov Chains – Chapman-Kolmogorov equations - Classification of states.

		Semester – V			
		L	T	P	C
17MMU502B	BOOLEAN ALGEBRA AND AUTOMATA THEORY	6	2	0	6

Course Objectives

This course enables the students to learn

- Lattice and algebraic system, Basic properties of algebraic systems
- Finite Automata and regular languages
- The foundations of computability theory
- A strong background in reasoning about finite state automata and formal languages.
- Mathematical arguments using logical connectives and quantifiers.
- The various categories of languages and grammars in the Chomsky hierarchy.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand how lattices and Boolean algebra are used as tools and mathematical models in the study of networks.
2. Define various categories of automata.
3. Context free grammars and pushdown automata.
4. Understand Turing machine as a model of computation.
5. Define the various categories of Undecidability.
6. Knowledge about Post Correspondence Problem.

UNIT I

LATTICES AND BOOLEAN ALGEBRAS

Definition of ordered set with examples and basic properties of ordered sets - Maps between ordered sets - Duality principle - Lattices as ordered sets- Lattices as algebraic structures - sublattices - Products and homomorphisms - Modular and distributive lattices.

Boolean algebras: Boolean polynomials - Minimal forms of Boolean polynomials - Quinn-McCluskey method -Karnaugh diagrams - Switching circuits and applications of switching circuits.

UNIT II

THE CENTRAL CONCEPT OF AUTOMATA

Alphabets - String and languages. Finite Automata and Regular Languages: Deterministic and non-deterministic finite automata - Regular expressions - Regular languages and their relationship with finite automata - Pumping lemma and closure properties of regular languages.

UNIT III

CONTEXT FREE GRAMMARS AND PUSHDOWN AUTOMATA

Context free grammars (CFG) - Parse trees -ambiguities in grammars and languages - Pushdown automaton (PDA) and the language accepted by PDA - Deterministic PDA - Non- deterministic PDA - Properties of context free languages - Normal forms - Pumping lemma - Closure properties - Decision properties.

UNIT IV

TURING MACHINES

Turing machine as a model of computation - Programming with a Turing Machine - Variants of Turing machine and their equivalence.

UNIT V

UNDECIDABILITY

Recursively enumerable and recursive languages - Undecidable problems about Turing machines: halting problem - Post Correspondence Problem and undecidability problems About CFGs.

SUGGESTED READINGS

TEXT BOOKS

4. Anderson J.A., (2006). Automata Theory with Modern Applications, Cambridge University Press, Cambridge.

Course Objectives

This course enables the students to learn

- The basics concept of functions of several variables.
- Mastery in the skills of limit and continuity functions of two variables.
- Definition and compute partial derivatives, directional derivatives and differentials.
- Find local extreme values of functions of several variables, test for saddle points, examine the conditions for the existence of absolute extreme values.
- Differential, integral and double integral calculus for functions of more than one variable.
- The mathematical tools and methods are used extensively in the physical sciences, engineering and economics.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the functions of several variables.
2. Know about the Extrema of functions of two variables.
3. Use double, triple and its applications.
4. Know about the change of variables in double integrals and triple integrals
5. Synthesize the key concepts of line integrals and its applications.
6. Ability to apply the knowledge of Green's theorem and Stoke's theorem

UNIT I**FUNCTIONS OF SEVERAL VARIABLES**

Limit and continuity of functions of two variables, partial differentiation, total differentiability and differentiability, sufficient condition for differentiability. Chain rule for one and two independent parameters, directional derivatives, the gradient, maximal and normal property of the gradient, tangent planes.

UNIT II**EXTREMA OF FUNCTIONS OF TWO VARIABLES**

Method of Lagrange multipliers, constrained optimization problems, Definition of vector field, divergence and curl.

UNIT III**DOUBLE INTEGRATION OVER RECTANGULAR REGION**

Double integration over non-rectangular region, double integrals in polar co-ordinates, Triple integrals, Triple integral over a parallelepiped and solid regions. Volume by triple integrals, cylindrical and spherical co-ordinates. Change of variables in double integrals and triple integrals

UNIT IV**LINE INTEGRALS**

Applications of line integrals, Mass and Work. Fundamental theorem for line integrals, conservative vector fields, independence of path.

UNITV

GREEN'S THEOREM

Surface integrals, integrals over parametrically defined surfaces. Stoke's theorem, The Divergence theorem.

SUGGESTED READINGS

TEXT BOOK

1. Strauss M.J., Bradley G.L. and Smith K. J., (2007). Calculus, Third Edition, Dorling Kindersley (India) Pvt.Ltd. (Pearson Education), Delhi.

REFERENCES

1. Thomas G.B., and Finney R.L., (2005). Calculus, Ninth Edition, Pearson Education, Delhi.

3. James Stewart., (2001). Multivariable Calculus, Concepts and Contexts, Second Edition, Brooks Cole, Thomson Learning, USA.

Course Objective:

This course enables the students to learn

- To get introduced to the concept of a regular parameterized curve in n
- To Understand the concept of curvature of a space curve and signed curvature of a plane curve.
- To be able to understand the fundamental theorem for plane curves.
- To get introduced to the notion of Serret-Frenet frame for space curves and the
- Involutes and evolutes of space curves with the help of examples. To be able to compute the curvature and torsion of space curves.
- The Parallel propagation of vectors, Covariant and intrinsic derivatives

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the theory of space curves with examples.
2. Study the concept of parametric curves on surfaces.
3. Know about the torsion of a geodesic and geodesic curvature.
4. Study the Tensors of different type, Algebra of tensors and contraction.
5. Know about the Parallel propagation of vectors.
6. Understand Laplacian operators in tensor form.

UNIT I**THEORY OF SPACE CURVES**

Space curves - Planer curves, Curvature, torsion and Serret-Frenet formulae - Osculating circles, Osculating circles and spheres - Existence of space curves - Evolutes and involutes of curves.

UNIT II**THEORY OF SURFACES**

Parametric curves on surfaces - Direction coefficients -First and second Fundamental forms - Principal and Gaussian curvatures - Lines of curvature - Euler's theorem - Rodrigue's formula - Conjugate and Asymptotic lines.

UNIT III**DEVELOPABLES**

Developable associated with space curves and curves on surfaces – Minimal surfaces.

Geodesics: Canonical geodesic equations - Nature of geodesics on a surface of revolution -Clairaut's theorem. -Normal property of geodesics -Torsion of a geodesic - Geodesic curvature - Gauss-Bonnet theorem - Surfaces of constant curvature -Conformal mapping.Geodesic mapping-Tissot's theorem.

UNIT IV**TENSORS ALGEBRA**

Summation convention and indicial notation - Coordinate transformation and Jacobian, Contra-variant and Covariant vectors - Tensors of different type - Algebra of tensors and contraction - Metric tensor and 3-index Christoffel symbols.

UNIT V

TENSORS CALCULUS

Parallel propagation of vectors, Covariant and intrinsic derivatives - Curvature tensor and its properties - Curl, Divergence and Laplacian operators in tensor form - Physical components.

SUGGESTED READINGS

TEXT BOOK

1. Willmore T.J., (2012). An Introduction to Differential Geometry, Dover Publications, New York.

REFERENCES

4. Lang S., (2001). Fundamentals of Differential Geometry, Springer, New York.
5. Spain B., (2003). Tensor Calculus: A Concise Course, Dover Publications, New York.

Course Objectives

This course enables the students to learn

- The basic theories and experiments in Physics.
- The fundamentals of physics.
- About the electronic component like Diode, transistor etc.
- The analytical methods required to interpret and analyze results and draw conclusions as supported by their data.
- The graphical relationship of resistance, capacitor and inductor.
- About the circuit connection.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Demonstrate proficiency in mathematics and the mathematical concepts to understand physics.
2. Design and conduct an experiment (or series of experiments) demonstrating their understanding of the scientific method and processes.
3. Demonstrate an understanding of the analytical methods required to interpret and analyze results and draw conclusions as supported by their data.
4. Know about the Laws of thermodynamics.
5. Know about the Intrinsic and extrinsic semiconductor.
6. Understand the graphical relationship of resistance, capacitor and inductor.

UNIT-I**PROPERTIES OF MATTER**

Elastic constants of an isotropic solid -Stress – Strain - Relations connecting them - Poisson's ratio - Bending of beams - Uniform and non-uniform bending - Bending moment of a bent beam - cantilever - Static and dynamic methods - Torsion in a wire - Rigidity modulus determination by Static and dynamic methods. Surface tension and Surface energy- Pressure difference across a spherical surface- Pressure difference across a curved surface.

UNIT-II**MECHANICS**

Motion of bodies in 2-D - Newton's laws - projectile motion – range- maximum height – projectile from space flight- Rotational motion – Rotation with constant angular acceleration –angular momentum of particles – rigid body – spinning top – conservation of angular momentum – Planetary motion – Kepler's laws – universal law of gravitation.

UNIT-III**THERMAL PHYSICS**

Laws of thermodynamics – Reversible and irreversible process – Heat engine – Carnot’s theorem. Black body – Stefan’s law – Newton’s law of cooling – Newton’s law of cooling from Stefan’s law – Experimental determination of Stefan’s constant – Wien’s displacement law – Rayleigh – Jean’s law – Planck’s law.

UNIT-IV

OPTICS AND LASER PHYSICS

Reflection – Refraction – Snell’s law – Total internal reflection – Interference – Diffraction – Polarization – Coherence. Stimulated emission and absorption – Einstein’s theory of radiation – population inversion – optical pumping – meta stable state – conditions for laser actions – Ruby laser – Helium – neon laser – applications of lasers – Raman effect – Raman shift – Stokes and anti-Stokes lines.

UNIT-V

BASIC ELECTRONICS

Intrinsic and extrinsic semiconductor – PN Junction diode – Biasing of PN junction – V-I characteristics of junction diode – Rectifiers – Half wave – Full wave and bridge rectifiers – Zener diode – Characteristics of Zener diode – Voltage regulator – Transistor – Characteristics of transistor – CB, CE mode – Transistors as an amplifier.

SUGGESTED READINGS

TEXT BOOK

1. Murugesan. R., Modern Physics, S.Chand & Co, New Delhi.

REFERENCES

1. Brijlal and N. Subramanyam, (2004). Properties of matter, S. Chand & Company, New Delhi.
2. Aruldas and P. Rajagopal, Modern Physics, Prentice Hall of India, New Delhi.
3. Mathur. D.S., (2003). Elements of properties of matter - Shyamlal Charitable Trust, New Delhi.

6. Ghatak and Thyagarajan, (1984). Lasers, Theory and applications, Macmillan India Ltd., New Delhi,

Course Objective

This course enables the students to learn

- The basic understanding of laboratory technique and to educate and motivate the students in the field of Physics.
- A deep knowledge of fundamentals of optics.
- The practical knowledge by applying the experimental methods to correlate with the Physics theory.
- The usage of electrical and optical systems for various measurements.
- The intellectual communication skills and discuss the basic principles of scientific concepts in a group.
- The physical Principles and applications of Electronics.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Perform basic experiments in mechanics and electricity and analyze the data.
2. Acquire engineering skills and Practical knowledge, which help the student in their everyday life.
3. Know the physical Principles and applications of Electronics.
4. Apply the analytical techniques and graphical analysis to the experimental data.
5. Apply the various procedures and techniques for the experiments.
6. Use the different measuring devices and meters to record the data with precision.
7. Apply the mathematical concepts/equations to obtain quantitative results

List of Practical

ANY EIGHT EXPERIMENTS

1. Young's Modulus-Non Uniform bending-Pin and Microscope
2. Young's Modulus-Static cantilever
3. Acceleration due to gravity-Compound pendulum
4. Determination of spring constant of the given spring.
5. Determine the radius of capillary tube using microscope.
6. Refractive Index of a solid prism (I-d) curve-Spectrometer
7. Co-efficient of thermal conductivity-Lee's disc method
8. Wavelength of spectral lines -Grating-minimum deviation method-Spectrometer.
9. Characteristics of a Zener and Junction diode
10. μ of a lens-Newton's ring method
11. Thickness of a thin wire-Air wedge method

12. Determine the surface tension - Drop weight method
13. Determine the wavelength of He-Ne laser.
14. Determination of the Coefficient of Viscosity of a given liquid using Burette method
15. Construct a single stage amplifier using transistor

SUGGESTED READINGS:

2. Singh S.P., 2003, Advanced Practical Physics – 1, 13th Edition, Pragathi Prakashan, Meerut
3. Singh S.P., 2000, Advanced Practical Physics – 2, 12th Edition, Pragathi Prakashan, Meerut

Course Objectives

This course enables the students to learn

- The behavior of polynomials and operators.
- The Rings and basic properties of rings and ideals.
- The concepts of unique factorization domains, Euclidean domains.
- The transpose of a linear transformation and its matrix in the dual basis.
- The Inner product spaces and norms, Gram-Schmidt orthogonalisation process.
- Least Squares Approximation and Spectral theorem.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Polynomial rings over commutative rings, dual spaces, dual basis, double dual, minimal solutions to systems of linear equations, normal and self-adjoint operators.
2. Understand the Divisibility in integral domains.
3. Study the transpose of a linear transformation and its matrix in the dual basis.
4. Know about the Inner product spaces and norms.
5. Study Least Squares Approximation, minimal solutions to systems of linear equations.
6. Know about the Orthogonal projections and Spectral theorem.

UNIT I RINGS

Polynomial rings over commutative rings - Division algorithm and consequences - Principal ideal domains - Factorization of polynomials - Reducibility tests - Irreducibility tests - Eisenstein criterion - Unique factorization in $\mathbb{Z}[x]$.

UNIT II INTEGRAL DOMAINS

Divisibility in integral domains- Irreducibles – Primes - Unique factorization domains - Euclidean domains.

UNIT III VECTOR SPACES

Dual spaces - Dual basis - Double dual - Transpose of a linear transformation and its matrix in the dual basis - Annihilators - Eigen spaces of a linear operator - Diagonalizability - Invariant subspaces and Cayley-Hamilton theorem - The minimal polynomial for a linear operator.

UNIT IV INNER PRODUCT SPACES

Inner product spaces and norms - Gram-Schmidt orthogonalisation process - Orthogonal complements - Bessel's inequality - The adjoint of a linear operator.

UNIT V OPERATORS

Least Squares Approximation - Minimal solutions to systems of linear equations - Normal and self-Adjoint operators - Orthogonal projections and Spectral theorem.

SUGGESTED READINGS

TEXT BOOK

1. Fraleigh.J.B., (2004). A First Course in Abstract Algebra , Seventh Edition , Pearson Education Ltd, Singapore.

REFERENCES

2. S. Lang, (2005). Introduction to Linear Algebra, Second Edition., Springer.

Course Objectives

This course enables the students to learn

- How to use forces, frictions and their applications in real life.
- To solve dynamics problems such as conservation of energy and linear and angular momentum.
- Applications of differential equations in advanced mathematical problems.
- Motion in different curves under central forces.
- Classification of the Couple moment and Moment of a couple about a line.
- The problem of central forces and mechanical systems.

Course Outcomes (COs)

On successful completion of this course students will be able to

1. Understand the concept of the Moment of a force about a point and an axis.
2. Classify the Laws of Coulomb friction.
3. Solve the problems of Conservative force field and conservation for mechanical energy.
4. Solve the Problems of equilibrium under forces including friction.
5. Analyze the Velocity and acceleration of a particle along a curve.
6. Know about the basic concepts of Simple harmonic motion, Simple Pendulum, Projectile Motion.

UNIT I

Moment of a force about a point and an axis, couple and couple moment, Moment of a couple about a line, resultant of a force system, distributed force system, free body diagram, free body involving interior sections, general equations of equilibrium, two point equivalent loading, problems arising from structures, static indeterminacy.

UNIT II

Laws of Coulomb friction, application to simple and complex surface contact friction problems, transmission of power through belts, screw jack, wedge, first moment of an area and the centroid, other centers, Theorem of Pappus-Guldinus, second moments and the product of area of a plane area, transfer theorems, relation between second moments and products of area, polar moment of area, principal axes.

UNIT III

Conservative force field, conservation for mechanical energy, work energy equation, kinetic energy and work kinetic energy expression based on center of mass, moment of momentum equation for a single particle and a system of particles, translation and rotation of rigid bodies, Chasles' theorem, general relationship between time derivatives of a vector for different references, relationship between velocities of a particle for different references, acceleration of particle for different references.

UNIT IV

Conditions of equilibrium of a particle and of coplanar forces acting on a rigid Body, Laws of friction, Problems of equilibrium under forces including friction, Centre of gravity, Work and potential energy.

UNIT V

Velocity and acceleration of a particle along a curve: radial and transverse components (plane curve), tangential and normal components (space curve), Newton's Laws of motion, Simple harmonic motion, Simple Pendulum, Projectile Motion.

2. Roberts A.P., (2003). Statics and Dynamics with Background in Mathematics, Cambridge University Press, Cambridge

Course Objectives

This course enables the students to learn

- The theory of functions of a complex variable with examples.
- Metric spaces, Continuous mappings and Convergence of sequences and series.
- Techniques of complex analysis that make practical problems easy (e.g. graphical rotation and scaling as an example of complex multiplication)
- Subsets of a metric space are open, closed, connected, bounded, totally bounded and/or compact.
- Function on a Complex number, and differentiability on complex functions.
- The Cauchy's Theorem, Cauchy's integral formula, Liouville's Theorem and Laurent's expansion.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the various properties of metric spaces
2. Definite continuous mappings - sequential criterion.
3. Understand the basic concepts of Riemann equations, sufficient conditions for differentiability.
4. Explore various properties of Analytic functions.
5. Understand the Contour integrals and its examples.
6. Apply the concept Liouville's theorem and the fundamental theorem of algebra.

UNIT I**METRIC SPACES**

Definition and examples - Sequences in metric spaces - Cauchy sequences.

Complete Metric Spaces - Open and closed balls – neighbourhood - open set - interior of a set. Limit point of a set - closed set - Diameter of a set - Cantor's theorem – Subspaces - dense sets – separable spaces.

UNIT II**CONTINUOUS MAPPINGS**

Continuous mappings - sequential criterion and other characterizations of continuity – Uniform Continuity – Homeomorphism - Contraction mappings - Banach Fixed point Theorem - Connectedness - connected subsets of \mathbb{R} .

UNIT III**LIMITS**

Limits - Limits involving the point at infinity - continuity. Properties of complex numbers – regions in the complex plane - functions of complex variable - mappings. Derivatives, differentiation formulas - Cauchy-Riemann equations, sufficient conditions for differentiability.

UNIT IV**ANALYTIC FUNCTIONS**

Analytic functions - Examples of analytic functions - Exponential function - Logarithmic function - Trigonometric function - Derivatives of functions - Definite integrals of functions.
Contours: Contour integrals and its examples - Upper bounds for moduli of contour integrals - Cauchy-Goursat theorem - Cauchy integral formula.

UNIT V

CONVERGENCE

Liouville's theorem and the fundamental theorem of algebra. Convergence of sequences and series- Taylor series and its examples - Laurent series and its examples, absolute and uniform convergence of power series.

SUGGESTED READINGS

TEXT BOOK

1. Satish Shirali., and Harikishan L. Vasudeva., (2006). Metric Spaces, Springer Verlag, London.

REFERENCES

1. Kumaresan S., (2011). Topology of Metric Spaces, Second Edition., Narosa Publishing House, New Delhi.

4. Joseph Bak., and Donald J. Newman., (2010). Complex Analysis, Second Edition., Undergraduate Texts in Mathematics, Springer-Verlag New York.

Course Objectives

This course enables the students to learn

- The basic facts about mathematics.
- Display the knowledge of conventions such annotations, terminology and recognize basic geometrical figures and graphical displays, state important facts resulting from their studies.
- A relational understanding of mathematical concepts and concerned structures, and should be able to follow the patterns involved with mathematical reasoning.
- Translate information presented verbally into mathematical form, select and use appropriate mathematical formulae or techniques in order to process the information and draw the relevant conclusion.
- Application of Fourier and inverse Fourier transforms.
- The concepts of Medical Imaging and Inverse Problems.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Get adequate exposure to global and local concerns so as to explore many aspects of Mathematical Sciences.
2. Apply their skills and knowledge, that is, translate information presented verbally into mathematical form, select and use appropriate mathematical formulae or techniques in order to process the information and draw the relevant conclusion.
3. Know about the X-ray: Introduction, X-ray behavior and Beers Law.
4. Aware of history of mathematics and hence of its past, present and future role as part of our culture.
5. Know the concept of Radon Transform.
6. Use the application of Fourier and inverse Fourier transforms.

UNIT I**MEDICAL IMAGING AND INVERSE PROBLEMS**

The content is based on Mathematics of X-ray and CT scan based on the knowledge of calculus, elementary differential equations, complex numbers and matrices.

UNIT II**INVERSE PROBLEMS**

Introduction, Illustration of Inverse problems through problems taught in Pre-Calculus, Calculus, Matrices and differential equations. Geological anomalies in Earth's interior from measurements at its surface (Inverse problems for Natural disaster) and Tomography.

UNIT III**X-RAY**

Introduction, X-ray behavior and Beers Law (The fundamental question of image construction) Lines in the place.

UNIT IV**RADON TRANSFORM**

Definition and Examples, Linearity, Phantom (Shepp - Logan Phantom -Mathematical phantoms). Back Projection: Definition, properties and examples.

UNIT V

CT SCAN

Revision of properties of Fourier and inverse Fourier transforms and applications of their properties in image reconstruction. Algorithms of CT scan machine. Algebraic reconstruction techniques abbreviated as ART with application to CT scan.

SUGGESTED READINGS

TEXT BOOK

1. Timothy G. Feeman.,(2010). The Mathematics of Medical Imaging, A Beginners Guide, Springer
Under graduate Text in Mathematics and Technology, Springer.

REFERENCES

1. Andreas Kirsch., (2011). An Introduction to the Mathematical Theory of Inverse Problems, 2nd Ed., Springer.
2. Groetsch C.W., (1999). Inverse Problems, Activities for Undergraduates, The Mathematical Association of America.

Course Objectives

This course enables the students to learn

- Basic knowledge on material properties.
- Magnetism and digital electronics.
- To educate and motivate the students in the field of science.
- The unit cell for some crystal structure, be able to draw the atomic packing arrangement for a specific crystallographic plane.
- The use of X-ray diffraction measurements in determining crystalline structures.
- The relation in between Electromagnetic theory.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Explain how physics applies to phenomena in the world around them.
2. Recognize how and when physics methods and principles can help address problems in their major and then apply those methods and principles to solve problems.
3. Study the theory of Photoelectric effect.
4. List different types of atomic spectra.
5. Understand the importance of Mosley's law and Bragg's law.
6. Understand the concept of digital electronics.

UNIT – I**ELECTROSTATICS**

Coulombs law – electric field – Gauss's law and its applications – potential – potential due to various charge distribution. Parallel plate capacitors – dielectrics- current – galvanometer – voltmeter – ammeter- potentiometric measurements.

UNIT - II**MAGNETISM**

Magnetic field – Biot Savart's law – B due to a solenoid – Amperes law – Faradays law of induction – Lenz's law. Magnetic properties of matter –Dia, para and ferro - Cycle of magnetization – Hysteresis – B-H curve – Applications of B-H curve.

UNIT - III**MODERN PHYSICS**

Einstein's Photoelectric effect-characteristics of photoelectron –laws of photoelectric emission- Einstein's photo electric equations- Compton effect-matter waves-De-Broglie Hypothesis. Heisenberg's uncertainty principle-Schrödinger's equation- particle in a box.

UNIT-IV

ATOMIC AND NUCLEAR PHYSICS

Atom Models : Sommerfield's and Vector atom Models – Pauli's exclusion Principle – Various quantum numbers and quantization of orbits. X-rays : Continuous and Characteristic X-rays – Mosley's Law and importance – Bragg's Law.

Nuclear forces –characteristics - nuclear structure by liquid drop model – Binding energy – mass defect – particle accelerators – cyclotron and betatron – nuclear Fission and nuclear Fusion.

UNIT - V

DIGITAL ELECTRONICS

Decimal – binary – octal and hexadecimal numbers– their representation, inter-conversion, addition and subtraction, negative numbers. Sum of products – product of sums – their conversion – Simplification of Boolean expressions - K-Map – min terms – max terms - (2, 3 and 4 variables). Basic logic gates – AND, OR, NOT, NAND, NOR and EXOR gates – NAND and NOR as universal building gates – Boolean Algebra – Laws of Boolean Algebra – De Morgan's Theorems – Their verifications using truth tables.

4. Floyd,Digital fundamentals(2006).Pearson education ,8th edition.
5. R. S. Sedha, (2004).A text book of Digital Electronics, S. Chand & Co, New Delhi, First edition.

Course Objective

This course enables the students to learn

- The concepts in integrated chips.
- The optical and electronic properties of solids through experimentations.
- The usage of electrical and optical systems for various measurements.
- The intellectual communication skills and discuss the basic principles of scientific concepts in a group.
- The physical Principles and applications of Electronics.
- The various procedures and techniques for the experiments.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Perform basic experiments in mechanics, heat and electricity and analyze the data.
2. Acquire engineering skills and Practical knowledge, which help the student in their everyday life.
3. Know the physical Principles and applications of Electronics.
4. Apply the various procedures and techniques for the experiments.
5. Apply the mathematical concepts/equations to obtain quantitative results.
6. Develop basic communication skills through working in groups in performing the laboratory experiments and by interpreting the results.

List of Practical**Any 8 Experiments**

1. Determine the magnetic dipole moment (m) of a bar magnet - Tan A
2. Determine the magnetic dipole moment (m) of a bar magnet - Tan B
3. Field Intensity-Circular coil- Vibration magnetometer
4. Moment of a magnet-Circular coil-Deflection Magnetometer
5. Study of logic gates using IC's.
6. Study of NOR gate as Universal building block.
7. Study of NAND gate as Universal building block.
8. Verification of Basic logic gates using discrete components.
9. To study the variation in current and voltage in a series LCR circuit

10. To study the variation in current and voltage in a parallel LCR circuit

11. Transistor characteristics – CE & CB

PROJECT

Semester -VI

L T P C

8 0 0 6

Course Objectives

This course enables the students to learn

- The fundamental concepts of algebraic ring theory and fields.
- The basic central ideas of Polynomial ring.
- How to test if a polynomial is irreducible Finite Field (Galois Fields).
- How to convert the various matrix forms.
- Develop capabilities with an axiomatic treatment of transformation.
- Develop an understanding of the structure of sets with operations on them.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Understand the concept and the properties of finite abelian groups.
2. Get pre-doctoral level knowledge in ring theory.
3. Attain good knowledge in field theory.
4. Define and study in details the properties of linear transformations.
5. Analyze the concept of trace and transpose.
6. Demonstrate capacity for mathematical reasoning through analyzing, proving and explaining concepts quadratic forms.

UNIT I

Another counting principle – application of theorems – Cauchy theorem – Sylow’s theorem – Direct product – Finite Abelian groups.

UNIT II

Ring Theory- Basic definition- More ideals and quotient rings- Euclidean rings-A Particular Euclidean Rings –Polynomial Rings-Polynomial over the Rational Field.

UNIT III

Fields – Extension Fields-Finite Extension of F – Some basic Definitions and Theorem – Roots of a Polynomial – More about Roots – The elements of Galois Theory.

UNIT IV

Linear Transformations-The Algebra of Linear Transformation – Characteristic Root-Matrices-Canonical Forms –Triangular form-Nilpotent Transformations–Jordan form.

UNIT V

Trace and Transpose – Trace of T-Symmetric Matrix –Determinants–Hermitian Transformation, Unitary Transformation and Normal Transformation – Real quadratic forms.

SUGGESTED READINGS**TEXT BOOK**

1. Herstein.I. N.,(2010). Topics in Algebra, Second edition, Wiley and sons Pvt Ltd, Singapore.

REFERENCES

1. Artin. M., (2008). Algebra, Prentice-Hall of India, New Delhi.

2.Fraleigh. J. B., (2004). A First Course in Abstract Algebra , Seventh edition , Pearson Education Ltd, Singapore.

3. Kenneth Hoffman., Ray Kunze., (2003). Linear Algebra, Second edition, Prentice Hall of India Pvt Ltd, New Delhi.

4. Vashista.A.R., (2005). Modern Algebra, Krishna Prakashan Media Pvt Ltd, Meerut.

Course Objectives

This course enables the students to learn

- The basic principles of Riemann – Stieltjes Integral.
- Apply mathematical concepts and principles to infinite series.
- How to identify sets with various properties such as convergence.
- Have the knowledge of Lebesgue integral of functions and their properties.
- Understand the importance of undefined terms, definitions, and axioms.
- Use a variety of proof techniques to prove theorems using axioms, definitions, and previous results.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Get specific skill in Riemann Stieltjes integral and Lebesgue integral.
2. Attain knowledge in infinite series.
3. Demonstrate an understanding of the uniform convergence and differentiation.
4. Enrich their knowledge of measure theory and extremum problems.
5. Solve given problems at a high level of abstraction based on Implicit function.
6. Describe the fundamental properties of the real numbers that underpin the formal development of real analysis.

UNIT I

The Riemann – Stieltjes Integral:

Introduction – Basic Definitions – Linear Properties – Integration by parts – Change of variable in a Riemann – Stieltjes Integral – Reduction to a Riemann Integral – Step functions as integrators – Reduction of a Riemann – Stieltjes Integral to a finite sum – Monotonically increasing – Additive and linear properties – Riemann condition – Comparison theorems – Integrators of bounded variation – Sufficient condition for Riemann Stieltjes integral.

UNIT II

Infinite series and infinite products:

Introduction – Basic definitions – Ratio test and root test – Dirichlet test and Able's test – Rearrangement of series – Riemann's theorem on conditionally convergent series – Sub series – Double sequences – Double series – Multiplication of series – Cesaro summability.

UNIT III

Sequences of functions:

Basic definitions – Uniform convergence and continuity - Uniform convergence of infinite series of functions – Uniform convergence and Riemann – Stieltjes integration – Non uniformly convergent sequence – Uniform convergence and differentiation – Sufficient condition for uniform convergence of a series.

UNIT IV

The Lebesgue integral:

Introduction- The class of Lebesgue – integrable functions on a general interval- Basic properties of the Lebesgue integral- Lebesgue integration and sets of measure zero- The Levi monotone

convergence theorem- The Lebesgue dominated convergence theorem-

Applications of Lebesgue dominated convergence theorem- Lebesgue integrals on unbounded intervals as limit of integrals on bounded intervals- Improper Riemann integrals- Measurable functions.

UNIT V

Implicit functions and extremum problems:

Introduction – Functions with non zero Jacobian determinant – Inverse function theorem – Implicit function theorem – Extrema of real valued functions of one variable and several variables

SUGGESTED READINGS

TEXT BOOK

1. Rudin. W., (1976) .Principles of Mathematical Analysis, Mcgraw Hill, New york .

REFERENCES

1. Tom .M. Apostol., (2002). Mathematical Analysis, Second edition, Narosa Publishing House, New Delhi.
2. Balli. N.P., (1981). Real Analysis, Laxmi Publication Pvt Ltd, New Delhi.
3. Gupta.S.L. and Gupta.N.R.,(2003).Principles of Real Analysis, Second edition, Pearson Education Pvt.Ltd, Singapore.
4. Royden .H.L., (2002). Real Analysis, Third edition, Prentice hall of India,New Delhi.
5. Sterling. K. Berberian., (2004).A First Course in Real Analysis, Springer Pvt Ltd, New Delhi.

Course Objectives

This course enables the students to learn

- To develop the working techniques on numerical differentiation and integration.
- To solve algebraic and transcendental equations.
- Appropriate numerical methods to solve differential equations.
- To provide suitable and effective methods for obtaining approximate representative numerical results of the problems.
- To solve complex mathematical problems using only simple arithmetic operations. The approach involves formulation of mathematical models of physical situations that can be solved with arithmetic operations.
- Provide a basic understanding of the derivation, analysis, and use of these numerical methods, along with a rudimentary understanding of finite precision arithmetic and the conditioning and stability of the various problems and methods.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Identify the concept of numerical differentiation and integration.
2. Provide information on methods of iteration.
3. Solve ordinary differential equations by using Euler and modified Euler method.
4. Study in detail the concept of boundary value problems.
5. Attain mastery in the numerical solution of partial differential equations.
6. Apply numerical methods to obtain approximate solutions to mathematical problems.

UNIT I

Solutions of Non Linear Equations: Newton's method-Convergence of Newton's method-Bairstow's method for quadratic factors. Numerical Differentiation and Integration: Derivatives from difference tables – Higher order derivatives – divided difference. Trapezoidal rule – Romberg integration – Simpson's rules.

UNIT II

Solutions of system of Equations: The Elimination method: Gauss Elimination and Gauss Jordan Methods – LU decomposition method.
Methods of Iteration: Gauss Jacobi and Gauss Seidal iteration-Relaxation method.

UNIT III

Solutions of Ordinary Differential Equations: One step method: Euler and Modified Euler methods –Rungekutta methods. Multistep methods: Adams Moulton method – Milne's method

UNIT IV

Boundary Value Problem and Characteristic value problem: The shooting method: The linear shooting method – The shooting method for non-linear systems.
Characteristic value problems –Eigen values of a matrix by Iteration-The power method.

UNIT V

Numerical Solution of Partial Differential Equations: Classification of Partial Differential Equation of the second order – Elliptic Equations. Parabolic equations: Explicit method – The Crank Nicolson difference method. Hyperbolic equations – solving wave equation by Explicit Formula.

SUGGESTED READINGS

TEXT BOOK

1. Gerald, C. F., and Wheatley. P. O., (2006). Applied Numerical Analysis, sixth edition, Dorling Kindersley (India) Pvt. Ltd. New Delhi.

REFERENCES

2. Burden R. L., and Douglas Faires.J,(2007). Numerical Analysis, Seventh edition, P. W. S. Kent Publishing Company, Boston.
3. Sastry S.S., (2008). Introductory methods of Numerical Analysis, Fourth edition, Prentice Hall of India, New Delhi.

Course Objectives

This course enables the students to learn

- The formulation and solutions of second order ordinary differential equations and get exposed to physical problems with applications.
- The concept of solve the system of first order equations.
- Linear homogeneous and non homogeneous equations with constant coefficients.
- Understanding the elementary linear oscillations.
- Understand all of the concepts relating to the order and linearity of ordinary differential equations, analytic and computational solution methods for ordinary differential equations, and the real-world applications of ordinary differential equations.
- Apply your understanding of the concepts, formulas, and problem solving procedures to thoroughly investigate relevant physical models.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Model a simple physical system to obtain a first and second order differential equation.
2. Understand the basic notions of linearity, superposition, existence and uniqueness of solution to differential equations and use these concepts in solving linear differential equations.
3. Identify homogeneous equations, homogeneous equations with constant coefficients and exact linear differential equations.
4. Solve higher order and system of differential equations of Successive approximation.
5. Understand the difficulty of solving problems for elementary linear oscillations.
6. Identify, analyze and subsequently solve physical situations whose behavior can be described by ordinary differential equations.

UNIT I

Second order linear equations with ordinary points – Legendre equation and Legendre polynomial – Second order equations with regular singular points – Bessel equation.

UNIT II

System of first order equations – existence and uniqueness theorems – fundamental matrix.

UNIT III

Non homogeneous linear system – linear systems with constant coefficient – Linear systems with periodic coefficients.

UNIT IV

Successive approximation – Picard's theorem – Non uniqueness of solution – continuation and dependence on initial conditions – existence of solution in the large existence and uniqueness of solution in the system.

UNIT V

Fundamental results – Sturm's comparison theorem – elementary linear oscillations – comparison theorem of Hill's theorem – Oscillations of $x'' + a(t)x = 0$ elementary non linear oscillations.

SUGGESTED READINGS

TEXT BOOK

1. Earl A. Coddington, (2002). An introduction to Ordinary differential Equations, Prentice Hall of India Private limited, New Delhi.

REFERENCES

1. Deo. S. G, Lakshmikantham, V. and Raghavendra, V. (2003). of Ordinary differential Equations, Second edition, Tata Mc Graw Hill Publishing Company limited, New Delhi.

3. George F. Simmons, (1991). Differential Equations with application and historical notes, Second edition, Tata Mc Graw Hill Publishing Company limited, New Delhi.

Course Objectives

This course enables the students to learn

- The concept of algebraic structures, lattices and its special categories which plays an important role in the field of computers.
- The fundamental concepts in graph theory, with a sense of some its modern applications.
- Some fundamental mathematical concepts and terminology.
- Learn some different types of discrete structures.
- Introduce students to the techniques, algorithms, and reasoning processes involved in the study of discrete mathematical structures.
- Introduce students to set theory, inductive reasoning, elementary and advanced counting techniques, equivalence relations, recurrence relations, graphs, and trees.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Develop new algebraic structures.
2. Think critically and analytically by modeling problems from social and natural sciences with the help of theory of graphs.
3. Apply discrete mathematics in formal representation of various computing constructs
4. Work effectively in groups on a project that requires an understanding of graph theory.
5. Demonstrate different traversal methods for trees and graphs.
6. Recognize the importance of analytical problem-solving approach.

UNIT I

Algebraic Structures: Introduction- Algebraic Systems: Examples and General Properties: Definition and examples - Some Simple Algebraic Systems and General properties - Homomorphism and isomorphism - congruence relation - Semigroups and Monoids: Definitions and Examples - Homomorphism of Semigroups and Monoids.

UNIT II

Lattices: Lattices as Partially Ordered Sets: Definition and Examples - Principle of duality - Some Properties of Lattices - Lattices as Algebraic Systems – Sublattices - Direct product, and Homomorphism.

UNIT III

Some special Lattices - e.g. Complete, Complemented and Distributive Lattices - Boolean Algebra: Definition and Examples - Subalgebra - Direct product and Homomorphism - join irreducible - atoms and antiatoms.

UNIT IV

Graph Theory: Definition of a graph - applications, Incidence and degree - Isolated and pendant vertices - Null graph, Path and Circuits: Isomorphism - Subgraphs, Walks -Paths and circuits - Connected graphs, disconnected graphs – components - Euler graph.

UNIT V

Trees: Trees and its properties - minimally connected graph - Pendant vertices in a tree - distance and centers in a tree - rooted and binary tree. Levels in binary tree - height of a tree - Spanning trees - rank and nullity.

3. Seymour Lipschutz, (2007),Discrete Mathematics, Schaum Series, McGraw-Hill Publishing Company Ltd, New Delhi.

Course Objectives

This course enables the students to learn

- The introduction and different architectures of neural networks.
- The applications of neural networks.
- To cater the knowledge of Fuzzy Logic Control and use these for controlling real time systems.
- The fundamental concepts of fuzzy logic and artificial neural networks.
- The concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic control and other machine intelligence applications of fuzzy logic.
- The importance of tolerance of imprecision and uncertainty for design of robust & low cost intelligent machines.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Obtain the fundamentals and types of neural networks.
2. Have a broad knowledge in developing the different algorithms for neural networks in Topology.
3. Analyze recurrent neural networks.
4. Acquire a broad knowledge in fuzzy logic principles.
5. Expose the students to the concepts of Classical and fuzzy sets
6. Provide adequate knowledge about the Fuzzy controllers.

UNIT I

Evolution of neural networks; Artificial Neural Network: Basic model, Classification, Feed forward and Recurrent topologies, Activation functions; Learning algorithms: Supervised, Un-supervised and Reinforcement; Fundamentals of connectionist modeling: McCulloch – Pits model, Perceptron, Adaline, Madaline.

UNIT II

Topology of Multi-layer perceptron, Back propagation learning algorithm, limitations of Multi-layer perceptron. Radial Basis Function networks: Topology, learning algorithm, Kohonen's self-organizing network: Topology, learning algorithm; Bidirectional associative memory Topology, learning algorithm, Applications.

UNIT III

Recurrent neural networks: Basic concepts, Dynamics, Architecture and training algorithms, Applications; Hopfield network: Topology, learning algorithm, Applications; Industrial and commercial applications of Neural networks: Semiconductor manufacturing processes, Communication, Process monitoring and optimal control, Robotics, Decision fusion and pattern recognition.

UNIT IV

Classical and fuzzy sets: Introduction, Operations and Properties, Fuzzy Relations: Cardinality, Operations and Properties, Equivalence and tolerance relation, Value assignment: cosine amplitude and max-min method; Fuzzification: Membership value assignment- Inference, rank ordering, angular fuzzy sets. Defuzzification methods, Fuzzy measures, Fuzzy integrals, Fuzziness and fuzzy resolution; possibility theory and Fuzzy arithmetic; composition and inference; Considerations of fuzzy decision-making.

UNIT V

Basic structure and operation of Fuzzy logic control systems; Design methodology and stability analysis of fuzzy control systems; Applications of Fuzzy controllers. Applications of fuzzy theory.

SUGGESTED READINGS

TEXT BOOK

1. Fakhreddine O. Karray and Clarence De Silva., (2009). Soft Computing and Intelligent Systems Design, Theory, Tools and Applications, Pearson Education, India.

REFERENCES

1. Timothy J. Ross, (1995). Fuzzy Logic with Engineering Applications, McGraw Hill, Delhi.
2. Yegnanarayana B., (2006). Artificial Neural Networks, PHI, India
3. Limin Fu, (2003). Neural Networks in Computer Intelligence, McGraw Hill, Delhi.

Course Objectives

This course enables the students to learn

- Improve mathematical proof writing skills.
- Cater mathematical verbal communication skills.
- Afford problem-solving skills.
- Combinatorial proofs of identities and inequalities.
- Model and analyze computational processes using analytic and combinatorial methods.
- Structures to represent mathematical and applied questions, and they will become comfortable with the combinatorial tools commonly used to analyze such structures.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Cognition in various combinatorial methods.
2. Solve recurrence relations through computational skills.
3. Apply the inclusion/exclusion principle.
4. Develop fundamental knowledge of combinatorics and Euler function.
5. Analyze combinatorial objects satisfying certain properties and answer questions related to Necklace problem.
6. Know the concept of Burnside's lemma.

UNIT I

Basic Combinatorial Numbers – Stirling numbers of the second kind – Recurrence formula for Pnm.

UNIT II

Generating functions – Recurrence relations- Bell's formula.

UNIT III

Multinomial – Multinomial theorem- Inclusion and Exclusion principle.

UNIT IV

Euler function –Permutations with forbidden positions –the Menage Problem.

UNIT V

Problem of Fibonacci –Necklace problem – Burnside's lemma.

SUGGESTED READINGS**TEXTBOOK**

REFERENCES

1. Balakrishnan V.K., (1995). Theory and problems of Combinatorics, Schaums outline series, McGraw Hill Professional.
2. Alan tucker, (2002). Applied Combinatorics, 4th edition, John wiley & Sons, New York.

Course Objectives

This course enables the students to learn

- How to use Newton's laws of motion to solve advanced problems involving the dynamic motion of classical mechanical systems.
- Applications of differential equations in advanced mathematical problems.
- To solve dynamics problems such as conservation of energy and linear and angular momentum.
- Parameters defining the motion of mechanical systems and their degrees of freedom.
- The components of a force in rectangular or nonrectangular coordinates. Determine the resultant of a system of forces.
- Complete and correct free-body diagrams and write the appropriate equilibrium equations from the free-body diagram.

Course Outcomes (COs)

On successful completion of this course students will be able to

1. Understand the concept of the D'Alembert's principle.
2. Derive the Lagrange's equation for holonomic and non holonomic constraints.
3. Classify Scleronomic and Rheonomic systems.
4. Solve the problems of Hamilton equations of motion.
5. Study of the canonical transformations.
6. Know the concept of Hamilton Jacobi Theory.

UNIT I

Survey of Elementary principles: Constraints - Generalized coordinates, Holonomic and non-holonomic systems, Scleronomic and Rheonomic systems. D'Alembert's principle and Lagrange's equations – Velocity – dependent potentials and the dissipation function – some applications of the Lagrange formulation.

UNIT II

Variation principles and Lagrange's equations: Hamilton's principle – Some techniques of calculus of variations – Derivation of Lagrange's Equations from Hamilton's principle – Extension of Hamilton's principle to non-holonomic systems – Conservation theorems and symmetry properties.

UNIT III

Hamilton Equations of motion: Legendre Transformations and the Hamilton Equations of motion-canonical equations of Hamilton – Cyclic coordinates and conservation theorems – Routh's procedure - Derivation of Hamilton's equations from a variational principle – The principle of least action.

UNIT IV

Canonical transformations: The equations of canonical transformation – Examples of Canonical transformations – Poisson Brackets and other Canonical invariants – integral invariants of Poincare, Lagrange brackets.

UNIT V

Hamilton Jacobi Theory: Hamilton Jacobi equations for Hamilton's principle function – Harmonic

oscillator problem - Hamilton Jacobi equation for Hamilton's characteristic function – Separation of variables in the Hamilton-Jacobi equation.

SUGGESTED READINGS

TEXT BOOK

T1. Goldstein. H. (2001), Classical Mechanics Second Edition, Narosa Publishing House, New Delhi.

REFERENCES

R1. Gantmacher, F., (2013). Lectures in Analytic Mechanics, MIR Publishers, Moscow.

R 2. Gelfand, I. M., and Fomin, S. V., (2003), Calculus of Variations, Prentice Hall, New Delhi.

R 3. Loney, S. L., (1979). An elementary treatise on Statics, Kalyani Publishers, New Delhi.

Course Objectives

This course enables the students to learn

- In-depth understanding of functional, logic, and programming paradigms.
- How to implement several programs in languages other than the one emphasized in the core curriculum.
- This course provides an introduction to the basic concepts and techniques of numerical solution of algebraic equation.
- This course is to provide students with an introduction to the field of numerical analysis.
- Understand the concept of Gauss elimination method.
- How to find the differential equation in numerical method.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Know the concepts for problem solving.
2. Acquire new knowledge in computing, including the ability to learn about new ideas and advances, techniques, tools, and languages, and to use them effectively; and to be motivated to engage in life-long learning
3. Comprehend important issues related to the development of computer-based systems in a professional context using a well-defined process.
4. Be familiar with programming with numerical packages.
5. Be aware of the use of numerical methods in modern scientific computing.
6. To develop the mathematical skills of the students in the areas of numerical methods.

List of Practical:

1. Solution of non-linear equation-Bairstow's method for quadratic factors.
2. Solution of simultaneous equations-Gauss Elimination.
3. Solution of simultaneous equations-Gauss Jordan.
4. Solution of simultaneous equations-Gauss Jacobi.
5. Solution of simultaneous equations-Gauss Seidal.
6. Solution of simultaneous equations-Triangularisation.
7. Numerical integration-Trapezoidal rule.
8. Numerical integration-Simpson's rules.
9. Solution for ordinary differential equation-Euler method.
10. Solution for ordinary differential equation- Runge Kutta Second order.
11. Solution for parabolic equation - Explicit method.
12. Solution for parabolic equation - The Crank Nicolson method.

Course Objectives

This course enables the students to learn

- To learn the concepts of Oriented circles and level curves.
- Fundamental concepts of complex integration.
- To know the concepts of harmonic function.
- To develop the skill of contour integration to evaluate complicated real integrals via residue calculus.
- The development of the complex variable in boundary behaviour.
- Contour integral using parametrization, fundamental theorem of calculus and Cauchy's integral formula.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Explain the role of the Conformal mapping.
2. Evaluate complex contour integrals and some of their consequences.
3. Determine the Taylor series or the Laurent series of an analytic function in a given region
4. Describe the convergence properties of a power series.
5. Know the basic properties of singularities of analytic functions.
6. Demonstrate familiarity with a range of examples of these concepts of conformal mapping.

UNIT I

Conformal mapping-Linear transformations- cross ratio- symmetry- Oriented circles-families of circles-level curves.

UNIT II

Complex integration-rectifiable Arcs- Cauchy's theorem for Rectangle and disc-Cauchy's integral formula-higher derivatives.

UNIT III

Harmonic functions-mean value property-Poisson's formula-Schwarz theorem, Reflection principle-Weierstrass theorem- Taylor series and Laurent series.

UNIT IV

Partial Fractions- Infinite products – Canonical products-The gamma function – Stirling's Formula – Entire functions – Jensen's formula.

UNIT V

Riemann Mapping Theorem – Boundary behaviour – Use of Reflection Principle – Analytical arcs – Conformal mapping of polygons- The Schwartz - Christoffel formula.

4. Walter Rudin., (2012) .Real and Complex Analysis,3rd edition, Mc Graw Hill Book Company, New York.

Course Objectives

This course enables the students to learn

- Topological properties of sets.
- The properties of compact spaces and connected spaces.
- To explore the foundations of linear subspace.
- The concepts of metric spaces and topological spaces.
- Metric spaces and metrizability of topological spaces; separation axioms.
- Interior, closure and boundary: applications to geographic information systems

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Know concept of metric spaces.
2. Acquire knowledge about various types of topological spaces and their properties.
3. Know the result of Compactness problems and theorems.
4. Admire the deep mathematical results like Urysohn's lemma.
5. Create examples and counterexamples in the fundamental concepts of separation space.
6. Formulate and analyze topological problems in connected space.

UNIT I

Topological spaces, Basis for a topologies, the order topology, the product topology $X \times Y$, the subspace topology.

UNIT II

Closed set and limit points, continuous functions, the product topologies, the metric topologies.

UNIT III

Connected spaces, connected subspaces of the real line, components and local connectedness.

UNIT IV

Compact spaces, compact subspaces of the Real line, limit point compactness, local compactness.

UNIT V

The countability axioms, the separation axioms, normal spaces, The Urysohn lemma, The Urysohn metrization theorem, the Tietze Extension theorem.

SUGGESTED READINGS**TEXT BOOK**

1. James R.Munkres., (2008). Topology, Second edition, Pearson Prentice Hall, New Delhi.

REFERENCES

1. Simmons, G. F., (2004). Introduction to Topology and Modern Analysis, Tata Mc Graw Hill,

New Delhi.

3. James Dugundji., (2002). Topology, Universal Book Stall, New Delhi.
4. Joshi, K. D.(2004). Introduction to General Topology, New Age International Pvt Ltd, New Delhi.

Course Objectives

This course enables the students to learn

- The basic concepts of integer linear programming.
- How to solve quadratic programming problems, dynamic programming problems and non-linear programming problems.
- Classical optimization techniques and numerical methods of optimization.
- Know the basics of different evolutionary algorithms.
- Explain Integer programming techniques and apply different optimization techniques to solve various models.
- Enumerate the fundamental knowledge of Linear Programming and Dynamic Programming problems.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Understand the concept of linear programming and integer programming.
2. Develop optimal decision policy skill.
3. Familiarize with real life applications of inventory models.
4. Skill in decision analysis.
5. Mastery in Beale's method and simplex method.
6. Use classical optimization techniques and numerical methods of optimization.

UNIT I

Integer Linear Programming: Types of Integer Linear Programming Problems - Concept of Cutting Plane - Gomory's All Integer Cutting Plane Method - Gomory's mixed Integer Cutting Plane method

Branch and Bound Method. - Zero-One Integer Programming – Real life application in Integer Linear Programming.

UNIT II

Dynamic Programming: Characteristics of Dynamic Programming Problem - Developing Optimal Decision Policy - Dynamic Programming under Certainty - DP approach to solve LPP.

UNIT III

Probabilistic Inventory Model: Real life application -Continuous review models- Probabilistic Economic order quantity (EOQ) Model. Single-period models – No setup model – setup model. Multi period model.

UNIT IV

Decision Analysis: Real life application - Decision making under certainty- Analytic hierarchy process. Decisions under Risk- Decision Trees-based expected value criterion, variations of the expected value criterion. Decisions under Uncertainty Real life application in Decision Analysis

UNIT V

Non-linear Programming Methods: Examples of NLPP - General NLPP - Graphical solution - Quadratic Programming - Wolfe's modified Simplex Methods - Beale's Method.

5. Sivarethina Mohan. R., (2005). Operations Research, First edition, Tata Mc Graw Hill Publishing Company Ltd, New Delhi.

Course Objectives

This course enables the students to learn

- The basic concepts of solution of first order partial differential equation and its applications.
- About initial and boundary value problems for PDEs of first and second order which includes Laplace Equation, Diffusion Equation and Wave Equation.
- Introduce students to how to solve linear Partial Differential with methods.
- Technique of separation of variables to solve PDEs and analyze the behavior of solutions in terms of eigen function expansions.
- Solutions of PDEs are determined by conditions at the boundary of the spatial domain and initial conditions at time zero.
- Basic questions concerning the existence and uniqueness of solutions, and continuous dependence of initial and boundary data.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Classify linear and Nonlinear first order differential equations with constant coefficients.
2. Solve the linear partial differential equations with constant coefficient equations.
3. Describe the method of separable variables and integral transforms.
4. Solve the elementary Laplace equation with symmetry.
5. Acquire the knowledge of wave equation and vibrating membranes.
6. Enrich their knowledge about diffusion equations with sources.

UNIT I

First Order Partial Differential Equations:

Non linear partial differential equation of first order –Compatible systems of first order equations – Special type of first order equations- Partial differential equations of second order – The origin of second order equations – Linear partial differential equations with constant coefficient equations with variable coefficients.

UNIT II

Method of separation of variables –The method of integral transforms.

UNIT III

Laplace Equation:

Elementary solutions of Laplace equations- Families of Equi-potential surfaces - Boundary Value problems-separation of variables-problems with axial symmetry.

UNIT IV

Wave Equation:

Elementary solutions of one dimensional wave equation-Vibrating membranes - Applications of calculus of variations- Green's functions for the wave equation.

UNIT V

Diffusion Equation:

The resolution of Boundary value problems for the Diffusion equation- Elementary solutions of

diffusion equation - Separation of variables- use of Green's functions- Diffusion with Sources.

Course Objectives

This course enables the students to learn

- The fundamental concepts in Graph Theory and some of its modern applications.
- The use of these methods in subsequent courses in the design and analysis of algorithms, computability theory, software engineering, and computer systems.
- Apply graph-theoretic terminology and notation.
- Analyze new networks using the main concepts of graph theory.
- Central theorems about trees, matching, connectivity, colouring and planar graphs.
- Describe and apply some basic algorithms for graphs.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Understanding the basic concepts of Euler graphs and Trees.
2. Determine whether graphs are Planer and/or non planer
3. Overview of properties of trees and a minimal spanning tree for a given weighted graph.
4. Identify induced subgraphs, cliques, matchings, covers in graphs.
5. Understand the concept of Directed Graphs.
6. Know the concept of domination in graphs.

UNIT I

Graphs – Introduction – Isomorphism – Sub graphs – Walks, Paths, Circuits – Connectedness – Components – Euler Graphs – Hamiltonian Paths and Circuits – Trees – Properties of trees – Distance and Centers in Tree – Rooted and Binary Trees - Spanning trees – Fundamental Circuits.

UNIT II

Spanning Trees in a Weighted Graph – Cut Sets – Properties of Cut Set – All Cut Sets – Fundamental Circuits and Cut Sets – Connectivity and separability – Network flows – 1- Isomorphism – 2-Isomorphism – Combinational versus Geometric Graphs – Planer Graphs – Different Representation of a Planer Graph.

UNIT III

Incidence matrix – Sub matrices – Circuit Matrix – Path Matrix – Adjacency Matrix – Chromatic Number – Chromatic partitioning – Chromatic polynomial - Matching - Covering – Four Color Problem.

UNIT IV

Directed Graphs – Types of Directed Graphs - Types of enumeration, counting labeled trees, counting unlabelled trees, Polya's counting theorem, graph enumeration with Polya's theorem.

UNIT V

Domination in graphs: Introduction – Terminology and concepts – Applications – Dominating set and domination number – Independent set and independence number – History of domination in graphs.

Course Objectives

This course enables the students to learn

- The theoretical fundamentals of theory of elasticity.
- The ability to use the principles of theory of elasticity in engineering problems.
- To solve advanced solid mechanics problems using classical methods and to characterize materials with elastics constitutive relations.
- To make students understand the principle of strain energy function.
- Be proficient with basic concepts in continuum mechanics of solids, including of strain, internal force, stress and equilibrium in solids.
- Be able to characterize materials with elastic constitutive relations.

Course Outcomes (COs)

On successful completion of this course the student will be able to

1. Know the concept of Tensor Analysis.
2. Analyze solid mechanics problems using classical methods and energy methods.
3. Apply various failure criteria for general stress states at points.
4. Get advanced knowledge about stresses, strains.
5. Understand the theory of elasticity including strain/displacement and Hooke's law relationships.
6. Apply the concept of strain energy function.

UNIT I

Tensor Analysis:

Co-ordinate transformations-contravariant and covariant vectors and tensors-symmetric and anti-symmetric tensors- metric tensor – conjugate tensor-associated tensors –Christoffel's symbols and transformations laws – covariant derivative – permutation symbols and tensors – relative and absolute tensors.

UNIT II

Analysis of strain:

Deformation –Affine transformation – infinitesimal affine deformations – A geometrical interpretation of components of strain – strain quadric of Cauchy – Principal strains and invariants general infinitesimal deformation – examples of strain – saint-Venant's equations of compatibility – finite –deformations.

UNIT III

Analysis of Stress:

Body and surface forces – stress tensor – equations of equilibrium in Cartesian co-ordinates – transformation of co-ordinates –stress quadric of Cauchy principal stresses – invariants of stress tension – maximum normal and shear stresses- Mohr's diagram – examples of stress.

UNIT IV

Equation of elasticity

Generalized Hooke's law- homogeneous isotropic medium – elastic module for isotropic media – simple tension – pure shear – hydrostatic pressure – equilibrium equations for an isotropic elastic

solid – Beltrami- Michell compatibility equations.

UNIT V

Dynamical equations of isotropic elastic solid – strain energy function – uniqueness of solution – statement of saint – Senant’s principle.

Course Objectives

This course enables the students to learn

- The fundamental theories of actuarial science as they apply in life insurance, general insurance and superannuation.
- How to assess the suitability of actuarial, financial and economic models in solving actuarial problems
- Interpretation and critically evaluating the articles in the actuarial research literature.
- About the concept of educational annuity plan.
- Understand the Premium Conversion tables for calculation of Policy values.
- The concept of Premiums for Annuity Plans.

Course Outcomes (COs)

On successful completion of this course the student will be able to

1. Explain the basic concepts of accounts and calculations of interest rates in banking / financial institution system.
2. Define Annuity and Summarize / calculate different values Annuities.
3. Learn about how to read Mortality Table and from that how to calculate the Probability of Survival and Death.
4. Describe about Premiums of Life Insurance and Endowment Assurance (Pure, Double and Marriage) and Educational Annuity plan.
5. Find the Annuity values for various Annuities.
6. Calculation of Net Premiums for Assurance Plans.

UNIT I

Accumulated Value – Present Value – Formula for present value- Annuities Certain- present Values- Amounts - Deferred Annuities –Perpetuities - Present Value of an Immediate Annuity Certain – Accumulated Value of Annuity – Relation between S_n and a_n – Present Value of Deferred Annuity Certain – Accumulated Value of a term of n years – Perpetuity – Present Value of an Immediate Perpetuity of 1 p.a. – Present Value of a Perpetuity due of 1 p.a. – Deferred Perpetuity with Deferral Period of m years – Mortality Table – The Probabilities of Survival and Death.

UNIT II

Life Insurance Premiums – General considerations - Assurance Benefits – Pure Endowment Assurance – Endowment Assurance – Temporary Assurance or Term Assurance - Whole Life Assurance – Pure Endowment Assurance – Endowment Assurance – Double Endowment Assurance Increasing Temporary Assurance – Increasing Whole Life Assurance – Fixed Term (Marriage) Endowment – Educational Annuity Plan.

UNIT III

Life Annuities and Temporary Annuities – Commutation Functions N_x – To Find the Present Value of an Annuity Due of Re.1 p.a. for Life – Temporary Immediate Life Annuity – Expression for $a_x : n$ – Deferred Temporary Life Annuity – Variable Life Annuity – Increasing Life Annuity – Variations in the Present Values of Annuities – Life Annuities Payable at Frequent Intervals.

UNIT IV

Net Premiums for Assurance Plans – Natural Premiums – Level Annual Premium – Symbols for Level Annual Premium under Various Assurance Plans – Mathematical Expressions for level Annual Premium under Level Annual Premium under Various Plans for Sum Assure of Re. 1 – Net Premiums – Consequences of charging level Premium – Consequences of withdrawals – Net Premiums for Annuity Plans – Immediate Annuities – Deferred Annuities.

UNIT V

Premium Conversion tables – Single Premium Conversion tables – Annual Premium Conversion Tables – Policy Values – Two kinds of Policy values – Policy value in symbols – Calculation of Policy Value for Unit Sum Assure – Other Expressions for Policy Value – Surrender Values – Paid up Policies – Alteration of Policy Contracts.

SUGGESTED READINGS

TEXT BOOK

1. Mathematical Basis of Life Insurance - Insurance Institute of India

Course Objectives

This course enables the students to learn

- The concepts of fluid, its properties and behavior under various conditions of internal and external flows.
- The fundamentals of Fluid Dynamics, which is used in the applications of Aerodynamics, Hydraulics, Marine Engineering, Gas dynamics etc.
- To imbibe basic laws and equations used for analysis of static and dynamic fluids
- About the Two-Dimensional Motion of the fluid.
- Identify the fundamental kinematics of a fluid element.
- State the conservation principles of mass, linear momentum, and energy for fluid flow.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Classify and exploit fluids based on the physical properties of a fluid.
2. Compute correctly the kinematical properties of a fluid element.
3. Apply the concept of Bernoulli's theorem in steady motion.
4. Understand both flow physics and mathematical properties of governing Navier-Stokes equations and define proper boundary conditions for solution.
5. Provide the student with the basic mathematical background and tools to model fluid motion.
6. Develop a physical understanding of the important aspects that govern incompressible flow that can be observed in a variety of situations in everyday life.

UNIT I

Introductory Notions – Velocity – Stream Lines and Path Lines – Stream Tubes and Filaments – Fluid Body – Density – Pressure. Differentiation following the Fluid – Equation of continuity – Boundary conditions – Kinematical and physical – Rate of change of linear momentum – Equation of motion of an in viscid fluid.

UNIT II

Euler's momentum Theorem – Conservative forces – Bernoulli's theorem in steady motion – energy equation for in viscid fluid – circulation – Kelvin's theorem – vortex motion – Helmholtz equation.

UNIT III

Two Dimensional Motion – Two Dimensional Functions – Complex Potential – basic singularities – source – sink – Vortex – doublet – Circle theorem. Flow past a circular cylinder with circulation – Blasius Theorem – Lift force. (Magnus effect)

UNIT IV

Viscous flows – Navier-Stokes equations – Vorticity and circulation in a viscous fluid – Steady flow through an arbitrary cylinder under pressure – Steady Couette flow between cylinders in relative motion – Steady flow between parallel planes.

UNIT V

Laminar Boundary Layer in incompressible flow: Boundary Layer concept – Boundary Layer equations – Displacement thickness, Momentum thickness – Kinetic energy thickness – integral equation of boundary layer – flow parallel to semi infinite flat plate – Blasius equation and its solution in series.

This course enables the students to learn

Course Objectives

- To provide the students an exposure to develop well-structured optimization techniques knowledge arising process in various level of science.
- The course aims at building capabilities in the students for analyzing different situations in the industrial/ business scenario involving limited resources and finding the optimal solution within constraints.
- This module aims to introduce students to use Probabilistic Model and techniques.
- The course aims at providing fundamental knowledge and exposure of the concepts, theories and practices in the field of management.
- Study the basic components of an optimization problem.
- Formulation of design problems as mathematical programming problems.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Use the object oriented concepts for implementation of Optimization Techniques.
2. Implement the data structure concepts for Optimization Techniques problems.
3. Acquire skills to solve various multivariable optimization problems
4. Solve of different optimization problems.
5. Identify and develop operational research models from the verbal description of the real system. Understand the mathematical tools that are needed to solve optimization problems.
6. Use mathematical software to solve the proposed models.

List of Practical:

1. Solution for a system of equations- Simplex method.
2. Decision Making with minimax criteria.
3. Decision Making under risk.
4. Travelling salesman problem to find the shortest path.
5. Write a C program to calculate the minimum cost using North West Corner Rule.
6. To calculate the EOQ for purchasing model without shortage using C program.
7. To calculate the EOQ for manufacturing model without shortage using C program.
8. To calculate the EOQ for manufacturing model with shortage using C program.
9. To calculate the EOQ for purchasing model with shortage using C program.
10. Probabilistic Model-EOQ.

Course Objectives

This course enables the students to learn

- The concept of Banach spaces and related theorems
- The specific techniques for bounded operators over normed and Hilbert spaces.
- The demonstrate significant applications of the theory of functional analysis.
- The ideas and some of the fundamental theorems of functional analysis.
- Understand how to use the main properties of compact operators.
- Apply the spectral analysis of compact self-adjoint operators to the resolution of integral equations.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Develop Banach spaces from vector spaces.
2. Describe the open mapping theorem.
3. Discuss Hilbert spaces and its properties.
4. Study in detail about the adjoint of an operator.
5. Handle complex problems concerning topics within the area of Functional Analysis.
6. Understand and apply fundamental theorems from the theory of normed and Banach spaces.

UNIT I

Banach Spaces- Normed linear space – Definitions and Examples-Theorems. Continuous Linear Transformations – Some theorems- Problems. The Hahn- Banach Theorem –Lemma and Theorems. The Natural imbedding of N in N^{**} -Definitions and Theorems.

UNIT II

The Open Mapping Theorem- Theorem and Examples –Problems. The closed graph theorem. The conjugate of an operation- The uniform boundedness theorem- Problems.

UNIT III

Hilbert Spaces- The Definition and Some Simple Properties – Examples and Problems. Orthogonal Complements - Some theorems .Ortho-normal sets – Definitions and Examples- Bessel's inequality- The conjugate space H^* .

UNIT IV

The Adjoint of an operator – Definitions and Some Properties-Problems. Self- adjoint operators – Some Theorems and Problems. Normal and Unitary operators –theorems and problems. Projections - Theorems and Problems.

UNIT V

Banach algebras: The definition and some examples of Banach algebra – Regular and singular elements – Topological divisors of zero – The spectrum – The formula for the spectral radius.

Course Objectives

This course enables the students to learn

- The introduction and different architectures of fuzzy sets.
- The applications of fuzzy networks.
- To cater the knowledge of fuzzy Logic Control and use these for controlling real time systems.
- Solve problems that are appropriately solved by neural networks, fuzzy logic, and genetic algorithms.
- The concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic control and other machine intelligence applications of fuzzy logic.
- The importance of tolerance of imprecision and uncertainty for design of robust & low cost intelligent machines.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Obtain the fundamentals and types of fuzzy networks.
2. Have a broad knowledge in developing the different algorithms for fuzzy Logic.
3. Analyze constructing Fuzzy sets and operations.
4. Acquire a broad knowledge in Fuzzy relation equation.
5. The basic mathematical elements of the theory of Fuzzy systems and neural networks.
6. Explain the concepts of neural networks, fuzzy logic, and genetic algorithms.

UNIT I

Classical logic: An overview-Multivalued logics- Fuzzy Propositions-Fuzzy quantifiers-linguistic hedges-Inference from conditional fuzzy propositions-Inference from conditional and qualified propositions-Inference from qualified propositions.

UNIT II

Uncertainty based in formations-Information and uncertainty-Non specificity of crisp sets- Non specificity of Fuzzy sets-Fuzziness of fuzzy sets- Uncertainty in evidence theory-Summary of Uncertainty measures-Principles of Uncertainty.

UNIT III

Constructing Fuzzy sets and operations - General discussion-Method of construction: An overview-Direct method with one expert- Direct method with multiple experts- Indirect method with one expert- Indirect method with multiple experts-Constructions from sample data.

UNIT IV

Fuzzy expert systems: An overview-Fuzzy implications-selection of Fuzzy implications-Multi conditional approximate reasoning-The role of Fuzzy relation equation-Interval-valued approximate reasoning.

UNIT V

Fuzzy systems-General discussion-Fuzzy controllers: An overview and examples-Fuzzy systems and neural networks- Fuzzy neural networks- Fuzzy Automata-Fuzzy dynamic systems.

Course Objectives

This course enables the students to learn

- Enrich the fundamental of mathematical modeling skills.
- The construction and analysis of mathematical models inspired by real life problems
- Several modeling techniques and the means to analyze the resulting systems.
- To analyze a model and to apply an appropriate method to calculate a solution in order to predict the behavior of the system.
- Assess and articulate what type of modeling techniques are appropriate for a given physical system.
- Make predictions of the behavior of a given physical system based on the analysis of its mathematical model.

Course Outcomes (COs)

On successful completion of this course the student will be able to

1. Solve problems involving dynamic models, and probabilistic models.
2. Understand the use of modern technology in solving real-world to Epidemic models.
3. Problems through ordinary differential equations, probability theory, graphs.
4. Formulate a mathematical model given a clear statement of the underlying scientific principles.
5. Solve basic linear difference equations and solve application problems.
6. Know the concept of mathematical modeling through Graphs.

UNIT I

Mathematical Modeling through Ordinary Differential Equations of First order: Linear Growth and Decay Models – Non-Linear Growth and Decay Models – Compartment Models – Dynamics problems – Geometrical problems.

UNIT II

Mathematical Modeling through Systems of Ordinary Differential Equations of First Order: Population Dynamics – Epidemics – Compartment Models – Economics – Medicine, Arms Race, Battles and International Trade – Dynamics.

UNIT III

Mathematical Modeling through Ordinary Differential Equations of Second Order: Planetary Motions – Circular Motion and Motion of Satellites – Mathematical Modelling through Linear Differential Equations of Second Order – Miscellaneous Mathematical Models.

UNIT IV

Mathematical Modeling through Difference Equations : Simple Models – Basic Theory of Linear Difference Equations with Constant Coefficients – Economics and Finance – Population Dynamics and Genetics – Probability Theory.

UNIT V

Mathematical Modeling through Graphs: Solutions that can be Modeled through Graphs – Mathematical Modeling in Terms of Directed Graphs, Signed Graphs, Weighted Digraphs and Un oriented Graphs.

3. Frank. R. Giordano, Maurice. D.Weir, WilliamP. Fox, (2003). A first course in Mathematical Modelling, Vikash Publishing House, UK.

Course Objectives

This course enables the students to learn

- To understand the basic concepts in probability generating functions, sample moments and their functions, sampling, significance tests and statistical measures
- Probability distributions, significance of testing hypothesis and its interpretation,
- Estimation, ANOVA and their applications in various disciplines.
- Understand the concept of estimation.
- The knowledge of fixed-sample and large-sample statistical properties of point and interval estimators.
- Understanding of how to design experiments and surveys for efficiency.

Course Outcomes (COs)

After successfully completed this module the students will be able to

1. Explain the concepts of probability, including conditional probability.
2. Explain the concepts of random variable, probability distribution, distribution function, expected value, variance and higher moments, and calculate expected values and probabilities associated with the distributions of random variables.
3. Summarize the main features of a data set and test statistical hypotheses.
4. Define basic discrete and continuous distributions, be able to apply them and simulate them in simple cases.
5. Explain the concepts of analysis of variance and use them to investigate factorial dependence.
6. Describe the main methods of estimation and the main properties of estimators, and apply them.

UNIT I

Probability: Random Events – Preliminary remarks – random events and operations performed on them – the system of axioms of the theory of probability – conditional probability – Bayes theorem – Independent Events – functions of random variables – Introduction to hypothesis testing, type of errors, standard errors, confidence interval, confidence limits. Significance level.

UNIT II

Sample moments and their functions: Notion of a sample and a statistic - Distribution functions of X , S^2 and (X, S^2) - Chi-square distribution - Student t-distribution - Fisher's Z-distribution - Snedecor's F-distribution - Distribution of sample mean from non-normal populations.

UNIT III

Significance test: Concept of a statistical test - Parametric tests for small samples and large samples Chi-square test - Kolmogorov Theorem - Smirnov Theorem - Tests of Kolmogorov and Smirnov type The Wald-Wolfovitz and Wilcoxon-Mann-Whitney tests - Independence Tests by contingency tables.

UNIT IV

Estimation: Preliminary notion - Consistency estimation - Unbiased estimates - Sufficiency - Efficiency - Asymptotically most efficient estimates - methods of finding estimates - confidence Interval.

UNIT V

Analysis of Variance: One way classification and two-way classification. Hypotheses Testing: Power functions -OC function-Most Powerful test -Uniformly most powerful test -unbiased test.

Course Objectives

This course enables the students to learn

- The basic concepts in automata theory and theory of computation.
- To identify different formal language classes and their relationships.
- This course focuses on the basic theory of Computer Science and formal methods of computation like automata theory, formal languages, grammars.
- Design automata, regular expressions and context free grammars for accepting or generating a certain language.
- Design grammars and recognizers for different formal languages
- Determine the decidability and intractability of computational problems.

Course Outcomes (COs)

On successful completion of this course the students will be able to:

1. Understand the definition of Automata.
2. Know about the different concepts in automata theory and formal languages such as formal proofs, non-deterministic automata, regular expressions, regular languages context-free grammars, context-free languages.
3. Discuss the acceptability of a string by finite automation.
4. Applications of Pumping Lemma.
5. Design automata, regular expressions and context-free grammars accepting or generating certain languages.
6. Acquire concepts relating to the theory of computation and computational models including decidability and intractability.

UNIT I

Definition of an Automation - Description of Finite Automaton – Transition systems - Property of transition functions - Acceptability of a string by a finite Automaton - Non deterministic finite automaton - The equivalence of DFA and NFA.

UNIT II

Formal Languages - Basic Definitions and examples - Chomsky classification of Languages - Languages and their relation - Recursive and Recursively Enumerable sets- Operations on Languages.

UNIT III

Regular expressions - Finite Automata and Regular expressions.

UNIT IV

Pumping Lemma for Regular sets - Applications of Pumping Lemma - Closure Property of Regular sets - Regular sets and Regular grammars.

UNIT V

Context free Languages and Derivation trees - Ambiguity in Context free grammars - Simplification of Context free grammars (examples only).

Course Objectives

This course enables the students to learn

- To understand fundamentals of magnetohydrodynamics which describes the dynamics of electrically conducting fluids
- To figure out the applications of magnetohydrodynamics to the various science and engineering fields
- Basics of electromagnetic theory and vector calculus.
- Able to understand the concept of flow and Stability.
- The basic properties of electrically-conducting fluids.
- The role of the Lorentz force and its relevance to plasma confinement, dynamo theory and the dynamics of magnetic waves.

Course Outcomes (COs)

On successful completion of this course the student will be able to:

1. Provide the details of the derivation of ideal and resistive MHD equations.
2. Demonstrate the basic properties of ideal MHD.
3. Describe electromagnetic boundary conditions.
4. Explain MHD waves.
5. Describe the derivation of fluid equations, energy equation.
6. Describe electromagnetic fields in the energy and momentum fluxes.

UNIT I

Review of equation of motions of viscous compressible fluid flow –Introduction of MHD-Electromagnetic field equations-Maxwell's equations and their Physical significance- Maxwell's equations in the moving frame of reference-Invariance under Galilean Transformation-Electromagnetic effects and the magnetic Reynolds number-induction equation –Alfven's Theorem-Physical Significance-Consequence of Alfven's Theorem-Ferraro's Law of irritation-The magnetic Energy- the mechanical equations and the mechanical effects-Electromagnetic stresses.

UNIT II

Magneto hydrostatics and steady states-Hydro magnetic equilibrium and forces free magnetic fields-boundary conditions – Boundary conditions in the case of force free magnetic fields-free surface of an isolated fluid mass- Chandrasekhar's theorem-General solution of force free magnetic field when is constant-some examples of force free fields.

UNIT III

Hydromagnetics of the laboratory- steady laminar motion-Hartmann flow (MHD Poiseuille's flow)- Domination of viscous forces over magnetic forces and vice versa-physical significance- Important dimensionless of MHD and their physical significance-electromagnetic boundary conditions-tensor electrical conductivity, Hall current and ion slip – simple flow problems with tensor electrical conductivity.

UNIT IV

Magneto hydrodynamic waves- Waves in an infinite fluid of infinite electrical conductivity- Alfven

waves in incompressible fluid in viscid fluid of infinite electrical conductivity-Waves of finite amplitude –propagation of velocity and current density with Alfven velocity-MHD waves in incompressible fluid- Alfven wave and two magneto acoustic waves- the limit of zero magnetic Prandtl number significance.

UNIT V

Stability of hydro magnetic systems- theory and applications-methods of investigation-small perturbations and instability-Energy principle-normal mode analysis-simple illustrative examples-the stability of Hartman layer-Squire's theorem-Orr-Summerfield equation-Instability of linear pinch-methods of stabilize- Flute Instability- A general criterion for stability-Bernstein's method of small oscillations(normal mode analysis) for hydro magnetic stability-jeans criterion for Gravitational stability- Chandrasekhar's generalization for MHD and rotating fluids.

3. Sutton G.W., and Sherman A., (1965). Engineering Magneto hydrodynamics., McGraw HillBook Co., New Delhi.
4. Chandrasekhar S., (1961). Hydro dynamic and Hydro dynamic stability, Oxford university press. Cambridge, UK.

Course Objectives:

This course enables the students to learn

- The basic concepts of fuzzy topological spaces
- Separation axioms in Fuzzy Topological spaces
- To study about Fuzzy relations
- To study α - connectedness and α - compactness.
- Understand the concept of fuzzy nonlinear simulation.
- The development of Fuzzy Arithmetic.

Course Outcomes (COs)

On successful completion of this course the student will be able to:

1. Able to learn fuzzy set theory.
2. Understand the concept of Operations on Fuzzy Sets
3. Mastery in fuzzy relations and fuzzy graphs
4. Attain in-depth knowledge in fuzzy relations.
5. Understand the knowledge of Fuzzy Logic.
6. Gain knowledge about the fundamental concepts of α - shading families.

UNIT I

Introduction: From classical Sets (crisp sets) to fuzzy sets, Basic definitions, basic operations on fuzzy sets, fuzzy sets induced by mappings, Types of fuzzy sets.

Fuzzy Sets Versus Crisp Sets: The α - cuts, strong α - cuts, properties of cuts, representation of fuzzy sets, decomposition theorems, Zadeh's extension principle.

UNIT II

Operations on Fuzzy Sets: Types of operations, fuzzy complements, fuzzy intersections, t – norms, fuzzy unions, t – conorms, combinations of operations, aggregation operations.

Fuzzy Arithmetic: Fuzzy numbers, Linguistic variables, arithmetic operations on intervals and fuzzy numbers, fuzzy equations.

UNIT III

Fuzzy Relations: Crisp and fuzzy relations, Projections and cylindric extensions, binary fuzzy relations, membership matrices and sagittal diagram, inverse and composition of fuzzy relations, binary fuzzy relation on a single set, fuzzy equivalence relation, fuzzy ordering relation, fuzzy

morphisms, sup and inf compositions.

UNIT IV

Fuzzy Logic: An overview of classical logic. Multivalued logics, fuzzy propositions, fuzzy quantifiers, Linguistic hedges, inferences from conditional fuzzy propositions, qualified fuzzy propositions and quantified fuzzy propositions. Fuzzy rule based systems and fuzzy nonlinear simulation.

UNIT V

Fuzzy Topology: Change's and Lowen's definition of fuzzy topology. Continuity, open and closed maps. α - shading families, α - connectedness and α - compactness.

Applications: Applications of fuzzy sets and fuzzy logic to various disciplines including Computer Science.

Semester – III

Course Objectives

This course enables the students to learn

- Range of mathematics tools with emphasis on engineering applications.
- To think quantitatively and analyse problems critically.
- How to apply integral equations to the ordinary differential equation.
- Converting the IVPs and BVPs to the corresponding integral equations and Fredholm and Volterra integro-differential equations.
- Equip with the methods of finding Laplace transform and Fourier Transforms of different functions.
- Fundamental concepts of Fourier series, Fourier transforms and Laplace transforms and their applications to differential equations.

Course Outcomes (COs)

On successful completion of this course the students will be able to,

1. Calculate the Laplace equation in half plane of standard functions both from the definition and by using tables.
2. Equation with separable kernel and Fredholm alternative approximation Method.
3. Select and combine the necessary Laplace transform techniques to solve second-order ordinary differential equations.
4. Calculate both real and complex forms of the Fourier series.
5. Calculate the Fourier transform of elementary functions from the definition.
6. Calculate the variational problem in parametric form.

UNIT I

Fourier transforms: Fourier Transforms – Definition of Inversion theorem – Fourier cosine transforms - Fourier sine transforms – Fourier transforms of derivatives - Fourier transforms of some simple functions - Fourier transforms of rational function.

UNIT II

The convolution integral – convolution theorem – Parseval's relation for Fourier transforms – solution of PDE by Fourier transform – Laplace's Equation in Half plane – Laplace's Equation in an infinite strip - The Linear diffusion equation on a semi-infinite line - The two-dimensional diffusion equation.

UNIT III

Integral equations: Types of Integral equations – Equation with separable kernel- Fredholm Alternative Approximate method – Volterra integral equations – Classical Fredholm theory – Fredholm's First, Second, Third theorems.

UNIT IV

Application of Integral equation to ordinary differential equation – initial value problems – Boundary value problems – singular integral equations – Abel Integral equation .

UNIT V

Calculus of variations: Variation and its properties – Euler's equation – Functionals of the integral forms -

Functional dependent on higher order derivatives – functionals dependent on the functions of several independent variables – variational problems in parametric form.

Semester – III

Course Objectives

This course enables the students to learn

- It is well recognized nowadays the importance of Statistics as an indispensable tool for obtaining and spreading information.
- Importance has been enhanced by the use of computational resources and particularly the software SPSS, that showed, during the last decades, to be an effective tool for treating and analyzing statistical data.
- Ability to use SPSS procedures in handling data files and performing statistical analysis, and to interpret the outputs provided by the program.
- Acquiring sensitivity and critical thinking towards arguments and conclusions based on statistical studies.
- Understanding the fundamental principles underlying descriptive and inferential statistical reasoning.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Describe and classify data using statistical terminology.
2. Use SPSS to conduct basic descriptive analyses and graphical presentations.
3. Define the null hypothesis and the alternative hypothesis and Interpret P values and confidence intervals.
4. Understand different measures of effect (e.g. mean difference).
5. Know when to use basic statistical hypothesis tests (t-tests, chi-squared tests, correlation) and how to carry out these tests using SPSS.
6. Appreciate how to present and interpret these results in scientific reports.

List of Practical:

1. Introduction to SPSS Package
2. Working with windows in SPSS
3. Defining variables in variable view window in SPSS
4. Drawing of graphs and diagrams in SPSS Package
5. Standard deviation for individual and discrete series using SPSS Package.
6. Standard deviation continuous series using SPSS Package.
7. Coefficient of variation for individual and discrete series using SPSS Package.
8. Calculation of Mean and variance for binomial distribution using SPSS Package.

9. Calculation of Mean and variance for Poisson distribution using SPSS Package.
10. Karl Pearson's Correlation using SPSS Package.
11. Rank Correlation Coefficient using SPSS Package.
12. Testing Hypothesis using t - test in SPSS Package.
13. Testing Hypothesis using Z - test in SPSS Package.
14. Testing Hypothesis using chi-square - test in SPSS Package.
15. Interpretation of results in the SPSS output viewer.

Semester –IV

Course Objectives

This course enables the students to learn

- Perspective on the broader impact of measure theory in ergodic theory.
- To apply the general principles of measure theory and integration.
- About the concept of Measurable spaces.
- To understand the basic concepts Riemann integral and Lebesgue integral.
- Basic knowledge of measure theory needed to understand probability theory, statistics and functional analysis.
- Develop the ideas of Lebesgue integration and its properties.

Course Outcomes (COs)

After successful completion of this course the students will be able to:

1. Get a clear view of the fundamentals of measure theory.
2. Acquaint with the proofs of the fundamental theorems underlying the theory of Lebesgue integration.
3. Identify the broader impact of measure theory in ergodic theory and ability to pursue further studies in this area.
4. Mastery in the measure spaces and its properties.
5. Apply the theorems of monotone and dominated convergence and Fatou's lemma.
6. Apply Lebesgue decomposition and the Radon-Nikodym theorem.

UNIT I

Lebesgue Measure: Introduction – Outer measure – Measurable sets and Lebesgue Measure – A non measurable set – Measurable set – Measurable functions – Littlewoods's three principles.

UNIT II

The Lebesgue Integral: The Riemann integral – The Lebesgue integral of a bounded function over a set finite measure – The integral of a non negative function – The general Lebesgue integral – Convergence in measure.

UNIT III

Differentiation of monotone function, Functions of bounded variation-differentiation of an integral-Absolute continuity.

UNIT IV

Measure spaces-Measurable functions-Integration-General convergence Theorems.

UNIT V

Signed measures-The Radon-Nikodym theorem-the L^p spaces.

4. Rudin W, (2006). Real and Complex Analysis, 3rd Edition, Mcgraw – Hill, New Delhi.

Course Objectives

This course enables the students to learn

- The mathematical theory of random variables and random processes
- How queueing theory are used as tools and mathematical models in the study of networks.
- The theoretical concepts and techniques for solving problems that arises in practice
- Markov processes in discrete and continuous time.
- The essential mathematical tools for handling random processes.
- The familiarize the students with the stochastic simulation techniques.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Capable to expose the students to different types mathematical models with a view of random processes.
2. Understanding in the concept of birth and death process.
3. Solve the Kolmogorov equations problems.
4. Compute probabilities of transition between states and return to the initial state after long time intervals in Markov chains.
5. Identify classes of states in Markov chains and characterize the classes.
6. Stochastic Processes in Queuing Systems.

UNIT I

Definition of Stochastic Processes – Markov chains: definition, order of a Markov Chain – Higher transition probabilities – classification of states and chains.

UNIT II

Markov Process with discrete state space: Poisson process – and related distributions – properties of Poisson process, Generalizations of Poisson Processes – Birth and death Processes – continuous time Markov Chains.

UNIT III

Markov processes with continuous state space: Introduction, Brownian motion – Wiener Process and differential equations for Wiener process, Kolmogorov equations – first passage time distribution for Wiener process – Ornstein – Uhlenbeck process.

UNIT IV

Branching Processes: Introduction – properties of generating functions of Branching process– Distribution of the total number of progeny, Continuous- Time Markov Branching Process, Age dependent branching process: Bellman-Harris process.

UNIT V

Stochastic Processes in Queuing Systems: Concepts – Queuing model M/M/1 – transient behavior of M/M/1 model

– Birth and death process in Queuing theory: $M/M/1$ – Model related distributions – $M/M/1$ - $M/M/S/S$ – loss system - $M/M/S/M$ – Non birth and death Queuing process: Bulk queues – $M(x)/M/1$.

Undergraduate Programme – B.Sc Microbiology Programme Outcomes

Programme Outcomes of UG Microbiology: Students of all undergraduate microbiology degree Programmes at the time of graduation will be able to

- Scientific Knowledge:** Microbiology majors able to make observations, develop hypotheses, and design and execute experiments using advanced methods. Able to discuss science and scientific methodology. They will have a good knowledge of Intellectual Property Rights.
- Laboratory Skills:** Microbiology students will master the following laboratory skills: aseptic culture techniques, microscopy, use of appropriate methods to identify microorganisms and to use high laboratory equipments. They are able to practice safe microbiology, using appropriate protective and emergency procedures.
- Data analysis skills:** Systematically collect, record, and analyze data, identify sources of error, interpret the results, and reach logical conclusions.
- Problem-Solving Skills:** Microbiology students will be able to analyze and interpret results from a variety of microbiological methods, and apply these methods to analogous situations. Use mathematical and graphing skills and reasoning to solve problems in microbiology.
- Communication Skills:** Microbiology majors will demonstrate competence in written and oral communication.
- Cooperation/Social Responsibility:** Microbiology majors able to understand and appreciate the value of cooperating and working effectively with peers and be able to demonstrate a commitment to the process of developing such skills.
- Able to understand the importance of microorganisms in various industries such as pharmaceuticals, food, biofertilizers and biopesticides etc, Students will have a major knowledge on concepts of immunology, biotechnology, molecular biology, biochemistry, genetics. Able to explain the beneficial and harmful role of microorganisms in environment.

Programme Specific Outcomes (PSOs)

- h. Students will have a major knowledge on concepts of immunology, biotechnology, molecular biology, biochemistry, genetics. Able to explain the beneficial and harmful role of microorganisms in environment. Able to understand the importance of microorganisms in various industries such as pharmaceuticals, food, biofertilizers and biopesticides etc,
- i Describe how microorganisms are used as *model systems* to study basic biology, genetics, metabolism and ecology.
- j. Identify ways microorganisms play an *integral role* in disease, and microbial and immunological methodologies are used in disease treatment and prevention.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

Programme Educational Objectives of UG Microbiology: The major objectives of the undergraduate course is

PEO-I: To impart knowledge on basic concepts of microbiology. To understand the beneficial and harmful role of microorganisms in the environment.

PEO-II: To understand the fundamentals of physiological reactions including metabolic pathways and biochemical reactions in microorganisms.

PEO-III: To develop human resource and entrepreneurs in Microbiology with the ability to independently start their own ventures or small biotech units in the field of biotechnology.

PEO-IV: Understand modern microbiology - practices and approaches with an emphasis in technology application in pharmaceutical, medical, industrial, environmental and agricultural areas.

PEO-V: Become familiar with public policy, bio-safety, and intellectual property rights issues related to microbiology applications nationally and globally

PEO-VI: Gain experience with standard bioinstrumentations and molecular tools and approaches utilized: manipulate genes, gene products and organisms.

PEO-VII: To demonstrate the written and oral communication skill .To develop the problem solving and data interpretation skills.

அலகு – I : இக்கால இலக்கியம்:

(10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை –

ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் –
மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட
வாழ்க்கை.

அலகு – II : அற இலக்கியம்:

(10

மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் – 20

குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்:

(10

மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை:

(10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்

2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்

3. வாழ்க்கை - இளவழகனார்

4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்

5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:

(8 மணிநேரம்)

1. பொருத்தமான தமிழ்ச் சொற்களைப் பயன்படுத்துதல்

2. செய்யுள் பொருளுணர் திறன்

3. மொழிபெயர்ப்புப் பயிற்சிகள்

4. கடிதங்கள் மற்றும் விண்ணப்பங்கள் எழுதுதல்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத்

தமிழ்த் துறை வெளியீடு.

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVE:**

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

COURSE OUTCOME:

- Develop the four types of skills
- Reading and comprehending literary works
- Genres of literature to provide moral education
- Develop communication skills in business environment
- Interpersonal skills will be developed.
- Betterment of language competence

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us - Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. A River - A.K. Ramanujan
3. The Sailor - Safaa Fathy

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Romance of a Busy Broker - O.Henry
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV

- GRAMMAR :**
1. Tenses
 2. Auxiliaries (Primary and Modal)
 3. Articles
 4. Tag Questions

UNIT - V**FUNCTIONAL ENGLISH**

1. Filling the blanks with the suitable form of verb in a conditional sentence.

2. Dialogue Writing
3. Changing positive to negative without altering the meaning
4. Fill in the blank with suitable modal
5. Framing a question to a statement
6. Rewrite the sentences changing the underlined word as directed

Prescribed Text: Reminisce, Published by the Department of English, Karpagam University.

Suggested Reading: Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide a strong, fundamental foundation in microorganisms for advanced studies in biological sciences, particularly to improve their **skills** in microbiology field.
- To identify and understand the principle components of a light microscope
- To provide an overview of the biology of algae, ii) use the study of algae to provide a basis for understanding the evolutionary pathways to higher plants
- To explain why the study of fungi such as yeast and molds is within the discipline of microbiology
- To describe the unique characteristics of fungi
- To explain laboratory diagnosis, prevention and control of protozoa

COURSE OUTCOMES

1. After completion of this course paper, the students clearly understand the contributions of various scientists for development of microbiology field and **skills** associated with it.
2. This course will demonstrate the diversity of microbes and their applications.
3. Students will know about the various field of Microbiology
4. Students will know the role of microorganism in fermentation and spoilage
5. Able to understand the special features of algae, fungi and protozoa
6. Familiarize with morphologic criteria to differentiate the most common protozoan

Unit I

Development of microbiology as a discipline, spontaneous generation Vs biogenesis. Contribution of Anton von Leewenhoek, Golden era of Microbiology Louis Pasteur, Robert Koch, Joseph Lister, Alexander Flemming. Role of microorganism in fermentation, Germ theory of disease, Establishment of fields of medical microbiology and immunology through the work of Paul Ehrlich, Ellie Metchnikoff, Edward Jenner. Microscopy Application in industries, Application in medicine, Application in agriculture, Application in biotechnology, Application in biology.

Unit II

Bergey's Manual, Binomial Nomenclature and Universal Phylogenetic tree. Classification system: Phenetic and Phylogenetic, Whittaker's Five Kingdom and Carl Woese's three kingdom classification system and their utility. Difference between prokaryotic and eukaryotic microorganism. Major diversity of microbial life. Bacteriology.

Unit III

General characteristics of algae including algal cell ultra-structure. Classification of algae- Chlamydomonas, Volvox, Diatoms, red algae and brown algae). Application of Algae in agriculture, industry, environment and food.

Unit IV

General characteristics of fungi including habitat, distribution, nutritional requirements, fungal cell ultra-structure. Economic importance of fungi . Classification of fungi.

Unit V

General characteristics with special references with *Entamoeba histolytica*, *Trichomonas*, *Giardia* and *Plasmodium*. Classification of viruses.

Instruction Hours / week: L: 4 T: 0 P: 0
External: **60** Total: **100**

Marks: Internal: **40**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide a strong base in the fundamentals of bacteria that improves their chances in employability.
- To learn techniques and methods used in the cultivation and isolation of bacteria.
- To learn various physical and chemical means of sterilization
- To prepare the specimen and identify the morphology of the bacteria
- To know about the culture media
- To obtain with the knowledge about the habitat and characteristics of various physiological groups of bacteria and archaea in detail.

COURSE OUTCOME

After completion of this course candidate able to:

1. Understand the basic microbial structure and function and this course provide an understanding of the concepts of bacteriology which is one of the basic requirements for their employability
2. Understand the structural similarities and differences among various physiological groups of bacteria and archaea
3. Demonstrate theory and practical skills in staining procedures
4. Understand various Culture media and their applications
5. Understand various physical and chemical means of sterilization
6. Know General bacteriology and microbial techniques for isolation of pure culture of bacteria

Unit I

Cell shape and arrangement, glycocalyx, capsule, flagella, fimbriae and pili. Cell-wall structure and composition of Gram-positive, Gram-negative and archae cell wall. Action of antibiotics and enzymes on the cell wall (sphaeroplasts, protoplasts, and L-forms). Cell Membrane- Structure, function and chemical composition of bacterial and Archaeal cell membranes. Cell organelles. Endospore: Structure, formation, stages of sporulation.

Unit II

Staining-principle and types of staining (Simple and Differential). Pure culture technique-microbial preservation- cultivation of anaerobic bacteria.

Unit III

Culture media-types, composition. Sterilization technique-Physical and Chemical methods of microbial control-types and mode of action. Bacterial growth curve-bacterial motility and cell count technique. Calculation of generation time and specific growth rate.

Unit IV

Aim and principles of classification, systematics and taxonomy, concept of species, taxa, strain; conventional, molecular and recent approaches to polyphasic bacterial taxonomy, evolutionary

chronometers, rRNA oligonucleotide sequencing, signature sequences, and protein sequences. Differences between eubacteria and Archaeobacteria.

Unit V

Archae bacteria and Eubacteria- General characteristics, Classification (Overview), metabolism and ecological significance. Gram Positive and Gram Negative (Low G+C and High G+C)-General characteristics with suitable examples. Cyanobacteria: An Introduction.

Instruction Hours / week: L: 4 T: 0 P: 0
External: **60** Total: **100**

Marks: Internal: **40**

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide the knowledge on basics of biochemistry and its applications and to highlight the technical skill.
- To describe the classification and functions of lipids.
- To summarize the structure and classification of enzymes
- To state the Structure and types of DNA
- To analyse the functions and properties of phosphoglycerides
- To understand about storage and structural polysaccharides.

COURSE OUTCOME

Upon completion of this course students will be able to

1. Understand the structures of enzymes, proteins, carbohydrates and fats
2. Understand the functions of biomolecules
3. Analyze the process of metabolism
4. Understand of nucleic acids and their importance to combine and analyses information.
5. Explain the structure and mechanism of enzyme action
6. Summarize the DNA & RNA structure and base pairing schemes

Unit I

Atoms and molecules, cell structure, cell organelles, developing membrane structure, transport of molecules, Beer and Lambert's Law, Colorimeter, Anabolism and catabolism and standard for energy change.

Unit II

Monosaccharides-families, stereo isomerism, epimers, Mutarotation and anomers. Forms of glucose and fructose, Haworth projection. Sugar derivatives. Disaccharides- occurrence, concept of reducing and non-reducing sugars and Haworth projections. Polysaccharides-storage and structural polysaccharides.

Unit III

Classification and functions of lipids. Storage lipids- structure and function of fatty acids. Triacylglycerols. Saponification. Structural lipids- structure, functions and properties of phosphoglycerides and sphingolipids.

Unit IV

Classification and functions of proteins and amino acids, Structure of amino acids and concept of zwitterion. Ninhydrin reaction. Natural modifications of amino acids in proteins. Non protein amino acids, Oligopeptides: Structure and functions of glutathione, insulin and aspartame. Primary and Secondary structure of proteins- alpha helix, beta pleated sheet. Tertiary and quaternary structures of proteins. Human haemoglobin structure.

Unit V

Structure and classification of enzymes, mechanism of action of enzymes. Km equation and enzyme activity. Allosteric enzyme and its mechanism. Multienzyme complex. Enzyme inhibition. Vitamins-classification and characteristics, sources and importance.

SUGGESTED READINGS

1. Campbell, M.K. (2012) Biochemistry, 7th edition. Published by Cengage Learning.
2. Campbell, P.N., and Smith, A.D., (2011) Biochemistry Illustrated, 4th edition. Published by Churchill Livingstone.
3. Tymoczko, J.L., Berg, J.M., and Stryer, L. (2012) Biochemistry: A short course, 2nd edition. W.H.Freeman.

6. Willey, M.J., Sherwood, L.M., & Woolverton, C. J. (2013) Prescott, Harley and Klein's Microbiology. 9th edition. McGrawHill.

Instruction Hours / week: L: 0 T: 0 P: 3
External: 60 Total: 100

Marks: Internal: 40

End Semester Exam: 3 Hours

COURSE OBJECTIVES

To develop **skills** related to

- Isolation and culture techniques of bacteria
- The external feature of bacteria and colony characteristics. Various staining techniques
- Sterilization of heat sensitive materials
- Counting of microorganism in the environment
- Isolation of parasites from edible fruits.
- Good laboratory practice and Biosafety measures.

COURSE OUTCOME

1. This practical paper will build the student to describe and distinguish the bacterial colonies.
2. They also will create knowledge on preparing permanent temporary mounts for fungi, protozoan's and algae.
3. Students will be able to understand the parasites and its nature.
4. They can be able to handle the pathogens safely.
5. Students able to describe the *Spirogyra*, *Chlamydomonas* and *Volvox*.
6. Students able to handle the instruments in the microbiology laboratory

EXPERIMENTS

1. Microbiology Good Laboratory Practices and Biosafety.
2. To study the principle and applications of important instruments (biological safety cabinets, autoclave, incubator, BOD incubator, hot air oven, microscope, pH meter) used in the microbiology laboratory.
3. Preparation of culture media for bacterial cultivation.
4. Sterilization of heat sensitive material by membrane filtration and assessment for sterility.
5. Demonstration of the presence of micro flora in the environment by exposing nutrient agar plates to air.
6. Temporary mounts Lacto phenol cotton blue mount – *Rhizopus*, *Penicillium*, *Aspergillus*.
7. Study of *Spirogyra* and *Chlamydomonas*, *Volvox* using temporary mounts.
8. Study of the following protozoans using permanent mounts/photographs: *Amoeba*, *Entamoeba*, *Paramecium* and *Plasmodium*

SUGGESTED READINGS

5. Atlas, R.M. (1997). Principles of Microbiology. 2nd edition. W.M.T.Brown Publishers.
6. Pelczar, M.J., Chan, ECS., and Krieg, N.R. (1993). Microbiology. 5th edition. McGraw Hill Book Company.
7. Stanier, R.Y., Ingraham, J.L., Wheelis, M.L., and Painter, P.R., (2005). General Microbiology. 5th edition. McMillan.

Instruction Hours / week: L: 0 T: 0 P: 3
External: 60 Total: 100

Marks: Internal: 40

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide a strong base in the fundamentals of bacteria.
- To learn techniques and methods used in the cultivation and isolation of bacteria.
- To develop **skills** related to preservation of bacterial cultures.
- To learn about bacterial specialized structure using staining methods
- To learn the bacterial special structure capsule and spore
- To measure the bacterial size

COURSE OUTCOME

After Completion of this course candidate can able to demonstrate:

1. Theory and practical skills in staining procedures
2. Various Culture media and their applications
3. Various microbial culture techniques to obtain isolation of pure cultures of bacteria
4. Bacterial endospore and capsule
5. Able to analyze the Bacterial size
6. Able explain the bacterial motility and flagella

EXPERIMENTS

1. Preparation of different media: synthetic media BG-11, Complex media - Nutrient agar, McConkey agar, EMB agar.
2. Micrometry.
3. Motility by hanging drop method.
4. Simple staining
5. Negative staining
6. Gram's staining
7. Acid fast staining – demonstration permanent slide only.
8. Capsule staining
9. Endospore staining.
10. Isolation of pure cultures of bacteria by streaking method - Quadrant, Continuous and T-streaking.
11. Preservation of bacterial cultures by various techniques - Agar slants and deeps - Mineral Oil, Glycerol stocks
12. Estimation of Colony Forming Unit (CFU) count by spread plate method/pour plate method.

60 Total: 100

Marks: Internal: 40 External:

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To familiarize the students with the basic cellular processes at molecular level
- To make students familiar with practical techniques used for studying biochemical structure and analysis of biochemical methods.
- To expertise in Qualitative/Quantitative tests of carbohydrates, reducing sugars, Protein and lipids.
- To study the protein secondary and tertiary structures
- To study the effect of temperature, pH and heavy metals on enzyme activity.
- To gain the knowledge on vitamin estimation

COURSE OUTCOME

Upon the completion this course student will acquire

1. The practical knowledge and the **skills** associated about various techniques used in Biochemistry.
2. The skill in qualitative and quantity analysis of carbohydrates, protein and lipid
3. An understanding in protein secondary and tertiary structures
4. An insight in enzyme activity and its physical factors influence the activity
5. Knowledge on vitamin estimation
6. Cognitive skill and students able to solve the numerical problems

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத்
தமிழ்த் துறை வெளியீடு.

Instruction Hours / week: L: 4 T: 0 P: 0
External: 60 Total: 100

Marks: Internal: 40

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To study general aspects of viral morphology and classification, replication, interactions and immunity to viruses
- To discuss the application of various immunological and molecular diagnostic tools.
- To explain the students about the virus classification
- To distinguish the architecture of viruses and their features
- To know the methods used in studying viruses
- Discern the replication strategies of representative viruses from the seven Baltimore classes

COURSE OUTCOME

1. This paper will have clear understanding the role of various in plant, animal and human disease
2. Candidate able to understand their skill based various mechanisms to enter and escape from host.
3. Comprehend the intricate interaction between viruses and host cells
4. Understand the interactions between viruses and the host immune system
5. It will explain the terms Oncogenes and tumor suppressor genes, and how tumor viruses interact with these products and their intersecting pathways and cause oncogenesis.
6. Explain vaccine strategies and mechanisms of antiviral drugs and interferons

Unit I

History of viruses. Structure, Classification, nomenclature of viruses. Isolation, purification and cultivation of viruses. Viral assay. Concept of viroids, virusoids, satellite viruses, Virophage and Prions.

Unit II

Diversity, classification, one step multiplication curve, lytic and lysogenic phages (lambda phage) concept of early and late proteins, regulation of transcription in lambda phage

Unit III

Modes of viral transmission, Salient features of viral Nucleic acid-unusual bases, overlapping genes, splicing genes, terminal redundancy, cohesive ends, capping and tailing. Viral genome Organisation.

Unit IV

Viral multiplication and replication-Interaction, and entry, assembly, maturation and release of virions. Oncogenic viruses and its types, mechanism. Viral replication strategies as per Baltimore classification. Prevention and control of viral diseases.

Unit V

Antiviral compounds and their mode of action. Interferon and their mode of action. General principles of viral vaccination. Immunization schedule. Use of viral vectors in cloning and expression, gene therapy and phage display.

9. Versteeg J. (1985). A Color Atlas of Virology. Wolfe Medical Publication.

Instruction Hours / week: L: 4 T: 0 P: 0
Total: 100

Marks: Internal: 40 External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- It gives brief description on the microbial metabolism and its energetic.
- It deals with the various aerobic and an aerobic processes through which the organisms obtain and utilize the energy for their growth and to produce industrially important products that helps the students to become better **entrepreneurs**.
- Explains photosynthesis and photosynthetic bacteria
- To study the structure, function, energy metabolism, growth and regulatory mechanisms of microorganisms.
- The students will learn about the metabolic diversity exhibited by microorganisms
- The students will learn about regulatory networks that support their survival and growth of the microorganism.

COURSE OUTCOME (CO'S)

1. The students will be able to understand and predict the various metabolic reactions in microbial cell.
2. This will make them predict the intermediate products which can be employed in industrial production processes.
3. Students will understand the growth, nutrition and environmental factors
4. Students able to assess the prokaryotes by observing the biochemical reaction
5. This course will support them to interpret the fermentation using microbes
6. Able to summarize the nutrients uptake system in the prokaryotes

Unit I

Microbial nutrition–nutrient requirements, Nutritional groups of microorganisms. Uptake of nutrients by cell – Passive, Facilitated diffusion, Active transport, Group translocation and Iron uptake.

Unit II

Different phases of growth curve - generation time. Measurement of microbial growth. Batch, Continuous and Synchronous culture, Diauxic growth, Influence of environmental factors on growth (Temperature, pH, solute, water activity, oxygen and pressure)

Unit III

Carbohydrate metabolism – EMP, ED, Pentose phosphate pathway, TCA cycle, Aerobic respiration, oxidative phosphorylation, electron transport chain (Prokaryotic and Eukaryotic), substrate level phosphorylation. Anaerobic respiration. Uncouplers and inhibitors.

Unit IV

Anaerobic respiration with special reference to dissimilatory nitrate reduction (Denitrification; nitrate/nitrite and nitrate/ammonia respiration; fermentative nitrate reduction). Fermentation - Alcohol fermentation and Pasteur effect; Lactate fermentation (homofermentative and heterofermentative pathways), concept of linear and branched fermentation pathways

Unit V

Photosynthesis – bacteria and cyanobacteria, photosynthetic pigments – oxygenic (cyanobacterial) and Anoxygenic (Purple, green bacteria) photosynthesis. Nitrogen metabolism-overview of nitrogen cycle.

SUGGESTED READINGS

5. Stanier, R.Y., Ingrahm, J.I., Wheelis, M.L., and Painter, P.R. (1987). General Microbiology. 5th edition, McMillan Press.
6. Willey, J.M., Sherwood, L.M., and Woolverton, C.J. (2013). Prescott's Microbiology. 9th edition. McGraw Hill Higher Education.

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES**

- To focus on the basic principles of genetics incorporating the concepts of classical, molecular and population genetics.
- Compilation is required for recent advances in genetic principles for strong foundation in Biotechnology that improve their chances of **employability** in biotechnological industries.
- To explain the mutagen and process of mutation.
- To explain about DNA as a genetic material.
- To paraphrase the genetic material structure and model.
- To explain the concept of recombination, linkage mapping and elucidate the gene transfer mechanisms in prokaryotes and eukaryotes.

COURSE OUTCOME

1. This course provided candidates with basic knowledge and understanding of Molecular Biology with special reference to microbial genome.
2. Students undertaking this course will be able to describe the nature of molecular world and its application in modern Microbiological sectors.
3. Students able to understand the properties, structure and function of genes in microorganism at the molecular level
4. Describe the importance of genetic code and operon concept
5. Discuss the molecular mechanisms underlying mutations and repair mechanisms
6. Able to summarize the concept of recombination, linkage mapping and elucidate the gene transfer mechanisms in prokaryotes and eukaryotes

Unit I

Concept of Genetics, Mendelian principles, DNA as a genetic material, Experimental evidence – Chromosomal theory of inheritance. DNA structure, models of DNA, DNA replication, transcription, translation, RNA structure and types.

Unit II

Types of plasmids- replication, partitioning, host range, plasmid-incompatibility, amplification, curing and application.

Unit III

Genetic code- Operon concept-Lactose, tryptophan. Genetic recombination in bacteria- Conjugation, Transformation-Transduction and its types. Gene Mapping techniques-gene and chromosome walking.

Unit IV

Mutations and mutagenesis, types of mutations and mutagens. Identification of mutants- Ames test.

Unit V

Transposons-definition, types of Transposons, mechanism of transposition and application. Mu transposon and eukaryotic transposable elements. Applications.

Instruction Hours / week: L: 0 T: 0 P: 3
External: 60 Total: 100

Marks: Internal: 40

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- Describe the structure and replication strategies of the individual viruses discussed, including the processes of entry into cells, control of gene transcription.
- Define the process of virus latency and describe in molecular terms control of the process and activation of viral genomes during reactivation.
- Describe the growth behavior differences between normal cells and cells transformed by oncogenic DNA and RNA viruses.
- To study general aspects of viral morphology and classification.
- Cultivation of viruses and various methods of propagation.
- To discuss the application of various immunological and molecular diagnostic tools.

COURSE OUTCOME

- Upon paper completion, students will have skill based knowledge on structure of plants, animal, bacteria and viruses.
- This paper also enables the student on isolation, propagation of various viruses.
- It will help the students to understand the plant and animal viruses.
- Students can distinguish the viruses According to their characteristic features.
- It will explain the research activities involved in virology studies.
- Skill based viral analysis can be performed in medical research.

EXPERIMENTS

1. Study of the structure of important animal viruses (rhabdo, influenza, paramyxo hepatitis B and retroviruses) using electron micrographs – Demonstration.
2. Study of the structure of important plant viruses (caulimo, Gemini, tobacco ring spot, cucumber mosaic and alpha-alpha mosaic viruses) using electron micrographs – Demonstration.
3. Study of the structure of important bacterial viruses (ϕ X174, T4, λ) using electron micrograph – Demonstration.
4. Isolation and enumeration of bacteriophages (PFU) from water/sewage sample using double agar layer technique
5. Studying isolation and propagation of animal viruses by chick embryo technique
6. Study of cytopathic effects of viruses using photographs
7. Perform local lesion technique for assaying plant viruses.

Instruction Hours / week: L: 0 T: 0 P: 3
External: 60 Total: 100

Marks: Internal: 40

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To enhance the students' knowledge on various aspects of microbial physiology like growth, extremophiles studies and chemical characterization of microbes.
- To improve their **skills** in handling microorganisms
- To analyze the growth condition of the bacteria.
- To facilitate the students to deal with the bacterial strain
- To demonstrate the fermentation technique
- To demonstrate the generation time and thermal death time of bacteria

COURSE OUTCOME

Upon successful completion of this practical course

1. The students will be able to analyze the bacteria growth and growth condition
2. Able to identify the various factors for optimal growth of *E.coli*.
3. Understand the basic microbial structure and functions of various physiological groups of prokaryotes.
4. Able to utilize the various Culture media in the proper physical condition for fermentation
5. Able to explain the microbial metabolism – Autotrophy and heterotrophy modes of nutrition
6. Students able to understand the physical and chemical growth requirements of bacteria and thermal death time of bacteria.

EXPERIMENTS

1. Study and plot the growth curve of *E. coli* by turbidometric and standard plate count methods.
2. Calculations of generation time and specific growth rate of bacteria from the graph plotted with the given data
3. Effect of temperature on growth of *E. coli*
4. Effect of pH on growth of *E. coli*
5. Effect of carbon and nitrogen sources on growth of *E.coli*
6. Effect of salt on growth of *E. coli*
7. Demonstration of alcoholic fermentation
8. Demonstration of the thermal death time and decimal reduction time of *E. coli*.

SUGGESTED READINGS

Instruction Hours / week: L: 0 T: 0 P: 4
External: 60 Total: 100

Marks: Internal: 40

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To focus on the basic principles of genetics incorporating the concepts of classical, molecular and population genetics.
- Compilation is required for recent advances in genetic principles for strong foundation in Biotechnology that improve their chances of **employability** in biotechnological industries
- To study the effect of chemical and physical mutagens on prokaryotic cell
- To isolate the extra chromosomal from bacteria
- To Interpret the DNA quantity and purity
- To identify the mutant strains using appropriate techniques

COURSE OUTCOME

1. Students undertaking this practical shall be able to describe the key concept in the basic Microbial Genetics
2. Effectively understand the implication of mutation and its characteristics.
3. Further, the experiments would allow students to recall and relate the information gained from Microbial Genetics theory paper and **skills** associated with it.
4. Students able demonstrate the gene transfer techniques.
5. Students can estimate the genetic materials.
6. Able to distinguish the plasmid and Genomic DNA.

EXPERIMENTS

1. Preparation of Master and Replica Plates.
2. Study the effect of chemical (HNO₂) and physical (UV) mutagens on bacterial cells.
3. Study survival curve of bacteria after exposure to ultraviolet (UV) light.
4. Isolation of Plasmid DNA from *E. coli*.
5. Study different conformations of plasmid DNA through Agarose gel electrophoresis.
6. Demonstration of Bacterial Conjugation.
7. Demonstration of bacterial transformation and transduction.
8. Demonstration of AMES test.

Instruction Hours / week: L: 4 T: 0 P: 0
External: 60 Total: 100

Marks: Internal: 40

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and/or practitioners.
- To create awareness among the students to know about various renewable and nonrenewable resources of the region, enables environmentally literate citizens (by knowing the environmental acts, rights, rules, legislation, etc.)
- To make appropriate judgments and decisions for the protection and skills associated with improvement of the earth.

COURSE OUTCOME

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT-1

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit 2

Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fireworks.

Unit 3

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and

local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit 4

Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

Unit 5

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

**17MBU301
(4H – 4C)****ENVIRONMENTAL MICROBIOLOGY****Instruction Hours / week: L: 4 T: 0 P: 0
Total: 100****Marks: Internal: 40****External: 60****End Semester Exam: 3 Hours****COURSE OBJECTIVE**

- To educate students about Environmental monitoring and environmental aspects of microbes.
- To impart a skilled knowledge on Microbes and environment and ecological importance.
- The main goal is to know and understand the role of microbes in biogeochemical processes in different ecosystems. The students will learn the basic microbiological principles, the methods in microbial ecology and their theoretical and practical use.
- The knowledge can give the base for understanding processes and changes in the environment.
- The students can get some skills to recognise the ecological problems and critical evaluation of the human impacts on pollution, climate changes and as well as environmental protection.

COURSE OUTCOME

1. It provides a comprehensive overview of biogeochemical processes relevant to environmental scientists and engineers mediated by microorganisms.
2. It will impart the student to develop their **entrepreneurial** knowledge on ecological behavior of microorganism.
3. It will distinguish biogeochemical cycles.
4. This course will determine microbial role in nutrient cycling
5. This course can able to determine water quality.
6. It will explain the degradation of natural organic compounds and selected pollutants in the environment.

Unit I

Structure and function of ecosystems (Definition and concept). Types of Environment-Terrestrial, Aquatic and extreme habitats. Environmental factors affecting microbial growth. Microbial succession in decomposition of plant organic matter.

Unit II

Microbe interactions: Mutualism, synergism, commensalism, competition, amensalism, parasitism, predation. Microbe-Plant interaction: Symbiotic and non-symbiotic interactions. Microbe-animal interaction: Microbes in ruminants, nematophagous fungi and symbiotic luminescent bacteria

Unit III

Carbon cycle: Microbial degradation of cellulose, hemicelluloses, lignin and chitin. Nitrogen cycle: Nitrogen fixation, ammonification, nitrification, denitrification and nitrate reduction. Phosphorus cycle: Phosphate immobilization and solubilisation. Sulphur cycle: Microbes involved in sulphur cycle. Other elemental cycles: Iron and manganese

Unit IV

Solid Waste management: Sources and types of solid waste, Methods of solid waste disposal (composting and sanitary landfill and incineration). Liquid waste management: Composition and strength of sewage (BOD and COD), Primary, secondary (oxidation ponds, trickling filter, activated sludge process and septic tank) and tertiary sewage treatment.

Unit V

Principles and biodegradation of common pesticides, organic (hydrocarbons, oil spills) and inorganic (heavy metals-chelation) matter, biosurfactants. Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) MPN test (b) Membrane filter technique. GMO and their impact.

Instruction Hours / week: L: 4 T: 0 P: 0
Total: 100

Marks: Internal: 40

External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To encode the **employability** importance of the role of microorganisms in food industries both in beneficial and harmful ways.
- This course aims to provide instruction in the general principles of food microbiology.
- Hands on practicals complimented with an industry-based project, give a real-world perspective to microbiological challenges faced by the food industry.
- The course covers the microbiology of food preservation and food commodities; principles and methods for the microbiological examination of foods and microbiological quality control.
- To develop an understanding of the major principles of and current issues in the several topical areas that collectively constitute Food Microbiology
- It will help the students to understand the dairy Technology.

COURSE OUTCOME

1. Provides job oriented information about the role of microorganisms in many food, and beverage industries both in production and spoilage processes.
2. Develop job based output on industrial based technologies on Food microbiology.
3. It will explain the interactions between microorganisms and the food environment, and factors influencing their growth and survival.
4. Discuss the microbiology of different types of food commodities.
5. Explain why microbiological quality control programmes are necessary in food production.
6. Students can able to under the food safety system.

Unit I

Natural flora and source of contamination of foods in general. Intrinsic and extrinsic factors that affect growth and survival of microbes in foods. Microbial spoilage of various foods – Spoilage of vegetables, fruits, meat, eggs, milk and butter, bread, canned Foods

Unit II

Principles of food preservation. Physical methods of food preservation: temperature (low, high, canning, and drying), irradiation, hydrostatic pressure, high voltage pulse, microwave processing and aseptic packaging. Chemical methods of food preservation: salt, sugar, organic acids, SO₂, nitrite and nitrates, antibiotics and bacteriocins, sterilization of dry heat, moist heat, chemical, physical and radiation.

Unit III

Fermented dairy products: yogurt, acidophilus milk, kumiss, kefir, dahi and cheese. Other fermented foods: Idly, sauerkraut, soy sauce and tampeh. Probiotics: Health benefits, types of microorganisms used, probiotic foods available in market.

Unit IV

Causative agents, foods involved, symptoms and preventive measures of the following diseases

Food intoxications: *Staphylococcus aureus*, *Clostridium botulinum* and mycotoxins. Food infections: *Bacillus cereus*, *Vibrio parahaemolyticus*, *Escherichia coli*, Salmonellosis, Shigellosis, *Yersinia enterocolitica*, *Listeria monocytogenes* and *Campylobacter jejuni*, fungal diseases.

Unit V

Cultural and rapid detection methods of food borne pathogens in foods and introduction to predictive microbiology. HACCP, FSSAI (ISO 9001:2008) Indices of food sanitary quality (record maintenance and standards) and sanitizers.

Instruction Hours / week: L: 4 T: 0 P: 0
Total: 100

Marks: Internal: 40

External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To encompasses the employability use of microorganisms in the manufacture of food or industrial products.
- The aim of the course is to give the students broad theoretical and practical skills in industrial microbiology.
- This course covers the principles of various processes associated with the production and recovery of different bio-products derived from microorganisms.
- The students will be able to discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.
- It will make the students to explore their practical skills in entrepreneurial activities.
- It will deliver the large-scale production of microbial products techniques in advanced level.

COURSE OUTCOME

1. Provides knowledge in the large scale production of industrial product, providing the trends to cater the needs of industry.
2. This will help the students to enhance their employment knowledge on microbiology based commercial products.
3. The aim of the course is to give the students broad theoretical and practical skills in industrial microbiology.
4. This course covers the principles of various processes associated with the production and recovery of different bio-products derived from microorganisms.
5. The students will be able to discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.

Unit I

Brief history and developments in industrial microbiology. Sources of industrially important microbes and methods for their isolation, primary and secondary screening methods. Strain improvement method (protoplast fusion, mutation and recombinant DNA technology).

Unit II Preservation and maintenance of industrial strains. Media formulation (molasses, corn-steep liquor, sulphite waste liquor, whey, yeast extract and protein hydrolysates).

Unit III

Types of fermentation processes – Solid-state and liquid-state (stationary and submerged) fermentations; batch, fed-batch and continuous fermentations. Components of a typical bio-reactor, Types of bioreactors – Laboratory,

pilot- scale and production fermenters, constantly stirred tank and air-lift fermenters. Measurement and control of fermentation parameters - pH, temperature, dissolved oxygen, foaming and aeration.

Unit IV

Separation of cells – filtration and centrifugation. Cell disruption – physical, chemical and enzymatic methods. Product separation – solvent extraction and precipitation. Lyophilization and spray drying. Methods of immobilization, advantages and applications of immobilization.

Unit V

Microbial production of industrial products-Citric acid, Ethanol, Penicillin, Glutamic acid, Vitamin B₁₂, Enzymes (amylase, protease, lipase) Wine, Beer (micro-organisms involved, media, fermentation conditions, downstream processing and uses).

MICROBIAL QUALITY CONTROL IN FOOD AND PHARMACEUTICAL INDUSTRIES

**Instruction Hours / week: L: 3 T: 0 P: 0
Total: 100**

Marks: Internal: 40

External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To make the students better to understand the aspects of skilled manufacturing practices, kinds of pathogenic microorganisms in food and quality control in food and pharmaceutical industries.
- Develop industry-oriented skills on developing drugs and food.
- To make the students to understand the food quality systems and advancement universally.
- It will explain the students about all kinds of bio safety levels in laboratories.
- To train the students to be competent working professionals in the food industry and pharmaceutical industry.
- To help the students to explain the production of quality food by imparting better nutritional, sanitation & hygiene concepts.

COURSE OUTCOME

1. Imparts skilled knowledge on good manufacturing practices and food spoilage of different types of foods.
2. Develop skills on Food and drug based microbiological analysis.
3. To encourage students to the entrepreneurs and develop the capacity for setting up small scale enterprises with respect to food and pharmaceuticals within the country.
4. To organize functions for creating awareness about the importance of safe processed nutritious food.
5. To provide diagnostic analysis of food and pharmaceutical products.
6. The students will be able to discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.

Unit I

Good laboratory practices – Good microbiological practices. Biosafety cabinets – Working of biosafety cabinets, using protective clothing, specification for BSL-1, BSL-2, BSL-3. Discarding biohazardous waste – Methodology of Disinfection, Autoclaving & Incineration.

Unit II

Sampling procedures for food, water, and air Culture and microscopic methods – Standard plate count, membrane filtration, most probable numbers, direct microscopic counts, Biochemical and immunological methods: Limulus lysate test for endotoxin, gel, lot agglutination precipitation sterility testing for pharmaceutical products. Molecular methods – Nucleic acid probes, PCR based detection, biosensors.

Unit III

Enrichment culture technique, Detection of specific microorganisms – on XLD agar, Salmonella Shigella Agar, Mannitol salt agar, EMB agar, MacConkey Agar, Saboraud Agar.

Unit IV

Ascertaining microbial quality of milk by MBRT, Rapid detection methods of microbiological quality of milk at milk collection centres (COB, 10 min Resazurin assay).

Unit V

Hazard analysis of critical control point (HACCP) - Principles, flow diagrams, limitations. Microbial Standards for Different Foods and Water – BIS specifications for common foods and drinking water.

SUGGESTED READINGS

1. Harrigan WF (1998) Laboratory Methods in Food Microbiology, 3rd edition, Academic Press
2. Garg N, Garg KL and Mukerji KG (2010). Laboratory Manual of Food Microbiology I K International Publishing House Pvt. Ltd.
3. Jay JM, Loessner MJ, Golden DA (2005) Modern Food Microbiology, 7th edition. Springer.
4. Baird RM, Hodges NA and Denyer SP (2005). Handbook of Microbiological Quality control in Pharmaceutical and Medical Devices, Taylor and Francis Inc.

Instruction Hours / week: L: 3 T: 0 P: 0
Total: 100

Marks: Internal: 40

External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide an **employment** understanding of the natural history of infectious diseases in order to deal with the etiology, laboratory diagnosis, treatment and control of infections in the community.
- This course is aimed to Identify the species of pathogenic bacteria and fungi
- Determine the modes of transmission of infectious diseases and pathogenesis
- Know of the theoretical foundations for the differentiation of the major pathogenic groups
- To Determine the antimicrobials to be used in the sensitivity testing of different types of pathogens.
- Analyze and solve case studies involving bacterial and fungal agents

COURSE OUTCOME

1. Provides employment knowledge to identify the common infectious agents with the help of laboratory procedures and use antimicrobial sensitivity tests to select suitable antimicrobial agents.
2. It describes the basic mechanisms of pathogenesis of infectious diseases.
3. It explains the basic principles of diagnosis, antimicrobial treatment, prevention and control of infectious diseases in the hospital and community.
4. It help the students to understand the host immune system and explain the host response to infection
5. Understand and interpret basic laboratory tests for the diagnosis of infectious diseases.
6. Apply the principles of molecular and immunological techniques for the diagnosis of infectious diseases.

Unit I

Bacterial, Viral, Fungal and Protozoan Diseases of various human body systems, Disease associated clinical samples for diagnosis.

Unit II

How to collect clinical samples (oral cavity, throat swab, tissue sample, skin, Blood, CSF, urine and faeces) and precautions required. Method of transport of clinical samples to laboratory and storage.

Unit III

Examination of sample by staining – Gram stain, Ziehl-Neelson staining for tuberculosis, Giemsa-stained thin blood film for malaria. Preparation and use of culture media - Blood agar, Chocolate agar, Lowenstein-Jensen medium, MacConkey agar, distinct colony properties of various bacterial pathogens.

Unit IV

Serological Methods - Agglutination, ELISA, immune fluorescence, Nucleic acid based methods – PCR, Nucleic acid probes, Typhoid, HBV, HCV, HIV and Denque.

Unit V

Importance, Determination of resistance/sensitivity of bacteria using disc diffusion method (Kirby Bauer Method) Determination of minimal inhibitory concentration (MIC) of an antibiotic by broth dilution method (LC₅₀, LC₉₀).

SUGGESTED READINGS

1. Ananthanarayan R and Paniker CKJ (2009). Textbook of Microbiology, 8th edition, Universities Press Private Ltd.
2. Brooks G.F., Carroll K.C., Butel J.S., Morse S.A. and Mietzner, T.A. (2013). Jawetz, Melnick and Adelberg's Medical Microbiology. 26th edition. McGraw Hill Publication.
3. Randhawa, VS, Mehta G and Sharma KB (2009) Practicals and Viva in Medical Microbiology. 2nd edition, Elsevier India Pvt Ltd.
4. Tille P (2013) Bailey's and Scott's Diagnostic Microbiology, 13th edition, Mosby
5. Collee JG, Fraser, AG, Marmion, BP, Simmons A (2007) Mackie and McCartney Practical Medical Microbiology, 14th edition, Elsevier.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To educate students about skill oriented Environmental monitoring and environmental aspects of microbes.
- To impart a knowledge on Microbes and environment and ecological importance.
- To study the diversity of microorganism and microbial communities inhabiting a multitude of habitats and occupying a wide range of ecological habitats.
- Learn the occurrence, abundance and distribution of microorganism in the environment and their role in the environment and also learn different methods for their detection and characterization
- Competently explain various aspects of environmental microbiology and microbial ecology and to become familiar with current research in environmental microbiology.
- Understand various biogeochemical cycles – Carbon, Nitrogen, Phosphorus cycles etc. and microbes involved

COURSE OUTCOME

1. Provides a comprehensive skilled overview of biogeochemical processes relevant to environmental scientists and engineers mediated by microorganisms.
2. Understand various plant microbes' interactions especially rhizosphere and their applications especially the biofertilizers and their production techniques
3. Understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems – waste water treatment and bioremediation
4. Know the Microorganisms responsible for water pollution especially Water-borne pathogenic microorganisms and their transmission
5. Comprehend the various methods to determine the Sanitary quality of water and sewage treatment methods employed in waste water treatment
6. Provide learning opportunities to critically evaluate research methodology and findings.

EXPERIMENTS

1. Analysis of soil - pH, moisture content, water holding capacity, percolation, capillary action.
2. Isolation of microbes (bacteria & fungi) from soil (28°C & 45°C).
3. Isolation of microbes (bacteria & fungi) from rhizosphere and rhizoplane.
4. Assessment of microbiological quality of water.
5. Determination of BOD of waste water sample.
6. Study the presence of microbial activity by detecting (qualitatively) enzymes (dehydrogenase, amylase and urease) in soil.
7. Isolation of *Rhizobium* from root nodules.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100**End Semester Exam: 9 Hours****COURSE OBJECTIVES**

- To encode the importance of the role of microorganisms in food industries both in beneficial and harmful ways.
- To obtain a good **entrepreneurial** understanding of food and dairy products and become qualified as microbiologist in food and dairy industries.
- Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
- To know the spoilage mechanisms in foods and thus identify methods to control deterioration and spoilage
- Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods.
- To Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries.

COURSE OUTCOME

1. Provides necessary entrepreneurial information on the food, dairy Microbiology in safety and quality perspective.
2. It will help to study the importance in the prevention of contamination that might be caused by the microorganisms.
3. To Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
4. Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
5. Students can able to understand of the basis of food safety regulations and Discuss the rationale for the use of standard methods and procedures for the microbiological analysis of food
6. Acquire, discover, and apply the theories and principles of food microbiology in practical, real-world situations and problems.

EXPERIMENTS

1. MBRT of milk samples
2. Standard plate count of milk sample.
3. Alkaline phosphatase test to check the efficiency of pasteurization of milk.
4. Isolation of food borne bacteria from food products.
5. Isolation of spoilage microorganisms from spoiled vegetables/fruits.
6. Isolation of spoilage microorganisms from bread.
7. Preparation of yogurt.

17MBU313	INDUSTRIAL	MICROBIOLOGY	–	Semester – III	PRACTICAL
(4H – 2C)					

Instruction Hours / week: L: 0 T: 0 P: 4
Total: 100

Marks: Internal: 40

External: 60

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To encompasses the use of microorganisms in the manufacture of food or industrial products on the basis of **employment**.
- Get equipped with a theoretical and practical understanding of industrial microbiology
- Appreciate how microbiology is applied in manufacture of industrial products
- Know how to source for microorganisms of industrial importance from the environment
- Know about design of bioreactors, factors affecting growth and production, heat transfer, oxygen transfer
- Understand the rationale in medium formulation & design for microbial fermentation, sterilization of medium and air.

COURSE OUTCOME

1. Provides knowledge in the large-scale production of industrial product, and teaches the modern employment trends to cater the needs of industry.
2. Students will differentiate the types of fermentation processes
3. Understand the biochemistry of various fermentations
4. Identify techniques applicable for Improvement of microorganisms based on known biochemical pathways and regulatory mechanisms
5. Comprehend the techniques and the underlying principles in downstream processing
6. Students can able to explore the practical skills in research activities.

EXPERIMENTS

1. Study of different parts of fermenter
2. Microbial fermentation – Production and estimation (qualitative and quantitative) of
 - a) Enzymes : Amylase and Protease
 - b) Amino acid : Glutamic acid
 - c) Organic acid : Citric acid
 - d) Alcohol : Ethanol
3. A visit to any educational institute/industry to see an industrial fermenter, and other downstream processing operations.

SUGGESTED READINGS

1. Stanbury PF, Whitaker A and Hall SJ. (2006). Principles of Fermentation Technology. 2nd edition, Elsevier Science Ltd.

**MICROBIAL QUALITY CONTROL IN FOOD AND
PHARMACEUTICAL INDUSTRIES – PRACTICAL****Instruction Hours / week: L: 0 T: 0 P: 3**
Total: 100**Marks: Internal: 40 External: 60****End Semester Exam: 3 Hours****COURSE OBJECTIVE**

- To make the students better to understand the aspects of **skilled** manufacturing practices, kinds of pathogenic microorganisms in food and quality control in food and pharmaceutical industries.
- Quality systems such as investigations, document management systems, Standard Operating Procedures (SOP), change management system, recall management and inspection management
- Food safety systems including hazard analysis critical control points and preventative control plans
- Principles of enumeration and identification of micro-organisms, using both traditional and rapid methods as well as the pharmacopoeial methods for the detection of specified organisms.
- To gain theoretical and practical knowledge on food and pharma industries.
- To encourage students to the entrepreneurs and develop the capacity for setting up small scale enterprises with respect to food within the country.

COURSE OUTCOME

1. This paper imparts skilled knowledge on good manufacturing practices and food spoilage of different types of foods.
2. Students can develop their entrepreneurial skills in food and pharma sectors.
3. Good Manufacturing Practices (GMP) and associated guidelines for drugs, natural health products, cannabis and food
4. Good documentation Practices (GDP) and Data Integrity (DI)
5. Validation for equipment, methods, cleaning and process
6. Quality systems such as investigations, document management systems, Standard Operating Procedures (SOP), change management system, recall management and inspection management.

EXPERIMENTS

1. Good manufacturing practices.
2. Most probable number test.
3. Isolation of pathogens from food samples.
4. Methylene blue reduction test.
5. Enumeration of microbial population from pharmaceutical samples.

SUGGESTED READINGS

1. Harrigan WF (1998) Laboratory Methods in Food Microbiology, 3rd edition, Academic Press.
2. Garg N, Garg KL and Mukerji KG (2010). Laboratory Manual of Food Microbiology I K International Publishing House Pvt. Ltd.

MICROBIAL DIAGNOSIS IN HEALTH CLINIC - PRACTICAL

Instruction Hours / week: L: 0 T: 0 P: 3
Total: 100

Marks: Internal: 40

External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide **employment** oriented understanding of the natural history of infectious diseases in order to deal with the etiology, laboratory diagnosis, treatment and control of infections in the community.
- This course provides learning opportunities in the basic principles of medical microbiology and infectious disease.
- It covers mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.
- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.
- To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

COURSE OUTCOME

1. Acquire knowledge to identify the common infectious agents with the help of laboratory procedures and use antimicrobial sensitivity tests to select suitable antimicrobial agents on the basis of employment.
2. Helps to understand the use of lab animals in medical field.
3. Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
4. Explain the methods of microorganism's control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.
5. Demonstrate theory and practical skills in microscopy and their handling techniques and staining procedures.
6. It will help the students to understand the general bacteriology and microbial techniques for isolation of pure cultures of Microorganisms.

EXPERIMENTS

1. Collection and processing of clinical specimen – Sputum.
2. Collection and processing of clinical specimen – Urine.
3. Collection and processing of clinical specimen – Blood.
4. Collection and processing of clinical specimen – Stool.
5. Antibiotic sensitivity testing by Kirby-Bauer method
6. Determination of minimal inhibitory concentration.

SUGGESTED READINGS

1. Brooks G.F., Carroll K.C., Butel J.S., Morse S.A. and Mietzner, T.A. (2013). Jawetz, Melnick and Adelberg's Medical Microbiology. 26th edition. McGraw Hill Publication.

3. Greenwood D, Slack R, Barer M, and Irving W. (2012). Medical Microbiology, 18th Edition. Churchill Livingstone.
4. Ryan KJ and Ray CG. (2014). Sherris Medical Microbiology, 6th Edition. McGraw-Hill Professional.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To strengthen the knowledge of students in immunodiagnostics.
- To learn the latest trends in immunology.
- Rapid diagnosis and Immune reaction.
- To provide overview of immune system, antigen antibody structure and interactions.
- To develop understanding of innate and adaptive immunity along with major cells and molecules involved.
- To integrate immunology with health and enrich the knowledge for autoimmune disorders, hypersensitivity reaction

COURSE OUTCOME

1. Introducing the **employment** aspect of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.
2. Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity
3. Develop understanding about immune system, antigen antibody interactions.
4. Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
5. Students can able to perform basic immunological assays.
6. It will distinguish fundamental knowledge on immunology and its advancement.

Unit I

Concept of Innate and Adaptive immunity; Contributions of following scientists to the development of field of immunology – Edward Jenner, Karl Landsteiner, Robert Koch, Paul Ehrlich, Elie Metchnikoff, Peter Medawar, MacFarlane Burnet, Neils K Jerne, Rodney Porter and Susumu Tonegawa. Structure, Functions and Properties of: Immune Cells – Stem cell, T cell, B cell, NK cell, Macrophage, Neutrophil, Eosinophil, Basophil, Mast cell, dendritic cell; and Immune Organs – Bone Marrow, Thymus, Lymph Node, Spleen, GALT, MALT, CALT.

Unit II

Antigens – Characteristics of an antigen (Foreignness, Molecular size and Heterogeneity); Haptens; Epitopes (T & B cell epitopes); T-dependent and T-independent antigens; Adjuvants. Antibodies – Structure, Types, Functions and Properties of antibodies; Antigenic determinants on antibodies (Isotypic, allotypic, idiotypic); Monoclonal and Chimeric antibodies.

Unit III

MHC – Organization of MHC locus; Structure and Functions of MHC I & II molecules; Antigen processing and presentation (Cytosolic and Endocytic pathways). Complement system – Components of the Complement system; Activation pathways (Classical, Alternative); Biological consequences of complement Activation

Unit IV

Primary and Secondary Immune Response; Generation of Humoral Immune Response (Plasma and Memory cells); Generation of Cell Mediated Immune Response (Self MHC restriction, T cell activation, Co-stimulatory signals); Killing Mechanisms by CTL and NK cells, Introduction

to tolerance. Types of Autoimmunity and Hypersensitivity with examples; Immuno deficiencies – Animal models (Nude and SCID mice), DiGeorge syndrome, Chediak-Higashi syndrome. Transplantation immunology, Graft versus host reaction, Types of tumors, tumor Antigens, causes and therapy for cancers.

Unit V

Principles of precipitation, agglutination, complement fixation, Immunodiffusion, Immunoelectrophoresis, ELISA, ELISPOT, Western blotting, Immunofluoresence, Flow cytometry, Immunoelectron microscopy.

SUGGESTED READINGS

1. Goldsby RA, Kindt TJ, Osborne BA. (2007). Kuby's Immunology. 6th edition. W.H. Freeman and Company, New York.
2. Delves P, Martin S, Burton D, Roitt IM. (2006). Roitt's Essential Immunology. 11th edition Wiley- Blackwell Scientific Publication, Oxford.
3. Murphy K, Travers P, Walport M. (2008). Janeway's Immunobiology. 7th edition Garland Science Publishers, New York.
4. Abbas AK, Lichtman AH, Pillai S. (2007). Cellular and Molecular Immunology. 6th edition, Saunders Publication, Philadelphia.
5. Peakman M, and Vergani D. (2009). Basic and Clinical Immunology. 2nd edition Churchill Livingstone Publishers, Edinberg.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100**End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To introduce the skill oriented knowledge of the medically important microorganisms, microbial morphology with the main focuses being the characterization, isolation and identification of different microorganism.
- Develop understanding about immune system, antigen antibody interactions.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
- To develop understanding about microbial infections and manifestations.
- Gain knowledge on microbial infections and its prophylaxis.
- To understand the microbial host interactions in life science.

COURSE OUTCOME

1. It provides the ability to characterize, isolate and identify different microbes.
2. It includes a detailed study of characterization, etiology, pathogenicity, clinical systems, and laboratory diagnosis of disease-causing Microorganisms.
3. Upon completion, students gained the knowledge of most common medically important organism and the infections they cause.
4. Different approaches, techniques and tools used to identify pathogens and control them.
5. Diagnostic approaches for microbial pathogens
6. Developing efficient vaccines and new drugs

Unit I

Normal micro flora of the human body: Importance of normal microflora, normal microflora of skin, throat, gastrointestinal tract, urogenital tract. Host pathogen interaction: Definitions – Infection, Invasion, Pathogen, Pathogenicity, Virulence, Toxigenicity, Carriers and their types, Opportunistic infections, Nosocomial infections. Transmission of infection, Pathophysiologic effects of LPS. Collection, transport and culturing of clinical samples – Sputum, Stool and Urine.

Unit II

List of diseases of various organ systems and their causative agents. The following diseases in detail with symptoms, mode of transmission, prophylaxis and control. Respiratory pathogens: *Streptococcus pyogenes*, *Haemophilus influenzae*, *Mycobacterium tuberculosis*. Gastrointestinal Diseases: *Escherichia coli*, *Salmonella typhi*, *Vibrio cholerae*, *Helicobacter pylori*. Others: *Staphylococcus aureus*, *Bacillus anthracis*, *Clostridium tetani*, *Treponema pallidum*.

Unit III

The detailed study of following diseases – Causative agents, Mode of transmissions, Pathogenicity, Symptoms and prophylaxis of Polio, Herpes, Hepatitis, Rabies, Dengue, AIDS, Influenza with brief description of swine flu, Ebola, Chikungunya, Japanese Encephalitis

Unit IV

Brief description of each of the following types of mycoses and one representative disease to be studied with respect to transmission, symptoms and prevention. Cutaneous mycoses: Tinea pedis

(Athlete's foot). Systemic mycoses: Histoplasmosis. Opportunistic mycoses: Candidiasis. The detailed study of following diseases – Causative agents, Mode of transmissions, Pathogenicity, Symptoms and prophylaxis of Amoebiasis, Giardiasis, Elephantiasis, Taeniasis, Malaria, Kala-azar.

Unit V

Antibacterial agents: Five modes of action with one example each: Inhibitor of nucleic acid synthesis; Inhibitor of cell wall synthesis; Inhibitor of cell membrane function; Inhibitor of protein synthesis; Antibiotic resistance - MDR, XDR, MRSA, NDM-1 – resistance mechanisms. Antifungal agents: Mechanism of action of Amphotericin B, Griseofulvin. Antiviral agents: Mechanism of action of Amantadine, Acyclovir, Azidothymidine.

Instruction Hours / week: L: 4 T: 0 P: 0
100

Marks: Internal: 40 External: 60 Total:

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To learn the basic tools in recombinant technology
- To understand the various concepts of cloning vectors and cloning strategies
- To emphasize the knowledge in biotechnology and techniques.
- To familiarize the students to versatile tools and techniques employed in genetic engineering and recombinant DNA technology.
- A sound knowledge on procedural repertoire allows students to innovatively apply these in basic and applied fields of biological research.
- This course offers theoretical bases to properties and applications of versatile DNA modifying enzymes, cloning strategies, vector types, host genotype specificities for selection and screening of recombinants and/or recombinant transformants.

COURSE OUTCOME

1. Imparts the **entrepreneurial** concepts of rDNA technology and their applications and Acquire knowledge on the applications of genetic engineering.
2. Understand the difference between old biotechnology and modern biotechnology.
3. Provide examples of current applications of biotechnology and advances in the different areas like medical, microbial, environmental, bioremediation, agricultural, plant, animal, and forensic sciences.
4. Explain the general principles of generating transgenic plants, animals and microbes.
5. Technical know-how on versatile techniques in recombinant DNA technology.
6. An understanding on application of genetic engineering techniques in basic and applied experimental biology.

Unit I

Milestones in genetic engineering and Biotechnology cloning Tools; Restriction modification systems: Types I, II and III. Mode of action, nomenclature, applications of Type II restriction enzymes in genetic engineering. DNA modifying enzymes and their applications: DNA polymerases. Terminal deoxynucleotidyl transferase, kinases and phosphatases, and DNA ligases

Unit II

Cloning Vectors: Definition and Properties Plasmid vectors: pBR and pUC series Bacteriophage lambda and M13 based vectors Cosmids, BACs, YACs. Use of linkers and adaptors. Expression vectors: *E.coli* lac and T7 promoter-based vectors, yeast YIp, YEp and YCp vectors, Baculovirus based vectors, mammalian SV40-based expression vectors

Unit III

Transformation of DNA: Chemical method, Electroporation. Gene delivery: Microinjection, electroporation, biolistic method (gene gun), liposome and viral-mediated delivery, *Agrobacterium* - mediated delivery DNA, RNA and Protein analysis: Agarose gel electrophoresis, Southern - and Northern - blotting techniques, dot blot, DNA microarray analysis, SDS-PAGE and Western blotting.

Unit IV

PCR: Basics of PCR, RT-PCR, Real-Time PCR (Quantitative). Sanger's method of DNA Sequencing: traditional and automated sequencing. Primer walking and shotgun sequencing

Unit V

Construction of Genomic and cDNA libraries, screening of libraries: Colony hybridization and colony PCR, Chromosome walking and chromosome jumping. Products of recombinant DNA technology: Products of human therapeutic interest - insulin, hGH. Bt transgenic - cotton, brinjal, Gene therapy, recombinant vaccines, protein engineering and site directed mutagenesis.

Instruction Hours / week: L: 3 T: 0 P: 0
Total: 100

Marks: Internal: 40 External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To demonstrate the techno-economic viability of the biofertilizers / biopesticides to farmers through field demonstration at farmer's field & by know-how training.
- To study about the biofertilizers in increasing soil fertility and usage of Biopesticides for plant disease.
- To prepare literature and promulgate in local language through booklets / documents etc. about; the benefits of biofertilizers for farming in villages through trained beneficiaries/ cultivators as multiplier impact.
- To demonstrate the effectiveness of biofertilizer cultural practices in the farmers fields for enhanced crop productivity through bioreclamation of waste/ marginal land
- To raise the rural/tribal economy & living standard of the lowly of the lowest backward farming community especially SC & ST and marginal farmers.
- To create self employment opportunities to weaker underprivileged SC & ST and marginal farmers.

COURSE OUTCOME

1. This course has been designed to provide the student knowledge about eco friendly product which play a crucial role in determining its future use and applications in environmental management.
2. Provides detailed **entrepreneurial** idea about biofertilizer production and plant disease.
3. To produce and impart training of ecofriendly agricultural inputs so as to nullify the ill effects of chemical fertilizers.
4. To demonstrate the know-how technology pertinent to microbiological and physico-chemical analyses of soil samples and their assessment.
5. To demonstrate the low cost media preparation and cultural practices in biofertilizer / biopesticide production.
6. Students can able to develop fundamental aspects of to seed/seed material/seedlings/soil/waste matter/crop residues in order to increase the population

Unit I

General account of the microbes used as biofertilizers for various crop plants and their advantages over chemical fertilizers. Symbiotic N₂ fixers: *Rhizobium* – Isolation, characteristics, types, inoculum production and field application, legume/pulses plants. *Frankia* – Isolation and characteristics, Alder, Casurina plants, non-leguminous crop symbiosis. Cyanobacteria, *Azolla* – Isolation, characterization, mass multiplication, their role in rice cultivation, crop response and field application.

Unit II

Free living *Azospirillum*, *Azotobacter* – isolation, characteristics, mass production and field application.

Unit III

Phosphate solubilizing microbes – Isolation, characterization, mass production, field application.

Unit IV

Importance of mycorrhizal inoculum, types of mycorrhizae and associated plants, Mass production of VAM, field applications of Ectomycorrhizae and VAM.

Unit V

General account of microbes used as bio-insecticides and their advantages over synthetic pesticides, *Bacillus thuringiensis*, production, Field applications, Viruses – cultivation and field applications.

SUGGESTED READINGS

1. Kannaiyan, S. (2003). Bioethnology of Biofertilizers, CHIPS, Texas.
2. Mahendra K. Rai (2005). Hand book of Microbial biofertilizers, The Haworth Press, Inc. New York.
3. Reddy, S.M. *et. al.* (2002). Bioinoculants for sustainable agriculture and forestry, Scientific Publishers.
4. Subba Rao N.S (1995) Soil microorganisms and plant growth Oxford and IBH publishing co. Pvt. Ltd. New Delhi.
5. Saleem F and Shakoori AR (2012) Development of Bioinsecticide, Lap Lambert Academic Publishing GmbH KG.
6. Aggarwal SK (2005) Advanced Environmental Biotechnology, APH publication.

**Instruction Hours / week: L: 3 T: 0 P: 0
Total: 100**

Marks: Internal: 40 External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To strengthen the knowledge of personal health care to students through a detailed study on vaccine and its schedule throughout the life time for all age group.
- Increase the focus on health promotion and prevention, screening and early intervention; and
- Improve quality, safety, performance and accountability.
- To provide health care services aimed at preventing health problems.
- To work with health care professionals
- To counsel and educate the patients and their families

COURSE OUTCOME

1. Introducing the **skilled** basics about the health care and to study various types of vaccines to control the life time infectious disease.
2. Demonstrate understanding of the role of health in the practice of health promotion
3. Discuss the concepts of health, health education, health promotion and some related terms
4. To develop Personal Health Knowledge to achieve societal benefits on health care system.
5. Upon completion students will gain knowledge personal health care system.
6. Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.

Unit I

Vaccination: History –Types of vaccines –conventional and modern vaccines, Route of administrations –mechanisms of inducing immunity.

Unit II

Vaccination schedule for adults - Hepatitis B vaccines, MMR – Tetanus - Varicella vaccines. Vaccines for travelers.

Unit III

Vaccines for 50 - year-old adult - types and routes. Vaccines for 65 – year - old adult - types and routes. Vaccines for healthcare workers.

Unit IV

Child health management - General health - Types of infection in child - Growth and development – Nutrition and fitness - Positive parenting.

Unit V

Vaccination schedule in children – New born - Child below 5yrs - Child below 10years Vaccines at adolescent age. Vaccine risks and safety.

SUGGESTED READINGS

Instruction Hours / week: L: 0 T: 0 P: 4
Total: 100

Marks: Internal: 40 External: 60

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To strengthen the knowledge of students in immunodiagnostics on [skill](#) basis.
- To learn the latest trends in immunology.
- Rapid diagnosis and Immune reaction.
- To provide overview of immune system, antigen antibody structure and interactions.
- To develop understanding of innate and adaptive immunity along with major cells and molecules involved.
- To integrate immunology with health and enrich the knowledge for autoimmune disorders, hypersensitivity reaction.

COURSE OUTCOME

1. Introducing the science of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.
2. Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity
3. Develop understanding about immune system, antigen antibody interactions.
4. Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
5. After course completion, students can apply the knowledge in further studies and higher education.
6. Knows the concepts of advanced immunological assays.

EXPERIMENTS

1. Identification of human blood groups.
2. Perform Total Leukocyte Count of the given blood sample.
3. Perform Differential Leukocyte Count of the given blood sample.
4. Separate serum and plasma from the blood sample (demonstration).
5. Perform immunodiffusion by Ouchterlony method.
6. Perform DOT ELISA.
7. Perform immunoelectrophoresis.

SUGGESTED READINGS

5. Peakman M, and Vergani D. (2009). Basic and Clinical Immunology. 2nd edition Churchill Livingstone Publishers, Edinberg.
6. Richard C and Geiffrey S. (2009). Immunology. 6th edition. Wiley Blackwell Publication.

Instruction Hours / week: L: 0 T: 0 P: 4
Total: 100

Marks: Internal: 40 External: 60

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To introduce the knowledge of the medically important microorganisms, microbial morphology with the main focuses being the characterization, isolation and identification of different microorganism.
- The aim of Medical Microbiology course is to introduce basic principles and application relevance of clinical disease for students who are in preparation for physicians.
- The content of rigorous course includes many etiological agents responsible for global infectious diseases.
- It covers all biology of bacteria, viruses and other pathogens related with infectious diseases in humans.
- The course will provide the conceptual basis for understanding pathogenic microorganisms and particularly address the fundamental mechanisms of their pathogenicity.
- It will develop the basic skills on handling clinical pathogens.

COURSE OUTCOME

1. It provides the **entrepreneurial** ability to characterize, isolate and identify different microbes.
2. It includes a detailed study of characterization, etiology, pathogenicity, clinical systems, and laboratory diagnosis of disease causing Microorganisms.
3. It will also provide opportunities for a student to develop diagnostic skills in microbiology, including the practical application and interpretation of laboratory tests for the diagnosis of infectious diseases.
4. Comprehend the various methods for identification of unknown microorganisms.
5. Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
6. Explain the methods of microorganisms control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding. • Demonstrate practical skills in fundamental microbiological techniques.

EXPERIMENTS

1. Identify bacteria (any three of *E. coli*, *Salmonella*, *Pseudomonas*, *Staphylococcus*, *Bacillus*) using laboratory strains on the basis of cultural, morphological and biochemical characteristics: IMViC, TSI, nitrate reduction, urease production and catalase tests.
2. Study of composition and use of important differential media for identification of bacteria: EMB Agar, McConkey agar, Mannitol salt agar, Deoxycholate citrate agar, TCBS, Salmonella Shigella/BSA Agar.
3. Study of bacterial flora of skin by swab method.
4. Antibacterial sensitivity assay by Kirby-Bauer method.
5. Determination of minimal inhibitory concentration (MIC) of an antibiotic.

6. Study symptoms of the diseases with the help of photographs: Polio, anthrax, herpes, chicken pox, HPV warts, AIDS (candidiasis), dermatomycoses (ring worms).
7. Study of various stages of malarial parasite in RBCs using permanent mounts.

SUGGESTED READINGS

1. Brooks G.F., Carroll K.C., Butel J.S., Morse S.A. and Mietzner, T.A. (2013). Jawetz, Melnick and Adelberg's Medical Microbiology. 26th edition. McGraw Hill Publication
2. Greenwood D, Slack R, Barer M, and Irving W. (2012). Medical Microbiology, 18th Edition. Churchill Livingstone.
3. Ryan KJ and Ray CG. (2014). Sherris Medical Microbiology, 6th Edition. McGraw-Hill Professional.
4. Ananthanarayan R. and Paniker C.K.J. (2009) Textbook of Microbiology. 8th edition, University Press Publication.
5. Madigan MT, Martinko JM, Dunlap PV and Clark DP. (2014). Brock Biology of Microorganisms. 14th edition. Pearson International Edition.
6. Goering R., Dockrell H., Zuckerman M. and Wakelin D. (2007). Mims' Medical Microbiology. 4th edition. Elsevier
7. Willey JM, Sherwood LM, and Woolverton CJ. (2013). Prescott, Harley and Klein's Microbiology. 9th edition. McGraw Hill Higher Education.

Instruction Hours / week: L: 0 T: 0 P: 4
Total: 100

Marks: Internal: 40 External: 60

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To learn the **entrepreneurial** basic tools in recombinant technology
- To understand the various concepts of cloning vectors and cloning strategies
- To emphasize the knowledge in biotechnology and techniques.
- Provide idea about DNA, protein purification from samples and quantification.
- To learn the techniques pertaining to amplification of biological molecules.
- To impart knowledge on basic microbial isolation and identification approaches

COURSE OUTCOME

1. Imparts the concepts of rDNA technology and their applications and Acquire knowledge on the applications of genetic engineering.
2. Students will develop understanding about isolation and enumeration of microorganisms from various samples.
3. Microbial identification and characterization using a number of approaches will be well understood.
4. Acquainted with molecular modification approaches that encompass extraction, purification, quantification and augmentation.
5. To give basic understanding of microbial genetic manipulations
6. To understand working of different laboratory equipments used in microbiological laboratories

EXPERIMENTS

1. Preparation of competent cells for transformation.
2. Demonstration of Bacterial Transformation and calculation of transformation efficiency.
3. Digestion of DNA using restriction enzymes and analysis by agarose gel electrophoresis
4. Ligation of DNA fragments.
5. Cloning of DNA insert and Blue white screening of recombinants.
6. Interpretation of sequencing gel electropherograms.
7. Designing of primers for DNA amplification.
8. Amplification of DNA by PCR.
9. Demonstration of Southern blotting.

Instruction Hours / week: L: 0 T: 0 P: 3
Total: 100

Marks: Internal: 40

External: 60

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To study about the biofertilizers in increasing soil fertility and usage of Biopesticides for plant disease on the **entrepreneurial** basis.
- Appreciate the diversity of microorganism and microbial communities inhabiting a multitude of habitats and occupying a wide range of ecological habitats.
- Learn the occurrence, abundance and distribution of microorganism in the environment and their role in the environment and also learn different methods for their detection and characterization
- Competently explain various aspects of environmental microbiology and microbial ecology and to become familiar with current research in environmental microbiology.
- Understand various biogeochemical cycles – Carbon, Nitrogen, Phosphorus cycles etc. and microbes involved
- Understand various plant microbes interactions especially rhizosphere, phyllosphere and mycorrhizae and their applications especially the biofertilizers and their production techniques

COURSE OUTCOME

1. Provide the student knowledge about eco friendly product which play a crucial role in determining its future use and applications in environmental management.
2. Provides detailed idea about biofertilizer production and plant disease.
3. Understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems
4. waste water treatment and bioremediation
5. Know the Microorganisms responsible for water pollution especially Water-borne pathogenic microorganisms and their transmission
6. Comprehend the various methods to determine the Sanitary quality of water and sewage treatment methods employed in waste water treatment

EXPERIMENTS

1. Isolation and identification of *Rhizobium* spp. from root nodules – mass production and application.
2. Isolation and identification of *Azotobacter* spp. – mass production and application.
3. Isolation and identification of *Azospirillum* spp. – mass production and application.
4. Isolation and identification of phosphate solubilizing bacteria – mass production and application.
5. Isolation and identification of mycorrhizae.
6. Isolation and maintenance of *Azolla*.
7. Isolation and identification of *Anabena* and *Nostoc* – its mass cultivation.
8. Isolation, identification and maintenance of *Bacillus thuringiensis*.
9. Isolation and identification of *Trichoderma viridae* – its mass cultivation.
10. Isolation and identification of *Beauveria bassiana* – its mass cultivation.

SUGGESTED READINGS

5. Saleem F and Shakoori AR (2012) Development of Bioinsecticide, Lap Lambert Academic Publishing GmbH KG.

Instruction Hours / week: L: 0 T: 0 P: 3
100**Marks: Internal: 40 External: 60 Total:****End Semester Exam: 6 Hours****COURSE OBJECTIVES**

- To strengthen the skilled knowledge of personal health care to students through a detailed study on vaccine and its schedule throughout the life time for all age group.
- Demonstrate understanding of the role of health in the practice of health promotion
- Discuss the concepts of health, health education, health promotion and some related terms
- Identify social determinants of health
- List the levels of disease prevention
- To distinguish microbial concept on normal micro flora and pathogens.

COURSE OUTCOME

1. Introducing the skilled basics about the health care and to study various types of vaccines to control the life time infectious disease.
2. Personal Health and disease, influence of family and community
3. Culture, beliefs, attitudes, and stigmatized illnesses
4. To make the understanding on Leading causes of death, risk factors, and prevention
5. To distinguish three levels of health promotion/disease prevention
6. To build a consumer-focused integrated primary health care system.

EXPERIMENTS

1. Effect of hand-wash on microbial load.
2. Isolation of Various kinds of skin microflora.
3. Effectiveness of antimicrobial clothes
4. Normal flora and pathogen of mouth.
5. Evaluation of disinfectants and antiseptics.

Instruction Hours / week: L: 4 T: 0 P: 0
Total: 100

Marks: Internal: 40 External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide a strong base in the fundamentals of pathogens.
- To learn techniques and methods used in the cultivation and isolation of pathogens.
- To obtain with the knowledge about the habitat and characteristics of pathogens in detail.
- Develop understanding about immune system, antigen antibody interactions.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
- Theoretical knowledge on techniques employed for culturing and detection of plant and animal viruses.

COURSE OUTCOME

1. Develop **skills** for identification, classification, and characterization of various pathogens.
2. To describe and practice the basic principles of chemotherapy and disinfection through laboratory exercises accompanied by case studies.
3. Upon completion, students gained the knowledge of most common medically important organism and the infections they cause.
4. Different approaches, techniques and tools used to identify pathogens and control them.
5. Diagnostic approaches for microbial pathogens
6. Developing efficient vaccines and new drugs.

Unit I

Infectious and non-infectious diseases, microbial and non-microbial diseases, Deficiency diseases, occupational diseases, Incubation period, mortality rate, nosocomial infections

Unit II

Respiratory microbial diseases, gastrointestinal microbial diseases, Nervous system diseases, skin diseases, eye diseases, urinary tract diseases, Sexually transmitted diseases: Types, route of infection, clinical systems and general prevention methods, study of recent outbreaks of human diseases (SARS/ Swine flu/Ebola) – causes, spread and control, Mosquito borne disease – Types and prevention.

Unit III

Treatment using antibiotics: beta lactam antibiotics (penicillin, cephalosporins), quinolones, polypeptides and aminoglycosides. Anti-fungal and anti-parasitic agents. Judicious use of antibiotics, importance of completing antibiotic regimen, Concept of DOTS, emergence of antibiotic resistance, current issues of MDR/XDR microbial strains. Treatment using antiviral agents: Amantadine, Acyclovir, Azidothymidine. Concept of HAART.

Unit IV

General preventive measures, Transmission and prevention of microbial diseases. Importance of personal hygiene, environmental sanitation and methods to prevent the spread of infectious agents transmitted by direct contact, food, water and insect vectors.

Unit V

Importance, types, Vaccine preparation, synthetic or recombinant vaccines. vaccines available against microbial diseases, vaccination schedule (compulsory and preventive) in the Indian context.

SUGGESTED READINGS

5. Madigan MT, Martinko JM, Dunlap PV and Clark DP. (2014). Brock Biology of Microorganisms. 14th edition. Pearson International Edition.

**Instruction Hours / week: L: 4 T: 0 P: 0
Total: 100**

Marks: Internal: 40 External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To impart knowledge microflora of air and water, sample collection, analysis and control of diseases.
- This paper is designed with the objective to impart hand-on experience and laboratory skills to students in area of bioprocess.
- Learning the basic principles of environment microbiology and be able to apply these principles to understanding and solving problems in current environmental, air and water issues.
- The students will develop set of skills to recognize the ecological problems and critical evaluation of the human impacts on pollution, climate changes and as well as environmental protection.
- To reduce volume of sludge, to stabilize organic solids, and to recover resources. Typical Methods of Treatment: Thickening, chemical addition, centrifugation, filtration, digestion, incineration.
- Quality systems such as investigations, document management systems, Standard Operating Procedures (SOP), change management system, recall management and inspection management

COURSE OUTCOME

1. Provides **employability** skills involved in the air and water analysis
2. Characterization of microorganisms from water and air samples
3. Students will get the basic knowledge how to prepare and perform sampling and microbial analyses to determine the abundance, growth rate and microbial community composition together with the basic environmental parameters.
4. Validation for equipment, methods, cleaning and process
5. Students can develop their entrepreneurial skills in analysis of air and water sample.
6. Learning the basic principles of microbiological analysis of environmental sector.

Unit I

Bioaerosols, Air borne microorganisms (bacteria, viruses, fungi) and their impact on human health and environment, significance in food and pharma industries and operation theatres, allergens

Unit II

Bioaerosol sampling, air samplers, methods of analysis, CFU, culture media for bacteria and fungi, Identification characteristics

Unit III

Fate of bioaerosols, inactivation mechanisms – UV light, HEPA filters, desiccation, Incineration. Precipitation, chemical disinfection, filtration, high temperature, UV light

Unit IV

Water borne pathogens and water borne diseases

Unit V

Sample Collection, Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) standard qualitative procedure: presumptive/MPN tests confirmed and completed tests for faecal coliforms (b) Membrane filter technique and (c) Presence/absence tests

**Semester – V
BIOMATHEMATICS AND BIOSTATISTICS**

(4H)

**Instruction Hours / week: L: 4 T: 0 P: 0
Total: 100**

Marks: Internal: 40 External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- This course has been intended to provide the learner insights into helpful areas of Statistics which plays an essential role in present, future use and applications of Biology.
- This course provides an introduction to a variety of statistical methods of use in describing and analyzing biological data.
- It includes a laboratory component in which biological data are analyzed using statistical software. No prior knowledge of the software will be assumed.
- Statisticians help to design data collection plans, analyze data appropriately and interpret and draw conclusions from those analyses.
- To develop students' skills in algebraic manipulation, the calculus of linear and non-linear differential equations, mathematical modelling, matrix algebra and statistical methods.
- To introduce students to the application of mathematical modeling in the analysis of biological systems including populations of molecules, cells and organisms.
- To show how mathematics, statistics and computing can be used in an integrated way to analyse biological systems.

COURSE OUTCOME

1. Students get an idea about collection, interpretation and presentation of statistical data.
2. Statistics, a branch of applied Mathematics, is regarded as mathematics applied to observational data.
3. Conceivably everything dealing with the collection, processing, analysis and interpretation of numerical data belongs to the domain of statistics.
4. To introduce students to the use of R for the analysis of biological processes and data, including simple computer programming.
5. have an enhanced knowledge and understanding of mathematical modeling and statistical methods in the analysis of biological systems;
6. be able to analyse data from experiments and draw sound conclusions about the underlying processes using their understanding of mathematics and statistics be better able to assess biological inferences that rest on mathematical and statistical arguments.

Unit I

Sets. Functions and their graphs : polynomial, sine, cosine, exponential and logarithmic functions. Motivation and illustration for these functions through projectile motion, simple pendulum, biological rhythms, cell division, muscular fibres etc. Simple observations about these functions like increasing, decreasing and, periodicity. Sequences to be introduced through the examples arising in Science beginning with finite sequences, followed by concepts of recursion and difference equations. For instance, the Fibonacci sequence arising from branching habit of trees and breeding habit of rabbits.

Unit II

Intuitive idea of algebraic relationships and convergence. Infinite Geometric Series. Series formulas for e^x , $\log(1+x)$, $\sin x$, $\cos x$. Step function. Intuitive idea of discontinuity, continuity and limits. Differentiation. Conception to be motivated through simple concrete examples as given above from Biological and Physical Sciences. Use of methods of differentiation like Chain rule, Product rule and Quotient rule. Second order derivatives of above functions. Integration as reverse process of differentiation. Integrals of the functions introduced above. Differential Equations of first order, Linear Differential Equations. Points in plane and space and coordinate form. Examples of matrices arising in Biological Sciences and Biological networks. Sum and Product of matrices upto order 3.

Unit III

Measures of central tendency, Measures of dispersion; skewness, kurtosis; Elementary Probability and basic laws; Discrete and Continuous Random variable, Mathematical Expectation; Curve Fitting; Correlation and Regression. Emphasis on examples from Biological Sciences.

Unit IV

Mean and Variance of Discrete and Continuous Distributions namely Binomial, Poisson, Geometric, Weibull, Logistic and Normal distribution. Fitting of Distributions; Statistical methods: Scope of statistics: utility and misuse. Principles of statistical analysis of biological data.

Unit V

Sampling parameters. Difference between sample and Population, Sampling Errors, Censoring, difference between parametric and non-parametric statistics. Sampling Distributions, Standard Error, Testing of Hypothesis, Level of Significance and Degree of Freedom; Large Sample Test based on Normal Distribution, Small sample test based on t-test, Z- test and F test; Confidence Interval; Distribution-free test - Chi-square test; Basic Introduction to Multivariate statistics, etc.

Instruction Hours / week: L: 4 T: 0 P: 0
Total: 100

Marks: Internal: 40 External: 60

End Semester Exam: 3

Hours

COURSE OBJECTIVES

- To detail the importance of computer in field of life sciences.
- To obtain good understanding about the interpretation of biological data base.
- To uptake knowledge in latest tools and technology.
- Aimed to provide an overview of various bioinformatics tools, databases available and sequence analysis
- Provide knowledge on database concept, management, retrieval along with utilization in gene and protein analysis.
- To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis.

COURSE OUTCOME

1. Provides computational [skill](#) on search engines and various software tools involved in bioinformatics
2. It will impart computational based techniques which includes genomics and proteomics in Bioinformatics
3. Retrieve information from available databases and use them for microbial identifications and drug designing
4. Gain ability to modify gene and protein structures in simulated systems.
5. Introduction to the basics of sequence alignment and analysis.
6. Describe about the different types of Biological databases.

Unit I

RDBMS - Definition of relational database. Mode of data transfer (FTP, SFTP, SCP), advantage of encrypted data transfer.

Unit II

Biological databases – nucleic acid, genome, protein sequence and structure, gene expression databases, Database of metabolic pathways, Mode of data storage - File formats - FASTA, Genbank and Uniprot, Data submission & retrieval from NCBI, EMBL, DDBJ, Uniprot, PDB.

Unit III

Local and Global Sequence alignment, pairwise and multiple sequence alignment. Scoring an alignment, scoring matrices, PAM & BLOSUM series of matrices. Types of phylogenetic trees, Different approaches of phylogenetic tree construction - UPGMA, Neighbour joining, Maximum Parsimony, Maximum likelihood.

Unit IV

Diversity of Genomes: Viral, prokaryotic & eukaryotic genomes Genome, transcriptome, proteome, 2-D gel electrophoresis, Maldi Tof spectroscopy. Major features of completed genomes: *E.coli*, *S.cerevisiae*, *Arabidopsis*, Human.

Unit V

Hierarchy of protein structure - primary, secondary and tertiary structures, modeling. Structural Classes, Motifs, Folds and Domains. Protein structure prediction in presence and absence of structure template Energy minimizations and evaluation by Ramachandran plot Protein structure and rational drug design.

End Semester Exam: 3 Hours

COURSE OBJECTIVES

To develop skills related to

- Understand the principles of various instruments used in the life sciences
- Ability to operate the instruments
- Data analysis and interpretations
- Introduce the basic concept of qualitative and quantitative analysis of a given sample
- Study various spectroscopic techniques and its instrumentation.
- Study the concept of separation science and its applications.
- To learn the fundamentals of research methodology, working principles and applications of instruments used in biology.

COURSE OUTCOME

1. offers the students with an opportunity to develop skill on the bioinstrumentation and concepts of principles and applications.
2. Define and explain various fundamentals of spectroscopy, qualitative and quantitative analysis
3. and characterize functionalities of biomolecules by using spectroscopic techniques.
4. Explain the various separation techniques and its instrumentation.
5. Describe the principle and working of various radiation detectors.
6. Evaluate the various types & applications of chromatography and electrophoresis.
7. Appreciate the working principles and applications of Microscopy.

Unit I

Brightfield and darkfield microscopy, Fluorescence Microscopy, Phase contrast Microscopy, Confocal Microscopy, Electron Microscopy (Scanning and Transmission Electron Microscopy).

Unit II

Principles and applications of paper chromatography (including Descending and 2-D), Thin layer chromatography. Column Chromatography - packing types (IEC, AC, SEC), fraction collection. GLC and HPLC.

Unit III

Principle and applications of native polyacrylamide gel electrophoresis, SDS-polyacrylamide gel electrophoresis, 2D gel electrophoresis, Isoelectric focusing, Zymogram preparation and Agarose gel electrophoresis.

Unit IV

Principle, Instrumentation and application of spectrophotometer, colorimeter and turbidometer. MALDI-TOF, FTIR, MS, NMR.

Unit V

Principles of centrifugations – RCF and sedimentation coefficient. Types of centrifuges – rotors - fixed angle and swinging bucket rotors. Types of Centrifugation – differential, density gradient and ultracentrifugation. Analytical centrifugation.

(4H – 4C)

PLANT PATHOLOGY

Instruction Hours / week: L: 4 T: 0 P: 0
100

Marks: Internal: 40 External: 60 Total:

End Semester Exam: 3

Hours

COURSE OBJECTIVES

- This paper aims at introducing students to the basic and applied aspects of plant biotechnology.
- Introduce students to the basic principles and concepts of plant pathology.
- Introduce and illustrate the major groups of organisms that cause plant diseases.
- Enhance student's understanding of scientific research, especially as it applies to the science of plant pathology and the study of microorganisms.
- Provide a framework that students can use in their profession to best approach plant disease management.
- Prepare students for additional classes in Plant Pathology and related disciplines.

COURSE OUTCOME

1. This will enable for learning the techniques to save endangered species which will be useful for mankind
2. Describe the concepts of what constitutes disease in plants.
3. Identify major principles of plant pathology.
4. Recognize the etiological agents of disease.
5. Employ methods to diagnose and manage a wide range of plant diseases.
6. Describe aspects of integrated pest management.

Unit I

Concept of plant disease- definitions of disease, disease cycle and pathogenicity, symptoms associated with microbial plant diseases, types of plant pathogens, economic losses and social impact of plant diseases. Significant landmarks in the field of plant pathology- Contributions of Anton DeBary, Millardet, Burrill, E. Smith, Adolph Mayer, Ivanowski, Diener, Stakman, H.H. Flor, Van Der Plank, molecular Koch's postulates. Contributions of eminent Indian plant pathologists.

Unit II

Infection, invasion, colonization, dissemination of pathogens and perennation. Concepts of monocyclic, polycyclic and polyetic diseases, disease triangle & disease pyramid, forecasting of plant diseases and its relevance in Indian context.

Unit III

Study of some important plant diseases giving emphasis on its etiological agent, symptoms, epidemiology and control.

a. Important diseases caused by phytopathogenic bacteria: Angular leaf spot of cotton, bacterial leaf blight of rice, crown galls, bacterial cankers of citrus.

b. Important diseases caused by fungi: White rust of crucifers - *Albugo candida*, Downy mildew of onion

– *Peronospora*, Powdery mildew of wheat - *Erysiphe graminis*.

c. Important diseases caused by viruses: Papaya ring spot, tomato yellow leaf curl, banana bunchy top, rice tungro.

Unit IV

a. Microbial Pathogenicity

Virulence factors of pathogens: enzymes, toxins (host specific and non specific) growth regulators, virulence factors in viruses (replicase, coat protein, silencing suppressors) in disease development. Effects of pathogens on host physiological processes (photosynthesis, respiration, cell membrane permeability, translocation of water and nutrients, plant growth and reproduction).

b. Genetics of Plant Diseases

Concept of resistance (R) gene and avirulence (avr) gene; gene for gene hypothesis, types of plant resistance: true resistance– horizontal & vertical, apparent resistance.

c. Defense Mechanisms in Plants

Concepts of constitutive defense mechanisms in plants, inducible structural defenses (histological- cork layer, abscission layer, tyloses, gums), inducible biochemical defenses [hypersensitive response (HR), systemic acquired resistance (SAR), phytoalexins, pathogenesis related (PR) proteins, plantibodies, phenolics, quinones, oxidative bursts].

Unit V

Principles and practices involved in the management of plant diseases by different methods, viz. regulatory - quarantine, crop certification, avoidance of pathogen, use of pathogen free propagative material cultural - host eradication, crop rotation, sanitation, polyethylene traps and mulches chemical - protectants and systemic fungicides, antibiotics, resistance of pathogens to chemicals. biological - suppressive soils, antagonistic microbes-bacteria and fungi, trap plants genetic engineering of disease resistant plants- with plant derived genes and pathogen derived genes.

SUGGESTED READINGS

1. Agrios GN. (2006). Plant Pathology. 5th edition. Academic press, San Diego.
2. Lucas JA. (1998). Plant Pathology and Plant Pathogens. 3rd edition. Blackwell Science, Oxford.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60
Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To make students understand the aspects of industrial, soil, environmental, agricultural microbiology.
- Gain knowledge about the Industrially important microorganisms & nutritional requirements.
- Know about the Commercialization methods of Microbial products.
- To understand the industrially important microorganisms' commercial value and importance of patent and IPR.
- Describe about different sewage treatment methods employed in waste water treatment.
- know the microorganisms responsible for water pollution.

COURSE OUTCOME

1. This paper imparts knowledge on applications of microorganisms in various fields and helps to gain **employability** in pharmaceutical industries
2. Describe about different sewage treatment methods employed in waste water treatment.
3. Learn about the global environmental problems.
4. To provide a fundamental knowledge about the various scopes in environmental and industrial studies.
5. Learn about the applications of microbes in biotransformations, therapeutic and industrial biotechnology
6. Describe aspects of genetically engineered microbes for industrial application.

Unit I

Microbial biotechnology: Scope and its applications in human therapeutics, agriculture (Biofertilizers, PGPR, Mycorrhizae), environmental, and food technology. Use of prokaryotic and eukaryotic microorganisms in biotechnological applications. Genetically engineered microbes for industrial application: Bacteria and yeast

Unit II

Recombinant microbial production processes in pharmaceutical industries - Streptokinase, recombinant vaccines (Hepatitis B vaccine). Microbial polysaccharides and polyesters, Microbial production of bio-pesticides, bioplastics, Microbial biosensors

Unit III

Microbial based transformation of steroids and sterols. Bio-catalytic processes and their industrial applications: Production of high fructose syrup and production of cocoa butter substitute. Phage typing, gene therapy.

Unit IV

Microbial product purification: filtration, ion exchange & affinity chromatography techniques Immobilization methods and their application: Whole cell immobilization. RNAi and its applications in silencing genes, drug resistance, therapeutics and host pathogen interactions.

Unit V

Bio-ethanol and bio-diesel production: commercial production from lignocellulosic waste and algal biomass, Biogas production: Methane and hydrogen production using microbial culture. Microorganisms in bioremediation: Degradation of xenobiotics, mineral recovery, removal of heavy metals from aqueous effluents. Patents, patenting fundamental requirements- patent multicellular organisms, IPR, Copyrights, Trademarks

SUGGESTED READINGS

1. Ratledge, C and Kristiansen, B. (2001). Basic Biotechnology, 2nd edition, Cambridge University Press.
2. Demain, A. L and Davies, J. E. (1999). Manual of Industrial Microbiology and Biotechnology, 2nd edition, ASM Press.
3. Swartz, J. R. (2001). Advances in Escherichia coli production of therapeutic proteins. Current Opinion in Biotechnology, 12, 195–201.
4. Prescott, Harley and Klein's Microbiology by Willey JM, Sherwood LM, Woolverton CJ (2014), 9th edition, Mc Graw Hill Publishers.
5. Gupta PK (2009) Elements of Biotechnology 2nd edition, Rastogi Publications.
6. Glazer AN and Nikaido H (2007) Microbial Biotechnology, 2nd edition, Cambridge University Press
7. Glick BR, Pasternak JJ, and Patten CL (2010) Molecular Biotechnology 4th edition, ASM Press.
8. Stanbury PF, Whitaker A, Hall SJ (1995) Principles of Fermentation Technology 2nd edition, Elsevier Science.
9. Crueger W, Crueger A (1990) Biotechnology: A text Book of Industrial Microbiology 2nd edition. Sinauer associates, Inc.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3

Hours

COURSE OBJECTIVE

- To make students understand the principles of Genetics and inheritance biology.
- understand that genes are the units of inheritance for individual characteristics and also may contribute to susceptibility to certain diseases
- understand the number of chromosomes that make up the human genome and where they are located within the cell
- understand the role of the X and Y chromosomes in determining sex and how they are inherited.
- understand how gametes are produced by the process of meiosis and how the full complement of 46 chromosomes is restored at fertilisation
- To identify and describe the process and purposes of the cell cycle, meiosis, and mitosis, as well as predict the outcomes of these processes.

COURSE OUTCOME

1. This paper imparts knowledge on the different aspects of genetics and pedigree analysis.
2. Understand the central dogma of molecular biology and the genome of prokaryotic and eukaryotic microorganisms.
3. To gain knowledge about the microbial genetics and central dogma of molecular biology
4. Students will understand the cellular components underlying mitotic cell division.
5. Students will apply their knowledge of cell biology to selected examples of changes or losses in cell function. These can include responses to environmental or physiological changes, or alterations of cell function brought about by mutation.
6. To describe applications and techniques of modern genetic technology, as well as select the correct techniques to solve practical genetic problems.

Unit I

Unit I

Historical developments: Model organisms in genetic analyses and experimentation: *Escherichia coli*, *Saccharomyces cerevisiae*, *Neurospora crassa*, *Caenorhabditis elegans*, *Drosophila melanogaster*, *Arabidopsis thaliana*.

Unit II

Mendel's Laws: Dominance, segregation, independent assortment, deviation from Mendelian inheritance, Rediscovery of Mendel's principles, Chromosome theory of inheritance: Allele, multiple alleles, pseudoallele, complementation tests, Extensions of Mendelian genetics: Allelic interactions, concept of dominance, recessiveness, Incomplete dominance and co-dominance, Multiple alleles, Epistasis, penetrance and expressivity.

Unit III

Linkage and recombination of genes, Cytological basis of crossing over, Crossing over at four-strand stage, Molecular mechanism of crossing over, mapping Homologous and non-homologous recombination, including transposition, site-specific recombination.

Unit IV

Rules of extra nuclear inheritance, Organelle heredity - Chloroplast mutations in *Chlamydomonas*, mitochondrial, mutations in *Saccharomyces*, Maternal effects – Shell coiling in *Limnaea peregra* Infectious heredity - Kappa particles in *Paramecium*. Pedigree analysis, lod score for linkage testing, karyotypes, genetic disorders. Polygenic inheritance, heritability and its measurements, QTL mapping.

Unit V

Structural organization of chromosomes - centromeres, telomeres and repetitive DNA, Packaging DNA molecules into chromosomes, Concept of euchromatin and heterochromatin, Normal and abnormal karyotypes of human chromosomes, Chromosome banding, Giant chromosomes: Polytene and lampbrush chromosomes, Variations in chromosome structure: Deletion, duplication, inversion and translocation, Variation in chromosomal number and structural abnormalities - Klinefelter syndrome, Turner syndrome, Down syndrome

MANAGEMENT OF HUMAN MICROBIAL DISEASES - PRACTICAL

**Semester – V
(4H – 2C)**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60
Total: 100

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To provide a strong base in the fundamentals of pathogens.
- To learn techniques and methods used in the cultivation and isolation of pathogens.
- To obtain with the knowledge about the habitat and characteristics of pathogens.
- Program aims to develop students' understanding of medical microbiology with hand on experience in the isolation of the bacteria from different sources.
- It gives the knowledge about the pathogenicity, understanding the biofilm formation in bacteria, role of biofilm in pathogenicity and their antibiotics resistance pattern of pathogenic bacteria which is useful for public awareness.
- The objective of this course is to instill awareness on basics of immune system where students will learn the components of immunity and various immune responses that work together to protect the host.

COURSE OUTCOME

1. Involves the identification, classification, and characterization of pathogenic species.
2. This paper imparts **employability** in hospital laboratories.
3. Properly use aseptic techniques, including sterilization. Know General bacteriology and microbial techniques for isolation of pure cultures of bacteria.
4. Basics in microbiology course is designed as an interdisciplinary course to acquaint the students of different streams with a very basic knowledge and understanding of
5. microbes, pathogens and their control Learning methods for antimicrobial susceptibility testing
6. In this course the students will observe and perform experiments related to clinical microbiology and virology which will enhance their laboratory skills, and scientific knowledge.

EXPERIMENTS

1. Diagnosis of respiratory tract disease.
2. Diagnosis of urinary tract disease.
3. Diagnosis of gastrointestinal tract disease.
4. Identification of dermatophytes

SUGGESTED READINGS

17MBU511B Semester – V
2C) (4H –

MICROBIOLOGICAL ANALYSIS OF AIR AND WATER – PRACTICAL

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks: Internal: 40** **External: 60**
Total: 100

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- Impart knowledge microflora of air and water, sample collection, analysis and control of diseases.
- Explain the significance of air Microflora and airborne diseases
- Gain knowledge about water pollution and waste water treatments.
- Learning the basic principles of environment microbiology and be able to apply these principles to understanding and solving problems in current environmental, air and water issues.
- Validation for equipment, methods, cleaning and process
- Students can develop their entrepreneurial skills in analysis of air and water sample.

COURSE OUTCOME

- This paper teaches different laboratory **skills** of analyzing air and water.
- Hand on training of the general equipment used in microbiology laboratory
- Develop capability to perform different gene transfer methods in microbes
- Characterization of microorganisms from water and air samples
- Enumeration of bacteria and fungi from air by membrane filtration technique
- Gain knowledge about water pollution and waste water treatments.

EXPERIMENTS

1. Enumeration of indoor and outdoor microflora of air (bacteria and fungi) by settle plate method.
2. Enumeration of bacteria and fungi from air by membrane filtration technique.
3. Microbicidal effect of UV light.
4. Evaluation of disinfectants – Phenol coefficient method.
5. MPN test.
6. Enumeration of bacteria and fungi from water by membrane filtration technique.

SUGGESTED READINGS

1. Da Silva N, Taniwaki MH, Junqueira VC, Silveira N, Nascimento MS, Gomes RAR (2012) Microbiological Examination Methods of Food and Water. A Laboratory Manual, CRC Press.

Semester – V

17MBU512A BIOMATHEMATICS AND BIOSTATISTICS - PRACTICAL (4H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4
Total: 100

Marks: Internal: 40 External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- This course has been intended to provide the learner insights into helpful areas of Statistics which plays an essential role in present, future use and applications of Biology.
- Statisticians help to design data collection plans, analyze data appropriately and interpret and draw conclusions from those analyses.
- Statistics helps in the proper and efficient planning of a statistical inquiry in any field of study.
- Statistics helps in providing a better understanding and exact description of a phenomenon of nature.
- To develop students' skills in algebraic manipulation, the calculus of linear and non-linear differential equations, mathematical modelling, matrix algebra and statistical methods.
- To introduce students to the application of mathematical modeling in the analysis of biological systems including populations of molecules, cells and organisms.

COURSE OUTCOME

1. Students get an idea about collection, interpretation and presentation of statistical data.
2. Statistics help in providing data as well as tools to analyze the data.
3. Some powerful techniques are index numbers, time series analysis, and also forecasting.
4. Statistical knowledge helps you use the proper methods to collect the data, employ the correct analyses, and effectively present the results.
5. To show how mathematics, statistics and computing can be used in an integrated way to analyse biological systems.
6. Conceivably everything dealing with the collection, processing, analysis and interpretation of numerical data belongs to the domain of statistics.

EXPERIMENTS

1. Word Problems based on Differential Equations
2. Mean, Median, Mode from grouped and ungrouped Data set
3. Standard Deviation and Coefficient of Variation
4. Skewness and Kurtosis
5. Curve fitting
6. Correlation
7. Regression
8. Finding area under the curve using normal probability
9. Testing of Hypothesis- Normal Distribution, t-test and Chi-Square-test
10. Confidence Interval

SUGGESTED READINGS

1. H. S. Bear: Understanding Calculus, John Wiley and Sons (Second Edition); (2003).
2. E. Batschelet : Introduction to Mathematics for Life Scientists, Springer Verlag, International Student Edition, Narosa Publishing House, New Delhi; (1975)
3. Edmondson and D. Druce : Advanced Biology Statistics, Oxford University Press; (1996).
4. W. Danial: Biostatistics: A foundation for Analysis in Health Sciences, John Wiley and Sons Inc; (2004).

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Students get an idea about collection, interpretation and presentation of bioinformatics data.
- Develop competence to integrate biological information with computational softwares
- Impart basic understanding of bioinformatics approaches for bacterial/viral/fungal identifications and drug design
- Bioinformatics is the application of computer technology to get the information that's stored in certain types of biological data.
- Bioinformatics provides central, globally accessible databases that enable scientists to submit, search and analyse information.
- A sound knowledge on procedural repertoire allows students to innovatively apply these in basic
- and applied fields of biological research.

COURSE OUTCOME

1. This course has been intended to provide the learner insights into helpful areas of Bioinformatics which plays an essential role in application-oriented biology.
2. Provides computational **skill** on search engines and various software tools involved in bioinformatics
3. Learning methods for designing primers and in-silico PCR
4. Develop competence to retrieve information from biological databases and integrate this biological information with computational softwares.
5. Design an experiment with step-by-step instructions to address a research problem
6. Technical know-how on versatile techniques in bioinformatics techniques

EXPERIMENTS

1. Introduction to different operating systems - UNIX, LINUX and Windows
2. Introduction to bioinformatics databases (any three): NCBI/PDB/DDBJ, Uniprot, PDB
3. Sequence retrieval using BLAST
4. Sequence alignment & phylogenetic analysis using clustalW & phylip
5. Picking out a given gene from genomes using Genscan or other softwares (promoter region identification, repeat in genome, ORF prediction). Gene finding tools (Glimmer, GENSCAN), Primer designing, Genscan/Genetool
6. Protein structure prediction: primary structure analysis, secondary structure prediction using psi- pred, homology modeling using Swissmodel. Molecular visualization using jmol, Protein structure model evaluation (PROCHECK)
7. Prediction of different features of a functional gene

SUGGESTED READINGS

1. Saxena Sanjay (2003) A First Course in Computers, Vikas Publishing House
2. Pradeep and Sinha Preeti (2007) Foundations of Computing, 4th ed., BPB Publications

3. Lesk M.A.(2008) Introduction to Bioinformatics . Oxford Publication, 3rd International Student Edition.

5. Primrose and Twyman (2003) Principles of Genome Analysis & Genomics. Blackwell.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60
Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

To develop skills related to

- Understand the principles of various instruments used in the life sciences.
- Ability to operate the instruments.
- Data analysis and interpretations.
- Appreciate the working principles and applications of Microscopy.
- Understand the mechanics of thesis writing
- To understand working of different laboratory equipment used in microbiological laboratories

COURSE OUTCOME

1. Offers the students with an opportunity to gain practical **skills** on the bioinstrumentation and concepts of principles and applications.
2. Evaluate the various types & applications of chromatography and electrophoresis.
3. Evaluate the various types & phase contrast microscopy and Electron microscopy
4. Explain the various separation techniques and its instrumentation.
5. Hand on training of the general equipment used in microbiology laboratory
6. Comprehend the major spectrophotometric and titrimetric approaches of quantification in biological and environmental samples.

EXPERIMENTS

1. Study of fluorescent micrographs to visualize bacterial cells – Demonstration
2. Ray diagrams of phase contrast microscopy and Electron microscopy – Demonstration
3. Separation of mixtures by paper / thin layer chromatography.
4. Demonstration of column packing in any form of column chromatography.
5. Separation of protein mixtures by any form of chromatography.
6. Separation of protein mixtures by Polyacrylamide Gel Electrophoresis (PAGE).
7. Determination of λ_{max} for an unknown sample and calculation of extinction coefficient.
8. Separation of components of a given mixture using a laboratory scale centrifuge.
9. Understanding density gradient centrifugation with the help of pictures.

SUGGESTED READINGS

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40
Total: 100

External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- This paper aims at introducing students to the basic and applied aspects of plant biotechnology.
- Introduce students to the basic principles and concepts of plant pathology.
- Introduce and illustrate the major groups of organisms that cause plant diseases
- Provide a framework that students can use in their profession to best approach plant disease management.
- To study the importance of plant diseases and cutting sections of infected plant material
- To acquaint with different strategies for management of plant diseases

COURSE OUTCOME

1. This will enable for learning the techniques to save endangered species which will be useful for mankind.
2. Identify major principles of plant pathology.
3. Demonstration of fungal, bacterial and viral plant pathogens.
4. Recognize the etiological agents of disease.
5. Employ methods to diagnose and manage a wide range of plant diseases.
6. To teach the students about the different groups of insects that vector plant pathogens, vector-plant pathogen interaction, management of vectors for controlling diseases

EXPERIMENTS

1. Demonstration of Koch's postulates in fungal, bacterial and viral plant pathogens.
2. Study of important diseases of crop plants by cutting sections of infected plant material - *Albugo*, *Puccinia*, *Ustilago*, *Fusarium*, *Colletotrichum*.

SUGGESTED READINGS

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks: Internal: 40** External: 60 Total: 100

End Semester Exam: 6 Hours

COURSE OBJECTIVE

- To make students understand the aspects of industrial, soil, environmental, agricultural microbiology.
- To understand the methods for Production of industrially important compounds from fungal source.
- This paper is designed to provide an exposure to the students about the potential of fungi as food and in field of biotechnology as source of different enzymes, secondary metabolites, vitamins, polysaccharides, polyhydric alcohols, pigments and lipids.
- Develop an understanding of various aspects of bioprocess technology.
- Evaluate nanotechnology and microbial production of therapeutic compounds
- The laboratory training in addition to theory is included so that the students will acquire the skills to qualify for a broad range of positions in research, industry, consultancy, education and public administration, or for further education in a doctoral program.

COURSE OUTCOME

1. Impart knowledge on applications of microorganisms in various fields
2. Provides **skill** development on microbial products.
3. To study the immobilization techniques and fungal pigment production.
4. Develop a xylanase and lipase production technology.
5. Demonstration of algal single cell proteins.
6. State of art knowledge about various methodological and analytic approaches that are used within the
 - a. specialization.

EXPERIMENTS

1. Study yeast cell immobilization in calcium alginate gels.
2. Study enzyme immobilization by sodium alginate method.
3. Pigment production from fungi (*Trichoderma* / *Aspergillus* / *Penicillium*).
4. Isolation of xylanase or lipase producing bacteria.
5. Study of algal Single Cell Proteins.

SUGGESTED READINGS

1. Ratledge, C and Kristiansen, B. (2001). Basic Biotechnology, 2nd edition, Cambridge University Press.

17MBU514B
(3H – 1C)

INHERITANCE BIOLOGY - PRACTICAL

Semester – V

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60
Total: 100

End Semester Exam: 6 Hours

COURSE OBJECTIVE

- To make students understand the principles of Genetics and inheritance biology.
- Students will learn the basic principles of inheritance at the molecular, cellular and organismal levels
- Students will test and deepen their mastery of genetics by applying this knowledge in a variety of problem-solving situations.
- Describe the principal cell types comprising each tissue system
- Identify location and function of apical meristems, and describe their general structure
- Explain DNA repair and recombination in terms of mutation and evolution
- The objective of the course is to make student understand about the structure and function of biologically important molecules.

COURSE OUTCOME

1. Imparts knowledge on the different aspects of genetics and pedigree analysis.
2. Students will understand the cellular components underlying mitotic cell division
3. Students will apply their knowledge of cell biology to selected examples of changes or losses in cell function.
4. Identify the organs and tissue systems of plants, and explain their respective function
5. Understand how molecular cell biology forms the foundation of biotechnology
6. Students will learn about DNA, RNA and the molecular events that govern cell functions

EXPERIMENTS

1. Mendelian deviations in dihybrid crosses
2. Studying Barr Body with the temporary mount of human cheek cells
3. Studying *Rhoeo* translocation with the help of photographs
4. Karyotyping with the help of photographs
5. Chi-Square Analysis
6. Study of polytene chromosomes using temporary mounts of salivary glands of *Chiromonas / Drosophila* larvae
7. Study of pedigree analysis
8. Analysis of a representative quantitative trait

SUGGESTED READINGS

1. Gardner EJ, Simmons MJ, Snustad DP (2008). Principles of Genetics. 8th Ed. Wiley-India.
2. Snustad DP, Simmons MJ (2011). Principles of Genetics. 6th Ed. John Wiley and Sons Inc.
3. Weaver RF, Hedrick PW (1997). Genetics. 3rd Ed. McGraw-Hill Education.

4. Klug WS, Cummings MR, Spencer CA, Palladino M (2012). Concepts of Genetics. 10th Ed. Benjamin Cummings.
5. Griffith AJF, Wessler SR, Lewontin RC, Carroll SB. (2007). Introduction to Genetic Analysis. 9th Ed. W.H. Freeman and Co., New York

7. Russell PJ. (2009). *i* Genetics - A Molecular Approach. 3rd Ed, Benjamin Cummings.

Instruction Hours / week: L: 0 T: 0 P: 4
Total: 100

Marks: Internal: 40 External: 60

End

Semester Exam: 3 Hours

COURSE OBJECTIVES

- To teach on cultivation, diseases and health benefits of mushrooms.
- To provide practical knowledge of different sterilization procedures and learn handling of mushrooms.
- To enhance the student's knowledge and impress upon them the important aspects of mushroom.
- To understand to know pure culture techniques and methods of culturing preservation and maintenance of mushrooms.
- To make the students more knowledge on mushroom cultivation.
- To make the students to know the classification.

COURSE OUTCOME

1. To impart knowledge on various mushrooms and its cultivation techniques to become an **entrepreneur**.
2. Able to Know how the architecture of mushrooms
3. To know the methods used to cultivate mushroom.
4. Students are able to predict where the mushroom placed in vegetable kingdom
5. Able to cultivate mushrooms from agricultural waste.
6. Students can able to develop latest technologies in mushroom cultivation.

Unit I

Mushroom morphology: Different parts of a typical mushroom and variations in mushroom morphology. Key to differentiate edible from poisonous mushrooms. Mushroom Classification: Based on occurrence – Epigenous and hypogenous, Natural habitats – Humicolous, Lignicolous & Coprophilous, Color of spores – white, yellow, pink, purple brown and black. Ainsworth et al classification (8th edition) and Bisby's 'Dictionary of Fungi'.

Unit II

Biology of Mushrooms: Vegetative characters, general morphology, spore germination and life cycle of button mushroom (*Agaricus bisporus*), milky mushroom (*Calocybe indica*), oyster mushroom (*Pleurotus sajorajju*) and paddy straw mushroom (*Volvariella volvcea*).

Unit III

Equipment and sterilization techniques. Isolation and culture of spores, culture media preparation. Production of mother spawn, multiplication of spawn – Inoculation technique – Cultivation technology – Substrates, composting technology, bed, polythene bag preparation, spawning – casing – cropping – Mushroom production – harvest – packing, storage and marketing.

Unit IV

Nutritional profile of Mushrooms: protein, amino acids, calorific values, carbohydrates, fats, vitamins & minerals. Medicinal Properties of Mushrooms: Antibacterial, antifungal, antiviral, anti-tumour effect and hematological value. Cardiovascular and renal effect, in therapeutic diets, adolescence, for aged persons and diabetes mellitus. Mushroom nutraceuticals.

Unit V

Problems in cultivation – diseases, pests and nematodes, weed moulds and their management strategies. Mushroom economics: economics of spawn and mushroom, cultivation, postharvest technologies. Processing and preservation of mushrooms. Mushroom research centres in India.

SUGGESTED READINGS

1. Alice, D., Muthusamy and Yesuraja, M. (1999). Mushroom Culture. Agricultural College, Research Institute Publications, Madurai.
2. Marimuthu, T. et al. (1991). Oyster Mushroom. Department of Plant Pathology. Tamil Nadu Agricultural University, Coimbatore.
3. Nita Bhal. (2000). Handbook on Mushrooms. 2nd ed. Vol. I and II. Oxford and IBH Publishing Co. Pvt. Ltd., New Delhi.
4. Pathak, V. N. and Yadav, N. (1998). Mushroom Production and Processing Technology. Agrobios, Jodhpur.
5. Tewari Pankaj Kapoor, S. C. (1988). Mushroom Cultivation. Mittal Publication, New Delhi.

Instruction Hours / week: L: 4 T: 0 P: 0
100

Marks: Internal: 40 External: 60 Total:

End Semester Exam: 3

Hours

COURSE OBJECTIVES

- To encode the importance of the role of microorganisms in food industries in beneficial ways.
- Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
- To learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
- To Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
- To Understand the use of standard methods and procedures for the microbiological analysis of food
- Acquire, discover, and apply the theories and principles of food microbiology in practical, real-world situations and problems.

COURSE OUTCOME

1. To impart knowledge on various microorganisms involved in food fermentation.
2. To nurture the student to gain **employability** in industrial area.
3. Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods.
4. Understand the beneficial role of microorganisms in fermented foods and in food processing and the microbiology of different types of fermented food products – dairy, pickles, Legume and cereal based food products
5. Able to predict spoilage mechanisms in foods
6. Identify methods to control deterioration and spoilage

Unit I

Definition, types, advantages and health benefits

Unit II

Curd, Yogurt, Buttermilk and cheese: Preparation of inoculums, types of microorganisms and production process

Unit III

Soy sauce, Bread, Idli and Dosa: Microorganisms and production process

Unit IV

Pickels, Saeurkraut: Microorganisms and production process

Unit V

Pickles, Fermented Meat and Fish, Types, microorganisms involved fermentation process.

SUGGESTED READINGS

1. Hui YH, Meunier-Goddik L, Josephsen J, Nip WK, Stanfield PS (2004) Handbook of food and fermentation technology, CRC Press.
2. Holzapfel W (2014) Advances in Fermented Foods and Beverages, Woodhead Publishing.
3. Yadav JS, Grover, S and Batish VK (1993) A comprehensive dairy microbiology, Metropolitan.
4. Jay JM, Loessner MJ, Golden DA (2005) Modern Food Microbiology, 7th edition. Springer.

Semester – VI

17MBU602A BIOSAFETY AND INTELLECTUAL PROPERTY RIGHTS (4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0
100

Marks: Internal: 40 External: 60 Total:

End Semester Exam: 3
Hours

COURSE OBJECTIVES

- To learn the basic handling of microorganisms.
- To understand the various biological containments.
- To emphasize on IPR issues and need for knowledge in patents in biotechnology.
- To gain knowledge on steps of a patenting process and the role of biosafety committee.
- To emphasize the components and design of laboratory.
- Provide learning opportunities to critically evaluate research methodology and findings

COURSE OUTCOME

1. Able to understand safety aspects in biological laboratory.
2. To create awareness on the Intellectual property rights and patenting of biotechnological processes.
3. To equip students with a basic understanding of the underlying principles of quantitative and qualitative patenting methods.
4. Provide students with in-depth training on the conduct and management of patent filing from inception
5. Enable students to acquire expertise in the use and application of the methods of data collection and analysis.
6. Enable students to be reflexive about their role and others' roles as researchers.

Unit I

Biosafety: Introduction; biosafety issues in biotechnology; Biological Safety Cabinets & their types; Primary Containment for Biohazards; Biosafety Levels of Specific Microorganisms.

Unit II

Biosafety Guidelines: Biosafety guidelines and regulations (National and International); GMOs/LMOs- Concerns and Challenges; Role of Institutional Biosafety Committees (IBSC), RCGM, GEAC etc. for GMO applications in food and agriculture; Environmental release of GMOs; Risk Analysis; Risk Assessment; Risk management and communication; Overview of International Agreements - Cartagena Protocol.

Unit III

AERB/RSD/RES guidelines for using radioisotopes in laboratories and precautions. Agreements and Treaties: GATT, TRIPS Agreements; Role of Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty on international recognition of the deposit of microorganisms; UPOV

& Brene conventions; Patent Co-operation Treaty (PCT); Indian Patent Act 1970 & recent amendments.

Unit IV

Introduction to Intellectual Property: Patents, Types, Trademarks, Copyright & Related Rights, Industrial Design and Rights, Traditional Knowledge, Geographical Indications- importance of IPR – patentable and non patentables – patenting life – legal protection of biotechnological inventions – World Intellectual Property Rights Organization (WIPO).

Unit V

Grant of Patent and Patenting Authorities: Types of patent applications: Ordinary, PCT, Conventional, Divisional and Patent of Addition; An introduction to Patent Filing Procedures; Patent licensing and agreement; Patent infringement- meaning, scope, litigation, case studies, Rights and Duties of patent owner.

SUGGESTED READINGS

1. Bare Act, (2007). Indian Patent Act 1970 Acts & Rules, Universal Law Publishing Co. Pvt. Ltd., New Delhi.
2. Kankanala C (2007). Genetic Patent Law & Strategy, 1st Edition, Manupatra Information Solution Pvt. Ltd. New Delhi.
3. Mittal, D.P. (1999). Indian Patents Law, Taxmann, Allied Services (p) Ltd.
4. Singh K K (2015). Biotechnology and Intellectual Property Rights: Legal and Social Implications, Springer India.
5. Goel D & Prashar S (2013). IPR, Biosafety and Bioethics. Pearson.

17MBU602B MICROBES IN SUSTAINABLE AGRICULTURE AND DEVELOPMENT

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3

Hours

COURSE OBJECTIVE

- The goal of sustainable agriculture is to meet society's food and textile needs in the present without compromising the ability of future generations to meet their own needs.
- Able to evaluate the application of ecological principles and concepts in sustainable agriculture system.
- To know the role of microbes which make crop output more and increase the fertility of crops.
- To know the basics and concepts of various biotechnological related terms
- To know the physiological processes that occur during plant growth and development of methodology involved in plant growth
- To make them to understand issues related to plant nutrition, quality improvement, environmental adaptation, transgenic crops and their use in agriculture.

COURSE OUTCOME

1. Develops the programmatic activities in sustainable agriculture and food systems
2. Able to relate their knowledge about ecology to its relevance in sustainable agriculture
3. Provides detailed idea about biofertilizer production and develop entrepreneur skill related to agriculture field.
4. Understand on soil characteristics and biogeochemical cycling.
5. Students able to the uses of microorganisms as bio control agents.
6. Understand transgenic crops and their use in agriculture.

Unit I

Soil as Microbial Habitat, Soil profile and properties, Soil formation, Diversity and distribution of microorganisms in soil, Mineralization of cellulose, hemicelluloses, lignocelluloses, lignin and humus, phosphate, nitrate, silica, potassium

Unit II

Carbon dioxide, methane, nitrous oxide, nitric oxide – production and control

Unit III

Biocontrol mechanisms and ways, Microorganisms used as biocontrol agents against Microbial plant pathogens, Insects, Weeds.

Unit IV

Plant growth promoting bacteria, biofertilizers – symbiotic (*Bradyrhizobium*, *Rhizobium*, *Frankia*), Non Symbiotic (*Azospirillum*, *Azotobacter*, Mycorrhizae, MHBs, Phosphate solubilizers, algae), Novel combination of microbes as biofertilizers, PGPRs

Unit V

Biotech feed, Silage, Biomanure, biogas, biofuels – advantages and processing parameters, Advantages, social and environmental aspects, Bt crops, golden rice, transgenic animals.

SUGGESTED READINGS

6. Barton LL & Northup DE (2011). Microbial Ecology. 1st edition, Wiley Blackwell, USA.
7. Campbell RE. (1983). Microbial Ecology. Blackwell Scientific Publication, Oxford, England.
8. Coyne MS. (2001). Soil Microbiology: An Exploratory Approach. Delmar Thomson Learning.
9. Altman A (1998). Agriculture Biotechnology, 1st edition, Marcel dekker Inc.
10. Mahendra K. Rai (2005). Hand Book of Microbial Biofertilizers, The Haworth Press, Inc. New York.
11. Reddy, S.M. et. al. (2002). Bioinoculants for Sustainable Agriculture and Forestry, Scientific Publishers.
12. Saleem F and Shakoori AR (2012) Development of Bioinsecticide, Lap Lambert Academic Publishing GmbH KG

Instruction Hours / week: L: 3 T: 0 P: 0
Total: 100

Marks: Internal: 40

External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To study cell structure and functions of organelle.
- Exposure on transportations through cell membrane.
- To focus on different receptors and model of signaling.
- To introduce the concept of cell signaling.
- To obtain knowledge in cell death and cell renewal.
- To gain knowledge in structural aspects of cells

COURSE OUTCOME

1. Basic concept of cell structure, membrane, cellular functions of different types of cell, modes of cellular signaling and signal amplification.
2. Students able to annotating cell organization of prokaryotic and Eukaryotic.
3. Students able to paraphrase cell death and cell renewal.
4. Able to bullet pointing protein sorting and transport
5. Expertise in interpreting cell internal organelles.
6. Knowledge in induced pluripotent stem cells.

Unit I

Cell Organization – Eukaryotic (Plant and animal cells) and prokaryotic. Plasma membrane: Structure and transport of small molecules. Cell Wall: Eukaryotic cell wall, Extra cellular matrix and cell matrix interactions, Cell-Cell Interactions - adhesion junctions, tight junctions, gap junctions, and plasmodesmata (only structural aspects). Mitochondria, chloroplasts and peroxisomes. Cytoskeleton: Structure and organization of actin filaments, association of actin filaments with plasma membrane, cell surface protrusions, intermediate filaments, microtubules.

Unit II

Nuclear envelope, nuclear pore complex and nuclear lamina. Chromatin – Molecular organization. Nucleolus.

Unit III

Ribosomes, Endoplasmic Reticulum – Structure, targeting and insertion of proteins in the ER, protein folding, processing and quality control in ER, smooth ER and lipid synthesis, export of proteins and lipids. Golgi Apparatus – Organization, protein glycosylation, protein sorting and export from Golgi Apparatus Lysosomes.

Unit IV

Signalling molecules and their receptors. Function of cell surface receptors. Pathways of intracellular receptors – Cyclic AMP pathway, cyclic GMP and MAP kinase pathway.

Unit V

Eukaryotic cell cycle and its regulation, Mitosis and Meiosis, Development of cancer, causes and types, Programmed cell death, Stem cells, Embryonic stem cell, induced pluripotent stem cells.

SUGGESTED READING

1. Hardin J, Bertoni G and Kleinsmith LJ. (2010). Becker's World of the Cell. 8th edition. Pearson.
2. Karp G. (2010) Cell and Molecular Biology: Concepts and Experiments. 6th edition. John Wiley & Sons. Inc.
3. De Robertis, EDP and De Robertis EMF. (2006). Cell and Molecular Biology. 8th edition. Lipincott Williams and Wilkins, Philadelphia.
4. Cooper, G.M. and Hausman, R.E. (2009). The Cell: A Molecular Approach. 5th Edition. ASM Press & Sunderland, Washington, D.C.; Sinauer Associates, MA.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40
Total: 100

External: 60

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To provide an experience for the students in an interdisciplinary research program connecting animal genomics with animal reproduction and biotechnology.
- To impart information on the historical developments in Molecular Biology
- An in-depth study on structure and organization of chromosome and mutagenesis.
- To expose the students on the basic understanding of various techniques used in molecular studies.
- To gather information to know mechanism of DNA replication.
- To gain the knowledge of translational machinery in prokaryotes and eukaryotes.

COURSE OUTCOME

1. Explores technologies using molecular biology, embryo manipulation, cell and tissue culture.
2. Manipulate the genomes of animals for ways to improve the live stock for food production and biomedical purpose.
3. Develop the [skills](#) in molecular biology.
4. Executing concept of RNA splicing and mRNA and its significance.
5. Students able to inferring various model of DNA replication
6. Students able to contrast translational machinery.

Unit I

DNA Structure: Miescher to Watson and Crick- historic perspective, DNA Structure, Salient features of double helix, Types of DNA, Types of genetic material, denaturation and renaturation, cot curves. DNA topology - linking number, topoisomerases; Organization of DNA Prokaryotes, Viruses, Eukaryotes. RNA Structure, Organelle DNA -- mitochondria and chloroplast DNA.

Unit II

Bidirectional and unidirectional replication, semi- conservative, semi- discontinuous replication Mechanism of DNA replication: Enzymes and proteins involved in DNA replication –DNA polymerases, DNA ligase, primase, telomerase – for replication of linear ends. Various models of DNA replication including rolling circle, D- loop (mitochondrial), (theta) mode of replication and other accessory protein, Mismatch and excision repair.

Unit III

Transcription: Definition, difference from replication, promoter - concept and strength of promoter RNA Polymerase and the transcription unit, Transcription in Eukaryotes: RNA polymerases, general Transcription factors. Split genes, concept of introns and exons, RNA

splicing, spliceosome machinery, concept of alternative splicing, Polyadenylation and capping, Processing of rRNA, RNA interference: si RNA, miRNA and its significance

Unit IV

Translational machinery, Charging of tRNA, aminoacyl tRNA synthetases, Mechanisms of initiation, elongation and termination of polypeptides in both prokaryotes and eukaryotes, Fidelity of translation, Inhibitors of protein synthesis in prokaryotes and eukaryote

Unit V

Principles of transcriptional regulation, regulation at initiation with examples from *lac* and *trp* operons, Sporulation in *Bacillus*, Yeast mating type switching, Changes in Chromatin Structure - DNA methylation and Histone Acetylation mechanisms.

Instruction Hours / week: L: 0 T: 0 P: 4
Total: 100

Marks: Internal: 40 External: 60

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To teach on cultivation, diseases and health benefits of mushrooms.
- To provide practical knowledge of different sterilization procedures and learn handling of mushrooms.
- To enhance the student's knowledge and impress upon them the important aspects of mushroom.
- To understand to know pure culture techniques and methods of culturing preservation and maintenance of mushrooms.
- To make the students more knowledge on mushroom cultivation.
- To make the students to know the classification.

COURSE OUTCOME

1. To impart knowledge on various mushrooms and its cultivation techniques to become an entrepreneur.
2. Students able to predict classification of edible mushroom.
3. Able to cultivate spawn from waste materials.
4. Have a knowledge in sterilization and handling of mushroom.
5. Students understand the application of mushroom biotechnology.
6. Students understand the characteristics and importance of mushrooms.

EXPERIMENTS

1. Oyster cultivation and demonstration of Button mushroom cultivation
2. Tissue isolation and sub culturing
3. Spawn making using sorghum
4. Fruiting bags production – preparing beds (chopping and sterilization of straw)
5. Field trip to commercial mushroom farms and scientific institutions.

17MBU612B MICROBES IN SUSTAINABLE AGRICULTURE AND DEVELOPMENT - PRACTICAL

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40
Total: 100

External: 60

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- Able to relate their knowledge about ecology to its relevance in sustainable agriculture
- Able to evaluate the application of ecological principles and concepts in sustainable agriculture.
- To know the role of microbes which make crop output more and increase the fertility of crops.
- To analyses the degrading microorganisms by various techniques.
- Able to design biogas plant.
- To obtain knowledge in entrepreneur in agricultural area.

COURSE OUTCOME

1. Able to relate their knowledge about ecology to its relevance in sustainable agriculture
2. Provides detailed idea about biofertilizer production and develop entrepreneur skill related to agriculture field.
3. Able to device biogas plant
4. Students will be annotate various zone in soil profile
5. Students will be isolate various degrading microorganisms for agricultural use.
6. Criticize the role of soil microbes in crop production.

EXPERIMENTS

1. Study soil profile
2. Study microflora of different types of soils
3. *Rhizobium* as soil inoculants characteristics and field application
4. *Azotobacter* as soil inoculants characteristics and field application
5. Design and functioning of a biogas plant

6. Isolation of cellulose degrading organisms

MOLECULAR BIOLOGY - PRACTICAL

**Instruction Hours / week: L: 0 T: 0 P: 3
Total: 100**

Marks: Internal: 40 External: 60

End Semester Exam: 6 Hours

COURSE OBJECTIVE

- To provide an experience for the students in an interdisciplinary research program connecting animal genomics with animal reproduction and biotechnology.
- The course will facilitate in understanding of molecular biology by examining common processes and principles in genes to illustrate complexity.
- To obtain knowledge in resolution and visualization of proteins
- To evaluate genetic material in different samples.

- The student will receive hands-on training in various culturing and molecular techniques for studying microbial diversity and microbial activity.
- To introduce the student to the advanced concepts in molecular biology.

COURSE OUTCOME

1. Explores technologies using molecular biology, cell and tissue culture to manipulate the genomes of animals for ways.
2. Develop the **skills** in molecular biology.
3. Student capable of explaining process involved in genetic changes and mutations
4. The identification of genetic regulatory mechanism and distinguishing different mechanism of gene regulation
5. The design of different techniques based on utilizing the genetic mechanism of microbes.
6. Hand on experience of different microbial genetic modification strategies.

EXPERIMENTS

1. Study of different types of DNA and RNA using micrographs and model / schematic representations.
2. Study of semi-conservative replication of DNA through micrographs / schematic representations.
3. Isolation of genomic DNA from *E. coli*.
4. Estimation of salmon sperm / calf thymus DNA using colorimeter (diphenylaminereagent) or UV spectrophotometer (A260 measurement).
5. Estimation of RNA using colorimeter (orcinol reagent) or UV spectrophotometer (A260 measurement).
6. Resolution and visualization of DNA by Agarose Gel Electrophoresis.
7. Resolution and visualization of proteins by Polyacrylamide Gel Electrophoresis (SDS-PAGE).

SUGGESTED READINGS

1. Watson JD, Baker TA, Bell SP, Gann A, Levine M and Losick R (2008) Molecular Biology of the Gene, 6th edition, Cold Spring Harbour Lab. Press, Pearson Publication
2. Becker WM, Kleinsmith LJ, Hardin J and Bertoni GP (2009) The World of the Cell, 7th edition, Pearson Benjamin Cummings Publishing, San Francisco
3. De Robertis EDP and De Robertis EMF (2006) Cell and Molecular Biology, 8th edition. Lippincott Williams and Wilkins, Philadelphia

Postgraduate Programme – M.Sc Microbiology

Programme Outcomes

Programme Outcomes of PG Microbiology: Students of all postgraduate microbiology degree Programmes at the time of graduation will be able to

- a. Science Observation: Microbiology majors able to discuss science and scientific methodology as a way of knowing. Microbiology majors will make observations, develop hypotheses and design and execute experiments using appropriate methods. They will be able to explain how the nature of science is applied to everyday problems.
- b. Laboratory Skills: Microbiology students will master the following laboratory skills: aseptic pure culture techniques, preparation of and viewing samples for microscopy, use appropriate methods to identify microorganisms, estimate the number of microorganisms in a sample and use common lab equipment. They will be able to practice safe microbiology using appropriate protective and emergency procedures. Student able to gain the good knowledge of the development process and the planning process involved in the microbial products and enhance the entrepreneurship.
- c. Data analysis skills: Microbiology majors will be able to systematically collect, record and analyze data, identify sources of error, interpret the result and reach logical conclusions. They will be able to appropriately format data into tables, graphs and charts for presentation and publication.
- d. Critical Thinking Skills: Microbiology majors will be able to (1) differentiate between fact and opinion, (2) recognize and evaluate author bias and rhetoric, (3) develop inferential skill, (4) recognize logical fallacies and faulty reasoning and (5) make decisions and judgments by drawing logical conclusions using sound quantitative and statistically – based reasoning.
- e. Problem Solving Skills: Microbiology majors will be competent problem-solvers. They should be able to assess the elements of a problem and develop and test a solution based on logic and the best possible information. Microbiology students should be able to analyze and interpret results from a variety of microbiological methods and apply these methods to analogous situations. They will use mathematical and graphing skills and reasoning to solve problems in microbiology

Programme Specific Outcomes (PSOs)

- f. Upon master graduation, Microbiology majors will master a set of advanced skills, which would be useful to function effectively as professionals and to their continued development and learning within the field of Microbiology.
- g. Our candidates will be able to explain why microorganisms are ubiquitous in nature, inhabiting a multitude of habitats and occupying a wide range of ecological habitats.
- h. Able to cite examples of the vital role of microorganisms in biotechnology, fermentation, medicine and other industries important to human well being.
- i. Able to demonstrate that microorganisms have an indispensable role in the environment, including elemental cycles, biodegradation etc.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

Programme Educational Objectives of PG Microbiology: The major objectives of the postgraduate course is

PEO-I: To provide detailed knowledge of Microbiology (bacteriology, virology, parasitology and mycology) and their application fields (Medical, Agricultural and Marine Microbiology). To understand the beneficial and harmful role of microorganisms in the environment and in the industries.

PEO-II: To understand the fundamentals of physiological reactions including metabolic pathways and biochemical reactions in microorganisms. To understand the fundamental concepts of immunology, biochemistry, biotechnology and genetics etc.

PEO-III: To develop human resource and entrepreneurs in Microbiology with the ability to independently start their own ventures or small biotech units in the field of biotechnology.

PEO-IV: Understand modern microbiology - practices and approaches with an emphasis in technology application in pharmaceutical, medical, industrial, environmental and agricultural areas.

PEO-V: Gain experience with standard molecular tools and approaches utilized: manipulate genes, gene products and organisms. Become familiar with handling of Laboratory animals for the research purpose. Interpret differences in data distributions via visual displays.

PEO-VI: Become familiar with public policy, biosafety, bioinformatics and intellectual property rights issues related to microbiology applications.

Semester –I

I7MBP101 FUNDAMENTALS OF MICROBIOLOGY AND CLASSIFICATION 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURE OBJECTIVES

- The course is designed to provide a basic understanding on the fundamental aspects of microbiology from historical development.
- To improve the proficiency and knowledge of the candidate on the study of microbial techniques for well exploitation of microorganisms.
- To comprehend the various methods for identification of unknown microorganisms
- This course enables the students to understand various physical and chemical means of sterilization and also learn various techniques for isolation of pure cultures.
- This course figures out them to know about culture collection and maintenance of microbial cultures.
- The beneficial and harmful manifestations of microorganisms especially of bacteria and their role in microbial mineralization and disease processes

COURSE OUTCOME (CO'S)

1. Understand the basic microbial structure and functions of various physiological groups of prokaryotes and eukaryotes.
2. Learn the theory and practical skills in microscopy handling and staining techniques know various culture media and their applications.
3. Study microbial nutritions- Autotrophy and heterotrophy modes of nutrition.
4. Identify the unknown organisms by using microbial tools.
5. Demonstrate electricity generation from the organic matter.
6. Understand the microbial transport systems and the modes and mechanisms of energy conservation in microbial metabolism – Autotrophy and heterotrophy

UNIT – I

History and scope of Microbiology. Microbial evolution and Diversity – Taxonomic ranks - Classification system – Phenetic and Phylogenetic Haeckel's three-kingdom concept, Whittaker's Five-kingdom concept, Three-domain concept of Carl Woese.

UNIT – II

Microscopy –Simple, Compound, Dark-field, Phase contrast, Fluorescent and Electron microscopes. (SEM and TEM), Confocal microscopy – Principles and their applications. Stains and Staining techniques: Simple and Differential staining methods.

UNIT – III

Classification of bacteria - Bergey's manual and its importance. Classification of algae Clamydomonas, volvox, diatoms, red and brown algae. Classification of virus – DNA, RNA viruses. Classification and taxonomy of fungi – Alexopolous. Economical importance of Fungi. Classification of protozoa – *Entamoeba histolytica*, *Giardia*, *Trichomonas*, *Plasmodium*.

UNIT – IV

Sterilization and disinfection, culture methods: Auxenic and synchronous, aerobic and anaerobic, culture media and nutritional types, growth curve, generation time and growth kinetics. Factors influencing microbial growth. Preservation methods and quality control.

UNIT – V

Modern Microbiology: Molecular taxonomy, 16S/18S rRNAs and its importance in identification of microorganisms. Phylogenetic tree, Molecular tools in assessing microbial diversity, probiotics and their applications, microbial fuel cells.

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To gain the knowledge with the various inner and outer structures of prokaryotes and eukaryotes in detail.
- To provide information on sources of energy and its utilization by microorganisms. Microorganisms play important role in environment as producers, consumers and decomposers.
- To impart knowledge on metabolic function and biochemical reaction going on inside the microbial cell.
- To teach metabolic pathways, their regulation and engineering, and methods used in their elucidation.
- To teach students about cell cycle, growth and methods to determine microbial growth.
- Understand the microbial transport systems and the modes and mechanisms of energy conservation in microbial metabolism – Autotrophy and heterotrophy

COURSE OUTCOME (CO'S)

1. The students will be able to understand and predict the various metabolic reactions in microbial cell.
2. This will make them to predict the intermediate products which can be employed in industrial production processes.
3. The students will be able to know how bacterial and archaeal structure lead to function, how metabolic processes are regulated.
4. The course makes them to understand how microbes respond to environmental stressors, and how microbes can be manipulated to enhance their growth or the production of desired products.
5. Know the various Physical and Chemical growth requirements of bacteria and get equipped with various methods of bacterial growth measurement
6. The students will be able to understand how the organisms communicate to the population by using various mechanisms.

UNIT – I

Prokaryotic cell structure and organization - cell wall, plasma membrane, cytoplasmic matrix, inclusion bodies, ribosome, nucleoid, capsule, slime layers, S layers, pili, fimbriae, flagella and motility. Eukaryotic cell structure and its organelles. Lichens and microalgae: Structural organization and their properties. Mycoplasma. Basic structure of viruses.

UNIT – II

Structure of bacterial endospore, endospore formation in *Bacillus* spp. Exospore formation in *Streptomyces*. Sporulation in fungi: *Aspergillus* sp., *Penicillium* sp. Spore cycle, factors affecting

spore formation. Growth and nutritional requirements, control of microorganisms. Biofilm and biosurfactant production in bacteria

UNIT – III

Glycolysis, EMP, HMP and ED pathway, TCA cycle, Glyoxylate cycle. Aerobic respiration and anaerobic respiration. Electron transport chain in prokaryotes and eukaryotes; Substrate level and oxidative phosphorylation – ATP generation.

UNIT – IV

Biosynthesis of fatty acids, nucleotides, amino acids, phospholipids. Archaeal lipids. Cell wall biosynthesis of Gram positive and Gram negative bacteria. Cell membrane synthesis and synthesis of secondary metabolites. Toxins – characterization, mechanism of action.

UNIT – V

Aerobic and anaerobic fermentation and its types. Photosynthetic bacteria – Oxygenic (Cyanobacteria) and anoxygenic (Purple/green sulfur and non-sulfur bacteria). Bacterial photosynthetic pigments. Methanogenesis – assimilation of carbondioxide. Bioluminescence and Quorum sensing – mechanism, importance and applications.

6. Voet, D., and Voet J.G., (2003). *Biochemistry*. John Wiley and Sons, New York.

COURSE OBJECTIVES

- The course presents methods and experimental tools used in modern molecular genetics with emphasis on prokaryotes and eukaryotes.
- The theoretical grounds of methods and their applications in research will be discussed.
- The course also deals with the genome structure, stability, organization, and its expression.
- To provide molecular mechanisms underlying mutations, detection of mutations and DNA damage and repair mechanisms
- The course includes among others model systems, genetics behind complex diseases, identification of disease genes and different types of mutations.
- It helps the students to explore genetic engineering techniques.

COURSE OUTCOME (CO'S)

1. This course allows the candidate to recollect the basics of molecular genetics and apply a cognitive thinking on the application-oriented sectors of genetics.
2. Students would be able to practically apply this knowledge in different sectors with possibilities ranging from the treatment of human diseases to the development of novel medicines.
3. A thorough understanding of the process of translation and operons along with recombination of DNA.
4. An in-depth study of mutagenesis and genetic analysis with gene mapping.
5. Have a conceptual knowledge about DNA as a genetic material, enzymology, and replication strategies.
6. Full understanding of all aspects of all-important techniques used for the study of biomolecules.

UNIT – I

Genetics and its types – History; Mendelian principles – nucleic acid as genetic material Experimental evidence. Structure of DNA – chemical and physical structure of DNA – circular and super helical DNA - different forms of DNA. DNA replication – enzymology of DNA replication – different modes, models and types of DNA replication – Eukaryotic DNA replication.

UNIT – II

Genetic code: DNA transcription in prokaryotes and eukaryotes. Transcriptional control and modification system – RNA translation in prokaryotes and eukaryotes. Polypeptide synthesis (maturation and processing of RNA) – Translational modification. Regulation of gene expression – Operon model (Lac, Trp, Ara) – Regulation of gene expression in eukaryotes.

UNIT – III

Genetic recombination in bacteria – conjugation, transformation, transduction. Linkage and genetic mapping. Phage genetics (Replication cycle) – Phage T4 mutants (detection and isolation) — Genetic map of T4 phage.

UNIT – IV

Mutagen, mutagenesis and mutation. Luria Delbruck experiment and its significance. Molecular basis of mutation. Spontaneous and induced mutations. Different types of mutation, mutant detection, mutant selection and carcinogenicity testing. DNA damage – types of damage (deamination, oxidative damage, alkylation, Pyrimidine dimers) – DNA repair mechanism (base excision, nucleotide excision, recombination repair, SOS repair).

UNIT – V

Yeast genetics – Life cycle, metabolism, genome and extra chromosomal element. Genetic nomenclature in yeast. Tetrad analysis, Petite mutants (mutant isolation and complementation). Genetic mapping in yeast, *Neurospora* and *Drosophila*.

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- Introduce the basic concept of qualitative and quantitative analysis of a given sample
- To Study various spectroscopic techniques and its instrumentation.
- To know the concept of separation science and its applications.
- To understand the basic laboratory skills that are essential for beginning-level employment in clinical, pharmaceutical, microbiology, biochemistry and biotechnology laboratories.
- To impart the concept of radiochemical analysis along with industrial analyzers
- To understand working of different laboratory equipment's used in microbiological laboratories

COURSE OUTCOME (CO'S)

1. This enables students to be able to explain bioinstrumentation techniques, design and application.
2. To know the concepts and operation of various lab instruments and related terms.
3. Acquire knowledge and lab skills to perform experiments in laboratory.
4. Connect the concepts of physics, chemistry and engineering principles in the instrumentation.
5. The students will be able to know all the basic principles, technology and applications of various instruments in life science.
6. Comprehend the techniques and the underlying principles in bioinstrumentation.

UNIT – I

Spectroscopy – properties of electromagnetic radiations. Instrumentation and applications of – UV-Visible spectrophotometer, spectrofluorimeter, atomic spectroscopy, FTIR, NMR spectroscopy, MALDI-TOF and flow cytometer.

UNIT – II

Centrifugation: principle and types of centrifuges. Principles and applications of analytical and preparative centrifuges. Relative molecular mass determination and sedimentation coefficient. Sub-cellular Fractionation of cellular components. Density gradient and ultra centrifugation.

UNIT – III

Chromatography – principle, instrumentation and applications of ion exchange, affinity, gel filtration, Low pressure liquid chromatography (LPLC) and high performance liquid chromatography (HPLC) and fast protein liquid chromatography (FPLC), gas liquid chromatography-mass spectroscopy (GC-MS).

UNIT – IV

Electrophoresis - principle, instrumentation and applications of agarose gel electrophoresis, native PAGE, sodium dodecyl sulphate - polyacrylamide gel electrophoresis (SDS-PAGE), isoelectric focusing, immuno electrophoresis, pulse field gel electrophoresis, capillary electrophoresis, gel documentation – applications.

UNIT – V

Radioisotopic techniques – introduction, nature of radio activity, types and rate of radioactive decay, units of radio activity, detection and measurement of radio activity. Principle, instrumentation and applications of Geiger-Muller counter, solid and liquid scintillation counter and autoradiography. Biosafety methods in radioactive laboratory.

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To provide students with basic knowledge on the biology and ecology of marine microorganisms, and their ecological role.
- To know the basic biology of marine microorganisms and their activities
- To impart modern techniques for the characterization and study of marine microorganisms and microbial communities.
- To understanding the ecological role of marine microorganisms and marine microbial communities.
- To know the main techniques of modern use necessary for the characterization and study of marine microbes.
- To understand basic biological processes that occur in and between organisms in nature.

COURSE OUTCOME (CO'S)

1. Capable of describing and explaining both biological interaction processes and their importance to ecosystems.
2. To acquire knowledge of the most common research methods used to develop our knowledge of biological processes.
3. learn to work independently in collecting and analysing scientific data, both in the field and in the laboratory.
4. Understand the architecture of marine ecosystem and its essential role
5. Specify the biological significance of biomolecules in metabolism
6. To understand computer applications and Bioinformatics

UNIT – I

Marine microorganisms: collection, preservation, enumeration (total and viable counts), isolation of culture and identification based on morphological, physiological and biochemical characteristics. International and national collection centres.

UNIT – II

Extremophiles: Thermophiles, basophiles, halophiles, psychrophiles, acid – alkaliphiles, oligotroph, toxitolerant, xerotolerant, endolith – Extremophiles and their environment, biodiversity. Genomics of extremophiles, phylogeny of extremophiles, 16S RNA classification in mitochondrial DNA genome, RAPD, RFLP studies.

UNIT – III

Microbiology of degradation of xenobiotic environment: Ecological considerations, decay behaviour, degradative plasmids, hydrocarbons, oil pollution, surfactants, pesticides, Bioremediation:- Factors affecting bioremediation – role of microbes in the marine nutrient cycles – diseases of marine organisms and its impact on marine biodiversity.

UNIT – IV

Brief account of photosynthetic and accessory pigments. Phytoplanktons and Zooplanktons, Red tides, Zones, Bioluminescence and Biopigment, Marine micro and macro organisms, Coral reefs, Mangrooves, Hydrothermal vents and water currents.

UNIT – V

Bar coding of marine organisms: Genome sequencing and physical mapping of genome. Marine exploration, Aquaculture-inland and freshwater, Isolation of marine bioactive compounds-separation, purification and identification techniques, cryopreservation.

COURSE OBJECTIVES

- To detail the importance of computer in field of life sciences.
- To obtain good understanding about the interpretation of biological data base. To uptake knowledge in latest tools and technology.
- To describe the history, scope and importance of Bioinformatics and role of internet in Bioinformatics
- Provide an overview of the application areas of bioinformatics, with a focus on the topics that will be taught in the course
- To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis
- Classify different types of Biological Databases

COURSE OUTCOME (CO'S)

1. The students will have an understanding about the information on the search engines and various software tools involved in bioinformatics.
2. Additional knowledge on different operating systems would enable the candidate to work with versatility.
3. Provides computational skill on search engines and various software tools involved in bioinformatics
4. It will impart computational based techniques which includes genomics and proteomics in Bioinformatics.
5. Retrieve information from available databases and use them for microbial identifications and drug designing
6. Gain ability to modify gene and protein structures in simulated systems.

UNIT – I

Information networks-internet, web browsers, HTTP,HTML and URLs. EMBnet – NCBI, Virtual tourism. Introduction to Operating systems like Windows, UNIX & LINUX - Computer Viruses – Overview and prevention.

UNIT – II

Bioinformatics tools - Global Vs local alignment – Similarity searching –Pair wise alignment and multiple alignments – Biological Databases – Literature, Sequence and Structure – identification and retrieving data from databases.

UNIT – III

Protein information resources –primary sequence database, Composite protein sequence database, secondary database, and Composite protein structure database. Protein structure prediction - Proteomic tools at ExPASy server.

UNIT – IV

Protein structure comparison and classification – RNA structure analysis – Plasmid mapping and Primer designing– Structure visualization softwares – Phylogenetics – Tree types and construction methods.

UNIT – V

DNA sequencing –Specialized genomic resources. DNA microarray – principles and databases – Genomics and Proteomics – genes prediction, splices sites and regulatory regions – Drug designing and Commercial Bioinformatics.

7. Claverie, J.M., and Notredame, C., (2003). *Bioinformatics for Dummies*, Wiley Publishing, Inc

COURSE OBJECTIVES

- To provide the knowledge on basics of biochemistry and its applications and to highlight the technical skill.
- To describe the classification and functions of lipids.
- To summarize the structure and classification of enzymes
- To state the Structure and types of DNA
- To analyse the functions and properties of phosphoglycerides
- To understand about storage and structural polysaccharides.

COURSEOUTCOME

1. Understand the structures of enzymes, proteins, carbohydrates and fats
2. Understand the functions of biomolecules
3. Analyze the process of metabolism
4. Understand of nucleic acids and their importance to combine and analyses information.
5. Explain the structure and mechanism of enzyme action
6. Summarize the DNA & RNA structure and base pairing schemes.

UNIT - I

Definition and scope of biochemistry, cellular basis of life, molecular composition of cells, elements and compounds of life Biochemical functions of cell organelles.

UNIT - II

Proteins- protein content of various type of cells, biological role of proteins; primary, secondary, tertiary, quaternary structure of proteins. Classification of proteins.

UNIT - III

Saccharides - Mono, oligo and polysaccharides; isomerism, chain and ring structure of carbohydrates, structure of starch, cellulose, glycogen and mucopolysaccharides.

UNIT - IV

Fatty acids- properties and nomenclature, essential and non-essential fatty acids. Classification of lipids and storage of lipids.

UNIT - V

DNA- Properties, structure, and importance. Prokaryotic and Eukaryotic cell differences. DNA as genetic material and genetic code

Basic Practical – I**COURSE OBJECTIVES**

- This course is put forward with the objectives of equipping the candidates with practical knowledge on basic techniques involved in the isolation, characterization and identification of different types of microorganism.
- Know various Culture media and their applications and also understand various physical and chemical means of sterilization.
- Know General bacteriology and microbial techniques for isolation of pure cultures.
- Master aseptic techniques and be able to perform routine culture handling tasks safely and effectively.
- Comprehend the various methods for identification of unknown microorganisms.
- Understand the microbial transport systems and the modes and mechanisms of energy conservation in microbial metabolism

COURSE OUTCOME

1. A student able to skillfully isolate and identify the microorganisms using different microbiological techniques needed in laboratory.
2. To enhance the ability of the student skills in medical laboratories and research sectors.
3. Demonstrate practical skills in the use of tools, technologies and methods common to microbiology.
4. To apply the scientific method and hypothesis testing in the design and execution of experiments
5. To develop theoretical and practical skills in the design and execution of experiments.
6. Know the various Physical and Chemical growth requirements of bacteria and get equipped with various methods of bacterial growth measurement.

1. Micrometry
2. Measurement of pH
3. Staining techniques: Simple, Gram, Negative and Endospore
4. Motility determination - Hanging drop and SIM inoculation
5. Cultivation of anaerobic microorganisms – Wrights tube – Mc Intosh anaerobic jar - roll tube methods.
6. Lactophenol cotton blue mounting of fungi - *Aspergillus* sp, *Mucor* sp, *Rhizopus* sp, *Fusarium* sp, *Penicillium* sp

7. Measurement of microbial growth – Viable count – Direct count – Turbidity methods
8. Biochemical characterization
 - a) Indole
 - b) MR
 - c) VP
 - d) Citrate utilization tests
 - e) TSI test
 - f) Catalase
 - g) Oxidase
 - h) Urease
 - i) Nitrate
 - j) Carbohydrate fermentation tests
 - k) Amino acid utilization
 - l) Hydrolysis of polymers- Starch, Lipid, Casein, Gelatin.

Instruction Hours / week: L: 0 T: 0 P: 4**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 9 Hours****COURSE OBJECTIVES**

- To acquire skill on the different molecular mechanism of gene transfer, mutations and separation of nucleic acids.
- This course is put forward with the objectives of equipping the candidates with practical knowledge on basic techniques.
- To impart skills of isolation, characterization and identification of different types of microorganism.
- Know various Culture media and their applications and also understand various physical and chemical means of sterilization.
- To make students understand the principles of Genetics
- Students will learn the basic principles of inheritance at the molecular, cellular and organismal levels.

COURSE OUTCOME

1. A student undertaking this course will be learning the principles behind the molecular techniques which would enable him to work in competent molecular biology based laboratories.
 2. Imparts knowledge on the different aspects of genetics and pedigree analysis.
 3. Students will apply their knowledge of to selected examples of changes or losses in cell function.
 4. Identify the organs and tissue systems of plants, and explain their respective function.
 5. Impart knowledge on applications of microorganisms in various fields
 6. Provides skill development on microbial products.
-
1. Spontaneous Mutation – gradient plate technique
 2. Induced Mutagenesis-chemical and physical - UV
 3. Replica plating technique.
 4. Transformation in Bacteria
 5. Bacterial Conjugation
 6. Induction of Lac operon
 7. Measurement of growth-one step growth curve using a T even phage
 8. Titration of phages (T4)
 9. Nuclear staining for nucleic acid identification.
 10. Spectrophotometric estimation of protein – BSA
 11. Analysis of amino acid by Paper chromatography
 12. Analysis of amino acid by Thin layer chromatography
 13. Purification of proteins by column chromatography
 14. Analysis of amino acid by HPLC – Demonstration

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- Virology, often considered a part of microbiology or of pathology, is the study of biological viruses and virus like agents.
- Viral structure, classification and evolution, their ways to infect and exploit cells of virus reproduction, the disease they cause.
- The techniques to isolate and culture them and their potential uses in research and therapy.
- To know how viruses are classified
- To understand the architecture of viruses
- To understand the interactions between viruses and the host immune system

COURSE OUTCOMES

1. Describe the structure and replication strategies of the viruses, the processes of entry into cells, control of gene transcription and where relevant translation and gene product stability, control of and mechanism of genome replication, virion assembly and egress from the cell.
2. Define the process of virus latency and describe in molecular terms control of the process and activation of viral genomes during reactivation.
3. Describe the growth behavior differences between normal cells and cells transformed by oncogenic DNA and RNA viruses.
4. Integrate experimental strategies learned in the context of viral systems into the design of experiments involving other systems.
5. Discern the replication strategies of representative viruses from the seven Baltimore classes
6. To understand the interactions between viruses and the host immune system

UNIT – I

Historical perspective of virology - Scope of virology -Viral classification and properties of viruses – Replication of viruses, cultivation of viruses (animal inoculation, Embryonated egg and tissue culture) - properties of viroids and Prions.

UNIT – II

Animal viruses- DNA viruses - morphology, replication, pathogenesis and laboratory diagnosis of Pox virus, Adeno virus, Hepatitis viruses – type A,B and D. Herpes simplex viruses, oncogenic viruses- Papova virus,- oncogenes and Oncogenesis.

UNIT – III

Animal viruses - RNA viruses - morphology, replication, pathogenesis and laboratory diagnosis of Poliovirus. Rabies virus, Influenza virus, mumps virus, Measles virus and rubella virus, Retro virus - HIV virus. Dengue and Japanese Encephalitis, SARS, Swine Flu.

UNIT – IV

Plant viruses – RNA viruses – TMV, Cowpea mosaic virus, Bromomosaic viruses, Satellite viruses – Double stranded DNA viruses – CaMV – Single stranded DNA viruses – Gemini virus. Structure and replication of Bacteriophage (T4) – Filamentous phage (ΦX174).

UNIT – V

Nosocomial infections, viral syndromes. Viral vaccines-interferons - Antiviral drugs - strategies to develop AIDS vaccines - Rabies vaccines preparation (animal and cell culture) and their immunization.

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- Medical Bacteriology introduces basic principles and then applies clinical relevance of many etiological agents responsible for global infectious diseases.
- The infectious disease cycle of the pathogens enables to solve the epidemics.
- The territory covered by infections and the immune response
- We focus on pathogenic mechanisms in order to foster a student's ability to solve problems in their future clinical career and able to establish the medical laboratory.
- This course provides learning opportunities in the basic principles of medical microbiology and infectious disease
- It covers mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora

COURSE OUTCOMES

1. Demonstrate an understanding at an advanced level of microbial virulence mechanisms and host response to infection.
2. Application of molecular techniques to medical microbiology; biochemical and genetic mechanisms of antimicrobial agent activity, microbial susceptibility and resistance to antimicrobial agents.
3. Demonstrate an understanding of skin and respiratory tract infections (microbial causes, pathogenesis, transmission of infection, diagnosis, prevention and treatment) by being able to identify unknown organisms in clinical samples, and describe the pathogenesis of important pathogens.
4. It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.
5. To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.
6. Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.

UNIT – I

Laboratory precaution and guidelines – Aseptic collection – transportation – handling and examination of pathological specimens – methods of isolation, identification and interpretation of pathogenic organisms – antibiotic susceptibility testing..

UNIT – II

Infections – types – methods – infectious disease cycle. Definitions of Epidemics, Endemics, Pandemics and investigation of epidemics and control. Definition of pathogens, Saprophytes and Commensals. Quality control in microbiology lab.

UNIT – III

Gram positive organisms: Morphology, cultural characteristics, antigenic property, pathogenicity, laboratory diagnosis and treatment. *Staphylococcus* sp., *Streptococcus* sp., *Bacillus* sp., *Corynebacterium* sp., *Clostridium* sp. Acid Fast organism - *Mycobacterium* sp.

UNIT – IV

Gram negative organisms: Morphology, cultural characteristics, antigenic property, pathogenicity, laboratory diagnosis and treatment. *E.coli*, *Klebsiella* sp., *Proteus* sp., *Pseudomonas* sp., *Vibrio* sp., *Salmonella* sp., *Shigella* sp., *Spirillum* and spirochetes- *Treponema* sp., *Leptospira* sp.; *Neisseria* sp. and *Haemophilus* sp.

UNIT – V

Nosocomial infection – Urinary tract infection, Respiratory tract infection, Sexually transmitted disease – Immunoprophylaxis – Antimicrobial chemotherapy, antibiotics, second line drugs. Vaccines.

I7MBP203

MICROBIAL TECHNOLOGY AND INTELLECTUAL PROPERTY RIGHTS 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Microbial technology is concerned with the industrial processing of materials by microorganisms to provide desirable products or serve other useful purposes.
- This paper emphasizes the application of biological systems to the manufacturing and service industries or the use of biological processes within the framework of technical operations and industrial production.
- It creates awareness on the Intellectual property rights and patenting of biotechnological processes.
- This course will provide technical skill majorly deals with DNA.
- To familiarize the students, with the principles of bioethical concepts
- To emphasize on IPR issues and need for knowledge in patents in biotechnology.

COURSE OUTCOME (CO'S)

1. To learn the basic tools in recombinant technology
2. To understand the various concepts of cloning vectors
3. To learn the cloning strategies
4. To familiarize the students, with the principles of bioethical concepts
5. To emphasize on IPR issues and need for knowledge in patents in biotechnology.
6. To aware students with current research.

UNIT – I

Introduction to microbial technology, restriction enzymes – nomenclature – types – and its properties, isolation of DNA, plasmids and RNA. Handling and quantification of nucleic acids, radiolabelling and non radiolabelling of nucleic acids, gel electrophoresis - Blotting techniques – Southern, Northern and Western blotting techniques.

UNIT – II

Cloning vectors: Plasmid as cloning vectors - pBR322, Bacteriophage - ϕ , M13; Cosmid, phagemids. Yeast vector. Expression vectors. Prokaryotic hosts: *E.coli*, Eukaryotic hosts: Yeast cell. Gene cloning - basic steps, cloning construction of cDNA, selection and screening method of recombinants. Bio labeling of genes and proteins.

UNIT – III

Transgenic plants: Methodology, development of herbicide resistance plants, delayed fruit ripening, Biocontrol agents - Insecticidal toxin of BT, cry gene and baculovirus. Transgenic animals. Methodology, development of transgenic mice – its application. DNA diagnostic in medical forensics. Biosafety and Bioethics.

UNIT – IV

Discrepancies in biotechnology / chemical patenting. IPR – historical perspective – recent developments – IPR in India, IPR and the rights of farmers in developing countries. Types of IPR- Governing bodies-national and international.

UNIT – V

Patenting – fundamental requirements – patenting multicellular organisms – patenting and fundamental research. Patenting of biological materials, Product patents, conditions for patenting, Patenting of liveforms, regulating recombinant technology, Food and food ingredients. Trade secrets. How do write a patent?.

6. Slater, A., and Scott, N., (2003). *Plant Biotechnology - The Genetic Manipulations of plants*. (2nd ed.), Oxford University Press, New York.

COURSE OBJECTIVES

- To educate the students about concepts of designs of water distribution systems, sewer networks, working principles and design of various physical, chemical and biological treatment systems of water and wastewater.
- To study about the biofertilizers, plant disease and increasing soil fertility.
- To impart a skilled knowledge on Microbes and environment and ecological importance.
- The main goal is to know and understand the role of microbes in biogeochemical processes in different ecosystems. The students will learn the basic microbiological principles, the methods in microbial ecology and their theoretical and practical use.
- The knowledge can give the base for understanding processes and changes in the environment.
- The students can get some skills to recognise the ecological problems and critical evaluation of the human impacts on pollution, climate changes and as well as environmental protection.

COURSE OUTCOME (CO'S)

1. This course will provide the student insights into these invaluable areas of Environmental microbiology, which play a crucial role in determining its future use and applications in environmental management.
2. Students able to know detailed idea about biofertilizer production and plant disease.
3. Students able to become Entrepreneur after understanding this process and product development.
4. This course will determine microbial role in nutrient cycling
5. This course can able to determine water quality.
6. It will explain the degradation of natural organic compounds and selected pollutants in the environment.

UNIT – I

Aquatic environment - microbiology of water - water pollution and water borne pathogens. Bacteriological examination of water, indicator organism. Microbiology of sewage. Chemical and biochemical characteristic of sewage. methods of sewage treatment - physical screening, chemical, biological (sludge digestion; activated sludge, aerating filters, oxidation pond).

UNIT – II

Microbiology of air - Microbial contaminants of air, sources of contamination, microbial indicators of air pollution. Enumeration of bacteria in air. Air samplers and Sampling techniques. Air sanitation.

UNIT – III

Bioremediation – contaminated soil, aquifers, marine pollutants, air pollutants, stimulation of oil spills degradation. Bioremediation of air pollutants. Bioleaching – recovery of metal from ores – oxidation of minerals – testing for biodegradability.

UNIT – IV

Biological nitrogen fixation - symbiotic and non-symbiotic microorganisms, root nodule formation, nitrogen fixers, hydrogenase, Nitrogenase, *Nif* gene regulation. Biochemistry of nitrogen fixation, Rhizosphere- R: S ratio, Interaction of microbes with plants. Bioconversion of agricultural wastes. Genetically Modified organisms and crops.

UNIT – V

Biofertilizer - Application of biofertilizers and biomanures – A combination of biofertilizer and manure applications with reference to soil, seed and leaf sprays. Laboratory and field application; Cost-benefit analysis of biofertilizer and biomanure production. Biopesticides and its application.

COURSE OBJECTIVES

- To study cell structure, functions of organelle and gain exposure on transportations through cell membrane and to focus on different receptors and model of signaling.
- Students will understand the structures and purposes of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles.
- Students will understand how these cellular components are used to generate and utilize energy in cells.
- To gain the knowledge base in genetics, molecular biology and cell physiology.
- To engage the students in review of scientific literature in the areas of cell mediated biomedical studies.
- Conceptualize and describe protein structure, folding and sorting

COURSE OUTCOME

1. Students upon completion of this paper will have clear knowledge on various cellular functions such as transportation and signaling.
2. It will enable the students to enter into cellular function level research for their future.
3. Students will understand the cellular components underlying mitotic and meiotic cell division.
4. Students will apply their knowledge of cell biology to selected examples of changes or losses in cell function.
5. Students will get the knowledge of common and advanced laboratory practices in cell and molecular biology
6. Conceptual knowledge of properties, structure, function of enzymes, enzyme kinetics and their regulation, enzyme engineering, Application of enzymes in large scale industrial processes

1.

UNIT – I

Cell- Definitions and properties, cell theory. Ultrastructure of eukaryotic cell - plant and animal. Bacterial cell wall structure and composition and their functions.

UNIT – II

Plasma membrane - structure and functions. Transportaion – types and methods. Role of microtubules and microfilaments.

UNIT – III

Cell organelles – Endoplasmic reticulum, Golgi complex, Mitochondria, Chloroplast, Ribosomes, Lysosomes, Peroxisomes, Nucleus and Vacuoles.

UNIT – IV

Mitosis – properties and significance, mitotic cell division and five phases of mitosis.

UNIT – V

Meiosis - properties and significance, Phases of meiosis and Cellular aging:

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To inculcate the quality standards and the quality control practice followed in the industry.
- To bring awareness about biosafety and to enhance the entrepreneurship and employability.
- Knowledge of the principles and documentation of the quality system is a prerequisite for the course.
- Develop goal-oriented standards, policies, and procedures based on user-defined data quality requirements.
- Confirm that draft standards are acceptable to all users.
- Ensure that developed standards conform to the primary goals of the organization.

COURSE OUTCOME

1. Set up and Assess Food Quality Assurance Plans.
2. Create and Critically Evaluate quality specifications for raw materials, and associated final product and appropriate packaging.
3. Design and critically evaluate appropriate testing and recording procedures for raw materials and associated Final product.
4. Design, and evaluate processing documentation including Standard Operating procedures.
5. To realize the importance of significance of quality
6. Identify requirements of quality improvement programs

UNIT - I

An introduction to industrial microbiology. Definition of Quality assurance- roles and responsibilities of Quality assurance in industrial Microbiology. Roles and responsibilities of Quality control in industrial Microbiology.

UNIT - II

Antimicrobial agents – Definitions, properties, mode of action and applications. Antimicrobial agents for external usage - Chemical antimicrobial agents, synthetic antimicrobial agents, naturally antimicrobial agents.

UNIT - III

Sterilization – Types and methods of sterilization. Sterility testing and assessment of Microbial Contamination. Quality parameter to assess Natural products, Nutraceutical product, Pharmaceutical products.

UNIT - IV

Disinfection – Types and methods. Disinfection agents- properties and mode of action (Phenol, isopropyl alcohol and ethanol). Antibiotics and antimicrobial drug resistance, search for new antimicrobial agents.

UNIT - V

Quality assurance and Quality control – pharmacopeias, quality checking, routine examination and validation of industry. International disinfectant testing protocols, assessment of biocide effectiveness.

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- This course encompasses the use of microorganisms in the manufacture of food or industrial products.
- The use of microorganisms for the production of food, either human or animal, the microorganisms used in bio processes may be natural isolates; laboratory selected mutants or genetically engineered organisms.
- To know the basics and concepts of various biotechnological related terms
- Elucidate the significance of transgenic plants as bioreactors for the production of enzymes.
- Address bioethical and biosafety issues related to plant transgenics
- Elucidate the molecular techniques involved in gene manipulation and rDNA technology

COURSE OUTCOME

1. This course will enable the students to design the various microbial fermentation products and their production, purification for various applications
2. To know the process protocol for the, synthesis and characterization of nanoparticles
3. Explain the gene transfer methods for the production of transgenic animals
4. Gain experimental knowledge to perform animal biotechnology related experiments
5. Explain the application of biotechnology in medical and its allied fields, gene therapy, genetic counseling
6. Address the bioethical issues & concerned linked to medical biotechnology

UNIT-I

Design of a basic fermenter, bioreactor configuration, design features, computer control of fermentation process, measurement and control of process. Types of Bioreactors and its functions.

UNIT – II

Transport phenomena in fermentation: Gas- liquid exchange and mass transfer, oxygen transfer, critical oxygen concentration, heat transfer, aeration/agitation, its importance. Sterilization of Bioreactors, nutrients, air supply, products and effluents, process variables and control, scale-up of bioreactors.

UNIT – III

Growth of cultures in the fermenter. Importance of media in fermentation, media formulation and modification . Kinetics of growth in batch culture, continuous culture with respect to substrate utilization, specific growth rate, steady state in a chemostat, fed-batch fermentation, yield of biomass, product, calculation for productivity.

UNIT – IV

Down streaming process of microbial products - separation, extraction, and purification, drying and crystallization.

UNIT – V

Isolation, selection and improvement of microbial cultures. Strain improvement for the selected organism: Use of recombinant DNA technology, protoplast fusion techniques for strain improvement. Improvement of characters other than products and its application in the industry. Preservation of cultures after strain improvement programme.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100**End Semester Exam: 9 Hours****COURSE OBJECTIVES**

- To obtain outstanding practical skill in various techniques in Microbial Biotechnology and Agricultural Microbiology.
- The course provides the basics of microbiology to build a foundation for more advanced studies in microbiology and biotechnology
- In this course students will learn key methods of microbial production (e.g. fermentation, recombinant protein production and purification).
- Practice in research project planning, in different methods for biotechnology, and for conducting scientific research project.
- To develop an understanding of the major principles of and current issues in the several topical areas that collectively constitute Microbiology Techniques.
- It will distinguish the students to acquire practical skills on advanced laboratory analysis.

COURSE OUTCOME (CO'S)

1. This practical course renders a candidate the knowledge of advanced techniques involved in Microbial Biotechnology and Agricultural Microbiology.
 2. Candidates would be able to understand and perform molecular techniques which forms an integral part of core Microbiology.
 3. This practical course renders a candidate the knowledge of advanced techniques involved in microbial biotechnology.
 4. He/she will be able to judge how microbes and enzymes could be applied in industry.
 5. Candidates would be skilled enough to perform a molecular technique which forms an integral part of industrial microbiology.
 6. Students can develop entrepreneur skills for applications in biotechnology based industries.
-
1. Isolation of plasmid DNA from Bacteria
 2. Isolation of chromosomal DNA from Bacteria
 3. Determination of molecular weight by SDS Polyacrylamide gel electrophoresis
 4. Isolation of microbes from soil
 5. Isolation of free-living N₂ fixation from soil - Azotobacter
 6. Isolation of symbiotic nitrogen fixers from root nodule - Rhizobium
 7. Isolation of phosphate solubilisers, ammonifiers and denitrifiers
 8. Study of Mycorrhizae, Cyanobacteria and Azolla
 9. Determination of Dissolved oxygen of water

10. Determination of BOD (Biochemical Oxygen Demand) of water
11. Determination of COD (Chemical Oxygen Demand) of water

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To acquire practical knowledge in numerous diagnostic tests and procedures used in the microbiology laboratory.
- To understand the importance of diagnostic procedures and gain skills related to the laboratory experiments.
- To learn the techniques pertaining to amplification of biological molecules
- To provide hands-on experience to determine microorganisms in clinical samples
- To understand the importance of diagnostic procedures and gain skills related to the laboratory experiments.
- It helps the students to study the advanced laboratory diagnosis procedures.

COURSE OUTCOME (CO'S)

1. This course provides the current medical aspects on the clinical diagnosis of infection providing the combined treatment of bacteriology and virology.
 2. It will also provide opportunities for a student to develop diagnostic skills in microbiology, including the practical application and interpretation of laboratory tests for the diagnosis of infectious diseases.
 3. It will also provide opportunities for a student to develop diagnostic skills in microbiology, including the practical application and interpretation of laboratory tests for the diagnosis of infectious diseases.
 4. The significance of bacterial genetic variation (in drug resistance, pathogenesis or virulence and variation, diagnosis, and vaccination), and manipulation of cloned DNA.
 5. To know the Virulence of bacteria, bacterial virulence factors and their regulation.
 6. To understand drug resistance, drug-bacteria relationship, clinical implications, and prevention
-
1. Laboratory diagnosis of pyogenic infections – tuberculosis – enteric fever – diarrhea – UTI – anaerobic infections
 2. Isolation and identification of *Candida albicans*
 3. Antibiotic sensitivity test disc preparation
 4. Antibiotic sensitivity test – Kirby - Bauer, Stroke's method
 5. MIC determination by Broth dilution technique, filter paper disc assay
 6. Wet mount preparation of parasites- Saline, iodine
 7. Identification of parasites-formal ether concentration, floatation methods
 8. Morphological examination of fungi in tissues

9. Cultivation of viruses-Egg inoculation
10. Isolation of coli phage from sewage using membrane filter technique.
11. Examination of plant diseases: Wilt of potato, Citrus canker, Rice dwarf virus

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours**COURSE OBJECTIVES**

- Imparting advanced technological knowledge through a detailed study of topics such as immunodiagnosis, assessment of cell mediated immunity and current trends in immunology of diseases.
- The students will be able to identify the cellular and molecular basis of immune responsiveness.
- The students will be able to describe the roles of the immune system in both maintaining health and contributing to disease.
- The students will be able to describe immunological response and how it is triggered and regulated.
- The students will be able to demonstrate a capacity for problem-solving about immune responsiveness.
- Students will be able to transfer knowledge of immunology into clinical decision-making through case studies presented in class.

COURSE OUTCOME (CO'S)

1. To strengthen the technical skill on the immune system, their structure and classification, genetic control of antibody production, Types, structure of antigens and immunodiagnostics.
2. To obtain knowledge of through Molecular immunology, hypersensitive immune reaction and Latest trends in immunology.
3. Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity.
4. Develop understanding about immune system, antigen antibody interactions.
5. Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
6. Introducing the **employment** aspect of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.

UNIT – I

Immunity – types. Cells of the immune system - lymphoid cells, mononuclear cells, granulocytic cells and mast cells. T & B – cell maturation, activation and differentiation. Organs of the immune system - primary and secondary lymphoid organs – cutaneous / mucosal - associated lymphoid tissues

UNIT – II

Antigens - factor influence immunogenicity - Epitopes - Haptens - study of antigenicity. Immunoglobulins – structure – types and biological activities. Antigenic determinants. Monoclonal antibodies.

UNIT – III

Hypersensitive reactions – Type. Complement system - classical, alternative and lectin pathways, biological consequences. T - cell receptor. Cytokines – Structure, functions and receptors. Major Histocompatibility complex, classes, structure and its functions.

UNIT – IV

Autoimmune diseases: Antigen processing and presentation - Transplantation immunology - Transplantation antigens, HLA typing. Tumor immunology - treatment of tumors. Immune response to infectious disease.

UNIT – V

Antigen - Antibody reactions: Agglutination and precipitation. Complement fixation test, Immunofluorescence, ELISA, RIA, Immuno electron microscopy. Forensic serology, Immunohaematology – ABO, RH incompatibility.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours**COURSE OBJECTIVES**

- To encompasses the employability use of microorganisms in the manufacture of food or industrial products.
- The aim of the course is to give the students broad theoretical and practical skills in food and industrial microbiology.
- This paper adds information about the role of microorganisms in many food, beverage and pharma industries both in production and spoilage processes.
- The students will be able to discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.
- It will make the students to explore their practical skills in entrepreneurial activities.
- It will deliver the large-scale production of microbial products techniques in advanced level.

COURSE OUTCOME (CO'S)

1. Provides knowledge in the large-scale production of industrial product, providing the trends to cater the needs of industry.
2. This will help the students to enhance their employment knowledge on microbiology based commercial products.
3. The aim of the course is to give the students broad theoretical and practical skills in industrial microbiology.
4. To encode the importance of the role of microorganisms in food industries both in beneficial and harmful ways.
5. To obtain a good understanding of industrial microbiology and become qualified as microbiologist in food and other industries and candidate able to become entrepreneur after understanding this entire course.
6. Explain why microbiological quality control programmes are necessary in food production.

UNIT – I

Food and microorganisms – Important microorganisms in food – Fungi, Bacteria; Intrinsic and extrinsic parameters of food affecting microbial growth – sources of contamination of food. Food sanitation – indicators of food safety – Coliform bacteria.

UNIT – II

Food preservation – principles – factors affecting preservation – food preservation using temperature – low temperature food preservation – characteristics of psychrotrophs – high temperature food preservation – characteristics of thermophiles – preservation of foods by drying chemicals and radiation – limitations – commercial application.

UNIT – III

Food borne diseases - food poisoning - food borne infection and intoxication- Food control agencies - microbiological criteria for food, microbial quality control and food laws, Hazard Analysis Critical Control Point (HACCP).

UNIT – IV

History and chronological development of industrial microbiology. Industrially important strains – isolation and preservation. Inoculum development for various fermentation processes - strain development – mutation, recombinant DNA technology and protoplast fusion. Fermentation – submerged, solid state, batch and continuous.

UNIT – V

Fermentor design – scale-up process. Types of fermentors - Tower, cylindroconical, airlift and Components of CSTR. Downstream process – intracellular and extracellular product separation column chromatography, affinity. Production of beverages – beer, vitamins - vitamin B12, Riboflavin, antibiotics.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100**End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- Medical Bacteriology introduces basic principles and then applies clinical relevance of many etiological agents responsible for infectious diseases.
- The infectious disease cycle of the pathogens enables to solve the epidemics.
- The territory covered by infections and the immune response
- We focus on pathogenic mechanisms in order to foster a student's ability to solve problems in their future clinical career and able to establish the medical laboratory.
- This course provides learning opportunities in the basic principles of medical microbiology and infectious disease
- It covers mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora

COURSE OUTCOMES

1. Demonstrate an understanding at an advanced level of microbial virulence mechanisms and host response to infection.
2. Application of molecular techniques to medical microbiology; biochemical and genetic mechanisms of antimicrobial agent activity, microbial susceptibility and resistance to antimicrobial agents.
3. Demonstrate an understanding of skin and respiratory tract infections (microbial causes, pathogenesis, transmission of infection, diagnosis, prevention and treatment) by being able to identify unknown organisms in clinical samples, and describe the pathogenesis of important pathogens.
4. It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.
5. To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue
6. Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.

UNIT – I

General Properties of Fungi - Isolation and identification of medically important fungi – diagnosis of fungal disease - routine mycological techniques - antifungal agents

UNIT – II

Superficial mycosis –Pityriasis versicolor, Tinea nigra, piedra. Cutaneous mycosis – Dermatophytes. Systemic mycosis –Opportunistic mycosis – Candidosis, Cryptococcosis, aspergillosis. Subcutaneous mycosis - Sporotrichosis, Chromoblastomycosis, Mycetoma

UNIT – III

Introduction to Parasitology - protozoa-amoebae – flagellates - Laboratory techniques in parasitology - Ova, cyst analysis direct and concentration methods. Blood smear examination - antiprotozoan therapy.

UNIT – IV

Protozoan infections - *Entamoeba histolytica*, *Plasmodium falciparum*, *Leishmania donovani* - *Giardia intestinalis* *Trichomonas vaginalis*, *Toxoplasma gondii*, *Pneumocystis carinii*, *Balantidium coli*.

UNIT – V

Helminthic infections – *Taenia solium*. *Trematodes* - *Schistosoma haematobium*, Nematodes - *Trichuris trichiura* - *Ascaris lumbricoides*, *Ancylostoma duodenale*, *Wuchereria Bancrofti*, *Isospora sp.*

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- About collection, interpretation and presentation of statistical data
- The analytics of data, probability, and hypothesis testing of samples
- The essential role of statistics in present, future use and applications of Biology.
- To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.
- Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques
- The ethical and philosophical issues associated with research in education

COURSE OUTCOMES

1. Apply basic statistical concepts commonly used in health and medical sciences
2. Use basic analytical techniques to generate results
3. Interpret results of commonly used statistical analyses in written summaries.
4. Demonstrate statistical reasoning skills correctly and contextually.
5. Provide learning opportunities to critically evaluate research methodology and findings.
6. Enable students to be reflexive about their role and others' roles as researchers.

UNIT-I

Definitions-Scope of Biostatistics- Variables in biology, collection, classification and tabulation of data- Graphical and diagrammatic representation.

Measures of central tendency – Arithmetic mean, median and mode. Measures of dispersion-Range, standard deviation, Coefficient of variation.

UNIT – II

Correlation – Meaning and definition - Scatter diagram –Karl pearson's correlation coefficient. Rank correlation.

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

UNIT – III

Test of significance: Tests based on Means only-Both Large sample and Small sample tests - Chi square test - goodness of fit. Analysis of variance – one way and two way classification. CRD, RBD Designs.

UNIT – IV

Research: Scope and significance – Types of Research – Research Process – Characteristics of good research – Problems in Research – Identifying research problems. Research Designs – Features of good designs.

UNIT – V

Sampling Design: Meaning – Concepts – Steps in sampling – Criteria for good sample design. Scaling measurements – Techniques – Types of scale.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100**End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To study about the biofertilizers, plant disease and increasing soil fertility.
- To provide the knowledge on biomanure and biofertilizer and to become an entrepreneur in the field.
- To Provides detailed idea about biofertilizer production and plant disease.
- To provide the student knowledge about ecofriendly product which play a crucial role in determining its future use and applications in environmental management.
- The students will be able to make qualitative and quantitative description of the basic enzymatic phenomena and processes.
- To provide the student for entrepreneur.

COURSE OUTCOME (CO'S)

1. This course has been designed to provide the student knowledge about eco friendly product.
2. Product play a crucial role in determining its future use and applications in environmental management.
3. Provides detailed idea about biofertilizer production and plant disease.
4. To produce and impart training of ecofriendly agricultural inputs so as to nullify the ill effects of chemical fertilizers.
5. To demonstrate the know-how technology pertinent to microbiological and physico-chemical analyses of soil samples and their assessment.
6. Provides detailed **entrepreneurial** idea about biofertilizer production and plant disease.

UNIT – I

Fertilizer - importance and present status of types of fertilizers and application. Nitrogen; Carbon, phosphorus and sulphur cycles. Biogeocycles associated with microorganisms.

UNIT – II

Biofertilizers – Nostoc, Anabaena, Gloeocaps and Scytonema; Free living forms – Azotobacter, Azospirillum; Symbiotic forms – Rhizobium; Legume Association; *Pseudomonas*; Non-legume association.

UNIT – III

Mycorrhizal association - Vescicular arbuscular mycorrhizal association (VAM) –Actinomycetes associations in biofertilizer.

UNIT – IV

Biomanures- Properties, production and applications; Composts – production and applications. Agro wastes – Poultry manure and saw-dust.

UNIT – V

Vermi composting– Properties, production and applications Types of compost pits and biodegradation.

Application of biofertilizers and biomanures.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Aimed to provide training on various methods of handling.
- Concerning the care and use of laboratory animals.
- Laboratory animal care provides the proper handling and care for various species of animals used in research, testing, and in education.
- It extensively deals with the amended act on the Animal Welfare and the concept, availability, and use of research or testing methods that limit the use of animals or minimize animal distress.
- It extensively deals with the amended act on the Animal Welfare and the concept, availability, and use of research or testing methods that limit the use of animals or minimize animal distress.
- To study the preclinical studies.

COURSE OUTCOME (CO'S)

1. Laboratory animal care provides the proper handling and care for various species of animals used in research, testing, and in education.
2. It extensively deals with the amended act on the Animal Welfare and the concept, availability, and use of research or testing methods that limit the use of animals or minimize animal distress.
3. This course content will enhance the employment in drug testing field.
4. Validation for equipment, methods, cleaning and process
5. Students can develop their entrepreneurial skills in analysis of pens design and environment.
6. Ethical knowledge for use of animals in research.

UNIT – I

Modern methods of care, management breeding and maintenance of Laboratory animals – rabbit.

UNIT – II

Modern methods of care, management breeding and maintenance of Laboratory animals – mice.

UNIT – III

Modern methods of care, management breeding and maintenance of Laboratory animals – rat.

UNIT – IV

Modern methods of care, management breeding and maintenance of Laboratory animals– guinea pig.
Specific pathogen free animal – gnotobiotic animal.

UNIT – V

Handling – various routes of inoculation and bleeding. Laboratory use of animals in microbiology - antibody production. Disposal of animal house wastes and carcasses.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- This course has been intended to provide knowledge about the Bio nanomaterials synthesis and its advancement.
- To foundational knowledge of the Nanoscience and related fields.
- To make the students acquire an understanding the Nanoscience and Applications
- To help them understand in broad outline of Nanoscience and Nanotechnology.
- Understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment
- Apply their learned knowledge to develop Nanomaterial's.

COURSE OUTCOME (CO'S)

1. Students get an idea about application of nanotechnology in biology.
2. It provide analytical knowledge of trends and developments in the field of nanotechnology
3. Acquire knowledge in nanotechnology and how it will support the employment greatly.
4. Students able to construct hierarchy strategy in machine.
5. Able to describe self-application and machine phase biotechnology.
6. Students have an enhanced knowledge and understanding of chemical transformation and biomolecular sensing.

UNIT – I

Biotechnology to Bionanotechnology: Bionanomachines – Modern bionano materials – protein, nucleic acid, lipids used for carrying information – polysaccharides use in special structural roles – Present status of bionanotechnology.

UNIT – II

Molecular design for nanotechnology: Recombinant DNA technology – X-ray crystallography, NMR spectroscopy and electron microscopy, use in nanotechnology – Computer modeling to bionanomachines and computer assisted molecular design.

UNIT – III

Structural principles of Bionanotechnology: Natural bionanotechnology design for specific environment – Biomolecular structure as low materials – Hierarchical strategy in construction of nanomachines – protein folding – self organization – molecular recognition – flexibility.

UNIT – IV

Functional principles of Bionanotechnology: Information driven nano assembly – chemical transformation – biomolecular sensing – self application – machine phase bionanotechnology.

UNIT – V

Future of Bionanotechnology: Problems in bionanotechnology – Abide finger problem – Sticky finger problem – role of enzyme to solve these problems – Core studies – nonotube synthesis, nanoscale assembler, nanosurveillance – ethical consideration – respect for life, potential dangers, fuel

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- The general objectives of the lab will be to introduce immunology and basic serological techniques.
- To develop the skill in health clinic
- To enhance knowledge in research.
- To give employment opportunities.
- Technical skill of immunology techniques.
- To understand disease mechanisms.

COURSE OUTCOME (CO'S)

1. This practical is to provide the student with a basic knowledge and technical skill of immunology and make them to understand the significance to human disease.
2. Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity
3. Develop understanding about immune system, antigen antibody interactions.
4. Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
5. After course completion, students can apply the knowledge in further studies and higher education.
6. Introducing the science of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.

EXPERIMENTS

1. Separation of serum / plasma
2. ABO Blood grouping - Rh typing and cross matching. Estimation of hemoglobin content of human blood.
3. Agglutination tests.
 - WIDAL - slide and tube test
 - RA test.
 - RPR test.
 - ASO test.
 - CRP test.
 - β -HCG test
4. ELISA- thyroid hormone analysis
5. Ouchterlony's Double Immunodiffusion test (ODD)

6. Counter immunoelectrophoresis (CIE)

End Semester Exam: 9 Hours

COURSE OBJECTIVE

- This provides information on fermented food product production in food industries. To know the possible contamination of food products which may include bacteria and fungi.
- To develop the skill in Isolation of pathogen.
- To enhance knowledge in research.
- To give employment opportunities.
- Technical skill of industries techniques.
- To understand disease mechanisms.

COURSE OUTCOME (CO'S)

1. This practical adds a technical skill and good understanding of industrial microbiology
 2. Students can develop the skills of an efficient microbiologist in food and beverage industries.
 3. Provides necessary entrepreneurial information on the food, dairy Microbiology in safety and quality perspective.
 4. It will help to study the importance in the prevention of contamination that might be caused by the microorganisms.
 5. To Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
 6. Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
-
1. Production of enzymes – Solid state & Submerged fermentation – GUS assay – Amylase
 2. Production of protease from submerged fermentation
 3. Production of sauerkraut ,yoghurt, wine
 4. Enumeration of Microorganisms from Food samples
 5. Detection and enumeration of Microorganisms present in lab surfaces.
 6. Analysis of Milk quality by MBRT and resazurin
 7. Detection of coliforms from water - MPN test
 8. Isolation of plant pathogens – Bacteria and fungi
 9. Citric Acid production
 10. Mushroom Cultivation
 11. Immobilization technique (Sodium alginate method)

தமிழ் முதல் தாள்

SEMESTER – I

4H – 4C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60

Total: 100

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு – I : இக்கால இலக்கியம்:

(10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை – ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் –மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்:

(10 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் – 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்:

(10 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை:

(10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:

(8 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

17ENU101

ENGLISH

SEMESTER – I

4H – 4C

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcomes:

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us - Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. A River - A.K. Ramanujan
3. The Sailor - Safaa Fathy

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Romance of a Busy Broker - O.Henry
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV GRAMMAR

1. Tense
2. Auxiliaries (Primary and Modal)
3. Articles
4. Tag Questions

UNIT - V FUNCTIONAL ENGLISH

1. Filling the blanks with the suitable form of verb in a conditional sentence.
2. Dialogue Writing
3. Changing positive to negative without altering the meaning
4. Fill in the blank with suitable modal

5. Framing a question to a statement

6. Rewrite the sentences changing the underlined word as directed

Prescribed Text:

1. Reminisce, Published by the Department of English, Karpagam University.

Suggested Reading:

1. Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

	SEMESTER – I
MECHANICS	L T P C
17PHU101	5 - - 5

Course Objectives

- To know how to use Newton's laws of motion
- To solve advanced problems involving the dynamic motion of mechanical systems and other advanced mathematics in the solution of the problems.
- To find the use of conservation of energy and linear and angular momentum
- To solve dynamics problems.
- To understand the concept of oscillations.
- To gain the knowledge on elasticity.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. To enable the students to understand the basic concepts of mechanics
2. To understand the concepts of simple harmonic motion
3. Parameters defining the motion of mechanical systems and their degrees of freedom.
4. Study the interaction of forces between solids in mechanical systems.
5. Application of the vector theorems of mechanics and interpretation of their results.
6. Introduction to analytical mechanics as a systematic tool for problem solving.

UNIT - I

Vectors: Vector algebra. Scalar and vector products. Derivatives of a vector with respect to a parameter. Ordinary Differential Equations: 1st order homogeneous differential equations. 2nd order homogeneous differential equations with constant coefficients.

UNIT - II

Laws of Motion: Frames of reference. Newton's Laws of motion. Dynamics of a system of particles. Centre of Mass. Momentum and Energy: Conservation of momentum. Work and energy. Conservation of energy. Motion of rockets. Rotational Motion: Angular velocity and angular momentum. Torque. Conservation of angular momentum.

UNIT - III

Gravitation: Newton's Law of Gravitation. Motion of a particle in a central force field (motion is in a plane, angular momentum is conserved, areal velocity is constant). Kepler's Laws (statement only). Satellite in circular orbit and applications. Special Theory of Relativity: Constancy of speed of light. Postulates of special theory of Relativity. Length contraction. Time dilation. Relativistic addition of velocities.

UNIT - IV

Oscillations: Simple harmonic motion. Differential equation of SHM and its solutions. Kinetic and Potential Energy, Total Energy and their time averages. Damped oscillations.

UNIT - V

Elasticity: Hooke's law- Stress-strain diagram - Elastic moduli-Relation between elastic constants- Poisson's Ratio-Expression for Poisson's ratio in terms of elastic constants- Work done in stretching & work done in twisting a wire- Twisting couple on a cylinder- Determination of Rigidity modulus by static torsion- Torsional pendulum-Determination of Rigidity modulus and moment of inertia - q , η & by Searles method.

Suggested Readings:

4. D. S. Mathur "Elements of Properties of Matter" S. Chand & Co.
5. University Physics. FW Sears, MW Zemansky & HD Young 13/e, 1986. Addison-Wesley
6. Mechanics Berkeley Physics course, v.1: Charles Kittel, et.al. 2007, Tata McGraw-Hill
7. Engineering Mechanics, Basudeb Bhattacharya, 2nd edn., 2015, Oxford University Press
8. University Physics, Ronald Lane Reese, 2003, Thomson Brooks/Cole.
9. <https://lecturenotes.in/notes/15822-note-for-mechanics-mech-by-amity-kumar>

	SEMESTER – I
SOLID STATE PHYSICS	L T P C
17PHU102	5 - - 5

Course Objective:

- This course integrates theory of Solid State Physics with experimental demonstrations in the Physics Lab.
- The course will provide a valuable theoretical introduction and an overview of the fundamental applications of the physics of solids.
- It includes theoretical description of crystal and electronic structure, lattice dynamics, and optical properties of different materials (metals, semiconductors, dielectrics, magnetic materials and superconductors), based on the classical and quantum physics principles.
- To calculate thermal and electrical properties in the free-electron model.
- To gain a basic knowledge of crystal systems and spatial symmetries.
- To know what phonons are, and be able to perform estimates of their dispersive and thermal properties.

Course Outcomes

After successful completion of the course, the student is expected to

1. Account for interatomic forces and bonds.
2. Have a basic knowledge of crystal systems and spatial symmetries.
3. Account for how crystalline materials are studied using diffraction, including concepts like form factor, structure factor, and scattering amplitude.
4. Know what phonons are, and be able to perform estimates of their dispersive and thermal properties.
5. Calculate thermal and electrical properties in the free-electron model.
6. Explain superconductivity using BCS theory
7. Outline the importance of solid state physics in the modern society.

UNIT - I

Crystal Structure: Solids: Amorphous and Crystalline Materials. Lattice Translation Vectors. Lattice with a Basis. Unit Cell. Miller Indices. Reciprocal Lattice. Types of Lattices. Brillouin Zones. Diffraction of X-rays by Crystals. Bragg's Law. Atomic and Geometrical Factor.

UNIT - II

Elementary Lattice Dynamics: Lattice Vibrations and Phonons: Linear Monoatomic and Diatomic Chains. Acoustical and Optical Phonons. Qualitative Description of the Phonon Spectrum in Solids. Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids (qualitative only). T^3 law

UNIT - III

Magnetic Properties of Matter: Dia-, Para-, Ferri- and Ferromagnetic Materials. Classical

Langevin Theory of dia- and Paramagnetic Domains. Quantum Mechanical Treatment of Paramagnetism. Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains. Discussion of B-H Curve. Hysteresis and Energy Loss.

UNIT - IV

Dielectric Properties of Materials: Polarization. Local Electric Field at an Atom. Depolarization Field. Electric Susceptibility. Polarizability. Clausius Mosotti Equation. Classical Theory of Electric Polarizability. Normal and Anomalous Dispersion. Cauchy and Sellmeier relations. Langevin-Debye equation. Complex Dielectric Constant. Optical Phenomena. Application: Plasma Oscillations, Plasma Frequency, Plasmons.

UNIT - V

Elementary band theory: Kronig Penny model. Band Gaps. Conductors, Semiconductors and insulators. P and N type Semiconductors. Conductivity of Semiconductors, mobility, Hall Effect, Hall coefficient. Superconductivity: Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors.

Suggested Books

2. Introduction to Solid State Physics, Charles Kittel, 8th Ed., 2004, Wiley India Pvt. Ltd.
3. Solid State Physics by R. J. Singh, Dorling Kindersley (India) Publisher, 2012, ISBN- 978-81-317-5401-6.
4. Solid State Physics by J. R. Hook, H. E. Hall, John Wiley & Sons, Ltd, 2010, ISBN 9780471928041.
5. Solid State Physics, Rita John, 2014, McGraw Hill
6. Solid State Physics, M.A. Wahab, 2011, Narosa Publications

	SEMESTER - I
MATHEMATICAL PHYSICS - I	L T P C
17PHU103	4 - - 4

Course Objectives

- To provide students with a repertoire of mathematical methods that are essential to the solution of advanced problems encountered in the fields of applied physics and engineering.
- In addition, intended to prepare the student with mathematical tools and techniques that are required in advanced courses offered in the applied physics
- To communicate mathematical and physical knowledge and ideas to the students.
- To learn the fundamentals and applications of Complex Variable, Analyticity, Cauchy-Riemann and Cauchy's Integral.
- To contribute innovations and application of basic research.
- To get knowledge to find the relationship between observation and theory and their use in building the basic concepts of computing.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. To communicate mathematical and physical knowledge and ideas to the students.
2. Get introduced to Special functions like Gamma function, Beta function, Delta function, Bessel functions and their recurrence relations
3. Learn the fundamentals and applications of Complex Variable, Analyticity, Cauchy-Riemann and Cauchy's Integral.
4. Build connections between mathematical development and conceptual understanding.
5. Understand the relationship between observation and theory and their use in building the basic concepts of computing.
6. To contribute innovations and application of basic research.

UNIT - I

Euler's formula, RK Method (II & IV), Linear interpolation: Newton forward interpolation formula and backward interpolation formula - Bessel's Formula. Interpolation with unequal intervals: Lagrange's interpolation formula.

Trapezoidal rule - Simpson's 1/3 rule and 3/8 rule- Bisection method - method of successive approximations - Regula Falsi method - Newton-Raphson method

UNIT - II

Basic of C language: Introduction, Data types, Operators and Expressions, Conditional Statements, Input and output Statements (Exclude Program)

UNIT - III

Frobenius Method and Special Functions: Singular Points of Second Order Linear Differential Equations and their importance. Frobenius method and its applications to differential equations. Legendre, Properties of Legendre Polynomials: Rodrigues Formula, Orthogonality. Simple recurrence relations.

UNIT - IV

Partial Differential Equations: Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry.

UNIT - V

Complex Analysis: Brief revision of Complex numbers & their graphical representation. Roots of Complex Numbers. Functions of Complex Variables. Analyticity and Cauchy-Riemann Conditions. Examples of analytic functions. Singular functions: poles and branch points, order of singularity. Integration of a function of a complex variable. Cauchy's Integral formula.

SUGGESTED BOOKS:

1. Mathematical Methods for Physicists: Arfken, Weber, 2005, Harris, Elsevier. Fourier Analysis by M.R. Spiegel, 2004, Tata McGraw-Hill.
2. Mathematics for Physicists, Susan M. Lea, 2004, Thomson Brooks/Cole.
3. An Introduction to Ordinary Differential Equations, E.A Coddington, 1961, PHI Learning Differential Equations, George F. Simmons, 2006, Tata McGraw-Hill.
4. Essential Mathematical Methods, K.F.Riley and M.P.Hobson, 2011, Cambridge University Press.
5. <https://nptel.ac.in/courses/115/103/115103036/>

	SEMESTER – I
MECHANICS PRACTICAL	L T P C
17PHU111	- - 2 1

Course Objective

1. To impart knowledge on various types of Mechanisms and instruments
2. To impart skills to analyze the position, velocity and acceleration.
3. To understand basic laws governing mechanics of a system.
4. To determine the acceleration due to gravity using various methods.
5. To determine the Moment of Inertia using various methods.
6. To know forces their relationship to engineering applications

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand and analyze basic theory and principles of forces in mechanics
2. Forces their relationship to engineering applications
3. Analyze motion, forces and motion, work and energy problems and their relationship to engineering applications
4. To understand basic laws governing mechanics of a system.

ANY SIX EXPERIMENTS

1. Measurements of length (or diameter) using vernier caliper, screw gauge and travelling microscope.
2. To determine the Height of a Building using a Sextant.
3. To determine the Moment of Inertia of a Flywheel.
4. To determine the Young's Modulus of a Wire by Optical Lever Method.
5. To determine the Modulus of Rigidity of a Wire by Maxwell's needle.
6. To determine the Elastic Constants of a Wire by Searle's method.
7. To determine g by Bar Pendulum.
8. To determine g by Kater's Pendulum.
9. To determine g and velocity for a freely falling body using Digital Timing Technique
10. To study the Motion of a Spring and calculate (a) Spring Constant (b) Value of g

Suggested Books

1. Advanced Practical Physics for students, B.L.Flint and H.T.Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. Engineering Practical Physics, S.Panigrahi & B.Mallick, 2015, Cengage Learning India Pvt. Ltd.
4. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

	SEMESTER – I
SOLID STATE PHYSICS PRACTICAL	L T P C
17PHU112	- - 2 1

Course Objectives:

- The course is to understand the basic knowledge on magnetic properties of materials.
- To understand the various parameters of the Hysteresis loop
- Acquire the knowledge of semiconducting and dielectric materials.
- To comprehend the concepts of superconductivity and magnetic properties of solids.
- To verify the dielectric constant of a material by experimentally.
- To understand the importance of new materials in modern technology.

Course Outcome:

After successful completion of the course, the student is expected to

1. Basic practical knowledge on magnetic materials.
2. Understand the basic idea about the dielectric Properties of Solids
3. Experience the behavior of Hysteresis loop of a crystal.
4. Measure the susceptibility of magnetic materials.
5. Verify the dielectric constant of a material by experimentally.
6. Understand the importance of new materials in modern technology.

ANY SIX EXPERIMENTS

1. Measurement of susceptibility of paramagnetic solution (Quinck's Tube Method)
2. To measure the Magnetic susceptibility of Solids.
3. To determine the Coupling Coefficient of a Piezoelectric crystal.
4. To measure the Dielectric Constant of a dielectric Materials with frequency
5. To determine the complex dielectric constant and plasma frequency of metal using Surface Plasmon resonance (SPR) technique.
6. To determine the refractive index of a dielectric layer using SPR technique.
7. To study the PE Hysteresis loop of a Ferroelectric Crystal.
8. To draw the BH curve of iron using a Solenoid and determine the energy loss from Hysteresis.
9. To measure the resistivity of a semiconductor (Ge) crystal with temperature (up to 150°C) by four-probe method and to determine its band gap.
10. To determine the Hall coefficient of a semiconductor sample.

Suggested Books

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. Elements of Solid State Physics, J.P. Srivastava, 2nd Ed., 2006, Prentice-Hall of India

	SEMESTER – I
MATHEMATICAL PHYSICS PRACTICAL I	L T P C
17PHU113	- - 4 2

Course Objectives

- To provide students with a repertoire of mathematical methods that are essential to the solution of advanced problems encountered in the fields of applied physics and engineering.
- In addition, intended to prepare the student with mathematical tools and techniques that are required in advanced courses offered in the applied physics
- To communicate mathematical and physical knowledge and ideas to the students.
- To demonstrate the utility and limitations of a variety of powerful calculational techniques and to provide a deeper understanding of the mathematics underpinning theoretical physics.
- To find the solution through programming languages.
- To write the coding for physical problems

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. communicate mathematical and physical knowledge and ideas to the students.
2. demonstrate the utility and limitations of a variety of powerful calculation techniques
3. provide a deeper understanding of the mathematics underpinning theoretical physics.
4. Write algorithm of numerical problems.
5. Analytical thinking and correlation of the problems.
6. Understand the interpretation of physical problems.

ANY SIX EXPERIMENTS

Topics	Descriptions with Applications
Introduction and Overview	Computer architecture and organization, memory and Input/output devices
Basics of scientific computing algorithms, Sequence, Selection and	Binary and decimal arithmetic, Floating point numbers, Repetition, single and double precision arithmetic, underflow and overflow - emphasize the importance of making equations in terms of dimensionless variables, Iterative methods
Errors and error Analysis	Truncation and roundoff errors, Absolute and relative errors, Floating point computations
	Introduction to Programming, constants, variables and data types, operators and Expressions, I/O

Review of C & C++	statements, scanf and printf, cin and cout ,Manipulators for data formatting, Control statements (decision making and looping statements)
Programming fundamentals	(<i>if-statement, if-else statement, nested if statement, else-if statement, ternary operator, goto statement, switch statement, unconditional and conditional looping, while and do while loop, for loop, nested loops, break and continue statements</i>). Arrays (1D and 2D) and strings, user defined functions, Structures and Unions, Idea of classes and objects
Programs: using C/C++ language	Sum and average of a list of numbers, largest of a given list of numbers and its location in the list, sorting of numbers in ascending descending order, Binary search
Random number generation	Area of circle, area of square, volume of sphere, value of pi
Solution of Algebraic and Transcendental equations by Bisection, Newton Raphson and Secant methods	Solution of linear and quadratic equation, solving
Interpolation by Newton Gregory Forward and Backward difference formula, Error estimation of linear interpolation	Evaluation of trigonometric functions e.g. <i>sin</i> , <i>cos</i> , <i>tan</i> etc
Numerical differentiation (Forward and Backward difference formula) and Integration (Trapezoidal and Simpson rules), Monte Carlo method	Given Position with equidistant time data calculate velocity and acceleration and vice versa. Find the area of BH Hysteresis loop
Solution of Ordinary Differential Equations (ODE) First order Differential	First order differential equation Radioactive decay Current in RC, LC circuits with DC source

equation Euler, modified Newton's law of cooling
Euler and Runge-Kutta (RK) Classical equations of motion
second and fourth order
methods

Suggested Books

1. Introduction to Numerical Analysis, S.S. Sastry, 5th Edn., 2012, PHI Learning Pvt. Ltd. Schaum's Outline of Programming with C++. J.Hubbard, 2000, McGraw- Hill Pub.
2. Numerical Recipes in C⁺⁺: The Art of Scientific Computing, W.H. Press et.al., 2nd Edn., 2013, Cambridge University Press.
3. A first course in Numerical Methods, U.M. Ascher & C. Greif, 2012, PHI Learning.
4. An Introduction to computational Physics, T.Pang, 2nd Edn., 2006, Cambridge Univ. Press

17LSU201

தமிழ் இரண்டாம் தாள்

SEMESTER – II

L T P C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது) 4 - - 4

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு – I: பக்தி இலக்கியம்

(10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம், வளர்ச்சி, வரலாறு.

1. சைவம் - பெரியபுராணம் - திருமூலநாயனார் புராணம்.
2. வைணவம் - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு – II : சங்க இலக்கியம் : (15 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). எட்டுத்தொகை

நற்றிணை : பிரசம் கலந்த – பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை – குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு –உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்தொடி கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் –பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு முருகன் இருப்பிடங்கள் – ‘சிறுதினை மலரொடு’ என்பதிலிருந்துதொடங்கி, ‘அறிந்தவாறே’ என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – ‘தெய்வம் சான்ற’ என்பதிலிருந்து தொடங்கி, ‘நல்குமதி’ என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம்

(6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – கண்ணகியின் சிறப்பு: ‘நாகநீள் நகரொடு’ என்பதிலிருந்து தொடங்கி, ‘கண்ணகி என்பாண் மன்னோ’ என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: 'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: 'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை

(10 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி

(7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

	SEMESTER – II
ELECTRICITY AND MAGNETISM	L T P C
17PHU201	5 - - 5

Course Objectives

- To establish grounding in electromagnetism in preparation for more advanced courses.
- The major concepts covered are: the abstraction from forces to fields using the examples of the gravitational, electric and magnetic fields, with some applications; the connection between conservative forces and potential energy; how charges move through electric circuits; the close connection between electricity and magnetism, leading to the discovery of electromagnetic waves.
- To use electromagnetic theory and principles in a wide range of applications.
- To understand the calculus along with physical principles
- To effectively solve problems encountered in everyday life, further study in science, and in the professional world.
- To gain confidence in their ability to apply mathematical methods to understand electromagnetic problems to real-life situations.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Apply knowledge of electricity and magnetism to explain natural physical processes and related technological advances.
2. Gain confidence in their ability to apply mathematical methods to understand electromagnetic problems to real-life situations.
3. Use an understanding of calculus along with physical principles to effectively solve problems encountered in everyday life, further study in science, and in the professional world.
4. Be able to use electromagnetic theory and principles in a wide range of applications.
5. Design experiments and acquire data in order to explore physical principles, effectively communicate results, and critically evaluate related scientific studies.
6. To develop an understanding of the principles of electricity and magnetism.

UNIT – I

Electrostatics: Electrostatic Field, electric flux, Gauss's theorem of electrostatics. Applications of Gauss theorem- Electric field due to point charge, infinite line of charge, uniformly charged spherical shell and solid sphere, plane charged sheet, charged conductor.

UNIT - II

Electric potential as line integral of electric field, potential due to a point charge, electric dipole, uniformly charged spherical shell and solid sphere. Calculation of electric field from potential. Capacitance of an isolated spherical conductor. Parallel plate, spherical and cylindrical condenser. Energy per unit volume in electrostatic field. Dielectric medium, Polarisation, Displacement vector. Gauss's theorem in dielectrics. Parallel plate capacitor completely filled with dielectric.

UNIT - III

Magnetostatics: Biot-Savart's law and its applications- straight conductor, circular coil, solenoid carrying current. Divergence and curl of magnetic field. Magnetic vector potential. Ampere's circuital law.

Magnetic properties of materials: Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Brief introduction of dia-, para- and ferro-magnetic materials.

UNIT – IV

Electromagnetic Induction: Faraday's laws of electromagnetic induction, Lenz's law, self and mutual inductance, L of single coil, M of two coils. Energy stored in magnetic field.

UNIT – V

Maxwell's equations and Electromagnetic wave propagation: Equation of continuity of current, Displacement current, Maxwell's equations, Poynting vector, energy density in electromagnetic field, electromagnetic wave propagation through vacuum and isotropic dielectric medium, transverse nature of EM waves, polarization.

Suggested Books:

1. Electricity and Magnetism, Edward M. Purcell, 1986, McGraw-Hill Education.
Electricity and Magnetism, D C Tayal, 1988, Himalaya Publishing House.
2. University Physics, Ronald Lane Reese, 2003, Thomson Brooks/Cole.
3. D.J.Griffiths, Introduction to Electrodynamics, 3rd Edn, 1998, Benjamin Cummings.
4. D Halliday, R Resnick and J Walker, Fundamentals of Physics (Extended) 6th ed., John Wiley, 2001.
5. <https://ocw.mit.edu/courses/physics/8-02t-electricity-and-magnetism-spring-2005/lecture-notes/>
6. <https://cpb-us-e1.wpmucdn.com/cobblearning.net/dist/e/1364/files/2014/03/Magnets-webquest-answers-2jdtthlu.pdf>

	SEMESTER II
ANALOG SYSTEMS AND APPLICATIONS	L T P C
17PHU202	5 - - 5

Course Objectives

- The objective of this paper is to give information about different analog electronic circuits and their applications.
- To understand operation of semiconductor devices.
- To understand DC analysis and AC models of semiconductor devices.
- To implement mini projects based on concept of electronics circuit concepts.
- To apply concepts for the design of Regulators and Amplifiers.
- To verify the theoretical concepts through laboratory and simulation experiments.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. To apply concepts for the design of Regulators and Amplifiers.
2. Acquire knowledge about how a semiconductor diode rectifies an input ac signal
3. To verify the theoretical concepts through laboratory and simulation experiments.
4. Be able to know about the Field Effect Transistors, their principles and applications
5. Learn how to construct a transistor amplifier and how its gain varies with frequency
6. To implement mini projects based on concept of electronics circuit concepts.

UNIT- I

Semiconductor Diodes: P and N type semiconductors. Energy Level Diagram. Conductivity and Mobility, Concept of Drift velocity. PN Junction Fabrication (Simple Idea). Barrier Formation in PN Junction Diode. Static and Dynamic Resistance. Current Flow Mechanism in Forward and Reverse Biased Diode. Drift Velocity. Derivation for Barrier Potential, Barrier Width and Current for Step Junction. Current Flow Mechanism in Forward and Reverse Biased Diode.

UNIT -II

Two-terminal Devices and their Applications: Rectifier Diode: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers, Calculation of Ripple Factor and Rectification Efficiency, C-filter, Zener Diode and Voltage Regulation. Principle and structure of LEDs, Photodiode and Solar Cell.

Bipolar Junction transistors: n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Current gains α and β Relations between α and β . Load Line analysis of Transistors. DC Load line and Q-point. Physical Mechanism of Current Flow. Active, Cutoff and Saturation Regions. **(6 Lectures)**

UNIT- III

Amplifiers: Transistor Biasing and Stabilization Circuits. Fixed Bias and Voltage Divider Bias. Transistor as 2-port Network. h-parameter Equivalent Circuit. Analysis of a single-stage

CE amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains. Classification of Class A, B & C Amplifiers. Coupled Amplifier: Two stage RC-coupled amplifier and its frequency response.

Feedback in Amplifiers: Effects of Positive and Negative Feedback on Input Impedance, Output Impedance, Gain, Stability, Distortion and Noise.

UNIT- IV

Sinusoidal Oscillators: Barkhausen's Criterion for self-sustained oscillations. RC Phase shift oscillator, determination of Frequency. Hartley & Colpitt oscillators.

Operational Amplifiers (Black Box approach): Characteristics of an Ideal and practical Op-Amp. (IC 741) Open-loop and Closed-loop Gain. Frequency Response. CMRR. Slew Rate and concept of Virtual ground.

UNIT -V

Applications of Op-Amps: Inverting and non-inverting amplifiers, Adder, Subtractor, Differentiator, Integrator, Log amplifier, Zero crossing detector, Wein bridge oscillator.

Conversion: Resistive network (Weighted and R-2R Ladder). Accuracy and Resolution. A/D Conversion (successive approximation)

Suggested Books:

1. Integrated Electronics, J. Millman and C.C. Halkias, 1991, Tata Mc-Graw Hill.
2. Electronics: Fundamentals and Applications, J.D. Ryder, 2004, Prentice Hall.
3. Solid State Electronic Devices, B.G.Streetman & S.K.Banerjee, 6th Edn.,2009, PHI Learning
4. Electronic Devices & circuits, S.Salivahanan & N.S.Kumar, 3rd Ed., 2012, Tata Mc-Graw Hill
5. OP-Amps and Linear Integrated Circuit, R. A. Gayakwad, 4th edition, 2000, Prentice Hall
6. Microelectronic circuits, A.S. Sedra, K.C. Smith, A.N. Chandorkar, 2014, 6th Edn., Oxford University Press.
7. Electronic circuits: Handbook of design & applications, U.Tietze, C.Schenk,2008, Springer
8. Semiconductor Devices: Physics and Technology, S.M. Sze, 2nd Ed., 2002, Wiley India

	MATHEMATICAL PHYSICS – II	SEMESTER II
17PHU203		L T P C
		4 - - 4

Course Objectives

- To provide students with a repertoire of mathematical methods that are essential to the solution of advanced problems encountered in the fields of applied physics and engineering.
- In addition, intended to prepare the student with mathematical tools and techniques that are required in advanced courses offered in the applied physics.
- To contribute innovations and application of basic research.
- To communicate mathematical and physical knowledge and ideas to the students.
- To build connections between mathematical development and conceptual understanding.
- To get introduced to Special functions like Gamma function, Beta function, Delta function, Bessel functions and their recurrence relations

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. To communicate mathematical and physical knowledge and ideas to the students.
2. Get introduced to Special functions like Gamma function, Beta function, Delta function, Bessel functions and their recurrence relations
3. Learn the fundamentals and applications of Complex Variable, Analyticity, Cauchy-Riemann and Cauchy's Integral.
4. Build connections between mathematical development and conceptual understanding.
5. Understand the relationship between observation and theory and their use in building the basic concepts of computing.
6. To contribute innovations and application of basic research.

UNIT- I

Fourier Series: Periodic functions. Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only). Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Complex representation of Fourier series. Expansion of functions with arbitrary period. Expansion of non-periodic functions over an interval. Even and odd functions and their Fourier expansions. Application.

UNIT- II

Special Functions: Hermite and Laguerre Differential Equations. Properties of Legendre Polynomials: Rodrigues Formula, Generating Function, Orthogonality. Simple recurrence relations. Expansion of function in a series of Legendre Polynomials.

UNIT -III

Bessel Functions of the First Kind: Generating Function, simple recurrence relations. Zeros of Bessel Functions ($J_0(x)$ and $J_1(x)$) and Orthogonality.

UNIT -IV

Some Special Integrals: Beta and Gamma Functions and Relation between them. Expression of Integrals in terms of Gamma Functions. Error Function (Probability Integral).

Theory of Errors: Systematic and Random Errors. Propagation of Errors. Normal Law of Errors. Standard and Probable Error. Least-squares fit. Error on the slope and intercept of a fitted line.

UNIT -V

Partial Differential Equations: Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry. Wave equation and its solution for vibrational modes of a stretched string, rectangular and circular membranes. Diffusion Equation.

Suggested Books:

1. Mathematical Methods for Physicists: Arfken, Weber, 2005, Harris, Elsevier.
2. Fourier Analysis by M.R. Spiegel, 2004, Tata McGraw-Hill.
3. Mathematics for Physicists, Susan M. Lea, 2004, Thomson Brooks/Cole.
4. Differential Equations, George F. Simmons, 2006, Tata McGraw-Hill.
5. Partial Differential Equations for Scientists & Engineers, S.J. Farlow, 1993, Dover Pub.
6. Engineering Mathematics, S.Pal and S.C. Bhunia, 2015, Oxford University Press
7. Mathematical methods for Scientists & Engineers, D.A. McQuarrie, 2003, Viva Books

	SEMESTER – II
ELECTRICITY AND MAGNETISM PRACTICAL	L T P C
17PHU211	- - 2 1

Course Objectives

- To establish grounding in electromagnetism in preparation for more advanced courses.
- Assess the contributions of physics to our evolving understanding of global change and sustainability while placing the development of physics in its historical and cultural context.
- To gain practical knowledge on RC Circuit
- To develop skills in the basic concept of electric forces.
- To understand Gauss law and its applications.
- To gain practical knowledge on magnetic moment.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. To gain practical knowledge on RC Circuit
2. Develop skills in the basic concept of electric forces.
3. To understand Gauss law and its applications.
4. To gain practical knowledge on magnetic moment.
5. Determine a Low Resistance by Carey Foster's Bridge
6. Compare capacitances using De'Sauty's bridge

ANY SIX EXPERIMENTS

1. To use a Multimeter for measuring (a) Resistances, (b) AC and DC Voltages, (c) DC Current, and (d) checking electrical fuses.
2. Ballistic Galvanometer:
 - i. Measurement of charge and current sensitivity
 - ii. Measurement of CDR
 - iii. Determine a high resistance by Leakage Method
 - iv. To determine Self Inductance of a Coil by Rayleigh's Method.
3. To compare capacitances using De'Sauty's bridge.
4. Measurement of field strength B & its variation in a Solenoid (Determine dB/dx).
5. To study the Characteristics of a Series RC Circuit.
6. To study a series LCR circuit and determine its (a) Resonant Frequency, (b) Quality Factor
7. To study a parallel LCR circuit and determine its (a) Anti-resonant frequency and (b) Quality factor Q
8. To determine a Low Resistance by Carey Foster's Bridge.
9. To verify the Thevenin and Norton theorem
10. To verify the Superposition, and Maximum Power Transfer Theorem

Suggested Books

1. Advanced Practical Physics for students, B.L.Flint & H.T.Worsnop, 1971, Asia Publishing House.
2. Engineering Practical Physics, S.Panigrahi & B.Mallick, 2015, Cengage Learning India Pvt. Ltd.
3. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

				SEMESTER II
	ANALOG SYSTEMS AND APPLICATIONS PRACTICAL	L	T	P
17PHU212		-	-	2
			1	

Course Objectives

- The objective of this paper is to give information about different analog electronic circuits and their applications.
- To understand operation of semiconductor devices.
- To study the characteristics of a Bipolar Junction Transistor in CE configuration.
- To study the various biasing configurations of BJT for normal class A operation.
- To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.
- To design an inverting amplifier using Op-amp for dc voltage circuits

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand the basics of diode
2. Analyse the characteristics of Bipolar Junction Transistor
3. Perform the procedures for the working of RC-coupled transistor
4. Analyse the relationship between V-I & power curves
5. Understand the applications of Op-amp
6. Develop the ability to analyze and design analog electronic circuits using discrete components.
7. Acquire a basic knowledge in solid state electronics including diodes, MOSFET, BJT, and operational amplifier.

Any 6 experiments

1. To study V-I characteristics of PN junction diode, and Light emitting diode.
2. To study the V-I characteristics of a Zener diode and its use as voltage regulator.
3. Study of V-I & power curves of solar cells, and find maximum power point & efficiency.
4. To study the characteristics of a Bipolar Junction Transistor in CE configuration.
5. To study the various biasing configurations of BJT for normal class A operation.
6. To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.
7. To study the frequency response of voltage gain of a RC-coupled transistor amplifier.
8. To design a Wien bridge oscillator for given frequency using an op-amp.
9. To design a phase shift oscillator of given specifications using BJT.
10. To study the Colpitt's oscillator.
11. To design a digital to analog converter (DAC) of given specifications.
12. To study the analog to digital convertor (ADC) IC.
13. To design an inverting amplifier using Op-amp (741,351) for dc voltage of given gain

14. To design inverting amplifier using Op-amp (741,351) and study its frequency response
15. To design non-inverting amplifier using Op-amp (741,351) & study its frequency response
16. To study the zero-crossing detector and comparator
17. To add two dc voltages using Op-amp in inverting and non-inverting mode
18. To design a precision Differential amplifier of given I/O specification using Op-amp.
19. To investigate the use of an op-amp as an Integrator.
20. To investigate the use of an op-amp as a Differentiator.
21. To design a circuit to simulate the solution of a $1^{st}/2^{nd}$ order differential equation.

Suggested Books:

1. Basic Electronics: A text lab manual, P.B. Zbar, A.P. Malvino, M.A. Miller, 1994, Mc-Graw Hill.
2. OP-Amps and Linear Integrated Circuit, R. A. Gayakwad, 4th edition, 2000, Prentice Hall.
3. Electronic Principle, Albert Malvino, 2008, Tata Mc-Graw Hill.
4. Electronic Devices & circuit Theory, R.L. Boylestad & L.D. Nashelsky, 2009, Pearson

	SEMESTER II
MATHEMATICAL PHYSICS PRACTICAL – II	L T P C
17PHU213	- - 4 2

Course Objectives

This course enables the students to learn

- To solve simultaneous linear algebraic equations using various methods.
- To evaluate definite integrals using numerical techniques.
- To problem-solving through (computer language) programming.
- To write the coding for physical problems
- To solve complex problems through modeling.
- To find the solution for given problems through computer programming.

Course Outcomes (COs)

On Successful completion of this course, the student will be able to

1. Familiarize with the programming environment for numerical methods.
2. Develop proficiency in skills to solve the algebraic equations.
3. Evaluate the definite integrals using computer programming techniques
4. Find the solution through programming.
5. Write the coding for physical problems
6. Solve complex problems through modeling.

Introduction to Numerical computation software Scilab

Introduction to Scilab, Advantages and disadvantages, Scilab environment, Command window, Figure window, Edit window, Variables and arrays, Initialising, variables in Scilab, Multidimensional arrays, Subarray, Special values, Displaying output data, data file, Scalar, and array operations, Hierarchy of operations, Built in Scilab functions, Introduction to plotting, 2D and 3D plotting, Branching Statements and program design, Relational & logical operators, the while loop, for loop, details of loop operations, break & continue statements, nested loops, logical arrays and vectorization User defined functions, Introduction to Scilab functions, Variable passing in Scilab, optional arguments, preserving data between calls to a function, Complex and Character data, string function, Multidimensional arrays an introduction to Scilab file processing, file opening and closing, Binary I/o functions, comparing binary and formatted functions, Numerical methods and developing the skills of writing a program.

Curve fitting, Least square fit:

Goodness Ohms law to calculate R, Hooke's law to calculate spring of fit, standard deviation constant

Solution of Linear system of equations

Solution of mesh equations of electric circuits (3 meshes), by Gauss elimination method and Gauss, Seidal method. Diagonalization of Solution of coupled spring mass systems (3 masses matrices, Inverse of a matrix, Eigen vectors, eigen values problems

Generation of Special functions using User defined functions in Scilab

Generating and plotting Legendre Polynomials Generating and plotting Bessel function

Solution of ODE First order differential equation

First order Differential equation Euler, modified Euler and Runge-Kutta second order methods: Newton's law of cooling, Classical equations of motion

Second order differential equation, Fixed difference method: Second order Differential Equation Harmonic oscillator (no friction) Damped Harmonic oscillator Over damped, Critical damped, Oscillatory, Forced Harmonic oscillator, Transient and Steady state solution

Suggested Books:

1. Mathematical Methods for Physics and Engineers, K.F Riley, M.P. Hobson and S. J. Bence, 3rd ed., 2006, Cambridge University Press
2. Complex Variables, A.S. Fokas & M.J. Ablowitz, 8th Ed., 2011, Cambridge Univ. Press
3. First course in complex analysis with applications, D.G. Zill and P.D. Shanahan, 1940, Jones & Bartlett
4. Computational Physics, D.Walker, 1st Edn., 2015, Scientific International Pvt. Ltd.
5. A Guide to MATLAB, B.R. Hunt, R.L. Lipsman, J.M. Rosenberg, 2014, 3rd Edn., Cambridge University Press
6. Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications: A.V. Wouwer, P. Saucez, C.V. Fernández. 2014 Springer Scilab by example: M. Affouf 2012, ISBN: 978-1

	SEMESTER - II
ENVIRONMENTAL STUDIES	L T P C
17AEC201	4 - - 4

Course Objectives

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To gain knowledge on environmental issues.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
7. Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and / or practitioners.

UNIT-I

Environment: Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT -II**Natural Resources**

Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Fire accidents and prevention.

UNIT -III

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT- IV

Environmental Pollution: Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

UNIT -V

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Suggested Books

1. Tripathy.S.N. & Sunakar Panda. (2004). Fundamentals of Environmental Studies. 2nd Edition. New Delhi: Vrianda Publications Private Ltd.
2. Arvind Kumar . (2004). A Textbook of Environmental Science. New Delhi: APH Publishing Corporation.
3. Verma P.S., & .Agarwal. V.K. (2001). Environmental Biology:Principles of Ecology. New Delhi: S.Chand and Company Ltd.
4. Anubha Kaushik, C.P. & Kaushik, (2004). Perspectives in Environmental Studies. New Delhi: New Age International Pvt. Ltd. Publications.
5. Singh, M.P., Singh, B.S. & Soma S. Dey, (2004). Conservation of Biodiversity and Natural Resources. Delhi: Daya Publishing House.
6. Daniel B.Botkin & Edward A.Keller. (1995). Environmental Science. NewYork: John Wiley and Sons, Inc.
7. Uberoi, N.K., (2005). Environmental Studies, New Delhi, India: Excel Books Publications.

	SEMESTER - III
THERMAL PHYSICS & STATISTICAL MECHANICS	L T P C
17PHU301	4 - - 4

Course Objectives

- The objective of this course is to give awareness on different laws of thermodynamics and its effect on different aspects in life.
- The aim of statistical mechanics is to give knowledge on the laws of classical thermodynamics for macroscopic systems using the properties of its atomic particles.
- To apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.
- To apply the concepts and laws of thermodynamics to solve problems in thermodynamic systems such as gases, heat engines and refrigerators etc.
- To give knowledge on the statistical mechanics and explain the applications of thermodynamics.
- To provide the correlation of thermodynamical problems with statistical concepts.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Identify and describe the statistical nature of concepts and laws in thermodynamics, in particular: entropy, temperature, chemical potential, Free energies, partition functions.
2. Realize the importance of Thermo dynamical functions and their applications.
3. Statistical physics methods, such as Boltzmann distribution, Gibbs distribution, Fermi-Dirac and Bose-Einstein distributions to solve problems in some physical systems.
4. Become familiar with various thermodynamic process and work done in each of these process.
5. Apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.
6. Apply the concepts and laws of thermodynamics to solve problems in thermodynamic systems such as gases, heat engines and refrigerators etc.

UNIT - I

Laws of Thermodynamics: Thermodynamic Description of system: Zeroth Law of thermodynamics and temperature. First law and internal energy, conversion of heat into work, Various Thermodynamical Processes, Applications of First Law: General Relation between C_P and C_V , Work Done during Isothermal and Adiabatic Processes, Compressibility and Expansion Coefficient, Reversible and irreversible processes, Second law, Entropy, Carnot's cycle & theorem, Entropy changes in reversible and irreversible processes, Entropy-temperature diagrams, Third law of thermodynamics, Unattainability of absolute zero.

UNIT - II

Thermodynamic Potentials: Enthalpy, Gibbs, Helmholtz and Internal Energy functions, Maxwell's relations and applications - Joule-Thompson Effect, Clausius-Clapeyron Equation, Expression for $(C_P - C_V)$, C_P/C_V , TdS equations.

UNIT - III

Kinetic Theory of Gases: Derivation of Maxwell's law of distribution of velocities and its experimental verification, Mean free path (Zeroth Order), Transport Phenomena: Viscosity, Conduction and Diffusion (for vertical case), Law of equipartition of energy (no derivation) and its applications to specific heat of gases; mono-atomic and diatomic gases.

UNIT - IV

Statistical Mechanics: Introduction – Liouville's theorem – Measurement of macro-properties of a thermodynamic system – Ensemble – Microcanonical and Canonical ensembles – Entropy of an ideal gas – microcanonical ensemble – Application of Gibbs canonical ensembles – Fluctuations in thermodynamic variables – Stirling's approximation or Stirling's formula – Relation between entropy and probability – Boltzman theorem.

UNIT – V

Statistical Mechanics: Phase space, Macrostate Thermodynamic probability, Maxwell-Boltzmann Quantum statistics, Fermi-Dirac distribution law, comparison of three statistics. and Microstate, Entropy and law, distribution of velocity, Bose-Einstein distribution law.

Suggested Books:

1. Thermal Physics, S. Garg, R. Bansal and C. Ghosh, 1993, Tata McGraw-Hill. A Treatise on Heat, Meghnad Saha, and B.N. Srivastava, 1969, Indian Press.
2. Heat and Thermodynamics, M.W.Zemasky and R. Dittman, 1981, McGraw Hill Thermodynamics, Kinetic theory & Statistical thermodynamics, F.W.Sears and G.L.Salinger. 1988, Narosa
3. University Physics, Ronald Lane Reese, 2003, Thomson Brooks/Cole.
4. Thermal Physics, A. Kumar and S.P. Taneja, 2014, R. chand Publications.
5. <https://study.com/academy/lesson/introduction-to-thermal-physics.html>.
6. <https://farside.ph.utexas.edu/teaching/sm1/Thermal.pdf>

	SEMESTER – III
PHYSICS OF DEVICES AND COMMUNICATION	L T P C
17PHU302	4 - - 4

Course Objective

- To know about power semiconductor devices frequently used in industries.
- To have an idea about the principle and operation of circuits using semiconductor devices to control various operations.
- To acquaint with industrial and domestic applications of power semiconductor devices.
- To understand the concepts of electronic devices and their communication systems.
- To develop their knowledge on digital communication technology.
- To design the electronic circuits and their block diagrams with number of different electronic components.

Course outcomes

After successful completion of the course, the student is expected to

1. Understand the construction and working of different semiconductor devices.
2. Study about Basics electronics Technology
3. Develop explicit problem-solving strategies that emphasize qualitative analysis steps to describe and clarify the problem.
4. Develop knowledge on design trade-offs in various digital electronic families with a view towards reduced power consumption
5. Realize the importance of different electronic communication systems.
6. Design power electronic circuit for real time application like rectifier and convertor etc.

UNIT-I

Devices: Characteristic and small signal equivalent circuits of UJT and JFET. Metal semiconductor Junction. Metal oxide semiconductor (MOS) device. Ideal MOS and Flat Band voltage. SiO₂-Si based MOS. MOSFET– their frequency limits. Enhancement and Depletion Mode MOSFETS, CMOS. Charge coupled devices. Tunnel diode.

UNIT -II

Power supply and Filters: Block Diagram of a Power Supply, Qualitative idea of C and L Filters. IC Regulators, Line and load regulation, Short circuit protection. Active and Passive Filters, Low Pass, High Pass, Band Pass and band Reject Filters.

Multivibrators: Astable and Monostable Multivibrators using transistors.

UNIT- III

Phase Locked Loop (PLL): Basic Principles, Phase detector (XOR & edge triggered), Voltage Controlled Oscillator (Basics, varactor). Loop Filter– Function, Loop Filter Circuits, transient response, lock and capture. Basic idea of PLL IC (565 or 4046).

Processing of Devices: Basic process flow for IC fabrication, Electronic grade silicon. Crystal plane and orientation. Defects in the lattice. Oxide layer. Oxidation Technique for Si. Metallization technique. Positive and Negative Masks. Optical lithography. Electron lithography. Feature size control and wet anisotropic etching. Lift off Technique. Diffusion and implantation.

UNIT- IV

Digital Data Communication Standards: Serial Communications: RS232, Handshaking, Implementation of RS232 on PC. Universal Serial Bus (USB): USB standards, Types and elements of USB transfers. Devices (Basic idea of UART). Parallel Communications: General Purpose Interface Bus (GPIB), GPIB signals and lines, Handshaking and interface management, Implementation of a GPIB on a PC. Basic idea of sending data through a COM port.

UNIT-V

Introduction to CRO: Block Diagram of CRO. Applications of Oscilloscope: (1) Study of Waveform, (2) Measurement of Voltage, Current, Frequency and Phase Difference.

Power Supply: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers Calculation of Ripple Factor and Rectification Efficiency, Basic idea about capacitor filter, Zener Diode and Voltage Regulation Timer IC: IC 555 Pin diagram and its application as Astable and Monostable Multivibrator.

Suggested Books:

1. Physics of Semiconductor Devices, S.M. Sze & K.K. Ng, 3rd Ed.2008, John Wiley & Sons
2. Electronic devices and integrated circuits, A.K. Singh, 2011, PHI Learning Pvt. Ltd.
3. Op-Amps & Linear Integrated Circuits, R.A.Gayakwad,4 Ed. 2000,PHI Learning Pvt. Ltd
4. Electronic Devices and Circuits, A. Mottershead, 1998, PHI Learning Pvt. Ltd.

	SEMESTER III
ELECTROMAGNETIC THEORY	L T P C
17PHU303	4 - - 4

Course Objective

The aim and objective of the course

- The aim of this course is to provide the students with the fundamental principles of electrical energy (electro- magnetism).
- It is very important to understand the propagation of waves in different media, its transmission and reception.
- To understand the relation between electric and magnetic fields.
- To gain the knowledge on electromagnetic wave propagations.
- To describe simple models for electromagnetic interaction with media
- To experience the wave propagation in different media.

Course Outcome

After successful completion of the course, the student is expected to

1. calculate electric and magnetic fields from stationary and dynamic charge and current distributions.
2. Be able to use electromagnetic wave theory and principles in a wide range of applications.
3. Gain confidence in their ability to apply mathematical methods to understand electromagnetic problems to real-life situations.
4. Solve simple electrostatic boundary problems.
5. Describe simple models for electromagnetic interaction with media
6. Choose adequate models and solution methods for specific problems.

UNIT- I

Maxwell Equations: Review of Maxwell's equations. Displacement Current. Vector and Scalar Potentials. Gauge Transformations: Lorentz and Coulomb Gauge. Boundary Conditions at Interface between Different Media. Wave Equations. Plane Waves in Dielectric Media. Poynting Theorem and Poynting Vector. Electromagnetic (EM) Energy Density. Physical Concept of Electromagnetic Field Energy Density, Momentum Density and Angular Momentum Density.

UNIT -II

EM Wave Propagation in Unbounded Media: Plane EM waves through vacuum and isotropic dielectric medium, transverse nature of plane EM waves, refractive index and dielectric constant, wave impedance. Propagation through conducting media, relaxation time, skin depth. Wave propagation through dilute plasma, electrical conductivity of ionized gases, plasma frequency, refractive index, skin depth, application to propagation through ionosphere.

UNIT -III

EM Wave in Bounded Media: Boundary conditions at a plane interface between two media. Reflection & Refraction of plane waves at plane interface between two dielectric media-Laws of Reflection & Refraction. Fresnel's Formulae for perpendicular & parallel polarization cases, Brewster's law. Reflection & Transmission coefficients. Total internal reflection, evanescent waves. Metallic reflection (normal Incidence).

UNIT -IV

Polarization of Electromagnetic Waves: Description of Linear, Circular and Elliptical Polarization. Propagation of E.M. Waves in Anisotropic Media. Symmetric Nature of Dielectric Tensor. Fresnel's Formula. Uniaxial and Biaxial Crystals. Light Propagation in Uniaxial Crystal. Double Refraction. Polarization by Double Refraction. Nicol Prism. Ordinary & extraordinary refractive indices. Production & detection of Plane, Circularly and Elliptically Polarized Light. Phase Retardation Plates: Quarter-Wave and Half-Wave Plates. Babinet Compensator and its Uses. Analysis of Polarized Light

UNIT -V

Wave Guides: Planar optical wave guides. Planar dielectric wave guide. Condition of continuity at interface. Phase shift on total reflection. Eigenvalue equations. Phase and group velocity of guided waves. Field energy and Power transmission.

Optical Fibres:- Numerical Aperture. Step and Graded Indices (Definitions Only). Single and Multiple Mode Fibres (Concept and Definition Only).

SUGGESTED BOOKS

1. Introduction to Electrodynamics, D.J. Griffiths, 3rd Ed., 1998, Benjamin Cummings.
2. Elements of Electromagnetics, M.N.O. Sadiku, 2001, Oxford University Press.
3. Introduction to Electromagnetic Theory, T.L. Chow, 2006, Jones & Bartlett Learning
4. Fundamentals of Electromagnetics, M.A.W. Miah, 1982, Tata McGraw Hill
5. Electromagnetic field Theory, R.S. Kshetrimayun, 2012, Cengage Learning

	SEMESTER – III
RENEWABLE ENERGY AND ENERGY HARVESTING	L T P C
17PHU304A	3 - - 3

Course Objective

- To understand the various forms of conventional energy resources.
- To learn the present energy scenario and the need for energy conservation
- To explain the concept of various forms of renewable energy
- Give outline division aspects and utilization of renewable energy sources for both domestics and industrial application.
- To provide the awareness and need of renewable energy.
- To describe the uses, needs and applications of various renewable energy sources.

Course Outcome

After successful completion of the course, the student is expected to

1. Describe the environmental aspects of non-conventional energy resources. In Comparison with various conventional energy systems, their prospects and limitations.
2. Understand the concept of hydro energy resources and their classification.
3. Describe the use of solar energy and the various components used in the energy production with respect to applications like - heating, cooling, desalination, power generation, drying, cooking etc.
4. Appreciate the need of Wind Energy and the various components used in energy generation and know the classifications.
5. Understand the concept of Biomass energy resources and their classification, types of biogas Plants- applications.
6. Compare Solar, Wind and bio energy systems, their prospects, Advantages and limitations.

UNIT -I

Fossil fuels and Alternate Sources of energy: Fossil fuels and nuclear energy, their limitation, need of renewable energy, non-conventional energy sources. An overview of developments in Offshore Wind Energy, Tidal Energy, Wave energy systems, solar energy, biomass, biochemical conversion, biogas generation,

UNIT- II

Solar energy: Solar energy, its importance, storage of solar energy, solar pond, non convective solar pond, applications of solar pond and solar energy, solar water heater, flat plate collector, solar distillation, solar cooker, solar green houses, solar cell, absorption air conditioning. Need and characteristics of photovoltaic (PV) systems, PV models and equivalent circuits, and sun tracking systems.

UNIT -III

Wind Energy harvesting: Fundamentals of Wind energy, Wind Turbines and different electrical machines in wind turbines, Power electronic interfaces, and grid interconnection topologies. Ocean Energy: Ocean Energy Potential against Wind and Solar, Wave Characteristics and Statistics, Wave Energy Devices.

Tide characteristics and Statistics, Tide Energy Technologies, Ocean Thermal Energy, Osmotic Power, Ocean Bio-mass.

UNIT - IV

Hydro Energy: Hydropower resources, hydropower technologies, environmental impact of hydro power sources. Piezoelectric Energy harvesting: Introduction, Physics and characteristics of piezoelectric effect, materials and mathematical description of piezoelectricity, Piezoelectric parameters and modeling piezoelectric generators, Piezoelectric energy harvesting applications, Human power.

UNIT - V

Electromagnetic Energy Harvesting: Linear generators, physics mathematical models, recent applications, Geothermal Energy: Geothermal Resources, Geothermal Technologies. Carbon captured technologies, cell, batteries, power consumption, Environmental issues and Renewable sources of energy, sustainability.

Suggested Books:

1. Non-conventional energy sources, B.H. Khan, McGraw Hill
2. Solar energy, Suhas P Sukhative, Tata McGraw - Hill Publishing Company Ltd.
3. Renewable Energy, Power for a sustainable future, Godfrey Boyle, 3rd Edn., 2012, Oxford University Press.
4. Renewable Energy, 3rd Edition,
5. Solar Energy: Resource Assessment Handbook, P Jayakumar, 2009
6. J.Balfour, M.Shaw and S. Jarosek, Photovoltaics, Lawrence J Goodrich (USA).
7. <https://www.edfenergy.com/for-home/energywise/renewable-energy-sources>
8. <https://www.nrdc.org/stories/renewable-energy-clean-facts>
9. <https://www.nationalgeographic.com/environment/energy/reference/renewable-energy/>

	SEMESTER – III
PHYSICS WORKSHOP SKILL	L T P C
17PHU304B	3 - - 3

Course Objectives:

The objective of this course is

- To enable the students to familiar and experience with various mechanical and electrical tools through hands-on mode.
- To extend their skill on workshop tools and their usages.
- To apply their knowledge on making new materials by using various operating machines.
- To develop their knowledge about household electrical appliances, electric shock, etc.
- To use their knowledge towards industries.
- To think and correlate the physics of engineering materials and their applications.

Course outcome

After successful completion of the course, the student is expected to

1. Acquire knowledge about various types of wiring systems, wiring tools, lighting & wiring accessories, wiring estimation & costing, etc.
2. To get familiarized with the welding process.
3. Understand the concept of machining, forming and welding process.
4. Develop knowledge on Operation of oscilloscope.
5. Acquire knowledge about household electrical appliances, electric shock, etc.
6. To get familiarized with the properties of different materials- metals and non metals

UNIT -I

Introduction: Measuring units. conversion to SI and CGS. Familiarization with meter scale, Vernier calliper, Screw gauge and their utility. Measure the dimension of a solid block, volume of cylindrical beaker/glass, diameter of a thin wire, thickness of metal sheet, etc. Use of Sextant to measure height of buildings, mountains, etc.

UNIT -II

Mechanical Skill: Concept of workshop practice. Overview of manufacturing methods: casting, foundry, machining, forming and welding. Types of welding joints and welding defects. Common materials used for manufacturing like steel, copper, iron, metal sheets, composites and alloy, wood.

UNIT- III

Concept of machine processing, introduction to common machine tools like lathe, shaper, drilling, milling and surface machines. Cutting tools, lubricating oils. Cutting of a metal sheet using blade. Smoothing of cutting edge of sheet using file. Drilling of holes of different diameter in metal sheet and wooden block. Use of bench vice and tools for fitting. Make funnel using metal sheet.

UNIT -IV

Electrical and Electronic Skill: Use of Multimeter. Soldering of electrical circuits having discrete components (R, L, C, diode) and ICs on PCB. Operation of oscilloscope. Making regulated power supply. Timer circuit, Electronic switch using transistor and relay.

UNIT -V

Introduction to prime movers: Mechanism, gear system, wheel, Fixing of gears with motor axel. Lever mechanism, Lifting of heavy weight using lever. braking systems, pulleys, working principle of power generation systems. Demonstration of pulley experiment.

Suggested Books:

1. A text book in Electrical Technology - B L Theraja – S. Chand and Company.
2. Performance and design of AC machines – M.G. Say, ELBS Edn.
3. Mechanical workshop practice, K.C. John, 2010, PHI Learning Pvt. Ltd.
4. Workshop Processes, Practices and Materials, Bruce J Black 2005, 3rd Edn., Editor Newnes [ISBN: 0750660732]
5. New Engineering Technology, Lawrence Smyth/Liam Hennessy, The Educational Company of Ireland [ISBN: 0861674480]

		SEMESTER – III
	THERMAL PHYSICS AND	L T P C
17PHU311	STATISTICAL MECHANICS PRACTICAL	- - 4 2

Course Objectives

- The objective of this course is to learn how to apply thermodynamic principles in order to interpret thermodynamic systems and predict their behaviors.
- To determine Stefan's Constant.
- To determine the coefficient of thermal conductivity of Cu by Searle's Apparatus.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.
- To experience the practical difficulties to find the physical constant values.

Course Outcome

After successful completion of the course, the student is expected to

1. Understand the process of thermal conductivity, viscosity and diffusion in gases
2. Able to correlate theory and practical.
3. Understand the basic thermal properties via experiments.
4. Verify the Newton's law.
5. Analyse the characteristics of Bipolar Junction Transistor
6. Understand the applications of thermal conduction materials.
7. Apply the laws of thermodynamics to real physical systems and processes.
8. Apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.

Any 8 Experiments

1. To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.
2. Measurement of Planck's constant using black body radiation.
3. To determine Stefan's Constant.
4. To determine the coefficient of thermal conductivity of Cu by Searle's Apparatus.
5. To determine the Coefficient of Thermal conductivity of Cu by Angstrom's Method.
6. To determine the coefficient of thermal conductivity of a bad conductor by Lee and Charlton's disc method.
7. To determine the temperature co-efficient of resistance by Platinum resistance thermometer.
8. To study the variation of thermo emf across two junctions of a thermocouple with temperature.
9. To record and analyze the cooling temperature of an hot object as a function of time using a thermocouple and suitable data acquisition system
10. To calibrate Resistance Temperature Device (RTD) using Null Method/Off-Balance Bridge

Suggested Books

1. Advanced Practical Physics for students, B.L. Flint & H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, KitabMahal, New Delhi.
4. A Laboratory Manual of Physics for Undergraduate Classes, D.P.Khandelwal, 1985, Vani Publication.

	SEMESTER III
PHYSICS OF DEVICES AND COMMUNICATION	L T P C
17PHU312	- - 4 2
PRACTICAL	

Course Objective

- To know about semiconductor devices frequently used in industries.
- To acquaint industrial and domestic applications of semiconductor devices.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To understand operation of diodes, transistors in order to design basic circuits.
- To design, fabricate and test the different electronic circuit.

Course Outcome

After successful completion of the course, the student is expected to

1. By the end of this subject, students should have acquired reasonable proficiency in the analysis and design of basic electronic circuits.
2. Apply the concepts of basic electronic devices to design various circuits.
3. Understand operation of diodes, transistors in order to design basic circuits.
4. Design small and large signal amplifier circuits for various practical applications.
5. The course as a whole outline some ways of thinking about analog circuits that hopefully will help to develop intuition.
6. Design, fabricate and test small electronic circuit.

Any 8 Experiments

1. To design a power supply using bridge rectifier and study effect of C-filter.
2. To design the active Low pass and High pass filters of given specification.
3. To design the active filter (wide band pass and band reject) of given specification.
4. To study the output and transfer characteristics of a JFET.
5. To design a common source JFET Amplifier and study its frequency response.
6. To study the output characteristics of a MOSFET.
7. To study the characteristics of a UJT and design a simple Relaxation Oscillator.
8. To design an Amplitude Modulator using Transistor.
9. To design PWM, PPM, PAM and Pulse code modulation using ICs.
10. To design an Astable multivibrator of given specifications using transistor.
11. To study a PLL IC (Lock and capture range).
12. To study envelope detector for demodulation of AM signal.
13. Study of ASK and FSK modulator.
14. Glow an LED via USB port of PC.
15. Sense the input voltage at a pin of USB port and subsequently glow the LED connected with another pin of USB port.

SUGGESTED BOOKS

1. Ouseph C.C., U.J. Rao and V. Vijayendran 2007, PRACTICAL Physics and Electronics, S. Viswanathan (Printers & Publishers) Pvt. Ltd., Chennai
2. Singh S.P., 2003, Advanced PRACTICAL Physics – 1, 13th Edition, Pragathi Prakashan, Meerut
3. Singh S.P., 2000, Advanced PRACTICAL Physics – 2, 12th Edition, Pragathi Prakashan, Meerut
4. Ramakant A. Gayakwad, 2002, Op-amp and Linear Integrated Circuits, 4th Edition, Prentice Hall

	SEMESTER III
ELECTROMAGNETIC THEORY PRACTICAL	L T P C
17PHU313	- - 4 2

Course Objective

- The aim of this course is to provide the students by correlating the fundamental principles of electrical energy (electro- magnetism) practically.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To find the value of Boltzman constant.
- To calculate the wavelength and velocity of ultrasonic waves in a liquid by studying the diffraction through ultrasonic grating.
- To differentiate the experimental issues with theoretical aspects.

Course Outcome

After successful completion of the course, the student is expected to

1. find electric and magnetic fields from stationary and dynamic charge and current distributions.
2. Describe simple models for electromagnetic interaction with media
3. Be able to choose adequate models and solution methods for specific problems.
4. Operate the polarimeter to find the polarization behavior of liquid and crystalline materials.
5. Calculate the wavelength of monochromatics source Young's double slit method.
6. Verify the Faraday's law of electromagnetism.

Any 8 experiments

1. To verify the law of Malus for plane polarized light.
2. To determine the specific rotation of sugar solution using Polarimeter.
3. To analyze elliptically polarized Light by using a Babinet's compensator.
4. To study dependence of radiation on angle for a simple Dipole antenna.
5. To determine the wavelength and velocity of ultrasonic waves in a liquid (Kerosene Oil, Xylene, etc.) by studying the diffraction through ultrasonic grating.
6. To study the reflection, refraction of microwaves
7. To study Polarization and double slit interference in microwaves.
8. To determine the refractive index of liquid by total internal reflection using Wollaston's air-film.
9. To determine the refractive Index of (1) glass and (2) a liquid by total internal reflection using a Gaussian eyepiece.
10. To study the polarization of light by reflection and determine the polarizing angle for air-glass interface.
11. To verify the Stefan's law of radiation and to determine Stefan's constant.
12. To determine the Boltzmann constant using V-I characteristics of PN junction diode.

Suggested Books

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, I. Prakash & Ramakrishna, 11th Ed., 2011, Kitab Mahal
4. Electromagnetic Field Theory for Engineers & Physicists, G. Lehner, 2010, Springer

		SEMESTER – III
	RENEWABLE ENERGY AND ENERGY HARVESTING	L T P C
17PHU314A	PRACTICAL	- - 3 1

Course Objective

- To describe the challenges and problems associated with the use of various energy sources, including fossil fuels, with regard to future supply and the environment.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To obtain knowledge on renewable energy sources.
- To experience the needs of renewable energy sources.
- To develop the new concept of renewable energy sources.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate Training modules on Solar energy, wind energy, etc.
2. Convert units of energy-to quantify energy demands and make comparisons among energy uses, resources, and technologies.
3. Collect and organize information on renewable energy technologies as a basis for further analysis and evaluation.
4. Understand the needs of renewable energy sources.
5. Experience the calculation of wind velocity.
6. Study of box type solar cooker.

Any 5 Experiments

1. Fuel value of wood/charcoal.
2. Study of sensible heat storage using liquid.
3. Selective and Non-selective coatings – Determination of Selectivity ratio.
4. Thermal efficiency of liquid – flat plate collector.
5. Study of box type solar cooker.
6. Determination of instantaneous thermal efficiency of parabolic collector.
7. Efficiency and fill factor of solar cells.

Suggested Books:

1. Non conventional Energy sources, G. D. RAI (4th edition), Khanna Publishers, Delhi.
2. Solar Energy, S.P. Sukhatme (second edition), Tata Mc.Graw Hill Ltd, New Delhi.
3. Solar Energy Utilisation, G. D. RAI (5th edition), Khanna Publishers, Delhi.

		SEMESTER – III
	PHYSICS WORKSHOP SKILL	L T P C
17PHU314B	PRACTICAL	- - 3 1

Course Objectives

- To understand concepts of various basic equipments and devices.
- To gain a knowledge and to understand fundamental physical concepts.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To develop the skill on operating the modern machines.
- To enhance their knowledge on foundry tools.

Course Outcomes

After successful completion of the course, the student is expected to

1. Develop skills in assessing the quality of one's own and others' work
2. Develop skills in observation, interpretation, reasoning, synthesis, generalizing, predicting, and questioning as a way to learn new knowledge.
3. Use the multimeters and other electronic kits.
4. Operate the oscilloscope and PCB.
5. Make different shape of materials using foundry tools.
6. Construct the circuit of regulated power supply. Timer circuit, Electronic switch using transistor and relay.

Any 5 Experiments

1. Screw guage, Vernier Calipers, Spherometer, Least count, Zero error, Measurement of thickness of the scale, breadth of scale, radius of curvature of a concave and convex surface.
2. Cutting of a metal sheet using blade. Smoothing of cutting edge of sheet using file. Drilling of holes of different diameter in metal sheet and wooden block.
3. Use of bench vice and tools for fitting. Make funnel using metal sheet.
4. Use of Multimeter. Soldering of electrical circuits having discrete components (R, L, C, diode) and ICs on PCB.
5. Operation of oscilloscope. Making regulated power supply. Timer circuit, Electronic switch using transistor and relay.

Suggested Books:

1. A text book in Electrical Technology - B L Theraja – S. Chand and Company.
2. Performance and design of AC machines – M.G. Say, ELBS Edn.
3. Mechanical workshop practice, K.C. John, 2010, PHI Learning Pvt. Ltd.
4. Workshop Processes, Practices and Materials, Bruce J Black 2005, 3rd Edn., Editor Newnes [ISBN: 0750660732]
5. New Engineering Technology, Lawrence Smyth/Liam Hennessy, The Educational Company of Ireland [ISBN: 0861674480]

	SEMESTER IV
WAVES AND OPTICS	L T P C
17PHU401	4 - - 4

Course Objective

- This course builds the ideas of harmonic motion to cover in depth concept of waves in physics with particular emphasis on light waves as an example.
- The foundation of the course is Fourier theory, which will then be used to understand dispersion of waves, image formation in optics and diffraction and other aspects of Fourier optics.
- Understand how the principle of superposition is applied when two pulses meet
- Define three terms to describe periodic waves: speed, wavelength, and frequency
- Explain the characteristics of transverse and longitudinal waves.
- Identify the relationship between the speed, wavelength, and frequency of a wave.

Course Outcome

After successful completion of the course, the student is expected to

1. To develop an understanding of the principles of optics.
2. Understand linear, time-invariant systems.
3. Understand the role of the wave equation and appreciate the universal nature of wave motion in a range of physical systems
4. To build connections between mathematical development and conceptual understanding.
5. Understand dispersion in waves and model dispersion using Fourier theory.
6. Understand optical phenomena such as polarization, birefringence, interference and diffraction in terms of the wave model.

UNIT - I

Superposition of Two Collinear Harmonic oscillations: Simple harmonic motion (SHM). Linearity and Superposition Principle. (1) Oscillations having equal frequencies and (2) Oscillations having different frequencies (Beats). Superposition of Two Perpendicular Harmonic Oscillations: Graphical and Analytical Methods. Lissajous Figures (1:1 and 1:2) and their uses. Waves Motion- General: Transverse waves on a string. Travelling and standing waves on a string. Normal Modes of a string. Group velocity, Phase velocity. Plane waves. Spherical waves, Wave intensity.

UNIT - II

Sound: Sound waves, production and properties. Intensity and loudness of sound. Decibels. Intensity levels. musical notes. musical scale. Acoustics of buildings (General idea). Wave Optics: Electromagnetic nature of light. Definition and Properties of wave front. Huygens Principle.

UNIT – III

Interference: Interference: Division of amplitude and division of wavefront. Young's Double Slit experiment. Lloyd's Mirror & Fresnel's Biprism. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger Fringes); Fringes of equal thickness (Fizeau Fringes). Newton's Rings: measurement of wavelength and refractive index. Michelson's Interferometer: Construction and working. Idea of form of fringes (no theory needed), Determination of wavelength, Wavelength difference, Refractive index, and Visibility of fringes.

UNIT – IV

Diffraction: Fraunhofer diffraction: Single slit; Double Slit. Multiple slits & Diffraction grating. Fresnel Diffraction: Half-period zones. Zone plate. Fresnel Diffraction pattern of a straight edge, a slit and a wire using half-period zone analysis.

.

UNIT-V

Polarization: Transverse nature of light waves. Plane polarized light – production and analysis. Circular and elliptical polarization. Hygiene's explanation of double refraction, positive and negative uniaxial crystals, quarter and half wave plates, types of polarized light, production and analysis of plane, circularly and elliptically polarized light, optical activity (Sections 20.9,20.17-20.20,20.24 Brijlal, Subramaniam, & Avadhanulu and Ajoy Ghatak)

Suggested Books:

1. Fundamentals of Optics, F.A Jenkins and H.E White, 1976, McGraw-Hill Principles of Optics, B.K. Mathur, 1995, Gopal Printing
2. Fundamentals of Optics, A. Kumar, H.R. Gulati and D.R. Khanna, 2011, R. Chand Publications
3. University Physics. F.W. Sears, M.W. Zemansky and H.D. Young. 13/e, 1986. Addison-Wesley.
4. Pedrotti, Frank L.; Pedrotti, Leno S.; Pedrotti, Leno Matthew, Introduction to optics, 3.ed.: Harlow, Essex: Pearson, 2014.
5. Young, Hugh D.; Freedman, Roger A.; Ford, A. Lewis; Sears, Francis Weston 13th ed., international edition: San Francisco: Pearson Addison Wesley, cop. 2012.
6. <https://www.cleariitmedical.com/2019/05/physics-notes-wave-optics.html>

	SEMESTER – IV
NUCLEAR AND PARTICLE PHYSICS	L T P C
17PHU402	4 - - 4

Course Objective

- This is a basic course in Physics which deals with the phenomena taking place in the nuclear domain. Students will be given an insight into the dimensions of a nucleus.
- The aim is to tell them about the stability of nucleus and various other properties.
- The students will learn about various types of radiations and their interaction with matter.
- Students will learn the methods to find the mass and charge of any nucleus by using some instruments.
- To gain knowledge in the content areas of nuclear and particle physics.
- Students will learn the concept of nuclear reactions.

Course Outcomes

After successful completion of the course, the student is expected to

1. Determine the charge, mass of any nucleus by using various spectrographs.
2. They are able to understand the size of nucleus and all its properties.
3. Develop and communicate analytical skills in subatomic physics.
4. This course has led the students to understand interaction of various types of radiation with matter which they observe in their daily life. It's easy for them now to relate the theory to practical.
5. Acquire knowledge in the content areas of nuclear and particle physics, focusing on concepts that are commonly used in this area.
6. Students now know various methods of accelerating various types of particles to perform scattering experiments.

UNIT- I

General Properties of Nuclei: Constituents of nucleus and their Intrinsic properties, quantitative facts about size, mass, charge density (matter energy), binding energy, average binding energy and its variation with mass number, main features of binding energy versus mass number curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excited states.

UNIT- II

Nuclear Models: Liquid drop model approach, semi empirical mass formula and significance of various terms, condition of nuclear stability. Two nucleon separation energies, Fermi gas model (degenerate fermion gas, nuclear symmetry potential in Fermi gas), evidence for nuclear shell structure, nuclear magic numbers, basic assumption of shell model, concept of mean field, residual interaction, concept of nuclear force.

UNIT- III

Nuclear Reactions: Nuclear fission - Energy released in fission - Bohr and Wheeler's theory of nuclear fission - Chain reaction - Multiplication factor - Natural uranium and chain reaction - Design of nuclear reactor - Breeder reactor - Nuclear fusion - Source of stellar energy - Thermonuclear reactions - Transuranic elements.

Ionization chamber – Geiger-Muller counter – Proportional counter – Wilson's cloud chamber – Bubble chamber – Their principles and working.

UNIT -IV

Nuclear Reactions: Conservation Laws, kinematics of reactions, Q-value, reaction rate, reaction cross section, Concept of compound and direct reaction, resonance reaction, Coulomb scattering (Rutherford scattering).

UNIT- V

Particle physics: Particle interactions; basic features, types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, parity, baryon number, Lepton number, Isospin, Strangeness and charm, concept of quark model.

Suggested Books:

1. Introductory nuclear Physics by Kenneth S.Krane (Wiley India Pvt. Ltd., 2008).
Concepts of nuclear physics by Bernard L.Cohen.(Tata Mcgraw Hill, 1998).
2. Introduction to the physics of nuclei & particles, R.A.Dunlap. (Thomson Asia, 2004)
3. Introduction to Elementary Particles, D. Griffith, John Wiley & Sons
4. Radiation detection and measurement, G.F. Knoll (John Wiley & Sons, 2000)
5. Nuclear and Particle Physics, Axel Maas, Lecture in SS 2016 at the KFU Graz.
6. Nuclear and Particle Physics, B. R. Martin, Online ISBN:9780470035474, 2006 John Wiley & Sons, Ltd.
7. <https://www.springer.com/gp/physics/particle-nuclear-physics>
8. <https://iopscience.iop.org/book/978-0-7503-1140-3>
9. <https://www.wiley.com/en-us/Nuclear+and+Particle+Physics%3A+An+Introduction-p-9780470035474>.

	SEMESTER IV
DIGITAL SIGNAL PROCESSING	L T P C
17PHU403	4 - - 4

Course Objective

- Digital signal processing has lot of applications in different fields of life.
- This paper is to give knowledge to students about the theory of signal processing and the different methods involved in it.
- Apply the principles of discrete-time signal analysis to perform various signal operations
- Apply the principles of z-transforms to finite difference equations.
- Apply the principles of Fourier transform analysis to describe the frequency characteristics of discrete-time signals and systems
- To understand the digital filters and their classifications based on the response, design and algorithm.

Course Outcome

After successful completion of the course, the student is expected to

1. Fundamental classification of signals and systems based on the parameters which define them.
2. Concept of Discrete-Time Fourier Transform and Z-transform on signals and its properties.
3. Concept of Discrete Fourier Transform, different convolution techniques, filters and their classifications.
4. Fluency in using Fast Fourier Transform.
5. Understanding of Digital Filters and their classifications based on the response, design and algorithm.
6. Signal generation, realization of systems and finding their transfer function, characterization using pole-zero plots and designing digital filters using Scilab simulations.

UNIT- I

Discrete-Time Signals and Systems: Classification of Signals, Transformations of the Independent Variable, Periodic and Aperiodic Signals, Energy and Power Signals, Even and Odd Signals, Discrete-Time Systems, System Properties. Impulse Response, Convolution Sum; Graphical Method; Analytical Method, Properties of Convolution; Commutative; Associative; Distributive; Shift; Sum Property System Response to Periodic Inputs, Relationship Between LTI System Properties and the Impulse Response; Causality; Stability; Invertibility, Unit Step Response.

UNIT- II

Discrete-Time Fourier Transform: Fourier Transform Representation of Aperiodic Discrete-Time Signals, Periodicity of DTFT, Properties; Linearity; Time Shifting; Frequency Shifting; Differencing in Time Domain; Differentiation in Frequency Domain; Convolution Property.

UNIT-III

The z -Transform: Bilateral (Two-Sided) z -Transform, Inverse z -Transform, Relationship Between z -Transform and Discrete-Time Fourier Transform, z -plane, Region-of-Convergence; Properties of ROC, Properties; Time Reversal; Differentiation in the z -Domain; Power Series Expansion Method (or Long Division Method); Analysis and Characterization of LTI Systems; Transfer Function and Difference-Equation System. Solving Difference Equations.

UNIT-IV

Filter Concepts: Phase Delay and Group delay, Zero-Phase Filter, Linear-Phase Filter, Simple FIR Digital Filters, Simple IIR Digital Filters, All pass Filters, Averaging Filters, Notch Filters.

Discrete Fourier Transform: Frequency Domain Sampling (Sampling of DTFT), The Discrete Fourier Transform (DFT) and its Inverse, DFT as a Linear transformation, Properties; Periodicity; Linearity; Circular Time Shifting; Circular Frequency Shifting.

UNIT-V

Fast Fourier Transform: Direct Computation of the DFT, Symmetry and Periodicity, Properties of the Twiddle factor (W_N), Radix-2 FFT Algorithms; Decimation-In-Time (DIT) FFT Algorithm; Decimation-In-Frequency (DIF) FFT Algorithm, Inverse DFT Using FFT Algorithms.

Realization of Digital Filters: Non-Recursive and Recursive Structures, Canonic and Non-Canonic Structures, Equivalent Structures (Transposed Structure), FIR Filter structures; Direct-Form; Cascade-Form; Basic structures for IIR systems; Direct-Form I.

Suggested Books:

1. Digital Signal Processing, Tarun Kumar Rawat, 2015, Oxford University Press, India
2. Digital Signal Processing, S. K. Mitra, McGraw Hill, India.
3. Modern Digital and Analog Communication Systems, B.P. Lathi, 1998, 3rd Edn. Oxford University Press.
4. Fundamentals of Digital Signal processing using MATLAB, R.J. Schilling and S.L. Harris, 2005, Cengage Learning.
5. Fundamentals of signals and systems, P.D. Cha and J.I. Molinder, 2007, Cambridge University Press.
6. Proakis, John G. Digital signal processing: principles algorithms and applications. Pearson Education India.
7. Hayes, Monson H. Digital signal processing Tata McGraw-Hill edition 2004
8. Digital Signal Processing Principles Algorithm & Applications, J.G. Proakis and D.G. Manolakis, 2007, 4th Edn., Prentice Hall.
9. Digital Signal Processing: Principles, Algorithms, and Applications by J. G. Proakis and D. G. Manolakis.
10. <https://www.sciencedirect.com/book/9780750689762/digital-signal-processing>.

	SEMESTER IV
BASIC INSTRUMENTATION SKILL	L T P C
17PHU404A	3 - - 3

Course Objectives

- This course is to get exposure with various aspects of instruments and their usage through hands-on mode.
- To impart physical measurement skills.
- To make the students understand coherence between theoretical and practical measurement.
- Identify the signals and systems.
- To use the techniques, skills and modern technical tools necessary for technical or engineering practice.
- The primary objective of this course is to provide a thorough understanding and working knowledge of design, implementation and analysis of instruments.

Course Outcome

After successful completion of the course, the student is expected to

1. Develop skills to impart practical knowledge in real time solutions.
2. Understand principle, concept, working and application of new technology and comparison of results with theoretical calculations.
3. Understand the terminology used in various instruments.
4. Gain knowledge of new concept in the solution of practical oriented problems and to understand more deep knowledge about the solution to theoretical problems.
5. Connect concepts with the instruments to enhance understanding.
6. Understand measurement technology, usage of new instruments and real time applications in engineering studies.

UNIT-I

Basic of Measurement: Instruments accuracy, precision, sensitivity, resolution range etc. Errors in measurements and loading effects. **Multimeter:** Principles of measurement of dc voltage and dc current, ac voltage, ac current and resistance. Specifications of a multimeter and their significance.

UNIT- II

Electronic Voltmeter: Advantage over conventional multimeter for voltage measurement with respect to input impedance and sensitivity. Principles of voltage, measurement (block diagram only). Specifications of an electronic Voltmeter/ Multimeter and their significance. **AC millivoltmeter:** Type of AC millivoltmeters: Amplifier- rectifier, and rectifier- amplifier. Block diagram ac millivoltmeter, specifications and their significance.

UNIT- III

Cathode Ray Oscilloscope: Block diagram of basic CRO. Construction of CRT, Electron gun, electrostatic focusing and acceleration (Explanation only– no mathematical treatment), brief discussion on screen phosphor, visual persistence & chemical composition. Time base operation, synchronization. Front panel controls. Specifications of a CRO and their significance.

UNIT- IV

CRO Measurement: Use of CRO for the measurement of voltage (dc and ac frequency, time period. Special features of dual trace, introduction to digital oscilloscope, probes. Digital storage Oscilloscope: Block diagram and principle of working.

Signal Generators and Analysis Instruments: Block diagram, explanation and specifications of low frequency signal generators. pulse generator, and function generator. Brief idea for testing, specifications. Distortion factor meter, wave analysis.

UNIT- V

Impedance Bridges & Q-Meters: Block diagram of bridge. working principles of basic (balancing type) RLC bridge. Specifications of RLC bridge. Block diagram & working principles of a Q- Meter. Digital LCR bridges.

Digital Instruments: Principle and working of digital meters. Comparison of analog & digital instruments. Characteristics of a digital meter. Working principles of digital voltmeter.

Digital Multimeter: Block diagram and working of a digital multimeter. Working principle of time interval, frequency and period measurement using universal counter/ frequency counter, time- base stability, accuracy and resolution.

SUGGESTED BOOKS

1. A text book in Electrical Technology - B L Theraja - S Chand and Co.
2. Performance and design of AC machines - M G Say ELBS Edn.
3. Digital Circuits and systems, Venugopal, 2011, Tata McGraw Hill.
4. Logic circuit design, Shimon P. Vingron, 2012, Springer.
5. Digital Electronics, Subrata Ghoshal, 2012, Cengage Learning.
6. Electronic Devices and circuits, S. Salivahanan & N. S.Kumar, 3rd Ed., 2012, Tata Mc-Graw Hill
7. Electronic circuits: Handbook of design and applications, U.Tietze, Ch.Schenk, 2008, Springer
8. Electronic Devices, 7/e Thomas L. Floyd, 2008, Pearson India

	SEMESTER IV
RADIATION SAFETY	L T P C
17PHU404B	3 - - 3

Course Objective

- To identify the parts of the x-ray machine and explain their purpose and function.
- Explain how x-rays are produced and how they travel.
- Compare the effects that x-radiation has on a variety of biological and non-biological materials.
- Describe the spectrum of electromagnetic radiation.
- The goal is for the students to develop a basic knowledge of the methods employed in veterinary hospitals and clinics to protect employees and the veterinarians themselves against radiation exposure.
- Discuss the difference between a rotating anode and a fixed anode.
- Discuss which types of machines today have fixed and which have rotating anodes.

Course Outcomes

After successful completion of the course, the student is expected to

1. List and describe the function the parts of the x-ray machine
2. Describe the spectrum of electromagnetic radiation.
3. Understand the terminology used in radiation safety.
4. Gain knowledge of new concept in the field of radiation.
5. They are able to understand the Interaction of Radiation with matter.
6. Impact knowledge on different radiation detector.

UNIT- I

Basics of Atomic and Nuclear Physics: Basic concept of atomic structure; X rays characteristic and production; concept of bremsstrahlung and auger electron, The composition of nucleus and its properties, mass number, isotopes of element, spin, binding energy, stable and unstable isotopes, law of radioactive decay, Mean life and half life, basic concept of alpha, beta and gamma decay, concept of cross section and kinematics of nuclear reactions, types of nuclear reaction, Fusion, fission.

UNIT -II

Interaction of Radiation with matter: Types of Radiation: Alpha, Beta, Gamma and Neutron and their sources, sealed and unsealed sources, **Interaction of Photons** - Photo-electric effect, Compton Scattering, Pair Production, Linear and Mass Attenuation Coefficients, **Interaction of Charged Particles:** Heavy charged particles - Beth-Bloch Formula, Scaling laws, Mass Stopping Power, Range, Straggling, Channeling and Cherenkov radiation. Beta Particles- Collision and Radiation loss (Bremsstrahlung), **Interaction of Neutrons**- Collision, slowing down and Moderation.

UNIT -III

Radiation detection and monitoring devices: Radiation Quantities and Units: Basic idea of different units of activity, KERMA, exposure, absorbed dose, equivalent dose, effective dose, collective equivalent dose, Annual Limit of Intake (ALI) and derived Air Concentration (DAC).

UNIT -IV

Radiation detection: Basic concept and working principle of gas detectors (Ionization Chambers, Proportional Counter, Multi-Wire Proportional Counters (MWPC) and Gieger Muller Counter), Scintillation Detectors (Inorganic and Organic Scintillators), Solid States Detectors and Neutron Detectors, Thermo luminescent Dosimetry.

UNIT- V

Radiation safety management: Biological effects of ionizing radiation, Operational limits and basics of radiation hazards evaluation and control: radiation protection standards, International Commission on Radiological Protection (ICRP) principles, justification, optimization, limitation, introduction of safety and risk management of radiation. Nuclear waste and disposal management. Brief idea about Accelerator driven Sub-critical system (ADS) for waste management.

Suggested Books:

1. W.E. Burcham and M. Jobes – Nuclear and Particle Physics – Longman (1995)
2. G.F.Knoll, Radiation detection and measurements
3. Thermoluminescence Dosimetry, Mcknlly, A.F., Bristol, Adam Hilger (Medical Physics Handbook 5)
4. W.J. Meredith and J.B. Massey, “Fundamental Physics of Radiology”. John Wright and Sons, UK, 1989.
5. J.R. Greening, “Fundamentals of Radiation Dosimetry”, Medical Physics Hand Book Series, No.6, Adam Hilger Ltd., Bristol 1981.
6. Practical Applications of Radioactivity and Nuclear Radiations, G.C. Lowental and P.L. Airey, Cambridge University Press, U.K., 2001
7. Martin and S.A. Harbisor, An Introduction to Radiation Protection, John Willey & Sons, Inc. New York, 1981.
8. NCRP, ICRP, ICRU, IAEA, AERB Publications.
9. W.R. Hendee, “Medical Radiation Physics”, Year Book – Medical Publishers Inc. London, 1981.
10. <http://www.barc.gov.in/publications/nl/2003/200301-2.pdf>

17PHU411

WAVES AND OPTICS PRACTICAL**SEMESTER – IV****L T P C****- - 4 2****Course Objective**

- Understand and working of polarimeter.
- Understand the resolving power of different optical instruments.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- Students will be observe the readings practically.
- Students will experience the phenomena of reflection, refraction, etc.,

Course Outcomes

After successful completion of the course, the student is expected to

1. Gain knowledge on various theories of light.
2. Acquire skills to identify and apply formulas of optics and wave physics.
3. Understand the properties of light like reflection, refraction, interference, and diffraction etc.,
4. Understand the applications of diffraction and polarization.
5. Determine the different optical properties by using various apparatus.
6. Know the importance of optical materials in the industrials.

Any 8 Experiments

1. To investigate the motion of coupled oscillators
2. To determine the Frequency of an Electrically Maintained Tuning Fork by Melde's Experiment and to verify $\lambda^2 - T$ Law.
3. To study Lissajous Figures
4. Familiarization with Schuster's focussing; determination of angle of prism.
5. To determine the Refractive Index of the Material of given Prism using Na Light.
6. To determine Dispersive Power of the Material of a given Prism using Hg Light
7. To determine the value of Cauchy Constants of a material of a prism.
8. To determine the Resolving Power of a Prism.
9. To determine wavelength of sodium light using Fresnel Biprism.
10. To determine wavelength of sodium light using Newton's Rings.
11. To determine the wavelength of Laser light using Diffraction grating.
12. To determine wavelength of (1) Sodium and (2) Mercury light using plane diffraction Grating
13. To determine the Resolving Power of a Plane Diffraction Grating.

Suggested Books

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia

Publishing House.

2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

		SEMESTER IV
17PHU412	NUCLEAR AND PARTICLE PHYSICS PRACTICAL	L T P C
		- - 4 2

Course Objectives

- To understand the operation of G.M. counter.
- To study the general properties of nucleus
- To study the nuclear forces and nuclear reactions.
- To analyse the B-H curve and their concepts practically.
- To introduce the concept of elementary particles practically.
- To apply the theoretical knowledge into the experiments and find the solutions.

Course Outcomes

After successful completion of the course, the student is expected to

1. Acquire basic knowledge about nuclear and particle physics
2. Develop the nuclear reactions and neutron physics.
3. Know the calculations of e/m and their applications.
4. Understand the operation of G.M. counter
5. Verify the B-H curve of radiative materials.
6. Understand the difference between Magnetron and Thomson methods.

Any 4 Experiments

1. Young's Modulus – Elliptical Fringes (Cornu's method).
2. Viscosity of liquid – Mayer's oscillating disc method.
3. Michelson Interferometer – Determination of λ and $d\lambda$.
4. ' e/m ' by Thomson's method and Magnetron method.
5. Young's Modulus – Hyperbolic Fringes (Cornu's method).
6. ' e ' by Millikan's method.
7. Young's Double slit – Determination of Wavelength of monochromatic source.
8. G.M.Counter-Absorption co-efficient and inverse square law.

Suggested Books

1. Radiation detection and measurement, G.F. Knoll (John Wiley & Sons, 2000)
2. Nuclear and Particle Physics, Axel Maas, Lecture in SS 2016 at the KFU Graz.
3. Nuclear and Particle Physics, B. R. Martin, Online ISBN:9780470035474, 2006 John Wiley & Sons, Ltd.

17PHU413	DIGITAL SIGNAL PROCESSING PRACTICAL	SEMESTER IV L T P C - - 4 2
----------	-------------------------------------	-----------------------------------

Course Objectives

- Digital signal processing has lot of applications in different fields of life.
- This objective of this paper is to give knowledge to students about the practical knowledge of signal processing and the different methods involved in it.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- Students will learn writing program and perform the analysis using scilab software.
- Write the computer programme and verify the results by manipulation of data.

Course Outcome

After successful completion of the course, the student is expected to

1. Fluency in writing program and perform the analysis using scilab software.
2. Verify the data using scilab programs.
3. Concept of Discrete-Time Fourier Transform and Z-transform on signals and its properties.
4. Concept of Discrete Fourier Transform, different convolution techniques, filters and their classifications.
5. Apply the knowledge on Fourier Transform and verify the results by manipulation of data.
6. Understanding of Digital Filters and their classifications based on the response, design and algorithm.
7. Signal generation, realization of systems and finding their transfer function, characterization using pole-zero plots and designing digital filters using Scilab simulations.
8. Write the program and algorithm of Scilab.

Any 8 Experiments

Scilab based simulations experiments based problems like

1. Write a program to generate and plot the following sequences: (a) Unit sample sequence $\delta(n)$, (b) unit step sequence $u(n)$, (c) ramp sequence $r(n)$, (d) real valued exponential sequence $x(n) = (0.8)^n u(n)$ for $0 \leq n \leq 50$.
2. Write a program to compute the convolution sum of a rectangle signal (or gate function) with itself for $N = 5$

$$x(n) = \text{rect}\left(\frac{n}{2N}\right) = \Pi\left(\frac{n}{2N}\right) = \begin{cases} 1 & -N \leq n \leq N \\ 0 & \text{otherwise} \end{cases}$$

3. An LTI system is specified by the difference equation

$$y(n) = 0.8y(n-1) + x(n]$$
 - (a) Determine $H(e^{j\omega})$
 - (b) Calculate and plot the steady state response $y_{ss}(n)$ to

$$x(n) = \cos(0.5\pi n)u(n)$$
4. Given a casual system

$$y(n) = 0.9y(n-1) + x(n]$$
 - (a) Find $H(z)$ and sketch its pole-zero plot
 - (b) Plot the frequency response $|H(e^{j\omega})|$ and $\angle H(e^{j\omega})$
5. Design a digital filter to eliminate the lower frequency sinusoid of $x(t) = \sin 7t + \sin 200t$. The sampling frequency is $f_s = 500$ Hz. Plot its pole zero diagram, magnitude response, input and output of the filter.
6. Let $x(n)$ be a 4-point sequence:

$$x(n) = \begin{matrix} \{1,1,1,1\} \\ \uparrow \end{matrix} = \begin{cases} 1 & 0 \leq n \leq 3 \\ 0 & \text{otherwise} \end{cases}$$
 Compute the DTFT $X(e^{j\omega})$ and plot its magnitude
 - (a) Compute and plot the 4 point DFT of $x(n)$
 - (b) Compute and plot the 8 point DFT of $x(n)$ (by appending 4 zeros)
 - (c) Compute and plot the 16 point DFT of $x(n)$ (by appending 12 zeros)
7. Let $x(n)$ and $h(n)$ be the two 4-point sequences,

$$x(n) = \begin{matrix} \{1,2,2,1\} \\ \uparrow \end{matrix}$$

$$h(n) = \begin{matrix} \{1,-1,-1,1\} \\ \uparrow \end{matrix}$$
 Write a program to compute their linear convolution using circular convolution.
8. Using a rectangular window, design a FIR low-pass filter with a pass-band gain of unity, cut off frequency of 1000 Hz and working at a sampling frequency of 5 KHz. Take the length of the impulse response as 17.
9. Design an FIR filter to meet the following specifications:

passband edge $F_p = 2$ KHz
 stopband edge $F_s = 5$ KHz
 Passband attenuation $A_p = 2$ dB
 Stopband attenuation $A_s = 42$ dB
 Sampling frequency $F_s = 20$ KHz
10. The frequency response of a linear phase digital differentiator is given by

$$H_d(e^{j\omega}) = j\omega e^{-j\tau\omega} \quad |\omega| \leq \pi$$
 Using a Hamming window of length $M = 21$, design a digital FIR differentiator. Plot the amplitude response.

Suggested Books:

1. Digital Signal Processing, Tarun Kumar Rawat, Oxford University Press, India.
2. A Guide to MATLAB, B.R. Hunt, R.L. Lipsman, J.M. Rosenberg, 2014, 3rd Edn., Cambridge University Press.

-
3. Fundamentals of Digital Signal Processing using MATLAB, R.J.Schilling and S.L. Harris, 2005, Cengage Learning.
 4. Digital Signal Processing, S.K. Mitra, McGraw Hill, India.
 5. Fundamentals of signals and systems, P.D. Cha and J.I. Molinder, 2007, Cambridge University Press.
 6. Simulation of ODE/PDE models with MATLAB, OCTAVE and SCILAB: Scientific and Engineering Applications: A. Vande Wonwer, P. Saucez, C.V. Fernanderz. 2014 Springer ISBN: 978-3319067896.
 7. Scilab by example: M. Affouf, 2012, ISBN: 978-1479203444.
 8. Scilab Image Processing: L.M. Surhone, 2010, Betascript Pub., ISBN: 978-6133459274

		SEMESTER IV
17PHU414A	BASIC INSTRUMENTATION SKILL PRACTICAL	L T P C
		- - 3 1

Course Objectives:

- To familiarize the students with working, design and analysis of basic amplifier circuits.
- To design and analyze wave shaping circuits, rectifiers and power supply circuits
- Introduce the basic concept of qualitative and quantitative analysis of an instruments.
- Study the concept of separation science and its applications.
- To demonstrate their knowledge in designing the control loops for these processes.
- To apply the theoretical knowledge into the experiments and find the solutions.

Course Outcomes:

After successful completion of the course, the student is expected to

1. Handle any kind of process by framing it in block diagram, mathematical model and different process variables.
2. Use modern engineering tools and techniques in the practice of electronic devices.
3. Know all the industrial processes and demonstrate their knowledge in designing the control loops for these processes.
4. Understand the working of various types of amplifiers, oscillators, wave shaping and power supply circuits
5. Design and Analyze the various types of amplifiers, oscillators, wave shaping and power supply circuits for any practical situation.
6. Discuss the terms, principle, instrumentation, operation and applications of instruments.

The test of lab skills will be of the following test items:

1. Use of an oscilloscope.
2. CRO as a versatile measuring device.
3. Circuit tracing of Laboratory electronic equipment,
4. Use of Digital multimeter/VTVM for measuring voltages
5. Circuit tracing of Laboratory electronic equipment,
6. Winding a coil / transformer.
7. Study the layout of receiver circuit.
8. Trouble shooting a circuit
9. Balancing of bridges

Laboratory Exercises:

1. To observe the loading effect of a multimeter while measuring voltage across a
2. low resistance and high resistance.
3. To observe the limitations of a multimeter for measuring high frequency voltage and

currents.

4. To measure Q of a coil and its dependence on frequency, using a Q- meter.
5. Measurement of voltage, frequency, time period and phase angle using CRO.
6. Measurement of time period, frequency, average period using universal counter/ frequency counter.
7. Measurement of rise, fall and delay times using a CRO.
8. Measurement of distortion of a RF signal generator using distortion factor meter.
9. Measurement of R, L and C using a LCR bridge/ universal bridge.

Open Ended Experiments

1. Using a Dual Trace Oscilloscope
2. Converting the range of a given measuring instrument (voltmeter, ammeter)

Suggested Books:

1. A text book in Electrical Technology - B L Theraja - S Chand and Co.
2. Performance and design of AC machines - M G Say ELBS Edn.
3. Digital Circuits and systems, Venugopal, 2011, Tata McGraw Hill.
4. Logic circuit design, Shimon P. Vingron, 2012, Springer.
5. Digital Electronics, Subrata Ghoshal, 2012, Cengage Learning.
6. Electronic Devices and circuits, S. Salivahanan & N. S.Kumar, 3rd Ed., 2012, Tata Mc-Graw Hill
7. Electronic circuits: Handbook of design and applications, U.Tietze, Ch.Schenk, 2008, Springer Electronic Devices, 7/e Thomas L. Floyd, 2008, Pearson India

17PHU414B

RADIATION SAFETY PRACTICAL**SEMESTER IV****L T P C****- - 3 1****Course Objectives:**

- Student will get idea about the basic radiation principle.
- To know the nuclear interactions with matter and detection.
- To identify the Biological effects of radiation and measurement.
- To give the demonstration of Gamma spectrum of Gas Light mantle
- To know the Shielding of nuclear radiation.
- To know the importance of background radiation levels using Radiation meter.

Course Outcomes

After successful completion of the course, the student is expected to

1. Understood the concepts of nuclear radiation.
2. Know the interaction of nuclear radiation with matter.
3. Detect the nuclear radiation.
4. Be familiar with dosimeters and measurements.
5. Know the importance of background radiation levels using Radiation meter.
6. Identify the α particles using reference source & determining its half life using spark counter

Any 4 Experiments

1. Study the background radiation levels using Radiation meter
2. Characteristics of Geiger Muller (GM) Counter:
3. Study of characteristics of GM tube and determination of operating voltage and plateau length using background radiation as source (without commercial source).
4. Study of counting statistics using background radiation using GM counter.
5. Study of radiation in various materials (e.g. KSO₄ etc.). Investigation of possible radiation in different routine materials by operating GM at operating voltage.
6. Study of absorption of beta particles in Aluminum using GM counter.
7. Detection of α particles using reference source & determining its half life using spark counter
8. Gamma spectrum of Gas Light mantle (Source of Thorium)

Suggested Books:

1. W.E. Burcham and M. Jobes – Nuclear and Particle Physics – Longman (1995)
2. G.F.Knoll, Radiation detection and measurements
3. Thermoluminescence Dosimetry, Mcknlly, A.F., Bristol, Adam Hilger (Medical Physics Handbook 5)
4. W.J. Meredith and J.B. Massey, “Fundamental Physics of Radiology”. John Wright and Sons, UK, 1989.

-
5. J.R. Greening, “Fundamentals of Radiation Dosimetry”, Medical Physics Hand Book Series, No.6, Adam Hilger Ltd., Bristol 1981.
 6. Practical Applications of Radioactivity and Nuclear Radiations, G.C. Lowental and P.L. Airey, Cambridge University Press, U.K., 2001
 7. Martin and S.A. Harbisor, An Introduction to Radiation Protection, John Willey & Sons, Inc. New York, 1981.
 8. NCRP, ICRP, ICRU, IAEA, AERB Publications.
 9. W.R. Hendee, “Medical Radiation Physics”, Year Book – Medical Publishers Inc. London, 1981

		SEMESTER V
	COMPUTATIONAL PHYSICS	L T P C
17PHU501A		3 - - 3

Course Objective

- The aim of this course is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics.
- Students should be able to tackle with problems in the physical science using computer and different software.
- Identify and describe the characteristics of various numerical methods.
- Independently program computers using leading-edge tools,
- Formulate and computationally solve a selection of problems in physics,
- Use the tools, methodologies, language and conventions of physics to test and communicate ideas and explanations.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate basic knowledge of numerical methods.
2. Demonstrate basic programming skills.
3. Demonstrate an understanding of the applicability of numerical methods for modeling physical systems and its advantages and disadvantages.
4. Demonstrate the ability to estimate the errors in the use of numerical methods.
5. Demonstrate skills to write and develop simple programs in FORTRAN.
6. Understand the Importance of graphical analysis and its limitations.

UNIT -I

Introduction: Importance of computers in Physics, paradigm for solving physics problems for solution. Usage of linux as an Editor. Algorithms and Flowcharts: Algorithm: Definition, properties and development. Flowchart: Concept of flowchart, symbols, guidelines, types. Examples: Cartesian to Spherical Polar Coordinates, Roots of Quadratic Equation, Sum of two matrices, Sum and Product of a finite series, calculation of $\sin(x)$ as a series, algorithm for plotting (1) lissajous figures and (2) trajectory of a projectile thrown at an angle with the horizontal.

UNIT -II

Scientific Programming: Some fundamental Linux Commands (Internal and External commands). Development of FORTRAN, Basic elements of FORTRAN: Character Set, Constants and their types, Variables and their types, Keywords, Variable Declaration and concept of instruction and program. Operators: Arithmetic, Relational, Logical and Assignment Operators. Expressions: Arithmetic, Relational, Logical, Character and Assignment Expressions. Fortran Statements: I/O Statements (unformatted/formatted), Executable and Non-Executable Statements, Layout of Fortran Program, Format of writing Program and concept of coding, Initialization and Replacement Logic. Examples from physics problems.

UNIT- III

Control Statements: Types of Logic (Sequential, Selection, Repetition), Branching Statements (Logical IF, Arithmetic IF, Block IF, Nested Block IF, SELECT CASE and ELSE IF Ladder statements), Looping Statements (DO-CONTINUE, DO-ENDDO, DO-WHILE, Implied and Nested DO Loops), Jumping Statements (Unconditional GOTO, Computed GOTO, Assigned GOTO) Subscripted Variables (Arrays: Types of Arrays, DIMENSION Statement, Reading and Writing Arrays), Functions and Subroutines (Arithmetic Statement Function, Function Subprogram and Subroutine), RETURN, CALL, COMMON and EQUIVALENCE Statements), Structure, Disk I/O Statements, open a file, writing in a file, reading from a file. Examples from physics problems.

UNIT- IV

Scientific word processing: Introduction to LaTeX: TeX/LaTeX word processor, preparing a basic LaTeX file, Document classes, Preparing an input file for LaTeX, Compiling LaTeX File, LaTeX tags for creating different environments, Defining LaTeX commands and environments, Changing the type style, Symbols from other languages.

Equation representation: Formulae and equations, Figures and other floating bodies, Lining in columns- Tabbing and tabular environment, Generating table of contents, bibliography and citation, Making an index and glossary, List making environments, Fonts, Picture environment and colors, errors.

UNIT- V

Visualization: Introduction to graphical analysis and its limitations. Introduction to Gnuplot. importance of visualization of computational and computational data, basic Gnuplot commands: simple plots, plotting data from a file, saving and exporting, multiple data sets per file, physics with Gnuplot (equations, building functions, user defined variables and functions), Understanding data with Gnuplot

Suggested Books:

1. Introduction to Numerical Analysis, S.S. Sastry, 5th Edn., 2012, PHI Learning Pvt. Ltd.
2. Computer Programming in Fortran 77". V. Rajaraman (Publisher: PHI).
3. LaTeX–A Document Preparation System", Leslie Lamport (Second Edition, Addison-Wesley, 1994).
4. Gnuplot in action: understanding data with graphs, Philip K Janert, (Manning 2010)
5. Schaum's Outline of Theory and Problems of Programming with Fortran, S Lipsdutz and A Poe, 1986Mc-Graw Hill Book Co.
6. Computational Physics: An Introduction, R. C. Verma, et al. New Age International Publishers, New Delhi(1999)
7. A first course in Numerical Methods, U.M. Ascher and C. Greif, 2012, PHI Learning
8. Elementary Numerical Analysis, K.E. Atkinson, 3rd Edn., 2007, Wiley India Edition.
9. https://onlinecourses.nptel.ac.in/noc20_ph20/preview
10. <https://iopscience.iop.org/book/978-1-6817-4896-2>

	WEATHER FORECASTING	SEMESTER V
		L T P C
17PHU501B		3 - - 3

Course Objective:

- The aim of this course is not just to impart theoretical knowledge to the students but to enable them to develop an awareness
- To understand the causes and effects of different weather phenomenon and basic forecasting techniques.
- To know the role of air, water, and wind in weather systems.
- Assess variability and change within this expanded, extended and quality assured network.
- To explain what causes different types of weather.
- To understand the concept of Ecosystems and climate interactions

Course Outcome

After successful completion of the course, the student is expected to

1. Ecosystems and climate interactions
2. Effects of climate change on life cycles
3. Biodiversity, Weather vs climate
4. The greenhouse effect, Treaty rights
5. Traditional ecological knowledge
6. Understand the climate change and related issues.

UNIT -I

Introduction to atmosphere: Elementary idea of atmosphere: physical structure and composition; compositional layering of the atmosphere; variation of pressure and temperature with height; air temperature; requirements to measure air temperature; temperature sensors: types; atmospheric pressure: its measurement; cyclones and anticyclones: its characteristics.

UNIT -II

Measuring the weather: Wind; forces acting to produce wind; wind speed direction: units, its direction; measuring wind speed and direction; humidity, clouds and rainfall, radiation: absorption, emission and scattering in atmosphere; radiation laws.

UNIT- III

Weather systems: Global wind systems; air masses and fronts: classifications; jet streams; local thunderstorms; tropical cyclones: classification; tornadoes; hurricanes.

UNIT -IV

Climate and Climate Change: Climate: its classification; causes of climate change; global warming and its outcomes; air pollution; aerosols, ozone depletion, acid rain, environmental issues related to climate.

UNIT -V

Basics of weather forecasting: Weather forecasting: analysis and its historical background; need of measuring weather; types of weather forecasting; weather forecasting methods; criteria of choosing weather station; basics of choosing site and exposure; satellites observations in weather forecasting; weather maps; uncertainty and predictability; probability forecasts.

Suggested Books:

1. Aviation Meteorology, I.C. Joshi, 3rd edition 2014, Himalayan Books
2. The weather Observers Hand book, Stephen Burt, 2012, Cambridge University Press.
3. Meteorology, S.R. Ghadekar, 2001, Agromet Publishers, Nagpur.
4. Text Book of Agrometeorology, S.R. Ghadekar, 2005, Agromet Publishers, Nagpur.
5. <https://www.sciencedirect.com/science/article/abs/pii/S0065268708603118>
6. https://cimss.ssec.wisc.edu/satmet/modules/7_weather_forecast/wf-1.html
7. <https://www.outdoorproject.com/articles/weather-forecasting-101-how-predict-weather-go>

	ELEMENTS OF MODERN PHYSICS	SEMESTER V
		L T P C
17PHU502A		4 - - 2

Course Objective

- To identify the circumstances, in Modern Physics. Enumerate and understand the postulate of relativity.
- To learn about the speed of light as a natural limit to speed.
- To understand the work of Planck, Bohr, Heisenberg, uncertainty principle and the other features of Quantum Mechanics.
- Acquaintance with basic fields of modern physics
- Ability of searching solutions of physical problems in scientific and technical literature.
- Understanding of physical processes and technology

Course Outcome

After successful completion of the course, the student is expected to

1. Recall and apply knowledge in the areas of optics and waves, special relativity and quantum physics (developing the knowledge capability dimension);
2. Conduct relevant experiments, analyse data and report results in written form (developing the technical capability and communication dimensions).
3. Analyse the plank's constant using different experimental technique.
4. Find the wavelength of any laser sources.
5. Differentiate the interference and diffraction properties by the experiments.
6. Understand the theory and practical knowledge of light and other properties.

UNIT-I

Planck's quantum, Planck's constant and light as a collection of photons; Blackbody Radiation: Quantum theory of Light; Photo-electric effect and Compton scattering. DeBroglie wavelength and matter waves; Davisson-Germer experiment. Wave description of particles by wave packets. Group and Phase velocities and relation between them. Two-Slit experiment with electrons. Probability. Wave amplitude and wave functions.

UNIT-II

Position measurement- gamma ray microscope thought experiment; Wave-particle duality, Heisenberg uncertainty principle (Uncertainty relations involving Canonical pair of variables): Derivation from Wave Packets impossibility of a particle following a trajectory; Estimating minimum energy of a confined particle using uncertainty principle; Energy-time uncertainty principle- application to virtual particles and range of an interaction.

UNIT- III

Two slit interference experiment with photons, atoms and particles; linear superposition principle as a consequence; Matter waves and wave amplitude; Schrodinger equation for non-relativistic particles; Momentum and Energy operators; stationary states; physical interpretation of a wave function, probabilities and normalization; Probability and probability current densities in one dimension.

UNIT-IV

One dimensional infinitely rigid box- energy eigenvalues and eigenfunctions, normalization; Quantum dot as example; Quantum mechanical scattering and tunneling in one dimension- across a step potential & rectangular potential barrier. Size and structure of atomic nucleus and its relation with atomic weight; Impossibility of an electron being in the nucleus as a consequence of the uncertainty principle. Nature of nuclear force, NZ graph, Liquid Drop model: semi-empirical mass formula and binding energy, Nuclear Shell Model and magic numbers.

UNIT- V

Radioactivity: stability of the nucleus; Law of radioactive decay; Mean life and half-life; Alpha decay; Beta decay- energy released, spectrum and Pauli's prediction of neutrino; Gamma ray emission, energy-momentum conservation: electron-positron pair creation by gamma photons in the vicinity of a nucleus.

Suggested Books:

1. Concepts of Modern Physics, Arthur Beiser, 2002, McGraw-Hill.
2. Introduction to Modern Physics, Rich Meyer, Kennard, Coop, 2002, Tata McGraw Hill
3. Introduction to Quantum Mechanics, David J. Griffith, 2005, Pearson Education.
4. Physics for scientists and Engineers with Modern Physics, Jewett and Serway, 2010, Cengage Learning.
5. Modern Physics, G.Kaur and G.R. Pickrell, 2014, McGraw Hill
6. Quantum Mechanics: Theory & Applications, A.K.Ghatak & S.Lokanathan, 2004, Macmillan
7. Modern Physics, J.R. Taylor, C.D. Zafiratos, M.A. Dubson, 2004, PHI Learning.
8. Theory and Problems of Modern Physics, Schaum`s outline, R. Gautreau and W. Savin, 2nd Edn, Tata McGraw-Hill Publishing Co. Ltd.
9. Quantum Physics, Berkeley Physics, Vol.4. E.H.Wichman, 1971, Tata McGraw-Hill Co.
10. Basic ideas and concepts in Nuclear Physics, K.Heyde, 3rd Edn., Institute of Physics Pub. Six Ideas that Shaped Physics: Particle Behave like Waves, T.A.Moore, 2003, McGraw Hill.
11. https://www.arsdcollege.ac.in/wp-content/uploads/2020/04/Presentation_1-11_compressed.pdf

	MEDICAL PHYSICS	SEMESTER V
		L T P C
17PHU502B		4 - - 2

Course Objective

- The objective of the course is to educate and to train students to a competency level sufficient to practice radiation oncology physics independently.
- This prepares the students for clinical practices in radiation therapy (RT) physics through a structured clinical trainings and didactic courses.
- To know the energetic charged particle interactions and transport in matter.
- The program is supervised and mentored by highly qualified clinical practitioners.
- This paper is aimed at giving idea to the students regarding the nature of human body and usage of different radiations for the treatment of body.
- To active participation in clinical research, teaching, and training.

Course Outcomes

After successful completion of the course, the student is expected to

1. Different areas of research in Medical Physics
2. Understand and apply key concepts specific to energy deposition for both ionizing photon interactions and transport in matter
3. Know the energetic charged particle interactions and transport in matter.
4. Understanding the working of a manual optical eye-testing machine
5. Familiarization with the Use of a Vascular Doppler.
6. Realize the real time examples of medical instruments.

UNIT – I

PHYSICS OF THE BODY-I

Basic Anatomical Terminology: Standard Anatomical Position, Planes. Familiarity with terms like- Superior, Inferior, Anterior, Posterior, Medial, Lateral, Proximal and Distal.

Mechanics of the body: Skeleton, forces, and body stability. Muscles and dynamics of body movement. Physics of Locomotors Systems: joints and movements, Stability and Equilibrium. **Energy household of the body:** Energy balance in the body, Energy consumption of the body, Heat losses of the body, Thermal Regulation. **Pressure system of body:** Physics of breathing, Physics of cardiovascular system.

UNIT – II

PHYSICS OF THE BODY-II

Acoustics of the body: Nature and characteristics of sound, Production of speech, Physics of the ear, Diagnostics with sound and ultrasound. **Optical system of the body:** Physics of the eye. **Electrical system of the body:** Physics of the nervous system, Electrical signals and information transfer.

UNIT - III**PHYSICS OF DIAGNOSTIC AND THERAPEUTIC SYSTEMS-I**

X-RAYS: Electromagnetic spectrum, production of x-rays, x-ray spectra, Brehmsstrahlung, Characteristic x-ray. **X-ray tubes & types :** Coolidge tube, x-ray tube design, tube cooling stationary mode, Rotating anode x-ray tube, Tube rating, quality and intensity of x-ray. X-ray generator circuits, half wave and full wave rectification, filament circuit, kilo voltage circuit. Single and three phase electric supply. Power ratings. Types of X-Ray Generator, high frequency generator, exposure timers and switches, HT cables.

UNIT - IV

RADIATION PHYSICS: Radiation units exposure, absorbed dose, units: rad, gray, relative biological effectiveness, effective dose- Rem & Sievert, inverse square law. Interaction of radiation with matter Compton & photoelectric effect, linear attenuation coefficient. **Radiation Detectors:** ionization (Thimble chamber, condenser chamber), chamber. Geiger Muller counter, Scintillation counters and Solid State detectors, TFT.

UNIT - V

MEDICAL IMAGING PHYSICS: Evolution of Medical Imaging, X-ray diagnostics and imaging, Physics of nuclear magnetic resonance (NMR), NMR imaging, MRI Radiological imaging, Ultrasound imaging, Physics of Doppler with applications and modes, Vascular Doppler. Radiography: Filters, grids, cassette, X-ray film, film processing, fluoroscopy. **Computed tomography scanner-** principle and function, display, generations, mammography. Thyroid uptake system and Gamma camera (Only Principle, function and display)

Suggested Books:

1. Medical Physics, J.R. Cameron and J.G.Skofronick, Wiley (1978)
2. Basic Radiological Physics Dr. K. Thayalan - Jayapee Brothers Medical Publishing Pvt. Ltd. New Delhi (2003)
3. Christensen's Physics of Diagnostic Radiology: Curry, Dowdey and Murry Lippincot Williams and Wilkins (1990)
4. Physics of the human body, Irving P. Herman, Springer (2007).
5. Physics of Radiation Therapy : F M Khan - Williams and Wilkins, 3rd edition (2003)
6. The essential physics of Medical Imaging: Bushberg, Seibert, Leidholdt and Boone Lippincot Williams and Wilkins, Second Edition (2002)
7. Handbook of Physics in Diagnostic Imaging: R.S.Livingstone: B.I. Publication Pvt Ltd.
8. The Physics of Radiology-H E Johns and Cunningham.
9. <https://sites.google.com/a/northgeorgia.edu/ngcsu-physics-note-sharing/home/medical>

	MATHEMATICS-I	SEMESTER V
		L T P C
17PHU503		4 - - 4

Course Objectives

This course enables the students to learn

- The concepts of Matrices and their properties.
- Techniques of differentiation and integration.
- The transform of a periodic function.
- The applications of the inverse Laplace transform.
- To know the properties of definite integrals.
- To understand the concept of Beta and Gamma integrals.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Solve simultaneous equations with the help of matrices.
2. Mastery in the concepts of vector and scalar fields.
3. Gain the intellectual knowledge of complex functions and their applications.
4. Acquire fundamental knowledge in the techniques of differentiation.
5. Know the properties of definite integrals.
6. Understand the concept of Beta and Gamma integrals.

UNIT I

Curvature in Cartesian coordinates-centre and radius of curvature in Cartesian and polar forms- Total differentiation

UNIT II

Integration of $\frac{f'(x)}{f(x)}$, $f' \sqrt{f(x)}$, $(px+q)/\sqrt{ax^2+bx+c}$, $(\sqrt{(x-a)/(b-x)})$, $1/(\sqrt{(x-a)/(b-x)})$, $(1/a \cos x + b \sin x + c)$, $1/(a \cos^2 x + b \sin^2 x + c)$, Integration by parts.

UNIT III

Reduction formulae- problems- evaluation of double and triple integrals- applications to calculations of areas and volumes-areas in polar coordinates.

UNIT IV

Change of order of integration in double integral- change of variables in double and triple integrals.

UNIT V

Beta and Gamma integrals-their properties, relation between them- evaluation of multiple integrals using Beta and Gamma functions.

SUGGESTED READINGS

1. S.Narayanan and T.K.M. Pillai. Calculus Vol 1 and Vol 2,Viswanathan Publishers.
2. P.Kandasamy & K.Thilagarathy,Mathematics for BSc .Vol I and. II(2000), S.Chand and Co.
3. Shanthi Narayanan & J.N.Kapoor, A Text book of calculus,S.Chand & Co

17PHU504

CHEMISTRY-I**SEMESTER V****L T P C****4 - - 4****Course Objectives**

- Students will learn about the molecular orbital theory, preparation and properties of inorganic compounds.
- To know the theory of covalent bond, polar effects and stereochemistry of organic compounds.
- Gain knowledge on important industrial chemicals like silicones, fuel gases and fertilizers and their impact on environment.
- Acquire concept on the elements of photochemistry, chemical kinetics and chromatography.
- To understand the nature of bonding in simple molecules.
- To understand the basic concepts in chemistry

Course Outcome

The student understand

1. The molecular orbital theory, preparation and properties of inorganic compounds.
2. Theory of covalent bond, polar effects and stereochemistry of organic compounds.
3. About important of industrial chemicals like silicones, fuel gases.
4. About the fertilizers and their impact on environment.
5. Elements of photochemistry, chemical kinetics and chromatography.
6. About the dyes, chemotherapy and vitamins.

UNIT-I

Chemical Bonding: Molecular orbital theory-linear combination of atomic orbitals-bonding and antibonding molecular orbitals-energy level diagram-bond order- M.O. configuration of H_2 , N_2 and F_2 molecules. Diborane: Preparation, properties and structure. $NaBH_4$: Preparation and uses. Borazole: Preparation and properties. Interhalogen compounds: ICl , BrF_3 , IF_5 - preparation, properties, uses and structure. Basic properties of iodine. Compounds of sulphur: Sodium hydrosulphite- preparation, properties, uses and structure. Per acids of sulphur: Preparation, properties, uses and structure.

UNIT- II

Covalent Bond and Stereoisomerism: Covalent Bond: Orbital overlap, hybridization and geometry of CH_4 , C_2H_4 and C_2H_2 . Polar effects: Inductive effect-electromeric effect-mesomeric effect- steric effect- hyperconjugation. **Stereoisomerism:** Elements of symmetry-polarised light and optical activity-isomerism in tartaric acid-racemisation- resolution-geometrical isomerism of maleic and fumaric acids-keto-enol tautomerism of acetoacetic esters.

UNIT-III

Industrial Chemistry: Silicones: Synthesis, properties and uses. Fuels gases: Natural gas-water gas-semi water gas-carbureted water gas-producer gas- oil gas (Manufacturing details not required).Fertilizers: NPK fertilizer-ammonium sulphate-urea-superphosphate of lime-triple superphosphate- potassium nitrate-ammonium nitrate. Pollution: Water, air and soil pollution-sources and remedies-acid rain-ozone hole-greenhouse effect.

UNIT-IV

Elements of Photochemistry, Chemical Kinetics and Chromatography: Elements of Photochemistry: Photochemical laws-Beer Lambert's law-Grotthuss-Draper law-Stark-Einstein law (statement only). **Chemical Kinetics:** Rate-order-molecularity-pseudo first order reactions-zero order reactions-determination of order of reaction-measurement of order and rates of reactions-effect of temperature on reaction rate-energy of activation. **Chromatography:** Principles and applications of Column, Paper and Thin Layer Chromatography.

UNIT- V

Dyes, Chemotherapy and Vitamins: Dyes: Terms used chromophore, auxochrome, bathochromic shift and hypsochromic shift- classification of dyes- based on chemical structure and application-one example each for azo, triphenylmethane, vat and mordant dyes-preparation.

Chemotherapy: Preparation, uses and mechanism of action sulpha drugs- preparation and uses of prontosil, sulphadiazine and sulphafurazole-structure and uses of pencillins and Chloromycetin. **Vitamins:** Diseases caused by the deficiency of vitamins A, B₁, B₂, C and D- sources of these vitamins.

SUGGESTED BOOKS

1. Thangamani, A. (2018). *Text Book on Allied Chemistry* (1st Edition). Coimbatore: Karpagam Publication.
2. Puri, B.R., Sharma, L. R., & Kalia, K. C. (2017). *Principles of Inorganic Chemistry* (33rd Edition). Jalandar: Vishal Publishing Company.
3. Bahl, A., & Bahl, B.S. (2015). *A Textbook of Organic Chemistry* (21st Revised Edition). New Delhi: S.Chand & Company Pvt. Ltd.
4. Puri, B. R., Sharma, L. R. & Pathania, M. S. (2014). *Elements of Physical Chemistry* (46th Edition). Jalandhar: Vishal Publishing Company.
5. Gopalan, R., & Sundaram, S. (2013). *Allied Chemistry* (III Edition). New Delhi: Sultan Chand & Sons.

	SEMESTER V
COMPUTATIONAL PHYSICS PRACTICAL	L T P C
17PHU511A	- - 3 1

Course Objective

- The aim of this course is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics.
- Both experimental and theoretical physics are incomplete without the option to compute whenever it is necessary.
- The goal of computational physics is not to replace theory or experiment, but to enhance our understanding of physical processes.
- The aim of this course is to lay the grounds for the development of the computational skills.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To understand the applicability of numerical methods for modeling physical systems and its advantages and disadvantages.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate basic knowledge of numerical methods.
2. Demonstrate basic programming skills.
3. Demonstrate an understanding of the applicability of numerical methods for modeling physical systems and its advantages and disadvantages.
4. Solve the problems by computing.
5. Understand the differences of theory, computing and experiments.
6. Solve the complex equations using different software packages.

Hands on exercises

1. To compile a frequency distribution and evaluate mean, standard deviation etc.
2. To evaluate sum of finite series and the area under a curve.
3. To find the product of two matrices
4. To find a set of prime numbers and Fibonacci series.
5. To write program to open a file and generate data for plotting using Gnuplot.
6. Plotting trajectory of a projectile projected horizontally.
7. Plotting trajectory of a projectile projected making an angle with the horizontally.
8. Creating an input Gnuplot file for plotting a data and saving the output for seeing on the screen. Saving it as an eps file and as a pdf file.
9. To find the roots of a quadratic equation.
10. Motion of a projectile using simulation and plot the output for visualization.
11. Numerical solution of equation of motion of simple harmonic oscillator and plot the outputs for visualization.
12. Motion of particle in a central force field and plot the output for visualization.

Suggested Books:

1. Introduction to Numerical Analysis, S.S. Sastry, 5th Edn., 2012, PHI Learning Pvt. Ltd.
2. Computer Programming in Fortran 77". V. Rajaraman (Publisher: PHI).
3. LaTeX—A Document Preparation System", Leslie Lamport (Second Edition, Addison-Wesley, 1994).
4. Gnuplot in action: understanding data with graphs, Philip K Janert, (Manning 2010)
5. Schaum's Outline of Theory and Problems of Programming with Fortran, S Lipsdutz and A Poe, 1986Mc-Graw Hill Book Co.
6. Computational Physics: An Introduction, R. C. Verma, et al. New Age International Publishers, New Delhi(1999)
7. A first course in Numerical Methods, U.M. Ascher and C. Greif, 2012, PHI Learning
8. Elementary Numerical Analysis, K.E. Atkinson, 3rd Edn., 2007 , Wiley India Edition.

	WEATHER FORECASTING PRACTICAL	SEMESTER V
		L T P C
17PHU511B		3 - - 3

Course Objective:

- The aim of this course is not just to impart theoretical knowledge to the students but to enable them to develop an awareness
- To understand the causes and effects of different weather phenomenon and basic forecasting techniques.
- To know the role of air, water, and wind in weather systems.
- Assess variability and change within this expanded, extended and quality assured network.
- To explain what causes different types of weather.
- To understand the concept of Ecosystems and climate interactions

Course Outcome

After successful completion of the course, the student is expected to

1. Know the idea on Ecosystems and climate interactions
2. Know the Effects of climate change on life cycles
3. Know the Biodiversity, Weather vs climate
4. Understand the greenhouse effect, Treaty rights
5. Understand traditional ecological knowledge
6. Understand the importance of weather changes.

Demonstrations and Experiments:

1. Study of synoptic charts & weather reports, working principle of weather station.
2. Processing and analysis of weather data:
3. To calculate the sunniest time of the year.
4. To study the variation of rainfall amount and intensity by wind direction.
5. To observe the sunniest/driest day of the week.
6. To examine the maximum and minimum temperature throughout the year.
7. To evaluate the relative humidity of the day.
8. To examine the rainfall amount month wise.
9. Exercises in chart reading: Plotting of constant pressure charts, surfaces charts, upper wind charts and its analysis.
10. Formats and elements in different types of weather forecasts/ warning (both aviation and non aviation)

Suggested books

1. Text Book of Agrometeorology, S.R. Ghadekar, 2005, Agromet Publishers, Nagpur.
2. <https://www.sciencedirect.com/science/article/abs/pii/S0065268708603118>

6. <https://www.weatheronline.in/weather/maps/city?WMO=43321&CONT=inin&LAND=II&ART=PRE&LEVEL=162&MOD=tab>
7. <https://www.worldweatheronline.com/hwd/>

	SEMESTER V
ELEMENTS OF MODERN PHYSICS PRACTICAL	L T P C
17PHU512A	- - 4 2

Course Objective

- To identify the circumstances, in Modern Physics. Enumerate and understand the postulate of relativity.
- To learn about the speed of light as a natural limit to speed.
- To understand the work of Planck, Bohr, Heisenberg, uncertainty principle and the other features of Quantum Mechanics.
- Acquaintance with basic fields of modern physics
- Ability of searching solutions of physical problems in scientific and technical literature.
- Understanding of physical processes and technology

Course Outcome

After successful completion of the course, the student is expected to

1. Recall and apply knowledge in the areas of optics and waves, special relativity and quantum physics (developing the knowledge capability dimension);
2. Conduct relevant experiments, analyse data and report results in written form (developing the technical capability and communication dimensions).
3. Analyse the plank's constant using different experimental technique.
4. Find the wavelength of any laser sources.
5. Differentiate the interference and diffraction properties by the experiments.
6. Understand the theory and practical knowledge of light and other properties.

Any 8 Experiments

1. Measurement of Planck's constant using black body radiation and photo-detector
2. Photo-electric effect: photo current versus intensity and wavelength of light; maximum energy of photo-electrons versus frequency of light
3. To determine work function of material of filament of directly heated vacuum diode.
4. To determine the Planck's constant using LEDs of at least 4 different colours.
5. To determine the wavelength of H-alpha emission line of Hydrogen atom.
6. To determine the ionization potential of mercury.
7. To determine the absorption lines in the rotational spectrum of Iodine vapour.
8. To determine the value of e/m by (a) Magnetic focusing or (b) Bar magnet.
9. To setup the Millikan oil drop apparatus and determine the charge of an electron.

10. To show the tunneling effect in tunnel diode using I-V characteristics.
11. To determine the wavelength of laser source using diffraction of single slit.
12. To determine the wavelength of laser source using diffraction of double slits.
13. To determine (1) wavelength and (2) angular spread of He-Ne laser using plane diffraction grating

Suggested Books:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, I.Prakash & Ramakrishna, 11th Edn, 2011, Kitab Mahal.

	MEDICAL PHYSICS PRACTICAL	SEMESTER V
		L T P C
17PHU512B		- - 4 2

Course Objective

- The objective of the course is to educate and to train students to a competency level sufficient to practice radiation oncology physics independently.
- This prepares the students for clinical practices in radiation therapy (RT) physics through a structured clinical trainings and didactic courses.
- To know the energetic charged particle interactions and transport in matter.
- The program is supervised and mentored by highly qualified clinical practitioners.
- This paper is aimed at giving idea to the students regarding the nature of human body and usage of different radiations for the treatment of body.
- To active participation in clinical research, teaching, and training.

Course Outcomes

After successful completion of the course, the student is expected to

1. Different areas of research in Medical Physics
2. Understand and apply key concepts specific to energy deposition for both ionizing photon interactions and transport in matter
3. Know the energetic charged particle interactions and transport in matter.
4. Understanding the working of a manual optical eye-testing machine
5. Familiarization with the Use of a Vascular Doppler.
6. Realize the real time examples of medical instruments.

Any 8 experiments

- 1) Understanding the working of a manual Hg Blood Pressure monitor and measure the Blood Pressure.
- 2) Understanding the working of a manual optical eye-testing machine and to learn eye-testing procedure.
- 3) Correction of Myopia (short sightedness) using a combination of lenses on an optical bench/breadboard.
- 4) Correction of Hypermetropia/Hyperopia (long sightedness) using a combination of lenses on an optical bench/breadboard.
- 5) To learn working of Thermoluminescent dosimeter (TLD) badges and measure the background radiation.
- 6) Familiarization with Geiger-Muller (GM) Counter and to measure background radiation.
- 7) Familiarization with Radiation meter and to measure background radiation.
- 8) Familiarization with the Use of a Vascular Doppler.

Suggested Books:

1. Basic Radiological Physics, Dr. K. Thayalan - Jayapee Brothers Medical Publishing Pvt. Ltd. New Delhi (2003)
2. Christensen's Physics of Diagnostic Radiology: Curry, Dowdey and Murry - Lippincot Williams and Wilkins (1990)
3. Physics of Radiation Therapy: F M Khan - Williams and Wilkins, 3rd edition (2003)
4. The essential physics of Medical Imaging: Bushberg, Seibert, Leidholdt and Boone Lippincot Williams and Wilkins, Second Edition (2002)
5. Handbook of Physics in Diagnostic Imaging: Roshan S. Livingstone: B. I. Publications Pvt Ltd.
6. The Physics of Radiology-H E Johns and Cunningham.

17PHU513

MATHEMATICS - I PRACTICAL
SEMESTER V
L T P C
- - 4 2
Course Objectives

This course enables the students

- To develop skills for quantitative estimation using computer language.
- To code various differentiation and integration methods in a modern computer language.
- To plot the graphs of function
- Problem-solving through programming.
- Hands-on training using lab components.
- The usage of program to solve the differential equations.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Solve complicated matrix related problems like matrix inverse and matrix multiplication.
2. Acquire problem-solving skills through computer programming.
3. Plot various functions and parametric curves.
4. Solve the differential equations for physics problems
5. Gain the intellectual knowledge of complex functions and their applications.
6. Apply the mathematical concepts to physics problems with the aid of computer programming
7. Solve the geometry and plot variations of complex functions.

LIST OF PRACTICALS

1. Plotting of graphs of function e^{ax+b} , $\log(ax+b)$, $1/(ax+b)$, $\sin(ax+b)$, $\cos(ax+b)$, $|ax+b|$ and to illustrate the effect of a and b on the graph.
2. Plotting the graphs of polynomial of degree 4 and 5, the derivative graph.
3. Sketching parametric curves. (Eg. Circle, Ellipse, Cycloid and Asteroid).
4. Evaluating definite integrals. (Line integral)
5. Evaluating integrals using Reduction formulae.
6. Evaluating integration of an expression by Quadrature.
7. Plotting the double integral of $z = f(x, y) = x + y$ in $0 < x < 2$; $0 < y < 2$.
8. Plotting area under any curve using line integral.

SUGGESTED READINGS

1. S.Narayanan and T.K.M. Pillai. Calculus Vol 1 and Vol 2, Viswanathan Publishers.
2. P.Kandasamy & K.Thilagarathy, Mathematics for BSc .Vol I and. II(2000), S.Chand and Co.
3. Shanthi Narayanan & J.N.Kapoor, A Text book of calculus, S.Chand & Co

17PHU514

CHEMISTRY PRACTICAL - I**SEMESTER V**
L T P C
- - 4 2**Course Objective**

- To make the student able to identify the elements and the functional groups present in an organic compound.
- Experimental practice of quantitative and qualitative analysis.
- The objective of the titration is the determination of the concentration or the mass of the minimum formula from the titrated chemical material composing a pure liquid or a solution.
- The main objective of volumetric analysis is to determine the amount of a substance in a given sample.
- When dealing with volumetric analysis the concept of concentration cannot be avoided.
- Molarity i.e. moles per litre or decimeter is widely used unit of concentration.

Course Outcome

On successful completion of the course the students able to

1. Learnt about the qualitative analysis of organic compounds.
2. Learnt the detection of elements and functional groups present in an organic compound by systematic analysis.
3. Gain knowledge on basic test of organic compounds.
4. Differentiate the chemicals and their families.
5. Identify the compound wheather it is aromatic or aliphatic.
6. Confirm different functional group by confirmation studies.

Systematic analysis of an organic compound

1. Preliminary tests
2. Detection of elements present
3. Aromatic or aliphatic
4. Saturated or unsaturated
5. Nature of the functional group,
6. Confirmatory tests– aldehydes, ketones, amines, amides, diamide, carbohydrates, phenols, acids, esters & nitro compounds.

Note: Each student should analyse minimum 6 compounds.

SUGGESTED BOOKS

1. Thomas, A.O. (2012). Practical Chemistry for B.Sc. Main Students. Cannanore: Kerala, Scientific Book Centre.
2. Ramasamy, R. (2011). Allied Chemistry Practical Book. Karur: Priya Publications.
3. Venkateswaran, V., Veeraswamy, R., & Kulandaivelu, A. R. (2015). Basic Principles of Practical Chemistry (2nd ed.). New Delhi: S. Chand Publications.

	SEMESTER VI
NANO MATERIALS AND APPLICATIONS	L T P C
17PHU601A	4 - - 4

Course Objective:

- This course covers the different classes of nanomaterials that have been developed in recent years in light of various technological applications.
- In order to understand the behavior of these nanomaterials, quantum phenomena and the limitations of basic physical laws that are important at the nanometer length scale are introduced and developed.
- In particular, properties that exhibit size effects (including electronic, magnetic, photonic, and mechanical) at the nanometer length scale will be presented so that nanomaterials becoming increasingly relevant to modern technologies can be better understood.
- The course will cover recent breakthroughs and assess the impact of this burgeoning field.
- Specific nanofabrication topics include epitaxy, beam lithographies, self-assembly, biocatalytic synthesis, atom optics, and scanning probe lithography.
- The course consists of topics in fundamental nanoscale science, plus an overview of areas in nanotechnology.

Course Outcome

After successful completion of the course, the student is expected to

1. Explain the fundamental principles of nanotechnology and their application to biomedical engineering.
2. Apply engineering and physics concepts to the nano-scale and non-continuum domain.
3. Identify and compare state-of-the-art nanofabrication methods
4. perform a critical analysis of the research literature.
5. Design processing conditions to engineer functional nanomaterials.
6. Evaluate current constraints, such as regulatory, ethical, political, social and economical, encountered when solving problems in living systems.

UNIT - I

NANOSCALE SYSTEMS: Length scales in physics, Nanostructures: 1D, 2D and 3D nanostructures (nanodots, thin films, nanowires, nanorods), Band structure and density of states of materials at nanoscale, Size Effects in nano systems, Quantum confinement: Applications of Schrodinger equation- Infinite potential well, potential step, potential box, quantum confinement of carriers in 3D, 2D, 1D nanostructures and its consequences.

UNIT - II

SYNTHESIS OF NANOSTRUCTURE MATERIALS: Top down and Bottom up approach, Photolithography. Ball milling. Gas phase condensation. Vacuum deposition. Physical vapor deposition (PVD): Thermal evaporation, E-beam evaporation, Pulsed Laser deposition. Chemical vapor deposition (CVD). Sol-Gel. Electro deposition. Spray pyrolysis. Hydrothermal synthesis. Preparation through colloidal methods. MBE growth of quantum dots.

UNIT - III

CHARACTERIZATION: X-Ray Diffraction. Optical Microscopy. Scanning Electron Microscopy. Transmission Electron Microscopy. Atomic Force Microscopy. Scanning Tunneling Microscopy. Fourier Transform Infrared spectroscopy, UV-visible spectroscopy

UNIT – IV

OPTICAL PROPERTIES: Coulomb interaction in nanostructures. Concept of dielectric constant for nanostructures and charging of nanostructure. Quasi-particles and excitons. Excitons in direct and indirect band gap semiconductor nanocrystals. Quantitative treatment of quasi-particles and excitons, charging effects. Radiative processes: General formalization- absorption, emission and luminescence. Optical properties of heterostructures and nanostructures.

UNIT - V

ELECTRON TRANSPORT: Carrier transport in nanostructures. Coulomb blockade effect, thermionic emission, tunneling and hopping conductivity. Defects and impurities: Deep level and surface defects.

APPLICATIONS: Applications of nanoparticles, quantum dots, nanowires and thin films for photonic devices (LED, solar cells). Single electron transfer devices (no derivation). CNT based transistors. Nanomaterial Devices: Quantum dots heterostructure lasers, optical switching and optical data storage. Magnetic quantum well; magnetic dots -magnetic data storage. Micro Electromechanical Systems (MEMS), Nano Electromechanical Systems (NEMS).

Suggested Books:

1. C.P. Poole, Jr. Frank J. Owens, Introduction to Nanotechnology (Wiley India Pvt. Ltd.). S.K. Kulkarni,
2. Nanotechnology: Principles & Practices (Capital Publishing Company) K.K. Chattopadhyay and A. N. Banerjee,
3. Introduction to Nanoscience and Technology (PHI Learning Private Limited).
4. Introduction to Nanoelectronics, V.V. Mitin, V.A. Kochelap and M.A. Stroscio, 2011, Cambridge University Press.
5. Richard Booker, Earl Boysen, Nanotechnology (John Wiley and Sons).
6. Mark C. Hersam (2006), "MSE 376 Nanomaterials," <https://nanohub.org/resources/1914>.

7. <https://nanohub.org/resources/7313>.

17PHU601B	BIOLOGICAL PHYSICS	SEMESTER VI
		L T P C 4 - - 4

Course Objectives:

- The course aims to provide students with a foundation in the basic concepts of Biophysics.
- Biophysics is an interdisciplinary science that employs and develops theories and methods of the physical sciences for the investigation of biological systems.
- Topics will include canonical and non-canonical structures of nucleic acids, structure of proteins, enzymes etc.
- Fundamental concepts that underlie biomolecular interactions will be discussed and biophysical methods that are employed for the structural analysis of these systems will be introduced at an elementary level.
- To Understand the concept of life of molecules.
- The physical quantities such as temperature, energy, enthalpy, entropy, and free energy will be employed to understand why a biological system chooses particular state at conditions under study.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate knowledge of the fundamental concepts in physics and chemistry that underlie biological processes.
2. Define the structural characteristics of nucleic acids and proteins
3. Examine parameters that variously determine their stability and function(s).
4. Describe the principles that govern biomolecular interactions
5. Appreciate how established methods of research and enquiry are employed to analyze the different aspects of these interactions.
6. Understand the concept of life of molecules.

UNIT -I

Overview: The boundary, interior and exterior environment of living cells. Processes: exchange of matter and energy with environment, metabolism, maintenance, reproduction, evolution. Self-replication as a distinct property of biological systems. Time scales and spatial scales. Universality of microscopic processes and diversity of macroscopic form. Types of cells. Multicellularity. Allometric scaling laws.

UNIT- II

Molecules of life: Metabolites, proteins and nucleic acids. Their sizes, types and roles in structures and processes. Transport, energy storage, membrane formation, catalysis, replication, transcription, translation, signaling. Typical populations of molecules of various types present in cells, their rates of production and turnover. Energy required to make a

bacterial cell. Simplified mathematical models of transcription and translation, small genetic circuits and signaling pathways. Random walks and applications to biology. Mathematical models to be studied analytically and computationally.

UNIT -III

The complexity of life: At the level of a cell: The numbers of distinct metabolites, genes and proteins in a cell. Complex networks of molecular interactions: metabolic, regulatory and signaling networks. Dynamics of metabolic networks; the stoichiometric matrix. Living systems as complex organizations; systems biology. Models of cellular dynamics. The implausibility of life based on a simplified probability estimate, and the origin of life problem.

UNIT -IV

At the level of a multicellular organism: Numbers and types of cells in multicellular organisms. Cell types as distinct attractors of a dynamical system. Stem cells and cellular differentiation. Pattern formation and development. Brain structure: neurons and neural networks. Brain as an information processing system. Associative memory models. Memories as attractors of the neural network dynamics.

UNIT -V

At the level of an ecosystem and the biosphere: Foodwebs. Feedback cycles and self-sustaining ecosystems.

Evolution: The mechanism of evolution: variation at the molecular level, selection at the level of the organism. Models of evolution. The concept of genotype-phenotype map. Examples.

Suggested Books:

17PHU602

MATHEMATICS - II**SEMESTER VI****L T P C****4 - - 4****Course Objective**

This course enables the students to learn

- The Concept of Fourier analysis and solving boundary value problems.
- Techniques of Fourier and Laplace transform
- To solve differential equations.
- Numerical techniques of differentiation and integration.
- The basic concepts of Reduction of second order Linear Equations to canonical forms
- The Systems of linear differential equations and its applications.
- The concept of second order linear homogeneous, non-homogeneous differential equations with constant coefficients.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Appreciate the physical significance of Fourier series
2. Understand the mathematical principles on transforms.
3. Apply mathematical foundation to formulate and solve problems arising in physics
4. Synthesize numerical techniques for practical problems.
5. Solve the numerical problem for physics
6. Apply the numerical methods to solve the real-life problem

UNIT I
